Chapter 1: General Release Information

Note: CA Adapter still contains the terms Arcot, WebFort, and RiskFort in some of its code objects and other artifacts. Therefore, you will find occurrences of Arcot, WebFort, and RiskFort in all CA Adapter documentation. In addition, some of the topics in this guide do not follow the standard formatting guidelines. These inconsistencies will be fixed in a future release.

This section contains the following topics:

[Operating System Support](#) (see page 7)

[Documentation](#) (see page 7)

[Technical Support](#) (see page 7)

Operating System Support

For information about platform support and the system requirements to install CA VPN Client, see the *CA VPN Client User Guide*.

Chapter 2: New Features

This section contains the following topics:

[Profile Support for CA VPN Client](#) (see page 9)

Profile Support for CA VPN Client

CA VPN Client now works with the profiles that were created using the CA Adapter configuration wizard. In addition, users now see a drop-down list of the available profiles, and they can select the profile to be used for authentication.

Chapter 3: Product Limitations

This section contains the following topics:

[User Profiles Cannot Reside on a Network Location](#) (see page 11)

[Authentication Issues with Duplicate User Names](#) (see page 11)

[Multi-Byte Data Not Supported for CA VPN Client](#) (see page 11)

User Profiles Cannot Reside on a Network Location

CA VPN Client does not support the storage of user profiles on a network location. The User Profile directory must be available locally on the system running the client.

Authentication Issues with Duplicate User Names

If two users with the same name are present in two different organizations, of which one is the Default Organization (DEFAULTORG), then ArcotID PKI authentication fails under the following conditions:

- If the authentication profile was created without specifying the organization name.
- If the ArcotID PKI for the other user is already present on the system.

Multi-Byte Data Not Supported for CA VPN Client

Internationalization (multi-byte data) for CA VPN Client is not supported.
