IPIS1213**Stack *P1* is inactive****Reason:**

An attempt to access IPSECNMI for the indicated stack (*P1*) has failed, because the stack is inactive.

System Action:

The request is rejected.

User Action:

Investigate why the stack is inactive.

IPIS1214**IPSec support is only available for IBM stacks****Reason:**

The requested function is not currently supported by TCPaccess.

System Action:

Processing of the function is terminated.

User Action:

None.

IPIS1215**List incomplete. *P1* of *P2* records displayed****Reason:**

The displayed list is incomplete. *P1* records are displayed out of a possible total of *P2*.

This situation occurs when there are too many records for the IPSECNMI interface to handle. An internal limit in IPSECNMI has been exceeded.

System Action:

The incomplete list is displayed.

User Action:

Contact Technical Support.

IPIS1216

No *P1* configured for stack *P2*

Reason:

A request to list items of type *P1* for stack *P2* has failed. No *P1* items were returned from IPSECNMI.

System Action:

None.

User Action:

None.

IPIS1217

No *P1* found matching the supplied criteria

Reason:

A request to list *P1* items, using criteria supplied from the menu input fields, has returned with no matches.

System Action:

None.

User Action:

None.

IPIS1218

Tunnel *P1* on stack *P2* *P3* by *P4*

Reason:

Tunnel *P1* has been activated, inactivated or refreshed by user *P4*.

System Action:

This message is written to the activity log as an audit trail of actions against a tunnel.

User Action:

None.

IPIS1219**IPSECNMI authorization failure for *P1* request to *P2*****Reason:**

An IPSECNMI request has failed with a return code of 'EACCES'. This means the SOLVE SSI region has insufficient authority to perform the requested *P1* IPSECNMI function against stack *P2*.

System Action:

The request is rejected.

User Action:

The IPSECNMI facility needs the userid associated with the SOLVE SSI address space to be authorized to the following SERVAUTH resources:

- EZB.NETMGMT.*sysname.stackname*.IPSEC.DISPLAY
- EZB.NETMGMT.*sysname.stackname*.IPSEC.CONTROL
- EZB.NETMGMT.*sysname.sysname*.IKED.DISPLAY

Alternatively, the userid associated with the SOLVE SSI region must be an OMVS superuser or must be permitted to the BPX.SUPERUSER resource in the FACILITY class.

Check whether this authorization has been granted, and review the SOLVE SSI, PAGENT, and IKE daemon logs for additional error messages.

For further information, contact Technical Support.

IPIS1220**IPSECNMI request failed, maximum message size exceeded****Reason:**

An IPSECNMI request issued from SOLVE SSI has failed because the message returned from the NMI was too large to process.

System Action:

The request fails.

User Action:

Specify values in the Filter Type, Tunnel State, and/or Remote Endpoint fields to limit the size of the list requested.

If this is unsuccessful, contact Technical Support.

IPIS2001

Stack *P1* does not exist

Reason:

The stack name entered in the Stack Name field is not known to the system.

System Action:

The request is rejected.

User Action:

Enter ? in the Stack Name field to list the defined stacks, from which you can select one.

IPIS2002

No stacks available

Reason:

No stacks are defined for the selected system.

System Action:

The request fails.

User Action:

Press F3 to return to the menu, and select another system.

IPIS2003

Option not available on this z/OS version

Reason:

You requested an FTP connection summary, but this option is supported only on systems running z/OS V1R10.0 or later.

System Action:

The request is rejected.

User Action:

Select a stack running on a later z/OS version, or select another option.

IPIS2101**SORT operand must be ACTIVE, SECURE or P1****Reason:**

You entered a SORT command with an invalid operand. The valid operands are ACTIVE, SECURE, and *P1*.

System Action:

The request fails.

User Action:

Reissue the SORT command with a valid operand.

IPIS2102**P1 inactive****Reason:**

An attempt to build a secured connection summary for all stacks on a system has found one or more inactive stacks, as indicated in *P1*.

System Action:

The summary is generated for the other stacks on the system.

User Action:

Check whether the indicated stack or stacks are active. If so, the resource definition for the stack may be incorrect. Review and correct the definitions, and request the summary again.

To review and correct a STACK resource definition

1. Enter **/RADMIN.R**, select the system image and the STACK resource class, and then select the stack resource definition you want to review.
2. Select the TCP/IP Stack General Description panel.
3. Ensure that the TCP/IP Stack Step Name field contains the procedure name of the stack. If the value is incorrect, update the resource definition.

IPLK1301

Invalid calltype value specified, keyword= P1 value= P2

Reason:

An invalid call was made to the procedure. The keyword in error is identified by *P1* and the value by *p2* .

System Action:

None

User Action:

Contact your System Administrator.

IPLK1302

TCP/IP Link Monitor active

Reason:

The TCP/IP Link Monitor task, which maintains the TCP/IP Link Names List, is now active.

System Action:

None.

User Action:

None.

IPLK1303

SOLVE TCP/IP Link Monitor failed

Reason:

The SOLVE TCP/IP Link Monitor task, which maintains the TCP/IP Link Names List, failed to initialize. The failure reason (*P1*) is shown in the following message.

System Action:

The link monitor is inactive.

User Action:

Refer to the message explanation for the message which follows. When this problem is resolved, restart the link monitor by using the FILE command (F3) within the TCP/IP Administration, Multi-system Support option.

IPLK1304**Action failed, the map P1 does not exist****Reason:**

An MDO assignment failed with ZMDORC 16 and ZMDOFDBK 0. This indicates that the map *P1* does not exist in this system.

System Action:

The action terminates.

User Action:

Ensure that the OSCNTL file has been correctly updated during the installation of the product and any maintenance.

IPLK1305**MDO action failed, map= P1, name= P2, MDORC= P3, MDOFDBK= P4****Reason:**

An MDO assignment failed. The MAP was P1 , the MDORC was P3 , the MDOFDBK value was P4 , and the MDO component involved in the last operation was *P2*.

System Action:

The action terminates.

User Action:

Refer to the NCL Reference for details of the codes.

IPLK1306**Link Monitor processing P1 event P2****Reason:**

This is an informational message indicating that the TCP/IP Link Monitor task, which maintains system configuration has processed the indicated event.

System Action:

System configuration information is updated as per the event.

User Action:

None.

IPLK1307

Cisco Channel Card TN3270 log receiver start failed for P1 : P2

Reason:

An attempt to start a background procedure to receive TN3270 log messages from a Cisco channel card (*P1*) failed for the reason shown (*P2*).

System Action:

The process is not started and the TN3270 log for the specified channel card is not available.

User Action:

Review the reason (*P1*) that the start failed and use this to fix the problem.

IPLK1308

Received from P1 : P2

Reason:

The TCP/IP Link Monitor task has received an error message from a remote system call. *P1* identifies the remote system, *P2* is the message received.

System Action:

None. The link monitor continues processing.

User Action:

Investigate the cause of the error on the remote system. More information may be available in the activity log of the remote system.

IPLK1309

Unknown Event received, ID= P1 ZMTEXT= P2

Reason:

A blank event name is received.

System Action:

None. The link monitor continues processing.

User Action:

Investigate the cause of the event with the process ID and message.

IPLK1401**Invalid parameter value specified, keyword= P1 value= P2****Reason:**

An invalid call was made to the procedure. The keyword in error is identified by *P1* and the value by *P2* .

System Action:

None.

User Action:

Contact your system administrator.

IPLK1402**Variable error, table= P1, req= P2, key= P3, FDBK= P4****Reason:**

The procedure failed because an &VARTABLE verb gave an unexpected return code. In the message:

P1 is the VARTABLE name.

P2 is the &VARTABLE request type.

P3 is the key for the entry.

P4 is the return code.

System Action:

The request is rejected and the procedure terminates.

User Action:

Contact your system administrator.

IPLK1403**Request for device link information on system P1 failed: P2****Reason:**

An error has occurred while requesting device link information from the region identified by *P1* . The error message is *P2* .

System Action:

The procedure terminates.

User Action:

Contact your system administrator.

IPLK1501

Invalid parameter value specified, keyword= P1 value= P2

Reason:

An invalid call was made to the procedure. The keyword in error is identified by *P1* and the value by *P2* .

System Action:

None.

User Action:

Contact your system administrator.

IPLK1502

Variable error, table= P1, req= P2, key= P3, FDBK= P4

Reason:

The procedure failed because an &VARIABLE verb gave an unexpected return code. In the message:

P1 is the VARIABLE name.

P2 is the &VARIABLE request type.

P3 is the key for the entry.

P4 is the return code.

System Action:

The request is rejected and the procedure terminates.

User Action:

Contact your system administrator.

IPLK3703

Option invalid with multiple links selected

Reason:

The selected option is invalid if multiple links have been selected. The option is only valid for a single link name.

System Action:

None.

User Action:

Correct the entry and retry the operation.

IPLK3704**Selection cancelled****Reason:**

The selection list was exited without selecting an item.

System Action:

None

User Action:

None

IPLK3705**Name ' P1' contains invalid characters****Reason:**

The name entered, *P1* ,does not conform to the specification for a valid link or stack name.

System Action:

None

User Action:

Correct the entry and retry the operation.

IPLK3706**Stack P1 does not exist****Reason:**

The selected stack is not known to the system.

System Action:

The request is rejected.

User Action:

Enter '?' in the stack field to obtain a list of stacks.

IPLK3707

No local stacks exist

Reason:

There are no TCP/IP stacks known or defined to the local system.

System Action:

The request is rejected.

User Action:

Enter ? in the Stack field to obtain a list of stacks.

List this region's configuration details (/IPTEST), and investigate any errors.

If necessary, use the administration functions to define a stack for the sockets interface and/or define secondary stacks for connection awareness.

IPLK3708

No stacks found matching P1

Reason:

There are no TCP/IP stacks that match the generic mask.

System Action:

The request is rejected.

User Action:

Enter '?' in the stack field to obtain a list of stacks.

IPLK3709

Link P1 is not active

Reason:

The Link Name identified by *P1* is not currently active.

System Action:

The request is rejected.

User Action:

Investigate the cause of the link failure and retry the operation.

IPLK3710**Link *P1* does not exist****Reason:**

The selected link is not known to the system.

System Action:

The request is rejected.

User Action:

Enter ? in the link name field to display a list of known links.

IPLK3711**Stack *P1* is not an *P2* stack****Reason:**

Stack *P1* is not suitable for the selected function. The function is only available for type *P2* stacks.

System Action:

The request is rejected.

User Action:

Enter '?' in the stack field to obtain a list of stacks.

IPLK3712**No *P1* stacks exist****Reason:**

There are no TCP/IP stacks of the *P1* type defined.

System Action:

The request is rejected.

User Action:

The current function is only supported for stacks of the *P1* type. If the environment should have stacks of this type defined, check the STACK resource definitions. You can check the definitions on the IP Resource Monitor (/IPMON shortcut).

Otherwise, select a different function.

IPLO8001

CALLTYPE P1 NOT RECOGNIZED BY LOG BROWSE SERVICE PROCEDURE

Reason:

The TCP/IP Services log browse service procedure \$IPLO80B does not support the calltype P1 from the browse utility (\$CABU000).

System Action:

Log browse processing terminates.

User Action:

Contact your System Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

IPLO8101

TCP/IP EVENT LOGGER IS ALREADY RUNNING

Reason:

An attempt was made to start the TCP/IP event logger but it was already running.

System Action:

The existing TCP/IP event logger continues.

User Action:

None.

IPLO8102**IPLOG NDB ERROR: ACTION= P1 RETURN-CODE= P2 STATUS= P3****Reason:**

The TCP/IP Event Logger encountered an error when trying to perform an *P1* command on the IPLOG database. The return code is *P2*. The TCP/IP Event Logger may terminate or continue processing as indicated by its status.

System Action:

The TCP/IP Event Logger may terminate if it cannot continue processing.

User Action:

Determine why the NDB error occurred. Contact your System Administrator for further assistance.

IPLO8103**P1 IPLOG I/O ERROR, LOGGING HAS STOPPED, EXTRACT DATA AND RESET NDB****Reason:**

The Event Logger received a VSAM I/O error when trying to add a record to the IPLOG database. This is a serious error, and the Event Logger has terminated. The most likely reason for this error is that the IPLOG database has become full.

System Action:

The Event Logger cannot continue processing and has terminated. The IPLOG database is most likely in a status of BAD-LOCKED.

User Action:

Check the Activity Log for further messages that indicate why the I/O error occurred. To access the log, type \$LOG from any panel.

If the NDB is full and is marked *BAD-LOCKED*, the only solution is to delete and redefine the NDB. However, before doing this, if you wish to extract the data currently in the NDB, perform the following steps:

1. Issue the *NDB START IPLOG UNLOCK INPUT* command to open the database as input only. If you issue this command without the *INPUT* option, the SOLVE region will attempt to reapply the last transaction, causing the NDB to remain *BAD-LOCKED*.
2. Type the name of your extract dataset into the field provided on the History Data Menu (*/IPHIST*), and select option *EX* to start the extract process.
3. Go to the Activity Log (*\$LOG*) for progress messages on the extract process.
4. When the extract process has finished, deallocate the IPLOG database by issuing the following commands:
 - *NDB STOP IPLOG* to stop the database
 - *UDBCTL CLOSE=IPLOG* to close the file
 - *DEALLOC DD=IPLOG* to deallocate the file
5. After the IPLOG database has been deallocated, submit your batch job to delete and redefine the dataset (optionally giving it more space). For information about the attributes of the distributed database, see the *SOLVE Installation and Setup Instructions*.
6. Upon successful completion of the batch job, go to the Customizer : Parameter Groups menu (*/PARMS*) and check that all parameters in IPFILES parameter group are correct. You might want to decrease the number of days worth of records to be stored within the database.
7. Press *F3* (File) to action the parameters. This reinitializes the Event Logging environment, and the Event Logger should restart with no problems.

IPLO8104

P1 IPLOG IS LOCKED, LOGGING HAS STOPPED**Reason:**

The Event Logger tried to add a record to the IPLOG database and discovered that the database was locked. This is a serious error, and the Event Logger has terminated. The most likely reason for this error is that the IPLOG database has become full.

System Action:

The Event Logger cannot continue processing and has terminated. The IPLOG database is in a status of LOCKED or BAD-LOCKED.

User Action:

Check the Activity Log for further messages that indicate why the I/O error occurred. To access the log, enter *\$LOG* from any panel.

It is uncommon for the NDB to have the *LOCKED* status. However, if this occurs, issue an *NDB START IPLOG UNLOCK* command and then action the Customizer : Parameter Groups (*/PARMS*) IPFILES parameter group by pressing *F6*. If the NDB is full and has the *BAD-LOCKED* status, the only solution is to delete and redefine the NDB. However, before doing this, if you wish to extract the data currently in the NDB, perform the following steps:

1. Issue the *NDB START IPLOG UNLOCK INPUT* command to open the database as input-only. If you issue this command without the *INPUT* option, the SOLVE region will attempt to reapply the last transaction, causing the NDB to remain *BAD-LOCKED* .
2. Type the name of your extract dataset into the field provided on the History Data Menu (*/IPHIST*), and select option *EX* to start the extract process.
3. Go to the Activity Log (*\$LOG*) for progress messages on the extract process.
4. When the extract process has finished, deallocate the IPLOG database by issuing the following commands:
 - *NDB STOP IPLOG* to stop the database - *UDBCTL CLOSE=IPLOG* to close the file - *DEALLOC DD=IPLOG* to deallocate the file
5. After the IPLOG database has been deallocated, submit your batch job to delete and redefine the dataset (optionally giving it more space). For information about the attributes of the distributed database, see the *SOLVE Installation and Setup Instructions* .
6. Upon successful completion of the batch job, go to the Customizer : Parameter Groups menu (*/PARMS*) and check that all parameters in IPFILES parameter group are correct. You might want to decrease the number of days worth of records to be stored within the database.
7. Press *F3* (File) to action the parameters. This reinitializes the Event Logging environment, and the Event Logger should restart with no problems.

IPLO8105

WAITING FOR IPLOG DATABASE UPGRADE TO COMPLETE

Reason:

The Event Logger has determined that the IPLOG database is currently being upgraded to a newer version.

System Action:

The Event Logger waits for the upgrade process to complete.

User Action:

None

IPLO8106

P1 Initiating IPLOG database reorg

Reason:

The Event Logger tried to add a record to a full IPLOG database and failed, so it is initiating the IPLOG database reorganization process.

System Action:

Event logging is paused while the reorg is in process.

User Action:

None.

IPLO8107

IPLOG Initialization complete *P1*

Reason:

The IPLOG initialization is complete. *P1* may indicate (SMF ONLY), which means that no records are written to the IPLOG due to errors during startup.

System Action:

Logging continues. If *P1* indicates (SMF ONLY), SMF recording is available only if SMF logging is enabled; otherwise all records are discarded.

User Action:

Check the initialization log to determine the cause of the failure, if any.

IPLO8108**IPLOG Processing changed from 'ACTIVE' to 'SMF-ONLY'****Reason:**

An NDB error prevented records from being written to IPLOG, and caused the logger to only record events through SMF, if SMF logging is enabled.

System Action:

Logging continues if SMF logging is enabled; otherwise, all records are discarded.

User Action:

Check the initialization log to determine the cause of the failure.

To enable SMF logging, set the Write samples to SMF? field to YES in the IPFILES Customizer parameter group and specify a non-zero value in the SMF Record Identifier field of the SMF Customizer parameter group.

IPLO8109**IPLOG Processing changed from 'SMF-ONLY' to 'ACTIVE'****Reason:**

The IPLOG is recovered and the logger resumes writing records to the NDB.

System Action:

Logging continues.

User Action:

None.

IPLO8110**IPLOG Logger has ended P1****Reason:**

IPLOG Logger has stopped. If *P1* is present, the logger was terminated due to errors.

System Action:

None.

User Action:

Review the activity log to determine the reason for the logger being stopped.

IPLO8115

First P1 characters of Dataset Name 1 or 2 truncated

Reason:

While logging a file transfer event, the first *P1* characters of Dataset Name 1 or Dataset Name 2 were truncated and the last 255 characters retained in the log record. The succeeding message IPLO8116 shows the complete name.

System Action:

Event logging continues.

User Action:

Contact your local support representative.

IPLO8116

P1: P2

Reason:

This message follows IPLO8115 message, which displays the complete Dataset Name *P2* .

System Action:

None.

User Action:

None.

IPLO8201

TCP/IP P1 process started - eligible records: P2

Reason:

The TCP/IP *P1* procedure has started. This procedure will extract records from the IPLOG TCP/IP event database and write them in comma-delimited format to a sequential dataset. If the process is an ARCHIVE, then the records will also be deleted.

System Action:

The TCP/IP *P1* process continues running.

User Action:

None.

IPLO8202**TCP/IP P1 Process ended****Reason:**

The TCP/IP *P1* procedure has finished. This procedure extracts records from the IPLOG TCP/IP event database and writes them in comma-delimited format to a sequential dataset. If the process is an ARCHIVE then the records are also deleted.

System Action:

The TCP/IP *P1* process finishes.

User Action:

None.

IPLO8203**IPXTRACT file error: action=*p1* return-code=*p2*****Reason:**

An error occurred while performing a *p1* command on the IPXTRACT file. The return code is *p2*.

System Action:

The process may or may not continue processing.

User Action:

To determine the cause of the error, review the activity log. The probable causes can vary from not having enough space or the selected file is not available to the current user. For further assistance, contact your system administrator.

IPLO8204

IPLOG NDB error: action= P1 return-code= P2 status= P3

Reason:

An error occurred when trying to perform an *P1* command on the IPLOG database. The NDB return code is *P2*.

It is normal to get this error message with an action of 'START:1' when the NDB is first accessed. The reason for this is that the dataset is not an NDB at this point, and will only be formatted as an NDB as a result of this error.

System Action:

The process will *P3* processing.

User Action:

Determine why the NDB error occurred. Contact your System Administrator for further assistance.

IPLO8205

Writing TCP/IP event records to IPXTRACT file

Reason:

The extraction process is commencing the WRITE step.

System Action:

The extraction process continues.

User Action:

None.

IPLO8206

Deleting TCP/IP event records from IPLOG NDB

Reason:

The TCP/IP archive process is commencing the 'DELETE' step of its processing.

System Action:

The TCP/IP archive process continues running.

User Action:

None.

IPLO8207**Invalid keyword value specified, keyword= P1 value= P2****Reason:**

The call to the procedure failed because the Keyword identified by *P1* had an invalid value, identified by *P2* .

System Action:

The request is rejected.

User Action:

Contact your System Administrator.

IPLO8208**No TCP/IP event records qualify for P1 processing****Reason:**

The TCP/IP *P1* process did not find any records that qualify for *P1*.

System Action:

The TCP/IP *P1* process terminates.

User Action:

None.

IPLO8209***p1* records written to the IPXTRACT file****Reason:**

The TCP/IP events extraction process has written *p1* records to the IPXTRACT file.

System Action:

The extraction process continues.

User Action:

None.

IPLO8210

Error creating IPLOG NDB from dataset P1

Reason:

An error was encountered when trying to format the dataset *P1* as an NDB

System Action:

Reporting will not continue.

User Action:

Determine why the NDB error occurred. Contact your System Administrator for further assistance.

IPLO8211

Domain ID inside NDB P1 is not P2

Reason:

An 'NDB START' command was issued for the IPLOG Reporting database but another domain ID was present in the NDB control record.

System Action:

Reporting will not continue.

User Action:

Check to ensure that this dataset is not currently in use by another region. If it is not being used and you are sure that this is the dataset you wish to open, issue the 'NDB START IPLOG FORCE UNLOCK' command from an OCS window and then re-initialize the Reporting feature from the Administration menu.

IPLO8212

P1 records deleted from the IPLOG dataset

Reason:

The TCP/IP archive process has deleted *P1* records from the IPLOG dataset.

System Action:

The TCP/IP archive process continues running.

User Action:

None.

IPLO8213**Converting IPLOG to version P1****Reason:**

The Reporting initialization process has discovered that the IPLOG database was created by an earlier release of NetMaster for TCP/IP and is now upgrading the database to the version indicated by *P1*

System Action:

IPLOG NDB conversion continues.

User Action:

None.

IPLO8214**P1 IPLOG records updated****Reason:**

The IPLOG upgrade process is converting the IPLOG database to a newer version. This process updates records by copying data from old fields into new fields. This message indicates how many records have been processed thus far.

System Action:

The IPLOG upgrade process continues running.

User Action:

None.

IPLO8215**IPLOG conversion completed****Reason:**

The IPLOG database upgrade process has completed.

System Action:

The IPLOG Event Logger will now continue.

User Action:

None.

IPLO8216

IPLOG NDB error: verb= P1 NDB RC= P2 error indicator= P3

Reason:

An error occurred when trying to access the IPLOG NDB. The action being attempted is *P1* and the NDB return code is *P2*. The optional NDB error indicator is *P3*.

System Action:

Processing terminates.

User Action:

Determine why the NDB error occurred. Contact your System Administrator for further assistance.

IPLO8217

Warning: IPLOG data component P1 utilized.

Reason:

The data component of the IPLOG dataset has reached *P1* capacity. If it reaches 100% then logging to the IPLOG dataset will stop and the automatic reorg process may fail if no space can be reclaimed.

System Action:

IPLOG initialization continues.

User Action:

Verify that the parameters controlling your IPLOG environment are set satisfactorily. These include:

1) The size of your IPLOG dataset.

2) The number of days you wish to keep records for.

The IPLOG dataset must be large enough to hold the TCP/IP event records generated by your system for the number of days you wish to keep.

3) Time of day to extract. Your NetMaster region needs to be up at this time if any expired records are to be deleted from the IPLOG dataset.

IPLO8220**IPLOG reorg processing started****Reason:**

The IPLOG reorg process has started.

System Action:

Reorg processing continues.

User Action:

None.

IPLO8221**IPLOG reorg: copying records to P1****Reason:**

The IPLOG reorganization process is beginning step 1 - copying all records from the IPLOG NDB to the sequential dataset indicated by *P1*.

System Action:

Reorg processing continues.

User Action:

None.

IPLO8222**IPLOG reorg: copying records from P1****Reason:**

The IPLOG reorganization process is beginning step 2 - copying all records from the sequential dataset indicated by *P1* to the IPLOG NDB.

System Action:

Reorg processing continues.

User Action:

None.

IPLO8223

IPLOG reorg: P1

Reason:

This is an IDCAMS message produced by the IPLOG reorg process.

System Action:

Reorg processing continues.

User Action:

None.

IPLO8224

IPLOG reorg processing P1

Reason:

The IPLOG reorg process has either successfully finished or it has failed, depending upon the status of *P1*.

System Action:

Reorg processing has finished. TCP/IP event logging should resume normally if the reorg was successful. If it failed then TCP/IP event logging has stopped and an alert is raised.

User Action:

None.

IPLO8225

No sequential dataset defined for the IPLOG reorg

Reason:

The IPLOG reorg process could not continue as no sequential dataset has been defined for the reorg.

System Action:

Reorg processing terminates.

User Action:

Define a sequential dataset with a record length of 4096, a block size of 23445, and a record format of VB. Then add the dataset name to the IPLOGSEQ Reorg Dataset field on the TCP/IP Reporting Configuration panel.

IPLO8226**IPLOG P1 already running****Reason:**

An automated attempt to start the IPLOG reorg process has failed because it is already running.

System Action:

Processing terminates.

User Action:

None.

IPLO8227**IPLOG STOP failed RC= P1****Reason:**

An NDB STOP command for the IPLOG failed with RC= *P1* .

System Action:

Processing terminates, and the logger is not restarted.

User Action:

See the NCL programmer Guide to determine the appropriate action for this return code.

IPLO8228**IPLOG PURGE failed RC= P1****Reason:**

An NDB PURGE command for the IPLOG failed with RC= *P1* .

System Action:

Processing terminates, and the logger is not restarted.

User Action:

See the NCL Programmer Guide to determine the appropriate action for this return code.

IPLO8229

Unable to process IPLOG status is P1

Reason:

The IPLOG could not be processed because an NDB START command has not been issued or has failed. The meaning of status *P1* is described in message *N89503* .

System Action:

Processing terminates.

User Action:

Check the IPFILES initialization log to determine the appropriate action

IPLO8230

IPLOG Record deletion processing FAILED.

Reason:

The IPLOG record deletion processing has failed.

System Action:

Processing terminates.

User Action:

Check the IPFILES Initialization Log for details of the failure and determine the appropriate action.

IPLO8231**IPLOG BACKUP Unable to rename the current dataset****Reason:**

During IPLOG START or automatic REORG, it was determined that the current dataset is no longer usable. An attempt was made to backup and rename the current IPLOG but the new name is already in use. The backup dataset name would have the format:

&ZDNSQLCL.&ZJOBNAME.IPLOG.annnv

where:

&ZDNSQLCL = value of the local dataset qualifier as set in the DSNQLCL JCL parameter
&ZJOBNAME = jobname of the NetMaster region
a = is an alphabetic character from A to J and is indexed by the last digit of the current year + 1
nnn = current Julian day
v = version number from 0 to 9

System Action:

Processing terminates with the logger processing unable to write records to IPLOG but SMF processing continues.

User Action:

Specify a new IPLOG dataset in the IPFILES parameter panel.

IPLO8232**IPLOG BACKUP Unable to determine VSAM component names****Reason:**

The VSAM DATA and INDEX component names of the current IPLOG could not be determined from an IDCAMS LISTCAT.

System Action:

Processing terminates with the logger processing unable to write records to IPLOG but SMF processing continues.

User Action:

Specify a new IPLOG dataset in the IPFILES parameter panel.

IPLO8233

IPLOG BACKUP: P1

Reason:

This is an IDCAMS message produced during renaming of the IPLOG.

System Action:

Processing continues.

User Action:

None.

IPLO8234

IPLOG P1 in progress since P2 P3

Reason:

IPLOG is undergoing database maintenance which requires exclusive control. No further action is possible.

System Action:

The current request waits until exclusive control is released.

User Action:

None.

IPLO8235

IPLOG BACKUP Unable to create a new dataset

Reason:

During IPLOG START or automatic REORG, it was determined that the current dataset is no longer usable. An attempt to define a new IPLOG dataset failed.

System Action:

Processing terminates with the logger processing unable to write records to IPLOG but SMF processing continues.

User Action:

Review the initialization log to determine the cause of the failure or specify a new IPLOG dataset form the IPFILES parameter display panel.

IPLO8236**IPLOG P1 dataset P2****Reason:**

The IPLOG dataset has been *RENAMED* or *RESTORED* to *P2* .

System Action:

Processing continues.

User Action:

None.

IPLO8237**IPLOG resizing in progress****Reason:**

The IPLOG is being resized. The new size is determined by the product of the average record length and the total number of records rounded up to the next megabyte.

System Action:

Processing continues with records being cached during resizing.

User Action:

None.

IPLO8238**IPLOG started successfully****Reason:**

An NDB START command for the IPLOG completed without errors.

System Action:

None

User Action:

None

IPLO8239

IPLOG not available: *P1*

Reason:

The IPLOG file is not available to process an IMPORT request due to one of the reasons indicated by *P1*.

System Action:

Processing terminates.

User Action:

To enable IPLOG:

1. Enter /PARMS to display the Customizer panel.
2. Enter L beside \$IP IPFILES.
3. Review the initialization log for error messages that caused IPLOG to be unavailable for processing. If necessary, supply the parameter group with an appropriate IPLOG Event History Dataset.
4. Press F6 (Action) to restart the IPLOG Event History data set.
5. Retry the IMPORT processing for IPLOG.

IPLO8240

NDB error: Action=*P1* NDBRC=*P2* *P3*

Reason:

An error occurred when trying to execute an IMPORT request against the source described in action *P1*. The corresponding NDB return code *P2* and optional error information *P3* is shown.

System Action:

Processing terminates.

User Action:

For more information about NDB Response Codes and corresponding error information, see the *NCL Programmer Guide*.

For further assistance, contact Technical Support.

IPLO8241**IPLOG import processing started****Reason:**

The IPLOG import process started.

System Action:

Import processing continues.

User Action:

None.

IPLO8242***P1* records imported to IPLOG****Reason:**

The import process wrote *P1* records to the IPLOG data set.

System Action:

The import process continues.

User Action:

None.

IPLO8243**IPLOG import completed****Reason:**

The import process completed.

System Action:

Processing terminates.

User Action:

None.

IPLO8244

IPLOG import failed

Reason:

The import process failed with the preceding message, which indicates the cause of the failure.

System Action:

Processing terminates.

User Action:

Review the preceding error messages to determine the reason for the failure and retry the request when appropriate.

IPLO8245

IPLOG data set not compatible with current release

Reason:

Initialization for event logging is incomplete because the supplied data set is not compatible with the current release of the product.

System Action:

Logging continues without a log data set. SMF records are written if SMF logging is enabled; otherwise, all records are discarded.

User Action:

To enable event logging to IPLOG:

1. Define an IPLOG data set using the attributes as supplied by the installation JCLs for the current release of the product.
2. Press F6 (Action) to implement the new IPLOG data set.

If you want to retain the records from an earlier version of IPLOG, perform the following additional steps:

1. Issue the command CMD to open a Command Entry panel.
2. Issue the following command:

```
$IPL082Z ACTION=IMPORT DSNAME=old_IPLOG_dataset_name
```

IPLO8246**P1 duplicate records detected during import****Reason:**

The import process detected *P1* duplicate records during IPLOG import processing.

System Action:

The duplicate records are rejected.

User Action:

None.

IPLO8301**IPLOG Monitor is already running****Reason:**

An attempt was made to start the IPLOG Monitor, but it is already running.

System Action:

Processing terminates.

User Action:

None

IPLO8302**IPLOG Logger not started****Reason:**

An attempt to query the status of the IPLOG failed because it is not allocated or the Logger was disabled.

System Action:

Processing terminates.

User Action:

Review the initialization log to determine why logging has been stopped.

IPLO8303

IPLOG Reorg was not successful

Reason:

Automatic IPLOG reorganization processing has failed.

System Action:

Process terminates and re-scheduled at the next monitoring cycle.

User Action:

Review the IPFILES Initialization log to determine the cause of the failure.

IPLO8304

IPLOG P1 Component utilization P2 extents

Reason:

The IPLOG *P1* component currently has a utilization space of *P2* extents.

System Action:

The IPLOG Monitor continues processing.

User Action:

None.

IPLO8305

No significant space reclaimed: DU(P1) IU(P2) T2(P3) extents

Reason:

The IPLOG Monitor determined that no significant space was reclaimed after an automatic REORG was performed. The DU(*P1*) and IU(*P2*) values display the data and index utilization respectively after the completion of the REORG.

System Action:

Processing continues. At the next REORG, the file will be resized,

User Action:

Review space utilization. If necessary, reallocate the IPLOG with more space or schedule a deletion of old records.

IPLO8306**IPLOG Monitor mode is disabled****Reason:**

The IPLOG Monitor failed to initialize since it was not enabled.

System Action:

Processing terminates.

User Action:

Action (PF6) the initialization parameters for \$IP IPFILES to restart the IPLOG monitor.

IPLO8307**Automatic REORG aborted. Last reorg: P1****Reason:**

IPLOG Automatic Reorg has determined that the last execution did not alleviate the IPLOG full condition. A new reorganization will not be scheduled.

System Action:

Processing terminates and logging remains inactive.

User Action:

Schedule an archive to delete old records or allocate more space to the IPLOG.

IPLO8401

Invalid dataset or HFS file: *p1*

Reason:

Errors are detected in the Dataset or HFS file field. *p1* provides the following explanation:

Missing HFS File Name

Indicates that the specified text is not the name of a file.

Missing PDS Member Name

Indicates that the specified text does not have a PDS member name.

Invalid HFS Path

Indicates that the specified text does not conform to path naming rules.

Path does not exist or is not accessible

Indicates that the specified path either does not exist or is not available for processing the request.

Relative HFS directory path not supported

Indicates that a relative directory path was specified, which is not supported.

Invalid HFS File Name

Indicates that the specified text does not conform to file naming rules.

File is an HFS directory

Indicates that the specified name points to a directory.

Invalid PDS Member Name

Indicates that the specified text does not conform to PDS member naming rules.

DSN not Qualified

Indicates that the specified text does not contain a qualified data set name.

Dataset is not DSORG PS or PO

Indicates that the specified name points to a data set that is not valid for this function.

Dataset is not a PDS

Indicates that the specified name points to a data set that is not a partitioned data set.

Dataset LRECL < *n*

Indicates that the target data set has a logical record length less than n bytes.

System Action:

None.

User Action:

Correct the indicated error, and retry the operation.

IPLO8402

Invalid dataset or HFS file. You must enter the HFS path and file name

Reason:

The value entered is not a valid data set name, or a valid file path and name.

System Action:

The field is set in error.

User Action:

Specify a valid data set name or a valid file name.

IPLOLH01

IPLOG file has not been configured

Reason:

You have selected an IP History option but the IPLOG file is not configured. IP history is stored in the IPLOG file.

System Action:

Option not processed.

User Action:

Use Customizer (/PARMS) to configure the IPLOG file in the IPFILES parameter group.

IPL0LH02

REPORTING DATABASE IS CURRENTLY P1

Reason:

The Reporting database (IPLOG NDB) is in a status of *P1* and is not available for Reporting.

System Action:

Option not processed.

User Action:

Determine why the IPLOG NDB is not ACTIVE and resolve the problem.

IPLP9101

INVALID ACTION - P1

Reason:

The line print daemon command handling procedure does not recognize the action *P1* and is unable to process it.

System Action:

The request is rejected and the procedure terminates.

User Action:

Contact your local support representative.

IPLP9102

P1 COMMAND FAILED

Reason:

A portion of the file PRINT command to the Line Printer Daemon failed during processing. *P1* describes the particular section during which the failure occurred.

System Action:

The print request processing is terminated.

User Action:

Retry the operation and, if unsuccessful, report the problem to your network systems administrator.

IPLP9103**PRINT REQUEST COMPLETED****Reason:**

The print request command was successfully sent to the line print daemon.

System Action:

None.

User Action:

None.

IPLP9104**DEALLOCATE RC= P1 FDBK= P2****Reason:**

A line printer command process received an error indication while freeing TCP/IP resources. *P1* and *P2* are the return values from SOCKET DEALLOCATE.

System Action:

Processing continues.

User Action:

Report the error to your product support representative.

IPLP9105

**TRACE OF OUTBOUND DATA, LENGTH= P1 TRACE OF INBOUND DATA,
LENGTH= P1 P1 P2 P3 P4 P5 * P6***

Reason:

A line print command process has been started using TRACE=YES. The message text is one of the three indicated formats. The first two formats are heading lines that display the direction relative to the terminal of the data flow and *P1* its length. The third format is a dump of the datastream that is repeated until the entire datastream is displayed. The fields are:

P1 - The offset into the datastream

P2-P5 - The hexadecimal display of the ASCII characters

P6 - The EBCDIC character form of the data

Note: When data has been entered using the Hide function of the fullscreen interface or using TRACESUP=YES, the datastream is replaced by the characters '**SUPPRESSED**'.

System Action:

None.

User Action:

Use the trace output to verify that session operation is as desired.

IPLP9106

CONNECTION REFUSED - PRINTING SERVICES MAY BE STOPPED

Reason:

A request to connect to the line print daemon was refused by the host. This is usually because the print services process on the host is not active or is not installed.

System Action:

The request is terminated.

User Action:

Determine if printing services are available at the host. If not available contact your network administrator to activate them.

IPLP9107**TCP/IP PRINT SERVICES UNAVAILABLE, HOST P1 DOWN****Reason:**

A request for TCP/IP print services sent to host *P1* was unable to be serviced because the host machine is down.

System Action:

The request is terminated.

User Action:

Advise your system administrator of the host machines problem.

IPLP9108**TCP/IP PRINT SERVICES UNAVAILABLE, HOST P1 UNREACHABLE****Reason:**

A request for TCP/IP print services sent to host *P1* was unable to be serviced because the host machine is unreachable.

System Action:

The request is terminated.

User Action:

Advise your system administrator of the problem with the host machine.

IPLP9109**IPv6 socket support not enabled on P1****Reason:**

An LPD request cannot proceed. The target address is IPv6, but the sockets API in region *P1* supports IPv4 addresses only.

System Action:

The action terminates.

User Action:

Check the SOCKETS parameter group (/PARMS) in the *P1* region. For IPv6 support, the TCP/IP Software Type must specify IBMV6.

IPLP9114

P1 FAILED, RC= P2 FDBK= P3 ERRNO= P4, P5

Reason:

A line print request SOCKET verb has indicated an error condition. *P1* is the verb which failed. *P2*, *P3* and *P4* indicate the error received. *P5* is the interpretation of the error code indicating the reason for the failure.

System Action:

The line print request process is terminated.

User Action:

Use the error information to determine the cause of the error. If necessary restart the session.

IPLP9115

TCP/IP NOT ACTIVE

Reason:

A line print command process did not start because TCP/IP services are not active.

System Action:

None.

User Action:

Use the SHOW TCPIP STATUS command to determine the state of the Interface. If necessary issue the TCPIP START command to activate the interface.

IPLP9116

LINE PRINT CONNECTION TO P1 TIMED OUT

Reason:

The line print command connection request did not receive a response from the peer host within the one minute limit.

System Action:

The line print process terminates.

User Action:

Use the PING command to determine if the peer host is reachable.

IPLP9117**LPD CONNECTION TO P1 CLOSED BY PEER****Reason:**

The line print command connection was closed by the peer host.

System Action:

The line print command process terminates.

User Action:

Use the PING command to determine if the peer host is reachable.

IPLP9118**P1 FAILED, RC= P2 FDBK= P3 VENDOR ERRNO= P4****Reason:**

A Line Print request SOCKET verb has indicated an error condition. *P1* is the verb which failed. *P2*, *P3* and *P4* indicate the error received.

System Action:

The Line Print request process is terminated.

User Action:

Use the error information to determine the cause of the error. If necessary restart the session.

IPLP9119**P1 FAILED, REQUEST TIMED OUT****Reason:**

The line print command connection request was not responded to by the peer host before the wait interval expired.

System Action:

The line print process terminates.

User Action:

Use the PING command to determine if the peer host is reachable.

IPLP9120

DELETE REQUEST FOR P1 ON P2 FAILED

Reason:

The request to delete the print queue entry *P1* was rejected by the print server. This may be because the requester does not have sufficient authority at the *P2* print server.

System Action:

The print request processing is terminated.

User Action:

Retry the operation and, if unsuccessful, report the problem to your network systems administrator.

IPLP9121

DELETE REQUEST ACCEPTED

Reason:

The delete print queue entry request command was successfully sent to and accepted by the Line Print Daemon.

System Action:

None.

User Action:

None.

IPMB0001

Option ' P1' is not valid on this line

Reason:

A line command was entered against a record that does not support the command.

System Action:

The command is rejected.

User Action:

Choose a different line command.

IPMB0002**' P1' is only valid for P2****Reason:**

A line command was entered against a record that does not support the command.

System Action:

The command is rejected.

User Action:

Choose a different line command. To display valid line commands, enter ? next to the record.

IPMB0003**'DELETE' is not allowed on the first line****Reason:**

The 'DELETE' command was requested against the first entry in the list. This is not allowed as the only way to recover other deleted entries is by issuing a GetNext request against the first entry.

System Action:

The command is rejected.

User Action:

Choose a different line command.

IPMB0004**No valid Host Name or IP Address provided****Reason:**

A request was made to initiate the MIB browser but no valid host name or IP address was passed to it. Thus the browser cannot determine what device is to be browsed.

System Action:

The MIB browser does not initialize.

User Action:

Provide a valid host name or IP address and retry.

IPMB0005

No MIBs have been loaded

Reason:

If the MIB browser has not been passed one or more OIDs with which to prime its display it will normally present a list of loaded MIBs from which the user can select the MIBs whose OIDs are to be used to prime the display. This message indicates that no MIB definitions have been loaded and were therefore not available to be selected.

It also means that the browser will not be able to make an intelligent interpretation of the OIDs that are eventually displayed.

System Action:

The MIB browser continues with limited intelligence.

User Action:

If you require a more intelligent display then proceed to the MIB Administration display (/MIBD) and load the MIBs that you require then restart the browser.

IPMB0006

GetNext Amount must be a number between 1 and 100 inclusive

Reason:

You have requested the GetNext, GetTable, or Skip line command, or the Walk primary command, but you have specified an invalid GetNext amount. The GetNext amount must be a number between 1 and 100, inclusive. This value is used by the GetNext action to limit the number of Object IDs requested. The GetTable action uses this value to limit the size of the GetNexts it issues when populating a table. The Skip action is a GetNext action that begins with the first object after the current table or group. The Walk command is a GetNext action performed on the last object in the current MIB Browser.

System Action:

The user request is not actioned.

User Action:

Change the GetNext amount to a value between 1 and 100 inclusive and retry the requested action.

IPMB0007**Possible SNMP security violation, type 'CHGSEC' to change details.****Reason:**

An SNMP request has resulted in an IPSNPK09 message which indicates either that SNMP is unavailable on this host or that the SNMP security details supplied with the request did not warrant authorization (in which case the request fails).

System Action:

The SNMP request fails with an IPSNPK09 message.

User Action:

If SNMP is available on the host, then try typing CHGSEC on the command line to change your user-level SNMP security details.

IPMB0009**There are no OIDs in the MIBinsight browser****Reason:**

The MIBinsight browser does not contain any OIDs for browsing, that is, it is an empty list.

System Action:

The MIBinsight browser continues but no browsing can be done until the browser obtains at least one OID.

User Action:

Issue one of the following primary commands to add OIDs to the browser:

ADDMIB - Adds OIDs from a compiled MIB definition

FIRST - Adds and gets the value for the first OID in the device MIB

OID - Adds a specific OID to the browser (the OID must be provided as a parameter on the command)

WALK - Starts walking through the MIB (this gets the first set of OIDs)

IPMB0010

MIB Browser list is too big

Reason:

The 3270 MIB browser can display a maximum of 9998 list items. This includes MIB objects, groups, tables, and table sort groupings. Your current browser session has more than 9998 items to display. This is not possible.

System Action:

List formatting stops when 9998 items are formatted for display.

User Action:

Hide (collapse) or delete any unnecessary objects to display objects beyond the end of the list.

IPMB0011

OID command requires a valid OID as a parameter.

Reason:

The OID command adds a specific OID to the MIBinsight Browser; therefore, it requires a valid OID as a parameter, otherwise no OID is added.

System Action:

The command is rejected.

User Action:

Include a valid OID as a parameter on the OID command.

IPMB0012

' P1' is not valid for P2

Reason:

A line command was entered against a record that does not support the command.

System Action:

The command is rejected.

User Action:

Choose a different line command. To display valid line commands, enter ? next to the record.

IPMB0013**Initial OID is not valid****Reason:**

The initial Object ID provided to the MIBinsight Browser is not a valid Object ID.

System Action:

The MIBinsight Browser continues but does not add the requested Object ID to its display.

User Action:

Restart the MIBinsight Browser and provide a valid Object ID. Alternatively, use the OID command to add a valid Object ID to the MIBinsight Browser display.

IPMB0014**IPv6 socket support not enabled on *P1*****Reason:**

An SNMP request cannot proceed. The target address is IPv6, but the sockets API on region *P1* supports IPv4 addresses only.

System Action:

The action terminates.

User Action:

Check the SOCKETS parameter group (/PARMS) on region *P1*. For IPv6 support, the TCP/IP Software Type must specify IBMV6.

IPMB0101

No object ID key provided

Reason:

A request was made to the MIB Browser Data Manager to return information for an OID but no OID key was passed to the Data Manager. This should never occur, if it does it would indicate a problem with the MIB Browser

System Action:

The MIB Browser Data Manager returns nothing.

User Action:

Contact your support personnel and pass them the details of your MIB Browser session to see if they can replicate the problem.

IPMB0102

MDO error. MDO= P1, Map= P2, Return-code= P3, Feedback-code= P4

Reason:

An error occurred performing an ASSIGN of an MDO. The MDO is identified by P1 , the Map is identified by P2 , the MDO return code is identified by P3 and the MDO Feedback value is identified by P4 .

System Action:

The procedure terminates.

User Action:

Contact your system administrator.

IPMB0103**No user security information available****Reason:**

The MIB Browser encountered an error when trying to fetch the user's SNMP security information.

System Action:

The MIB Browser will continue the SNMP request using default information

User Action:

Update your SNMP security information using the facility provided. If you are using the 3270 MIB Browser interface then type the 'CHGSEC' command at the command line and press <ENTER>. If you are using the MIB Browser via the NetMaster web interface then click on the 'Change user security details' link.

IPMB0104**Error saving user SNMP security information. Feedback-code= P1****Reason:**

The MIB Browser encountered an error when trying to save the user's SNMP security information. The error feedback code is *P1*.

System Action:

The MIB Browser will continue to function using default SNMP security.

User Action:

Contact your system administrator.

IPMB0105

MIB object updated. IP address= P1, OID= P2, Value= P3, User= P4

Reason:

The value of the MIB object indicated by the Object Id in *P2* has been successfully changed to the value shown in *P3* in the MIB of the device whose IP address is *P1* by user *P4*.

This is simply an informational message to provide an audit trail.

System Action:

None.

User Action:

None.

IPMB0106

P1 request returned ENDOFMIBVIEW condition

Reason:

A GetNext, GetTable, Skip, or Walk request has reached the end of this device's MIB.

System Action:

None.

User Action:

Do not issue any further GetNext, GetTable, Skip, or Walk commands because there are no more OIDs available in the device's MIB.

IPMB0107**No data returned for this generic OID****Reason:**

A GetGeneric (GetTable) request returned no OIDs that match the generic OID provided. This is probably because a MIB definition was loaded into the browser that contains tables and SNMP levels that do not exist in this device's MIB.

System Action:

No OIDs are returned.

User Action:

Do not issue Get requests for OIDs in this table or SNMP level. We recommend that you delete the table or SNMP level from the MIBinsight browser.

IPMB0108**Table too large, only partial content returned****Reason:**

A GetGeneric (GetTable) request has returned 10,000 objects and there are more.

System Action:

The request terminates when 10,000 objects are returned.

User Action:

This table is extremely large. Be careful when you perform further GetTable or GetNext requests for this table.

The 3270 MIB browser supports a maximum of 32,767 sort entries (objects, groups, and so on), but displays a maximum of 9,998 lines of output only. The WebCenter MIB browser supports a maximum of 500 objects (plus SNMP groups and sort groupings). After 500 objects are browsed, no more objects are added to the MIB browser until you create space by deleting unwanted objects.

IPMB0109

Browser list is incomplete, too many OIDs to sort.

Reason:

Browsing the objects in this MIB has resulted in a list that contains more than 32,767 sort entries.

System Action:

The sorting process has stopped at the 32,767th entry. The resulting list is incomplete.

User Action:

Delete some unwanted objects from your browser list.

IPMB0110

All OIDs returned are contained within your starting OID

Reason:

This is an information message. All OIDs returned by a GetNext request begin with the initial OID. This indicates that all OIDs are probably in a large SNMP Group or Table.

System Action:

The OIDs and their values are returned correctly.

User Action:

If the GetNext is issued for a collapsed SNMP Group or Table, any subsequent GetNexts at the same level return the same OIDs. Try using a GetTable command to populate the entire level, or the Skip command if you are not interested in this level. Alternatively, expand the Group or Table and continue issuing GetNexts from OIDs in the structure.

IPMB0111**Table fully populated****Reason:**

This message is information only. A GetGeneric (GetTable) request has finished populating a table or SNMP group.

System Action:

The request completes.

User Action:

If the table or group is collapsed, expand it to view all objects in this level.

IPMB0112**MIB Browser data table is full****Reason:**

The web interface for the MIBinsight Browser limits the number of objects that can be browsed to 500. This maintains a reasonable response time on the web. The browser can display more than 500 lines due to groups and sort groupings being inserted.

System Action:

No new OIDs are added to the display.

User Action:

If you want to browse more OIDs, you must delete unwanted OIDs. Alternatively, use the 3270 interface for the MIBinsight Browser.

IPMB0113**P1 objects deleted****Reason:**

A Delete OID or Delete MIB command has resulted in *P1* objects being removed from the MIBinsight Browser.

System Action:

None.

User Action:

None.

IPMB0201

Cannot get this object's SNMP details, update is not allowed

Reason:

You tried to update an object value, but the MIB browser could not get the SNMP object type which is required for update. Either the object does not exist within the run-time MIB or SNMP access to this object is either unavailable or unauthorized.

System Action:

The MIB browser prevents update access to this object.

User Action:

Determine why the SNMP information could not be accessed. Is an SNMP agent running on the device being browsed? Have the required security levels been set up correctly? If not, fix these issues and try again.

IPMB0202

MIB object P1 updated successfully.

Reason:

You successfully updated the value for MIB object *P1*.

System Action:

The MIBinsight browser returns you to either the main browser display or the 'Object Details' display in browse mode, showing the new value for the MIB object.

User Action:

None.

IPMB0203**Value field can only contain an integer****Reason:**

You tried updating the value of a MIB object with a value other than an integer when the syntax of the object indicates that it can only contain an integer value (e.g. INTEGER, TruthValue, TestAndIncr, etc.)

System Action:

Update is rejected.

User Action:

Enter a valid integer value and try again.

IPMB0301**The CHGSEC command lets you change security details while browsing.****Reason:**

This is an informational message to remind you that you can type CHGSEC on the command line while browsing a MIB if you need to change your user-level SNMP security details for the host whose MIB you are browsing.

System Action:

None

User Action:

None

IPMB0303**No Host Name or IP Address provided****Reason:**

A request was made to update MIB browser user security details, but no host name or IP address was passed on the request. Therefore the correct user security details cannot be determined.

System Action:

The MIB browser user security details interface terminates.

User Action:

Provide a host name or IP address and retry.

IPMB0304

P1 is required

Reason:

The Security Level value indicates either authentication or privacy. The field specified in *P1* is required.

System Action:

The field is highlighted.

User Action:

Enter a value in field *P1* .

IPMB0305

Invalid value for P1. Must be P2

Reason:

An invalid value has been entered in field *P1* . Correct values for this field are described in *P2* .

System Action:

The value is rejected.

User Action:

Correct the value.

IPMB0306

P1 is required when P2 is P3

Reason:

The field *P1* has been omitted. This field is required when field *P2* has the value *P3* .

System Action:

The omitted field is highlighted.

User Action:

Enter a value in the field.

IPMB0308**Reenter P1****Reason:**

You have entered a password in a non-display field. This message prompts you to reenter the password for confirmation.

System Action:

Processing continues.

User Action:

Reenter the password.

IPMB0309**Password not the same****Reason:**

The password value entered for confirmation differs from the value first entered.

System Action:

The password value is rejected.

User Action:

Reenter the password.

IPMB1001**No MIB Import/Export Dataset available****Reason:**

An attempt to access the MIB import/export dataset failed. No import/export dataset is allocated to the region.

System Action:

The MIB compile may fail.

User Action:

The MIB import/export dataset (IPMIBX) is defined in the IPFILES parameter group. Review this parameter group and ensure that a dataset is defined for IPMIBX.

IPMB1002

IPMIBX Data Set Error detected: Action= P1 Error Code= P2

Reason:

An error occurred when trying to perform a *P1* action on the IPMIBX Data Set. The Error Code is *P2* .

System Action:

The MIB Compilation will continue processing, but errors may result.

User Action:

The Error Code *P2* is the RPLERRCD value returned by the VSAM macro. Look up the RPLERRCD value in the IBM Manual 'DFSMS Macro Instructions for Datasets'. If the cause of the problem is not evident, contact your System Administrator. After addressing the Data Set problem the MIB Compilation should be retried.

IPMB1101

Compiled MIB P1 has been saved

Reason:

The compiled data for MIB *P1* has been saved successfully.

System Action:

No further action.

User Action:

No action.

IPMB1102**No data in file****Reason:**

An attempt was made to read MIB data from an external file but no data was returned. The file is either an empty HFS file or sequential file, or a PDS file.

System Action:

Request fails and control is returned to the user.

User Action:

Make sure you have specified the correct file name for the external source file. The source file must be a HFS file or a sequential file containing data, or a PDS member containing data.

IPMB1103**No P1 source exists for P2 P3****Reason:**

The MIB "Browse Source" function was requested but no source was found for the saved MIB definition specified or for the external file provided

System Action:

Request fails and control is returned to the user.

User Action:

Make sure you have specified the correct file name for an external browse source request from the add, copy or compile MIB panels.

IPMB1203**Value in 'External Source File' is not a valid HFS file name or DSN****Reason:**

An invalid HFS filename or DSN *P1* was specified in the *External Source File* field.

System Action:

None.

User Action:

Correct the HFS filename or DSN and retry. The file must be a HFS file, a sequential dataset or a PDS member.

IPMB1204

' P1' is a required field

Reason:

No value was provided in field *P1* . It is a required field.

System Action:

None.

User Action:

Provide the necessary data and retry the action.

IPMB1205

'Batch Compile Order' must be a number between 1 and 9 inclusive

Reason:

Either no value or an invalid value was provided in the "Batch Compilation Order" field. This field is a required field and must be an integer between 1 and 9 inclusive.

System Action:

None.

User Action:

Provide the necessary data and retry the action.

IPMB1206

No MIB Import/Export dataset has been defined

Reason:

'Export Definitions' cannot be set to 'YES' if no MIB Import/Export dataset has been defined.

System Action:

Validation fails.

User Action:

Update the \$IP IPFILES parameter group in Customizer and specify a valid dataset in the MIB Import/Export dataset field.

IPMB1301**Option ' P1' is not valid on this line****Reason:**

A line command was entered against a record that does not support the command.

System Action:

The command is rejected.

User Action:

Choose a different line command.

IPMB1302**' P1' is only valid for P2****Reason:**

A line command was entered against a record that does not support the command.

System Action:

The command is rejected.

User Action:

Choose a different line command.

IPMB1303**The ADDMIB command lets you select extra MIBs while browsing.****Reason:**

This is an informational message to remind you that you can type ADDMIB on the command line while browsing a MIB if you wish to add more MIB definitions to your MIB browser.

System Action:

None

User Action:

None

IPMB1401

Option P1 is not valid on this line

Reason:

A line command was entered against a record that does not support the command.

System Action:

The command is rejected.

User Action:

Choose a different line command.

IPMB1402

' P1' is only valid for P2

Reason:

A line command was entered against a record that does not support the command.

System Action:

The command is rejected.

User Action:

Choose a different line command.

IPMB1403

' P1' has ACCESS level of NOT-ACCESSIBLE

Reason:

An object with a minimum ACCESS level of NOT-ACCESSIBLE cannot be used as a monitoring attribute.

System Action:

The request is rejected.

User Action:

None.

IPMB1404**No accessible qualifying objects****Reason:**

A request for a list of qualifying objects has resulted in an empty list because all possible qualifying objects has a minimum ACCESS level of NOT-ACCESSIBLE.

System Action:

None.

User Action:

None.

IPMB1801**MIB Batch Compiler starting****Reason:**

The MIB batch compiler is starting.

System Action:

The MIB batch compiler proceeds.

User Action:

None.

IPMB1802**MIB Batch Compiler finished****Reason:**

The MIB batch compiler has finished its processing.

System Action:

The MIB batch compiler ends.

User Action:

None.

IPMB1803

Compiling MIB P1, order= P2

Reason:

The MIB batch compiler is processing the MIB indicated by *P1* . The current batch compilation order is indicated by *P2* .

System Action:

The MIB batch compiler continues.

User Action:

None.

IPMB1804

MIB P1 compiled, rc= P2

Reason:

The MIB batch compiler has finished compiling the MIB indicated by *P1* . The return code is indicated by *P2* .

System Action:

The MIB batch compiler continues.

User Action:

None.

IPMB1805

MIB Batch Compiler submitted to BSYS, see activity log for details

Reason:

The MIB batch compiler has submitted itself to the background system region for processing. All messages from the batch compiler will be recorded in the activity log.

System Action:

The MIB batch compiler continues.

User Action:

None.

IPMB1806**Determining compilation order****Reason:**

The MIB batch compiler is beginning its first pass through all MIB definitions to determine the compilation order.

System Action:

The MIB batch compiler continues.

User Action:

None.

IPMB1807**Saving import dependencies for MIB P1****Reason:**

The MIB batch compiler is processing the MIB indicated by *P1* and saving its IMPORT information so that the compilation order can be determined.

System Action:

The MIB batch compiler continues.

User Action:

None.

IPMB1808**Another MIB Batch Compiler is currently running, request rejected****Reason:**

A request was made to start the MIB Batch Compiler but another one was already running in the background system region. As a result this request is rejected.

System Action:

The request to start the MIB Batch Compiler is rejected.

User Action:

Wait for the current MIB Batch Compiler to finish and then start the new MIB Batch Compiler.

IPMB1809

MIB Batch Compiler not started, lock unavailable

Reason:

The MIB Batch Compiler was successfully submitted to the background system region but it could not start as the exclusive lock was unavailable. The most likely reason for this is that 2 batch compiles were submitted at the same time and only 1 managed to obtain the lock.

System Action:

This instance of the MIB Batch Compiler does not continue.

User Action:

Ensure the reason for the termination is because another batch compile is already running in the background system region.

IPMB2001

Incomplete data passed on P1 call to MIB file handler

Reason:

The parameters passed on a *P1* call to to MIB file handler were in error. Either no MIB name was passed, or the MDO containing header information is empty.

System Action:

The request is rejected.

User Action:

Contact your systems administrator.

IPMB2002

MIB record P1 currently locked by P2

Reason:

An attempt to compile or delete MIB *P1* has failed. The MIB is currently being maintained by user *P1*.

System Action:

The request is rejected.

User Action:

Wait until the other user has completed his update and try again.

IPMB2003**File error on P1: P2 of P3 Message: P4****Reason:**

An error has occurred on an I/O operation on file *P1* .
P2 is the file operation that was attempted.
P3 is the key of the record.
P4 is the message returned by the operation.

System Action:

The request fails.

User Action:

If the cause of the problem is not evident, contact your systems administrator.

IPMB2004**File error on P1: P2 RC= P3 Error= P4 Key= P5****Reason:**

An error has occurred on an I/O operation on file *P1* .
P2 is the file operation that was attempted.
P3 is the return code from the operation.
P4 is the VSAM error code.
P5 is the full or partial key used.

System Action:

The request fails.

User Action:

The error code *P4* is the RPLERRCD value returned by the VSAM macro. Look up the RPLERRCD value in the IBM Manual 'DFSMS Macro Instructions for Datasets'. If the cause of the problem is not evident, contact your systems administrator.

IPMB2005

MIB P1 not found

Reason:

An attempt to locate MIB *P1* has failed. The MIB does not exist in any concatenated MODS file.

System Action:

The request is rejected.

User Action:

None

IPMB2006

MODS access failure: P1

Reason:

An attempt to select a MODS file in order to access MIB data failed. *P1* shows details of the failure.

System Action:

The request is rejected.

User Action:

Report this error to your systems administrator.

IPMB2007

Delete rejected. MIB P1 not at primary level (MODSUSR)

Reason:

An attempt to delete MIB *P1* has been rejected. The MIB is not located in the top level of the MODS concatenation. MIBs in lower-level MODS files can be updated/deleted by authorized users only, via the administration panels.

System Action:

The request is rejected.

User Action:

None

IPMB2008**List failed. Variable P1 Error FDBK= P2****Reason:**

An attempt to build a list of MIBS failed. An error occurred on a vartable *P1* operation. *P2* is the feedback from the operation.

System Action:

The request fails.

User Action:

Contact your systems administrator.

IPMB2010**MIB file P1 P2 at P3 on P4 by P5, MODS file P6****Reason:**

This is an audit message showing activity on the MIB repository. MIB file *P1* had the action *P2* issued against it at time *P3* on date *P4* by user *P5* . The MODS file used was *P6* .

System Action:

None

User Action:

None

IPMB3201**Invalid value for P1. Must be P2****Reason:**

An invalid value has been entered in field *P1* . Correct values for this field are described in *P2* .

System Action:

The value is rejected.

User Action:

Correct the value.

IPMB3202

Attribute P1 already exists in activity MDO

Reason:

An attempt was made to add a new attribute with the same name as a pre-existing attribute.

System Action:

The attribute is not added.

User Action:

Change the attribute name and try again.

IPMB3203

Attribute P1 has been successfully stored

Reason:

An attribute was successfully stored in the activity MDO.

System Action:

The attribute is added to the activity.

User Action:

None.

IPMB3204

Only ENUMERATED attributes can be defined for syntax P1

Reason:

An attempt was made to define an attribute with an attribute type other than ENUMERATED from a MIB object whose syntax is *P1* . Only MIB objects whose syntax is either Counter, Counter32, Counter64, Gauge32, INTEGER or Integer32 can be defined as a non-ENUMERATED type.

System Action:

The value is rejected.

User Action:

Correct the value.

IPMB3401**Unable to determine IP address for resource P1****Reason:**

MIBinsight attribute sampling failed for resource *P1* because no IP address could be determined for the resource.

System Action:

MIBinsight attribute sampling fails for this resource.

User Action:

Contact your systems administrator.

IPMB3402**SAMPLE ERROR : Non-numeric value for an attribute defined as type P1****Reason:**

The sampling application has returned a non-numeric value for an attribute that has been defined as type P1 . Only attributes whose type is ENUMERATED can have non-numeric values.

System Action:

The value is rejected.

User Action:

Review the attribute definition and determine the correct sampling attribute type for the MIB attribute in error.

IPMB3403

Multiple values detected, Resource= P1 Attr= P2 Qual= P3 Value= P4

Reason:

A MIB attribute has returned numerous values for the same resource/attribute/qualifier combination. The Data Sampling Framework can only cater for one value per qualifier, per sample. The extra sample values are recorded in the transient log for reference.

System Action:

The extra samples are discarded after their value is written to the transient log.

User Action:

Review the attribute definition and determine whether a unique qualifier can be defined for this attribute.

IPMB3404

Multiple values detected, see transient log for resource P1

Reason:

A MIB attribute has returned numerous values for the same resource/attribute/qualifier combination. The Data Sampling Framework can only cater for one value per qualifier, per sample. The extra sample values are recorded in the transient log for reference through message IPMB3403. *P1* is the resource name for which multiple values were detected.

System Action:

The extra samples are discarded after their value is written to the transient log through message IPMB3403.

User Action:

View the transient log for resource *P1* and review all IPMB3403 messages. You may need to redefine the attributes reported in these messages and give them a qualifier with unique values.

IPMG1001**INVALID KEYWORD VALUE SPECIFIED, P1= P2****Reason:**

The call to the procedure failed because the keyword identified by *P1* had an invalid value identified by *P2* .

System Action:

The request is rejected.

User Action:

Contact your system administrator.

IPMG1002**NO GROUP SELECTED****Reason:**

No selection was made from a group pick list.

System Action:

None.

User Action:

None.

IPMG1003**GROUP P1 NOT DELETED, GROUP NOT EMPTY****Reason:**

You tried to delete an IP node monitor group that is used by IP nodes.

System Action:

The delete request is rejected.

User Action:

Use the *LM* (List All Members) action to view the IP nodes in the monitor group.

IPMG1004

RECORD NOT SAVED, NO CHANGES MADE

Reason:

You tried to file or save a definition that has not been changed. The requested action is not performed.

System Action:

The definition is not saved again.

User Action:

None.

IPMX0101

System P1 is not configured with PROD=TCPIP

Reason:

An attempt was made to access a NetMaster for TCP/IP function, but region *P1* has not been configured for that product.

System Action:

None.

User Action:

Contact your Systems Administrator. The RUNSYSIN member should be changed to include PROD=TCPIP.

IPMX0102

VFS P1 failed FILERC: P2 VSAM FDBK: P3 VFS KEY: P4

Reason:

The VFS operation identified by *P1* failed with FILERC *P2* and VSAM feedback code *P3* for the VFS key identified by *P4* .

System Action:

None.

User Action:

Contact Technical Support.

IPMX0103**VFS File Open failed - user is not authorized****Reason:**

An attempt to open the VFS file failed as the user does not have the authority to access the file.

System Action:

None.

User Action:

Contact Technical Support.

IPMX0104**Cannot update VFS file - user is not authorized****Reason:**

An attempt to update the VFS database failed as the user does not have update authority.

System Action:

None.

User Action:

Contact your Systems Administrator.

IPMX0105**P1 is not a valid extract dataset****Reason:**

The dataset name specified in the Extract Dataset name field either does not exist or is not the right format for an extract dataset.

System Action:

Option not processed.

User Action:

Ensure that the dataset specified has been allocated as a sequential dataset with a record format of VB and a record length of at least 502 bytes.

IPMX0106

2216 Router P1 is not known

Reason:

The data entered into the device name field is not the name of an IBM 2216 router defined to this system.

System Action:

Option not processed.

User Action:

Enter the name of a 2216 router (or '?' for a selection list) and retry the operation.

IPMX0107

Channel Card name P1 is not defined

Reason:

The data entered into the Channel Card Name field is not a defined channel card entry.

System Action:

Option not processed.

User Action:

Correct the field, or define the Channel Card, and retry the operation.

IPMX0108

Selection cancelled

Reason:

The selection list was exited without selecting an item.

System Action:

None.

User Action:

None.

IPMX0109**Function not supported for TCPaccess stacks****Reason:**

The requested function is not supported by CA TCPaccess CS.

System Action:

Processing of the function is terminated.

User Action:

None.

IPMX0110**TCP/IP sockets interface is not active - option not available****Reason:**

A requested menu option is not available because the TCP/IP sockets interface is not active.

System Action:

Request is rejected.

User Action:

To start the TCP/IP sockets interface, perform the following steps:

1. Review the SOCKETS Parameter group (/*PARM*). Verify that all the details are correct and then press PF6 to action the group.
2. If actioning the group fails, verify that the associated stack address space is available and completely initialized. Retry and action the parameter group.

IPMX0111**CTRACE Packet Tracing not available for TCPaccess stacks.****Reason:**

The selected link name uses TCPaccess as its primary stack but packet tracing using CTRACE is available for IBM stacks only.

System Action:

Request is rejected.

User Action:

For TCPaccess stacks, select a SmartTrace option.

IPMX0112

Address space is not a Telnet server

Reason:

The name specified in the Telnet Server Address Space Name field is not the name of a Telnet server defined to NetMaster. A Telnet server running in its own address space must be defined as an ASMON resource of type TNSERVER.

System Action:

Request is rejected.

User Action:

If the named address space is a Telnet server, update the ASMON definition (use /RADMIN.R). If your Telnet server runs as part of the stack address space, use the stack menu (/STACK or /CONFIG).

IPMX0113

Option not supported on backlevel link *P1*

Reason:

Link *P1* represents a backlevel region linked in migration mode. The selected option is not supported on the backlevel region.

System Action:

The request is rejected.

User Action:

Select a different link, or upgrade the remote region to the latest release.

IPMX0114**Function not available for stack *P1*****Reason:**

The requested function is not available for the indicated stack. The stack is defined to the system image, but the stack resource definition has Monitoring Activity set to OFF.

System Action:

Processing of the function is terminated.

User Action:**To update a STACK resource definition**

1. Enter **/RADMIN.R**, select the system image and the STACK resource class, and then enter **U** next to the stack resource definition you want to review.
2. Select the TCP/IP Stack General Description panel.
3. Update the Monitoring Activity field, and press F3 to save the change.

IPMX0115

***p1* is not a DB2 resource**

Reason:

The name, *p1*, in the Address Space Name field is not the name of a resource defined as a DB2 task. The name must be that of an ASMON resource of the DB2 type.

System Action:

The request is rejected.

User Action:

If the named address space is a DDF task, the resource is defined incorrectly.

To correct the definition

1. Enter **/RADMIN.R.**
The list of resource definition classes appears.
2. Specify the system image, and select ASMON.
3. Locate the resource definition for the task, and enter *U* next to the definition.
4. Select the General Description panel, and set the Address Space Monitor Type field to DB2.
5. Press F3 (File).

IPMX0116**No type DB2 resources defined in system image *p1*****Reason:**

A ? was entered in the Address Space Name field to list the defined DB2 resources, but no resources were found in the *p1* system image.

System Action:

The request is rejected.

User Action:

Enter the /RADMIN.R panel shortcut, set the system image, and select ASMON to see what resources are defined.

If your DDF task is listed, update the definition and change the Address Space Monitor Type field on the General Description page to DB2.

If your DDF task is not listed, press F4 (Add) on the Address Space Monitor List to create a resource definition.

IPMX0117**No *p1* resource defined in system image *p2*****Reason:**

The value *p1* in the Address Space Name field is not the name of a resource defined in the *p2* system image.

System Action:

The request is rejected.

User Action:

Enter ? in the Address Space Name field to see a list of defined DB2 resources.

If the name you are looking for is not listed, create the definition.

To create the definition

1. Enter **/RADMIN.R**.
The list of resource definition classes appears.
2. Specify the system image, and select ASMON.
The Address Space Monitor List appears.
3. Press F4 (Add) to create the definition, using the DB2 template.
4. Press F3 (File).

IPMX0118

p1* is not defined in system image *p2

Reason:

The value *p1* in the Address Space Name field is not the name of a resource defined in the *p2* system image. The TRS option is available only for resources defined in the system image.

System Action:

The request is rejected.

User Action:

Check that *p1* is entered correctly. If so, ask your administrator to add *p1* as an ASMON resource of the DB2 type to the *p2* system image.

IPMX0119

***p1* is not a valid DDF address space name**

Reason:

p1 does not meet the requirements of a DDF address space name. The name must have the format *ssid*DIST. Wildcards are not allowed.

System Action:

The request is rejected.

User Action:

Correct the address space name, and retry.

IPNM0101

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The TCP/IP monitor interface procedure \$IPNM01Z failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2*.

System Action:

The request is rejected.

User Action:

Report the error to your technical support representative.

IPNM0102**GROUP P1 NOT FOUND****Reason:**

The IPMON GROUP keyword specifies a group that is not defined.

System Action:

The request is rejected.

User Action:

Correct the group name entered on the GROUP keyword. If necessary use the TCP/IP Administration Monitor Group List to confirm the groups defined.

IPNM0103**GROUP P1 SET P2****Reason:**

The recording for a IP node monitor group has been modified. A value of ACTIVE indicates that all sampling for the IP nodes in the group has been started. A value of INACTIVE indicates that sampling will be stopped.

System Action:

The GROUP definition on the IPFILE is updated.

User Action:

Use the IPMON GROUP=name COLLECT=YES|NO command when required to stop or start monitoring.

IPNM0104**INVALID SNMP ATTRIBUTE REQUEST, FIELD= P1 VALUE= P2****Reason:**

A request to define an SNMP attribute to the IP Node Monitor was invalid. The field passed was *P1* and the invalid value for that field was *P2*.

System Action:

The request is rejected.

User Action:

Ensure that all the required fields have been set and that they are of the correct type.

IPNM0105

CANNOT OVERWRITE RESERVED ATTRIBUTE ID P1

Reason:

A request to define an SNMP attribute to the IP Node Monitor was invalid. The attribute ID specified is a system defined attribute and cannot be overwritten.

System Action:

The request is rejected.

User Action:

Specify a different attribute ID.

IPNM0106

SNMP ATTRIBUTE P1 DEFINED

Reason:

A request to define an SNMP attribute to the IP Node Monitor was successfully processed.

System Action:

The attribute is made available for use.

User Action:

None.

IPNM0107

SNMP OBJECT ID (OID) MUST END IN '.*' WHEN QUALIFIER IS SPECIFIED

Reason:

A request to define an SNMP attribute to the IP Node Monitor failed because a qualifier specification was present but the object ID requested did not have the '.*' qualifier indicator present.

System Action:

The request is rejected.

User Action:

Either specify the '.*' qualifier indicator in the OID field or do not specify the QUALIFIER field. Retry the request.

IPNM0108**SNMP QUALIFIER MUST BE SPECIFIED IF OBJECT ID (OID) ENDS IN
'.'****Reason:**

A request to define an SNMP attribute to the IP Node Monitor failed because the object ID had the '.' qualifier indicator present but a qualifier specification was not present.

System Action:

The request is rejected.

User Action:

Either remove the '.' qualifier indicator in the OID field or specify the QUALIFIER field. Retru the request.

IPNM0109**QUALIFIER ENUMERATED VALUES CANNOT BE SPECIFIED IF
QUALIFIER.OID IS NULL****Reason:**

A request to define an SNMP attribute to the IP Node Monitor failed because a qualifier enumerated value set was specified but no qualifier object ID was specified.

System Action:

The request is rejected.

User Action:

Either specify the qualifier object ID or remove the enumerated values for the qualifier.

IPNM0120

Unreachable destination host: ~P1

Reason:

The TCP/IP socket interface did not receive a normal response from the destination host identified by P1 and is deemed unreachable. This occurs for one of the following reasons:

- The specified destination host address is not powered on or does not exist.
- The IP route to the destination address is unusable due to a network outage.
- The packet size exceeds the maximum transmission unit (MTU) size allowed for an IP route.
- The response time wait has been exceeded for a PING or TRACEROUTE.

System Action:

No sample is taken and the NETSTATUS attribute is set to Timeout.

User Action:

Check the existence of the destination host. If you specified a packet size, try reducing the size or increase the response time wait if it is available. Check also that the route to the host is available and the host is active. A TRACERTE command is useful to determine the point where routing fails.

IPNM0121

TCP/IP sockets interface is not active

Reason:

A socket request cannot be completed because the TCP/IP sockets interface has terminated or never started.

System Action:

No sample is taken and the NETSTATUS attribute is set to Unknown.

User Action:

To start the TCP/IP sockets interface:

1. Enter /PARMS and review the SOCKETS Parameter group. Verify that all of the details are correct and then press F6 to action the group.
2. If actioning the group fails, verify that the associated stack address space is available and initialized, then action the parameter group.

IPNM0122**Socket request(~P1) error for ~P2****Reason:**

The TCP/IP socket interface returned a TCP/IP socket error where P1 indicates the failing socket request code and P2 describes the monitored attribute.

System Action:

No sample is taken and the NETSTATUS attribute is set to Error.

User Action:

Contact your System Administrator and provide the error details indicated for P2 attribute.

IPNM0123**Socket request(~P1) error for ~P2 action****Reason:**

The TCP/IP socket interface returned a TCP/IP socket error where P1 indicates the failing socket request code and P2 describes the requested SNMP action. This message is accompanied by an IPSNPK01 error message for a monitored MIB attribute.

System Action:

No sample is taken and the NETSTATUS attribute is set to Error.

User Action:

Contact your System Administrator and provide the error details in IPSNPK01 for a monitored MIB attribute.

IPNM0210

PINGRTT of ~P1 returned: RC(~P2) FDBK(~P3) SOCKETERRNO(~P4)

Reason:

During sampling of attribute PINGRTT for IPNODE, P1 ended with socket errors.

System Action:

No sample is taken.

User Action:

Contact your System Administrator and advise that a socket PING function ended with errors - RC *P2* , Feedback Code *P3* and Socket Error *P4*.

See the NCL Reference for a description of the &SOCKET verb return codes.

IPNM0211

No MDO map detected during sampling PINGRTT for ~P1

Reason:

Data sampling of PINGRTT for IPNODE P1 completed without an MDO map. This is probably due to an error in a socket call.

System Action:

No sample is taken.

User Action:

Contact your System Administrator.

IPNM0212**IPv6 socket support not enabled. Cannot ping *P1*****Reason:**

IPNODE monitoring of resource *P1* failed while attempting a ping. The IP address of the node is IPv6. The ping failed because the current sockets API supports IPv4 addresses only.

System Action:

The PINGRTT attribute for resource *P1* is set in error.

User Action:

Check the SOCKETS parameter group (/PARMS). For IPv6 support, the TCP/IP Software Type must specify IBMV6.

IPNM0214**PINGRTT Source Address is not a valid home address for *P1*****Reason:**

The PINGRTT source address is not a valid home address for the stack shown in *P1*. The source address is specified as part of the IP node resource definition. This error occurs because of one of the following reasons:

- The primary stack used by the region when the IP node was defined is different from the current stack.
- The stack configuration of home addresses has changed since the IP node was defined.
- The source address is a VIPA that is no longer owned by the current stack.

System Action:

The PINGRTT sample fails with a socket error.

User Action:

Determine the cause of the error, and review the value in the Source Address field of the IP node resource definition.

IPNM0310

TRACEROUTE of P1 returned: RC(P2) FDBK(P3) SOCKETERRNO(P4)

Reason:

During sampling of attribute NoOfHops for IPNODE P1 ended with socket errors.

System Action:

No sample is taken.

User Action:

Contact your System Administrator and advise that a socket TRACEROUTE function ended with errors - RC *P2* , Feedback Code *P3* and Socket Error *P4*.

See the NCL Reference for a description of the &SOCKET verb return codes.

IPNM0311

No MDO map detected during sampling of NoOfHops for ~P1

Reason:

Data sampling of NoOfHops for IPNODE P1 completed without an MDO map. This is probably due to an error in a socket call.

System Action:

No sample is taken.

User Action:

Contact your System Administrator.

IPNM0312**IPv6 socket support not enabled. Cannot traceroute *P1*****Reason:**

IPNODE monitoring of resource *P1* failed while attempting a traceroute. The IP address of the node is IPv6. The traceroute failed because the current sockets API supports IPv4 addresses only.

System Action:

The NoofHops attribute is set in error.

User Action:

Check the SOCKETS parameter group (/PARMS). For IPv6 support, the TCP/IP Software Type must specify IBMV6.

IPNM0313**Traceroute *P1* returned: *P2*****Reason:**

Monitoring of the *P1* IP node failed while attempting a traceroute. *P2* is the error condition returned from the traceroute.

System Action:

The NoofHops attribute is set in error.

User Action:

Review *P2* and correct the error.

IPNM0314

NoOfHops Source Address is not a valid home address for *P1*

Reason:

The NoOfHops source address is not a valid home address for the stack show in *P1*. The source address is specified as part of the IP node resource definition. This error occurs because of one of the following reasons:

- The primary stack used by the region when the IP node was defined is different from the current stack.
- The stack configuration of home addresses has changed since the IP node was defined.
- The source address is a VIPA that is no longer owned by the current stack.

System Action:

The NoOfHops sampling fails with a socket error.

User Action:

Determine the cause of the error, and review the value in the Source Address field of the IP node resource definition.

IPNR0501

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= *P1* VALUE= *P2*

Reason:

The site file (HOSTS.LOCAL) loader utility failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected.

User Action:

Correct your request and retry.

IPNR0502**INCORRECT IP ADDRESS P1 FOUND IN DSN P2 LINE NUMBER P3****Reason:**

The site file (HOSTS.LOCAL) loader utility encountered an invalid HOST statement reading the dataset *P2* the invalid address was *P1* the line number where it occurs is *P3*

System Action:

The address on this entry is ignored.

User Action:

Correct the HOSTS.LOCAL file, reset the loaded data by issuing the \$IPNR05Z ACTION=RELOAD command.

IPNR0503**VARTABLE P1 ERROR. TABLE= P2 KEY= P3****Reason:**

The site file (HOSTS.LOCAL) loader utility encountered an error while performing the action *P1 on the table P2 using key P3*.

System Action:

The current entry is ignored.

User Action:

Ensure the HOSTS.LOCAL file is in the correct format and reload the table using the \$IPNR05Z ACTION=RELOAD command.

IPNR0504**LOADED P1 ADDRESS ENTRIES AND P2 NAME ENTRIES FROM P3****Reason:**

The site file (HOSTS.LOCAL) loader utility has loaded entries from the file *P3*. *P1* address entries and *P2 NAME entries were loaded, based on* the HOST entries in the file.

System Action:

None.

User Action:

None.

IPNR0601

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The site file loader utility failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and *P2* was the invalid value.

System Action:

The request is rejected.

User Action:

Correct the request and retry the operation.

IPNR0603

HOST TABLE MEMBER DOES NOT EXIST IN DATASET P1

Reason:

The member containing host table entries does not exist in the TCPaccess configuration parms dataset.

System Action:

None.

User Action:

None.

IPNR0604

P1 ADDRESS ENTRIES AND P2 NAME ENTRIES LOADED FROM P3

Reason:

The site file loader utility has successfully loaded host name and address entries from the *P3* file. *P1* address entries and *P2* name entries were loaded based on the HOST entries in the file.

System Action:

None.

User Action:

None.

IPNR0605**SYSCMD P1 NOT PASSED TO OPERATING SYSTEM SUCCESSFULLY.****Reason:**

The site file loader utility issued system command P1 to the operating system for execution but the command was rejected.

System Action:

None.

User Action:

None.

IPNR0606**UNABLE TO DETERMINE CONFIGURATION MEMBER SUFFIX FOR TASK P1****Reason:**

An unexpected reponse to the TCPaccess TASK command was received. The suffix of the member name containing information for the task P1 could not be determined,

System Action:

The requested action is not processed.

User Action:

Check that the jobname specified in the TCPaccess Job Name field in the TCPaccess Management Interface panel from the TCP/IP : Administration Menu is correct.

IPNR0607**SYSCMD P1 TIME OUT****Reason:**

A recognized response to a Syscmd issued to TCPaccess was not received within the time limit specified. *P1* is the command issued.

System Action:

The process terminates.

User Action:

None.

IPNR0608

TCPACCESS JOB P1 NOT ACTIVE

Reason:

A command issued to Tcaccess failed because the Task/Job *P1* is not active.

System Action:

The process terminates.

User Action:

Check that the TCPaccess Job name specified in the TCPaccess Management Interface of the TCP/IP Administration Menu matches the actual TCPaccess job running.

IPNR0609

TCPACCESS TASK COMMAND FAILED, REFER TO LOG MESSAGE P1

Reason:

A command to determine information about a TCPaccess TASK was not processed by the operating system. Message P1 provides more information about the failure.

System Action:

The process terminates.

User Action:

Determine the cause for failure, correct the problem and retry the operation.

IPNR0610

TCPACCESS TASK COMMAND FOR GROUP P1 FAILED

Reason:

A command to determine information about a TCPaccess TASK failed because the group name *P1* was invalid or not installed in TCPaccess.

System Action:

The process terminates.

User Action:

Determine the cause for failure, correct the problem and retry the operation.

IPNS0602**Non-keyword parms found in passed parameters****Reason:**

The TCP/IP NETSTAT command handler procedure \$IPNS06H failed during request processing because it passed non-keyword parameters.

System Action:

The request is rejected.

User Action:

Contact your Systems Administrator.

IPNS0607**Max connections reached - P1 records returned****Reason:**

The requested maximum number of connections (*P1*) has been reached but more connections satisfy the criteria. The remaining connections are ignored.

System Action:

None.

User Action:

If more connections are required, increase the Max Connections option and retry.

IPNS0611**Stack *P1* does not exist****Reason:**

The selected stack is not known to the system.

System Action:

The request is rejected.

User Action:

Enter **?** in the Stack field to obtain a list of stacks.

List this region's configuration details (/IPTTEST), and investigate any errors.

IPNS0612

NETSTAT processing failed for stack p1, message: P2

Reason:

The message indicates NETSTAT processing has failed. The message, which is also logged, indicates the cause of the failure.

System Action:

None.

User Action:

Check the status of the stack and ensure it is ACTIVE.
Check that the stack definition has been correctly defined and configured.
Check that NETSTAT functionality is enabled for this TCPaccess stack configuration (see the TCPaccess System Administration Guide).
Record the associated error message for problem determination.
Contact your Systems Administrator.

IPNS0621

Unexpected NETSTAT message: P1

Reason:

An unexpected message (*P1*) was returned by the NETSTAT message process.

System Action:

The NETSTAT message (*P1*) is written to the Activity Log where it may be viewed when this message is truncated for display on a panel.

User Action:

Determine the cause for failure, correct the problem and retry the operation.

IPNS0622**Option P1 is not recognized by the NETSTAT command****Reason:**

The NETSTAT process for TCPaccess does not support the *P1* option specified.

System Action:

Control is returned to the calling procedure.

User Action:

Contact your System Administrator.

IPNS0627**DROP command successfully processed****Reason:**

The specified session has been successfully terminated.

System Action:

None.

User Action:

None.

IPNS0631**Unable to start \$IPNETAX - Netstat subsystem.****Reason:**

The \$IPNETAX subsystem generates and sends Netstat commands which obtain information from TCPaccess. An error occurred in the processing, and an attempt was made to clear the error by stopping and restarting the \$IPNETAX subsystem. The recovery attempt failed.

System Action:

The request for information from TCPaccess fails.

User Action:

Use the OCS command "SHOW SUBSYS=\$IPNETAX" to diagnose the problem. Determine the cause of the error, and retry the operation.

IPNS0633

Netstat command: P1

Reason:

Netstat commands issued to TCPaccess are being traced. Command *P1* has been issued. This message marks the start of a group. It will be followed by TCPaccess messages T01NTnnn and TCP/IP services messages IPNS0634 and IPNS0635.

System Action:

None.

User Action:

None - this message is used for debugging purposes only.

IPNS0634

Return code 4 from \$IPNETAX. Processing continues...

Reason:

Netstat commands issued to TCPaccess are being traced. This message is issued in response to return code 4 from \$IPNETAX (the TCPaccess Netstat interface subsystem). This indicates that \$IPNETAX has returned a group of messages, but there are still more messages to be returned.

System Action:

None.

User Action:

None - this message is used for debugging purposes only.

IPNS0635

***** End *****

Reason:

Netstat commands issued to TCPAccess are being traced. This message is issued in response to return code 0 from \$IPNETAX (the TCPAccess Netstat interface subsystem). This indicates that \$IPNETAX has returned all remaining messages for the request listed in the preceding IPNS0633 message.

System Action:

None.

User Action:

None - this message is used for debugging purposes only.

IPNS0641**\$IPNETAX subsystem not available****Reason:**

The \$IPNETAX subsystem which is used to communicate with TCPAccess stacks is unavailable to this region.

System Action:

The procedure terminates.

User Action:

Contact your System Administrator.

IPNS0642**P1 of \$IPNETAX subsystem failed****Reason:**

The *P1* action for the \$IPNETAX subsystem failed. The \$IPNETAX subsystem is used to communicate with TCPAccess stacks.

System Action:

The procedure terminates.

User Action:

Contact your System Administrator.

IPNS0643

P1 is not authorized for SUBSYS P2 command

Reason:

The user ID identified by *P1* is not authorized to issue the SUBSYS command identified by *P2* .

System Action:

The procedure terminates.

User Action:

Contact your System Administrator.

IPNS0644

\$IPNETAX subsystem starting

Reason:

The \$IPNETAX subsystem is in a state of STARTING.

System Action:

The procedure terminates.

User Action:

If the system is heavily loaded, wait and retry the operation, otherwise contact your System Administrator.

IPNS0645

Stack P1 is inactive

Reason:

The selected stack is not active.

System Action:

The request is rejected.

User Action:

Investigate why this stack is inactive.

IPNS0698**NETSTAT PROCESSING FAILED, RC= P1****Reason:**

The message indicates NETSTAT processing has failed. The return code is indicated by *P1* .

System Action:

Control is returned to the calling procedure.

User Action:

Contact your Systems Administrator.

IPNS0702**Non-keyword parms found in passed parameters****Reason:**

The TCP/IP Netstat command handler procedure failed during request processing because it passed non-keyword parameters.

System Action:

The request is rejected and the procedure terminates.

User Action:

Contact your Systems Administrator.

IPNS0705**Unable to locate Netstat server procedure****Reason:**

The Netstat request handler procedure has attempted to locate the Netstat request server procedure \$IPNS08Z to queue a Netstat request to it. The server procedure cannot be located.

System Action:

The Netstat request fails.

User Action:

If the problem, contact Technical Support.

IPNS0706

Unable to start Netstat server procedure

Reason:

The Netstat request handler procedure has attempted to start the Netstat request server procedure \$IPNS08Z to process a Netstat request. The start request has failed.

System Action:

The Netstat request fails.

User Action:

If the problem persists, contact Technical Support. Refer to the error messages in the log which precede this message.

IPNS0708

No response from Netstat server procedure

Reason:

The Netstat request handler procedure has queued a Netstat request to the Netstat request server procedure \$IPNS08Z, and has not received a reply.

System Action:

The Netstat request fails.

User Action:

If the problem persists, contact Technical Support.

IPNS0711

Stack *P1* does not exist

Reason:

The selected stack is not known to the system.

System Action:

The request is rejected.

User Action:

Enter ? in the stack field to obtain a list of stacks.

List this region's configuration details (/IPTEST), and investigate any errors.

IPNS0712**Stack P1 with procname P2 is inactive****Reason:**

An attempt to use the NetStat interface for the indicated stack (*P1*) has failed. For IBM TCP/IP stacks, the Netstat interface requires the procedure (job) step name (*P2*). The request has failed for one of the following reasons:

- The stack is not active.
- The stack's procedure name is incorrectly defined.

System Action:

The request is rejected.

User Action:

First, check that the stack is correctly defined to ResourceView. To do this:

1. Use the /RADMIN.R shortcut, select STACK resources, and select the indicated stack.
2. Select the TCP/IP Stack General Description panel.
3. Check the TCP/IP Stack Step Name field. This field is the procname.
4. If this is incorrect, update the resource and retry.

Second, if the resource definition is correct, check if the stack is active. To do this:

1. Use the /IPMON shortcut to display Status Monitor : IP Resources.
2. If STACK resources are not displayed, use the FILTER command to select a filter that includes stack resources.
3. Use the CHK command to check the status.
4. Use the L command to browse the transient log for the resource. Review the latest messages and action accordingly.

IPNS0713**DROP command successfully processed****Reason:**

The specified session has terminated successfully.

System Action:

None.

User Action:

None.

IPNS0790

netstat-parms

Reason:

This is a message used internally by SOLVE to send requests to be processed by NETSTAT.

System Action:

None.

User Action:

None.

IPNS0797

Buffer pool display is not supported by Communications Server

Reason:

A request has been received for a buffer pool display indicating storage usage by IBM's Communications Server. The request has been rejected because this function is not supported by Communications Server.

System Action:

The request is rejected.

User Action:

None.

IPNS0798

Netstat processing request failed, see Activity log for details

Reason:

The message indicates Netstat processing has failed and no specific error information is available. The corresponding command responses have been written to the activity log.

System Action:

Netstat request fails.

User Action:

Review the activity log entries for the corresponding command responses to determine the cause of the failure. Correct the problem and retry the request.

IPNS0799**Netstat processing completed****Reason:**

This is an informational message. It indicates the end of output from a Netstat request.

System Action:

None.

User Action:

None.

IPNS0801**NETSTAT server already active****Reason:**

The TCP/IP NETSTAT server procedure has been started, but during procedure initialization it has detected that another server with the same name is active.

System Action:

The new server procedure terminates.

User Action:

Retry your request. If the problem persists, contact your Systems Administrator.

IPNS0804**A receive request has timed out****Reason:**

A message was expected from the z/OS UNIX System Services Shell. The receive request which was waiting for the message has timed out.

System Action:

None.

User Action:

None.

IPNS0805

UNIX shell command has completed

Reason:

A command was issued to the z/OS UNIX System Services Shell. All output from the command has now been received.

System Action:

None.

User Action:

None.

IPNS0806**UNIX shell request P1 has failed due to P2****Reason:**

An attempt has been made to communicate with the UNIX System Services Shell. The request has failed for the reason shown.

P1 shows the request that failed (OPEN, SEND or RECEIVE).

P2 shows the reason for the failure. It could be one of the following values:

storage shortage - A storage shortage has occurred

duplicate ID - The ID specified on OPEN is already in use

unknown ID - The ID specified is invalid

SHELL subtask termination - The shell subtask terminated unexpectedly

buffer overflow - A buffer overflow has occurred

UNIX interface not available - Probably caused by no SSI providing the UNIX service (UNIX=YES)

transport not available - Probably caused by the region not being connected to an SSI.

service not available - Probably caused by the SSI not being available

System Action:

The request fails.

User Action:

Contact your Systems Administrator.

If *P1* is SERVICE NOT AVAILABLE, ensure that the:

- SSI settings in Customizer /PARMS are correctly defined.
- SSIPARMS member has UNIX=YES.

IPNS0807

UNIX shell P1 request has failed, CALL= P2 RC= P3 RSN= P4

Reason:

A attempt has been made to communicate with the z/OS UNIX System Services Shell. The request has failed for the reason shown.

P1 shows the request that was made (OPEN, SEND or RECEIVE).

P2 shows the specific macro call that failed. This value is the system control offset of the macro call that was made, as described in IBM's UNIX System Services Programming: Assembler Callable Services Reference. This value can be used to determine the name of the macro call.

P3 shows the Return Code that was returned by the macro call, as described in the relevant messages and codes guide.

P4 shows the Reason Code that was returned by the macro call, as described in the relevant messages and codes guide.

System Action:

The request fails.

User Action:

Locate the description of the macro call that failed, by using the value given for the System Control Offset. This gives an indication of what the system was trying to do at the time of the error. See IBM's UNIX System Services Messages and Codes guide for more information about the error using the Return Code and Reason Code. If you are unable to determine the nature of the error using this information, contact Technical Support.

IPNS0808

Attach of module NM077 failed

Reason:

An attempt has been made to initialize the z/OS UNIX System Services Shell. Module NM077 is attached as a subtask and it then attaches the Shell module. The attach of module NM077 has failed.

System Action:

The request fails.

User Action:

Investigate why the load of module NM077 failed. There should be messages in the system log which indicate the reason for the failure.

IPNS0809**UNIX shell initialization failed, CALL= P1 RC= P2 RSN= P3****Reason:**

An attempt was made to initialize the z/OS UNIX System Services Shell. The request failed for the reason shown.

P1 shows the specific macro call that failed. This value is the system control offset of the macro call made, as described in IBM's UNIX System Services Programming: Assembler Callable Services Reference. This value can be used to determine the name of the macro call.

P2 shows the Return Code that was returned by the macro call, as described in the relevant Messages and Codes manual.

P3 shows the Reason Code that was returned by the macro call, as described in the relevant Messages and Codes manual.

System Action:

The request fails.

User Action:

Locate the description of the macro call that failed, by using the value given for the System Control Offset. This gives an indication of what the system was trying to do at the time of the error. See IBM's UNIX System Services Messages and Codes guide for more information about the error using the Return Code and Reason Code. If you are unable to determine the nature of the error using this information, contact Technical Support.

IPNS0810**NETSTAT server has terminated due to error****Reason:**

The TCP/IP NETSTAT server procedure has terminated due to error. This message is sent to the originator of any NETSTAT requests which were queued to the server at the time it had the error.

System Action:

The server procedure terminates.

User Action:

Check the log for additional error messages and correct any problems. Reissue the request. A new server procedure will be started to process the new request.

IPNS0890

NETSTAT request accepted

Reason:

This is a message used internally to indicate that a NETSTAT request has been received by the NETSTAT server procedure.

System Action:

None.

User Action:

None.

IPNS0898

NETSTAT processing request failed, RC= P1

Reason:

This message indicates that an error has occurred during processing of a NETSTAT request. No specific error information is available. P1 contains the return code value which was set by the NETSTAT server task.

System Action:

Control is returned to the calling procedure.

User Action:

Refer the error to your Systems Administrator.

IPNS0899

NETSTAT processing completed

Reason:

The message is for information only. It indicates the end of output from a NETSTAT request.

System Action:

None.

User Action:

None.

IPNS1001**Stack *P1* does not exist****Reason:**

The selected stack is not known to the system.

System Action:

The request is rejected.

User Action:

Enter **?** in the Stack field to display a list of stacks.

List this region's configuration details (/IPTEST), and investigate any errors.

IPNS1002

Stack P1 with procname P2 is inactive

Reason:

An attempt to use the EZBNMIFR API for the indicated stack (*P1*) has failed. The API requires the procedure (job) step name (*P2*). The request failed due to one of the following reasons:

- The stack is not active
- The procedure name of the stack is incorrectly defined

System Action:

The request is rejected.

User Action:

Check that the stack is correctly defined to ResourceView. To do this, follow these steps:

1. Enter /RADMIN.R, select STACK resources, and then select the indicated stack.
2. Select the TCP/IP Stack General Description panel.
3. Ensure that the TCP/IP Stack Step Name field is correct. This field is the procname. If this is incorrect, update the resource and retry.

If the resource definition is correct, check if the stack is active. To do this, follow these steps:

1. Enter /IPMON. The Status Monitor : IP Resources dialog appears.
2. If STACK resources are not displayed, use the FILTER command to select a filter that includes stack resources.
3. Check the status using the CHK command.
4. Browse the transient log for the resource using the L command.
5. Review the latest messages and action accordingly.

IPNS1003**EZBNMIFR P1 failed. RC= P2 Reason= P3****Reason:**

An attempt to retrieve connection details from IBM's EZBNMIFR API has failed. The type of request is shown in *P1* . *P3* is the return code (errno) and *P4* is the reason code (errnojr)

System Action:

The request is rejected.

User Action:

Contact Technical Support.

IPNS1004**Error processing NMIFR P1. RC= P2 FDBK= P3****Reason:**

An attempt to retrieve connection details has failed. The type of operation is shown in *P1* . *P2* is the return code and *P3* is the feedback code. Some possible return codes and feedback values are:

RC FDBK Explanation

-- ---- -

12 1	NEXT request rejected, no outstanding GET request
12 2	Prepare MDO failure
12 3	Assign MDO failure
12 4	Connect map failure
12 5	Subtaskabend processing this request
12 6	NetMaster region not authorized
12 7	API module EZBNMIFR load failed during initialization
12 8	Interface disabled due to excessive number of abends
12 10	Region shutdown in progress

System Action:

The request is rejected.

User Action:

This is an internal failure. Contact CA Technical Support.

IPNS1007

Max connections reached - P1 records returned

Reason:

The requested maximum number of connections (*P1*) has been reached but more connections satisfy the criteria. The remaining connections are ignored.

System Action:

None.

User Action:

If more connections are required, increase the Maximum Connections option and retry.

IPNY0001

Error: Incomplete NetSpy data. The MDO size limitation has been reached.

Reason:

While processing the results returned by NetSpy, the size of the data exceeded the MDO size. The display contains incomplete NetSpy data.

System Action:

None.

User Action:

Modify your request by refining your selection criteria.

IPOF0302

NON-KEYWORD PARMS FOUND IN PASSED PARAMETERS

Reason:

The TCP/IP NETSTAT command handler procedure \$IPNS01H failed during request processing because it was passed non-keyword parameters.

System Action:

The request is rejected and procedure \$IPNS01H terminates. Control is returned to the NCL procedure which executed \$IPNS01H.

User Action:

Contact your System Administrator.

IPOF0304**DATASET P1 SUBMITTED BY P2 FOR OBEYFILE PROCESSING****Reason:**

The dataset identified by *P1* was submitted by the user identified by *P2* for OBEYFILE processing.

System Action:

None

User Action:

None

IPOF0305**START OF DATASET P1****Reason:**

This message identifies the start of the dataset identified by *P1* which has been submitted for processing by the OBEYFILE subsystem.

System Action:

None

User Action:

None

IPOF0306**P1****Reason:**

This message identifies lines submitted for processing by the OBEYFILE subsystem. The message text is identified by *P1* .

System Action:

None

User Action:

None

IPOF0307

END OF DATASET P1

Reason:

This message indicates the end of data lines from the dataset identified by *P1* which was submitted to the OBEYFILE subsystem for processing.

System Action:

None

User Action:

None

IPOF0321

' P1' IS NOT A PDS

Reason:

The dataset specified by *P1* includes a member name but the dataset is not partitioned.

System Action:

The procedure terminates.

User Action:

Specify the correct dataset or member name.

IPOF0322

MEMBER ' P1' DOES NOT EXIST IN ' P2'

Reason:

The dataset specified by *P2* does not contain the member *P1* .

System Action:

The procedure terminates.

User Action:

Specify the correct member or dataset name.

IPOF0323**INSUFFICIENT ACCESS AUTHORITY TO ' P1 '****Reason:**

The dataset specified by *P1* cannot be opened for read access.

System Action:

The procedure terminates.

User Action:

Obtain authority for the SOLVE system to access the dataset.

IPOF0324**TRACE STOPPED FOR P1****Reason:**

A Packet Trace Clear request has been issued using the OBEYFILE subsystem. The specific IP address *P1* is one of the nodes currently being traced.

System Action:

Packet Tracing is stopped - this affects all nodes.

User Action:

Use the Packet Trace menu option from the IP Network Diagnostics menu to perform the following:

- Stop GTF or CTRACE
- Load the trace data
- View traces

IPOF0398

OBEYFILE PROCESSING COMPLETED, ERRORS DETECTED

Reason:

An OBEYFILE has been processed by TCPIP. The messages returned by TCPIP indicate that an error was detected.

System Action:

The messages returned by TCPIP OBEYFILE command are written to the activity log.

User Action:

Refer to the activity log for the messages returned by OBEYFILE processing.

IPOF0399

OBEYFILE PROCESSING COMPLETED

Reason:

An OBEYFILE has been successfully processed by TCP/IP stack.

System Action:

The OBEYFILE messages are written to the activity log.

User Action:

None

IPOF0401

NO VALUE SUPPLIED FOR REQUIRED KEYWORD P1

Reason:

The call to the procedure failed because the Keyword identified by *P1* had a null value.

System Action:

The request is rejected.

User Action:

Contact your system administrator.

IPOF0402**INVALID KEYWORD VALUE SPECIFIED P1= P2****Reason:**

The call to the procedure failed because the keyword identified by *P1* had an invalid value, identified by *P2* .

System Action:

The request is rejected.

User Action:

Contact your System Administrator.

IPOF0403**P1 FOR P2 P3 FAILED - REQUEST TIMEOUT****Reason:**

The result of the *P1* action for *P2 P3* could not be determined and is deemed to have failed because the process timed out while waiting for a response to the action.

System Action:

The command is not processed.

User Action:

Determine if the action is still valid and retry the command.

IPOF0404**P1 FOR P2 P3 FAILED - P4 IS NOT ACTIVE****Reason:**

The *P1* action for *P2 P3* could not be performed because the TCPaccess job *P4* specified in the TCP/IP Management Interface is not active.

System Action:

The command is not processed.

User Action:

Check that the jobname specified is correct. Restart the job and retry the operation if still appropriate.

IPOF0405

P1 P2 ACTIVATION IN PROGRESS

Reason:

A request to activate *P2* of interface type *P1* has been actioned and the activation is now in progress.

System Action:

None.

User Action:

None.

IPOF0406

P1 P2 ACTIVE

Reason:

A request to activate *P2* of interface type *P1* has been successfully processed.

System Action:

None.

User Action:

None.

IPOF0407

P1 REQUEST FAILED - P2 P3 DOES NOT EXIST

Reason:

The *P1* action for *P2 P3* failed because the resource does not exist.

System Action:

The command is not processed.

User Action:

Check that the resource specified is correct. Retry the operation if still appropriate.

IPOF0408**P1 P2 INACTIVATE IN PROGRESS****Reason:**

A request to inactivate *P2* of interface type *P1* has been actioned and the shutdown is now in progress.

System Action:

None.

User Action:

None.

IPOF0409**P1 P2 INACTIVATED****Reason:**

A request to inactivate *P2* of interface type *P1* has been successfully processed.

System Action:

None.

User Action:

None.

IPOF0430**P1 COMMAND FOR P2 FAILED, REFER TO LOG MESSAGE P3****Reason:**

The requested action for *P2* could not be performed because the *P1* command was not processed by the operating system. Message *P3* provides more information about the failure.

System Action:

None.

User Action:

Determine the cause for failure, correct the problem and retry the operation.

IPPD3801

Invalid value for shared variable, var= P1 value=" P2"

Reason:

The selection list service procedure for the \$DSCALL PDS member list displays failed because it received an invalid value for a shared variable. The variable name was *P1* and its value was *P2* .

System Action:

The selection list service procedure terminates.

User Action:

Contact the System Administrator.

IPPD3802

Invalid command

Reason:

An invalid command was entered in the Command field on the panel.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

IPPD3803

Command assigned to function key P1 is invalid

Reason:

Function key *P1* pressed on the new member name data entry panel has an invalid command assigned to it.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

IPPD3804**Rename of P1 cancelled****Reason:**

A request was received to rename a dataset or a member of a Partitioned dataset (PDS). When the new name was requested, the user cancelled the function.

System Action:

None

User Action:

None

IPPD3805**Option P1 not recognized by Selection List service procedure****Reason:**

The Selection List service procedure \$IPPD38L does not support the selection option *P1* that was specified on the selection list.

System Action:

Selection rejected.

User Action:

Contact your System Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

IPPG4001

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The TCP/IP external interface procedure \$IPCALL failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed \$IPCALL. If executed from OCS, check the command entered on the command line and retry.

IPPG4002

INVALID SELECT VALUE SPECIFIED - KEYWORD= P1 VALUE= P2

Reason:

The TCP/IP procedure \$IPTN30S failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPTN30S terminates.

User Action:

Contact your System Administrator.

IPPG4004**REQUIRED PARAMETER (P2) MISSING FOR COMMAND P1****Reason:**

The TCP/IP external interface procedure \$IPCALL failed because a required parameter (P2) for P1 was omitted from the call to \$IPCALL. One of either ADDRESS, HOSTNAME or HOST must be specified.

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Contact your System Administrator.

IPPG4005**MDO ERROR, MDO= P1, MAP= P2, MDORC= P3, MDOFDBK= P4****Reason:**

An MDO error occurred. The MDO is identified by P1 the map name by P2 the MDO return code by P3 and the feedback code is P4 .

System Action:

The procedure terminates.

User Action:

Contact your System Administrator.

IPPG4006**FIELD " P1" MUST BE NUMERIC****Reason:**

A non-numeric value was entered for the field identified by P1 .

System Action:

The field is highlighted in error.

User Action:

Correct the field value and repeat the operation.

IPPG4007

VALUE ENTERED FOR FIELD " P1" MUST BE IN RANGE P2 TO P3

Reason:

A value was entered for the field identified by *P1* which was not in the range specified by *P2* and *P3* .

System Action:

The field in error is highlighted.

User Action:

Correct the field value and repeat the operation.

IPPG4010

NO RECORDS TO DISPLAY

Reason:

No entries were returned for display.

System Action:

Control returns to the Primary Menu and the error message is displayed.

User Action:

Correct the entry in the Host name field and retry.

IPPKG002

Invalid keyword parameter value, keyword= P1 value=" P2"

Reason:

An invalid keyword parameter value was passed. The keyword was *P1* and the invalid value was *P2*.

System Action:

Processing terminates.

User Action:

Contact your local technical support representative.

IPPKG003**Action failed, the map P1 does not exist****Reason:**

An MDO assignment failed with Return Code 16 and Feedback Code 0. This indicates that the map *P1* does not exist in this system.

System Action:

The action terminates.

User Action:

Ensure that the OSCNTL file has been correctly updated during the installation and/or maintenance of this product.

IPPKG004**MDO action failed with RC= P1 FDBK= P2 for P3****Reason:**

An MDO assignment failed. The Return Code was *P1* and the Feedback Code was *P2*. The map and component for which the error occurred was *P3*.

System Action:

The action terminates.

User Action:

Refer to the NCL Reference manual for details of the codes.

IPPKG005**P1 request failed, RC= P2 FDBK= P3 (see log for message P4)****Reason:**

An encode or decode request failed. The request was *P1*, the Return Code was *P2* and the Feedback Code was *P3*. There may be a related message in the log - if so, *p4* shows the message ID.

System Action:

The action terminates.

User Action:

Refer to the NCL Reference for details of the codes.

IPPKG006

Invalid value for Net Address Mask

Reason:

The field Net Address Mask does not contain a valid IP Address mask. Valid values are:

- A mask where ? matches a single character and * matches one or more characters, for example, 192.*
- A valid IP address with an optional /*nn* suffix, for example, 10.0.0.0/8

System Action:

None.

User Action:

Correct the value and retry.

IPPKG009

Unable to determine CHPID for device P1. P2

Reason:

An attempt to extract the Channel Path ID for device *P1* has failed. The reason is provided in *P2*. Possible reasons for failure are: DEVINFO RC=*aa bb aa* is the DEVINFO verb return code, *bb* is the FDBK. DEVINFO returned multiple CHPIDs more than one CHPID value was returned for the device.

System Action:

The request is rejected.

User Action:

Contact your System Administrator.

IPPKG010

Access denied. Table= P1, location= P2, resource= P3

Reason:

You are not authorized to perform the action which you attempted. To perform this action you need access (via NPF - the Network Partitioning Facility) to resource *P2.P3* in resource group *P1*

P1 (Table) identifies the type of call that was rejected, either:

- \$IPCMD: indicates you are not authorized to use that function
- \$IPRES: indicates you can use the function, but not on that resource

P2 (Location) identifies the entity affected by the change, either:

- a domain ID, for changes which affect a NetMaster region
- a stack name or address, for changes which affect a TCP/IP stack

P3 (Resource) identifies the specific resource required

System Action:

The action terminates.

User Action:

Contact your administrator to request the authority required to perform this action.

IPPKG011

Load of Application map data failed: P1

Reason:

The Application name mapping process was unable to load the data required. *P1* was the reason.

System Action:

The action terminates.

User Action:

Correct the indicated problem or look for related log message for more information.

IPPKG015

END

Reason:

This is the last message returned from an SNMP MIB walk request. It indicates that the walk limit has been reached and no more object will be retrieved.

System Action:

None.

User Action:

None.

IPPKG016

A Receive request has timed out

Reason:

A message was expected from the OS/390 UNIX System Services Shell. The receive request which was waiting for the message has timed out.

System Action:

None

User Action:

None

IPPKG017**UNIX Shell request P1 has failed due to P2****Reason:**

An attempt has been made to communicate with the OS/390 UNIX System Services Shell. The request has failed for the reason shown.

P1 shows the request which failed (OPEN, SEND or RECEIVE).

P2 shows the reason for the failure. It could be one of the following values:

STORAGE SHORTAGE - A storage shortage has occurred

DUPLICATE ID - The ID specified on OPEN is already in use (internal error)

UNKNOWN ID - The ID specified is invalid (internal error)

SHELL SUBTASK TERMINATION - The shell subtask has terminated unexpectedly

BUFFER OVERFLOW - A buffer overflow has occurred

SERVICE NOT AVAILABLE - Probably caused by the SSI not being available

System Action:

The request fails.

User Action:

Contact your system administrator.

IPPKG018

UNIX Shell initialization failed, CALL= P1 RC= P2 RSN= P3

Reason:

An attempt has been made to initialize the OS/390 UNIX System Services Shell. The request has failed for the reason shown.

P1 shows the specific macro call which failed. This value is the 'system control offset' of the macro call which was made, as described in the Assembler Callable Services manual for OS/390. This value can be used to determine the name of the macro call.

P2 shows the Return Code which was returned by the macro call, as described in the relevant Messages and Codes manual.

P3 shows the Reason Code which was returned by the macro call, as described in the relevant Messages and Codes manual.

System Action:

The request fails

User Action:

Locate the description of the macro call which failed, using the value given for the System Control Offset. This gives an indication of what was occurring at the time of the error. Refer to the Unix System Services Messages and Codes manual to obtain a description of the error using the Return Code and Reason Code. If you are unable to determine the nature of the error using this information, contact your Support representative.

IPPKG019**UNIX Shell P1 request has failed, CALL= P2 RC= P3 RSN= P4****Reason:**

A attempt has been made to communicate with the OS/390 UNIX System Services Shell. The request has failed for the reason shown.

P1 shows the request which was made (OPEN, SEND or RECEIVE).

P2 shows the specific macro call which failed. This value is the 'system control offset' of the macro call which was made, as described in the Assembler Callable Services manual for OS/390. This value can be used to determine the name of the macro call.

P3 shows the Return Code which was returned by the macro call, as described in the relevant Messages and Codes manual.

P4 shows the Reason Code which was returned by the macro call, as described in the relevant Messages and Codes manual.

System Action:

The request fails.

User Action:

Locate the description of the macro call which failed, by using the value given for the System Control Offset. This gives an indication of what the SOLVE system was trying to do at the time of the error. Refer to the Messages and Codes manual to obtain a description of the error using the Return Code and Reason Code. If you are unable to determine the nature of the error using this information, contact your technical support representative.

IPPKG020**No TRLE found for chpid P1****Reason:**

An attempt to locate a TRLE corresponding to chpid *P1* has failed.

System Action:

The request is rejected.

User Action:

No TRLE will be found if chpid *P1* is not currently in use by this LPAR. If the chpid is in use and this message occurs, contact your systems administrator.

IPPKG021

P1* is not a valid home address for *P2

Reason:

The field *P1* does not contain a valid home address for the stack shown in *P2* .

System Action:

The request is rejected.

User Action:

Correct the value and retry.

IPPKG022

***P1* is not a valid IP address**

Reason:

The field *P1* does not contain a valid IP Address.

System Action:

None.

User Action:

Correct the value and retry.

IPPKG023

No suitable *P1* found for *P2*

Reason:

A prompt list cannot be displayed for field *P1* because no suitable addresses can be found.

System Action:

Field *P1* is highlighted in error.

User Action:

Clear field *P1* and retry.

IPPKG024***P1* not selected from list****Reason:**

A prompt list of valid values for field *P1* was displayed; however, you did not select a valid value from the list.

System Action:

Field *P1* is highlighted in error.

User Action:

Retry the operation or clear field *P1*.

IPPKG025***P1* must be an *P2* address****Reason:**

The field *P1* contains a valid IP address; however, the IP version (*P2*) is not acceptable here. Either the sockets API does not support this IP version or there is a mismatch with another IP address specified.

System Action:

The field is highlighted in error.

User Action:

Correct the value and retry.

IPPKG026***p1* invalid: *p2*****Reason:**

The *p1* field has specified invalid TCP ports. *p2* gives a more specific reason for the error.

System Action:

The field is set in error.

User Action:

Specify a valid TCP port. This value can be one or more port numbers, or port range specifications separated by a blank or comma. Each port number must be between 1 and 65535. A port range specification is two port numbers separated by a - (dash) or : (colon). The low number must be specified first.

IPPKG027

Duplicate/overlapping port specifications for *p1* and *p2* at *p3*

Reason:

The TCP port associations are ambiguous. Protocols *P1* and *P2* specify the same port numbers or there is an overlap in port ranges. The port specification in error is *P3*.

System Action:

Field set in error.

User Action:

Specify TCP port to protocol associations that are unambiguous, with no ports associated to more than one protocol.

IPPKG028

Duplicate/overlapping port specifications for *p1* at *p2*

Reason:

The TCP port associations are ambiguous. Protocol *P1* specifies the same port numbers or there is an overlap in port ranges. The port specification in error is *P2*.

System Action:

Field set in error.

User Action:

Specify a TCP port to protocol association that is unambiguous, with no ports specified more than once.

IPPKG029**Duplicate/overlapping port specification at '*p1*'****Reason:**

The specified TCP ports are ambiguous. The same port numbers are specified, or there is an overlap in port ranges.

p1 identifies the incorrect port specification.

System Action:

The field set in error.

User Action:

Specify TCP ports that are unambiguous, with no ports specified more than once and no ranges that cover ports specified individually or in another range.

IPPM5201**Unknown detector type P1****Reason:**

The TCP/IP Services Proactive Monitor was called to edit an alert rule for an unsupported detector type. *P1* is the detector type.

System Action:

The add or update request is cancelled.

User Action:

This message should not occur - contact your Systems Administrator.

IPPM5202**Status must be 'ACTIVE' or 'INACTIVE'****Reason:**

An invalid value was entered.

System Action:

The invalid field is highlighted.

User Action:

Enter active or inactive in the indicated field.

IPPM5203

Required field omitted

Reason:

The indicated field must be completed.

System Action:

The required field is highlighted.

User Action:

Specify a value in the indicated field.

IPPM5204

Enter a valid number (K, M, G suffixes allowed)

Reason:

The highlighted field must contain a positive number, with an optional suffix of K (kilobytes), M (megabytes), or G (gigabytes).

System Action:

The field is highlighted.

User Action:

Specify a correct value in the highlighted field.

IPPM5205

Enter a valid time

Reason:

The indicated field must be a time in the form hh:mm

System Action:

The field is highlighted.

User Action:

Specify a time value (hh:mm) in the indicated field.

IPPM5206**Map error: map P1 not found****Reason:**

An internal error occurred because the map *P1* was not found in the map dataset.

System Action:

The request is rejected.

User Action:

Contact your Systems Administrator.

IPPM5207**Map error: map P1, MDORC= P2, MDOFDBK= P3****Reason:**

An internal error occurred. The map *P1* experienced the error described by MDORC= *P2* and MDOFDBK= *P3* .

System Action:

The request is rejected.

User Action:

Contact your Systems Administrator.

IPPM5208**Enter criteria details (press F4)****Reason:**

The conditions for the triggering of the alert must be specified.

System Action:

None.

User Action:

Press F4 and complete the panel to specify criteria.

IPPM5209

Enter alert details (press F5)

Reason:

The alert you want to trigger must be specified.

System Action:

None.

User Action:

Press F5 and complete the panel to specify alert details.

IPPM5210

No link selected from list

Reason:

No link was selected from the displayed list.

System Action:

None.

User Action:

None.

IPPM5211

Enter a valid IP address or mask

Reason:

The indicated field must contain an IP address mask or an IP address. It can contain an * character at the end to indicate a generic value; otherwise, it must be a valid IP address in the form *a.b.c.d*.

System Action:

The field is highlighted.

User Action:

Specify a correct IP address value in the indicated field.

IPPM5212**Port type must be 'TCP' or 'UDP'****Reason:**

An invalid value was entered.

System Action:

The invalid field is highlighted.

User Action:

Enter TCP or UDP in the indicated field.

IPPM5213**P1 must be a valid name, a generic name or '*'****Reason:**

P1 is a task or job name. You entered an invalid value. Valid values are:

- A single *
- A valid name of 1-8 characters; the first character must be alphabetic or one of the characters @, # or \$
- A generic name (a valid name with a trailing *)

System Action:

The invalid field is highlighted.

User Action:

Enter a valid value in the indicated field.

IPPM5214**Message ID must begin with 'IPCP15'****Reason:**

An invalid value was entered. All channel card log messages begin with IPCP15

System Action:

The invalid field is highlighted.

User Action:

Enter a valid value in the indicated field, or enter a ? to see a prompt list of valid messages.

IPPM5215

Enter a valid FTP command

Reason:

The indicated field must be one of the following:

- a valid FTP command
- an abbreviation, providing the command is uniquely identified
- an asterisk (*) to denote all commands

The following table shows valid values, including the permitted abbreviations:

Command Abbreviations * RETR RET STOR S, ST, STO APPE A, AP, APP
DELETE D, DE, DEL, DELE, DELET RENAME REN, RENAM

Note that if an abbreviation is entered it will be saved and displayed as the full command value.

System Action:

The field is highlighted.

User Action:

Specify a correct FTP command value in the indicated field.

IPPM5216

Enter a valid dataset name

Reason:

The indicated field must be either:

- a full dataset name, optionally including a member name in parenthesis for example PROD.FTP.FILE(MEMBER)
- a dataset name prefix followed by an asterisk for example PROD.FTP.FI* or PROD.FTP.*

System Action:

The field is highlighted.

User Action:

Specify a correct dataset name value in the indicated field.

IPPM5217**P1 must be specified****Reason:**

P1 must be specified for a valid test condition.

System Action:

None.

User Action:

Enter a valid *P1* to create a valid test condition.

IPPM5218**Criteria number P1 invalid in expression****Reason:**

Either the criteria number *P1* is not in the range 1 to 5, or criteria number *P1* is not set.

System Action:

None.

User Action:

Correct the expression so that it refers to all used criteria.

IPPM5219**Criteria number(s) missing from expression****Reason:**

All used criteria numbers (1 to 5) must be included in the expression.

System Action:

None.

User Action:

Correct the expression so that it refers to all used criteria.

IPPM5220

Expression is invalid P1

Reason:

The expression is not a valid boolean expression. *P1* may contain an error message returned by the boolean expression evaluator.

System Action:

None.

User Action:

Correct the expression.

IPPM5221

Scan Text conflicts with Console Message Text

Reason:

There is a conflict between the extended filter and the message text.

System Action:

The scan text is highlighted in error.

User Action:

Correct message text or extended filter.

IPPM5222

Enter a valid IP address

Reason:

The indicated field must contain an IPv4 address in the form *a.b.c.d*.

System Action:

The field is highlighted.

User Action:

Specify a correct IP address value in the indicated field.

IPPM5223**Enter a valid APPN Partner CP network ID and Name, or 'ALL'****Reason:**

The indicated field must specify an APPN Partner CP value. Valid formats for this value are:

NWIDxxxx.CPNAMExx

NWIDxxxx.*

NWIDxxxx is the network ID of the APPN partner CP.

CPNAMExx is the CP Name of the APPN partner CP.

NWIDxxxx.* specifies any CP Name on the network.

Alternatively, you can specify a value of *all* . This event detector then applies to RTP Pipes on all APPN connections, but may result in many alerts. It is recommended to specify these events only for the most critical individual APPN connections.

System Action:

The field is highlighted.

User Action:

Specify a correct APPN Partner CP value in the indicated field or type ? to select from a list of current APPN CPs.

IPPM5224***p1* must be a valid IP network address****Reason:**

The value for the *p1* field must be a valid IP network address, not just any IP address. The network address must be one of the standard network classes (a, b, or c) with the host portion zero.

System Action:

The field in error is highlighted.

User Action:

Specify a valid IP network address.

IPPM5225

***p1* must be a valid name (mask characters allowed)**

Reason:

The value for the field must contain only alphanumeric characters, or the special characters @, # or \$. The first characters cannot be numeric. Additionally, you can specify the mask characters * (representing zero or more unknown characters) or ? (representing exactly one unknown character).

System Action:

The field in error is highlighted.

User Action:

Specify a valid name.

IPPM5226

***p1* is an invalid TCP connection end reason code**

Reason:

The value *p1* is not a recognized TCP connection end reason code as defined in the *z/OS Communications Server IP Configuration Guide*.

System Action:

A prompt list of valid reason codes is presented.

User Action:

Select a valid reason code from the list provided.

IPPM5227

Stack Name must be a specific name to get list of Interface Names

Reason:

A prompt list of Interface Names was requested but the Stack Name field did not contain a specific stack name from which the list of interfaces could be obtained.

System Action:

A prompt list of valid reason codes is presented.

User Action:

Specify a specific stack name and retry the prompt list.

IPPM5228**Criteria is too broad, you must specify at least *p1* highlighted filter criteria****Reason:**

The criteria for the condition is too broad and could potentially flood the system with alerts. You need to be more specific about which conditions are important.

You must specify at least the indicated number of the filter criteria fields to ensure that the criteria do not capture too many conditions and cause excessive alerts to be created.

System Action:

The filter criteria fields are highlighted in error.

User Action:

Specify at least *p1* of the criteria fields highlighted.

IPPM5229**stack *p1* unknown****Reason:**

Stack name *p1* is invalid. No stack with this name is defined in this region.

System Action:

The field in error is highlighted.

User Action:

Enter ? in the Stack field to list the defined stacks.

IPPM5230**Server Host cannot be generic****Reason:**

A generic value was specified in the Server Host field, which is not allowed.

System Action:

The field is set in error.

User Action:

Specify a specific TCP server host address or name.

IPPM5301

INVALID KEYWORD VALUE SPECIFIED, P1= P2

Reason:

The call to the procedure failed because the keyword identified by *P1* had an invalid value identified by *P2* .

System Action:

The request is rejected.

User Action:

Contact your Systems Administrator.

IPPM5302

VARIABLE P1 ERROR, FDBK= P2 P3

Reason:

A variable error occurred. The variable action was *P1* , the feedback code was *P2* . If relevant, *P3* contains the key value which experienced the problem.

System Action:

The action fails.

User Action:

Determine the cause of the error, based on the feedback code.

IPPM5303

VARIABLE ADD ERROR, ENTRY WITH KEY P1 ALREADY EXISTS

Reason:

A variable add failed because the requested key value already exists. *P1* is the key value.

System Action:

The action fails.

User Action:

Contact your Systems Administrator.

IPPM5304**Error connecting to EPS service, RC=*p1* ERRNO=*p2*****Reason:**

An error occurred while connecting to the SSI using EPS. The return code was *p1* and the error number was *p2*.

System Action:

Packet analyzer events are not monitored. The process will retry the connection after a short interval.

User Action:

Check that the SSI is available and connected to this region (see the SSI parameter group). Ensure that the SSI has the correct parameter settings to enable events.

IPPM5305**Error receiving event data from EPS service, RC=*p1* ERRNO=*p2*****Reason:**

An error occurred while trying to receive data from the SSI using EPS. The return code was *p1* and the error number was *p2*.

System Action:

Packet analyzer events are not monitored. The process will retry the connection after a short interval.

User Action:

Check that the SSI is available and connected to this region (see the SSI parameter group). Ensure that the SSI has the correct parameter settings to enable events.

IPPM5306

MONITOR IS ALREADY RUNNING FOR DETECTOR= P1

Reason:

An attempt was made to start the monitor but it was already running.
P1 is the detector type.

System Action:

The existing monitor continues.

User Action:

None.

IPPM5307

MONITOR STOPPED FOR DETECTOR= P1

Reason:

The monitor process has been asked to stop.
P1 is the type of detector which is being shut down.

System Action:

The monitor terminates.

User Action:

None.

IPPM5308

MONITOR STARTED FOR DETECTOR P1

Reason:

The monitor has started.
P1 is the type of detector.

System Action:

The monitor initializes and begins monitoring.

User Action:

None.

IPPM5310**ALERT CREATE FAILED - SEE PREVIOUS MESSAGE****Reason:**

An attempt to create an alert failed. The reason is explained in the previous message.

System Action:

Monitoring continues.

User Action:

Refer to the previous message.

IPPM5311**ALERT CLEAR FAILED - SEE PREVIOUS MESSAGE****Reason:**

An attempt to clear an alert failed. The reason is explained in the previous message.

System Action:

Monitoring continues.

User Action:

Refer to the previous message.

IPPM5312**SOCKET P1 ERROR, RETCODE= P2 ZFDBK= P3 ERRNO= P4- P5
VERRIN= P6****Reason:**

A socket error occurred. The socket action was P1 , the return code was P2 , the feedback code was P3 , the error number was P4 - P5 is the name of the error, and the TCPIP vendor specific error code is P6 .

System Action:

The action fails. But recovery is attempted.

User Action:

If the problem persists determine the cause from the error codes and correct the problem.

IPPM5313

ICMP MESSAGE PROCESSING IGNORING NON-IPV4 PACKET: P1

Reason:

A message was received by the ICMP message processor which is not an IP version 4 packet. This packet is ignored. The first part of the packet is shown in *P1* .

System Action:

The message is discarded and processing continues.

User Action:

None.

IPPM5315

SNMP GET UNEXPECTED ERROR STATUS= P1, REQUESTED OID= P2 ERROR OID= P3

Reason:

An SNMP GET response message contained an unexpected error indication.

P1 is the error code; possible values are:

- 1 - too big
- 3 - bad value
- 4 - read only
- 5 - general error.

P2 was the OID requested by the GET operation.

P3 was the OID returned in the response.

System Action:

The current test is not performed.

User Action:

Determine and correct the cause of the error.

IPPM5318**Socket error, TCP/IP interface is inactive****Reason:**

A socket operation has failed because the TCP/IP interface is down.

System Action:

ICMP event detectors wait for the TCP/IP interface to be restarted.

User Action:

The TCP/IP interface is started by the SOCKETS parameter group. Check the parameter group for error messages.

To restart the TCP/IP interface, action the SOCKETS parameter group.

IPPM5319**AOM is inactive****Reason:**

Console event detectors cannot operate because the AOM interface has been stopped. AOM is used to intercept console messages.

System Action:

Console event detectors wait for AOM to be restarted.

User Action:

Investigate why AOM is inactive.

To restart AOM, action the OPSYSIDS parameter group.

IPPM5320

RTP Event Detector RTPRED5M: RTP Pipe with ARBmode=Red > 5 minutes.

Reason:

An ARB mode of RED indicates critical flow congestion on an RTP Pipe.

System Action:

The receiver reduces its send rate by 50%.

User Action:

To view information about this RTP pipe, enter the A (Analyze) command next to this alert. From the resulting RTP display, many diagnostic actions are available including the following:

- F4 (Display) performs a VTAM HPRDIAG display of the pipe.
- F12 (TG) displays information about the Transmission Group PU.

If you have linked CA NetMaster regions, F5 (Remote/Local) toggles between this and the remote end of the pipe.

If you have CA NetMaster NM for SNA running in this region, F10 (Sessions) shows the SNA LU-LU sessions that use this pipe.

To run the RTP Health Check, enter the CH (Check) command next to this alert.

Use the RTP Pipe List (shortcut /RTP) to examine all RTP Pipes.

See all APPN/HPR : RTP Management functions from shortcut /APPNHPR.

If you are only interested in RTP Pipes that use Enterprise Extender, use the EE-specific RTP Pipe List and Health Check (shortcut /EE).

IPPM5321

Connection count too low: TCP server *p2:p3* client *p4* stack *p1***Reason:**

The number of current TCP connections between the specified partners has dropped to below the required minimum number, which is *p5*.

At least *p5* TCP connections must exist at all times between these connection endpoints:

- TCP Server *p2:p3* on stack *p1*
- TCP Client *p4*

The Packet Analyzer has detected one of these connections ending, which has left the number of remaining connections too low.

Connections in any TCP status (not just ESTABLISHED) are counted.

For a minimum connection count of 1, this alert indicates that there are currently no TCP connections between the specified partners.

This alert is raised by a CONNSTAT Packet Analyzer event detector.

System Action:

Business functions that depend on these TCP connections are negatively impacted.

If there are no TCP connections between these end points, then the remote partner has no connectivity or access to the z/OS application.

If there are too few TCP connections between these end points, then application throughput, volume, or other functions can be impaired.

User Action:

Investigate why the TCP connections between these partners ended, were not started, or could not be started. Try and restart the connections.

If there are repeated connection problems, some of these steps can help:

- Use the Connection List (/CONNCF) to see if there are successful connections to this TCP server from other remote partners.
- Use the Listener List (/CONNL) to see if there are backlog queue problems with this TCP server port.
- Use PING and TRACERT (/IPDIAG) to test IP connectivity to this remote partner.
- Check the TCP Server address space job log, application logs, and system log for any application problems.
- Use SmartTrace to trace and view connection setup attempts or connection dropouts.

IPPM5322

SSL handshake failure: TCP server *p2:p3* client *p4* stack *p1*

Reason:

Setup of an SSL/TLS connection between the specified partners below has failed in the SSL handshake phase.

- TCP Server *p2:p3* on stack *p1*
- TCP Client *p4*

This alert is raised by a SSLHFAIL Packet Analyzer event detector.

System Action:

None. The SSL/TLS connection is not established.

User Action:

Ensure that each endpoint supports SSL/TLS.

Some causes of SSL handshake failure include:

- revoked, expired, unknown, unsupported, unreserved or bad certificates
- protocol version incompatibilities
- decode, decrypt or negotiation problems
- unknown or unsupported names, psk identities, extensions
- illegal parameters, unexpected messages, user cancellation

Use the /SECURE options to see if there are currently any other successful SSL/TLS connections involving either endpoint.

You can repeat the failing connection attempt while using SmartTrace. This will show the full SSL handshake packet flow, requests and responses.

IPPM5323**Connection reset by server: server *p2:p3* client *p4* stack *p1*****Reason:**

A TCP Reset (RST packet) was sent by TCP server *p2:p3* to client *p4*.

This alert is raised by a SVRRESET Packet Analyzer event detector.

System Action:

None. The TCP connection is terminated.

User Action:

Generally, TCP Server Reset is sent when the TCP server does not like the data it received from the client, such as when there are problems with the handshake or with the application-level protocol.

Use a Connection List to see whether this TCP Server currently has successful connections with any other clients.

Check the TCP Server address space job log, application logs, and system log for any application problems.

