Service	Details				
LU10385	LU10385 M.C.S. ENTRIES = ++PTF (LU10385) REWORK(2023160) WEB SERVICES LIST PACKAGE PROMOTION HISTORY + MINOR FIXES PROBLEM DESCRIPTION: In the Endevor Web Services REST API: 1) The promotion history option is missing in the List Package endpoint. 2) A NullPointerException is thrown when either the create or the update package endpoint is called with an incorrect config file name in the URL. 3) The maximum value of the AgedTimeout setting in the web services configuration file is 1200 s instead of 86400 s (1 day). 4) Both Create and Update package endpoints add a leading space to all of the lines of the passed package SCL, therefore creating an invalid SCL if any comments were present, because comments need to have an asterisk as the first character SYMPTOMS: 1) Currently, the package promotion history cannot be obtained via the REST API 'List Package' endpoint. 2) Create and update package endpoints called with an incorrect config file name return an HTTP status 500 (internal error), and the EWS server log contains a NullPointerException. An error message explaining that the configuration file name was incorrect is missing in the response. 3) Configuration files with AgedTimeout values that exceed 1200 s are rejected as invalid during EWS startup and not usable, although values up to 86400 s (1 day) should be valid based on the documentation. 4) Creating or updating package SCL via EWS will create an invalid SCL, if the provided SCL contained comments. All lines in the package SCL updated via EWS will contain an extra leading space. IMPACT: 1) Package promotion history cannot be obtained by using the REST API 'List Package' endpoint 2) Using an incorrect config file name on create or update package endpoint is harder to recognize. The server throws unnecessary errors in the log. 3) AgedTimeout values over 1200 cannot be used. Config files that use such values are considered invalid. 4) Packages created or updated via EWS cannot contain comments in the SCL or these packages will need to be fixed through other interfaces before they can be cast and executed. CIRCUMVENTION: 1) Obtain the package history information via the Submit SCL endpoint and parse the returned output, or use an Endevor interface other than the REST API. 2) None. 3) Use an AgedTimeout value less than or equal to 1200 s, or manually edit enws.xsd in the Tomcat server's /webapps/endevor folder to modify the allowed maximum value. 4) Modify the affected SCL in another interface. PRODUCT(S) AFFECTED: <table> <tr> <td>Endevor Software Change Manager</td><td>Release 18.1</td></tr> <tr> <td>Endevor</td><td>Version 19.0</td></tr> </table> Related Problem: ENDBAS 20025 (C) 2023 Broadcom Inc and/or its subsidiaries; All rights reserved R00111-SCM190	Endevor Software Change Manager	Release 18.1	Endevor	Version 19.0
