Chapter 3: General Considerations

- CA ERwin Data Model Validator is enabled for use with CA ERwin Data Modeler Standard Edition and Workgroup Edition.

Note: You cannot open *.ER1 files in CA ERwin Data Model Validator. You can convert an *.ER1 file to *.erwin format by opening and saving the file in CA ERwin Data Modeler.

- CA ERwin Data Model Validator uses the CA ERwin Data Modeler API to detect whether or not CA ERwin Data Modeler is generating indexes on foreign keys. This ensures that the product does not mistakenly report the absence of those keys.

Chapter 4: Known Issues

Models of Previous Versions Do Not Open

There is a known issue in CA ERwin Data Model Validator. You cannot open a model that is created using a previous version of CA ERwin Data Modeler through CA ERwin Data Model Validator. You can open only those models that you have saved using CA ERwin Data Modeler r8.

Release Numbers

The release number on the title page of a document might not correspond to the current product release number; however, all documentation delivered with the product, regardless of release number on the title page, will support your use of the current product release. The release number changes only when a significant portion of a document changes to support a new or updated product release. If no substantive changes are made to a document, the release number does not change. For example, a document for r7 may still be valid for r7.3. Documentation bookshelves always reflect the current product release number.

Occasionally, we must update documentation outside of a new or updated release. To indicate a minor change to the documentation that does not invalidate it for any releases that it supports, we update the edition number on the cover page. First editions do not have an edition number.