If server resets happen repeatedly on a connection, use SmartTrace to see the exact packet flow.

IPPM5324

Connection ended: TCP server *p2:p3* client *p4* stack *p1*

Reason:

A TCP connection between the following partners has ended:

- TCP Server *p2:p3* on stack *p1*
- TCP Client *p4*

This alert is raised by a TCPEND Packet Analyzer event detector.

System Action:

None.

User Action:

Bring the connection end to the attention of the appropriate group to investigate the area of the specific TCP Connection End reason code.

If the connection should be up all the time, attempt to reconnect.

The reason code can indicate the following conditions:

- Possible network security violations
- IP stack load or stress problems
- TCP performance problems
- Application problems
- Operator actions

IPPM5325**Restricted connection started: server *p2:p3* client *p4* stack *p1*****Reason:**

A restricted TCP connection has started, between these partners:

- TCP Server *p2:p3* on stack *p1*
- TCP Client *p4*

This alert is raised by a TCPSTART Packet Analyzer event detector.

System Action:

None.

User Action:

User action depends on why this connection is significant and why it was specified as being restricted.

It may indicate unexpected activity, or a possible security breach.

Use Connection Lists to see what other connections currently involve either of the connection partners. From this list, you can also drop connections.

Use SmartTrace to view the packet flow and packet content (if not encrypted) on the connection.

IPPM5326**Stack *p1* interface *p2* inactive****Reason:**

Network interface *p2* on stack *p1* is inactive.

This alert is raised by a IFSTATUS Packet Analyzer event detector.

System Action:

None. Connections flowing over the interface are interrupted.

User Action:

Use the diagnostic options at /DEVLINK to investigate the interface failure.

IPPM5327

Packet fragmentation rate too high: Remote Network *p2* Stack *p1*

Reason:

The IP packet fragmentation rate for type *p3* packets exceeded the specified threshold rate, which is *p4* fragmented packets within *p5* seconds.

The Packet Analyzer detected this fragmentation on conversations between stack *p1* and remote network *p2*.

High fragmentation can contribute to increased packet loss or packet retransmissions. These conditions in turn can result in increased response times and higher processing load as the end point must reassemble the packets.

System Action:

None.

User Action:

Fragmentation is needed when a datagram is bigger than the physical frame size of the network. The condition can be caused by incorrect sizing of the maximum transmission unit (MTU).

Locate the remote hops for which most datagrams are being fragmented. Frame size is determined by the MTU size. TCP/IP uses the MTU to see if fragmentation is needed.

Consider Implementing Path MTU Discovery

On z/OS, the MTU used for a particular outbound send can vary, depending on the configuration.

If IP traffic from this z/OS stack crosses multiple hops with different MTU sizes, you should enable path MTU discovery (IPCONFIG PATHMTUDISCOVERY). This statement discovers and uses an MTU size that will reach the final hop without needing fragmentation.

(Without path MTU discovery, the send uses the smaller of the interface MTU (from the stack interface physical device links) or the configured route MTU.) Path MTU discovery is usually off by default.

For discussions of MTU considerations and fragmentation considerations, see the IBM z/OS Communications Server IP Configuration Guide.

To see how to use the PING command with the PMTU parameter and large outbound packet lengths to determine the path MTU size to a host, see the IBM z/OS Communications Server IP Diagnosis Guide.

Other Fragmentation Information

The Advanced Connection List (/CONNCF) can list all TCP connections where local or remote fragmentation has been observed.

Stack Performance History (/STKPERF.IP) includes stack-wide performance attributes ipFrag%, ipFragFailed, ipFragFailed%, and ipFragOk.

(This alert is raised by a FRAGMENT Packet Analyzer event detector.)

IPPM5328

Error connecting to PAEVENT EPS server rc=*p1* key=*p2*

Reason:

An attempt to connect to the SSI address space to the PAEVENT feature EPS server failed with the return code *p1* and optionally, key code *p2*.

System Action:

Packet Analyzer supported event detectors are not operative. The system will retry the connection after a delay.

User Action:

Ensure that the SSI is running and configured with the Packet Analyzer.

Issue the OCS command **SSI STATUS**.

The response should contain these messages:

```
NFST01 PACKET ANALYZER FEATURE IS ACTIVE
```

```
NF1003 PACKET ANALYZER VERSION IS 120.01
```

The Packet Analyzer version must be 120.01 or later. Earlier versions do not support event detectors.

If the SSI is running and configured correctly, then contact Technical Support.

IPPM5329**Packet Analyzer event detectors are inoperative****Reason:**

The event detectors that rely on the Packet Analyzer (PA) for real-time input are inoperative. The SOLVE SSI cannot be contacted, or there was an error while trying to access the PA event server.

The following event detectors are affected by this condition:

CONNSTAT - TCP Connection Status

FRAGMENT - IP Packet Fragmentation

NOLISTEN - TCP Conn Attempt Fail No Listener Port

SSLHFAIL - SSL Handshake Failure

SVRRESET - TCP Server Connection RESET

TCPEND - TCP Connection Ended

TCPSTART - TCP Connection Started

All existing alerts for these detectors are closed, and no new alerts are raised until the SSI connection has been re-established.

System Action:

Packet Analyzer supported event detectors are not operative. The region keeps retrying the connection at regular intervals.

User Action:

If there is an additional specific message associated with this alert, check the help for that message. This alert is raised if the SSI is shutting down or terminates. The alert automatically closes when the SSI connection is re-established successfully.

Ensure that the SSI is running and configured with the Packet Analyzer. Check the associated text for this alert for indicators of the SSI's status and version, and the Packet Analyzer's processing level.

Issue the OCS command, **SSI STATUS**, to determine whether the SSI is running and its version. The response contains these messages:

NFST01 PACKET ANALYZER FEATURE IS ACTIVE

NF1003 PACKET ANALYZER VERSION IS 120.01

The Packet Analyzer version must be at least 120.01. Earlier versions do not support event detectors.

The Packet Analyzer level must be at NOSTATS or higher. If the level is not at the maximum, then the SSI STATUS command output contains the following additional messages indicating the current level:

NF1011 PACKET ANALYZER EXECUTION LEVEL IS: NOSTATS

NF1012... PROCESSING. EVENTS: YES PACKETS: YES TRACE: YES STATS: NO P-EVENTS: YES

The NF1012 message must indicate "P-EVENTS: YES" for event detectors to be operative. If this is not the case, change the Packet Analyzer level using one of the following methods. The required minimum level is NOSTATS. Level=FULL is highly recommended.

- Issue the following command from the connected NetMaster region:
SSISEND PACTL LEVEL=*pa_level*
- Set the PALEVEL=parameter in the SSI parameters file, and restart the SSI.

If the SSI is running and configured correctly, then contact Technical Support.

IPPM5330**FAILED event detector "*p1*". Error defining to PA****Reason:**

An error occurred while attempting to define an event detector to the Packet Analyzer (PA). The specific event detector is inoperative; other detectors are not affected.

p1 identifies the inoperative detector.

All existing alerts for this detector are closed, and no new alerts are raised until the error is resolved.

System Action:

The identified event detector is inoperative and will not detect the desired events.

Error messages describing the error in more detail are written to the activity log.

User Action:

Gather the messages from the activity log, and contact Technical Support.

IPPM5331

Connect attempt rejected: server *p2:&p3* client *p4* stack *p1*

Reason:

A TCP Reset (RST packet) was sent by stack *p1* in response to a SYN request from client *p4* because there was no TCP server task listening on *p2* port number *p3*.

This alert is raised by a NOLISTEN Packet Analyzer event detector.

System Action:

None.

The TCP connection fails to establish.

User Action:

When a TCP listener port is not active and clients attempt to connect to that port, the stack automatically sends a reset back to the client, failing the connection attempt.

Continual or multiple occurrences of this failure commonly indicate a misconfigured client, whose server port setting is incorrect.

Check if this server port should be active and in use. If so, start the application task that enables the port listener.

If this server port is deliberately unassigned, check if the client task is misconfigured.

Another possibility is that a client may be deliberately scanning many ports, searching for a server that can be compromised.

If you think this may be happening, alert your network security group to the suspected violation and provide them with details of the client. SmartTrace can be used to trace that client's activity with this LPAR or IP host.

IPPM5332***SSL handshake failure: server @ alert limit, detector *p1*****Reason:**

Too many SSL Handshake Failure alerts were opened at once by the *p1* event detector *p2*.

Its Active Alert Limit is *p3*.

As a safety measure, this event detector has now been disabled.

The number of alerts indicates that excessive numbers of SSL/TLS connections failed during the security negotiation stage.

This alert is raised by alert limit processing for an SSLHFAIL Packet Analyzer event detector.

System Action:

The SSL/TLS connection is not established.

The event detector has been set to INACTIVE, to prevent additional alerts from flooding the Alert Monitor.

All the previous alerts opened by this event detector have been closed. They can be viewed using the Alert History.

User Action:

Step 1. Review all the alerts that were reported by this event detector

These alerts show the end points of each reported SSL handshake failure.

The Alert Text section of this alert shows the details of the last SSL handshake failure reported by this event detector before it was deactivated.

To see the other failures, use the Alert History.

1. Access the Alert History using F4=History from the Alert Monitor or shortcut /ALHIST.
2. From the Alert History display, enter **FILTER SSLHFAIL**.
3. Examine the individual SSLHFAIL end points, and look for patterns.

To review the exact criteria for this event detector, use /EDETECT.

Step 2. Look for a common cause of the SSL Handshake Failures

Ensure that each end point supports SSL/TLS.

Some causes of SSL handshake failure include:

- Revoked, expired, unknown, unsupported, unreserved or bad certificates
- Protocol version incompatibilities
- Decode, decrypt, or negotiation problems
- Unknown or unsupported names, PSK identities, extensions
- Illegal parameters, unexpected messages, or user cancellation

Use the /SECURE options to see if there are currently any other successful SSL/TLS connections involving either endpoint.

You can repeat the failing connection attempt while using SmartTrace. This will show the full SSL handshake packet flow, requests and responses.

IPPM5333***Connection reset by server: server @ alert limit, detector *p1*****Reason:**

Too many TCP server connection RESET alerts were opened at once by the *p1* event detector *p2*.

Its Active Alert Limit is *p3*.

As a safety measure, this event detector has been disabled.

The number of alerts indicates that excessive numbers of TCP connections are being reset by the server side of the connection.

This alert is raised by alert limit processing for a SVRRESET Packet Analyzer event detector.

System Action:

The TCP connection is reset.

The event detector has been set to INACTIVE, to prevent additional alerts from flooding the Alert Monitor.

All the previous alerts opened by this event detector have been closed. They can be viewed using the Alert History.

User Action:

Step 1. Review all the alerts that were reported by this event detector

These alerts show the end points of each reported TCP server connection RESET.

The Alert Text section of this alert shows the details of the last TCP server RESET reported by this event detector before it was deactivated.

To see the other RESETs, use the Alert History.

1. Access the Alert History using F4=History from the Alert Monitor or shortcut /ALHIST.
2. From the Alert History display, enter **FILTER SVRRESET**.
3. Examine the individual SVRRESET end points, and look for patterns.

To review the exact criteria for this event detector, use /EDETECT.

Step 2. Look for a common cause of the TCP server connection RESETs

Generally, TCP server RESET is sent when the TCP server does not like the data it received from the client, such as when there are problems with the handshake or with the application-level protocol.

Use a connection list to see whether this TCP server currently has successful connections with any other clients.

Check the TCP server address space job log, application logs, and system log for any application problems.

If server resets happen repeatedly on a connection, use SmartTrace to see the exact packet flow.

IPPM5334

Connection ended: server @ alert limit, detector *p1

Reason:

Too many TCP Connection Ended alerts were opened at once by the *p1* event detector *p2*.

Its Active Alert Limit is *p3*.

As a safety measure, this event detector has now been disabled.

The number of alerts indicates that excessive numbers of monitored TCP connections have ended.

This alert is raised by alert limit processing for an TCPEND Packet Analyzer event detector.

System Action:

The TCP/IP connection ends.

The event detector has been set to INACTIVE, to prevent additional alerts from flooding the Alert Monitor.

All the previous alerts opened by this event detector have been closed. They can be viewed using the Alert History.

User Action:Step 1. Review all the alerts that were reported by this event detector

These alerts show the end points of each reported TCP Connection End.

The Alert Text section of this alert shows the details of the last TCP Connection End reported by this event detector before it was deactivated.

To see the other ended connections, use the Alert History.

1. Access the Alert History using F4=History from the Alert Monitor or shortcut /ALHIST.
2. From the Alert History display, enter **FILTER TCPEND**.
3. Examine the individual TCPEND end points, and look for patterns.

To review the exact criteria for this event detector, use /EDETECT.

Step 2. Look for a reason for the connections ending

Bring the connections ended to the attention of the appropriate group to investigate the area of the specific TCP Connection End reason code (if relevant).

If the connection should be up all the time, attempt to reconnect.

The reason code can indicate the following conditions:

- Possible network security violations
- IP stack load or stress problems
- TCP performance problems
- Application problems
- Operator actions

IPPM5335

Restricted connection started: server @ alert limit, detector *p1

Reason:

Too many restricted TCP Connection alerts were opened at once by the *p1* event detector *p2*.

Its Active Alert Limit is *p3*.

As a safety measure, this event detector has now been disabled.

The number of alerts indicates that excessive numbers of restricted TCP/IP connections have been started.

This alert is raised by alert limit processing for a TCPSTART Packet Analyzer event detector.

System Action:

The restricted SSL/TLS connection is started.

The event detector has been set to INACTIVE, to prevent additional alerts from flooding the Alert Monitor.

All the previous alerts opened by this event detector have been closed. They can be viewed using the Alert History.

User Action:Step 1. Review all the alerts that were reported by this event detector

These alerts show the end points of each reported TCP Connection Start.

The Alert Text section of this alert shows the details of the last TCP Connection Start reported by this event detector before it was deactivated.

To see the other failures, use the Alert History.

1. Access the Alert History using F4=History from the Alert Monitor or shortcut /ALHIST.
2. From the Alert History display, enter **FILTER TCPSTART**.
3. Examine the individual TCPSTART end points, and look for patterns.

To review the exact criteria for this event detector, use /EDETECT.

Step 2. Investigate the need for the restricted TCP Connections

This step depends on why these connections are significant and why they were specified as being restricted.

It may indicate unexpected activity, or a possible security breach.

Use Connection Lists to see what other connections currently involve either of the connection partners. From this list, you can also drop connections.

Use SmartTrace to view the packet flow and packet content (if not encrypted) on the connection.

IPPM5336***Connect attempt rejected: server @ alert limit, detector *p1*****Reason:**

Too many Connect attempt rejected alerts were opened at once by the *p1* event detector *p2*.

Its Active Alert Limit is *p3*.

As a safety measure, this event detector has been disabled.

The number of alerts indicates that excessive numbers of TCP connection attempts are being reset by the stack due to no listener on the server port.

This alert is raised by alert limit processing for a NOLISTEN Packet Analyzer event detector.

System Action:

The TCP connection fails to establish.

The event detector has been set to INACTIVE, to prevent additional alerts from flooding the Alert Monitor.

All the previous alerts opened by this event detector have been closed. They can be viewed using the Alert History.

User Action:

Step 1. Review all the alerts that were reported by this event detector

These alerts show the client of each reported TCP connection attempt that was rejected.

The Alert Text section of this alert shows the details of the last TCP connection attempt reported by this event detector before it was deactivated.

To see the other alerts, use the Alert History.

1. Access the Alert History using F4=History from the Alert Monitor or shortcut /ALHIST.
2. From the Alert History display, enter **FILTER NOLISTEN**.
3. Examine the individual NOLISTEN end points, and look for patterns.

To review the exact criteria for this event detector, use /EDETECT.

Step 2. Look for a common cause of the TCP connection attempt rejections

When a TCP listener port is not active and clients attempt to connect to that port, the stack automatically sends a reset back to the client, failing the connection attempt.

Continual or multiple occurrences of this failure commonly indicate a misconfigured client, whose server port setting is incorrect.

Check if this server port should be active and in use. If so, start the application task that enables the port listener.

If this server port is deliberately unassigned, check if the client task is misconfigured.

Another possibility is that a client may be deliberately scanning many ports, searching for a server that can be compromised.

If you think this may be happening, alert your network security group to the suspected violation and provide them with details of the client. SmartTrace can be used to trace that client's activity with this LPAR or IP host.

IPPM5337***Packet fragmentation rate too high: server @ alert limit, detector *p1*****Reason:**

Too many IP Packet Fragmentation alerts were opened at once by the *p1* event detector *p2*.

Its Active Alert Limit is *p3*.

As a safety measure, this event detector has now been disabled.

The number of alerts indicates that an excessive and/or prolonged rate of packet fragmentation is occurring.

High fragmentation can contribute to increased packet loss or packet retransmissions. These conditions in turn can result in increased response times and higher processing load as the end point must reassemble the packets.

This alert is raised by alert limit processing for an FRAGMENT Packet Analyzer event detector.

System Action:

The event detector has been set to INACTIVE to prevent additional alerts from flooding the Alert Monitor.

All the previous alerts opened by this event detector have been closed. They can be viewed using the Alert History.

User Action:

Step 1. Review all the alerts that were reported by this event detector

These alerts show the details of reported packet fragmentation.

The Alert Text section of this alert shows the details of the last fragmentation event reported by this event detector before it was deactivated.

To see the other fragmentation events, use the Alert History.

1. Access the Alert History using F4=History from the Alert Monitor or shortcut /ALHIST.
2. From the Alert History display, enter **FILTER FRAGMENT**.
3. Examine the individual FRAGMENT end points, and look for patterns.

To review the exact criteria for this event detector, use /EDETECT.

Step 2. Look for a common cause of the packet fragmentation

Fragmentation is needed when a datagram is bigger than the physical frame size of the network. The condition can be caused by incorrect sizing of the maximum transmission unit (MTU).

Locate the remote hops for which most datagrams are being fragmented. Frame size is determined by the MTU size. TCP/IP uses the MTU to see if fragmentation is needed.

Consider Implementing Path MTU Discovery

On z/OS, the MTU used for a particular outbound send can vary, depending on the configuration.

If IP traffic from this z/OS stack crosses multiple hops with different MTU sizes, you should enable path MTU discovery (IPCONFIG PATHMTUDISCOVERY). This statement discovers and uses an MTU size that will reach the final hop without needing fragmentation.

(Without path MTU discovery, the send uses the smaller of the interface MTU (from the stack interface physical device links) or the configured route MTU.) Path MTU discovery is usually off by default.

For discussions of MTU considerations and fragmentation considerations, see the *IBM z/OS Communications Server IP Configuration Guide*.

To see how to use the PING command with the PMTU parameter and large outbound packet lengths to determine the path MTU size to a host, see the *IBM z/OS Communications Server IP Diagnosis Guide*.

Other Fragmentation Information

The Advanced Connection List (/CONNCF) can list all TCP connections where local or remote fragmentation has been observed.

Stack Performance History (/STKPERF.IP) includes stack-wide performance attributes ipFrag%, ipFragFailed, ipFragFailed%, and ipFragOk.

IPPM5399***p1*****Reason:**

This general diagnostic message contains variable information.

System Action:

None.

User Action:

Gather all related messages, and send them to Technical Support.

IPPM5401**P1 Action not available for this alert****Reason:**

You have selected the *P1* action for an alert, but the resource associated with the alert is not part of an active system image, so the *P1* action is not available.

System Action:

The action terminates.

User Action:

Select another action.

IPPM5402**ClassId< P1> not matched for rule get P2****Reason:**

The Alert ClassId < *P1* > cannot be matched during AlertRule_Get processing of the Alert Monitor Callback package.

System Action:

Processing terminates.

User Action:

Contact Technical Support.

IPPT0200

SmartTrace definition P1 P2 by P3 P4

Reason:

The SmartTrace definition *P1* had the action *P2* issued against it by user *P3*. If the action was invoked using a line command from a connection list or resource monitor, *P4* shows the internal SmartTrace definition name. The message provides an audit trail of SmartTrace activity.

System Action:

None.

User Action:

None.

IPPT0201

Error reading IPFILE. P1

Reason:

An attempt to read saved SmartTraces from IPFILE failed. *P1* is the error message received on the READ.

System Action:

Processing continues. Saved traces are not available.

User Action:

For more information, see the explanation for message *P1*. If the condition continues, contact Technical Support.

IPPT0202

Error saving trace. P1

Reason:

An attempt to save a SmartTraces to IPFILE failed. *P1* is the error message received from the WRITE.

System Action:

The save fails.

User Action:

For more information, see the explanation for message *P1*.

IPPT0203

Variable error: Table= P1, Req= P2, Key= P3, FDBK= P4

Reason:

An unexpected error has occurred in VARTABLE processing.

P1 is the VARTABLE name

P2 is the VARTABLE request type

P3 is the key for the entry

P4 is the feedback value for the operation

System Action:

The previous display ends.

User Action:

Retry the operation. If the problem continues, contact Technical Support.

IPPT0204

Record not found on IPFILE: Key= P1

Reason:

An attempt to read a saved trace record from IPFILE failed. *P1* is the trace name.

System Action:

The procedure fails.

User Action:

If this condition continues, contact Technical Support.

IPPT0205

P1 action not supported for a SAVED trace

Reason:

An attempt to perform an action on a saved trace failed. *P1* is the action. This action does not apply to a saved trace.

System Action:

The action fails.

User Action:

Select another action or another trace.

IPPT0206

Trace contains no packets

Reason:

An attempt to view packets for an active trace has failed. The trace currently contains no packets.

System Action:

The action fails.

User Action:

Wait until some packets have been traced.

IPPT0207

Error decoding packet: P1

Reason:

An attempt to decode a packet for viewing has failed. *P1* contains the error message from the decode process.

System Action:

The action fails.

User Action:

For more information, see the *P1* message.

IPPT0208

Invalid P1 sequence number P2

Reason:

An attempt to read a set of packets failed because the starting or ending sequence number *P2* provided with the request is invalid. The sequence numbers must both exist in the same buffer (initial or main buffer) and the ending sequence number must be greater than the starting sequence number.

System Action:

The action fails.

User Action:

This is an internal error. Contact Technical Support.

IPPT0209**Request rejected. Trace not active****Reason:**

An attempt to inactivate or delete a trace has failed. Either the trace does not exist or it is inactive.

System Action:

The action fails.

User Action:

None.

IPPT0210**Request rejected. Trace already active****Reason:**

An attempt to activate a trace has failed. The trace is already active.

System Action:

The action fails.

User Action:

None.

IPPT0211**Trace P1****Reason:**

This message confirms the activation or inactivation of a trace.

System Action:

None.

User Action:

None.

IPPT0212

Packet Tracing currently unavailable

Reason:

Packet Tracing is unavailable for one of the following reasons:

- The SSI is not running.
- The Packet Analyzer is not configured to run in the SSI.
- The Packet Analyzer is configured, but its processing level has been set too low, i.e. to a value other than PALEVEL=FULL.

System Action:

None.

User Action:

Check the status of the SSI region.

If the SSI is active, check why it is not running with the SSI parameter *PALEVEL=FULL*.

When including Packet Analyzer functions in an SSI, it is recommended to always set the PALEVEL parameter to FULL. If you run with a level other than FULL, various IP monitoring functions will not be available.

Only use a PALEVEL other than FULL if instructed by Technical Support.

IPPT0213

Request rejected. Insufficient space in trace database

Reason:

An attempt to activate a trace failed. The current utilization of the trace database in the SSI is above 80%, at which point any new trace requests are rejected.

System Action:

The action fails.

User Action:

To see the current SSI trace database size, use */IPTEST*.

To free space in the trace database, delete any ACTIVE or ENDED trace that is no longer required.

If this condition occurs frequently, consider increasing the database size on the next restart of the SOLVE SSI region. The database size is set by SSI startup parameter, PTRCDBSIZE.

IPPT0214**Request rejected. P1 is not owned by this region****Reason:**

An action against SmartTrace definition *P1* has been rejected because the definition is not owned by this region.

System Action:

The action fails.

User Action:

None.

IPPT0215**Request rejected. P1 does not exist****Reason:**

An action against SmartTrace definition *P1* has failed because the definition does not exist.

System Action:

The action fails.

User Action:

None.

IPPT0216**Activation failed. Invalid trace criteria: P1****Reason:**

An attempt to activate SmartTrace definition *P1* failed because the trace definition specifies invalid criteria. *P1* shows details of the criteria in error.

System Action:

The action fails.

User Action:

Review the criteria and modify as required.

IPPT0217

Trace definition not available

Reason:

The definition for a selected trace was not available for viewing because of one of the following reasons:

- The expiry period for an ENDED trace has lapsed.
- A SAVED trace was imported from an external source.
- A SAVED trace was created from an earlier version of the product.

System Action:

For a selected trace that has just expired, the list is refreshed.

User Action:

None.

IPPT0218

SmartTrace action record for *P1* not found

Reason:

An internal request to retrieve the related action record for trace definition *P1* failed because the record does not exist in IPFILE.

System Action:

Processing continues. The trace definition is activated with no possibility of the related actions being executed.

User Action:

Review the activity log for earlier messages with a prefix of IPPT63* that may indicate some VSAM file error processing. If none are found, either redefine the actions for this trace, or update and save the definition with no actions defined.

IPPT0219**Error accessing SmartTrace action record for *P1*****Reason:**

An unrecoverable error for an internal request to retrieve SmartTrace action records for trace definition *P1* has occurred.

System Action:

Processing terminates.

User Action:

Review the activity log for messages with a prefix of IPPT63* that may indicate some VSAM error processing and take appropriate action. If none are found, either redefine the actions for this trace, or update and save the definition with no actions defined.

IPPT0220**Trace activated. Tracing will commence when *P1* is started****Reason:**

You activated a SmartTrace; however, the stack you want to trace is inactive. Packet tracing will commence when the stack starts.

System Action:

None.

User Action:

None.

IPPT0221

Trace activated. Packet analysis is disabled for stack *P1*

Reason:

You activated a SmartTrace; however, the stack you want to trace is not being processed by the packet analyzer. Tracing will start when the stack is enabled to the packet analyzer.

System Action:

None.

User Action:

Investigate why the stack is not being processed by the packet analyzer. Possibly it was disabled using a STACK UNHOOK command to the SSI. Alternatively, there may have been a failure in the packet analyzer. Look for error messages in the JESMSG log in the SSI region.

IPPT0400**End of export; P1 exported, P2 truncated, P3 dropped, P4****Reason:**

The export operation finished.

P1 is the total number of packets exported.

P2 is the number of packets truncated.

P3 is the number of packets not traced due to storage shortage.

P4 is the maximum length encountered for a physical packet.

Note: The truncation may be due to the following:

- The logical record length (LRECL) of the Physical Sequential (PS) data set is smaller than the saved packet length.
- The saved packet size is bigger than 64 KB. The part of the packet that fits is exported.
- The CTRACE trace includes packets already truncated by the CTRACE function.
- The user that performed the export does not have read authorization for SmartTrace. The data portion is stripped of TCP and UDP packets.

For details on packets not traced due to storage shortage, see the IPPT5019 message.

System Action:

None.

User Action:

None.

IPPT0401**Trace open failed: P1****Reason:**

The selected trace open failed. *P1* is the reason.

For more information, check the Activity Log for message IPPT0429.

System Action:

None.

User Action:

Ensure that the trace instance exists. If the problem persists, contact Technical Support.

IPPT0402

Invalid field: *P1*

Reason:

Errors are detected in the panel input field; *P1* is the explanation.

For the Dataset or HFS file field, *P1* provides the following explanation:

Null DSN/File Name

Indicates that null text is specified in the field.

Missing HFS File Name

Indicates that the specified text is not an HFS file name.

Invalid HFS Path

Indicates that the specified text does not conform to HFS path-naming rules.

Invalid HFS File Name

Indicates that the specified text does not conform to HFS file-naming rules.

DSN not Qualified

Indicates that the specified text does not contain a qualified DSN.

Dataset Services Message

Indicates that this is a copy of the Dataset Services messages generated when an I/O operation fails.

Dataset is not Physical Sequential

Indicates that the specified name points to a data set that is not of physical sequential organization.

PDS Member

Indicates that the specified name points to the member of a partitioned data set that is not supported for export operation.

Dataset RECFM is not V or VB

Indicates that the specified name points to a data set that is not of variable (blocked or unblocked) format and the output is in libpcap format.

Dataset RECFM is not VB

Indicates that the specified name points to a data set that is not of variable blocked format and the output is in CTRACE format.

Dataset LRECL < minimum

Depending on the output format, it indicates that the output data set logical record length is less than required minimum:

27994 bytes for CTRACE

2056 bytes for LIBPCAP

Dataset LRECL not < BLKSIZE-4

Indicates that the CTRACE output points to a data set with a logical record length that is not at least four bytes less than the physical block length.

For the Target Time Zone field, *P1* provides the following explanation:

Invalid Sign

Indicates that the specified sign is not blank, -, or +.

Invalid Time Format

Indicates that the specified value is not of the format, *hh:mm*.

Hours GT 12

Indicates that the field specified an offset bigger than 12:00.

Minutes Invalid

Indicates that the field specified a minutes offset that is not 00 or 30.

System Action:

None.

User Action:

Correct the indicated error and retry the operation.

IPPT0403

Trace export file failed to open: *P1*

Reason:

The trace export file failed to open. *P1* is the reason.

Check the help for the message quoted in *P1*. If the reason quotes message N16C82 PATH NOT FOUND, it is most likely that the region does not have the level of security authorization required to access the File/Dataset in write mode.

System Action:

None.

User Action:

Check the MVS system log for Security System messages relating to the File/Dataset in question.

You may need to contact your Security Administrator. If the problem persists, contact Technical Support.

IPPT0404

Trace close failed: P1

Reason:

The trace close failed; export finished. *P1* is the reason.
For more information, check the Activity Log for message IPPT0429.

System Action:

None.

User Action:

If the situation persists, contact Technical Support.

IPPT0405

Trace export file close failed: P1

Reason:

The export file close failed, it may be usable.
P1 is the reason. For more informatin, check the Activity Log for message IPPT0429.

System Action:

None.

User Action:

If the situation persists, contact Technical Support.

IPPT0406

Trace instance read failed; RC: P1, FD: P2, Reason: P3

Reason:

The trace instance read failed. The export operation terminated. Some packets may have been exported.
P1 is the RC.
P2 is the feedback code.
P3 is the reason.

System Action:

None.

User Action:

If the situation persists, contact Technical Support.

IPPT0407**Trace export file write failed: P1****Reason:**

The trace export failed. The export operation terminated. Same packets may have been exported.

P1 is the reason. For more information, check the Activity Log for message IPPT0429.

System Action:

None.

User Action:

If the situation persists, contact Technical Support.

IPPT0408**Trace record not found on IPFILE: Key= P1****Reason:**

An attempt to read a saved trace record from IPFILE failed. *P1* is the trace instance name.

System Action:

The procedure fails.

User Action:

If this condition persists, contact Technical Support.

IPPT0409**Error reading IPFILE: P1****Reason:**

An attempt to read saved packets from IPFILE failed. *P1* is the error message received on the READ. Some packets may have been exported.

System Action:

Processing terminates.

User Action:

For more information, see the explanation for message *P1*. If the condition persists, contact Technical Support.

IPPT0410

Invalid P1 sequence number P2

Reason:

An attempt to read a set of packets failed because the starting or ending sequence number *P2* provided with the request is invalid. The sequence numbers must both exist in the same buffer (initial or main buffer) and the ending sequence number must be greater than the starting sequence number. Some packets may have been exported.

System Action:

The action fails.

User Action:

This is an internal error. Contact Technical Support.

IPPT0411

Error decoding packet: P1

Reason:

An attempt to decode a saved packet failed. *P1* contains the error message from the decode process. Some packets may have been exported.

System Action:

The action fails.

User Action:

For more information, see the *P1* message.

IPPT0412**Internal error: P1 P2****Reason:**

An internal error was detected. *P1* describes the error, *P2* may contain additional information. Some packets may have been exported.

P1 - Error in UNIX time conversion, *P2* -input time in hexadecimal.

System Action:

The export operation terminates. Some packets may be exported.

User Action:

This is an internal error. Contact Technical Support.

IPPT0413**Error reading trace: P1****Reason:**

An attempt to read saved packets from CTRACE failed. *P1* is the error message received. Some packets may have been exported. For more information, Check the Activity Log for message IPPT0429.

System Action:

Processing terminates.

User Action:

For more information, see the explanation for message *P1*. If the condition persists, contact Technical Support.

IPPT0414**Trace too big, P1****Reason:**

Trace selected for export exceeds supported size of 32767 packets. *P1* is the number of packets in the selected Trace Instance.

System Action:

Processing terminates.

User Action:

Try to define a trace that produces less packets.

IPPT0415

Specification conflict: P1, P2

Reason:

There is a conflict between specified parameters.

P1 is the first parameter.

P2 is the second parameter.

Possible reasons for conflict:

- Exporting Trace in CTRACE output format to HFS
- Exporting CTRACE Trace in CTRACE output format
- Specifying Time Zone Adjustment for CTRACE output format

System Action:

Processing terminates.

User Action:

Resolve the conflict and retry.

IPPT0416

User P1 does not have authority to export SmartTrace traces

Reason:

User *P1* is performing a trace export; however, they do not have sufficient authority.

SmartTrace authority provides partial export functionality and packet view authority provides full export functionality. TCP and UDP data portions are not exported for SmartTrace authority.

System Action:

Processing terminates.

User Action:

Contact your Security Administrator if you need a higher authority.

IPPT0419**Export terminated; P1, packet P2, reason: P3****Reason:**

The export operation terminated due to the input/output error.

P1 is the error

P2 is the error packet number

P3 is the message accompanying the error Check Activity Log for message IPPT0429, which contains full text of *P2* .

Note: If the number of packets reported by message IPPT0429 is greater than 0, the output is most likely usable.

System Action:

None.

User Action:

None.

IPPT0420**Output: P1, trace name: P2, desc: P3****Reason:**

This is a description of the trace exported:

P1 is the output dataset or HFS file name.

P2 is the trace name, if present.

P3 is the trace description, if present.

System Action:

None.

User Action:

None.

IPPT0421

Packets received truncated: P1

Reason:

Trace export received packets already truncated. *P1* is the number of truncated packets received.

System Action:

None.

User Action:

Check why the trace contained truncated packets.

IPPT0422

Packets may have been truncated due to security limitations

Reason:

Some packets may have been truncated due to the security limitations, that is, lack of packet-browsing authorization. TCP and UDP packets are exported without the data portion.

System Action:

None.

User Action:

Contact your Security Administrator for full SmartTrace authorization.

IPPT0423

Packets received in error: P1

Reason:

The trace export received packets marked in error. *P1* is the number of packets received in error.

System Action:

None.

User Action:

Check the input trace for more information about packets in error.

IPPT0429

Export terminated; *P1*: RC: *P2*, FD: *P3*, reason: *P4*

Reason:

This message gives more information following several panel-only message indicating errors. It indicates that the export operation terminated due to error *P1*.

P1 is the error description.

P2 is the error Return Code.

P3 is the error Feedback Code.

P4 is the message accompanying the error.

If any packets were exported, this message may be followed by messages IPPT0400 and IPPT0420.

System Action:

None.

User Action:

None.

IPPT0430

User *P1* does not have authority to generate TCP Data Flow Reports

Reason:

User *P1* is generating trace reports; however, they do not have sufficient authority to generate TCP Data Flow Reports.

System Action:

Processing continues; however, trace reports do not contain any TCP Data Flow reports.

User Action:

Contact your Security Administrator if you need a higher authority.

IPPT0431

EPS *P1* error: Errno=*P2* Reason=*P3*

Reason:

A Packet Analyzer request to the SOLVE SSI failed. The message includes the following details:

P1 is the EPS request type, for example Connect, Send, Receive.

P2 is the EPS error number.

P3 is an explanation of the EPS error number.

System Action:

The request fails.

User Action:

Use the EPS Error Number and Reason to determine the error:

70 No SSI Connection

This indicates that the connection between this region and the SSI region is not active. Use the \$LOG command to check the activity log for related messages.

Use the \$NM SSI Customizer parameter group to restart the SOLVE SSI.

For all other errors, contact Technical Support.

IPPT0432

EPS ID error: Verb=*P1*, ID=*P2*, SSID=*P3*, system=*P4*, NCLID=*P5*

Reason:

A Packet Analyzer request to the SOLVE SSI failed because of an invalid connection ID. The message includes the following:

P1 is the EPS verb name that was issued when the error was detected.

P2 is the EPS connection ID.

P3 is the SSID that identifies the SOLVE SSI region.

P4 is the system name where the region is running.

P5 is the NCLID of the process.

This message corresponds to an EPS error number 81.

System Action:

The request fails.

User Action:

Retry the request. If the problem persists, contact Technical Support.

IPPT0433

SSI *P1* on *P2* not contactable or Packet Analyzer not configured

Reason:

A Packet Analyzer request to the SOLVE SSI failed because the SSI region cannot be contacted or does not include support for the packet analyzer. The SSID (*P1*) and system (*P2*) identify the SSI region where the request is issued. This can be the local SSI region or a remote region, possibly on another LPAR.

This message corresponds to EPS error numbers 39 and 70.

System Action:

The request fails.

User Action:

Check the following in the region running on *P2*:

1. Ensure that the region is connected to the correct SSI. To do this, display the list of Customizer parameter groups (/PARMS) and select the SSI group (from the INTERFACES section). Ensure that the SSID is specified and is the correct value. Display the parameter group's initialization log (Ilog). Update and action the parameter group, as required.
2. Display the activity log and check for other SSI-related error messages and action these accordingly.
3. Ensure that the SSI initialization parameters include support for the packet analyzer. To do this, display the SSIPARMS member in the SOLVE SSI region's JCL library.

Ensure that Packet Analyzer support is enabled by specifying *PKTANALYZER=YES*.

Also ensure that the parameters include *PALEVEL=FULL*.

Only use a *PALEVEL* other than *FULL* if instructed by Technical Support.

Note: Only one SOLVE SSI region (per LPAR) can include support for the packet analyzer.

IPPT0434**Request timed out on SSID=*P1*, system=*P2*****Reason:**

A Packet Analyzer request to the SOLVE SSI did not complete in a reasonable time. The SSID (*P1*) and system (*P2*) identify the SSI region where the request is issued to obtain or store data. This can be the local SSI region, or a remote region, possibly on another LPAR.

System Action:

The request fails.

User Action:

Retry the request. If the problem persists, contact Technical Support.

IPPT0500**End of import; *P1* read, *P2* written****Reason:**

The import operation ended.

P1 is the total number of packets read.

P2 is the number of packets written.

System Action:

None.

User Action:

None.

IPPT0501

Trace open failed: *P1*

Reason:

The output trace open failed.

P1 is the reason.

For more information, see the Activity Log for message IPPT0529.

System Action:

None.

User Action:

If the problem persists, contact Technical Support.

IPPT0502**Invalid field: *P1*****Reason:**

Errors are detected in the panel input field; *P1* is the explanation.

Description Missing

Indicates that null text is specified in the field.

For the Dataset or HFS file field, *P1* provides the following explanation:

Null DSN/File Name

Indicates that null text is specified in the field.

Missing HFS File Name

Indicates that the specified text is not an HFS file name.

Invalid HFS Path

Indicates that the specified text does not conform to HFS path-naming rules.

Invalid HFS File Name

Indicates that the specified text does not conform to HFS file-naming rules.

DSN not Qualified

Indicates that the specified text does not contain a qualified DSN.

Dataset Services Message

Indicates that this is a copy of the Dataset Services messages generated when an I/O operation fails.

Dataset is not Physical Sequential

Indicates that the specified name points to a data set that is not of physical sequential organization and is not HFS.

PDS Member

Indicates that the specified name points to the member of a partitioned data set that is not supported for import operation.

Dataset RECFM is not V or VB

Indicates that the specified name points to a data set that is not of variable (blocked or unblocked) format.

System Action:

None.

User Action:

Correct the indicated error and retry.

IPPT0503

Trace import file failed to open: *P1*

Reason:

The trace import file failed to open. *P1* is the reason.

Check the help for the message quoted in *P1*. If the reason quotes message N16C82 PATH NOT FOUND, it is most likely that the region does not have the level of security authorization required to access the file or data set in write mode.

System Action:

None.

User Action:

Check the MVS system log for Security System messages relating to the file or data set in question.

You may need to contact your Security Administrator. If the problem persists, contact Technical Support.

IPPT0504

Trace close failed: *P1*, RC: *P2*, FD: *P3*

Reason:

The trace close failed; import ended.

P1 is the record number.

P2 is the return code.

P3 is the feedback code.

System Action:

None.

User Action:

If the situation persists, contact Technical Support.

IPPT0505**Trace import file close failed: *P1*****Reason:**

The import file close failed.

P1 is the reason.

For more information, see the Activity Log for message IPPT0529.

System Action:

None.

User Action:

If the situation persists, contact Technical Support.

IPPT0506**Trace read failed; RC: *P1*, FD: *P2*, Reason: *P3*****Reason:**

The trace read failed. The import operation terminated. Some packets may have been imported.

P1 is the RC, if applicable

P2 is the feedback code, if applicable.

P3 is the reason.

System Action:

None.

User Action:

If the situation persists, contact Technical Support.

IPPT0507

Data set or z/OS UNIX file is not in the libpcap format

Reason:

The import cannot proceed because the input file is not in the libpcap format. Libpcap files must have a header as the first record. The first four bytes of the header record must be X'A1B2C3D4' or X'D4C3B2A1'. This file does not contain either value.

System Action:

The import does not proceed.

User Action:

Verify that the file name correctly identifies a libpcap file. If the file is transferred using FTP, specify the binary option.

If you believe the file is in libpcap format, contact Technical Support.

IPPT0509

Error reading trace: *P1*

Reason:

An attempt to read trace file failed.

P1 is the error message received on the READ.

Some packets may have been imported.

System Action:

Processing terminates.

User Action:

For more information, see the explanation for message *P1*.

If the condition persists, contact Technical Support.

IPPT0510**Error writing trace, record *P1*, RC: *P2*, FD: *P3*****Reason:**

Writing trace record failed.

P1 is the record number.

P2 is the return code.

P3 is the feedback code.

System Action:

The action fails.

User Action:

Check the integrity of your trace list file.

If the problem persists, contact Technical Support.

IPPT0519**Import terminated; *P1*, packet *P2*, reason: *P3*****Reason:**

The import operation terminated due to error.

P1 is the error.

P2 is the error packet number.

P3 is the message accompanying the error.

Unless the error is *INTERR*, check the Activity Log for message IPPT0529, which contains the full text of *P2*.

Note: If the number of packets reported by message IPPT0529 is greater than 0, the output is most likely usable.

System Action:

None.

User Action:

Correct the situation using information provided in message IPPT0529. Contact Technical Support with log entries if the error is *INTERR*. You may be asked to provide the trace file you tried to import.

IPPT0520

Input: *P1*, trace name: *P2*, desc: *P3*

Reason:

The following is a description of the trace imported:

P1 is the input data set or HFS file name.

P2 is the trace name.

P3 is the trace description.

System Action:

None.

User Action:

None.

IPPT0521

Packets received truncated: *P1*

Reason:

Trace import received packets already truncated.

P1 is the number of truncated packets received.

System Action:

None.

User Action:

Examine why the trace contained truncated packets.

IPPT0529

Import terminated; *P1*: RC: *P2*, FD: *P3*, reason: *P4*

Reason:

This message gives more information following several panel-only message errors. It indicates that the import operation terminated due to error *P1*.

P1 is the error description.

P2 is the error Return Code.

P3 is the error Feedback Code.

P4 is the message accompanying the error.

If any packets were imported, this message may be followed by messages IPPT0500 and IPPT0520.

System Action:

None.

User Action:

None.

IPPT5001

No trace definitions exist. Press F4 (Add) to add a new definition

Reason:

No trace definitions are defined on the system.

System Action:

None.

User Action:

Press F4 (Add) to add a new trace definition.

IPPT5002

" P1" deleted.

Reason:

The trace definition *P1* was deleted. All unsaved traces for this definition were also deleted.

System Action:

None.

User Action:

None.

IPPT5003

No traces currently exist or target stacks are not active

Reason:

There are no traces for the trace definition. This may be due to the following:

- The definition is not active.
- The definition is active and it contains a specific filter for one or more stacks; however, none of the stacks are active.
- The definition is active, it contains a stop condition and all the traces for the stacks have hit the stop condition, and the resulting traces have subsequently expired. To restart the trace, inactivate and then activate the definition.
- The definition is inactive and all traces have been deleted or have expired.
- The definition is inactive and all traces have been deleted due to an SSI restart.

Note: Saved traces cannot be deleted by restarting the SSI.

System Action:

None.

User Action:

Do one of the following:

- If the trace definition is not active, no traces are created. Activate the trace definition using the *A* action.
- If the trace definition is active and it is a TCP connection trace, traces appear only when a connection matching the criteria is established.
- If the trace definition specifies specific stacks, a trace appears only when the stacks are active.
- If the definition has a stop condition and that condition has been met, restart the stacks or inactivate and re-activate the definition.

IPPT5004**Invalid dataset or HFS file****Reason:**

The value entered is not a valid dataset name nor is it a valid HFS file path and name.

System Action:

Field is set in error.

User Action:

Specify a valid dataset name or a valid HFS file path and name.

IPPT5005**Adjust Time By invalid. Must be of the form +hh:mm or -hh:mm****Reason:**

The value entered is not a valid time offset value.

System Action:

Field is set in error.

User Action:

Specify a valid time offset of the form + or -, followed by the number of hours and a colon (:), and then 30 or 0 minutes. You can specify equals (=) to use the system's local time offset.

IPPT5006**Invalid dataset or HFS file. You must enter the HFS path and file name****Reason:**

The value entered is not a valid dataset name or a valid HFS file path and name.

System Action:

Field is set in error.

User Action:

Specify a valid dataset name or a valid HFS file name.

IPPT5007

***P1* is only applicable to manually defined trace definitions**

Reason:

You cannot access the trace definition with the action *P1*. This action is reserved for trace definitions created manually using the A (Add SmartTrace Definition; shortcut *TRADD*) menu option from the

TCP/IP : Packet Tracing Menu (shortcut */SMART*).

System Action:

Field is set in error.

User Action:

Choose a different action for the selected trace definition.

IPPT5008

No traces currently exist on stack *P1* for *P2*

Reason:

There are no traces on stack *P1* for definition *P2*.

System Action:

None.

User Action:

If the trace definition is not active, no traces are created. Activate the trace definition using the *A* action.

If the trace definition is active and it is a TCP connection trace, traces appear only when a connection matching the criteria is established.

IPPT5009**No traces currently exist for P1****Reason:**

There are no traces for *P1*.

System Action:

None.

User Action:

Ensure that the PT command has been issued for *P1*. If it has, wait for packets that match the PT command's criteria to appear.

IPPT5010**Tracing has not been activated for P1****Reason:**

The PT command has not been issued for *P1*; therefore, no traces are displayed.

System Action:

None.

User Action:

Ensure that the PT command has been issued for *P1*.

IPPT5011**Tracing is not active for P1****Reason:**

There is no active tracing for *P1*, although saved traces do exist.

System Action:

None.

User Action:

None.

IPPT5012

Invalid record skip amount P1

Reason:

The number of records to skip is invalid. *P1* must be an integer and represent the number of records to skip forward or back.

System Action:

Field set in error.

User Action:

Specify a valid number or blank to get the default value of 1.

IPPT5013

End of trace reached.

Reason:

You cannot skip the requested number of records because there are insufficient records.

System Action:

The last record in the trace appears.

User Action:

None.

IPPT5014

Top of trace reached.

Reason:

You cannot skip back the requested number of records because there are insufficient records.

System Action:

The first record in the trace appears.

User Action:

None.

IPPT5015

Select this line or press F4 (Add) to add a new trace definition

Reason:

To add a new SmartTrace definition, you can select this line or press F4 (Add).

System Action:

None.

User Action:

Select the message line or press F4 (Add) to add a new SmartTrace definition.

IPPT5016

No traces match the criteria.

Reason:

No traces exist that match the criteria that you entered.

System Action:

The trace definition list is not presented.

User Action:

If a trace has been activated recently, ensure that the correct Link Name is specified. Enter ? to display the names of all linked systems.

IPPT5017

There are no EE traces.

Reason:

There are currently no EE traces to list.

System Action:

None.

User Action:

None.

IPPT5018

Output format must be LIBPCAP or CTRACE

Reason:

The value entered for the output format is invalid.

System Action:

Field is set in error.

User Action:

Specify a valid output format of LIBPCAP or CTRACE.

IPPT5019

Packet not traced due to storage shortage

Reason:

When this trace was collected, a packet that should have been traced could not be captured because there was insufficient storage in the SSI's trace database.

System Action:

This packet is not traced.

User Action:

If the trace is active, delete some other ACTIVE or ENDED traces to free space in the trace database and reduce the risk of future packets being missed. If this message occurs frequently, consider increasing the database size on the next restart of the SOLVE SSI region. The database size is set by SSI startup parameter, PTRCDBSIZE.

IPPT5020

Invalid time. Hours must range from 0 to 12. Minutes must be 0 or 30

Reason:

The value entered is not a valid time offset value. The sign must be + or - (+ is assumed if a sign is omitted). The hours must be between 0 and 12. The minutes must be exactly 30 or 0.

System Action:

Field is set in error.

User Action:

Specify a valid time offset of the form + or -, followed by the number of hours and a colon (:), and then 30 or 0 minutes. You can specify equals (=) to use the system's local time offset.

IPPT5021

Invalid time. It must range from -12:00 to +12:00 in 30-min. intervals

Reason:

The value entered is out of range. The time offset must range from -12:00 to +12:00 in increments of 30 minutes.

System Action:

Field is set in error.

User Action:

Specify a valid time offset of the form + or -, followed by the number of hours and a colon (:), and then 30 or 0 minutes. You can specify equals (=) to use the system's local time offset.

IPPT5022

Trace printed in background, notification will be sent when completed.

Reason:

The print request was submitted to the background because it can take a while to print so many packets. When the print is complete, a notification is sent.

System Action:

None.

User Action:

None.

IPPT5023

Trace printed.

Reason:

The print request completed successfully and the output was sent to the printer.

System Action:

None.

User Action:

None.

IPPT5024

Background print of trace p1 failed.

Reason:

The print request for trace *P1* failed. An accompanying message gives the reason.

System Action:

Print request aborted.

User Action:

Check the accompanying message for an action.

IPPT5025**No packets collected due to storage shortage****Reason:**

When this trace was collected, all packets that should have been traced could not be captured because there was insufficient storage in the SSI's trace database.

System Action:

None.

User Action:

If the trace is active, delete some other ACTIVE or ENDED traces to free space in the trace database and reduce the risk of future packets being missed. If this message occurs frequently, consider increasing the database size on the next restart of the SOLVE SSI region. The database size is set by SSI startup parameter, PTRCDBSIZE.

IPPT5026**Prompting terminated - port *P1* already decoded as *P2*****Reason:**

The DECODE command prompting has terminated because the current list is filtered on Port *P1* that is being decoded as *P2*. This occurs because of one of the following reasons:

1. A previous DECODE command has assigned Port *P1* to be decoded as *P2*.
2. Port *P1* is by default always decoded as *P2*.

System Action:

Processing terminated.

User Action:

If prompting terminated because of the first reason, issue the **DECODE P2 CLEAR** command to stop decoding so that Port *P1* can be decoded using another protocol. Reissue the **DECODE** command.

The second reason indicates that Port *P1* cannot be decoded with any other protocol. If required, you can refresh the display temporarily without the decoded information by issuing the TCPSUMM command.

IPPT5027

Command not supported by linked region

Reason:

A command has failed because the target linked region is of an earlier version that does not support the command.

System Action:

The command is rejected.

User Action:

None.

IPPT5028

No tags previously defined

Reason:

The TAGCLR command found no tags to clear.

System Action:

None.

User Action:

None.

IPPT5029

All tags successfully cleared

Reason:

The TAGCLR ALL command has cleared all existing tags.

System Action:

None.

User Action:

None.

IPPT5030**Tag P1 successfully cleared****Reason:**

The TAGCLR command has cleared tag *P1*.

System Action:

None.

User Action:

None.

IPPT5031**Tag number must be numeric (1-9)****Reason:**

The TAGCLR command is rejected because an invalid tag number was specified.

System Action:

The command is rejected.

User Action:

Reissue the command with a valid tag number (1 to 9).

IPPT5032**P1 terminated - User not authorized to view packet data****Reason:**

The *P1* command was terminated because you do not have authority to view packet data. Your viewing of packets are limited to the IP and protocol headers.

System Action:

The command is terminated.

User Action:

Contact your security administrator.

For information about SmartTrace security requirements, see the *Security Guide*.

IPPT5033

DECODE command disabled - internal table not available

Reason:

The DECODE command has been disabled as the required internal tables for port decoding is either corrupted or could not be located.

System Action:

Command processing is terminated.

User Action:

Contact Technical Support for assistance in restoring the internal table.

IPPT5034

Export to be processed without payload data - insufficient authority

Reason:

A request to export a trace will be processed without the packet payload data because of insufficient authority.

SmartTrace security has two levels of authority. Full authority permits a user to define, delete, start and stop tracing, export, and view all contents of a traced packet. Partial authority has a similar scope, but the user cannot view the payload data of any traced packet. For TCP and UDP packets, any data that follows the TCP or UDP header is removed.

System Action:

None.

User Action:

If full authority is required, contact your security administrator.

IPPT5035**No traces started by the PT command for the selected system****Reason:**

No traces exist that were created by a PT command against a resource for the selected system. If traces were previously activated, they are deleted if not referenced or saved after a certain period.

You can activate a trace using the PT command as follows:

- Against a resource name on a resource monitor
- Using the menu option from a resource class SmartTrace Menu

System Action:

None.

User Action:

If a trace has been recently activated, check that the correct System is specified. Enter ? to display the names of all monitored system images.

IPPT5036**No packets decoded in current page****Reason:**

You issued the DECODE command; however, no packets were decoded on the current page for all protocols specified by the command. One or more of the following conditions exist:

- The packets in the current page contain no payload data.
- The packets in the current page contain payload data but cannot be decoded using the nominated protocol.
- The packets are part of a secure connection that uses an encryption algorithm on the payload data. No decoding is possible on packets that are part of a secure connection.

System Action:

None.

User Action:

Ensure that the payload data matches the nominated protocol (for example, no decoding is possible for HTTP packets using the TELNET protocol). Review the packet list and identify packets that are decoded correctly by the command.

IPPT5037

No packets tagged in current page

Reason:

You issued the TAG command; however, no packets were tagged on the current page for all target strings specified in the command. One or more of the following conditions exist:

- The packets in the current page contain no payload data.
- The packets in the current page contain payload data but no match was found for all target strings.
- The packets are part of a secure connection that uses an encryption algorithm on the payload data, which eliminates the possibility of a matching target string in readable text format.

System Action:

None.

User Action:

Issue a FIND TAG command to reposition the list on the next packet that contains a matching target string.

IPPT5038**Error sense details not found in NETINFO database****Reason:**

You issued a command to display details of error sense data; however, it failed because it does not exist in the NETINFO database.

System Action:

None.

User Action:

For user sense data (first byte = x'00'), manually add the details to the NETINFO database. To do this:

1. Enter /NETINFO.
2. Select option 2.
3. Select Category 2 - SNA Sense Codes.
4. Enter the details of the user sense data.
5. Press F10 (Add).

For all other sense data categories (first byte \neq x'00'), contact Technical Support and provide the sense data that does not exist in the NETINFO database. The details of the sense data can also be obtained from IBM publication GA27-3136, Systems Network Architecture Formats.

IPPT5039**The selected entry does not contain error sense data****Reason:**

You issued a line command to display details of error sense data; however, the entry has no error sense data. The 4-byte sense data is shown in hexadecimal format and highlighted in red as part of the summary information.

System Action:

The command is rejected.

User Action:

None.

IPPT5040

Invalid VIEW command options: *P1*

Reason:

The parameter passed to the VIEW command is invalid. The passed parameter is P1.

System Action:

Command rejected.

User Action:

Enter a valid parameter for the VIEW command. The syntax for the command is:

VIEW [ACTIVE | ALL | CONNECTIONS | EE | RESOURCES | TRACES |

USER [user] | MATCH pattern]

If no parameters are specified, ALL is assumed and all traces are shown. You can abbreviate the view keywords to as few as two characters.

The views have the following meanings:

ACTIVE displays the Active Traces list, which shows definitions that are currently active.

ALL or blank displays the All Trace Definitions

list, which shows definitions, and the saved traces that have no associated definition.

CONNECTIONS displays the TCP Connection Traces list which shows definitions created using the PT command

against a TCP connection.

EE displays the EE Active and Ended Traces list, which shows definitions created using the PT command

against an Enterprise Extender component.

RESOURCES displays the IP Resources Traces list, which shows definitions created using the PT command against

an IP resource.

TRACES displays the Active and Ended Traces list, which shows definitions that have traces, and the saved traces that have no associated definition.

USER [userid] displays the user Traces list, which shows definitions last updated by the specified user ID or list of user IDs. If no ID is specified, your user ID

is used.

MATCH pattern displays the Trace Matching Name pattern list, which shows definitions with names that match the specified pattern. The pattern can include the following special characters:

*` matches one or more characters.

?` matches a single character.

For example, a?b*c matches all definitions that start with A, followed by any character, followed by B, then

any characters, and finally ending with C.

IPPT5041

View changed to: P1

Reason:

A request to change the view of IP traces completed successfully. The new view settings are P1.

System Action:

None.

User Action:

None.

IPPT5042

IPv6 address format changed to *p1* full address

Reason:

A request to change the IPv6 address format in the display completed successfully. The new setting for the IPv6 address format is *p1*.

The possible formats are:

SHOW the IPv6 addresses are shown in the full colon style format. *HIDE* the IPv6 addresses are shown in an abbreviated format with a maximum length of 15 characters (the least significant part of the address is removed and replaced with the >< symbol to denote the short format).

Note: Not every instance of an IPv6 address will always be affected by this setting. For example on a list of PT started connection list traces (TCP or EE UDP) the Trace Definition text will not be affected by this setting.

System Action:

None.

User Action:

None.

IPPT5043

No additional saved traces exist

Reason:

The request to display a list of additional saved traces could not be completed because there are no traces that have been saved on the IPFILE which had their original definition deleted.

System Action:

None.

User Action:

None.

IPPT5044**No traces started by the PT command****Reason:**

No traces exist that were created by a PT command against a connection. Previously activated traces are deleted if not referenced or saved after certain period.

System Action:

None.

User Action:

None.

IPPT5045**SQL Code details not found in NETINFO database****Reason:**

You issued a command to display details of an SQL Code; however, it failed because it does not exist in the NETINFO database.

System Action:

None.

User Action:

For user sense data (first byte =x'00'), manually add the details to the NETINFO database. To do this:

1. Enter **/NETINFO**.
2. Select option 2.
3. Select Category 2 - SNA Sense Codes.
4. Enter the details of the user sense data.
5. Press F10 (Add).

For all other sense data categories (first byte ^=x'00'), contact Technical Support and provide the sense data that does not exist in the NETINFO database. The details of the sense data can also be obtained from IBM publication GA27-3136, *Systems Network Architecture Formats*.

IPPT5046

The selected entry does not contain SQL code

Reason:

You issued a line command to display details of an SQL code; however, the entry has no valid SQL code. The SQL format is highlighted in either red or yellow and has the following format:

nnn(xxxxx)

nnn

Is a signed number.

xxxxx

Is in hexadecimal format.

System Action:

The command is rejected.

User Action:

None.

IPPT5101

TAG command executed: *P1*

Reason:

The TAG Command Prompt was actioned with a result *P1*:

n tags set

Indicates the number of tags set.

No tags defined

Indicates that no tags were specified.

System Action:

None.

User Action:

None.

IPPT5102**Invalid usage: *p1*****Reason:**

When issuing the TAG command or specifying data for the input fields on a TAG Command Prompt panel, an invalid parameter was specified. *P1* is one of the following error conditions:

No tag data supplied

Indicates that no data was provided to the command.

Invalid hex data

Indicates that the data contains characters other than hexadecimal characters (0 to 9, A to F, or a to f).

Hex data not byte aligned

Indicates that the specified hexadecimal data results in binary data that is not byte aligned. The data should contain an even number of characters. For example, specify 02 instead of 2.

Invalid IPv4 address

Indicates that the specified IP address is not a valid IPv4 address.

Invalid IPv6 address

Indicates that the specified IP address is not a valid IPv6 address.

Unknown data format

Indicates that the specified data format is not recognized or not supported by the command.

System Action:

On the TAG Command Prompt panel, the fields in error are highlighted. If the TAG *search_string search_format* command is issued, it is rejected.

User Action:

Retry the command with valid values.

If a null is required as a tag data, specify the low value 00 with a format of HEX. Hexadecimal data should be byte aligned (for example, 02 is binary 00000010).

On the TAG Command P panel, you can specify ? in the Format column to list the valid data formats.

IPPT5103

Tag *P1* defined

Reason:

A TAG command has tagged the packets that contain data specified by tag *P1*.

System Action:

None.

User Action:

None.

IPPT5104

Unable to define tag - maximum of *p1* tags already defined

Reason:

A request to define a new tag has failed because the maximum number of *P1* tags are already defined.

System Action:

The command is rejected.

User Action:

Issue the **TAGCLR** command to either remove all tags or specific tags.

Alternatively, you can replace an existing tag that is no longer required. Enter **TAG** to list the currently defined tags, and update as required.

IPPT5105**DECODE command executed: P1****Reason:**

The DECODE Command Prompt was actioned with result *P1*:

Port assignments completed without errors

Indicates that all port assignments were completed without errors.

No ports defined for decode

Indicates that no ports were defined to be decoded by the command prompt.

System Action:

None.

User Action:

None.

IPPT5106**Maximum allowable entries exceeded****Reason:**

The maximum allowable entries has been exceeded.

System Action:

The DECODE command prompt is displayed and the field in error is highlighted. The additional port is truncated and appended at the end of the field.

User Action:

Remove entries that are not required for decoding and respecify the additional port to be decoded.

IPPT5107

Invalid usage: *p1*

Reason:

When issuing the DECODE command or specifying data on the DECODE Command Prompt panel, an invalid value was specified. *P1* is one of the following error conditions:

Protocol *P2* not supported

Indicates that the specified protocol *P2* is not currently supported for decoding.

Port number not required on port filtered list

Indicates that for a packet list that is filtered on a local port, specifying a port number is optional. If specified, it must be the same as the local port number.

No port number specified

Indicates that a port number is required for a packet list that is not filtered on a local port.

System Action:

On the DECODE Command Prompt panel, the fields in error are highlighted. If the DECODE *server_port_type port_number* command is issued, the DECODE Command Prompt is displayed.

User Action:

Retry the command with the valid values.

IPPT5108**Unable to decode port - maximum of *p1* ports already defined****Reason:**

A request to define a new port for decoding has failed because the maximum number of *P1* ports for the same protocol are already defined.

System Action:

The command is rejected.

User Action:

Issue the **DECODE *protocol* OFF** command to remove all defined ports for the specified protocol.

Alternatively, you can replace a port that is no longer required for the protocol. Enter **DECODE** to list the currently defined ports, and update as required.

IPPT5109**Decoding for defined *P1* ports disabled****Reason:**

The **DECODE *P1* OFF** command has disabled decoding for all ports that were defined for decoding with the *P1* protocol.

System Action:

None.

User Action:

None.

IPPT5110**No *P1* ports defined for decoding.****Reason:**

The **DECODE *P1* OFF** command ended, but no *P1* ports were found.

System Action:

None.

User Action:

None.

IPPT5111

Port *P1* already defined for decoding with another protocol

Reason:

An attempt to decode Port *P1* has failed because it is already defined for decoding with another protocol.

System Action:

The request is rejected.

User Action:

Enter *DECODE* to display the list of ports and associated protocol assignments.

IPPT6102

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1, VALUE= P2

Reason:

The TCP/IP procedure \$IPPT61PL failed during processing because it was passed an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

The request is rejected.

User Action:

Contact your Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

IPPT6103

" P1" IS NOT A VALID SEQ DATASET NAME

Reason:

An invalid dataset name *P1* was specified in the *Trace Dataset Name* field.

System Action:

None.

User Action:

Correct the Dataset Name and retry. The dataset must be a sequential dataset.

IPPT6106

Command must be in the format 'TRACE CT,WTRSTART=member'

Reason:

The component trace command that starts the external writer must be in the format:

TRACE CT,WTRSTART=member

The only parts of the command that you should change to suit your installation is the *member* name specified on the WTRSTART= keyword parameter in the command or the option 'NOWRAP' (Default:WRAP) can be specified.

The *member* name must be between 1 and 7 characters in length.

System Action:

None.

User Action:

Correct the command field so that its contents are valid.

IPPT6107

TCPaccess jobname must be specified.

Reason:

TCPaccess trace jobname for your installation must be specified even if it is currently running. The jobname specified will be used to check if the TCPaccess trace is running. If it is not running, the job will be started.

System Action:

None.

User Action:

Add the TCPaccess trace jobname.

IPPT6108

Function not available for selected stack

Reason:

The primary stack for the system selected is either an old version, or is not currently available.

System Action:

Action terminates.

User Action:

None.

IPPT6109

SSI DD SUBSYS facility is currently unavailable

Reason:

The SSI DD SUBSYS facility was determined to be currently unavailable. This could be caused by any of the following conditions:

- The SOLVE SSI region is not active.
- This region is not connected to a SOLVE SSI region.
- The DDSUBSYS facility is not enabled in the SOLVE SSI region.

System Action:

The requested action terminates.

User Action:

For information about administering the SOLVE Subsystem Interface and SSI DD SUBSYS support, see the Reference Guide.

IPPT6201***WARNING* P1 trace records are missing before packet num P2****Reason:**

Whilst reading the trace file, it was detected that *P1* trace records are missing. *P2* indicates the position in the trace where the records were missing. Records could be missed due to an error or an overflow of the trace buffer. Therefore you may get unexpected results when browsing the packet trace.

System Action:

A warning message is issued.

User Action:

Try to reduce the amount of traffic that you are tracing so that the trace processing can keep up with the amount of data it is receiving. To limit the traffic you are tracing, specify a specific IP address to trace instead of tracing everything.

IPPT6205***WARNING* packet length is P1, expected length is P2****Reason:**

While reading the trace file, a TCP/IP trace record was found that had a length in the packet header that did not match the actual length of the IP datagram.

P1 is the actual length of packet.

P2 is the expected length of packet.

System Action:

Processing continues.

User Action:

Determine why the length in the packet header does not match the actual length of the packet.

IPPT6206

P1 IP packets saved; P2 IP packets in error

Reason:

TCP/IP Services has completed saving IP packets that were in the trace file. *P1* is the number of IP packets that were saved. *P2* is the number of IP packets in error.

System Action:

None.

User Action:

You can now access the trace information that has been loaded.

IPPT6207

Errors/warnings issued during save of trace file

Reason:

Errors or warnings were encountered whilst saving IP packets in trace file records.

System Action:

None.

User Action:

You can now access the trace information that has been saved.

IPPT6208

Dump description: P1

Reason:

Whilst reading the trace file an error was encountered and some diagnostic information was dumped. *P1* is a description of the type of data that has been dumped. This message is at the top of a dump.

System Action:

None.

User Action:

Refer to the following messages that are associated with this message.

IPPT6209**P1****Reason:**

Whilst reading the trace file an error was encountered and some diagnostic information was dumped. *P1* is a line of the diagnostic data that has been dumped.

System Action:

None.

User Action:

None.

IPPT6212***WARNING* packet contains an invalid IP version of *P1*****Reason:**

A TCP/IP trace record has been found that has an IP version other than IPv4 or IPv6. The version of IP in the trace record was *P1*.

System Action:

A warning message is issued.

User Action:

Determine the source of the packet that has an invalid IP version.

IPPT6213***WARNING* packet contains an invalid IP header length of *P1*****Reason:**

Whilst reading the trace file a TCP/IP trace record was found that contained an Internet header length field which had a value less than 5. The value of the Internet header length field was *P1*.

System Action:

A warning message is issued.

User Action:

Try to determine the source of the invalid packet.

IPPT6214

***WARNING* IP header length P1 exceeds IP packet length P2**

Reason:

Whilst reading the trace file a TCP/IP trace record was found that contained an Internet header length field *P1* which had a value greater than the length of the IP packet(*P2*).

System Action:

A warning message is issued.

User Action:

Try to determine the source of the invalid packet.

IPPT6215

No IP packets found in trace data set

Reason:

No IP packet trace records were found in the trace file.

System Action:

None.

User Action:

Check that you have specified the correct trace file name. Also check that you specified the correct criteria during tracing. There may not be any IP records in the trace file, if no packets were transmitted or received within the criteria that you specified.

IPPT6217***WARNING* pkt header length is P1, expected P2****Reason:**

Whilst reading the trace file a TCP/IP trace record was found that had a length in the packet header that did not match the length of the IP datagram in the trace data.

P1 is the length in the packet header.

P2 is the length that was expected.

System Action:

Save of trace data continues.

User Action:

Determine why the length in the packet header does not match the length of the data.

IPPT6218***WARNING* expected P1 more bytes of data in IP datagram****Reason:**

When reading the trace file a TCP/IP trace record was found that had a length in the IP header that did not match the length of the IP datagram in the trace data.

System Action:

Save of trace data continues.

User Action:

Determine why the length in the IP header does not match the length of the data.

IPPT6219

Trace data set does not contain packet trace entries.

Reason:

An attempt to process a component trace data set failed because no valid packet entries were found. A valid packet trace entry would contain the name of its IPCS CTRACE formatting module (*EZBPTFM4* for IBM CS and *T03PTIPM* for SNS TCPACCESS).

System Action:

Processing is terminated.

User Action:

Check the name of the trace data set.

IPPT6220**EPS P1 rejected (RC= P2 FDBK= P3) RSN: P4****Reason:**

The events receiver failed when issuing an EPS request. The failure is identified by the following:

- Type of EPS REQ, *P1* (for example, CONNECT)
- Return code, *P2* (&RETCODE)
- Feedback code, *P3* (&ERRNO)
- Reason, *P4* (for example, EPS UNAVAILABLE)

System Action:

Processing is terminated.

User Action:

Use the feedback reason to determine why the Event Receiver failed:

70 NO SSI CONNECTION This normally indicates that you have not connected this region to the (correct) SSI.

Use the SHOW SYSPARM=SSID command to determine the SSID value.

Ensure that the correct SSID is specified, and that the SOLVESSI started task is active. Use the SSI STATUS command to verify the status of the SSI started task.

81 SSI CONNECTION LOST This indicates that the connection to the SSI has been lost. This may occur if the SOLVESSI started task has terminated, or the region is disconnected from the SOLVESSI because the SSID parameter has been reset.

Use the SHOW SYSPARM=SSID command to determine the SSID value.

Ensure that the correct SSID is specified, and that the SOLVESSI started task is active. Use the SSI STATUS command to verify the status of the SSI started task.

For all other feedback reasons, contact Technical Support.

IPPT6221

EPS RECEIVE TIMED OUT - Check JOB P1

Reason:

An EPS RECEIVE operation timed out for any of the following reasons:

- JOB *P1* was not released for execution OR
- JOB *P1* abnormally terminated OR - JOB *P1* had a JCL error

System Action:

Processing is terminated.

User Action:

Check the system log to determine the cause of the error. It is recommended that the JOB CLASS assigned should be a non-held class or a class that will immediately execute upon submission. Also verify that the JOB card conforms to site standards. Review the corresponding Customizer Parameter Group for packet tracing.

IPPT6222

EPS RECEIVE TIMED OUT - JES JOB log messages follow

Reason:

An EPS RECEIVE operation timed out because the CTRACE batch job failed to send an output message within the default wait period. The output from the JES JOB log messages follows this message.

System Action:

Processing is terminated.

User Action:

Determine the cause of the failure from the JES JOB log messages. The generated job should use:

- 1) a JOB CLASS that is a non-held class;
- 2) a JOB card that conforms to site specific standards.

Review the corresponding Customizer Parameter Group for packet tracing.

IPPT6223**End of JES JOB log messages****Reason:**

This message signifies the end of the JES JOB log messages.

System Action:

None.

User Action:

None.

IPPT6224**No trace records loaded - errors during save P1****Reason:**

The request to save trace records encountered errors during save processing. This may have caused the condition where no trace records are saved.

System Action:

None.

User Action:

Do the following:

- 1) Ensure that the correct trace file name is specified.
- 2) Check the activity log error messages for information about the cause of the failure. For error messages that indicate an internal error, contact Technical Support.

IPPT6225**PACKETTRACE Save Trace Data has received P1 lines****Reason:**

The packet trace save trace data process has received *P1* lines from the trace formatter.

System Action:

Processing continues.

User Action:

None.

IPPT6230

FILEID P1 unavailable, FILERC= P2

Reason:

A request to open database FILEID *P1* failed with return code *P2* . The meaning of the return code is:

RC=12 File not accessible

RC=16 An unrecoverable error occurred during OPEN.

For more information, see the next message, which is written to the activity log

System Action:

The request is rejected and procedure \$IPPT62F terminates.

User Action:

Review the activity log for any additional messages. Use the SHOW ALLOC and the SHOW UDB commands to verify that the file is set up correctly, and then retry the request.

IPPT6231

Processing terminated - no response from P1

Reason:

An unexpected error condition has occurred because procedure *P1* failed to respond in a preset time period.

System Action:

The current process terminates.

User Action:

This is an internal error. Contact Technical Support.

IPPT6232**Processing continued with no response from P1****Reason:**

The procedure *P1* terminated without notifying the main procedure. This may produce an incomplete set of packet trace data.

System Action:

The current process continues.

User Action:

Do the following:

1. Run a similar IPCS batch job against the trace dump file to ensure that all packet trace data is saved.
2. Check the activity log for information about the cause of the failure. This is an internal error. Contact Technical Support.

IPPT6233**P1 IP packets saved; P2 IP packets in error - errors during save****Reason:**

TCP/IP services has saved the IP packets in the tracefile. *P1* is the number of IP packets saved. *P2* is the number of IP packets in error. Processing errors were encountered when saving the packets; therefore, the packet trace data may be incomplete.

System Action:

None.

User Action:

Do the following:

1. Run a similar IPCS batch job against the trace dump file to ensure that all packet trace data is saved.
2. Check the activity log for information about the cause of the error.

IPPT6234

Error during file processing: Req= P1 Category= P2

Reason:

A database request of *P1* for record category *P2* has failed.

System Action:

The request is rejected and procedure \$IPPT62F terminates.

User Action:

Do the following:

1. Review the activity log for any additional messages. Messages that start with IPPT63 describe the error in detail.
2. Ensure that there is enough space to hold all of the packet trace data.
3. Use the SHOW ALLOC and the SHOW UDB commands to ensure that the file is set up correctly, and then retry the request.

IPPT6235

***WARNING* packet contains payload length 0 and next header P1**

Reason:

A TCP/IP trace record has been found that contains an IPv6 header with a payload length of zero and a next header value of *P1*.

System Action:

A warning message is issued.

User Action:

None.

IPPT6301**FILEID P1 unavailable, FILERC= P2****Reason:**

A request to access a database failed because the procedure a file could not be opened. The file identifier of the file is *P1* and the return code from the FILE OPEN statement was *P2* .

System Action:

The request is rejected and procedure \$IPPT63F terminates.

User Action:

Interpret the return code using the NCL Reference.

IPPT6302**Invalid keyword value specified, keyword= P1, value= P2****Reason:**

A procedure failed because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2*.

System Action:

Request fails and procedure \$IPPT63F terminates.

User Action:

Contact your Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

IPPT6303

Lock error, RC= P1, FDBK= P2, PNAME= P3, MNAME= P4

Reason:

A request to write data to a database failed because a procedure was unable to obtain a lock. The primary name of the lock was *P3* , the minor name was *P4* , the return code was *P1* , and the feedback code was *P2* .

System Action:

The request is rejected and procedure \$IPPT63F terminates.

User Action:

Interpret the feedback code using the NCL Reference. The SHOW LOCKS command can be issued from an OCS window to determine the procedure and userid that is holding the lock.

IPPT6304

VSAM error, file= P1, req= P2, RC= P3, FDBK= P4, key= P5

Reason:

A request to access data on a database failed because a procedure was unable to access the file. The file identifier of the file is *P1* . The file request that failed was *P2* , the file return code was *P3* , the VSAM feedback code was *P4* , and the key of the record was *P5* .

System Action:

The request is rejected and procedure \$IPPT63F terminates.

User Action:

Interpret the file return code using the NCL Reference and the feedback code using the VSAM Programmer's Guide or the VSAM Administration: Macro Instruction Reference for installations with DFP.

IPPT6305**IPFILE error, P1 P2 key= P3, RC= P4/ P5 P6****Reason:**

A request to access data on a database failed because a procedure was unable to access the file. The failing request was *P1* of category *P2* . *P3* was the failing record key.

System Action:

The request is rejected and procedure \$IPPT63F terminates.

User Action:

Interpret the file return code using the NCL Reference and the feedback code using the VSAM Programmer's Guide or the VSAM Administration: Macro Instruction Reference for installations with DFP.

IPPT6306**IPFILE not available, or open for input only****Reason:**

A request to access the IPFILE database failed because the file is not allocated and open, or the file has been opened read-only.

System Action:

The request is rejected.

User Action:

Action the IPFILES Customizer parameter group to correctly allocate and open the IPFILE database.

IPPT6310**The specified record (KEY= P1) does not exist****Reason:**

A internal request to get or delete a record from IPFILE has failed because the specified record does not exist or has been deleted.

System Action:

None.

User Action:

Contact Technical Support.

IPPT6314**Get packet list request has exceeded 32K limit****Reason:**

A request to get the list of packet entries has exceeded the internal limit of 32K.

System Action:

The records that have been retrieved are returned to the caller.

User Action:

See the IxNetwork documentation for more information on this error.

IPPT6401**Option P1 not recognized by selection list service procedure****Reason:**

A Selection List service procedure did not support the selection option *P1* that was specified on the selection list.

System Action:

Selection rejected.

User Action:

Contact your Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

IPPT6402**Calltype P1 not recognized by selection list service procedure****Reason:**

A Selection List service procedure does not support the calltype *P1* from the selection list manager.

System Action:

Selection list terminates.

User Action:

Contact your Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

IPPT6403

No IP packets in error for this trace

Reason:

The List IP packets in error was issued for a saved packet trace but none were found. The following are the reasons for an IP packet to be in error:

- 1) Unsupported IP version (only version 4).
- 2) The IP Header length has a value less than 5.
- 3) The IP Header length exceeds the IP packet length.
- 4) The IP Header total length does not match the actual length of the datagram.

System Action:

No list is displayed.

User Action:

None.

IPPT6404

No IP packets for this trace

Reason:

The selected packet trace entry is empty.

System Action:

None.

User Action:

None.

IPPT6405**Request rejected - Save Trace Data in progress****Reason:**

You have entered a line command for an entry that is currently saving trace data.

System Action:

The request is rejected.

User Action:

Retry the command when the save completes. If the save process is in progress for an excessive amount of time, issue the **D=Delete** command and retry.

IPPT6501**Option P1 not recognized by selection list service procedure****Reason:**

A Selection List service procedure does not support the selection option *P1* that was specified on the selection list.

System Action:

Selection rejected.

User Action:

Contact your Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

IPPT6502

Calltype P1 not recognized by selection list service procedure

Reason:

A Selection List service procedure does not support the calltype *P1* from the selection list manager.

System Action:

Selection list terminates.

User Action:

Contact your Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

IPPT6701

No more trace records available

Reason:

You have tried to scroll past the start or end of the packet trace. There are no more packet trace records available in the direction you are scrolling.

System Action:

You are positioned at the first trace record if a 'Prev' action was being processed or the last trace record if a 'Next' action was being processed.

User Action:

None.

IPPT6702

P1 is an invalid scroll amount

Reason:

You have specified an invalid scroll amount. Valid scroll amounts are a number, or 'M' or 'MAX' for a maximum scroll.

System Action:

Request rejected.

User Action:

Correct the scroll amount and retry.

IPPT6801**Option P1 not recognized by selection list service procedure****Reason:**

A Selection List service procedure does not support the selection option *P1* that was specified on the selection list.

System Action:

Selection rejected.

User Action:

Contact your Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

IPPT6802**Calltype P1 not recognized by selection list service procedure****Reason:**

A Selection List service procedure does not support the calltype *P1* from the selection list manager.

System Action:

Selection list terminates.

User Action:

Contact your Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

IPPT6901

Option P1 not recognized by selection list service procedure

Reason:

A Selection List service procedure does not support the selection option *P1* that was specified on the selection list.

System Action:

Selection rejected.

User Action:

Contact your Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

IPPT6902

Calltype P1 not recognized by selection list service procedure

Reason:

A Selection List service procedure does not support the calltype *P1* from the selection list manager.

System Action:

Selection list terminates.

User Action:

Contact your Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

IPPT6904

No IP address analysis exists for this trace

Reason:

The 'IP Address List' action was issued for a saved packet trace but no IP Address analysis has been performed for this trace.

System Action:

The IP Address List is not displayed.

User Action:

Select a different action for this trace as 'IP Address List' is not available.

IPPT7001**Option P1 not recognized by selection list service procedure****Reason:**

A Selection List service procedure does not support the selection option *P1* that was specified on the selection list.

System Action:

The selection is rejected.

User Action:

Contact your system administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

IPPT7002**Calltype P1 not recognized by selection list service procedure****Reason:**

The Selection List service procedure does not support the calltype *P1* from the selection list manager.

System Action:

The selection list terminates.

User Action:

Contact your system administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

IPPT7004

No connection analysis exists for this P1

Reason:

The 'Connection List' action was issued for either a saved packet trace or an IP Address within a saved packet trace, but no connection data exists for this object.

System Action:

The Connection List is not displayed.

User Action:

Select a different action as the 'Connection List' is not available.

IPPT7301

Invalid keyword value specified, keyword= P1 value= P2

Reason:

A SOLVE procedure failed because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and the procedure terminates.

User Action:

Contact your product supplier.

IPPT7302

P1 is not a valid SORT field

Reason:

You specified *P1* as the sort field for the list on the SORT command but *P1* is not a valid sort field.

System Action:

The SORT command was rejected.

User Action:

Correct the sort field name (which is an operand on the SORT command) and retry.

IPPT7401**P1 parameter specifies an invalid value - P2****Reason:**

The value of the specified parameter passed is invalid.

System Action:

None

User Action:

Correct the parameter and retry.

IPPT7402**P1 parameter has been omitted****Reason:**

The specified parameter is required for this call but has been omitted.

System Action:

None

User Action:

Specify the parameter and retry.

IPPT7403**P1 job status is P2****Reason:**

This message is returned in response to a \$IPPT74Z ACTION=STATUS call.
P1 will be CTRACE, *P2* will be set to ACTIVE or INACTIVE.

System Action:

None.

User Action:

None.

IPPT7404

P1 is already active

Reason:

A request has been received to start *P1* , but *P1* is already active.

System Action:

None.

User Action:

None.

IPPT7405

Messages for failed P1 start follow

Reason:

A request has been received to start *P1* but the system messages did not indicate that *P1* had been started. The messages received from the operating system have been written to the Activity Log following this message.

System Action:

None.

User Action:

View the messages and determine if *P1* did start. If the messages indicated that *P1* did start, contact Technical Support.

IPPT7406

End of P1 start failure messages

Reason:

A request has been received to start *P1* but the system messages did not indicate that *P1* had been started. The messages received from the operating system have been written to the Activity Log following message IPPT7405. This message (IPPT7406) signifies the end of the system messages.

System Action:

None.

User Action:

Refer to message IPPT7405 for a description of why these messages are written to the Activity Log.

IPPT7407**P1 start failed, refer to activity log****Reason:**

A request has been received to start *P1* but the system messages did not indicate that *P1* had been started. The messages received from the operating system have been written to the Activity Log following message IPPT7405.

System Action:

None.

User Action:

Review the messages in the Activity Log to determine why *P1* failed to start.

IPPT7408**P1 start completed****Reason:**

A request has been received to start *P1* and the request has completed successfully.

System Action:

None.

User Action:

Perform your tracing.

IPPT7409**P1 trace is not active****Reason:**

A request has been received to stop *P1* but *P1* is not active.

System Action:

None.

User Action:

None.

IPPT7410

Messages for failed P1 stop follow

Reason:

A request has been received to stop *P1* but the system messages did not indicate that *P1* had been stopped. The messages received from the operating system have been written to the Activity Log following this message.

System Action:

None.

User Action:

View the messages and determine if *P1* did actually stop. If the messages indicated that *P1* did stop, contact Technical Support.

IPPT7411

End of P1 stop failure messages

Reason:

A request has been received to stop *P1* but the system messages did not indicate that *P1* had been stopped. The messages received from the operating system have been written to the Activity Log following message IPPT7410. This message (IPPT7411) signifies the end of the system messages.

System Action:

None.

User Action:

Refer to message IPPT7410 for a description of why these messages are written to the Activity Log.

IPPT7412**P1 stop failed, refer to the Activity Log****Reason:**

A request has been received to stop *P1* but the system messages did not indicate that *P1* had been stopped. The messages received from the operating system have been written to the Activity Log following message IPPT7410.

System Action:

None.

User Action:

Review the messages in the Activity Log to determine why *P1* failed to stop.

IPPT7413**P1 stop complete, refer to log msg P2 for details****Reason:**

A request has been received to stop *P1* . The request has completed and the name of the trace output dataset was obtained, but it could not be stored. An error message with message number *P1* was written to the Activity Log explaining why the operation failed.

System Action:

None.

User Action:

Review the messages in the Activity Log to determine why the operation failed.

IPPT7414

P1 stop complete. Trace data available in P2

Reason:

A request has been received to stop *P1* . The request has completed. The name of the trace output dataset was obtained and is shown as *P2* in this message. This message is also written to the log which will show the full dataset name if it is truncated on the panel.

System Action:

None.

User Action:

None.

IPPT7415

P1 stop complete, no trace data available

Reason:

A request has been received to stop *P1* . The request has completed but *P1* has indicated that no trace output is available.

System Action:

None.

User Action:

Check that you are tracing the correct IP resources, as there was no packets traced that matched the criteria you specified.

IPPT7416

Messages for failed P1 status display follow

Reason:

A request has been received to obtain the status of *P1* , but the response to the 'D J,jobname' command was not understood by the SOLVE system. The SOLVE system has not been able to determine the status of *P1* .

System Action:

None.

User Action:

View the messages and determine what state *P1* is in.

IPPT7417**End of P1 status display failure messages****Reason:**

A request has been received to obtain the status of *P1* , but the region did not understand the display resulting from the 'D J,xxx' command issued. The display messages have been written to the Activity Log following message IPPT7416. This message (IPPT7417) signifies the end of the system messages.

System Action:

None.

User Action:

Refer to message IPPT7416 for a description of why these messages are written to the Activity Log.

IPPT7418**P1 status display failed, refer to the Activity Log****Reason:**

A request has been received to obtain the status of *P1* , but the region did not understand the display produced by the 'D J,xxx' command. The display messages have been written to the Activity Log following message IPPT7416.

System Action:

None

User Action:

Review the messages in the Activity Log to determine what the status of *P1* is

IPPT7419

Unable to get Tracename(xxxx) parm value. Refer to log

Reason:

An error occurred while attempting to retrieve the component name from the IFSPARM TRACENAME(xxxx) parameter in the IJTCFGxx configuration member which is in the TCPaccess PARM dataset. This dataset is defined to TCP/IP Services on the TCP/IP Management Interface panel which can be accessed from the TCP/IP Administration Menu.

System Action:

None.

User Action:

Check the log for details of the error and take appropriate corrective action.

IPPT7420

Component name not found

Reason:

An attempt was made to retrieve the component name from the IJT configuration member but TRACENAME was missing from the IFSPARM.

System Action:

None.

User Action:

Update the IJT configuration member to include the name in IFSPARM TRACENAME(xxx), where xxx is a valid component name.

IPPT7421

Packet trace clear completed successfully

Reason:

All packet traces have been cleared.

System Action:

None.

User Action:

None. Information only.

IPPT7422**TCP/IP interface must be active to use packet trace functions****Reason:**

A packet trace operation was attempted, but could not be performed because the TCP/IP interface is not ACTIVE.

System Action:

None.

User Action:

TCP/IP services should be initialized using the TCP/IP Administration Menu.

IPPT7423**Trace load not attempted - no data****Reason:**

A request has been received to load trace data. However, the trace collector has indicated that no trace output is available.

System Action:

None.

User Action:

Check that you are tracing the correct resources, as there was no trace data produced during the time the collector was active.

IPPT7424**Trace load not attempted - collector stop failed****Reason:**

A request has been received to load trace data. However, the trace collector was not stopped successfully.

System Action:

None.

User Action:

Refer to the trace collector stop messages for problem determination.

IPPT7425

Component trace is already stopped.

Reason:

A packet trace clear is not necessary as the component trace function is not active.

System Action:

None.

User Action:

None. Information only.

IPPT7426

Packet tracing is already stopped.

Reason:

A packet trace clear is not necessary as the packet tracing component trace is not active.

System Action:

None.

User Action:

None. Information only.

IPPT7427

Timeout reading system command responses

Reason:

A system command has been issued by the trace control process and the expected responses have not been returned within a 2 minute period.

System Action:

The current action is terminated and messages received so far are logged along with this message.

User Action:

Refer to the earlier messages for an indication of why the system command failed. Report the error to your system administrator. If necessary provide activity log and system log for the period to your product support representative.

IPPT7428**Packet trace started for P1****Reason:**

Packet Tracing of Host Name/Addr *P1* has been started successfully.

System Action:

None.

User Action:

Perform the activity you want to trace.

IPPT7429**External writer status messages follow****Reason:**

The output from the MVS command D TRACE,WTR= follows this message. A list of component traces currently connected to the external writer is shown.

System Action:

None.

User Action:

Review the output and determine the components that are currently connected to the external writer. Either stop all the connected components or force the external writer to end by repeatedly issuing the MVS command TRACE CT,WTRSTOP= . See MVS System Messages(ITT121I) for more details.

IPPT7430**End of external writer status messages****Reason:**

This message signifies the end of the system messages.

System Action:

None.

User Action:

Refer to message IPPT7431 for a description of why these messages are written to the Activity Log.

IPPT7431

CTRACE stop failed, external writer is still connected

Reason:

A request has been received to stop CTRACE but one or more components were still connected to the external writer. The status of the external writer has been written to the Activity Log.

System Action:

None.

User Action:

Review the messages following IPPT7429 to determine the components currently connected to the external writer. Either stop all the connected components or force the external writer to end by repeatedly issuing the MVS command TRACE CT,WTRSTOP= . See MVS System Messages (ITT121I) for more details.

IPPT7432

External writer *P1* currently in use by another trace

Reason:

A request to use the external writer *P1* failed because it is in use by another component trace. The external writer can only be associated to one component trace at a time.

System Action:

The request is rejected.

User Action:

Perform the following steps:

1. Issue the following command to determine which component trace is using the external writer:

`SYSCMD D TRACE,WTR=external_writer_name`
2. If you cannot stop the component trace that is using the external writer, nominate a different external writer and retry the request.

IPPT7501**No IP address analysis exists for this trace****Reason:**

The 'IP Address List' action was issued for a saved packet trace but no IP Address analysis has been performed for this trace.

System Action:

The IP Address List is not displayed.

User Action:

Select a different action for this trace as 'IP Address List' is not available.

IPPT7502**No connection analysis exists for this P1****Reason:**

The 'Connection List' action was issued for either a saved packet trace or an IP Address within a saved packet trace, but no connection data exists for this object. *P1* is the object type.

System Action:

The Connection List is not displayed.

User Action:

Select a different action as the 'Connection List' is not available.

IPPT7503**No packets match the criteria.****Reason:**

The List packets action was issued for a saved packet trace but no packets within the trace match the criteria specified.

System Action:

The packet list is not displayed.

User Action:

Select a different criteria and retry the operation.

IPPT7504

No IP packets in error for this trace

Reason:

The List IP packets in error was issued for a saved packet trace but none were found. The following are the reasons for an IP packet to be in error:

1) Unsupported IP version (only version 4) 2) The IP Header length has a value less than 5. 3) The IP Header length exceeds the IP packet length. 4) The IP Header total length does not match the actual length of the datagram.

System Action:

No list is displayed.

User Action:

None

IPPT7505

No IP packets for this trace

Reason:

The selected packet trace entry is empty.

System Action:

None

User Action:

None

IPPT7601

Option P1 not recognized by selection list service procedure

Reason:

A Selection List service procedure does not support the selection option *P1* that was specified on the selection list.

System Action:

Selection rejected.

User Action:

Contact your system administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

IPPT7602**Calltype P1 not recognized by selection list service procedure****Reason:**

A Selection List service procedure does not support the calltype *P1* from the selection list manager.

System Action:

Selection list terminates.

User Action:

Contact your system administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

IPPT7701**Initialization error in CTAPl interface: RC= P1 FDBK= P2****Reason:**

An error occurred during initialization of CTAPl API. The meaning of the return and feedback code are as follows:

RC FDBK Description

12 1 API load module EZBCTAPI load failure

12 2 API load module EZBNMCTF load failure

12 3 API format table EZBPTFM4 load failure

16 2 Internal prepare MDO failure

16 3 Internal assign MDO failure

System Action:

The current process terminates.

User Action:

This is an internal error. Contact Technical Support.

IPPT7702

Formatting error in CTAPI interface: RC= P1 FDBK= P2

Reason:

An error occurred during initialization of CTAPI API. The meaning of the return and feedback code are as follows:

RC FDBK Description

- 8 1 FORMAT rejected - Interface not initialized
- 8 2 Invalid FORMAT call - Empty input buffer
- 8 3 Invalid FORMAT call - Buffer not empty
- 8 4 Invalid FORMAT call - Incomplete CTE in buffer
- 12 1 API load module EZBCTAPI load failure
- 12 2 API load module EZBNMCTF load failure
- 12 3 API format table EZBPTFM4 load failure
- 16 2 Internal prepare MDO failure
- 16 3 Internal assign MDO failure

System Action:

The current process terminates.

User Action:

This is an internal error. Contact Technical Support.

IPPT7703

Error in EZBCTAPI Macro Interface: RTNCDE= P1 RSNODE= P2

Reason:

An error occurred in the EZBCTAPI Macro Interface. For more information about the meaning of the return and reason codes, see the z/OS Communication Server: IP Programmer's Reference manual.

System Action:

The current process terminates.

User Action:

This is an internal error. Contact Technical Support.

IPPT8501**' P1' is not a valid value for keyword parameter P2****Reason:**

The value *P1* is not a valid value for the keyword parameter *P2* .

System Action:

Process terminates.

User Action:

This is an internal error. Contact Technical Support.

IPPT8502**' P1' is only valid with 'ACTION=DEFINE'****Reason:**

The keyword-value pair of *P1* is valid with *ACTION=DEFINE* only.

System Action:

Process terminates.

User Action:

This is an internal error. Contact Technical Support.

IPPT8503**Mutually exclusive keywords NAME, OBJID, LPORT specified****Reason:**

The procedure call contains keyword parameters that are mutually exclusive. One of the keywords can be specified only.

System Action:

Process terminates.

User Action:

This is an internal error. Contact Technical Support.

IPPT8504

Either 'NAME=' or 'OBJID=' or 'LPORT=' must be specified

Reason:

Specify keyword NAME=, OBJID=, or LPORT.

System Action:

Process terminates.

User Action:

This is an internal error. Contact Technical Support.

IPPT8505

Required keyword parameter P1 not specified.

Reason:

A procedure call did not include the required keyword parameter *P1* .

System Action:

Process terminates.

User Action:

This is an internal error. Contact Technical Support.

IPPT8506

The keyword parameter P1 contains a non-numeric value P2

Reason:

The procedure call specified the keyword parameter *P1* with a non-numeric value *P2* . The keyword accepts numeric values only.

System Action:

Process terminates.

User Action:

This is an internal error. Contact Technical Support.

IPPT8507**The keyword parameter P1 value outside the range of P2- P3****Reason:**

The procedure call specified the keyword parameter *P1* with a numeric value outside the valid range of *P2-P3*.

System Action:

The field in error is highlighted.

User Action:

Specify a value in the range.

IPPT8508**Error accessing resource database - see activity log****Reason:**

An error was encountered when attempting to access the resource definition database.

System Action:

Process terminates.

User Action:

Review the activity log entry and determine the cause of the failure.

IPPT8509**Packet tracing not supported for resource class P1****Reason:**

Packet tracing is not available for the selected resource.

System Action:

Process terminates.

User Action:

This is an internal error. Contact Technical Support.

IPPT8510

Invalid internal trace definition name (P1) for type P2

Reason:

An internally-generated trace definition name *P1* does not conform to naming conventions for trace type *P2* .

System Action:

Process terminates.

User Action:

This is an internal error. Contact Technical Support.

IPPT8511

Input MDO definition contains invalid map P1

Reason:

The input MDO definition provided as part of the function call uses an invalid map *P1* .

System Action:

Procedure terminates.

User Action:

This is an internal error. Contact Technical Support.

IPPT8512

Trace definition (P1) found with a status of P2

Reason:

Trace definition *P1* was successfully retrieved and has a current status of *P2* .

System Action:

None.

User Action:

None.

IPPT8513**Trace definition (P1) not found****Reason:**

A request to retrieve trace definition *P1* failed because it does not exist.

System Action:

None.

User Action:

None.

IPPT8514**Packet tracing temporarily unavailable - try later****Reason:**

Packet tracing is temporary unavailable for the selected entry. This condition usually occurs when the SSI region that implements the Packet Analyzer feature is initialized after the CA NetMaster region.

System Action:

The request is rejected.

User Action:

Try again later.

IPPT8515**Packet trace information does not exist for selected entry****Reason:**

The selected entry does not contain packet data or a definition, although request to stop, clear, or view a trace was requested.

System Action:

Request rejected.

User Action:

Issue a PT command to define a trace for the selected entry.

IPPT8516

Packet trace setup canceled

Reason:

The process to set up a packet trace is canceled.

System Action:

None.

User Action:

None.

IPPT8517

Packet trace definition P1 saved

Reason:

The packet trace definition *P1* is saved successfully in the database.

System Action:

None.

User Action:

None.

IPPT8518

Input MDO definition required

Reason:

The input MDO definition is not provided as part of the function call.

System Action:

Procedure terminates.

User Action:

This is an internal error. Contact Technical Support.

IPPT8519**Error saving trace definition - check activity log for details****Reason:**

An attempt to save a packet trace definition failed.

System Action:

Procedure terminates.

User Action:

Check the activity log for message FAPKG01 and the entries that follow.

IPPT8520**Packet trace activated****Reason:**

A request to activate a packet trace completed successfully.

System Action:

None.

User Action:

None.

IPPT8521**Packet trace reactivated - existing trace entries have been retained****Reason:**

A request to activate a packet trace that is already active has been reactivated successfully. All existing trace entries are retained.

System Action:

None.

User Action:

None.

IPPT8522

Packet trace inactivated

Reason:

A request to inactivate a packet trace completed successfully.

System Action:

None.

User Action:

None.

IPPT8523

Packet trace already inactive

Reason:

A request to inactivate a packet trace determined that the trace is already inactive.

System Action:

None.

User Action:

None.

IPPT8524

Packet trace deleted

Reason:

A request to delete a packet trace completed successfully.

System Action:

None.

User Action:

None.

IPPT8525**Packet trace inactivated and deleted****Reason:**

A request to delete a packet trace completed successfully for an active trace.

System Action:

None.

User Action:

None.

IPPT8526**Packet tracing not available - ASMON resource has no ports defined****Reason:**

Packet tracing for an ASMON resource has been rejected because its monitoring definition does not specify any ports.

System Action:

Process terminates.

User Action:

Review the monitoring definition for the selected ASMON resource, and ensure TCP and/or UDP ports are specified.

IPPT8527**Packet tracing currently unavailable, SSI not contactable****Reason:**

The selected action is unavailable for one of the following reasons:

- The SSI is not running.
- The Packet Analyzer is not configured to run in the SSI.

System Action:

None.

User Action:

List this region's configuration details (/IPTTEST), and investigate any errors.

IPPT8528

Packet tracing currently disabled

Reason:

Packet tracing is disabled because the SOLVESSI region is running with a PALEVEL value other than FULL.

System Action:

None.

User Action:

Check why the SSI is not running with the parameter *PALEVEL=FULL*.

When including Packet Analyzer functions in an SSI, it is recommended to always set the PALEVEL parameter to FULL. If you run with a level other than FULL, tracing and other IP functions will not be available.

Only use a PALEVEL other than FULL if instructed by Technical Support.

IPPT8529

Packet trace already activated

Reason:

A request to activate a packet trace has failed because the trace is already active.

System Action:

The action fails.

User Action:

None.

IPPT8530

Packet trace P1 activated

Reason:

Packet trace *P1* activation request was successfully completed.

System Action:

None.

User Action:

None.

IPPT8531**SmartTrace not supported on remote region P1****Reason:**

The requested function is not supported by the *P1* remote region. The remote region is used because it is the managing region for the resource. The remote region is currently linked to this region in Migration Mode. This type of linkage is used during the migration of the remote region to a new release level.

System Action:

Processing of the function terminates.

User Action:

After you upgrade the remote region to the same release level as this region, link them using normal region synchronization to get full functionality.

IPPT8532**Packet trace not available - stack *P1* unknown to packet analyzer****Reason:**

A packet trace request has been rejected because the stack *P1* is not known to Packet Analyzer. The stack is not defined as a monitored IP resource in the region.

System Action:

The packet trace request is terminated.

User Action:**Define the stack using the resource administration panels**

1. Enter **/RADMIN.R** to access the Resource Definition panel.
2. Specify the system name and version number to identify the system image that will be used to store the stack's resource definition.
3. Enter **S** next to the STACK resource class.

The TCP/IP Stack List panel appears.

Press F4 (Add) to create a definition for the stack.

IPPT8534

Back-level Packet Analyzer, IPv6 not supported

Reason:

An attempt to initiate SmartTrace has failed because the Packet Analyzer to be used for the trace is executing in an SSI region that is not at the latest product release level and does not support IPv6 addressing formats.

System Action:

Request is rejected.

User Action:

Consider upgrading. Contact your system administrator.

IPPT8535

RTP *P1* is not using EE, cannot be traced

Reason:

You attempted to start a SmartTrace of an RTP pipe with PU name *P1*. The action failed because the RTP pipe is not an EE RTP pipe, and is not using IP.

System Action:

None.

User Action:

None. SmartTrace traces IP packets only.

IPPT8536**Packet Analyzer on *P1* not enabled for EE analysis****Reason:**

A Packet Analyzer request to the SOLVE SSI on LPAR *P1* failed because the Packet Analyzer is not enabled for EE processing.

System Action:

The request fails.

User Action:

Investigate why EE analysis is disabled on *P1*.

1. Check the Packet Analyzer version using the SSI STATUS command.

EE analysis requires Packet Analyzer version 116.01.

2. Check if EE Analysis is disabled. To do this, display the SSIPARMS member in the SOLVE SSI region's JCL library. EE analysis is disabled by setting parameter PAEESTACK to NONE, or PAEEBASE to NO or 0.

IPPT8537**Trace start failed, *P1* unknown to VTAM****Reason:**

You attempted to start a SmartTrace of an RTP pipe with PU name *P1*. The action failed because the RTP pipe is not known to VTAM.

System Action:

None.

User Action:

The RTP may have terminated. Press F6 to refresh the list of RTP pipes.

IPPT8601

Input MDO definition not shared in or specified.

Reason:

An internal function requires an input MDO definition that is not shared in as part of the procedure call.

System Action:

Procedure terminates.

User Action:

This is an internal error. Contact Technical Support.

IPPT8602

Input MDO definition contains invalid map P1

Reason:

The input MDO definition provided as part of the function call uses an invalid map *P1* .

System Action:

Procedure terminates.

User Action:

This is an internal error. Contact Technical Support.

IPPT8603

Trace is P1, last updated by P2 on P3 P4

Reason:

The selected entry has a trace definition with a current status of *P1* and was last updated by userid *P2* .

System Action:

None.

User Action:

None.

IPPT8604

Press F3 to FILE; F6 to FILE and ACTIVATE; Enter to RESUME

Reason:

This prompt message appears when you press F3 (File) while updating a trace definition. The following options are available:

F3 (File) Saves the updated definition and exits the current panel. If a trace is active, it is restarted; otherwise, it remains inactive.

F6 (Action) Does the same as PF3, except that it unconditionally starts or restarts the trace.

Enter Resumes updating the currently-displayed trace definition.

System Action:

None.

User Action:

Select the appropriate option.

IPPT8605

Version change; F5 to retain current version, F6 to implement change

Reason:

You changed the IP or ICMP Version field while defining a new trace definition. The following options are available:

F5(Retain)

Retains the current version and preserves all existing field values.

F6(ChgVer)

Implements the new IP/ICMP version and clears all existing fields except for the Name, Definition, and IP/ICMP version fields.

System Action:

None.

User Action:

Select the appropriate option.

IPPT8606

Previous version retained

Reason:

You pressed F5 (Retain) and you changed the IP/ICMP Version field while defining a new trace definition.

System Action:

Current field values are retained.

User Action:

None.

IPPT8607

New version implemented - all fields cleared

Reason:

You pressed F6 (ChgVer) and changed the IP/ICMP Version field while defining a new trace definition.

System Action:

All fields are cleared except Name, Description, and IP/ICMP Version.

User Action:

None.

IPPT8608

No action selected

Reason:

When asked to select an action, no selection was made; or all existing actions were deleted manually.

System Action:

None.

User Action:

None.

IPPT8609**No changes made to current list of actions****Reason:**

This is an informational message indicating that no changes were made to the current list of actions.

System Action:

None.

User Action:

None.

NWMIP--IPPT8610**Request canceled****Reason:**

A request to add or update a list of stop actions has been canceled.

System Action:

Current changes are abandoned.

User Action:

None.

IPPT8611**Update to actions completed****Reason:**

A request to update a list of actions has been completed.

System Action:

None.

User Action:

None.

IPPT8612

No actions to display

Reason:

A request to view a list of actions has failed because none has been defined.

System Action:

None.

User Action:

None.

IPPT8613

No stop conditions defined

Reason:

A attempt to define an automated stop action has failed because no stop condition has been defined on Page 3 of the trace definition.

System Action:

Request is rejected.

User Action:

Define a stop condition on Page 3 of the trace definition before attempting to define a stop action.

IPPT8614

All stop actions cleared

Reason:

All defined stop actions have been cleared because the associated stop conditions on Page 3 of the trace definition has been cleared.

System Action:

None.

User Action:

None.

IPPT8615**Function not supported on back-level region****Reason:**

The selected function is not supported because the linked region is running a back-level version of the product.

System Action:

Request is rejected.

User Action:

Consider upgrading. Contact your system administrator.

IPPT8801**Input MDO has invalid map P1****Reason:**

The input MDO is using an invalid map *P1* or is not assigned a map.

System Action:

The request is rejected.

User Action:

Contact Technical Support.

IPPT8811**Validation failed for field P1****Reason:**

A request to validate field *P1* failed because there is no validation routine to handle the request.

System Action:

The request is rejected.

User Action:

Contact Technical Support.

IPPT8812

Input MDO contains no fields to validate

Reason:

Validation is not possible because the input MDO contains null fields.

System Action:

None.

User Action:

None.

IPPT8813

Trace definition P1 already exists.

Reason:

The trace definition *P1* already exists.

System Action:

The name is highlighted in error.

User Action:

Enter a different name and retry.

IPPT8814

Trace definition name *P1* already in use by *P2*

Reason:

The trace definition *P1* already exists on region *P2*. SmartTrace definition names must be unique across all regions on an LPAR.

System Action:

The name is highlighted in error.

User Action:

Enter a different name, and retry.

IPPT8815**Invalid *P1* value: IPv6 not supported (back-level PA)****Reason:**

The field validation for the current SmartTrace definition has detected that the Packet Analyzer to be used for the trace is executing in an SSI region that is not at the latest product release level and does not support IPv6 addressing formats. *P1* identifies the field in error.

System Action:

The field in error is highlighted.

User Action:

Consider upgrading. Contact your system administrator.

IPPT8820**Required field *P1* omitted****Reason:**

The required field *P1* was not provided.

System Action:

The field is highlighted in error.

User Action:

Enter a valid value for the field.

IPPT8821**Stack *P1* unknown on *P2*****Reason:**

Stack name *P1* is invalid. No stack of this name is defined in region *P2*.

System Action:

The field in error is highlighted.

User Action:

Enter ? in the Stack field to obtain a list of stacks.

IPPT8822

Invalid use of character (?) for fieldname P1

Reason:

The use of the character ? to display a selection list is not valid for the field *P1* .

System Action:

The request is rejected.

User Action:

Do not specify ? for this field.

IPPT8823

P1 value too long and has been truncated

Reason:

The length of the specified value for *P1* exceeds that allowed and has been truncated.

System Action:

The field in error is highlighted.

User Action:

Reformat the supplied value with the equivalent numeric codes for the *ICMP Types* and *ICMP Codes* fields.

IPPT8824

TCP/IP Stack required for Interface Name

Reason:

The *TCP/IP Stack* field is required when an *Interface Name* is specified.

System Action:

The field in error is highlighted.

User Action:

Select from the list of valid stacks.

IPPT8825**Local Host or Foreign Host not valid with Special Address****Reason:**

The Local Host or Foreign Host fields are mutually exclusive with the Special Address field.

System Action:

The field in error is highlighted.

User Action:

Either clear the Special Address field or the Local Host and/or Foreign Host fields.

IPPT8826**IP Protocol should be TCP or UDP when port fields are specified****Reason:**

Local Ports or *Foreign Ports* was specified; however, the *IP Protocol* value was not TCP or UDP.

System Action:

The field in error is highlighted.

User Action:

Specify TCP or UDP in the *IP Protocol* field.

IPPT8827**IP Protocol must be TCP when creating a multiple TCP connection trace****Reason:**

The Create Multiple TCP Connection Trace? field is set to YES; however, the IP Protocol field *is not set to TCP or 6*.

System Action:

The fields in error are highlighted.

User Action:

Specify TCP in the *IP Protocol* field when creating a multiple TCP connection trace.

IPPT8829

Validation of trace definition found P1 fields in error

Reason:

A validation of the trace definition completed with *P1* fields in error.

System Action:

A list of all associated error messages is returned.

User Action:

Review the next error messages and take the appropriate action.

IPPT8830

Invalid *P1* specified

Reason:

The *P1* field value contains invalid characters or violates the coding rules for the field. A valid value consists of alphanumeric characters (A-Z and 0-9), national characters, and should begin with an alphabetic character.

System Action:

The field in error is highlighted.

User Action:

Specify a valid value.

IPPT8831**Invalid Interface Name : P1****Reason:**

The specified interface name contains invalid characters or violates coding rules. *P1* describes the reason for the error. The value in the Interface Name field must adhere to the following rules:

- The first character must be alphanumeric, or either the dollar sign (\$) or the at sign (@).
- Each character must be a non-blank printable character.
- The following characters are not permitted:
 - comma (,)
 - semicolon (;)
 - period (.)
 - equal sign (=)
 - asterisk (*)

System Action:

The field in error is highlighted.

User Action:

Specify a valid interface name.

IPPT8832**P1 valid numeric range P2 to P3****Reason:**

The value specified must be numeric and be in the range specified.

System Action:

The field in error is highlighted.

User Action:

Specify a value in the range.

IPPT8833

Invalid time format or range specified. Valid range is 00:02 to 99:59

Reason:

You specified an invalid time format or range.

System Action:

The field in error is highlighted.

User Action:

Specify a valid time format (HH:MM) in the range of 00:02 to 24:00.

IPPT8834

P1 valid values : Yes or No

Reason:

Valid values for this field are Yes or No or blank.

System Action:

The field in error is highlighted.

User Action:

Specify a valid value.

IPPT8835

P1 valid values : In or Out

Reason:

Valid values for this field are In or Out or blank.

System Action:

The field in error is highlighted.

User Action:

Specify a valid value.

IPPT8836**Invalid IP Protocol name specified****Reason:**

This error condition is generated when an invalid *IP Protocol* name is specified. The assigned IP protocol name is regulated by the Internet Assigned Numbers Authority (IANA) and is always subject to change.

System Action:

The field in error is highlighted.

User Action:

Specify the assigned number (0-255) for the required IP protocol.

IPPT8837**P1 valid values : Loopback, Multicast or Broadcast****Reason:**

Valid values for this field are Loopback, Multicast, Broadcast, or blank.

System Action:

The field in error is highlighted.

User Action:

Specify a valid value.

IPPT8838**Invalid numeric size operator****Reason:**

A value other than =, ^=, <, <=, >, >= and its corresponding mnemonic (Q, NE, LT, LE, GT, GE) was specified.

System Action:

The field in error is highlighted.

User Action:

Specify a valid operator or enter ? to select from a list.

IPPT8839

Invalid ICMP Message Type P1

Reason:

This error condition is generated by one of the following reasons:

- The specified ICMP message type is not valid. The ICMP type can be specified as a number from 0-255 or by selection from a list of valid name types.
- The *Original Datagram Details* section has non-blank fields, which limits the valid type to ICMP error messages. See message *IPPT8856* for a list of valid ICMP error message types.
- The *Redirect Gateway* field is non-blank, which limits the valid type to *REDIRECT Type(5)* .

System Action:

The field in error is highlighted.

User Action:

Make a selection from the list of valid types or enter a blank where appropriate.

IPPT8840

Invalid ICMP Message Code P1

Reason:

The specified ICMP Codes is not valid for the selected ICMP Types, for example, the *PARAMPROB* ICMP message type uses codes 0-2.

System Action:

The field in error is highlighted.

User Action:

Select from the list of valid ICMP codes.

IPPT8841**ICMP Types list not valid when ICMP Codes is provided****Reason:**

ICMP Codes was specified but *ICMP Types* contains a list of types. ICMP code values can be associated with one ICMP type only.

System Action:

The field in error is highlighted.

User Action:

Modify the *ICMP Types* field to contain only one message type that is relevant to the specified ICMP code.

IPPT8842**The value P1 has been been specified more than once****Reason:**

An input list has *P1* specified more than once.

System Action:

The field in error is highlighted.

User Action:

Review the input list and remove any duplicate values.

IPPT8843**REDIRECT is the only valid ICMP Message Type****Reason:**

A ICMP Message Type other than *REDIRECT* (Type 5) is specified together with a *Redirect Gateway* address.

System Action:

The field in error is highlighted.

User Action:

Specify REDIRECT, 5, or blank for the *ICMP Types* field.

IPPT8844

Relational expression no longer valid

Reason:

The expression is no longer valid because all of the simple expressions used to build the compound relational expression have been deleted.

System Action:

The field in error is highlighted.

User Action:

Clear the expression field.

IPPT8845

Invalid QOS value specified P1

Reason:

An invalid *QOS* value was specified.

System Action:

The field in error is highlighted.

User Action:

Select from the list of valid *QOS* values.

IPPT8846**Invalid or non-existent expression****Reason:**

An invalid expression was used to build the compound expression. This is caused by one of the following conditions:

- You included an unsupported operator or expression when building the compound expression.
- For packet data box entries, a simple expression was deleted but continues to be referenced as part of the compound expression.

System Action:

The fields in error are highlighted.

User Action:

Do one of the following:

- Select from the list of expressions available for building the compound expression.
- Clear the field to generate a default compound expression.

IPPT8847**Unbalanced parenthesis in expression****Reason:**

A relational expression is invalid because a right parenthesis is missing to balance a corresponding left parenthesis.

System Action:

The field in error is highlighted.

User Action:

Review and modify the expression to balance an open left parenthesis.

IPPT8849

Start Pos. and Length exceeds range limit of 128 bytes

Reason:

Data comparisons are done on the first 128 bytes of the target data. The combined values specified for Start Pos. and Length exceeds this limit. For example, a start position of 100 and length of 50 is an invalid combination.

System Action:

The fields in error are highlighted.

User Action:

Adjust the values for Start Pos. and Length to conform to the scope for comparing.

IPPT8850

Invalid data format specified P1

Reason:

An invalid data format *P1* was specified.

System Action:

The field in error is highlighted.

User Action:

Select from the list of valid data formats.

IPPT8851

Invalid data operator specified P1

Reason:

An invalid data operator *P1* was specified.

System Action:

The field in error is highlighted.

User Action:

Select from the list of valid data operators.

IPPT8852**Data string contains non-hexadecimal characters****Reason:**

A Format value of HEX was specified; however, the data string contains non-hexadecimal characters.

System Action:

The field in error is highlighted.

User Action:

Modify the data string to contain hexadecimal characters only.

IPPT8853**The Length value does not match EQ/NE Data string length****Reason:**

When specified, the Length value must be equal to the actual length of the EQ/NE Data string.

System Action:

The field in error is highlighted.

User Action:

Adjust the length value so that it matches the length of the data string. Alternatively, leave the Length field blank when you use EQ/NE operators.

IPPT8854**No simple expressions to build a compound expression****Reason:**

An attempt to build a compound expression is rejected because no simple expression is defined.

System Action:

The field in error is highlighted.

User Action:

Specify at least one simple expression.

IPPT8855

Incomplete expression

Reason:

An expression cannot end with a left parenthesis or relational operator.

System Action:

The field in error is highlighted.

User Action:

Complete the expression.

IPPT8856

Invalid ICMP Type with Original Datagram Details

Reason:

The specified ICMP Type does not support embedding details of the original datagram as part of its message. ICMP error message types always contains the IP header and the first eight bytes of the IP datagram that caused the ICMP error message. The valid ICMP error messages types are as follows:

DESTUNREACH (type 3)-Destination Unreachable

SRCQUENCH (type 4)-Source Quench

REDIRECT (type 5)-Redirect

TIMEEXC (type 11)-Time exceeded

PARAMPROB (type 12)-Parameter problem

System Action:

The field in error is highlighted.

User Action:

Select a valid error message type from the list.

IPPT8857**No valid interfaces found for stack P1****Reason:**

A request to list known stack interfaces or an attempt to validate a given interface cannot be completed. This condition is caused by one of the following:

- The stack is inactive
- The SSI region is inactive
- The stack is not known to the SSI region

System Action:

The field is highlighted.

User Action:

Ensure that the interface name is valid for the selected stack.

IPPT8858**Invalid Interface specified P1****Reason:**

The specified interface does not exist for the selected stack.

System Action:

The field in error is highlighted.

User Action:

Select from the list of known stack interfaces.

IPPT8859

Interface *P1* conditionally accepted

Reason:

Interface *P1* is accepted conditionally because an existence check cannot be done at this time. This condition is caused by one of the following reasons:

- The stack is inactive.
- The SSI is inactive.
- The stack is not known to the SSI.
- The interface is associated with a VIPA that is not currently assigned.

System Action:

If the SSI is active, trace activation is permitted and packets are collected when the specified interface becomes available.

User Action:

None.

IPPT8860

Invalid hexadecimal data - does not end on byte boundary

Reason:

A hexadecimal data string that does not end on a byte boundary is rejected. For example, hexadecimal 12AED is invalid while hexadecimal 12AED6 is a valid data string.

System Action:

The field in error is highlighted

User Action:

Modify the hexadecimal string to end on a byte boundary.

IPPT8861**LIKE Data pattern does not contain wildcard characters * or ?****Reason:**

The supplied data pattern for the LIKE operator does not contain the required wildcard characters * or ?.

System Action:

The field in error is highlighted.

User Action:

Review the data pattern and determine the appropriate wildcard character. An asterisk (*) matches zero or more characters, while a question mark matches any character. If wildcard characters are not required, change the operation from LIKE to EQ .

IPPT8862**Simple expression not used in compound expression****Reason:**

A simple expression is not referenced in the compound expression.

System Action:

The fields in error are highlighted.

User Action:

Remove the simple expression that is not referenced or clear the expression field to generate a default expression that contains all of the simple expressions.

IPPT8863

Minimum Length value must be equal to length of the LIKE data pattern

Reason:

The minimum Length that can be specified must be equal to the length of the LIKE data pattern.

System Action:

The field in error is highlighted.

User Action:

Adjust the length value so that it is at least equal to the length of the LIKE data pattern but not exceeding 32 bytes.

IPPT8864

The Length value must be half the length of the displayed hex string

Reason:

If the length is specified for a HEX type data string, it must be half the length of the displayed hexadecimal string.

System Action:

The field in error is highlighted.

User Action:

Adjust the length value accordingly. Alternatively, leave the Length field blank when you use EQ/NE operators.

IPPT8865

LIKE operator not valid with P1 data format

Reason:

The LIKE operator cannot be used with *P1* data format strings.

System Action:

The field in error is highlighted.

User Action:

Use an EQ or NE operator when you compare packet data with a *P1* data format string.

IPPT8866**Foreign/Local Host combination cannot be traced****Reason:**

The specified Foreign/Local Host address combination cannot be traced. The following combinations are not valid:

- Foreign and Local Host addresses with the same IP Address, and the IP address is not a LOOPBACK address.
- Foreign and Local Host addresses are interfaces from the same TCP/IP stack.
- Foreign and Local Host addresses are LOOPBACK addresses with different IP addresses.
- Foreign and Local Host addresses are not of the same addressing architecture. For example, a local host address is an IPv4 address while the foreign host address is an IPv6 address.

System Action:

The fields in error are highlighted.

User Action:

Supply a correct combination of IP addresses. For combinations 1-3, validation is performed only when the stacks are known to the packet analyzer; otherwise, it is your responsibility to ensure that a valid combination is specified.

IPPT8867**The Length value must be 4 if specified for an IP4ADDR data format****Reason:**

A length value other than four was specified for an IP4ADDR data format. An IP4ADDR data format converts the test IP address character string to its equivalent four-byte binary format for an IP address. The binary format is then used for packet data comparisons.

System Action:

The field in error is highlighted.

User Action:

If a length is specified, only a value of four is allowed. Alternatively, the field can be left blank.

IPPT8868

Generic address notation not valid for *P1* data format

Reason:

A generic address notation is not valid for *P1* data format.

System Action:

The field in error is highlighted.

User Action:

Specify a valid IP address format.

IPPT8869

Packets After Stop value must be less than Trace Limit value

Reason:

Packets After Stop value equal or greater than the Trace Limit value is not allowed.

System Action:

The fields in error are highlighted.

User Action:

Decrease the Packets After Stop value to less than the current Trace Limit or increase the Trace Limit.

IPPT8870**Action not supported for this entry****Reason:**

Packet tracing is not possible for the selected entry for one of the following reasons:

- The Foreign and Local Host address have the same IP Address, and the IP address is not a LOOPBACK address.
- The Foreign and Local Host address are interfaces from the same TCP/IP stack.
- The Foreign and Local Host address are LOOPBACK addresses with different IP addresses.

System Action:

None.

User Action:

None.

IPPT8871**Foreign Host address not valid for tracing****Reason:**

The specified Foreign Host address cannot be traced for one of the following reasons:

- The Foreign Host address is an interface from the specified TCP/IP stack.
- The Foreign Host address is the same as the Local Host address and the IP address is not a LOOPBACK address.
- The Foreign Host address is a LOOPBACK address and is different from the Local Host address.

System Action:

The field in error is highlighted.

User Action:

Supply a valid Foreign Host address. Validation is performed only when the stacks are known to the packet analyzer; otherwise, it is your responsibility to ensure that a valid address is specified.

IPPT8872

Local Host address not found in any stack

Reason:

Packet tracing is not possible because the specified Local Host address cannot be found in any of the stacks known to the packet analyzer.

System Action:

The field in error is highlighted.

User Action:

Supply a valid Local Host address from a stack known to the packet analyzer.

IPPT8873

Local Host address conditionally accepted

Reason:

The specified local host address is accepted conditionally because an existence check cannot be done at this time. This condition is caused by one of the following reasons:

- The stack is inactive.
- The stack is not known to the Packet Analyzer.
- The SSI is inactive.
- The address is a VIPA that is not currently assigned.

System Action:

If the SSI is active, trace activation is permitted and packets are collected when the specified local host address becomes available.

User Action:

None.

IPPT8874**Local Host address not valid for tracing****Reason:**

The specified Local Host address cannot be traced for one of the following reasons:

- The Local Host address is the same as the IPNODE's address and is not a LOOPBACK address.
- The Local Host address and the IPNODE's address are interfaces from the same TCP/IP stack.
- The Local Host address and the IPNODE's address are LOOPBACK addresses but with different IP addresses.

System Action:

The field in error is highlighted.

User Action:

Supply a valid Local Host address. Validation is performed only when the stacks are known to the packet analyzer; otherwise, it is your responsibility to ensure that a valid address is specified.

IPPT8875**Character (*P1*) not allowed for *P2*****Reason:**

Character *P1* is not valid for field *P2*.

System Action:

The request is rejected.

User Action:

Remove the invalid character.

IPPT8876

***P1* address format not valid for this trace definition**

Reason:

The specified host address uses a *P1* address format that is not valid for this trace definition.

System Action:

The fields in error are highlighted.

User Action:

Enter the correct IP address format that matches the IP or ICMP version field.

IPPT8877

***P1* valid values : 4 or 6**

Reason:

Valid values for this field are 4 or 6.

System Action:

The field in error is highlighted.

User Action:

Specify a valid value.

IPPT8878

***P1* valid values : Loopback or Multicast**

Reason:

Valid values for this field are Loopback, Multicast, or blank.

System Action:

The field in error is highlighted.

User Action:

Specify a valid value.

IPPT8879**PKT-TOO-BIG is the only valid ICMP Message Type****Reason:**

An ICMP Message Type other than PKT-TOO-BIG (type 2) is specified with an MTU of Next Hop value.

System Action:

The field in error is highlighted.

User Action:

Specify PKT-TOO-BIG, 2, or blank for ICMP Types.

IPPT8880**Only 0's and 1's are valid****Reason:**

This field accepts series of numbers between 0 and 1. For example, a valid combination is 01010101.

System Action:

The field in error is highlighted.

User Action:

Specify a valid value.

IPPT8881

Invalid ICMP Message Type *P1*

Reason:

This error condition is generated by one of the following reasons:

- The specified ICMP message type is not valid. The ICMP type can be specified as a number from 0-255 or by selecting from a list of valid name types.
- The Original Datagram Details section has non-blank fields, which limits the valid type to ICMP error messages. See message IPPT8882 for a list of valid ICMP error message types.
- The MTU of Next Hop field is non-blank, which limits the valid type to PKT-TOO-BIG Type(2).

System Action:

The field in error is highlighted.

User Action:

Select a valid type from the list or enter a blank where appropriate.

IPPT8882

Invalid ICMP Type with Original Datagram Details

Reason:

The specified ICMP Type does not support embedding details of the original datagram as part of its message. ICMP error message types always contain the packet that caused the ICMP error message. The valid ICMP error message types are as follows:

DESTUNREACH (type 1) - Destination Unreachable

PKT-TOO-BIG (type 2) - Packet Too Big

TIMEEXC (type 3) - Time Exceeded

PARAMPROB (type 4) - Parameter Problem

System Action:

The field in error is highlighted.

User Action:

Select a valid error message type from the list.

IPPT8883**Invalid IP network address****Reason:**

The supplied IP network address is invalid for one of the following reasons:

- The address mask is not a valid IPv4 dotted decimal notation. For example, 192.168/255.128 or 192.168/255.255.
- The prefix length is not in the valid range. For an IPv4 address, the valid prefix length is from 1-32 while for an IPv6 address, the valid range is 1-128. For example, 192.21/9 or 2001:DB8::/32.

System Action:

None.

User Action:

Correct the value and retry.

IPPT8884**The Length value must be 16 if specified for an IP6ADDR data format****Reason:**

You specified a length value other than 16 for an IP6ADDR data format. An IP6ADDR data format converts the test IP address character string to its equivalent 16 byte binary format for an IP address. The binary format is then used for packet data comparisons.

System Action:

The field in error is highlighted.

User Action:

If a length is specified, only a value of 16 is allowed. Alternatively, you can leave the field blank.

IPPT8885

The Data value is not a *P1* data format

Reason:

The supplied data value is not compatible with the selected data format of *P1*.

System Action:

The field in error is highlighted.

User Action:

Specify the correct value for the selected data format.

IPPT8886

YES is the only valid value for *P1*

Reason:

This field accepts a value of YES only.

System Action:

The field in error is highlighted.

User Action:

Specify YES to activate this criteria.

IPPT8887

IP addressing format not valid for selected protocol

Reason:

The IP addressing format defined for this trace definition is not valid for the selected protocol.

System Action:

The fields in error are highlighted.

User Action:

Select a valid protocol for the current IP addressing format or specify the correct IP addressing format for the selected protocol.

IPPT9001**Initialization error in CTAPI interface: RC=*P1* FDBK=*P2*****Reason:**

An error occurred during initialization of CTAPI API. The meaning of the return and feedback codes are as follows:

RC=12**FDBK=1**

API load module EZBCTAPI load failure

FDBK=2

API load module EZBNMCTF load failure

FDBK=3

API format table EZBPTFM4 load failure

RC=16**FDBK=2**

Internal prepare MDO failure

FDBK=3

Internal assign MDO failure

System Action:

The current process terminates.

User Action:

This is an internal error. Contact Technical Support.

IPPT9002

EPS *P1* error: Errno=*P2* Reason=*P3*

Reason:

A Packet Analyzer request to the SOLVE SSI failed. The message includes the following details:

P1 is the EPS request type, for example, Connect, Send, Receive.

P2 is the EPS error number.

P3 is an explanation of the EPS error number.

System Action:

The request fails.

User Action:

Use the EPS Error Number and Reason to determine the error:

70 No SSI Connection

This indicates that the connection between this region and the SSI region is not active. Use the \$LOG command to check the activity log for related messages.

Use the \$NM SSI Customizer parameter group to restart the SOLVE SSI.

For all other errors, contact Technical Support.

IPPT9003

EPS ID error: Verb=*P1*, ID=*P2*, SSID=*P3*, system=*P4*, NCLID=*P5*

Reason:

A Packet Analyzer request to the SOLVE SSI failed because of an invalid connection ID. The message includes the following:

P1 is the EPS verb name that was issued when the error was detected. *P2* is the EPS connection ID.

P3 is the SSID that identifies the SOLVE SSI region.

P4 is the system name where the region is running.

P5 is the NCLID of the process.

This message corresponds to an EPS error number 81.

System Action:

The request fails.

User Action:

Retry the request. If the problem persists, contact Technical Support.

IPPT9004

SSI *P1* on *P2* not contactable or Packet Analyzer not configured

Reason:

A Packet Analyzer request to the SOLVE SSI failed because the SSI region cannot be contacted or does not include support for the packet analyzer. The SSID (*P1*) and system (*P2*) identify the SSI region where the request is issued. This can be the local SSI region or a remote region, possibly on another LPAR.

This message corresponds to EPS error numbers 39 and 70.

System Action:

The request fails.

User Action:

Check the following in the region running on *P2*:

1. Ensure that the region is connected to the correct SSI. To do this, display the list of Customizer parameter groups (/PARMS) and select the SSI group (from the INTERFACES section). Ensure that the SSID is specified and is the correct value. Display the parameter group's initialization log (Ilog). Update and action the parameter group, as required.
2. Display the activity log and check for other SSI-related error messages and action these accordingly.
3. Ensure that the SSI initialization parameters include support for the packet analyzer. To do this, display the SSIPARMS member in the SOLVE SSI region's JCL library.

Ensure that Packet Analyzer support is enabled by specifying *PKTANALYZER=YES*.

Also ensure that the parameters include *PALEVEL=FULL*.

Only use a *PALEVEL* other than *FULL* if instructed by Technical Support.

Note: Only one SOLVE SSI region (per LPAR) can include support for the packet analyzer.

IPPT9005**Request timed out on SSID=*P1*, system=*P2*****Reason:**

A Packet Analyzer request to the SOLVE SSI did not complete in a reasonable time. The SSID (*P1*) and system (*P2*) identify the SSI region where the request is issued to obtain or store data. This can be the local SSI region, or a remote region, possibly on another LPAR.

System Action:

The request fails.

User Action:

Retry the request. If the problem persists, contact Technical Support.

IPPT9006

Formatting error in CTAPI interface: RC=*P1* FDBK=*P2*

Reason:

An error occurred during initialization of CTAPI API. The meaning of the return and feedback codes are as follows:

RC=8

FDBK=1

FORMAT rejected - Interface not initialized

FDBK=2

Invalid FORMAT call - Empty input buffer

FDBK=3

Invalid FORMAT call - Buffer not empty

FDBK=4

Invalid FORMAT call - Incomplete CTE in buffer

RC=12

FDBK=1

API load module EZBCTAPI load failure

FDBK=2

API load module EZBNMCTF load failure

FDBK=3

API format table EZBPTFM4 load failure

RC=16

FDBK=2

Internal prepare MDO failure

FDBK=3

Internal assign MDO failure

System Action:

The current process terminates.

User Action:

This is an internal error. Contact Technical Support.

IPPT9007**Error in EZBCTAPI Macro Interface: RTNCDE=P1 RSNODE=P2****Reason:**

An error occurred in the EZBCTAPI Macro Interface. For more information about the meaning of the return and reason codes, see the z/OS Communication Server: IP Programmer's Reference manual.

System Action:

The current process terminates.

User Action:

This is an internal error. Contact Technical Support.

IPPT9008**Background print of trace report completed****Reason:**

The print request completed successfully and the output was sent to the printer.

System Action:

None.

User Action:

None.

IPPT9009**Background print of trace report failed.****Reason:**

The print request for a trace report failed. An accompanying message gives the reason.

System Action:

The print request is aborted.

User Action:

Check the accompanying message for an action.

IPPT9101

Generation of Trace Reports in progress ... please wait

Reason:

The generation of trace reports is in progress.

System Action:

Processing continues and the details of the status panel are refreshed.

