An error message explaining that the configuration file name was incorrect is missing in the response.</li> <li>3) Configuration files with AgedTimeout values that exceed 1200 s are rejected as invalid during EWS startup and not usable, although values up to 86400 s (1 day) should be valid based on the documentation.</li> <li>4) Creating or updating package SCL via EWS will create an invalid SCL, if the provided SCL contained comments. All lines in the package SCL updated via EWS will contain an extra leading space.</li> </ol> <p>IMPACT:</p> <ol style="list-style-type: none"> <li>1) Package promotion history cannot be obtained by using the REST API 'List Package' endpoint</li> <li>2) Using an incorrect config file name on create or update package endpoint is harder to recognize.
