Chapter 1: Welcome

Welcome to the CA Federation Manager Java SDK. These release notes contain product information, known issues, and a link to CA Technical Support.

Chapter 2: New Features for this Release

This section contains the following topics:

[Assertion Generator Plug-in](#) (see page 9)

[Support for Multi-Valued Attributes](#) (see page 9)

Assertion Generator Plug-in

You can modify the assertion content using an assertion generator plug-in. The plug-in enables you to customize the content of an assertion based on business agreements between you and your partners and vendors.

The classes that are included to support the assertion generator plug-in are legacy classes from the CA SiteMinder® product. You can use these classes as if they were written for Federation Manager.

Support for Multi-Valued Attributes

The following methods have been added to support multi-valued attributes:

`java.lang.String[] getAttributeMV(java.lang.String name)`

Returns all values for the specified attribute.

`java.util.Map getAttributesMV()`

Returns all the attributes with all of their values.

Chapter 3: Known Issues

The CA Federation Manager Java SDK has no known issues for this release.

Chapter 4: Documentation