User Action:

None.

IPPT9102

Generate Trace Reports processing failed ... check log

Reason:

An unrecoverable error has occurred while generating the trace reports.

System Action:

Processing terminates.

User Action:

Regenerate the trace reports. If the condition persists, contact Technical Support. Provide the activity log from the time an attempt was made to generate trace reports till after this message is written to the log.

IPPT9103

Trace Report generation canceled

Reason:

Trace Report generation is canceled.

System Action:

Processing terminates.

User Action:

None.

IPPT9104**No trace reports generated****Reason:**

A request to generate trace reports ended with no errors but with no reports generated.

System Action:

None.

User Action:

Review the activity log for possible error messages; otherwise, contact Technical Support for assistance.

IPPT9105**Errors detected during report generation - report maybe incomplete****Reason:**

Errors detected during trace report generation may be caused by having an incomplete or inaccurate set of reports.

System Action:

Processing ends with error messages written to the activity log.

User Action:

Review the activity log for the cause of the error and take appropriate action. If necessary, contact Technical Support for assistance.

IPPT9106**Errors detected during report generation - no reports available****Reason:**

A request to generate trace reports ended with errors and with no reports generated.

System Action:

Processing ends with error messages written to the activity log.

User Action:

Review the activity log for the cause of the error and take appropriate action. If necessary, contact Technical Support for assistance.

IPPT9107

Internal report data server no longer available

Reason:

A request sent to the internal report data server detected that the server is no longer available.

System Action:

The current list display terminates.

User Action:

Contact Technical Support for assistance.

IPPT9108

Internal report data server not responding

Reason:

A request sent to the internal report data server timed out.

System Action:

The current list display terminates.

User Action:

Contact Technical Support for assistance.

IPPT9109

Printer form not appropriate - must have at least *p1* cols

Reason:

A request to print a report failed because the selected printer uses a form that has less than *P1* columns.

System Action:

Print request is rejected.

User Action:

Perform the following steps:

1. Enter **/PSM.P** to determine the printer form used by the selected printer.
2. Enter **/PSM.F** to update the details of the printer form or select an appropriate printer form for the selected printer.

IPPT9110

Report printed, notification will be sent when completed.

Reason:

The print request was submitted to the background. When the print is complete, a notification is sent.

System Action:

None.

User Action:

None.

IPPT9111

Background printing failed - check activity log

Reason:

Print request failed with error messages written to the activity log.

System Action:

None.

User Action:

Review the activity log to determine the cause of the error and take appropriate action.

IPPT9112

Invalid dataset or HFS file: *P1*

Reason:

Errors are detected in the panel input field; *P1* is the explanation.

For the Dataset or HFS file field, *P1* provides the following explanation:

Missing HFS File Name

Indicates that the specified text is not an HFS file name.

Missing PDS Member Name

Indicates that the specified text does not have a PDS member name.

Invalid HFS Path

Indicates that the specified text does not conform to HFS path-naming rules.

Path does not exist or is not accessible

Indicates that the specified HFS path either does not exist or is not available for processing the request.

Relative HFS directory path not supported

Indicates that a relative HFS directory path was specified, which is not supported.

Invalid HFS File Name

Indicates that the specified text does not conform to HFS file-naming rules.

File is an HFS directory

Indicates that the specified HFS file is an existing HFS directory.

Invalid PDS Member Name

Indicates that the specified text does not conform to PDS member naming rules.

Invalid SYSOUT Class

Indicates that the specified text does not contain a valid SYSOUT class.

DSN not Qualified

Indicates that the specified text does not contain a qualified DSN.

Dataset is not DSORG PS or PO

Indicates that the specified name points to a data set that is not valid for this function.

Dataset is not a PDS

Indicates that the specified name points to a data set that is not a partitioned data set.

Dataset LRECL < *n*

Indicates that the target data set has a logical record length less than *n* bytes.

System Action:

None.

User Action:

Correct the indicated error, and retry the operation.

IPPT9113

Invalid dataset or HFS file. You must enter the HFS path and file name

Reason:

The value entered is not a valid data set name or a valid HFS file path and name.

System Action:

Field is set in error.

User Action:

Specify a valid data set name or a valid HFS file name.

IPPT9114

Save Trace Reports in progress ... please wait

Reason:

The saving of trace reports is in progress.

System Action:

Processing continues and the details of the status panel are refreshed.

User Action:

None.

IPPT9115

Trace report saved

Reason:

The save request for the selected report ended without errors.

System Action:

None.

User Action:

None.

IPPT9116

Trace report saved to SYSOUT DDNAME(*P1*)

Reason:

The save request for the selected report ended without errors. You can retrieve it from the JES spool with DDNAME(*P1*) of this CA NetMaster region.

System Action:

None.

User Action:

None.

IPPT9201

***P1* not supported by remote system**

Reason:

The remote system is at a maintenance level that does not support the *P1* function.

System Action:

the process terminates.

User Action:

Update the remote region to the same maintenance level as the local region.

IPPTPKG01**User ID P1 is not authorized to view packet data****Reason:**

Access to the SmartTrace packet data has not been granted by your site's security system.

System Action:

Packet data is restricted to IP and protocol headers.

User Action:

Contact your security administrator.

For more information about SmartTrace security requirements, see the Security Guide.

IPPTPKG02**User ID P1 is not authorized for SmartTrace****Reason:**

You are not authorized to use the SmartTrace facility.

System Action:

The SmartTrace function is not performed.

User Action:

Contact your security administrator.

To access SmartTrace, your User ID must be defined to UAMS with a TCP/IP Services value of 2.

For more information, see the Security Guide.

IPPTPKG03

SmartTrace security check failed for user id P1. Security is not implemented.

Reason:

Verification by your external security system has failed. A SAF VERIFY check on user ID P1 resulted in SAF RC=4 and security system RC=4. This probably indicates that resource NETMSTR.PKTTRACE.region of class FACILITY is not defined.

System Action:

SmartTrace packet viewing is restricted to IP and protocol headers only.

User Action:

Contact your security administrator.

For more information about SmartTrace security requirements, see the Security Guide.

IPPTPKG04

SmartTrace security check failed. User P1 is unknown or revoked.

Reason:

Verification by your external security system has failed. A SAF VERIFY check on user ID *P1* has resulted in SAF RC=8 and security system RC=28 (x'1C'), indicating that user access is revoked.

System Action:

User *P1* is restricted to viewing IP and protocol headers.

User Action:

Contact your security administrator.

For more information about SmartTrace security requirements, see the Security Guide.

IPPTPKG10**SmartTrace security access failure****Reason:**

A SAF call to verify access to the SmartTrace facility failed with an unexpected error. This message, together with messages IPPTPKG11 and IPPTPKG12, is written to the activity log, which contains information about the return code and reason code.

System Action:

SmartTrace packet viewing is restricted to IP and protocol headers only.

User Action:

Review the messages in the activity log.

Contact your security administrator.

For more information about SmartTrace security requirements, see the Security Guide.

IPPTPKG11**SAF Parameters: P1****Reason:**

This message is part of a message set that is written to the activity log when an unexpected SAF resource check error occurs. The message shows the parameter string that was passed to the SAF program, NM022.

System Action:

SmartTrace packet viewing is restricted to IP and protocol headers only.

User Action:

See messages IPPTPKG10 and IPPTPKG12.

IPPTPKG12

SAF response: REQ=*P1* SAFRC=*P2* SECRC=*P3* SECREAS=*P4*

Reason:

This message is part of a message set that is written to the activity log when an unexpected SAF resource check error occurs. The message shows the response details returned by the SAF program, NM022.

REQ=*P1* is the RACROUTE REQUEST=operand

SAFRC *P2* is the SAF (RACROUTE) return code (R15)

SECRC *P3* is the security system return code

SECREAS *P4* is the security system reason code

For more information about the RACROUTE request macros, and the associated return codes and reason codes, see the (IBM) RACF System Macros manual. The most common SAFRC/SECRC combinations are:

04 PROGRAM ACTIVATION FAILURE

04 Program not APF-authorized

08 Invalid parameter

0C Missing parameter

10 Parameters inconsistent

08 SAF INTERFACE FAILURE

SAF/RACROUTE return codes:

04 Requested function was not processed

08 Requested function was processed, but failed

12 ACCESS VERIFICATION FAILURE

RACROUTE REQUEST=VERIFY return codes:

04 No security profile defined

08 Password invalid

0C Password expired

10 New password invalid

14 Group definition is missing

18 Security exit denied access

1C User temporarily revoked

20 Security system not active

24 Access to group is revoked

?? Others as per specific security subsystem

16 ACCESS AUTHORIZATION FAILURE

RACROUTE REQUEST=AUTH return codes:

04 Resource is not security protected

08 Resource access not allowed

99 NO ENTRY PARAMETERS**System Action:**

SmartTrace packet viewing is restricted to IP and protocol headers only.

User Action:

Contact your security administrator. Use the error codes and messages provided above to investigate the cause of the error. You also need:

- The SAF RACROUTE macro documentation
- The messages and codes documentation for your external security system (CA ACF2, CA Top Secret, or RACF)

Ensure that the region is running out of an authorized load library. Ensure that your external SAF security system is active.

Ensure that your security administrator has set up SAF security for use with this region correctly.

For more information about SmartTrace security requirements, see the *Security Guide*.

IPPTPKG13**SAF Interface error: P1****Reason:**

An error has occurred calling the SAF program, NM022. *P1* describes the error.

System Action:

The message, and for some errors message IPPTPKG11, is written to the activity log. SmartTrace packet viewing is restricted to IP and protocol headers only.

User Action:

This is an internal error that should be reported to your product supplier.

IPPTPKG14

Internal connection ID not available

Reason:

The internal connection ID cannot be obtained for a given connection. This temporary condition occurs when a connection existed before the SSI region was initialized.

System Action:

None.

User Action:

None.

IPPTPKG15

Check for expression P1 completed with no errors.

Reason:

A request for a syntax check of expression *P1* has ended with no errors.

System Action:

None.

User Action:

None.

IPPTPKG16

Expression P1 is empty - nothing to check

Reason:

A request for a syntax check of expression *P1* is not possible because nothing is specified.

System Action:

Request rejected.

User Action:

None.

IPPTPKG17**Connection not found****Reason:**

The connection cannot be found using the Packet Analyzer or NetStat. The most likely cause is because the connection has recently closed.

System Action:

None.

User Action:

None.

IPPTPKG18**Connection is not known to the Packet Analyzer****Reason:**

The connection is not visible to the Packet Analyzer. This may be because the stack is not being processed by the Packet Analyzer, or the connection has recently closed, or the connection has been idle since before the SOLVE SSI region started.

System Action:

None.

User Action:

None. It is not possible to start a trace of this connection at this time.

IPPTPKG19**SmartTrace maximum connections reached for P1****Reason:**

A multiple TCP connection trace has reached its specified maximum number of connections.

System Action:

No further traces are created for *P1*.

User Action:

None.

IPPTPKG20

SmartTrace trace creation failed for *P1*. Insufficient storage

Reason:

A multiple TCP connection trace has attempted to trace a new connection, but the attempt failed because the trace database has insufficient storage.

System Action:

Trace creation does not occur. Packets from the connection are not traced.

User Action:

To see the current SSI trace database size, use /IPTEST.

To free space in the trace database, delete any ACTIVE or ENDED trace that is no longer required.

If this condition occurs frequently, consider increasing the database size on the next restart of the SOLVE SSI region. The database size is set by SSI startup parameter, PTRCDBSIZE.

IPPTPKG21

SmartTrace stop condition matched for definition *P1* on stack *P2*

Reason:

A SmartTrace trace has stopped or is in the process of stopping because the defined stop condition has been matched.

System Action:

If a numeric value other than 0 was defined for the Packets After Stop option, the trace waits for the specified number of extra packets to be collected; otherwise, the trace ends.

User Action:

Review the trace results.

IPPTPKG22**Action not available. SSI version does not support SmartTrace****Reason:**

A Packet Analyzer request to the SOLVE SSI failed because the SSI is running with an old version of the software.

System Action:

The request fails.

User Action:

Update the SSI to the latest version of the product.

IPPTPKT01**User not authorized to view packet data. Data suppressed.****Reason:**

The payload data in the packet is not displayed because your user ID is not authorized to view packet data. To view packet data, your user ID must have read access to resource NETMSTR.PKTTRACE.region in your external security package.

System Action:

SmartTrace packet viewing is restricted to IP and protocol headers only.

User Action:

Contact your security administrator.

For more information about SmartTrace security requirements, see the Security Guide.

IPPTPKT02

Error decoding packet. *p1*

Reason:

An error occurred decoding an IP packet. *P1* provides details about which part of the packet caused the error.

System Action:

The packet is not completely decoded.

User Action:

Contact Technical Support.

IPRA0201

No traffic to *p1* seen in the last hour

Reason:

A request to display recent traffic statistics could not be satisfied because the Packet Analyzer has seen no packets to or from address *p1* in the last hour.

System Action:

The action is rejected.

User Action:

If traffic is expected, check the status of the remote address.

IPRA1201

No remote IP addresses recorded for stack *P1 P2*

Reason:

A request for a list of remote addresses has been sent to the Packet Analyzer. The request failed because the Packet Analyzer has seen no activity from stack *P1* to any remote address in network *P2* (if shown), or else no activity to any remote address.

System Action:

The request fails.

User Action:

If the Packet Analyzer has been restarted recently, wait a while and reissue this command. If the Packet Analyzer has not been restarted recently, check the status of the network.

IPRA1202**Packet Analyzer statistics not available****Reason:**

The SSI is currently running with PALEVEL set to NOPACKETS or NOSTATS. Packet statistics are available only when PALEVEL is FULL.

System Action:

The RI command displays without packet statistics. The BI command is not displayed.

User Action:

Check why the SSI is not running with PALEVEL=FULL.

The PALEVEL setting can be altered using the SSI's PACTL command. SSI commands can be entered from a region using the SSISEND command, for example:

```
SSISEND PACTL PALEVEL=FULL
```

IPRT1101**Invalid keyword value specified, keyword= P1 value= P2****Reason:**

The call to the procedure failed because the keyword identified by *P1* had an invalid value, identified by *P2* .

System Action:

The request is rejected.

User Action:

Contact your system administrator.

IPRT1102

Router definition P1 does not exist

Reason:

A request was received to retrieve the IBM 2216 router definition called *P1* but no such router definition exists.

System Action:

None.

User Action:

Check the name of the router definition requested. If it is correct, investigate why the definition has been deleted.

IPRT1103

Update of multiple router definitions is not supported

Reason:

A request was received to add or update multiple IBM 2216 router definitions in a single request. This is not supported.

System Action:

The request is rejected.

User Action:

Request only one update at a time.

IPRT1104

Router definition P1 already exists

Reason:

A request was received to add an IBM 2216 router definition called *P1* but a router definition with that name already exists.

System Action:

The request is rejected.

User Action:

Choose a different name for the router definition, or update the definition that already exists.

IPRT1105**Action failed, the map P1 does not exist****Reason:**

An MDO assignment failed with ZMDORC 16 and ZMDOFDBK 0. This indicates that the map *P1* does not exist in this system.

System Action:

The action terminates.

User Action:

Ensure that the OSCNTL file has been correctly updated for TCP/IP Services.

IPRT1106**MDO action failed, map= P1, name= P2, MDORC= P3, MDOFDBK= P4****Reason:**

An MDO assignment failed. The MAP was P1 , the MDORC was P3 , the MDOFDBK value was P4 , and the MDO component involved in the last operation was *P2*.

System Action:

The action terminates.

User Action:

See the NCL Reference for details of the codes.

IPRT1107**Start of monitoring activity for P1 failed****Reason:**

When a router definition is updated, save processing issues a request to change the current monitoring status of the router to reflect the current settings. A request to start monitoring activity for router *P1* has failed.

System Action:

None

User Action:

The message preceding this message indicates the cause of the failure.

IPRT1303

Router P1 at address P2 is not a valid router

Reason:

A request was received to perform an action on an IBM 2216 router, but during processing it was determined that the specified device is not a valid router.

System Action:

The action terminates.

User Action:

Correct the IP Address in the router definition and retry.

IPRT1307

Max connections reached - P1 records returned

Reason:

The requested maximum number of connections (*P1*) has been reached but more connections satisfy the criteria. The remaining connections are ignored.

System Action:

None.

User Action:

If more connections are required, increase the Max Connections option and retry.

IPRT1308

TN3270s information vartable allocation error, RC= P1 FDBK= P2

Reason:

An unexpected error occurred when the Router TN3270 Server information procedure was allocating the vartable used to store the returned information.

System Action:

The action terminates.

User Action:

Contact your System Administrator.

IPRT1311**CONNECTION DETAILS NOT PASSED IN \$IPCONN. MDO****Reason:**

An action has been attempted for a TN3270 client connection through a router. The action required details about the connection to be passed in an MDO called \$IPCONN. However, either this MDO has not been passed or it is not mapped correctly.

System Action:

The action terminates

User Action:

Contact your System Administrator.

IPRT1312**CONNECTION DETAILS PASSED IN \$IPCONN. MDO ARE INCOMPLETE****Reason:**

An action has been attempted for a TN3270 client connection through an IBM 2216 router. The action required details about the connection to be passed in an MDO called \$IPCONN. However, some of the data which should be present in the MDO is not present.

System Action:

The action terminates

User Action:

Contact your System Administrator.

IPRT1313**Connection for client P1 has already ended****Reason:**

A request was received to perform an action on a TN3270 client connection, but the request has failed because the specified connection has ended.

System Action:

The action terminates.

User Action:

Refresh the connection list display.

IPRT1317

Monitoring for P1 is not active

Reason:

A request was received to obtain monitor data for the IBM 2216 router *P1* but monitoring is not active for this router.

System Action:

The action terminates.

User Action:

None

IPRT1318

Monitoring is inactive for all attributes of P1

Reason:

A request was received to obtain monitor data for IBM 2216 router *P1* but all attributes requested had a monitoring status of 'inactive'.

System Action:

The action terminates.

User Action:

None

IPRT1319

TN3270 server is not active at P1

Reason:

Your request cannot be processed because the 2216 router at address *P1* does not have an active TN3270 server.

System Action:

The request is not processed

User Action:

Determine why there is no active TN3270 server at that address, or re-issue the request using a different address.

IPRT1701**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The TCP/IP Router Tn3270 Server procedure \$IPRT17L failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPRT17L terminates.

User Action:

Correct the NCL procedure which caused execution of \$IPRT17L. If executed from OCS, check the command entered on the command line and retry.

IPRT1702**INVALID SELECT VALUE SPECIFIED - KEYWORD= P1 VALUE= P2****Reason:**

The TCP/IP procedure \$IPRT17L failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPRT17L terminates.

User Action:

Contact your System Administrator.

IPRT1703

REQUIRED PARAMETER (P2) MISSING FOR COMMAND P1

Reason:

The TCP/IP external interface procedure \$IPCALL failed because a required parameter was omitted from the call to \$IPCALL. One of either ADDRESS, HOSTNAME or HOST must be specified.

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Contact your System Administrator.

IPRT2001

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The TCP/IP external interface procedure \$IPCALL failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed \$IPCALL. If executed from OCS, check the command entered on the command line and retry.

IPRT2002**INVALID SELECT VALUE SPECIFIED - KEYWORD= P1 VALUE= P2****Reason:**

The TCP/IP procedure \$IPRT20L failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPRT20L terminates.

User Action:

Contact your System Administrator.

IPRT2003**Action not supported for this entry****Reason:**

The attempted action is not valid in the following places:

- On the selected LU or,
- On display lines that are not LUs.

System Action:

None.

User Action:

None.

IPRT2101

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The TCP/IP external interface procedure \$IPCALL failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed \$IPCALL. If executed from OCS, check the command entered on the command line and retry.

IPRT2102

Invalid select value specified - KEYWORD= P1 VALUE= P2

Reason:

The TCP/IP procedure \$IPCP21L failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPRT21L terminates.

User Action:

Contact your System Administrator.

IPRT2103**Action not supported for this entry****Reason:**

The attempted action is not valid in the following places:

- On the selected LU or,
- On display lines that are not LUs.

System Action:

None.

User Action:

None.

IPRT2201**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The TCP/IP external interface procedure \$IPCALL failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed \$IPCALL. If executed from OCS, check the command entered on the command line and retry.

IPRT2202

INVALID SELECT VALUE SPECIFIED - KEYWORD= P1 VALUE= P2

Reason:

The TCP/IP procedure \$IPRT22L failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPRT22L terminates.

User Action:

Contact your System Administrator.

IPRT2203

Action not supported for this entry

Reason:

The attempted action is not valid in the following places:

- On the selected LU or,
- On display lines that are not LUs.

System Action:

None.

User Action:

None.

IPRT3001**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The TCP/IP external interface procedure \$IPCALL failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed \$IPCALL. If executed from OCS, check the command entered on the command line and retry.

IPRT3002**INVALID SELECT VALUE SPECIFIED - KEYWORD= P1 VALUE= P2****Reason:**

The TCP/IP procedure \$IPRT30L failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPRT30L terminates.

User Action:

Contact your System Administrator.

IPRT3003

Action not supported for this entry

Reason:

The attempted action is not valid in the following places:

- On the selected LU or,
- On display lines that are not LUs.

System Action:

None.

User Action:

None.

IPRT3503

Action not supported by this entry

Reason:

You entered an action on the routing table list that cannot be processed. For example, you entered the R option to view the routing table for a router, but the route selected is a direct one (that is, no router is used).

System Action:

None.

User Action:

Correct the action and retry.

IPRT3601

Action not supported by this entry

Reason:

You entered an action on the routing table list that cannot be processed. For example, you entered the R action to view the routing table for a router, but the route selected is a direct one (that is, no router is used).

System Action:

None.

User Action:

Correct the action and retry.

IPRV4101**Stack management for P1 enabled****Reason:**

A request to enable management for a TCP/IP stack (*P1*) was accepted.

System Action:

Packet analysis for the stack is enabled if not already enabled. It may be already enabled by a previous request by either this NetMaster region, or another NetMaster region in the same LPAR that has defined the stack resource.

User Action:

None.

IPRV4102**Stack management for P1 disabled.****Reason:**

A request to disable management for a TCP/IP stack (*P1*) was accepted.

System Action:

Packet analysis for the stack is disabled if there are no other NetMaster regions in the same LPAR that are managing this stack.

User Action:

None.

IPRV4103

Stack *P1* not known to packet analyzer

Reason:

Packet Analyzer cannot see the packets on the *P1* stack.

A possible cause is that this is a CA TCPAccess stack that does not have the requisite level of maintenance for Packet Analyzer support.

System Action:

None.

User Action:

Do the following:

- For CA TCPAccess stacks, see the Installation Guide for more information about the required maintenance.
- Check for Packet Analyzer error messages in the JESMSG output of the SOLVE SSI region.
- Ensure that the stack initializes correctly.
- If the z/OS version or release has recently been upgraded, the Packet Analyzer may require a fix to support the new level.

If the cause of the problem is not apparent, contact Technical Support.

IPRV4111

Stack management *P1* request for *P2* failed

Reason:

A request to enable or disable (*P1*) management for a TCP/IP stack (*P2*) failed.

System Action:

The packet analysis status for the stack is unchanged by this request. The stack may have been enabled by a previous request by either this NetMaster region, or another NetMaster region in the same LPAR that has defined the stack resource.

User Action:

This message is followed by another message stating the reason for the failure. If the message indicates that the SSI interface is inoperative, restart the SSI. For other errors, contact your product supplier.

IPSA0301**Selected device has no performance history****Reason:**

No performance history to display because the selected device is not being used by any stack interface.

System Action:

Request rejected.

User Action:

None.

IPSA0302**No devices found for P1****Reason:**

No devices were found for the selected resource *P1* .

System Action:

Request rejected.

User Action:

Check the resource definition. Ensure the CHPID is valid and online.

IPSA0401**No OAT details returned from OSA/SF****Reason:**

No details about the OAT table were returned from OSA/SF.

System Action:

None.

User Action:

None.

IPSA0403

OSA/SF returned: P1

Reason:

A query call to OSA/SF returned in error, as shown in *P1*.

System Action:

The request for information from OSA/SF fails.

User Action:

See the Open Systems Adapter Support Facility User's Guide for more information on message *P1*.

IPSA1102

P1 attribute P2 was not returned by P3

Reason:

A request to sample attribute *P2* failed because *P3* did not return the data requested. This may be because the attribute specified is not applicable to the particular OSA, for example, Ethernet attributes specified for sampling on a token-ring OSA.

System Action:

No sample is available for this time period.

User Action:

Contact your local support representative.

IPSA1105

No devices found for P1

Reason:

No devices were found for the OSA *P1* .

System Action:

No sample is taken.

User Action:

Check the resource definition. Ensure the CHPID is valid and online.

IPSA1106**P1 P2 could not be determined****Reason:**

A request to determine the status of attribute *P2* for OSA *P1* failed.

System Action:

No sample is taken for this attribute but processing of other monitored attributes continues.

User Action:

Check the OSA definition for *P1* . If the CHPID is that of a valid OSA device, contact Technical Support.

IPSA1107**OSA/SF interface failure: P1****Reason:**

An attempt to communicate with the OSA/SF task failed. *P1* is the error message returned by the OSA/SF interface.

System Action:

Processing continues.

User Action:

Check the status of the OSA/SF task. If the condition persists, it may be necessary to stop and restart the OSA/SF task.

IPSA1108**Utilization check failed: P1****Reason:**

An attempt to check the utilization of an OSA failed. *P1* is the error message returned by the utilization routines.

System Action:

Processing continues.

User Action:

Ensure the CHPID value is correct.

IPSA1109

P1 attribute P2 requires OSA/SF

Reason:

An attempt to check an attribute of OSA *P1* has failed. The attribute *P2* requires OSA/SF, but the OSA resource definition for *P1* specifies that OSA/SF should not be used.

System Action:

The attribute sample is not taken.

User Action:

Change the resource definition: either specify 'Use OSA/SF', or inactivate monitoring of attribute *P2*.

IPSA1114

P1 attribute P2 is invalid for this OSA type

Reason:

An attempt to check an attribute of OSA *P1* has failed. The attribute *P2* applies to OSA- Express and this OSA is an OSA-2, or vice versa.

System Action:

The attribute sample is not taken.

User Action:

Change the resource definition in inactivate monitoring of attribute *P2*.

IPSA1115**P1 removed. Please review attribute settings.****Reason:**

As a result of your change to the 'Open System Adaptor Type' or the 'Use OSA/SF?' or 'Use SNMP?' field, some previously active monitoring attributes are no longer applicable. *P1* attributes have been removed.

System Action:

None.

User Action:

Press F8 and review the monitoring attribute settings.
Alternatively, you may apply a new template to the resource definition. In the Template selection area, enter 'R' (Reset) and enter a '?' in the TemplateName field to display a list of templates suitable for the changed definition.

IPSA1117**QDIO check failed: P1****Reason:**

An attempt to extract QDIO information for an OSA has failed. *P1* is the error message returned by the QDIO routine.

System Action:

Processing continues.

User Action:

Ensure the CHPID value is correct.

IPSA1118**No QDIO priority queues found for OSA P1****Reason:**

An attempt to extract QDIO information for OSA *P1* has returned no data.

System Action:

Processing continues.

User Action:

Contact your systems administrator.

IPSA1119

P1 attribute P2 requires z/OS P3 or later

Reason:

An attempt to monitor an attribute of OSA *P1* has failed. Monitoring of attribute *P2* is only supported on z/OS version *P3* or later.

System Action:

The attribute sample is not taken.

User Action:

Change the resource definition to inactivate monitoring of attribute *P2*.

IPSA1201

OSA definition P1 does not exist

Reason:

A request was received to retrieve the OSA definition called *P1* but no such definition exists.

System Action:

None.

User Action:

Check the name of the OSA definition requested. If it is correct, investigate why the definition has been deleted.

IPSA1203

No stacks found that are running on processor P1

Reason:

A request to produce an OSA utilization analysis failed because there were no stacks registered as running on the same processor on which the OSA is installed. The processor ID on which the OSA is installed is *P1*.

System Action:

No OSA utilization analysis is generated.

User Action:

Ensure that this SOLVE region is linked to all SOLVE regions that are running on processor *P1* and that these SOLVE regions are monitoring the stack interfaces of all stacks that are using the OSA being analysed.

IPSA1205**No performance monitoring requirements defined for OSA P1****Reason:**

A request to view the performance data for an OSA card could not be processed because the OSA specified does not have performance monitoring defined.

System Action:

None.

User Action:

Select an OSA that has performance monitoring specifications defined or define performance monitoring for the OSA.

IPSA1206**P1 definition error. Chpid P2 is not an OSA.****Reason:**

A command was received to display information about resource *P1*. The display could not proceed because the resource definition contains a chpid value *P2* which is not an OSA chpid.

System Action:

The command is rejected.

User Action:

Update the resource definition and correct the chpid value.

IPSA1207

The requested function is not available on this system

Reason:

The requested function is not available. It is not supported by this release of the product.

System Action:

The request is rejected.

User Action:

This message generally occurs when a function is requested of a remote system which is running a later version than the local system. To perform this function on the remote system you will need to log on to that system.

IPSA1208

Unable to extract information for OSA P1. OSAINFO RC= P2 FDBK= P3

Reason:

An attempt to extract status information for OSA CHPID P1 has failed. The return code from the OSAINFO verb is shown in P2 ;the feedback code is P3 .

System Action:

The request is rejected.

User Action:

Contact your System Administrator.

IPSA1209

Unable to determine devices for OSA P1. OSAINFO RC= P2 FDBK= P3

Reason:

An attempt to extract the device numbers for channel path P1 has failed. The return code from the OSAINFO verb is shown in P2 ;the feedback code is P3 .

System Action:

The request is rejected.

User Action:

Contact your System Administrator.

IPSA1301**P1 is not a valid channel path identifier****Reason:**

\$IPSA13Z was called with a request to gather information for CHPID *P1* , but *P1* is not a valid channel path identifier. Valid values are character strings representing hexadecimal values in the range 00 to FF.

System Action:

The request is rejected.

User Action:

Repeat the operation, specifying CHPID=xx, where xx is a channel path identifier.

IPSA1308**Unable to locate OSA/SF interface module****Reason:**

An attempt was made to call the OSA/SF Application Program Interface, but the API load module (IOAEXEC) could not be found.

System Action:

The call fails.

User Action:

Ensure that the OSA/SF load library SYS1.SIOALMOD is available to your region, by including it in either the linklist or the region's steplib concatenation.

IPSA1309

Call to OSA/SF failed. RC=*p1* Reason=*p2*

Reason:

An attempt was made to call the OSA/SF Application Program Interface, IOAEXEC, but the call failed. *p1* is the return code, *p2* is the reason code, if available.

Possible return code values are:

4 = Warning. Command completed, but something the user should be aware of prevented successful completion.

8 = Error. Command did not complete successfully.

12 = Severe Error. Command did not complete successfully.

20 = Catastrophic error. The command failed, and the error prevented any reason code or further explanation from being returned.

40 = Memory allocation error occurred while trying to get storage to send the command back to the API. No data could be displayed.

41 = Control block sent to the API was too small. It must always be a minimum of a base control block.

For more information, refer to IBM's *Open Systems Adapter Support Facility User's Guide For OSA-2*.

System Action:

The call fails.

User Action:

If the reason for the failure is not evident, contact CA Technical Support.

IPSA1310

Dump of OSA/SF IOAECB *p1* data

Reason:

This message starts a block of debugging data written by \$IPSA13Z. *p1* is either 'query' or 'response'.

System Action:

None.

User Action:

None.

IPSA1311**p1****Reason:**

This message is part of a block of debugging data written by \$IPSA13Z.
p1 is a dump of data to or from OSA/SF, in hexadecimal and graphic formats.

System Action:

None.

User Action:

None.

IPSA1312**End of IOAECB p1 data****Reason:**

This message ends a block of debugging data written by \$IPSA13Z.
p1 is either 'query' or 'response'.

System Action:

None.

User Action:

None.

IPSA1319**This action is only available if OSA/SF is used****Reason:**

An attempt has been made to access OSA/SF for a resource. The resource definition specifies that OSA/SF is not to be used.

System Action:

The action is rejected.

User Action:

Select a different action.

IPSA1320

OSA/SF started task not responding

Reason:

An attempt was made to call the OSA/SF Application Program Interface, but the OSA/SF started task is not responding.

System Action:

The call is cancelled and the action fails.

User Action:

If the system is heavily loaded, wait and retry the operation; otherwise, it may be necessary to restart the OSA/SF started task.

For information about how to restart the started task, see the *Open Systems Adapter Support Facility User's Guide*.

IPSA1601

OSA P1 SNMP support requires z/OS 1.4 or later

Reason:

An attempt has been made to access SNMP data for OSA resource *P1*. This functionality is only supported on z/OS 1.4 or later.

System Action:

The action is rejected.

User Action:

Update the OSA *P1* resource definition so that 'Use SNMP?' is set to NO. If OSA/SF is available, you can set the field 'Use OSA/SF' to YES to get equivalent functionality.

IPSA1602**OSA *P1* monitoring cannot find an IP address for stack *P2*****Reason:**

An attempt has been made to access SNMP data for OSA resource *P1* using stack *P2*. Access was unsuccessful because no IP address could be determined for the stack.

System Action:

The action fails.

User Action:

From Command Entry, enter *SELFTEST* and check for errors related to the socket interface. If no errors are reported, issue a Netstat command to the stack to check whether there is a problem with the Netstat interface.

For assistance, contact Technical Support.

IPSA1603**No entry found in MIB table for OSA CHPID *P1*****Reason:**

An attempt has been made to access SNMP data for OSA chpid *P1*. The attempt was unsuccessful. The SNMP query found no entry for the selected chpid in the MIB table.

System Action:

The action fails.

User Action:

Ensure that the OSA resource definition specifies the correct stack name and that the IOBSNMP task is running for this stack. If the cause of the problem is not apparent, contact your support representative.

IPSA1604

Unable to extract LPAR names. SYSINFO Retcode= P1 FDBK= P2

Reason:

An attempt to extract LPAR names for OSA monitoring or display has failed. The retcode and feedback values provide further information. The retcode values have the following meaning: 8 Map \$NMMPLPR not found on OSCNTL 12 System not running authorized 16 Internal error. FDBK contains the internal error indicator.

System Action:

OSA monitoring/display continues, with LPAR data identified by relative LPAR number rather than name.

User Action:

Contact your systems administrator.

IPSD0001

Unknown IP System " P1"

Reason:

The IP System *P1* is not connected to this product region. The specified IP System must be the system image name loaded on this or a linked product region.

System Action:

Field is set in error.

User Action:

Use '?' to select from a list of available IP Systems. If the product region that you wish to view is not in that list then it may be because the product region is not started or the link to the product regions is not active. Use the shortcut /LISTREG to show the linked regions and the system image names loaded on those regions.

IPSD0002**Unsupported simple statistics type P1****Reason:**

An unsupported simple statistics type was received by module \$IPSD00W.

System Action:

Procedure terminates in error.

User Action:

Contact Technical Support.

IPSD0003**No statistics available for system P1****Reason:**

A request to display IP statistics for the *P1* system failed because of one of the following causes:

- Packet Analyzer has not collected any statistics or specific statistics types for the system (for example, no TCP server ports have been opened and hence that type of data has no statistics).
- Data summarization failed to process the statistics in a timely manner for the system.
- The Packet Analyzer scan was aborted due to excessive data for the system.

System Action:

No statistics are displayed.

User Action:

If the region has recently started, wait until statistics have had time to build up; otherwise, review the activity log for related error messages (for example, IPFA0204).

List this region's configuration details (/IPTTEST), and investigate any errors.

IPSD0004

No Packet Analyzer statistics available

Reason:

A request to present IP statistics cannot be satisfied for one of the following reasons:

- The SSI is not running.
- The Packet Analyzer is not configured to run in the SSI.
- The Packet Analyzer is running with statistics collection disabled (PALEVEL=NOSTATS) or packet intercept disabled (PALEVEL=NOPACKETS).

System Action:

No data is presented.

User Action:

Check the status of the SSI region.

If the SSI is active, check why it is not running with the SSI parameter *PALEVEL=FULL*.

When including Packet Analyzer functions in an SSI, it is recommended to always set the PALEVEL parameter to FULL. If you run with a level other than FULL, various IP monitoring functions will not be available.

Only use a PALEVEL other than FULL if instructed by Technical Support.

IPSD0005

Invalid value " P1" for IP System

Reason:

The value *P1* is not a valid value for the IP System field. The summary data cannot be displayed because the IP System specified is not valid.

System Action:

Field is set in error.

User Action:

Specify a valid IP System name. The name must be that of the local system's loaded system image or of a connected region's loaded system image.

IPSD0006**No IP Systems match the prefix " P1"****Reason:**

A request to present a prompt list of IP Systems failed because no systems exist whose loaded system image matches the prefix specified. *P1* is the specified prefix.

System Action:

Field is set in error.

User Action:

Specify a valid IP System name or use ? to get a prompt list of available names to choose from.

IPSD0007**No new data available for refresh. Try again after P1****Reason:**

A request to refresh the IP Traffic or Condition summary data was not performed because there is no new data available; however, you can refresh at *P1* when new data is available.

System Action:

None.

User Action:

Refresh the screen after *P1* to get the next available data.

IPSD0008**Please wait while the system gathers the data for formatting****Reason:**

A request to refresh the IP Summary data is being processed. This may take a while. The screen will be automatically updated when it is ready.

System Action:

None.

User Action:

None.

IPSD0009

Condition monitor initializing, "P1" will take effect when initialized

Reason:

A request to change the view of IP Condition Summary is made while the condition monitor is still initializing. The view will change after the condition monitor has completed initialization.

System Action:

The request is processed, and the view will change when initialization completes.

User Action:

None.

When the condition monitor has initialized, the display will change to the requested view.

IPSD0010

View changed to: P1

Reason:

A request to change the view of the IP Summary completed successfully. The new view settings are *P1*.

System Action:

None.

User Action:

None.

IPSD0011**Invalid VIEW command options: P1****Reason:**

The parameter passed to the VIEW command is invalid. The passed parameter is *P1*.

System Action:

Command rejected.

User Action:

Enter a valid parameter for the VIEW command. The syntax for the command is:

VIEW [ALL | [COND] [TRAFFIC] [EETRAFFIC] [ALERT]]

If no parameters are specified, ALL is assumed and all components of the summary display are displayed. You can abbreviate the component keywords to the smallest number of characters to make them unique.

Examples:

1. View all components of the summary display: VIEW
2. View only conditions and EE traffic: VIEW CO EE
3. View IP traffic and alerts: VIEW TRAF AL

IPSD0012**Auto-refresh changed to: P1****Reason:**

A request to change the auto-refresh settings of the IP Summary completed successfully. The new settings are *P1*.

System Action:

None.

User Action:

None.

IPSD0013

Invalid AUTOREF command options: *P1*

Reason:

The parameter passed to the AUTOREF command is invalid. The passed parameter is *P1*.

System Action:

Command rejected.

User Action:

Enter a valid parameter for the AUTOREF command. The syntax for the command is:

AUTOREF [ALL | [COND] [TRAFFIC] [EETRAFFIC] [ALERT]]

If no parameters are specified, ALL is assumed and all components of the summary display are auto-refreshed. You can abbreviate the component keywords to the smallest number of characters to make them unique.

Examples:

1. Auto-refresh all components of the summary display: AUTOREF
2. Auto-refresh only conditions and EE traffic: AUTOREF CO EE
3. Auto-refresh IP traffic and alerts: AUTOREF TRA AL

IPSD0100

p1* ID=*p2* - *p3

Reason:

Tracing is active for the Application Traffic Explorer.

This message displays a trace record.

p1 is the NCL ID.

p2 is the trace ID.

p3 is the trace text.

System Action:

None.

User Action:

Contact Technical Support.

IPSD0101**No statistics are available at this time****Reason:**

A request to present detailed traffic statistics could not be satisfied because no statistics are currently available to display.

System Action:

Procedure terminates.

User Action:

Wait until statistics have had time to build up. Ensure that you have configured your system to gather packet and byte statistics for your IP stacks.

IPSD0110**Application Traffic statistic collection has failed. Reason: *p1*****Reason:**

The TCP/IP Application Traffic Explorer has failed because of an internal error, the reason is *p1*.

System Action:

The Application Traffic Explorer process terminates.

User Action:

Contact Technical Support.

IPSD0111**Application Traffic statistic collection has failed, see the activity log.****Reason:**

The TCP/IP Application Traffic Explorer has failed because of an internal error. Message *IPSD0110* has the failure details.

System Action:

The Application Traffic Explorer process terminates.

User Action:

Locate message IPSD0110 in the activity log.

Contact Technical Support.

IPSD0112

No *p1* traffic statistics at this time

Reason:

There are no *p1* traffic statistics currently available.

p1 is:

- application for IP Throughput display
- interface for Applications display

System Action:

Procedure continues.

User Action:

Wait until statistics have had time to build up.

IPSD0113

No *p1* traffic at this time

Reason:

There was no *p1* traffic for the selected time slot.

p1 is:

- application for IP Throughput display
- interface for Applications display

System Action:

None.

User Action:

None.

IPSECN01**P1 DATE IS P2 THAN P3 DATE****Reason:**

The Date field indicated by *P1* is either greater than or less than (as indicated by *P2*) the date indicated by *P3* . 'From Date' must not be greater than 'To Date' which must not be greater than the current date.

System Action:

Validation of the search criteria fails.

User Action:

Correct the values entered into the date fields indicated.

IPSECN02**P1 DATE AND TIME IS P2 THAN P3 DATE AND TIME****Reason:**

The Date and time fields indicated by *P1* are either greater than or less indicated by *P2*) the date and time indicated by *P3* . 'From Date' and 'From Time' must not be greater than 'To Date' and 'To Time' which must not be greater than the current date.

System Action:

Validation of the search criteria fails.

User Action:

Correct the values entered into the date and time fields indicated.

IPSECN03**INPUT FIELDS(P1) OMITTED****Reason:**

The *P1* fields require valid values.

System Action:

The validation fails.

User Action:

Specify value in the *P1* fields.

IPSECN04

***P1* is not a valid IP address search string**

Reason:

The IP address search string contains invalid characters or does not follow the expected text representation of an IP address. An IPv4 address uses a dot to separate numbers ranging from 0-255. An IPv6 address uses a colon to separate hexadecimal numbers ranging from 0-FFFF and a double colon to compress consecutive zeros. Mixed IPv4 and IPv6 address notations are not allowed.

System Action:

None.

User Action:

Correct the entry and retry.

IPSECN05

P1* must be less than *P2

Reason:

The field *P1* must be less than the value specified in the field *P2*. These values are used to construct a logical search expression each of which is connected via the logical operator AND. A value cannot be greater than value X and at the same time less than value Y when it is already known that X is greater than Y.

System Action:

Fields set in error.

User Action:

Specify a smaller value in *P1* than in *P2*.

IPSECR01

***p1* must not contain imbedded blanks.**

Reason:

The value specified for field *p1* must not contain embedded blanks.

System Action:

Validation of the search criteria fails.

User Action:

Review the value for field *p1* and remove the embedded blanks.

IPSECR02

"From Date/Time" cannot be the same or later than "To Date/Time"

Reason:

The values specified for the From Date and From Time fields cannot be the same or later than the values in the To Date and To Time fields.

System Action:

Validation of the search criteria fails.

User Action:

Review the values specified in all the date and time fields, making sure that they are in proper chronological sequence.

IPSECR03

Input fields "*p1*" omitted

Reason:

The *p1* fields require valid values.

System Action:

The validation fails.

User Action:

Specify value in the *p1* fields.

IPSECR04

***p1* is not a valid IP address search string**

Reason:

The IP address search string contains invalid characters or does not follow the expected text representation of an IP address. An IPv4 address uses a dot to separate numbers ranging from 0 to 255. An IPv6 address uses a colon to separate hexadecimal numbers ranging from 0 to FFFF, and a double colon to compress consecutive zeros. Mixed IPv4 and IPv6 address notations are not permitted.

System Action:

None.

User Action:

Correct the entry.

IPSECR05

p1* must be less than *p2

Reason:

The value in the *p1* field must be less than the value specified in the *p2* field. These values are used to construct a logical search expression through the logical operator AND. A value cannot be greater than x and at the same time less than y when x is greater than y.

System Action:

The fields are set in error.

User Action:

Specify a smaller value in *p1* than in *p2*.

IPSEFT01**P1 DATE IS P2 THAN P3 DATE****Reason:**

The Date field indicated by *P1* is either greater than or less than (as indicated by *P2*) the date indicated by *P3* . 'From Date' must not be greater than 'To Date' which must not be greater than the current date.

System Action:

Validation of the search criteria fails.

User Action:

Correct the values entered into the date fields indicated.

IPSEFT02**P1 DATE AND TIME IS P2 THAN P3 DATE AND TIME****Reason:**

The Date and time fields indicated by *P1* are either greater than or less indicated by *P2*) the date and time indicated by *P3* . 'From Date' and 'From Time' must not be greater than 'To Date' and 'To Time' which must not be greater than the current date.

System Action:

Validation of the search criteria fails.

User Action:

Correct the values entered into the date and time fields indicated.

IPSEFT03**INPUT FIELDS(P1) OMITTED****Reason:**

The *P1* fields require valid values.

System Action:

The validation fails.

User Action:

Specify value in the *P1* fields.

IPSEFT04

***P1* is not a valid IP address search string**

Reason:

The IP address search string contains invalid characters or does not follow the expected text representation of an IP address. An IPv4 address uses a dot to separate numbers ranging from 0-255. An IPv6 address uses a colon to separate hexadecimal numbers ranging from 0-FFFF and a double colon to compress consecutive zeros. Mixed IPv4 and IPv6 address notations are not allowed.

System Action:

None.

User Action:

Correct the entry and retry.

IPSEFT05

P1* must be less than *P2

Reason:

The field *P1* must be less than the value specified in the field *P2*. These values are used to construct a logical search expression each of which is connected via the logical operator AND. A value will *never* be greater than value X and at the same time less than some other value Y, when it is already known that X is greater than Y.

System Action:

Fields set in error.

User Action:

Specify a smaller value in *P1* than in *P2*.

IPSETN01**P1 DATE IS P2 THAN P3 DATE****Reason:**

The Date field indicated by *P1* is either greater than or less than (as indicated by *P2*) the date indicated by *P3* . 'From Date' must not be greater than 'To Date' which must not be greater than the current date.

System Action:

Validation of the search criteria fails.

User Action:

Correct the values entered into the date fields indicated.

IPSETN02**P1 DATE AND TIME IS P2 THAN P3 DATE AND TIME****Reason:**

The Date and time fields indicated by *P1* are either greater than or less indicated by *P2*) the date and time indicated by *P3* . 'From Date' and 'From Time' must not be greater than 'To Date' and 'To Time' which must not be greater than the current date.

System Action:

Validation of the search criteria fails.

User Action:

Correct the values entered into the date and time fields indicated.

IPSETN03**INPUT FIELDS(P1) OMITTED****Reason:**

The *P1* fields require valid values.

System Action:

The validation fails.

User Action:

Specify value in the *P1* fields.

IPSETN04

P1 is not a valid IP address search string

Reason:

The IP address search string contains invalid characters or does not follow the expected text representation of an IP address. An IPv4 address uses a dot to separate numbers ranging from 0-255. An IPv6 address uses a colon to separate hexadecimal numbers ranging from 0-FFFF and a double colon to compress consecutive zeros. Mixed IPv4 and IPv6 address notations are not allowed.

System Action:

None.

User Action:

Correct the entry and retry.

IPSM0101

SESSION MONITOR STARTED FOR P1.

Reason:

An SNA session monitor is now active for the resource indicated by *P1*.

System Action:

The Session Awareness interface (SAW) is used to trace the logical unit.

User Action:

None.

IPSM0102

SESSION MONITOR TERMINATED FOR P1.

Reason:

An SNA session monitor has terminated.

System Action:

None.

User Action:

None.

IPSM0103**SESSION MONITOR TRACING FOR P1 ALREADY IN USE BY P2.****Reason:**

An attempt to start a session monitor has failed because the terminal is already being traced.

System Action:

Tracing is not started.

User Action:

None.

IPSM0104**SESSION MONITOR INTERNAL ERROR, PROCESSING P1.****Reason:**

A session monitor has failed.

System Action:

Tracing is terminated.

User Action:

Report this error to the System Administrator.

IPSM0105**P1 P2 P3 APPLICATION SEND, RESPONSE TIME P4, OPERATION P5, LENGTH P6.****Reason:**

A session monitor has detected an application output operation. P4 is the calculated application response time (or N/A if not known). The output operation is indicated by P5 and the data length by P6.

System Action:

None.

User Action:

None.

IPSM0106

P1 P2 P3 TERMINAL INPUT, KEY P4, LENGTH P5.

Reason:

A session monitor has detected terminal input data. *P4* is the input operation code. *P5* is the length of the data.

System Action:

None.

User Action:

None.

IPSM0107

P1 P2 P3 TERMINAL RESPONSE, NETWORK PATH TIME P4.

Reason:

A session monitor has detected a terminal response to application data. *P4* is the time elapsed since the output operation.

System Action:

None.

User Action:

None.

IPSM0108

P1 P2 P3 SEND ERROR, SENSE P4

Reason:

A session monitor has detected a negative terminal response to application data. *P4* is the sense code.

System Action:

None.

User Action:

None.

IPSM0110**P1 P2 P3 P4 PACING.****Reason:**

A session monitor has detected a Pacing flow between the two network nodes *P1* and *P2*.

P4 identifies the direction of the flow as either:

INBOUND - From *P3*

OUTBOUND - To *P3*

System Action:

None.

User Action:

None.

IPSM0111**P1 P2 P3 SESSION CONTROL FLOW P4.****Reason:**

A session monitor has detected a session control flow. *P4* indicates the request type.

System Action:

None.

User Action:

None.

IPSM0112**P1 P2 P3 SESSION CONTROL RESPONSE, NETWORK PATH TIME P4.****Reason:**

A session monitor has detected a response to a session control request. *P4* is the time elapsed since the output operation.

System Action:

None.

User Action:

None.

IPSM0113

MISSING RESPONSE TO P1 FOR P2.

Reason:

A session monitor has detected a response to a session control request without receiving a response to an earlier request as indicated by *P1*.

System Action:

None.

User Action:

None.

IPSM0114

P1 P2 P3 SESSION CONTROL REJECTED, SENSE P4, NETWORK PATH TIME P5.

Reason:

A session monitor has detected a negative response to a session control request. P4 is the time elapsed since the output operation.

System Action:

None.

User Action:

None.

IPSM0115

SESSION AWARENESS HAS BEEN TERMINATED.

Reason:

An SNA session monitor has detected that the NTS ACB has been closed.

System Action:

The session monitor terminates.

User Action:

A SAW STOP command has most likely been issued. Check when Session Awareness may be restarted and issue the SAW START command.

IPSM0116**FUNCTION NOT SUPPORTED BY REMOTE SYSTEM.****Reason:**

The remote system is at a maintenance level that does not support this function.

System Action:

The session monitor terminates.

User Action:

None.

IPSM0201**EVENT MONITOR STARTED.****Reason:**

An event monitor is now active for the connection.

System Action:

Events which relate to the connection will be displayed.

User Action:

None.

IPSM0202**EVENT MONITOR TERMINATED.****Reason:**

An event monitor has terminated.

System Action:

None.

User Action:

None.

IPSM0210

P1 P2 P3

Reason:

An event monitor has detected an event that is of interest to the requestor.

P1 identifies the event attribute class.

P2 identifies the event name.

P3 identifies the message number associated with the specific event.

System Action:

None.

User Action:

None.

IPSM0216

EVENT MONITORING FUNCTION NOT SUPPORTED BY REMOTE SYSTEM.

Reason:

The remote system is at a maintenance level that does not support the event monitoring function.

System Action:

Events which relate to this connection will not be detected. Other monitoring events, such as the solicitation of connection details continue.

User Action:

None.

IPSNPK01

UDP socket *P1* error, ID=*P2* RC=*P3* FDBK=*P4* ERR=*P5* VERRIN=*P6*

Reason:

An action for a UDP socket failed.

P1 is the action being performed.

P2 is the socket ID.

P3 is the return code.

P4 is the feedback code.

P5 is the error code.

P6 is the vendor error information.

System Action:

Processing terminates.

User Action:

Check the &SOCKET error code and vendor error information in the *Network Control Language Reference Guide* to determine the appropriate action.

IPSNPK02

Unable to interpret the OID value returned for OID *P1*

Reason:

The response to an SNMP request contains a structure that cannot be interpreted by NetMaster for TCP/IP.

System Action:

The request fails.

User Action:

None.

IPSNPK03

Start of SNMP MIB walk of OID P1 at address= P3

Reason:

This is the first message of a group of messages that show the results of an SNMP MIB walk function. The MIB accessed is located at address *P3* and the first MIB object to be retrieved will be the one with an object ID greater than *P1* , which is the starting object ID. SNMP GetNext requests will continue until the limit is reached.

System Action:

SNMP MIB walk continues.

User Action:

None.

IPSNPK04

P1 = P2

Reason:

This is a detailed message from a SNMP MIB walk request. *P1* is the object ID of the MIB object retrieved and *P2* is the value of the object.

System Action:

SNMP MIB walk continues.

User Action:

None.

IPSNPK05

END

Reason:

This is the last message returned from an SNMP MIB walk request. It indicates that the walk limit has been reached and that no more objects will be retrieved.

System Action:

None.

User Action:

None.

IPSNPK06**SNMP send failed: *P1*****Reason:**

An SNMP send failed. *P1* is the failure reason.

System Action:

The action terminates.

User Action:

Determine the cause, and retry the operation.

IPSNPK07**SNMP request to *P1* resulted in *P2* error status, OID= *P3*****Reason:**

An SNMP request to host *P1* resulted in an error status of *P2* . For some requests the SNMP Object Identifier for which the error was detected is shown as *P3* . The error status can have the following values: tooBig noSuchName badValue readOnly genError

System Action:

The action terminates.

User Action:

Determine the cause of the error and retry. If the error status is noSuchName then ensure that the Object ID specified in the request is correct.

IPSNPK08

Unreachable destination host: *P1*

Reason:

An SNMP request was issued for the destination host *P1* and the request timed out. Subsequently, the host was pinged and a negative response was received, indicating that it is unreachable. This may occur for one

of the following reasons:

- The specified destination host address is not powered on or does not exist.
- The IP route to the destination address is unusable because of a network outage.
- The packet size exceeds the maximum transmission unit (MTU) size allowed for an IP route.

System Action:

The action terminates.

User Action:

Contact your System Administrator for the device to determine the cause and action.

IPSNPK09

No resp from *P1* - SNMP may be unauth/unavailable

Reason:

An SNMP request was issued for the host *P1* , but no response was received within the timeout period. This may be due to one of the following reasons:

- The requestor's IP address is not in the host's access list
- A community name (other than public) is not specified
- The host SNMP agent is not active
- The device does not support SNMP

System Action:

The action terminates.

User Action:

Contact the System Administrator for the device, to determine the cause. Possible actions includes the following:

- Add the requestor's IP address to the host's access list
- Supply the correct community name
- Activate the host SNMP agent

IPSNPK10**SNMP response from P1 failed authentication****Reason:**

An SNMP version 3 response from host *P1* contained an authorization digest that did not match the value expected.

System Action:

The response is rejected.

User Action:

Determine the cause of the error and retry.

IPSNPK11**SNMP response from P1 failed decryption****Reason:**

An SNMP version 3 response from host *P1* could not be decrypted.

System Action:

The response is rejected

User Action:

Contact Technical Support.

IPSNPK12**SNMPv3 request to P1 failed. Report received: P2****Reason:**

An SNMP version 3 request received a 'REPORT' PDU. *P2* indicates the REPORT content.

System Action:

The response is rejected.

User Action:

Contact Technical Support.

IPSNPK13

SNMPv3 discovery of P1 failed. No P2 returned.

Reason:

An SNMP version 3 discovery was unsuccessful. *P3* indicates the component was not returned by the SNMP engine.

System Action:

The response is rejected.

User Action:

Ensure that the remote SNMP is correctly configured to support SNMP V3.

IPSNPK14

SNMP request to P1 returned exception status for all OIDs

Reason:

An SNMP request to host *P1* returned no valid data. This condition occurs only with SNMP v2 or v3 hosts.

System Action:

The action terminates.

User Action:

Check the SNMP host details for *P1*. Host details are accessed via */IPADMIN.S* . If the host details say that SNMP Version 3 is to be used, check that the user specified is associated with a view that includes the ibmTCIPmvs MIB.

IPSNPK15**Invalid Type supplied for SNMPSET OID= P1 Type= P2****Reason:**

A SNMP SETREQUEST has failed because an invalid type value has been supplied by the calling program. Valid values for type are:

For SNMP Version 1:

SIMPLE.NUMBER SIMPLE.STRING SIMPLE.OBJECT SIMPLE.EMPTY
APPLICATIONWIDE.COUNTER APPLICATIONWIDE.GAUGE
APPLICATIONWIDE.TICKS APPLICATIONWIDE.ARBITRARY

For SNMP Version 2 or 3:

SIMPLE.INTEGERVALUE SIMPLE.STRINGVALUE SIMPLE.OBJECTIDVALUE
APPLICATIONWIDE.IPADDRESSVALUE APPLICATIONWIDE.COUNTERVALUE
APPLICATIONWIDE.TIMETICKSVALUE APPLICATIONWIDE.ARBITRARYVALUE
APPLICATIONWIDE.BIGCOUNTERVALUE
APPLICATIONWIDE.UNSIGNEDINTEGERVALUE

System Action:

The SET request fails.

User Action:

None.

IPSNPK16**SNMP get of ifTable on P1 returned P2****Reason:**

An SNMP request to host *P1* to read the ifTable resulted in an error response *P2*.

System Action:

The action terminates.

User Action:

If *P2* is NOSUCHOBJECT and you are using SNMP v3 to access the host, make sure your SNMP v3 user is associated with a view that includes the IF-MIB. Alternatively, this error message may indicate a problem with the host's MIB.

IPSNPK17

IPv6 socket support not enabled on *P1*

Reason:

An SNMP request cannot proceed. The target address is IPv6, but the sockets API on region *P1* supports IPv4 addresses only.

System Action:

The action terminates.

User Action:

Check the SOCKETS parameter group (/PARMS) on region *P1*. For IPv6 support, the TCP/IP Software Type must specify IBMV6.

IPSNPK18

SNMP request failed. Sockets interface is not active on *P1*

Reason:

An SNMP request cannot proceed. The sockets interface in region *P1* is not active.

System Action:

The request terminates.

User Action:

To activate the sockets interface, enter **/PARMS** and action the SOCKETS parameter group.

IPSNPK19**Source Address is not a valid home address for P1****Reason:**

The source address is not a valid home address for the stack shown in *P1*. The source address is specified as part of the IP node resource definition. This error occurs because of one of the following reasons:

- The primary stack used by the region when the IP node was defined is different from the current stack.
- The stack configuration of home addresses has changed since the IP node was defined.
- The source address is a VIPA that is no longer owned by the current stack.

System Action:

The SNMP request terminates with a socket error.

User Action:

Specify a valid value in the Source Address field of the IP node resource definition.

IPSP1201**Dataset name omitted****Reason:**

No dataset name specified.

System Action:

The action terminates.

User Action:

Retry, specifying the dataset name. The dataset is specified using the DSN= and MBR= operands as follows:

For a physical sequential (PS) dataset: DSN= full dataset name

For a member of a partitioned sequential (PO) dataset (a PDS), use one of two options:

- DSN= full dataset name, including the member name in parentheses.

Example: *DSN=PROD.TCPIP.IPTRACE(TRACE1)*

- DSN= dataset name and MBR= member name. Example:

DSN=PROD.TCPIP.IPTRACE MBR=TRACE1

Note that a specific member name must be entered; generic member names are not supported.

IPSP1202

Invalid dataset name format

Reason:

The dataset name does not conform to OS/390 dataset name standards.

System Action:

The action terminates.

User Action:

Retry, specifying a dataset name in the correct format. The dataset is specified using the DSN= and MBR= operands as follows:

For a physical sequential (PS) dataset: DSN= full dataset name

For a member of a partitioned sequential (PO) dataset (a PDS), use one of two options:

- DSN= full dataset name, including the member name in parentheses.

Example: *DSN=PROD.TCPIP.IPTRACE(TRACE1)*

- DSN= dataset name and MBR= member name. Example:

DSN=PROD.TCPIP.IPTRACE MBR=TRACE1

Note that a specific member name must be entered; generic member names are not supported.

IPSP1203

Member name required for partitioned dataset

Reason:

The dataset name specified by the DSN= parameter is a partitioned dataset but no member name was supplied.

System Action:

The action terminates.

User Action:

Retry, specifying the dataset name and member name.

For a member of a partitioned sequential (PO) dataset (a PDS), use one of two options:

- DSN= full dataset name, including the member name in parentheses.

Example: *DSN=PROD.TCPIP.IPTRACE(TRACE1)*

- DSN= dataset name and MBR= member name. Example:

DSN=PROD.TCPIP.IPTRACE MBR=TRACE1

Note that a specific member name must be entered; generic member names are not supported.

IPSP1204**Invalid dataset organization****Reason:**

The dataset name specified using the DSN= parameter has a dataset organization which is not supported. The dataset organization must be either PS or PO.

System Action:

The action terminates.

User Action:

Retry, specifying the correct dataset name.

IPSP1205**Empty dataset or member****Reason:**

The dataset name, or member, either does not exist or is empty.

System Action:

The action terminates.

User Action:

Retry, specifying another dataset name.

IPSP1206**No trace headers found****Reason:**

The dataset identified by the DSN= and MBR= operands exists, but no TCP/IP Services trace header messages were found. Trace header messages are identified by message N3B106.

System Action:

The action terminates.

User Action:

Ensure that the correct dataset name and/or member name were specified. Check the dataset to ensure that it is an extract from a SOLVE activity log that contains SOLVE TCP/IP Services trace messages.

IPSP1207

Trace too large. Detected handling block P1 at line P2

Reason:

The trace dataset is read and IP trace Receive and Send blocks are extracted and saved in an MDO. The MDO assignment for a block of trace data has failed because the size of the MDO exceeds the design limits. The location where this occurred is indicated by the relative (Receive or Send) block count (*P1*), and the input line number (*P2*).

System Action:

The action terminates.

User Action:

The trace dataset must be split to multiple datasets. Use the line number as a guide - split the dataset at the beginning of a Receive or Send block preceeding the indicated line number.

IPSP1208

Unable to decrypt encrypted PDU

Reason:

The associated PDU is an SNMPv3 PDU which is encrypted. The trace formatter is unable to decrypt the PDU. This means that some information (such as reqtype and OID#) is unavailable and will show blank in the selection list.

System Action:

Processing continues.

User Action:

The trace formatter will decrypt encrypted PDUs if a SNMP host details record exists for the remote IP address, and the record contains a privacy key applicable to the traced PDU. Check the host details using /IPADMIN.S

IPSP1301**Routing table cannot be displayed****Reason:**

The request to display the routing table for the specified host failed as the routing table cannot be accessed. Possible causes include:

- SNMP not authorized
- no routing table exists. This may be a gateway host or bridge.

System Action:

None.

User Action:

None.

IPSP1401**Invalid keyword value specified, keyword= P1, value= P2****Reason:**

A procedure was passed an invalid keyword value. The keyword in error was *P1* and the invalid value was *P2*.

System Action:

The action terminates.

User Action:

Contact your System Administrator.

IPSP1402**Action failed, the map P1 does not exist****Reason:**

An MDO assignment failed with ZMDORC 16 and ZMDOFDBK 0. This indicates that the map *P1* does not exist in this system.

System Action:

The action terminates.

User Action:

Ensure that the OSCNTL file has been correctly updated for the TCP/IP Services.

IPSP1403

MDO action failed, MDORC= P1, MDOFDBK= P2, MAP= P3

Reason:

An MDO assignment failed. The MDORC was *P1* , the MDOFDBK value was *P2* , and the map where the error was detected was *P3*.

System Action:

The action terminates.

User Action:

Refer to the NCL Reference for details of the codes.

IPSP1801

IPv6 socket support not enabled on P1

Reason:

An SNMP request cannot proceed. The target address is IPv6, but the sockets API on region *P1* supports IPv4 addresses only.

System Action:

The action terminates.

User Action:

Check the SOCKETS parameter group (/PARMS) on region *P1*. For IPv6 support, the TCP/IP Software Type must specify IBMV6.

IPSP1802

Error loading Object ID translation table for device info display:

Reason:

An error occurred loading the object ID translate table. The following message is a more specific explanation of the problem.

System Action:

The object ID translate table is not used.

User Action:

Check the following message in the log for cause and action details.

IPSP1803**Variable P1 error, FDBK= P2, key= P3****Reason:**

A variable error occurred. The variable action was P1 and the feedback code was P2 . If relevant, P3 contains the key value which experienced the problem.

System Action:

The action fails.

User Action:

Determine the cause of the error based on the feedback code.

IPSP2001**Invalid value for IP address/mask. P1****Reason:**

You have entered an incorrect value in the IP address/mask field.

P1 may provide additional information.

System Action:

The value is rejected.

User Action:

Enter a valid IP address/mask.

The following are valid for IPv4:

- An IP address in dotted notation, for example, 10.20.108.1
- An IP address with one or more segments expressed as ranges or wildcards, for example, 10.20.108-110.*

The following are valid for IPv6:

- An IP address in standard notation, for example, fd00:7a06:a20:100::11
- An IP address with one or more segments expressed as ranges or wildcards, for example, fd00*:a20:100::11-31

IPSP2002

Record already exists. Enter a new IP address/mask value.

Reason:

You are attempting to do a COPY but the IP address/mask specified already exists.

System Action:

The IP address/mask field is highlighted.

User Action:

Enter a new IP address/mask value.

IPSP2003

Address range overlaps existing definition P1

Reason:

You have entered an IP address/mask containing an address range. The range overlaps an already defined address range, *P1* .

System Action:

The IP address/mask field is highlighted.

User Action:

Enter a different IP address/mask.

IPSP2004

P1 or P2 required

Reason:

The Security Level value indicates either authentication or privacy. One or other of the fields specified in *P1* and *P2* is required.

System Action:

The two fields are highlighted.

User Action:

Enter a value in field *P1* or *P2* .

IPSP2005**Invalid value for P1. Must be P2****Reason:**

An invalid value has been entered in field *P1* . Correct values for this field are described in *P2* .

System Action:

The value is rejected.

User Action:

Correct the value.

IPSP2006**P1 is required when P2 is P3****Reason:**

The field *P1* has been omitted. This field is required when field *P2* has the value *P3* .

System Action:

The omitted field is highlighted.

User Action:

Enter a value in the field.

IPSP2007**Version 3 invalid when IP address/mask has a mask value****Reason:**

You have specified V3 for the SNMP version but the IP address/mask field has a mask or range value. A version 3 definition can only be built for a single IP address.

System Action:

The value is rejected.

User Action:

Enter a single IP address.

IPSP2008

Re-enter P1

Reason:

You have entered a password in a non-display field. This message prompts you to re- enter the password for confirmation.

System Action:

Processing continues.

User Action:

Re-enter the password.

IPSP2009

Password not the same

Reason:

The password value entered for confirmation differs from the value first entered.

System Action:

The password value is rejected.

User Action:

Re-enter the password.

IPSP2010

Record not found

Reason:

An SNMP details record does not exist for the selected IP address/mask. It has been deleted since the selection list was last refreshed.

System Action:

The selection fails.

User Action:

Press F6 to refresh the selection list.

IPSP2011

P1 key build failed. Enter key value or retry later.

Reason:

An attempt has been made to generate an authentication or privacy key using the supplied user ID and password. The attempt failed. The key generation process may need to access the remote host to discover the host's engine ID. This process can fail if the remote host is not currently available.

System Action:

The key is not generated.

User Action:

Either manually enter a key in the highlighted field, or retry later.

IPSP2012

SNMP definition update in progress by P1

Reason:

Update is in progress on this definition by another user.

System Action:

The request is rejected.

User Action:

Try again later.

IPSP2101

Internal Error. IP address not supplied to \$IPSP21U.

Reason:

An attempt has been made to call \$IPSP21U without supplying an IP address in MDO \$IPDATA.

System Action:

The call is rejected.

User Action:

Contact Technical Support.

IPST2902

Unable to determine home address for stack P1

Reason:

A request to sample interface statistics for stack *P1* failed because the stack's home address could not be determined.

System Action:

Interface sampling for the period is not performed.

User Action:

Check the status of the stack.

IPST2904

IP, TCP and UDP monitoring returned: P1

Reason:

An attempt to perform IP, TCP, and UDP monitoring failed. *P1* shows the error message.

System Action:

No sample is taken.

User Action:

See message *P1* for more information.

IPTD2101

TCP/IP TREND EVENT LISTENER IS ALREADY RUNNING

Reason:

An attempt was made to start the TCP/IP Trend Event Listener but it was already running.

System Action:

The existing TCP/IP Trend Event Listener continues processing.

User Action:

None.

IPTD2102**IPFILE UDB ERROR: ACTION= P1 RETURN-CODE= P2 KEY= P3****Reason:**

The TCP/IP Trend Event Listener encountered an error when trying to do a *P1* command on the IPFILE database. The return code is *P2*. The TCP/IP Trend Event Listener will not accumulate this hourly summary data into the total summary for this 4-hour or daily period.

System Action:

The TCP/IP Trend Event Listener ignores this event and continues processing. The accumulated trend record(s) for the device/attribute shown will not include the data from this hourly summary event.

User Action:

Determine why the NDB error occurred. Contact your Systems Administrator for further assistance.

IPTD2103**THE TCP/IP TREND EVENT LISTENER IS NOW ACTIVE.****Reason:**

The TCP/IP Trend Event Listener has set its profile and is ready to receive and process summary trend events from the IP Node Monitor, CISCO Interface Processor, and TCP/IP Stack.

System Action:

The TCP/IP Trend Event Listener commences processing.

User Action:

None.

IPTD2104

MDO ASSIGN ERROR, MDO= P1, MAP= P2, MDORC= P3, MDOFDBK= P4

Reason:

An MDO ASSIGN error occurred. The MDO is identified by P1 the ASN1 map name by P2 the return code by P3 and the feedback code is P4 .

System Action:

The TCP/IP Trend Event Listener terminates. No trend data can be collected until this problem is rectified and the procedure restarted.

User Action:

Contact your Systems Administrator. Probably an installation error. Ensure that the ASN1 map named in the message has been correctly installed.

IPTD2105

Unrecognized P1 " P2" for resource P3, attribute P4

Reason:

The TCP/IP Trend Event Listener encountered a *P1* that it did not recognize for resource *P3* , attribute *P4* . The value of the unknown *P1* was *P2* .

System Action:

The TCP/IP Trend Event Listener ignores this trend event and continues processing.

User Action:

None.

IPTD2106**Invalid key length generated: Length= P1, Key=" P2"****Reason:**

The TCP/IP Trend Event Listener generated a key length that was too long for IPFILE. The length of the key was *P1* and the value of the key was " *P2* ".

System Action:

This record is not added to IPFILE. The data for the resource and attribute shown in the key are not accumulated in any trend data. The Trend Event Listener ignores this event and continues processing.

User Action:

None.

IPTD2107**Trend Event type P1 does not match IPFILE type P2 for key P3****Reason:**

An IPFILE record was found for key *P3* but the existing record type of *P2* does not match the incoming event type of *P1*. Possible internal causes include: More than one monitor using the same attribute identifier. A monitor changing its definition of the attribute identifier.

System Action:

The Trend Event Listener will ignore this event and continue processing. Report data for this resource/attribute will be incomplete.

User Action:

Contact your Systems Administrator.

IPTD2108

Data validation error - summary P1 format P2 is invalid. Resource/Attr is P3/ P4

Reason:

The incoming trend event for resource ID P3 attribute P4 contains a summary P1 field value " P2 " which has an incorrect date *or* time format.

System Action:

The Trend Event Listener ignores this event and continues processing.

User Action:

None.

IPTD2109

Data validation error - P1 value " P2" is not numeric. P3/ P4

Reason:

The incoming trend event for resource ID *P3* attribute *P4* has an invalid *P1* total field value of " P2 ".

System Action:

The Trend Event Listener ignores this event and continues processing.

User Action:

None.

IPTD2110

DATA VALIDATION ERROR - GAUGE VALUES " P1", " P2" AND " P3" ARE NOT ALL NUMERIC. P4/ P5

Reason:

The incoming trend event for Resource ID *P4* Attribute *P5* has at least one invalid gauge avg/min/max value.

System Action:

The Trend Event Listener will ignore this event and continue processing.

User Action:

None.

IPTD2111**DATA VALIDATION ERROR - invalid period/value pair " P1"," P2" for resource/attribute P3/ P4****Reason:**

The incoming trend event for Resource ID **P3** Attribute **P4** has an invalid enumerated period/value pair. The period in minutes is " **P1** " and the value is " **P2** "

System Action:

The Trend Event Listener will ignore this event and continue processing.

User Action:

None.

IPTD2112**Warning: Trend Data lost - NMIQLIM limit exceeded****Reason:**

The number of trend events waiting to be processed by the Trend Event Listener has exceeded your system's NMIQLIM setting. All trend events exceeding this limit are discarded.

System Action:

The Trend Event Listener continues processing. Lost data cannot be accumulated and subsequent totals are inaccurate.

User Action:

Investigate why the message build up occurred. If you are collecting trend data in a very large network, you may have maximum NMIQLIM value. Consider redesigning your application or contact Technical Support.

IPTD2113

Error detected during Trend Listener processing, current event ignored.

Reason:

A run time error was encountered by Trend Listener procedure \$IPTD21W. This message heads a message group consisting of multiple instances of message IPTD2114. These contain details of the specific error, and information identifying the trend or summary event that caused the error

System Action:

The summary or trend event that caused the error is discarded. Processing continues with the next event.

User Action:

If this message appears continually, contact your Systems Administrator.

IPTD2114

P1

Reason:

This is part of a message group issued for run-time Trend Listener errors. It contains run- time error details, and information from the event that caused the error.

System Action:

The event is discarded. Processing continues with the next event.

User Action:

None.

IPTD2115

Warning: accumulated trend data exceeds file length, update discarded. File key= P1

Reason:

The trend report data for the resource and attribute referred to in the file key P1 is too long to be contained in a single IPFILE record. This usually results when regular Trend Data Rollups have not been run. Trend Data Rollups delete old, expired data from the file, making room for the newest data to be added.

System Action:

The accumulated data for this period/resource/attribute is not updated. The new data is discarded and will not be reflected in future reports for this resource. The Trend Event Listener continues processing.

User Action:

Ensure that the Trend Data Rollup procedure \$IPTD23W runs regularly. It should automatically run whenever the region starts: check the Activity Log for any errors. You can also set a regular daily rollup time using Customizer (/PARMS) Parameter group IPFILES 'Time of day to extract' files.

IPTD2301

TCP/IP TREND DATA ROLLUP PROCEDURE IS ALREADY RUNNING.

Reason:

An attempt was made to start the TCP/IP Trend Event Rollup Procedure but it was already running.

System Action:

The existing TCP/IP Trend Data Rollup Procedure continues.

User Action:

None.

IPTD2302

IPFILE UDB ERROR: ACTION= P1 RETURN-CODE= P2 KEY= P3

Reason:

The TCP/IP Trend Data Rollup encountered an error when trying to do a *P1* command on the IPFILE database. The return code is *P2*. The TCP/IP Trend Data Rollup can therefore not accumulate the data referenced by this key.

System Action:

Processing continues. The data for the resource and attribute shown in the key will be disregarded and will not be reflected in any totals.

User Action:

Determine why the NDB error occurred. Contact your System Administrator for further assistance.

IPTD2303

INVALID KEY LENGTH GENERATED LENGTH= P1, KEY=" P2"

Reason:

The TCP/IP Trend Event Rollup generated a key length that was too long for IPFILE. The length of the key was *P1* , the value of the key was " *P2* "

System Action:

This record will not be added to IPFILE. The data for the resource and attribute shown in the key will not be accumulated in any trend data. The Trend Event Rollup will ignore this data and continue processing.

User Action:

None.

IPTD2304

MDO ASSIGN ERROR, MDO= P1, MAP= P2, MDORC= P3, MDOFDBK= P4

Reason:

An MDO ASSIGN error occurred. The MDO is identified by P1 the ASN1 map name by P2 the return code by P3 and the feedback code is P4 .

System Action:

The TCP/IP Trend Data Rollup procedure terminates. No sequential IPTREND dataset will be produced.

User Action:

Contact your System Administrator. Probably installation error. Ensure that the ASN1 map named in the message has been correctly installed.

IPTD2305

**ROLLED UP RECORD TYPE " P1 DOES NOT MATCH ROLLED INTO
RECORD TYPE " P2" FOR KEY P3**

Reason:

An existing rolled into record was found, but its type did not match that of the rolled up record.

System Action:

Probable duplicate attribute IDs.
The Trend Data Rollup will ignore this data and continue processing.

User Action:

None.

IPTD2306

IPTREND file error: action= P1 return-code= P2 DSN= P4 msg=" P3"

Reason:

The TCP/IP Trend Data Rollup encountered an error when trying to do a P1 command on the IPTREND sequential file P4 . The action was P1 , the return code was P2 . Additional message information - " P3 "

System Action:

The unload step terminates. A sequential IPTREND dataset can not be produced.

User Action:

Determine why the error occurred. Ensure that the file is allocated, and the DSN is specified on the TCP/IP Administration (Reporting) panel. Check that the file has not run out of space. Contact your System Administrator for more assistance.

IPTD2307

TCP/IP Trend Data Rollup completed P1 with RC= P2. P3 IPTREND Dataset P4

Reason:

The TCP/IP Trend Data Rollup procedure has finished with return code P2 For a 0 return code, IPTREND dataset P4 has been successfully produced. A code of 4 indicates a file error on either the IPFILE UDB VSAM file, or the IPTREND sequential dataset. A code of 8 indicates an ASN1 Mapping Services error.

System Action:

None.

User Action:

If the code was zero, the IPTREND file may now be transferred to the PC. For a non-zero code, check the log for detailed error messages and attend to these error conditions. Contact your System Administrator for more assistance.

IPTD2308**TCP/IP Trend Data Rollup in progress, P1****Reason:**

The TCP/IP Trend Data Rollup procedure is in progress. *P1* indicates the current stage of processing.

System Action:

Processing continues with the step indicated.

User Action:

None.

IPTD2310**TCP/IP Trend Data Rollup: P1****Reason:**

This message begins a message group detailing the processing just performed by a successful TCP/IP Trend Data Rollup. These details are for information only. *P1* identifies the group being processed.

System Action:

None.

User Action:

None.

IPTD2311**P1 P2 P3****Reason:**

This subheading or total line is part of message group IPTD2310.

P1 = "****" indicates the start of a subgroup.

P1 = "Total" indicates the end of a subgroup.

P2 identifies the subgroup of the group identified in message IPTD2310.

P3 in the Total line identifies the number of records affected.

System Action:

None.

User Action:

None.

IPTD2312

IP Node Monitor P1

Reason:

This detail line is part of message group IPDT2311.
P1 is the number of IP Node Monitor records in this group.

System Action:

None.

User Action:

None.

IPTD2313

CISCO Interface Processor Monitor P1

Reason:

This detail line is part of message group IPDT2311.
P1 is the number of CIP Monitor records in this group.

System Action:

None.

User Action:

None.

IPTD2314

TCP/IP STACK P1

Reason:

This detail line is part of message group IPDT2311.
P1 is the number of Stack Monitor records in this group.

System Action:

None.

User Action:

None.

IPTD2315**VIPA Monitor P1****Reason:**

This detail line is part of message group IPDT2311.
P1 is the number of VIPA Monitor records in this group.

System Action:

None.

User Action:

None.

IPTD2316**Error detected during Trend Rollup processing, processing terminated.****Reason:**

A run time error was encountered by Trend Rollup procedure \$IPTD23W. This message heads a message group consisting of multiple instances of message IPTD2317. These contain details of the specific error, and information identifying the record that caused the error.

System Action:

Processing terminates. The IPTREND file is not updated.

User Action:

Contact your Systems Administrator.

IPTD2317**P1****Reason:**

This is part of a message group issued for run-time Trend Listener errors. It contains run- time error details, and information from the record that may have caused the error.

System Action:

Trend Rollup Processing is abandoned. The IPTREND file is not updated.

User Action:

Contact your Systems Administrator.

IPDT2318

IBM 2216 Router Monitor P1

Reason:

This detail line is part of message group IPDT2311.
P1 is the number of IBM 2216 records in this group.

System Action:

None.

User Action:

None.

IPDT2319

Open Systems Adapter Monitor P1

Reason:

This detail line is part of message group IPDT2311.
P1 is the number of OSA records in this group.

System Action:

None.

User Action:

None.

IPDT2320

CSM Monitor (Communications Storage Mgmt.) P1

Reason:

This detail line is part of message group IPDT2311.
P1 is the number of CSM Monitor records in this group.

System Action:

None.

User Action:

None.

IPTD2321**Address Space Monitor P1****Reason:**

This detail line is part of message group IPDT2311.
P1 is the number of Address Space Monitor records in this group.

System Action:

None.

User Action:

None.

IPTD2322**EE Monitor (Enterprise Extender) P1****Reason:**

This detail line is part of message group IPDT2311.
P1 is the number of Enterprise Extender Monitor records in this group.

System Action:

None.

User Action:

None.

IPTD2323**CICS Monitor P1****Reason:**

This detail line is part of message group IPDT2311.
P1 is the number of CICS Monitor records in this group.

System Action:

None.

User Action:

None.

IPTN3101

VARIABLE P1 ERROR ZFDBK= P2 KEY= P3

Reason:

The Telnet connection diagram display utility encountered an internal error while processing a vartable.

P1 was the vartable action being attempted

P2 was the feedback code

P3 was the key (if relevant)

System Action:

The diagram is not displayed.

User Action:

Determine the cause of the error and retry.

IPTN3102

ACTION NOT SUPPORTED BY P1

Reason:

You requested an action on an object displayed on a Telnet connection diagram. The requested action is not supported by that object.

P1 is the name of the object.

System Action:

None

User Action:

Correct the action request, or retry on another object.

IPTN3103

MDO ACTION FAILED, MDORC= P1 MDOFDBK= P2

Reason:

An MDO assignment failed. The MDORC was *P1* the MDOFDBK value was *P2*

System Action:

The action terminates.

User Action:

Refer to the NCL User Reference for details of the codes.

IPTN3104**OPTION NOT AVAILABLE WHEN LINK NAME SPECIFIED****Reason:**

You attempted to execute a command against a connection when a link name has been specified. This option is not available when viewing connections on a remote link.

System Action:

None.

User Action:

None.

IPTN3105**MAI SESSION INFORMATION UNAVAILABLE****Reason:**

You attempted to obtain MAI session information when a link name has been specified and the link is to a system that is running a version of management services less than version 3.4. To be able to obtain MAI information, the remote SOLVE system must be running at version 3.4 or later.

System Action:

None.

User Action:

Upgrade the remote system or use NTS to obtain MAI session information.

IPTN3106

RESPONSE FROM SOLVE SYSTEM TIMED OUT. CMD: P1

Reason:

A response from the SOLVE system was not received within 20 seconds when issuing the command *P1* .

System Action:

Could not complete requested function.

User Action:

Determine why the SOLVE system is not responding to the command and correct problem. Check for the message IPTN3107 in the log which will contain the last message received. If no messages were_received, this message will not be in the log.

IPTN3107

LAST RESPONSE: P1

Reason:

This message is written to the log due to a command not completing within 20 seconds. *P1* is the text of the last message that was received before the command timed-out. The command that was issued is identified in the message IPTN3106 in the log.

System Action:

Could not complete requested function.

User Action:

Determine why the SOLVE system is not responding to the command and correct the problem.

IPTN3108**AN INMC LINK MUST BE DEFINED TO P1 TO GET MAI SESSION INFORMATION****Reason:**

You attempted to obtain MAI session information but there is no INMC link to the SOLVE system that you wish to obtain the information from.

System Action:

None.

User Action:

Start an INMC link to the P1 SOLVE system. Note that this system must be running management services V3.4 or later.

IPTN3109**DROP REQUESTED FOR TELNET CONNECTION FROM P1 LUNAME P2 BY USERID P3****Reason:**

Userid **P3** has issued a command to drop the telnet connection for LU **P2** from the **P1** IP connection.

System Action:

None.

User Action:

None.

IPTN3110**NO LINKS AVAILABLE TO P1****Reason:**

You attempted to obtain session information but there are no links to any SOLVE system on the same SSCP as the command target.
P1 is the CDRM name containing the target.

System Action:

None.

User Action:

Start an INMC link to a SOLVE system on the correct VTAM domain.

IPTP0601

SESSION MONITOR STOP REQUESTED.

Reason:

A session monitor process has been requested to terminate.

System Action:

A STOP message is queued to the session monitor.

User Action:

None.

IPTP0602

CHECKING TELNET SERVER AND IP PATH.

Reason:

Connectivity tests to the Telnet Server and Telnet Client are in progress.

System Action:

A PING is requested for the network components.

User Action:

None.

IPTP0603

TELNET SERVER NOT CONTACTABLE VIA TCP/IP.

Reason:

A connectivity test to the Telnet server failed. No response was received within the timeout period.

System Action:

None.

User Action:

This indicates a failure in the IP network. Perform a traceroute for the Telnet Server IP address to determine the nature of the connectivity problem. If necessary, report the error to your Network Administrator.

IPTP0604**TELNET CLIENT NOT CONTACTABLE VIA TCP/IP.****Reason:**

A connectivity test to the Telnet client failed. No response was received within the timeout period.

System Action:

None.

User Action:

This indicates a failure in the IP network. Use the TRACEROUTE function to determine the nature of the connectivity problem. If necessary, report the error to your Network Administrator.

IPTP0605**NO RECORDS IN LOG.****Reason:**

There are no log records currently stored for viewing.

System Action:

None.

User Action:

Wait for network connectivity tests to complete.

IPTP0606**REFRESH ALREADY IN PROGRESS.****Reason:**

Connectivity tests to the Telnet server and Telnet client are already in progress.

System Action:

Refresh processing continues.

User Action:

Wait for the current tests to complete before issuing the Refresh command.

IPTP0607

SESSION MONITOR ALREADY ACTIVE - START IGNORED.

Reason:

A session monitor start has been requested when the session monitor is already active.

System Action:

None.

User Action:

Wait for the session monitor to receive VTAM Session Awareness trace information or use the MONSTOP command to terminate the session monitor.

IPTP0608

SESSION MONITOR NOT ACTIVE.

Reason:

A session monitor stop has been requested when the session monitor is not active.

System Action:

None.

User Action:

Use the MONSTART command to activate the VTAM session monitor.

IPTP0609

SESSION MONITOR NOT AVAILABLE.

Reason:

The NTS component is not available on the local system.

System Action:

None.

User Action:

Check that SNA components are licensed and available.

IPTP0628**INVALID CALLTYPE P1 FROM SERVICE PROCEDURE****Reason:**

The CALLTYPE parameter passed to the function is not supported.

System Action:

None.

User Action:

Report the error to your product support representative.

IPTP0701**P1 MONITOR P2****Reason:**

A request to start or stop the monitor was accepted at the indicated time (*P1*). The action to be performed (*P2*) is one of the following:

STARTED - the monitor has been started.

STOPPED - the monitor has been stopped.

System Action:

When the monitor is started, the connection will be tested approximately every 60 seconds (see note) until either the connection closes, or the monitor is stopped.

Note: If you leave this display to view another display (for example, by pressing F8=Alerts) while MonStart is active, the MonStart activity is suspended. When you return to the Transaction Path Analysis display after viewing the other display, MonStart activity and the update of displayed information resumes.

User Action:

None.

IPTP0702

CHECKING SERVER AND IP PATH

Reason:

Connectivity tests to the server and the client are in progress.

System Action:

A PING is requested for the network components.

User Action:

None.

IPTP0703

SERVER NOT CONTACTABLE VIA TCP/IP

Reason:

A connectivity test to the server failed. No response was received within the timeout period.

System Action:

None.

User Action:

This indicates a failure in the IP network. Perform a traceroute for the Telnet server IP address to determine the nature of the connectivity problem. If necessary, report the error to your Network Administrator.

IPTP0704

CLIENT NOT CONTACTABLE VIA TCP/IP

Reason:

A connectivity test to the client failed. No response was received within the timeout period.

System Action:

None.

User Action:

This indicates a failure in the IP network. Use the TRACEROUTE function to determine the nature of the connectivity problem. If necessary, report the error to your Network Administrator.

IPTP0705**NO RECORDS IN LOG****Reason:**

There are no log records currently stored for viewing.

System Action:

None.

User Action:

Wait for network connectivity tests to complete.

IPTP0707**MONITOR ALREADY ACTIVE - START IGNORED****Reason:**

A monitor start has been requested when the monitor is already active.

System Action:

None.

User Action:

None.

IPTP0708**MONITOR NOT ACTIVE****Reason:**

A monitor stop has been requested when the monitor is not active.

System Action:

None.

User Action:

Use the MONSTART command to activate the monitor.

IPTP0709

MONITOR DISABLED - CONNECTION CLOSED

Reason:

A request to start the monitor has failed because the connection has closed.

System Action:

None.

User Action:

None.

IPTP0711

--Time-- Bytes Out Kb/Sec Bytes In Kb/Sec --Idle--

Reason:

This message is the heading line for connection time samples for the Transaction Path Analysis facility. The details for each time sample is shown in message ITP0712. The details in these messages are as follows:

P1 Time The time that the sample was taken.

P2 Bytes Out The number of bytes sent from the server to the client since the socket was opened.

P3 Kb/Sec The approximate data transfer rate for the difference in the number sent from the client to the server since the last sample.

P4 Bytes In The number of bytes sent from the client to the server since the socket was opened.

P5 Kb/Sec The approximate data transfer rate for the difference in the number sent from the server to the client since the last sample.

P6 Idle The time that the socket has been idle.

P7 (Warning Message) A warning message if there are apparent problems:
FTP HUNG An FTP connection (the client and/or server is using the FTP-D port) has been idle for over 60 seconds.

System Action:

The message is written to the Transaction Path Analyzer log.

User Action:

None.

IPTP0712

P1 P2 P3 P4 P5 P6 P7

Reason:

Refer to ITP0711.

System Action:

Refer to ITP0711.

User Action:

Refer to ITP0711.

IPTP0713

P1 CONNECTION CLOSED

Reason:

A request to get the latest details for a specific connection was issued at the indicated time (*P1*). The request failed as the connection has closed.

System Action:

The refresh and monitor functions are disabled. If monitoring was active it is stopped.

User Action:

Exit the TPA display.

IPTP0728

INVALID CALLTYPE P1 FROM SERVICE PROCEDURE

Reason:

The CALLTYPE parameter passed to the function is not supported.

System Action:

None.

User Action:

Report the error to your product support representative.

IPTP0729**ERROR: P1 CONNECTIONS RETURNED BY NETSTAT****Reason:**

A request to get the latest details for a specific connection has failed as more than one connection details was returned by the NETSTAT processing routine. The number of connections returned was *P1*.

System Action:

No time sample is obtained but processing continues.

User Action:

This is an internal error which should be reported to your product supplier.

IPTP0801**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The handler procedure \$IPTP08H for the TCP/IP Transaction Path Analyzer failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and the procedure terminates. Control is returned to the procedure which called \$IPTP08H.

User Action:

Contact your system administrator.

IPTP0802

DEST= P1 HOPS= P2 ALERT= P3 PATH= P4

Reason:

This is a TRACERTE summary message which shows the destination host name (*P1*), the number of hops (*P2*) from the local host to the destination host, and the number of hops that have alerts (*P3*). The path from the local host to the destination (*P4*) is shown as a series of IP addresses.

For a hop to have an alert, it must be defined to the IP Node Monitor and have one or more active alerts.

System Action:

None.

User Action:

None.

IPTP0901

TPA PROCESS TIMED OUT - CLIENT INACTIVE 10 MINS

Reason:

A transaction path analysis process has detected that the web client has exceeded a 10 minute inactivity timeout limit. This limit is used to prevent an accumulation of long running processes when the client has terminated without notifying the host.

System Action:

The process terminates.

User Action:

Limit the use of the 'Freeze graph' function to less than 10 minutes.

IPTP0902**CONNECTION P1 NOT FOUND****Reason:**

The request connection no longer exists.

System Action:

The process terminates.

User Action:

Refresh the connection list to view an updated list.

IPTR3401**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The TCP/IP external interface procedure \$IPCALL failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed \$IPCALL. If executed from OCS, check the command entered on the command line and retry.

IPTR3402**INVALID SELECT VALUE SPECIFIED - KEYWORD= P1 VALUE= P2****Reason:**

The TCP/IP procedure \$IPTN30S failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPTN30S terminates.

User Action:

Contact your System Administrator.

IPTR3404

REQUIRED PARAMETER (P2) MISSING FOR COMMAND P1

Reason:

The TCP/IP external interface procedure \$IPCALL failed because a required parameter was omitted from the call to \$IPCALL. One of either ADDRESS, HOSTNAME or HOST must be specified.

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Contact your System Administrator.

IPTR3405

MDO ERROR, MDO=*P1*, MAP=*P2*, MDORC=*P3*, MDOFDBK=*P4*

Reason:

An MDO error occurred. The MDO is identified by *P1* the map name by *P2* the MDO return code by *P3* and the feedback code is *P4*.

System Action:

The procedure terminates.

User Action:

Contact your System Administrator.

IPTR3406

FIELD " P1" MUST BE NUMERIC

Reason:

A non-numeric value was entered for the field identified by *P1* .

System Action:

The field in error is highlighted.

User Action:

Correct the field value and repeat the operation.

IPTR3407**VALUE ENTERED FOR FIELD "P1" MUST IN RANGE P2 TO P3****Reason:**

A value was entered for the field identified by *P1* which was not in the range specified by *P2* and *P3*.

System Action:

The field in error is highlighted.

User Action:

Correct the field value and repeat the operation.

IPTR3408**TRACEROUTE ERROR : HOST NOT FOUND****Reason:**

The Traceroute operation failed because no entry for the host could be found.

System Action:

None

User Action:

Check the details entered are correct and retry the operation. If an error still occurs, contact your System Administrator.

IPTR3409**TEMPORARY TRACEROUTE ERROR - PLEASE TRY AGAIN LATER****Reason:**

The Traceroute operation experienced a temporary failure.

System Action:

None

User Action:

Retry the operation. If an error still occurs, contact your System Administrator.

IPTR3410

NO RECORDS TO DISPLAY

Reason:

No entries were returned for display.

System Action:

Control returns to the Primary Menu and the error message is displayed.

User Action:

Correct the entry in the Host Name field and retry.

IPTR3411

TRACEROUTE ERROR - NAMESERVER FAILURE

Reason:

The Traceroute operation failed due to a nameserver error.

System Action:

None

User Action:

Contact your System Administrator.

IPTR3412

TRACEROUTE ERROR - NO DATA OF THIS TYPE ASSOCIATED WITH THIS ADDRESS

Reason:

The Traceroute operation failed because the host does not support the protocol used.

System Action:

None

User Action:

Contact your System Administrator.

IPTR3413**NO HISTORY PRESENT FOR P1****Reason:**

There are currently no history details to present for *P1*. The sampling interval may not have expired and hence there may not be any data at this time.

System Action:

None.

User Action:

Ensure that statistics collection is set for the resource group that the resource belongs to.

IPTR3414**MDO ACTION FAILED, MAP= P1, NAME= P2, MDORC= P3, MDOFDBK= P4****Reason:**

An MDO assignment failed. The MAP was P1 , the MDORC was P3 , the MDOFDBK value was P4 , and the MDO component involved in the last operation was P2.

System Action:

The action terminates.

User Action:

Refer to the NCL Reference for details of the codes.

IPTR3415**Action failed, the map P1 does not exist****Reason:**

An MDO assignment failed with ZMDORC 16 and ZMDOFDBK 0. This indicates that the map *P1* does not exist in this system.

System Action:

The action terminates.

User Action:

Ensure that the OSCNTL file has been correctly updated for TCP/IP Services.

IPTR3416

P1 is not being monitored

Reason:

A request for IP Node Monitoring details for *P1* was rejected because the resource is not being monitored.

System Action:

The action is rejected.

User Action:

Add the resource to those currently being monitored and ensure that the resource is in a resource group that has statistics collection active.

IPTR3417

Protocol must be UDP or ICMP

Reason:

You entered an invalid value in the Protocol field. Valid values are UDP or ICMP.

System Action:

The field in error is highlighted.

User Action:

Correct the field value and repeat the operation.

IPTR3501

Hop limit exceeded

Reason:

The traceroute request did not reach the destination IP address within the number of hops specified.

System Action:

Traceroute terminates

User Action:

Increase the traceroute hop count and retry.

IPTR3502**Timeout****Reason:**

The traceroute request timed out before reaching the destination IP address.

System Action:

Traceroute terminates

User Action:

Increase the traceroute timeout value and retry.

IPUN1101**P1 PARAMETER SPECIFIES AN INVALID VALUE - P2****Reason:**

The value of the specified parameter passed is invalid.

System Action:

None

User Action:

Correct the parameter and retry.

IPUN1102**P1 PARAMETER HAS BEEN OMITTED****Reason:**

The specified parameter is required for this call but has been omitted.

System Action:

None

User Action:

Specify the parameter and retry.

IPUN1103

P1 FOR JOBNAME P2

Reason:

This message is used by the S:NМ-TCP/IP unsolicited system message facility to notify of registration or deregistration of interest in messages for a specified jobname

System Action:

None

User Action:

None

IPUN1104

REGISTRATION NOTIFICATION TO MESSAGE RECEIVER FAILED, RC=P1

Reason:

TCP/IP Services registration of interest in unsolicited system messages has tried to notify a message listener process that resgitation has occurred but the notification process has failed with the return code shown.

System Action:

No messages can be receiver for this jobname

User Action:

Contact Technical Support.

IPUN1108**MESSAGE REGISTRATION UPDATE COMPLETE****Reason:**

The S:NМ-TCP/IP unsolicited system message registration facility has successfully updated message registration. This change is effective immediately.

System Action:

If registration was requested, messages will now be received for the requested jobname. If deregistration was requested, messages will no longer be received for the requested jobname, or for any jobname if no jobname was specified.

User Action:

None.

IPUN1109**NO MESSAGE REGISTRATIONS EXIST****Reason:**

The S:NМ-TCP/IP unsolicited system message registration facility has been requested to deregister interest in receiving messages from a specific jobname or from all jobnames. The request has not caused any change because no registrations exist.

System Action:

None.

User Action:

None.

IPUN1201**P1 PARAMETER SPECIFIES AN INVALID VALUE - P2****Reason:**

The value of the specified parameter passed is invalid.

System Action:

None

User Action:

Correct the parameter and retry.

IPUN1202

P1 PARAMETER HAS BEEN OMITTED

Reason:

The specified parameter is required for this call but has been omitted.

System Action:

None

User Action:

Specify the parameter and retry.

IPUN1203

P1 PARAMETER IS NOT ALLOWED ON THIS CALL

Reason:

The parameter shown is not allowed on this call but has been specified.

System Action:

None

User Action:

Remove the parameter and retry.

IPUN1204

INVALID REQUEST RECEIVED - P1

Reason:

An invalid request has been received by the TCP/IP Services unsolicited system message receiver.

System Action:

The request is ignored.

User Action:

Contact Technical Support.

IPUN1205**UNEXPECTED MESSAGE RECEIVED - P1****Reason:**

An unexpected message has been received by the TCP/IP Services unsolicited system message receiver.

System Action:

The message is logged and processing continues.

User Action:

Contact Technical Support.

IPUN1208**MESSAGE REGISTRATION CALL FAILED RC= P1 SYSMMSG= P2****Reason:**

The TCP/IP Services unsolicited system message registration facility has attempted to register to receive job messages from Automation Services but the registration call has failed.

System Action:

No messages can be received from the specified job

User Action:

Contact Technical Support.

IPUN1209**MESSAGE Deregistration CALL FAILED RC= P1 SYSMMSG= P2****Reason:**

The TCP/IP Services unsolicited system message registration facility has attempted to deregister for job messages from Automation Services but the deregistration call has failed.

System Action:

None

User Action:

Contact Technical Support.

IPVP0101

Stack P1 on LPAR P2 not known to NetMaster

Reason:

The VIPA is active on stack *P1* on LPAR *P2* but this stack is not defined to the managing NetMaster region on this LPAR.

System Action:

The port distribution table is not obtained.

User Action:

Check why the stack is unknown to the NetMaster region on LPAR *P1*.

IPVP0102

No managing region available on LPAR P1

Reason:

The VIPA is active on LPAR *P1* but there is no NetMaster region in this LPAR to retrieve the port distribution table.

System Action:

The port distribution table is not obtained.

User Action:

Check the status of the NetMaster region on LPAR *P1*.

IPVP0202

VIPA P1 has no active connections

Reason:

A CR command has been actioned against VIPA *P1*. No connections are currently active for this VIPA.

System Action:

The command is rejected.

User Action:

Choose another command, or another VIPA resource.

IPVP0301**M command canceled****Reason:**

The M command for a VIPA resource has been canceled.

System Action:

None

User Action:

None

IPVP0302**VIPADYNAMIC statements incomplete - review activity log****Reason:**

VIPADYNAMIC statements cannot be generated because errors were detected. The preceding messages in the activity log are prefixed with the link name of the system where the error occurred.

System Action:

The edit panel is shown with an incomplete set of VIPADYNAMIC statements.

User Action:

Update the VIPADYNAMIC statements as required. To determine the cause of the errors, do the following:

- Scan for the highlighted messages preceding IPVP0302 in the activity log. The messages are prefixed with the link name of the system that generated the error message. Review the recommended user actions.
- To display all of the log entries for that system, use the following command:

`DOM link_name`
- Review the log of that system to determine the cause of the failure.
- List this region's configuration details (/IPTEST), and investigate any errors.

If you are unable to determine the nature of the error, contact Technical Support.

IPVP0401

Stack Name not selected from list

Reason:

No value was selected from the selection list displayed.

System Action:

None

User Action:

None

IPVP0402

Stack P1 not known. Use '?' to display a list of known stacks

Reason:

The stack *P1* is invalid, because it is not known to this system.

System Action:

None

User Action:

Specify a different stack name or type '?' in the field to display a selection list of all known stacks.

IPVP0403

Stack P1 is not an IBM stack

Reason:

The stack *P1* is invalid, because it is not an IBM stack. A dynamic VIPA can only be defined on an IBM stack.

System Action:

None

User Action:

Specify a different stack name.

IPVP0404**Stack P1 is not on the same sysplex as the current stack****Reason:**

The stack *P1* is invalid, because it is not on the same sysplex. The M command only supports VIPA modification within its current sysplex.

System Action:

None

User Action:

Specify a different stack name.

IPVP0405**Obeyfile Dataset is a PDS. Please include a member name****Reason:**

You have entered the name of a PDS in the Obeyfile field. A member name is required. Please amend the dataset name to include a member name.

System Action:

None

User Action:

Add a member name to the end of the datasetname; for example, dataset(member). The member can be new or existing. If an existing member name is specified, the member will be overwritten.

IPVP0406**Obeyfile not suitable. Enter a sequential dataset or PDS member****Reason:**

You have entered the name of a dataset in the Obeyfile field which has a format unsuitable for this function.

System Action:

None

User Action:

Enter the name of a dataset with PS or PO format. If a PDS is specified, include a member name (new or existing).

IPVP1101

No managing region available on LPAR P1

Reason:

The VIPA makes use of a stack on LPAR *P1* but there is no NetMaster region on this LPAR to provide management information.

System Action:

The information for this LPAR is not obtained.

User Action:

Check the status of the NetMaster region on LPAR *P1*.

IPVP1102

Stack P1 on LPAR P2 not known to P3

Reason:

The VIPA makes use of stack *P1* on LPAR *P2* but this stack is not defined to the NetMaster region *P3* on this LPAR.

System Action:

The information for this LPAR is not obtained.

User Action:

Check the status of the NetMaster region *P3*.

IPVP1103

P1 unavailable due to missing data from P2

Reason:

VIPA monitoring is not able to provide a total value for attribute *P1* because the required component data is unavailable from LPAR *P2*.

System Action:

The total value is not provided.

User Action:

Check the status of the region on the named LPAR.

IPVP1104**P1 cannot be determined. P2 not sampled.****Reason:**

VIPA monitoring is not able to provide a total value for attribute *P1*. This attribute depends on the sampling results of attribute *P2*. Attribute *P2* has been marked INACTIVE in the VIPA definition.

System Action:

The total value is not provided.

User Action:

Change the status of attribute *P2* to active, or change *P1* to inactive.

IPVP1105**Stack P1 on LPAR P2 not known to NetMaster****Reason:**

The VIPA is active on stack *P1* on LPAR *P2* but this stack is not defined to the managing NetMaster region on this LPAR.

System Action:

Monitoring of the associated VIPA attribute fails.

User Action:

Check why the stack is unknown to the NetMaster region on LPAR *P1*.

IPVP1106**No entries in Distribution Port Table****Reason:**

An attempt to sample the distributedconnects or distributedlisteners attribute for a VIPA failed. A display of the VIPA's distribution port table returned no entries.

System Action:

Monitoring of the associated VIPA attribute fails.

User Action:

Check why the distribution port table is empty.

IPVP1107

This is not a sysplex distributor VIPA

Reason:

An attempt to monitor the behaviour of a sysplex distributor VIPA has failed. The 'D TCPIP,SYSPLEX,VIPAD' output indicates that the VIPA is not distributing.

System Action:

Monitoring of the associated VIPA attribute fails.

User Action:

If this is not a sysplex distributor VIPA, inactivate the distributor attributes in the VIPA definition.

IPVP1109

P1 sampling failed: P2

Reason:

An attempt to collect performance data for VIPA attribute *P1* failed. *P2* contains the detailed error message.

System Action:

No data for VIPA attribute *P1* is recorded for this interval.

User Action:

See the help for message *P2* for more details.

IPVP1201

VIPA P1 not found on stack P2

Reason:

A request for information about VIPA *P1* has failed. The VIPA is not known to the local stack *P2*.

System Action:

The request fails.

User Action:

Confirm that the VIPA resource definition specifies the correct local stack.

IPVP1203**VIPA P1 details unavailable. P2 inactive****Reason:**

A request to sample the performance of VIPA *P1* has failed. Local stack *P2* is inactive.

System Action:

None

User Action:

Check why the stack is inactive.

IPVP1205**Check of VIPA P1 returned: P2****Reason:**

An attempt to check whether the VIPA resource *P1* exists on a linked region has returned error message *P2*. This check is performed when the local stack resource has the field Create VIPA Resources? set to YES.

System Action:

The check process terminates for this VIPA.

User Action:

Investigate the cause of the error. The help for error message *P2* may provide more information.

IPVP1206**Create of VIPA resource P1 returned: P2****Reason:**

An attempt to create a dynamic VIPA resource for VIPA *P1* has returned error message *P2*. The resource is being created because the local stack resource has the field Create VIPA Resources? set to YES.

System Action:

The creation fails.

User Action:

Investigate the cause of the error. The help for error message *P2* may provide more information.

IPVP1208

No stacks available to display connections

Reason:

A request to display connections to a VIPA has failed. No stacks are available to display.

System Action:

None

User Action:

Check the status of stacks participating in this VIPA. The stacks may be inactive or they may be currently inaccessible to this region.

IPVP1209

Connection Routing Table not applicable to VIPA P1

Reason:

A display of the connection routing table has been actioned against VIPA *P1* . This display is supported only for sysplex distributor VIPAs. *P1* is not defined as a sysplex distributor VIPA.

System Action:

The action is rejected.

User Action:

Choose another action, or another VIPA resource.

IPVP1210

Stack P1 on LPAR P2 not known to NetMaster

Reason:

The VIPA is active on stack *P1* on LPAR *P2* but this stack is not defined to the managing NetMaster region on this LPAR.

System Action:

The connection routing table is not obtained.

User Action:

Check why the stack is unknown to the NetMaster region on LPAR *P1*.

IPVP1211**No managing region available on LPAR P1****Reason:**

The VIPA is active on LPAR *P1* but there is no NetMaster region in this LPAR to retrieve the connection routing table.

System Action:

The connection routing table is not obtained.

User Action:

Check the status of the NetMaster region on LPAR *P1*.

IPVP1212**CDI error. P1****Reason:**

An error occurred during a call to the CDI service. *P1* is the error description.

The CDI service runs in the SSI region and is used to retrieve VIPA status information from the perspective of the sysplex.

System Action:

If the failure is not recoverable, the region reverts to retrieving the sysplex information through a system command, which can cause excessive output in the system log and the stack's JES job log if you are monitoring multiple VIPAs.

User Action:

Report this message to Technical Support.

IPVP1213

P1

Reason:

This is a hexadecimal dump of the invalid data returned from the CDI service used to extract dynamic VIPA information.

For more information about the error, see the IPVP1212 message preceding this block of messages.

System Action:

None.

User Action:

Report this message to Technical Support.

IPVP1214

CDI service is not available in the SSI region

Reason:

An attempt to retrieve information about a dynamic VIPA through the CDI service has failed.

The CDI service runs in the SSI region and is used to retrieve VIPA status information from the perspective of the sysplex.

System Action:

VIPA monitoring reverts to retrieving the information using a system command. This can cause excessive output in the system log and the stack's JES job log if you are monitoring multiple VIPAs.

User Action:

Investigate why the CDI service is not available. It is enabled through SSI parameter CDI=YES.

IPVP1301**VIPA monitoring P1 for P2****Reason:**

A background process to monitor VIPA movement has started or stopped for stack *P2* . The process runs if the stack resource has the field Create VIPA Resources? set to YES.

System Action:

None

User Action:

None

IPW31001**TCP/IP Web access URL set to P1****Reason:**

After Web Server initialization has completed, the TCP/IP product will be available for access via the URL *P1* .

System Action:

None.

User Action:

Wait for the Web Server to become active, then use a browser to access the indicated URL.

IPW31002**THE TCP/IP WEB SERVER IS INACTIVE FOR PORT= P1****Reason:**

The web server has deregistered the TCP/IP product for access via the port *P1* .

System Action:

None.

User Action:

None.

IPWH0001

Invalid object for transformation. Appl= P1 DataClass= P2 RC/Fdbk= P3 Co mp= P4

Reason:

An attempt to translate an object into an XML document for transmission to a data warehouse failed. The data was sourced from application P1, data class P2. The error occurred in mapping the object, the return code and feedback codes for the action were P3. P4 is the name of the component in error.

System Action:

The object is discarded and processing continues.

User Action:

Contact your local support representative.

IPWH0002

Ignored P1 data, reason: P2

Reason:

An attempt to translate IP sampling data for transmission to a data warehouse failed. The type of data is P1. The error message received was P2.

System Action:

The data is ignored and processing continues.

User Action:

Contact your local support representative.

IPWH0101

IPTREND DSN name not specified, and default dataset name is not available.

Reason:

An attempt was made to run the IPTREND Data Warehouse Conversion Utility but the dataset name of the sequential IPTREND file to be converted was not specified via the DSN= keyword. The utility attempted to use the default IPTREND dataset name, but this has not been set. (The default name is usually set when a name is specified for the IPTREND dataset in the TCP/IP Administration / Set System Parameters / Reporting Configuration menu).

System Action:

The IPTREND Data Warehouse Conversion is not performed.

User Action:

Specify the dataset name of the IPTREND file using the DSN= keyword.

IPWH0102

IPTREND Conversion File Error during P1, RC= P2 P3 DSN= P4

Reason:

The IPTREND Data Warehouse Conversion Utility encountered a file error attempting an operation on the sequential IPTREND file *P5*

System Action:

The IPTREND Data Warehouse Conversion is terminated. Conversion of all eligible IPTREND file records may not be complete.

User Action:

Correct the dataset error and retry the conversion.

IPVP1108

VIPA P1 has moved from P2 to P3

Reason:

This is an informational message indicating that dynamic VIPA *P1* has moved from lpar- stack *P2* to *P3*.

System Action:

None

User Action:

None

IPWH0103

P1 P2 P3 P4 P5 P6 P7 P8 P9 P10

Reason:

The message contains status information about the progress and status of the IPTREND Data Warehouse conversion.

System Action:

None.

User Action:

If the conversion fails, examine the log for specific error messages.

IPWH0104**Delimiter P1 does not match file P2****Reason:**

The IPTREND Data Warehouse Conversion Utility could not correctly parse the sequential IPTREND file. There is a mismatch between the field separator value present in the file (usually a comma) and the value of the DELIM keyword (defaults to a comma).

System Action:

The IPTREND Data Warehouse Conversion is terminated.

User Action:

Examine the IPTREND file to see what delimiter it was created with, and re-run the conversion specifying the correct DELIM value.

If the file delimiter is a comma, the default will be correct.

If the file delimiter is a semicolon, specify DELIM=SEMICOLON

If the file delimiter is the tab character (X'05'), specify DELIM=TAB

If the file delimiter is any other character, eg. / specify DELIM=/

If the DELIM keyword is omitted, a comma is used.

The delimiter or field separator used in an IPTREND file is set on the NetworkIT NetMaster TCP/IP region that created the IPTREND file, in the Administration/Set System Parameters/Reporting Configuration menu.

An IPTREND file created on one NetMaster region may be converted to Data Warehouse format by another NetMaster region, providing:

- a. The delimiter is correctly specified, if different from a comma.
- b. The NetMaster regions run on the same OS/390 system. This is because the Sysplex and System ID from the converting region are assigned to any Resource records created by the conversion process.

IPWH0105

Data Delivery Failed P1 P2 P3 P4 P5 P6 P7 P8 P9 P10

Reason:

The IPTREND Data Warehouse Conversion Utility encountered a error while attempting to queue a Data Warehouse update for converted IPTREND file data. This message indicates the return codes from the Data Warehouse Adaptor code and details that identify the fact entry being added.

System Action:

The IPTREND Data Warehouse Conversion is terminated. Conversion of all eligible IPTREND file records may not be complete.

User Action:

Contact your support representative. Provide any Activity Log output associated with the failing conversion.

IPWH0106

No Data Warehouse Services Servers defined.

Reason:

An attempt was made to run the IPTREND Data Warehouse Conversion Utility but no Data Warehouse Services Servers have been defined on this region to receive the data.

Data produced by IPTREND file conversions, as well as live reporting data produced by a NetMaster Network Management for TCP/IP region, requires a Data Warehouse Services Server to be defined and active on the same region. Sample and converted data is converted to an XML document format understood by the ReportCenter Data Warehouse Adaptor. These documents are placed on a queue in your VFS file for processing by the DWS Server. The DWS Server takes documents from this queue and forwards them to the Data Warehouse Adaptor.

If too many documents accumulate in the queue without any active servers to forward them, queue overflows and consequent loss of data are likely.

System Action:

The IPTREND Data Warehouse Conversion is not performed.

User Action:

Define and activate at least one Data Warehouse Services Server, then retry the conversion. Servers are defined using Option MS.WS from this region's primary menu.

IPWK0102**Connection workload monitoring returned: P1****Reason:**

An attempt to perform connection workload monitoring failed. *P1* shows the error message.

System Action:

No sample is taken.

User Action:

See message *P1* for more information.

IPWK0103**Stack *P1* not known to packet analyzer****Reason:**

The connection workload monitoring procedure found that the Packet Analyser does not know about the *P1* stack.

The most likely cause is that this is a CA TCPaccess stack that does not have the requisite level of maintenance for Packet Analyzer support.

System Action:

No connection workload monitoring is performed for this stack.

User Action:

Do the following:

- For CA TCPaccess stacks, see the Installation Guide for more information about the required maintenance.
- Check for Packet Analyzer error messages in the JESMSG output of the SOLVE SSI region.
- Ensure that the stack is initialized correctly.
- If the z/OS version or release has recently been upgraded, the Packet Analyzer may require a fix to support the new level.

If the cause of the problem is not apparent, contact Technical Support.

IPWK1001

Workload monitoring error. Stacks P1 and P2 both use hostname P3

Reason:

An error has occurred during setup of FTP or Telnet workload monitoring. The event receiver has discovered the same hostname P3 is used by both stack P1 and P2 .

System Action:

All FTP workload for host *P3* will be reported under stack *P2*. *Any Telnet* workload for host *P3* that uses a telnet server running in its own address space will be reported under stack *P2*.

User Action:

Review why the two stacks have the same hostname. The event receiver uses the UNIX hostname command and DNR to extract stack hostnames.

IPWK1002

Error during workload registration for P1. Variable P2 FDBK: P3

Reason:

An error occurred while manipulating an NCL VARIABLE for Telnet or FTP workload monitoring. *P1* is the resource being processed at the time of the error. *P3* is the feedback code from the variable *P2* verb.

System Action:

None.

User Action:

Notify your systems administrator.

IPWK1003**Error during workload registration for P1: P2****Reason:**

During registration of stack *P1* for FTP or Telnet workload monitoring, an attempt to invoke the UNIX HOSTNAME command failed. *P2* is the error message returned from the UNIX interface.

System Action:

The failed operation is retried at intervals, if required. While the failure persists, the workload monitoring data for *P1* may be incomplete.

User Action:

Notify your systems administrator.

IPWL0101**INVALID KEYWORD VALUE SPECIFIED, P1= P2****Reason:**

The call to the procedure failed because the keyword identified by *P1* had an invalid value identified by *P2* .

System Action:

The request is rejected.

User Action:

Contact your System Administrator.

IPWL0102**MAP ERROR: MAP P1 NOT FOUND****Reason:**

An internal error occurred because map *P1* was not found in the map dataset.

System Action:

The request is rejected.

User Action:

Contact your System Administrator.

IPWL0103

MAP ERROR: MAP P1, MDORC= P2, MDOFDBK= P3

Reason:

An internal error occurred. Map *P1* experienced the error described by MDORC= *P2* and MDOFDBK= *P3* .

System Action:

The request is rejected.

User Action:

Contact your System Administrator.

IPWL0201

ISSUED SYSCMD P1 NOT PASSED TO OPERATING SYSTEM SUCCESSFULLY.

Reason:

The site file loader utility has issued a system command to the operating system for execution but it has not been passed successfully.

System Action:

None.

User Action:

None.

IPWL0202

WORKLOAD MANAGER IWMSRSRS MACRO FAILED, RSN= P1

Reason:

The request to obtain workload manager information using the IWMSRSRS macro has failed. *P1* contains the reason code describing the failure.

System Action:

None.

User Action:

Refer to IBM's MVS Workload Management Services manual for a description of the reason code.

IPWL0203**INVALID PARAMETER PASSED****Reason:**

The request to obtain workload manager information has failed because an invalid parameter was passed.

System Action:

None.

User Action:

Contact Technical Support.

IPWL0204**NOT APF AUTHORIZED, UNABLE TO OBTAIN WORKLOAD MANAGER INFORMATION****Reason:**

The request to obtain workload manager information has failed because this region is not running APF authorized. APF authorization is required to issue workload manager macros.

System Action:

None.

User Action:

None.

IPWL0205**No stacks registered with Workload Manager****Reason:**

No TCP/IP stacks are registered with the Workload Manager.

System Action:

None.

User Action:

None.

IPWL0206

No stacks registered for *P1*

Reason:

No stacks are registered with Workload Manager for the *P1* Telnet cluster.

System Action:

None.

User Action:

None.

IPWL0207

***P1* has no Telnet clusters registered with Workload Manager**

Reason:

There are no Telnet clusters registered with WLM for *P1*. Telnet clusters are registered using the WLMCLUSTERNAME statement.

System Action:

None.

User Action:

If the command was issued against a stack, the Telnet server may be running in its own address space. Issue the command against the ASMON resource for the telnet server. (Your site can define ASMON resources of type TNSERVER for such servers.)

IPWL0210

***P1 P2* is inactive**

Reason:

The stack or address space selected for the command is inactive.

P1 is the resource class.

P2 is the resource name.

System Action:

The command is rejected.

User Action:

None.

IPWL0211**Stack *P1* does not exist****Reason:**

The selected stack is not known to the system.

System Action:

The request is rejected.

User Action:

Enter ? in the Stack field to obtain a list of stacks.

List this region's configuration details (/IPTEST), and investigate any errors.

IUV001**Start of request validation phase****Reason:**

Indicates that the VIP is starting to read control statements from the system input file.

System Action:

None.

User Action:

None.

IUV002**End of request validation phase****Reason:**

Indicates that the VIP is finished reading control statements from the system input file. Valid requests will now be actioned.

System Action:

None.

User Action:

None.

IUV003

Processing request number P1

Reason:

During validation of the control statements, VIP assigns a request number to each separate request. Following a copy of the command *P1.* statement images, message IUVC01 is issued showing the request number, At the end of the validation phase, valid requests are processed in turn and this message (IUV003) indicates the start of processing for this request.

System Action:

None.

User Action:

None.

IUV004

**** End ****

Reason:

Indicates normal end of VIP processing. All requests were valid and were actioned.

System Action:

VIP terminates with JCL return code of zero.

User Action:

None.

IUV005

**** End ** - Warning: Some functions incomplete due to previous errors**

Reason:

Indicates end of VIP processing. However one or more requests were not actioned due to validation or processing errors which are detailed in previous messages.

System Action:

Program completes with JCL return code 4.

User Action:

Review the system output for other messages. Correct the invalid requests and rerun.

IUV006

VIP terminated due to previous errors

Reason:

Indicates that VIP has abnormally terminated because of unrecoverable errors in one or more requests. These processing errors are detailed in previous messages.

System Action:

Program completes with JCL return code greater than 4.

User Action:

Review the system output for other messages. Correct the invalid requests and rerun.

IUV007

Warning: One or more specified applications have no records

Reason:

This message is issued at the completion of a VIP request that specified a sublist of applications. For example APPL=(AAA,BBB,CCC) and no records existed for one or more applications:

- for the LIST and COPY functions on the file(s) identified by the INDD= parameter
- for the DELETE functions on the file(s) identified by the OUTDD= parameter

System Action:

Program completes with JCL return code 4.

User Action:

Review the system output for other messages. Determine if the application(s) should exist on the relevant file(s) and rerun if required.

IUV204

System error: INDD= P1 OUTDD= P2 FUNCTION= P3 RC= P4 VSAM CC= P5 VSAM FDBK= P6

Reason:

An error occurred when trying to access a data set. **P1** is the last processed input DD name and **P2** the last processed output DD name. The function **P3** indicates the type of file function that was being performed.

The internal return code **P4**, VSAM completion code **P5** and VSAM feedback code **P6** are also shown.

System Action:

The VIP processing terminates.

User Action:

Contact Technical Support.

IUV205**Insufficient storage****Reason:**

The VIP has requested system storage during the processing of a request. No storage is available.

System Action:

The program terminates.

User Action:

Increase the region size and rerun, or simplify the VIP requests to process less requests in a single execution step.

IUVC01**Request valid, request number P1 assigned****Reason:**

During validation of the control statements, VIP assigns a request number to each separate request. The number that has been assigned to a request *P1* is shown in this message, issued following a copy of the control cards. At the end of the validation phase, valid requests are processed in turn and message IUV003 is issued at the start of processing for this request.

System Action:

None.

User Action:

None.

IUVC02

Expecting command name, found P1

Reason:

An error has been found during the validation of the VIP control statements. The start of the first command cannot be identified because the first keyword *P1* on the first statement is not a valid command name.

System Action:

Control statements are skipped until a command can be recognized.

User Action:

The first word on the first statement (except for blank or comment statements) must be a valid command name (LIST, COPY, DELETE). Correct the control statement and rerun.

IUVC03

File type required

Reason:

An error has been found during the validation of the VIP control statements. The word following the command name (LIST, COPY, DELETE) is omitted, that is, the next word is either a new command name or is end of file.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC04**Unknown file type, P1****Reason:**

An error has been found during the validation of the VIP control statements. The word *P1* following the command name (LIST, COPY, DELETE) is not a valid file type. Valid types are PANELS, MODS and OSCNTL.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC05**Unknown keyword at P1****Reason:**

An error has been found during the validation of the VIP control statements. The data starting at *P1* is not a valid keyword. Valid keywords are INDD=, OUTDD=, APPL=, LANG= and OPT=.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC06**P1 keyword invalid on P2 command****Reason:**

An error has been found during the validation of the VIP control statements. The combination of keyword *P1* and command *P2* is invalid. For example, the OUTDD= keyword is invalid for the LIST command.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC07

Incomplete P1 keyword operand

Reason:

An error has been found during the validation of the VIP control statements. The operand value for the keyword identified by *P1* has been omitted making the keyword operand incomplete. For example, APPL= was specified but without any data.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC08

P1 invalid in sublist format for P2 command

Reason:

An error has been found during the validation of the VIP control statements. The operand value for the keyword identified by *P1* has been specified as a sublist but the particular command *P2* does not support multiple values, making a sublist format invalid. For example, the OUTDD= keyword must specify a single DD name for all commands.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC09**P1 keyword duplicated****Reason:**

An error has been found during the validation of the VIP control statements. The keyword identified by *P1* has been specified more than once.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Keywords may only be specified once per command. Use sublist format if multiple values are required, for example: invalid: INDD=IN1 INDD=IN2 valid: INDD=(IN1,IN2) Correct the control statement and rerun.

IUVC10**P1 keyword operand has invalid sublist format****Reason:**

An error has been found during the validation of the VIP control statements. The keyword identified by *P1* has an invalid sublist because of one of the following reasons:

- The character immediately following the keyword is an opening (left) parenthesis but the last character is not a closing (right) parenthesis. For example: INDD=(AAA,BBB
- The closing (right) parenthesis is followed by a non-blank character. For example: INDD=(IN1,IN2)IN3)
- There are no suboperands in the sublist. For example: INDD=() or INDD=(,,)

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Complete the sublist specification. Correct the control statement and rerun.

IUVC11

Invalid P1 keyword operand value at P2

Reason:

An error has been found during the validation of the VIP control statements. The keyword identified by *P1* has an invalid value within the operand list. The value *P2* is not valid for the type of keyword. For example, the DD name for INDD= or OUTDD= is not a valid DD name.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC12

P1 keyword invalid with P2 file type

Reason:

An error has been found during the validation of the VIP control statements. The keyword identified by *P1* is not valid for the file type that is identified by *P2*. For example, the LANG= keyword is invalid when used for an OSCNTL file.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC13

P1 command requires the P2 keyword to be specified

Reason:

An error has been found during the validation of the VIP control statements. The keyword identified by *P2* is mandatory for the command identified by *P1*. For example, the LIST command requires the INDD= keyword.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC14**Duplicated value in P1 sublist, value is P2****Reason:**

An error has been found during the validation of the VIP control statements. The sublist for the *P1* keyword contains a duplicated value, *P2*. For example INDD=(IN1,IN2,IN1). Duplicated values are not permitted.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC15**P1 is a reserved DD name****Reason:**

An error has been found during the validation of the VIP control statements. A DD name specified within the INDD= or OUTDD= operands is invalid because it is reserved for use as a VIP system file. For example SYSIN or SYSPRINT.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC16**P1 invalid with P2 file type****Reason:**

An error has been found during the validation of the VIP control statements. The parameter and value identified by *P1* is not valid for the file type that is identified by *P2*. For example, OPT=MAINT is invalid when used for an OSCNTL file.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC18

Insufficient storage

Reason:

The VIP has requested system storage during the validation of a request. No storage is available.

System Action:

The program terminates.

User Action:

Increase the region size and rerun, or simplify the VIP requests to process less requests in a single execution step.

IUVC19

P1 keyword format invalid on P2 command

Reason:

An error has been found during the validation of the VIP control statements. The format of keyword *P1* is invalid when used with command *P2*. For example:

- the APPL=* keyword value was specified on a DELETE command
- a COPY command specifying OPT=INSTALL and with a sublist of input files (INDD=(DD1,DD2,...) also has applications (APPL=) specified (other than APPL=*)).

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC20**P1 command invalid with P2 file type****Reason:**

An error has been found during the validation of the VIP control statements. The command identified by *P1* is not valid for the file type that is identified by *P2*. For example, the BUILD command is invalid when used for a PANELS file.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC21**DD name P1 specified as both INDD and OUTDD****Reason:**

An error has been found during the validation of the VIP control statements. The output file DD name *P1* is the same as one of the input file DD names specified for the same request. For example: INDD=(FILE1,FILE2,FILE3)
OUTDD=FILE2

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVE48**SYSPRINT not open - no formatted dump available****Reason:**

This message is written to the system log when the VIP abends and is unable to write a VIP formatted dump to the system print file because it has failed to open.

System Action:

The VIP ends abnormally.

User Action:

Contact Technical Support.

IUVE49

VIP internal abend module P1 reason P2

Reason:

This message is written to the system log when the VIP abends due to an internal error (\$NMDUMP). The VIP module *P1* and reason code *P2* are shown.

System Action:

A VIP formatted dump is written to the system output data set and a system dump requested.

User Action:

Contact Technical Support.

IUVG01

Unidentified record: INDD= P1

Reason:

The VIP has read an unrecognized record from the input file *P1*. This message is followed by the record contents in dump format.

System Action:

The VIP terminates.

User Action:

Check the following:

1. Ensure that the input file matches the VIP operation type. For example, when using the COPY PANELS operation, ensure that the dataset indicated by the INDD parameter is a PANELS dataset.
2. Ensure that you are running the correct version of the VIP and that all maintenance has been supplied, as the VIP may have been updated to support new record types.
3. Check the validity of the indicated file and record. Many files used by the VIP have keys that include hex characters which may have become corrupted if they have been transmitted using FTP etc.

If the problem persists, contact Technical Support and provide the following information:

1. The VIP parameter cards (SYSIN)
2. The VIP output (SYSPRINT)
3. A copy of the input file containing the error

IUVG04

**System error: INDD= P1 OUTDD= P2 FUNCTION= P3 RC= P4 VSAM
CC= P5 VSAM FDBK= P6**

Reason:

An error occurred when trying to access a dataset. **P1** is the last processed input DD name and **P2** the last processed output DD name. The function **P3** indicates the type of file function that was being performed. The internal return code **P4**, VSAM completion code **P5** and VSAM feedback code **P6** are also shown.

System Action:

The VIP processing terminates.

User Action:

Contact Technical Support.

IUVG05**Insufficient storage****Reason:**

The VIP has requested system storage during the processing of a request. No storage is available.

System Action:

The program terminates.

User Action:

Increase the region size and rerun, or simplify the VIP requests to process less requests in a single execution step.

IUVM01**Application register built****Reason:**

A BUILD MODS request has completed successfully.

System Action:

None.

User Action:

None.

IUVM02

Invalid maint record tag

Reason:

The VIP is processing a COPY MODS request with OPT=MAINT specified but a record on the current input file contains an invalid maintenance tag. Valid tags are A|, U|, and D|. Message IUVM03 follows showing the key of the invalid record and the previous occurrence of message IUVR10 details the DD name of the current input file.

OPT=MAINT must only be used with files that have been created using the MODS Compare Definition Utility (*D.AD.U.CM*). It may not be used on files that are designed for OPT=INSTALL.

System Action:

The VIP terminates.

User Action:

Check that the correct input file has been specified. Correct and rerun.

IUVM03

Key= P1

Reason:

This message follows IUVM02 and shows the key of the current record. Refer to message IUVM02 for more details.

System Action:

Refer to IUVM02.

User Action:

Refer to IUVM02.

IUVM04

System error: INDD= P1 OUTDD= P2 Function= P3 RC= P4 VSAM CC= P5 VSAM FDBK= P6

Reason:

An error occurred when trying to access a MODS dataset.

P1 is the last processed input DD name

P2 is the last processed output DD name

P3 indicates the type of file function that was being performed

P4 is the internal return code

P5 is the VSAM completion code

P6 is the VSAM feedback code

System Action:

The VIP processing terminates.

User Action:

Contact Technical Support.

IUVM05**Insufficient storage****Reason:**

The VIP has requested system storage during the processing of a request. No storage is available.

System Action:

The program terminates.

User Action:

Increase the region size and rerun, or simplify the VIP requests to process less requests in a single execution step.

IUVM10

Unknown MODS component - P1, P2; KEY= P3

Reason:

The VIP has read an unrecognized record. *P1/P2* indicate the data values obtained from the key that are not supported. *P3* is the full key value of the record.

System Action:

The record is ignored and the VIP reads the next record. At the end of processing all requests, the VIP will complete with a return code of at least 4.

User Action:

Check that you are using the correct version of the VIP program. If the latest VIP is installed correctly then report the error to Technical Support.

IUVM11

Unknown message - P1; KEY= P2

Reason:

The VIP has read an unrecognized MODS message (\$MS) record. *P1* indicates the message identifier obtained from the key that is not recognized as being owned by an application. *P2* is the full key value of the record.

System Action:

The record is ignored and processing continues. However the process may be incomplete. A minimum return code value of 4 is set.

User Action:

Check that you are using the correct files. This error indicates that there is a mismatch between the applications defined in the application register records and the message records.

IUVM12**No application register entry for Appl= P1 Key= P2****Reason:**

The VIP has read an MODS record for which an application register entry does not currently exist and the record read is not itself an application register definition. *P1* is the required application ID and *P2* is the full key of the record.

System Action:

The record is processed as normal. An internal application register entry is built without message identifier details.

User Action:

Check that you are using the correct files. This error indicates that there is a mismatch between the applications defined in the application register records and the input records being processed.

IUVP02**Non-Panel Services record found****Reason:**

During processing of a VIP COPY PANELS command where OPT=MAINT has been specified, a record other than a Panel Services record has been found on the current input file. Only panel services may be copied using OPT=MAINT.

System Action:

The current request is terminated and totals (so far) are printed. The VIP continues with the next request.

User Action:

The output file will be partially updated and should be restored before correcting the input file and re-running.

