ENTRIES = ++PTF (LU10080) REWORK(2023131) CAS9180E AND CAS9182A MESSAGES, LMP KEY PORTFOLIO, SCRT PROBLEM DESCRIPTION: This SYSMOD introduces a simplification of the Vantage LMP key portfolio. With the SYSMOD applied: - Vantage will verify the LMP keys K6 and 0C only, depending on the particular Vantage configuration that is activated. - LMP key verification is performed at the moment of Vantage STC startup, upon first usage of a particular functionality that is licensed by one of the keys and then once every 24 hours (at 01:13 am). This reduces the number of possible "CAS9180E CPU @@@@ Requires a LMP key to run Prod (xx)xxxxxxxxxxxxxxxxxxxx" and "CAS9182A WARNING: LMP key Prod (xx)xxxxxxxxxxxx expires in \$\$\$ days." messages to a single occurrence in each 24-hour period. Additionally, this SYSMOD introduces internal code changes for SCRT reporting and establishes as prerequisites all previous generally available PTFs for SCRT reporting to ensure that reports are as accurate as possible. SYMPTOMS: The JESMSG LG part of Vantage STC log and system log is flooded with CAS9180E or CAS9182A messages. In addition, SCRT reports may include an incorrect release or version number for one or more Broadcom products for z/OS. IMPACT: Large numbers of CAS9180E or CAS9182A messages must be manually deleted from the system master console. Additionally, SCRT reports may contain inaccurate information. CIRCUMVENTION: None. PROBLEM DESCRIPTION: With the LU04565 applied the Vantage Summary Objects that are based on a MORE object show duplicate records if the value of the Vantage system parameter that controls the size of the chunk is smaller than the total number of records in the base object. A MORE object is a Vantage object that show data in chunks, which you can navigate using the "Next" button. This SYSMOD ensures that the summary object does not show duplicate records. SYMPTOMS: Vantage summary object shows duplicated records. IMPACT: Vantage summary object provides invalid data. CIRCUMVENTION: The following Vantage system parameters determine the size of data chunks. We recommend that you review the values of these parameters and set them to the maximum size: CA1NMBRS, CDSNMBRS, DSNMBRS, GENNMBRS, JOBRECS, TLSNMBR, VVDSNMBR, depending on the base object upon which you are building the summary object.