IUVP03

Request terminated - incomplete

Reason:

An error has occurred as indicated by a previous message.

System Action:

The current request is incomplete. The VIP continues with the next request.

User Action:

Refer to the user action(s) specified for any prior messages.

IUVP04

System error: INDD= P1 OUTDD= P2 Function= P3 RC= P4 VSAM CC= P5 VSAM FDBK= P6

Reason:

An error occurred trying to access a PANELS data set.

P1 is the last processed input DD name

P2 is the last processed output DD name

P3 indicates the type of file function that was being performed

P4 is the internal return code

P5 is the VSAM completion code

P6 is the VSAM feedback code

System Action:

The VIP processing terminates.

User Action:

Contact Technical Support.

IUVP05**Insufficient storage****Reason:**

The VIP has requested system storage during the processing of a request. No storage is available.

System Action:

The program terminates.

User Action:

Increase the region size and rerun, or simplify the VIP requests to process less requests in a single execution step.

IUVQ01**Warning: Obsolete record type(s) found****Reason:**

During processing of a VIP LIST or COPY OSCNTL command, some obsolete record types were found on the input file. These records are not appropriate for the current version of the VIP and indicate that the input file was prepared for use with a previous version of the VIP.

System Action:

For the COPY function, the obsolete records are copied to the output file. The VIP continues processing all requests but will terminate with return code 4 (and message IUV005 issued).

User Action:

Contact Technical Support.

IUVQ03**Request terminated - incomplete****Reason:**

An error has occurred as indicated by a previous message.

System Action:

The current request is incomplete. The VIP continues with the next request.

User Action:

Refer to the user action(s) specified for any prior messages.

IUVQ04

System error: INDD= P1 OUTDD= P2 Function= P3 RC= P4 VSAM CC= P5 VSAM FDBK= P6

Reason:

An error occurred trying to access an OSCNTL data set.

P1 is the last processed input DD name

P2 is the last processed output DD name

P3 indicates the type of file function that was being performed

P4 is the internal return code

P5 is the VSAM completion code

P6 is the VSAM feedback code

System Action:

The VIP processing terminates.

User Action:

Contact Technical Support.

IUVQ05

Insufficient storage

Reason:

The VIP has requested system storage during the processing of a request. No storage is available.

System Action:

The program terminates.

User Action:

Increase the region size and rerun, or simplify the VIP requests to process less requests in a single execution step.

IUVR01**Appl P1 P2 Record category and type****Reason:**

This message, together with subsequent IUVR02 and IUVR03 messages show record count statistics that are issued for a VIP LIST/COPY/DELETE command for an OSCNTL or PANELS file. This message, IUVR01 is a heading line, and is followed by groups of messages IUVR02 and IUVR03 as follows:

OSCNTL file: Message IUVR02 shows the number of records for a specific record type and message IUVR03 is the total of these for the application or final indicated.

PANELS file: Message IUVR02 is the only message issued. IUVR03 is unused.

The Appl column shows the specific application ID that relates, or "Total" for all application IDs listed. The Record category and type column details the specific record type (IUVR02), or the total type (IUVR03). Depending upon function, one or two record counts and associated headings *P1* and *P2* will be printed as follows:

LIST Command: In the heading *P1* is Records and *P2* is blank. The *P1* column gives the count of records on the current input file. The *P2* column is blank.

DELETE Command: In the heading *P1* is Deleted and *P2* is blank. The *P1* column gives the count of records deleted from the output file. The *P2* column is blank.

COPY Command: In the heading *P1* is Copied and *P2* is Deleted. The *P2* column gives the count of records deleted from the output file before copying. The *P1* column shows the number of records copied from the current file to the output file.

System Action:

None.

User Action:

None.

IUVR02

P1 P2 P3 P4

Reason:

This message, together with messages IUVR01 and IUVR03 show record count statistics that are issued for a VIP LIST/COPY/DELETE command for an OSCNTL or PANELS file. In the message:

P1 is the application ID

P2 and *P3* are record count fields

P4 the specific record type or category Refer to message IUVR01 for further details.

System Action:

None.

User Action:

None.

IUVR03

P1 P2 P3 P4

Reason:

This message, together with messages IUVR01 and IUVR02 show record count statistics that are issued for a VIP LIST/COPY/DELETE OSCNTL file command.

In the message:

P1 is the application ID

P2 and *P3* are record count fields

P4 is the specific total type Refer to message IUVR01 for further details.

System Action:

None.

User Action:

None.

IUVR04**Appl ID Cat Updates Adds Deletes Record category and type****Reason:**

This message, together with subsequent IUVR05 and IUVR06 messages show record count statistics that are issued for a VIP LIST/COPY/DELETE command for a MODS file. This message, IUVR04 is a heading line and is followed by groups of messages IUVR05 and IUVR06 in which:

- The Appl column shows the specific application ID that relates, or "Total" for all application IDs listed.
- Message IUVR06 provides the totals for the preceeding group of IUVR05 messages. IUVR05 shows the total for a specific record type identified in the column headed Record category and type.

System Action:

None.

User Action:

None.

IUVR05**P1 P2 P3 P4 P5 P6 P7****Reason:**

This message, together with messages IUVR04 and IUVR06 show record count statistics that are issued for a VIP LIST/COPY/DELETE command for a MODS file. The fields in this message correspond to the columns in message IUVR04 as follows:

P1 is the application ID

P2 and *P3* are the MODS component and sub-component codes respectively

P4, *P5* and *P6* are the UPDATE, ADD and DELETE record counts respectively

P7 is the record category and type

Refer to the description of message IUVR04 for additional information.

System Action:

None.

User Action:

None.

IUVR06

P1 P2 P3 P4 P5 P6 P7

Reason:

This message, together with messages IUVR04 and IUVR05 show record count statistics that are issued for a VIP LIST/COPY/DELETE command for a MODS file. The fields in this message correspond to the columns in message IUVR04 as follows:

P1 is the application ID

P2 and *P3* are the MODS component and sub-component codes respectively

P4, *P5* and *P6* are the UPDATE, ADD and DELETE record counts respectively

P7 is the specific total type

Refer to the description of message IUVR04 for additional information.

System Action:

None.

User Action:

None.

IUVR10

P1 DDNAME= P2 DSN= P3

Reason:

This message is produced for each DD name opened by the VIP. *P1* may be either Input or Output and relates to the INDD= or OUTDD= operand accordingly. The specific DD name is identified by *P2* and the Dataset Name *P3* is obtained from the run JCL.

System Action:

None.

User Action:

None.

IUVR12**Total records on DD= P1 P2****Reason:**

This message relates to the VIP LIST/COPY command. It shows the total number of records *P2* that have been read from the current input file. *P1* is a current input DD name from the INDD= operand.

System Action:

None.

User Action:

None.

IUVR13**No JCL statement for DD= P1****Reason:**

An attempt to process the file identified by DD= *P1* has failed because there is no JCL statement for the DD name.

System Action:

The request is terminated.

User Action:

Check that the DD name specified is correct. Either correct the VIP request or amend the run JCL to specify the DD name.

IUVR14

Open error: DD= P1 RC= P2 VSAM CC= P3 VSAM FDBK= P4

Reason:

An error occurred during a VIP LIST/COPY/DELETE command when trying to open a data set where:

P1 is the DD name

P2 is the VIP return code, values below

P3 is the VSAM completion code

P4 is VSAM feedback code

VSAM completion codes and feedback codes are listed in the appropriate VSAM manual. VIP return codes are as follows:

14 - VSAM error - refer to completion and feedback codes

18 - Invalid file type: Input File is neither a VSAM file nor a sequential file
Output File is not a VSAM file

1C - Dummy file, unsupported

System Action:

The VIP processing terminates.

User Action:

Use the return code information described above to determine the exact error cause. If the problem persists contact Technical Support.

IUVS05**Keylength incompatible with file type: DDNAME= P1 DSN= P2****Reason:**

On opening a VSAM file, the keylength for the KSDS did not match the requirements for the file type that was specified in the request. The value for each file type is as follows:

File Type	PANELS	MODS	OSCNTL
Key Length	36	75	80

The most likely cause of this error is that the DD card for the specific file has the DSN of the wrong data set. For example:

```
//INDD1 DD DSN=.....PANLDIS LIST MODS INDD=INDD1
```

System Action:

The VIP terminates.

User Action:

Check the DD names specified in the INDD= and OUTDD= parameters. Check the JCL to ensure that the DSN= is for the correct dataset. If necessary use IDCAMS LISTCAT to check the file's attributes. Correct the job and rerun.

Lx Messages

LD0001**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The Language Services external interface procedure \$CALD000 failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2*.

System Action:

The request is rejected and procedure \$CALD000 terminates.

User Action:

Contact the system administrator.

LD0002

VARTABLE *P1* ERROR, FDBK= *P2* ID= *P3* KEY= *P4*

Reason:

Language Services failed during request processing because an error was encountered accessing a variable table. The action being used to access the table was *P1*, the identifier of the table was *P3*, the feedback code was *P2* and the key value used was *P4*.

System Action:

The request is rejected.

User Action:

Interpret the feedback code using the NCL Reference.

LD0101

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= *P1* VALUE= *P2*

Reason:

A request to add, browse or update a language definition failed because procedure \$CALD01P received an invalid keyword value. The keyword was *P1* and the invalid value was *P2*.

System Action:

The request is rejected.

User Action:

Contact the system administrator.

LD0102

INVALID COMMAND

Reason:

An invalid command was entered in the Command field on the Language Description panel.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

LD0103**COMMAND ASSIGNED TO FUNCTION KEY P1 IS INVALID****Reason:**

Function key *P1* was pressed on the Language Description panel and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

LD0104**P1 COMMAND IS NOT ACTIVE ON THIS PANEL****Reason:**

A command was entered in the Command field on the Language Description panel that was a valid command, however, it was not allowed to be specified on that panel. The command was *P1* .

System Action:

The command is rejected.

User Action:

Clear the Command field.

LD0105**LANGUAGE P1 NOT DEFINED****Reason:**

A request to browse or update a language definition failed because the language definition was not defined. The code of the language definition was *P1* .

System Action:

The request is rejected.

User Action:

Specify a language code previously defined and retry.

LD0106

ADD CANCELLED

Reason:

An add language definition request was cancelled.

System Action:

None.

User Action:

None.

LD0107

UPDATE CANCELLED

Reason:

An update language definition request was cancelled.

System Action:

None.

User Action:

None.

LD0108

LANGUAGE DEFINITION P1 ADDED

Reason:

A language definition was successfully added. The code of the language definition was *P1* .

System Action:

None.

User Action:

None.

LD0109**LANGUAGE DEFINITION P1 UPDATED****Reason:**

A language definition was successfully updated. The code of the language definition was *P1* .

System Action:

None.

User Action:

None.

LD0110**P1 MUST BE ENTERED****Reason:**

A value was not entered in the *P1* field on the Language Description panel.

System Action:

The Language Description panel is displayed with the *P1* field set in error.

User Action:

Enter a value in the *P1* field and retry.

LD0111**LANGUAGE P1 ALREADY DEFINED****Reason:**

A request to add a language definition failed because the language definition was already defined. The code of the language definition was *P1* .

System Action:

The request is rejected.

User Action:

Specify a new language code and retry.

LD0112

LIBRARY NOT SELECTED FROM PANEL LIBRARY LIST

Reason:

A Panel Library List was presented but you did not select a panel library.

System Action:

None.

User Action:

Enter a panel library name, or select one from the list.

LD0113

Panel Library MUST BE IN THE CURRENT PANEL PATH

Reason:

A library name was entered in the Panel Library field on the Language Description panel that was not in the user's current panel path.

System Action:

The Language Description panel is displayed with the Panel Library field set in error.

User Action:

Enter a library name in the Panel Library field that is in your current panel path and retry. A question mark (?) can be entered in the Panel Library field to present a list of library names that are in your current panel path from which a selection can be made.

LD0114**Panel Library MUST BE DEFINED AS EDITABLE****Reason:**

A library name was entered in the Panel Library field on the Language Description panel that was defined as non editable.

System Action:

The Language Description panel is displayed with the Panel Library field set in error.

User Action:

Enter a library name in the Panel Library field that is defined as editable and retry. A question mark (?) can be entered in the Panel Library field to present a list of library names that are in your current panel path from which a selection can be made. For each library in the list it shows whether or not it is editable.

LD0115**USERID P1 NOT AUTHORIZED TO ACCESS LANGUAGE DEFINITIONS****Reason:**

A request to access a language definition was denied because the user ID P1 was not authorized. System Support Services authority is required to be able to access language definitions.

System Action:

The request is rejected.

User Action:

None.

LD0201

REQUEST REJECTED, DATA SOURCE NOT DEFINED IN LIST DEFINITION

Reason:

A request to present a list failed because the Data Source field in the list definition was null.

System Action:

The request is rejected.

User Action:

Contact the system administrator.

LD0202

REQUEST REJECTED, DATA SOURCE ' P1' NOT SUPPORTED

Reason:

A request to present a list failed because the Data Source field in the list definition was set to an invalid value.

System Action:

The request is rejected.

User Action:

Contact the system administrator.

LD0203

ACTION NOT SUPPORTED FOR SELECTED ENTRY

Reason:

A request to apply an action to an entry on the Help List failed because the action was not valid for the selected entry. The only valid action for the selected entry is F (Functions).

System Action:

The request is rejected.

User Action:

Change the action to F and retry.

LD0204**VARIABLE ALLOC ERROR, FDBK= P1 ID= P2****Reason:**

A request to present a list of primary commands for an application failed because an error was encountered allocating a variable table. The identifier of the variable table was *P2* and the feedback code was *P1* .

System Action:

The request is rejected.

User Action:

Interpret the feedback code using the NCL Reference.

LD0205**VARIABLE P1 ERROR, FDBK= P2 ID= P3 KEY= P4****Reason:**

A request to present a list of primary commands for an application failed because an error was encountered accessing a variable table. The action being used to access the table was *P1* , the identifier of the table was *P3* , the feedback code was *P2* and the key value used was *P4* .

System Action:

The request is rejected.

User Action:

Interpret the feedback code using the NCL Reference.

LD0301**USERID P1 NOT AUTHORIZED TO ACCESS LANGUAGE DEFINITIONS****Reason:**

A request to access the Language Definition List was denied because the user ID *P1* was not authorized. System Support Services authority is required to be able to access the Language Definition List.

System Action:

The request is rejected.

User Action:

None.

LD0401

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

A request to add or rebuild the components for a language failed because procedure \$CALD04Z received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$CALD04Z terminates.

User Action:

Contact the system administrator.

LD0402

APPLICATION REBUILT

Reason:

The application components for a language were successfully rebuilt.

System Action:

None.

User Action:

None.

LD0501

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

A request to browse or update Common Services presentation elements failed because procedure \$CALD05P received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$CALD05P terminates.

User Action:

Contact the system administrator.

LD0502**INVALID COMMAND****Reason:**

An invalid command was entered in the Command field on one of the Common Services presentation elements panels.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

LD0503**COMMAND ASSIGNED TO FUNCTION KEY P1 IS INVALID****Reason:**

Function key *P1* was pressed on one of the Common Services presentation elements panels and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

LD0504**P1 COMMAND IS NOT ACTIVE ON THIS PANEL****Reason:**

A valid command was entered in the Command field on one of the Common Services presentation elements panels. However the command is not allowed to be specified on this panel. The command was *P1* .

System Action:

The command is rejected.

User Action:

Clear the Command field.

LD0505

COMMON SERVICES PRESENTATION ELEMENTS RECORD NOT FOUND ON DATABASE, LC= P1

Reason:

A request to browse or update the common services presentation elements for a language failed because the presentation elements record for common services was not defined on the database. The language code of the presentation elements to be accessed was **P1** .

System Action:

The request is rejected.

User Action:

Contact the system administrator.

LD0506

UPDATE CANCELLED

Reason:

An update common services presentation elements request was cancelled.

System Action:

None.

User Action:

None.

LD0507

COMMON SERVICES PRESENTATION ELEMENTS UPDATED

Reason:

The common services presentation elements for a language were successfully updated.

System Action:

None.

User Action:

None.

LD0508**P1 MUST BE ENTERED****Reason:**

A value was not entered in the *P1* field on one of the Common Services presentation elements panels.

System Action:

The panel is displayed with the *P1* field set in error.

User Action:

Enter a value in the *P1* field and retry.

LD0509**YES AND NO MUST BE DIFFERENT****Reason:**

The same value was entered in the YES and NO fields on the the Common Services General Elements panel.

System Action:

The Common Services General Elements panel is displayed with the YES and NO fields set in error.

User Action:

Change the value of either the YES or NO field and retry. The YES and NO fields must have different values.

LD0601**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

A request to browse or update MAI presentation elements failed because procedure \$CALD06P received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$CALD06P terminates.

User Action:

Contact the system administrator.

LD0602

INVALID COMMAND

Reason:

An invalid command was entered in the Command field on one of the MAI presentation elements panels.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

LD0603

COMMAND ASSIGNED TO FUNCTION KEY P1 IS INVALID

Reason:

Function key *P1* was pressed on one of the MAI presentation elements panels and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

LD0604

P1 COMMAND IS NOT ACTIVE ON THIS PANEL

Reason:

A valid command was entered in the Command field on one of the MAI presentation elements panels. However it is not allowed to be specified on this panel. The command was *P1* .

System Action:

The command is rejected.

User Action:

Clear the Command field.

LD0605**MAI PRESENTATION ELEMENTS RECORD NOT FOUND ON DATABASE,
LC= P1****Reason:**

A request to browse or update the MAI presentation elements for a language failed because the presentation elements record for MAI was not defined on the database. The language code of the presentation elements to be accessed was P1 .

System Action:

The request is rejected.

User Action:

Contact the system administrator.

LD0606**UPDATE CANCELLED****Reason:**

An update MAI presentation elements request was cancelled.

System Action:

None.

User Action:

None.

LD0607**MAI PRESENTATION ELEMENTS UPDATED****Reason:**

The MAI presentation elements for a language were successfully updated.

System Action:

None.

User Action:

None.

LD0608

P1 MUST BE ENTERED

Reason:

A value was not entered in the *P1* field on one of the MAI presentation elements panels.

System Action:

The panel is displayed with the *P1* field set in error.

User Action:

Enter a value in the *P1* field and retry.

LD0701

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

A request to browse or update an MAI line command definition failed because procedure \$CALD07P received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$CALD07P terminates.

User Action:

Contact the system administrator.

LD0702

INVALID COMMAND

Reason:

An invalid command was entered in the Command field on the MAI Line Command Definition panel.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

LD0703**COMMAND ASSIGNED TO FUNCTION KEY P1 IS INVALID****Reason:**

Function key *P1* was pressed on the MAI Line Command Definition panel and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

LD0705**MAI LINE COMMAND P1 NOT FOUND ON DATABASE****Reason:**

A request to browse or update an MAI line command failed because the string definition record for the command was not defined on the database. The internal ID of the string definition was *P1* .

System Action:

The request is rejected.

User Action:

Contact the system administrator.

LD0706**UPDATE CANCELLED****Reason:**

An update MAI line command request was cancelled.

System Action:

None.

User Action:

None.

LD0707

MAI LINE COMMAND P1 UPDATED

Reason:

An MAI line command was successfully updated. The ID of the command was *P1* .

System Action:

None.

User Action:

None.

LD0708

User Description MUST BE ENTERED

Reason:

A value was not entered in the User Description field on the MAI Line Command Definition panel.

System Action:

The MAI Line Command Definition panel is displayed with the User Description field set in error.

User Action:

Enter a value in the User Description field and retry.

LD0801

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

A request to add, browse, update or delete a primary command definition failed because procedure \$CALD08P received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$CALD08P terminates.

User Action:

Contact the system administrator.

LD0802**INVALID COMMAND****Reason:**

An invalid command was entered in the Command field on the Primary Command Definition panel.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

LD0803**COMMAND ASSIGNED TO FUNCTION KEY P1 IS INVALID****Reason:**

Function key *P1* was pressed on the Primary Command Definition panel and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

LD0804**PRIMARY COMMAND P1 NOT FOUND ON DATABASE****Reason:**

A request to copy, browse, update or delete a primary command failed because the string definition record for the command was not defined on the database. The internal ID of the string definition was *P1*.

System Action:

The request is rejected.

User Action:

Contact the system administrator.

LD0805

ADD CANCELLED

Reason:

An add primary command request was cancelled.

System Action:

None.

User Action:

None.

LD0806

UPDATE CANCELLED

Reason:

An update primary command request was cancelled.

System Action:

None.

User Action:

None.

LD0807

PRIMARY COMMAND P1 ADDED

Reason:

A primary command was successfully added. The ID of the command was *P1* .

System Action:

None.

User Action:

None.

LD0808**PRIMARY COMMAND P1 UPDATED****Reason:**

A primary command was successfully updated. The ID of the command was *P1* .

System Action:

None.

User Action:

None.

LD0809**PRIMARY COMMAND P1 DELETED****Reason:**

A primary command was successfully deleted. The ID of the command was *P1* .

System Action:

None.

User Action:

None.

LD0810**P1 MUST BE ENTERED****Reason:**

A value was not entered in the *P1* field on the Primary Command Definition panel.

System Action:

The Primary Command Definition panel is displayed with the *P1* field set in error.

User Action:

Enter a value in the *P1* field and retry.

LD0811

PRIMARY COMMAND P1 NOT ELIGIBLE FOR DELETION

Reason:

A request to delete a primary command failed because it was not eligible for deletion. The ID of the command was *P1* . For a primary command to be eligible for deletion it must be an abbreviation of another command. For example, the H command can be deleted because it is an abbreviation of the HIDE command, where as the HIDE command cannot be deleted as it is not an abbreviation of another command.

System Action:

The delete request is rejected.

User Action:

None.

LD0812

PRIMARY COMMAND P1 ALREADY DEFINED

Reason:

A primary command was entered in the Command ID field on the Primary Command Definition panel that was already defined. The command ID entered was *P1* .

System Action:

The Primary Command Definition panel is displayed with the Command ID field set in error.

User Action:

Enter a primary command in the Command ID field that is not already defined and retry.

LD0813**VARTABLE P1 ERROR, FDBK= P2 ID= P3 KEY= P4****Reason:**

An error was encountered accessing a variable table while processing an add, browse, update or delete primary command definition request. The action being used to access the table was *P1* , the identifier of the table was *P3* , the feedback code was *P2* and the key value used was *P4* .

System Action:

This error message is displayed.

User Action:

Interpret the feedback code using the NCL Reference.

LD0814**INTERNAL ID P1 NOT DEFINED****Reason:**

An internal ID was entered in the Internal ID field on the Primary Command Definition panel that was not previously defined. The internal ID entered was *P1* .

System Action:

The Primary Command Definition panel is displayed with the Internal ID field set in error.

User Action:

Enter an internal ID previously defined and retry. A question mark (?) can be entered in the Internal ID field to present a list of previously defined internal IDs from which a selection can be made.

LD0901

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

Language Services procedure \$CALD09Z failed during request processing because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure \$CALD09Z terminates.

User Action:

Contact the system administrator.

LD0902

APPLICATION P1 ACTIVATED FOR LANGUAGE P2

Reason:

The application *P1* was successfully activated for the language code *P2* .

System Action:

The application is made available in the specified language to users with a corresponding language code. Each time Language Services is initialised it will make the application available in this language.

User Action:

None.

LD0903

APPLICATION P1 INACTIVATED FOR LANGUAGE P2

Reason:

The application *P1* was successfully inactivated for the language code *P2* . Inactive applications are not made available in the specified language when Language Services is being initialized.

System Action:

The application is disabled for the specified language.

User Action:

None.

LD0904**APPLICATION P1 INITIALIZED FOR LANGUAGE P2****Reason:**

The application *P1* was successfully initialized for the language code *P2* .

System Action:

The application is made available in the specified language to users with a corresponding language code.

User Action:

None.

LD0905**APPLICATION P1 TERMINATED FOR LANGUAGE P2****Reason:**

The application *P1* was successfully terminated for the language code *P2*.

System Action:

The application is disabled for the specified language.

User Action:

None.

LD0906**VARIABLE ALLOC ERROR, FDBK= P1 ID= P2****Reason:**

A request to initialize an application for a language failed because an error was encountered allocating a variable table. The identifier of the table was *P2* and the feedback code was *P1* .

System Action:

The request is rejected.

User Action:

Interpret the feedback code using the NCL Reference.

LD0907

VARIABLE P1 ERROR, FDBK= P2 ID= P3 KEY= P4

Reason:

A request to initialize or terminate an application for a language failed because an error was encountered accessing a variable table. The action being used to access the table was *P1* , the identifier of the table was *P3* , the feedback code was *P2* and the key value used was *P4* .

System Action:

The request is rejected.

User Action:

Interpret the feedback code using the NCL Reference.

LD0908

INITIALIZATION COMPLETE, P1 ERRORS OCCURRED

Reason:

The initialization of all active applications completed with *P1* errors occurring during processing.

System Action:

Errors that occurred during processing are written to the activity log.

User Action:

If errors occurred during processing refer to the activity log for further details.

LD0909

TERMINATION COMPLETE, P1 ERRORS OCCURRED

Reason:

The termination of all active applications completed with *P1* errors occurring during processing.

System Action:

Errors that occurred during processing are written to the activity log.

User Action:

If errors occurred during processing refer to the activity log for further details.

LD0910**APPLICATION P1 ALREADY INITIALIZED FOR LANGUAGE P2****Reason:**

A request to initialize application *P1* for language code *P2* failed because the application was already initialized for that language code.

System Action:

The request is rejected.

User Action:

None.

LD0911**APPLICATION P1 ALREADY ACTIVE FOR LANGUAGE P2****Reason:**

A request to activate application *P1* for language code *P2* failed because the application was already active for that language code.

System Action:

The request is rejected.

User Action:

None.

LD0912**APPLICATION P1 ALREADY INACTIVE FOR LANGUAGE P2****Reason:**

A request to inactivate application *P1* for language code *P2* failed because the application was already inactive for that language code.

System Action:

The request is rejected.

User Action:

None.

LD1001

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

Language Services procedure \$CALD10D failed during request processing because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure \$CALD10D terminates.

User Action:

Contact the system administrator.

LD1002

VFS UNAVAILABLE, FILERC= P1

Reason:

A request to access a language status record failed because procedure \$CALD10D was unable to open the VFS File. The return code from the &FILE statement was *P1* .

System Action:

The request is rejected and procedure \$CALD10D terminates.

User Action:

Interpret the feedback code using the NCL Reference.

LD1003

VSAM ERROR, FILE=VFS REQ= P1 RC= P2 FDBK= P3 KEY= P4

Reason:

A request to access a language status record failed because procedure \$CALD10D encountered an error accessing the VFS file. The file request that failed was *P1* , the file return code was *P2* , the VSAM feedback code was *P3* and the key of the record was *P4* .

System Action:

The request is rejected and procedure \$CALD10D terminates.

User Action:

Interpret the file return code using the NCL Reference and the the feedback code using the VSAM Programmer's Guide or the VSAM Administration: Macro Instruction Reference for installations with DFP.

LD1301

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

A request to browse a string definition failed because procedure \$CALD13P received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$CALD13P terminates.

User Action:

Contact the system administrator.

LD1302

INVALID COMMAND

Reason:

An invalid command was entered in the Command field on the String Definition panel.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

LD1303

COMMAND ASSIGNED TO FUNCTION KEY P1 IS INVALID

Reason:

Function key *P1* was pressed on the String Definition panel and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

LD1304

STRING NOT DEFINED, APPL= P1 CLASS= P2 ID= P3 SEQ= P4

Reason:

A request to browse a string definition failed because the definition was not defined on the database. The application ID of the definition was *P1* , the class was *P2* , the internal ID was *P3* and the sequence number was *P4* .

System Action:

The request is rejected.

User Action:

Specify a string definition previously defined and retry.

LD1401**USERID P1 NOT AUTHORIZED TO ACCESS LANGUAGE DEFINITIONS****Reason:**

A request to access the Language List was denied because the user ID P1 was not authorized. System Support Services authority is required to be able to access the Language List.

System Action:

The request is rejected.

User Action:

None.

LD1402**LANGUAGE P1 ALREADY ACTIVE****Reason:**

A request to activate language code *P1* failed because the language was already active.

System Action:

The request is rejected.

User Action:

None.

LD1403**LANGUAGE P1 ALREADY INACTIVE****Reason:**

A request to inactivate language code *P1* failed because the language was already inactive.

System Action:

The request is rejected.

User Action:

None.

LD1404

LANGUAGE P1 ACTIVATED

Reason:

A language was successfully activated. The code of the language was *P1* .

System Action:

None.

User Action:

None.

LD1405

LANGUAGE P1 INACTIVATED

Reason:

A language was successfully inactivated. The code of the language was *P1* .

System Action:

None.

User Action:

None.

LH0002

Unsupported return code received from procedure P1, RC= P2

Reason:

List Handler failed during request processing because it received an unknown return code from a procedure. The name of the procedure was *P1* and the unknown return code was *P2* .

System Action:

The request is rejected and List Handler terminates.

User Action:

Contact your System Administrator.

LH0003**List P1. P2. P3. P4 not defined****Reason:**

A request to get or display a list failed because the list definition was not defined or the information in the list cache was incorrect. The information in the list cache can become incorrect when list definitions are added to the MODS file using the Definition Utility move or copy functions. The Definition Utility does not update the list cache when it moves or copies list definitions. The list to access belongs to application ID *P1* , its type is *P2* , its owner's user ID if private is *P3* ,and its name is *P4* .

System Action:

The request is rejected.

User Action:

If the list is defined on the MODS file, reset the list cache (option R on the CAS : List Definition Menu) and retry the request; otherwise, specify a list previously defined and retry.

LH0005**? in P1 can only be preceded by alphanumerics and nationals****Reason:**

A question mark (?) was entered in the *P1* field and was preceded by an invalid value. The value preceding the ? contained characters other than alphabetics (A - Z), numerics (0-9) and nationals (@, # and \$).

System Action:

The panel is displayed with the *P1* field set in error.

User Action:

Correct the value in the *P1* field and retry.

LH0007

Request denied, list P1. P2. P3. P4 inactive

Reason:

A request to display a list was denied because the list definition was inactive. The list to display belongs to appl ID *P1* , with type *P2* , and owner's user ID (if private) of *P3* ,and named *P4* .

System Action:

The request is rejected.

User Action:

Change the status defined in the list definition to ACTIVE and retry.

LH0009

No lists defined within specified range

Reason:

A request to get lists failed because there are no lists defined in the range specified.

System Action:

The request is rejected.

User Action:

None.

LH0010

List cache reset

Reason:

List definitions are saved in a cache when used. The request to reset (clear) the cache was successful.

System Action:

The cache is cleared.

User Action:

None.

LH0011**Format list P1 in P2. P3. P4. P5 refers format list****Reason:**

A request to display a list failed because the format list specified in the list definition refers to a format list. A format list must contain the list formatting information - it cannot refer to another format list. The name of the list referring to another format list is *P1* . The list to display belongs to appl ID *P2* , its type is *P3* , its owner's user ID if private is *P4* ,and its name was *P5* .

System Action:

The request is rejected.

User Action:

Change the format list to contain the formatting information and retry.

LH0012**Format list P1 in P2. P3. P4. P5 not defined****Reason:**

A request to display a list failed because the format list specified in the list definition is not defined. The name of the list not defined is *P1* . The list to display belongs to application ID *P2* , its type is *P3* , its owner's user ID if private is *P4* ,and its name is *P5* .

System Action:

The request is rejected.

User Action:

Change the format list in the list definition to a previously defined list and retry.

LH1103

P1 command is not active on this panel

Reason:

A command was entered in the Command field on the List Description or List Criteria panel that was a valid command; however, it was not allowed to be specified on that panel.

System Action:

The command is rejected.

User Action:

Clear the Command field.

LH1114

Command assigned to function key P1 is invalid

Reason:

Function key *P1* was pressed on the List Description or List Criteria panel and the command assigned to it is invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

LH1115

A format must be specified or the Format List fields must be entered

Reason:

A request to file or save a list definition was rejected because a format was not entered on the List Format panel or the name of a list definition was not entered in the Format List fields on the List Criteria panel.

System Action:

The file or save request is rejected.

User Action:

Enter a format on the List Format panel or the name of a list definition in the Format List fields on the List Criteria panel, and then retry.

LH1116**List Format and Format List fields are mutually exclusive****Reason:**

A request to file or save a list definition was rejected because a format was entered on the List Format panel and the name of a list definition was entered in the Format List fields on the List Criteria panel.

System Action:

The file or save request is rejected.

User Action:

Clear the format on the List Format panel or the Format List fields on the List Criteria panel, and then retry.

LH1117**Format list P1. P2. P3. P4 not defined****Reason:**

A request to file or save a list definition was rejected because the list definition entered in the Format List fields on the List Criteria panel is not defined. The list not defined belongs to application ID *P1* , its type is *P2* , its owner's user ID (if private) is *P3* , and its name is *P4* .

System Action:

The file or save request is rejected.

User Action:

Specify a list previously defined in the Format List fields on the List Criteria panel and retry.

LH1118

Presentation Attributes and Format List fields are mutually exclusive

Reason:

A request to file or save a list definition was rejected because data was entered on the List Entry Line Presentation Attributes panel and the name of a list definition was entered in the Format List fields on the List Criteria panel.

System Action:

The file or save request is rejected.

User Action:

Clear the fields on the List Entry Line Presentation Attributes panel or the Format List fields on the List Criteria panel and retry.

LH1201

Unsupported field name received from \$CAGP000, field= P1

Reason:

The validation exit \$CALH12X for the List Description and List Criteria panel received an unknown field name from procedure \$CAGP000. The name of the field is *P1* .

System Action:

Procedure \$CALH12X terminates.

User Action:

Contact your System Administrator.

LH1202

P1 must be PU(blic) or PR(ivate)

Reason:

An invalid value was entered in the *P1* field on the List Description or List Criteria panel.

System Action:

The panel is displayed with the *P1* field set in error.

User Action:

Enter PUBLIC or PRIVATE in the *P1* field and retry. The first two characters need to be entered only.

LH1203**P1 must not be entered when P2 set to P3****Reason:**

P3 was entered in the *P2* field on the List Description or List Criteria panel and a value was entered in the *P1* field.

System Action:

The panel is displayed with the *P1* field set in error.

User Action:

Clear the *P1* field or change the value of the *P2* field and retry.

LH1204**Public list P1 already defined****Reason:**

A list name was entered in the List Name field on the List Description or List Criteria panel that was previously defined. The list name entered is *P1* and it is a public list.

System Action:

The panel is displayed with the List Name field set in error.

User Action:

Enter a list name not previously defined and retry.

LH1205**Private list P1 for userid P2 already defined****Reason:**

A list name was entered in the List Name field on the List Description List Criteria panel that was previously defined. The list name entered is *P1* and it is a private list owned by user ID *P2* .

System Action:

The panel is displayed with the List Name field set in error.

User Action:

Enter a list name not previously defined and retry.

LH1206

P1 must be in the range 1 to P2

Reason:

An invalid value was entered in the *P1* field on the List Description panel.

System Action:

The List Description panel is displayed with the *P1* field set in error.

User Action:

Enter a value in the range 1 to *P2* in the *P1* field and retry.

LH1207

P1 must be entered when P2 is set to P3

Reason:

P3 was entered in the *P2* field on the List Criteria panel and a value was not entered in the *P1* field.

System Action:

The List Criteria panel is displayed with the *P1* field set in error.

User Action:

Enter a value in the *P1* field or change the value of the *P2* field and retry.

LH1208

P1 must not be entered when P2 not entered

Reason:

A value was not entered in the *P2* field on the List Criteria panel and a value was entered in the *P1* field.

System Action:

The List Criteria panel is displayed with the *P1* field set in error.

User Action:

Clear the *P1* field or enter a value in the *P2* field and retry.

LH1210**P1 must be A(ctive) or I(nactive)****Reason:**

An invalid value was entered in the *P1* field on the List Description panel.

System Action:

The List Description panel is displayed with the *P1* field set in error.

User Action:

Enter ACTIVE or INACTIVE in the *P1* field and retry. The first character needs to be entered only.

LH1211**P1 must not be set to FREEFORM when P2 is entered****Reason:**

FREEFORM was entered in the *P1* field on the List Criteria panel and a value was also entered in the *P2* field.

System Action:

The List Criteria panel is displayed with the *P1* field set in error.

User Action:

Change the value of the *P1* field or clear the *P2* field and retry.

LH1212**P1 must not be entered when P2 is not entered****Reason:**

A value was not entered in the *P2* field on the List Entry Line Presentation Attributes panel and a value was entered in the *P1* field.

System Action:

The List Entry Line Presentation Attributes panel is displayed with the *P1* field set in error.

User Action:

Enter a value in the *P2* field or clear the *P1* field and retry.

LH1213

P1 must be entered when P2 is set to P3

Reason:

P3 was entered in the *P2* field on the List Entry Line Presentation Attributes panel and a value was not entered in the *P1* field.

System Action:

The List Entry Line Presentation Attributes panel is displayed with the *P1* field set in error.

User Action:

Enter a value in the *P1* field or clear the *P2* field and retry.

LH1501

Public list P1 P2

Reason:

A list definition was successfully added, updated, or deleted. The name of the list definition is *P1* and it is a public list. The action successfully performed was *P2* .

System Action:

None.

User Action:

None.

LH1502

Private list P1 for userid P2 P3

Reason:

A list definition was successfully added, updated, or deleted. The name of the list definition is *P1* and it is a private list owned by user ID *P2* . The action successfully performed was *P3* .

System Action:

None.

User Action:

None.

LH1503**Public list P1 already defined****Reason:**

A request to add a list definition failed because the list definition is already defined. The name of the list is *P1* and it is a public list.

System Action:

The request is rejected.

User Action:

Specify a list name not previously defined and retry.

LH1504**Private list P1 for userid P2 already defined****Reason:**

A request to add a list definition failed because the list definition is already defined. The name of the list is *P1* and it is a private list owned by user ID *P2* .

System Action:

The request is rejected.

User Action:

Specify a list name not previously defined and retry.

LH1505**Public list P1 not defined****Reason:**

A request to browse, update, delete, or copy a list definition failed because the list definition is not defined. The name of the list is *P1* and it is a public list.

System Action:

The request is rejected.

User Action:

Specify a list name previously defined and retry.

LH1506

Private list P1 for userid P2 not defined

Reason:

A request to browse, update, delete, or copy a list definition failed because the list definition is not defined. The name of the list is *P1* and it is a private list owned by user ID *P2* .

System Action:

The request is rejected.

User Action:

Specify a list name previously defined and retry.

LH1605

Line P1 invalid, P2 list comment line already entered

Reason:

A comment line was entered in format line *P1* that was already specified. The invalid comment line was for a *P2* list.

System Action:

The List Format panel is redisplayed.

User Action:

Change line *P1* so that it is not a comment line for a *P2* list and retry.

LH1606

Heading starting at line P1 exceeds maximum of 10 lines

Reason:

A heading was entered that consisted of more than 10 lines. The first line of the heading is line *P1* of the format.

System Action:

The List Format panel is redisplayed.

User Action:

Change the heading to be from 1- to 10-lines and retry.

LH1607**Entry Line Field in column P1 on line P2 must be 1 to 12 characters****Reason:**

An invalid Entry Line Field name was entered in format line *P2* starting at column *P1* . The Entry Line Field name entered was not 1- to 12- alphabetic (A - Z), numeric (0-9) and/or national (@, # and \$) characters starting with an alphabetic or national character.

System Action:

The List Format panel is redisplayed.

User Action:

Change the name of the Entry Line Field to be 1- to 12- alphanumeric and/or national characters starting with an alphabetic or national character and retry.

LH1608**Entry Line Field ' P1' in column P2 on line P3 is a reserved ncl keyword****Reason:**

An invalid Entry Line Field name was entered in format line *P3* starting at column *P2* . The Entry Line Field name entered is a reserved NCL keyword. The name of the Entry Line Field is *P1* .

System Action:

The List Format panel is redisplayed.

User Action:

Change the name of the Entry Line Field to a name that is not a reserved NCL keyword and retry.

LH1609

Maximum of 10 screen formats exceeded

Reason:

The format for a list definition was entered that consists of more than 10 screen formats.

System Action:

The List Format panel is redisplayed.

User Action:

Change the format to consist of 1- to 10- screen formats and retry.

LH1614

A format must be specified or the Format List fields must be entered

Reason:

A request to save a list definition was rejected because a format was entered on the List Format panel or the name of a list definition was entered in the Format List fields on the List Criteria panel.

System Action:

The save request is rejected.

User Action:

Enter a format on the List Format panel or the name of a list definition in the Format List fields on the List Criteria panel, and then retry.

LH1615

List Format and Format List fields are mutually exclusive

Reason:

A request to save a list definition was rejected because a format was entered on the List Format panel and the name of a list definition was entered in the Format List fields on the List Criteria panel.

System Action:

The save request is rejected.

User Action:

Clear the format on the List Format panel or the Format List fields on the List Criteria panel, and then retry.

LH1616**Heading must be entered for screen format P1 before line P2****Reason:**

A screen format was entered that did not contain at least one heading line. The number of the screen format is *P1* and the format line before which the the heading must be inserted is *P2* .

System Action:

The List Format panel is redisplayed.

User Action:

Change screen format *P1* to include at least one heading line by inserting a heading before format line *P2* and retry.

LH1617**Entry line must be entered for screen format P1 on line P2****Reason:**

A screen format was entered that did not contain an entry line. The number of the screen format is *P1* and the format line that did not contain an entry line is *P2* .

System Action:

The List Format panel is redisplayed.

User Action:

Change screen format *P1* to include an entry line at format line *P2* and retry.

LH1618**Screen format must be entered when a comment line is entered****Reason:**

The format for a list definition was entered that consisted of a comment line and no screen format. At least one screen format must be entered when a comment line is entered.

System Action:

The List Format panel is redisplayed.

User Action:

Change the format to include at least one screen format and retry.

LH1619

Presentation Attributes and Format List fields are mutually exclusive

Reason:

A request to file or save a list definition was rejected because data was entered on the List Entry Line Presentation Attributes panel and the name of a list definition was entered in the Format List fields on the List Criteria panel.

System Action:

The file or save request is rejected.

User Action:

Clear the fields on the List Entry Line Presentation Attributes panel or the Format List fields on the List Criteria panel, and then retry.

LH1703

P1 command is not active on this panel

Reason:

A command was entered in the Command field on the List Entry Line Fields panel that was a valid command; however, it was not allowed to be specified on that panel.

System Action:

The command is rejected.

User Action:

Clear the Command field.

LH1705**Attribute ID ' P1' is a reserved ncl keyword****Reason:**

An invalid attribute ID was entered in an Attribute ID field on the List Entry Line Fields panel. The attribute ID entered was a reserved NCL keyword. The ID of the attribute is *P1* .

System Action:

The List Entry Line Fields panel is displayed with the Attribute ID field set in error.

User Action:

Change the ID of the attribute to an ID that is not a reserved NCL keyword and retry.

LH1706**Attribute ID must contain alphanumeric and national characters only****Reason:**

An invalid attribute ID was entered in an Attribute ID field on the List Entry Line Fields panel. The attribute ID entered was not 1- to 12- alphabetic (A - Z), numeric (0-9) and/or national (@, # and \$) characters starting with an alphabetic or national character.

System Action:

The List Entry Line Fields panel is displayed with the Attribute ID field set in error.

User Action:

Change the ID of the attribute to be 1 to 12 alphanumeric and/or national characters starting with an alphabetic or national character and retry.

LH1713

Command assigned to function key P1 is invalid

Reason:

Function key *P1* was pressed on the List Entry Line Fields panel and the command assigned to it is invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

LH1714

A format must be specified or the Format List fields must be entered

Reason:

A request to save a list definition was rejected because a format was entered on the List Format panel or the name of a list definition was entered in the Format List fields on the List Criteria panel.

System Action:

The save request is rejected.

User Action:

Enter a format on the List Format panel or the name of a list definition in the Format List fields on the List Criteria panel, and then retry.

LH1715

List Format and Format List fields are mutually exclusive

Reason:

A request to save a list definition was rejected because a format was entered on the List Format panel and the name of a list definition was entered in the Format List fields on the List Criteria panel.

System Action:

The save request is rejected.

User Action:

Clear the format on the List Format panel or the Format List fields on the List Criteria panel, and then retry.

LH1716**Presentation Attributes and Format List fields are mutually exclusive****Reason:**

A request to file or save a list definition was rejected because data was entered on the List Entry Line Presentation Attributes panel and the name of a list definition was entered in the Format List fields on the List Criteria panel.

System Action:

The file or save request is rejected.

User Action:

Clear the fields on the List Entry Line Presentation Attributes panel or the Format List fields on the List Criteria panel, and then retry.

LH1904**No lists defined within specified range****Reason:**

A request to present a List list failed because there are no lists defined in the range specified.

System Action:

The request is rejected.

User Action:

None.

LH1905**List P1 deleted by another user****Reason:**

The selection of a list from the List list failed because the list was deleted by another user since the List list was displayed. The name of the list selected is *P1* .

System Action:

The selection of the list is rejected.

User Action:

None.

LH2001

Unsupported call type received from \$CASL000, calltype= P1

Reason:

A request to display a list failed because procedure \$CALH20L received an unknown call type in variable &\$SLCALLTYPE from procedure \$CASL000. The unknown call type is *P1* .

System Action:

Procedure \$CALH20L terminates and the request is rejected

User Action:

Contact your System Administrator.

LH2004

P1 procedure not found, proc= P2

Reason:

A request to display a list failed because the list exit or service procedure for the list was not found in the procedure library. The type of procedure not found is *P1* and the name of the procedure is *P2* .

System Action:

The request is rejected.

User Action:

Correct the list exit or service procedure name in the list definition or create the procedure, and then retry.

LH2005**Invalid return code received from P1, proc= P2 RC= P3****Reason:**

A request to display a list failed because the list exit or service procedure returned an invalid return code. The type of procedure is *P1* , the name of the procedure is *P2* , and the invalid return code is *P3* .

System Action:

The request is rejected.

User Action:

Correct the setting of the return code by the list exit or service procedure and retry.

LH2006**RC 4 from P1 invalid when &\$LHOPT set to P2, proc= P3****Reason:**

A request to display a list failed because the list exit or service procedure returned a return code that was not valid for the option set in variable &\$LHOPT. The type of procedure is *P1* , the value of variable &\$LHOPT is *P2* , and the name of the procedure is *P3* .

System Action:

The request is rejected.

User Action:

Correct the setting of the return code by the list exit or service procedure and retry.

LH2007

No entries to display

Reason:

A request to display a list failed because there were no entries to display.

System Action:

None.

User Action:

None.

LH2008

Entry not selected from list

Reason:

A list was displayed and an entry was not selected.

System Action:

None.

User Action:

None.

LH2011

Command parameter invalid

Reason:

A command was entered in the Command field that is a valid command; however, the command parameter is invalid.

System Action:

The command is rejected.

User Action:

Correct the command parameter and retry.

LH2012**' P1' option not supported by service procedure****Reason:**

List Handler called the service procedure for list to process an option; however, the option is not supported by the service procedure. The option to process is *P1* .

System Action:

The request is rejected.

User Action:

None.

LH2013**&\$LH ACTIONS not set to available actions by service proc, proc= P1****Reason:**

A request to display a list failed because the service procedure did not set variable &\$LH ACTIONS to the available actions. The name of the service procedure is P1 .

System Action:

The request is rejected.

User Action:

If the list is to be presented as an action list, modify the service procedure to set variable &\$LH ACTIONS and retry.

LH2014

RC 8 from P1 and &SYMSG null, proc= P2

Reason:

During a request to display a list, the service procedure or list exit set returned code 8 and did not set variable &SYMSG to an error message. The type of procedure is *P1* and the name of the procedure is *P2* .

System Action:

None.

User Action:

Correct the list exit or service procedure to set &SYMSG to an error message and retry.

LI0201

APPC RECEIVE ERROR OCCURRED ON SOLVE:OPS OV/NV LINK. RC/FB= P1/ P2

Reason:

An APPC receive error starting the conversation that sends events to the workstation event manager.

System Action:

SOLVE:Operations OV/NV event flow terminates.

User Action:

Check installation details for SOLVE:Operations OV/NV client on the workstation and also on the product region server.

LI0202**APPC SEND ERROR SENDING EVENTS IN SOLVE:OPS OV/NV. RC/FB= P1/ P2****Reason:**

An APPC SEND error occurred while sending events to the workstation event manager.

System Action:

SOLVE:OPS OV/NV event flow terminates.

User Action:

Check that workstation is active. Check that link is still active. Check Installation of SOLVE:Ops OV/NV on workstation and on the SOLVE server region.

LI0203**ERROR ENCODING SOLVE:OPS OV/NV EVENT INTO SNMP TRAP. RC/FB= P1/ P2****Reason:**

An error occurred while BER encoding a SOLVE:Ops OV/NV event into an SNMP trap for sending to the workstation event manager.

System Action:

Skips this event without sending it and waits for the next.

User Action:

Contact systems programmer. Check installation, including ASN1 maps are compiled on this version of Management Services.

LI0204

PROFILE COMMAND FAILED

Reason:

An error occurred when a procedure in SOLVE:Ops OV/NV tried to profile itself for a certain event type.

System Action:

SOLVE:Ops OV/NV server terminates.

User Action:

Check SOLVE:Ops OV/NV userid Event Distribution Services (EDS) authority.
Contact technical support.

LI0205

SOLVE:OPS OV/NV SNMP TRAP FLOW TERMINATING, TERMINATE EVENT RECEIVED

Reason:

The SOLVE:Ops OV/NV SNMP trap flow is terminating because it received a termination event, probably as the result of a terminate command.

System Action:

SOLVE:Ops OV/NV server terminates completely.

User Action:

Re-start SOLVE:Ops OV/NV from workstation if required.

LI0207**SOLVE:Ops OV/NV event overflow. Events discarded.****Reason:**

The SOLVE:Operatins OV/NV process that receives events and sends them as traps to the workstation has reached its queue limit, and events received are discarded.

The NMIQLIM parameter controls the maximum size of the event queue. The default for this is 32767.

System Action:

Events are discarded until queue size drops.

User Action:

Investigate why so many events are queued.

LI0208**SOLVE:OPS OV/NV ERROR ENCODING ALERT EVENT TRAP.
ZMDORC/FB= P1/ P2****Reason:**

An error occurred trying to BER encode an event in to an SNMP trap.

P1 is the ZMDORC value,

P2 is the ZMDOFDBK value.

System Action:

SOLVE:Ops OV/NV processing terminates.

User Action:

Contact technical support.

LI0209

ERROR STARTING SOLVE:Ops OV/NV LINK MONITOR, RC/MSG= P1/P2

Reason:

An error occurred trying to start the link monitor in SOLVE:Ops OV/NV.
P1 is the return code from the start.
P2 is any error message returned from the start.

System Action:

SOLVE:Ops OV/NV processing terminates.

User Action:

Contact technical support.

LI0210

SOLVE:OPS OV/NV SNMP TRAP FLOW STARTED TO &P1

Reason:

SOLVE:Ops OV/NV has been started from the workstation, and the SNMP trap sender has been activated.
P1 is the host name of the workstation to which the events are sent.

System Action:

SOLVE:Ops OV/NV should receive events as they arise.

User Action:

None. (Informational)

LI0211**SOLVE:OPS OV/NV TRAP FLOW NOT STARTED. SOLVE:OPS OV/NV NOT CONFIGURED.****Reason:**

A workstation peer system running SOLVE:Ops OV/NV attempted to open an SNMP trap flow from this SOLVE:Operations region, however this region is not configured to use SOLVE:Ops OV/NV, so the connection was rejected. SOLVE:Ops OV/NV is configured by setting the SOLVE:Operations \$RM WSPEER Customisation parameter group.

System Action:

The SOLVE:Operations component of SOLVE:Ops OV/NV is not started.

User Action:

To configure SOLVE:Operations to connect to a SOLVE:Ops OV/NV system, update the \$RM WSPEER Customisation parameter group in SOLVE:Operations.

LI0212**SOLVE:OPS OV/NV TRAP FLOW NOT STARTED. SOCKET ERROR. RC/FB=&P1/&P2.****Reason:**

A Socket error occurred while trying to start the flow of SNMP traps from SOLVE:Operations to SOLVE:Ops OV/NV running on a workstation.

System Action:

The SOLVE:Operations component of SOLVE:Ops OV/NV is not started.

User Action:

Check that the \$RM WSPEER parameter group in SOLVE:Operations has been configured correctly. Check that the TCP/IP port numbers are not in use by any other applications.

LI0213

ALERT MONITOR ERROR: P1

Reason:

An error occurred when the alert monitor was invoked to create an agent to receive alerts that are to be sent to SOLVE:Operations for OpenView and NetView. *P1* contains more details of the error.

System Action:

The SOLVE:Operations for OpenView and NetView server terminates.

User Action:

Contact your support representative.

LI0214

SOLVE:LINK RECEIVED INVALID PARAMETER FROM CLIENT P1 P2= P3

Reason:

The SOLVE:Link event monitor terminated because it received an invalid startup parameter from the workstation P1 is the workstation host name (if known) P2 is the parameter that was in error P3 is the invalid parameter value that was supplied

System Action:

The SOLVE:Link event monitor process terminates.

User Action:

Make sure the version of SOLVE:Link on the workstation is compatible with the version of Management Services.

LI0215**TRAP OVERFLOW TO P1, P2 MESSAGE(S) LOST****Reason:**

A failed connection to a workstation has resulted in *P2* messages being lost. The workstation's sysid is *P1*.

System Action:

Message pooling continues.

User Action:

Check the log for additional messages that indicate the reason that the link to the workstation failed and correct the problem.

LI0216**ERROR QUEUING INIT STRING, RC=*P1* SYSID=*P2*****Reason:**

An attempt to recover a link to a workstation failed. The initialization string could not be queued to the existing server. The return code was *P1* and the system ID of the workstation was *P2*.

System Action:

Connection terminates.

User Action:

Check the log for additional messages that may indicate a reason for the error.

LI0217**P1****Reason:**

This is a general trace message. *P1* contains variable information used to debug problems.

System Action:

None.

User Action:

Send all of these messages to your support representative.

LI0218

P1 MESSAGES LOST DUE TO CONNECTION FAILURE BETWEEN P2 AND P3

Reason:

While waiting for a workstation to reconnect P1 messages that were being pooled were lost due to pool table overflow. The connection failure was between the times stated by *P2* and *P3*.

System Action:

Processing continues.

User Action:

None.

LI0900

P1

Reason:

This message is written to the MVS console in response to a LOGMSG request from a SOLVE:Link workstation.

System Action:

None.

User Action:

None.

LI0901

TRANSACTION PROTOCOL VIOLATION, RECEIVED P1 NOT P2

Reason:

Unexpected data was received on the SOLVE:Link host command APPC transaction.

P1 is what was received.

P2 is what was expected to be received.

System Action:

The host command transaction ends.

User Action:

Contact your local support representative.

LI0902**HOST COMMAND SEND ERROR, RC= P1 FDBK= P2****Reason:**

An APPC error occurred when sending data to a SOLVE:Link workstation. *P1* is the RETCODE value after the APPC SEND. *P2* is the ZFDBK value after the APPC SEND.

System Action:

The host command transaction ends.

User Action:

Retry. Check that all SOLVE:Link links, PU's and LU's are active.

LI0903**HOST COMMAND TIMED OUT BEFORE A RESPONSE WAS RECEIVED****Reason:**

No response was received within the expected period for a command submitted from a SOLVE:Link workstation.

System Action:

The transaction ends. The command may not have completed.

User Action:

Retry the command. The timeout may have been caused by slow system response times. Check that the command is intended to be a short running command. This command facility is not useful for starting long running background procedures, or commands that display panels. If the problem recurs, increase the timeout period specified in the `&&000$RMCMDWS` and/or `&&000$RMCMDWR` system variables. If the region is licensed for SOLVE:Operations, these values should be changed in the WSPEER parameter group. Otherwise, set them in the region's initialization procedure.

LI1501

SOLVE:LINK P1 LISTENER SOCKET ERROR, RC= P2 FB= P3 CMD= P4

Reason:

The SOLVE:Link Data Request listener (which accepts requests from SOLVE:Link workstations to initiate event flow) either could not be initialized, or failed. It will automatically attempt to restart in the specified number of seconds. P1 is the return code from the &SOCKET verb P2 is the feedback code from the &SOCKET verb P3 is the &SOCKET verb that failed

System Action:

The Data Request listener will not accept data flow connection requests from SOLVE:Link workstations. It will automatically initialize when the problem has been rectified.

User Action:

Determine the cause of the error (it may be that the TCP/IP stack has been stopped) and take corrective action. Once the problem has been rectified the Data Request listener will automatically restart.

LI1502

SOLVE:LINK P1 LISTENER NOT STARTED - TCP/IP IS NOT ACTIVE

Reason:

The SOLVE:Link Data Request listener (which accepts requests from SOLVE:Link workstations to initiate event flow) could not be initialized because the TCP/IP stack is not active.

System Action:

The Data Request listener will not accept data flow connection requests from SOLVE:Link workstations. It will automatically initialize when the TCP/IP stack is started.

User Action:

Start the TCP/IP stack.

LI1503**SOLVE:LINK P1 LISTENER IS NOW ACTIVE, PORT= P2 SOCKET= P3****Reason:**

The SOLVE:Link Data Request listener (which accepts requests from SOLVE:Link workstations to initiate event flow) is now active.

System Action:

Requests from SOLVE:Link workstations to initiate data flow will now be processed.

User Action:

None.

LI1504**SOLVE:LINK P1 LISTENER WILL ATTEMPT RESTART IN P2 SECONDS****Reason:**

The SOLVE:Link Data Request listener (which accepts requests from SOLVE:Link workstations to initiate event flow) either could not be initialized, or failed. It will automatically attempt to restart in the specified number of seconds.

System Action:

The Data Request listener will automatically attempt to restart in the specified number of seconds.

User Action:

Review the preceding error message (which has a prefix of LI15) to determine why the error occurred and take appropriate action.

LI1505

SOLVE:LINK P1 LISTENER FAILED - PORT P2 IS ALREADY IN USE

Reason:

The SOLVE:Link Data Request listener (which accepts requests from SOLVE:Link workstations to initiate event flow) could not be initialized because the nominated port is already in use by another procedure or application.

System Action:

The system will not accept data flow connection requests from SOLVE:Link workstations until the problem is corrected.

User Action:

Find the procedure or application that is using the port and free it, or change the data port number used by the SOLVE:Link agent.

LI1701

TCP/IP FAILURE IN SOLVE:LINK COMMAND TRANSACTION, RC= P1 FB= P2

Reason:

A command from a SOLVE:Link workstation could not be processed because a TCP/IP error occurred.

System Action:

The command is not processed.

User Action:

Check that the TCP/IP stack is active using the SHOW TCPIP command.
Determine the cause of the error from the return and feedback codes.

LI1702**NO RESPONSE FROM COMMAND PROCESSOR****Reason:**

No response was returned from the command processor when a command from a SOLVE:Link workstation was submitted. This probably indicates that the command processor failed.

System Action:

The command may not have been processed.

User Action:

Check the SOLVE activity log for error messages, particularly from process \$LITP09Z OR \$LISG19T.

LI1703**LOGON FAILED - USER P1 IS UNKOWN****Reason:**

A command request from a SOLVE:Link workstation was rejected because the userid was not defined in the security database.

System Action:

The command is not processed.

User Action:

Resubmit the command with a valid userid.

LI1704**LOGON REJECTED - PASSWORD IS LONGER THAN 8 CHARACTERS****Reason:**

A command request from a SOLVE:Link workstation was rejected because the supplied password or new password was longer than the maximum allowed length.

System Action:

The command is not processed.

User Action:

Resubmit the command, supplying valid password(s).

LI1705

NO RESPONSE AFTER SOCKET SELECT

Reason:

NO RESPONSE AFTER SOCKET SELECT

System Action:

System will work on next available socket

User Action:

no

LI1902

LOGON FAILED: P1

Reason:

A logon request from a SOVLE:Link workstation was refused. *P1* is the reason for not allowing the logon.

System Action:

The command is not processed.

User Action:

Determine the cause of the problem from the error message, correct and retry.

LI1903

PASSWORD HAS EXPIRED

Reason:

A command request from a SOLVE:Link workstation was rejected because the user's password has expired.

System Action:

The command is not processed.

User Action:

Either resubmit the request supplying a new password, or directly log on to the SOLVE region and follow the prompts to change the password.

LI1904**NEW USER - PASSWORD CHANGE IS REQUIRED****Reason:**

A command request from a SOLVE:Link workstation was rejected because the user is logging on for the first time and did not supply a new password.

System Action:

The command is not processed.

User Action:

Either resubmit the command supplying a new password, or directly log on to the SOLVE region and follow the prompts to change the password.

LI1905**LOGON FAILED - INVALID PASSWORD****Reason:**

A command from a SOLVE:Link workstation was not processed because an invalid password was supplied.

System Action:

The command is rejected.

User Action:

Resubmit the command with the correct password.

LI1906**LOGON FAILED - USER P1 IS UNKNOWN****Reason:**

A command request from a SOLVE:Link workstation was rejected because the userid was not defined in the security database.

System Action:

The command is not processed.

User Action:

Resubmit the command with a valid userid.

LI1907

USER VERIFICATION FAILED

Reason:

A command request from a SOLVE:Link workstation was rejected because user verification failed.

System Action:

The command is not processed.

User Action:

Contact the system administrator. There may be a problem with the security system.

LI1908

LOGON REJECTED BY SECURITY EXIT

Reason:

A command request from a SOLVE:Link workstation was rejected because the external security system rejected the request.

System Action:

The command is not processed.

User Action:

Contact your systems administrator.

LI2501

SECURITY LEVEL P1 IS NOT SUPPORTED

Reason:

A logon request from a SOLVE:Link or SOLVE:Operations for OV/NV/ITO workstation workstation could not be processed because the security level used is not supported on this system.

System Action:

The command is not processed.

User Action:

Either change the security level used on the SOLVE:Link or SOLVE:Operations for OV/NV/ITO workstation, or apply patches (if available) to the current region so that it supports the security level that is being used.

LI2502**PASSWORD IS NOT IN EXPANDED HEXADECIMAL****Reason:**

A logon request from a SOLVE:Link or SOLVE:Operations for OV/NV/ITO workstation was flagged as an encrypted string, but was not in the expected format.

System Action:

The command is not processed.

User Action:

Contact your local support representative.

LICALL01**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

An invalid keyword parameter value was passed. The keyword was *P1* and the invalid value was *P2*.

System Action:

Processing terminates.

User Action:

Specify a valid value.

LICALL02

P1 DOES NOT EXIST AND P2 IS NOT AUTHORIZED FOR USER MAINTENANCE

Reason:

In order to activate the SOLVE:Link agent procedures, the Workstation Peer User ID must be defined. P1 is the Workstation Peer User ID and it does not exist. It could not be defined automatically because you are not authorized for UAMS maintenance access.

System Action:

Processing terminates.

User Action:

From a userid that has UAMS Maintenance authority, invoke the following procedure:
\$LICALL ACTION=DEFUSER

LICALL03

UAMS ADD ERROR, USER= P1 MSG= P2

Reason:

An attempt to add a user or group definition to the UAMS database failed. *P1* is the ID of the user and *P2* is the message set by the &SECCALL verb.

System Action:

The UAMS record is not added and processing terminates.

User Action:

Determine the cause of the error from the &SECCALL message, correct, and retry the request.

LICALL04**ACTION P1 COMPLETED SUCCESSFULLY****Reason:**

The request action *P1* successfully completed.

System Action:

None.

User Action:

None.

LICALL05**STARTING SOLVE:LINK TCP/IP P1 LISTENER, PORT P2****Reason:**

The agent process which accepts command or event flow requests from a SOLVE:Link workstation has been started. *P1* is the type of listener (DATA or CONTROL) *P2* is the port number used by the listener

System Action:

None.

User Action:

None.

LICALL06

SOLVE:LINK APPC DEFINITION FAILED, COMMAND=*P1* MSG=*P2* HOST=*P3*

Reason:

During initialization of the SOLVE:Link agent, an APPC command failed.

P1 is the APPC verb that failed.

P2 is the error message returned from the APPC command.

P3 is the name of the host for which the link was being defined.

System Action:

An APPC link is not established for the host. Processing continues.

User Action:

Determine the cause of the error from the APPC error message, correct and retry.

LICALL07

SOLVE:LINK APPC LINKS DEFINED FOR HOST *P1*, CNTLLU= *P2* DATALU= *P3*

Reason:

APPC links were successfully defined for communication with the SOLVE:Link workstation *P1* is the name of the SOLVE:Link workstation

P2 is the control (command) LU *P3* is the data (event flow) LU

System Action:

None.

User Action:

None.

LICALL08**INVALID APPC PARAMETERS, HOST= P1 CNTLLU= P2 DATALU= P3****Reason:**

An invalid parameter set was passed for a SOLVE:Link APPC connection. If one of HOST, CNTLLU and DATALU is supplied, the other two must also be supplied.

System Action:

Processing terminates.

User Action:

Correct the command and retry.

LOBR0001**LOG FILE P1 IS UNAVAILABLE****Reason:**

An attempt by the Log Browse utility to access the file *P1* failed.

System Action:

Log Browse terminates.

User Action:

Ensure the file id is correctly specified. If necessary issue a SHOW UDB command to determine the file id's that are available.

LOBR0002**LOG FILE P1 NOT INITIALIZED - ENSURE LOGGING IS ACTIVE****Reason:**

The Log Browse utility attempted to access a log file. The data was not in the expected format. *P1* is the identifier of the file being accessed.

System Action:

Log Browse terminates.

User Action:

Check that the file accessed has been used as a log file.

LOBR0003

COMMAND ' P1' NOT SUPPORTED

Reason:

A command entered on the Log Browse panel is not recognized.

System Action:

None.

User Action:

Check the spelling of the command. If necessary use the Help command, or press F1, to view the application help.

LOBR0004

NO COMMAND ENTERED

Reason:

A / command was entered without any operands.

System Action:

None.

User Action:

Reenter the / command with a SOLVE command as the operand.

LOBR0005

COMMAND ISSUED

Reason:

A SOLVE command has been processed.

System Action:

None.

User Action:

None.

LOBR0006**INVALID DATE****Reason:**

A request to access a specific date failed because the format of the data does not match one of the following: YY.DDD DD/MM/YY or MM/DD/YY (if US language code) YY/MM/DD YYMMDD

System Action:

None.

User Action:

Correct the date entered to match one of the supported formats.

LOBR0007**INVALID LABEL NAME ' P1'****Reason:**

A label command has specified an invalid label name. A label must be 1 to 8 characters.

System Action:

None.

User Action:

Correct the label entered to be 1 to 8 characters.

LOBR0008**INVALID SCAN LIMIT ' P1'****Reason:**

A SCANMAX command has specified an invalid value. The limit must be a number in the range 1 to 5000.

System Action:

None.

User Action:

Correct the limit entered to be a number in the range 1 to 5000.

LOBR0009

SCAN LIMIT SET TO P1

Reason:

A SCANMAX command has been accepted. *P1* is now the limit on the number of log records that will be searched for a Find request.

System Action:

None.

User Action:

None.

LOBR0010

MESSAGE ATTRIBUTES WILL BE DISPLAYED

Reason:

An ATTR command has been used to activate message level coloring and highlighting.

System Action:

Log messages with color and highlighting will be displayed with those attributes.

User Action:

Use the ATTR command again to reset message level attributes.

LOBR0011

MESSAGE ATTRIBUTE DISPLAY RESET

Reason:

An ATTR command has been used to deactivate message level coloring and highlighting.

System Action:

Log messages are displayed without color and highlighting.

User Action:

Use the ATTR command again to set message level attributes.

LOBR0012**INVALID SCROLL AMOUNT ' P1'****Reason:**

A scroll value entered is not supported.

System Action:

None.

User Action:

Correct the scroll amount entered.

LOBR0013**INVALID TIME****Reason:**

A request to access a specific time failed because the format of the data does not match one of the following: HH HH.MM HH.MM.SS

System Action:

None.

User Action:

Correct the time entered to match one of the supported formats.

LOBR0014**LABEL NAME OMITTED****Reason:**

A LABEL command has not specified a label name.

System Action:

None.

User Action:

Correct the label command to specify a label name. For example '.HERE' or 'LABEL HERE'.

LOBR0015

FORMAT ' P1' NOT SUPPORTED

Reason:

A FORMAT command has specified an unknown format name.

System Action:

The format is unchanged.

User Action:

Correct the Format command to specify one of NORMAL, SHORT, LONG, or SOURCE.

LOBR0016

FIND STRING OMITTED

Reason:

A FIND command has not specified a search argument.

System Action:

None.

User Action:

Correct the Find command to specify a search argument.

LOBR0017

LABEL NAME OMITTED

Reason:

A LOCATE command has not specified a label name.

System Action:

None.

User Action:

Correct the LOCATE command to specify a label name. For example, 'LOCATE THERE'.

LOBR0018**UNKNOWN LABEL ' P1'****Reason:**

A Locate command has specified a label name that is not defined.

System Action:

None.

User Action:

Check that the label name is spelt correctly and matches a defined label.

LOBR0019**LABEL ' P1' DEFINED****Reason:**

A Label has been defined for the line indicated by the cursor or the line displayed at the top of the screen.

System Action:

None.

User Action:

Use the *Locate P1* command to reposition to this line.

LOBR0020**LABEL ' P1' REPLACED****Reason:**

A Label has been defined for the line indicated by the cursor or the line displayed at the top of the screen. This definition replaces an earlier position for the label.

System Action:

None.

User Action:

Use the *Locate P1* command to reposition to this line.

LOBR0021

DOMAIN NAME P1 IS UNKNOWN

Reason:

A request to display a remote Activity Log has failed because the domain ID specified (*P1*) is unknown. The value must represent either a SOLVE Domain ID or an INMC Link Name that is known to this SOLVE region.

System Action:

Log Browse terminates.

User Action:

Ensure the domain ID is correctly specified. If necessary issue a SHOW DOMAINS or SHOW LINKS command to verify IDs that are available.

LOBR0022

DOMAIN NAME P1 DOES NOT SUPPORT REMOTE LOG BROWSE

Reason:

A request to display a remote Activity Log has failed because the domain ID specified (*P1*) does not support remote log browse. Only SOLVE systems running Management Services V3.3 and above provide this facility.

System Action:

Log Browse terminates.

User Action:

None.

LOBR0023**DOMAIN NAME P1 IS NOT CONTACTABLE****Reason:**

A request to display a remote Activity Log has failed because the domain ID specified (*P1*) is not contactable due to one of the following reasons:

- the INMC link is not active
- the APPC link is not defined

System Action:

Log Browse terminates.

User Action:

Check the status of the INMC link by using the SHOW LINKS TYPE=INMC command. If the requested domain is not active, activate it. If it is active, check that APPC links have been defined on the remote system. Log on to the remote system and issue the SHOW LINKS TYPE=APPC command and verify that there is a link name defined, perhaps using a generic LUMASK, that supports a link from the local SOLVE System.

LOBR0024**NO DOMAIN SELECTED****Reason:**

No domain name was selected from the list of domains presented.

System Action:

Log Browse terminates.

User Action:

If a display was required, ensure that you select one of the domains in the list. To select the local log select the first item.

LOBR0025

LOGPROC IS NOT RUNNING - TERMINATION REASON IS P1

Reason:

The Logging procedure is not running. The reason why it is not running is given in *P1* . The following reasons are possible:

FILE_OPEN_ERROR - Logproc experienced an error while trying to open the log file.

FILE_ADD_ERROR - Logproc experienced an error while trying to add a record to the log file. The log file may be full.

WRONG_FILE_FORMAT - Logproc determined that the contents of the log file are not in the correct format for log records.

NONE_GIVEN - No reason is available for why Logproc is not running. It may never have been started or it may have been deliberately flushed.

System Action:

Log Browse continues if possible but no new log records will be written.

User Action:

If you require Logproc to be running. Ensure that the logging file is of the correct format and available for use. Then start Logproc by issuing the 'SYSPARM LOGPROC=your_logproc_name' command.

LOBR0026

SIGNUM P1 will produce a date that is out of range.

Reason:

You entered a number to increment/decrement the current date. The resulting date is out of the date processor's range.

System Action:

Date request is ignored.

User Action:

Use a smaller number to increment/decrement the current date.

LOBR0027**LOG BROWSE CAN ONLY BE PERFORMED IN FULL SCREEN MODE****Reason:**

You entered \$LOG in a processing environment that does not have an associated real terminal window (for example, the system background environment, LU 1 Telnet, or ROF session).

System Action:

The command cannot be serviced.

User Action:

Issue the \$LOG command in an environment with a terminal window.

LOBR0028**INVALID SEARCH LIMIT****Reason:**

An invalid search limit was specified. The value must be a numeric value in the range of 500 to 9999.

System Action:

Log search processing terminates.

User Action:

Correct the limit entered to be a number in the range 500 to 9999.

LOBR0029**INVALID SCROLL AMOUNT****Reason:**

An invalid scroll amount was specified. The value must be a numeric value in the range of 1 to 999.

System Action:

Log search processing terminates.

User Action:

Correct the amount entered to be a number in the range 1 to 999.

LOBROW01

Activity Log Browsing can only be performed in full screen mode.

Reason:

You attempted to browse the Activity Log from an environment that does not have an associated real terminal window (for example, the system background environment, LU 1 Telnet, or ROF session).

System Action:

The request cannot be processed.

User Action:

Issue the \$LOG command in an environment with a terminal window.

LOBROW02

' P1' is not a valid log browse or NetMaster command.

Reason:

A command entered on the Log Browse panel is not recognized. Valid commands from the Activity Log display include: Specific log browse commands such as find. date, time, print and so on CAS commands and menu shortcuts Any NetMaster command

System Action:

None.

User Action:

Check the spelling of the command. See the log browse online help for a description of log browse commands.

LOBROW03**No log data available for P1 P2****Reason:**

The data requested by a log browse DATE or TIME command is outside the range of data stored in all activity log files.

System Action:

None.

User Action:

The command 'DATE ?' or 'D ?' will display the range of dates/times contained in the allocated activity log files.

LOBROW04**' P1' is an invalid DATE command parameter.****Reason:**

The parameter entered for the Log Browse DATE command was not recognized. Valid DATE command parameters are as follows:
D D ? D absolute date D +N D -N

System Action:

None.

User Action:

Correct the parameter and retry the command.

LOBROW05

Omitted or invalid **TIME** command parameter

Reason:

The parameter entered for the Log Browse TIME command was either omitted or invalid. A parameter is mandatory for the TIME command. Valid TIME command parameters are as follows:

T HH T HH.MM T HH.MM.SS T HH.MM.SS.hh

T +HH T +HH.MM or T+.MM T +HH.MM.SS or T+.MM.SS or T+..SS T +HH.MM.SS.hh or T+.MM.SS.hh or T+...hh

T -HH T -HH.MM or T-.MM T -HH.MM.SS or T-.MM.SS or T-..SS T -HH.MM.SS.hh or T- .MM.SS.hh or T-...hh

System Action:

None.

User Action:

Correct the parameter and retry the command.

LOBROW06

Note: Lines marked + came after a backwards time change *P1* at *P2*

Reason:

This message appears when the Activity Log lines displayed on this panel include lines that occurred after a backwards local time offset change on this LPAR.

Activity Log lines always appear with their local system time. When a backward time change occurs, such as for Daylight Saving, the local system time moves back; however, log records are already written for this time interval.

To distinguish the log records that occurred during the second time through the same local time interval, a + is displayed after the local system time.

Example

- Browse the Activity Log just before 3:00 a.m. All records between 2:00 a.m. and 3:00 a.m. display as normal.
- At 3:00 a.m. the local system time is set back to 2:00 a.m. Log records have already been written between local time 2:00 a.m. and 3:00 a.m. Now, new log records are written, again between local time 2:00 a.m. and 3:00 a.m. These records are written after the second 2:00 a.m. is flagged.
- Browse Activity Log records from between 2:00 a.m. and 3:00 a.m. Records written during the first 2:00 a.m. to 3:00 a.m. period display as normal, for example,
02.50.06 Message ...

Records written during the second 2:00 a.m. to 3:00 a.m. period after the backwards time change display with a + character, for example,
02.50.06+Message ...

System Action:

None.

User Action:

None.

To see when local time offset changes were detected on this LPAR, look for log messages N02H10 to N02H13.

LOBROW07

Label name P1 P2 P3 P4 P5 P6 P7 P8

Reason:

This message reports the status of a Label-related Log Browse command. Labels must have a valid name, from 1 through 12 characters long. The first character of the name must be alphabetic, or one of the characters @, #, or \$. Label names are not case sensitive. If a Label Name already exists, it is replaced,
Label names are valid only for the current Log Browse instance - they are not retained once you exit Log Browse.

System Action:

None.

User Action:

If necessary, correct the invalid label name and retry the operation.

LOBROW08

No data for this date P1 P2 P3 P4 P5 P6 P7 P8

Reason:

A scroll attempt was made, but there is either no or no more applicable log data for the displayed date.
If a Region, Origin or Text filter is active, this message indicates that no (more) log data matching the filter exists for this date. There may be more non-matching lines of log data beyond the times shown.

System Action:

None.

User Action:

None.

LOBROW09

Invalid *P1* filter or highlight criteria " *P2*"**Reason:**

A Region/Origin/Text/Color command has an invalid filter criteria, or an hlRegion/hlOrigin/hlText command has an invalid highlight criteria.

The correct command format is:

REGION <*region name*>

region name is a valid user ID

ORIGIN <*origin name*>

origin name is a valid terminal ID

TEXT <*text string*>

text string contains no blank characters

COLOR <*color initial*>

1st letter of color name: r p y g b t w

r(ed) p(ink) y(ellow) g(reen) b(lue) t(urquoise) w(hite) For example, color r displays all red lines.

HLREGION <*region name*>

region name is a valid user ID

HLORIGIN <*origin name*>

origin name is a valid terminal ID

HLTEXT <*text string*>

text string contains no blank characters

You can enter the commands without parameters to remove all filtering or highlighting on that Criteria. Any two or all three attributes can be filtered or highlighted at once - this is cumulative (that is, matches region AND origin AND text).

System Action:

None.

User Action:

None.

LOBROW10

Log message color and highlight attributes are P1

Reason:

An ATTR command has been used to enable or disable message level coloring and highlighting.

System Action:

When enabled, log messages with special display attributes are shown as colored and/or highlighted. When disabled, all log messages are shown in low intensity monocolour.

User Action:

Use the ATTR command again to reverse the message level attributes.

LOBROW11

Command issued P1

Reason:

A NetMaster command has been issued on domain *P1*

System Action:

None.

User Action:

None.

LOBROW12**Find parameters P1****Reason:**

A log browse 'Find' command has been attempted but the parameters were omitted or invalid. Valid command formats are:

Find repeats any last Find command Find * repeats any last Find command

Find xxx yyy zzz find next occurrence of xxx yyy zzz

Find a a ° b b ° c c find next line containing aaa or bbb or ccc Find a a + b b + c c find next line containing aaa and bbb and ccc

° and + cannot be mixed in the same operation.

arguments are case-insensitive & space-sensitive

By default, scanning starts forward from the current cursor position. The keywords Prev, First or Last may be added to the command.

Prev causes search to be performed backwards First finds first occurrence of the string for the displayed date Last finds last occurrence of the string for the displayed date

All find operations are performed only within the displayed date. To search another day for the same thing, use the D command then the repeat Find command.

The Findmax limit controls the number of lines that are searched. Find terminates when the Findmax limit is reached, or the day changes. Use the Findmax or Scanmax commands to change the search line limit.

If Text, Region or Origin filters are active, only lines that pass the filter condition(s) will go on to be searched for the search string(s).

System Action:

None.

User Action:

None.

LOBROW13

Find error, P1

Reason:

A log browse 'Find' command was requested but could not be performed because of the error condition indicated. These are usually file errors on the activity log VSAM files.

System Action:

None.

User Action:

Check the log for any additional messages describing the error. For file errors, correct the condition and retry the find request.

LOBROW14

P1 P2 P3 P4 P5 P6 P7 P8 P9 P10

Reason:

This message indicates the results of a completed FIND command.

System Action:

None.

User Action:

None.

LOBROW15**P1 P2 P3 P4 P5 P6 P7 P8 P9 P10****Reason:**

This message indicates the results of a SCANMAX or FINDMAX command. SCANMAX (or FINDMAX or MAX) sets the number of lines to be searched by a Find command. The limit can be between 500 and 10,000 inclusive. The default value is set at startup by your System Administrator.

Note: If text, region or origin filtering is active, SCANMAX continues to control the number of lines read from the log file(s), filtered, and searched. In other words, SCANMAX 600 does not mean that 600 lines matching the filters are searched - it means that 600 lines are filtered and searched.

System Action:

None.

User Action:

None.

LOBROW16**Default format/filter/highlight/find/label settings restored.****Reason:**

A Reset command has been completed.

The following Log Browse settings are restored to their default values:

Format/Mode = NORMAL, column offset 1

Repeat Find parameters reset to none

All Label definitions reset

PF12 Command Stack reset

Text/Region/Origin filters reset to none and data refreshed

Highlight Text/Region/Origin reset to HLREGION=&USERID

Message Attribute Display = ON

Scanmax/Findmax reset to default

System Action:

None.

User Action:

None.

LOBROW17

Invalid scroll amount "**P1**"

Reason:

An invalid horizontal or vertical scroll amount was entered on the command line or in the scroll field.

Valid vertical scroll values are:

MAX or M—to the start or end of the displayed day

PAGE—one page

HALF—half a page

CSR—at cursor line position

D—to next or previous day (D is valid only on the command line, not the scroll field)

nnn—*nnn* lines, 1-xxxx (xxxx being a number between 1 and the number specified in /PARMS, \$NM LOGFILES for "Log View FIND Line Limit")

Valid horizontal scroll values are:

MAX or M—left to column 1 or right to column 256

PAGE—one page

HALF—half a page

CSR—at cursor column position

nnn—*nnn* columns, 1-256

System Action:

None.

User Action:

None.

LOBROW18**Print parameter error: P1 P2 P3 P4 P5 P6 P7 P8 P9 P10****Reason:**

A Log Browse Print command was attempted with invalid parameters. Valid command format is:

Print Screen (or Print Page) print all lines on the display

Print nnnn lines print next nnnn lines (from and including the top line) nnnn = 1 to PrMax (see note below)

Print mmmm minutes print next mmmm minutes (from and including the top line) mmmm = 1 to 1439

Print Screen, Print nnnn lines and Print mmmm minutes are self-contained print commands that will be executed immediately.

Alternatively, a print range may be specified using a combination of the Print Start, Print End, and Print commands, as follows:

Print Start defines the top line as the start of the print range

Print End defines the top line as the end of the print range

Print prints all lines in the print range, inclusive of the start and end line. The print range is then reset (The end line time may be before the start line time)

Print Cancel resets any specified print range

Print Range displays the currently specified print range

Print Start, Print End, and Print must be entered in that order, but do not need to be consecutive commands - other non-Print commands may be issued in between.

Note: the default maximum print lines is 9999. Maximum can be changed with \$GLBL \$lo\$PrMax nnnn , where nnnn is in the range 100 to 500000.

System Action:

None.

User Action:

None.

LOBROW19

Print line range P1 P2 P3 P4 P5 P6 P7 P8 P9 P10

Reason:

This message provides information about the current print line range.

A print line range may be specified via a combination of the Print Start, Print End, and Print commands, as follows:

Print Start defines the currently displayed top line as the start

Print End defines the currently displayed top line as the end

Print prints all lines in the print range, inclusive of the start and end line. The print range is then reset (The end line time may be before the start line time)

Print Cancel resets any specified print range

Print Range displays the currently specified print range

Print Start, Print End, and Print must be entered in that order, but do not need to be consecutive commands - other non-Print commands may be issued in between.

Alternatively, instead of specifying a print range, one of the following commands may be used.

Print Screen (or Print Page) print all lines on the display

Print nnnn lines print next nnnn lines (from and including the top line) nnnn = 1 to PrMax (see note below)

Print mmmm minutes print next mmmm minutes (from and including the top line) mmmm = 1 to 1439

Print Screen, Print nnnn lines and Print mmmm minutes are self-contained print commands that will be executed immediately.

Note: the default maximum print lines is 9999. Maximum can be changed with \$GLBL \$lo\$PrMax nnnn , where nnnn is in the range 100 to 500000.

System Action:

None.

User Action:

None.

LOBROW20**P1 P2 P3 P4 P5 P6 P7 P8 P9 P10****Reason:**

This message displays the completion status of a print request.
A successful print request should now be visible on the /PSM request queue.

System Action:

None.

User Action:

None.

LOBROW21

Print: P n lines | P m minutes | P screen | P start/end (see PF1)

Reason:

This message displays information about Print command syntax. Valid command format is:

Print Screen (or Print Page) print all lines on the display

Print nnnn lines print next nnnn lines (from and including the top line) nnnn = 1 to PrMax (see note below)

Print mmmm minutes print next mmmm minutes (from and including the top line) mmmm = 1 to 1439

Print Screen, Print nnnn lines and Print mmmm minutes are self-contained print commands that will be executed immediately.

Alternatively, a print range may be specified via a combination of the Print Start, Print End, and Print commands, as follows:

Print Start defines the top line as the start of the print range

Print End defines the top line as the end of the print range

Print prints all lines in the print range, inclusive of the start and end line. The print range is then reset (The end line time may be before the start line time)

Print Cancel resets any specified print range

Print Range displays the currently specified print range

Print Start, Print End, and Print must be entered in that order, but do not need to be consecutive commands - other non-Print commands may be issued in between.

Print may be abbreviated as Prt, Pr or P.

The RESET command resets, among many other things, the print range settings.

Note: The default maximum print lines is 9999. Maximum can be changed with \$GLBL \$lo\$PrMax nnnn, where nnnn is in the range 100 to 500000.

System Action:

None.

User Action:

None.

LOBROW22**Print request error: P1 P2 P3 P4 P5 P6 P7 P8 P9 P10****Reason:**

A print request has failed, due to the indicated error.
If this is a PSM (Print Services Manager) error, consult the PSM documentation.

System Action:

None.

User Action:

None.

LOBROW23**Domain or link name P1 is unknown.****Reason:**

A request to display a remote Activity Log has failed because the domain ID specified (*P1*) is unknown. The value must represent either a NetMaster Domain ID or an INMC Link Name that is known to this NetMaster region.

System Action:

Log Browse terminates.

User Action:

Ensure the domain ID is correctly specified. If necessary issue a SHOW DOMAINS or SHOW LINKS command to verify IDs that are available.

LOBROW24**Domain name P1 does not support remote Activity Log Browsing****Reason:**

A request to display a remote Activity Log has failed because the domain ID specified (*P1*) does not support remote log browse. Only NetMaster systems running Management Services V3.3 and above provide this facility.

System Action:

Log Browse terminates.

User Action:

None.

LOBROW25

Domain name P1 cannot be contacted.

Reason:

A request to display a remote Activity Log has failed because the domain ID specified (*P1*) is not contactable due to one of the following reasons:

- The INMC link is not active.
- The APPC link is not defined.

System Action:

None

User Action:

Check the status of the INMC link by using the SHOW LINKS TYPE=INMC command. If the requested domain is not active, activate it. If it is active, check that APPC links have been defined on the remote system. Log on to the remote system and issue the SHOW LINKS TYPE=APPC command and verify that there is a link name defined, perhaps using a generic LUMASK, that supports a link from the local system.

LOBROW26

Displayed domain changed from P1 to P2

Reason:

The domain of the displayed Activity Log data has changed as indicated, as the result of a DOMAIN command.

Valid command format is:

DOMAIN Displays a selection list of formally linked domains.

DOMAIN domainId/linkName Switches the current display to the requested remote NetMaster region. The browsing environment is retained, and the time set as close as possible to the previous display.

Note: domainId/linkName, when explicitly specified, are not restricted to those on the selection list. Any dynamically linked domain may be specified.

System Action:

None

User Action:

None

LOBROW27**Invalid shortcut. (For help:put cursor on this line, press F1)****Reason:**

An invalid shortcut was entered from the Activity Log Browse display. Navigating to the function you want from the Activity Log can be done in any of these ways:

- Entering a shortcut (/levels or =/levels)
- Entering a combined shortcut and menu option (/bcast.s or =/bcast.s)
- Entering a panel path (=H.I.P)

System Action:

None.

User Action:

Correct the shortcut or panel path, and retry.

SHORTCUTS

Enter a shortcut name, preceded by a slash, at the ==> prompt (for example, /levels or /info or /ipmon). This will take you directly to the function. To see a list of all shortcuts and their associated functions, enter a single slash (/) at the ==> prompt. Select the desired shortcut from the list by entering 'S' beside it.

If a shortcut exists for a menu option, it is displayed in turquoise, to the right of the option description.

Shortcuts may also be combined with menu options (for example, /bcast.s or =/bcast.s).

Shortcuts can be invoked in two ways: 1. A 'nested' shortcut 2. A shortcut skip To retain and nest the current screen level, use a nested shortcut: /shortcut_name Exit will bring you back to the last nested screen in this window. Screens may be nested to a maximum of 64 levels.

To close all currently nested screen levels, use a shortcut skip: =/shortcut_name

Exit will take you back to the Primary Menu. If you no longer need any nested screens, a shortcut skips saves storage and resources.

(If you are currently at the Primary Menu, a nested shortcut and a shortcut skip behave the same.)

PANEL PATH

Like shortcuts, panel paths move directly to a function without having to access each submenu between it and the current menu. A panel path consists of multiple menu options separated by periods (for example =U.M).

Also like shortcuts, the = sign functions as a skip character, closing all nested screens and effectively entering the path from the primary menu. (If you are currently at the Primary Menu, the skip character is not required.)

Frequently used panel paths have associated shortcuts. If you don't remember a shortcut, enter / at the ==> prompt for a list. Select one from the list, or enter it at the ==> prompt.

There is no difference between accessing a function using a panel path skip or a shortcut skip, although the shortcut should be easier to remember. Both close the current screens and go straight to the function.

Entering == at the ==> prompt from any panel closes all nested screens and returns you to the Primary Menu.

LOBROW28

Latest log entry posted on p1 p2

Reason:

This informational message issued by the Activity Log Browser indicates that new log entries have been posted that are not in the current

User Action:

To view the most recent log entry, press F6=Latest to reposition the

LOCAL501

Find error, P1 P2 P3 P4 P5 P6

Reason:

A log browse 'Find' command was requested but could not be performed because of the error condition indicated. These are usually file errors on the activity log VSAM files.

System Action:

None.

User Action:

Check the log for any additional messages describing the error. For file errors, correct the condition and retry the find request.

LOCAL502**No Activity Log data files are available****Reason:**

An attempt was made to browse the Activity Logs or perform Log Administration, but no VSAM log data files are available.
By default, three Activity Log VSAM files are defined at NetMaster installation time, and allocated and opened at region startup.
Activity Logs are VSAM datasets named ?dsnqual.NMLOG01, NMLOG02, NMLOG03 They should be allocated to the region as DD's NMLOG01, NMLOG02, NMLOG03 and a UDBCTL OPEN performed with the same names as the FILEIDs.
Up to 7 files, NMLOG01 - NMLOG07, may be used.

System Action:

Activity Log browse or administration functions are not available.

User Action:

Ensure that at least one activity log VSAM file is correctly allocated and opened.
Use SH VSAM=NMLOG* to check that correctly defined VSAM datasets are allocated as DDNAMEs NMLOG01 and so on.
A UDBCTL OPEN.. should have been performed for each file - recommended parameters are DEFER, LSR, SIS
Once the files are allocated and opened, use the SYSPARMS LOGPROC=\$LOPROC command to start activity logging.

LOCAL503

Activity Log File P1 cannot be browsed

Reason:

An attempt was made to browse Activity Log VSAM Fileid *P1* , but this file cannot be browsed. It may not have been correctly allocated and opened, or it may have been flagged in error by the LOGPROC procedure (possibly after an unsuccessful swap attempt).

System Action:

None.

User Action:

Retry the Log Browse activity without specifying a specific fileid. The latest available log data will be displayed.

System Administrators: Ensure that the VSAM file has been correctly defined, allocated and opened. Check the \$LOGFILES ICS Parameter group for errors. Check the hardcopy log for any log swap failures. After fixing any errors, flush and restart the LOGPROC to make this file available for use.

LOCAL504**APPC Error accessing remote system P1****Reason:**

An APPC error was encountered while trying to get activity log data or details from remotely connected system *P1*

The APPC error details are written to the activity log.

(An APPC verb specified the parameter aaaa with invalid value bbbb)

If the parameter is LINK, a likely cause of the error is that the underlying INMC/APPC link between this system and the remote system *P1* has gone down. Check the status of the link, on both systems, and restart it if necessary.

If the parameter is LUNAME, a probable cause of the error is having no DEFLINK TYPE=APPC ... definition covering this LUNAME.

If the parameter is LUNAME, do a SH DEFLINK TYPE=APPC command and ensure that there is an LUMASK that matches this LUNAME. If not, use REPLINK to correct the definition.

System Action:

None. Activity Log display may revert to the local system.

User Action:

Check the log for any additional messages describing the link error. SH LINK TYPE=APPC and SH DOMAINS will display the remote links and domains available. Fix the link between the two systems, and try the operation again.

LOCAL505**Parameter error, P1 P2 P3 P4 P5****Reason:**

Incorrect parameters were passed to the Activity Log Interface. This is an internal programming error.

System Action:

None.

User Action:

Retry the action - if the message recurs, contact support.

LOCAL506

Log file P1 is in a status of P2

Reason:

An attempt was made to browse the Activity Log, but the current activity log *P1* contains no data.

The file status *P2* is one of:

RESET The file has been reset and is ready to receive log record data, but no records have been written to it yet. This should be a temporary condition.

NODATA The file is in the process of being closed so that it can be reset. This should be a temporary condition.

ERROR This status has a variety of causes:

- The file could not be closed.
- The file could not be opened.
- The file is marked unusable because of a VSAM error condition.
- The region could not write to the file.

System Action:

None.

User Action:

Wait for a short time, then try to browse the activity log again.

If the problem recurs, investigate the following for additional details on the exact VSAM log file error:

- JCL message and SYSPRINT output for this NetMaster region
- SYSLOG LOGxx DD output for this NetMaster region
- this contains all log messages, including those that could not be written to VSAM Log files
- OCS SHOW VSAM and SHOW UDB commands

LOCAL01

NO LOG DATA PRESENT FOR P1

Reason:

No log data was found for the date specified.

System Action:

None.

User Action:

Specify a date that has log data for it. For a list of dates that contain log data, enter the DATE command without specifying a date.

LOCAL02**FILE ERROR, RC= P1 VSAMFDBK= P2 ON FILE P3****Reason:**

A delete request for the named log file *P3* failed with an unexpected return code of *P1* . *P2* is the VSAM feedback.

System Action:

If available the system message from the FILE Verb is logged.

User Action:

Refer to the VSAM Programming manual for an explanation of error codes.

LOCAL03**RECORDS FOR DATE P1 NOT PRESENT IN FILE P2****Reason:**

A delete request for the named log file *P3* was rejected. No records for the request date *P1* were found on the file *P2* .

System Action:

None.

User Action:

None.

LOCAL04**SYSTEM INITIALIZED ON P1 P2 at P3. JOB NAME P4****Reason:**

Details of the system being accessed.

System Action:

None.

User Action:

None.

LOCAL05

DATE P1 NOT RECOGNIZED

Reason:

A request to access a specific date failed because the format of the data does not match one of the following: YY.DDD DD/MM/YY or MM/DD/YY (if US language code) YY/MM/DD YYYYMMDD

System Action:

None.

User Action:

Correct the date entered to match one of the supported formats.

LOCAL06

DELETE NOT SUPPORTED FOR CURRENT DAY

Reason:

A request to delete log data has specified the current day. This is not supported.

System Action:

None.

User Action:

None.

LOCAL07

NCL LOG FILEID P1 IS NOT AVAILABLE. FILERC= P2

Reason:

An attempt to access the named log file failed.

System Action:

None.

User Action:

Determine why the file is unavailable (by using SH ALLOC and SH UDB commands). Correct and retry.

LOCAL08**INSUFFICIENT AUTHORITY****Reason:**

A request to process log resources requires the System Support authority which the current user region does not have.

System Action:

The request is rejected.

User Action:

Contact your Systems Administrator. System Support authority may be granted through the update user function of UAMS maintenance.

LOCAL09**REQUIRED OPERAND P1 OMITTED FOR ACTION P2****Reason:**

A request to access Log functions has failed because a required operand is not specified.

System Action:

Request is terminated.

User Action:

Correct the request to specify the required operand.

LOCAL10**' P1' IS NOT A VALID VALUE FOR P2****Reason:**

The value *P1* is not a valid value for the field identified by the field label *P2* .

System Action:

The user cannot proceed until a valid value is entered.

User Action:

Enter a valid value before proceeding.

LOCAL11

DATA ' P1' LOCATED IN LINE P2, P3 COLUMN P4

Reason:

The value *P1* has been located in the Log file. The log record number for the day is *P2* . The data was found in the field *P3* at offset *P3* .

System Action:

None.

User Action:

None.

LOCAL12

DATA NOT FOUND. P1 LINES SEARCHED (time P2 to P3)

Reason:

A Log search has failed to locate the requested search argument. *P1* lines were read in the time range indicated by *P2* to *P3* .

System Action:

None.

User Action:

If necessary retry the Find operation.

LOCAL13

DATA NOT FOUND. TOP OF DATA REACHED

Reason:

A Log search has failed to locate the requested search argument. The top of data was reached for the current day.

System Action:

None.

User Action:

If necessary retry the Find operation.

LOCAL14**DATA NOT FOUND. BOTTOM OF DATA REACHED****Reason:**

A Log search has failed to locate the requested search argument. The bottom of data was reached for the current day.

System Action:

None.

User Action:

If necessary retry the Find operation.

LOCAL15**PARAMETER ERROR IN CALL TO P1, REFER TO LOG****Reason:**

A parsing error occurred processing the parameters in the procedure *P1* .

System Action:

The SETVARS system message is logged.

User Action:

Refer to the log and report the error to your product support representative.

LOFI0101**Activity Log File P1 is empty or in error, and cannot be browsed.****Reason:**

The VSAM file selected for browsing is either empty or in error. Only files with a status of 'DATA' can be browsed.

System Action:

None.

User Action:

None.

LOPKG001

Activity Log File Error. Proc: P1 Action: P2 Fileid: P3 Retcode: P4 Error number: P5 P6 Key: P7

Reason:

Activity Logging Services Procedure **P1** received an error on a **P2** operation for log file **P3** . The File System Error Number was **P5** . The associated file key was **P7**

System Action:

Additional messages may describe the specific error action taken by the calling procedure. In general, file errors while writing to a file cause the logging procedure to swap to the next available file. File errors on reading cause the termination of log browsing procedures.

User Action:

Contact your system administrator.

LOPKG002

Log Variable Error. Procedure: P1 Action: P2 Variable: P3 FDBK: P4 Key: P5

Reason:

Activity Logging Services Procedure P1 received an error on a P2 operation for Variable P3 . The FDBK code was P4 . The associated file key was P5

System Action:

Additional messages may describe the specific error action taken by the calling procedure. In general, variable errors cause log writing or browsing operations to terminate.

User Action:

Contact your system administrator.

LOPKG003**Logging Terminated. Fatal error: P3 Procedure: P1 P2****Reason:**

The active LOGPROC procedure has terminated because of a fatal condition detected by Activity Log Services procedure *P1* in routine/function *P2*

System Action:

Activity Logging reverts to the default processing - messages are logged to SYSOUT, but are not written to any VSAM Log files. Log browsing may continue, but log records from this point onwards are not available. There may be additional SYSOUT messages related to the error condition.

User Action:

Contact your system administrator. Correct the error condition and issue the SYSPARMS LOGPROC= ... command to restart VSAM Activity Logging.

LOPKG004**Warning: No Logging Procedure is currently active.****Reason:**

No LOGPROC procedure is currently active. The procedure may have terminated in error, or may have been manually stopped with the SYSPARMS LOGPROC=FLUSH command.

System Action:

Activity Logging is using the default processing - messages are logged to SYSOUT, but are not written to any VSAM Log files. Log browsing may continue, but no records since the LOGPROC termination will be available Log File and Date displays may be inaccurate.

User Action:

Contact your system administrator. Check the SYSOUT LOG files for error messages. Correct the error condition and issue the SYSPARMS LOGPROC=\$LOPROC command to resume activity logging.

LOPKG005

Log Swap: Procedure P1 NCLID P2 P3 flushed to free file P5

Reason:

The executing NCL process with the specified NCLID has been flushed to enable a Log Swap to take place.

System Action:

Log Swap processing continues.

User Action:

None.

LOPKG006

Log Swap: Userid P1 cancelled to free file P5

Reason:

The specified userid has been cancelled in order to free the target log file and enable a Log Swap to take place.

System Action:

Log Swap processing continues.

User Action:

None.

LOPR0001

LOG PROCESSOR P1 STARTED ON P2, DOMAIN P3

Reason:

The LOG procedure *P1* has started processing activity log records.

System Action:

None.

User Action:

None.

LOPR0002**FILE ERROR ON P1, RC= P2, FDBK= P3. LOG PROCESSOR P4
TERMINATING****Reason:**

A VSAM error was received writing to the activity log file P1 . P2 is the FILERC value. P3 is the VSAM feedback code indicating the error.
P4 is the procedure name of the log processor detecting the error.

System Action:

Log processing terminates.

User Action:

Refer to the hardcopy log for further messages. Use the feedback code to determine the nature of the error. If necessary allocate a new VSAM log file. Issue SYSPARMS LOGPROC= *P4* to restart the log processor.

LOPR0003**SESSION REPLAY FACILITY DISABLED. PROCESS P1 HAS TERMINATED****Reason:**

The process P1 started by the log procedure to handle trace records has terminated. The recording of Session Replay Facility traces stops.

System Action:

Logging continues with SRF.

User Action:

Determine why the \$TRPROC process terminated. If necessary stop and restart the log procedure to reactivate SRF tracing.

LOPR0004

FILE OPEN ERROR ON P1, RC= P2. LOG PROCESSOR P3 TERMINATING

Reason:

An &FILE error was received opening the activity log file P1 . P2 is the &FILERC value. P3 is the procedure name of the log processor detecting the error.

System Action:

Log processing terminates.

User Action:

Use the &FILERC value to determine the cause of the error. Check that the file indicated is allocated and that the fileid has been made available to NCL by means of UDBCTL OPEN. Issue SYSPARMS LOGPROC= P3 to restart the log processor.

LOPR0005

P1 FILE FORMAT INCOMPATIBLE, FILEKEY= P2. LOG PROCESSOR P3 TERMINATING

Reason:

The log file **P1** contains records that are not in the expected key format. **P2** is the unexpected data. The file key should be in the format 'yyyymmddnnnnnn'. **P3** is the procedure name of the log processor detecting the error.

System Action:

Log processing terminates.

User Action:

If the file key is in the format 'yy/mm/ddnnnnnn' then the file has not been converted from an earlier release. Refer to the product installation instructions for conversion procedures. If the existing data is not required then use the RESET option on UDBCTL OPEN to delete the old data.
Issue SYSPARMS LOGPROC= P3 to restart the log processor.

LOGPROC01**Log Swap P1 P2 P3 P4 P5 P6****Reason:**

The Activity Log Services Logging Procedure is commencing a VSAM Log Swap operation. This message group indicates the status of the log swap.

System Action:

The log swap processing proceeds. Log swaps of VSAM Log Files are done in response to user request, and on full or file error conditions.

User Action:

None.

LOGPROC02**Log Exit P1 P2 P3 P4 P5 P6****Reason:**

This message provides information about the status of the log exit procedure.

System Action:

If an error is detected in a log exit procedure or it does not exist, calls to the exit are disabled until the next SYSPARMS LOGPROC restart. If the exit sets the log text to the string NOLOG, that record will be ignored by the LOGPROC procedure.

User Action:

The log exit name is set in the \$NMLGXIT global variable. To implement or correct a log exit, LOGPROC must be flushed and restarted with the SYSPARMS LOGPROC command.

The log exit is passed the variable &#lo\$record and the MDO &\$LOG. &\$LOG. is mapped by the distributed ASN.1 map \$MSG.

LOPROC03

Access Services Session Replay Facility disabled. Procedure \$TRPROC NCL id P1 has terminated.

Reason:

The process *P1* started by the log procedure to handle trace records has terminated. The recording of Session Replay Facility traces stops.

System Action:

Logging continues with SRF.

User Action:

Determine why the \$TRPROC process terminated. If necessary stop and restart the log procedure to reactivate SRF tracing.

LOPROC04

Backward time offset *P1* expires *P2P3*

Reason:

A backwards local time offset change was detected.

The offset amount was *p1* (*sHHMM*) and the change was made at *P2 P3*.

System Action:

None.

User Action:

None.

To see when local time offset changes were detected on this LPAR, look for log messages N02H10 to N02H13.

Note: When you browse the Activity Log for a period affected by a backwards time change, log records that occur during the second time through the same local time interval are marked with the character +.

Mx Messages

MC0001

MIB compilation starting for *p1***Reason:**

This message is produced by the MIB compiler as it commences compilation of a MIB.

System Action:

None.

User Action:

None.

MC0002

MIB compilation complete for *p1*. Return code: *p2***Reason:**

This message is produced by the MIB compiler at the end of compilation of a MIB. The return code is shown.

Return code values are:

- 0 - Compilation successful. No errors or warnings
- 4 - Compilation may be successful. At least one warning was found.
- 8 - Compilation failed. At least one error was found.
- 12 - Compilation aborted. A serious error or compiler failure occurred.

System Action:

None.

User Action:

None.

MC0050

***p1* long identifiers found**

Reason:

This message is produced by the MIB compiler at the end of compilation if any identifiers were found that exceeded 32 characters in length.

Individual warning messages were produced as each identifier was found. This message (an ERROR severity message) indicates how many were found.

This release of the MIB compiler does not support identifiers longer than 32 characters.

System Action:

Compilation is terminated.

This is an ERROR message.

User Action:

Examine the compiler messages for warnings about identifier length, and make the appropriate corrections to the MIB source.

MC0080

Error parsing MIB compiler input parameters...

Reason:

This message is produced by the MIB compiler if an error occurs parsing the supplied parameters. The error message from the SETVARS statement follows.

System Action:

Compilation is terminated.

User Action:

Report this error to your product support representative.

MC0081**Input parameter *p1* omitted or invalid. Value: *p2*****Reason:**

This message is produced by the MIB compiler if a required parameter is omitted or has an invalid value.

System Action:

Compilation is terminated.

User Action:

Report this message to your product support representative.

MC0082**Input parameter *p1* invalid. Value: *p2*****Reason:**

This message is produced by the MIB compiler if an input parameter has an invalid value.

System Action:

Compilation is terminated.

User Action:

Report this message to your product support representative.

MC0083**Input source array has invalid line count: *p1*****Reason:**

This message is produced by the MIB compiler if the input source line array variable has an invalid line count.

System Action:

Compilation is terminated.

User Action:

Report this message to your product support representative.

MC0085

IGNORE option: p1 unrecognized. Ignored.

Reason:

This message is produced by the MIB compiler if an option in the IGNORE parameter is not recognized.

System Action:

The option is ignored. Other IGNORE options are recognized and honored.

User Action:

Remove or correct the invalid option.

MC0086

IMPRENAME entry: p1 invalid: p2

Reason:

This message is produced by the MIB compiler if an entry in the IMPRENAME parameter is not valid.
The reason is shown.

System Action:

The entry is ignored. Other IMPRENAME entries are processed.
This message counts as an error.

User Action:

Remove or correct the invalid entry.

MC0090

MIB compiler internal failure (ON ERROR block driven)

Reason:

This message is produced by the MIB compiler if an internal failure has occurred.

System Action:

Compilation is terminated.

User Action:

Report the error to your product support representative.

MC0091**Error traceback follows...****Reason:**

This message is produced by the MIB compiler if an internal failure has occurred. It indicates that an execution stack traceback follows.

System Action:

None.

User Action:

Refer to message MC0090.

MC0092**Error variable: p1 value: p2****Reason:**

This message is produced by the MIB compiler if an internal failure has occurred. It provides the name and value of an internal error information variable. Only non-null variables are displayed.

System Action:

None.

User Action:

Refer to message MC0090.

MC0093**p1 token. Line: p2 Col: p3 Value: p4****Reason:**

This message is produced by the MIB compiler if an internal failure or fatal error has occurred. It provides the value and location of a source token. This information allows identification of the location in the source where the problem occurred.

System Action:

None.

User Action:

Refer to message MC0090.

MC2001

MIB does not start with a Module Name identifier

Reason:

This message is produced by the MIB compiler if the first token found in the MIB source is not a valid identifier.

System Action:

Compilation is terminated.

User Action:

Correct the MIB source and recompile.

MC2002

MIB Module OBJECT IDENTIFIER syntax error prevents compilation

Reason:

This message is produced by the MIB compiler if an OBJECT IDENTIFIER was found after the MIB module name and the syntax was invalid.

System Action:

Compilation is terminated.

User Action:

Correct the MIB source and recompile.

MC2003

A MIB module should not have an initial OBJECT IDENTIFIER

Reason:

This message is produced by the MIB compiler if an OBJECT IDENTIFIER was found after the MIB module name.

The IGNORE=INITOID option was specified, resulting in this warning.

This is not recommended syntax. (Refer to RFC2578, section 3, second last paragraph.)

System Action:

Compilation continues. This message counts as a warning.

User Action:

None.

MC2004**A MIB module must not have an initial OBJECT IDENTIFIER****Reason:**

This message is produced by the MIB compiler if an OBJECT IDENTIFIER was found after the MIB module name.

This is not recommended syntax. (Refer to RFC2578, section 3, second last paragraph.)

This error can be suppressed by specification of the INITOID option of the IGNORE compiler parameter.

System Action:

Compilation continues. This message counts as an error.

User Action:

Correct the MIB source, or specify the INITOID option of the IGNORE compiler parameter.

MC2005**' P1' expected.****Reason:**

This message is produced by the MIB compiler if the indicated token was expected in the source during processing of the initial DEFINITIONS statement.

The indicated token was not found.

System Action:

Compilation is terminated.

User Action:

Correct the MIB source and recompile.

MC2006

MIB Module Name: p1

Reason:

This message shows the MODULE name found by the MIB compiler. This name is the name specified on the DEFINITIONS BEGIN statement.

System Action:

None.

User Action:

None.

MC2007

Missing 'END' statement

Reason:

This message is produced by the MIB compiler when it did not find an END statement at the end of the MIB source.

System Action:

Compilation is terminated.

User Action:

Correct the MIB source and recompile.

MC2008

Unexpected source after 'END' statement

Reason:

This message is produced by the MIB compiler when it found further MIB source following the END statement.
This does not include comments.

System Action:

Compilation is terminated.

User Action:

Correct the MIB source and recompile.

MC2009**Module Name identifier is too long (> 32 characters)****Reason:**

This message is produced by the MIB compiler if the MIB module name is longer than 32 characters.

This version of the MIB compiler requires MIB module names to be no longer than 32 characters.

System Action:

Compilation is terminated.

User Action:

Correct the MIB source and recompile.

MC2020**Unrecognized statement****Reason:**

This message is produced by the MIB compiler when an unrecognized statement is found.

The statement is not valid in a MIB. It may be a valid ASN.1 statement; however, the MIB compiler does not recognize it.

System Action:

Compilation continues with the next recognized statement. This statement counts as an error.

User Action:

Correct the MIB source and recompile.

MC2021

Identifier expected for this macro invocation

Reason:

This message is produced by the MIB compiler when a macro name was found that requires an identifier.

Identifiers in ASN.1 must start with a lower-case letter.

System Action:

Compilation continues with the next recognized statement. This statement counts as an error.

User Action:

Correct the MIB source and recompile.

MC2022

Type identifier expected for this macro invocation

Reason:

This message is produced by the MIB compiler when a macro name was found that requires a type identifier.

Type identifiers in ASN.1 must start with an upper-case letter.

System Action:

Compilation continues with the next recognized statement. This statement counts as an error.

User Action:

Correct the MIB source and recompile.

MC2023**Unsupported Statement****Reason:**

This message is produced by the MIB compiler when an ASN.1 statement that is unsupported by the MIB compiler is encountered.

The statement is not valid in a MIB. It may be a valid ASN.1 statement; however the ASN.1 subset that is acceptable in a MIB does not include it.

System Action:

Compilation continues with the next recognized statement. This statement counts as an error.

User Action:

Correct the MIB source and recompile.

MC2080**Macro not found in table: p1****Reason:**

This message is produced by the MIB compiler when an apparent macro name was not found in an internal table.

System Action:

Compilation terminates.

User Action:

Report this to your product support representative.

MC2081**Invalid STYPE: p1****Reason:**

This message is produced by the MIB compiler when an internal field had an unrecognized value.

System Action:

Compilation terminates.

User Action:

Report this to your product support representative.

MC2101

Invalid identifier after ' p1'

Reason:

This message is produced by the MIB compiler when it finds invalid source during the processing of an IMPORTS statement.

System Action:

Compilation continues with the next statement.

This message counts as an error.

NOTE: errors in an IMPORTS statement can cause other errors later in compilation due to missing definitions.

User Action:

Correct the MIB source and recompile.

MC2102

Expected ',' or 'FROM'

Reason:

This message is produced by the MIB compiler when it finds invalid source during the processing of an IMPORTS statement.

Either a comma (,) or the FROM keyword was expected at this point.

System Action:

Compilation continues with the next statement.

This message counts as an error.

NOTE: errors in an IMPORTS statement can cause other errors later in compilation due to missing definitions.

User Action:

Correct the MIB source and recompile.

MC2103**Expected identifier or ';'** **Reason:**

This message is produced by the MIB compiler when it finds invalid source during the processing of an IMPORTS statement.
Either an identifier or a semicolon (;) was expected at this point.

System Action:

Compilation continues with the next statement.
This message counts as an error.
NOTE: errors in an IMPORTS statement can cause other errors later in compilation due to missing definitions.

User Action:

Correct the MIB source and recompile.

MC2110**Duplicated IMPORT item: p1****Reason:**

This message is produced by the MIB compiler when it finds a duplicated item during processing of an IMPORTS statement.
The indicated item has already been imported.
This version of the MIB compiler does not support qualified references to imported items. Therefore all imported items must be unique.

System Action:

Compilation continues. Other IMPORT items are processed.
This message counts as an error.
NOTE: errors in an IMPORTS statement can cause other errors later in compilation due to missing definitions.

User Action:

Correct the MIB source and recompile.

MC2111

Import module for item: p1 renamed from: p2 to: p3

Reason:

This message is produced by the MIB compiler when it renames the module that the indicated item was to be imported from.

This occurs when a match is found in the IMPRENAME list.

System Action:

Compilation continues.

This message counts as a warning.

NOTE: errors in an IMPORTS statement can cause other errors later in compilation due to missing definitions.

User Action:

None.

MC2112

Import module for item: p1 renamed from: p2 to: p3

Reason:

This message is produced by the MIB compiler when it renames the module that the indicated item was to be imported from.

This occurs when the IMPORT/EXPORT exit renames the module name.

System Action:

Compilation continues.

This message counts as a warning.

NOTE: errors in an IMPORTS statement can cause other errors later in compilation due to missing definitions.

User Action:

None.

MC2113**Import of: p1 failed. Module p2 not defined in Database.****Reason:**

This message is produced by the MIB compiler when it tries to import the definition of an item from the Imports Database.

The module that the item was being imported from (or as renamed by the IMPRENAME option or the Import/Export exit) was not found on the database. This means that the module (or MIB) has not been compiled or compilation failed, or that the module name was spelt incorrectly.

System Action:

Processing continues with the next IMPORT item or next statement.

This message counts as a warning.

NOTE: errors in an IMPORTS statement can cause other errors later in compilation due to missing definitions.

User Action:

Correct the MIB source and recompile.

MC2114**Import of: p1 failed. Module p2 does not contain definition.****Reason:**

This message is produced by the MIB compiler when it tries to import the definition of an item from the Imports Database.

The module that the item was being imported from (or as renamed by the IMPRENAME option or the Import/Export exit) did not contain a definition for the item.

System Action:

Processing continues with the next IMPORT item or next statement.

This message counts as a warning.

NOTE: errors in an IMPORTS statement can cause other errors later in compilation due to missing definitions.

User Action:

Correct the MIB source and recompile.

MC2115

Import of: p1 from Module p2 failed. Database error.

Reason:

This message is produced by the MIB compiler when it tries to import the definition of an item from the Imports Database.
An error occurred while processing the Imports Database.

System Action:

Processing continues with the next IMPORT item or next statement.
This message counts as a warning.
NOTE: errors in an IMPORTS statement can cause other errors later in compilation due to missing definitions.

User Action:

Examine the log for related messages and report the error to your product support representative.

MC2116

IMPORT Module name length greater than 32: p1

Reason:

This message is produced by the MIB compiler while parsing an IMPORT statement.
A MODULE name on the IMPORT statement was longer than 32 characters.
This release of the MIB compiler does not support module names greater than 32 characters in length.

System Action:

Compilation terminates.
This message counts as an error.
NOTE: errors in an IMPORTS statement can cause other errors later in compilation due to missing definitions.

User Action:

Correct the MIB source as required and recompile.
You may need to alter the source for the referenced MIB to shorten its module name to less than 32 characters and compile that MIB as well.

MC2180**Invalid return code (p1) from internal import handler****Reason:**

This message is produced by the MIB compiler when an internal function has returned an invalid code.

System Action:

Compilation terminates.

User Action:

Report this to your product support representative.

MC2201**Invalid identifier after ' p1'****Reason:**

This message is produced by the MIB compiler when it finds invalid source during the processing of an EXPORTS statement.

System Action:

Compilation continues with the next statement.

This message counts as an error.

NOTE: errors in an IMPORTS statement can cause other errors later in compilation due to missing definitions.

User Action:

Correct the MIB source and recompile.

MC2202

Duplicated EXPORT item: p1

Reason:

This message is produced by the MIB compiler when it finds a duplicated item during processing of an EXPORTS statement.

The indicated item has already been marked as exported.

This version of the MIB compiler does not support qualified references to exported items. Therefore all exported items must be unique.

System Action:

Compilation continues. Other EXPORT items are noted.

This message counts as an error.

NOTE: errors in an IMPORTS statement can cause other errors later in compilation due to missing definitions.

User Action:

Correct the MIB source and recompile.

MC2203

Expected ',' or ';'

Reason:

This message is produced by the MIB compiler when it finds invalid source during the processing of an EXPORTS statement.

Either a comma (,) or a semicolon (;) was expected at this point.

System Action:

Compilation continues with the next statement.

This message counts as an error.

NOTE: errors in an IMPORTS statement can cause other errors later in compilation due to missing definitions.

User Action:

Correct the MIB source and recompile.

MC2501**Type: p1 already defined****Reason:**

This message is produced by the MIB compiler when it finds a duplicated type name declaration.

The indicated type name has already been declared (or imported).

System Action:

Compilation continues.

This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC2502**OBJECT IDENTIFIER: p1 already defined****Reason:**

This message is produced by the MIB compiler when it finds a duplicated OBJECT IDENTIFIER name declaration.

The indicated name has already been declared (or imported).

System Action:

Compilation continues.

This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC2503

'::=' expected

Reason:

This message is produced by the MIB compiler while processing an OBJECT IDENTIFIER name declaration.

The token following OBJECT IDENTIFIER was not '::='.

System Action:

Compilation continues.

This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC2601

MACRO definition name: p1 version: p2 recognized and defined

Reason:

This message is produced by the MIB compiler while processing a MACRO definition statement.

This version of the MIB compiler does not support MACRO definitions.

However, it parses the MACRO statement and attempts to match the declared macro with one that it understands for MIB compilation.

The indicated macro name was recognized. It has been defined.

System Action:

Compilation continues.

This message counts as a warning.

User Action:

None.

MC2690**Unexpected end-of-source in macro definition: p1****Reason:**

This message is produced by the MIB compiler when it finds the end of the MIB source while processing a MACRO definition statement.

System Action:

Compilation is terminated.

User Action:

Correct the MIB source and recompile.

MC2691**Unrecognized MACRO definition name: p1****Reason:**

This message is produced by the MIB compiler while processing a MACRO definition statement.

This version of the MIB compiler does not support MACRO definitions.

However, it parses the MACRO statement and attempts to match the declared macro with one that it understands for MIB compilation.

The indicated macro was not one that it recognized.

System Action:

Compilation continues with the next statement.

This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC2692

MACRO definition name: p1 version: p2 mismatch with MIB SMI version p 3

Reason:

This message is produced by the MIB compiler while processing a MACRO definition statement.

This version of the MIB compiler does not support MACRO definitions.

However, it parses the MACRO statement and attempts to match the declared macro with one that it understands for MIB compilation.

The indicated macro name was recognized. However, the version of the MIB SMI had already been determined by previous definitions (for example, imported names). This macro definition was for a different version.

System Action:

Compilation continues with the next statement.

This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC3080

Type: p1 already declared as: p2

Reason:

This message is produced by the MIB compiler when it finds a duplicated definition.

The indicated name has already been declared. The type of declaration previously encountered is also shown.

System Action:

Compilation continues with the next statement.

This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC3081**p1 keyword duplicated in p2 declaration for: p3****Reason:**

This message is produced by the MIB compiler when it finds a duplicated keyword while processing a declaration.
The duplicated keyword name is shown. The type of declaration and the name of the entity being declared are also shown.

System Action:

Compilation continues with the next statement.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC3082**invalid value for p1 clause in p2 declaration for: p3****Reason:**

This message is produced by the MIB compiler when it finds an invalid clause while processing a declaration.
The clause keyword name is shown. The type of declaration and the name of the entity being declared are also shown.

System Action:

Compilation continues with the next statement.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC3083

expected ' p1' in p2 declaration for: p3

Reason:

This message is produced by the MIB compiler when it finds invalid syntax while processing a declaration.

The expected token name is shown. The type of declaration and the name of the entity being declared are also shown.

System Action:

Compilation continues with the next statement.

This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC3084

p1 declaration for: p2 missing p3 clause

Reason:

This message is produced by the MIB compiler when it finds missing clauses while processing a declaration.

The declaration type and name are shown. The missing clause name is also shown.

System Action:

Compilation continues with the next statement.

This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC3085**Expected ' p1' following ' p2'****Reason:**

This message is produced by the MIB compiler when it finds invalid syntax while processing a declaration.

The expected token is shown, along with the preceding token.

System Action:

Compilation continues with the next statement.

This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC3086**Unexpected end of source in p1 clause of p2 declaration****Reason:**

This message is produced by the MIB compiler when it finds the end of source while processing a declaration.

The clause being processed is shown.

System Action:

Compilation continues with the next statement.

This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC3087

Expected ' p1'

Reason:

This message is produced by the MIB compiler when it finds invalid syntax while processing a declaration.
The expected token is shown.

System Action:

Compilation continues with the next statement.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC3088

p1 and p2 clauses are mutually exclusive in p3 declaration

Reason:

This message is produced by the MIB compiler when it finds a pair of clauses that are mutually exclusive while processing a declaration.
The clause names are shown.

System Action:

Compilation continues with the next statement.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC3089**Expected ' p1' or ' p2'****Reason:**

This message is produced by the MIB compiler when it finds invalid syntax while processing a declaration.
The expected tokens are shown. At the indicated point, one of these tokens was expected.

System Action:

Compilation continues with the next statement.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC3099**' p1' keyword expected****Reason:**

This message is produced by the MIB compiler when an internal routine is called with unexpected or invalid source.
The expected token is shown.

System Action:

Compilation is terminated.

User Action:

Report this error to your product support representative.

MC6001

OBJECT IDENTIFIER resolution took p1 p2

Reason:

This message is produced by the MIB compiler to indicate how many passes were required to resolve forward references in OBJECT IDENTIFIER declarations.

System Action:

Compilation continues.

User Action:

None.

MC6080

OBJECT IDENTIFIER: p1 already defined

Reason:

This message is produced by the MIB compiler when it finds a duplicated OBJECT IDENTIFIER name declaration.
The indicated name has already been declared (or imported).

System Action:

Compilation continues.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6081**Integer or Identifier expected****Reason:**

This message is produced by the MIB compiler when it finds invalid syntax while parsing an OBJECT IDENTIFIER declaration.
An integer or identifier was expected. These are the only valid options at this point of an OBJECT IDENTIFIER declaration.

System Action:

Compilation continues.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6082**Recursive or duplicated OBJECT IDENTIFIER name reference****Reason:**

This message is produced by the MIB compiler when it finds invalid syntax while parsing an OBJECT IDENTIFIER declaration.
It indicates one of the following:

- The name being declared was found in the list (recursive).
- A duplicated name was found in the list.

System Action:

Compilation continues.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6083

Undefined OBJECT IDENTIFIER name reference not at front of list

Reason:

This message is produced by the MIB compiler when it finds invalid syntax while parsing an OBJECT IDENTIFIER declaration.
A name was found in the reference list. However, the name had no (integer) following it, and this is only allowed as the first reference entry.

System Action:

Compilation continues.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6084

Integer expected

Reason:

This message is produced by the MIB compiler when it finds invalid syntax while parsing an OBJECT IDENTIFIER declaration.
A bracketed value following a name was found. The value inside the brackets must be an integer.

System Action:

Compilation continues.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6085**'}' expected****Reason:**

This message is produced by the MIB compiler when it finds invalid syntax while parsing an OBJECT IDENTIFIER declaration.
A bracketed value following a name was found. The closing bracket following the integer was not found.

System Action:

Compilation continues.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6086**Integer, Identifier, or '}' expected****Reason:**

This message is produced by the MIB compiler when it finds invalid syntax while parsing an OBJECT IDENTIFIER declaration.
An integer, identifier, or '}' was expected. These are the only valid options at this point of an OBJECT IDENTIFIER declaration.

System Action:

Compilation continues.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6087

OBJECT IDENTIFIER reference not defined: p1

Reason:

This message is produced by the MIB compiler while resolving OBJECT IDENTIFIER references.

This processing occurs after all MIB source has been read. All OBJECT IDENTIFIER declarations and references that had unnumbered names in the definition list are resolved by locating a declaration for the name.

If no declaration for the name can be found, then this error message is produced.

System Action:

Compilation continues.

This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6088**p1 OBJECT IDENTIFIERS not resolved due to undefined parent(s)****Reason:**

This message is produced by the MIB compiler while resolving OBJECT IDENTIFIER references.

This processing occurs after all MIB source has been read. All OBJECT IDENTIFIER declarations and references that had unnumbered names in the definition list are resolved by locating a declaration for the name.

If a name was found, but it was itself not resolved, then this message will count it.

To prevent large numbers of error messages, this message simply indicates how many OBJECT IDENTIFIERS could not be resolved due to unresolved parents. This is because, typically, a single missing declaration can result in many other errors.

Actual undefined OBJECT IDENTIFIER names are reported by message MC6087. Generally, fixing the problems reported by those messages will eliminate this message.

System Action:

Compilation continues.

This message counts as an error.

User Action:

Correct errors indicated by message(s) MC6087 and this message should not appear.

MC6096**Invalid OID segment value passed to AddOid: p1****Reason:**

This message is produced by the MIB compiler when an internal procedure call passes invalid arguments.

System Action:

Compilation is terminated.

User Action:

Contact your product support representative.

MC6097

Invalid OID segment list count passed to AddOid: p1

Reason:

This message is produced by the MIB compiler when an internal procedure call passes invalid arguments.

System Action:

Compilation is terminated.

User Action:

Contact your product support representative.

MC6098

Invalid option passed to AddOid: p1

Reason:

This message is produced by the MIB compiler when an internal procedure call passes invalid arguments.

System Action:

Compilation is terminated.

User Action:

Contact your product support representative.

MC6099

Internal Error in OBJECT IDENTIFIER processing

Reason:

This message is produced by the MIB compiler when an internal error occurs while parsing an OBJECT IDENTIFIER declaration.

System Action:

Compilation is terminated.

User Action:

Contact your product support representative.

MC6101**Duplicate type declaration for: p1****Reason:**

This message is produced by the MIB compiler when a duplicate declaration for the named type is found.

System Action:

Compilation continues with the next statement.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6102**Expected ' p1'****Reason:**

This message is produced by the MIB compiler when invalid or unexpected syntax is found while processing a type declaration.
The expected token is indicated.

System Action:

Compilation continues with the next statement.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6103

Duplicate identifier in list.

Reason:

This message is produced by the MIB compiler when a duplicate identifier is found while processing a type declaration.
This could be a SEQUENCE list or enumeration (named numbers) list.

System Action:

Compilation continues with the next statement.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6104

Expected ' p1' or ' p2'

Reason:

This message is produced by the MIB compiler when invalid or unexpected syntax is found while processing a type declaration.
One of the shown tokens was expected. However, neither was found.

System Action:

Compilation continues with the next statement.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6105**Expected named list, SIZE, or range specification****Reason:**

This message is produced by the MIB compiler when invalid or unexpected syntax is found while processing a type declaration.

At the indicated point, either a named value list, a SIZE clause, or a range specification was expected.

System Action:

Compilation continues with the next statement.

This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6106**Expected ' p1' after ' p2'****Reason:**

This message is produced by the MIB compiler when invalid or unexpected syntax is found while processing a type declaration.

The identified token was expected after the last-shown token.

System Action:

Compilation continues with the next statement.

This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6107

Duplicate number in list.

Reason:

This message is produced by the MIB compiler when a duplicate number is found in a named numbers list .

System Action:

Compilation continues with the next statement.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6108

Use of 0 is not recommended

Reason:

This message is produced by the MIB compiler when a named number list entry has a numeric value of 0.
The use of 0 is strongly discouraged. Refer to RFC1212 (SMI v1) and RFC2578 (SMI v2).

System Action:

Compilation continues.
This message counts as a warning.

User Action:

Probably none. This message can be suppressed by use of the ENUM0 IGNORE compiler option.

MC6109**Invalid type name: ' p1'****Reason:**

This message is produced by the MIB compiler when invalid or unexpected syntax is found while processing a type declaration.

The indicated token is not a valid type name. Type names must be an identifier, and must start with an uppercase letter.

System Action:

Compilation continues with the next statement.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6110**p1 end value less than start value****Reason:**

This message is produced by the MIB compiler when the range of numbers in a range or SIZE clause is not valid.

At the indicated point, the end number is less than the start number.

System Action:

Compilation continues with the next statement.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6111

p1 number is too large

Reason:

This message is produced by the MIB compiler when a number in the indicated clause is too large.

System Action:

Compilation continues with the next statement.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6120

Type resolution took p1 p2

Reason:

This message is produced by the MIB compiler at the completion of type resolution. It indicates how many passes over the type table was required to completely resolve all type declarations.

System Action:

None.

User Action:

None.

MC6130

Tag value expected. Found: p1

Reason:

This message is produced by the MIB compiler when an ASN.1 tag number was expected.

System Action:

Compilation continues with the next statement.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6131**Right Square Bracket expected. Found: p1****Reason:**

This message is produced by the MIB compiler when the closing (right) square bracket after an ASN.1 tag number was expected and not found.

System Action:

Compilation continues with the next statement.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6150**'BITS' not allowed at this point****Reason:**

This message is produced by the MIB compiler when a BITS MIB type reference was found.
The BITS MIB construct is not valid at this point.

System Action:

Compilation continues with the next statement.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6151

'BITS' not followed by '{'

Reason:

This message is produced by the MIB compiler when invalid or unexpected syntax is found while processing a type declaration.

The BITS MIB construct must be followed by an opening brace and a list of bit names.

System Action:

Compilation continues with the next statement.

This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6152

'BITS' reference must not have list

Reason:

This message is produced by the MIB compiler when invalid or unexpected syntax is found while processing a type declaration.

The BITS reference must not have a named bits list definition. (Normally, BITS references within a SEQUENCE are not valid; however, the BITSREF IGNORE option was specified for this compilation. In any case, references to the BITS MIB pseudotype cannot have a named bits list at this point.)

System Action:

Compilation continues with the next statement.

This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC6160**Unresolved type: p1****Reason:**

This message is produced by the MIB compiler while performing resolution of all type declarations.

The named type was not resolved. This could be due to a preceding error, such as an error in another type declaration, or a missing IMPORT definition.

System Action:

Compilation terminates after completing all type resolution.
This message counts as an error.

User Action:

Determine the reason why the type declaration was not resolved and correct it.

MC6161**p1 types not resolved due to unresolved parents.****Reason:**

This message is produced by the MIB compiler while performing resolution of all type declarations.

The indicated number of type declarations could not be resolved, due to the referenced type itself not being resolved.

This message simply indicates the number of types with this problem. Refer to preceding instances of message MC6160 to determine the parent type(s) that were not declared and why.

System Action:

Compilation terminates after completing all type resolution.
This message counts as an error.

User Action:

Correct the other unresolved types (messages MC6160).

MC6162

p1 clause not valid for: p2

Reason:

This message is produced by the MIB compiler while performing resolution of all type declarations.

A forward-declared type had a clause (as indicated). However, after resolution, the base type that this type was based on does not allow this clause.

System Action:

Compilation terminates after completing all type resolution.
This message counts as an error.

User Action:

Correct the type declaration.

MC6186

Internal error. Reason: p1

Reason:

This message is produced by the MIB compiler when an internal error occurs while processing a type declaration.

System Action:

Compilation is terminated.

User Action:

Contact your product support representative.

MC6187

Internal error. Current token not ' p1'

Reason:

This message is produced by the MIB compiler when an internal error occurs while processing a type declaration.

System Action:

Compilation is terminated.

User Action:

Contact your product support representative.

MC6188**Unknown type: p1 found in type table****Reason:**

This message is produced by the MIB compiler when an internal error occurs while processing a type declaration.

System Action:

Compilation is terminated.

User Action:

Contact your product support representative.

MC6189**Type processing, Internal error****Reason:**

This message is produced by the MIB compiler when an internal error occurs while processing a type declaration.

System Action:

Compilation is terminated.

User Action:

Contact your product support representative.

MC6190**Type processing, nx field must be non-zero****Reason:**

This message is produced by the MIB compiler when an internal error occurs while processing a type declaration.

System Action:

Compilation is terminated.

User Action:

Contact your product support representative.

MC6191

Type reference, nx field must be zero

Reason:

This message is produced by the MIB compiler when an internal error occurs while processing a type declaration.

System Action:

Compilation is terminated.

User Action:

Contact your product support representative.

MC6192

Type declaration, nx field must be non-zero

Reason:

This message is produced by the MIB compiler when an internal error occurs while processing a type declaration.

System Action:

Compilation is terminated.

User Action:

Contact your product support representative.

MC6193

Unable to locate p1 base type table entry

Reason:

This message is produced by the MIB compiler when an internal error occurs while processing a type declaration.

System Action:

Compilation is terminated.

User Action:

Contact your product support representative.

MC6194**Type declaration with no line/col passed in****Reason:**

This message is produced by the MIB compiler when an internal error occurs while processing a type declaration.

System Action:

Compilation is terminated.

User Action:

Contact your product support representative.

MC6195**Imported type name not defined: p1****Reason:**

This message is produced by the MIB compiler when an internal error occurs while adding an imported type definition.

System Action:

Compilation is terminated.

User Action:

Contact your product support representative.

MC6196**Incorrect extra info type: p1:****Reason:**

This message is produced by the MIB compiler when an internal error occurs while adding an imported type definition.

System Action:

Compilation is terminated.

User Action:

Contact your product support representative.

MC6197

Incorrect number parms for p1: p2

Reason:

This message is produced by the MIB compiler when an internal error occurs while adding an imported type definition.

System Action:

Compilation is terminated.

User Action:

Contact your product support representative.

MC6198

Imported type name already defined: p1

Reason:

This message is produced by the MIB compiler when an internal error occurs while adding an imported type definition.

System Action:

Compilation is terminated.

User Action:

Contact your product support representative.

MC6199

Invalid base type for imported type add: p1 (bt: p2)

Reason:

This message is produced by the MIB compiler when an internal error occurs while adding an imported type definition.

System Action:

Compilation is terminated.

User Action:

Contact your product support representative.

MC6601**NOTIFICATION-TYPE resolution complete****Reason:**

This message is produced by the MIB compiler at the end of resolution of all NOTIFICATION-TYPE definitions.
No errors were found.

System Action:

None.

User Action:

None.

MC6680**NOTIFICATION-TYPE: p1 unresolved. Reason: p2 p3****Reason:**

This message is produced by the MIB compiler while performing resolution of all NOTIFICATION-TYPE definitions.

Resolution for the indicated NOTIFICATION-TYPE name failed. The following reasons are possible (the specific reason number is in the message):

- 1: The assigned value (after the ::=) had a syntax error.
- 2: The assigned value (after the ::=) was not resolved (as an OBJECT IDENTIFIER value).
- 3: An OBJECTS entry had a syntax error.
- 4: An OBJECTS entry could not be resolved as an OBJECT IDENTIFIER value.

System Action:

Compilation terminates after completing all NOTIFICATION-TYPE resolution.
This message counts as an error.

User Action:

Correct the error and recompile the MIB.

MC6681

p1 NOTIFICATION-TYPEs unresolved. Reason: p2

Reason:

This message is produced by the MIB compiler while performing resolution of all NOTIFICATION-TYPE definitions.

The message provides a summary count of the number of NOTIFICATION-TYPE definitions that could not be resolved for a specific reason.

The reason codes are explained in the help for message MC6680.

System Action:

Compilation terminates after completing all NOTIFICATION-TYPE resolution.

This message counts as an error.

User Action:

Correct the error and recompile the MIB.

MC6701

TRAP-TYPE resolution complete

Reason:

This message is produced by the MIB compiler at the end of resolution of all TRAP-TYPE definitions.

No errors were found.

System Action:

None.

User Action:

None.

MC6780**TRAP-TYPE: p1 unresolved. Reason: p2 p3****Reason:**

This message is produced by the MIB compiler while performing resolution of all TRAP- TYPE definitions.

Resolution for the indicated TRAP-TYPE name failed. The following reasons are possible (the specific reason number is in the message):

- 1: The assigned ENTERPRISE value had a syntax error.
- 2: The assigned ENTERPRISE value was not resolved (as an OBJECT IDENTIFIER value).
- 3: A VARIABLES entry had a syntax error.
- 4: A VARIABLES entry could not be resolved as an OBJECT IDENTIFIER value.

System Action:

Compilation terminates after completing all TRAP-TYPE resolution.
This message counts as an error.

User Action:

Correct the error and recompile the MIB.

MC6781**p1 TRAP-TYPEs unresolved. Reason: p2****Reason:**

This message is produced by the MIB compiler whilst performing resolution of all TRAP- TYPE definitions.

The message provides a summary count of the number of TRAP-TYPE definitions that could not be resolved for a specific reason.

The reason codes are explained in the help for message MC6780.

System Action:

Compilation terminates after completing all TRAP-TYPE resolution.
This message counts as an error.

User Action:

Correct the error and recompile the MIB.

MC6801

OBJECT-TYPE resolution complete

Reason:

This message is produced by the MIB compiler at the end of resolution of all OBJECT- TYPE definitions.
No errors were found.

System Action:

None.

User Action:

None.

MC6880

OBJECT-TYPE: p1 unresolved. Reason: p2

Reason:

This message is produced by the MIB compiler while performing resolution of all OBJECT-TYPE definitions.

Resolution for the indicated OBJECT-TYPE name failed. The following reasons are possible (the specific reason number is in the message):

- 1: The assigned OBJECT IDENTIFIER value (after the ::=) had a syntax error.
- 2: The assigned OBJECT IDENTIFIER value (after the ::=) was not resolved.
- 3: The assigned OBJECT IDENTIFIER value for this OBJECT-TYPE is not unique within all OBJECT-TYPE definitions in this MIB.
- 4: The assigned SYNTAX type definition had syntax errors. (This reason should never occur, and if it is found, the compilation will terminate immediately.)
- 5: The assigned SYNTAX type definition was not resolved.
- 6: One of the INDEX entries had a syntax error (that is, it was not a valid OBJECT IDENTIFIER reference).
- 7: One of the INDEX entries could not be resolved as an OBJECT IDENTIFIER.
- 8: The AUGMENTS entry had a syntax error (that is, it was not a valid OBJECT IDENTIFIER reference).
- 9: The AUGMENTS entry could not be resolved as an OBJECT IDENTIFIER.

System Action:

Compilation terminates after completing all OBJECT-TYPE resolution.
This message counts as an error.

User Action:

Correct the error and recompile the MIB.

MC6881**p1 OBJECT-TYPEs unresolved. Reason: p2****Reason:**

This message is produced by the MIB compiler while performing resolution of all OBJECT-TYPE definitions.

The message provides a summary count of the number of OBJECT-TYPE definitions that could not be resolved for a specific reason.

The reason codes are explained in the help for message MC6880.

System Action:

Compilation terminates after completing all OBJECT-TYPE resolution.

This message counts as an error.

User Action:

Correct the error and recompile the MIB.

MC6882**OBJECT-TYPE: p1 not root but has missing ancestors****Reason:**

This message is produced by the MIB compiler while performing resolution of all OBJECT-TYPE definitions.

The indicated OBJECT-TYPE definition was not a root entry (that is, there were other OBJECT-TYPE definitions with OBJECT IDENTIFIER values that were a prefix of this one), but there were missing ancestor OBJECT-TYPE definitions.

For example, this OBJECT-TYPE could have an OBJECT IDENTIFIER value of 1.3.6.1.5.7.9 but no OBJECT-TYPE was found with a value of 1.3.5.1.5.7.

System Action:

Compilation terminates after completing all OBJECT-TYPE resolution.

This message counts as an error.

User Action:

Correct the error and recompile the MIB.

MC6883

OBJECT-TYPE: p1 has no children but is not a base type.

Reason:

This message is produced by the MIB compiler while performing resolution of all OBJECT-TYPE definitions.

The indicated OBJECT-TYPE definition had no children defined (based on the OBJECT IDENTIFIER value assigned). However, the assigned type (the SYNTAX clause) was not a base type (or one derived from a base type).

For example, this entry had a type of SEQUENCE OF xxx.

System Action:

Compilation terminates after completing all OBJECT-TYPE resolution.
This message counts as an error.

User Action:

Correct the error and recompile the MIB.

MC6884

OBJECT-TYPE: p1 is SEQUENCE OF but does not have exactly 1 child

Reason:

This message is produced by the MIB compiler while performing resolution of all OBJECT-TYPE definitions.

The indicated OBJECT-TYPE definition had a type of SEQUENCE OF but did not have exactly one child OBJECT-TYPE (based on the OBJECT IDENTIFIER values).

System Action:

Compilation terminates after completing all OBJECT-TYPE resolution.
This message counts as an error.

User Action:

Correct the error and recompile the MIB.

MC6885**OBJECT-TYPE: p1 is SEQUENCE but has an incorrect number of children****Reason:**

This message is produced by the MIB compiler while performing resolution of all OBJECT-TYPE definitions.

The indicated OBJECT-TYPE definition had a type of SEQUENCE but the number of child OBJECT-TYPE entries (based on the OBJECT IDENTIFIER values) did not match the number of elements defined in the SEQUENCE definition.

System Action:

Compilation terminates after completing all OBJECT-TYPE resolution. This message counts as an error.

User Action:

Correct the error and recompile the MIB.

MC6886**OBJECT-TYPE: p1 has children but is a base type.****Reason:**

This message is produced by the MIB compiler while performing resolution of all OBJECT-TYPE definitions.

The indicated OBJECT-TYPE definition had children defined (based on the OBJECT IDENTIFIER value assigned). However, the assigned type (the SYNTAX clause) was a base type (or one derived from a base type).

For example, this entry had a type of INTEGER.

System Action:

Compilation terminates after completing all OBJECT-TYPE resolution. This message counts as an error.

User Action:

Correct the error and recompile the MIB.

MC7001

%

Reason:

This message is produced by the MIB compiler whenever an error or warning message is produced that can be tied to a specific MIB source position. The message consists of a single '%' character, which will be positioned under the approximate location on a source line (which will precede this message, with a line number instead of a message prefix).

The error or warning message will follow this message.

NOTE: If multiple errors or warnings are detected on the same source line, the source line is written once. Each error or warning will be preceded by this message with the appropriate source location. For example:

123456: mib source line here MC7001 % MC???? error description 1
(source...) MC7001 % MC???? error description 2 (line...)

System Action:

None.

User Action:

Review the error or warning message and the MIB source and correct it as required.

MC8001

Exported p1 p2 definitions

Reason:

This message is produced by the MIB compiler during EXPORT processing. It shows how many definitions of a specific type were exported.

System Action:

None.

User Action:

None.

MC8002**IMPORT Database load error for p1. p2. Rc: p3****Reason:**

This message is produced by the MIB compiler during IMPORT processing. It indicates that the requested item (item.module) could not be imported due to a database error.

The return code from the database handler is shown. An additional error message may also be produced with more information

System Action:

Processing continues.

This message counts as an error.

User Action:

Report this problem to your product support representative.

MC8080**IMPORT/EXPORT handler package: p1 init rc: p2. Disabled****Reason:**

This message is produced if the MIB compiler receives a non-zero return code from the IMPORT/EXPORT database interface handler initialization call.

The EXPORT/MPORT interface is disabled.

System Action:

Compilation proceeds. However, no external IMPORT requests can be honored. This message counts as an error.

User Action:

Report this to your product support representative.

MC8081

IMPORT/EXPORT handler package: p1 Error: p2. Disabled

Reason:

This message is produced if the MIB compiler traps an error during processing of the IMPORT/EXPORT database interface handler initialization call.
The EXPORT/MPORT interface is disabled.

System Action:

Compilation proceeds. However, no external IMPORT requests can be honored.
This message counts as an error.

User Action:

Report this to your product support representative.

MC8082

Initialization of EXPORT processing failed rc: p1. No exports done.

Reason:

This message is produced if the MIB compiler receives a non-zero return code from of the IMPORT/EXPORT database interface handler export initialization call.
EXPORT processing is not performed.

System Action:

EXPORT processing is not performed.
This message counts as an error.

User Action:

Report this to your product support representative.

MC8083**Invalid return code from EXPORT package. Function: p1 Rc: p2****Reason:**

This message is produced if the MIB compiler receives an invalid return code from the IMPORT/EXPORT database interface handler.
The function and return code are shown.

System Action:

further EXPORT processing is not performed.
This message counts as an error.

User Action:

Report this to your product support representative.

MC8084**Unknown IMPORT type (p1) forr p2. p3****Reason:**

This message is produced if the MIB compiler is unable to recognize the type of definition being imported for the indicated item.

System Action:

IMPORT processing for the indicated item is not performed.
This message counts as an error.

User Action:

Report this to your product support representative.

MC8099**MIB compiler internal error (\$MCCM80X): p1****Reason:**

This message is produced if an internal error is detected in the MIB compiler.

System Action:

Compilation terminates.

User Action:

Report this error to your product support representative.

MC8501

IMPORT item: p1 not found in module: p2 (Internal)

Reason:

This message is produced if the MIB compiler encounters an IMPORT request for an item that is in a module that the compiler regards as internal. However, the item was not found in the internal tables for that module. This can occur when an item name is misspelt.

System Action:

The item is skipped and processing continues with the next item. This message is regarded as a warning. However, errors are likely to occur later if the item is referenced.

User Action:

Correct the import name and recompile.

MC8502

IMPORT item: p1 from module: p2 SMI version is not p3

Reason:

This message is produced if the MIB compiler encounters an IMPORT request for an item that is in a module that the compiler regards as internal. The item was found; however, the compiler has already imported items that have set the SMI version. This item has a different SMI version. The item, module, and current SMI version are displayed. This can occur when IMPORT requests reference both SMI v1 modules (such as RFC1212-MIB) and SMI v2 modules (such as SNMPv2-SMI).

System Action:

The item is skipped and processing continues with the next item. This message is regarded as an error.

User Action:

Correct the import list and recompile.

MC8599**MIB compiler internal error (\$MCCM85I): p1****Reason:**

This message is produced if an internal error is detected in the MIB compiler.

System Action:

Compilation terminates.

User Action:

Report this error to your product support representative.

MC9001**Bstring/Hstring crosses lines****Reason:**

The MIB compiler detected a hex or binary string ('...'H or '...'B) that did not end before the end of the line.

The compiler does not support these strings crossing lines.

System Action:

Compilation is terminated.

This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC9002

Invalid p1 value

Reason:

The MIB compiler detected a hex or binary string ('...'H or '...'B) with an invalid value.

A binary string ('...'B) must only have the characters 0 or 1 between the quotes. If it is being used in a context where a number is expected, it must not have more than 48 digits.

A hex string ('...'H) must only have the characters 0-9 and A-F (upper or lower case) between the quotes. If it is being used in a context where a number is expected, it must not have more than 12 digits.

System Action:

Compilation is terminated.

This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC9003

Character after closing quote not B or H

Reason:

The MIB compiler found a quoted string (opened with a single quote ') that did not have a 'B' or 'H' after the closing quote.

Only a B (meaning binary string) or H (meaning hex string) can be specified.

System Action:

Compilation is terminated.

This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC9004**End of Source in quoted string****Reason:**

The MIB compiler found a quoted string (opened with a double quote ") that did not end before the end of the source.

System Action:

Compilation is terminated.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC9005**Invalid source data at line: p1 Col: p2 Char: p3 (Hex: p4)****Reason:**

The MIB compiler found a source character that it could not understand. The position and character are shown (including a hex expansion).
This can be caused by the use of an unsupported ASN.1 construct in the MIB source.

System Action:

Compilation is terminated.
This message counts as an error.

User Action:

Correct the MIB source and recompile.

MC9050

Comment until end of line

Reason:

This message is produced if the MIB compiler has found an ASN.1 comment that has a closing delimiter '--' and the LINECMTS IGNORE option was specified. The comment is treated as ending at the end of the line.

Normally, an ASN.1 comment extends from the opening -- until either end-of-line, or a closing --.

Some MIB compilers do not recognize the closing -- and treat all comments as ending at the end of the line. Because of this, some MIB source has comments that contain embedded -- sequences (such as a comment like: '-----!').

System Action:

The comment is treated as being the rest of the source line.

This message counts as a warning.

User Action:

None. You may correct the MIB source if you wish.

MC9051**Possible invalid comment syntax****Reason:**

This message is produced if the MIB compiler has found an ASN.1 comment that has a closing delimiter '--', but is possibly invalid. The LINECMTS IGNORE option was not specified for this compilation.

The comment is treated as ending at the next '--' after the opening '--'.

If the comment is invalid (such as a line of '-----'), it is very likely that syntax errors will occur.

This message is issued to inform you of possible problems. It is issued once only for any source line.

Investigate the LINECMTS IGNORE option.

Normally, an ASN.1 comment extends from the opening -- until either end-of-line, or a closing --.

Some MIB compilers do not recognize the closing -- and treat all comments as ending at the end of the line. Because of this, some MIB source has comments that contain embedded -- sequences (such as a comment like: '-----!').

System Action:

The comment ends at the next '--' after the opening '--'.

This message counts as a warning.

User Action:

Depends on related messages for this source line.

MC9052

Identifier length exceeds 48 characters (Length: p1)

Reason:

This message is produced if the MIB compiler has found an identifier in the source that exceeds 48 characters in length.

It is recommended that MIB identifiers not exceed 32 characters. MIBs have been found with longer identifiers, so this compiler accepts lengths up to 48. However, longer lengths are not accepted.

This message is a warning, to allow compilation to proceed. However, if this message is issued, an error message is issued at the end of compilation showing how many long identifiers were found.

System Action:

None.

This message counts as a warning.

User Action:

Correct the identifier.

MC9080

Unsupported ASN.1 keyword found: p1

Reason:

This message is produced if the MIB compiler encounters an ASN.1 keyword that is not supported.

System Action:

Compilation terminates.

User Action:

Correct the MIB source to remove the unsupported syntax, and then recompile.

MC9099**MIB compiler internal error (\$MCCM90L): p1****Reason:**

This message is produced if an internal error is detected in the MIB compiler.

System Action:

Compilation terminates.

User Action:

Report this error to your product support representative.

MC9501**MIB compile terminated by previous error (msgid: p1)****Reason:**

This message is produced if the MIB compiler encounters a fatal error condition. It indicates that all compilation processing is terminated. The ID of the message written when the problem was detected is displayed.

System Action:

Compilation terminates.

User Action:

Examine any previous errors (especially the noted ones) and correct them as required.

MC9502**MIB compile terminated by compiler internal error (msgid: p1)****Reason:**

This message is produced if the MIB compiler has an internal error condition. It indicates that all compilation processing is terminated. The ID of the message written when the problem was detected is displayed.

System Action:

Compilation terminates.

User Action:

Report this to your product support representative.

MH0001

Select an option or press a function key to proceed

Reason:

System Action:

User Action:

Enter a valid menu option, panel path, or command.

MENU OPTION

Each menu option is identified by a 1- to 3-character option string, displayed in yellow. Enter the option you want at the ==> prompt.

PANEL PATH

Panel paths move directly to a function without accessing each submenu between it and the current menu. A panel path consists of multiple menu options separated by periods (for example =AD.C.P).

The = sign functions as a skip character, closing all nested screens and entering the path from the primary menu. (If you are currently at the Primary Menu, the skip character is not required.)

Entering == at the ==> prompt from any panel closes all nested screens

MH0002

Select an option, press a function key, or enter a shortcut to proceed.

Reason:

The ENTER key was pressed, but no option, command or shortcut was entered.

System Action:

None.

User Action:

Enter a valid shortcut, menu option, panel path, or command.

SHORTCUTS

Enter a shortcut name, preceded by a slash, at the ==> prompt (for example, /levels or /info or /ipmon). This will take you directly to the function.

To see a list of all shortcuts and their associated functions, enter a single slash (/) at the ==> prompt. Select the desired shortcut from the list by entering 'S' beside it.

If a shortcut exists for a menu option, it is displayed in turquoise, to the right of the option description.

Shortcuts may also be combined with menu options (for example, /bcast.s or =/bcast.s).

Shortcuts can be invoked in two ways:

1. A 'nested' shortcut
2. A shortcut skip

To retain and nest the current screen level, use a nested shortcut:

/shortcut_name

Return will bring you back to the last nested screen in this window. Screens may be nested to a maximum of 64 levels.

To close all currently nested screen levels, use a shortcut skip:

=/shortcut_name

Return will take you back to the Primary Menu. If you no longer need any nested screens, a shortcut skip saves storage and resources.

(If you are currently at the Primary Menu, a nested shortcut and a shortcut skip are exactly equivalent.)

MENU OPTION

Each menu option is identified by a 1 to 3 character option string, displayed in yellow. Enter the option you want at the ==> prompt.

PANEL PATH

Like shortcuts, panel paths move directly to a function without having to access each submenu between it and the current menu. A panel path consists of multiple menu options separated by periods (for example =U.M).

Also like shortcuts, the = sign functions as a skip character, closing all nested screens and effectively entering the path from the primary menu. (If you are currently at the Primary Menu, the skip character is not required.)

Frequently used panel paths have associated shortcuts. If you don't remember a shortcut, enter / at the ==> prompt for a list. Select one from the list, or enter it at the ==> prompt.

There is no difference between accessing a function using a panel path skip or a shortcut skip, although the shortcut may be easier to remember. Both close the current screen and go straight to the function. A nested shortcut, however, retains the current screen.

COMMANDS

/CASCMD.L lists all CAS commands. /ASADMIN.C lists all Automation Services commands.

Entering == at the ==> prompt from any panel closes all nested screens and returns you to the Primary Menu.

MH0003**Invalid shortcut or option (For help: put cursor on this line, press F1)****Reason:**

The entered shortcut, menu option, panel path, or command was invalid (for example, the syntax might be incorrect or the required function is not licensed in this region).

If you want to access a function, use one of the following methods (examples are given in parentheses):

- Enter a shortcut (/LEVELS or =/LEVELS)
- Enter a combined shortcut and menu option (/BCAST.S or =/BCAST.S)
- Enter a menu option
- Enter a panel path (=H.I.P)

Note: Some shortcuts and options might be displayed but their operation suppressed for *the* following reasons:

- The shortcut or option requires a product or component that is not configured in this region.
- Access to the shortcut or option is denied because you do not have sufficient authority.

System Action:

None.

User Action:

If the syntax is incorrect, correct the shortcut, option, panel path or command, and retry.

SHORTCUTS

Enter a shortcut name, preceded by a slash, at the ==> prompt (for example, /LEVELS, /INFO, or /IPMON). This will take you directly to the function.

To see a list of all shortcuts and their associated functions, enter a single slash (/) at the ==> prompt. Select the desired shortcut from the list by entering S beside it.

If a shortcut exists for a menu option, it is displayed in turquoise to the right of the option description. If the value is -, it indicates that the option has no shortcut.

Shortcuts may also be combined with menu options (for example, /BCAST.S or =/BCAST.S).

You can invoke shortcuts in two ways:

- A nested shortcut
- A shortcut skip

To retain and nest the current panel level, use a nested shortcut:

/shortcut_name

Exiting brings you back to the last nested panel. Panels may be nested to a maximum of 64 levels.

To close all currently nested panel levels, use a shortcut skip:

=/shortcut_name

Exiting takes you back to the Primary Menu. If you no longer need any nested panels, a shortcut skips saves storage and resources.

(If you are currently at the Primary Menu, a nested shortcut and a shortcut skip behave the same way.)

MENU OPTION

Each menu option is identified by a 1 to 3 character option string, displayed in yellow. Enter the option you want at the ==> prompt.

PANEL PATH

Like shortcuts, panel paths move directly to a function without having to access each submenu between it and the current menu. A panel path consists of multiple menu options separated by periods (for example, =U.M).

Also like shortcuts, the = sign functions as a skip character, closing all nested panels and effectively entering the path from the Primary Menu. (If you are currently at the Primary Menu, the skip character is not required.)

Frequently used panel paths have associated shortcuts. If you do not remember a shortcut, enter / at the ==> prompt for a list. Select one from the list, or enter it at the ==> prompt.

There is no difference between accessing a function using a panel path skip or a shortcut skip, although the shortcut should be easier to remember. Both close the current panels and go straight to the function.

Entering == at the ==> prompt closes all nested panels and returns you to the Primary Menu.

MH0004**Invalid option or command****Reason:**

The value entered is not a valid option on this menu and is not a command that is supported on this menu.

System Action:**User Action:****MH0007****Unable to access P1 - RC= P2 P3****Reason:**

An attempt to retrieve a menu record from the database was unsuccessful.

System Action:

The Menu Handler call is rejected.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

MH0008**Service procedure ' P1' not found****Reason:**

The service procedure defined for the requested menu was not found in the NCL source library.

The most likely cause is that you have used a shortcut that leads to a menu that is part of another product in the suite, but is not licensed on this region.

System Action:

The Menu Handler call is rejected.

User Action:

Check that the function you are trying to access is one for which the region is licensed. If this is the case then check that the name of the service procedure in the menu definition is correct, or add the NCL procedure to the NCL source library.

MH0009

NCL procedure ' P1' not found

Reason:

The NCL procedure to be executed for a selected menu option does not exist in the NCL procedure library.

System Action:

The Menu Handler call is rejected.

User Action:

Correct the name of the NCL procedure in the menu definition, or add the NCL procedure to the NCL source library.

MH0010

Option P1 unsuccessful

Reason:

The option selected by the user has ended unsuccessfully.

System Action:

Any error messages generated are displayed on a full screen panel before this message is displayed.

User Action:

Determine the cause of the error from the displayed messages and retry.

MH0019

Required field omitted

Reason:

No data was entered in a mandatory field.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Enter a valid value in the field.

MH0054**Invalid line definition****Reason:**

An input field was specified incorrectly in the menu definition.

System Action:

If the invalid line is visible on the window, the cursor is placed on it and the field is highlighted.

User Action:

Correct the line definition.

MH0060**Menu P1 for application P2 not defined****Reason:**

An attempt to retrieve a menu record from the database was unsuccessful because the menu does not exist.

System Action:

The Menu Handler call is rejected.

User Action:

Define the missing menu or correct the menu details and retry.

MH0063**Menu ID IS P1****Reason:**

This message is in response to the MENUID command. *P1* is the ID of the current menu.

System Action:

None.

User Action:

None.

MH0064

Menu shortcut nesting limit exceeded

Reason:

To avoid excessive storage use and subsequent performance degradation, a nesting limit of 64 levels has been placed on the menu shortcut function. When you issue shortcut requests in the form /shortcut-name, the panels are nested, that is, when you exit a panel, you are returned to the panel from which you issued the shortcut. The nesting limit is exceeded by your last shortcut request.

System Action:

No further shortcuts are accepted.

User Action:

Enter `=panel-path` to access the panel, where panel-path can be /shortcut-name or the panel path in dot format (for example, A.B.C). The = sign takes you back to the Primary Menu and removes any nesting.

MS0001

Message ID prefix required for generic message list

Reason:

A generic list of messages starting with a prefix was requested. The Message ID field specified the wildcard character (* or ?) but omitted the prefix. At least one character must precede the wildcard character.

System Action:

None.

User Action:

Enter at least one prefix character.

MS0002**MSGID keyword must be supplied to P1 - call rejected****Reason:**

A call was made to the Message Handler without the MSGID keyword parameter.

System Action:

The call to the Message Handler is rejected.

User Action:

Correct the procedure call and retry.

MS0003**Specified MSGID ' P1' exceeds 12 characters****Reason:**

A call was made to the Message Handler with an invalid MSGID keyword parameter. The maximum allowable length for a message ID is 12 characters.

System Action:

The call to the Message Handler is rejected.

User Action:

Correct the procedure call and retry.

MS0006**Message definition P1 does not exist****Reason:**

The requested message definition does not exist on the database.

System Action:

The action is rejected.

User Action:

None.

MS0017

PROCNAME keyword not supplied to \$CAMS000 MSGID= P1

Reason:

The PROCNAME keyword parameter was not supplied on the call to the Message Handler.

System Action:

The procedure call is rejected.

User Action:

Correct the procedure call and retry.

MS0022

No more messages to view

Reason:

The first (if using the PrevMsg action) or last (if using the NextMsg) action) message on the database was viewed. There are no more messages to be viewed.

System Action:

None.

User Action:

None.

MS0071

Message definition P1 does not exist for language P2

Reason:

The requested message definition does not exist on the database.

System Action:

The action is rejected.

User Action:

None.

N0x to N1x Messages

N00101

NOTIFY: *source* **EVENT:** *event* **RESOURCE:** *resource*

Reason:

This is the asynchronous event message. It is intended for delivery in the INTCMD environment to NCL processes which issue asynchronous NCL verbs that notify completion in this manner (eg PANEL and APPC verbs).

System Action:

None.

User Action:

User defined.

N00102

scope>: *name* **RESOURCE:** *resource* **OBJECT:** *object* **REF:** *reference*
TYPE: *type* **DATA:** *event-data*

Reason:

This is the event notification message. It is intended for delivery in the INTCMD environment to NCL processes profiled for the particular event variables. Scope will be either SYSTEM or REGION, depending on event scope.

System Action:

None.

User Action:

User defined.

N00103

UNIX SUPPORT RESET DUE TO INITIALIZATION FAILURE - REASCODE nnnnnnnn

Reason:

The release of OS/390 that you are running supports UNIX System Services but the first call made by SOLVE failed.

System Action:

SOLVE UNIX support is reset. SOLVE initialization continues.

User Action:

UNIX Systems Services may not be configured correctly in OS/390. Consult your systems programmer. The reason code may be found in the UNIX System Services Messages and Codes manual.

N00151

SOLVE FSP/XSP INCORRECT ENTRY USED.

Reason:

SOLVE in a Fujitsu FSP or XSP environment has been link-edited incorrectly. It has been entered as NM000001, not NMFSP001.

System Action:

SOLVE terminates.

User Action:

Check that NM001 has been link-edited correctly.

N00180

SOLVE FSP/XSP UNRECOGNISED OPERATING SYSTEM.

Reason:

SOLVE is unable to recognise the operating system environment, when it expects Fujitsu FSP or XSP.

System Action:

SOLVE terminates.

User Action:

Contact your product support representative.

N00181**SOLVE FSP/XSP NOT IN SUBSYSTEM MODE.****Reason:**

SOLVE running in an FSP or XSP environment must run as a subsystem. This was not the case.

System Action:

SOLVE terminates.

User Action:

Change the SOLVE JCL to execute it as a subsystem.

N00182**SOLVE FSP/XSP NOT AUTHORISED.****Reason:**

SOLVE running in FSP or XSP must be APF authorized.

System Action:

SOLVE terminates.

User Action:

Ensure that the SOLVE load modules are in an APF authorized library.

N00301**INVALID OPERAND IN JCL PARM P1****Reason:**

An error was detected during validation of the JCL parm field (*P1*). The value for the operand is invalid. This error may occur if commas are omitted between two parms and cannot be delimited.

System Action:

Execution is terminated.

User Action:

Correct the error and re-start the region.

N00302

UNRECOGNISED OPERAND IN JCL PARM STARTING AT xxxxxxxx

Reason:

An invalid operand was detected during validation of the JCL PARM field data. The invalid operand commences with xxxxxxxx.

System Action:

Execution is terminated.

User Action:

Correct the error and re-submit the job.

N00303

UNABLE TO LOAD SECURITY EXIT MODULE: mmm

Reason:

The security exit load module, mmm, named by the SEC=mmm JCL parm, could not be loaded.

System Action:

SOLVE terminates.

User Action:

Check the load module name, and ensure that the load module is in the SOLVE load library.

N00304

WARNING: JCL PARM P1 IS OBSOLETE AND HAS BEEN IGNORED

Reason:

This message indicates that an obsolete parameter (*P1*) was specified. The parameter has been ignored.

System Action:

None.

User Action:

Update your run JCL to remove the obsolete parameter.

N00501**START-UP PARAMETERS ARE:- xxx.....xxx****Reason:**

The JCL initialization parameters xxx.....xxx are correct and are written to the activity log for reference.

System Action:

None.

User Action:

None.

N00502**I/O ERROR ON VFS DATASET ATTEMPTING TO RETRIEVE BROADCAST****Reason:**

The system broadcasts stored on the VFS dataset could not be read.

System Action:

Processing continues. The stored broadcast will not be set and should be manually set by the system operator.

User Action:

Determine the cause of the dataset I/O error and correct it.

N00503***** P1 INITIALIZATION COMPLETE P2 *******Reason:**

This message is written to the system console at the completion of the product's initialization. *P1* is the product name and *P2* is the system name as set by the PRI= initialization parameter.
The inclusion of the system name provides an identification aid when multiple regions are executing in the same system.

System Action:

The system is available for use. Both the INIT and READY procedures have completed and users can now logon.

User Action:

None

N00504

FEATURE INITIALIZATION FAILURE - LOAD FAILED FOR module, R15=yyyy, R1=zz

Reason:

Failure to load the specified module caused initialization of the relevant optional feature to be abandoned. yyyy and zzzz are the register values associated with the load failure and can be used to determine the reason for the failure.

System Action:

The optional feature will not be available for use.

User Action:

Determine which feature, of the optional features configured for your system, failed to initialize. Then determine why the system was unable to find the specified load module. The STATUS command will identify those features that have successfully initialized.

N00511

WAITING FOR SOLVE VFS DATASET: *dsname*

Reason:

SOLVE has issued an exclusive ENQ for the VFS dataset *dsname*, and this ENQ was not satisfied. Another SOLVE system has currently enqueued it. This message is followed by message N00514, which may be replied to cancel the wait.

System Action:

SOLVE delays further initialization until the ENQ is satisfied.

User Action:

If the requested VFS dataset is in use by another SOLVE system, then reply (with anything) to message N00514 and alter the SOLVE JCL, as VFS datasets cannot be shared. If the VFS dataset is being held by a previous execution of this SOLVE job, then when it finishes terminating, the ENQ is released and initialization continues. If you do not want to delay initialization, the JCL parameter, VFSENQ, can be used to prevent the ENQueuing of the VFS dataset.

N00512**VFS DATASET AVAILABLE, INITIALIZATION CONTINUING.****Reason:**

This message follows a previous N00511 message. It indicates that the VFS dataset ENQ has now been satisfied.

System Action:

SOLVE initialization continues. The N00514 WTOR message is deleted from the console.

User Action:

None.

N00513**VFS DATASET WAIT CANCELLED BY OPERATOR, TERMINATING.****Reason:**

This message follows the previous N00511 and N00514 messages. The operator has replied to the N00514 (WTOR) message. Any reply to that message results in SOLVE terminating immediately.

System Action:

SOLVE terminates.

User Action:

Check that the operator reply to message N00514 was wanted. Restart SOLVE after correcting the VFS ENQ problems.

N00514

ANY REPLY WILL CANCEL VFS DATASET WAIT.

Reason:

This message follows the previous N00511 message. It is a WTOR message that may be replied to in order to shut SOLVE down.

If not replied to, it is automatically deleted when the VFS dataset wait is satisfied (see message N00513).

System Action:

SOLVE waits for either a reply (any reply) to this message, or for the the VFS dataset wait to be satisfied.

User Action:

If you do not want SOLVE to wait for the VFS dataset ENQ, then use the operating system REPLY command to reply to this message. SOLVE will then terminate.

N00517

REGION NOT RUNNING AUTHORIZED, TERMINATING

Reason:

Region initialization failed because the region was started from a non-authorized load library. This product must run from an APF-authorized library.

System Action:

The region terminates.

User Action:

Determine why the load library is not APF-authorized.

N00801

**aaaaaaaa USER bbbbbbbb LOGON FAILED FOR REASON -
xxxxxxxxxxxxxxxxxxxxxxxxxxxx**

Reason:

The attempt to log on user ID bbbbbbbb failed for the stated reason. The user category (aaaaaaaa) is noted which may be LOCAL, REMOTE, SYSTEM, CONSOLE, TSO, NET/VIEW, VM/OPER, or APPC.

System Action:

User IDs fail to logon only if they have been defined incorrectly on the UAMS dataset, or incorrect definitions are provided by an installation's security exit.

User Action:

Check the definition of the userid whose logon is failing.

N00802

SYSTEM USERID xxxxxx LOGON FAILED, DEFAULTS TAKEN

Reason:

The initial attempt to logon an internal userid environment failed so a userid environment is built using standard system default userid attributes.

System Action:

Internal virtual userids fail to logon only if they are defined incorrectly on the UAMS dataset, or incorrect definitions are provided by an installation's security exit.

The default command authority is 255 except for consoles. Secondary consoles default to the same attributes as the SYSOPER userid. If the SYSOPER userid is undefined, the default command authority for all consoles is 3. In addition, if the system is configured with the WTO=YES initialization job parameter, the console region is enabled for monitor class message receipt.

User Action:

Check the definition of the userid whose logon is failing.

N00803

USERID aaaa DETAILS UNAVAILABLE, REASON - bbbb

Reason:

When the SIGNON command is used for an environment refresh the user security system is called to return the user attributes. The security system has rejected the request with the stated reason bbbb.

System Action:

The signon refresh for the region fails and the existing environment remains in effect.

User Action:

Note the reason and refer the problem to your installations help desk facility or systems administrator.

N00804

ERROR(S) DURING CREATION OF NETWORK PARTITIONS FOR xxxxxxx MAY LIMIT FUNCTION

Reason:

Errors were found when the system tried to process the NPF control members or NPF resource tables defined for user xxxxxxxx. Network functions may be limited because resource names have been restricted.

System Action:

None.

User Action:

Use the SHOW NPF and SHOW NPTAB commands to determine the cause of the error. Correct the control members or NPF resource tables and signon again.

N00M10

hh:mm:ss ET: ss.th DC: s.ttttt TC: s.ttttt %A: pp.th

Reason:

This message is issued to the log every minute or every 15 seconds (depending on whether CPUCM or CPUFM is specified in the JCL parm XOPT list), if the XOPT JCL parameter CPUMM is specified. It provides an indication of the region CPU utilization in the preceding period.

The fields are as follows:

hh:mm:ss

Displays the time the message was issued

ET:ss.th

Displays the interval elapsed time. This is normally 60.00 or 15.00. If significantly longer, it may indicate that the region is not being dispatched in a timely manner due to system load.

DC: s.ttttt

Displays the amount of CPU time used in this period by the CA NetMaster Maintask (Delta CPU).

TC: s.ttttt

Displays the total amount of CPU time used by the CA NetMaster Maintask since this region started.

%A: pp.th

Displays the average percentage of the time that the CA NetMaster maintask was active in this period (that is, (delta CPU times 100) divided by elapsed time).

System Action:

None.

User Action:

None.

N00M11

hh:mm:ss ET: ss.th TCB: DC: s.tttttt TC: s.tttttt %T: pp.th

Reason:

This message is issued to the log every minute or every 15 seconds (depending on whether CPUCM or CPUFM is specified in the JCL parm XOPT list), if the XOPT JCL parameter CPUMM is specified. It provides a breakdown of the 'maintask' CPU utilization in the preceding period.

This message is produced only if XM=ZIIP or XM=BEST is specified in the JCL parms. IT indicates the CPU time used by the maintask TCB in the preceding period.

The fields are as follows:

hh:mm:ss displays the time the message was issued.

ET: ss.th displays the interval elapsed time. This is normally 60.00 or 15.00. If significantly longer, it may indicate that the region is not being dispatched in a timely manner due to system load.

TCB: indicates that the times in this message pertain to the maintask TCB CPU utilization.

DC: s.tttttt displays the amount of CPU time used in this period by the CA NetMaster Maintask (Delta CPU).

TC: s.tttttt displays the total amount of CPU time used by the CA NetMaster Maintask since this region started.

%T: pp.th displays the percentage of the CPU time expended in the period by the TCB, the percentage being of the total of TCB times (as in this message), and SRB times (as in the following N00M12 message).

System Action:

None.

User Action:

None.

N00M12

hh:mm:ss ET: ss.th SRB: DC: s.ttttt TC: s.ttttt %S: pp.th

Reason:

This message is issued to the log every minute or every 15 seconds (depending on whether CPUCM or CPUFM is specified in the JCL parm XOPT list), if the XOPT JCL parameter CPUMM is specified. It provides a breakdown of the 'maintask' CPU utilization in the preceding period.

This message is produced only if XM=ZIIP or XM=BEST is specified in the JCL parms. IT indicates the CPU time used by the paired maintask SRB in the preceding period.

The fields are as follows:

hh:mm:ss displays the time the message was issued.

ET: ss.th displays the interval elapsed time. This is normally 60.00 or 15.00. If significantly longer, it may indicate that the region is not being dispatched in a timely manner due to system load.

SRB: indicates that the times in this message pertain to the SRB associated with the maintask TCB.

DC: s.ttttt displays the amount of CPU time used in this period by the SRB (Delta CPU).

TC: s.ttttt displays the total amount of CPU time used by the SRB since the region started.

%S: pp.th displays the percentage of the CPU time expended in the period by the SRB, the percentage being of the total of TCB times (as in the preceding N00M11 message), and SRB times (as in this message).

System Action:

None.

User Action:

None.

N00M13

hh:mm:ss ET: ss.th MS: sss #W: www #T: ttt XM: mmmm

Reason:

This message is issued to the log every minute or every 15 seconds (depending on whether CPUCM or CPUFM is specified in the JCL parm XOPT list), if the XOPT JCL parameter CPUMM is specified. It provides information about events during the preceding period.

This message is produced only if XM=ZIIP or XM=BEST is specified in the JCL parms.

The fields are as follows:

hh:mm:ss displays the time the message was issued.

ET: ss.th displays the interval elapsed time. This is normally 60.00 or 15.00. If significantly longer, it may indicate that the region is not being dispatched in a timely manner due to system load.

MS: sss displays the number of 'mode switches' between TCB and SRB mode.

#W: www displays the number of real waits issued in this period.

#T: ttt displays the number of timer requests issued in this period.

XM: mmm displays the execution mode, normally ZIIP.

System Action:

None.

User Action:

None.

N00M14

hh:mm:ss ET: ss.th PH: s.tttttt ZC: s.tttttt ZZ: s.tttttt %Z: p.th

Reason:

This message is issued to the log every minute or every 15 seconds (depending on whether CPUCM or CPUFM is specified in the JCL parm XOPT list), if the XOPT JCL parameter CPUMM is specified. It provides information about events during the preceding period.

This message is produced only if XM=ZIIP or XM=BEST is specified in the JCL parms.

The fields are as follows:

hh:mm:ss displays the time the message was issued.

ET: ss.th displays the interval elapsed time. This is normally 60.00 or 15.00. If significantly longer, it may indicate that the region is not being dispatched in a timely manner due to system load.

PH: s.tttttt displays the delta of the ASSBPHTM field, indicating the total preemptible SRB CPU time expended in the period.

ZC: s.tttttt displays the delta of the ASSB_TIME_zIIP_ON_CP field, indicating the total zIIP-eligible CPU time expended on normal CPs during the period.

ZZ: s.tttttt displays the delta of the ASSB_TIME_ON_zIIP field, indicating the total zIIP-eligible CPU time expended on zIIPs during the period.

%Z: p.th indicates the percentage of total zIIP-eligible time that was actually expended on a zIIP.

System Action:

None.

User Action:

None.

N00M20

hh:mm:ss ET: ss.th DC: s.ttttt PC: s.ttttt ST: ss EN: ee TO: tt CU: cc

Reason:

This message is issued to the log every minute or every 15 seconds (depending on whether CPUCM or CPUFM is specified in the JCL parm XOPT list), if the XOPT JCL parameter CPUPM is specified. It shows the CA NetMaster Maintask CPU utilization by high-level language processes over the preceding period.

Note: If Process monitoring and CPU monitoring is active, this message follows the N00M10 message, and some fields will be identical.

The fields are as follows:

hh:mm:ss

The time the message was issued.

ET: ss.th

The interval elapsed time. This is normally 60.00 or 15.00. If significantly longer, it may indicate that CA NetMaster is not being dispatched in a timely manner due to system load.

DC: s.ttttt

The amount of CPU time used in this period by the CA NetMaster Maintask (Delta CPU).

PC: s.ttttt

The total amount of CPU time used by the high-level language processing in the CA NetMaster maintask in this period. If the value in this field is significantly less than the delta CPU value, it indicates that the remaining Maintask processing is not in high-level languages.

ST: ss

The number of high-level language processes that started in this period.

EN: ss

The number of high-level language processes that ended in this period.

TO: ss

The total number of high-level language processes that existed in this period.

CU: ss

The number of high-level language processes that existed at the end of this period (that is, current).

System Action:

None.

User Action:

None.

N00M21

aa bbbbbb uuuuuuuu pppppppp l se s.th c.tttttt s.tttttt

Reason:

This message is issued to the log once per minute or once per 15 seconds (depending on whether CPUCM or CPUFM is specified in the JCL parm XOPT list), if the XOPT JCL parameter CPUPM is specified. It follows the N00M20 message that summarizes the period. It lists the most-active high-level language processes in descending scaled CPU utilisation order.

The fields are as follows:

aa

The position of this process in the list.

1 is the top, 10 is the bottom.

bbbbbb

The NCLID of the process.

uuuuuuuu

The User ID that this process is executing under.

pppppppp

The base procedure name in the process.

l

The language of the base procedure.

N is NCL, O is OML, R is REXX.

se

Two flags that indicate if this process started and/or ended in this period.

The first flag can be 'S' meaning that the process started during this period or '-' meaning that the process was already executing when this period started. The second flag can be 'E' meaning that the process ended during this period or '-' meaning that the process was still executing at the end of the period. Thus,

-- means that the process was executing for the entire period

S- means that the process started during the period

-E means that the process ended during the period

SE means that the process started and ended during the period

s.th

The time that the process was executing during the period. If the 'se' field is '--', this is the full period value; otherwise, this field indicates how much of the period the process existed.

c.tttttt

The CPU time that this process consumed during the period.

s.tttttt

The scaled CPU time that this process consumed during the period. This is the sort key for these lines (descending, highest first), and is calculated by taking the actual CPU time and scaling it by (period time/ actual exec time). For example, if a process was active for 10 seconds out of a 60 second period, the value in this field would be six times the actual CPU time used.

Note: Only processes that existed for at least one second and that used at least 10 milliseconds of CPU are considered for display. Only the top 10 of these eligible processes are displayed.

System Action:

None.

User Action:

None.

N00M29***END*****Reason:**

This message is issued to the log once per minute or once per 15 seconds (depending on whether CPUCM or CPUFM is specified in the JCL parm XOPT list), if the XOPT JCL parameter CPUPM is specified. It follows the last N00M21 message that summarizes the period. It terminates the list of the most active high-level language processes.

System Action:

None.

User Action:

None.

N00M30**hh:mm:ss ET: ss.th DC: s.tttttt TC: s.tttttt ST: ss EN: ee TO: tt CU: cc****Reason:**

This message is issued to the log every minute or every 15 seconds (depending on whether CPUCM or CPUFM is specified in the JCL parm XOPT list), if the XOPT JCL parameter CPUTM is specified. It shows the CA NetMaster CPU utilization by subtasks over the preceding period.

Note: If Task monitoring and CPU monitoring is active, this message follows the N00M10 message, and, if process monitoring is also active, the N00M2x messages, and some fields will be identical.

The fields are as follows:

hh:mm:ss The time the message was issued.

ET: ss.th The interval elapsed time. This is normally 60.00 or 15.00. If significantly longer, it may indicate that CA NetMaster is not being dispatched in a timely manner due to system load.

DC: s.tttttt The amount of CPU time used in this period by the CA NetMaster Maintask (Delta CPU).

TC: s.tttttt The total amount of CPU time used by the subtasks of the CA NetMaster Maintask in this period.

ST: ss The number of subtasks that started in this period.

EN: ss The number of subtasks that ended in this period.

TO: ss The total number of subtasks that existed in this period.

CU: ss The number of subtasks that existed at the end of this period (that is, current).

REQUESTED EXECUTION MODE: *aaa* ACTUAL EXECUTION MODE: *bbb*

Reason:

This message is written to the log during region startup. It indicates the requested execution mode (*aaa*), as set or defaulted by the XM JCL Parm, and the in-effect execution mode (*bbb*).

The possible requested mode values are as follows:

N/S-No execution mode was requested.

TASK-Task mode was requested.

ZIIP-zIIP mode was requested.

BEST-The best available mode was requested.

The possible in-effect execution mode values are as follows:

TASK-The region is executing in TASK mode.

ZIIP-The region is executing in SRB mode, possibly utilizing a zIIP if one is available.

System Action:

None.

User Action:

None.

N02180

EXEC. MODE: *mode* SETUP FAILURE. REASON: *reason*

Reason:

This message is written to the log during region startup. It indicates that the setup of the requested execution mode failed. A reason is provided.

The possible requested mode values are as follows:

ZIIP-ZIIP mode was requested.

BEST-The best available mode was requested.

The possible reasons are as follows:

- N/S ON THIS OPERATING SYSTEM
- NOT APF AUTHORIZED
- GETMAIN FAILURE (1)
- ZIIP SUPPORT NOT AVAILABLE
- NO DEFINED ZIIP PROCESSORS
- NO ONLINE ZIIP PROCESSORS
- PAUSE EP LOAD FAILURE
- PAUSE TOKEN DEFINE FAILED
- WLM REGISTRATION FAILED
- WLM ENCLAVE DEFINE FAILED
- WLM ENCLAVE ZIIP ACTIVATION FAILED
- SRB MODE WAIT SETUP FAILED

System Action:

Initialization continues in TASK mode.

User Action:

Examine the reason and take corrective action, if required.

N02601

INTCONT ISSUED WHEN NO VALID MESSAGE CURRENT

Reason:

No previous INTREAD has been satisfied or INTCONT has been issued after other message read processing, such as LOGREAD, MSGREAD etc.

System Action:

The procedure is terminated.

User Action:

Ensure INTREAD is satisfied before issuing INTCONT. If necessary change the procedure's logic to issue INTCONT before other message processing.

N02602

INTREPL ISSUED WHEN NO VALID MESSAGE CURRENT

Reason:

No previous INTREAD has been satisfied or INTREPL has been issued after other message read processing, such as LOGREAD, MSGREAD etc.

System Action:

The procedure is terminated.

User Action:

Ensure INTREAD is satisfied before issuing INTREPL. If necessary change the procedure's logic to issue INTREPL before other message processing.

N02603

MDO=\$MSG is invalid MDO name for INTREAD.

Reason:

\$MSG is a reserved MDO name for an INTREAD operation. A \$MSG MDO is always built when an INTREAD request is satisfied, hence it may not be the target of an embedded input MDO.

System Action:

The procedure is terminated.

User Action:

Correct the INTREAD statement to specify an MDO name other than \$MSG.

N02701**EVENT NAME CONTAINS INVALID CHARACTERS****Reason:**

An EVENT statement contains an invalid NAME operand. The event name must consist of valid NCL variable name characters and must not begin with \$.

System Action:

The NCL procedure is terminated.

User Action:

Correct the EVENT NCL statement.

N02B01**EDS PROFILE NAME aaaaaaaa ALREADY DEFINED****Reason:**

A PROFILE EDS ENABLE=name command was issued from an environment in which a profile with the same name has already been defined.

System Action:

The registration request is ignored.

User Action:

Ensure the profile is only defined once, or define the new profile with a different name.

N02B02**UNABLE TO OBTAIN EVENT REGISTRATION BUFFER.****Reason:**

SOLVE was unable to obtain storage for a PROFILE EDS ENA=name request.

System Action:

The registration request is ignored.

User Action:

Contact your systems administrator and examine reason for storage shortage.

N02B03

No matching event profile found for aaaaaaaa

Reason:

A PROFILE EDS DIS=name command was issued from an environment in which no profile existed with a matching name for the request.

System Action:

The request is ignored.

User Action:

Ensure the profile is correct.

N02B04

EVENT REGISTRATION REQUEST LIMIT REACHED.

Reason:

The system wide limit on event profile registration has been reached.

System Action:

The registration request is ignored.

User Action:

Investigate why a large number of event profile requests are being generated.

N02C01

UNABLE TO OBTAIN STORAGE FOR EVENT REGISTRATION.

Reason:

SOLVE was unable to obtain storage for a PROFILE EDS ENA=name request.

System Action:

The registration request is ignored.

User Action:

Contact your systems administrator and examine the reason for the storage shortage.

N02C02**EDS PROFILE DISABLED.****Reason:**

This message is in response to a successful PROFILE EDS DIS=name request.

System Action:

All matching EDS profiles were successfully disabled.

User Action:

None.

N02C03**EDS PROFILE ENABLED.****Reason:**

This message is in response to a successful PROFILE EDS ENA=name request.

System Action:

The EDS profile is registered.

User Action:

None.

N02C04**EVENT RESOURCE OPERAND IS INVALID.****Reason:**

The RESOURCE operand specified on the PROFILE EDS request is invalid.

System Action:

The registration request is ignored.

User Action:

Correct the PROFILE EDS statement.

N02C05

EDS PROFILE REQUEST FAILED.

Reason:

This message is issued if the event registration profile build fails.

System Action:

The registration request is unsuccessful.

User Action:

Investigate the reason for the EDS profile build failure by looking for messages issued prior to this one.

N02C06

TYPE OPERAND IS INVALID.

Reason:

The TYPE operand specified on the PROFILE EDS request is invalid.

System Action:

The registration request is ignored.

User Action:

Correct the PROFILE EDS statement.

N02C07

ROUTCDE VALUE IS INVALID.

Reason:

The ROUTCDE operand specified on the PROFILE EDS request is invalid.

System Action:

The registration request is ignored.

User Action:

Correct the PROFILE EDS statement.

N02C08**EDS NAME OPERAND IS INVALID.****Reason:**

The name specified on the PROFILE EDS ENA=profile NAME=name request is invalid. Specify any NCL character set name plus '*' wild characters.

System Action:

The registration request is ignored.

User Action:

Correct the PROFILE EDS statement.

N02C09**EDS PROFILE ENABLE OPERAND IS INVALID.****Reason:**

The name specified on the PROFILE EDS ENA=name request is invalid. The profile name may contain 1 to 32 characters which are valid in an NCL variable in addition to '.' and '_'.

System Action:

The registration request is ignored.

User Action:

Correct the PROFILE EDS ENABLE operand.

N02D01**USER NCLID SCOPE PROFNAME****Reason:**

This is the header line for the SHOW EDS command output.

System Action:

None.

User Action:

Refer to message N02D02.

N02D02

**userid nclid scope profname NAME=name TYPE=type OBJECT=object
RESOURCE=resource REF=reference ROUTCDE=routcdes**

Reason:

This is a detail line for SHOW EDS command output which follows the N02D01 message. The attribute masks for an event profile are displayed. Fields displayed are as follows:

userid - Id of user who has EDS profile defined.

nclid - NCLID of NCL procedure to which EDS profile is assigned.

scope - Scope may be SYSTEM or REGION and defines the scope of event receipt.

profname - Name assigned to EDS profile on the ENA= operand of the PROFILE EDS command.

NAME= Shows the event name mask for the profile.

TYPE= Lists event types for profile.

OBJECT= Object mask (or mask pair) for profile.

RESOURCE=Resource mask for profile.

REF= Profile reference mask.

ROUTCDE= PROFILE route codes.

Only the first 256 bytes of profile details will be displayed on message N02D02. Data extending beyond this overflows onto message N02D03.

System Action:

None.

User Action:

None.

N02D03

XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXX

Reason:

This is a continuation of N02D02 for profile displays which do not fit on one line.

System Action:

None.

User Action:

See N02D02 for details.

N02D04**NO EVENT PROFILES ACTIVE FOR XXXXXXXXXXXXXXXX****Reason:**

A SHOW EDS command was issued but no EDS profiles matched the show command display criteria.

System Action:

None.

User Action:

Check SHOW EDS operands.

N02D05**INVALID OPERAND FOR SHOW EDS COMMAND**

XXXXXXXXXXXXXXXXXXXXXXXXXXXX.

Reason:

A SHOW EDS command operand was invalid.

System Action:

None.

User Action:

Check SHOW EDS operands.

N02D07

**nnnnnnnn EVENTS MATCHED userid nclid PROFILE profname time
DD/MM**

Reason:

This message is displayed for a SHOW EDS STATS command. It shows the number of events which have matched a user's EDS profile since it was enabled (time and day show when profile was enabled).

System Action:

None.

User Action:

None.

N02D08

nnnnnnnn EVENTS DELIVERED TO userid nclid

Reason:

This message is displayed for a SHOW EDS STATS command. It shows the number of times events have been delivered to a user NCL environment because it matched an enabled EDS profile for that NCL process. Note that a single event may be delivered more than once if it matches multiple EDS profiles.

System Action:

None.

User Action:

None.

N02D09**EVENT NOTIFICATION ENTERED *nnnnnnnn* TIMES SINCE STARTUP.****Reason:**

This message is displayed for a SHOW EDS STATS command. It shows the number of times EDS has been entered since system initialization. This represents the number of &EVENT statements executed, plus the number of times internal event points were entered.

System Action:

None.

User Action:

None.

N02D10***nnnnnnnn* SYSTEM AND *nnnnnnnn* REGION EVENTS DELIVERED SINCE STARTUP.****Reason:**

This message is displayed for a SHOW EDS STATS command. It shows the number of events delivered to all users since system initialization.

System Action:

None.

User Action:

None.

N02F01**EVENT REGISTRATION CLEANUP FAILED.****Reason:**

This message indicates a SOLVE logic error has occurred during event profile cleanup.

System Action:

None.

User Action:

Report the error to your product support representative.

N02H01

REGION LOCAL D/T: *dddd tttt* UTC OFFSET: *oooo*

Reason:

This message is written to the CA NetMaster log during initialization and shows the local date and time. It also shows the offset from UTC (GMT) time in the format *shhmm*, or if grater than 1 day, *sddd:hhmm*.

System Action:

None.

User Action:

None.

N02H02

JCL PARM TZ= HAS SET UTC OFFSET TO *shhmm*

Reason:

This message is written to the CA NetMaster log during initialization when the TZ JCL parm is processed. It shows the offset used for local time.

System Action:

None.

User Action:

None.

N02H03

JCL PARM TZ=GMT IS IN EFFECT

Reason:

This message is written to the CA NetMaster log during initialization when the TZ JCL parm is processed. It shows that the region is using GMT (UTC) time.

System Action:

None.

User Action:

None.

N02H10**LOCAL TIME OFFSET CHANGE PROCESSED...****Reason:**

This message is written to the CA NetMaster log and monitor receivers when a local time offset change is processed.

System Action:

The local region time is updated.

Additional message are written (messages N02H11,12,13) indicating the old, new and changed offset.

User Action:

None.

N02H11**OLD LOCAL D/T/OFFSET: *dddd tttt* UTC OFFSET: *oooo*****Reason:**

This message is written to the CA NetMaster log and monitor receivers following the N02H10 message. It shows the previous local time and UTC (GMT) offset.

System Action:

None.

User Action:

None.

N02H12

NEW LOCAL D/T/OFFSET: *dddd tttt* UTC OFFSET: *oooo*

Reason:

This message is written to the CA NetMaster log and monitor receivers following the N02H11 message. It shows the new local time and UTC (GMT) offset.

System Action:

None.

User Action:

None.

N02H13

'OFFSET CHANGE: *ooo*

Reason:

This message is written to the CA NetMaster log and monitor receivers following the N02H12 message. It shows the change in local time offset for *shhmm* format or *sddd:hhmm* format.

System Action:

None.

User Action:

None.

N02I01**ENF CODE 53 LISTENER INSTALLED****Reason:**

This message is written to the CA NetMaster log during initialization and indicates that a listener for ENF event 53 (local time offset change) has been installed.

This listener allows the region to automatically detect and process changes to the local date/time offset relative to GMT (UTC).

Note: The listener is activated only for z/OS release 1.7 or later.

System Action:

The listener is activated.

User Action:

If you do not want the ENF event 53 listener, specify XOPT=NOENF53 in the JCL parameters.

N02I80**ENF LISTENER INSTALL FAILED, REASON: *rrr*****Reason:**

This message is written to the CA NetMaster log during initialization and indicates that the ENF event 53 listener could not be installed. The reasons are:

- OS OR VERSION N/S: *osname,osversion*
- NOT APF AUTH
- RESMGER ADD FAILED, RC: *rr*
- ECSA GETMAIN FAILED, RC: *rr*

The reasons are self-explanatory.

System Action:

The listener is not installed.

User Action:

If the reason is not because of an unsupported operating system or because it is not APF-authorized, contact Technical Support.

N03601

INVALID OR MISSING RESOURCE NAME IN RSCCHECK

Reason:

No valid resource name was specified on an RSCCHECK, NPFDCCHK, NPFMCHK, or NPFVCHK builtin function statement.

System Action:

The NCL procedure is terminated.

User Action:

Correct the statement and retry the procedure.

N03602

INVALID SYNTAX.

Reason:

An invalid statement has been detected.

System Action:

The NCL procedure is terminated.

User Action:

This may have been caused by a variable having an unexpected null value which resulted in the variable being eliminated during the variable substitution process and hence altering the syntax of the statement. You must ensure that all variables are correct (and cannot have a null value) when used in a string statement (eg: *SUBSTR*, *SELSTR*). Correct the statement and retry the procedure.

N03604**INVALID OPERATOR xx FOUND IN aaaaaaaa STATEMENT****Reason:**

An invalid operator *xx* has been found in the nominated *aaaaaaa* NCL statement. Only those operators (eg: EQ or NE etc.) discussed in the appropriate section of the NCL Reference are accepted.

System Action:

The NCL procedure is terminated.

User Action:

Refer to the NCL Reference for valid operators. Correct the statement and retry the procedure. This error may have been caused by the elimination of a null variable during the variable substitution process. The NCL User Guide discusses techniques to cater for situations where variables in &IF statements may have a null value.

N03605**LOOP PROTECTION TRIGGERED, &LOOPCTL LIMIT EXCEEDED****Reason:**

NCL procedure processing provides automatic runaway loop protection. When an NCL procedure commences processing a value of 1000 is assigned to the &LOOPCTL counter. This is subsequently decremented by 1 for each branch statement. If this count reaches 0, the procedure is automatically terminated as potentially looping.

System Action:

The NCL procedure is terminated.

User Action:

Determine if the procedure is in fact looping. The &CONTROL TRACE statement can be used to obtain expanded trace information during the processing of a procedure. If the NCL procedure is looping, correct it and retry. If the procedure is not looping, but has validly exhausted the &LOOPCTL counter due to large processing requirements, use the &LOOPCTL statement to assign a higher loop protection limit. Refer to the NCL Reference for information on the &LOOPCTL built infunction.

N03606

INVALID DATA SUPPLIED FOR HEXPACK PROCESSING

Reason:

The data to be converted to character format by the *HEXPACK function* must consist of hexadecimal digits (0 - 9, A - F).

System Action:

The procedure is terminated.

User Action:

Correct and retry.

N03608

EXCESSIVE DATA FOR HEXPACK OR HEXEXP

Reason:

HEXEXP processing converts single characters into 2-digit HEX representation (eg: 'A' converts to 'C1'). The result of the conversion is a string twice as long as the original string. Since the maximum length of a variable is 256 characters, the maximum string length input to HEXEXP processing is 128 characters, whilst for HEXPACK it is the NCL word length of 256 characters. This message indicates that more than the maximum length was supplied.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N03609**INVALID OR MISSING APPLICATION NAME IN APPSTAT****Reason:**

APPSTAT was used to obtain the status of an application but the name of the application was either omitted or was not a valid 1 - 8 character name.

System Action:

The procedure is terminated.

User Action:

Correct and retry.

N03611**ILLEGAL ASSIGNMENT, EXCEEDS MAXIMUM FOR VARIABLE****Reason:**

Data assigned to a variable cannot exceed the maximum variable data length of 256 characters.

System Action:

The procedure is terminated.

User Action:

Correct and retry.

N03613**INVALID NUMERIC EXPRESSION****Reason:**

The numeric expression contains invalid syntax or has violated the rules for numeric expressions.

System Action:

The NCL procedure is terminated.

User Action:

Ensure no variables have been eliminated from the expression during the variable substitution process because they have a null value. Correct the statement and retry the procedure.

N03614

NUMERIC EXPRESSION VALUES EXCEED MAXIMUM

Reason:

The numeric expression has resulted in a value that exceeds the limits for the function being attempted.

System Action:

The NCL procedure is terminated.

User Action:

Refer to the NCL User Guide for information on the limits of numeric expressions. Correct the statement and retry the procedure.

N03615

OMITTED OR INVALID INPUT TO &HEX/&DEC OPERATION

Reason:

The &HEX and &DEC builtin functions must specify the number to be converted. For &DEC this must be a valid hexadecimal number, for &HEX this must be a valid decimal number.

System Action:

The NCL procedure is terminated.

User Action:

Refer to the NCL Reference for information on the maximum values that can be processed by these functions. Correct the statement and retry the procedure.

N03616**CONVERSION OF FLOATING POINT NUMBER TO CHARACTER STRING HAS FAILED.****Reason:**

An NUMEDIT NCL statement to convert a floating point number to a character format has failed because the source variable is not a valid floating point number.

System Action:

The NCL procedure terminates.

User Action:

Correct the procedure and retry.

N03701**xxxxxxx IS NOT A VALID NAME FOR A VARIABLE****Reason:**

The variable xxxxxxx violates the rules for user defined variables. A variable name must not exceed 12 characters (not including the ampersand).

System Action:

The NCL procedure terminates.

User Action:

Correct the statement and retry the procedure.

N03704**INVALID ASSIGNMENT SYNTAX.****Reason:**

The syntax of an assignment statement is invalid.

System Action:

The NCL procedure terminates.

User Action:

Correct the statement and retry the procedure.

N03705

TRACING TERMINATED - SYSTEM LIMIT REACHED. NCLID nnnnnn

Reason:

The system imposed limit for the number of outstanding NCL trace messages has been reached.

System Action:

Tracing has been terminated, processing of the NCL procedure continues.

User Action:

If the trace limit is too low, increase it by use of the SYSPARMS NCLTRMAX command, or use the CONTROL TRACE/NOTRACE NCL statement to do selective tracing.

N03706

A COMMAND MUST FOLLOW WAIT.

Reason:

The statement following an WAIT must be a command.

System Action:

The NCL procedure terminates.

User Action:

Correct the statement and retry.

N03707

INVALID USE OF &xxxx KEYWORD.

Reason:

The specified keyword cannot be used in a procedure of this type or the keyword has been used in an invalid way.

System Action:

The procedure is terminated.

User Action:

See the NCL Reference for restrictions on the use of this keyword.

N03709

xxxxxxx OPERAND yyyyyyy IS INVALID OR MISSING.

Reason:

The function xxxxxxx does not support operand yyyyyyy. It is invalid.

System Action:

The NCL procedure terminates.

User Action:

Correct the statement and retry the procedure.

N03716

FACILITY ONLY VALID FROM PPOPROC

Reason:

Use of the &DEFMSG function is only valid within the system level PPOPROC procedure.

System Action:

The NCL procedure terminates.

User Action:

Use of this function within other NCL procedures is meaningless. Refer to the NCL Reference for information on these facilities.

N03717

INVALID OPERAND SPECIFIED FOR DEFMSG

Reason:

When used within PPOPROC, DEFMSG specifies the three trailing characters of the VTAM PPO messages to be processed by the procedure. Multiple three character operands can follow DEFMSG. In systems other than DOS each operand must be a three digit number in the range 000-999. In a DOS or NIDOS system, each operand must be one alphabetic characters followed by a 2 digit number in the range 00-99.

System Action:

The NCL procedure terminates and normal PPO message processing resumes.

User Action:

Correct the statement and retry the procedure.

N03801**SYSTEM BUFFER LIMIT EXCEEDED BY EXPANSION OF VARIABLE
xxxxxxx****Reason:**

During the processing of the specified statement an attempt was made to perform variable substitution on the variable xxxxxxxx. The substitution process failed as the system buffer limit was exceeded.

System Action:

The NCL procedure terminates.

User Action:

The maximum size of a single variable is 256 characters. The maximum length of a statement after variable substitution is 16384. Restructure the procedure so that the failing statement remains within the system limits.

N03802

**.aaaaaaaa STMT NO: bbbbbbbb PROC: cccccc NCLID: ddddd or
bbbbbbb stmttext or bbbbbbbb PROC: cccccc NCLID: ddddd
stmttext**

Reason:

The first message format identifies the passage of logic flow through the nominated label (.aaaaaaaa), when the CONTROL TRACE/TRACELAB/TRACEALL/TRACELOG statement is in force, *at statement number bbbbbbbb* within procedure cccccc. The NCLID of the NCL procedure (dddddd) is also shown.

The second message format is issued when *CONTROL TRACE/TRACELOG* is in force. The statement number (bbbbbbb) and the substituted text of the statement (stmttext) are displayed.

The third message format is issued when *CONTROL TRACEALL* is in use. In addition to the second format, the message will include the procedure name (ccccc) and its NCLID (dddddd).

System Action:

None.

User Action:

None.

N03803**SUBSTITUTION OF VARIABLE aaaaa CREATED WORD EXCEEDING 256 CHARACTERS.****Reason:**

The maximum length of the string generated by variable substitution cannot exceed 256 characters.

System Action:

The procedure is terminated.

User Action:

Correct and retry.

N03804**VARIABLE xxxxxxxx EXCEEDS MAXIMUM LENGTH.****Reason:**

The variable xxxxxxxx exceeds the system limit of 256 characters.

System Action:

The NCL procedure terminates.

User Action:

Restructure the procedure to avoid this error and work within system limits.

N03806**INVALID LABEL.****Reason:**

An invalid label has been specified. A label must commence with a period and be followed by 1 to 12 characters.

System Action:

The NCL procedure terminates.

User Action:

Correct the label and retry the procedure.

N03812

INVALID WORD AT HEAD OF STATEMENT

Reason:

The NCL statement starts with an unknown keyword or a keyword that cannot logically start a statement.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N03813

INVALID VERB GENERATED BY SUBSTITUTION

Reason:

The NCL statement contains an NCL verb created by a process of substitution. However, it is not valid to create the verb in this way.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N03814

INVALID ASSIGNMENT STATEMENT GENERATED BY SUBSTITUTION.

Reason:

An NCL assignment statement has been created by a process of substitution. This is not valid.

System Action:

The NCL procedure terminates.

User Action:

Correct the procedure and retry.

N03903**PRELOAD OF NCL PROCEDURE procname COMPLETE.****Reason:**

Signals the completion of a previous SYSPARMS PRELOAD=procname request. IF this preload was as a result of the SYSPARMS CMDREPL command, the additional literal (COMMAND REPLACED) will appear.

System Action:

Procedure procname is now preloaded.

User Action:

The SHOW NCLSTAT command can be used to display a list of preloaded NCL procedures. A preloaded procedure cannot be updated until a restart of the system is performed or a SYSPARMS UNLOAD=procname command is issued.

N03905**NCL PROCEDURE procname STMT yyyyyyy EXCEEDS MAXIMUM CONTINUATION SIZE.****Reason:**

A statement has been found in the nominated NCL procedure that (after concatenation of all continuation statements) exceeds the system limit of 2048 characters (excluding trailing blanks and continuation '+' characters). The CONTROL CONT / NOCONT operands control continuation processing.

System Action:

The NCL procedure is terminated.

User Action:

Correct the overlength statement and retry the procedure.

N03906

type procedure PROCESSING COMPLETE. NCLID nnnnnn

Reason:

The LIST, EXEC, FSPROC, NCLCHECK or START processing for NCL procedure 'procedure' has completed.

If SYSPARMS NCLOGTRM=YES is in effect, this message is also logged, with the total processing-units and performance group displayed.

System Action:

None.

User Action:

None. This message is issued by default. It can be suppressed by issuing an CONTROL NOENDMSG statement within the procedure. Regardless of CONTROL NOENDMSG, this message will be issued if a procedure is terminated by an END command.

N03909

aaaaaaaa FLUSHED. NCLID nnnnnn

Reason:

An NCL process aaaaaaaaa that was being executed has been flushed. This can be the result of the FLUSH or CANCEL command being issued or the OCS Operator exiting while the function was in progress, in which case this message will be written to the log. The NCL identifier nnnnnn of the ended process is included in the message.

System Action:

None.

User Action:

None.

N03913**PROCEDURE procname HAS INVALID LABEL AT STMT NO: xxxxxxxx****Reason:**

The NCL label statement nominated has an invalid label name.

System Action:

Execution of the procedure procname fails.

User Action:

Correct the label and retry.

N03915**typPROC HAS ENDED, RESUMING STANDARD typ PROCESSING****Reason:**

The special system procedure typPROC (CNMPROC, PPOPROC, or LOGPROC) has ended. This can result from an error in the procedure that has caused it to terminate or the logic of the procedure has allowed it to end. This message is issued to users with Monitor status.

System Action:

The procedure is no longer active. Normal *typ* message processing resumes.

User Action:

Correct the error or procedure logic to avoid termination and restart the procedure.

N03920**LOAD OF PROCEDURE procname FAILED, DDNAME ddnm NOT DEFINED****Reason:**

The nominated procedure could not be loaded, as the library indicated was not defined in the SOLVE JCL.

System Action:

The procedure is not loaded.

User Action:

Ensure the alternate NCL library DD or DLBL statement(s) are placed in the SOLVE JCL.

N03921

LOAD OF PROCEDURE procname FAILED, DATASET ddname IS NOT PO/F(B)/80

Reason:

The dataset(s) on the indicated ddname is not a PDS, or is not RECFM=F/FB with LRECL 80.

System Action:

The procedure is not loaded.

User Action:

Ensure the correct library name is in the user's UAMS definition.

N03922

ABEND abendcode LOADING PROCEDURE procname FROM LIBRARY libname

Reason:

An ABEND occurred while loading an NCL procedure from the indicated library.

System Action:

The procedure is not loaded.

User Action:

If the ABEND is a SYSTEM 913 ABEND, ensure that SOLVE is authorized to access the library. Otherwise, investigate the ABEND using the relevant operating system message manuals.

N03923**I/O ERROR OCCURRED LOADING PROCEDURE procname FROM LIBRARY libname****Reason:**

A hard I/O error occurred while loading an NCL procedure from the indicated library.

System Action:

The procedure is not loaded.

User Action:

Correct the cause of the I/O error. Note that, for normal NCL load requests, the system automatically retries once after an I/O error.

N03924**LOAD OF PROCEDURE procname FROM LIBRARY libname FAILED, STORAGE SHORTAGE****Reason:**

Insufficient storage was available to process an NCL procedure load request.

System Action:

The procedure is not loaded.

User Action:

Retry. If the problem persists, contact your systems administrator.

N03925**LOAD OF PROCEDURE procname FROM LIBRARY libname FAILED, PDS FIND ERROR****Reason:**

An unexpected return code from the FIND macro was encountered while trying to locate the indicated NCL procedure.

System Action:

The procedure is not loaded.

User Action:

Contact your systems administrator. The PDS directory may be corrupt.

N03926

ABEND abendcode LOADING PROCEDURE procname FROM LIBRARY libname

Reason:

An ABEND occurred while loading an NCL procedure from the indicated library.

System Action:

The procedure is not loaded.

User Action:

If the ABEND is a SYSTEM 913 ABEND, ensure that SOLVE is authorized to access the library. Otherwise, investigate the ABEND using the relevant operating system message manuals.

N03927

I/O ERROR OCCURRED LOADING PROCEDURE procname FROM LIBRARY libname

Reason:

A hard I/O error occurred while loading an NCL procedure from the indicated library.

System Action:

The procedure is not loaded.

User Action:

Correct the cause of the I/O error. Note that, for normal NCL load requests, the system automatically retries once after an I/O error.

N03928

LOAD OF PROCEDURE procname FROM LIBRARY libname FAILED, STORAGE SHORTAGE

Reason:

Insufficient storage was available to process an NCL procedure load request.

System Action:

The procedure is not loaded.

User Action:

Retry. If the problem persists, contact your systems administrator.

N03929

**LOAD OF PROCEDURE aaaaaaaa FROM LIBRARY bbbbbbbb FAILED,
LIBRARY EXTENT ERROR.**

Reason:

An MVS partitioned dataset containing the NCL library (DDNAME bbbbbbbb) has been extended by another region/address space whilst SOLVE was loading procedure aaaaaaaa.

System Action:

If the procedure was being loaded as a result of the LIST command, the command is terminated. In all other cases the load is retried once.

User Action:

If this was as a result of a LIST command, resubmit the command.

N03930

**LOAD OF PROCEDURE aaaaaaaa FROM LIBRARY bbbbbbbb FAILED,
PROCEDURE IS OML**

Reason:

An attempt to load the named procedure failed. The procedure was found to be written in the OML language, not NCL.
This should only occur if an NCLCHECK command names the procedure.

System Action:

The load is terminated.

User Action:

If this was as a result of the NCLCHECK command, use the OMLCHECK command instead.

N03950

RESTARTING LOAD OF PROCEDURE `procname` FROM LIBRARY `libname` AFTER I/O ERROR.

Reason:

An I/O error was encountered while loading the indicated procedure. One retry will be attempted.

System Action:

The procedure load will be restarted.

User Action:

None. If the load fails a second time, further messages will be produced.

N03A02

UNABLE TO LOAD PROCEDURE `xxxxxxx` - STORAGE THRESHOLD REACHED

Reason:

Insufficient storage was available to complete the load of NCL procedure `xxxxxxx`.

System Action:

The procedure is not executed.

User Action:

Use the SHOW NCL command to determine whether an unusually high number of NCL *processes are running*.
Contact Technical Support if you are unable to identify the reason (process starts looping) for the situation.

N03C01**NCL I/O MANAGER INITIALIZATION COMPLETE****Reason:**

This message (sent to the SOLVE activity log) indicates that the NCL I/O manager has initialized successfully.

System Action:

None.

User Action:

None.

N03C02**NCL I/O MANAGER SUBTASK ABEND - RESTARTING SUBTASK****Reason:**

This message indicates an unexpected subtask abend by an NCL I/O subtask.

System Action:

An attempt is made to restart the subtask.

User Action:

Determine the reason for the abend from the operating system log. Contact your product support representative.

N03D50**NCL LIBRARY I/O ERROR PROC procname synad-information****Reason:**

An I/O error was encountered whilst loading the indicated NCL procedure. I/O error information, as obtained by the SYNADAF function is displayed.

System Action:

The system will retry the load, if possible.

User Action:

None, unless the problem persists. If it does, investigate the problem.

N03F01

NCL LOADER STATISTICS

Reason:

Statistics for the NCL procedure loader follow. This is output of the SHOW NCLLOAD command.

System Action:

none.

User Action:

none.

N03F02

title

Reason:

Statistics for the NCL procedure loader follow. This is a heading line.

System Action:

none.

User Action:

none.

N03F03

name value

Reason:

This is an NCL loaded stats line. The name is self-explanatory.

System Action:

none.

User Action:

none.

N04001**NCL PROCEDURE NESTING LIMIT HAS BEEN EXCEEDED.****Reason:**

A group of NCL procedures contains more than 250 levels of nested EXEC statements. EXEC statements in excess of 250 nested levels are invalid.

System Action:

The procedure terminates.

User Action:

Restructure the procedure(s) to prevent it/them from exceeding this maximum.

N04003**EXEC REJECTED. PROCEDURE `procname` ALREADY IN USE AT ANOTHER NESTING LEVEL.****Reason:**

During execution of a group of NCL procedures, a nested EXEC statement occurred specifying a procedure already being executed at an earlier nesting level.

System Action:

The EXEC statement is ignored since its processing could lead to a nesting loop.

User Action:

Check the nesting levels specified in the executed group. This check is imposed to avoid inadvertent recursive looping of procedures. If it is intentional to re-execute a procedure of the same name the *CONTROL RECCHK* option must be used to bypass this check.

N04005

NCL PROCEDURE procname DOES NOT EXIST IN LIBRARY ddname

Reason:

The procedure specified on the EXEC, START or FSPROC command does not exist in the procedure library specified by ddname.

System Action:

The command is rejected.

User Action:

Correct the procedure name. If the procedure name is correct ensure that it exists in the procedure library specified for use by this userid. This can be determined by the SHOW EXEC command or alternatively the LIST command could be used to display the procedure without execution.

N04006

ttt PROCEDURE procname FLUSHED, NOT EXECUTED DUE TO USER EXITING.

Reason:

This message is issued if the user exits OCS mode before the specified procedure had started execution. The procedure type (NCL or OML) is indicated. This message is only written to the activity log.

System Action:

The procedure is flushed prior to completion.

User Action:

Determine if any corrective action is required due to the procedure being flushed.

N04007**EXEC OF PROCEDURE procname QUEUED PENDING COMPLETION OF procname****Reason:**

A request to execute an NCL procedure has been entered while an existing procedure is executing in this OCS window. NCLPEND=YES is in force by default; therefore, the second procedure is queued for execution when

System Action:

Execution commences automatically when all previous procedures are

User Action:

If necessary, use the SHOW NCL command to determine why the existing

N04008**xxxx OF yyyyyyyy REJECTED, PROCEDURE eprocnam STILL BEING PROCESSED.****Reason:**

This situation should not happen because NCLPEND=YES is hard-coded.

System Action:

The command is rejected.

User Action:

Contact Technical Support.

N04012

PROCEDURE procname IS ALREADY PRELOADED

Reason:

An attempt has been made to preload an NCL procedure that is already preloaded, or being shared by one or more users.

System Action:

The request is ignored.

User Action:

Use the SYSPARMS UNLOAD command to schedule an unload for a procedure that is PRELOADED or AUTOSHRed. If a new copy is required in storage, the procedure can then be PRELOADED. If the procedure is in the P-UNLOAD state, subsequent requests for this procedure will not be queued to this copy, rather, a new copy of the procedure will be loaded to which they will be directed. The SHOW NCLSTAT command can be used to display the names of PRELOADED or AUTOSHRed procedures, and those procedures that are pending an unload request.

N04013

PROCEDURE procname LOAD TERMINATED, PRELOAD/AUTOSHARE INDEX ERROR

Reason:

During manipulation of the internal indices for the preload/autosshare lists, an error occurred.

System Action:

The procedure is not loaded.

User Action:

Contact your Systems Administrator and report this error to Technical Support.

N04020**PROCEDURE aaaaaaaaa NOT PRELOADED, COMMAND REPLACEMENT INHIBITED.****Reason:**

A SYSPARMS CMDREPL=aaaaaaaa command has failed. This command requires the replacement NCL procedure (aaaaaaaa) to be preloaded, and will automatically preload it. During the execution of the command, another SOLVE user has unloaded the procedure.

System Action:

The command fails.

User Action:

Resubmit the command.

N04021**PROCEDURE aaaaaaaaa IN AUTOSHR/PRELOAD STATUS. UNUSABLE FOR COMMAND REPLACEMENT.****Reason:**

A SYSPARMS CMDREPL=aaaaaaaa command has failed because there is already a preloaded or autoshrared copy of the NCL procedure.

System Action:

The command fails.

User Action:

Issue a SYSPARMS UNLOAD=aaaaaaaa statement and retry the command.

N04022

**PROC xxxxxxxx NCLID nnnnnn SUSPENDED AT LINE mmmmmmmmm
DUE TO reason**

Reason:

This message is produced by the NCL debug facility when an NCL procedure is suspended during execution. 'reason' gives the reason why the procedure was suspended.

'HOLD COMMAND BEING ISSUED' indicates that the DEBUG HOLD command was used to suspend execution of the procedure.

'PROFILE SETTING NEWHOLD=YES' indicates that the DEBUG SET NEWHOLD=YES command has been entered to cause all new NCL processes to be suspended when they begin execution.

'STEP STMT LIMIT BEING REACHED' indicates that the DEBUG STEP command was used to cause a specific number of statements in the NCL process to be executed before suspending the process.

'STEP STMT NUMBER BEING REACHED' indicates that the DEBUG STEP command was used and that it specified the statement number at which execution was to be suspended.

'PROCEDURE ENTRY' indicates that a DEBUG STEP NEXT=ENTRY command has been entered to allow execution of an NCL process until the next nested procedure entry, and the procedure entry has occurred.

'PROCEDURE EXIT' indicates that a DEBUG STEP NEXT=ENTRY command has been entered to allow execution of an NCL process until the next procedure exit, and the procedure exit has occurred.

System Action:

Execution of the NCL process is suspended.

User Action:

The DEBUG RESUME and DEBUG STEP commands may be used to continue execution of the NCL process.

N04023

**CALL TO PROCEDURE aaaaaaaa NCLID bbbbbb LEVEL ccc METHOD
LEVEL ddd**

Reason:

The DEBUG CALLTRC command can be used to turn 'procedure call tracing' on. This causes this message to be issued to the debugging user when a nested procedure call is made by an NCL process which is executing under the control of NCL/DEBUG. If the new nesting level is also a new METHOD LEVEL, the new method level is displayed on the end of the

System Action:**User Action:****N04024**

**RETURN FROM PROCEDURE aaaaaaaa NCLID bbbbbb LEVEL ccc
RETCODE ddd METHOD LEVEL eee**

Reason:

The DEBUG CALLTRC command can be used to turn 'procedure call tracing' on. This causes this message to be issued to the debugging user when a nested procedure call returns to a previous nesting level in an NCL process which is executing under the control of NCL/DEBUG. If the return is a change in METHOD LEVEL, the new method level is placed on the end of the message.

System Action:

None.

User Action:

None. See also the DEBUG SET CALLTRC= operand.

N04107

PROCEDURE procname NCLID bbbb PAUSED.

Reason:

An &PAUSE statement has been detected in an NCL procedure.

System Action:

Processing for the procedure is suspended.

User Action:

Enter GO, END or FLUSH as required to resume or cancel processing of the procedure.

N04111

WAITING FOR MESSAGE STRING: aaaaaaaaaa

Reason:

An &WAIT STRING statement has been detected in an NCL procedure.

System Action:

Processing for the procedure is suspended, awaiting the arrival of a message containing the specified string aaaaaaaaaa.

User Action:

The SHOW PAUSE command can be used to display the expected string.

N04113

WAITING FOR MESSAGE: aaaaaaaaaa.

Reason:

An &WAIT statement has been detected in an NCL procedure.

System Action:

Processing for the procedure is suspended awaiting the arrival of the specified message aaaaaaaaaa.

User Action:

None.

N04114**WAIT INVALID WITHIN PROCEDURE EXECUTED BY INTCMD****Reason:**

If &INTCMD is used to EXECute a dependent process, the dependent process cannot include procedures that issue WAIT statements.

System Action:

The procedure terminates.

User Action:

Correct the procedure and retry.

N04115**PAUSE IGNORED, PREVIOUS WAIT STILL REQUIRES A COMMAND.****Reason:**

During NCL procedure processing an &PAUSE statement was found following an &WAIT statement. The &WAIT must be followed by a command. An &PAUSE statement is invalid.

System Action:

The statement is ignored.

User Action:

Correct the procedure and retry.

N04116**WAIT IGNORED, PREVIOUS WAIT STILL REQUIRES A COMMAND.****Reason:**

During NCL procedure processing two successive &WAIT statements were found. An &WAIT statement requires a command other than &WAIT or &PAUSE to follow it.

System Action:

The &WAIT is ignored.

User Action:

Correct the procedure and retry.

N04201

**SOLVE PAUSED DUE TO VTAM RECEIVE REQUEST FAILURE. RC=rc,
FDBK2=fdbk, SENSE=sense**

Reason:

The return code from a VTAM RECEIVE request indicates a temporary error. SOLVE issues this message and pauses for 5 seconds before retrying the VTAM RECEIVE. VTAM feedback data (rc, fdbk, sense) is only provided if the error is other than temporary storage shortage.

System Action:

If the condition persists for four minutes, SOLVE will close the primary ACB and go into re-open processing after a further five seconds.

User Action:

Refer the problem to your systems administrator.

N04202

INVALID RPL RECEIVED THROUGH PRIMARY ACB - reason

Reason:

An invalid RPL has been passed to SOLVE via the primary ACB. The reason indicates the failing condition and may be one of the following:

NO VTAM CID PRESENT - The communication identifier is not set in the RPL.

INVALID VTAM CID PRESENT - The communication identifier set does not match that related to the passed user correlator data.

NO USER CORRELATOR RETURNED - The user correlator expected by SOLVE is not set in the RPLUSFLD.

System Action:

The input is ignored. Messages N04203 and N04204 are issued containing a dump of the RPL and RU.

User Action:

Report the problem to your systems administrator.

N04203**dump text****Reason:**

An invalid RPL has been passed to SOLVE via the primary ACB. This message is issued dumping the RU associated with the failing request. Message N04202 is issued detailing the reason for the rejection.

System Action:

Associated message N04204 is produced dumping the failing RPL.

User Action:

Record the data for problem resolution.

N04204**dump text****Reason:**

An invalid RPL has been passed to SOLVE via the primary ACB. This message is issued dumping the RPL associated with the failing request. Message N04202 is issued detailing the reason for the rejection.

System Action:

None.

User Action:

Record the data for problem resolution.

N04301**OVERLENGTH INPUT RECEIVED FROM luname - LU DISCARDED****Reason:**

Input received from LU luname was longer than 32K bytes. This is inconsistent with the type of data normally received from the type of LU.

System Action:

The LU is disconnected from SOLVE.

User Action:

Investigate the cause of the overlength input. The most likely cause is a failure of the terminal microcode or control program.

N04401

SEND-RESPONSE, GAVE RC=rc, FDBK2=fdbk, SENSE=sense

Reason:

A VTAM SEND, used to send a response, failed with the return code, feedback and sense codes shown.

System Action:

The error is ignored.

User Action:

Determine the cause of the failure with reference to the appropriate VTAM manual.

N04701

UNKNOWN COMMAND TYPE RECEIVED, IGNORED.

Reason:

A command other than START, MODIFY or STOP was received through the system console `MODIFY' command interface.

System Action:

The command is ignored.

User Action:

Refer this situation to your systems administrator.

N04702

STOP COMMAND REJECTED, USE MODIFY FSTOP.

Reason:

A system STOP (P) command was received from the system console.

System Action:

The command is rejected.

User Action:

Use the FSTOP command through the `MODIFY' command interface.

N04703**PARAMETERS ENTERED WITH START COMMAND HAVE BEEN IGNORED.****Reason:**

Parameters specified on the START command when running SOLVE as a started task are ignored.

System Action:

SOLVE parameters are taken from the PARM field of the procedure JCL.

User Action:

None.

N04A01**CONSOLE NOT AUTHORISED FOR OCS - COMMAND REJECTED.****Reason:**

An attempt to use an OCS command through a system console has failed because the console userid, for example SYSOPER, does not have OCS access privilege.

System Action:

The command is rejected.

User Action:

None.

N04A02**SIGNON FAILED FOR aaaaaaaa AT CONSOLE bbbbbbbb.****Reason:**

A MODIFY command entered at the indicated console caused SOLVE to attempt to sign the console on. The indicated user ID was not a valid SOLVE user. The signon thus failed.

System Action:

The signon fails and the command is ignored.

User Action:

Define the user ID if required.

N04B01

COMMAND IGNORED, CONSOLE USERID aaaaaaaa NOT AUTHORISED FOR OCS

Reason:

A command entered from a system console is rejected because the userid definition of the user associated with the console is not profiled with OCS authority.

System Action:

None.

User Action:

If necessary, redefine the console userid to have OCS authority.

N04C09

COMMAND OBSOLETE

Reason:

The SHOW LICENCE command is now obsolete and will be withdrawn in a future release. Use the STATUS command to display the system CPU and product status information.

System Action:

None

User Action:

None

N04E01

feature_name FEATURE WILL EXPIRE IN nn DAYS/HAS EXPIRED.

Reason:

The SOLVE optional feature indicated by *feature_name* is about to expire or has already expired.

System Action:

None.

User Action:

Contact your product support representative.

N04E02**SOLVE FEATURE(S) DUE TO EXPIRE. SEE LOG FOR DETAILS.****Reason:**

SOLVE has detected that some features will expire within the next thirty (30) days. A message N04E01 will be on the SOLVE log for each of the features due to expire. This message will be issued every night until the system is refreshed with a new license.

System Action:

Processing continues.

User Action:

Check the SOLVE log for the list of features due to expire and contact your product support representative.

N05501**CLSDST FAILED FOR luname - RC=bbb, FBK2=ccc, SENSE=ddd****Reason:**

Release of the specified logical unit failed with the specified error information.

System Action:

None. The terminal may not be properly disconnected.

User Action:

Refer to the VTAM Programming manual for explanation of the error codes.

N05503

LOGON FAILED FOR luname - UNSUPPORTED DEVICE TYPE

Reason:

A logon request was received from a logical unit that was not defined as another SOLVE system and that does not have BIND parameters indicating it to be a supported terminal type. This may include an LU-1 terminal attempting to logon to SOLVE by bypassing EASINET.

System Action:

The logon is rejected.

User Action:

If the device attempting to logon is a supported device type, or an application simulating a supported device, ensure that the correct LOGMODE table entry is specified on the device definition.

N05602

SESSION FOR luname FAILED. LOSTERM CODE xx

Reason:

The specified LU has been unexpectedly disconnected.

System Action:

None.

User Action:

Refer to the VTAM Programming manual for the cause of the LOSTERM event. The OPNDST command can be used to re-acquire the LU if necessary.

N05701**SESSIONC FAILED FOR luname, reason-text****Reason:**

A remote system attempted to establish a session with the system that issued this message, but during the connection process a VTAM OPNSEC or SESSIONC macro failed with the indicated error codes.

System Action:

The session is not established.

User Action:

Determine the cause of the error from the appropriate VTAM Programming manual.

N05901**Communication halted. Reply RESTART or END****Reason:**

The ACBs have closed because VTAM is terminating or the primary APPL has

System Action:

Waits for a reply.

User Action:

Restart VTAM or activate the APPL definition and reply as appropriate.

N05902**COMMUNICATION HALTED, ACB OPEN RETRY IN 30 SECONDS****Reason:**

The ACBs have been closed because VTAM is terminating or the primary

System Action:

Waits for 30 seconds before attempting to reopen the ACBs.

User Action:

None.

N05903

COMMUNICATION RESTARTED SUCCESSFULLY

Reason:

The system ACB has been successfully re-opened following an earlier N05901 message.

System Action:

Processing resumes.

User Action:

None.

N05904

VTAM PPO STOPPED

Reason:

The VTAM PPO ACB has been closed and SOLVE is no longer receiving PPO messages. PPO messages are sent by VTAM to the system console.

System Action:

None.

User Action:

Use the PPO START command to restart the PPO interface if necessary.

N06601

CLSDST FOR luname GAVE, RC=rc, FDBK2=fdbk, SENSE=sense

Reason:

A CLSDST macro, issued for the terminal luname shown, received from VTAM the non-retryable return codes displayed in the message.

System Action:

CLSDST processing continues, but the terminal may not be successfully disconnected from SOLVE.

User Action:

Investigate the error condition.

N06602**aaaa FAILED - VTAM TEMPORARY STORAGE SHORTAGE. RETRY IN PROGRESS.****Reason:**

A VTAM macro -aaaa is CLSDST or TERMSESS - has failed because of a VTAM temporary storage shortage. This message will be automatically repeated at one minute intervals while the shortage persists.

System Action:

The VTAM function is retried every five seconds.

User Action:

If the message persists investigate the cause of the VTAM storage shortage.

N06701**ERROR DETECTED IN DATASTREAM FOR LU luname CODE=X'cc', POS1=X'pos1', POS2=X'pos2'.****Reason:**

An error has been detected in the datastream for LU luname. The offset into the datastream before compression is given by pos1 which corresponds to the offset pos2 in the datastream after compression. The code cc is a 3270 control character order, which can be determined from the 3270 Component Description Manual.

System Action:

Compression is aborted, and a snapshot of the datastream is sent to the log.

User Action:

Determine the cause of the error.

N06702

DUMP OF DATASTREAM IN ERROR FOLLOWS:

Reason:

This message follows N06701. An error having been detected, a snapshot of the offending datastream, is written to the log to facilitate in determination of the problem.

System Action:

None.

User Action:

Determine the cause of the error.

N06703

TRACE OF DATASTREAM BEFORE COMPRESSION FOR LU luname

Reason:

Tracing of LU luname has been requested using the LUTRACE command.

System Action:

The data for LU luname will be traced based on the SYSPARMS TRACEOPT values.

User Action:

None.

N06704

+off bbbbbbbb bbbbbbbb bbbbbbbb bbbbbbbb ...

Reason:

This line contains the trace data as requested at offset off. The data is formatted in hex on the left and character format on the right.

System Action:

None.

User Action:

None.

N06705**END OF DATASTREAM.****Reason:**

Denotes the end of tracing for this datastream.

System Action:

None.

User Action:

None.

N06801**PANEL EXCEEDS SYSTEM MAXIMUM - TRUNCATED****Reason:**

The panel being processed has exceeded the size of the internal processing buffer and has been truncated.

This may be caused by a panel that contains an excessive number of attribute bytes which has resulted in a datastream being generated that exceeds the internal buffer which is 8K- 12 bytes (by default) or as set by the SYSPARMS PANLBFSZ operand.

System Action:

Processing continues, however processing may be impacted by the truncation of the panel.

User Action:

Determine the cause for the error. If necessary re-organize the panel to reduce the number of fields and attribute bytes. Alternatively, use SYSPARMS PANLBFSZ to increase the internal buffer size for panel support. If the problem persists report it to your product support representative.

N06B01

NAME ADDED DELETED CURRENT #SEQ #INDX DEPTH REORG FREESPC

Reason:

This is the heading message for a SHOW INDEX command. One or more N06B02 messages follow. The heading identifies the messages contents with the following meaning. NAME is the index name, identifying the index type. ADDED and DELETED are counts of all entries ever added to or deleted from the index. CURRENT is a count of current entries in the index. The remaining fields are internal debug guides. #SEQ is the number of sequence set elements, #INDX the number of index elements, DEPTH is the current depth of the index elements, REORG is the number of times a reorg has occurred, FREESPC is the amount of free space in the index.

System Action:

None.

User Action:

None.

N06B02

**aaaaaaaaaaaaaaaaaaaaa bbbbbb ccccccc dddddddd eeee fffff gggggg hhhhh
iiii%**

Reason:

This is the detail line of a SHOW INDEX command. Its contents are explained under the heading message N06B01.

System Action:

None.

User Action:

None.

N06B03

***END* -- aaaa INDEX ENTRIES DISPLAYED.**

Reason:

This terminates a SHOW INDEX message sequence and provides a count of the number of name index sets processed. aaaa = count of index sets processed.

System Action:

None.

User Action:

None.

N06D01

WARNING - NRD RETENTION QUEUE FULL, OLD NRD MESSAGES LOST

Reason:

The number of Non-Roll Delete messages received has exceeded the hold limit and as a result one or more have been lost.

System Action:

The NRD messages are discarded.

User Action:

Some of the NRD messages currently being retained should be deleted so the queue can accept more NRD messages, otherwise the losses will continue. The SYSPARMS NRDLIM operand can be used to increase the limit.

N06D02

WARNING - NRD RETENTION QUEUE AT OR BEYOND 75% FULL

Reason:

The number of Non-Roll Delete messages received has reached or exceeded 75% the hold limit.

System Action:

None.

User Action:

When the hold limit is reached, message N06D01 will be issued; refer to message N06D01 above.

N07002

luname CONNECTED

Reason:

SOLVE has opened a session with terminal *luname* . This message is issued only if the SYSPARMS CONMSG=YES command has been issued.

System Action:

None.

User Action:

None.

N07003

CONNECT FAILED FOR TERMINAL aaaaaaaaa - errdescr

Reason:

Connection of terminal aaaaaaaaa has failed. errdescr describes the error which occurred.

System Action:

The terminal is not connected.

User Action:

From the error description, determine the cause of the error.

N07005**RE-ACQUISITION OF TERMINAL aaaaaaaa AS A MODEL 2 WILL BE ATTEMPTED.****Reason:**

A Fullscreen terminal session has been rejected by the device aaaaaaaa. The M2RETRY system parameter setting indicates that the system should automatically retry session establishment using a default screen size. This message is logged and indicates that the session request is to be reissued using the default screen size.

System Action:

A session is requested with the named device using a default model 2 logmode.

User Action:

None.

N07006**OPNDST FAILED FOR LU luname - ALREADY IN USE BY ANOTHER APPLICATION****Reason:**

The connection attempt for the specified logical unit failed because the terminal is already in session with another application.

System Action:

None.

User Action:

Reissue the OPNDST command requesting the owning application to release the terminal.

N07007

LOGMODE FOR LU aaaaaaaa - NOT FOUND IN MAIMDTAB.

Reason:

A SYSPARMS MAIMDTAB command was previously specified to provide a supplied mode table for MAI sessions. An attempt was made to match the bind parameters for the logical unit, LUNAME aaaaaaaa, with an entry in the supplied table but no match was found.

System Action:

The logmode table name is ignored.

User Action:

Check the user logmode table.

N07301

SEND TO TERMINAL luname FAILED. RC=xx,FBK2=yy,SENSE=zzzz

Reason:

An error occurred when a message was sent to the specified terminal. The codes given are the RPL return codes following the send.

System Action:

The session is ended.

User Action:

Refer to the VTAM Programming manual for explanation of the error codes.

N07401**POWER OFF DETECTED.****Reason:**

An attempt to read input from a terminal has failed because the terminal is powered off. On non-SNA terminals this condition may only be detected when the terminal is powered on again.

System Action:

If this occurs in an active user region then a disconnection is performed. If an EASINET terminal then the EASINET procedure is redriven.

User Action:

Logoff to release system resources before powering off the terminal. A subsequent reconnection may be performed to resume the interrupted work.

N07501**SCREEN INPUT ERROR - HIT CLEAR KEY****Reason:**

The system was unable to correlate an input from the screen with an active function. Pressing CLEAR will ensure synchronisation of processing.

System Action:

The input is ignored.

User Action:

Hit the Clear key to redisplay the current screen image and re-enter the data.

N07503**TRACE OF INBOUND DATASTREAM FROM LU luname****Reason:**

Tracing of the inbound datastream has been requested for LU luname via the LUTRACE command.

System Action:

The inbound datastream will be traced.

User Action:

None.

N07504

aaaaaaaa bbbbbbbb cccccccc dddddddd

Reason:

This message is preceded by N07503. This message contains the requested trace data from the specified LU.

System Action:

The datastream is logged.

User Action:

None.

N07505

END OF DATASTREAM.

Reason:

Denotes the end of tracing for this datastream.

System Action:

None.

User Action:

Tracing can be terminated using the LUTRACE command.

N07901**MESSAGE(S) LOST, HOLD LIMIT EXCEEDED****Reason:**

This message will appear whenever any messages are discarded because the limit to the number of messages that can be held for this OCS Operator has been exceeded. If the OCS window is not fully closed, the 'MSGs LOST' caption will be displayed above the command entry line to warn that messages are being discarded.

System Action:

One or more messages are discarded and processing continues. The hold limit is imposed to avoid excessive storage being allocated to queued messages.

User Action:

The number of messages that will be held is determined by the HOLD operand of the PROFILE command. A value in the range 10 to 999 can be specified by the user. By default 200 messages will be held. Refer to the PROFILE command for more information.

N07902**MISSING DOMID DETECTED IN DOM MESSAGE****Reason:**

A message flagged as a Delete Operator Message does not contain a DOM identifier component.

System Action:

DOM processing is not performed.

User Action:

Determine if an NCL process has incorrectly generated or modified a DOM message. In particular, ensure that MSGPROC processing is not deleting the DOMID component when propagating messages.

N08002

WAIT STRING FOUND, RESUMING PROCEDURE procname

Reason:

The NCL procedure specified has resumed processing because the character string specified on an earlier &WAIT statement has been received.

System Action:

NCL procedure processing resumes.

User Action:

None.

N08401

luname CLOSED

Reason:

The region indicated, luname, has been processed for termination.

System Action:

The region is terminated.

User Action:

None.

N08403

luname CLOSE IN PROGRESS.

Reason:

The CLSDST command has been issued to terminate the session between the LU 'luname' and SOLVE. The session is already being terminated and this message is sent to the user to notify them.

System Action:

The CLSDST command is ignored. Termination of the session between the LU and SOLVE continues.

User Action:

None.

N08502**TRACE OF DATASTREAM SENT TO LU luname WITH RC/FDBK/SENSE
xxxxxxxx****Reason:**

A VTAM SEND to a terminal connected to SOLVE has failed with Return Code, Feedback and Sense values as shown. This message precedes a hexadecimal dump of the datastream (see messages N08503 and N08504).

System Action:

None.

User Action:

Contact your systems administrator to have the source of the datastream error located.

N08503

xxxxxxxx xxxxxxxx xxxxxxxx xxxxxxxx

Reason:

A VTAM SEND to an LU connected to SOLVE has failed, with Return Code, Feedback and Sense codes shown in message N08502. The dump of the datastream being sent is contained in the N08503 messages following message N08502.

System Action:

None.

User Action:

Contact you systems administrator to have the source of the datastream error located.

N08504

END OF DATASTREAM.

Reason:

This message terminates the hexadecimal dump of a datastream which was being sent to an LU connected to SOLVE when a VTAM SEND fails. Refer to message N08502 for return code, Feedback and Sense code information.

System Action:

None.

User Action:

Contact your systems administrator to have the source of the datastream error located.

N08505

EXCEPTION NOT RECEIVED FOR LU luname WITH RC/FDBK xxxxxxxx

Reason:

A VTAM RECEIVE for an exception response associated with a terminal connected to SOLVE has failed with the indicated Return Code, Feedback. The occurrence of this message indicates an abnormal condition in the VTAM API. A SEND request has failed with an X'0C0D' sense code indicating an error in chain. The RECEIVE request issued to process the associated exception response has failed.

System Action:

If the terminal is still in session the failing SEND operation is retried.

User Action:

If the condition continues notify your product support representative and supply them with the error information.

N08801**Message(s) lost, &INTREAD queue limit exceeded****Reason:**

When a procedure issues a command using the &INTCMD statement, there is a limit to the number of messages queued to the procedure's dependent response queue or dependent request queue as a result of command or other process execution. This limit, with a default of 32767, is set in the NMIQLIM parameter. If this limit is exceeded as a result of messages queued to a process's &INTREAD queues, this message is queued as the NMIQLIM + 1 message.

NMIQLIM affects the number of messages queued to &PROMPT environments and to the total number of Remote Operator Facility (ROF) messages

System Action:

One or more messages are discarded and processing continues. The hold limit is imposed to avoid excessive storage being allocated to queued messages. Messages are discarded until the queue depth drops below

User Action:**N08H01****userid RECONNECTED.****Reason:**

This message acknowledges that a request by the user with the userid shown to reconnect to a previously disconnected user region has been successful.

System Action:

The user's terminal is connected to the disconnected region.

User Action:

Continue using the reconnected region.

N08H02

REGION nnnnn FOR userid DISCONNECTED.

Reason:

This message acknowledges that the DISCONN command or session failure has caused the disconnection of a user region. The reconnection identifier nnnnn and userid show the user who has been disconnected. This message is written to the activity log only.

System Action:

The user region has been disconnected.

User Action:

To reconnect to the region at a later stage, use the RECONN command.

N08H03

REGION ~P1 FOR ~P2 RECONNECTED

Reason:

A reconnection for the user P2 has completed successfully. P1 is the terminal name of the disconnected region.

System Action:

The terminal is connected to the disconnected region.

User Action:

Press the Enter key to resume processing.

N08R01**RECONNECTION REJECTED DUE TO DEVICE MISMATCH.****Reason:**

An attempt has been made to reconnect to a session which was disconnected from a terminal with different physical characteristics (eg. previous session was an LU2 terminal and reconnection was attempted from an LU-1 terminal). The reconnection attempt has been rejected.

System Action:

The reconnection attempt has been rejected.

User Action:

Try reconnecting from a device with characteristics similar to those which the original terminal possessed.

N08R02**RECONNECTION REJECTED DUE TO REGION CLEANUP IN PROGRESS.****Reason:**

An attempt was made to reconnect to a disconnected session, but the reconnection failed because either the current or original region was terminating.

System Action:

The reconnection attempt is rejected.

User Action:

None.

N08X01

aaaaaaaa CONNECTING AS A bbbbbbb DEVICE

Reason:

This message appears on VOS3 systems only. It confirms that terminal aaaaaaaaa which is currently connecting to SOLVE is a bbbbbbb device type. bbbbbbb is either 3270 or 560/20.

System Action:

None.

User Action:

None.

N09003

TRACE OF DATASTREAM SENT TO LU luname CHAIN=ccc

Reason:

Tracing of outbound datastreams to LU luname has been requested. If compression was requested, this datastream is after compression has been performed. ccc is either FIC, LIC, MIC or OIC, indicating a first, last, middle or only in chain message.

System Action:

The datastream is traced to the activity log.

User Action:

Tracing may be terminated by use of the LUTRACE command.

N09004

+off hexdata hexdata hexdata hexdata char char char char

Reason:

This message is preceded by N09003. This is the trace of the outbound datastream to the specified LU.

System Action:

None.

User Action:

Tracing may be terminated by the LUTRACE command.

N09005**END OF DATASTREAM.****Reason:**

Denotes the end of the trace messages for this datastream.

System Action:

None.

User Action:

None.

N09202**OPERATIONAL WINDOW TOO SMALL****Reason:**

A split screen operation was attempted which would provide a window of insufficient size for the current function. Certain functions require a minimum sized window for their operation, for example OCS mode. Minimum requirements apply if an OCS mode screen is executing an NCL procedure in fullscreen mode.

System Action:

If the error occurs when attempting to split a screen being operated by an NCL procedure that is operating as a full screen processor out of OCS mode the screen split will be ignored and this message will be queued for display when the procedure reverts to standard OCS mode of operation.

User Action:

Select a larger window size.

N09301

SPO PROCESSING TERMINATED

Reason:

VTAM SPO message receipt has stopped. This is typically due to a VTAM error indicated in the previous message N09B02. If, however, the SPO interface has been stopped, no N09B02 will have been issued.

System Action:

The VTAM SPO interface is inactive.

User Action:

Refer to message N09B02.

N09302

SPO RCVCMD FAILED, reason-text

Reason:

A RCVCMD macro failed when issued to receive VTAM SPO messages. The error codes are explained in the appropriate VTAM Programming manual.

System Action:

Replies can no longer be received to VTAM commands.

User Action:

Determine the cause of the failure by referring to the VTAM Programming manual. Restart SOLVE. The SPO interface may be restarted using the SPO START command.

N09303

SPO RCVCMD FAILED - VTAM TEMPORARY STORAGE SHORTAGE

Reason:

A RCVCMD macro failed when issued to receive VTAM SPO messages because of a VTAM storage shortage.

System Action:

Replies can no longer be received to VTAM commands.

User Action:

SOLVE will continue to issue the RCVCMD macro every 5 seconds until an SPO STOP command is entered or until the storage shortage is relieved.

N09401**FACILITY ONLY VALID FROM PPOPROC.****Reason:**

The NCL verbs &PPOREAD, &PPODEL, &PPOCONT and &PPOREPL are valid only if issued from PPOPROC.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N09402**INVALID OPERAND SPECIFIED FOR DEFMSG.****Reason:**

An invalid VTAM message number has been specified on the &DEFMSG NCL statement.

System Action:

The PPOPROC NCL procedure is terminated. Standard PPO and SPO messages delivery is resumed.

User Action:

Correct the NCL procedure and restart PPOPROC.

N09501**PPO PROCESSING TERMINATED****Reason:**

VTAM PPO message receipt has stopped due to a VTAM error. This message will follow N09B02 which details the VTAM error.

System Action:

The VTAM PPO interface is inactive.

User Action:

Refer to message N09B02.

N09503

PPO RCVCMD FAILED, reason-text

Reason:

A RCVCMD macro failed when issued to receive VTAM PPO messages. The error codes are explained in the appropriate VTAM Programming manual.

System Action:

The VTAM PPO ACB is closed, so no more unsolicited messages will be received from VTAM.

User Action:

Determine the cause of the failure by referring to the VTAM Programming manual. Use the PPO START command to re-open the ACB, or restart SOLVE.

N09601

VTAM PPO STARTED

Reason:

The SOLVE PPO ACB has been opened successfully.

System Action:

VTAM PPO messages will now be routed to those operators authorized to receive them.

User Action:

If you do not wish to receive PPO messages at this stage, the PROFILE command PPO=NO operand can be used to suppress them.

N09602**OPEN FOR VTAM PPO ACB FAILED CODE X'yy'.****Reason:**

The SOLVE PPO ACB failed to open. The code specified is the value of ACBERFLG following the OPEN.

System Action:

None.

User Action:

Determine the cause of the error by referring to the appropriate VTAM Programming manual. When corrected, issue a PPO START command to retry the operation.

N09603**VTAM PPO STOPPED****Reason:**

Signifies that SOLVE has closed its PPO ACB and stopped receiving PPO messages.

System Action:

None.

User Action:

PPO may be started by the PPO START command.

N09701**PRIMARY ACB acbname FAILED TO OPEN, CODE=xx REPLY RETRY OR END****Reason:**

The system's primary ACB did not open for the stated reason code. The code is the value of the ACBERFLG following the OPEN macro.

System Action:

Waits for a reply of RETRY or END.

User Action:

Reply as required. Refer to the VTAM Programming manual for a description of ACB open error codes.

N09702

PRIMARY ACB acbname OPEN FAILED, CODE=xx, AUTO RETRY IN nn SECONDS

Reason:

The system's primary ACB did not open for the stated reason code. The code is the value of the ACBERFLG following the OPEN macro. The system retries every nn seconds (the default value is 30) if SYSPARMS ACBRETRY is set or defaulted to YES.

System Action:

The system automatically retries the open attempt every nn seconds.

User Action:

Refer to the VTAM Programming manual for a description of ACB open error codes.

N09703

SOLVE PRIMARY ACB aaaaa NOW OPEN.

Reason:

The primary ACB has successfully opened. This message is normally issued during initialization but may also be issued if VTAM is restarted or the primary ACB varied inactive and active.

System Action:

Communication between SOLVE and VTAM is now possible.

User Action:

None.

N09704

**VTAM LEVEL: A.B.C VTAM COMPID: XXXXXXXXXXXXXXXX FUNC STRING:
AAAAAAAAAAAAAAAAAAAA.**

Reason:

This message appears in the log during system initialization. It displays the installation VTAM level information. VTAM LEVEL is the version of VTAM your system is running on. COMPID displays the component name returned by VTAM, and FUNC STRING the function vector data converted to hexadecimal display.

System Action:

None.

User Action:

None.

N09705**GENERIC RESOURCE SUPPORT NOT AVAILABLE****Reason:**

This message appears in the log during system initialization. It indicates that VTAM generic resources are not supported in this environment, and that the SYSPARMS GENRSRC=*name* command was entered.

System Action:

The generic resource name is ignored.

User Action:

Remove the SYSPARMS GENRSRC command from the NMINIT deck.

N09706

SETLOGON FAILED FOR GENERIC RESOURCE: P1

Reason:

This message is written to the activity log during initialization when an attempt to activate the requested generic resource fails. The VTAM return code (RTNCD) and feedback (FDB2) information is displayed (*P1*).

Note: RTNCD=X'10' (16) and FDB2=X'19' (25) is described in message N09708.

System Action:

The generic resource is ignored and the SYSPARM value is cleared.

User Action:

Investigate the failure information. VTAM RTNCD and FDB2 codes are documented in the IBM Communications Server SNA Programming guide. When the problem has been resolved, recycle the region to reactivate the generic resource.

N09707

SETLOGON GNAMEDEL FAILED: reason

Reason:

An attempt to set the VTAM Generic Resource System Parameter (GENRSRC) to NO failed.

System Action:

The region remains registered to the VTAM Generic Resource and the GENRSRC system parameter remains unchanged.

User Action:

It is likely that there is an operating system issue in the parallel sysplex. Investigate the failure reason codes to determine the cause of the problem.

N09708**SETLOGON FAILED FOR GENERIC RESOURCE: COUPLING FACILITY INACCESSIBLE****Reason:**

This message is written to the hardcopy log during initialization when an attempt to activate the requested generic resource fails. A generic resource is activated using the SETLOGON macroinstruction but this has failed with RTNCD=X'10' (16) and FDB2=X'19' (25), which indicates that the coupling facility for this host is not accessible.

The coupling facility may be inaccessible because:

- A coupling facility does not exist.
- A CFRM policy for the required coupling facility structure is not active.
- VTAM is not defined as an APPN node.
- VTAM has lost connectivity to the required coupling facility structure.

System Action:

The generic resource is ignored and the SYSPARM value is cleared.

User Action:

Determine why the coupling facility is inaccessible. When this has been resolved, recycle the region to reactivate the generic resource.

N09B01**xxx RCVCMD FAILED - VTAM TEMPORARY STORAGE SHORTAGE****Reason:**

A RCVCMD macro failed when issued to receive VTAM SPO or PPO messages (xxx is SPO or PPO) because of a VTAM storage shortage.

System Action:

Replies can no longer be received to VTAM commands.

User Action:

SOLVE will continue to issue the RCVCMD macro every 5 seconds until an SPO STOP or PPO STOP command is entered or until the storage shortage is relieved.

N09B02

xxx RCVCMD FAILED, R0=aa reason-text

Reason:

A RCVCMD macro failed when issued to receive VTAM SPO or PPO messages (xxx is SPO or PPO). The error codes are explained in the appropriate VTAM Programming manual.

System Action:

Replies can no longer be received to VTAM commands.

User Action:

Determine the cause of the failure by referring to the VTAM Programming manual. Restart SOLVE. The appropriate interface may be restarted using the SPO START or PPO START command.

N09C01

INSUFFICIENT STORAGE TO PROCESS PPO RECORD.

Reason:

An attempt to obtain storage to pass a PPO or SPO message to PPOPROC has

System Action:

User Action:

N09C02

PPO message queue threshold exceeded. Future PPO messages will be ignored

Reason:

The PPO queue limit has been reached. This may occur if PPOPROC is not clearing messages from the PPO queue quickly enough and may indicate

System Action:

No more PPO messages are queued to PPOPROC until the queue length drops

User Action:

Determine which statement PPOPROC is executing using the SHOW NCL command. If it is held up on one particular statement, review PPOPROC

N09F01**PPO ISR CONTACT INITIATED WITH LINK aaaa DOMAIN bbbb.****Reason:**

An ISR command for unsolicited VTAM message traffic on the specified link has been accepted and is the process of being established. Additional message(s) will follow to indicate whether the establishment was successful or not.

System Action:

None.

User Action:

None.

N09F02**PPO ISR CONTACT COMPLETED WITH LINK aaaa DOMAIN bbbb
VERSION cccc.****Reason:**

Contact with a remote PPO system has been successfully established across an an ISR link.

System Action:

None.

User Action:

None.

N09F03**PPO ISR CONTACT LOST WITH LINK aaaa DOMAIN bbbb.****Reason:**

Contact with a remote PPO system across an an ISR link has been lost. PPO messages can not flow between the two systems. This is probably due to the INMC link becoming disabled.

System Action:

PPO ISR traffic is suspended on this link. The ISR link will be automatically restarted following a link failure.

User Action:

Determine the cause of the link failure.

N09J01

bbb ATTR=cccc PPMSG=ddd SPMSG=eee

Reason:

This message is issued as a part of the SHOW ISR command. The current settings of the local, remote, and actual ISR/PPO conversation are shown. This includes the message attribute option, whether PPO message are sent/received, whether SPO message are sent/received, and whether VTAM (SPO) commands are sent/received.

System Action:

None.

User Action:

Refer to the description of the PPO options of the ISR command.

N09J02

aaa SPOCMD=bbb DELIVER=cccccccccccccc

Reason:

This message is issued as a part of the SHOW ISR command. The current settings of the local, remote, and actual ISR/PPO conversation are shown. This includes whether VTAM (SPO) commands are sent/received, and the setting of the DELIVER option.

System Action:

None.

User Action:

Refer to the description of the PPO options of the ISR command.

N09J03**INVALID KEYWORD FOR DELIVER OPTION ON ISR COMMAND****Reason:**

The option specified on the ISR ENA=PPO OPTION DELIVER= operand was invalid. Valid operands are PPO, LOCAL, REMOTE, ALL, or DEFMSG.

System Action:

The ISR command is ignored.

User Action:

Refer to the description of the PPO options of the ISR command and correct the operand.

N09J04**OPTION DEFMSG=xxxx NO LONGER SUPPORTED, DELIVER=yyyyyy ASSUMED****Reason:**

The DEFMSG= operand is no longer supported on the ISR PPO command.

System Action:

DEFMSG=ASIS will be changed to mean DELIVER=PPO, and DEFMSG=LOCAL will be changed to DELIVER=DEFMSG.

User Action:

Refer to the description of the PPO options of the ISR command.

N09K01**VTAM MSG# PPO LOC. REM. DEF. ACT. EVENTNAME****Reason:**

This message is the heading for a group of messages issued as a result of the SHOW DEFMSG command. It is followed by multiple occurrences of message N09K02 which detail individual VTAM message numbers. The fields in each line are: VTAM MSG# The VTAM message number. This is a message number, or message number range, and corresponds to message ISTnnnI or JCEnnnI. For DOS/VSE prior to VTAM R3.2 it is the 5AnnI to 5JnnI equivalent. Refer to the VTAM Messages and Codes manual. PPOPROC, LOCAL, REMOTE YES or NO. Show the message delivery indicators for PPOPROC, LOCAL, and remote destinations which have been set using the DEFMSG command, or which are set in the default message table
DEFAULT YES or NO. Indicates whether this message number is in the default table supplied by SOLVE.
ACT YES or NO. Indicates whether a DEFMSG SET command was issued for this message.
EVENTNAME SNA event name suffix for EDS event notification.

System Action:

None.

User Action:

None.

N09K02

aaaaaaaa bbbbbbbb cccccccc dddddddd

Reason:

Part of the SHOW DEFMSG display.

System Action:

None.

User Action:

Refer to message N09K01.

N09K04**PPO-RCV SPO-RCV Q-PPOPROC #-PPOCONT #-PPODEL #-LOCAL****Reason:**

This message is the heading for the SHOW PPOSTAT display. Message N09K05 follows.

Headings are:-

PPO-RCV The number of message lines received on the PPO ACB. SPO-RCV The number of message lines received via the SPO interface.

Q-PPOPROC The number of message lines queued to PPOPROC.

#-PPOCONT The number of implicit or explicit *PPOCONTs issued*.

#-PPODEL The number of *PPODELs issued*.

#-LOCAL The number of PPO messages delivered to local receivers.

System Action:

None.

User Action:

None.

N09K05

aaaaaaaa bbbbbbbb cccccccc dddddddd eeeeeeee ffffffff

Reason:

This message contains details for the SHOW PPOSTAT command. It follows message N09K04 which contains the headings.

System Action:

None.

User Action:

See message N09K04.

N0D201

INSUFFICIENT STORAGE TO PROCESS SHOW COMMAND

Reason:

A SHOW DATACOM command was unable to obtain storage. The command requires approximately 12 KB of storage to process.

System Action:

The command is not processed.

User Action:

Increase the region size to at least 12 KB.

N0D202

DATACOM API DBSVWPR NOT LOADED, LOAD FAILED WITH R15=p1,R1=p2

Reason:

A SHOW DATACOM command was entered but could not be processed. The CA Datacom API module, DBSVWPR, could not be loaded during region initialization. The LOAD macro returned a nonzero return code in register 15.

p1 is the return code, and p2 is the failure reason code.

System Action:

The command is not processed.

User Action:

Ensure that the CAILIB data set allocated to STEPLIB is for the latest release of CA Datacom installed.

N0D203**DATAKOM API DBSVWPR NOT LOADED, MODULE NOT FOUND****Reason:**

A SHOW DATAKOM command was entered but could not be processed. The CA Datacom API module, DBSVWPR, could not be loaded during region initialization.

System Action:

The command is not processed.

User Action:

Ensure that the CAILIB data set allocated to STEPLIB is for the latest release of CA Datacom installed.

N0D204**DATAKOM API DBSVWPR RETURNED R15= p1****Reason:**

A SHOW DATAKOM command was entered. The CA Datacom API module, DBSVWPR, returned a nonzero return code in register 15.

System Action:

The command is not processed.

User Action:

Ensure that the CAILIB data set allocated to STEPLIB is for the latest release of CA Datacom installed.

For assistance, contact Technical Support.

N0D205

DATACOM API DBNTRY RETURN RC= p1, IC= p2

Reason:

A SHOW DATACOM command was entered but could not be processed. The CA Datacom API module, DBNTRY, returned a nonzero return code in Register 15.

p1 is the decimal return code, and p2 is the decimal internal code.

System Action:

The command is not processed.

User Action:

For information about the return code, see Message Guide for CA Datacom.
For assistance, contact Technical Support.

N0D208

MUFNAME REL TP JOBNAME SVC SUB STATUS

Reason:

A SHOW DATACOM command was entered. This is the heading line for the list of DATACOM systems displayed in following messages.

System Action:

The N0D209 messages list DATACOM instances.

User Action:

None.

N0D209**p1 p2 p3~p4 p5 p6 p7****Reason:**

A SHOW DATACOM command was entered. This shows the detail of a DATACOM instance.

System Action:

None.

User Action:

None.

N0D210**p1 p2 p3 p4 p5 p6 p7~p8 p9 p10 p11****Reason:**

A SHOW DATACOM command was entered. This is the detail line for the TABLE=IDENTITY operand.

System Action:

None.

User Action:

None.

N0D211**p1 p2 p3 p4~p5 DIRNAME DBID OCCURRENCE S VN****Reason:**

A SHOW DATACOM command was entered. This is the detail line for the TABLE=DATABASES operand.

System Action:

None.

User Action:

None.

N0D212

p1 p2 p3 p4 p5 p6 p7 p8 p9

Reason:

A SHOW DATACOM command was entered. This is the detail line for the TABLE=DATASETS operand.

System Action:

None.

User Action:

None.

N0D213

p1 p2 p3 p4 p5 p6 p7~p8 p9 p10~p11 p12 p13

Reason:

A SHOW DATACOM command was entered. This is the detail line for the TABLE=TABLES operand.

System Action:

None.

User Action:

None.

N0D220

**MUFNAME JOBNAME DIRNAME SVC SUB ENABLE-DATE/TIME
NODENAME DD-SEC DQ-SEC REL SP**

Reason:

A SHOW DATACOM command was entered. This is the heading line for the TABLE=IDENTITY operand.

System Action:

The N0D210 messages list the MUF details.

User Action:

None.

N0D221**DIRNAME DBID OCCURRENCE S VN****Reason:**

A SHOW DATACOM command was entered. This is the heading line for the TABLE=DATABASES operand.

System Action:

The N0D211 messages list the details of each database for the MUF.

User Action:

None.

N0D222**DIRNAME DBID AREA DATASET DEVICE BLOCK TRACKS BLOCKS
MAXBLK****Reason:**

A SHOW DATACOM command was entered. This is the heading line for the TABLE=DATASETS operand.

System Action:

The N0D212 messages list the details of each data set for the MUF.

User Action:

None.

N0D223**DIRNAME DBID AREA TAB TBID DDID T I RECORDS N OCCURRENCE S
VERN SQLAUTH SQLNAME****Reason:**

A SHOW DATACOM command was entered. This is the heading line for the TABLE=TABLES operand.

System Action:

The N0D213 messages list the details of each table for the MUF.

User Action:

None.

N0D266

DATACOM VERSION p1 NOT SUPPORTED

Reason:

A SHOW DATACOM=mufname command was entered. The version of the targeted CA Datacom is not supported.

System Action:

The command is not processed.

User Action:

For assistance, contact Technical Support.

N0D267

DBSVWPR API DOES NOT SUPPORT VERSION p1

Reason:

A SHOW DATACOM=mufname command was entered. The loaded CA Datacom API module, DBSVWPR, does not support the targeted version of MUF.

System Action:

The command is not processed.

User Action:

Ensure that the CAILIB data set allocated to STEPLIB is for the latest release of CA Datacom installed.

For assistance, contact Technical Support.

N10001**WARNING - COMMAND xxxxxxxx TOO LONG FOR INTERNAL BUFFER****Reason:**

The command string entered exceeded the internal processing buffer size; this can occur with the use of long Prefix PFKs or commands entered within NCL procedures. This message is also issued if an attempt is made to ROUTE a command to a system which does not support commands longer than 256 bytes.

System Action:

The excess command text is discarded.

User Action:

Change the command to operate within system limits.

N10002**COMMAND RECURSION LIMIT EXCEEDED.****Reason:**

Recursive command execution has been detected. This may be because CMDREPLs or EQUATEs have been constructed in a way that cause a command to be executed recursively.

System Action:

Command execution is aborted.

User Action:

Remove the recursive command definitions.

N10049

COMMAND FAILED: aaaaaaaa NOT LOADED, reason text

Reason:

The execution of an SOLVE command failed because the command's processing load module (*aaaaaaa*) could not be loaded for the indicated reason.

System Action:

The command is ignored.

User Action:

Check that the indicated load module is in a dataset that is included in your run-time load library concatenation.

N10101

COMMAND cccccccc NOT RECOGNIZED

Reason:

The command string cccccccc was not recognized as a valid system command.

System Action:

The command string is ignored.

User Action:

Determine why the command is incorrect. This error may result from the execution of an NCL statement which has invalid syntax, perhaps resulting from an unexpected null variable. In such cases, if a statement is not recognized, the product region attempts to execute it as a command or as an equated command string, which may in turn result in this error. If this is the case, correct the NCL procedure and retry. The &CONTROL TRACE statement may help in determining the source of errors within an NCL procedure.

N10102**cccccccc COMMAND IS NOT VALID FOR ENTRY FROM THIS SOURCE****Reason:**

Certain commands can be accepted only when they form part of an NCL procedure or are entered from a particular operating mode.

System Action:

The ccccccc command is rejected.

User Action:

Refer to the description of the rejected command.

N10103**NEW LOGO TITLE SET****Reason:**

Issued in response to an LTITLE command.

System Action:

The new LOGO title becomes immediately effective.

User Action:

None.

N10104**aaaaaaa COMMAND NOT VALID FROM DEPENDENT ENVIRONMENT****Reason:**

The aaaaaaa command issued from a dependent environment is not supported from this source. For example fullscreen commands such as K, PAGE, and CLEAR.

System Action:

The command is rejected.

User Action:

Correct the NCL procedure issuing the INTCMD or executing under a dependent environment.

N10105

COMMAND NOT SUPPORTED UNDER THIS OPERATING SYSTEM

Reason:

The command entered is not a valid command under this operating system.

System Action:

The command is rejected.

User Action:

None.

N10106

COMMAND cccccccc IS AMBIGUOUS

Reason:

A command string was abbreviated to the point at which it cannot be uniquely interpreted.

System Action:

The command string cccccccc is rejected.

User Action:

Re-enter the relevant command with further qualification to make it unique or invoke the online help facility for further information.

N10107

USERID uuuuuuuu NOT AUTHORISED FOR REQUESTED COMMAND.

Reason:

The user is not authorized to issue the command.

System Action:

The command is rejected.

User Action:

Userid authorization is set in the userid definition. Authorization may be raised by authorized personnel.

N10109**AUTOHOLD OPERAND IS INVALID.****Reason:**

An invalid operand was specified on the AUTOHOLD command. Valid operands are ON, OFF, AUTO, NOAUTO or blank.

System Action:

The command is ignored.

User Action:

Refer to the description of the AUTOHOLD command for correct syntax.

N10110**AUTOHOLD type SET status.****Reason:**

This confirms that AUTOHOLD type is set to the given status, where type is MODE or AUTO and status is ON or OFF.

System Action:

If AUTOHOLD is set on, the window will be `frozen' whenever the last line is filled, necessitating operator action to view any further messages.

User Action:

None.

N10111**NEW TITLE SET.****Reason:**

A TITLE command has been processed.

System Action:

The new Operator Control Services title line has been set.

User Action:

Press the CLEAR key to view the new title.

N10112

NCL PROCEDURE NAME procname IS INVALID.

Reason:

The requested NCL procedure name procname is longer than 8 characters or it contains invalid characters.

System Action:

The command is rejected.

User Action:

Correct the procedure name and re-enter.

N10114

COMMAND NOT VALID FOR ENTRY IN THIS MODE

Reason:

The command is not valid for entry in this mode.

System Action:

The command is rejected.

User Action:

Refer to the command description for restrictions on its use.

N10115

COMMAND NOT VALID FROM SYSTEM CONSOLE

Reason:

The command is not valid for entry by a system console environment.

System Action:

The command is rejected.

User Action:

Reissue the command from a standard user environment, For example from Operator Console Services. Alternatively, if executing NCL, then correct the procedure to not issue the command.

N10116**LOGSWAP REQUESTED BY userid COMMENCED.****Reason:**

The specified USERID has issued a LOGSWAP command.

System Action:

The current log will be closed and the next available one opened.

User Action:

None.

N10117**LOGSWAP IMPOSSIBLE, LOGGING HALTED BY PREVIOUS ERROR.****Reason:**

A LOGSWAP command is rejected because no further logging can take place.

System Action:

The command is rejected.

User Action:

Should logging be required, SOLVE must be terminated and restarted.

N10118**COMMAND NOT VALID FROM REMOTE USER****Reason:**

A command was ROUTED to a remote SOLVE system via the Remote Operator Facility, but the command is one that can be executed only in the local system.

System Action:

The command is rejected.

User Action:

None.

N10119

DISCONNECTED.

Reason:

An `X' (Exit) command was ROUTED to a remote SOLVE system, causing the user's ROF session to be terminated.

System Action:

None.

User Action:

None.

N10120

SBCS TITLE INVALID

Reason:

The TITLE command contains invalid characters, possibly associated with entry from a DBCS capable terminal.

System Action:

The command is rejected.

User Action:

Correct and Retry. Ensure that the title text does not contain DBCS character strings.

N10121

NEW DBCS TITLE SET

Reason:

The command TITLE DBCS= was executed successfully to define a title that will be displayed on terminals that are DBCS capable.

System Action:

None.

User Action:

None.

N10122**DBCS TITLE EXCEEDS MAXIMUM LENGTH****Reason:**

The TITLE DBCS= command was executed specifying a string that is longer than is acceptable for the command.

System Action:

The command is rejected.

User Action:

Refer to the TITLE command documentation.

N10123**SBCS LOGO TITLE INVALID****Reason:**

The LTITLE command has specified an invalid character stream as the logo title, possibly associated with entry from a DBCS capable terminal.

System Action:

The command is rejected.

User Action:

Ensure that the title text does not contain DBCS characters.

N10124**NEW DBCS LOGO TITLE SET****Reason:**

The command LTITLE DBCS= was executed successfully to define a title that will be displayed on terminals that are DBCS capable.

System Action:

None.

User Action:

None.

N10125

DBCS LOGO TITLE EXCEEDS MAXIMUM LENGTH

Reason:

LTITLE DBCS= command was executed specifying a string that is longer than is acceptable for the command.

System Action:

The command is rejected.

User Action:

Refer to the LTITLE command documentation.

N10126

COMMAND NOT VALID DURING SYSTEM SHUTDOWN

Reason:

The requested command is not valid once the system has commenced shutdown.

System Action:

The command is ignored.

User Action:

None.

N10199

COMMAND aaaaaaa NOT RECOGNISED.

Reason:

The entered command was not recognized by SOLVE as a valid command or equate name.

System Action:

The command is not executed.

User Action:

Correct the command and re-enter it.

N10501**CLSDST COMMAND REJECTED. luname NOT IN SESSION.****Reason:**

A CLSDST command specified an LU which is not connected.

System Action:

The command is rejected.

User Action:

None.

N10502**CLSDST OF aaaaaaaaa IS NOT SUPPORTED****Reason:**

An attempt was made to issue a CLSDST command to disconnect the system console aaaaaaaaa from the system, but this is invalid as the console is not a VTAM terminal.

System Action:

The command is rejected.

User Action:

None.

N10503**NO NODE NAME SPECIFIED.****Reason:**

A CLSDST command was issued but the name of the terminal to be disconnected was omitted.

System Action:

The command is rejected.

User Action:

Retry, including the required terminal name.

N10504

INVALID NODE NAME.

Reason:

An OPNDST or CLSDST command was issued for a terminal whose name has an invalid length.

System Action:

The command is rejected.

User Action:

Correct the terminal name and re-enter.

N10505

INVALID SYNTAX.

Reason:

An invalid operand was specified on the OPNDST or CLSDST command.

System Action:

The command is rejected.

User Action:

See the description of the OPNDST command in the Command Reference.

N10506

CLSDST ACCEPTED FOR nnn LUNAME(S)

Reason:

A CLSDST command specifying the WAIT=YES operand was entered and has been accepted. The command will complete when all messages queued for all terminals have been sent. The CLSDST command may be used with the GENERIC operand to affect multiple terminals. The number of terminals (nnn) is noted in the message.

System Action:

The command is accepted.

User Action:

None.

N10507**NO LUNAMES MEET GENERIC MASK CRITERIA OF aaaaa.****Reason:**

A CLSDST command with the GENERIC operand has failed to match on any logical unit names.

System Action:

The command is ignored.

User Action:

Check the generic mask aaaaa and retry. Use the SHOW SESS or SHOW USERS commands to list the LUNAMES of terminals with which SOLVE has a session.

N10508**LOGON REQUEST FOR luname CANCELLED****Reason:**

A queued logon request for the specified LU has been cancelled by the CLSDST command.

System Action:

When the LU is connected to SOLVE it will be immediately discarded.

User Action:

None.

N10509

INSUFFICIENT AUTHORITY FOR CLSDST COMMAND: NOT AN LU1 PRINTER

Reason:

A CLSDST command was rejected because your command authority restricts you to LU1 Printers. This message can arise when either:

- the luname specified is not an LU1 printer, or,
- you specified GENERIC.

System Action:

The command is rejected.

User Action:

Contact your systems administrator.

N10601

USERID: userid TERMINAL-ID: termid

Reason:

This is the first line of the display issued as a result of a PROFILE command. userid is the name of the user currently logged on to this terminal which is known as termid.

System Action:

None.

User Action:

None.

N10602**NCL PROCEDURE LIBRARY ID: procdd.****Reason:**

Part of the PROFILE display; shows the DD name that will be used by NCL when loading NCL procedures for this user ID. This is specified as part of the UAMS definition and allows users to reference different libraries.

System Action:

This library will only be used when loading procedures. If a preloaded copy of the procedure exists and your OCS profile specifies NCLTEST=NO, a copy of the preloaded procedure will be used.

User Action:

This ID can only be changed by altering your user ID definition.

N10603**AUTHORITY LEVEL IS x, zzzzzzzzzzzzzzzzzzz.****Reason:**

Part of the PROFILE display; shows the user's command authority level (x) and the status of the message (MSGPROC) NCL procedure associated with the user (zz) if any is defined. The MSGPROC can be 'NOT DEFINED', 'ACTIVE' or 'INACTIVE'. Inactive means the procedure was loaded and initially active but has terminated at some stage either due to an error or because it logically ended and is no longer effective.

System Action:

None.

User Action:

If the MSGPROC NCL procedure is required and has failed, you must correct the procedure and either exit and re-enter Operator Control Mode or use the PROFILE MSGPROC command to reinstate the MSGPROC procedure.

N10604

(VTAMNUM=xxx.) VTAM MESSAGE NUMBERS WILL/WILL NOT BE DISPLAYED

Reason:

Part of the PROFILE display; indicates the status of the VTAMNUM profile option.

System Action:

None.

User Action:

None.

N10605

(PPO=xxx.....) VTAM PPO MESSAGES WILL/WILL NOT BE DISPLAYED, CLASS=yyyy

Reason:

Part of the PROFILE display; indicates whether the user will receive PPO messages, and if so, at what severity class. `yyyy' may be INFO, WARN, NORM or SER.

System Action:

None.

User Action:

None.

N10606

(ROLL=nn.....) SCREEN ROLL DELAY TIME IS nn

Reason:

Part of the PROFILE display; indicates the current roll-delay time for this OCS environment in seconds.

System Action:

None.

User Action:

None.

N10607

(CMDSTACK=nn.) COMMAND STACK SIZE IS nn

Reason:

Part of the PROFILE display; indicates the user's command stack size.

System Action:

None.

User Action:

None.

N10608

(DELCHAR=x...) ROLL DELIMITER LINE CHARACTER IS "x"

Reason:

Part of the PROFILE display; indicates the character used to form the roll-delimiter line.

System Action:

None.

User Action:

None.

N10609

(HOLD=nnn....) HELD MESSAGES THRESHOLD IS nnn

Reason:

Part of the PROFILE display; indicates the number of messages which will be held for this window while the window is in HOLDING or AUTOHOLD state.

System Action:

None.

User Action:

None.

N10610

Profile complete for dependent/primary OCS environment.

Reason:

Signifies the end of the PROFILE display.

System Action:

None.

User Action:

None.

N10611

aaaaaaa PROFILE CHANGED.

Reason:

Confirms successful processing of a PROFILE command, aaaaaaa specifies the executing environment (CURRENT or PRIMARY).

System Action:

New PROFILE options are in effect.

User Action:

None.

N10612

PROFILE OPERAND xxxxxxxx IS INVALID OR OUT OF RANGE.

Reason:

The value of the specified operand is invalid.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N10613**DELCHAR OPERAND SPECIFIES INVALID CHARACTER****Reason:**

The DELCHAR or NRDELCH characters cannot conflict with DBCS shiftin characters, value X`0E'.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N10614**USERID NOT AUTHORISED FOR PPO MESSAGES.****Reason:**

The user's USERID definition does not specify PPO authority, and therefore this attempt to change the user's profile to receive PPO messages is rejected.

System Action:

None.

User Action:

None.

N10615**WARNING - PPO SELECTED BUT PPO FUNCTION NOT ACTIVE.****Reason:**

A PROFILE command was entered requesting that the user start receiving PPO messages but the system is not receiving PPO messages from VTAM at the moment.

System Action:

None.

User Action:

Determine whether the system should be receiving PPO messages, and if so issue a PPO START command.

N10616

USERID HAS MONITOR STATUS.

Reason:

Part of the PROFILE display. Indicates that the user is privileged to receive Monitor messages.

System Action:

None.

User Action:

None.

N10617

(INITCMD=....) INITIAL CMD HAS NOT BEEN SET.

Reason:

Part of the PROFILE display. Indicates that no initial command is executed automatically when the user enters OCS mode.

System Action:

None.

User Action:

None.

N10618

(INITCMD=....) INITIAL CMD IS: command

Reason:

Part of the PROFILE display. Indicates that an initial command is executed automatically when the user enters OCS mode.

System Action:

None.

User Action:

None.

N10619**(CMDKEEP=....) LAST COMMAND WILL/WILL NOT BE KEPT ON ENTRY LINE.****Reason:**

Part of the PROFILE display. Indicates that when a command is entered from the OCS window command line the command text is (is not) retained on the command line.

System Action:

If CMDKEEP=NO is in effect commands will be erased from the command input line. In this case they will still be added to the command stack and can be retrieved in the normal manner.

User Action:

None.

N10620**INITCMD OPERAND HAS UNPAIRED QUOTES OR NO DATA.****Reason:**

The text of the INITCMD operand of the PROFILE command must be enclosed in quotes.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N10621**INITCMD TEXT EXCEEDS MAXIMUM OF 40 CHARACTERS.****Reason:**

The INITCMD operand text is limited to 40 characters.

System Action:

The command is rejected.

User Action:

Reduce INITCMD text to 40 or fewer characters.

N10622

USERID NOT AUTHORISED FOR MSGPROC STATUS ALTERATION.

Reason:

A PROFILE MSGPROC= command has been issued by a user who does not have a command authority level high enough for this operand of the PROFILE command.

System Action:

The command is ignored.

User Action:

Refer to your systems administrator.

N10623

Operand Function

Reason:

Heading line within a PROFILE display.

System Action:

None.

User Action:

None.

N10624

NO NPF COMMAND RESTRICTIONS.

Reason:

Part of the PROFILE display. Indicates that no NPF command control member has been specified for the user. The user is entitled to issue VTAM commands referring to any network resource.

System Action:

None.

User Action:

None.

N10625**NPF COMMAND MEMBER=ccmem****Reason:**

Part of the PROFILE display. Indicates that the user may issue VTAM commands that refer only to those network resources defined by the NPF tables associated with the command control member ccmem.

System Action:

None.

User Action:

None.

N10626**NOT AUTHORISED TO RECEIVE PPO MESSAGES.****Reason:**

Part of the PROFILE display. Indicates that the user will not receive unsolicited VTAM messages.

System Action:

None.

User Action:

None.

N10627**PPO MESSAGE DELIVERY DETAILS:****Reason:**

Part of the PROFILE display. This provides a heading for the subsequent messages that describe which unsolicited messages will be sent to the user.

System Action:

None.

User Action:

None.

N10628

..NO NPF MESSAGE RESTRICTIONS.

Reason:

Part of the PROFILE display. Indicates that if unsolicited (PPO) messages are to be sent to the user, the messages concerned may refer to any network resource.

System Action:

None.

User Action:

None.

N10629

..RECEIVE ALL PPO MESSAGES.

Reason:

Part of the PROFILE display. Indicates that the user will receive all unsolicited (PPO) messages generated by VTAM.

System Action:

None.

User Action:

None.

N10630

..RECEIVE UNDELIVERABLE PPO MESSAGES.

Reason:

Part of the PROFILE display. Indicates that the user will receive unsolicited messages that refer to network resources for which no logged-on operator is partitioned, or those that do not refer to any network resource.

System Action:

None.

User Action:

None.

N10631**..NPF MESSAGE MEMBER=mcmem****Reason:**

Part of the PROFILE display. Indicates that the user will receive unsolicited (PPO) messages that refer to network resources defined by the NPF tables associated with message control member mcmem.

System Action:

None.

User Action:

None.

N10632**..UNDELIVERABLE PPO MESSAGES WILL/WILL NOT BE DISPLAYED.****Reason:**

Part of the PROFILE display. Indicates that the user will/will not receive PPO messages referring to network resources outside their partition.

System Action:

None.

User Action:

None.

N10633**INITCMD OPERAND NOT VALID FROM THIS SOURCE.****Reason:**

The INITCMD operand of the PROFILE command cannot be entered from a terminal under control of EASINET or from a user region which does not have OCS access authority.

System Action:

The command is rejected.

User Action:

None.

N10634

(MSGALARM=...) QUEUED MESSAGE ALARM COUNT IS bb.

Reason:

Part of the PROFILE display. MSGALARM specifies the number of times that the terminal alarm will be rung to notify the operator that a message has arrived at a closed OCS window. MSGALARM applies to all operational windows, including MAI, regardless of function.

System Action:

The alarm will be rung only the first time a message arrives. Subsequent arrival of additional messages will not cause the alarm to be rung.

User Action:

MSGALARM can be in the range 0 to 9. 0 indicates that the alarm is not to be rung.

N10635

MSGCODE VALUE EXCEEDS AUTHORISED RANGE.

Reason:

An attempt was made, using the PROFILE MSGCODE=mm command, to set additional bits in your msgcode profile that you are not entitled to set. The mask, mm, specifies 2 hexadecimal digits, 00-FF. The MSGCODE operand allows a user to specify a mask that is used to determine whether or not a user is to receive messages caused by an &WRITE MSGCODE=mm. If the bits set in xx are also set in the users msgcode profile mm then the message will be written to the screen.

System Action:

The command is rejected.

User Action:

Refer to the description of this command in the *SOLVE Command Reference* manual.

N10636**AUTOHOLD SETTING IS aaa bbbbb****Reason:**

Part of the PROFILE display. Displays the current setting of the AUTOHOLD option, governing the automatic control of screen wraparound.

System Action:

None.

User Action:

See the Command Reference for details of the AUTOHOLD command.

N10637**(NRDELCH=b...) NRD DELIMITER LINE CHARACTER IS "b".****Reason:**

Part of the PROFILE display. NRDELCH specifies the character to be used to form the delimiter line that separates the non-roll delete area on an OCS window from the roll delete area.

System Action:

None.

User Action:

None.

N10638**(RDMIN=bb....) MINIMUM RDM LINES IS bb.****Reason:**

Part of the PROFILE display. RDMIN specifies the minimum number of lines that the roll delete area of the OCS window may shrink to, to make room for non-roll delete messages.

System Action:

None.

User Action:

None.

N10639

USERID NOT AUTHORISED FOR MONITOR MESSAGES.

Reason:

The user issued a PROFILE MONMSG= command but the userid is not authorized for the receipt of monitor messages.

System Action:

None.

User Action:

None.

N10640

(MONMSG=xxx..) MONITOR CLASS MESSAGES WILL/WILL NOT BE DISPLAYED.

Reason:

Part of the Profile display. It displays the users Monitor message receipt status.

System Action:

Monitor class messages will now be directed to this user's OCS window.

User Action:

None.

N10641

MSGPROC NOT ACTIVE, FLUSH REQUEST REJECTED

Reason:

An attempt has been made to flush MSGPROC using PROFILE MSGPROC=FLUSH but has failed because no MSGPROC was running.

System Action:

None.

User Action:

None.

N10642**INSUFFICIENT STORAGE TO START MSGPROC****Reason:**

An attempt has been made to start MSGPROC but has failed because of a shortage of storage.

System Action:

MSGPROC is not started.

User Action:

Try again later. If the problem persists, notify your systems administrator.

N10643**ENVIRONMENT DOES NOT SUPPORT MSGPROC PROCESSING****Reason:**

An attempt was made to start MSGPROC in an environment which does not support the use of MSGPROC, e.g: from an internal environment using *INTCMD*.

System Action:

MSGPROC is not started.

User Action:

None.

N10644**MSGPROC ALREADY ACTIVE, REQUEST REJECTED****Reason:**

An attempt was made to start MSGPROC but failed because MSGPROC had already been started.

System Action:

MSGPROC is not started again.

User Action:

None.

N10645

MSGPROC PROCESSING ACTIVATED

Reason:

This message is issued to confirm that a request to start MSGPROC was successful.

System Action:

MSGPROC is started.

User Action:

None.

N10646

MSGPROC FLUSHED

Reason:

This message is issued to confirm that a request to flush MSGPROC was successful.

System Action:

MSGPROC processing is terminated.

User Action:

None.

N10647

DUPLICATE ENV= OPERAND IGNORED

Reason:

The ENV= operand on a PROFILE command has been entered twice and the second occurrence has been ignored.

System Action:

The second occurrence of the ENV= operand is ignored.

User Action:

None.

N10648**PROFILE OPERAND <aaaaaaaa> INVALID FOR ENVIRONMENT****Reason:**

A PROFILE command has been entered but either an operand or the command itself (without operands) is not applicable to the environment specified on the ENV= operand supplied or defaulted.

System Action:

The PROFILE command is rejected.

User Action:

None.

N10649**..NPF RESOURCE MEMBER LIST=aaaaaaaa****Reason:**

This message is part of the PROFILE LIST display. It shows the name of the users NPF RESOURCE LIST member.

System Action:

None.

User Action:

None.

N10653**USER TIMEZONE NAME: aaaaaa OFFSET: shhmm****Reason:**

This is a line of output from the PROFILE command. It shows the user's assigned time zone name and the time zone offset.

System Action:

None.

User Action:

None.

N10701

INSUFFICIENT STORAGE

Reason:

A SPLIT or SWAP command has been issued but the operation cannot be performed due to lack of storage.

System Action:

The command is rejected.

User Action:

None.

N10702

SWAP/SPLIT REQUEST INVALID WHILST TERMINAL IS LOCKED

Reason:

A SPLIT or SWAP command has been issued whilst the current window is locked.

System Action:

The command is rejected.

User Action:

Terminate the LOCK process before retrying the function.

N10704

SPLIT/SWAP REQUEST INVALID, USER NOT AUTHORISED.

Reason:

The SPLIT or SWAP was command was issued in a region not authorized for multiple windows.

System Action:

The command is rejected.

User Action:

Contact your installation Help Desk if authorization is required.

N10801**PFK nn SET.****Reason:**

Confirms a PFnn command has been processed, setting the specified Program Function Key.

System Action:

None.

User Action:

None.

N10802**PFK REQUEST NOT RECOGNISED.****Reason:**

An invalid operand was entered in a PF command.

System Action:

The command is rejected.

User Action:

Correct and re-enter the request.

N10803**REQUESTED PFK NOT WITHIN RANGE.****Reason:**

The PF command supports PFKs in the range 1-24.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N10804

PFK REQUEST INVALID FROM THIS ENVIRONMENT

Reason:

A PF command has been issued from an environment which does not support PF Key usage eg: an internal environment via &INTCMD.

System Action:

The command is rejected. If issued from within an NCL procedure, the procedure will be terminated.

User Action:

Check which operands are supported in the environment specified.

N10805

ENTER KEY SET.

Reason:

A valid ENTER command has been used to equate the ENTER key to a command.

System Action:

None.

User Action:

None.

N10806

KEY NOT SET. AT LEAST ONE KEY MUST EXECUTE COMMAND LINE TEXT.

Reason:

The ENTER command has been used to set the ENTER key to a command but there is no PF key set to the standard ENTER key function. At least one key must be defined to execute the command line text.

System Action:

The ENTER command is ignored.

User Action:

Specify a PF key to take the role of the ENTER key before attempting to equate the ENTER key to another command.

N10807**INSUFFICIENT AUTHORITY****Reason:**

A PFnn command has been executed by a SUBMIT command but the user who issued the SUBMIT command does not have the authority to do so.

System Action:

The command is rejected.

User Action:

This is a security related condition. The user authority may be too low.

N10901**MESSAGE LOGGED TO ACTIVITY LOG.****Reason:**

Confirms that a LOG command has been processed.

System Action:

The message has been written to the activity log. The `==>' indicator will prefix the text of the message written to the log.

User Action:

None.

N10B04**INVALID KEYWORD FOR DELIVER OPTION ON DEFMSG.****Reason:**

The DEFMSG command was entered with an invalid value specified on the DELIVER= operand.

System Action:

The DEFMSG command is rejected.

User Action:

Correct the DELIVER operand. The valid values are PPO, LOCAL, REMOTE, ALL and NONE.

N10B13

LIST PROCEDURE NAME procname IS INVALID

Reason:

A LIST command has been entered from OCS but the procedure name supplied, procname, is not a valid procedure name.

System Action:

None.

User Action:

Correct the syntax of the procedure name.

N10B27

LOG NUMBER IS INVALID

Reason:

The log number specified on a LOGSWAP command must be in the range 1 to 9. Note that the log number is ignored unless SYSPARMS LOGWRAP=YES is specified.

System Action:

The LOGSWAP command is ignored.

User Action:

Reissue the corrected command.

N10B28

INVALID OPERAND SPECIFIED FOR DEFMSG

Reason:

An invalid VTAM message number has been specified on the DEFMSG command, or one of the other DEFMSG operands specified is invalid.

System Action:

The command is ignored.

User Action:

Reissue the corrected command.

N10B29**DEFMSG REQUEST ACCEPTED****Reason:**

A DEFMSG command is valid and has been accepted.

System Action:

None.

User Action:

None.

N10B30**NCL TEST MODE IS aaa bbb ccc****Reason:**

An NCLTEST command is valid and has been accepted. This message shows the (new) NCLTEST values.
aaa will be NOW if the NCLTEST command had operands, else it is not present.
bbb will be OFF, ON, or LOG ccc will be blank, or if bbb is ON, may be LOG.

System Action:

None.

User Action:

None.

N10B31**NCLTEST OPTION NOT 'ON' OR 'OFF'.****Reason:**

The NCLTEST command may have a single operand of either 'ON' or 'OFF'. The operand value specified is neither of these.

System Action:

The command is ignored.

User Action:

Correct the command and retry.

N10B32

INVALID PARAMETER(S) ON NCLTEST COMMAND.

Reason:

An NCLTEST command has additional operands following 'ON' or 'OFF'. No further operands are required.

System Action:

The entire command is ignored.

User Action:

Correct the command and retry.

N10B33

INSUFFICIENT STORAGE

Reason:

A request has been made to invoke the EDIT Services function of SOLVE. A storage shortage condition has occurred and the request has failed.

System Action:

The EDIT Services function is not invoked.

User Action:

Investigate cause of storage shortage condition.

N10C01

REQUESTED FUNCTION KEY NOT SET

Reason:

No value has been defined (via the PF command) for the PF key that was pressed.

System Action:

The PF key request is ignored.

User Action:

Set the PF key using the PF command if required.

N10C02**INVALID FUNCTION KEY, NOT SUPPORTED****Reason:**

The system supports PFKs in the range 1-24 only.

System Action:

The command is rejected.

User Action:

Correct and retry.

N10F01**NCLTRACE COMMAND PROCESSED.****Reason:**

Processing has successfully completed for the NCLTRACE command.

System Action:

If NCLTRACE has been used to start or reset tracing then the target NCL process will begin tracing upon resumption of execution.

User Action:

Review trace messages if required.

N10F02**NCLTRACE VARS= NOT SUPPORTED BY OML****Reason:**

An NCLTRACE VARS= command has been issued, but the target procedure is an OML procedure. OML does not support the use of NCLTRACE VARS=. Use the NCL DEBUG facility to perform variable update tracing.

System Action:

None.

User Action:

None.

N10F09

NCLID aaaaaa HAS NO ACTIVE PROCEDURE

Reason:

An NCLTRACE command failed as the target NCL process was not executing an NCL procedure.

System Action:

None.

User Action:

Try an option that does not require a currently executing procedure.

N10F10

NCLID aaaaaa NOT PROCESSING IN bbbb ENVIRONMENT.

Reason:

The NCLTRACE command was unable to locate the specified NCL process identified as aaaaaa via the ID operand.

System Action:

None.

User Action:

Correct the ID= operand value. Use SHOW NCL if necessary to determine the processing identifier of the desired NCL process.

N10F11

NCLID aaaaaa AT TRACE LIMIT. USE 'RESET' OPTION.

Reason:

An NCLTRACE START has determined that the target process, aaaaaa, has already reached the system tracing limit. No further tracing will be performed.

System Action:

None.

User Action:

Review existing trace messages. If further tracing is required use the RESET keyword on the NCLTRACE START request so that tracing may be restarted.

N10F12**NCLTRACE COMMAND FAILED, STORAGE SHORTAGE.****Reason:**

The NCLTRACE command failed to obtain the necessary storage to continue processing. The request is ignored.

System Action:

None.

User Action:

Review existing trace messages and if possible reduce storage held by clearing message queues. Retry the request.

N10F13**MAXIMUM RANGE DIFFERENTIAL EXCEEDED.****Reason:**

An NCLTRACE command has specified a variable range greater than the maximum allowed.

System Action:

The command is rejected.

User Action:

Correct the variable specification.

N10F14**VAR\$=aaaaaaaaaaaa PREFIX TOO LONG FOR RANGE.****Reason:**

The variable prefix supplied combined with the range generates variable names greater in length than the maximum of 12 characters.

System Action:

The command is rejected.

User Action:

Specify a smaller range or prefix so that all names within the requested range are valid.

N10G02

USERID aaaaaaaaa NOT AUTHORISED FOR REQUEST

Reason:

Your userid has not been authorized to perform the function requested.

System Action:

None.

User Action:

Contact your installation help desk if you require this authority.

N10G05

UNDEFINED MODE SPECIFIED

Reason:

A SETMODE command has specified a mode not recognized by the system.

System Action:

None.

User Action:

The SETMODE command is used by primary menu procedures to control processing. Refer the problem to your installation help desk for problem determination.

N10G06

INVALID SOURCE FOR SHOWMSG

Reason:

The SHOWMSG command may only be issued from a dependent environment.

System Action:

None.

User Action:

None.

N10G07**PRIMARY ENVIRONMENT MODIFIED****Reason:**

A SETMODE command to modify the primary environment has completed successfully.

System Action:

Any change in the primary environment manager will be actioned when the current primary environment manager terminates.

User Action:

None.

N10G99**SETMODE COMMAND IS NOT VALID FOR ENTRY FROM THIS SOURCE****Reason:**

A SETMODE command has been issued from a non-terminal region.

System Action:

The command is rejected.

User Action:

None. The command environment is not valid for issuing SETMODE.

N10J01**Insufficient storage for DEFMSG build.****Reason:**

The DEFMSG command could not obtain sufficient storage to build the DEFMSG table entry.

System Action:

The DEFMSG table entry is not build.

User Action:

Try to determine why the SOLVE address space is short on storage.

N10J02

PPO EVENT NAME LIMIT EXCEEDED, REQUEST REJECTED.

Reason:

A limit of 256 unique PPO event names exists for the DEFMSG table. You have tried to specify a new name on the DEFMSG EVENTNAME operand but have exceeded the limit.

System Action:

The DEFMSG table entry is not built.

User Action:

Normalize PPO event names to reduce the number of discrete event names. The other attributes of the PPO message may be used by the event listener procedures to achieve greater granularity if required.

N10J03

NPF INITIALIZATION FAILED - CHECK SYSTEM LOG.

Reason:

An attempt was made to issue a DEFMSG command but NPF initialization did not complete successfully.

System Action:

The DEFMSG command is ignored.

User Action:

Look for a message from SOLVE initialization which indicates the reason for initialization failure. This will most likely be an N180xx message. Correct the error and re-start SOLVE.

N10L01**TIMEZONE ADD SUCCESSFUL FOR aaaa****Reason:**

A TIMEZONE ADD command has added the named time zone to the TIMEZONE table.

System Action:

None.

User Action:

None.

N10L02**TIMEZONE ADD FOR aaaa FAILED, ALREADY DEFINED****Reason:**

The named time zone already exists in the TIMEZONE table.

System Action:

The command is ignored

User Action:

Correct the TIMEZONE name and retry if required.

N10L03**TIMEZONE DELETE SUCCESSFUL FOR aaaa****Reason:**

A TIMEZONE DELETE command has removed the named time zone from the TIMEZONE table.

System Action:

None.

User Action:

None.

N10L04

TIMEZONE DELETE FOR aaaa FAILED, NOT DEFINED

Reason:

The named time zone could not be deleted as it does not exist in the TIMEZONE table.

System Action:

The command is ignored

User Action:

Correct the TIMEZONE name and retry if required.

N10L11

INVALID TIMEZONE NAME

Reason:

The time zone name on a TIMEZONE command is not valid. A time zone name must be a 1 to 8 character PDSNAME-format name, except that the values USER and SYSTEM are not accepted.

System Action:

The command is ignored.

User Action:

Correct the time zone name.

N10L12

INVALID TIMEZONE OFFSET

Reason:

The time zone offset on a TIMEZONE command is not valid. A time zone offset must be either 0 or in the format shhmm where s is + or -, hh is an hours value (00 to 23) and mm is a minutes value (00 to 59).

System Action:

The command is ignored.

User Action:

Correct the time zone offset and retry.

N10M01**INSUFFICIENT STORAGE FOR REQUEST.****Reason:**

An attempt to start user NCL cputime accounting reporting failed due to insufficient storage being available for work buffers.

System Action:

None.

User Action:

Contact System Administrator.

N10M02**USERACCT COMMAND ACCEPTED.****Reason:**

The USERACCT command entered by the user was accepted without any syntax errors.

System Action:

Command processed.

User Action:

None.

N10M03**USERACCT COMMAND OPERAND aaaaaaaaaa INVALID OR OUT OF RANGE.****Reason:**

An attempt to start user NCL cputime accounting reporting failed because one of the operands had an invalid value. aaaaaaaaaa is operand name.

System Action:

None.

User Action:

Correct and re-submit command.

N10M04

INVALID FROM TIME VALUE SYNTAX.

Reason:

The value used on the FROM= operand on the USERACCT command is invalid syntax for a time value.

System Action:

None.

User Action:

Correct and retry.

N10M05

FROM/INTERVAL OPERANDS INVALID WHEN USERACCT ACTIVE.

Reason:

It is invalid to specify the FROM or INTERVAL operands when user NCL cputime reporting is active.

System Action:

None.

User Action:

Either don't use these operands, or inactivate user NCL cputime accounting using a USERACCT STOP before restarting it.

N10M06

USERACCT PENDING INACTIVATION. WAIT AND RETRY.

Reason:

User NCL cputime accounting reporting was in the process of deactivating when the USERACCT command was entered.

System Action:

None.

User Action:

Wait till user NCL cputime accounting reporting deactivation finishes and retry.

N10M07**SYSTEM CPUTIME ACCOUNTING NOT ACTIVE.****Reason:**

The USERACCT START command failed because the system was not started with the system cputime accounting option. (JCL PARM OPT=01).

System Action:

User NCL cputime accounting reporting not started.

User Action:

In order to use the user NCL cputime accounting facility, SOLVE must be re-started with JCL parm OPT=01.

N10M08**USERACCT COMMAND ACCEPTED.****Reason:**

The USERACCT command was processed successfully.

System Action:

User NCL cputime accounting reporting commenced if USERACCT START specified. User NCL cputime accounting stopped if USERACCT STOP was specified. Also any additional parameters specified (for USERACCT START or USERACCT SET) have been modified and will apply for the next report.

User Action:

None.

N10M09**USERACCT ERROR, INTERVAL MUST BE WHOLE FACTOR OF 24.****Reason:**

The USERACCT command failed because an invalid value was specified on the INTERVAL= operand. The INTERVAL operand value must be a whole factor of 24. (i.e. 1,2,3,4,6,8,12 or 24).

System Action:

User NCL cputime accounting reporting not commenced.

User Action:

Correct and re-try.

N10M10

USERACCT START ERROR, ALREADY ACTIVE.

Reason:

The USERACCT command failed because the START operand was used when user NCL cputime reporting was already active.

System Action:

None.

User Action:

Either STOP user NCL cputime reporting in order to re-start it, or use the USERACCT SET option to modify user NCL cputime reporting parameters.

N10M11

USERACCT STOP ERROR, ALREADY INACTIVE.

Reason:

The USERACCT command failed because the STOP operand was used when user NCL cputime reporting was already inactive.

System Action:

None.

User Action:

Use the USERACCT START operand to start user NCL cputime reporting. Use the USERACCT SET operand to modify user NCL cputime reporting parameters without affecting the current active/inactive status of user NCL cputime reporting.

N10N01**USERACCT SMF WRITE FAILED: INVALID OS OR AUTHORITY.****Reason:**

An attempt to produce a user NCL cputime accounting SMF report failed because the system is not authorized to produce SMF reports, or the operating system does not support SMF reporting.

System Action:

User NCL cputime accounting reporting is terminated.

User Action:

Re-start system authorized in order to generate user NCL cputime accounting SMF reports.

N10N02**USERACCT SMF WRITE FAILED: STORAGE ERROR.****Reason:**

An attempt to produce a user NCL cputime accounting SMF report failed due to a storage shortage.

System Action:

User NCL cputime accounting reporting is terminated.

User Action:

Contact system administrator.

N10N03**USERACCT SMF WRITE FAILED: SMF NOT ACTIVE.****Reason:**

An attempt to produce a user NCL cputime accounting SMF report failed because SMF is inactive.

System Action:

User NCL cputime accounting reporting is terminated.

User Action:

Start SMF and then restart user NCL cputime accounting reporting, using the USERACCT START command.

N10N04

USERACCT SMF WRITE FAILED: INVALID RECORD TYPE.

Reason:

The SMF record id specified for user NCL cputime accounting reporting is invalid.

System Action:

User NCL cputime accounting reporting is terminated.

User Action:

Modify the SMF record id using the USERACCT SMFRECID= operand when re-starting user NCL cputime accounting reporting.

N10N05

USERACCT SMF WRITE FAILED: SMF RETCODE=retcode.

Reason:

An attempt to write a user NCL cputime accounting report to SMF failed in SMF with an SMF return code of retcode.

System Action:

User NCL cputime accounting reporting is terminated.

User Action:

Refer to SMF manual.

N10N06

USER NCL CPUTIME ACCOUNTING SMF REPORT GENERATED.

Reason:

A report containing details of user NCL cputime usage has been written to SMF.

System Action:

User NCL cputime accounting report was generated.

User Action:

None. (Note that SHOW USERACCT will show current status of user NCL cputime reporting, including the SMF record id for user NCL cputime accounting SMF records).

N10T01**ALTLIB COMMAND HAS SET NCL LIBRARY NAME TO: IIIIIII****Reason:**

This message is issued when the ALTLIB SET command is used to alter the NCL library name. The new name is displayed.

System Action:

All following NCL procedure requests for this user session are loaded from the indicated library.

User Action:

None.

N10T02**ALTLIB COMMAND HAS SET PANEL PATH NAME TO: pppppppp****Reason:**

This message is issued when the ALTLIB SET command is used to alter the PANEL path name. The new name is displayed.

System Action:

All following PANEL definition requests for this user session are loaded from the indicated library.

User Action:

None.

N10T03**ALTLIB COMMAND HAS RESET NCL LIBRARY AND PANEL PATH****Reason:**

This message is issued when the ALTLIB RESET command is used to reset the NCL library name and PANEL path name.

System Action:

All following NCL procedure and PANEL requests for this user session are loaded from the default library/path (normally COMMANDS for NCL and PANELS for Panel requests).

User Action:

None.

N10T80

ALTLIB COMMAND NOT VALID IN THIS ENVIRONMENT

Reason:

This message is issued when the ALTLIB command is issued from an environment where it cannot be used. For example, an EASINET session.

System Action:

The command is ignored.

User Action:

None.

N10V01

DATE AND TIME RESYNCHRONISED WITH SYSTEM, OLD GMT OFFSET: *ooo* NEW GMT OFFSET: *nnn*

Reason:

This message is a response to the SYNCTIME command, and shows that a local time offset change was detected.

The previous offset (in hours and minutes) and new offset are shown.

System Action:

The system uses the new local time offset.

User Action:

None.

N10V02

NO DATE/TIME OFFSET CHANGE DETECTED

Reason:

This message is a response to the SYNCTIME command, and shows that no local time offset change was detected.

The previous offset (in hours and minutes) and new offset are shown.

System Action:

None.

User Action:

None.

N10V03**aaa IN EFFECT, SYNCTIME COMMAND IGNORED****Reason:**

This message is a response to the SYNCTIME command, and shows that the command was ignored. Possible reasons are as follows:

- ##TOFF TEST MODE-The ##TOFF command is used to set test mode.
- JCL PARM TZ=*offset*-The TZ JCL parm is specified.
- JCL PARM TZ=GMT-The TZ=GMT JCL parm is specified.

System Action:

None.

User Action:

None.

N10Z01**DDNAME C# #-EXCP T-CONN DSN****Reason:**

A heading line for the response to a SHOW IOSTATS command.

System Action:

None.

User Action:

None.

N10Z02

ddname c# #-excp t-conn dsn

Reason:

A detail line for the response to a SHOW IOSTATS command.

The fields are:

ddname The ddname for this file *c#* The relative concatenation number; '-' if not a part of a concatenation *#-excp* The number of I/O requests to this file (via this allocation) *t-conn* The total connect time (seconds.milliseconds) *dsn* The dataset name (and member name if available)

System Action:

None.

User Action:

None.

N10Z90

SHOW IOSTATS COMMAND NOT SUPPORTED ON THIS OPERATING SYSTEM

Reason:

This message is produced if the SHOW IOSTATS command is issued in an operating system environment that does not support it.

This command is supported on MVS/ESA and OS/390 only.

System Action:

The SHOW IOSTATS command is ignored.

User Action:

None.

N11001

LOCAL TIME: *hh.mm.ss day dd-mon-year yy.ddd shhmm gmt-ind*

Reason:

This is the response to a TIME command and a SYSPARMS TIMEZONE= command. It shows the current time, and the current date in Gregorian and Julian date formats. Also, the system GMT time offset, and if the JCL PARM TZ=GMT is specified, this is indicated with TZ=GMT.

System Action:

None.

User Action:

None.

N11002

GMT TIME: *hh.mm.ss day dd-mon-year yy.ddd*

Reason:

This is the response to a TIME command and a SYSPARMS TIMEZONE= command. It shows GMT time, and the current date in Gregorian and Julian date formats.

System Action:

None.

User Action:

None.

N11003

USER TIME: *hh.mm.ss day dd-mon-year yy.ddd shhmm name*

Reason:

This is the response to a TIME command. It shows the user time, date, time zone offset and name.

If the user time offset is greater than one day, the offset shown is only the remaining hours, and the message also contains (DAYS: *ddd*) following the offset.

System Action:

None.

User Action:

None.

N11101

FSTOP COMMAND ACKNOWLEDGED.

Reason:

Confirms the acceptance of an FSTOP command.

System Action:

An irreversible system shutdown begins. Logged on users will receive a 10 second warning prior to Shutdown completing.

User Action:

None.

N11102

SYSTEM ALREADY IN SHUTDOWN.

Reason:

A SHUTDOWN command was entered when an earlier one had already been entered.

System Action:

The command is ignored.

User Action:

None.

N11201**MAXIMUM TIMER COMMAND INTERVAL IS 24 HOURS.****Reason:**

An EVERY command was entered specifying an interval greater than 24 hours.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N11202**INVALID TIME VALUE SYNTAX.****Reason:**

The TIME operand of an AT or EVERY command is invalid or out of range.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N11203**REQUIRED OPERANDS HAVE BEEN OMITTED.****Reason:**

One or more required operands of an AT or EVERY command has been omitted.

System Action:

The command is ignored.

User Action:

Supply the missing operand(s) and retry.

N11204

COMMAND TEXT HAS NOT BEEN SPECIFIED.

Reason:

The command text for an AT or EVERY command has been omitted.

System Action:

The command is rejected.

User Action:

The command text must be specified as the last operand of an AT or EVERY command. Correct and retry.

N11205

`KEEP' AND `ROUTE' OPERANDS REQUIRE A HIGHER AUTHORITY LEVEL.

Reason:

You are not authorized to use the KEEP or ROUTE operands of the AT and EVERY command.

System Action:

The command is rejected.

User Action:

Contact your systems administrator if you need to use either of these operands.

N11206

COMMAND REJECTED. LIMIT OF nnnnnn TIMER BASED COMMANDS REACHED.

Reason:

The system has a limit to the number of timer based commands that may be active concurrently. This limit has been reached.

System Action:

The command is rejected.

User Action:

Retry the command later, when some timer based commands may have been purged. This limit may be increased by your systems administrator if required.

N11207**COMMAND TEXT EXCEEDS MAXIMUM OF 80 CHARACTERS.****Reason:**

The command text in an AT or EVERY command may not be longer than 80 characters.

System Action:

The command is rejected.

User Action:

Split the command into multiple commands or abbreviate commands and operands where possible.

N11208**`EVERY' COMMAND MINIMUM REPEAT TIME IS sssss SECONDS.****Reason:**

The time interval on an EVERY command may not be less than sssss seconds.

System Action:

The command is ignored.

User Action:

Choose an interval greater than sssss seconds.

N11209**COMMAND ACCEPTED. PURGE ID NUMBER IS ppppp.****Reason:**

An AT or EVERY command has been accepted. The purge ID number shown can be used in a subsequent PURGE command to manually terminate the command. This number will also be displayed in the ID field of the SHOW TIMER display.

System Action:

The command is queued for execution at the specified interval.

User Action:

None.

N11210

`AT' COMMAND TIME RANGE IS 00.00.01 TO 24.00.00.

Reason:

An invalid time has been specified in the AT command.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N11212

**COMMAND REJECTED. `EVERY' CANNOT BE SOURCED FROM AN
`EVERY' COMMAND.**

Reason:

Propagation of an `EVERY' timer command is not supported from other
`EVERY' commands.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N11213

TIMER TID=aaaa VALUE ALREADY ASSIGNED

Reason:

The user-assigned timer identification (TID=aaaa) is already assigned to
another timer command.

System Action:

The command is rejected.

User Action:

Specify a different TID= value and retry.

N11214

***+TIME ONLY VALID ON `AT' COMMAND.**

Reason:

A time offset expression is only valid on an AT command.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N11215

INVALID USERID.

Reason:

The ROUTE= operand on an AT or EVERY command contains invalid characters.

System Action:

The command is ignored.

User Action:

Correct the command and retry.

N11216

`ALL' OR `OWN' ARE NOT VALID FOR ID=

Reason:

ID=ALL or ID=OWN are not valid on an AT or EVERY command.

System Action:

The command is ignored.

User Action:

Specify a correct ID= operand and resubmit the command.

N11217

EVERY 0 REQUIRES A NON-ZERO LIMIT.

Reason:

A repeat timer interval of zero has been specified on an EVERY command but no LIMIT has been specified.

System Action:

The command is rejected.

User Action:

Specify either a limit, or a non-zero repeat interval.

N11301

CURRENT MAXUSERS LIMIT IS aaaa, NUMBER OF USERS IS bbbb.

Reason:

This is the response to a MAXUSERS command with no operands.

System Action:

None.

User Action:

None.

N11302

MAXUSERS LIMIT NOW SET TO nnnn.

Reason:

Confirms that a MAXUSERS command has been processed.

System Action:

The new MAXUSERS limit is now nnnn.

User Action:

None.

N11303**MAXUSERS LIMIT IS INVALID.****Reason:**

The MAXUSERS operand specified is not numeric, or is longer than 4 digits.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N11304**MAXUSERS LIMIT EXCEEDS MAXIMUM ACCEPTABLE LIMIT OF xxxx.****Reason:**

The MAXUSERS operand specifies a number greater than that allowed.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N11401**KEYWORD NOT RECOGNISED.****Reason:**

No operands are expected on the STATUS command.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N11402

SYSTEM STATUS AS ON DDD dd-MMM-yyyy AT hh.mm.ss

Reason:

This is the first message in response to the STATUS command.

DDD Is the abbreviation of the day of the week.

dd Is the number of the day in the month.

MMM Is the abbreviation of the month.

yyyy Is the year.

hh Is the hour in 24-hour format.

mm Is the minute of the hour.

ss Is the second of the minute.

System Action:

None.

User Action:

None.

N11403

NUMBER OF USERS LOGGED ON IS nnnn.

Reason:

Part of the STATUS display. Indicates the number of users logged on to SOLVE.

System Action:

None.

User Action:

None.

N11404**VTAM PPO ACB IS OPEN.****Reason:**

Part of the STATUS display. Indicates that SOLVE's PPO ACB is open, and that SOLVE will receive unsolicited VTAM messages.

System Action:

None.

User Action:

None.

N11405**PPO START COMMAND HAS NOT BEEN ENTERED.****Reason:**

Part of the STATUS display. Indicates that SOLVE's PPO ACB is not open, or a PPO START command has been issued but an error was encountered and the ACB was not opened.

System Action:

None.

User Action:

Issue a PPO START command if SOLVE is to receive unsolicited VTAM messages.

N11406**SYSTEM SHUTDOWN IS IN PROGRESS.****Reason:**

Part of the STATUS display. A SHUTDOWN or FSTOP command has been entered.

System Action:

SOLVE is in the process of terminating.

User Action:

None.

N11407

NUMBER OF USERS RECEIVING PPO MESSAGES IS nnnn.

Reason:

Part of the STATUS display. Indicates the number of logged-on users eligible to receive unsolicited VTAM messages.

System Action:

None.

User Action:

None.

N11408

SYSTEM DOMAIN ID: *aaaa* SYSTEM USER PREFIX: *bbbb*

Reason:

Part of the STATUS display. The domain ID is specified on the NMDID initialization parameter and must be unique in a network of connected SOLVE systems. The SOLVE System User Prefix is a 1 to 4-character value that forms the prefix for all system users, for example, BLOG, BMON. This value is specified on the NMSUP initialization parameter and if omitted defaults to the NMDID value.

System Action:

None.

User Action:

None.

N11409**SYSTEM ID: P1 JOBNAME 2****Reason:**

Part of the display resulting from a STATUS command. *P1* is the local identifier of this region, as defined by the SYSPARMS ID= parameter at system initialization. The started task/job name is shown (*P2*) where available. If not available, for example before the VTAM interface is available, *N/A* is shown.

System Action:

None

User Action:

None

N11410**nnnn REMOTE LINK(S) ACTIVE, mmmm INACTIVE.****Reason:**

Part of the display resulting from a STATUS command, this indicates the number of active (nnnn) or inactive (mmmm) links that exist from this SOLVE system to remote SOLVE systems.

System Action:

None.

User Action:

Use the SHOW LINKS command for detailed information on the status of the individual links.

N11411

NETWORK PARTITIONING FOR UNSOLICITED MESSAGES HAS BEEN DISABLED.

Reason:

An error during system initialization has caused NPF message partitioning to be disabled. Users will be treated as though no NPF message member has been defined for their userids.

System Action:

None.

User Action:

Refer to the system activity log for details of the error that occurred. Correct the error and restart the system.

N11412

aaaPROC procname IS (NOT) LOADED.

Reason:

Gives the name of the current PPOPROC, CNMPROC or LOGPROC NCL procedure and whether it is executing.

System Action:

None.

User Action:

None.

N11413

END

Reason:

Denotes the end of the STATUS display.

System Action:

None.

User Action:

None.

N11414**SYSTEM CONFIGURED WITH P1 P2 - P3 P4****Reason:**

This region includes the displayed product feature.

P1 is the product feature name key. The key is in a PROD statement in the RUNSYSIN member.

P2 shows the product LMP code (if applicable).

P3 is the product feature release.

P4 is the service pack (if applied).

System Action:

None.

User Action:

If a required product is not indicated by one of these messages, add its product name key in a PROD statement in the RUNSYSIN member.

N11415**EASINET FEATURE IS ACTIVE, USING NCL PROCEDURE procname****Reason:**

Part of the STATUS display. Indicates that the system is operating with the EASINET feature, and the feature is driven by the NCL procedure procname.

System Action:

None.

User Action:

None.

N11416

SYSTEM BASE IS - P1 P2

Reason:

Part of the STATUS display, this message specifies the current release (*P1*) of the system services base and the service pack (LEVEL *P2*) applied.

System Action:

None.

User Action:

None.

N11417

CPU ACCOUNTING IS ACTIVE P1

Reason:

CPU measurement is active in the region. A SHOW NCL command will return an N11946 message showing the NCL procedure's CPU usage in seconds. If *P1* is blank, CPU accounting is controlled by the XOPT=CPU statement in the region's RUNSYSIN startup parameters, and it adds to the region's CPU usage. If *P1* is (HIGH PERFORMANCE), the region is running on at least an IBM z9 system supporting the ECTG machine instruction. CPU accounting is enabled automatically, and it adds little to the region's CPU usage.

System Action:

None.

User Action:

None.

N11418**ACTIVITY LOGGING HALTED****Reason:**

Part of the STATUS display. Indicates that logging to the system activity log has terminated. This happens only if I/O errors occur on the activity log. The system should not be run any longer than necessary without logs since no audit trail of system actions will be available.

System Action:

None.

User Action:

Determine the cause of the error that terminated logging.

N11419**LOCAL TIME OFFSET IS shhmm dddd mmmm****Reason:**

Part of the STATUS display shows the local time offset in hours and minutes (with a sign indicating ahead (+) or behind (-) GMT/UTC.

If the offset exceeds one day, the offset is only the remaining hours, and the number of days is shown as (DAYS: nnn).

If the region is not operating in normal local time mode, an additional literal indicates the mode as follows:

(JCL TZ=SHHMM) JCL parm TZ=offset was specified

(JCL TZ=GMT) JCL parm TZ=GMT was specified

(##TOFF TEST MODE) The ##TOFF command is in use

System Action:

None.

User Action:

None.

N11420

SYSTEM OPERATING WITH type SECURITY EXIT

Reason:

Part of the STATUS display. Indicates that the system is operating with an installation provided security exit. type indicates the type of exit in use, either PARTIAL or FULL.

System Action:

None.

User Action:

None.

N11421

SYSTEM CONNECTED TO VTAM Va.a.a SSCPNAME=sscpname NETWORK=network

Reason:

Part of the STATUS display. Indicates the VTAM version and release level with which SOLVE is operating, and the SSCPNAME and NETWORK name of the VTAM system.

System Action:

None.

User Action:

None.

N11422

ABEND COMMAND IS SET TO: command-text / IS NOT SET

Reason:

Part of the STATUS display which shows the text of the ABEND command.

System Action:

None.

User Action:

None.

N11423**SPO INTERFACE IS ACTIVE/INACTIVE - DOMAIN=xxxx****Reason:**

Part of the STATUS display which shows the status (ACTIVE/INACTIVE) of the VTAM SPO interface. If the status is ACTIVE then the domain ID of the owner of SPO interface is also shown.

System Action:

VTAM commands fail with message N12106.

User Action:

Refer to the user action for message N12106.

N11424**PPO/SPO IN RETRY, VTAM TEMPORARY STORAGE SHORTAGE****Reason:**

A shortage of VTAM storage has occurred which has affected the operation of the PPO and/or SPO interface(s).

System Action:

Responses to VTAM commands and/or the processing of unsolicited messages will not be received due to the inactive state of the interface(s). SOLVE will attempt to restart the interface(s) every 5 seconds until a PPO STOP or SPO STOP command is entered or until the storage shortage is relieved.

User Action:

None.

N11425**PRIMARY NAME IS nnnnnnnnn****Reason:**

This message is part of the STATUS display. It indicates the primary name with which the region is operating.

System Action:

None.

User Action:

None.

N11426

SSL PROVIDER IS: *nnnnnnnnnnnnnnnnnn* VERSION IS: *vvvvvvvvvv*

Reason:

This message is part of the STATUS display. It identifies the name and version of the SSL provider used by the region.

System Action:

None.

User Action:

None.

N11427

EXECUTION MODE (REQ ACTUAL): *rrrr aaaa*

Reason:

This message is produced as part of the response to a STATUS command. It indicates the requested and in-effect execution mode (the requested mode is the mode specified on the *XM=aaaa* JCL parm).

The possible requested mode values are as follows:

N/S-No execution mode was requested.

TASK-Task mode was requested.

ZIIP-zIIP mode was requested.

BEST-The best available mode was requested.

The possible in-effect execution mode values are as follows:

TASK-The region is executing in TASK mode.

ZIIP-The region is executing in SRB mode, possibly utilizing a zIIP if one is available.

System Action:

None.

User Action:

None.

N11428**... FAILURE INFO... *reas rc subreas desc*****Reason:**

This message is produced as part of the response to a STATUS command, when the requested and actual execution modes differ (except when the requested mode is BEST and the actual mode is ZIIP).

The fields in the message are as follows:

reas

A reason code (related to the description)

rc

A system service return code

subreas

A system service reason code

desc

A textual description of the problem:

MODE N/S ON THIS OPSYS

APF AUTHORIZATION REQUIRED

NO DEFINED ZIIP PROCESSORS

NO ONLINE ZIIP PROCESSORS

GETMAIN FAILURE

LOAD OF PAUSE SERVICE FAILED

PEL DEFINE FAILED

WLM REGISTRATION FAILED

WLM ENCLAVE DEFINE FAILED

WLM ZIIP ACTIVATION FAILED

SRB MODE WAIT SETUP FAILED

System Action:

None.

User Action:

Examine the description to determine why the requested mode was not activated.

N11429

Passwords are p1 Case Sensitive.

Reason:

This message indicates whether passwords are used as entered (case sensitive) or folded to uppercase (when p1 displays NOT).

Passwords are case sensitive if the XOPT JCL parameter of the region specifies the PWMIX option in the dsnpref.rname.TESTEXEC(RUNSYSIN) member. The default is to fold passwords to uppercase.

System Action:

None.

User Action:

To permit mixed case passwords, add PPREF='XOPT=PWMIX' to the RUNSYSIN member.

N11430

SYSTEM WAS INITIALIZED ON aaaa AT bbbb

Reason:

Issued in the group of messages that form the response to the STATUS command. This message displays the date and time that SOLVE completed its initialization.

System Action:

None.

N11501**PPO START COMMAND ACCEPTED.****Reason:**

Acknowledges a PPO START command.

System Action:

An attempt will be made to open the VTAM PPO ACB, if successful, PPO messages received will be distributed to authorized users. Individual operators that are authorized to receive PPO messages will be notified that the PPO interface is now active.

User Action:

If PPO messages are not required, use the PROFILE PPO=NO command to suppress them from your OCS window.

N11502

PPO STOP COMMAND ACCEPTED.

Reason:

Acknowledges a PPO STOP command.

System Action:

The VTAM PPO ACB will be closed. Each operator that is authorized to receive PPO messages will be notified that the PPO interface has been disabled.

User Action:

None.

N11503

PPO OPERAND INVALID OR MISSING.

Reason:

The PPO command must include either the START or STOP operand.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N11504

PPO ALREADY ACTIVE.

Reason:

A PPO START command was issued when an earlier PPO START command was still in effect.

System Action:

The command is rejected.

User Action:

None.

N11505**PPO NOT ACTIVE.****Reason:**

A PPO STOP command was entered but the PPO ACB was not open.

System Action:

The command is rejected.

User Action:

None.

N11506**SPO START COMMAND ACCEPTED.****Reason:**

Acknowledges successful completion of the SPO START command.

System Action:

The SPO interface has been started and replies to VTAM commands may now be returned to the users that issued them.

User Action:

None.

N11507**SPO STOP COMMAND ACCEPTED.****Reason:**

Acknowledges successful completion of the SPO STOP command.

System Action:

The VTAM SPO interface will cease processing. Replies to VTAM commands will now be lost and will not be returned to the user who issued the command.

User Action:

None.

N11508

SPO OPERAND INVALID OR MISSING.

Reason:

The SPO command must include either the START or STOP operand.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N11509

SPO ALREADY ACTIVE.

Reason:

An SPO START command was issued when the SPO interface was already active.

System Action:

The command is rejected.

User Action:

None.

N11510

SPO NOT ACTIVE.

Reason:

An SPO STOP command was entered but the SPO interface was not active.

System Action:

The command is rejected.

User Action:

None.

N11511**SPO IN RETRY, VTAM SHORT ON STORAGE****Reason:**

A VTAM storage shortage has halted operation of the SPO interface.

System Action:

SOLVE will try to restart the SPO interface every 5 seconds until an SPO STOP command is entered or the storage shortage is relieved.

User Action:

None.

N11512**LINK TO REMOTE DOMAIN NOT ACTIVE****Reason:**

An attempt was made to redirect SPO commands to a remote domain, however, there is no active link to the remote domain.

System Action:

The SPO start fails.

User Action:

Start a link to the remote domain and reissue SPO START command.

N11513**SPO REDIRECTED TO DOMAIN dddd****Reason:**

SPO commands have been redirected to domain dddd .

System Action:

All SPO commands will be routed to the remote domain indicated.

User Action:

None.

N11601

SHUTDOWN COMMAND ACKNOWLEDGED, aaaaa USERS STILL LOGGED ON. bbbbb ACTIVE, ccccc DISCONNECTED

Reason:

A SHUTDOWN command has been entered by an authorized user. If users are still logged on the message indicates the number still active and if any are disconnected.

System Action:

If the message does not indicate users are still logged on then the shutdown sequence has been initiated. Otherwise, further logons are rejected, and the shutdown sequence will start when the last user logs off.

User Action:

If users remain then these may be informed of the shutdown via a broadcast. If necessary, enter SHUTDOWN CANCEL to reset the pending shutdown, or use the FSTOP command to shut down the system immediately.

N11602

SHUTDOWN NOT IN PROGRESS.

Reason:

A SHUTDOWN CANCEL command was entered, but no SHUTDOWN command had been entered earlier.

System Action:

The command is rejected.

User Action:

None.

N11603**SHUTDOWN NO LONGER IN EFFECT.****Reason:**

A SHUTDOWN CANCEL has been processed successfully.

System Action:

The previous pending shutdown is cancelled.

User Action:

None.

N11604**SHUTDOWN OPERAND NOT RECOGNISED.****Reason:**

An invalid operand was specified on a SHUTDOWN command.

System Action:

The command is rejected.

User Action:

None.

N11605**TOO LATE TO CANCEL SHUTDOWN.****Reason:**

A SHUTDOWN CANCEL command was entered but system termination had already started.

System Action:

The system will terminate.

User Action:

None.

N11606

**SHUTDOWN ALREADY IN EFFECT. aaaaa USERS STILL LOGGED ON.
bbbbbb ACTIVE, ccccc DISCONNECTED**

Reason:

A SHUTDOWN command has been entered and shutdown processing is already in effect. The message also indicates the number of currently logged on users of which 'bbbbbb' are active and 'cccccc' are disconnected.

System Action:

None.

User Action:

The shutdown can be cancelled with a SHUTDOWN CANCEL command or you can immediately terminate the system with an FSTOP command. You may also wish to notify the users via broadcast etc.. that a shutdown is pending.

N11701

***** P1 SHUTDOWN IN PROGRESS P2 *****

Reason:

This message is written to the system console at the beginning of the product's termination. *P1* is the product name and *P2* is the system name as set by the PRI= initialization parameter.

System Action:

System shutdown processing begins.

User Action:

Logoff from the system if you are logged on.

N11702

***** P1 SHUTDOWN COMPLETE P2 *****

Reason:

This message is written to the system console at the completion of the product's termination. *P1* is the product name and *P2* is the system name as set by the PRI= initialization parameter.

System Action:

The job terminates.

User Action:

None

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N11808**NON-PATH LOGONS TO applname SUSPENDED/ACTIVATED.****Reason:**

One of the messages issued as a result of an ACTLOGON or SUSLOGON
APPL=applname.

System Action:

SOLVE has taken the specified action to either allow or prevent all logon attempts to this application through the EASINET.

User Action:

None.

N11809

LOGON PATH pathname IS NOT DEFINED.

Reason:

The INPUT= operand of a SUSLOGON, ACTLOGON or DELLOGON command specified an undefined LOGON entry.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N11810

INSUFFICIENT STORAGE

Reason:

The DEFLOGON or REPLOGON command could not be processed because of storage shortage.

System Action:

The command is rejected.

User Action:

Retry.

N11811

MUTUALLY EXCLUSIVE OR DUPLICATED OPERANDS - aaaa

Reason:

An ACTLOGON, DEFLOGON, DELLOGON, REPLOGON or SUSLOGON command has been issued with conflicting or duplicated operands, aaaa.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N11812**LOGON PATH REMAINS SUSPENDED.****Reason:**

A RELOGIN command has been successfully processed for a logon path which was previously suspended by a SUSLOGIN command. The logon path remains suspended.

System Action:

None, for information only.

User Action:

If the path is to be activated also, issue the ACTLOGIN command.

N11814**LOGON PATH `pathname` ALREADY EXISTS. DEFLOGIN REJECTED.****Reason:**

A DEFLOGIN command was issued specifying the name of an existing LOGIN entry.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N11815**NO LOGIN PATHS FOUND WITH APPL=`applname`****Reason:**

A DELLOGIN command specified an APPL name for which no DEFLOGIN entries have been defined.

System Action:

The command is rejected.

User Action:

Correct the APPL name and retry.

N11816

**nnnnnn LOGON PATHS FOR APPL=applname
SUSPENDED/DELETED/ACTIVATED.**

Reason:

Confirms that the specified number of DEFLOGON entries for application applname have been suspended, deleted or activated, depending upon the command entered.

System Action:

None.

User Action:

None.

N11817

INPUT= OR APPL= NOT SPECIFIED. COMMAND REJECTED.

Reason:

A SUSLOGON, DELLOGON or ACTLOGON command failed to specify either the INPUT or the APPL operand, one of which is required.

System Action:

The command is rejected.

User Action:

Correct and retry.

N11818

SUPPLIED TEXT MORE THAN 50 CHARACTERS. COMMAND REJECTED.

Reason:

The SUSLOGON command TEXT operand may not exceed 50 characters.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N11819**nnnnnn LOGON PATHS SUSPENDED/DELETED/ACTIVATED.****Reason:**

Confirms that the specified number of DEFLOGON entries have been suspended, deleted or activated, depending upon the command entered.

System Action:

None.

User Action:

None.

N11901**SHOW OPERAND MUST BE ENTERED.****Reason:**

N11918

..... status nclverb, STMT/LINE line-number, text

Reason:

This message is issued during a SHOW NCL command and is accompanied by an N11936 message that identifies an NCL process. This message indicates the current state of that process. The process may be currently loading a procedure, executing the NCL verb nclverb at statement nnnn or executing a command. The 'status' field may contain the following values:

PROCESSING indicates that the NCL process is executing normally and is not under the control of the NCL debug facility.

IN-DEBUG indicates that the NCL process is executing normally and is under the control of the NCL debug facility.

SUSPENDED indicates that the NCL process is under control of the NCL debug facility and execution of the process has been suspended due to a user command or a breakpoint being reached.

The additional text string may contain a number of phrases that further describe the process:

'MSGs LOST' indicates that the process's dependent environment has exceeded message queueing limits resulting in loss of data.

'FORCED IDLE' is displayed if the process is currently in a wait state due to NCL performance controls.

'P=panel-name' displays the active panel display if the current verb is *PANEL*.

System Action:

None.

User Action:

N11919**NO GENERAL BROADCAST MESSAGE SET.****Reason:**

The response to a SHOW BRO command when no system broadcast is currently set.

N11922

THE FOLLOWING PRIMARY MENU BROADCAST IS SET:

Reason:

The response to a SHOW BRO command when a Primary Menu broadcast is set. The broadcast text follows this message.

System Action:

None.

User Action:

None.

N11923

logid status yy.ddd hh.mm.ss yy.ddd hh.mm.ss pages swapped-by

Reason:

Follows message N11924 and gives details of a SHOW LOG command.

logid - JCL DD name of this log.

status - defines the current status of the log. This will be "IN USE", "SWAPPED" or "AVAIL".

yy.ddd hh.mm.ss - date and time logging commenced to this DD.

yy.ddd hh.mm.ss - date and time logging ceased for this DD.

pages - the number of pages printed.

swapped-by - the reason the activity log was swapped. This will be either a USERID if a user entered the LOGSWAP command, "FULL" if the log swapped because the log filled up, or "IO-ERROR" if the log was swapped due to a write failure.

System Action:

None.

User Action:

None.

N11924

-DD- STATUS- ---START TIME-- ---STOP TIME--- PAGES -SWAPPED BY-

Reason:

The title line of the SHOW LOG display.

System Action:

None.

User Action:

None.

N11925

***WARNING* ALL ACTIVITY LOGGING HAS CEASED.**

Reason:

Part of the SHOW LOG display. Issued if all logs have been closed and no logging is taking place. This can normally only happen if an I/O error occurs while logging to the last available log, or if the last available log is full.

System Action:

None.

User Action:

SOLVE should be re-started as soon as possible if logging is necessary.

N11926

PROCESSING ENVIRONMENT IS NOT RUNNING NCL

Reason:

The response to a SHOW NCL/NCLVARS command if your NCL processing region has no active NCL processing running.

System Action:

None.

User Action:

None.

N11928

..... WAITING FOR TEXT/STRING: wait-text

Reason:

The response to a SHOW PAUSE command if the user has an NCL procedure which is paused because of an *WAIT statement*.

System Action:

None.

User Action:

The GO, END or FLUSH commands may be used to resume or terminate execution of the NCL procedure if the waiting text is not expected to arrive.

N11931

..... WAITING ON RETURN FROM USER MODULE module.

Reason:

Issued in response to SHOW PAUSE command when an NCL procedure is suspended pending completion of processing by the module module, invoked by the procedure via an &CALL statement.

System Action:

None.

User Action:

None.

N11932**WAITING FOR LOAD OF NCL PROCEDURE procname TO COMPLETE.****Reason:**

Issued in response to a SHOW PAUSE command and indicates that the loading of an NCL procedure is in progress prior to execution. The loading of NCL procedures is performed in conjunction with a subtask that performs the OPEN and CLOSE processing. It is possible that the loading of an NCL procedure could be delayed as a result of interference with the disk sub-system.

System Action:

None.

User Action:

Exiting OCS mode at this point in time will terminate the load process and flush the procedure. Excessive delays may be as a result of RESERVES being placed on the volume on which the NCL library resides. Check if this is the case and if necessary relocate the library to a less active volume.

N11934**..... WAITING ON VSAM I/O - STRING SHORTAGE OR EXCLUSIVE CONTROL.****Reason:**

Issued in response to a SHOW PAUSE command and indicates that the user has an NCL procedure waiting for completion of a VSAM I/O operation which has been delayed due to a string shortage or an exclusive control lockout.

System Action:

None.

User Action:

The user may allow the procedure to complete or flush the procedure if desired.

N11936

aaaaaa bbbbbbbb ccccccc dd e fffffff gggggggg hhhhhhhh i j kkkkk

Reason:

The description of an NCL process following the N11935 heading line. The columns line up under the headings in message N11935. Values are:

aaa - The NCL identifier of the process.

bbb - The name of the base procedure in the process.

ccc - The name of the procedure currently executing in the process.

d - The nesting level of the current procedure.

e - The window in whose NCL processing environment the process is executing. Value is 1 or 2.

fff - The type of process, eg: MSGPROC.

gggg - Normally the userid that originated the process's execution.

Alternatively this may be the luname of the terminal if the NCL procedure was started via the EASINET procedure without effecting user signon.

hhhh - The userid under whose NCL region the process is running.

i The NCL performance group of the process.

j - The dispatch priority of the process within its performance group.

kkk - The number of NCL processing units consumed by this process's execution so far.

System Action:

None.

User Action:

N11980**oooo OPERAND INVALID reason****Reason:**

This message is produced in response to a SHOW SESS command with extended operands. It indicates that an operand was in error.

System Action:

The SHOW SESS command is ignored.

User Action:

Correct the operand(s) in error and retry the command.

N11A01**NO OPERANDS SPECIFIED.****Reason:**

The ALLOC and UNALLOC commands require one or more operands that have been omitted.

System Action:

The command is rejected.

User Action:

Refer to the description of the ALLOC and UNALLOC commands in the Command Reference.

N11A02**OPERAND aaaaaaaaaa IS INVALID OR IN ERROR.****Reason:**

The operand is either unrecognized, or contains invalid syntax.

System Action:

The command is rejected.

User Action:

Refer to the description of the ALLOC and UNALLOC commands in the Command Reference.

N11A03

INSUFFICIENT STORAGE.

Reason:

The ALLOC or UNALLOC command failed due to insufficient storage.

System Action:

The command is rejected.

User Action:

Retry. If problem persists increase region size.

N11A04

INVALID aaaaaaaaaa

Reason:

The requested suboperand is in error.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N11A05

DUPLICATED OPERANDS.

Reason:

An operand has been specified more than once on an ALLOC command.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N11A06**CONFLICTING OPERANDS.****Reason:**

Operands specified are mutually exclusive.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N11A07**UCS NAME REQUIRED WITH "FOLD" OPTION.****Reason:**

Use of the FOLD option requires a UCS entry to nominate the universal character set being used.

System Action:

The command is rejected.

User Action:

Include a UCS name and retry.

N11A08**REQUEST ACCEPTED.****Reason:**

Confirms that the ALLOCate or UNALLOCate command has been accepted for processing.

System Action:

None.

User Action:

Other messages indicating the success or failure of this processing will follow.

N11A09

DDNAME dddddddd IS RESERVED.

Reason:

An attempt was made to ALLOC or UNALLOC a reserved DDNAME.

System Action:

The command is rejected.

User Action:

SOLVE itself has allocated to it ddnames such as those used for panel libraries, command libraries etc., which are reserved for its use only. Use a DDNAME that is not reserved.

N11A10

DSN OR SYSOUT MUST BE SPECIFIED.

Reason:

An ALLOC command was issued, but no dataset name or sysout class was specified.

System Action:

The command is rejected.

User Action:

The allocate command is used to allocate either a dataset or a sysout dataset. Determine the requirements for the task and re-enter specifying either a sysout class or dataset name.

N11A11**DDNAME dddddddd IS ALREADY IN USE.****Reason:**

An attempt was made to issue the allocate command using a DD name previously allocated.

System Action:

The command is rejected.

User Action:

Use a DD name that is not currently being used. The SHOW ALLOC command can be used to display those files SOLVE previously allocated with the ALLOCate command. Other DD names may also be in use that were part of the System Startup JCL.

N11A12**INSUFFICIENT AUTHORITY, FILE NOT SYSOUT.****Reason:**

An attempt has been made to change the status (eg. ALLOC, UNALLOC) of a dataset of a format other than SYSOUT and the user has insufficient command authority. Unless changed by your installation, the status of SYSOUT format datasets can be changed by users with a command authority of 0. Changing the status of all other datasets requires a higher command authority, usually authority level 2.

System Action:

The command is rejected.

User Action:

Contact your systems administrator.

N11A13

DESTID NAME REQUIRED WITH USERID OPTION.

Reason:

Use of the USERID option requires a DESTID to nominate the destination node where the userid is defined.

System Action:

The command is rejected.

User Action:

Include a DESTID and retry.

N11B02

TERMINAL ~P1 LOCKED BY TIME OUT

Reason:

The specified terminal has been locked due to an inactivity timeout.

System Action:

The lock panel is displayed until the users password is entered.

User Action:

Enter your password to resume your work.

N11B03

PROCESSING COMPLETE

Reason:

Confirms that the TERMINAL command has been accepted.

System Action:

None.

User Action:

None.

N11B04**TERMINAL ~P1 LOCKED BY USER ~P2****Reason:**

The specified terminal has been locked by the user issuing the LOCK command.

System Action:

The lock panel is displayed.

User Action:

Enter your password to unlock the terminal and resume your work.

N11B05**REGION NOT VALID FOR LOCK****Reason:**

The LOCK command has been issued to lock a terminal, but the terminal is not valid for LOCK processing. Only LU1 and LU2 devices which have a signed-on user may be locked.

System Action:

The LOCK command is rejected.

User Action:

None.

N11B06**LOCK ALREADY IN PROGRESS****Reason:**

The LOCK command has been issued to lock a terminal, but the terminal is already in a locked state.

System Action:

The LOCK command is rejected.

User Action:

None.

N11B08

LOCK BYPASSED DUE TO DISCONNECT

Reason:

The LOCK command has been entered to lock a terminal. The terminal is in a disconnected state, so the LOCK command is invalid and has been rejected.

System Action:

The LOCK command is rejected.

User Action:

None.

N11B10

terminal-type TERMINAL luname IS region-type

Reason:

This message is first line of the response to e TERMINAL command with no operands. It describes the terminal type (VIRTUAL/STD/FJ/FJ3), LU-name and region type (LU1/LU2/BSYS/BMON/ROF/etc).

System Action:

None. More information follows in subsequent messages.

User Action:

None.

N11B11

SCREEN SIZES aa,bb , cc,dd

Reason:

This message is part of the TERMINAL COMMAND device characteristics display, and shows the default (aa,bb) and alternate (cc,dd) screen sizes for the device.

System Action:

None.

User Action:

None.

N11B12**characteristic IS/IS NOT SUPPORTED****Reason:**

This message is part of the TERMINAL command device characteristics display and shows which device characteristics (such as color, DBCS support and highlighting) are supported by the terminal.

System Action:

None.

User Action:

None.

N11C01**NO OPERANDS SPECIFIED.****Reason:**

The SUBMIT command has been issued without operands.

System Action:

The command is rejected.

User Action:

Refer to the Command Reference for a description of this command.

N11C02**FIRST OPERAND INVALID.****Reason:**

The SUBMIT command has been issued but the first operand, which specifies the target of the command, is not valid.

System Action:

The command is rejected.

User Action:

Refer to the Command Reference for a description of this command.

N11C03

NO COMMAND TEXT SUPPLIED.

Reason:

The SUBMIT command has been issued without any command text.

System Action:

The command is rejected.

User Action:

Refer to the Command Reference for a description of this command.

N11C04

COMMAND SUBMITTED TO aaaa REGION/USER userid.

Reason:

The SUBMIT command has been issued successfully to the nominated virtual region or real user for processing.

System Action:

None.

User Action:

None.

N11C05

aaaa REGION NOT ACTIVE.

Reason:

The SUBMIT command has been issued correctly but the target virtual userid is not active and cannot receive the command.

System Action:

The command is rejected.

User Action:

Refer to the Command Reference for a description of this command.

N11C06**USER userid NOT LOGGED ON OR HAS NO OCS WINDOWS.****Reason:**

The SUBMIT command has been used with the USER= operand to execute a command in another user's OCS window. The command is rejected because the specified user is not logged on or has no OCS windows.

System Action:

The command is rejected.

User Action:

Ensure the correct userid has been specified.

N11C07**INVALID AUTH PARAMETER.****Reason:**

The SUBMIT command was issued with the AUTH parameter but the value specified in the AUTH parameter is not valid or has been omitted.

System Action:

The SUBMIT command is rejected.

User Action:

Correct the AUTH parameter value and retry. The value must be numeric and in the range 0-255.

N11C08

INSUFFICIENT AUTHORITY FOR THE 'USER=' PARAMETER.

Reason:

The SUBMIT command has been entered with the USER= operand but the command authority of the command issuer is not high enough to use the USER= operand.

System Action:

The SUBMIT command is rejected.

User Action:

The authority level required can be set using the SYSPARMS CMDAUTH command. Check with your systems administrator to find out why you do not have sufficient authority.

N11D01

NO OPERANDS SPECIFIED

Reason:

An LUTRACE command was entered without any operands.

System Action:

The command is rejected.

User Action:

Re-enter the command with the appropriate operands.

N11D06

TRACE FOR luname ALREADY ENABLED, START COMMAND IGNORED

Reason:

An LUTRACE command was entered requesting a trace of luname. However, a trace of this LUNAME is already active.

System Action:

The command is ignored.

User Action:

None.

N11D07**TRACE FOR luname NOT ENABLED, STOP COMMAND IGNORED****Reason:**

An LUTRACE command was entered requesting that a trace of luname be terminated. However, no trace is currently active for this LUNAME.

System Action:

The command is ignored.

User Action:

None.

N11D08**TRACE FOR luname STARTED, ACTIVATION PENDING****Reason:**

An LUTRACE command requesting a trace of luname has been accepted.

System Action:

If the LU is currently in session with SOLVE, a subsequent message will indicate that tracing has started. Otherwise, the request will remain in a pending state until the LU connects.

User Action:

None.

N11D09**TRACE FOR luname ACTIVE, DEVICE IS lotype****Reason:**

An LUTRACE command requesting a trace of luname has resulted in the tracing of this LU. lotype indicates the type of LU.

System Action:

Trace messages will be sent to the activity log as traffic occurs on the session.

User Action:

None.

N11D10

luname TYPE=lutype CURRENT MODE DEF SIZE(ccc,ddd) ALT SIZE(eee,fff)

Reason:

A trace of luname is currently active as a result of an LUTRACE command. The device is a 3270-type device, and this message gives the screen dimensions which it is currently utilizing, and any alternate dimensions.

System Action:

None.

User Action:

None.

N11D11

TRACE FOR luname INACTIVE, reason text.

Reason:

LU tracing for the LU 'luname' has been terminated. The reason for the trace to be terminated is given. The LUTRACE STOP command may be used to disable the trace on an LU. LU traces are also terminated when the session between the LU and SOLVE is terminated.

System Action:

Tracing is terminated.

User Action:

None.

N11D12**TRACE FOR luname STOPPED****Reason:**

An LUTRACE command requested that a trace of one or more LUs be terminated. This message confirms that the trace of luname has been terminated.

System Action:

Tracing is terminated.

User Action:

None.

N11D13**NO LU TRACES ACTIVE.****Reason:**

An LUTRACE command requested that tracing of all LUs be terminated. However, no tracing is currently active.

System Action:

The command is ignored.

User Action:

None.

N11D14**INSUFFICIENT STORAGE TO PROCESS REQUEST****Reason:**

There is insufficient storage available to process an LUTRACE command.

System Action:

The command is ignored.

User Action:

If the problem persists, it is possible that the SOLVE partition or region size needs to be increased.

N11E01

ABEND COMMAND HAS BEEN CLEARED

Reason:

This message confirms that the Abend Command has been cleared by the entry of the ABENDCMD command with no message text.

System Action:

The Abend Command is cleared.

User Action:

None.

N11E02

ABEND COMMAND HAS BEEN SET

Reason:

Confirms the successful setting of the Abend Command with the ABENDCMD command. The Abend Command set will be submitted to the operating system if SOLVE terminates abnormally.

System Action:

The text of the Abend Command is set.

User Action:

None.

N11E03

ABEND COMMAND NOT SET, COMMAND TOO LONG

Reason:

An attempt to set the Abend Command was refused because the command text supplied exceeded the maximum acceptable length of 60 characters.

System Action:

The command is rejected.

User Action:

Change the text so that it is not more than 60 characters long.

N11E04**ABEND COMMAND NOT SET, SYSTEM NOT AUTHORISED****Reason:**

An attempt to set the Abend Command has been refused because SOLVE does not have APF authorization to issue operating system commands.

System Action:

The command is rejected.

User Action:

If you wish to have an Abend Command, you will need to obtain APF authorization for SOLVE.

N11F11**MUTUALLY EXCLUSIVE OR DUPLICATED OPERANDS -
AAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAA.****Reason:**

A DEFLOGON or related command as incorrectly specified the use of the operand supplied in the message text.

System Action:

The command is rejected.

User Action:

Remove or correct the operand in error and retry the command.

N11F17**INPUT= OR APPL= NOT SPECIFIED. COMMAND REJECTED.****Reason:**

A DELLOGON, SUSLOGON or ACTLOGON command has been entered without the INPUT= or APPL= operand specified. This is invalid because one of these operands must be entered to identify which logon path is to be the subject of the command.

System Action:

The command is rejected.

User Action:

Specify the INPUT= or APPL= operand and retry.

N12001

NO COMMAND TEXT ENTERED

Reason:

The OPSYS or NOTIFY command was entered without text.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N12002

SYSTEM IS NOT APF AUTHORISED, CANNOT ISSUE COMMAND

Reason:

The OPSYS command may be used only if the region has APF authorization to issue operating system commands.

System Action:

The command is rejected.

User Action:

Refer this message to your systems administrator.

N12003

COMMAND ACCEPTED BY OPERATING SYSTEM

Reason:

An OPSYS or NOTIFY command has been passed to the operating system successfully and been accepted as syntactically correct.

System Action:

None.

User Action:

None.

N12004**COMMAND REJECTED BY OPERATING SYSTEM****Reason:**

The text of the OPSYS command was not valid, and has been rejected by the operating system.

System Action:

None.

User Action:

Correct the command being passed and re-enter.

N12005**COMMAND PASSED TO OPERATING SYSTEM****Reason:**

The text of an OPSYS command has been passed to the operating system. No information will be available as to whether or not the command passed was valid.

System Action:

None.

User Action:

None.

N12006**COMMAND NOT SUPPORTED UNDER THIS OPERATING SYSTEM****Reason:**

The OPSYS command is supported only under MVS or MSP.

System Action:

The command is rejected.

User Action:

None.

N12007

INSUFFICIENT STORAGE TO ISSUE CP COMMAND

Reason:

An OPSYS CP command has failed because SOLVE could not obtain storage to receive the replies.

System Action:

The command is ignored.

User Action:

Investigate why SOLVE has a storage shortage.

N12008

----- text -----

Reason:

This message details one line of the response to an OPSYS CP command. The responses are terminated by message N12009.

System Action:

None.

User Action:

None.

N12009

***END* R(nnn)**

Reason:

The message terminates the responses to an OPSYS CP command. The return code provided by VM/SP (nnn) is shown.

System Action:

None.

User Action:

None.

N12010**CP RESPONSE INCOMPLETE, EXCEEDS 8192 CHARACTERS****Reason:**

The total size of the messages provided by VM/SP in response to an OPSYS CP command exceeds 8K. N12008 messages detailing responses up to this point will have been issued prior to this message. Message N12009 is not issued.

System Action:

None.

User Action:

None.

N12011**COMMAND LONGER THAN 126 CHARACTERS****Reason:**

The text of the command exceeds 126 characters and has been rejected by the operating system. This applies to MVS and MSP only which place a limit on the size of the (operating system) command. The NOTIFY command is equivalent to an OPSYS SEND command. It is the resultant OPSYS command which is restricted to 126 characters.

System Action:

The command is rejected.

User Action:

Shorten the command being passed and re-enter.

N12101**OPERAND MISSING, INVALID, OR OUT OF RANGE.****Reason:**

A VTAM command was entered and a required operand was either missing or incorrect.

System Action:

The command is rejected.

User Action:

Refer to the command description in the Command Reference.

N12104

COMMAND REJECTED, ACCESS TO RESOURCE network.resource IS RESTRICTED.

Reason:

A VTAM VARY, MODIFY or DISPLAY command was issued specifying a network resource which is not within the user's Network Partitions.

System Action:

The command is rejected.

User Action:

Network Partitions define the resources which a user is entitled to reference. If access to the resource is required, the appropriate NPF tables must be available to the user. Refer to the SHOW NPF and SHOW NPTAB commands to determine the resources which you are entitled to reference.

N12105

REPLY COMMAND REJECTED, PPO ACB IS NOT OPEN.

Reason:

A REPLY command was entered but the system is not at present receiving PPO messages.

System Action:

The command is rejected.

User Action:

Issue a PPO START command if required.

N12106**COMMAND NOT ACCEPTED, SPO NOT ACTIVE****Reason:**

A VTAM command was issued whilst the Secondary Program Operator (SPO) interface was inactive. The command cannot be processed until the SPO interface is active.

System Action:

The command is rejected.

User Action:

Check that the primary ACB has been defined with the SPO attribute.

Issue the STATUS command and review message N11423. If SPO is defined to run on the local domain use the SPO START command to re-activate SPO.

If SPO has failed due to a VTAM error then review the activity log for instances of message N09B02. Save the details and contact Technical Support.

N12201**SHOW TSO/TSS COMMAND NOT VALID IN THIS SYSTEM****Reason:**

A SHOW TSO/TSS command was issued but SOLVE is not running in an operating system under which this command would be meaningful.

System Action:

The command is rejected.

User Action:

None.

N12202

SYSTEM IS NOT APF AUTHORIZED, CANNOT PROCESS COMMAND

Reason:

A SHOW TSO/TSS command cannot be processed unless your product region is authorized.

System Action:

The command is rejected.

User Action:

The product region must be APF authorized.

N12203

USERID NODENAME APPLID TERM ASID PROCNAME

Reason:

The title line of the SHOW TSO/TSS display.

System Action:

None.

User Action:

None.

N12204

nnnnn USER(S) DISPLAYED. mmmmm USERS LOGGED ON, sssss STARTING

Reason:

Part of the SHOW TSO/TSS display, showing the number of users displayed, the number logged on, and the number of 'starting' address spaces..

System Action:

None.

User Action:

None.

N12205**TSO/TSS MAXUSERS SET TO nnn****Reason:**

Part of the SHOW TSO/TSS display; the current TSO/TSS MAXUSERS value.

System Action:

None.

User Action:

None.

N12206**SHOW COMMAND HAS INVALID FORMAT****Reason:**

A SHOW TSO=data command was entered with the supplied data being longer than 8 characters.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N12207

Reason:

Underlines N12203.

System Action:

None.

User Action:

None.

N12208

userid node appl term asid procname

Reason:

The detail line of a SHOW TSO/TSS command. Identifies the TSO/TSS userid, the terminal to which the user is logged on (node), the TSO/TSS applid used for their terminal session, the terminal type, the address space ID of the user and their TSO/TSS logon procedure name.

System Action:

None.

User Action:

None.

N12301

MESSAGE DESTINATION AND TEXT OMITTED.

Reason:

The MSG command did not specify a destination for the message text.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N12302

SUPPLIED DESTINATION NAME IS INVALID.

Reason:

The destination name specified in a MSG command is invalid.

System Action:

The command is rejected.

User Action:

Use the SHOW USERS command to determine the names of userids or terminals to which you can send messages. Correct and retry.

N12303**DESTINATION NAME LONGER THAN 8 CHARACTERS.****Reason:**

Destination name must be 1 to 8 characters in length.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N12304**MESSAGE TEXT NOT ENTERED.****Reason:**

A MSG command was entered with no text.

System Action:

The command is rejected.

User Action:

Correct and re-enter. Text must be separated from destination name by a blank.

N12305**UNABLE TO SEND, USERID OR TERMINAL NOT IN SESSION.****Reason:**

The destination of a MSG command is not available.

System Action:

The command is rejected.

User Action:

Use the SHOW OCS command to determine the OCS operators or terminals to which you can send messages. Correct and retry.

N12306

DESTINATION IS NOT IN OPERATOR CONTROL MODE AND CANNOT RECEIVE MSG.

Reason:

The destination of a MSG command cannot receive the message because the user is not at present in Operator Control Mode.

System Action:

The command is rejected.

User Action:

None.

N12307

MESSAGE DISPATCHED TO nnn ENVIRONMENT(S).

Reason:

Confirms that the message from a MSG command has been successfully dispatched.

System Action:

If possible the message will be delivered to an active OCS window, if the OCS window is closed the message will be queued.

User Action:

None.

N12308

MESSAGE SENT TO ALL OCS OPERATORS.

Reason:

A MSG ALL command has been executed.

System Action:

The message will be sent to all operators in OCS mode.

User Action:

None.

N12309**UNABLE TO SEND, xxxxxxxx IS POWERED OFF OR UNAVAILABLE.****Reason:**

An attempt was made to send a message to terminal or userid xxxxxxxx using the MSG command, but that terminal is currently either powered off or otherwise unavailable.

System Action:

The message has not been sent.

User Action:

The terminal could be unavailable because it is in 'test' mode or in an SSCP session (SYSREQ pressed), or powered off. Retry later.

N12310**UNABLE TO SEND, xxxxxxxx IS PROFILED TO NOT RECEIVE MSG OUTPUT.****Reason:**

An attempt was made to send a message to terminal or userid xxxxxxxx using the MSG command, but that environment has a profile which prevents the message being received.

System Action:

The message has not been sent.

User Action:

None.

N12401**NCL PROCEDURE NOT IN A PAUSE OR WAIT STATE****Reason:**

A GO or END command was entered, but the target NCL process is not currently PAUSED.

System Action:

The command is ignored.

User Action:

None.

N12402

FLUSH COMMAND ACCEPTED.

Reason:

A flush command has been entered and accepted.

System Action:

The current NCL procedure is terminated without further processing.

User Action:

None.

N12403

NO USER NCL PROCEDURE EXECUTING

Reason:

A FLUSH command was entered, but there was no EXEC, FSPROC, NCLCHECK, START or LIST in progress to flush.

System Action:

The command is ignored.

User Action:

None.

N12404

aaaa COMMAND INVALID FOR PROCEDURE

Reason:

The command aaaa cannot be issued for the target NCL process.

System Action:

The command is ignored.

User Action:

None.

N12405**NCLID NOT PROCESSING IN aaaa ENVIRONMENT****Reason:**

A GO, END, INTQ or FLUSH command was entered, but the target process is not running in the nominated NCL processing environment.

System Action:

The command is ignored.

User Action:

Check that you have specified the correct NCL identifier.

N12406**NCL PROCESS NOT UNIQUELY IDENTIFIED****Reason:**

A GO, END, INTQ or FLUSH command was issued without specifying an NCL identifier. More than one NCL process is active in the NCL processing region and an identifier is required.

System Action:

The command is ignored.

User Action:

Specify the identifier of the required target process.

N12407**NO REQUEST TEXT SPECIFIED WITH INTQ COMMAND****Reason:**

An INTQ command specified no text to be passed to the target process.

System Action:

The command is ignored.

User Action:

Supply the INTQ text as required.

N12408

Queue limit reached, message discarded

Reason:

An INTQ command was issued to pass a message to an NCL process. The process already had a backlog of messages queued to its &INTREAD queues. No more messages can be queued to the process until the backlog is reduced.

System Action:

User Action:

Establish why there is a backlog of unprocessed messages queued to the

N12409

NCLID SPECIFIED IS INVALID

Reason:

The NCL identifier used to identify an NCL process that is the target of a command is not valid. It should be a number in range 1-999999.

System Action:

The command fails.

User Action:

Correct and retry.

N12410

INVALID OPERANDS DETECTED

Reason:

A FLUSH or END command operand is unrecognized.

System Action:

The command is rejected.

User Action:

Review the command string in error. The ID operand may have been incorrectly specified.

N12411**TYPE OPERAND INVALID. SPECIFY REQ OR RESP****Reason:**

An INTQ command was issued which specified an unrecognized value for the TYPE operand.

System Action:

The command is ignored.

User Action:

Correct and retry.

N12412**aaaaaaaa COMMAND NOT SUPPORTED BY OML****Reason:**

An END command has been entered, but the target procedure is an OML procedure. OML does not support the use of the END command to terminate

System Action:**User Action:****N12413****NCL PROCEDURE HAS CALLED OML - COMMAND REJECTED****Reason:**

An END command has been entered but the target NCL procedure has called an OML procedure. OML does not support the use of the END command to terminate a nesting level.

System Action:

None.

User Action:

None.

N12501

TIMER COMMAND x PURGED, EXECUTION LIMIT REACHED.

Reason:

The TIMER command with the purge ID of x has been automatically purged as the limit specified in the LIMIT operand when the command was defined has been reached.

System Action:

None.

User Action:

The timer command must be re-entered if further execution is required.

N12502

TIMER COMMAND x PURGED, xxxxxx NOT AVAILABLE AS OCS OPERATOR

Reason:

The TIMER command with the purge ID of x has been automatically purged as the specified USERID xxxxxx has exited Operator Control Mode.

System Action:

None.

User Action:

None.

N12601

PURGE OPERAND xxxxxxxx NOT RECOGNISED.

Reason:

The operand xxxxxxxx of the PURGE command is invalid.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N12602**PURGE OPERAND xxx IS INVALID OR OUT OF RANGE - nnnn.****Reason:**

The value of the operand xxx in the PURGE TIMER=xxx command is invalid or out of range. The valid operands are OWN, ALL or purge id number (nnnn).

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N12603**REQUIRED OPERANDS HAVE BEEN OMITTED.****Reason:**

Operands of the PURGE command that must be entered have been omitted.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N12604**TIMER COMMAND ID nn DOES NOT EXIST.****Reason:**

The purge ID number specified in the PURGE command does not exist.

System Action:

The command is rejected.

User Action:

You may have inadvertently specified an incorrect ID number, or the timer command may have already been automatically purged due to its execution limit having been reached. Use the SHOW TIMER command to verify the purge ID, correct the error if necessary, and retry.

N12605

HIGHER AUTHORITY LEVEL IS REQUIRED TO PURGE ANOTHER USER'S COMMAND.

Reason:

You attempted to purge a timer command created by another user. This function requires a higher authority level than you have.

System Action:

The timer command is not purged.

User Action:

Have your authority level increased if it is necessary to perform this function.

N12606

NUMBER OF TIMER COMMANDS PURGED WAS nn.

Reason:

Issued in response to a PURGE TIMER=OWN, ALL or id command.

System Action:

nn timer commands have been purged.

User Action:

None.

N12607

PURGING OF ALL TIMER COMMANDS REQUIRES HIGHER AUTHORITY LEVEL

Reason:

You have entered a PURGE TIMER=ALL command and are not authorized to do so.

System Action:

No timer commands have been purged.

User Action:

Have your authority level increased if it is necessary for you to be able to purge all timer commands.

N12608**TIMER COMMAND ID NUMBER nn PURGED.****Reason:**

Issued in response to a PURGE TIMER=nn command.

System Action:

The indicated timer command has been purged.

User Action:

None.

N12609**NO TIMER COMMANDS ACTIVE, PURGE IGNORED.****Reason:**

You attempted to purge a timer command, but none are active.

System Action:

The command is rejected.

User Action:

The timer command(s) you were attempting to purge may have already been automatically deleted.

N12610**LOCK REQUEST aaaa NOT FOUND WAITING.****Reason:**

The nominated LOCK request either does not exist or is not in a waiting state.

System Action:

The command is rejected.

User Action:

None.

N12611

LOCK REQUEST aaaa WITH TEXT bbbb PURGED

Reason:

The nominated LOCK has been successfully purged.

System Action:

None.

User Action:

None.

N12612

PURGE FOR LOCK aaaa FAILED

Reason:

The PURGE command for the nominated LOCK was not successful in deleting the LOCK.

System Action:

The command fails.

User Action:

Identify the holder(s) of the lock and cancel the associated NCL processes if the LOCK is causing problems to other NCL processes.

N12613

HIGHER AUTHORITY LEVEL IS REQUIRED TO PURGE LOCKS

Reason:

You do not have authority to purge LOCKs.

System Action:

The command is rejected.

User Action:

None.

N12614**HIGHER AUTHORITY LEVEL IS REQUIRED TO PURGE NRD MSGS.****Reason:**

A PURGE NRD= command has been issued by a user who does not have a command authority level high enough for the command.

System Action:

The command is ignored.

User Action:

Refer to your systems administrator.

N12615**NRD MESSAGE(S) MATCHING ID: aaaa PURGED.****Reason:**

A PURGE NRD= command to purge non-roll delimiter (NRD) messages based on domainid aaaa has been successful.

System Action:

None.

User Action:

None.

N12616**aaaa NRD MESSAGE(S) PURGED.****Reason:**

A PURGE NRD= command to purge Non-Roll Delete (NRD) messages based on a time interval has been successful and has deleted aaaa messages.

System Action:

None.

User Action:

None.

N12617

NRD MESSAGES WITH NCLID aaaa PURGED.

Reason:

A PURGE NRD= command to purge non-roll delimiter (NRD) messages based on NCLID aaaa has been successful.

System Action:

None.

User Action:

None.

N12618

APPLSTAT REQUEST FOR applname DOES NOT EXIST.

Reason:

The PURGE command was issued to cause cessation of INQUIRE APPSTAT processing for the nominated application. The application was not subject to APPLSTAT processing. See the SYSPARMS APPLSTAT command and the &APPSTAT NCL verb for more details.

System Action:

The command is rejected.

User Action:

None.

N12619

APPLSTAT REQUEST FOR aaaaaaaaa PURGED.

Reason:

A PURGE APPLSTAT=aaaaaaaa command has been issued to cancel INQUIRE APPSTAT processing for application aaaaaaaaa. INQUIRE APPSTAT processing has now been terminated for the application.

System Action:

None

User Action:

None. If the application status is to be periodically monitored this can be started using the SYSPARMS APPLSTAT command.

N12620**COMMAND REJECTED - VTAM SUPPORT DISABLED.****Reason:**

A PURGE APPLSTAT= command has been rejected. The SOLVE system is not running under VTAM, so the APPLSTAT operand is invalid.

System Action:

The PURGE command is rejected.

User Action:

None.

N12701**SHOW OPERAND TIMER=aaaa NOT RECOGNISED.****Reason:**

An invalid operand was entered on a SHOW TIMER command.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N12702**NO ACTIVE TIMER COMMANDS IN THE SYSTEM.****Reason:**

Issued in response to a SHOW TIMER=ALL command, when no timer commands are active.

System Action:

None.

User Action:

None.

N12703**ID BY INTERVAL -USERID-R LIM CNT K/P EPZFB TID NEXT-LCL****Reason:**

This is the heading line for the SHOW TIMER display.

The heading message is followed by pairs of detail lines (N12704 and N12707) for each TIMER command.

ID

Is the timer command purge ID.

BY

Is AT (AT), EV (EVERY), AF (AFTER), or *+ (AT *+interval), indicating the type of timer.

INTERVAL

Is, for EVERY, the repeat frequency, or, for AT, the time of day at which command will next execute. The interval is in the format *hh.mm.ss*.

If this is an AT timer with TZ=GMT or TZ=UTC, a Z follows the interval (time of day) to indicate that this is the GMT or UTC time.

USERID

Is the user ID under whose control command will be executed. Commands executing under the Background Monitor show a user ID of B/G-MON, and those executing under the Background Logger show a user ID of B/G-LOG. A user ID of STARTUP indicates that the commands are in the NMINIT or NMREADY initialization procedures where no specific user ID is assigned.

R

Displays an asterisk (*) if this timer command was routed to this user ID by the ROUTE operand. This command will not be purged automatically if the user ID is not logged on, unless a limit is specified using the LIMIT operand.

LIMIT

Specifies the number of times the command will be executed before automatic purging takes place. A limit of zero indicates that no limit applies.

CNT

Is the number of times the command has already been executed. This count is not incremented if the timer interval expires and the user ID is not logged on.

K/P

Specifies the value of the KEEP operand if it was entered when the command was created.

NO indicates that no KEEP function is in effect.

MON indicates that if the user ID is not logged on and the timer interval expires, the command will execute under control of the Background Monitor and the results will be routed to all monitor terminals.

LOG indicates that if the user ID is not logged on and the timer interval expires, the command will execute under the control of the Background Logger and the results will be routed to the activity log.

If specified, the KEEP operand takes precedence over the ROUTE operand if the user ID is not logged on.

EPZFB

Displays a set of 1-character flags:

E identifies the environment: P is primary, and C is current.

P displays the Pmsg option: Y is Yes, and N is No.

Z identifies the time zone: L is Local, and U is UTC or GMT.

F displays the FTC (Forward Time Change) option: S is Skip, and T is Trip. A dash (-) indicates that the FTC option is not relevant because the timer was defined with TZ=UTC or TZ=GMT.

B displays the BTC (Backward Time Change) option: S is Skip, and R is Repeat. A dash (-) indicates that the BTC option is not relevant because the timer was defined with TZ=UTC or TZ=GMT.

TID

Is the user assigned timer identification. Purge message is issued when the timer command expires.

NEXT

Is the *local* time at which the timer will pop next. If a backward time change occurs for a timer that has BTC=SKIP, the next logical pop time will be skipped and is indicated by a plus sign (+) following the time.

System Action:

Further display lines follow.

User Action:

Read the display lines that follow.

N12704

id by interval -userid-r lim cnt k/p epzfb tid next-lcl

Reason:

Follows message N12703 and gives details of a timer command. See message N12703 for details. The command or message text is detailed in the following message, N12707.

System Action:

None.

User Action:

None.

N12705

NUMBER OF TIMER COMMANDS DISPLAYED WAS nn.

Reason:

Gives a count of the number of preceding N12704 messages.

System Action:

None.

User Action:

None.

N12706

NO ACTIVE TIMER COMMANDS FOR USERID userid.

Reason:

Issued in response to a SHOW TIMER command, where the default operand of OWN has taken effect, and there are no active timer commands for the user.

System Action:

None.

User Action:

Use the SHOW TIMER=ALL command if timer commands other than those created by this userid are to be displayed.

N12707

CMD/MSG =xxxxxxxxxxxxxxxxxxxxxx

Reason:

Follows message N12704 and gives details of the command or message that is associated with a timer command.

System Action:

Command text may wrap to a second line if length exceeds available display space.

User Action:

None.

N12801

INSUFFICIENT AUTHORITY FOR CMDAUTH OPERAND.

Reason:

An attempt was made to change the authority of a command using the SYSPARMS CMDAUTH= command. You do not have authority to do so.

System Action:

The command is rejected.

User Action:

Have your authority level increased if it is necessary to perform this function.

N12802

SYSPARMS OPERAND xxxxxxxx IS INVALID OR OUT OF RANGE.

Reason:

The operand xxxxxxxx of the SYSPARMS command has an invalid or out-of-range value.

System Action:

The operand is rejected and processing continues.

User Action:

Correct the invalid value and enter the SYSPARMS command with that operand only.

Notes:

- SYSPARMS UNLOAD, MODDEL, MAPDEL, and MAPRESET have been replaced by the UNLOAD command.
- SYSPARMS PRELOAD, MODLOAD, and MAPLOAD have been replaced by the LOAD command.
- SYSPARMS APPLSTAT has been replaced by the APPLSTAT command.

N12803

NO OPERANDS SPECIFIED.

Reason:

A SYSPARMS command was entered with no operands.

System Action:

The command is rejected.

User Action:

Specify an operand.

N12804**SYSPARMS xxxxxxxx OPERAND ACCEPTED.****Reason:**

Issued in response to a SYSPARMS command.

System Action:

The operand is now in effect. A completion message may follow for some operands.

User Action:

None.

N12805**SYSPARMS oprnd OPERAND NOT VALID AFTER INITIALIZATION COMPLETE.****Reason:**

Certain operands of the SYSPARMS command may only be used in the NMINIT initialization procedure. One of these, oprnd, has been specified after system initialization.

System Action:

The operand is rejected.

User Action:

If the operand is required, it should be included in a SYSPARMS command in the NMINIT procedure, which is processed before the region initialization is complete.

N12806**UNABLE TO CHANGE ACB NAME - ACB IS CURRENTLY OPEN****Reason:**

To change the SOLVE ACB name the ACB must first be closed.

System Action:

None.

User Action:

Close the ACB and retry the command.

N12807

MODCB FOR ACB NAME FAILED, R15=X"XX", R0=X"XX".

Reason:

A SYSPARMS PRIACBNM= command has been unsuccessful because a VTAM MODCB macro failed. The R15 and R0 feedback from MODCB is shown.

System Action:

The command is rejected.

User Action:

Refer to the *VTAM Programming* manual, return codes.

N12808

SYSPARMS OPERAND aaaa IS INVALID FOR THIS OPERATING SYSTEM.

Reason:

A SYSPARMS command has been rejected because the specific operand aaaa is not valid for this operating system.

System Action:

The command is ignored.

User Action:

None.

N12809

OPERAND aaaaaaaaa IS NO LONGER SUPPORTED - COMMAND IGNORED

Reason:

SYSPARMS operand aaaaaaaaa is obsolete.

System Action:

The SYSPARMS command is rejected.

User Action:

None.

N12810**SYSPARM OPERAND P1 REJECTED - SET BY PARAMETER GROUP P2****Reason:**

If SYSPARMS SYSPGCHK=YES is specified (by default), all SYSPARMS operands that have been set using a Customizer parameter group can be updated only by using Customizer. You cannot execute SYSPARMS operands using the SYSPARMS command.

A request to set SYSPARMS operand (P1) has failed because it was previously set by execution of the identified parameter group (P2) and SYSPARMS SYSPGCHK=YES.

System Action:

The SYSPARMS command is rejected.

User Action:

To maintain integrity, this SYSPARMS operand should be updated using the Customizer parameter group identified.

If this SYSPARMS command was executed in an NCL procedure (either directly or using the &INTCMD verb), update the procedure to remove it. The value must be set by updating and actioning the parameter group. To bypass integrity checking, specify SYSPARMS SYSPGCHK=NO and reissue the (original) SYSPARM. Any SYSPARMS outside of Customizer are not reflected in the parameter group. If you bypass checking, we recommend that you synchronize the system with Customizer as soon as possible.

To synchronize the system: 1. Issue SYSPARMS SYSPGCHK=YES. 2. Update and action the Customizer parameter group.

N12811**INSUFFICIENT STORAGE FOR REQUEST****Reason:**

A SYSPARM COMMAND has failed because there is insufficient system storage to process the request.

System Action:

The SYSPARM command fails.

User Action:

Retry the command.

If the problem persists, check storage requirements and increase the region size if necessary.

N12901

NO OCS OPERATORS CURRENTLY ACTIVE.

Reason:

A SHOW OCS command was entered but no users logged on to the system are in Operator Control Mode.

System Action:

None.

User Action:

None.

N12902

-USERID- TERMINAL -----NAME----- -----LOCATION----- STATUS

Reason:

This message is title line of the SHOW OCS display. The messages following this message supply information about OCS operators.

System Action:

None.

User Action:

None.

N12903

userid termid name location status

Reason:

One of these messages is issued for each user currently logged on in Operator Control Mode. The display lines up under the title line (message N12902). The status (status) displayed may be REMOTE (the user has an ROF session from a remote system), ACTIVE, CLOSED (the user's OCS window is currently closed), or UNAVAIL (the user is logged on but the terminal is powered off).

System Action:

None.

User Action:

None.

N12904

END

Reason:

Signifies the end of the SHOW OCS display.

System Action:

None.

User Action:

None.

N13001

UNABLE TO ACCESS USERID INFORMATION.

Reason:

A PROFILE command was used to change the user's INITCMD, but the user's userid information could not be accessed, either because of an I/O error on the UAMS dataset or because the security exit in use rejected the request to update the userid.

System Action:

The command is rejected.

User Action:

Retry. Report occurrence to the systems administrator if this condition persists.

N13002

INITCMD NOT PERMANENTLY UPDATED.

Reason:

A PROFILE command was used to change the user's INITCMD but the update of the user's userid information failed.

System Action:

The command is rejected.

User Action:

Report the occurrence to the systems administrator for determination of the error cause.

N13003

INSUFFICIENT STORAGE TO COMPLETE REQUEST

Reason:

When calling a security exit to read a UDB insufficient storage was available to create the parameter list for the call.

System Action:

Request fails, system may eventually fall over due to lack of storage.

User Action:

Possibly wait until more storage is available. (if system stays up- system may eventually fall over due to lack of storage).

N13049

CONTAINS THE TEXT OF AN ERROR MESSAGE

Reason:

This message is issued from nm000130 when processing a PROFILE INITCMD.

System Action:

Refer to the embedded message. It may be issued from local UAMS or by a security exit.

User Action:

Determine the origin of the message and refer to that message.

N13101

NO DESTINATION SPECIFIED.

Reason:

A ROUTE command was entered without specifying the destination to which

System Action:

User Action:

Use the SHOW LINKS command to determine the destination name of the system to which the command is to be routed. A link name must be

N13102**NO COMMAND TEXT SPECIFIED.****Reason:**

A ROUTE command was entered which did not specify any command text to be routed to the destination SOLVE for execution.

System Action:

The command is rejected.

User Action:

Include some command text on the ROUTE command.

N13103**INSUFFICIENT STORAGE TO PROCESS COMMAND, RETRY.****Reason:****System Action:****User Action:**

Retry the command. Notify your Systems Administrator if the condition

N13104**UNABLE TO ROUTE COMMAND, linkname NOT CONNECTED.****Reason:**

A ROUTE command specified a destination system to which there is no

System Action:**User Action:**

Use the SHOW LINKS command to determine the status of the link to the specified destination, and retry the command when the link is active.

N13105

ROUTE COMMAND SPECIFIES INVALID LINK/DOMAIN/SSCP NAME aaaaaaaa

Reason:

The ROUTE command has been issued with the LINK or DOMAIN or SSCP operand specified but the value of the operand is invalid.

System Action:

The command is rejected.

User Action:

Correct the value of the invalid operand and retry.

N13106

COMMAND NOT VALID FOR ENTRY IN THIS MODE.

Reason:

An attempt has been made to execute a ROUTE command from an environment which does not support ROF connections. ROF connections are only supported from OCS, indirectly through ROF, from background regions (eg. BMON, BSYS, etc) and from &INTCMD environments.

System Action:

The command is rejected.

User Action:

Correct the way in which the ROUTE command is being executed. If the ROUTE command is to be executed from a fullscreen procedure then &INTCMD must be used.

N13107

Unable to route command, ROF outbound queue limit reached

Reason:

A ROUTE command to a remote system failed because the queue of messages already queued to that system for transmission exceeds the system

System Action:

User Action:

Establish whether there is a problem that is causing the backlog of

N13199**WARNING - COMMAND AAAAAAAA TOO LONG FOR INTERNAL BUFFER.****Reason:**

A Remote Operator Facility command string exceeds 250 characters and the remote system does not handle commands beyond this limit.

System Action:

The command is truncated at the 250 character limit.

User Action:

Shorten the command string by using abbreviations.

N13201**NON-PATH LOGONS TO APPLICATION applname SUSPENDED.****Reason:**

This message is issued in response to a SHOW DEFLOGON command to indicate that SOLVE has processed a SUSLOGON APPL=applname command, and will prevent all logon attempts to this application through the use of either MAI-FS or EASINET.

System Action:

None.

User Action:

None.

N13202**NON-PATH LOGONS TO ALL APPLICATIONS SUSPENDED.****Reason:**

This message is issued in response to a SHOW DEFLOGON command to indicate that SOLVE has processed a SUSLOGON APPL=ALL command, and will prevent all logon attempts to any application through the use of either MAI-FS or EASINET.

System Action:

None.

User Action:

None.

N13203

TYPE OPERAND SPECIFIES AN INVALID VALUE.

Reason:

The SHOW DEFLINK command has been entered with an operand other than the TYPE= operand or the TYPE= operand was specified with an invalid value.

System Action:

The command is rejected.

User Action:

Correct and retry.

N13204

NO LOGON PATHS HAVE BEEN DEFINED.

Reason:

A SHOW DEFLOGON command was issued but no logons have been defined to the system.

System Action:

None.

User Action:

If you wish to logon to an external application you will need to use the DEFLOGON command to establish a logon path.

N13205

-INPUT-- OPT --APPL-- --MID-- LOGMODE- MSHR DATA

Reason:

This is the title line of the display resulting from a SHOW DEFLOGON command. The message will be followed by detail lines (N13206 or N13208) each of which may be followed by messages N13207 and/or N13209 if relevant. The display is terminated by message N11907.

System Action:

None.

User Action:

None.

N13206**input opt applid mid logmode data****Reason:**

The response to a SHOW DEFLOGON command. One of these lines is displayed for each DEFLOGON entry, and shows the contents of the entry. The fields line up under the title line display N13205.

System Action:

None.

User Action:

None.

N13207**DEFLOGON Description****Reason:**

Part of the multiline SHOW DEFLOGON display. Details the DEFLOGON description for the logon path identified in the previous message (N13206 or N13208) only if the description is present.

System Action:

None.

User Action:

None.

N13208**input opt applid mid logmode data****Reason:**

This message has the same content as message N13206, but is displayed in high intensity to indicate that its use has been suspended by a SUSLOGON command.

System Action:

None.

User Action:

None.

N13209

SUSLOGON text

Reason:

Part of the multiline SHOW DEFLOGON display. Details the suspended logon text for logon path identified in the previous message (N13208).

System Action:

None.

User Action:

None.

N13210

NO DYNAMIC aaaa LINK DEFINITIONS EXIST

Reason:

A SHOW DEFLINK or SHOW DEFLINK TYPE="aaaa" command was issued but no dynamic link definitions have been defined to the system.

System Action:

None.

User Action:

None.

N13211

--MASK-- ---PREFIX--- MSGID -COLOUR-- HIGHLIGHT RETRY AM

Reason:

This is the title line of the display resulting from a SHOW DEFLINK TYPE=INMC command. It provides a heading or subheading for links defined using a mask.

System Action:

None.

User Action:

None.

N13212

aaaa bbbb cccc dddd eeee ffff gggg

Reason:

This is the detail line of the display resulting from a SHOW DEFLINK or SHOW DEFLINK TYPE=INMC command. One such line is displayed for each dynamic link definition in the system.

aaaa if the heading for this line is message N13211 this field is the mask value for this definition, with asterisks showing wildcard positions. When a remote system attempts to establish a link to this system, the mask value determines whether this dynamic link definition will be used to build the link. For the definition to be selected, the mask value must match the userdata passed on the logon from an NMPC system or the domain-id of the remote host SOLVE system. If the heading for this line is message N13214 this field is the luname of the remote system.

bbbb if the heading for this line is message N13211 this field is the 4-letter prefix which will be concatenated to the VTAM node name of the remote system to give its dynamic link name. If the heading for this line is message N13214 this field is the linkname.

cccc is the msgid which will be assigned to all dynamic links built from this definition.

dddd is the color to be used when displaying messages about any dynamic link built from this definition.

eeee is the highlight type to be used when displaying messages about any dynamic link built from this definition.

ffff is the retry interval (in seconds) to be used when reestablishing any dynamic link built from this definition.

gggg is the access method that will be used to establish sessions for this link.

System Action:

None.

User Action:

None.

N13214

-LUNAME- --LINKNAME-- MSGID -COLOUR-- HIGHLIGHT RETRY AM

Reason:

This is a title line of the display resulting from a SHOW DEFLINK or SHOW DEFLINK TYPE=INMC command. It provides a heading or sub-heading for all links defined with an LUNAME operand.

System Action:

None.

User Action:

None.

N13215

-LUNAME- --LINKNAME-- QUAL --OPSET- -COLOUR-- -HIGHL- MON ENV TRC AM

Reason:

This is the title line of the display resulting from a SHOW DEFLINK TYPE=APPC command. It provides a heading or subheading for links defined using an LUNAME.

System Action:

None.

User Action:

None.

N13216

-LUMASK- ---PREFIX--- QUAL --OPSET- -COLOUR-- -HIGHL- MON ENV TRC AM

Reason:

This is the title line of the display resulting from a SHOW DEFLINK TYPE=APPC command. It provides a heading or subheading for links defined using a mask.

System Action:

None.

User Action:

None.

N13217

aaaa bbbb cccc dddd eeee ffff gggg hhhh iiii jjjj

Reason:

This is the detail line of the display resulting from a SHOW DEFLINK TYPE=APPC command. Fields shown relate to the headings provided by message N13215 or N13216 and are as follows:

aaaa the complete luname of the remote end or an luname mask.

bbbb either the linkname (heading is N13215) or a four character prefix (heading is N13216).

cccc the four character qualifier to be used for this destination to qualify transaction identifiers.

dddd the name of the Option Set Control Table entry to be used to determine the options supported by the remote LU.

eeee is the color used when displaying any messages that relate to this link.

ffff is the highlight type used when displaying any messages that relate to this link.

gggg specifies whether or not link messages are to be displayed as monitor messages.

hhhh specifies whether APPC user region creation will be link dependent (ENV) or link independent (GBL) for a given userid.

iiii indicates whether LU 6.2 session tracing is to be used.

jjjj the access method that will be used to initiate sessions.

System Action:

None.

User Action:

None.

N13218

MPREF REFRESH MRESP- LIMIT ACTION NTFY APPST SESS- MAX

Reason:

This is the second header line of a SHOW DEFLOGON command. The heading identifies the attributes of a DEFLOGON detailed by an N13219 message.

System Action:

None.

User Action:

For more information, see the help for message N13219.

N13219

P1 P2 P3 P4 P5 P6 P7 P8 P9

Reason:

This is the second detail line of the display resulting from a SHOW DEFLOGON command. The fields, relating to the headings provided by message N13218, are:

P1 The 1 to 5 character prefix to be used by MAI-FS as the basis for selecting a pseudo- terminal.

P2 A function key recognized by the application as a request for screen refresh, for example, under SOLVE:Access this is CLEAR.

P3 BEFORE/AFTER value indicating whether MAI-FS is to propagate responses from the physical terminal or respond before sending the data to the terminal.

P4 Specifies a time in minutes that will be used by MAI-FS to set the period starting from keyboard unlock before MAI-FS initiates a timeout action.

P5 Indicates the timeout action to be taken by MAI-FS. Valid values are:

CC - Conditionally cancels the session.

C - Cancels the session.

EVENT - Issues an Event Distribution Services message.

SE - Invokes the session script in END mode.

SS - Invokes the session script in SKIP mode.

P6 YES/NO indication of whether EASINET should use the VTAM Third Party Notify facility when establishing sessions.

P7 YES/NO indication of whether the application's status should be queried before establishing sessions (MAI-FS and EASINET).

P8 Count of currently active MAI-FS sessions using this entry.

P9 The maximum number of concurrent active sessions.

System Action:

None.

User Action:

None.

N13220**P1****Reason:**

This is the third detail line of the display resulting from a SHOW DEFLOGON command. This line shows the session script details (*P1*) and corresponds to the DEFLOGON SCRIPT parameter. The line is only displayed if the SCRIPT parameter is specified.

System Action:

None.

User Action:

None.

N13301**NO EQUATE STRING SPECIFIED.****Reason:**

An EQUATE command was entered but no character string to which the command string is to be equated was entered.

System Action:

The command is rejected.

User Action:

Correct and retry the command.

N13302**EQUATE STRING CANNOT EXCEED 8 CHARACTERS.****Reason:**

The EQUATE command allows a string of between 1 and 8 characters to be equated to another text string. An EQUATE command has been entered which has attempted to set an equated value for a string of more than 8 characters.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N13303

EQUATE STRING CONTAINS INVALID CHARACTERS

Reason:

An EQUATE string has been entered which attempted to set an equate for a string which is not supported. The equate string may not have a suppression character (-) as the first character and may not contain ampersands (&).

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N13304

NO EQUATE TEXT SPECIFIED.

Reason:

An EQUATE command was entered specifying an equate string but no text. This form of the EQUATE command is only valid when the EQUATE command is intended to delete an existing EQUATE.

System Action:

The command is rejected.

User Action:

The EQUATE may have already been deleted. If not, some text must be specified on the EQUATE command.

N13305

EQUATE TEXT EXCEEDS MAXIMUM OF 130 CHARACTERS.

Reason:

An EQUATE command has been entered which specifies more than the maximum of 130 characters of text.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N13306**EQUATE STRING xxx DELETED.****Reason:**

The EQUATE for string xxx has been deleted by an EQUATE command. There is no longer an equated value for the string xxx.

System Action:

None.

User Action:

None.

N13307**TEXT SET FOR EQUATE STRING xxx.****Reason:**

An EQUATE command has been completed successfully. Entry of the string xxx will cause the equated text to be substituted in place of xxx before command execution.

System Action:

None.

User Action:

None.

N13308**GLOBAL EQUATE FOR xxx NULLIFIED FOR LOCAL USE.****Reason:**

The specified string, defined as a global or system wide EQUATE value, has been reset for this particular operator window by the entry of an EQUATE command. It remains available for other operator windows that have not also reset it.

System Action:

If the equated string is entered in this environment, the global equated string will not be substituted in its place.

User Action:

None.

N13309

EQUATE TEXT/STRING OF SINGLE `+' IS INVALID.

Reason:

The use of `+' indicates that a blank character is required at the end of the equated text or string, consequently a single `+' is equivalent to equating to a blank, which is invalid.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N13310

EQUATE STRING CONFLICTS WITH AN EXISTING COMMAND.

Reason:

You attempted to define an equate, but the selected equate string exactly matches an existing command. This is invalid after system initialization completes.

System Action:

The command is rejected.

User Action:

Select another string that does not conflict with another command. It is possible to replace an existing command with an equated string if you place the EQUATE command in the NMINIT NCL procedure that is executed automatically during system initialization. Using this technique, you can force an existing command to execute an alternative command or an NCL procedure if required. Another method of executing an NCL procedure in preference to executing a command is using the SYSPARMS CMDREPL command.

N13312**EQUATE STRING IS AMBIGUOUS WITH AN EXISTING COMMAND.****Reason:**

You attempted to define an equate, but the selected equate string matches a valid abbreviation for an existing command. This is invalid after system initialization completes.

System Action:

The command is rejected.

User Action:

Select a string that does not conflict with another command.

N13313**GLOBAL EQUATE xxxxxxxx HAS OVER-RIDDEN MATCHING COMMAND.****Reason:**

This message is issued when an EQUATE command in either NMINIT or NMREADY has exactly matched an existing SOLVE command and has replaced it. Each time the command is entered it will be translated into the equated string and the equated string will be executed in place of the original command.

System Action:

The equated string replaces the command for all users.

User Action:

If replacement of the command was intended, no action is required. If replacement was not intended, choose an alternative equate. The SHOW EQUATES command will show a TYPE of REPL for any equate that replaces a command. Local equates cannot be used to over-ride REPL equates. An alternative to replacing a command with an NCL procedure is to use the SYSPARMS CMDREPL command.

N13314

EQUATE CONFLICTS WITH FIXED GLOBAL EQUATE.

Reason:

You have defined an equate that matches an equate defined at system initialization, which was given the REPL attribute because it replaced an existing command. An equate that replaces an existing command is classified as fixed and cannot be replaced by a local equate.

System Action:

The command is rejected.

User Action:

Choose an alternative equate string.

N13315

EQUATE COMMAND INVALID FROM THIS ENVIRONMENT.

Reason:

The EQUATE command may only be issued from an OCS environment, such as a logged-on user or a console. It cannot be issued from a system procedure environment. If the EQUATE command is issued using &INTCMD, the EQUATE command applies to the primary environment in which the procedure is executing.

System Action:

The command is rejected.

User Action:

None.

N13433**USER SERVICES PROCEDURE: procname****Reason:**

Part of the PROFILE display. Indicates the name of the User Services NCL procedure that will be executed on selection of the User Services option from the SOLVE Primary Menu.

System Action:

None.

User Action:

None.

N13435**(MSGCODE=aa..) CURRENT MESSAGE CODE SETTING IS aa.****Reason:**

Part of the PROFILE display. MSGCODE specifies a mask of 2 hexadecimal digits, 00- FF . NCL procedures may specify &WRITE MSGCODE=aa to control delivery of messages. Only if the bits set on the &WRITE statement are also set in the users MSGCODE setting will the message will be written to that users screen.

System Action:

None.

User Action:

None.

N13441

(CMDSEP=aaa..) SEMI-COLONS `;' (NOT) RECOGNISED AS COMMAND SEPARATORS

Reason:

Part of the PROFILE display. CMDSEP specifies whether or not semi- colons may be used to separate multiple commands entered on the command line.

System Action:

None.

User Action:

None.

N13442

(NCLTEST=YES.) NCL PROCEDURES WILL BE LOADED FOR PRIVATE USE or (NCLTEST=NO..) NCL PROCEDURES MAY BE SHARED WITH OTHER USERS

Reason:

Part of the PROFILE display. NCLTEST specifies whether preloaded, autoshared, or retained NCL procedures can be used by this NCL environment. NO indicates they can be used (not test mode). YES indicates a private copy of an NCL procedure will always be used, and that this copy will never be autoshared or retained.

System Action:

None.

User Action:

None.

N13443**(PREFSYS=YES/NO...) MESSAGES WILL/WILL NOT HAVE ORIGIN SYSTEM ID PREFIX****Reason:**

This message is part of the PROFILE display. It tells you whether or not all messages, including those from your local system, will be prefixed by the originating system id when displayed in this environment.

System Action:

None.

User Action:

None.

N13444**(MSG=YES/NO....) MSG COMMAND OUTPUT WILL/WILL NOT BE RECEIVED****Reason:**

This message is part of the PROFILE display. It tells you whether or not this environment is to receive messages generated by the MSG command.

System Action:

None.

User Action:

None.

N13445

(UNSOL=YES/NO...) UNSOLICITED MESSAGES WILL/WILL NOT BE RECEIVED

Reason:

This message is part of the PROFILE display. It tells you whether or not unsolicited messages (PPO, AOM, monitor messages, broadcasts, etc) will be displayed in this environment. If UNSOL=YES, then unsolicited messages will be received as determined by individual message category options (such as PPOMSG=YES/NO). UNSOL=NO overrides 'YES' settings for individual message categories.

System Action:

None.

User Action:

N13446

(EXIT=xxx....) OCS EXIT (NOT) PREVENTED WHILST NCL PROCESSES ACTIVE

Reason:

Part of the PROFILE command display. This message indicates the setting of the EXIT option for Operator Console Services. xxx indicates whether OCS allows termination whilst NCL processes remain active. Values are:
YES - OCS termination proceeds.
NCL processes are flushed.
NO - OCS termination is prevented when NCL processes are active.
WARN - A warning message is issued if NCL processes are active. A subsequent termination request without further command input will exit OCS.
An N23001 message is issued if OCS termination is prevented.

System Action:

None.

User Action:

None.

N13447**(INDENT=nn...) MULTI-LINE MESSAGES WILL/WILL NOT BE INDENTED.****Reason:**

Part of the PROFILE list display, which supplies the current multi-line message indentation factor, nn. Messages to an OCS screen which are split over more than one line will have all lines other than the first indented by nn columns.

System Action:

None.

User Action:

N13452

(NCLUCASE=xxx) NCL PARAMETERS WILL BE yyyyyy CASE.

Reason:

This message is issued in response to a PROFILE display command. The NCLUCASE attribute of the Operator Console Service environment is set to either 'YES' or 'NO'. A value of 'YES' indicates that parameters passed to NCL will be uppercased. A value of 'NO' can be used to pass parameters as entered in the OCS command line.

System Action:

None.

User Action:

None.

N13453

USER TIMEZONE NAME: *nnn* OFFSET: *shhmm ddd*

Reason:

This message is issued in response to a PROFILE display command. It shows the user time zone name and GMT (UTC) time offset.

Note: A time zone name of SYSTEM means that this user is using the region local time offset.

If the offset is greater than one day, the number of days is shown and the *hhmm* is the remainder.

-STRING- TYPE ----- EQUATED COMMAND TEXT -----
-

Reason:

This is the title line of the SHOW EQUATES display.

System Action:

None.

User Action:

None.

N13502

string type text.....

Reason:

This is an information line from the SHOW EQUATES display. One of these display lines is issued for each equated string available to this operator window. string is the equated string, type signifies whether the value is global (GLBL) and hence available to all users on entry to Operator Control Mode or local (LOCL) to this window only, or has replaced a SOLVE command (REPL). text.... is the text equated to the string.

System Action:

None.

User Action:

Equates with a type of LOCL will be lost when exiting from Operator Control Mode. Equates with a type of GLBL will always be available unless a LOCL equate has been defined to replace the GLBL equate. LOCL equates are only valid for use from the operator window from which they were defined. Equates with a type of REPL have replaced a SOLVE command of the same name and cannot be overlayed or replaced by the definition of a LOCL equate.

N13503

N13505

**--LINKNAME-- -STATUS- MODE MSGID --NODE-- TYPE PEER -TIME
DIFF-**

Reason:

This is the title line of a SHOW LINKS display.

System Action:

None.

User Action:

None.

N13506**linkname status mode msgid node type peer timediff****Reason:**

This is a display line issued as a result of a SHOW LINK command. One such line is issued for each link that matches the selection criteria on the SHOW LINKS command. Additional messages provide the status of each of the link's sessions.

linkname is the INMC name by which the remote system is known within the system.

status is the current link status. Possible values are:

ACTIVE One or more sessions are open between the two systems and traffic may flow between them.

PEND-ACT This system is attempting to contact the remote system.

STARTING The two systems have made contact and INMC initialization is underway. This involves a protocol exchange to authorize and aid startup.

STOPPED The link between the two systems has been broken by use of a LINK STOP command.

FAILED An error has occurred on one or more of the sessions that comprise the link.

DISABLED The link between the two systems has been disabled due to inadequate licensing authorization.

mode is the mode in which the link operates, values being `S' (Simple mode) `P' (Preferential) or `R' (Rotate and Backup').

msgid is the default prefix assigned to messages received from the remote system.

node is the network node name of the remote system.

type is the link type, either DYN (dynamic) or STAT (static).

peer describes the remote system as either a HOST or PC.

timediff is the difference between the internal (hardware) clock times on this system and the remote system. The difference is expressed as plus or minus hh:mm:ss.th (relative to this system). This value may not match the apparent difference between the time-of-day clocks on the two systems, since time-of-day may be offset from the internal clock values.

System Action:

None.

User Action:

If the link status is 'FAILED' then this indicates an unrecoverable error has occurred on the link. Additional log messages will provide the failure reason and should be reported to your product support representative.
A link status of 'DISABLED' indicates that one or both systems are not licensed sufficiently. Report the error to your product support representative.

N13507

NO LINKS DEFINED.

Reason:

A SHOW LINKS command was specified but there are no links defined that match the specified name or prefix.

System Action:

Reason:

This message is issued in response to a SHOW USERS display, if there are no users currently logged on to the system.

System Action:

None.

User Action:

None.

N13509**USERID TERMINAL TYPE.****Reason:**

This is the title line of the SHOW USERS display.

System Action:

None.

User Action:

None.

N13510**userid terminal type (status)****Reason:**

This message forms part of the SHOW USERS display. One of these messages is issued for each user currently logged on to the system.

userid Is the logon user ID. This field is displayed in high intensity for the user that issued the display command.

terminal Is the region name. This is the logical unit name of the terminal at which the user is logged on. A numeric reconnection identifier is displayed for disconnected regions. *REMOTE* is displayed for users logged on from a remote system using ROF. This field is displayed in high intensity for the region that issued the display command.

type Is a mnemonic indicating the type of terminal being used:

AOMP - AOMPROC system procedure region

BAOM - background AOM region

BLOG - background logger region

BMON - background monitor region

BSVR - background server region

BSYS - background system region

CNMP - CNMPROC system procedure region

LOGP - LOGPROC system procedure region

OPER - system console

PPOP - PPOPROC system procedure region

3270 - display terminal (LU-type 2)

LU1 - line mode terminal (LU-type 1)

VDU - display terminal in a Fujitsu system

ROF - remote user (this is followed by the link name for the remote system)

status Contains additional information concerning the user region. The values may indicate the following:

LOCK The region is currently under the control of the LOCK function due to timeout or command.

DISC The region has been detached from the logical terminal due to timeout or the DISCONN command. Additional fields supply the terminal name and time of the disconnection.

TO link The user region has a ROF connection to the remote system named by 'link'.

FROM link The user region is a ROF connection from the remote system named by 'link'.

PENDING A ROF connection has been requested to a system for which the link is not active.

RECOVERY pending automatic recovery.

(U/A) An LUSTAT has been received indicating that the device is unavailable. This generally indicates that the device has been powered off.

System Action:

None.

User Action:

None.

N13511

aaaa USERS LOGGED ON, bbbb DISCONNECTED

Reason:

Issued at the end of a SHOW USERS command. Gives a count of the number of users logged on and the number logged on but currently disconnected.

System Action:

None.

User Action:

None.

N13512

Reason:

Provides an underline to the title line of the SHOW USERS display (N13509).

System Action:

None.

User Action:

None.

N13513

type TO linkname (status)

Reason:

Part of the SHOW USERS display, one such message appears for each connection that the user has to a remote SOLVE system. Type is INMC, NVC or APPC. Linkname is the name by which the remote SOLVE was defined in a LINK command and is the name to be used in ROUTE commands to that system. Status will be RECOVERY if the signon has failed at some time in the past owing to LINK failure. The signon will automatically be recovered when the link is re-established. Alternatively, status will be PENDING if a signon command was entered before a link to a remote SOLVE system was established. The signon will automatically complete when the link becomes active.

System Action:

None.

N13514

NO MESSAGES REQUIRING REPLIES HAVE BEEN INTERCEPTED.

Reason:

A SHOW REPLIES command was issued but no VTAM messages that require replies are outstanding.

System Action:

None.

User Action:

None.

N13515

TIME- R/# ----- MESSAGE TEXT -----

Reason:

The heading line of the SHOW REPLIES display.

System Action:

TIME is the time of day the message was intercepted. R/# is the reply number that will have to be used when replying to the message.

User Action:

See the following N13516 messages.

N13516

HH.MM x## ----- MESSAGE TEXT -----

Reason:

The text and receipt time of a VTAM message that requires or required a reply.

System Action:

None.

User Action:

The REPLY command can be used to reply to a message if no reply has already been issued. The reply number is in the format x## where x is the letter `P' or `S' and ## is in the range 00-99. When replying to a message the exact format of the reply number must be used. The P and S is used internally by SOLVE to determine how to return the reply to VTAM. Example: REPLY P00,YES

N13517

NO NCL PROCEDURES PRELOADED OR AUTO-SHARED.

Reason:

A SHOW NCLSTAT command was issued when there were no NCL procedures preloaded or auto-shared.

System Action:

None.

User Action:

**NAME STATUS USERS REFCNT STMTS KBYTES LIBRARY
AGEUSE/USERID**

Reason:

The title line of the SHOW NCLSTAT display.

System Action:

None.

User Action:

None.

N13519

**NAME STATUS USERS REFCNT STMTS KBYTES LIBRARY
AGEUSE/USERID**

Reason:

The detail line of a SHOW NCLSTAT display.

NAME - identifies the name of the NCL procedure.

STATUS - states whether the procedure is PRELOADed, AUTO-SHRed, LOADING or P-UNLOAD, RETAINED, CMDREPL, PRIVATE or NCLTEST.

USERS - is the number of users referencing the procedure.

REFCNT - is the number of times this copy of the procedure has been referenced since it was loaded.

STMTS - is the number of statements in the procedure.

KBYTES - is the number of Kilo Bytes the procedure occupies in virtual storage.

LIBRARY - is the procedure's library DD name.

AGEUSE - is used to keep a count of the "age" of the retained procedure.

Procedures that have a status of "P-UNLOAD", will be deleted only when the current user count reaches zero, subsequent requests for this procedure will result in a new copy of the procedure being loaded, and as such it is possible to have multiple copies of a procedure in storage at any one time.

USERID - is the userid initiated the procedure with the PRIVATE, LOADING or NCLTEST status (this field replaces AGEUSE).

System Action:

None.

User Action:

N13520**VSAM STATISTICS REQUEST FAILED, DD=ddname****Reason:**

A SHOW VSAM command has failed, either due to a lack of storage or a VSAM error.

System Action:

The command is terminated due to error.

User Action:

If the condition persists contact your systems administrator.

N13521**DDNAME FILEID TYPE A/U SM DATA EXT INDX EXT RKP KYL UKY STUS
OPTNS****Reason:**

The heading in response to a SHOW UDB command. This information can be used to help determine the space requirements for the VFS dataset. It is extracted from the VSAM ACB; therefore, reflects VSAM calculations about the space remaining in the VFS dataset.

DDNAME The JCL DDname associated with this file.

FILEID For UDBs, this is the logical file ID assigned to the UDBCTL OPEN ID= operand. This FILE ID must be used when referring to this file with an NCL statement. For UDBs, a single dash ('-') in this field indicates that no file ID is assigned.

TYPE The type of VSAM dataset: BASE (base cluster), AIX (Alternate Index), PATH (path), SYSO (sysout), ESDS or PDS.

A/U The number of active users that have a current logical connection to the file through VFS. This may include NCL procedures such as LOGPROC. It is not possible to logically stop access to a dataset (using the UDBCTL command) unless this number is 0.

SM Maximum strings used by VSAM to service this file. This can be used to tune the dataset.

DATA Percentage utilization of the data portion of the file.

EXT Number of extents used by the data portion of the file.

INDX Percentage utilization of the index portion of the file.

EXT Number of extents used by the index portion of the file.

RKP Relative key position of the dataset.

KYL The length of the key defined for the dataset.

UKY Indicates unique key requirement for alternate indices.

STUS Current file status. Can be SYS (SOLVE system dataset), AVAL (UDB available for use), STOP (UDB logically stopped by a UDBCTL command) or CLSD (UDB is physically closed because it failed to open or because a UDBCTL command closed it).

OPTNS The dataset may be opened with the following options:

R - Opened for reuse

I - Opened for input, updates not allowed

L - Local Shared Resource pool is used for buffers

S - Using Sequential Insert Strategy (SIS)

D - Using deferred writes

F - DBCS=FUJITSU is in effect for this file

N - EXIT=NO is in effect for this file

X - RLS is in effect for this file

System Action:

Multiple message lines (N13522) follow giving specific details.

User Action:

This information should be used only with the knowledge of the constraints of VSAM in calculating available space. The available space is based on control areas that are empty and have never been used. It is possible for a control area to have been used, the records deleted, and the control area to be empty again. VSAM does not classify this control area in its free space calculations; however, this information can be used to determine the largest amount of storage used at any time. When used in conjunction with the number of extents allocated, you should be able to predict when an increase in size is required. VSAM supports a maximum of 123 extents if the volume and/or available dataset permits.

N13522**ddname attributes****Reason:**

This message supplies the details for each VFS dataset or UDB as described by message N13521 or N15101.

System Action:

None.

User Action:

Refer to N13521 or N15101 for a description of the contents of the fields in this message.

N13523

SESS#...*xn* status mode AM=*name* KB=*number*

Reason:

Part of the SHOW LINK display. This message is repeated for each active session maintained with the remote system.

Primary sessions are shown with *x* being a fullstop, and *n* being the relative session number, for example, SESS#....3.

Secondary sessions are shown with *x* being the letter S, and *n* being the relative session number. For example, SESS#...S2 (secondary sessions are displayed only if the SHOW LINK command has the DETAIL operand specified).

The *status* indicates the current session state. Values are:

PEND-ACT

The system is attempting to contact the remote system using this session.

ACTIVE

The session between the two systems is open and traffic can flow across it.

QUIESCING

The link between the two systems is being deactivated. The session is being terminated.

STOPPED

The link between the two systems has been broken by the use of a LINK STOP command. No session exists.

DISABLED

This session cannot start and the error is regarded as permanent. When the session was disabled, messages N35004 and N35005 were sent to MONITOR users and the log. See those messages for more information.

The *mode* indicates the session mode (displayed only if the DETAIL operand is specified). Values are:

S

Single-mode primary session.

P

Preferential-mode primary session.

A

Active/Backup mode normal active session.

AB

Active/Backup mode backup session activated when normal active mode session fails or cannot be started.

SE

Secondary session.

The AM=*name* shows the access method that the session is using (if the DETAILS operand is specified).

The KB=*number* shows the number of kilobytes of data that have been sent on this primary session.

System Action:

None.

User Action:

To monitor the status of your session links, enter **/INMC** at the prompt on any panel to display the INMC : Link Status List.

If a session is quiescing, the LINK cannot be restarted until the session terminates.

N13524

**TOTALS: STATIC LINKS=stot DYNAMIC LINKS=dtot DYNAMIC
LIMIT=dmax**

Reason:

This message is the last line of a SHOW LINKS display. It gives the total number of static links defined in the system (stot), the total number of dynamic links in the system (dtot) and the maximum possible dynamic links (dmax), set by sysparm DYNLMAX.

System Action:

N13526

SOURCE OUTPUT -BYTES -SENDS COMPRESSED -BYTES SUCC% CMPR% TOTL%

Reason:

This is the heading message for a SHOW COMP command. One or more messages N13527 follow which contain values for each of the fields under this heading message, as described here. The SOURCE field specifies the source of the datastreams being compressed - either as MAI or PANEL (internally from SOLVE panels). Two OUTPUT values are shown, the BYTES sent, and SENDS - the number of sends. The COMPRESSED -BYTES field contains the number of bytes compressed. The SUCC% field indicates, as a percentage, how often compression was successful in reducing the output datastream size. The CMPR% indicates, as a percentage, the compression ratio when compression was successful, while TOTL% indicates, as a percentage, the total compression ratio.

LINK NAME linkname INVALID, MATCHES LOCAL ID OF THIS HOST.

Reason:

The link name specified in a LINK command is the same as the name used to identify this SOLVE system, as defined by the SYSPARMS command ID= operand. The same name cannot be used to identify another SOLVE system.

System Action:

The command is rejected.

User Action:

Correct the link name and retry.

N13623

LINK FROM *systemid* TO *linkname* HAS BEEN STOPPED.

Reason:

This message confirms successful completion of a LINK STOP= *linkname* command where *linkname* is the link name of a remote SOLVE system and *systemid* is the local ID of this system.

System Action:

None.

User Action:

None.

N13624

LINK SESSIONS FOR *linkname* STILL QUIESCING AND CANNOT BE RESET.

Reason:

A LINK RESET command has been issued for link *linkname*, but one or more of the VTAM sessions associated with the link is still in the process of stopping. The link cannot be reset until all sessions have stopped. This situation usually occurs during a period of VTAM degradation.

System Action:

The link is not reset.

User Action:

Wait a minute or two and reissue the command.

N13625

APPC LINK START REQUEST ACCEPTED.

Reason:

Confirms that a LINK START=*linkname* command has been accepted.

System Action:

None.

User Action:

None.

N13626**COMMAND REJECTED. TEMPORARY STORAGE SHORTAGE.****Reason:**

There was insufficient storage to process a LINK START= command.

System Action:

Command processing terminates.

User Action:

Investigate the storage problem.

N13627**APPC LINK aaaa TO LU bbbb WILL BE cccc AND DEACTIVATED.****Reason:**

This message confirms that a LINK STOP= aaaa TYPE=APPC command with option cccc has been entered and accepted.

System Action:

Link de-activation starts using option cccc. For the meaning of the different de-activation options see the Command Reference.

User Action:

None.

N13628**APPC LINK aaaa TO LU bbbb WILL BE FORCE DEACTIVATED.****Reason:**

This message confirms that a LINK STOP=aaaa TYPE=APPC FORCE command has been entered and accepted.

System Action:

Link de-activation will commence immediately. All active or pending conversations will be terminated.

User Action:

None.

N13629

APPC LINK *aaaa* TO LU *bbbb* *cccc* DEACTIVATION IN PROGRESS.

Reason:

A LINK STOP=*aaaa* TYPE=APPC command was entered when link de-activation was already in progress.

System Action:

The system will proceed with link de-activation using the strongest de-activation option *cccc* specified so far. QUIESCE takes precedence over DRAIN while FORCE takes precedence over both DRAIN and QUIESCE.

User Action:

None.

N13630

APPC LINK *aaaa* TO LU *bbbb* PENDING ACTIVATION, FORCE SCHEDULED.

Reason:

You entered a LINK STOP=*aaaa* TYPE=APPC with the FORCE operand. The link has not completed initialization but the force deactivation is scheduled.

System Action:

None.

User Action:

None.

N13631

TRACING *aaaaaaaa* FOR APPC LINK *bbbbbbbbbbbbbb* TO LU *cccccccc*.

Reason:

APPC tracing has been started or stopped, as indicated by "*aaaaaaaa*", for LINK "*bbbbbbbbbbbbbb*" to LU "*cccccccc*".

System Action:

As indicated by message.

User Action:

None.

N13632

APPC LINK aaaaaaaaaa NOT FOUND - COMMAND IGNORED.

Reason:

An attempt was made to stop an APPC link but no link by that name was active.

System Action:

The command is ignored.

User Action:

None.

N13633

APPC LINK aaaaaaaaaa TO LU bbbbbbbb ACTIVE - STOP REQUIRED.

Reason:

An attempt was made to RESET an APPC link but the link has not yet been stopped.

System Action:

The command is ignored.

User Action:

Issue STOP command to stop APPC link communication.

N13634

APPC LINK aaaaaaaaaa TO LU bbbbbbbb CLOSING - RESET SCHEDULED.

Reason:

An attempt was made to RESET an APPC link. The link is in the process of stopping and will be reset when all activity has ceased.

System Action:

Link reset is scheduled.

User Action:

None.

N13635

APPC LINK aaaaaaaaaa TO LU bbbbbbbb RESET.

Reason:

An APPC link has been reset after all processing associated with the link has terminated.

System Action:

Link knowledge is removed from memory.

User Action:

None.

N13640

name ACCESS METHOD NOT AVAILABLE

Reason:

A LINK START command was entered with an AM operand that specified an access method that is not available in this SOLVE system

System Action:

The command is rejected.

User Action:

Correct the AM operand.

N13641

name IS AN INVALID OR UNKNOWN ACCESS METHOD NAME

Reason:

A LINK START command was entered with an AM operand that specified an access method that is invalid or unrecognized.

System Action:

The command is rejected.

User Action:

Correct the AM operand.

N13642**LINK START COMMAND NOT SUPPORTED BY name ACCESS METHOD****Reason:**

A LINK START command was entered with an AM operand that specified an access method that does not support the LINK command.

System Action:

The command is rejected.

User Action:

Correct the AM operand.

N13643**LINK START OF THIS TYPE NOT SUPPORTED BY name ACCESS METHOD****Reason:**

A LINK START command was entered with an AM operand that specified an access method that does not support this type of LINK (APPC or INMC).

System Action:

The command is rejected.

User Action:

Correct the AM operand.

N13644**P1 ACCESS METHOD DISALLOWED IN DOMAIN DEFINITION****Reason:**

A LINK START command was entered with an AM operand which was specified as "NO" in the DOMAIN definition.

System Action:

The command is rejected.

User Action:

Correct the AM operand, or reissue the DOMAIN DEFINE command for the link.

N13701

INVALID OPERAND xxxx ENTERED.

Reason:

The only operand allowed in the SIGNON/SIGNOFF command is the linkname of the remote SOLVE system.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N13702

DESTINATION NAME linkname EXCEEDS MAXIMUM LENGTH.

Reason:

The specified link name of a remote SOLVE system exceeded the maximum supported for the operand. A linkname is 1 to 12 characters and a domain specification is 1 to 4 characters.

System Action:

The command is rejected.

User Action:

Correct the command operands and retry.

N13703

DESTINATION NAME OMITTED.

Reason:

The linkname of a remote SOLVE system was omitted from a SIGNON/SIGNOFF command, but is required.

System Action:

The command is rejected.

User Action:

Retry the command with the correct linkname.

N13704**DESTINATION NAME linkname CONTAINS INVALID CHARACTERS.****Reason:**

An invalid destination name was specified in a SIGNON/SIGNOFF command.

System Action:

The command is rejected.

User Action:

Retry the command with the correct linkname.

N13705**SIGNON COMPLETE. REGION REFRESHED.****Reason:**

Confirms that a SIGNON command without operands has been completed successfully and that the user region authorization has been re-initialized.

System Action:

None.

User Action:

None.

N13707**DESTINATION NAME linkname IS NOT DEFINED.****Reason:**

The destination name specified on a SIGNON/SIGNOFF command is not defined to the system as the linkname of a remote SOLVE system.

System Action:

The command is rejected.

User Action:

Retry the command with the correct linkname. If the linkname is correct, a LINK START=linkname command may be required to define the linkname.

N13708

SIGNON TO linkname ALREADY QUEUED.

Reason:

A SIGNON command has been entered but a previous SIGNON command is already queued for the same linkname for the same user.

System Action:

The command is rejected.

User Action:

The existing queued SIGNON will complete when the link to the remote SOLVE system becomes active.

N13709

LINK TO linkname NOT ACTIVE, SIGNON COMMAND PENDING.

Reason:

A valid SIGNON command has been entered but the link to the destination SOLVE system is not yet active. The request is queued and will complete when the link is established.

System Action:

The command is suspended.

User Action:

If the queued SIGNON is no longer required a SIGNOFF command can be used to cancel it.

N13710

SIGNOFF COMPLETE.

Reason:

Confirms successful completion of a SIGNOFF command.

System Action:

None.

User Action:

None.

N13711**NOT SIGNED ON FROM THIS WINDOW.****Reason:**

A SIGNOFF command was entered specifying the linkname of a SOLVE system to which the user is not signed on from the window from which the command was entered.

System Action:

The command is rejected.

User Action:

None.

N13712**PENDING SIGNON CANCELLED.****Reason:**

A SIGNON command issued earlier, but which has not completed because the link to the remote SOLVE system has not become active, has been cancelled by entry of a SIGNOFF command.

System Action:

None.

User Action:

None.

N13713**DESTINATION NAME aaaaaaaa IS NOT A REMOTE SYSTEM****Reason:**

A SIGNON/SIGNOFF command was issued but the destination name specified was the system identifier of the local system.

System Action:

The command is rejected.

User Action:

Retry the command with a remote linkname.

N13714

COMMAND NOT VALID FOR ENTRY IN THIS MODE.

Reason:

An attempt was made to issue the SIGNON or SIGNOFF command from an environment that does not support this command.

System Action:

The command is rejected.

User Action:

Retry from another environment.

N13715

SIGNON FAILED. REFRESH NOT PERFORMED.

Reason:

A SIGNON command has been issued to refresh a current user or background environment. The refresh failed because an error occurred obtaining the security information. If you are using a full security exit, your exit may have issued an error return code for the 'return userid information' request. Otherwise, there may be a problem with your UAMS dataset.

System Action:

The environment continues as before. It is not refreshed.

User Action:

For a user environment, refresh can be achieved by LOGOFF/LOGON.

N13716

REGION= OPERAND HAS INVALID VALUE.

Reason:

An invalid value was specified on the REGION= operand on a SIGNON command. Valid values are OWN, ALL or APPC. The default value is REGION=ALL.

System Action:

The command terminates.

User Action:

Correct operand value and retry the command.

N13717**OWNING REGION NOT FOUND FOR USER.****Reason:**

An attempt to refresh a user definition using the SIGNON command failed because the users owning environment was not found. Possible causes are because the user was in the middle of logging off, or the user region was terminating for some other reason.

System Action:

The refresh is not performed.

User Action:

Determine the state of the region, if the region still requires a SIGNON, then retry the operation.

N13718**ADDITIONAL OPERANDS INVALID WITH REGION=****Reason:**

A SIGNON command using the REGION= operand, had additional operands specified. The REGION= operand is mutually exclusive with all other SIGNON command operands.

System Action:

the command terminates.

User Action:

Correct the problem and retry the operation.

N13750

INSUFFICIENT AUTH FOR OPERAND

Reason:

A SIGNON command was entered but was rejected because one or more operands specified required a higher Command Authority level than that of the user who issued the command.

System Action:

The command is rejected.

User Action:

Retry without the operand(s).

N13801

NO NETWORK PARTITIONS DEFINED FOR THIS USERID.

Reason:

This is the response to a SHOW NPF command if no Network Partitioning for either commands or messages has been defined for this userid. The definition of Network Partitions is a function of UAMS maintenance.

System Action:

None.

User Action:

None.

N13802

NETWORK PARTITION STATUS FOR USERID uuuuuuuuu

Reason:

The title line of the SHOW NPF display.

System Action:

None.

User Action:

None.

N13803**RESOURCE TABLE NETWORK STATUS NOW INITIAL-STATUS****Reason:**

The display heading line for the SHOW NPF display.

System Action:

None.

User Action:

None.

N13804**resource table network curstat initstat****Reason:**

Issued in response to the SHOW NPF command. A display line in this format is provided for each NPF table for which this userid has been defined.

resource This is the resource group name associated with this NPF table. The resource group name is the first operand on each NPF resource list control member entry.

table Table names refer to resource members in the NPTABLES dataset. Table names are specified as part of a RESOURCE LIST control entry with the resource- member=qualifier.tablename operand. It is also the name by which the table can be referenced with the SHOW NPTAB=tablename command and the NPTAB command.

network This is the qualifier which applies to the NPF resources in the NPF table. For network resources the qualifier defaults to the network ID in which the domain is executing. Resource qualifiers may be specified as part of a RESOURCE LIST control entry.

curstat This is the current status of the table for this user ID. This status can be ACTIVE if the table is currently available for use, or INACTIVE if the table is not available, either due to an NPTAB INACT=tablename command being entered by the user, or the table being specified in the NPF RESOURCE LIST control entry as having an initial status of INACTIVE (eg: NPTAB=tablename,I). A status of DELETED means the table was built, but has since been deleted by a NPTAB DEL=tablename command. Once a table has been deleted it is no longer available to any user that currently references that table. If the deleted table is later re-added by an NPTAB ADD= command, users that referenced the table when it was deleted and hence show a status of DELETED must logoff/logon to re- instate the deleted table entry so that table becomes available. A status of UNAVAIL means that this table is not available to this user because of an error when the NPF control member entry was validated or an error in building the table. A corresponding message will have been written to the log in this case.

initstat This is the initial status of the table when the NPF control entry was processed. *initstat* may indicate an error condition that was detected when the NPF control entry was processed.

System Action:

None.

User Action:

None.

N13805

END

Reason:

Designates the end of the SHOW NPF display.

System Action:

None.

User Action:

None.

N13806

NETWORK PARTITIONS CONTAIN ERROR(S). FUNCTION MAY BE RESTRICTED.

Reason:

This message is issued at the end of a SHOW NPF display if one or more of the tables valid for the user contain errors.

System Action:

None.

User Action:

Use the SHOW NPTAB= command to determine the precise reason for the error(s) that exist.

N13807

SHOW OPERAND NOT RECOGNISED.

Reason:

An unidentified operand was specified on a SHOW command.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N13808

NO NETWORK PARTITION TABLES ACTIVE.

Reason:

A SHOW NPTAB command was issued but no NPF tables have been built. NPF tables are either built automatically when a user requiring a particular table logs on, or can be added by the NPTAB ADD= command.

System Action:

None.

User Action:

None.

N13809

NETWORK PARTITIONING FOR UNSOLICITED MESSAGES HAS BEEN DISABLED.

Reason:

The system function that performs Network Partition analysis and routing for unsolicited messages has been disabled because of an earlier error condition. The specific error was recorded on the system activity log under message number N18002. This message indicates that the delivery of unsolicited messages will be as though the users logged on had been defined without any NPF message restrictions. NPF command restriction is still available.

System Action:

None.

User Action:

Analyze the associated log message and take corrective action. Report this problem to your product support representative if the problem cannot be rectified.

N13810**TABLE-NAME ERROR-STATUS****Reason:**

The heading line of the SHOW NPTABS display.

System Action:

None.

User Action:

None.

N13811**tablename errstat****Reason:**

Information line for the SHOW NPTABS display. This message is issued for each attempt to build an NPF table either by a user requiring the table to logon, or by the entry of an NPTAB ADD= command. All NPF tables in the system are displayed, not just those in use by this user. Use the SHOW NP command to determine the tables applicable to this user. `tablename` is the name of the table, and `errstat` (if present) is the error that occurred when the table was built.

System Action:

None.

User Action:

More information for certain error conditions can be obtained with the SHOW NPTAB=tablename command.

N13812

REQUESTED TABLE IS INVALID OR NOT ACTIVE.

Reason:

A SHOW NPTAB= command requested a display of an NPF table that has either not been built or has been deleted by an NPTAB DEL= command. It is no longer available.

System Action:

The command is rejected.

User Action:

None.

N13813

REQUESTED TABLE MEMBER NOT FOUND IN LIBRARY DURING BUILD.

Reason:

A SHOW NPTAB= command requested a display of an NPF table that was not found in the NPF library when the build was attempted.

System Action:

The command is rejected.

User Action:

Correct the problem and create the member if necessary. Having created the member, the NPTAB ADD= command can be used to bring the table into effect. Users referencing that table will be immediately affected and need not logoff/logon.

N13814**REQUESTED TABLE MEMBER WAS EMPTY WHEN BUILT.****Reason:**

A SHOW NPTAB= command requested a display of an NPF table that exists on the NPF library but is empty. A member that only contains comment cards or blank cards is not classified as empty.

System Action:

The command is rejected as there is nothing to display.

User Action:

None.

N13815**REQUESTED TABLE MEMBER HAD I/O ERROR DURING READ.****Reason:**

A SHOW NPTAB= command requested a display of an NPF table, but an I/O error occurred when the table build was attempted.

System Action:

The command is rejected as the table cannot be displayed.

User Action:

Verify that the NPF dataset is not corrupted.

N13816**EXPANSION OF TABLE tablename FOLLOWS:****Reason:**

The heading line of a SHOW NPTAB= display. Following this message is a description of the Network Partitioning tables active in the system.

System Action:

None.

User Action:

None.

N13817

t: xxxxxxxx xxxxxxxx xxxxxxxx xxxxxxxx xxxxxxxx

Reason:

Response to a SHOW NPTAB= command. This is an expansion of the NPF table entries for the requested table. Each display line can contain several entries. The leading A: or R: on the message indicates if the entries on this line are ACCEPT (A:) or REJECT (R:) entries.

ACCEPT entries that match a resource allow access to the resource. REJECT entries that match a resource prohibit access to the resource. (Note that not finding a match in the table results in a REJECT.)

Each entry is displayed in the wildcard format. A question mark in the value indicates a single-character wildcard (that matches any nonblank character). An asterisk in the value indicates a multi-character wildcard (that matches zero or more characters in the value). Other characters match themselves.

For example:

NY* matches resources that start with NY
NY?1 matches resources that start with NY, are 4 characters long, and end in 1

*X matches resources that end in X

NOTE: Tables that were coded using the BASIC format used asterisks for both single and end-generic wildcards. These are translated to the new format with question marks and are displayed in the new format. For example, an old-format entry of 'NY*5*' would display as 'NY?4*'.

When a table contains syntax errors, message N13818 is displayed at the point at which the error is detected. Entries for subsequent records following a record containing an error are displayed after the N13818 message that describes the error.

System Action:

None.

User Action:

The SHOW NPTAB= command can be used to determine the particular resources which a user is entitled to reference in VTAM commands if NPF command restriction has been imposed, and/or the VTAM resources for which the user will receive unsolicited network messages if NPF message restriction has been imposed.

N13818**SYNTAX ERROR IN RECORD SEQUENCE NO: xxxxxxxx DATA=yyyyyyyy****Reason:**

This message is displayed as part of SHOW NPTAB= command when a syntax error is detected. This message may be preceded and followed by message N13817 which displays those entries which are not in error. When an NPF table is built, the processing for a record stops at the first entry in that record that is in error, and resumes on the following record. This message supplies the record sequence number from columns 73- 80 of the record in error and the first 8 bytes of the data where the syntax error was detected.

System Action:

The command is rejected.

User Action:

Correct the record in error, and use the NPTAB REP= command to immediately bring the changes into effect.

N13819**NO VALID TABLE ENTRIES BUILT, NO RESOURCE TABLES WILL BE AVAILABLE.****Reason:**

The user's NPF RESOURCE LIST control member contained syntax errors or were empty and the result was that no NPF resource tables are available and no access to any network resource will be allowed.

System Action:

None.

User Action:

Correct the control member(s) and logon again.

N13820

Reason:

Provides an underline for the SHOW NPF display.

System Action:

None.

User Action:

None.

N13821

Reason:

Provides an underline for the SHOW NPTABS display.

System Action:

None.

User Action:

None.

N13822

NPF TABLE tablename EXISTS, BUT DOES NOT CONTAIN ANY TABLE ENTRIES.

Reason:

A SHOW NPTAB=tablename command was issued but the specified NPF table did not contain any valid resource entries or only contained comment cards.

System Action:

None.

User Action:

None.

N13823**NPF type CONTROL MEMBER aaaaaaaa CONTAINS ERRORS.****Reason:**

A warning issued after a SHOW NPF display that the specified control member aaaaaaaa contains errors of some sort.

System Action:

None.

User Action:

Correct the control member and logon again. It is most likely that the format of the control statements is incorrect.

N13824**NO RESOURCE TABLE FOUND FOR RESOURCE aaaaaaaa****Reason:**

No resource table names match the name operand specified on the SHOW NPF=resource-name command.

System Action:

None.

User Action:

Check the command resource name operand.

N13825**TABLE FORMAT: format****Reason:**

Part of the output of a SHOW NPTAB= display. The message indicates if the original table source was in the old format (BASIC), or the new format (ADVANCED).

System Action:

None.

User Action:

None.

N13901

UNABLE TO OPEN LIBRARY ID: xxxxxxxx

Reason:

A SHOW EXEC command failed because the NCL procedure library for DD statement xxxxxxxx could not be opened.

System Action:

The command is rejected.

User Action:

Determine why the dataset failed to open. A corresponding system message will have been written to the system console and log.

N13902

I/O ERROR ON LIBRARY ID: xxxxxxxx.

Reason:

An I/O error occurred during the processing of a SHOW EXEC command. The NCL library involved is associated with DD statement xxxxxxxx . This could occur when a dataset in the concatenation has a larger blocksize than the first dataset in the concatenation for that DD statement.

System Action:

If SHOW EXEC,LIST=FULL or LIST=ALL was specified, the next dataset in the concatenation is listed, otherwise the command is terminated.

User Action:

Report the occurrence to your systems administrator.

N13903

mbrname mbrname mbrname mbrname

Reason:

The information line of the SHOW EXEC command. This line contains the list of member names as requested.

System Action:

None.

User Action:

None.

N13904

***END* -- nnnnn MEMBERS DISPLAYED.**

Reason:

Signifies the end of the SHOW EXEC display and includes the number of members listed in the display.

System Action:

None.

User Action:

None.

N13905

INVALID RANGE SPECIFIED.

Reason:

The SHOW EXEC command requested a range of members to be displayed, but the range given was invalid. The range must be in the format SHOW EXEC,start,end, where start and end must be a string from 1 to 8 characters long and where the end argument must be higher in collating sequence than the start argument.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N13906

INVALID ID= OPERAND SPECIFIED.

Reason:

The SHOW EXEC command can specify the ID of a library whose members are to be displayed. The ID operand specifies the DDNAME of the dataset. If specified, this operand must follow any member name range specification. The syntax of the command is incorrect.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N13907

MEMBERS IN CONCATENATION n

Reason:

An information line of the SHOW EXEC command with LIST=ALL specified. A ddname may consist of several libraries concatenated together, each concatenated library is numbered from 0 upwards. Member names matching the requested specification within this dataset are listed following this message.

System Action:

None.

User Action:

None.

N13908**INVALID LIST= OPERAND SPECIFIED.****Reason:**

The LIST= operand of the SHOW EXEC command allows you to display the member names in the FIRST library in the DD statement concatenation, the member names in ALL libraries or a FULL list, including member statistics for all libraries in the concatenation. If you specify LIST=, it must be LIST=FIRST, ALL or FULL.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N13909**name conc# vv.mm created changed size init mod id****Reason:**

An information line of the SHOW EXEC command with LIST=FULL specified.
name is the member name.
conc# is the concatenation number of the dataset within the ddname. The rest of the line contains ISPF/PDF statistics for the member (if present).
vv the version of the member.
mm the modification level of the member.
created the date (YY/MM/DD) the member was created.
changed the date (YY/MM/DD) and time (hh.mm) the member was last updated.
size the number of records in the member.
init the initial number of records in the member.
mod the number of records modified in the member.
id the userid or jobname which last updated the member.

System Action:

None.

User Action:

None.

N13910

NAME CONC VV.MM CREATED CHANGED SIZE INIT MOD ID

Reason:

A heading line of the SHOW EXEC command with LIST=FULL specified. For more details refer to the description of the N13909 message.

System Action:

None.

User Action:

None.

N13911

INVALID SYNTAX

Reason:

The SHOW EXEC command contained invalid syntax.

System Action:

Command is rejected.

User Action:

Correct and retry.

N13B01

DYNAMIC INMC/NVC/APPC LINK DEFINITION ALREADY EXISTS.

Reason:

A DEFLINK command was entered to add a dynamic link definition, but a definition already exists for the operands specified.

System Action:

The command is rejected.

User Action:

To change a dynamic link definition, use the REPLINK command. Use a 'SHOW DEFLINK' command to display current dynamic link definitions.

N13B03**DYNAMIC INMC/NVC/APPC LINK DEFINITION DEFINED/REPLACED.****Reason:**

Confirms the successful completion of a DEFLINK or REPLINK command to add or change a dynamic link definition.

System Action:

None.

User Action:

None.

N13B04**DYNAMIC INMC/NVC/APPC LINK DEFINITION DELETED.****Reason:**

Confirms the successful completion of a DELLINK command to remove a dynamic link definition.

System Action:

None.

User Action:

None.

N13B05**DYNAMIC INMC/NVC/APPC LINK DEFINITION DOES NOT EXIST.****Reason:**

An attempt to delete a dynamic link definition using a DELLINK command has failed because the indicated definition does not exist.

System Action:

The command is rejected.

User Action:

Change the operands and reissue the command. If necessary, use a `SHOW DEFLINK` command to list the current dynamic link definitions.

N13B06

RT OPERAND OUT OF RANGE

Reason:

An attempt to add a dynamic link definition using a DEFLINK command has failed because the retry interval specified on the RT operand was too high or too low. Retry interval must be between 60 seconds and 8 hours.

System Action:

The command is rejected.

User Action:

Change the RT operand to a number between 60 and 28800 and reissue the command.

N13B07

DYNAMIC INMC/NVC/APPC LINKNAME aaaa ALREADY DEFINED FOR LUNAME bbbb.

Reason:

A DEFLINK command was entered to add a dynamic link definition, but the dynamic link was already defined.

System Action:

The command is rejected.

User Action:

Change and retry.

N13B11

INVALID USE OF APPC KEYWORDS ON TYPE=INMC COMMAND.

Reason:

A DEFLINK command was entered to add a dynamic INMC link definition but it included operands which are only valid for DEFLINK TYPE=APPC.

System Action:

The command is rejected.

User Action:

Change the command to remove the APPC operands (or add TYPE=APPC).

N13B12**INVALID USE OF INMC KEYWORDS ON TYPE=APPC COMMAND.****Reason:**

A DEFLINK command was entered to add a dynamic APPC link definition but it included operands which are only valid for DEFLINK TYPE=INMC.

System Action:

The command is rejected.

User Action:

Change the command to remove the INMC operands.

N13B20**UNKNOWN ACCESS METHOD: name****Reason:**

A DEFLINK or REPLINK command was entered with the AM=name operand. The name supplied is not a recognized access method name

System Action:

The command is rejected.

User Action:

Correct the AM operand value.

N13B21**name ACCESS METHOD NOT AVAILABLE****Reason:**

A DEFLINK or REPLINK command was entered with the AM=name operand. The name supplied is a recognized access method, however it is not active in this SOLVE system

System Action:

The command is rejected.

User Action:

Correct the AM operand value.

N13B22

name ACCESS METHOD DOES NOT SUPPORT REQUESTED LINK TYPE

Reason:

A DEFLINK or REPLINK command was entered with the AM=name operand. The name supplied is a recognized active access method, however it does not support the requested link type (APPC or INMC).

System Action:

The command is rejected.

User Action:

Correct the AM operand value.

N13C01

..... NO ACTIVE NCL PROCEDURE

Reason:

This message is the result of a SHOW NCL command. It indicates that an NCL environment exists for which no NCL procedure was active at the time the command was issued, however the environment remains active because it is a registered object server.

System Action:

Information only.

User Action:

N/A

N13C03**COMMAND NOT SUPPORTED - PROCESS HAS ACTIVE OML****Reason:**

A SHOW NCLVARS command has been entered to display variables from an active process. The target process has one or more OML procedures active, and OML does not support the SHOW NCLVARS command. Use the NCL DEBUG facility to display variable contents.

System Action:

None.

User Action:

None.

N13C50**NCLID nnnnnn VARIABLE SUMMARY/LIST , CURRENT PROC aaaaaaaa
LEV bbbb****Reason:**

This message is a heading line issued by a SHOW NCLVARS command. nnnnnn is the NCLID of the target process for which information is being displayed. bbbb is the nesting level of the current procedure aaaaaaaa.

System Action:

None.

User Action:

None.

N13C51

aaaaaaaa bbb ccc ddddd eeeeeee ffffff gggggggg

Reason:

This is a detail line of the SHOW NCLVARS command summarizing the variable use of an NCL procedure.

aaaaaaaa is the ncl procedure name

bbb is the method level of the procedure

ccc is the nesting level of the procedure

The following fields are provided if LIST=SUMMARY is specified.

dddddd is the count of the number of variables

eeeeeeee is the total number of characters for all variables

ffffff is the average variable size (d/c)

gggggggg is the maximum chain depth

System Action:

None.

User Action:

Use the information to review the storage efficiency of the NCL process displayed. Excessive variable use may cause performance degradation.

N13C52

PROC MLVL LVL < COUNT BYTES AVGE MX-CHAIN >

Reason:

This is a subheading issued by a SHOW NCLVARS command. It is followed by one or more N13C51 messages summarizing the variable use of an NCL process. The first sub- heading is issued if the LIST=SUMMARY operand is specified.

System Action:

None.

User Action:

None.

N13E01

svrtype SERVER.. server-name-attr = server-name

Reason:

This is the first title line of the display resulting from a SHOW SERVER command.

svrtype is the type of server registered. This will be AGENT, METHOD, PROCESS, or SYSTEM.

server-name-attr is the object services attribute name of the server name field. For NCL servers this will be ZZZSERVER.

server-name is the name of the object for which the server is registered.

This message will be followed by detail line (N13E02).

System Action:

None.

User Action:

None.

N13E02

CLASS. zzzclass SCOPE.. aaaaaaaa DOMAIN. bbbb target.. ccccccc

Reason:

This is a detail line of the display resulting from a SHOW SERVER command. zzzclass is the class of object for the server registration. For NCL procedure servers the class will be ZZZPROCESS. For servers registered as object services methods the class will be the class of the registered object.

aaaaaaaa is the scope for the server is registered.

bbbb is the SOLVE system domain ID. target will be LINK or LU if this is an object services SYSTEM server or NCLID if it is a process, method, or agent server.

ccccccc is the linkname or luname for a system server or nclid of the method, agent, or function server.

System Action:

For servers with scope of USER down, message N13E03 will follow.

User Action:

None.

N13E03

USER.. aaaaaaaa REGION.. bbbbbbbb

Reason:

This is the second detail line of the display resulting from a SHOW SERVER command for servers with scope of region or user.
aaaaaaa is the userid that started the NCL process.
bbbbbbb is the region name (ie the logical unit name of the terminal at which the user is logged on).

System Action:

None.

User Action:

None.

N13E04

CONTEXT aaaaaa

Reason:

This message displays the contextid for a server with scope of CONTEXT from a SHOW SERVER command. aaaaaa is the server contextid.

System Action:

None.

User Action:

None.

N13E08

nnnnnnn SERVER ENTRIES PROCESSED.

Reason:

This is the termination line of the display resulting from a SHOW SERVER command. Where nnnnnnn is the number of server entries displayed.

System Action:

None.

User Action:

None.

N13E09**SHOW REJECTED - INVALID KEYWORD OR VALUE.****Reason:**

A SHOW SERVER command has been entered but the SCOPE= operand specifies an invalid value.

System Action:

The command is rejected.

User Action:

Refer to the help for the SHOW SERVER command to obtain a valid value for the SCOPE operand, and retry the command.

N13G01**DOMAIN P1 P2****Reason:**

A DOMAIN command has been successfully executed. The domain name is *P1* and the result *P2* (ADDED, REPLACED or DELETED) is shown.

System Action:

None.

User Action:

None.

N13G02**DOMAIN DEFINE FOR P1 FAILED: ALREADY EXISTS. COMMAND REJECTED.****Reason:**

A DOMAIN DEFINE command has failed because the domain name (*P1*) already exists.

System Action:

The command is rejected.

User Action:

To replace an existing domain definition use the DOMAIN REPLACE command.

N13G03

DOMAIN DELETE FOR P1 FAILED: DOES NOT EXIST. COMMAND REJECTED.

Reason:

A DOMAIN DELETE command has failed because the domain name specified (P1) does not exist.

System Action:

The command is rejected.

User Action:

None.

N13G11

DOMAIN FAILED: NO STORAGE.

Reason:

A DOMAIN command failed because of insufficient storage.

System Action:

The command is rejected.

User Action:

Determine why there is insufficient storage. You can use the OCS command, SHOW BUFF, to view the statistics on storage utilization.

N13G90

INVALID IP ADDRESS

Reason:

A DOMAIN DEFINE or DOMAIN REPLACE command specified an invalid IP address.

System Action:

The command is rejected.

User Action:

Issue the command with a valid IP address.

N13G91**INVALID PROXY ADDRESS/PORT****Reason:**

A DOMAIN DEFINE or DOMAIN REPLACE command specified an invalid IP proxy address or port number.

System Action:

The command is rejected.

User Action:

Issue the command with a valid IP proxy address or host name, and port number.

N14001**NPTAB OPERAND xxxx NOT RECOGNISED.****Reason:**

The operand xxxx included in an NPTAB command was not recognized.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N14002**NPTAB OPERAND xxxx IS INVALID OR OUT OF RANGE.****Reason:**

An NPTAB command requires the name of an NPF table. The name was either omitted or too long.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N14003

REQUIRED OPERAND(S) OMITTED.

Reason:

An NPTAB command was entered but is invalid because no operands have been specified.

System Action:

The command is rejected.

User Action:

Correct and retry. For a description of the operands refer to the NPTAB command in the Command Reference.

N14004

NPF TABLE tablename ALREADY EXISTS.

Reason:

An NPTAB ADD= command specified the name of an NPF table that is already known to the system.

System Action:

The command is rejected.

User Action:

If a new version of the table is to be brought into effect, the REP= operand must be used.

N14006

NPF TABLE tablename DOES NOT EXIST.

Reason:

An NPTAB DEL= or REP= command specified the name of an NPF table that is not known to the system.

System Action:

The command is rejected.

User Action:

None.

N14007**NPF TABLE tablename HAS BEEN DELETED.****Reason:**

Confirms successful completion of an NPTAB DEL= command.

System Action:

Users that are logged on that currently reference this table will no longer have it available. If a new user logs on that requires this table it will again be automatically added. It is the user's responsibility, when a table is deleted, to ensure that the table has been disabled or corrected as necessary to cater for this possibility.

User Action:

A SHOW NPF command display that includes this table will show a status of 'DELETED'.

N14008**NPF TABLE tablename STILL BEING BUILT, DELETE REJECTED.****Reason:**

An NPTAB DEL= command was entered specifying the name of an NPF table that is in the process of being built. This is invalid until the build process is complete.

System Action:

The command is rejected.

User Action:

Retry after the build has completed.

N14009

RESOURCE resname TABLE network.tablename IS NOT IN USE BY THIS USERID.

Reason:

An NPTAB resource ACT= command specified the name of an NPF resource table that the user is not entitled to use.

System Action:

The command is rejected.

User Action:

Use the SHOW NPF command to determine which tables are available to your userid.

N14010

RESOURCE resname TABLE network.tablename ALREADY ACTIVE.

Reason:

An NPTAB resource ACT= command specified the name of an NPF resource table that is already active.

System Action:

The command is rejected.

User Action:

None.

N14011**RESOURCE rename TABLE network.tablename NOW ACTIVE.****Reason:**

Confirms successful activation of NPF resource table tablename after an NPTAB resource ACT= command.

System Action:

Resources specified in the table will now be available to the user. If the table was an NPF message table (resource \$NMMSG) the user will now receive unsolicited network messages for the resources included in table `network.tablename`.

User Action:

The NPTAB resource INACT= command may be used to return the table to INACTIVE status.

N14012**NO RESOURCE GROUPS DEFINED FOR THIS USERID.****Reason:**

An NPTAB ACT= command was entered but the user does not have any NPF resource tables declared.

System Action:

The command is rejected.

User Action:

None.

N14013

RESOURCE resname TABLE network.tablename ALREADY INACTIVE.

Reason:

An NPTAB resource INACT= command specified the name of an NPF table that is already inactive.

System Action:

The command is rejected.

User Action:

The SHOW NPF command can be used to determine the current and initial status of tables.

N14014

RESOURCE resname TABLE network.tablename NOW INACTIVE.

Reason:

Confirms successful completion of an NPTAB resource INACT= command for NPF table `network.tablename' in resource group `resource'.

System Action:

None.

User Action:

The SHOW NPF command can be used to determine the current and initial status of tables.

N14015

COMMAND TABLES MAY NOT BE INACTIVATED OR ACTIVATED.

Reason:

An NPTAB resource INACT= command was attempted for an NPF command partitioning table (resource group \$NMCMD). Command partitioning table status may not be modified.

System Action:

The command is rejected.

User Action:

Do not attempt to issue the NPTAB (IN)ACT command for command partitioning resource tables.

N14016**USERID NOT AUTHORISED FOR REQUESTED FUNCTION.****Reason:**

An NPTAB ADD= or REP= command was entered but the user does not have a high enough command authority level.

System Action:

The command is rejected.

User Action:

None.

N14017**NPF TABLE tablename HAS BEEN DELETED AND IS NO LONGER AVAILABLE.****Reason:**

An NPTAB ACT= command specified the name of an NPF table that has been deleted by an NPTAB DEL=tablename command. It is not available to be reactivated.

System Action:

The command is rejected.

User Action:

Contact your systems administrator to determine why the table has been deleted.

N14018

STATUS CHANGE FOR TABLE `network.tablename` REJECTED, UNAVAILABLE DUE TO CONTROL MEMBER SYNTAX ERRORS

Reason:

An NPTAB ACT=tablename or INACT=tablename command specified the name of NPF table that cannot be processed because there were syntax errors in the user's RESOURCE LIST control member for the `network.tablename' resource table.

System Action:

The command is rejected because the resource table is not available due to control member syntax errors.

User Action:

The message control member should be corrected, and may be refreshed by logging on again.

N14019

RESOURCE OPERAND WILL BE IGNORED FOR ADD, DEL, REP COMMANDS.

Reason:

A resource group name was specified on an NPTAB ADD, DEL, or REP command. The ADD, DEL, REP commands apply only to library members and are only associated with resource groups via the RESOURCE LIST CONTROL MEMBER in a user's UAMS definition.

System Action:

The resource name operand is ignored and processing continues.

User Action:

It is not necessary to specify a resource name on NPTAB ADD, DEL, REP commands.

N14101**UNABLE TO OPEN NETWORK PARTITIONING DATASET.****Reason:**

An attempt to build an NPF table failed because the system could not open the NPF dataset.

System Action:

The command is terminated.

User Action:

Report the occurrence to your systems administrator.

N14102**ERRORS OCCURRED DURING THE BUILDING OF NPF TABLE tablename.****Reason:**

This message warns that one or more errors occurred during the building of NPF table tablename. This may result in a user's access being restricted to validly defined resources.

System Action:

None.

User Action:

Use the SHOW NPTAB=tablename command to display the errors that were detected within the specified NPF table.

N14103**NPF TABLE tablename ADDED.****Reason:**

Confirms successful building of the new NPF table tablename.

System Action:

None.

User Action:

None.

N14104

NPF TABLE tablename REPLACED.

Reason:

Confirms successful completion of an NPTAB REP=tablename command.

System Action:

The new table is made available immediately to all users without the need to logoff and logon.

User Action:

None.

N14590

INSUFFICIENT AUTHORITY FOR SHOW STOR COMMAND

Reason:

You do not have a high enough authority level for the SHOW STOR command. The authority level needed is 255.

System Action:

The command is ignored.

User Action:

Increase your command authority to 255 and try again.

N14901

P1 P2 P3

Reason:

A request to load or unload a procedure or module was successful. In the message:

P1 is the type (PROCEDURE, MODULE, or NVPANEL)

P2 is the name

P3 is the action taken (LOADED or UNLOADED)

System Action:

None.

User Action:

None.

N14902**LOAD FOR MODULE P1 FAILED, R15= P2, R1= P3****Reason:**

A request to load a module (*P1*) failed. The R15 (*P2*) and R1 (*P3*) return codes from the LOAD macro are shown.

System Action:

The module specified is not loaded.

User Action:

Determine the cause of the error and retry.

N14903**DELETE FOR MODULE P1 FAILED.****Reason:**

A request to delete load module (*P1*) failed.

System Action:

The specified module is not deleted.

User Action:

Specify the correct module name and retry.

N14904**PROCEDURE P1 NOT PRELOADED****Reason:**

A request to unload a procedure (*P1*) failed because the NCL procedure was not preloaded.

System Action:

The command is rejected.

User Action:

None.

N14905

UNLOAD OF P1 ACCEPTED, P2 ACTIVE USERS.

Reason:

A request to unload a procedure (*P1*) was issued. There are *P2* current users of the procedure.

System Action:

The procedure will be unloaded when the last active user terminates. New users of the procedure will execute a fresh copy of the procedure read from the procedure library.

User Action:

None.

N14906

P1 NCL PROCEDURE(S) UNLOADED BY GENERIC REQUEST.

Reason:

An UNLOAD PROCEDURE= command has been issued specifying a generic procedure or DD name. This message shows the total NCL procedures unloaded as a result of the command.

System Action:

The procedures are reloaded, as required.

User Action:

None.

N14907

P1 MAP(S) UNLOADED BY GENERIC REQUEST.

Reason:

An UNLOAD MAP= command has been issued specifying a generic map name. This message shows the total maps unloaded as a result of the command.

System Action:

The maps are reloaded, as required.

User Action:

None.

N14908**P1 PANEL(S) UNLOADED BY GENERIC REQUEST.****Reason:**

An UNLOAD NVPANEL= command has been issued specifying a generic panel name. This message shows the total panels unloaded as a result of the command.

System Action:

The panels are reloaded, as required.

User Action:

None.

N14909**PANEL P1 NOT PRELOADED****Reason:**

A request to unload a panel (*P1*) failed because the panel is not loaded.

System Action:

The command is rejected.

User Action:

None.

N14949**INSUFFICIENT STORAGE TO PROCESS COMMAND.****Reason:**

Storage could not be obtained to process the LOAD or UNLOAD command.

System Action:

The command is not processed.

User Action:

Determine the cause of the storage shortage.

N14T01

##TOFF *ttt* COMMAND PROCESSED

Reason:

A ##TOFF command was entered and processed successfully.

System Action:

As per the request.

User Action:

None.

N14T02

##TOFF *ttt* COMMAND IGNORED, TZ=... JCL PARM SPECIFIED

Reason:

A ##TOFF command was entered. It was ignored because the region had the TZ JCL parameter specified.

System Action:

The request is ignored.

User Action:

If you want to use the ##TOFF testing facility, remove any TZ parameters from the JCL PARM.

N14T80**INVALID TIME OFFSET: *ooo*****Reason:**

A ##TOFF command was entered. The time offset specified was not valid.

The time offset must be in the following format:

0 or *s0* or *shhmm* or *shh.mm*

where:

s is + or E (meaning east of or ahead of GMT/UTC), or W (meaning west of or behind GMT/UTC)

hh is the offset in hours (1 or 2 digits, max 99)

mm is the offset in minutes (2 digits, 00 to 59)

System Action:

The command is ignored.

User Action:

Correct the offset.

N15005**xxxPROC REQUEST INVALID, ALREADY ACTIVE.****Reason:**

Activation of xxxPROC was requested but the procedure is already active.

System Action:

The request is rejected.

User Action:

If you wish to restart the procedure you must first use the SYSPARMS xxxPROC=FLUSH command to terminate the current active procedure and then start the new version.

N15006

xxxPROC NOT ACTIVE, CANNOT FLUSH.

Reason:

An attempt to FLUSH the specified procedure cannot be processed because the procedure is not active.

System Action:

The request is rejected.

User Action:

If the procedure is active it should be waiting on the completion of an xxxREAD statement. Check the procedure logic to ensure that it does not get suspended without an xxxREAD statement being issued.

N15007

NCL GLOBAL VARIABLE TRACE ALREADY ACTIVE. NCLGBTRC=xxxx.

Reason:

An attempt to start tracing NCL global variables using SYSPARMS NCLGBTRC has failed because tracing is already active.

System Action:

The request is rejected.

User Action:

Tracing must be stopped using SYSPARMS NCLGBTRC= (that is, no operand) before tracing may be restarted.

N15012**EASINET CANNOT BE ACTIVATED/DEACTIVATED AFTER
INITIALIZATION COMPLETE.****Reason:**

You issued a SYSPARMS EASINET=procname or EASINET=NO command after system initialization. Activation of the EASINET feature can be specified only during system initialization and it cannot be deactivated by EASINET=NO after initialization is complete. The SYSPARMS EASINET=procname command may only be used after initialization to specify the name of a new EASINET procedure for security reasons.

System Action:

The command is rejected.

User Action:

The SYSPARMS EASINET=NO command must be issued by the ACINIT parameter group during system initialization. Update the parameter group and save the changes, but do not action it. The changes will take effect the next time the region is started. If necessary, recycle the region.

N15014**PROCEDURE procname NOT PRELOADED****Reason:**

A SYSPARMS UNLOAD= command specified the name of an NCL procedure that had not been preloaded.

System Action:

The command is rejected.

User Action:

Use the SHOW NCLSTAT command to determine the names of preloaded procedures.

N15015

UNLOAD OF procname ACCEPTED, nn ACTIVE USERS.

Reason:

A SYSPARMS UNLOAD= command was issued. There are nn current users of the preloaded NCL procedure.

System Action:

The procedure will be unloaded when the last active user terminates. New users of the procedure will execute a fresh copy of the procedure read from the procedure library. Alternatively a SYSPARMS PRELOAD= command may now be issued to preload an updated copy of the procedure.

User Action:

The SHOW NCLSTAT command can be used to determine the current status of procedures that are waiting to be unloaded.

N15101**DDNAME RECSZ D-CISZ I-CISZ CI-SP CA-SP D-BF I-BF STRSH BFRSH
LSR CTL****Reason:**

This is the title line of the SHOW VSAM (SHOW VSAMX) display.

DDNAME the JCL DDNAME, or DLBL name, associated with this file.

RECSZ the defined maximum record size for the dataset.

D-CISZ the VSAM Control Interval size for the Data component of a KSDS.

I-CISZ the VSAM Control Interval size for the Index component of a KSDS.

CI-SP the number of Control Interval splits that VSAM has performed for this dataset.

CA-SP the number of Control Area splits that VSAM has performed for this dataset.

D-BF the maximum number of data buffers allocated for processing a string of the VSAM dataset. This value shows the maximum amount of storage used at any time and may be used in tuning the BUFND VSAM operand specified in the JCL or on the UDBCTL command. (Note that for MVS the value shown may exceed the specified BUFND value due to dynamic string expansion).

I-BF the maximum number of index buffers allocated for processing a string of the VSAM dataset. This value represents the maximum amount of storage used at any time and may be used in tuning the BUFND VSAM operand specified in the JCL or on the UDBCTL command. (Note that for MVS the value shown may exceed the specified BUFND value due to dynamic string expansion).

STRSH the number of times a string shortage condition caused a temporary delay in processing a file. SOLVE will write a monitor message the first time this occurs only.

BFRSH the number of times a buffer shortage condition caused a temporary delay in processing a file. This should only occur for datasets running with LSR=YES (see below).

LSR NO, YES, RLS, or a number, indicating whether or not this VSAM dataset is using the Local Shared Resource pool. NO means that it is not, YES means that it is, using pool 0 if multiple pools are supported, and a number means that it is, using the indicated LSR pool. RLS means that VSAM RLS is in effect for this file.

CTL DSN or DD, indicating whether VSAM is sharing control block structures at a Dataset name level (DSN) or at a DDname level (DD). This applies to MVS only. When processing with Alternative Indices or Paths sharing should be at the DSN level, which is the default.

Notes: Where a number exceeds 99999 then truncation will occur to allow the value to fit within the field bounds. The number's magnitude is represented by the units K, M or G.

System Action:

None.

User Action:

None.

N15104

PANEL-NAME STATUS HITS PATH LIBRARY AGEUSE

Reason:

The title line issued in response to the SHOW PANELS command.
PANEL-NAME the name of a panel located in the active panel queue.
STATUS may be 'LOADED' indicating that the panel is actually resident in the active panel queue, or 'LOADING', indicating that a load is in progress for the particular panel.
HITS the number of times a requested panel has been found in the active panel queue, thus avoiding I/O.
PATH is the library path that the panel is registered on.
LIBRARY is the library in the path that the panel was found in.
AGEUSE is an aged use count used to decide when to drop a panel from the list of active panels.

System Action:

None.

User Action:

None.

N15105

panelname status hits path library ageuse

Reason:

Issued in response to the SHOW PANELS command, this is the information line as described on N15104.

System Action:

None.

User Action:

None.

N15106

***END* -- ACTIVE aaaa MAXPANEL bbbb REQUESTS cccccc HITS
ddddddd DROPS eeeee**

Reason:

Indicates the end of the SHOW PANELS display and provides summary data about the active panel queue. The number of panels currently on the active panel queue is aaaa . The MAXPANEL value is bbbb . The total number of requests for panels processed by the system is cccccc. The total number of times a reccccc. panel was found on the active panel queue is ddddddd.

System Action:**User Action:**

This information can be used to help analyze the optimal size of the active panel queue as set in the region.

A low number of hits indicates that the queue may be too small; therefore, excessive I/O must be performed to obtain panel images. Conversely, if the queue is too large, virtual storage is wasted and

N15107

DDNAME FILEID USERID NCL-PROC NCLID LUNAME

Reason:

This is the title line issued in response to a SHOW UDBUSER command.

System Action:

None.

User Action:

Refer to N15108 for details of these fields.

N15108**ddname fileid userid nclproc nclid lname****Reason:**

The information line issued in response to a SHOW UDBUSER command. This display is ordered by UDB. Each user of a UDB is displayed following the first reference to that particular UDB. Therefore users that have connections to multiple UDBs will appear multiple times, once for each UDB to which they are connected.

ddname the JCL DDNAME associated with this UDB. The ddname will appear only for the first user that is referencing that UDB. Subsequent display lines for that UDB will contain a '-' to assist in clarifying the display.

fileid the logical fileid assigned to the UDB using the UDBCTL command. This is the name used by NCL in an &FILEID statement to obtain access to the UDB. The fileid will appear only for the first user that is referencing that UDB. Subsequent display lines for that UDB will contain a '-' to assist in clarifying the display.

userid the user or system task currently processing the UDB. Where access to the UDB is being performed from the EASINET facility, a userid of 'EASINET' will be displayed. System tasks utilizing UDB processing may also be displayed as 'LOG-PROC', 'BG- MON', 'BG-SYS' or 'BG-LOG'. If the UDB was opened as NDB, this field will be displayed as '*NDB*'.

nclproc identifies the NCL procedure which issued the &FILEID statement to obtain access to this UDB. Where nested procedures are utilized this may not be the current NCL procedure that is processing.

nclid the nclid of the NCL process.

lname the lname (terminal) the user is logged on from. System tasks utilizing UDB processing may also be displayed as 'LOG-PROC', 'BG-MON', 'BG-SYS' or 'BG-LOG'.

(status) if displayed, this field indicates that processing the NCL procedure has been temporarily suspended waiting for system resources. A value of '(STRSH)' indicates that the procedure is waiting for VSAM processing strings. A value of '(BFRSH)' indicates that the procedure is waiting for VSAM buffers.

System Action:

None.

User Action:

If the (status) field is displayed it may indicate that system performance is being impacted and that attention should be given to tuning VSAM usage within the system. For Local Shared Resource (LSR) pools the LSRPOOL command may need to be used to alter the LSR pool to include additional VSAM strings and buffers. If not, the system JCL or the UDBCTL command can be used to specify additional strings and buffers as necessary. The SHOW UDB and SHOW VSAM commands can be used to further monitor system performance and obtain additional information about VSAM usage. Refer to the the VSAM Programming Guide for additional information on buffer and string control.

N15109

SELECTIVE/FULL LIST OF NCL GLOBAL VARIABLES FOLLOWS:

Reason:

This is the heading line issued in response to a SHOW NCLGLBL (full) or SHOW NCLGLBL=varname (selective) command.

System Action:

Subsequent information lines follow.

User Action:

None.

N15110

NAME LEN TEXT

Reason:

This is a title line issued in response to the SHOW NCLGLBL=varname command. Varname refers only to the variable name following the global variable prefix, and does not include the prefix itself. This command may be used to determine the current length and value of each global variable beginning with varname.

System Action:

Information lines follow for each variable requested.

User Action:

None.

N15111

variablename variablename variablename variablename

Reason:

This is the information line following N15109 for a full list of NCLGLBL variable names.

System Action:

None.

User Action:

None.

N15112

variablename leng text....

Reason:

This is the information line issued in response to the SHOW NCLGLBL=varname command. The full name of the variable is variablename and currently has a length of leng, and the actual contents of this variable is given by text.

System Action:

None.

User Action:

None.

N15113

***END* -- aaaaaa DISPLAYED, MAXIMUM CHAIN nnnn**

Reason:

This message indicates the end of the SHOW NCLGLBL command and summarizes the number of variables displayed and the depth of the maximum chain. The maximum chain depth is an indication of the processing required to access specific variables. A normal value would be 2 or 3. The creation of many global variables will cause long chains and increase access time.

System Action:

None.

User Action:

None.

N15114**DDNAME STATUS REQ-USER TIME CONCATDD DSN****Reason:**

The title line of the SHOW ALLOC display. Displays the DDname, the STATUS of the allocation, the user requesting the allocation, the time at which the allocation was performed, if the dataset is concatenated the ddname referred to in the CONCAT operand and the first 28 characters of the dataset name.

The STATUS field can contain one of 3 possible values :

ALLOCATED - the dataset is allocated to the SOLVE system

PENDING - the dataset is in the process of being allocated

UNKNOWN - the status of the allocation is unknown

System Action:

None.

User Action:

User Action:

None.

N15118

ddname filemode status requester time catdd dsname

Reason:

The information line issued in response to a SHOW ALLOC command. Refer to message N15117 for details.

System Action:

None.

User Action:

None.

N15119**STATUS SMFRID START INTERVAL MINCPU****Reason:**

First message returned on SHOW USERACCT command.

System Action:

None.

User Action:

None.

N15120**status smfrid start interval mincpu****Reason:**

Second message returned on SHOW USERACCT command. status is status of user NCL cputime reporting: ACTIVE, INACTIVE or P-INACT. smfrid is the SMF record id. Start is the FROM time for the reporting interval. interval is the reporting interval (in hours). mincpu is the minimum amount of cputime to be reported (in seconds).

System Action:

None.

User Action:

None.

N15301**INSUFFICIENT STORAGE FOR REQUEST****Reason:**

An NCL based command (EXEC, START, LIST etc.) failed because insufficient storage was available.

System Action:

The command is rejected.

User Action:

Restructure the procedure or increase the SOLVE region or partition size.

N15302

INVALID OPERAND xxxx

Reason:

A START, EXEC, FSPROC, LIST or NCLCHECK command specified an invalid operand.

System Action:

The command is rejected.

User Action:

Correct and retry.

N15303

FSPROC IS INVALID FROM THIS SOURCE

Reason:

An FSPROC command was issued from a procedure that is not directly associated with a display terminal, eg: LOGPROC.

System Action:

The command is rejected.

User Action:

Restructure the procedure.

N15304

LIST ID=aaaaaaaa IS INVALID

Reason:

A LIST command has been issued to list a member of a procedure library. The ID parameter specified on the command is not a valid ddname (MVS), filetype (VM) or sublib (VSE).

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15305**PROC NAME IS REQUIRED.****Reason:**

A START, EXEC, FSPROC, LIST or NCLCHECK command was issued but no procedure name was supplied. The PROC operand is mandatory.

System Action:

The command is rejected.

User Action:

Correct and retry.

N15306**INVALID PROC OPERAND VALUE xxxx.****Reason:**

A START, EXEC, FSPROC, LIST or NCLCHECK command was issued but the PROC operand value xxxx is not a valid NCL procedure name.

System Action:

The command is rejected.

User Action:

Correct and retry.

N15307**INVALID SERVER OPERAND VALUE xxxx.****Reason:**

A START command was issued but the SERVER operand value xxxx is not a valid NCL server name.

System Action:

The command is rejected.

User Action:

Correct and retry.

N15308

INVALID SCOPE OPERAND VALUE xxxx.

Reason:

A START command was issued but the SCOPE value xxxx is invalid.

System Action:

The command is rejected.

User Action:

Correct and retry.

N15309

INVALID ID OPERAND VALUE xxxx.

Reason:

A LIST command was issued but the ID operand value xxxx is invalid.

System Action:

The command is rejected.

User Action:

Correct and retry.

N15310

INVALID NOTIFY OPERAND VALUE xxxx

Reason:

The NOTIFY operand of the START command must be YES or NO.

System Action:

The command is rejected.

User Action:

Correct and retry.

N15314**PROCEDURE NESTING FROM CONCATENATED COMMAND IS INVALID.****Reason:**

An EXEC or FSPROC command has been entered to begin execution of an NCL procedure. The EXEC or FSPROC command is concatenated with another command, This is invalid.

System Action:

The request to begin a new NCL procedure is rejected.

User Action:

The EXEC or FSPROC command must be entered as a single (ie. not concatenated) command. Correct the command and retry.

N15401**OPERAND xxxxx NOT RECOGNISED****Reason:**

The specified operand of an NSBRO command was invalid.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15402**REQUIRED OPERAND HAS BEEN OMITTED****Reason:**

A required operand for the entered NSBRO command has been omitted.

System Action:

The command is rejected.

User Action:

Correct and retry.

N15403

LINE n OF SPECIFIC/GENERAL BROADCAST TEXT DELETED

Reason:

Confirms deletion of the specified line of the broadcast text as a result of an NSBRO command.

System Action:

None.

User Action:

None.

N15404

LINE n OF SPECIFIC/GENERAL BROADCAST TEXT SET

Reason:

Confirms successful execution of an NSBRO command to set a broadcast line.

System Action:

None.

User Action:

None.

N15405

INSUFFICIENT STORAGE TO SERVICE REQUEST

Reason:

An NSBRO command could not be serviced because of a storage shortage.

System Action:

The command is rejected.

User Action:

If necessary increase the SOLVE region or partition size.

N15406**LINE n OF BROADCAST TEXT EXCEEDS MAXIMUM LENGTH - TRUNCATED****Reason:**

The text length that can be specified with NSBRO is a maximum of 78 characters.

System Action:

The command is accepted but excess text is discarded.

User Action:

Re-format the broadcast if required.

N15408**xxxxx BROADCAST MASK OMITTED OR INVALID****Reason:**

The mask that defines the target terminals for a broadcast type xxxxx is invalid or has been omitted.

System Action:

The command is rejected.

User Action:

Correct the mask and retry.

N15409**NO TEXT PROVIDED FOR SPECIFIC BROADCAST****Reason:**

An NSBRO command was issued to send a specific broadcast but no text had been defined by an earlier NSBRO command.

System Action:

The command is rejected.

User Action:

Define the specific broadcast text and retry. After each use of the SSEND= operand, the specific broadcast text must be set again using the SBn operands.

N15411

BROADCAST REQUEST aaaaaaaa ACCEPTED

Reason:

An NSBRO broadcast has been accepted for processing. The ID assigned to the broadcast is aaaaaaaa. An N15501 message is issued when the broadcast has completed processing.

System Action:

The broadcast request is queued to process.

User Action:

Review the N15501 message to determine the results of the broadcast.

N15412

MUTUALLY EXCLUSIVE OPERANDS

Reason:

AN NSBRO command contains conflicting operands.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15413

OPERAND aaaaaaaaaa INVALID

Reason:

The indicated operand of an NSBRO command was invalidly specified.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15501**BROADCAST xxxxxxxx - MSG SENT TO yy TERMINALS, zz USERS.****Reason:**

Confirms successful execution of an NSBRO command or broadcast services request. xxxxxxxx indicates the broadcast identifier associated with the request. yy indicates the number of terminals that received the broadcast. zz indicates the number of SOLVE users that received the broadcast.

System Action:

None.

User Action:

None.

N15502**BROADCAST REQUEST aaaaaaaa CANCELLED BY bbbbbbbb.****Reason:**

The specified broadcast request has been cancelled by the named user. The broadcast may be either an active broadcast or one queued. If the broadcast was active then the N15501 message indicates the number of receivers.

System Action:

The broadcast request is discontinued if active and the broadcast is discarded.

User Action:

None.

N15577**BROADCAST REQUEST aaaaaaaa FOR userid DISCARDED.****Reason:**

The specified broadcast request has not completed due to the user logging off.

System Action:

The log procedure detects this message and decrements the number of outstanding broadcasts.

User Action:

None.

N15601

INVALID OR OMITTED OPERAND.

Reason:

A UDBCTL command has been entered either with no operands or with an invalid operand.

System Action:

The command is rejected.

User Action:

Refer to the command description in the Command Reference.

N15602

INVALID SYNTAX.

Reason:

A UDBCTL command has been entered with invalid syntax.

System Action:

The command is rejected.

User Action:

Correct the command and retry. This error normally indicates that the DDNAME specified in the command has invalid syntax or a logical fileid that is being assigned is invalid.

N15603

xxxxxx REQUEST COMPLETE.

Reason:

A UDBCTL command has been completed successfully. xxxxxx is the type of request and will be OPEN, CLOSE, RESET or ASSIGN.

System Action:

None.

User Action:

If it was an OPEN request a logical file ID will still have to be assigned before the UDB is available for processing, unless the ID= operand was also specified.

N15604**FILEID xxxxxxxx IS INVALID.****Reason:**

An attempt to assign a logical fileid to a UDB has failed because the specified name does not conform to system requirements.

System Action:

The command is rejected.

User Action:

Ensure that the specified name is from 1 to 8 characters in length, starts with an alphabetic or national character and contains only alphanumeric or national characters. Correct and retry.

N15605**UDB IS NOT CLOSED OR IS IN ERROR STATUS.****Reason:**

An OPEN or RESET request has been rejected because the nominated UDB is not CLOSED.

System Action:

The command is rejected.

User Action:

An attempt to OPEN an already open UDB is meaningless. Before a RESET request can be processed the UDB must be closed. This can be achieved by using the CLOSE operand. If necessary close the UDB and retry.

N15606

OPEN-RESET FAILED, ACB CODE=X`yy', UDB=ddname

Reason:

An attempt to RESET the UDB associated with DD ddname has failed because of the error X`yy'.

System Action:

The UDB has not been reset and remains in closed status.

User Action:

The VSAM ACB open code X`yy' is described in the VSAM Programmer's Guide. VSAM imposes certain restrictions and requirements on datasets before they can be reset. The dataset cannot be allocated with the UNIQUE attribute, cannot use KEYRANGES or use ALTERNATE INDICES. In addition the dataset must have been defined with the REUSE attribute. The SHOW UDB command can be used at any time to redisplay the error code for the error that caused the failure. Determine the cause of the error and if possible retry it. Even though the RESET process failed, it may still be possible to re-open the UDB (with the OPEN operand) and resume processing until the error can be corrected.

N15607

REQUESTED UDB ddname NOT KNOWN TO SYSTEM.

Reason:

A UDBCTL command has been entered that references a DDNAME that was not included in the system JCL or has not been allocated by use of the ALLOC command.

System Action:

The command is rejected.

User Action:

This may result from a syntax error. If so correct the command and retry. If the DDNAME has been omitted, use the ALLOC command to allocate this UDB.

N15608**FILEID filename ALREADY ASSIGNED TO UDB dddddddd****Reason:**

A UDBCTL command has been entered to assign a logical fileid to the DDNAME dddddddd. However, the FILEID fileid has previously been assigned. Only one fileid per UDB can be used.

System Action:

The assignment is rejected and the original fileid remains operative.

User Action:

If a new fileid is required the UDB must first be logically stopped using the STOP operand. The assignment of the new fileid can then be performed.

N15609**UNABLE TO ALTER STATUS, UNTIL OPEN ERROR CORRECTED.****Reason:**

An attempt to change the status of a UDB by assigning a logical fileid, logically stopping or physically closing has been rejected because the UDB is in error status. This error will either have occurred during system startup or as the result of a subsequent OPEN or RESET attempt.

System Action:

The request is rejected.

User Action:

Use the SHOW UDB command to determine the nature of the open error. This will be displayed as a VSAM ACB open error code which can be interpreted using the *VSAM Programmer's Guide*. The UDBCTL command OPEN operand can be used to retry the open. Only when this condition has been corrected, can the status be further changed.

N15610

FILEID filename STILL HAS ACTIVE USERS.

Reason:

An attempt to STOP or CLOSE a UDB using the UDBCTL command has been rejected because the UDB still has active users.

System Action:

The command is rejected.

User Action:

Before a UDB can be logically stopped or physically closed it must have no active users. Stopping or closing a UDB while it is being actively processed could impact processing and result in errors. The SHOW UDB command can be used to obtain a count of the number of active users. This is displayed in the A/U column. An active user is represented by an NCL procedure that has issued an &FILEID statement for that UDB. The connection is terminated either by the procedure ending or an &FILEFREE statement being issued. The SHOW UDBUSER command can be used to display the active users of this UDB. It should be remembered that specialized system procedures such as LOGPROC and CNMPROC represent active users of their respective UDBs and can be stopped using the SYSPARMS command LOGPROC=FLUSH etc. operand if required.

N15611

FILEID filename PREVIOUSLY ASSIGNED TO UDB dddddddd

Reason:

An attempt to assign a logical fileid filename to a UDB has failed because the selected name has previously been assigned to another ddname dddddddd. A fileid can be assigned to only one UDB.

System Action:

The command is rejected.

User Action:

Select a different fileid or logically stop the conflicting UDB using the STOP operand and then proceed with assigning the fileid to the required UDB.

N15612**INSUFFICIENT AUTHORITY, FILE NOT SYSOUT.****Reason:**

An attempt has been made to change the status (eg. OPEN, CLOSE OR RESET) of a dataset to a format other than SYSOUT using the UDBCTL command and the user has insufficient command authority. Unless changed by the installation, the status of a SYSOUT format dataset can be changed by users with a command authority of 0. Changing the status of all other datasets requires a higher authority, usually authority level 2.

System Action:

The command is rejected.

User Action:

Contact your systems administrator.

N15613**OPEN FAILED, ACB CODE=X`xx', UDB=dddddddd****OPEN FAILED, ABEND SYS-*nnn*', UDB=dddddddd****Reason:**

An attempt to OPEN the UDB associated with ddname *dddddddd* has failed because of the ACB OPEN error X`xx' or system abend code *nnn*.

System Action:

The UDB has not been opened and remains in closed status.

User Action:

Enter **/VSAMRC.00xx** at the ==> prompt to lookup VSAM ACB open error codes. Refer to the appropriate operating system manual (for example the VSAM Programmer's Guide) for a description of the error code. The SHOW UDB command can be used at any time to redisplay the error code that caused the failure. Determine the cause of the error, correct and retry.

N15614

CANNOT ASSIGN FILEID WHILE CLOSED.

Reason:

An attempt to assign a logical fileid has been rejected because the UDB is closed. The UDB has been closed by use of the UDBCTL command CLOSE operand.

System Action:

The assignment is rejected.

User Action:

Use the OPEN operand to re-open the UDB and retry the assignment.

N15615

DELETE FAILED FOR VSAM LSR POOL, R15=aaaaaaaa

Reason:

In the process of closing the last UDB that utilizes the LSR pool, SOLVE issues a DLVRP macro to delete the LSR pool. This macro has failed with the return code indicated.

System Action:

Processing continues.

User Action:

Determine the reason for the failure from the relevant VSAM manual.

N15616

CONFLICTING OPERANDS.

Reason:

The RESET, SIS and DEFER operands of the UDBCTL command are mutually exclusive with the INPUT operand.

System Action:

The command is rejected.

User Action:

Determine the requirements of the UDB, correct the error and retry.

N15617**CANNOT ASSIGN FILEID, INVALID UDB DEFINITION****Reason:**

The UDB to which the user was trying to assign a FILEID had not previously been opened successfully for either of two reasons: it is a dummy file, or its keylength is greater than 255 bytes. You may not assign a FILEID to a UDB that is not currently open.

System Action:

The request is rejected.

User Action:

The SHOW UDB command can be used to determine the status of the UDB.

N15618**DDNAME aaaaaa IS RESERVED.****Reason:**

An attempt was made, using the UDBCTL OPEN=ddname command, to open a UDB using a system ddname that is reserved.

System Action:

The command is rejected.

User Action:

SOLVE itself has allocated to it DDnames such as those used for panel libraries, command libraries etc., which are reserved for its use only. Use a DDname that is not reserved.

N15619

OPEN FAILED, dddddddd IS NOT A VALID UDB.

Reason:

The ddname *dddddddd* specifies a dataset that is not a valid UDB, for one of the following reasons:

- It is a dummy file.
- Its keylength is greater than 255 bytes.
- Another reason specified in message N28511 which is written to the activity log.

System Action:

The UDB is not opened, and is flagged in error.

User Action:

If the reason for the error is unclear, check the activity log for additional messages, for example N28511. Determine your requirements for this UDB, correct and retry.

N15620

INSUFFICIENT STORAGE TO PROCESS COMMAND.

Reason:

Storage could not be obtained to process the UDBCTL command.

System Action:

The command is not processed.

User Action:

Determine the cause of the storage shortage.

N15701**MODULE *modlname* ATTACH/LOAD FAILED****Reason:**

An attempt to attach or load module *modlname* has failed.

System Action:

The function in progress fails.

User Action:

Contact your systems administrator to determine the reason for the attach failing. Other messages will follow this describing any associated processing that is impacted.

N15702**SUBTASK HAS ABENDED SYS-yyy.****Reason:**

The module has abnormally terminated with the error SYS-yyy.

System Action:

The function in progress fails.

User Action:

Determine the reason for the failure. Other messages will follow this describing any associated processing that is impacted. If necessary report this problem to your product support representative.

N15703**MODULE *modlname* ATTACH FAILED - DOS SYSTEM 'NTASKS' REACHED.****Reason:**

The maximum number of subtasks allowed by the DOS System Generation NTASK value has been reached.

System Action:

The function requesting this attach fails.

User Action:

Retry when the number of tasks in the system has decreased. If the problem persists, notify your systems administrator.

N15704

MODULE modlname ATTACH FAILED - DOS PART. MAX. NO. SUBTASKS REACHED.

Reason:

The maximum number of subtasks allowed for any one partition has been reached.

System Action:

The current level of activity with FTS and/or MAI prevents the attach of a new subtask. The requested function fails.

User Action:

Retry when system activity declines.

N15705

INSUFFICIENT STORAGE TO ALLOCATE SUBTASK SAVEAREA.

Reason:

SOLVE failed to obtain sufficient storage for a task save area.

System Action:

The function in progress fails.

User Action:

Retry when system activity declines, or restart SOLVE in a larger partition.

N15749**SOLVE SUBTASK INTERNAL ABEND MODULE modlname REASON code.****Reason:**

An SOLVE subtask has issued an internal abend. The reason code further clarifies the type of abend. A full list of internal abend codes may be obtained using the CAS : Message Definition menu. All internal abend codes are prefixed by \$ABEND ie. \$ABENDxxx-yy.

System Action:

The subtask terminates. SOLVE may also terminate.

User Action:

Use the internal abend code to obtain the cause and description of the internal abend. If the problem cannot be easily diagnosed, refer the error to your product support representative.

N15801**command OF USERID uuuuuuuu FROM/TO region ACCEPTED****Reason:**

A CANCEL, DISCONN or RECONN command has been successfully issued against the named userid and region combination.

System Action:

If the command is CANCEL then the users processing region(s) is/are processed for termination.

If the command is DISCONN then the users processing region(s) is/are processed for disconnection.

For the RECONN command the current terminal is connected to the target region. The current region is either terminated or disconnected.

User Action:

If a reconnection is processed successfully a panel will be displayed indicating this. Press the ENTER key to resume the disconnected processing.

N15802

REQUIRED OPERAND OMITTED.

Reason:

The CANCEL command requires an operand. No operands have been specified.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N15803

INVALID USERID SPECIFIED.

Reason:

A CANCEL or DISCONN command has been issued specifying an invalid userid on the U= operand.

System Action:

The command is rejected.

User Action:

Correct and retry.

N15804

userid NOT VALID FOR COMMAND

Reason:

A CANCEL, DISCONN or RECONN command has been issued against the nominated userid. This userid is not processable by the command. Eg. Disconnection of a background userid.

System Action:

The command is rejected.

User Action:

None.

N15805**REGION NOT FOUND****Reason:**

A CANCEL or DISCONN command was issued but no regions were found to process.

System Action:

The command is rejected.

User Action:

If required issue SHOW USERS to verify the current users logged on.

N15806**UNSUPPORTED OPERAND****Reason:**

An unsupported operand (which is valid for another command) was specified on a CANCEL, DISCONN or RECONN command.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N15807**NO OTHER WINDOW EXISTS****Reason:**

A CANCEL WINDOW command was issued when no other window existed.

System Action:

The command is rejected.

User Action:

None.

N15808

OTHER WINDOW CANCELLED.

Reason:

A CANCEL WINDOW command has successfully cancelled the users other window.

System Action:

Processing with a single window continues.

User Action:

None.

N15809

RECONNECT REGION nnnnn CANCELLED

Reason:

A CANCEL command was issued specifying a user that had a numeric reconnection identifier nnnnn.

System Action:

The users reconnect region is processed for termination.

User Action:

None.

N15810

USER REGION aaaaaaaa ALREADY PROCESSING COMMAND.

Reason:

A CANCEL, DISCONN or RECONN command has been issued for a region that is already processing a region level command.

System Action:

The command is rejected.

User Action:

Retry the command if the condition persists then report the problem to your installation help desk.

N15811**RECONNECT REGION nnnnn NOT FOUND < FOR uuuuuuuu >****Reason:**

Either RECONN or CANCEL command has specified a numeric reconnection identifier nnnnn but no matching region exists. The userid uuuuuuuu is specified for RECONN command only.

System Action:

The command is rejected.

User Action:

Verify the reconnection identifier by issuing SHOW USERS=uuuuuuuu (for RECONN command) or SHOW USERS (for CANCEL command). If necessary retry the command.

N15812**INSUFFICIENT STORAGE****Reason:**

A RECONN command has failed due to lack of storage.

System Action:

The reconnection request is aborted.

User Action:

Retry the command if the condition persists notify your installation help desk.

N15813**INSUFFICIENT AUTHORITY****Reason:**

An attempt was made to CANCEL or DISCONN. The command operand authority level required exceeds that of the requestor.

System Action:

The command is rejected.

User Action:

None.

N15814

USER MUST RECONNECT FROM TERMINAL aaaaaaa

Reason:

A RECONN command has been issued from a terminal other than that specified in the message. The system is currently configured so that reconnection can only occur at the same terminal as disconnection.

System Action:

The request is rejected.

User Action:

If possible re-login at the indicated terminal and retry the request.

N15815

REGION NOT PROCESSABLE

Reason:

A CANCEL or DISCONN command specified a region that could not be processed. The region specified is not in a valid state for processing by the command.

System Action:

The command is rejected.

User Action:

If required issue SHOW USERS to verify the current users logged on.

N15816

CANCEL FORCE OF USERID P1 FROM P2 REJECTED - NO PREVIOUS CANCEL DONE

Reason:

A CANCEL command with the FORCE operand can only be issued when a CANCEL command has already been issued without the FORCE operand.

System Action:

None.

User Action:

Issue the CANCEL command without the FORCE operand.

N15817**CANCEL FORCE OF USERID P1 FROM P2 REJECTED - SIGNOFF IN PROGRESS****Reason:**

A CANCEL command with the FORCE operand cannot be issued for a user that is in the process of signing off.

System Action:

None.

User Action:

None.

N15818**CANCEL FORCE OF USERID P1 FROM P2 REJECTED - INVALID FOR THIS USER****Reason:**

A CANCEL command with the FORCE operand can only be issued for a terminal owning region such as an LU2 or LU1 type session.

System Action:

None.

User Action:

Issue the CANCEL command without the FORCE operand for this user.

N15901**VTAM SENDCMD MACRO REJECTED, RC=rc,FBK2=fb,SENSE=sense****Reason:**

A VTAM SENDCMD macro was rejected with the specified error codes.

System Action:

The VTAM command is unable to be executed.

User Action:

Determine the meaning of the error codes from the appropriate VTAM Programming manual.

N15902

VTAM SENDCMD MACRO FAILED RC=rc,FBK2=fb,SENSE=sense

Reason:

A VTAM SENDCMD macro was rejected with the specified error codes.

System Action:

The VTAM command is unable to be executed.

User Action:

Determine the meaning of the error codes from the appropriate VTAM programming manual.

N15A01

LSRPOOL OPT=REPLACE/UPDATE/RESET COMMAND PROCESSED SUCCESSFULLY.

Reason:

This message confirms the successful completion of an LSRPOOL command.

System Action:

None.

User Action:

None.

N15A02

LSRPOOL COMMAND REJECTED, `FORCE' REQUIRED WHEN AN LSR POOL IS ACTIVE.

Reason:

An LSRPOOL command has been issued to replace, update or reset the pending LSR pool definition. However there is an LSR pool currently active. You must code `FORCE' on your LSRPOOL command in this case.

System Action:

The command is rejected.

User Action:

Reissue the command with `FORCE' specified.

N15A10**BUFFER COUNT INVALID.****Reason:**

An LSRPOOL command has been issued with a parameter size=num defining a set of buffers to be allocated to the VSAM shared resources pool. However the number (num) is invalid.

If MVS/XA or MVS/ESA, the count must be 0, or greater than 3, to a maximum of 65535.

If not MVS/XA or MVS/ESA, it must be 0, or 3 to 32767, and the product of (buffer size * count) must not exceed 16M.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15A11**BUFFER SIZE INVALID IN THIS ENVIRONMENT.****Reason:**

You have specified a buffer size that is only supported in MVS/XA or MVS/ESA.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15A12**INVALID HIPERSPACE BUFFER SIZE.****Reason:**

Hiperspace buffers must be a multiple of 4K to a maximum of 32K.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15A13

INVALID HIPERSPACE BUFFER COUNT.

Reason:

The count of hiperspace buffers must be from 0 to 16777215 (16M-1).

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15A14

DUPLICATED BUFFER SIZE SPECIFICATION.

Reason:

A buffer size specification on an LSR command has been duplicated within a specific section. For example:

DATA 4K=10 2K=5 4K=8 The second 4K is duplicated.

This does not include the case where a size is repeated in separate sections of the command for example:

DATA 4K=10 INDEX 4K=5

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15A15

SEPARATE INDEX BUFFERS NOT SUPPORTED.

Reason:

The use of the INDEX keyword on the LSR command to request a separate index buffer pool is not supported on this operating system.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15A16**HIPERSPACE BUFFERS NOT SUPPORTED.****Reason:**

The use of the HIPERSPACE or HS keyword on the LSR command to request MVS/ESA hiperspace buffers is not supported on this operating system.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15A17**INVALID LSR POOL NUMBER.****Reason:**

The POOL=n keyword of the LSR command has specified an invalid pool number. The number is less than 0, or greater than the maximum pool number supported by the LSR command. In MVS/XA and MVS/ESA, a maximum pool number of 15 is allowed. All other environments only support a pool number of 0.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15A20

aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa

Reason:

This message is the header line for a SHOW LSR display. It indicates which definition (active, pending, or default) is being displayed.

System Action:

None.

User Action:

None.

N15A21

KEYLEN: nnn STRNO: mmm FIXIOB:YES/NO FIXBFR:YES/NO

Reason:

This is one line of the SHOW LSR display. This line displays the maximum allowable key length for the pool, maximum number of strings available, whether I/O control blocks are fixed in storage (YES or NO), and whether I/O buffers are fixed in storage (YES or NO).

System Action:

None.

User Action:

None.

N15A22

SIZE COUNT INDEX H-SPACE X-H-SPACE

Reason:

This is one line of the SHOW LSR display. This line is a header for the subsequent lines of the display (see N15A23).

NOTE: The INDEX, H-SPACE, and X-H-SPACE headings will only be displayed if separate index pools and/or hiperspace buffers are supported by the current operating system.

System Action:

None.

User Action:

None.

N15A23**size count index h-space x-h-space****Reason:**

This is one line of the SHOW LSR display. This line describes one set of buffers contained in the pool:

size is the size of the buffers,

count is the number of buffers of this size allocated.

index is the count of index buffers if a separate index pool exists.

h-space and x-h- space are the data and index pool hiperspace buffer counts.

NOTE: The count can be zero if one of the other counts are non-zero.

System Action:

N15A30**ACTIVE LSR POOL nnn STATISTICS****Reason:**

This is the header line for a multi-line display of statistics about a currently active LSR pool. The pool number is shown in the message.

System Action:

None.

User Action:

None.

N15A31

**KEYLEN:nnn STRNO:mmm FIXIOB:YES/NO FIXBFR:YES/NO
STRMAX:max ACTIVE:act**

Reason:

This is one line of a SHOW LSR=STATISTICS display. This line describes the attributes of the active LSR pool. It gives the maximum allowable key length for the pool, maximum number of strings available, whether I/O control blocks are fixed in storage (YES or NO), whether I/O buffers are fixed in storage (YES or NO), the maximum number of concurrent strings used, and the current number of open datasets using the pool

System Action:

None.

User Action:

None.

N15A32

SIZE COUNT P.READS BUF FOUND UIW NUIW %FOUND HS-COUNT

Reason:

This is one line of a SHOW LSR=STATISTICS display. This is a header for the following lines describing the buffers in the pool (see N15A33).

System Action:

None.

User Action:

None.

N15A33

size count p.reads buf found uiw nuiw %found hs-count

Reason:

This is one line of a SHOW LSR=STATISTICS display. This line describes one set of buffers within the pool. Statistics are:

size The size of each buffer

count The number of buffers of this size in the pool.

p.reads Number of physical reads into this set of buffers.

buf found The number of read requests satisfied from the LSR pool.

uiw The number of user-initiated writes from the LSR pool.

nuiw The number of non-user-initiated writes from the LSR pool.

% found The percentage of reads satisfied from the LSR pool.

hs-count If hiperspace buffers are defined for this buffer size, the the number of hiperspace buffers.

System Action:

None.

User Action:

None.

N15A34

DATA...

Reason:

This is one line of a SHOW LSR=STATISTICS display. This line indicates that the pool currently being displayed has a separate data and index buffer set defined, and that the following N15A33 messages relate to the DATA pool.

System Action:

None.

User Action:

None.

N15A35

INDEX...

Reason:

This is one line of a SHOW LSR=STATISTICS display. This line indicates that the pool currently being displayed has a separate data and index buffer set defined, and that the following N15A33 messages relate to the INDEX pool.

System Action:

None.

User Action:

None.

N15A39

UNABLE TO DISPLAY LSR STATS, REASON: aaaaaaaaaa

Reason:

A request for a display of LSR statistics has been unsuccessful for the reason given.

System Action:

None.

User Action:

None.

N15A40

INVALID OPTION ON SHOW LSR COMMAND.

Reason:

A SHOW LSR=xxxx command was entered, but the value of xxxx was not one of: STATISTICS, CURRENT, PENDING or DEFAULT

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15A41**INVALID OR UNRECOGNISED OPERANDS ON SHOW LSR COMMAND.****Reason:**

A SHOW LSR command was issued with invalid parameters.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15B01**SUBSYS option COMMAND ACCEPTED.****Reason:**

The entered SUBSYS command has completed successfully.

System Action:

none.

User Action:

none.

N15B20**SUBSYS DEFINE COMMAND FAILED. SUBSYSTEM name ALREADY DEFINED.****Reason:**

The entered SUBSYS DEFINE command failed. There is already a defined subsystem of that name.

System Action:

The command is not processed.

User Action:

Correct the subsystem name if required.

N15B21

SUBSYS option COMMAND FAILED. SUBSYSTEM name NOT DEFINED.

Reason:

The entered SUBSYS command failed. There is no subsystem of that name defined.

System Action:

The command is not processed.

User Action:

Correct the subsystem name if required.

N15B22

SUBSYS option COMMAND FAILED. SUBSYSTEM name HAS PENDING DELETE.

Reason:

The entered SUBSYS command failed. The subsystem is pending deletion.

System Action:

The command is not processed.

User Action:

Wait until the subsystem finishes processing the deletion request.

N15B23

SUBSYS FORCE COMMAND FAILED. SUBSYSTEM name NOT FORCEABLE.

Reason:

The entered SUBSYS FORCE command failed. The subsystem cannot be forced at this time.

System Action:

The command is not processed.

User Action:

A subsystem can only be forced when the subsystem subtask is processing user code. This is indicated by the FORCE column on SHOW SUBSYS, Check the output of a SHOW SUBSYS and retry if necessary.

N15C01**SUBSYS subname PROGRAM progname LOADED.****Reason:**

The listed subsystem has had the named program successfully loaded, ready for activation.

System Action:

none

User Action:

none

N15C02**SUBSYS subname PROGRAM progname FAILED TO LOAD. reason.****Reason:**

The listed subsystem program could not be loaded, The failure reason is shown.

System Action:

The subsystem remains inactive.

User Action:

Investigate the reason and correct it.

N15C03**SUBSYS name STARTED.****Reason:**

The listed subsystem is now running, and ready to process requests.

System Action:

The subsystem becomes active.

User Action:

none.

N15C04

SUBSYS name SUBTASK ATTACH FAILED. REFER TO LOG.

Reason:

The listed subsystem subtask could not be attached. There is an additional message on the activity log.

System Action:

The subsystem stays inactive.

User Action:

INvestigate the problem.

N15C05

SUBSYS name SUBTASK FAILED TO INITIALIZE.

Reason:

The listed subsystem subtask abended before initializing.

System Action:

The subsystem stays inactive.

User Action:

Check the System log and SOLVE job log for ABEND information (such as an indicative dump). Use the ABEND information to determine why the SUBSYS ABENDED.

N15C06

SUBSYS name STOPPED.

Reason:

The listed subsystem has stopped.

System Action:

none.

User Action:

none.

N15C07**SUBSYS name DELETED.****Reason:**

The listed subsystem has been deleted.

System Action:

none.

User Action:

none.

N15C08**SUBSYS name START FAILED - STORAGE SHORTAGE.****Reason:**

The listed subsystem could not be started, as there was a shortage of storage.

System Action:

The subsystem stays inactive.

User Action:

INvestigate the reason for storage shortage, and then retry.

N15C20**SUBSYS name ALREADY STARTED.****Reason:**

The listed subsystem could not be started, as it is already started.

System Action:

The subsystem is already started.

User Action:

None.

N15C21

SUBSYS name CANNOT BE STARTED - PROGRAM LOAD FAILED.

Reason:

The listed subsystem could not be started, as the subsystem program failed to load.

System Action:

The subsystem remains inactive.

User Action:

Determine the reason for the load failure, correct it, and restart the subsystem.

N15C22

SUBSYS name CANNOT BE STOPPED - NOT STARTED.

Reason:

The listed subsystem could not be stopped as it is not started.

System Action:

The subsystem remains inactive.

User Action:

none.

N15C23

SUBSYS name STARTED, RELOAD NOT ALLOWED.

Reason:

The SUBSYS RELOAD command is not allowed when the target subsystem is started. It must be stopped first.

System Action:

The command is not processed.

User Action:

Stop the subsystem and reissue the command.

N15C24**SUBSYS name STARTED, DELETE NOT ALLOWED.****Reason:**

The SUBSYS DELETE command is not allowed when the target subsystem is started. It must be stopped first.

System Action:

The command is not processed.

User Action:

Stop the subsystem and reissue the command.

N15C25**SUBSYS name CANNOT BE STOPPED - STORAGE SHORTAGE.****Reason:**

The SUBSYS STOP command could not be processed as there was a storage shortage that prevented us from obtaining storage to process the stop request.

System Action:

The command is not processed.

User Action:

Investigate the storage shortage and retry,

N15C30**SUBSYS name ABEND code.****Reason:**

The indicated Subsystem has abended. The ABEND code is shown

System Action:

The subsystem stops.

User Action:

Investigate the abend reason.

N15C31

SUBSYS name FORCED.

Reason:

The indicated Subsystem had a SUBSYS FORCE command successfully processed.

System Action:

The subsystem stops.

User Action:

None.

N15F01

No aaaaa SUBSYSTEMS DEFINED.

Reason:

This message will be issued by SHOW SUBSYS when no subsystems are defined, or if a SHOW SUBSYS=name command is issued and no subsystems match the supplied name or prefix.

System Action:

None.

User Action:

None.

N15F02**SUBSYS PROGRAM STATUS QREQ FRC PLF AUT STOP-REASON****Reason:**

This message will be issued by SHOW SUBSYS to head up the subsystem list.
The columns are:

SUBSYS The subsystem name

PROGRAM The program name

STATUS The subsystem status

QREQ The current number of queued requests

FRC Whether the subsystem can be forced

PLF The parameter list format

AUT The Automatic call replace option

STOP-REASON The reason that the subsystem was stopped

System Action:

None.

User Action:

None.

N15F03**subsys program status qreq frc plf aut stop-reason****Reason:**

This message will be issued by SHOW SUBSYS for each listed subsystem. refer to message N15F02 for the meanings of the columns.

System Action:

none.

User Action:

None.

N15F10

INVALID PARAMETERS ON SHOW SUBSYS COMMAND.

Reason:

The SHOW SUBSYS command had invalid or unrecognized parameters.

System Action:

The command is not processed.

User Action:

Correct the parameters.

N15F11

INVALID OR MISSING VALUE AFTER SUBSYS=.

Reason:

The SHOW SUBSYS command had invalid or unrecognized data after the SUBSYS= operand.

System Action:

The command is not processed.

User Action:

Correct the parameters.

N15Z10

SUBTASK ATTACH FAILED, PGM=name R15=r15 R0=r0

Reason:

SOLVE was unable to attach an operating system subtask to perform a function

System Action:

The attach fails.

User Action:

Contact your systems administrator to determine the reason for the attach failing. Other messages will follow this describing any associated processing that is impacted.

N15Z20**SOLVE SUBTASK ABEND, PGM: pgmname ABEND type PSW psw- info****Reason:**

A subtask attached by SOLVE has abended. The message indicates the abend code and PSW. (if no SDWA was available, the PSW is not provided and a message indicates that no SDWA was available).
N15Z21 messages follow with register information.

System Action:

Depends on the subtask purpose.

User Action:

If the subtask is a user program (eg &CALL program), examine the abend and correct the code. SOLVE subtask abends should be notified to Technical Support.

N15Z21**REGS raa-bb xxxxxxxx xxxxxxxx xxxxxxxx xxxxxxxx****Reason:**

This message follows the N15Z20 message and provides register information.
4 messages will contain all 16 registers.
Refer to message N15Z20 for details.

System Action:

See messages N15Z20

User Action:

See message N15Z20

N16101

NO ACTIVITY LOGS DEFINED, CONTINUING WITHOUT LOG.

Reason:

No LOG DD cards have been included in the product execution JCL.

System Action:

The system continues processing but no hardcopy logging can be performed. LOGPROC still receives each log record.

User Action:

If required, include DD cards for the log files. This can be done dynamically using the ALLOC command and logging can then be started using the LOGSWAP command.

N16102

INSUFFICIENT STORAGE FOR LOG BUFFER, CONTINUING WITHOUT ACTIVITY LOG.

Reason:

Storage shortage prevents use of the activity log.

System Action:

Processing continues.

User Action:

Increase job region/partition size and investigate cause of storage shortage.

N16103**I/O ERROR ON ACTIVITY LOG DD=xxxxxxx, ABEND CODE=yyy-zz,
USING NEXT LOG****Reason:**

An I/O error has occurred on the log dataset defined by the specified DD card, caused by the specified abend code.

System Action:

Swaps to the next available log dataset. If no more logs are available logging is halted.

User Action:

If logging is halted but is still required, a new log dataset may be dynamically allocated (using ALLOC) and then swapped to (using LOGSWAP).

N16104**LOGSWAP REQUEST REJECTED, PREVIOUS LOGSWAP STILL BEING
PROCESSED.****Reason:**

A LOGSWAP command has been entered before a previous LOGSWAP command has completed.

System Action:

The command is rejected.

User Action:

Await completion of the previous LOGSWAP operation, and try again if necessary.

N16105

LOGSWAP REQUEST REJECTED, NO LOGS AVAILABLE.

Reason:

A LOGSWAP command has been entered to cause use the next available hardcopy log but no more are available.

System Action:

The command is rejected. Processing continues with the last available log.

User Action:

If additional logs are required, they may be dynamically allocated using the ALLOC command.

N16106

LOG CLOSED AND SWAPPED TO LOG DD=xxxxxxxx

Reason:

Confirms successful completion of a LOGSWAP command and shows the DD name of the new log dataset.

System Action:

None.

User Action:

None.

N16107

ACTIVITY LOGGING HALTED, NO LOGS AVAILABLE.

Reason:

During LOGSWAP processing the next activity log file could not be opened so activity logging has been halted.

System Action:

Activity logging stops.

User Action:

Refer to message N16103 for required action.

N16108**ACTIVITY LOG DD=xxxxxxx FAILED TO OPEN, USING NEXT LOG.****Reason:**

During LOGSWAP processing the log dataset with DDname xxxxxxxx could not be OPENed.

System Action:

The system tries the next available log dataset.

User Action:

None.

N16109**PREVIOUS LOG DD=xxxxxxx, SWAPPED BY userid****Reason:**

Confirms completion of LOGSWAP processing. This message provides a record of the previous log dataset and the user who requested the LOGSWAP.

System Action:

None.

User Action:

None.

N16110**LOGSWAP COMPLETED, NEW LOG DD=xxxxxxx****Reason:**

Confirms completion of LOGSWAP processing to the log identified by the xxxxxxxx DD statement.

System Action:

None.

User Action:

None.

N16111

I/O ERROR ON ACTIVITY LOG DD=xxxxxxx, CONTINUING WITH NEXT LOG.

Reason:

An I/O error occurred on the current log and the system has generated an internal LOGSWAP operation.

System Action:

Logging will continue with the next available log if one exists. If no additional log remains a warning message will be issued to advise that logging has been halted. In this case the SYSPARMS command SYSLOG operand can be used to request logging to the system log until a restart can be performed.

User Action:

Determine the reason for the I/O error and rectify it.

N16112

PRINTER IN USE BY DD=xxxxxxx, CONTINUING WITHOUT ACTIVITY LOG

Reason:

In a VM/GCS system, the LOG1 FILEDEF statement identifies a spooled printer but the (only) printer is in use by the identified DD.

System Action:

Activity logging is halted.

User Action:

Amend the SOLVE startup procedure to avoid the conflicting use of the spooled printer. Consider activity logging to CMS disk datasets.

N16201**NEW OCS WINDOW ID SET.****Reason:**

Indicates successful processing of an OCSID command.

System Action:

This is the value that will subsequently be returned in the NCL system variable OCSID if requested from this window. The OCSID is displayed in the right hand side of the OCS window.

User Action:

None.

N16202**OCS ID TOO LONG, TRUNCATED.****Reason:**

The OCSID command allows an ID of up to 8 characters. A longer ID was specified and has been truncated.

System Action:

None.

User Action:

None.

N16203**OCS WINDOW ID RESET.****Reason:**

Indicates successful processing of an OCSID command that specified a null ID to delete the current OCSID.

System Action:

Any existing OCSID is deleted. At this time the OCSID NCL system variable will return a null value.

User Action:

None.

N16204

OCS ID TOO LONG, NOT SET

Reason:

An OCSID greater than 8 characters was specified, but the ID could not be truncated because it contains DBCS shift-in or shift-out characters.

System Action:

The command is rejected.

User Action:

Correct and retry.

N16205

OCSID REQUEST INVALID FROM THIS ENVIRONMENT

Reason:

An attempt was made to set the OCS window Id with the OCSID command but the current environment does not have an OCS window.

System Action:

The command is rejected.

User Action:

None.

N16301

OPERAND xxxx NOT RECOGNISED.

Reason:

The specified operand, entered in conjunction with a PROFILE, SHOW or SYSPARMS command, is not a valid operand for the command.

System Action:

The command is rejected.

User Action:

Correct and retry. The operand may be genuinely invalid or may be valid only for a feature which is not licensed.

N16302**OPERAND xxxx IS INVALID OR OUT OF RANGE.****Reason:**

The specified operand, entered in conjunction with a PROFILE, SHOW or SYSPARMS command, is a valid operand for the command but its value is invalid.

System Action:

The command is rejected.

User Action:

Correct and retry.

N16303**OPERAND IS NO LONGER SUPPORTED - COMMAND IGNORED****Reason:**

The specified operand, entered in conjunction with a PROFILE, SHOW or SYSPARMS command was valid in a previous release of SOLVE but is no longer supported.

System Action:

The command is ignored.

User Action:

Check the Release Summary for obsolete command operands.

N16601**UNABLE TO OBTAIN STORAGE FOR APPL ENTRY****Reason:**

A SYSPARMS APPLSTAT command could not be processed because of a storage shortage.

System Action:

The command is rejected.

User Action:

If necessary increase the SOLVE region or partition size, or investigate the reason for the storage shortage.

N16901

COMMAND NOT VALID WITH THIS OPERATING SYSTEM.

Reason:

A SYSPARMS NONSWAP command has been entered but it is not valid for use in this operational environment.

System Action:

The command is rejected.

User Action:

None.

N16902

SYSTEM IS NOT APF AUTHORISED, CANNOT PROCESS COMMAND.

Reason:

A SYSPARMS NONSWAP command has been rejected because the system is not APF authorized.

System Action:

The command is rejected.

User Action:

Contact your systems administrator to determine why the system is not APF authorized. Other processing may be limited without APF authorization.

N16903

SYSTEM IS ALREADY RUNNING SWAPPABLE.

Reason:

A SYSPARMS NONSWAP=NO command has been rejected because the system is already running swappable.

System Action:

The command is ignored.

User Action:

None.

N16904**SYSTEM IS ALREADY RUNNING NON-SWAPPABLE.****Reason:**

A SYSPARMS NONSWAP=YES command has been rejected because the system is running non-swappable.

System Action:

The command is ignored.

User Action:

None.

N16907**LOAD FOR MODULE modname FAILED, R15=bbbb, R1=cccc.****Reason:**

A SYSPARMS MODLOAD=modname command failed. bbbb and cccc show the return codes from the LOAD macro.

System Action:

The module specified is not loaded.

User Action:

Determine the cause of the error and retry.

N16908**DELETE FOR MODULE modname FAILED.****Reason:**

A SYSPARMS MODDEL=modname command failed.

System Action:

The specified module is not deleted.

User Action:

Retry specifying the correct module name.

N16916

SYSTEM USING CROSS-MEMORY SERVICES, CANNOT BE MADE SWAPPABLE.

Reason:

A SYSPARMS NONSWAP=NO command has been issued (under MVS) to make SOLVE run swappable. The attempt has failed, since AOM is running in cross-memory mode, and requires SOLVE to run non-swappable.

System Action:

The command is rejected. SOLVE will keep running non-swappable.

User Action:

None.

N16917

PROCEDURE NAME: aaaaaaaaa IS NOT AN EXACT COMMAND NAME.

Reason:

A SYSPARMS CMDREPL=aaaaaaaa command has been issued, however aaaaaaaaa is not the exact name of a known command. To replace a command with an NCL procedure, the procedure name must be an exact match for the command it is replacing.

System Action:

The command is rejected.

User Action:

Check the spelling of the command and reissue.

N16918

COMMAND: aaaaaaaaa NOT REPLACEABLE BY AN NCL PROCEDURE.

Reason:

A SYSPARMS CMDREPL=aaaaaaaa command has been issued, but it is not valid for command aaaaaaaaa to be replaced by an NCL procedure.

System Action:

The command is rejected.

User Action:

None. The command cannot be replaced.

N16919

COMMAND: aaaaaaaaa GLOBAL EQUATED OR OML REPLACED, NOT REPLACEABLE BY AN NCL PROCEDURE.

Reason:

A SYSPARMS CMDREPL=aaaaaaaa has been issued, but command aaaaaaaaa is already overridden by a global equate, or has been replaced by an OML procedure.

System Action:

The command is rejected.

User Action:

None.

N16920

nnn NCL PROCEDURES UNLOADED BY GENERIC REQUEST.

Reason:

A SYSPARMS UNLOAD= command has been issued specifying a generic NCL procedure or DDname. This message shows how many NCL procedures were unloaded as a result of the command.

System Action:

nnn NCL procedures have been unloaded.

User Action:

None.

N16C01

DDNAME NOT FOUND, DD=aaaaaaaa

Reason:

A request has been received by Dataset Services for an action to be performed on a specified DD. The request has failed because the DD does not exist.

System Action:

The request fails.

User Action:

Allocate the specified DD then retry the request.

N16C02

DATASET NOT FOUND, DSN=aaaaaaaa

Reason:

A request has been received by Dataset Services for an action to be performed on a specified dataset referenced by dataset name aaaaaaaaa. The request has failed because the dataset does not exist.

System Action:

The request fails.

User Action:

Allocate the specified dataset then retry the request.

N16C03

MEMBER NOT FOUND, MEMBER=aaaaaaaa

Reason:

A request has been received by Dataset Services for an action to be performed on a specified member of a Partitioned DataSet (PDS). The request has failed because the member aaaaaaaaa does not exist.

System Action:

The request fails.

User Action:

Check that the member is correct.

N16C04

DATASET IS NOT ALLOCATED, DSN=aaaaaaaa

Reason:

A request has been received by Dataset Services for an action to be performed on a specified dataset. The request has failed because the dataset is not allocated to SOLVE.

System Action:

The request fails.

User Action:

Allocate the dataset to SOLVE and retry the request.

N16C05**DYNALLOC FAILURE VB=aa RC=bb E=cccc I=dddd****Reason:**

The DYNALLOC macro has failed performing a Dataset Services action. The following information is returned:

aa - The verb code specified in the request block

bb - The Return Code in Register 15

cccc - The SVC99 Error reason code.

dddd - The SVC99 Information reason code.

System Action:

The request fails.

User Action:

Dynamic Allocation return code information is found in the following IBM Manual, chapter, and section:

Manual: OS/390 MVS Programming: Authorized Assembler Services Guide
Document Number GC28-1763

Chapter: Requesting Dynamic Allocation Functions

Section: SVC 99 Parameter List Verb Codes and Text Units, By Function

The verb index (VB) is one of the following:

X'01' Dsname allocation

X'02' Unallocation

X'03' Concatenation

X'04' Deconcatenation

X'05' Remove-in-use processing based on task-ID

X'06' Ddname allocation X'07' Information retrieval

Return code (RC) and feedback codes (E= and I=) are documented in the following section of the same chapter:

Interpreting DYNALLOC Return Codes

Investigate the reason for the failure using the supplied information. Check the SOLVE activity log for system messages which were returned by DYNALLOC processing.

N16C06

DATASET IS IN USE, DSN=aaaaaaaa

Reason:

A request has been received by Dataset Services for an action to be performed on a specified dataset. The request has failed because it requires exclusive access to the dataset, but another task in the system has the dataset allocated.

System Action:

The request fails.

User Action:

Obtain exclusive access to the dataset and retry the request.

N16C07

MEMBER REPLACED, MEMBER=aaaaaaaa

Reason:

A request has been received by Dataset Services to add an ALIAS for a member in a Partitioned DataSet (PDS). The ALIAS name matched the name of a member which already existed in the PDS, so this member has been replaced by the ALIAS entry.

System Action:

None.

User Action:

None.

N16C08**START OF NEW DIRECTORY****Reason:**

A request has been received by Dataset Services to read a Directory entry from a Partitioned DataSet (PDS). The read has encountered the end of the current directory and has begun to read the directory of the next dataset in the DD concatenation.

System Action:

None.

User Action:

None.

N16C09**END OF FILE OR MEMBER****Reason:**

A request has been received by Dataset Services to read one or more records from a sequential file or member of a Partitioned DataSet (PDS). During read processing, the end of the file or PDS member was found.

System Action:

None.

User Action:

None.

N16C10

WRITE ERROR ON CLOSE

Reason:

A request has been received by Dataset Services to CLOSE a file to which records were being written. The file supports blocked records and some records in the last block of records had not been written to the file, so before the CLOSE is performed the remaining records are written to the file. During the write of the final block, an error occurred.

System Action:

The file is closed.

User Action:

To obtain more specified error information, a FLUSH request should be performed before the CLOSE. The FLUSH request writes the remaining block of records to the file and returns more specific information about any errors which may occur.

N16C11

STOW ERROR ON CLOSE RC=aa

Reason:

A request has been received by Dataset Services to CLOSE a member of a Partitioned Data Set (PDS) which was being accessed. The STOW macro which is issued to end access to the PDS member has failed. The STOW macro is an IBM MVS macro.

System Action:

The member is not closed.

User Action:

Investigate the reason for the STOW failure using the return code shown in the appropriate IBM manual.

N16C12**ERROR ON CLOSE****Reason:**

A request has been received by Dataset Services to close a file and the close of the file has failed. The error is not expected and the exact failure reason cannot be determined.

System Action:

The file is not closed.

User Action:

Investigate the system log for related error messages.

N16C13**CLOSE ABEND xaaaa****Reason:**

A request has been received by Dataset Services to close a file and the CLOSE has resulted in an abend. The abend code is shown.

System Action:

The file is not closed.

User Action:

Investigate the reason for the abend using the abend code shown.

N16C14**DELETE FAILED - EXPDATE NOT REACHED****Reason:**

A request has been received by Dataset Services to DELETE a dataset and the DELETE request has failed because the dataset has an expiry date and this date has not been reached yet.

System Action:

The dataset is not deleted.

User Action:

None.

N16C15

DELETE FAILED - SCRATCH FAILED

Reason:

A request has been received by Dataset Services to DELETE a dataset and the DELETE request has failed. The Operating System SCRATCH routine has indicated that an error has occurred.

System Action:

The dataset is not deleted.

User Action:

Check the system log and job log for related error messages.

N16C16

RENAME FAILED - aaaaaaaaa RC=bb FB=cccc

Reason:

A request has been received by Dataset Services to RENAME a dataset and the RENAME request has failed. The request invoked an operating system function using macro aaaaaaaaa, which returned Return Code bb and Feedback Code cccc.

System Action:

The dataset is not renamed.

User Action:

Investigate the reason for the failure using the supplied information.

N16C17**RENAME FAILED - MULTIVOLUME DATASET****Reason:**

A request has been received by Dataset Services to RENAME a dataset and the RENAME request has been rejected because the dataset is distributed over more than one volume. Multi-volume datasets are not supported by Dataset Services.

System Action:

The dataset is not renamed.

User Action:

None.

N16C18**RENAME FAILED - NOT ON DASD****Reason:**

A request has been received by Dataset Services to RENAME a dataset and the RENAME request has been rejected because the dataset is not resident on a Direct Access Storage Device (DASD). Dataset Services does not support rename of tape or cartridge datasets.

System Action:

The dataset is not renamed.

User Action:

None.

N16C20

DATASET MIGRATED

Reason:

A request has been received by Dataset Services to perform an action on a dataset but the dataset has been migrated (for example, by DFHSM) and MIGRATE=YES was not specified on the request.

System Action:

The action is not performed.

User Action:

Specify MIGRATE=YES on the request or recall the dataset and retry the request.

N16C21

VOLUME NOT MOUNTED

Reason:

A request has been received by Dataset Services to perform an action on a dataset but the volume on which the dataset resides is not mounted and MOUNT=YES was not specified on the request.

System Action:

The action is not performed.

User Action:

Specify MOUNT=YES on the request or mount the volume and retry the request.

N16C22**OUTPUT ENQ FAILED****Reason:**

A request has been received by Dataset Services to ENQ a dataset or to OPEN a dataset for output, but the ENQ has failed.

System Action:

None.

User Action:

This usually indicates that another user is accessing the dataset. The other user may hold an ENQ for a very short time whilst accessing the dataset, in which case if the request is retried it may work.

N16C24**DATASET IS OPEN****Reason:**

A request has been received by Dataset Services to perform an action on a dataset, but the request cannot be performed because the dataset is currently OPEN.

System Action:

The request fails.

User Action:

CLOSE the dataset and retry the request.

N16C25**DATASET IS VSAM****Reason:**

A request has been received by Dataset Services to perform an action on a dataset, but the request cannot be performed because the dataset is a VSAM dataset. Some Dataset Services functions do not support VSAM files.

System Action:

The request fails.

User Action:

None.

N16C26

LOGSTREAM NOT FOUND, LSN=aaaaaaaa

Reason:

A request has been received by Dataset Services for an action to be performed on a specified logstream referenced by logstream name aaaaaaaaa. The request has failed because the logstream does not exist.

System Action:

The request fails.

User Action:

Check and correct or create the specified logstream then retry the request.

N16C27

LOGGER ERROR. RC=aaa RS=bbbbbbbb

Reason:

A system logger request has encountered an error. The system return code (aaa, decimal) and reason code (bbbbbbbb, hex) are displayed.

System Action:

The request fails.

User Action:

The return and reason codes can be looked up in the IBM Assembler Programming Reference in the sections on the System Logger macros, IXG.... Take action as required.

N16C28

HFS PATH NOT FOUND, NAME=aaaaaa

Reason:

A request has been received by Dataset Services for an action to be performed on a specified HFS path referenced by path name aaaaaa. The request has failed because the path does not exist.

System Action:

The request fails.

User Action:

Create the specified path then retry the request.

N16C30**OPEN FAILURE DD=aaaaaaaa****Reason:**

A request has been received by Dataset Services to OPEN a dataset and the OPEN of the dataset has failed.aaaaaaaa is the DDname used in the failed open request.

System Action:

The request fails.

User Action:

Check for relevant system messages on the system log and job log.

N16C31**I/O ERROR SEE LOG DD=aaaaaaaa****Reason:**

A request has been received by Dataset Services to perform an action on a dataset and the action has resulted in an I/O error. The DDname used in the request was 'aaaaaaaa'.

System Action:

The request fails.

User Action:

Refer to the SOLVE activity log for messages which supply more specific information about the error.

N16C32

DCB ABEND abbbb

Reason:

Dataset Services received a request to perform an action on a data set, and the action resulted in an abend. abbbb is the abend code returned from the failed action.

System Action:

The request fails.

User Action:

If the abend code indicates system level error, correct the error and retry the request. If you cannot determine the cause of the abend, contact Technical Support.

N16C33

BAD WRITE RECORD LENGTH

Reason:

A request has been received by Dataset Services to write a record to a file but the record is too long for the dataset.

System Action:

The request fails.

User Action:

Either truncate the record to a valid length or redefine the file with a larger maximum record length.

N16C34**BAD DIRECTORY BLOCK LENGTH****Reason:**

A request has been received by Dataset Services to read the next entry in a Partitioned Data Set (PDS) directory, and the length of the directory block returned by the system is invalid.

System Action:

The request fails.

User Action:

This indicates that the directory of the PDS is corrupted. Investigate the cause of the corruption.

N16C35**INVALID OPEN MODE****Reason:**

A request has been received by Dataset Services to OPEN a dataset and the OPEN MODE is invalid.

System Action:

The request fails.

User Action:

Correct the MODE option and retry. Valid modes are INPUT, OUTPUT, and EXTEND.

N16C36**BAD USER DATA LENGTH****Reason:**

A request has been received by Dataset Services to update a PDS directory entry (eg. due to CLOSE of a member or ADD ALIAS request) and the length of the userdata supplied is not valid.

System Action:

The request fails.

User Action:

Correct the userdata value and retry.

N16C37

BAD NUMBER OF USERDATA TTRS

Reason:

A request has been received by Dataset Services to update a PDS directory entry (eg. due to CLOSE of a member or ADD ALIAS request) and the userdata contains an invalid number of TTRs. The number of TTRs must be from 0 to 3, and the length of the userdata must match the length expected for the number of TTRs specified.

System Action:

The request fails.

User Action:

Correct the userdata value and retry.

N16C38

CANNOT OPEN PDS EXTEND/MOD

Reason:

A request has been received by Dataset Services to OPEN a file with MODE=EXTEND or to OPEN a file which is allocated with DISP=MOD but the request has been rejected because the file is a Partitioned DataSet (PDS) or a member of a PDS.

System Action:

The request fails.

User Action:

Alter the ALLOCate and OPEN requests to specify DISP=SHR/OLD and MODE=OUTPUT respectively. It is invalid to open a PDS or PDS member for EXTEND.

N16C39**INVALID DATASET BLKSIZE, VALUE: ssss****Reason:**

A request has been received by Dataset Services to OPEN a dataset, however the dataset blksize is zero or invalid.

System Action:

The request fails.

User Action:

Determine why the dataset blksize is not valid. Reallocate the dataset and try again.

N16C40**INVALID DDNAME, DD=aaaaaaaa****Reason:**

A request has been received by Dataset Services which specifies the DD name of a file to be actioned, but the DD name supplied is not a valid name.

System Action:

The request fails.

User Action:

Correct the DD name and retry the request.

N16C41**INVALID MEMBER NAME, MEMBER=aaaaaaaa****Reason:**

A request has been received by Dataset Services which specifies the name of a Partitioned DataSet (PDS) to be actioned but the member name is not a valid name.

System Action:

The request fails.

User Action:

Correct the member name and retry the request.

N16C42

INVALID 2ND MEMBER NAME, MEMBER=aaaaaaaa

Reason:

A request has been received by Dataset Services which specifies the name of a Partitioned DataSet (PDS) to be actioned but the member name is not a valid name.

System Action:

The request fails.

User Action:

Correct the member name and retry the request.

N16C43

INVALID DATASET NAME, DSN=aaaaaaaa

Reason:

A request has been received by Dataset Services which specifies the name of a dataset to be actioned but the dataset name is not a valid name.

System Action:

The request fails.

User Action:

Correct the dataset name and retry the request.

N16C44

INVALID 2ND DATASET NAME, DSN=aaaaaaaa

Reason:

A request has been received by Dataset Services which specifies the name of a dataset to be actioned but the dataset name is not a valid name.

System Action:

The request fails.

User Action:

Correct the dataset name and retry the request.

N16C45**INVALID PARM****Reason:**

A request has been received by Dataset Services which specifies a parameter which is not valid.

System Action:

The request fails.

User Action:

Locate the incorrect parameter, correct it and retry the request.

N16C46**INVALID DDLIST FORMAT****Reason:**

A request has been received by Dataset Services which specifies a list of DD names to be actioned, but the format of the list is not valid.

System Action:

The request fails.

User Action:

Correct the format of the list and retry the request. The list must be one or more valid DD names separated by commas and may be enclosed in parentheses.

N16C47**INVALID DDLIST, MUST HAVE AT LEAST 2 DDNAMES****Reason:**

A request has been received by Dataset Services which specifies a list of DD names to be actioned, but the list does not have at least 2 names.

System Action:

The request fails.

User Action:

Add more DD names to the list and retry the request.

N16C48

INVALID DDLIST, DUPLICATE DDNAME FOUND

Reason:

A request has been received by Dataset Services which specifies a list of DD names to be actioned, but the list contains a DD name which appears more than once in the list.

System Action:

The request fails.

User Action:

Ensure that each DD name in the list only appears once and retry the request.

N16C49

INVALID LOGSTREAM NAME, LSN=aaaaaaaa

Reason:

A request has been received by Dataset Services which specifies the name of a logstream to be actioned but the name is not a valid logstream name.

System Action:

The request fails.

User Action:

Correct the logstream name and retry the request.

N16C50

DSORG NOT aaaa

Reason:

A request has been received by Dataset Services which requires that the dataset to be actioned must have a specific dataset organisation. The dataset is not of the required organisation.

System Action:

The request fails.

User Action:

Redefine the dataset to have the specified dataset organisation.

N16C51**NO MEMBER NAME SUPPLIED****Reason:**

A request has been received by Dataset Services which specifies an action to be performed on a member of a Partitioned DataSet (PDS), but the member name has not been supplied.

System Action:

The request fails.

User Action:

Specify the member name and retry the request.

N16C52**MEMBER NAME NOT ALLOWED****Reason:**

A request has been received by Dataset Services which specifies an action to be performed on a Partitioned DataSet (PDS), but a member name has been supplied and no member name is allowed for the request.

System Action:

The request fails.

User Action:

Remove the member name and retry the request.

N16C53**SPANNED RECFM NOT SUPPORTED****Reason:**

A request has been received by Dataset Services which involves a dataset which contains spanned records. Spanned record datasets are not supported by Dataset Services.

System Action:

The request fails.

User Action:

None.

N16C54

NEW MEMBER ALREADY EXISTS, MEMBER=aaaaaaaa

Reason:

A request has been received by Dataset Services to RENAME a member of a Partitioned DataSet (PDS), but a member with the NEW name already exists in the PDS.

System Action:

The request fails.

User Action:

Delete the target member or choose a different new member name.

N16C55

PDS DIRECTORY FULL

Reason:

A request has been received by Dataset Services to add a new member to a Partitioned DataSet (PDS), but there is no free space in the PDS directory.

System Action:

The request fails.

User Action:

Delete unwanted members from the PDS, or redefine the PDS with a larger directory.

N16C56**ENQ ALREADY HELD****Reason:**

A request has been received by Dataset Services to obtain an ENQ for a file, but the specified ENQ is already held by the requestor. This usually denotes a logic error in the code being executed for not recognizing that the ENQ was already held.

System Action:

None.

User Action:

Notify the organization responsible for the code being executed of the ENQ problem.

N16C57**ENQ NOT HELD****Reason:**

A request has been received by Dataset Services to release an ENQ for a file, but the specified ENQ is not held by the requestor.

System Action:

None.

User Action:

None.

N16C58**INVALID HFS PATH NAME, PATH=aaaaaa****Reason:**

A request has been received by Dataset Services which specifies the name of an HFS path to be actioned but the path name is not a valid name.

System Action:

The request fails.

User Action:

Correct the path name and retry the request.

N16C60

UNABLE TO DETERMINE ALLOC REQUEST TYPE

Reason:

A request has been received by Dataset Services to ALLOCate a new or existing file, but some required parameters have been omitted. Dataset Services is unable to determine if the ALLOC request is for a new dataset, an existing dataset or a SYSOUT dataset.

System Action:

The ALLOC request is rejected.

User Action:

Specify either the STATUS operand or CLASS operand.

N16C61

ALLOC MDO OPERAND OMITTED, MDO KEY=aaaa

Reason:

A request has been received by Dataset Services to ALLOCate a new or existing file, but a required parameter has been omitted. aaaa shows the MDO key of the field which has been omitted. The MDO is mapped by the map \$DSCBD3Z. The MDO keys are in << >> structures in the map source which can be viewed from Mapping Services.

System Action:

The ALLOC request is rejected.

User Action:

Use the ASN.1 map for the request and key aaaa to determine which operand has been omitted, then retry the request with the operand supplied.

N16C62**ALLOC MDO OPERAND NOT ALLOWED, MDO KEY=aaaa****Reason:**

A request has been received by Dataset Services to ALLOCate a new or existing file, but a parameter has been specified which is not allowed for this request. aaaa shows the MDO key for the operand which is in error. The MDO is mapped by map \$DSCBD3Z. The keys are in the << >> structures in the maps source which can be viewed from Mapping Services.

System Action:

The ALLOC request is rejected.

User Action:

Use the ASN.1 map for the request and key aaaa to determine which operand is invalid, then retry the request without the operand supplied.

N16C63**ALLOC MDO OPERAND INVALID, MDO KEY=aaaa****Reason:**

A request has been received by Dataset Services to ALLOCate a new or existing file, but a parameter has been specified which is invalid. aaaa shows the MDO key for the operand which is invalid. The MDO is mapped by the map \$DSCBD3Z. The keys are in the << >> structures in the map source which can be viewed from Mapping Services.

System Action:

The ALLOC request is rejected.

User Action:

Use the ASN.1 map for the request and key aaaa to determine which operand is invalid, then retry the request after correcting the operand value.

N16C64

DYNALLOC REFUSED BY SMS VB=aa RC=bb REASON=cccccccc

Reason:

A request has been received by Dataset Services to allocate a new or existing file, but the request has failed due to a Systems Managed Storage error. The following fields are shown:

aa - The DYNALLOC verb code for the request.

bb - The return code in Register 15 on completion.

cccccccc - The SMS reason code for the failure.

System Action:

The ALLOC request is rejected.

User Action:

Investigate the reason for refusal by SMS, using the DYNALLOC verb code and SMS reason code. Refer to the activity log for any system messages related to the failure.

N16C65

LAST ALLOCATION RELATIVE REQUEST NUMBER REACHED

Reason:

A request has been received by Dataset Services to retrieve information about a DD using the Relative Request Number for the DD, and the operating system has indicated that the specified Relative Request Number is the highest for any dataset allocated to SOLVE.

System Action:

This message is for information only and informs the requestor that any request for information for a Relative Request Number higher than the one requested will fail.

User Action:

None.

N16C66**ALLOCATION RELATIVE REQUEST NUMBER aaaa DOES NOT EXIST****Reason:**

A request has been received by Dataset Services to retrieve information about a DD using the Relative Request Number for the DD, but no DD exists with the specified Relative Request Number.

System Action:

The request fails.

User Action:

Correct the Relative Request number and retry the request. When obtaining information by Relative Request Number, always check for return of message N16C65 which indicates that the highest Relative Request Number has been reached.

N16C67**DATASET ALREADY EXISTS DSN=aaaaaaaa****Reason:**

A request has been received by Dataset Services to allocate a NEW dataset but a dataset with the specified name already exists.

System Action:

The request fails.

User Action:

Delete the existing dataset or choose a different dataset name for the new dataset name.

N16C68

DD NAME aaaaaaaaa ALREADY IN USE

Reason:

A request has been received by Dataset Services to allocate a dataset but the DD name specified is already in use.

System Action:

The request fails.

User Action:

Choose a different DD name or unallocate the existing DD and retry the request.

N16C70

MDO UPDATE FAILED RC=aa FB=bb

Reason:

A request has been received by Dataset Services which returns information in an MDO. An error was encountered whilst the MDO was being updated with the returned information.

System Action:

The request has been performed as requested but no information is returned.

User Action:

Investigate the reason for MDO update failure using the shown return code and feedback values. These are documented in the NCL Reference.

N16C71

ATTACH OF aaaaaaaaa FAILED, RC=bbbb

Reason:

A request has been received by Dataset Services which involves a call to a system Utility Module. The Utility Module is ATTACHED as a subtask of SOLVE. The ATTACH has failed. The system Utility Module is 'aaaaaaaa'.

System Action:

The request fails.

User Action:

Investigate the reason for the ATTACH failure using the shown return code.

N16C72**GET DSINFO FAILED FUNCTION=aa RC=bb****Reason:**

A request has been received by Dataset Services which has failed due to errors during retrieval of dataset information. The following information is shown:

aa : A number indicating which function failed.

04 = DDname not found (DEVTYPE failed)

08 = Allocation Query failed (DYNALLOC failed)

12 = RDJFCB failed

16 = OBTAIN failed

20 = Abend occurred

bb : The return code from the requested function if applicable.

System Action:

The request fails.

User Action:

Investigate the cause of the problem by checking the meaning of the return code for the particular function.

N16C73**RDJFCB FAILED RC=aaaa****Reason:**

A request has been received by Dataset Services which required a RDJFCB macro to be issued. The macro call failed with the return code as shown.

System Action:

The request fails.

User Action:

Investigate the reason for the RDJFCB failure using the shown return code.

N16C74

OBTAIN FAILED RC=aaaa

Reason:

A request has been received by Dataset Services which required a OBTAIN macro to be issued. The macro call failed with the return code as shown.

System Action:

The request fails.

User Action:

Investigate the reason for the OBTAIN failure using the shown return code.

N16C75

UNEXPECTED ENQ/DEQ RC=aaaa

Reason:

A request has been received by Dataset Services which resulted in an ENQ or DEQ being issued. The ENQ or DEQ failed with the return code as shown.

System Action:

The request fails.

User Action:

Investigate the reason for the ENQ or DEQ failure using the shown return code.

N16C76

NOTE FAILED RC=aaaa

Reason:

A request has been received by Dataset Services which caused data to be written to or read from a dataset. A NOTE Macro is issued to note the position in the dataset after the read or write is performed. The NOTE macro has failed.

System Action:

The request fails.

User Action:

Investigate the reason for the NOTE failure using the shown return code. Refer to the system log and job log for related error messages.

N16C77**aaaaaaaa FUNCTION UNEXPECTED RETURN CODE, RC=aaaa****Reason:**

A request has been received by Dataset Services which requested an operating system function, and the operating system function has failed.

System Action:

The request fails.

User Action:

Investigate the reason for the failure using the shown return code and function name. Refer to the system log and job log for related error messages.

N16C78**aaaaaaaa FUNCTION ABEND=aaaa****Reason:**

A request has been received by Dataset Services which requested an operating system function, and the operating system function has abended.

System Action:

The request fails.

User Action:

Investigate the reason for the failure using the shown return code and function name. Refer to the system log and job log for related error messages.

N16C80**PATH NAME INVALID****Reason:**

A request has been received by Dataset Services which specifies a path name which is invalid.

System Action:

The request fails.

User Action:

Correct the path name and retry the request.

N16C81

PATH ALREADY DEFINED

Reason:

A request has been received by Dataset Services which opens a new path to a dataset, but a path with the specified name already exists.

System Action:

The request fails.

User Action:

Close the existing path name or change the path name and retry the request.

N16C82

PATH NOT DEFINED

Reason:

A request has been received by Dataset Services which access an existing path to a dataset, but no path exists with the specified name.

System Action:

The request fails.

User Action:

Correct the path name or open a path with the required name and retry the request.

N16C83

PATH WRONG ACCESS CLASS

Reason:

A request has been received by Dataset Services which access an existing path to a dataset, but the requested function is not available on the existing path. For example, a path has been opened to a Sequential File and a request to read a PDS directory has been encountered.

System Action:

The request fails.

User Action:

Correct the request type or open a path of the desired class and retry the request.

N16C84**REQUEST NOT VALID ON PATH NOW****Reason:**

A request has been received by Dataset Services which access an existing path to a dataset, but the requested function is not available on the existing path. For example, the path is to a sequential file and is open for output, and a READ operation was requested.

System Action:

The request fails.

User Action:

Correct the request type or open a path of the desired type and retry the request.

N16C85**PATH HAS HAD PREVIOUS ERROR****Reason:**

A request has been received by Dataset Services which access an existing path to a dataset, but the requested function cannot be performed due to a previous error on the path. For example, a WRITE operation was requested but an I/O error had occurred previously.

System Action:

The request fails.

User Action:

Close the path.

N16C86

INVALID SUBTASK STATUS

Reason:

A request has been received by Dataset Services which access an existing path to a dataset, but the requested function cannot be performed due to an abend in the I/O subtask during a previous request.

System Action:

The request fails.

User Action:

Close the path.

N16C87

NMDSSCHK EXIT HAS FAILED

Reason:

A request has been received by Dataset Services that requires authorization from the NMDSSCHK exit. The call to the NMDSSCHK exit has failed. This could indicate the LOAD of the NMDSSCHK module failed, or the initialization of the exit failed, or the exit abended during processing.

System Action:

The request fails.

User Action:

See the SOLVE activity log for further messages about the failure. Message N16D16 should be present, containing a description of the error. If an abend occurred, the subtask that calls the exit should have taken a subtask dump - investigate the dump and determine why the exit failed.

N16C88**NMDSSCHK EXIT HAS REFUSED REQUEST****Reason:**

A request has been received by Dataset Services which requires authorisation from the NMDSSCHK exit. The call to the NMDSSCHK exit has resulted in a return code from the exit indicating that the request is not allowed.

System Action:

The request fails.

User Action:

Refer to the SOLVE activity log for further messages about the failure. If the exit returns a message indicating the reason for the failure, it will be logged as part of message N16D16.

N16C89**SECURITY SYSTEM HAS REFUSED REQUEST****Reason:**

A request has been received by Dataset Services which requires authorization from the security system (for example, RACF). The security system has disallowed the request.

System Action:

The request fails.

User Action:

Check with your security administrator. There may be additional messages on the system log or system console that explain the failure.

N16C90

FUNCTION NOT SUPPORTED

Reason:

A request has been received by Dataset Services which is either not supported by the operating system on which SOLVE is executing (for example, Partitioned DataSet functions on VM operating system) or is not available in the environment in which SOLVE is executing (Systems Managed Storage not available in old versions of MVS).

System Action:

The request fails.

User Action:

None.

N16C91

ABEND aaaaaaaaa OCCURRED

Reason:

A request has been received by Dataset Services which has resulted in an unexpected abend during processing of the request.

System Action:

The request fails.

User Action:

Contact your SOLVE support center.

N16C92

REQUEST CANCELLED

Reason:

A request has been received by Dataset Services which has been cancelled due to termination of the requestor.

System Action:

The request is cancelled.

User Action:

None. This is normal for requests which were issued from NCL procedures. The request is cancelled if the procedure is flushed.

N16C93**STORAGE SHORTAGE****Reason:**

A request has been received by Dataset Services which has failed due to a storage shortage.

System Action:

The request fails.

User Action:

Retry the request.

N16C99**SYSTEM SHUTTING DOWN****Reason:**

A request has been received by Dataset Services which has been rejected because SOLVE is in shutdown. Dataset Services does not accept new requests during shutdown to enable active file processing to quiesce before shutdown completes.

System Action:

The request fails.

User Action:

None.

N16D01

DSS UNCAPTURED ABEND: aaaaaaaa REQ-CLASS: bbbbbbbb REQ-CODE: cc

Reason:

This message indicates an unexpected abend has occurred in a Dataset Services request. It shows the Abend Code for the abend (aaaaaaa), the Dataset Services Request Class (bbbbbbbb) for the request, and the Request Code (cc) which identifies the request being performed.

System Action:

This message and others relating to the abend are written to the activity log.

User Action:

Refer to the activity log for further information about the abend. Investigate the cause of the abend and, if the cause cannot be determined, contact Technical Support.

N16D02

PSW: aaaaaaaaaaaaaaaaa IC: bbbb ILC: cccc

Reason:

This message indicates an unexpected abend has occurred in a Dataset Services request. It shows the Program Status Word (PSW) at the time of Abend, the Interrupt Code (IC) and the Instruction Length Code (ILC) at the time of abend.

System Action:

This message and others relating to the Abend are written to the SOLVE activity log.

User Action:

Refer to the SOLVE activity log for further information about the Abend. Investigate the cause of the Abend and if the cause cannot be determined contact your SOLVE support center.

N16D03**Raa-Rbb xxxxxxxx xxxxxxxx xxxxxxxx xxxxxxxx****Reason:**

This message indicates an unexpected abend has occurred in a Dataset Services request. It shows the contents of some General Purpose Registers at the time of abend.

System Action:

This message and others relating to the Abend are written to the SOLVE activity log.

User Action:

Refer to the SOLVE activity log for further information about the Abend. Investigate the cause of the Abend and if the cause cannot be determined contact your SOLVE support center.

N16D04**aaa: xxxxxxxx aaa: xxxxxxxx aaa: xxxxxxxx aaa: xxxxxxxx****Reason:**

This message indicates an unexpected abend has occurred in a Dataset Services request. It shows the addresses of various Dataset Services processing modules at the time of abend. Each module and its address are shown in the format module name: address.

System Action:

This message and others relating to the Abend are written to the SOLVE activity log.

User Action:

Refer to the SOLVE activity log for further information about the Abend. Investigate the cause of the Abend and if the cause cannot be determined contact your SOLVE support center.

N16D09

END OF ABEND INFORMATION

Reason:

This message indicates an unexpected abend has occurred in a Dataset Services request. It is the last message in a group which are written to the SOLVE activity log when an abend has occurred in Dataset Services.

System Action:

This message and others relating to the Abend are written to the SOLVE activity log.

User Action:

Refer to the SOLVE activity log for further information about the Abend. Investigate the cause of the Abend and if the cause cannot be determined contact your SOLVE support center.

N16D15

DSS I/O ERROR: aaaaaaaa

Reason:

This message indicates an I/O error has occurred in a Dataset Services request. It shows the text of a messages returned by the operating system to describe the I/O error.

System Action:

This message is written to the SOLVE activity log.

User Action:

Investigate the cause of the I/O error using the information supplied in the message which was returned from the operating system. Refer to the system log and job log for further messages related to the error.

N16D16**NMDSSCHK EXIT ERROR: error text****Reason:**

A request has been received by Dataset Services which requires authorisation from the NMDSSCHK exit. The call to the NMDSSCHK exit has failed or has returned a return code indicating that the request is not allowed. This message is logged along with any message returned by the exit to explain the failure.

System Action:

The request fails.

User Action:

Investigate the reason for the failure using the error text shown. If the text consists of a SOLVE error message, the help for the message will explain what the problem was.

N16O01**LOAD OF NMDSSCHK EXIT MODULE FAILED - RC=aaaaaaaa****Reason:**

A request has been received by Dataset Services which requires authorisation from the NMDSSCHK exit. The LOAD of the exit module has failed with the return code aaaaaaaa.

System Action:

The request fails.

User Action:

Refer to the SOLVE job log for further messages about the failure. Check the SOLVE load library to ensure that the NMDSSCHK load module exists.

N16O02

NMDSSCHK EXIT INITIALIZATION FAILED

Reason:

A request has been received by Dataset Services which requires authorization from the NMDSSCHK exit. The initialization call made to the exit has received return code 8 (initialization failed) but no error message was returned from the exit.

System Action:

The request fails.

User Action:

Check the exit logic to find out why initialization failed. Check the SOLVE job log for any related error messages.

N16O03

ACCESS TO DATASET DENIED BY NMDSSCHK EXIT

Reason:

A request has been received by Dataset Services which requires authorisation from the NMDSSCHK exit. The authorisation call made to the exit has received return code 4 (access denied) but no error message was returned from the exit.

System Action:

The request fails.

User Action:

Contact your system administrator to find out why you are not allowed to perform the function you requested.

N16O04**INVALID R15 RETURNED BY NMDSSCHK EXIT - aaaaaaaa****Reason:**

A request has been received by Dataset Services which requires authorisation from the NMDSSCHK exit. The call made to the exit has received a return code aaaaaaaa in R15 which is not valid for the request type.

System Action:

The request fails.

User Action:

Check the logic of the NMDSSCHK exit to find out why the invalid return code was returned.

N16O05**ABEND OCCURRED IN NMDSSCHK EXIT - aaaaaaaa****Reason:**

A request has been received by Dataset Services which requires authorisation from the NMDSSCHK exit. The call made to the exit has resulted in an ABEND. aaaaaaaa shows the abend code.

System Action:

The request fails.

User Action:

The abend should result in a subtask dump for the task which called NMDSSCHK. Investigate the dump to find the cause of the abend.

N16O06

GETMAIN OF NMDSSCHK PARM LIST STORAGE FAILED

Reason:

A request has been received by Dataset Services which requires authorisation from the NMDSSCHK exit. The GETMAIN of storage used for the parameter list for the NMDSSCHK call has failed.

System Action:

The request fails.

User Action:

Investigate the reason for the storage shortage condition.

N16Q01

MDO mapped by \$DSCBD3Z converted to \$DSCBD3M format. Member name= 1, line number= 2(3), Column= 4

Reason:

Program 1 at line number 2 , column 4 , called Dataset Services with an MDO mapped by \$DSCBD3Z, which is obsolete. The calling program should use \$DSCBD3M instead. 3 is either ABS or REL, indicating that the line number is absolute or relative.

System Action:

The operation continues.

User Action:

Contact Technical Support, quoting the full text of the message.

N17004**USERID uuuuuuuu IS NOT KNOWN - CONNECTION REJECTED.****Reason:**

ROF signon to a remote SOLVE system failed because the user's USERID is not defined to the remote system.

System Action:

The remote signon is rejected.

User Action:

Contact your systems administrator, and, if required, define the USERID to the remote system.

N17008**REMOTE USER userid LOGGED ON FROM linkname - username****Reason:**

Issued to monitor status operators when successful ROF signon is completed by a user from another SOLVE system. The USERID (userid) origin (linkname) link name and user's name (username) are included in the message.

System Action:

None.

User Action:

None.

N17009**CONNECTED.****Reason:**

Signifies successful completion of ROF signon to a remote system.

System Action:

None.

User Action:

None.

N17010

REMOTE USER userid FROM linkname LOGGED OFF.

Reason:

Notifies monitor status operators that a ROF user has logged off.

System Action:

None.

User Action:

None.

N17011

REMOTE USER userid FROM linkname FORCED OFF BY SESSION FAILURE.

Reason:

Notifies monitor status operators that user userid's ROF session has been terminated because the link to linkname has been lost.

System Action:

None.

User Action:

Attempt to re-establish the link to linkname if required.

N17012

USERID NOT AUTHORISED FOR OCS - CONNECTION REJECTED.

Reason:

A user has attempted to establish a ROF session but the USERID defined at the remote system does not have operator authority, and therefore the ROF connection is not allowed.

System Action:

None.

User Action:

None.

N17013**SIGNON RESTART IN PROGRESS.****Reason:**

Notifies a user that re-establishment of a ROF connection that was disrupted earlier by a link failure will be attempted.

System Action:

Signon processing is scheduled at the remote SOLVE system.

User Action:

None.

N17014**ERROR(S) DURING CREATION OF NETWORK PARTITIONS MAY LIMIT FUNCTION.****Reason:**

During establishment of a ROF connection, errors were detected when processing the NPF members associated with the USERID.

System Action:

None.

User Action:

Use the SHOW NPF and SHOW NPTAB commands (at the remote SOLVE system) to display the NPF tables in error. Have the tables corrected and sign on again to build the correct environment.

N17301**SIGNON TO linkname LOST, RESTART PENDING LINK RECOVERY.****Reason:**

Notifies a user that the ROF connection to remote SOLVE system linkname has been broken because the link to the remote system has been lost.

System Action:

The ROF connection is scheduled for re-establishment when the link becomes active again.

User Action:

None.

N17302

ROF messages lost before transmission from link aaaa.

Reason:

ROF messages flowing from the nominated remote system were discarded before transmission from that system because the system NMIQLIM

System Action:

User Action:

Investigate why so many messages were issued. The default threshold is

N17401

ROF CONTACT ESTABLISHED/SUSPENDED LINK=aaaaaaaa

Reason:

This message is issued during link activation and de-activation. It shows that the system is prepared to support ROF sessions (link active), or has ceased supporting ROF sessions (link inactive).

System Action:

None.

User Action:

None.

N17501

SIGNON RESTART FOR linkname NO LONGER IN EFFECT.

Reason:

A user waiting for recovery of a ROF connection to remote SOLVE system linkname, lost because the link to the remote system has been broken, is notified that the ROF connection will not be restarted because the link definition to the remote system has been reset.

System Action:

None.

User Action:

If the link to the remote system is re-defined, the user will have to sign on again if a new ROF connection is required.

N17502**QUEUED SIGNON FOR userid CANCELLED. LINK DEFINITION RESET.****Reason:**

A user who had queued a signon request to a remote SOLVE system, pending activation of the link to that system is notified that the request has been cancelled because the link definition to the remote system has been reset.

System Action:

None.

User Action:

The signon must be attempted again once the link is re-defined.

N17801**COMMAND FAILED: aaaa NOT LOADED bbbb.****Reason:**

A SHOW command failed because the nominated module aaaa could not be loaded for execution. The reason may be determined from the reason code bbbb

System Action:

The command fails.

User Action:

Determine the reason for the failure to load. Ensure the module is in a library accessible to SOLVE.

N17A05

LOAD MODULE RETAINED STORAGE: CURR: aaaaaK, MAX: bbbbbK.

Reason:

Issued in response to a SHOW BUFF command following message N17A35. Some SOLVE commands are processed by non-resident load modules which are loaded as required and retained in storage until the total amount of storage (of all retained load modules) exceeds the maximum (bbbbbbK). When this occurs the oldest modules are deleted. The current storage total of retained modules is shown (aaaaaK).

System Action:

None.

User Action:

None, information only.

N17A35

LOAD MODULE STORAGE: BASE MODULE: aaaaaK, LOADED MODULES: bbbbbbK

Reason:

Part of the SHOW BUFF display. The size of the SOLVE base module NM001 which is loaded by the operating system is given in K-bytes. The storage total of all other modules subsequently loaded by the base module is given in K-bytes. For OS and VM systems storage allocation is controlled by the operating system. In DOS and NIDOS systems the storage for each loaded module is obtained from within the SOLVE reserves which are within GETVIS.

System Action:

None, for information only.

User Action:

None, for information only.

N17A36**LOAD MODULE STORAGE: BELOW 16M: aaaaaK****Reason:**

Part of the SHOW BUFF display. Displays the total number of kilobytes used for program modules below the 16M line.

System Action:

None.

User Action:

Load module storage use below the line may be reduced by specifying the INC or EXC startup parameters to select a subset of licensed components.

N17A37**LOAD MODULE STORAGE: ABOVE 16M: aaaaaK****Reason:**

Part of the SHOW BUFF display. Displays the total number of kilobytes used for program modules above the 16M line.

System Action:

None.

User Action:

None.

N17B01**NO NRD MESSAGES CURRENTLY HELD.****Reason:**

This message is issued in response to a SHOW NRD command. There are currently no messages held in the NRD retention list to display.

System Action:

None.

User Action:

None.

N17B02

NRD MESSAGES. CURRENT: nnnnnn MAX: mmmmm.

Reason:

This message is part of a SHOW NRD display. It gives the number of messages currently held on the NRD retention queue, and the maximum allowed at one time (set by SYSPARM NRDLIM).

System Action:

None.

User Action:

None.

N17B03

ID DATE TIME USERID NCLID MFAV TEXT

Reason:

This message is part of a SHOW NRD display. It is a header for the subsequent display lines for individual held messages (see N17B04).

System Action:

None.

User Action:

None.

N17B04**id date time userid nclid mfav text****Reason:**

This message is part of a SHOW NRD display. This line contains information and text of an individual held message. bd is the message id. date is the date the message was added to the NRD queue. time is the time the message was added to the NRD queue. nclid is the NCLID of the NCL procedure which added this message. mfav where the message is to be displayed: M=monitor screens, F=FTS screens, A=AOM screens, V=all OCS screens. text is the text of the message.

System Action:

None.

User Action:

None.

N17B05**NO MAPS CURRENTLY LOADED.****Reason:**

No Mapped Data Services maps are currently loaded into memory.

System Action:

none.

User Action:

Enter Sysparms Mapload=mapname command to load a particular map into memory.

N17B06

MAP-NAME STATUS ---LOAD-TIME--- CUR-USE

Reason:

Title message for SHOW MAPS command. For each map selected N17B07 will display the map name, status, time it was last loaded, and the current number of active connections for the map.

System Action:

None.

User Action:

None.

N17B07

aaaaaaaaaaaa ccccccc eeeeeeee gggggg

Reason:

Display for SHOW MAPS command. aaaaaa = map name. ccccc = map status
eeeeee = map load time ggggg = map active connection count

System Action:

None.

User Action:

None.

N17B08

aaaa MAP(S) DISPLAYED. STORAGE USED: bbbbbb BYTES.

Reason:

End message for a SHOW MAPS command. aaaa is the number of maps selected for display, and bbbbbb is the total storage used by the selected maps.

System Action:

None.

User Action:

None.

N17B09**OPERAND aaaaaaaa HAS AN INVALID VALUE.****Reason:**

An invalid value was specified for an operand of the SHOW MAP command.

System Action:

Command is rejected.

User Action:

Correct and retry.

N17C01**SHOW OPERAND MUST BE ENTERED.****Reason:**

A SHOW command is incomplete because no other operands were specified.

System Action:

The command fails.

User Action:

Reenter the command with the appropriate operand(s).

N17C03**COMMAND FAILED: aaaaaaaa NOT LOADED bbbbbbbbbbbbbbbb****Reason:**

A SHOW command failed because the nominated module *aaaaaaa* could not be loaded for execution. The reason may be determined from the reason code *bbbbbbbbbbbbbbbb*

System Action:

The command fails.

User Action:

Determine the reason for the failure to load. Ensure the module is in a library accessible to SOLVE.

N17C04

COMMAND FAILED: STORAGE SHORTAGE

Reason:

A SHOW command failed because there was insufficient storage to load the processor module.

System Action:

The SHOW command is rejected.

User Action:

Contact your systems administrator who can determine if the storage shortage is temporary. Other messages may indicate that there is a storage shortage.

N17C05

OPERAND NOT SUPPORTED UNDER THIS OPERATING SYSTEM

Reason:

The operand entered on the SHOW command is not valid under this operating system.

System Action:

The SHOW command is rejected.

User Action:

None.

N17G01**TYPE ENV UID/NAME LUNAME W NCLID MSGS MEM/REQ QMPROC
LOST****Reason:**

This message is the title line of a SHOW MSGQ display.

TYPE - The type of queues being reported, from the SHOW MSGQ operands:

- OCS
- OCS environments
- NCL
- NCL INTCMD environments
- BG - background processing environments
- SYS - various system queues

ENV - The specific environment.

- For a type of OCS, can be

OCS - an actual full-screen OCS environment

ROF - A remote operator

OPER - A signed on operating system console

LU1 - An LU1 OCS session

- For a type of NCL will only be NCL

- For a type of BG will be the background environment id, for example BSYS or LOGP.

- for a type of SYS, can be

LOG - the LOG/LOGPROC message queue

NRD - the NRD message retention queue

AOM - the AOMPROC message queue(s) and DOM Queue.

CNM - the CNMPROC message queue

PPO - the PPOPROC message queue

UID/NAME - the userid or a region or name of a system queue.

LUNAME - the terminal (or '-' if not relevant) W - the window number (or '-')

NCLID - for NCL types, or secondary AOMPROC, the NCLID, or '-'.

MSGs - the number of queued response or OCS messages

MEM/REQ - the number of OCS screen memory or NCL REQ msgs

QMPROC - the number of msgs queued to MSGPROC

LOST - flags if msgs have been lost at this time. (ie the queue is presently full and messages have been discarded. This indication gets reset when messages are read from the queue)

System Action:

None.

User Action:

None.

N17G02

N18001

VTAM message module modname cannot be interpreted.

Reason:

During system initialization the VTAM message module, which is used to initialize the DEFMSG summary table, was found to have invalid non numeric entries. This module is required to be correct for NPF initialization.

System Action:

NPF message delivery is disabled. This message will be followed by N18003.

User Action:

This could signify a VTAM internal problem.

N18002**Unable to load module *modname* R15=aaaa Rn=bbbb****Reason:**

During system initialization the VTAM message module *modname* (ISTCFMCM or its equivalent) could not be loaded. This module is required for NPF initialization. If *n* is 0 then the failure occurred on a BLDL macro. *aaaa* shows the return code and *bbbb* is the reason code. If *n* is 1 then the failure occurred on a LOAD or LINK macro. *aaaa* shows the reason code and *bbbb* is the abend code.

System Action:

NPF for message delivery is disabled. This means that any users logging on to the system who is authorized to receive unsolicited (PPO) messages will receive ALL such messages whether or not their USERIDS specify NPF message control.

User Action:

Determine the cause of load failure and restart the NetMaster region.

N18003**Network partitioning for unsolicited messages has been disabled****Reason:**

An error has occurred during initialization processing for the Network Partitioning Facility. An accompanying message on the activity log will indicate the reason for the failure.

System Action:

NPF for message delivery is disabled. This means that any users logging on to the system who is authorized to receive unsolicited (PPO) messages will receive ALL such messages whether or not their USERIDS specify NPF message control.

User Action:

Determine the cause of the failure and restart the NetMaster region.

N18101

NETWORK PARTITIONING ERROR: CONTROL MEMBER xxxx NOT IN DATASET

Reason:

During a user's LOGON processing the NPF RESOURCE control member xxxx defined in the user's UAMS record could not be located on the NPF dataset.

System Action:

The logon is allowed but the user will have no NPF resource access.

User Action:

Refer to the systems administrator for correction of the problem.

N18102

NETWORK PARTITIONING ERROR: I/O ERROR READING MEMBER mbrname

Reason:

During a user's logon processing an I/O error occurred while reading the NPF member mbrname. NPF processing continues but the user's access to network resources may be restricted, partially or completely.

System Action:

None.

User Action:

Refer the error to your systems administrator.

N18103**NETWORK PARTITIONING ERROR: CONTROL MEMBER aaaaaaaa
SYNTAX ERROR, SEQ NO: bbbbbbb****Reason:**

During a user's logon processing a syntax error was detected while processing control member aaaaaaaa. The sequence number of the record in error is bbbbbbbb, extracted from bytes 73-80 of the record.

System Action:

Processing continues.

User Action:

Correct the syntax error and logon again.

N18104**NETWORK PARTITIONING DATASET DD=ddname FAILED TO OPEN.****Reason:**

Processing of a user's NPF authorisation terminated because the system NPF dataset referenced by the NPTABLES DD statement could not be opened.

System Action:

None.

User Action:

Refer the error to your systems administrator. Access to network resources will be prohibited.

N18401**NETWORK PARTITIONING ERROR: MEMBER mbrname NOT IN
DATASET.****Reason:**

During a user's logon processing the NPF RESOURCE table member mbrname, referred to by the user's NPF RESOURCE control member, could not be found.

System Action:

Processing continues. Access to network resources may be restricted.

User Action:

Refer to your systems administrator.

N18402

NETWORK PARTITIONING ERROR: I/O ERROR READING MEMBER mbrname

Reason:

During a user's logon processing an I/O error occurred attempting to read the NPF resource table member mbrname.

System Action:

Processing continues. Access to network resources may be restricted.

User Action:

Refer to your systems administrator.

N18403

NETWORK PARTITIONING ERROR: MEMBER mbrname ERROR IN RECORD SEQ NO: bbbbbb bbb

Reason:

During a user's logon processing a syntax error was detected in record sequence number bbbbbbbbbb of NPF resource table member mbrname.

System Action:

Processing continues at the next record. Access to network resources may be restricted.

User Action:

Refer to your systems administrator for correction of the problem.

N18726**P1 P2 P3 P4 P5 P6 P7****Reason:**

This is the detail line of the SHOW DOMAINS TYPE=DEFINED display. The fields displayed match the heading message N18725. The information is as follows:

P1

Is the domain name

P2

Indicates how the domain is defined:

- YES indicates that the domain was explicitly defined using a DOMAIN DEFINE command.
- NO indicates that the domain was implicitly defined as a result of an inbound LINK START command from a remote system that matched a DEFLINK command on this system.

P3 to P6

Indicate if the domain may be accessed using the access method for that column, that is, VTAM, IP, EPS, and XNF. The columns display the following values:

- - indicates that no inbound links using that access method have been received and the access method has not been explicitly allowed.
- YES indicates that an inbound link has used that access method, or the access method was explicitly defined. IPADDR explicitly defines the IP access method.
- NO indicates that the access method has been explicitly prohibited.

If the IP access method is YES, there will be an additional message, N18727, which contains TCP/IP addressing information.

P7

Indicates whether the domain can be contacted with the INMC access method. This access method is relevant to APPC links only. It uses an INMC link (with some other access method) as a transport method for APPC sessions.

- YES indicates that the domain name is used to identify the remote domain.
- NO prevents an APPC over INMC link starting from an inbound request and inhibits the use of this access method for outbound requests.
- - indicates that this access method is not specified.

System Action:

None.

User Action:

None.

N18727**P1 IP: PORT= P2 HOST P3= P4****Reason:**

This is a detail line of the SHOW DOMAINS TYPE=DEFINED display. It is issued if the preceeding N18726 message indicated that the TCPIP access method is supported for connections to this domain. In this message:

P1 is domain name

P2 is the Port number that the (remote) system will use to receive inbound connections

P3 and *P4* show the connection details specified when the domain was defined and will be either: NAME and an internet host name, or, ADDR and an IP Address

System Action:

None.

User Action:

None.

N18728**NO MATCHING DEFINED DOMAIN NAMES FOUND****Reason:**

A SHOW DOMAINS TYPE=DEFINED display was requested but there are no domains defined which match the specified criteria.

System Action:

None.

User Action:

None.

N18729

P1 IP: PORT=P2 HOST P3=P4

Reason:

This is a detail line of the SHOW DOMAINS TYPE=DEFINED display. It is issued if the preceding N18726 message indicates that the TCP/IP access method is supported for connections to this domain. In this message:

P1 is domain name.

P2 is the port number that the (remote) system uses to receive inbound connections.

P3 and *P4* show the connection details of the proxy server and can be one of the following:

- NAME and an internet host name
- ADDR and an IP address

System Action:

None.

User Action:

None.

N19501

ALLOCATION REQUEST CANCELLED.

Reason:

A request for dynamic allocation that required a volume to be mounted was cancelled by the system operator.

System Action:

The allocation attempt is abandoned.

User Action:

Determine why the operator cancelled the request.

N19502**ALLOCATION SUCCESSFUL DDNAME IS dddddddd****Reason:**

An ALLOCATE command has been successfully issued. The ddname is dddddddd.

System Action:

None.

User Action:

None.

N19503**ALLOCATION FAILED REASON aaaa-bbbb. SMS REASON CODE cccccccc****Reason:**

A syntactically correct ALLOCATE command failed for the above reason. The SMS REASON CODE is only displayed if the error was related to a Systems Managed Storage error.

System Action:

None.

User Action:

You may use the \$DAIR NCL procedure supplied with the system to determine the reason for the dynamic allocation interface return code. If an SMS error occurred, look up the reason code in the appropriate SMS documentation.

N19504**ALLOCATION SUBTASK FAILED.****Reason:**

Requests for dynamic allocation are performed by a subtask. This subtask has failed.

System Action:

The request is rejected.

User Action:

Refer this problem to your systems administrator for correction.

N19505

ALLOCATION OF DDNAME ddname1 COMPLETED, CONCATENATION TO DDNAME ddname2 FAILED REASON cccc- dddd.

Reason:

An ALLOCATE command was issued specifying the CONCAT operand. The allocation was successful, but concatenation to the specified ddname ddname2 has failed.

System Action:

The dataset is allocated to ddname1, but not concatenated to ddname2.

User Action:

Use the \$DAIR NCL procedure to determine the reason for the failure using the dair code cccc.

N19601

UNABLE TO LOAD NMDSNCHK, ALLOCATION ABORTED

Reason:

The installation defined dataset authorisation exit could not be loaded.

System Action:

No allocation is performed.

User Action:

Determine the cause of the failure and retry.

N19702

UNALLOCATION COMPLETE

Reason:

The requested UNALLOC command has been successfully processed.

System Action:

None.

User Action:

None.

N19703**UNALLOCATION FAILED REASON aaaa-bbbb****Reason:**

A syntactically correct UNALLOC command failed for the above reason.

System Action:

None.

User Action:

Use the \$DAIR NCL procedure to determine the reason for the failure.

N19704**UNALLOCATION SUBTASK FAILED.****Reason:**

Requests for unallocation are performed by a subtask. This subtask has failed.

System Action:

The request fails.

User Action:

Refer this problem to your systems administrator for correction.

N19801**COMMAND REJECTED. TEMPORARY STORAGE SHORTAGE.****Reason:**

An OPNDST was rejected because of a storage shortage.

System Action:

The command is rejected.

User Action:

Retry the command. Increase job region or partition size if the problem persists.

N19802

luname ALREADY IN SESSION.

Reason:

An OPNDST was issued for a terminal already connected.

System Action:

The command is rejected.

User Action:

None.

N19803

luname IS ALREADY BEING CONNECTED.

Reason:

An OPNDST is already in progress for the specified LU.

System Action:

The command is rejected.

User Action:

None.

N19804

luname IS NOT KNOWN TO VTAM OR CANNOT BE CONTACTED.

Reason:

An OPNDST command specified an LU name not defined to VTAM, or one that VTAM cannot establish contact with. If the resource is in another domain there may not be a cross domain resource definition available or active.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N19805

SESSION REQUEST FAILED FOR luname, RC=rc, FBK2=fb, SENSE=sense.

Reason:

An OPNDST command failed.

System Action:

The command is rejected.

User Action:

Refer the error to your systems administrator. The error codes included in the message are explained in the appropriate *VTAM Programming* manual.

N19806

luname IS ALREADY IN USE BY ANOTHER APPLICATION.

Reason:

An OPNDST command was issued to connect terminal luname, but this device is already in session with a different application.

System Action:

The command is rejected.

User Action:

Retry the command later if required.

N19807

OPNDST FOR luname FAILED. logmode IS AN INVALID LOGMODE ENTRY NAME.

Reason:

An OPNDST command has specified an invalid logmode in the LOGMODE=logmode operand.

System Action:

The command is rejected.

User Action:

Correct the logmode name and retry.

N19808

CANCELLED LOGON REQUEST FOR luname IS PENDING COMPLETION

Reason:

An OPNDST command was entered to acquire an LU. SOLVE currently has a queued logon request for the LU due to a prior OPNDST command, and the LU has still not been connected. The CLSDST command has been used to cancel the pending logon request. SOLVE cannot issue another request to VTAM to acquire the terminal until the previous request completes.

System Action:

The OPNDST command is rejected.

User Action:

Investigate why the LU has not been connected to SOLVE. It is most likely to be in use by another application program.

N19901

FACILITY ONLY VALID FROM MSGPROC

Reason:

An &MSGREAD, &MSGDEL, &MSGCONT or &MSGREPL verb can only be issued by a procedure operating as a MSGPROC for an OCS window.

System Action:

The NCL procedure is flushed.

User Action:

Correct the NCL procedure.

N19902**MDS error on \$MSG MDO; RC=xx FDBK=yy MSGPROC TERMINATED****Reason:**

An MDS error occurred while trying to assign replacement message text during an INTREPL operation. xx and yy indicate the MDS return code and feedback information.

System Action:

The procedure is terminated.

User Action:

Return code and feedback values for MDS are explained in the NCL REFERENCE for the &ZMDSRC and &ZMDSFDBK system variables. Use this information to determine why MDS assignment failed for \$MSG.TEXT.

N19T01**LOGGER REFORMAT ERROR: INVALID FUNCTION CODE (cc)****Reason:**

This message is logged when an invalid function code is passed to the system logger interface record reformatter.

System Action:

The request is rejected.

User Action:

Contact your local SOLVE support office.

N19T02**LOGGER REFORMAT ERROR: INVALID FORMAT CODE (cc)****Reason:**

This message is logged when an invalid format code is passed to the system logger interface record reformatter.

System Action:

The request is rejected.

User Action:

Contact your local SOLVE support office.

N19T03

LOGGER REFORMAT ERROR: OUTPUT AREA OVERFLOW

Reason:

This message is logged when a reformatted record overflows the output area during processing by the system logger interface record reformatter.

System Action:

The request is rejected.

User Action:

Contact your local SOLVE support office.

N19T10

LOGGER REFORMAT ERROR: MDB HEADER INVALID (RECORD FOLLOWS)

Reason:

This message is logged when the system logger interface record refirnmatter encounters an invalid OPERLOG record. In this case, the MDB header is invalid.

The record is dumped to the SOLVE log (see message N19T90).

System Action:

The request is rejected.

User Action:

Contact your local SOLVE support office.

N19T11**LOGGER REFORMAT ERROR: INVALID MDB SEGMENT AT OFFSET oo
(RECORD FOLLOWS)****Reason:**

This message is logged when the system logger interface record refirnmatter encounters an invalid OPERLOG record. In this case, an invalid or unrecognised MDB segment was found. The offset is displayed. The record is dumped to the SOLVE log (see message N19T90).

System Action:

The request is rejected.

User Action:

Contact your local SOLVE support office.

N19T12**LOGGER REFORMAT ERROR: MDB LENGTH ERROR (RECORD FOLLOWS)****Reason:**

This message is logged when the system logger interface record refirnmatter encounters an invalid OPERLOG record. In this case, the MDB total length does not match the sum of the segment lengths. The record is dumped to the SOLVE log (see message N19T90).

System Action:

The request is rejected.

User Action:

Contact your local SOLVE support office.

N19T13

LOGGER REFORMAT ERROR: MDB SEGMENT SEQUENCE ERROR (RECORD FOLLOWS)

Reason:

This message is logged when the system logger interface record reformatter encounters an invalid OPERLOG record. In this case, the MDB segments are not in the correct sequence.

The record is dumped to the SOLVE log (see message N19T90).

System Action:

The request is rejected.

User Action:

Contact your local SOLVE support office.

N19T90

off hex hex hex hex char...

Reason:

This message is logged when the system logger interface record reformatter encounters an invalid record. It provides a hex dump of the record in error.

System Action:

None

User Action:

Refer to the previous N19Txx message for details of the error.

N19U90

RECORD REFORMAT ERROR - SEE LOG

Reason:

This message is returned (in the &SYSMSG variable) when a record reformat error occurs on a DSS_LOGGER READ OML verb.

Preceding records on the SOLVE log describe the error.

System Action:

The request is rejected. The return code is set to 32, the feedback code to 0.

User Action:

Contact your local SOLVE support office.

N1AM01**File not found, PATH=path****Reason:**

An attempt to reference a non-existent HFS file was made. The pathname was *path*.

System Action:

The request fails.

User Action:

Reissue the request with a valid path.

N1AM02**File not a directory, PATH=path****Reason:**

An attempt was made to perform an HFS directory operation on pathname *path*. However, *path* is not a directory.

System Action:

The request fails.

User Action:

Reissue the request with a path that represents an HFS directory.

N1AM03**Supplied offset is negative****Reason:**

An attempt was made to seek to a position before the start of an HFS file.

System Action:

The request fails.

User Action:

This is an internal error. Call your support representative.

N1AM04

Unable to determine MDO request type

Reason:

When processing a call to convert an MDO to a DSECT, a field was encountered that required classification. This was not possible because more than one class specification was encountered in the MDO.

System Action:

The request fails.

User Action:

This is an internal error. Call your support representative.

N1AM05

MDO operand omitted, MDO key=key

Reason:

A required operand was omitted on a call to convert an MDO to a DSECT or vice versa. The MDO key being processed was *key*.

System Action:

The request fails.

User Action:

This is an internal error. Call your support representative.

N1AM06

MDO operand not allowed, MDO key=key

Reason:

An operand that was not allowed was supplied on a call to convert an MDO to a DSECT or vice versa. The MDO key being processed was *key*.

System Action:

The request fails.

User Action:

This is an internal error. Call your support representative.

N1AM07**MDO operand invalid, MDO key=key****Reason:**

An invalid operand was supplied on a call to convert an MDO to a DSECT or vice versa. The MDO key being processed was *key*.

System Action:

The request fails.

User Action:

This is an internal error. Call your support representative.

N1AM08**HFS environment initialization failed, Return Code=rrrr, Reason Code=cccc-cccc****Reason:**

A Unix System Services call issued by Dataset Services failed with a return code of *rrrr* and reason code of *cccc-cccc* when trying to initialize the environment for an HFS call.

System Action:

The request fails.

User Action:

Refer to "Unix System Services Messages and Codes" for the relevant return code and reason code.

N1AM99**USS call failed, Return Code=rrrr, Reason Code=cccc-cccc****Reason:**

A Unix System Services call issued by NetMaster Dataset Services to process an HFS file failed with a return code of *rrrr* and reason code of *cccc-cccc*.

System Action:

The request fails.

User Action:

HFS file errors may have a variety of environmental causes. A common one is when the HFS file system is not mounted. Other possibilities include:

EPERM

File permission error.

The NetMaster started task UID does not have the required authority to access the file

ENOENT

File does not exist.

The path name may be wrong, or the file may have been deleted

ENODEV

No such device exists.

ENOMEM

Not enough space is available.

ENOSPC

No space is left on the device, or no space is available to create the IPC member ID.

ENOTDIR

Not a directory.

EMVSPFSPERM

HFS encountered a system error.

Ensure that the HFS file system has been defined with sufficient space and is correctly and permanently mounted. Ensure that NetMaster features such as ReportCenter have been installed with the name of a correct and available file system.

File permissions are a frequent cause of HFS file errors.

Verify that the OMVS UID attempting the file operation has sufficient authority to do so. In general, all distributed HFS product files should allow at least read access to all users. Refer to the specific product installation and user manuals for additional file permission requirements for their specific working data.

A complete list of HFS reason codes is available in the IBM publication *z/OS UNIX System Services Messages and Codes* for your operating system level.

Additional information about z/OS HFS implementation is available from the IBM Redbook publication *Hierarchical File System Usage Guide*.

N1C201**UNABLE TO GET PROCESS EXTENSION****Reason:**

Process extension storage is required to perform a CCI INIT request and is not obtainable because the region is low on storage.

System Action:

The CCI interface is not usable.

User Action:

Contact your Systems Programmer for assistance. If no problems are detected, contact Technical Support.

N1C202**CCI INIT NOT PERFORMED****Reason:**

An attempt was made to perform a CCI function before CCI INIT initializes the CCI interface.

System Action:

The CCI request fails.

User Action:

Correct the procedure logic so that CCI INIT is performed before other functions are requested.

N1S401

SOAP subtask ABENDED

Reason:

The SOAP subtask has abended. This will be preceded by messages N15Z20 and N15Z21 detailing the abend details.

System Action:

If the subtask was currently processing a SOAP verb work request, that request will be terminated with &SYS.RETCODE=8 and &SYS.FDBK=8. This message will be followed by either N1S402 or N1S404.

User Action:

Report the abend to Technical Support. Refer to the following N1S402 or N1S404 messages.

N1S402

SOAP subtask reactivated

Reason:

The SOAP subtask has just abended as noted by the preceding message N1S401. The SOAP subtask has been reactivated.

System Action:

Subsequent work requests will be processed as normal. To prevent a potential subtask abend loop, only 2 subtask reactivations are allowed. A third abend will cause message N1S404 to be issued instead of N1S402.

User Action:

No action required.

N1S403**SOAP subtask was FORCE-DETACHd****Reason:**

An attempt to shutdown the SOAP subtask was unsuccessful. The SOAP subtask did not terminate gracefully within 5 seconds. The system has forcibly detached the subtask. This can occur if the subtask is still busy processing a SOAP service call.

System Action:

After forcibly detaching the subtask, the SOAP interface is disabled.

User Action:

A forced detach should only occur at region shutdown. From a NetMaster point of view, this message is informational use only. The SOAP interface may report errors due to the fact that the subtask is being removed whilst a SOAP call is in progress.

N1S404**SOAP subtask unrecoverable. SOAP interface disabled****Reason:**

The SOAP subtask has just abended as noted by the preceeding message N1S401. The number of abends allowed for the SOAP subtask has been exceeded. This number is set to 2 - the third abend during the region lifetime or since the last SOAP USD FUNCTION=RESET call will cause this message. The SOAP interface is now disabled.

System Action:

Any subsequent SOAP verb call requests will be terminated with &SYS.RETCODE=8 and &SYS.FDBK=12. This will also apply to any SOAP requests already received but still queued for SOAP service processing.

User Action:

To reestablish the SOAP subtask interface, either recycle NetMaster or execute the OML verb 'SOAP USD FUNCTION="RESET"'.

N1S405

SOAP subtask active

Reason:

The SOAP subtask has just been activated and is now fully active. The SOAP subtask is activated by one of the following reasons:

1. After the receipt of the very first SOAP verb call for this region. 2. After an abend and subtask reactivation i.e. after N1S401 and N1S402. 3. After an unrecoverable abend (message N1S404) and RESET call issued.

System Action:

The SOAP subtask processes SOAP verb calls as normal.

User Action:

None.

N1UY01

Waiting for UNIX subtask completion

Reason:

The SOLVE UNIX interface is not available until the initial call to UNIX System Services is completed. This message is issued every 30 seconds until completion.

System Action:

SOLVE UNIX support is unavailable until the initial call is completed. SOLVE initialization continues.

User Action:

None.

N1UY02**UNIX initialization subtask ABENDEd - R0/R1: 1****Reason:**

The subtask to initialize communications with UNIX System Services has ABENDEd.

System Action:

SOLVE UNIX support is reset. SOLVE initialization continues.

User Action:

Contact Technical Support.

N1UY03**UNIX initialization subtask was FORCE DETACHEd.****Reason:**

The subtask that issued the initial call to UNIX System Services was FORCE DETACHEd.

System Action:

UNIX support is reset. Region initialization continues.

User Action:

Contact Technical Support.

N1UY04**UNIX set_dub_default call failed - Return code: 1, Rason code: 2(Hex)****Reason:**

The release of OS/390 that you are running supports UNIX System Services but the first call made by the SOLVE system failed.

System Action:

SOLVE UNIX support is reset. SOLVE initialization continues.

User Action:

UNIX Systems Services may not be configured correctly in OS/390. Consult your systems programmer. For details of the reason code, see the UNIX System Services Messages and Codes manual.

N1UY05

UNIX support reset due to init failure

Reason:

The SOLVE UNIX SHELL interface was unable to initialize and is not available for use. The reason for this was given in an earlier N1UYnn message.

System Action:

SOLVE UNIX support is reset. SOLVE initialization continues.

User Action:

See the N1UYnn message issued earlier.

N2x to N4x Messages

N20002

SESSION CANCELLED AT P1 ON P2 FOR USERID P3

Reason:

Displayed when a user is cancelled by a CANCEL command.

System Action:

This message is displayed for a short period only.

User Action:

None.

N20003

SESSION DISCONNECTED AT P1 ON P2 FOR USERID P3

Reason:

Displayed when a user is disconnected by a DISCONN command or timeout action.

System Action:

This message is displayed for a short period only.

User Action:

None.

N20004**SESSION TIMED OUT AT *P1* ON *P2* FOR USERID *P3*****Reason:**

Displayed when a user is cancelled by a timeout action.

System Action:

This message is displayed for a short period only.

User Action:

None.

N20005**SESSION TERMINATED AT ~*P1* ON ~*P2* FOR USERID ~*P3*****Reason:**

Displayed when a user logs off from the system.

System Action:

This message is displayed for a short period only.

User Action:

None.

N20102**USERID uuuuuuuuu NOT AUTHORISED FOR REQUEST****Reason:**

A user has selected a Primary Menu function for which they are not authorized.

System Action:

The selection is rejected.

User Action:

Contact your systems administrator.

N20103

SYSTEM NOT CONFIGURED FOR THIS FEATURE

Reason:

A Primary Menu function was selected but this SOLVE system is not configured for the function.

System Action:

The selection is rejected.

User Action:

None.

N20104

PASSWORD/USER DETAILS UPDATED

Reason:

Confirms a successful change of password.

System Action:

None.

User Action:

The new password will be required from now on eg. for logging on and for unlocking LOCKed screens etc. If an external security manager is in use the new password may also apply to other applications and subsystems.

N20107

PRIMARY MENU ENDED.

Reason:

The primary menu NCL procedure has terminated without specifying any direct action to be taken. This may reflect an NCL coding error or logic error.

System Action:

The line messages associated with the primary environment are displayed.

User Action:

Press the END key (PF03/15) to redrive the primary menu NCL. Press the RETURN key (PF04/16) to close the window.

N20202**REQUEST ACCEPTED - LU luname PASSED TO APPLICATION applname****Reason:**

Issued when a terminal under the control of EASINET is passed successfully to another VTAM application as a result of a logon request entered at the terminal.

System Action:

None.

User Action:

None.

N20203**INPUT INVALID, PLEASE RETRY****Reason:**

An unidentified logon request was made at a terminal under EASINET control.

System Action:

None.

User Action:

Refer to the procedures set down by your installation for logging on to your required application. Correct and re-enter.

N20204

UNABLE TO SERVICE REQUEST (INQUIRE FAILED)

Reason:

A VTAM INQUIRE macro failed during the attempt to pass the terminal to the requested application. SOLVE also assumes request failure if no response is received from VTAM within 30 seconds.

System Action:

The terminal remains under the control of EASINET. If VTAM sense codes are received message N20212 will go to the activity log, giving specific return code information. If a timeout occurred, N20214 is written to the activity log.

User Action:

Retry the logon request. If the condition persists, the return code information logged in message N20212 should be investigated.

N20205

SELECTED APPLICATION IS INACTIVE

Reason:

A logon request was made from a terminal under EASINET control, but the selected application is not running.

System Action:

The terminal remains under EASINET control.

User Action:

Determine why the application is not running and/or retry the request later.

N20206**APPLICATION IS NOT ACCEPTING LOGONS****Reason:**

An attempt to log on to an application failed because it will not allow any logons.

System Action:

The logon request is ignored.

User Action:

Check the status of the application and retry the logon when logons are allowed.

N20207**UNABLE TO SERVICE REQUEST (CLSDST PASS FAILED)****Reason:**

An attempt to logon to an application failed because the VTAM CLSDST PASS operation failed.

System Action:

The logon request is ignored and the terminal remains under EASINET control. Message N20211 is written to the activity log providing specific error information.

User Action:

Contact your systems administrator.

N20208

SELECTED APPLICATION IS NOT KNOWN TO VTAM - INPUT= P1 APPL= P2

Reason:

An attempt was made to log on to an application that is undefined or inactive. The DEFLOGON used is identified by P1 and the associated application LU name is P2.

System Action:

The logon request is rejected.

User Action:

Consult your systems administrator. Ensure that the application is defined to VTAM and that the DEFLOGON specifies the required LU name.

N20209

SELECTED APPLICATION IS UNAVAILABLE - INPUT= P1 APPL= P2

Reason:

A logon request specified the name of a logical unit that:

- Is not an application program, or
- Is an application program in another domain, but the domain is not currently accessible (for example, the cross-domain resource-manager is not active)

P1 is the string that identifies the DEFLOGON used and *P2* is the target application LU name.

System Action:

The logon request is ignored.

User Action:

If the logical unit is not an application, the DEFLOGON entry pertaining to the logon request is wrong and you must change it. In the case of an inaccessible domain, retry the request later when communications are re- established.

N20210**LOGMODE NAME aaaaaaaa IS NOT KNOWN TO VTAM****Reason:**

A logon request failed because the LOGMODE table entry specified in a DEFLOGON entry, or &LOGON statement, is not known to VTAM.

System Action:

The request is ignored.

User Action:

Consult your systems administrator to enable the DEFLOGON entry to be changed, or the &LOGON statement to be corrected.

N20211**CLSDST PASS FAILED, RC=rc,FBK2=fb,SENSE=sense****Reason:**

Written to the activity log with message N20207. Gives specific VTAM return code, feedback and sense information.

System Action:

None.

User Action:

Interpret the information using the VTAM Programming manual. Refer to the related message N20207.

N20212**INQUIRE APPSTAT FAILED, RC=rc,FBK2=fb,SENSE=sense****Reason:**

Written to the activity log with message N20204. Gives specific VTAM return code, feedback and sense information.

System Action:

None.

User Action:

Interpret the information using the VTAM Programming manual. Refer to the related message N20204.

N20213

LOGON TO SELECTED APPLICATION IS SUSPENDED

Reason:

An attempt was made to log on to an application that has been suspended using the SUSLOGON command.

System Action:

The logon is denied.

User Action:

Retry the logon later when the application is available.

N20214

NO RESPONSE TO INQUIRE APPSTAT FOR APPLICATION aaaaaaaa

Reason:

Written to the activity log when a VTAM INQUIRE APPSTAT has not completed within an expected interval.

System Action:

The associated function is failed as not completed successfully.

User Action:

Refer the details to your systems administrator for problem determination.

N20215

P1

Reason:

An attempt was made to log on to an application that has been suspended using the SUSLOGON command. The text, *P1*, indicates the reason for the suspension set by the issuer of the SUSLOGON command.

System Action:

The logon is denied.

User Action:

Retry the logon when the application has been made available.

N20216**SELECTED APPLICATION IS NOT DEFINED****Reason:**

An attempt was made to access an application that is undefined. A DEFLOGON command, that matches the first word of the MAI-FS logon string, has not been found.

System Action:

The session request is terminated.

User Action:

Correct the application name used in the logon request. If necessary, consult your systems administrator.

N20601**RE-ACQUISITION OF LU luname WILL BE ATTEMPTED****Reason:**

The session with an EASINET controlled terminal has been lost for a reason identified as recoverable by SOLVE.

System Action:

The system will try to re-establish the session with the terminal. Attempts of this nature are reported to Monitor status operators.

User Action:

None.

N20801**INVALID DATASET NAME****Reason:**

A dynamic allocation request specified an invalid dataset name.

System Action:

The request is rejected.

User Action:

Correct and retry.

N20802

UNABLE TO RESOLVE GENERATION DATASET GROUP NAME

Reason:

A request was made for dynamic allocation of a member of a generation data group but the system was unable to resolve the absolute dataset name of the specified member.

System Action:

The allocation request is rejected.

User Action:

None.

N20803

DATASET NOT FOUND, CAMLST LOCATE ERROR R15=xx

Reason:

A request for dataset replace was made. This involves deleting the dataset and subsequently re-creating it. The dataset to be deleted could not be found.

System Action:

This message is written to the log as an informational message only.

User Action:

Refer to Data Management SPL for explanation of CAMLST LOCATE return codes.

N20804

DATASET NOT DELETED, CAMLST SCRATCH ERROR R15=xx STATUS=yy

Reason:

The CAMLST SCRATCH macro has failed with the return codes as described.

System Action:

The request fails.

User Action:

Refer to Data Management SPL for explanation of CAMLST SCRATCH return codes.

N20805**DATASET NOT UNCATALOGUED, CAMLST ERROR R15=xx****Reason:**

The CAMLST CATALOG macro has failed with return codes as described.

System Action:

The dataset is not uncatalogued.

User Action:

Refer to Data Management SPL for explanation of CAMLST CATALOG return codes.

N20B01**aaaaaaaa IS A bbbbbb DEVICE.****Reason:**

This message appears on VOS3 systems only. It confirms that terminal aaaaaaaaa which has just connected to SOLVE is a bbbbbb device type. bbbbbb is either 3270 or 560/20.

System Action:

None.

User Action:

None.

N20D09**USERID MUST BE ENTERED****Reason:**

A logon was attempted but no userid was entered.

System Action:

None.

User Action:

Enter userid and password.

N20D10

PASSWORD MUST BE ENTERED

Reason:

A logon was attempted but no password entered.

System Action:

None.

User Action:

Enter userid and password.

N20E01

USERID uuuuuuuu IS NOT KNOWN, RE-ENTER OR LOGOFF

Reason:

A logon was attempted for an undefined USERID.

System Action:

The logon is rejected.

User Action:

Correct and re-enter, or have your USERID defined to SOLVE.

N20E02

PASSWORD IS INVALID, RE-ENTER

Reason:

The password entered during a logon attempt was not valid for the USERID.

System Action:

The logon is rejected.

User Action:

Correct and re-enter.

N20E03**PASSWORD VIOLATION LIMIT EXCEEDED, LOGON DENIED****Reason:**

The maximum number of password retries was exceeded during a logon attempt.

System Action:

The logon is rejected.

User Action:

See your systems administrator.

N20E05**user-class USER userid LOGGED ON FROM nodename -- username****Reason:**

This message is logged and sent to all monitor status users identifying users as they logon to SOLVE.

user-class: the user type, classed as LOCAL, REMOTE, SYSTEM, TSO, CONSOLE, NET/VIEW, VM/OPER or APPC. userid: the userid who has logged on. nodename: the terminal node name at which the user has logged on. In the case of an APPC user a nodename of *GLOBAL* indicates that any subsequent APPC logon requests for the same user will use this region irrespective of the node from which the logon request originates. username: the name of the user taken from their UAMS definition.

System Action:

None.

User Action:

None.

N20E06

PASSWORD NOT RENEWED, SESSION TERMINATED

Reason:

A logon has completed, but since the USERID password has expired, the system requires that it be changed. This was not done so the USERID is logged off.

System Action:

None.

User Action:

Logon again and change your password as requested.

N20E07

user-class USER userid LOGGED OFF FROM nodename USER TYPE usertype

Reason:

This message is logged to users with monitor status to indicate that the specified user has logged off. user-class identifies the class of user (see message N20E05). usertype indicates whether *the user* has multiple signon authority; values returned are MULTI or SINGLE.

System Action:

None.

User Action:

None.

N20E08**user-class USER userid FORCED OFF FROM nodename BY reason****Reason:**

The specified userid has been forcibly logged off from the specified node because the VTAM session has failed or been terminated due to Operator action.

System Action:

The userid is logged off.

User Action:

If disconnection has occurred as indicated by the message then the user may wish to logon and re-connect to the lost session.

N20E09**PASSWORD INVALID, ENTER USERID AND PASSWORD****Reason:**

A logon attempt, in which the user passed the userid and password as logon 'userdata' failed because the password specified was wrong.

System Action:

The SOLVE logo is displayed and this message prompts the user to re-enter both userid and password.

User Action:

Re-enter, or logoff.

N20E10**ENTER USERID****Reason:**

A logon attempt is in progress. A 1 to 8 character userid is required to identify the user to the system.

System Action:

If possible the logo panel is displayed prompting for input.

User Action:

Enter your userid, or logoff.

N20E11

ENTER PASSWORD

Reason:

A logon attempt is in progress. A 1 to 8 character password is required to confirm the identity of the user to the system.

System Action:

If possible the logon panel is displayed prompting for input.

User Action:

Enter your password, or logoff.

N20E49

text (ex security exit)

Reason:

A logon attempt has been rejected. The message text is that returned by the system or user security system.

System Action:

The logon is rejected and the logon panel is displayed.

User Action:

Re-enter your userid and password, or logoff.

N20E99

TIMEZONE NAME *aaaaaa* FOR USER *bbbbbb* NOT KNOWN, SYSTEM TIMEZONE USED

Reason:

During user logon, the user definition time zone name was not found in the TIMEZONE table.

System Action:

The system time zone is used (name is SYSTEM).

User Action:

Ensure that time zone names are set up during system initialization using the TIMEZONE command.

N20F01**USERID userid NOT AUTHORISED FOR OCS****Reason:**

An LU1 logon has been rejected because the user is not authorised for Operator Control Services.

System Action:

The logon is rejected.

User Action:

Contact your installation help desk to arrange OCS authorisation for your userid.

N20F03**USERID uuuuuuuu LOGGED ON AT time ON date.****Reason:**

An LU1 logon has completed successfully.

System Action:

None.

User Action:

Review broadcast messages if any. Proceed with work.

N21101**PRODUCT P1 REQUIRES A PREREQ OF P2****Reason:**

A product (*P1*), specified using the PROD= JCL parameter, is allowed only if another product is also specified. The prerequisite product (*P2*) is either the name of a specific product or **Multiple* to indicate that the product requires any one of multiple products as specified in the product documentation.

System Action:

The region terminates.

User Action:

Change the RUNSYSIN member to specify the correct PROD= values.

N21102

PRODUCT P1 NOT AUTHORIZED ON THIS OPERATING SYSTEM

Reason:

A product (*P1*), specified using the PROD= JCL parameter, is not allowed on the current operating system.

System Action:

The region terminates.

User Action:

Change the RUNSYSIN member to remove the relevant PROD= value. Contact your product supplier for product availability information.

N21103

PRODUCT P1 NOT AUTHORIZED ON SECURITY AND SYSTEM SERVICES VERSION P2

Reason:

A product (*P1*), specified using the PROD= JCL parameter, is not allowed on the version and maintenance level (*P2*) of Security and System Services.

System Action:

The region terminates.

User Action:

Change the RUNSYSIN member to remove the relevant PROD= value. Contact your product supplier for product availability information.

N21104

PROD= P1 NOT ALLOWED WITH PROD= P2

Reason:

A product (*P1*), specified using the PROD= JCL parameter, is not allowed to run concurrently with product *P2*.

System Action:

The region terminates.

User Action:

Remove one of the two PROD= values from the RUNSYSIN member. Contact your product supplier for product availability information.

N21302**CA Common Services HAS NOT BEEN INITIALIZED (CAS9 HAS NOT BEEN RUN)****Reason:**

The initialization process for CA Common Services has not been run since the last IPL. This product requires the services for some functions, including LMP checking.

The services are initialized by the CAS9 started task, which is normally run as part of your system IPL process.

System Action:

Some functions, such as LMP checking, are not operational.

User Action:

Contact your systems administrator.

N21303**PRODUCT P1 (LMP= P2) REGISTERED****Reason:**

A product (*P1*), with LMP code *P2* , has been registered with the Licence Manager Program (LMP) component of Resource Initialization Manager (CAIRIM). CAIRIM will monitor product usage.

System Action:

None

User Action:

None, for information only

N21304

PRODUCT *P1* (LMP= *P2*) NOT REGISTERED - *P3*

Reason:

The *P1* product (product code *P2*) failed registration with the LMP component of the Resource Initialization Manager (CAIRIM). *P3* is one of the following failure reasons:

CAS9 NOT RUN

Indicates that CA Common Services initialization process has not been run.

R15=xx

Indicates an unexpected LMP error. *xx* is the LMP return code in hexadecimal.

System Action:

None.

User Action:

If the reason is CAS NOT RUN, review the N21302 message. For other reasons, contact Technical Support.

N21305

WARNING: PRODUCT *P1* (LMP= *P2*) WILL EXPIRE WITHIN 30 DAYS

Reason:

A product (*P1*), with LMP code *P2* , has been registered with the Licence Manager Program (LMP) component of Resource Initialization Manager (CAIRIM). However, the product will expire within 30 days.

System Action:

None

User Action:

Contact your product supplier to obtain a new licence key.

N21306**WARNING: PRODUCT P1 (LMP= P2) HAS EXPIRED OR IS UNLICENSED****Reason:**

The displayed product is registered with the License Management Program (LMP) of the Resource Initialization Manager (CAIRIM), but its LMP key has either expired or is not valid for this CPU.

P1 is the product name key. The key is in a PROD statement in the RUNSYSIN member.

P2 is the product LMP code.

System Action:

None.

User Action:

Check that the LMP key registered for the product is correct.

If the key is ... Proceed as follows: Correct Either contact Technical Support to get a new LMP key for the product and register it, or comment out the PROD statement for the product in the RUNSYSIN member.

Not correct Register the correct LMP key for the product.

N21701**INSUFFICIENT STORAGE****Reason:**

A DEFLOGON command could not be processed because of a storage shortage.

System Action:

The command fails.

User Action:

Consider increasing the SOLVE region or partition size. Investigate possible cause of storage shortage.

N21801

INVALID QUERY REPLY FROM aaaaaaaaa

Reason:

When terminal aaaaaaaaa connected to SOLVE, a Read Partition Query was sent to the terminal to obtain information about the characteristics of the terminal. The Query Reply, which was sent from the terminal to SOLVE, contains invalid data. This message preceeds a hexadecimal dump of the Query Reply.

System Action:

The logon of the terminal proceeds, but some abilities of the terminal such as extended color or extended highlighting may not be utilized by SOLVE.

User Action:

The dump of the invalid Query Reply follows this message. Refer to this dump of the Query Reply to determine why it is invalid.

N21802

+off hexdata hexdata hexdata hexdata char char char char

Reason:

This message is preceded by N21801. This is the hexadecimal dump of the invalid Query Reply.

System Action:

None.

User Action:

None.

N22201

SYSPARM VALUE SOURCE NAME/USER LINKNAME

Reason:

This message is the title line of the SHOW SYSPARMS display.

System Action:

None.

User Action:

None.

N22202**P1 P2 P3 P4 P5****Reason:**

This message is produced for each SYSPARM displayed by the SHOW SYSPARMS command. It includes the following information:

P1 - The SYSPARM operand name.

P2 - The current value.

P3 to *P5* Indicates how the value was set. Possible values for *P3* are:

DEFAULT - The value is the default.

OCS - The value was set by a command entered in OCS.

P4 is the user ID that executed the command.

ROF - The value was set by a command entered in a remote region.

P4 is the user ID that executed the command.

P5 is the link name of the remote region.

COMMAND ENTRY - The value was set by a command entered using the Command Entry function.

P4 is the user ID that executed the command.

BG COMMAND - The value was set by a command entered from a background environment, for example, as a result of a time command.

P4 is the user ID of the background environment.

PROCEDURE - The value was set by an NCL procedure.

P4 is the procedure name.

Note: A procedure name of SYSPARMS indicates that a command replacement for the SYSPARMS command is in effect. For more information, see the CMDREPL Customizer parameter group and the SYSPARMS CMDREPL command.

CUSTOMIZER - The value was set when a Customizer parameter group was actioned.

P4 is the name of the parameter group.

Note: When a SYSPARM operand is set by Customizer, it cannot be updated using OCS, Command Entry, or an NCL procedure. The SYSPARM operand must be updated using the Customizer parameter group to ensure that values remain synchronized. Synchronization checks can be bypassed using SYSPARMS SYSPGCHK=NO; however, this is not recommended except in an emergency situation because there is no synchronization with the Customizer parameter group. If used, we recommended that you issue SYSPARMS SYSPGCHK=YES (the default) as soon as possible to reinstate synchronization checking.

System Action:

None.

User Action:

None.

N22203

STORAGE ERROR, UNABLE TO DISPLAY SYSPARMS

Reason:

A storage shortage has prevented processing of the SHOW SYSPARMS command.

System Action:

The command is not processed.

User Action:

Retry the command. If the problem persists, contact your systems administrator.

N22701

UNABLE TO SERVICE REQUEST (INSUFFICIENT STORAGE)

Reason:

A CLSDST operation could not be performed to pass a terminal to a target application because of a temporary storage shortage.

System Action:

The logon request fails.

User Action:

Retry. If the condition persists refer to your systems administrator.

N22703

TARGET APPLICATION REJECTED SESSION

Reason:

A logon request was issued for an active application and the terminal was passed successfully. However, the application subsequently rejected the session and SOLVE re-acquired the terminal.

System Action:

The logon request fails.

User Action:

Determine why the application rejected the session. In the case of systems such as CICS or IMS, the terminal may not be defined properly.

N22704**TERMINAL DID NOT ACCEPT SESSION****Reason:**

A logon request was issued for an active application and the terminal was passed to it successfully. However, the terminal subsequently rejected the session and SOLVE re- acquired the terminal.

System Action:

The logon request fails.

User Action:

Determine why the terminal rejected the session. The application could have supplied invalid bind parameters.

N22705**LU P1 BEING PASSED TO APPLICATION P2 LOGMODE P3****Reason:**

A logon request was issued for an active application. The terminal *P1* is now being passed to application *P2* . In VTAM terms, a CLSDST/PASS is about to be issued. The logmode specified for the session is *P1* . The word DEFAULT indicates no logmode is specified and that the terminal's default logmode will be used.

System Action:

The logon request proceeds. Subsequent messages indicate the result of the operation.

User Action:

None.

N22706

SESSION ESTABLISHMENT FAILED

Reason:

A logon request was issued for an active application and the terminal was passed to it successfully. However, the session between the terminal and the application was not established successfully, and EASINET re-acquired the terminal.

System Action:

The logon request fails and EASINET processing resumes.

User Action:

The error condition may be temporary - retry the logon request. If necessary examine the log for related messages which detail the error that occurred. Message N22712 is written to the activity log to provide various reason and sense code information, which should be examined to determine the exact cause of the failure.

Message N22731 indicates that the communication subsystem does not support Third Party Notify for this application. Modification of the application's DEFLOGON definition to specify NOTIFY=NO may be used to bypass this condition.

Message N22732 indicates that an attempt to logon using a specific logmode failed due to a queued session request. Retry the logon request.

N22708

SELECTED APPLICATION IS INACTIVE

Reason:

A logon request is issued for an application which is not active.

System Action:

The logon request fails.

User Action:

Retry when the application is active.

N22709**SIMLOGON FAILED, RC=rc,FBK2=fb,SENSE=sense. LU luname DISCARDED****Reason:**

A logon request was issued for an active application and the terminal luname was passed to that application. However, the session between the terminal and application did not establish successfully, and SOLVE attempted to re-acquire the terminal. During this re-acquisition, a VTAM SIMLOGON macro failed.

System Action:

The re-acquisition fails.

User Action:

Firstly, determine the cause of the session establishment failure. Message N22712 will detail the reason and sense codes. Secondly, determine the cause of the SIMLOGON failure. The VTAM return code, feedback and sense information in this message indicate the cause and should be used in reference to the VTAM Programming manual. If the terminal should be connected to the EASINET component, an OPNDST command should be issued from an OCS window.

N22712**SESSION BETWEEN LU luname AND APPL applname FAILED, RSN=X'rr', SENSE=X'ssssssss'****Reason:**

A logon request was issued for an active application applname and the terminal luname was passed to it successfully. However, the session between the terminal and the application was not established successfully.

System Action:

SOLVE attempts to re-acquire the terminal and issue an error message to the user.

User Action:

N22713

LU luname DID NOT RECONNECT, DISCARDED

Reason:

A logon request was issued for an active application and the terminal luname was passed to that application. However, the session between the terminal and application did not establish successfully, and SOLVE attempted to re-acquire the terminal to notify the user. However, this re-acquisition failed.

System Action:

The re-acquisition fails.

User Action:

Determine if the terminal should be connected to the EASINET component, and if so issue an OPNDST command from an OCS window to connect it. The re-acquisition attempt could have failed because another application acquired the terminal, or because the terminal became otherwise unavailable or inactive.

N22714

OPNDST FAILED, RC=rc,FBK2=fb,SENSE=sense. LU luname DISCARDED

Reason:

A logon request was issued for an active application and the terminal luname was passed to that application. However, the session between the terminal and application did not establish successfully, and SOLVE attempted to re-acquire the terminal. During this re-acquisition, a VTAM OPNDST macro failed.

System Action:

The re-acquisition fails.

User Action:

Firstly, determine the cause of the session establishment failure. Message N22712 will detail the reason and sense codes. Secondly, determine the cause of the OPNDST failure. The VTAM return code, feedback and sense information in this message indicate the cause and should be used in reference to the VTAM Programming manual. If the terminal should be connected to the EASINET component, an OPNDST command should be issued from an OCS window.

N22715**LU luname RE-ACQUIRED****Reason:**

A logon request was issued for an active application and the terminal luname was passed to that application. However, the session between the terminal and application did not establish successfully, and SOLVE re-acquired the terminal to notify the user.

System Action:

The EASINET procedure regains control after the &LOGON statement with an error message in the &SYSMSG variable.

User Action:

Other messages detail the cause of the session failure.

N22716**UNSUPPORTED DEVICE TYPE. LU luname DISCARDED****Reason:**

A logon attempt was received from an LU specifying BIND parameters that indicated that it was not an LU type 1,2 or 3 or LU 0 3277 device.

System Action:

The system rejects the logon attempt.

User Action:

Check the BIND parameter definitions for the device if it is a terminal that should be able to logon to SOLVE.

N22717

RE-ACQUISITION OF LU luname AS A MODEL 2 WILL BE ATTEMPTED

Reason:

A 3270 device rejected a BIND issued by EASINET. The system will retry the BIND to attempt to connect the terminal as a model 2 (24 x 80) terminal.

System Action:

The system retries the BIND.

User Action:

Check the BIND parameter definitions for the device if it is a terminal that should be able to logon to SOLVE.

N22718

LOGMODE NAME lgmdname IS NOT KNOWN TO VTAM. RE-ACQUISITION OF LU luname WILL BE ATTEMPTED

Reason:

Connection of the nominated terminal failed because the LOGMODE table entry *lgmdname* is not defined to VTAM. SOLVE will retry the connection with a default set of BIND parameters.

System Action:

The system retries the BIND.

User Action:

Check the MODE TABLE entry specified for the terminal.

N22731**TERMINAL LOGGED BACK ON WITH NOTIFY OUTSTANDING****Reason:**

A previous attempt to pass the terminal to another application using a VTAM CLSDST/PASS operation requested that VTAM provide notification to indicate the success or otherwise of the operation (this is referred to as Third Party Notify). VTAM has not provided notification and as such SOLVE cannot determine if the operation was successful.

System Action:

The current logon attempt is not completed. The EASINET procedure which issued the original CLSDST/PASS request via the &LOGON verb regains control of the terminal, and this error message is available in the &SYSMSG system variable after the &LOGON verb completes.

User Action:

Investigate the cause of the failure of VTAM to provide Third Party notification. Some versions of VTAM do not support the Third Party Notify feature. If this is the case, the use of this feature can be avoided by use of a SYSPARMS VTAMNTFY=NO command.

N22732

TERMINAL LOGGED BACK ON AFTER CLSDST ISSUED

Reason:

When a terminal connected to a SOLVE system requests logon using a Logmode other than the current one, SOLVE uses a VTAM CLSDST macro to terminate the current session, then a VTAM SIMLOGON macro to create a new session with the requested Logmode. After the CLSDST macro was issued, SOLVE detected that the terminal had logged on again before the SIMLOGON could be issued.

System Action:

The current logon attempt is not completed. The EASINET procedure which issued the original &LOGON request regains control of the terminal and this error message is available in the &SYSMSG system variable after the &LOGON verb completes.

User Action:

This occurrence indicates that VTAM has caused the terminal to be logged on (possibly because of LOGAPPL) when SOLVE had indicated the session with the terminal was not required. This has prevented SOLVE from reacquiring the terminal with the specified logmode. This error should be reported to your system administrator.

N23001

NCL PROCESS ACTIVE. Reason.

Reason:

An EXIT was attempted from OCS. However, there is an NCL process active. 'Reason' contains the reason an exit was not performed. Either: EXIT PREVENTED BY PROFILE OPTION or RE-ENTER EXIT TO FORCE OCS TERMINATION An exit from OCS is not performed.

System Action:

None.

User Action:

Action depends on the reason. Either re-enter EXIT or terminate the NCL process.

N23003**INSUFFICIENT STORAGE TO INITIATE OCS****Reason:**

A temporary storage shortage prevented the user from entering Operator Console Services mode.

System Action:

None.

User Action:

Retry. Refer to your systems administrator if the condition persists.

N23005**INSUFFICIENT STORAGE TO INITIATE MSGPROC****Reason:**

MSGPROC could not be invoked for the OCS window because of a storage shortage.

System Action:

None.

User Action:

Consider increasing the SOLVE region or partition size.

N23301**INVALID SYNTAX OR OMITTED VARIABLE****Reason:**

The statement in error has wrong syntax or a required variable has been omitted.

System Action:

The procedure terminates.

User Action:

See the NCL Reference for the syntax of the statement.

N23302

DUPLICATE VARIABLE aaaa SPECIFIED

Reason:

The failing statement specified a duplicate variable name.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23303

INSUFFICIENT STORAGE

Reason:

The procedure has failed because of a storage shortage.

System Action:

The procedure terminates.

User Action:

Consider increasing the SOLVE region or partition size.

N23304

INVALID aaaa SPECIFICATION ON VARIABLE

Reason:

An invalid length or skip value is specified.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23305**INVALID VARIABLE OR LIST SYNTAX****Reason:**

The failing statement contains invalid LIST syntax or an invalid variable.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23306**INVALID USE OF aaaa KEYWORD****Reason:**

The failing statement contains a reserved keyword (e.g an attempt to modify a system variable).

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23307**GENERIC PROCESSING OF ALL GLOBALS IS INVALID****Reason:**

You cannot perform generic processing of all global variables in the system. A generic processing request must specify a generic prefix longer than the global variable prefix so that only a subset of all global variables is selected.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23308

NAME: aaaaaaaaaaaaaa LEN: bbb MODF#: ccc ATTR: ddd DATA: eeeeeeeeeeee

Reason:

Issued in response to a SHOW NCLVARS command. The message contains:

NAME The name of the variable.

LENGTH The length of the variable.

MODF# Either blank or a number in the range 1 to 255. A value indicates the variable as having being modified by a system service eg. Panel Services, NDBGGET.

ATTR Indicates the attributes of the variable. Either:

Blank- No special *attributes* set.

MOD - The variable has been modified using the *ASSIGN OPT=SETMOD function*.

ERR - The variable has been modified using the *ASSIGN OPT=SETERR function*.

HEX - The variable contains non-displayable hexadecimal data.

DATA Up to the first 12 bytes of data contained in the variable. If LIST=ALL is used then the second line contains the complete data of the variable.

System Action:

None.

User Action:

None.

N23310

aaaa IS AN INVALID VARIABLE NAME

Reason:

aaaa does not conform to the rules for variable names.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23311**ATTEMPT TO GENERATE AN INVALID VARIABLE NAME USING aaaa
SOURCE VARIABLE****Reason:**

Dynamic generation of a variable name using aaaa would cause an invalid name to be generated.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23312

**vartype TRACE: varname FUNCTION: bbb UID:userid ID: nclid PROC:
xxxxxxxx STMT: yyyyyyyy DATA: dddddddddddd**

Reason:

SYSPARM NCLGBTRC has been set to cause tracing of varname. The trace is of a GLOBAL variable (vartype). The contents of the variable have been updated by the named user using procedure xxxx. The first 12 bytes of the data are displayed.

System Action:

None.

User Action:

Verify that the update is valid. When tracing is no longer required issue 'SYSPARM NCLGBTRC=', ie. without a value to terminate tracing.

N23314

GLOBAL VARIABLE USE INVALID.

Reason:

An operation was specified using a global variable (ie a variable whose name begins with the global variable prefix as defined by the NCLGLBL SYSPARM) but the operation is only valid for local variables. For example, setting or resetting the errfld or modified field attributes of a variable using *ASSIGN OPT=SETERR/RESETERR etc.*

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23315

DATA LENGTH EXCEEDS MAXIMUM OF aaaaa

Reason:

The data being moved into a buffer is too large for the buffer. For example, in a file operation the data exceeds the maximum record size.

System Action:

Operation is not completed.

User Action:

Reduce the length of data used in the operation.

N23316**HEX DATA ERROR. INVALID reason.****Reason:**

An attempt was made to reference an NCL variable that is specified as containing hexadecimal data. The data is invalid. It has either invalid hexadecimal CHARACTERS or an invalid LENGTH length (the length must be even) as indicated in the 'reason'.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23317**VARIABLE LEN MODF# MEOH DATA****Reason:**

This message is the title line for a variable display. The variables displayed are sorted into ascending alphabetic name order and show attributes (Modfld, Errfld, Outfld, Hex) and data. This display is produced by the DEBUG DISPLAY command. Refer to description of message N23318 for more information.

System Action:

None.

User Action:

None.

N23318

variable len modf# meoh data

Reason:

This message is the detail line for a variable display produced by the DEBUG DISPLAY command. The meanings of the fields are as follows:

variable - the name of the variable

len - the length of data contained in the variable

modf# - the current modfld order for the variable

meoh - attributes assigned to the variable

m - if 'Y' variable has MOD attribute set (otherwise '-')

e - if 'Y' variable has ERR attribute set (otherwise '-')

o - if 'Y' variable has OUT attribute set (otherwise '-')

h - if 'Y' variable contains HEX data (otherwise '-')

data - the contents of the variable

- If FORMAT=CHAR was entered on the DEBUG DISPLAY command the data contents are shown in character format.

- If FORMAT=HEX was entered on the DEBUG DISPLAY command the data contents are shown in hexadecimal format.

- If FORMAT=DUMP was entered on the DEBUG DISPLAY command the data contents are shown in a hex/character dump format in message N23319 which follows this message.

System Action:

None.

User Action:

None.

N23319

+000 xxxxxxxx xxxxxxxx xxxxxxxx xxxxxxxx cccccccc

Reason:

This message is produced by the DEBUG DISPLAY command when the FORMAT=DUMP operand is entered. The message contains a hex and character dump format display of the data in the specified MDO. The meanings of the fields are as follows:

+000 - shows the offset into MDO at which the data starts

xxxxxxx - the hexadecimal format of the data

ccccccc - the character format of the data

System Action:

None.

User Action:

None.

N23320**ATTEMPT TO GENERATE INVALID LENGTH VARIABLE NAME:**

aaaaaaaaaaaaaaaa

Reason:

A generic operation which creates variables by appending a suffix to a supplied prefix attempted to create a token name longer than 12 characters. e.g. VARS=XXXXXXXXXX* RANGE=(1,100) aaaaaaaaaaaaaaaaaa = Invalid variable name.

System Action:

Procedure is flushed.

User Action:

Modify statement in error so that variable names generated don't exceed 12 characters, either by using a shorter prefix, or a different range or generic suffix set.

N23501

PROCEDURE xxxx REJECTED, NCLUMAX LIMIT HAS BEEN REACHED

Reason:

The maximum number of concurrent NCL processes allowed for any user is set by the NCLUMAX value. You have attempted to start more than this

System Action:

User Action:

N23502

PROCEDURE proc-name REJECTED, SERVER=server-name SCOPE=scope ALREADY ACTIVE.

Reason:

A START command was issued but the SERVER operand value server-name is not unique within the scope provided.

System Action:

The command is rejected.

User Action:

Correct and retry.

N23601

xxxxxxxx PROCESSING TERMINATED DUE TO ERROR. NCLID yyyyyy

Reason:

This is the standard termination message for any process that fails. The NCLID of the process is yyyyyy.

System Action:

None.

User Action:

Determine the reason for procedure termination from other error messages that accompany this message.

N23602**INSUFFICIENT STORAGE****Reason:**

The process has failed to execute because of a storage shortage.

System Action:

The procedure terminates.

User Action:

If the condition persists, increase the SOLVE region or partition size.

N23603**OBJECT SERVICES METHOD aaaaaaaa TERMINATED DUE TO ERROR.****Reason:**

This message indicates that an object services method procedure invoked via OSCALL has terminated due to an error.

System Action:

None.

User Action:

Investigate the reason for the failure of the object services method procedure. Other messages which precede this message will indicate the type of error encountered.

N23610**PROCEDURE xxxxxxxx NCLID nnnnnn IN ERROR, STMT NO: nnnnnnnn
FOLLOWS:****Reason:**

A general termination message; the failing statement follows this message.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23614

WAIT WAS LAST STMT IN PROCEDURE - WAIT CANCELLED

Reason:

If WAIT is coded as the last statement in a procedure it is ignored and the procedure is ended.

System Action:

The procedure terminates.

User Action:

None.

N23620

MEMBER membername IN LIBRARY memberlib DROPPED FROM NCL RETAIN QUEUE.

Reason:

This message appears if JCL PARMS TRACE1= includes GT1TRDRR (X'20'). It identifies that NCL procedure 'membername', from library 'memberlib' has been dropped from the NCL retain queue. This is due to the maximum number of members on the retain queue has been exceeded, or the maximum amount of storage allocated to the NCL retain queue has been exceeded. Members are dropped from the retain queue in least used order.

System Action:

None.

User Action:

None.

N23A01

INVALID SYNTAX

Reason:

The NCL statement syntax is incorrect.

System Action:

The NCL procedure is terminated.

User Action:

Check the syntax of the statement in error, correct and retry.

N23A02**VAR\$=aaaa PREFIX TOO LONG FOR SPECIFIED RANGE****Reason:**

The prefix specified for generic variable name processing is too long for the range suffix to be appended.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23A03**0 INVALID AS A RANGE****Reason:**

An NCL statement which contains the ARG\$ and RANGE operands has specified a range which includes the system variable 0.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23A04**INVALID KEYWORD OPTION OR COMBINATION OF OPTIONS****Reason:**

An NCL statement which contains the *FILE ADD PRTCN\$= operand* has invalid options. For example, nulls in list, duplicates in list, too many entries or a syntax error. e.g. *prtcn\$=(skip2,skip1)* should generate this error.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23A06

ROUTCDE VALUE IS INVALID

Reason:

An invalid value has been specified for the ROUTCDE operand on either an *EVENT verb in an NCL procedure*, or on a *PROFILE EDS command*.

System Action:

The NCL procedure terminates, or the PROFILE command fails.

User Action:

Correct operand value and retry. An example of valid syntax is:
ROUTCDE=(1,2,3,4).

N23A07

RESOURCE LIST IS INVALID

Reason:

The RESOURCE operand on an *EVENT NCL statement* has an invalid value. The RESOURCE operand is specified as a single resource, or a pair of resources.
e.g. RESOURCE=(luname,userid).

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23B01

VAR=aaaa PREFIX TOO LONG FOR bbbb RANGE

Reason:

The prefix specified for generic variable name processing is too long for the range suffix to be appended.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23B03**VAR\$=aaaa PREFIX TOO LONG****Reason:**

The prefix specified for generic variable name processing is too long.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23B04**MAXIMUM RANGE DIFFERENTIAL EXCEEDED****Reason:**

ASSIGN has a processing limit of 256 generic variables in any one operation.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23B05**NONULLS/NORESET OPTION INVALID****Reason:**

An ASSIGN NCL statement has specified an incorrect NONULLS or NORESET operand.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23C01

ARITHMETIC EXPRESSION HAS UNPAIRED BRACKETS

Reason:

If parentheses are used to delimit the evaluation order of an arithmetic statement an equal number of left and right parentheses, correctly paired, is required.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23C02

EXCESSIVE OPERATORS FOUND IN ARITHMETIC EXPRESSION

Reason:

Too many operators (+, - * etc) have been coded in the statement for the number of operands to be operated on.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23C03

EXCESSIVE OPERANDS FOUND IN ARITHMETIC EXPRESSION

Reason:

Too many operands have been coded in the statement for the number of operators (+, - * etc).

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23C04**OPERAND STACK DEPTH EXCEEDED FOR ARITHMETIC EXPRESSION****Reason:**

An arithmetic statement is processed as a sequence of simple expressions. There is a limit of 32 simple expressions per statement.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23C05**OPERATOR STACK DEPTH EXCEEDED FOR ARITHMETIC EXPRESSION****Reason:**

An arithmetic statement is processed as a sequence of simple expressions. There is a limit of 32 simple expressions per statement.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23C06**OVERFLOW EXCEPTION IN ARITHMETIC EXPRESSION****Reason:**

The failing statement had an expression, the result of which was too large to be held in an 8-byte floating-point register (*CONTROL REAL*) or a 4-byte binary register (*CONTROL INTEGER*).

System Action:

The procedure terminates.

User Action:

Correct and retry. of NCL arithmetic.

N23C07

ZERO DIVISOR IN ARITHMETIC EXPRESSION

Reason:

An attempt was made to divide by zero.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23C08

NUMERIC VALUE EXCEEDS MAXIMUM FOR ARITHMETIC EXPRESSION

Reason:

An expression yielded a number greater than the largest supported positive or negative value.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23C09

CONSECUTIVE OPERANDS FOUND IN ARITHMETIC EXPRESSION

Reason:

Each operand in an arithmetic expression must be separated from the next by an arithmetic operator.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23C11**OPERAND FOUND IN ARITHMETIC EXPRESSION NEITHER NUMERIC OR CONSTANT****Reason:**

A variable in an arithmetic expression does not have a numeric value.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23C12**NEGATIVE OPERAND STACK INDEX ENCOUNTERED IN ARITHMETIC EXPRESSION****Reason:**

The arithmetic statement cannot be resolved.

System Action:

The NCL procedure is terminated.

User Action:

Check the logic of the statement.

N23C13**OPERATOR DOES NOT HAVE OPERAND FOLLOWING IN ARITHMETIC EXPRESSION****Reason:**

Each operator in an arithmetic expression must be followed by an operand.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23C14

REMAINDER DIVISION IS NOT SUPPORTED FOR FLOATING POINT ARITHMETICS

Reason:

The failing statement had an expression containing the remainder operator (\), however the expression contained floating-point values or CONTROL REAL was in effect.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23E01

PROC procname LINE linenum MISPLACED ELSE

Reason:

The nominated statement contains an *ELSE verb that is either not on its own statement or is logically inconsistent.*

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23E02

PROC procname LINE linenum HAS nnnn MISSING &DOENDS

Reason:

&DOEND statements to close preceding &DO, &DUNTIL or &DOWHILE groups are missing.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23E03**PROC procname LINE linenum MISPLACED &DOEND****Reason:**

An &DOEND statement was encountered, however there was no corresponding &DO statement preceding it.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23E04**PROC procname LINE linenum keyword STATEMENT INVALID ON keyword STATEMENT****Reason:**

A statement was found which does not make sense as the statement is the result of an IF, ELSE or ENDAFTER statement. For example, ` IF A EQ B THEN ELSE'.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23E05**PROC procname LINE linenum MISPLACED &ELSE STATEMENT****Reason:**

An &ELSE statement was encountered where the previous statement was not an &IF statement or the closure of an &DO .. &DOEND group which was the executable part of an &IF statement.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23E06

PROC procname LINE linenum LABEL INVALID ON &ELSE STATEMENT

Reason:

A statement label (that is, a valid name preceded by a period character `.`) was found on an &ELSE statement. It is illegal to branch directly to the &ELSE portion of an &IF statement, therefore labels are not allowed on the &ELSE statement.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23E07

PROC procname LINE linenum &ELSE INVALID ON &IF STATEMENT, NEED NEW STATEMENT

Reason:

An &ELSE keyword was encountered on the same line as an &IF statement. The &ELSE keyword must be on a separate statement.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23E46**PROC procname LINE linenum keyword IS INVALID AS FIRST WORD OF STATEMENT****Reason:**

A valid NCL keyword was encountered at the beginning of a statement but that keyword is not valid at the beginning of a statement. For example, the &THEN keyword or any NCL builtin function.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23E47**PROC procname LINE linenum UNEXPECTED END-STATEMENT AFTER keyword****Reason:**

A statement was encountered which terminated prematurely. For example, nothing appeared after the &THEN keyword of an &IF.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23E48**PROC procname LINE linenum INCORRECT NUMBER OF PARAMETERS AFTER keyword.****Reason:**

An &IF, &DOWHILE or &DUNTIL statement was encountered that had an incorrect number of parameters to make up the condition.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23E49

PROC procname LINE linenum TOO MANY PARAMETERS AFTER aaaa

Reason:

The aaaa function requires fewer parameters than have been coded.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23E50

PROC procname LINE linenum &DO STACK OVERFLOW

Reason:

The maximum number of nested &DO constructions has been reached. The maximum will vary depending upon the precise logic structure of the procedure, but is always a large number. Your procedure should never be structured in a manner that should ever approach this maximum.

System Action:

The NCL procedure is terminated.

User Action:

Restructure the procedure.

N23F01

NO DOMIDS PASSED

Reason:

&NRDDEL requires at least one DOMID (delete-operator-message identifier).

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23F02**DOMID aaaa IS INVALID****Reason:**

An &NRDDEL statement specified a delete-operator-message identifier (DOMID) to delete a non-roll delete message, but the DOMID specified was invalid.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23G01**FACILITY NOT VALID UNDER THIS OPERATING SYSTEM****Reason:**

The NCL procedure has issued an AOM NCL verb that is not supported under this operating system. For example, &WTOR is not supported in z/VM.

System Action:

The NCL procedure is terminated.

User Action:

Correct the procedure.

N23G03**&DOM SYSTEM ABEND code****Reason:**

The NCL procedure has issued an &DOM NCL verb, but the DOM macro abended with the indicated code. This can occur if an invalid DOMID is provided.

System Action:

The NCL procedure is terminated.

User Action:

Ensure only valid DOMIDs are used.

N23G04

NO MESSAGE TEXT OR ALL BLANK

Reason:

The text for an &WTO or &WTOR NCL verb was either omitted, or the value provided was all blank.

System Action:

The NCL procedure is terminated.

User Action:

Correct the procedure.

N23G20

ROUTCDE VALUE INVALID

Reason:

The ROUTCDE parameter of an &WTO or &WTOR NCL verb was not valid.

System Action:

The NCL procedure is terminated.

User Action:

Correct the procedure.

N23G21

DESC VALUE INVALID

Reason:

The DESC parameter of an &WTO NCL verb was not valid.

System Action:

The NCL procedure is terminated.

User Action:

Correct the procedure.

N23G22**MCS VALUE INVALID****Reason:**

The MCSFLAG value supplied for an &WTO or &WTOR NCL verb is not a valid list of allowable MCSFLAG values.

System Action:

The NCL procedure is terminated.

User Action:

Correct the procedure.

N23G23**WAIT=0/NOWAIT INVALID ON &WTOR****Reason:**

The NCL procedure has issued an &WTOR NCL verb with WAIT=0 or NOWAIT specified. This is invalid, as a valid delay is required to give the operator some chance to reply.

System Action:

The NCL procedure is terminated.

User Action:

Correct the procedure.

N23G24**CONSOLE ID INVALID****Reason:**

The console ID entered on an &WTO or &WTOR NCL statement is invalid. It must either be a number from 1 to 99 or (if extended MCS consoles are supported) a valid console name.

System Action:

The NCL process is terminated.

User Action:

Correct the console ID.

N23G25

USE OF LINETYPE OPERAND REQUIRES APF AUTHORISATION

Reason:

The LINETYPE operand of the &WTO NCL statement cannot be specified as anything other than NO unless the SOLVE system is running APF authorized.

System Action:

The NCL process is terminated.

User Action:

Determine why the SOLVE system is not running APF authorized.

N23G26

LINETYPE OPERAND NOT SUPPORTED IN THIS ENVIRONMENT

Reason:

Use of the LINETYPE operand on the &WTO NCL statement is only supported in the MVS and similar environments. It is not valid in z/VM,

System Action:

The NCL process is terminated.

User Action:

Remove the LINETYPE operand.

N23H31

INVALID OR MISSING SUBSTITUTION CHARACTER

Reason:

The substitution character provided to the *ZSUBST* function is missing or in error.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23H32**INVALID VARIABLES IN SUBSTITUTION STRING****Reason:**

The substitution string in the &ZSUBST function contains invalid variables.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23H33**SUBSTITUTION RESULT TOO LONG****Reason:**

The result of the &ZSUBST function is too long.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23H41**DATA TO BE QUOTED TOO LONG****Reason:**

The data to be quoted by the &ZQUOTE2 function was too long. This function will always add quotes to the data and hence the total length of the data must be less than or equal to the maximum variable size minus the number of quotes that will be added by the function.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I01

DATA IN VARIABLE: aaaaa DOES NOT START WITH <KWD=>. DATA IS bbbbb

Reason:

The &SETVARS function did not locate a KWD= with the ARGS or VARS operands. The variable is 'aaaaa'. The supplied data is 'bbbbb' and must contain KWD=.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I10

MISSING OR INVALID KEYWORD IN DATA STARTING AT: aaaaa

Reason:

The DATA= operand of the &SETVARS functions contains an invalid keyword or the keyword is missing. The start of the data is displayed.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I11

INVALID QUOTED STRING IN DATA STARTING AT: aaaaa

Reason:

A quoted string in the DATA= operand of the &SETVARS function is in error. Either the quotes are not paired or the data is too long.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I50

KEYWORD: aaaaa NOT FOUND IN KEYWORDS LIST.

Reason:

The keyword *aaaaa* specified on a data string was not in the list of keywords specified on the KEYWORDS= operand of the &SETVARS verb.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry. Refer to the NCL Reference for a description of the &SETVARS verb.

N23I51

OUTPUT VARIABLE NAME: aaaaa INVALID OR RESERVED.

Reason:

The variable name that is created by the &SETVARS function (PREFIX= operand data concatenated with the KEYWORDS= operand data) is invalid or reserved.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I52

KEYWORD: aaaaa DUPLICATED.

Reason:

The input data specified in the DATA=, VARS= or ARGS operand of the &SETVARS function contains a duplicate keyword and DUPLICATE=NO is specified.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I53

**DUPLICATE KEYWORD TABLE OVERFLOW WHILE PROCESSING
KEYWORD: aaaaa**

Reason:

The DUPLICATE=NO operand on the SETVARS function is specified. Too many keywords have been specified on the KEYWORDS= operand to perform checking for duplicates - the keyword table has overflowed.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I54

VALUE FOR VARIABLE: varname EXCEEDS NCL MAXIMUM LENGTH

Reason:

During processing of an &SETVARS verb, the value extracted for assignment to the named variable exceeded the maximum value that can be set into an NCL variable.

System Action:

The NCL procedure terminates, or, if the ERROR=CONTINUE operand was specified on the &SETVARS statement, this message is returned in &SYSMSG and a non-zero return code is set.

User Action:

Correct the input and retry.

N23I55**N23I55 UNEXPECTED BLANKS FOUND WHILE PROCESSING KEYWORD:
*kkk*****Reason:**

During the processing of an &SETVARS verb, embedded or trailing blanks were found while processing the named keyword.

System Action:

The NCL procedure terminates, or if the ERROR=CONTINUE operand was specified on the &SETVARS statement, this message is returned in &SYSMSG and a nonzero return code is set.

User Action:

Correct the input and retry.

N23I90**VARs PREFIX AND RANGE WILL GENERATE INVALID VARIABLE NAME.****Reason:**

The input variable name to be generated by the SETVARS function using the VARs= and RANGE= operand will create a variable name that is greater than 12 characters.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I91**NUMERIC PREFIX REQUIRES ALL KEYWORDS TO BE NUMERIC.****Reason:**

The PREFIX= operand of the &SETVARS function has been is a numeric value, all keywords of the KEYWORD= operand must be numeric.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I92

OUTPUT PREFIX AND KEYWORD WILL GENERATE INVALID VARIABLE NAME.

Reason:

The variable name to be generated by the &SETVARS function, using the PREFIX= operand concatenated either with one of the KEYWORDS= operand values or with one of the keywords specified in the PARMs, ARGs, VARS= or DATA= operand will be greater than 12 characters.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I93

VARS= PREFIX MUST BE GENERIC.

Reason:

The VARS= operand has been specified on the &SETVARS function. The prefix of each of the VARS must be generic.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I94

KEYWORDS LIST SYNTAX ERROR AT: aaaaaa.

Reason:

The KEYWORDS=list operand has been specified on the &SETVARS function. There is a syntax error in the specification of the list. The syntax of the list must be KWD,...,KWD or (KWD,...,KWD).

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23K01**NO FEATURE NAME SPECIFIED.****Reason:**

An &ZFEATURE statement was encountered that had no feature parameters specified.

System Action:

The NCL procedure is flushed.

User Action:

Correct the NCL procedure and retry.

N23K02**FEATURE AA..AA BB..BB****Reason:**

The &FEATURE verbs has been used to set version and level data for the feature indicated as AA..AA but this is invalid for the reason that is described as BB..BB which will be:

IS NOT A VALID FEATURE NAME The feature name is not a valid SOLVE feature name.

IS NOT AN NCL BASED FEATURE The feature name is not an NCL feature.

System Action:

The NCL process is flushed.

User Action:

Correct the NCL procedure.

N23K03

FEATURE VERSION FORMAT IS INVALID.

Reason:

The &ZFEATURE verb has been used to set the version and/or level for an NCL-based feature but the value specified for the version is invalid. The correct formats for version are either Vn.n or Vn.n.n (where n is a numeric digit).

System Action:

The NCL process is flushed.

User Action:

Correct the NCL procedure.

N23K04

FEATURE PUT LEVEL FORMAT IS INVALID.

Reason:

The &ZFEATURE verb has been used to set the version and/or level for an NCL-based feature but the value specified for the PUT level is invalid. The only valid format is a 4-digit value.

System Action:

The NCL process is flushed.

User Action:

Correct the NCL procedure.

N23K05

INVALID COMMAND FORMAT, TOO MANY PARAMETERS.

Reason:

The &ZFEATURE verb has been used to set the version and/or PUT level for an NCL-based feature but is invalid because additional data follows the PUT level value.

System Action:

The NCL process is flushed.

User Action:

Correct the NCL procedure.

N23L01**UNKNOWN &BOOLEXP OPERAND: AAAAAAAAAAAAAAAAAA****Reason:**

This message shows an unrecognized operand that was passed to the &BOOLEXP NCL builtin function.

System Action:

The NCL process is terminated.

User Action:

Correct the &BOOLEXP operand.

N23L02**DUPLICATE BOOLEXP OPERAND: AAAAAAAAAAAAAAAAAA****Reason:**

This message indicates a duplicated operand on an NCL statement using the &BOOLEXP builtin function.

System Action:

The NCL process is terminated.

User Action:

Correct the *BOOLEXP syntax*.

N23L03**INVALID OR OMITTED SUBCHAR VALUE****Reason:**

The value supplied for the SUBCHAR operand of the &BOOLEXP builtin function is invalid or was omitted.

The SUBCHAR values permitted are: ! % ? `

System Action:

The NCL process is terminated.

User Action:

Correct the SUBCHAR operand.

N23L04

INVALID OR OMITTED FOLD VALUE

Reason:

The value supplied for the FOLD operand of the &BOOLEXPB builtin function is invalid or omitted.

Valid values are YES (meaning fold all character data), NO (meaning do not fold), and * (meaning honour the &CONTROL IFCASE setting).

System Action:

The NCL process is terminated.

User Action:

Correct the FOLD operand.

N23L05

INVALID OR OMITTED EVAL VALUE

Reason:

The value supplied for the EVAL operand of the &BOOLEXPB builtin function is invalid or omitted.

Valid values are YES (meaning attempt to evaluate the expression) and NO.

System Action:

The NCL process is terminated.

User Action:

Correct the EVAL operand.

N23L06

INVALID OR OMITTED VARS VALUE

Reason:

The value supplied for the VARS operand of the &BOOLEXPB builtin function is invalid or omitted. The value must be a valid generic variable name prefix (including an asterisk (*) at the end).

System Action:

The NCL process is terminated.

User Action:

Correct the VARS operand.

N23L07**INVALID OR OMITTED RANGE VALUE****Reason:**

The value supplied for the RANGE operand of the &BOOLEXPB builtin function is invalid or omitted. It must be a parenthesized pair of numbers, with the second greater than or equal to the first, and the values must range from 0 to 32767.

System Action:

The NCL process is terminated.

User Action:

Correct the RANGE operand.

N23L10**OMITTED OR MUTUALLY EXCLUSIVE OPERANDS****Reason:**

A combination of operands on the %BOOLEXPB NCL builtin function is invalid. You have coded both the VARS and DATA operands or have not coded either.

System Action:

The NCL process is terminated.

User Action:

Correct the combination of operands.

N23L11**INVALID VARS AND RANGE COMBINATION****Reason:**

The operand values specified for the VARS and RANGE operands of the &BOOLEXPB NCL builtin function together result in a possible variable name length that exceeds 12 characters.

System Action:

The NCL process is terminated.

User Action:

Correct the operands.

N23L20

NULL BOOLEXPRESSION

Reason:

No boolean expression data has been supplied on the &BOOLEXPRESS NCL builtin function.

System Action:

The expression is regarded as 'invalid'.

User Action:

Provide an expression.

N23L21

INVALID SYNTAX IN BOOLEXPRESSION: token token

Reason:

Invalid expression syntax was detected in the provided expression for the &BOOLEXPRESS NCL builtin function.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression syntax.

N23L22

EXPECTED AND/OR/) IN BOOLEXPRESSION: token token

Reason:

Whilst parsing the &BOOLEXPRESS builtin function boolean expression, a syntax error in the expression was found. Either an 'AND', an 'OR' or a ')' (right parenthesis) was expected, but none was found.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression syntax.

N23L30**EXPECTED TRUE/FALSE AFTER IGNORE, FOUND: token****Reason:**

An IGNORE clause in an &BOOLEXPB NCL builtin function boolean expression was not correct. The word IGNORE must be followed by either TRUE or FALSE.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression syntax.

N23L31**EXPECTED NUMBER/LITERAL/VARIABLE, FOUND: token****Reason:**

Whilst parsing an &BOOLEXPB NCL builtin function boolean expression, a syntax error was detected. A number or literal or NCL variable was expected, but none was found.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression syntax.

N23L32**EXPECTED RELATIONAL OPERATOR, FOUND: token****Reason:**

While parsing an &BOOLEXPB NCL builtin function, invalid boolean expression syntax was detected. An operator was expected but none was found.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L33

RANGE OR GENERIC ONLY VALID FOR = AND ^= OPERATORS

Reason:

Whilst parsing an &BOOLEXPB NCL builtin function, a range or generic value was found but the associated operator was not EQUAL (=) or NOT EQUAL (^=).

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L34

GENERIC ONLY VALID WITH QUOTED DATA OR VARIABLES

Reason:

Whilst parsing an &BOOLEXPB NCL builtin function, a GENERIC operation was found with numeric operands.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L35

EXPECTED NUMBER/LITERAL/VARIABLE AFTER :, FOUND: token

Reason:

During parsing of an &BOOLEXPB NCL builtin function, a range test was found (:). The token after the range was not a number, literal, or variable.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L36**STRING:NUMBER OR NUMBER:STRING IS NOT A VALID RANGE****Reason:**

While parsing an &BOOLEXPB NCL builtin function boolean expression, a range test with differing data types was found.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L37**EXPECTED TYPE NAME OR VARIABLE, FOUND: token****Reason:**

Whilst parsing an &BOOLEXPB NCL builtin function boolean expression, a TYPE ('IS') test was found. The following token(s) were not either valid type names, or variable names.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L38

OPTION: token IS INVALID OR DUPLICATED

Reason:

While parsing an &BOOLEXPB NCL builtin function boolean expression, a modifier on a test (CHARACTER, NUMERIC, FOLD or NOFOLD) was either invalid or duplicated. For example, both CHAR and NUM were specified. The CHARACTER or NUMERIC modifiers are only allowed when both sides of the operator are variables. The default action is to perform a numeric comparison if both variables are numeric or a character comparison if either is not numeric. The modifier enables the comparison type to be forced. If either side of the operator is a constant, then the comparison type is implicitly determined by the presence or absence of quotes around the constant. If quoted, a character compare is forced. If not quoted, the constant must be numeric and a numeric compare is forced. In these cases it is invalid also to specify a modifier as this is a duplication.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L39

INVALID TYPE NAME: name

Reason:

Whilst parsing an &BOOLEXPB NCL builtin function boolean expression, an invalid type name was found.

System Action:

The return value is 'INVALID'.

User Action:

Correct the type name.

N23L40**CONSTANTS ON BOTH SIDES OF AN OPERATOR****Reason:**

Whilst parsing an &BOOLEXP NCL builtin function, constant values was found on both sides of an operator. This is a constant expression, which needs no dynamic evaluation.

This can occur if you allow variables to be substituted into the expression, rather than use SUBCHAR and allow &BOOLEXP itself to retrieve the variable values as required.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L41**STRICT OPERATORS CANNOT HAVE NUMERIC OPERANDS****Reason:**

Whilst parsing an &BOOLEXP NCL builtin function boolean expression, either a strict operator , LIKE or CONTAINS operator with numeric operands was found. Since these operators always perform character compares, this is not permitted.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L42

MIXED CONSTANTS ON BOTH SIDES OF AN OPERATOR

Reason:

Whilst parsing an &BOOLEXPB NCL builtin function, constant values was found on both sides of an operator. This is allowed, but the types of the constant expressions were mixed. That is, there was a number on one side of an operator (unquoted), and a quoted string on the other side. You cannot compare these mixed types of data.

This can occur if you allow variables to be substituted into the expression, rather than use SUBCHAR and allow &BOOLEXPB itself to retrieve the variable values as required.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L43

'IS' AND 'IS NOT' SUPPORT VARIABLES ONLY

Reason:

Whilst parsing an &BOOLEXPB NCL builtin function, constant values were found as arguments to the 'IS' or 'IS NOT' operators. Only variables may be provided as arguments. (Constants are allowed in the type list.)

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression and retry the operation.

N23L50**UNRECOGNISABLE DATA IN BOOLEXPRESSION: data****Reason:**

Whilst parsing an &BOOLEXPRESS NCL builtin function boolean expression, invalid data was found. Parsing could not continue.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L51**INVALID VARIABLE IN BOOLEXPRESSION: data****Reason:**

Whilst parsing an &BOOLEXPRESS NCL builtin function boolean expression, an invalid variable name was found.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L52**WORD LONGER THAN 256 CHARACTERS IN BOOLEXPRESSION:
data****Reason:**

Whilst parsing the boolean expression supplied to an BOOLEXPRESS function, a word longer than 256 characters was found.

System Action:

The return value is 'INVALID'.

User Action:

Correct the erroneous expression syntax.

N23L53

INVALID NUMBER IN BOOLEXPRESSION: data

Reason:

While parsing an &BOOLEXPRESS NCL builtin function boolean expression, an invalid number was found.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L54

INVALID QUOTED STRING IN BOOLEXPRESSION: data

Reason:

Whilst parsing an &BOOLEXPRESS NCL builtin function boolean expression, an invalid quoted string was found. Either the quoted value was too long or no ending quote was found.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L55

INVALID USE OF NCL KEYWORD IN BOOLEXPRESSION: keyword

Reason:

Whilst parsing an &BOOLEXPRESS NCL builtin function boolean expression, an NCL keyword was found that is not a system variable name.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression,

N23L56**UNSUPPORTED NCL-MODE SYSTEM VARIABLE IN &BOOLEXP
EXPRESSION: keyword****Reason:**

An NCL system variable was encountered in a BOOLEXP function that OML does not support.

System Action:

An error is raised or an invalid expression return is given.

User Action:

Correct the expression,

N23L70**VARIABLE: varname VALUE NOT NUMERIC: value****Reason:**

Whilst executing an &BOOLEXP NCL builtin function boolean expression, a variable value was retrieved and a numeric value was expected. The value was not numeric or was not in the range -2147483648 to 2147483647 for &CONTROL INTEGER setting (default) or in the range +1E-70 to +1E+70 or -1E+70 to -1E-70 for &CONTROL REAL setting.

System Action:

The return value is 'BAD'.

User Action:

Determine the reason for the bad variable data.

N23L71

VARIABLE: varname HAS INVALID TYPE NAME: type

Reason:

While executing an &BOOLEXPB NCL builtin function boolean expression, a type test ('IS') with a variable was processed. When the variable value was examined an invalid type name was found.

System Action:

The return value is 'BAD'.

User Action:

Correct the variable type list.

N23L79

VARIABLE: &varname VALUE LONGER THAN 256 BYTES.

Reason:

While processing a BOOLEXPB expression, the value for the named variable exceeded 256 bytes. This is presently not supported.

System Action:

An error is raised or a bad expression return is indicated.

User Action:

Ensure that all source variables used in the expression are not longer than 256 bytes,

N23L90

STORAGE SHORTAGE PROCESSING BOOLEXPB EXPRESSION

Reason:

While processing an &BOOLEXPB NCL builtin function, a storage shortage was encountered.

System Action:

The NCL process is terminated.

User Action:

Investigate the reason for the storage shortage.

N23O04**INVALID OR OMITTED FILTER.****Reason:**

A filter supplied to the object services selection method was invalid.

System Action:

Request is rejected.

User Action:

Correct the filter in the request SDU and submit it again.

N23O05**INVALID OR OMITTED OBJECT.****Reason:**

The object passed in an object services selection method was invalid.

System Action:

The request is rejected.

User Action:

Correct the object coded in the request SDU and resubmit the request.

N23P01**PPI RECEIVED INVALID - PPI DEFINE NOT ISSUED.****Reason:**

An PPI RECEIVE function has been called either without a prior PPI DEFINE being performed or PPI DEFINE was unsuccessful.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23P02

SUPPLIED HEX DATA INVALID OR UNEVEN NUMBER CHARS.

Reason:

An &PPI SEND or ALERT function has been issued with OPT=HEXPACK operand. The data specified in the DATA= operand is not valid hexadecimal data.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23P03

SUPPLIED MDO DATA INVALID OR NOT FOUND.

Reason:

An &PPI SEND or ALERT function has been issued with the MDO= operand. The mapped data object specified was invalid or not found.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23P04

MDS ERROR ASSIGNING DATA TO MDO.

Reason:

An &PPI RECEIVE function was issued with MDO= operand. A processing error was encountered with the mapped data structure when assigning the data to an object.

System Action:

The NCL procedure is terminated.

User Action:

Correct the mapped data structure and retry.

N23P05**BUFFERISE TOKENS FAILED.****Reason:**

An &PPI SEND or ALERT command was issued with the VARS= operand. An error was encountered processing the VARS and the variable tokens could not be buffered.

System Action:

The NCL procedure is terminated.

User Action:

Correct the VARS= operand or the variables and retry.

N23P90**INVALID PPI RECEIVER/SENDER ID.****Reason:**

An &PPI RECEIVE or SEND command was issued. The ID specified is an invalid name. The name must be one to eight characters and contain valid characters - A-Z, @, #, \$, % or .

System Action:

the NCL procedure is terminated.

User Action:

Correct and retry.

N23Q01**PROCESS STARTED. NCLID: aaaa DOMAIN: bbbb PROC: cccc****Reason:**

An NCL process has been started using either the START command with NOTIFY=YES or the NCL verb *APPC START*.

System Action:

None.

User Action:

None.

N23Q02

PROCESS ENDED. NCLID: aaaa DOMAIN: bbbb PROC: cccc RETCODE: dddd

Reason:

An NCL process previously started using either the START command with NOTIFY=YES or the NCL verb APPC START, has ended normally and the procedure return code is dddd .

System Action:

None.

User Action:

None.

N23Q03

PROCESS FAILED. NCLID: aaaa DOMAIN: bbbb PROC: cccc REASON: dddd - eeee

Reason:

An NCL process previously started using either the START command with NOTIFY=YES or the NCL verb &APPC START, has ended abnormally. An indication of the cause of failure is given by the reason code dddd and the message eeee .

System Action:

None.

User Action:

None.

N23Q04**TRANSFER REJECTED BY TARGET PROCEDURE.****Reason:**

An allocation request was issued for an APPC transaction whose remote end has been defined as a server (see DEFTRANS command) but the server was already active and an attempt to transfer the conversation to it was rejected by the active server.

System Action:

None.

User Action:

Refer to the DEFTRANS command for information on how to define the remote end of an APPC transaction as a server.

N23S01**DIRECTORY ERROR - TRANSACTION PROTOCOL ERROR.****Reason:**

Protocol error occurred during cleanup of remote OSCALL servers context.

System Action:

Cleanup of context fails.

User Action:

Contact Systems Programmer.

N23S02**DIRECTORY ERROR - CONTEXT BUFFER INVALID.****Reason:**

A corrupted OSCALL directory entry was detected during cleanup of remote OSCALL server's context.

System Action:

Cleanup of context fails.

User Action:

Contact Product Support Representative.

N23S03

DIRECTORY ERROR - DATA RECEIVED UNRECOGNISED.

Reason:

Invalid or null data was received during cleanup of remote OSCALL server context.

System Action:

Cleanup of context fails.

User Action:

Contact Technical Support.

N23S04

DIRECTORY ERROR - CONTEXT NOT FOUND.

Reason:

A cleanup request was received for an unknown remote OSCALL server context.

System Action:

Cleanup of context fails.

User Action:

Contact Technical Support.

N23T01

REMOTE CONTEXT CLEANUP FAILED.

Reason:

An attempt to send a request to a remote system to cleanup a remote OSCALL server context failed.

System Action:

Send cleanup request not issued.

User Action:

Check log for related messages if any, and check for APPC link failures.

N23U02**INVALID SYNTAX ON SRCEMDO OPERAND.****Reason:**

Invalid syntax was used on the SRCEMDO operand of the &ZFMTLINE verb.

System Action:

Procedure terminates in error.

User Action:

Contact product support representative.

N23U03**FORMAT MDO NOT FOUND OR EMPTY.****Reason:**

The MDO used for formatting the text lines on the &ZFMTLINE verb was not found, or contained no data.

System Action:

Procedure terminates in error.

User Action:

Contact product support representative.

N23U04**STORAGE ERROR.****Reason:**

A storage error/shortage occurred during processing of the &ZFMTLINE verb.

System Action:

Procedure terminates in error.

User Action:

Determine reason for storage shortage on system.

N23U05

LIST FORMAT ERROR. FIELD TOO LONG.

Reason:

The length of one of the fields in a text line caused the text line to exceed the maximum length on the &ZFMTLINE verb.

System Action:

Procedure terminates in error.

User Action:

Contact product support representative.

N23U06

GENERATED VARIABLE NAME EXCEEDS MAXIMUM LENGTH.

Reason:

A variable name generated by the &ZFMTLINE verb exceeds the maximum variable name length.

System Action:

Procedure terminates in error.

User Action:

Contact product support representative.

N23U07

FMTMDO OPERAND MISSING OR INVALID.

Reason:

The FMTMDO operand was missing, or was invalid, on the &ZFMTLINE verb.

System Action:

Procedure terminates in error.

User Action:

Contact product support representative.

N23U08**FMTMDO HAS INVALID OR MISSING DATA.****Reason:**

The MDO specified on the FMTMDO operand of the &ZFMTLINE verb has invalid or missing data.

System Action:

Procedure terminates in error.

User Action:

Contact product support representative.

N23U09**SOURCE MDO NOT FOUND, UNMAPPED OR IN ERROR.****Reason:**

The MDO specified on the SRCEMDO operand of the &ZFMTLINE verb was not found, or was unmapped or had invalid data.

System Action:

Procedure terminates in error.

User Action:

Contact product support representative.

N23U10**VARS LIST INVALID WITH SUFFIX OPERAND****Reason:**

The vars list format of the VARS= operand was used on the &ZFMTLINE verb in conjunction with the SUFFIX= operand. This combination is invalid. SUFFIX= is only valid with a generic form of VARS= operand.

System Action:

Procedure terminates in error.

User Action:

Contact product support representative.

N23V01

DATA IN VARIABLE varname IS TOO LONG, MAX LENGTH ALLOWED IS nnn.

Reason:

An attempt was made to update a VARTABLE entry with a data element longer than 256 bytes, or an attempt was made to reference a vartable entry with a key longer than the maximum stipulated on the KEYLEN parameter of the VARTABLE ALLOC statement.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23V02

DATA IN VARIABLE varname IS NOT NUMERIC OR IS NULL.

Reason:

A variable containing a non-numeric value was used for the ADJUST, COUNTER or user correlator field in an &VARTABLE ADD, UPDATE or PUT statement, or an attempt was made to access a vartable entry with a non-numeric key where the key format was specified as numeric in the &VARTABLE ALLOC statement.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23V03**FIELDS= LIST CONTAINS DATA FIELD NUMBER HIGHER THAN ALLOCATED.****Reason:**

An attempt was made to reference a VARTABLE entry data item, using an item number greater than the number of data items defined by the DATA= keyword of the VARTABLE ALLOC statement. For example, the field list specified 'DATA=5' but the *vartable* ALLOC statement defining the vartable specified 'DATA=4' for the number of data items.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23V04**GET OPT=GEN/IGEN INVALID FOR TABLE WITH KEYFMT=NUM.****Reason:**

An &VARTABLE GET statement was encountered which specified OPT=GEN or OPT=IGEN to do a generic or an inverse generic get operation on a vartable, however, the vartable was defined as having a numeric key (KEYFMT=NUM) in the &VARTABLE ALLOC statement. Generic and Inverse generic gets are only supported for character- format keys.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23V05

FIELD NUMBER ACCESS INVALID FOR ENTRY CONTAINING A MAPPED DATA OBJECT.

Reason:

When a VARTABLE entry contains a mapped data object then access by field number is not allowed. The entire object only may be accessed via the MDO operand.

System Action:

The NCL procedure is terminated.

User Action:

Use MDO operand to access a VARTABLE containing MDOs.

N23V20

SCOPE=AOM NOT SUPPORTED - AOM FEATURE NOT PRESENT.

Reason:

A vartable statement was encountered specifying 'SCOPE=AOM' for the vartable scope, however, this installation is not licensed for the AOM feature, or the feature was specifically excluded when the Net-Master system was brought up.

System Action:

The procedure terminates.

User Action:

Change the SCOPE to either PROCESS, REGION, or GLOBAL, if the vartable is not required for AOM.

N23V21**ALLOC SCOPE=AOM REQUIRES KEYLEN=16.****Reason:**

An &VARIABLE ALLOC statement was encountered which specified 'SCOPE=AOM', however, either no keylength or a keylength not equal to 16 was specified with the KEYLEN option. Variables which are required for AOM screening must have a keylength of 16.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23V22**ALLOC SCOPE=AOM REQUIRES A LIMIT= FROM 1 TO 65535.****Reason:**

An &VARIABLE ALLOC statement was encountered which specified 'SCOPE=AOM', however, no limit was specified with the 'LIMIT' operand. Variables which are required for AOM screening must have a limit to the number of entries specified.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23V23

ALLOC SCOPE=AOM REQUIRES DELOLD=NO.

Reason:

An &VARIABLE ALLOC statement was encountered which specified 'SCOPE=AOM', however, either no DELOLD option was specified or DELOLD=YES was specified. Variables which are required for AOM screening must specify DELOLD=NO.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23V24

ALLOC SCOPE=AOM REQUIRES AGE=NO/NEW.

Reason:

An &VARIABLE ALLOC statement was encountered which specified 'SCOPE=AOM', however, either no AGE option was specified or the incorrect AGE option was specified. Variables which are required for AOM screening must specify either AGE=NO or AGE=NEW.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23V25**RESET SCOPE=AOM DOES NOT ALLOW OLDEST/NEWEST.****Reason:**

An &VARIABLE RESET statement was encountered which specified 'SCOPE=AOM', however, the options OLDEST or NEWEST were specified. Variables which are required for AOM screening can only be wholly reset.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23V26**ALLOC SCOPE=AOM DOES NOT ALLOW KEYFMT=NUM/UCCHAR.****Reason:**

An &VARIABLE ALLOC statement was encountered which specified 'SCOPE=AOM', however, KEYFMT=NUM or UCCHAR was specified. Variables which are required for AOM screening must have a character key and it must be 16 characters long. Also data translation to upper case is not supported.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23V30

VAR= AND FIELDS= LISTS MUST HAVE THE SAME NUMBER OF ENTRIES

Reason:

An VARIABLE statement was encountered where the number of elements in the fields list (*FIELDS= keyword*) was different to the number of elements in the variables list (*VAR= keyword*). There must be a 1-1 correspondence between the elements in the field list and the variables list.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23V31

FIELDS= LIST HAS NULL ENTRIES.

Reason:

The FIELDS list on an &VARIABLE statement has null entries eg FIELDS=(A,,B). This is not permitted.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V32

FIELDS= LIST HAS DUPLICATE ENTRIES.

Reason:

The FIELDS list on an &VARIABLE statement has a duplicated entry (including option + .option). This is not permitted.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V33**FIELDS= LIST HAS TOO MANY ENTRIES.****Reason:**

The FIELDS list on an &VARIABLE statement has more entries than the system can handle.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V34**FIELDS= LIST HAS INVALID SYNTAX.****Reason:**

The FIELDS list on an &VARIABLE statement has invalid syntax.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V35**FIELDS= LIST IS EMPTY.****Reason:**

The FIELDS list on an &VARIABLE statement is empty.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V36

FIELDS= LIST HAS AN INVALID OR UNRECOGNISED KEYWORD.

Reason:

The FIELDS list on an &VARIABLE statement contains invalid or unrecognizable keywords. Only the keywords listed for the current option of &VARIABLE can be used.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V40

GENERIC-TOKEN/MDO NAME NOT IN SAME SLOT AS DATA*/MDO KEYWORD IN FIELD LIST.

Reason:

An VARIABLE statement was encountered which specified either 'DATA*' or 'MDO' in the field list (FIELD operand) however the corresponding entry in the variable list (VARS operand) was not either a generic token name (eg 'AB*') or an MDO name (eg 'ABC.') respectively.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V41

VARS= LIST HAS NULL ENTRIES.

Reason:

The VARS list on an &VARIABLE statement has null entries eg: VARS=(A,,B). This is not permitted.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V42**VAR= LIST HAS DUPLICATE ENTRIES.****Reason:**

The VAR= list on an &VARIABLE statement has a duplicated entry. This is not permitted.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V43**VAR= LIST HAS TOO MANY ENTRIES.****Reason:**

The VAR= list on an &VARIABLE statement has more entries than the system can handle.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V44**VAR= LIST HAS INVALID SYNTAX.****Reason:**

The VAR= list on an &VARIABLE statement has invalid syntax.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V45

VAR= LIST IS EMPTY.

Reason:

The VAR list on an &VARIABLE statement is empty.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V46

VAR= LIST HAS AN INVALID VARIABLE NAME.

Reason:

The VAR list on an &VARIABLE statement contains an invalid variable name.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V47

VAR= LIST HAS MORE THAN ONE GENERIC VARIABLE NAME.

Reason:

An &VARIABLE statement was encountered with 2 or more generic variable names (ie variable names ending with '*') in the 'VAR=' operand. There may only be one generic variable name in the variables list of a variable statement and it must correspond with the DATA* or .DATA* element in the FIELDS= list.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V48**VAR= FORMAT INVALID WITH FIELDS= LIST.****Reason:**

The FIELDS operand specified a list of items but the VAR operand was not a list of the same length.

System Action:

The procedure is terminated.

User Action:

Correct and retry.

N23V50**DATA LENGTH EXCEEDS MAXIMUM ALLOWABLE FOR AN ENTRY.****Reason:**

The size and number of NCL variables exceeded the system limit for a single VARIABLE entry.

System Action:

The NCL procedure is terminated.

User Action:

Try using an MDO.

N23Y01**UNRECOGNISED OPERAND: aaaaaaaa IN SHOW VARIABLES COMMAND.****Reason:**

An invalid or extraneous operand aaaaaaaa was entered on the SHOW VARIABLES command. Refer to the Command Reference for a description of the syntax of the SHOW VARIABLES command.

System Action:

None.

User Action:

Correct and retry.

N23Y02

OPERAND: aaaaaaaaa DUPLICATED OR INVALID FOR SHOW VARTABLES COMMAND.

Reason:

Either an operand appears twice or the operand is invalid for this particular scope of the SHOW VARTABLES command. Refer to the Command Reference for a description of the syntax of the SHOW VARTABLES command.

System Action:

None.

User Action:

Correct and retry.

N23Y03

INVALID VALUE FOR OPERAND: aaaaaaaaa IN SHOW VARTABLES COMMAND.

Reason:

The operand specified on the SHOW VARTABLES command was missing or invalid. Refer to the Command Reference for a description of the syntax of the SHOW VARTABLES command.

System Action:

None.

User Action:

Correct and retry.

N23Y04**NCLID: nclid NOT FOUND IN THIS REGION.****Reason:**

There is no NCL procedure running in the active region matching the NCLID specified on the SHOW VARIABLES=nclid command. You can only display process scope variables for NCL procedures executing in your region.

System Action:

None.

User Action:

None.

N23Y05**STORAGE SHORTAGE OCCURRED WHILE LOCATING NCLID.****Reason:**

A temporary storage shortage occurred while trying to process the SHOW VARIABLES command. The command was not processed.

System Action:

None.

User Action:

Consider increasing the SOLVE region/virtual storage/partition size.

N23Y06**USERID: userid NOT FOUND.****Reason:**

A show variables command specifying a userid was entered but that userid is not currently logged on to SOLVE.

System Action:

None.

User Action:

None.

N23Y07

LUNAME: luname NOT FOUND

Reason:

A show vartables command specifying a logical unit name was entered but that logical unit is not currently in session with SOLVE.

System Action:

None.

User Action:

None.

N23Y10

NAME SC/NCLID LU USER KEYL LIMIT ENTRIES NF AGE UD

Reason:

This is the header message for the following messages, a response to the SHOW VARTABLES command. The column headings are: SC/NCLID The scope of the vartable, or, if the scope is process, the nclid of the procedure owning it. USER For SCOPE=REGION, the userid. KEYL The defined keylengths. LIMIT The maximum number of entries possible in the vartable ENTRIES The number of entries currently in the tables. NF The number of data fields per entry in each table. AGE The ageing option specified for the table. U Whether a user correlator is present in the table. D The DELOLD option specified on the vartable.

System Action:

None. The table list follows.

User Action:

None.

N23Y11**MIR STG(K)****Reason:**

This is the subheader message for the following list of items, a response to the SHOW VARIABLES=AOM command. The column headings are: MIR Whether this variable is mirrored or not. STG(K) The amount of storage taken up by the variable mirror.

System Action:

None. The table list follows.

User Action:

None.

N23Y12**tablename scope lu user keyl limit entries nf age u d****Reason:**

This message is produced for each variable in the nominated scope. The columns are described in the N23Y10 message description.

System Action:

None.

User Action:

None.

N23Y13**mirrored storage****Reason:**

This message is produced for each SCOPE=AOM table nominated. The columns are described in the N23Y11 message description.

System Action:

None.

User Action:

None.

N23Y14

END

Reason:

This message terminates a multi-line display of the response to the SHOW VARIABLES command.

System Action:

None.

User Action:

None.

N23Y15

STG/TOT STG/ENT

Reason:

This message appears as a response to a SHOW VARIABLES STATS command. It provides subheadings for the following N23Y16 message.

STG/TOT

Shows the total storage allocated to the variable.

STG/ENT

Shows the average number of bytes per entry.

System Action:

None.

User Action:

None.

N23Y16

stg/tot stg/ent

Reason:

This message is the detail line displayed for a SHOW VARTABLES STATS command.

stg/tot

Is the total storage allocated to the vartable.

stg/ent

Is the average number of bytes per entry.

System Action:

None.

User Action:

None.

N23Y19

NO VARTABLES MATCH SEARCH CRITERIA.

Reason:

The user did a SHOW VARTABLES command but there were no vartables in existence matching the selection criteria specified.

System Action:

None.

User Action:

None.

N24010

INVALID SHRVARs GENERIC PREFIX SYNTAX

Reason:

An invalid generic variable prefix was specified on an *CONTROL SHRVARs* statement.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N24501

PANEL NAME INVALID OR OMITTED.

Reason:

An &PANEL statement either omitted or specified an invalid name for the panel to be displayed.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N24502

INVALID USE OF PANEL STATEMENT.

Reason:

The &PANEL statement can be used only in NCL procedures that have access to a screen which will display full-screen panels.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N24601**PANEL NAME INVALID OR OMITTED.****Reason:**

An &LOGON statement either omitted or specified an invalid name for the 'request accepted' panel.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N24603**LOGON TEXT EXCEEDS MAXIMUM LENGTH.****Reason:**

The length of data following the panelname on an &LOGON statement cannot exceed 168 characters. This includes any 'userdata' that is being passed to the application.

System Action:

The EASINET procedure terminates.

User Action:

Correct the text and retry.

N24604**INVALID USE OF LOGON STATEMENT.****Reason:**

The &LOGON statement may be used only within an EASINET procedure.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N24605

LOGMODE NAME INVALID.

Reason:

The &LOGON statement has specified an invalid logmode name on the logmode operand.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N24607

INSUFFICIENT STORAGE.

Reason:

&PANEL processing failed because of a temporary storage shortage.

System Action:

The procedure terminates.

User Action:

Retry. Contact your systems administrator if the condition persists.

N24701

MODULE NAME INVALID OR OMITTED.

Reason:

An &CALL statement omitted the name of the target module or specified a name that is not a valid load module name.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N24702**INSUFFICIENT STORAGE.****Reason:**

&CALL processing failed because a temporary storage shortage prevented successful calling of the requested module.

System Action:

The procedure terminates.

User Action:

Retry. Contact your systems administrator if the condition persists to investigate the cause of the storage shortage.

N24703**MODULE modname ATTACH/LOAD FAILED.****Reason:**

&CALL processing failed when the target module could not be successfully attached (MVS, VM, FSP) or loaded (VSE).

System Action:

The procedure terminates.

User Action:

Ensure that the target module is in a load library (core-image library) that is accessible to SOLVE. Contact your systems administrator.

N24704**MODULE modname RETURN CODE GREATER THAN 99.****Reason:**

The valid range of return codes that may be passed back from a module invoked via &CALL is 0 - 99 inclusive. The module has returned a return code in register 15 which is outside this range.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N24705

MODULE modname HAS ABENDED yyy-zzz

Reason:

The module invoked via &CALL abended with the specified completion code. This completion code will be SYS-zzz for a system abend code or USER-zzz for a user abend code.

System Action:

The procedure terminates.

User Action:

Correct the module and retry.

N24706

DATA OR SUBSTITUTION ERROR IN CALL

Reason:

&CALL supports simple substitution only. For example, &CALL MYMODULE &PARM1 &PARM2 is valid, but &CALL MYMODULE &PARM&NUMBER1 &PARM&NUMBER2 is invalid because complex substitution would be required to evaluate the parameters passed.

System Action:

The NCL procedure is terminated.

User Action:

Correct the procedure and retry.

N24707

PARMLIST= PARAMETER IS INVALID.

Reason:

The PARMLIST= operand on the &CALL statement has specified an invalid value. The value must be NEW or OLD.

System Action:

The NCL procedure is terminated.

User Action:

Correct the operand and retry.

N24708**SUBSYS aaaaa NOT DEFINED.****Reason:**

An &CALL statement with the SUBSYS= operand has specified a subsystem which is not defined.

System Action:

The NCL procedure is terminated.

User Action:

Correct the procedure and retry. See the SUBSYS command description for help on defining a subsystem.

N24709**CALL TO SUBSYS aaaaa FAILED. REASON=text****Reason:**

A &CALL to a subsystem has failed whilst waiting to be actioned due to the reason specified.

System Action:

The NCL procedure is terminated.

User Action:

Find out why the subsystem failed.

N24710**PROGRAM aaaaa RETURNED INVALID LENGTH FOR PARAMETER bbbbb.****Reason:**

A program called using CALL has returned a variable which has a length which is negative or too large.

System Action:

The NCL procedure is terminated.

User Action:

Correct the program and retry.

N24801

FACILITY ONLY VALID FROM LOGPROC

Reason:

&LOGREAD, &LOGDEL are verbs reserved for use by the LOGPROC system level procedure and cannot be used in any other process.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N24901

INVALID OR MISSING LABEL labname AFTER GOTO OR GOSUB.

Reason:

An &GOTO or &GOSUB statement either omitted a target label or specified an invalid label name, and &CONTROL LABEL is in effect.

System Action:

The procedure terminates.

User Action:

Correct and retry. &CONTROL NOLABEL will avoid the procedure being terminated due to this type of error.

N24902

LABEL labname NOT DEFINED OR NOT FOUND IN SEARCH RANGE.

Reason:

An &GOTO or &GOSUB specified a label that is not defined within the procedure, or was not found within the search range specified, and the procedure is executing without the &CONTROL NOLABEL option.

System Action:

The procedure terminates.

User Action:

Correct and retry or use the &CONTROL NOLABEL option to allow this occurrence.

N24903**LABEL labname HAS BEEN DUPLICATED.****Reason:**

Duplicate labels are not allowed unless &CONTROL NODUPCHK is specified. The procedure has been terminated because a label has been duplicated.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N24904**INVALID GENERIC SEARCH SCOPE.****Reason:**

The &GOTO and &GOSUB statements provide generic search capabilities. You have attempted to use an argument that is not valid.

System Action:

The procedure terminates.

User Action:

For a detailed description of this command, refer to the NCL User Reference manual.

N24906**RETURN CODE OUT OF RANGE.****Reason:**

The &RETSUB statement has attempted to pass an invalid return code back to the mainline.

System Action:

The procedure terminates.

User Action:

Correct the error and retry.

N24907

&GOSUB NESTING LIMIT EXCEEDED.

Reason:

SOLVE allows 250 levels of nested subroutines only. The procedure has attempted to nest deeper than this.

System Action:

The procedure terminates.

User Action:

Restructure the procedure to prevent it from exceeding this maximum.

N24A01

FILE OPEN ERROR, ID=aaaaa - INSUFFICIENT STORAGE TO PROCESS REQUEST.

Reason:

Error opening a file. Not enough internal SOLVE storage was available to create the control blocks required to process this file.

System Action:

File is not opened. System may soon run out of memory andabend.

User Action:

Try again later.

N24A02

FILE OPEN ERROR - NO FILE ID SPECIFIED.

Reason:

No file id was specified on an &FILE OPEN ncl statement.

System Action:

No file opened.

User Action:

Specify a fileid on the &FILE OPEN statement.

N24A03

FILE OPEN ERROR, ID=aaaaa - INVALID RETURN CODE FROM NCL EXIT bbbbb.

Reason:

The NCL exit provided for an FILE OPEN statement (NCLEX01) returned an invalid return code. Valid return codes are: 0,4,8,12,16.

System Action:

None.

User Action:

Examine the NCL exit, NCLEX01 to determine why it returned an invalid return code.

N24A04

FILE aaaaa ERROR - NO CURRENT FILE ID.

Reason:

Old file verbs: aaaaa = {KEY|PUT|GET|ADD|DEL}. No file is currently opened for processing.

System Action:

None.

User Action:

Use an &FILEID statement (for old file verb processing) before issuing the &FILE KEY/PUT/ADD/GET/DEL request.

N24A05

FILE aaaaa ERROR, ID=bbbb - FILE ID NOT OPEN.

Reason:

New file verbs: aaaaa={SET/PUT/ADD/GET/DEL} Old file verbs: aaaaa={KEY/PUT/ADD/GET/DEL} bbbbb = File name. The specified file has not been successfully opened.

System Action:

None.

User Action:

Check that a &FILE OPEN, or &FILEID statement was specified, and check the return code after opening the file to see if it was opened successfully.

N24A06

FILE aaaaa ERROR, ID=bbbb - FILE NOT AVAILABLE TO NCL.

Reason:

New file verbs: aaaaa = {SET/PUT/ADD/GET/DEL/OPEN} Old file verbs: aaaaa = {KEY/PUT/ADD/GET/DEL} bbbbb = File identifier. The specified file is not available to NCL for processing.

System Action:

None.

User Action:

Check the return code after opening the file. Check that the DDNAME is allocated and the UDB is open.

N24A07

FILE aaaaaa ERROR, ID=bbbbbb - RKP NOT 0.

Reason:

New file verbs: aaaaaa={SET/PUT/ADD/GET/DEL} Old file verbs: aaaaaa={KEY/PUT/ADD/GET/DEL} bbbbbbb=File name. The data set for this file was not defined with a relative key position of zero, and the file was opened as either delimited or mapped.

System Action:

None.

User Action:

It is not possible to carry out either Delimited (standard udb) or Mapped processing on a file which does not have a relative key position of 0. Use a different file, or a different processing mode.

N24A08

FILEaaaaaaaa ERROR, ID=bbbbbbbbb - KEY INCONSISTENT WITH FILE FORMAT.

Reason:

Applies to old file verbs only. aaaaaaaaa = {KEY/PUT/ADD/GET/DEL} bbbbbbbbbb = File name File key has been specified in a different format to the file format. e.g. a Text key specified for an EXT-HEX format file.

System Action:

None.

User Action:

Specify the file key using the correct format.

N24A09

FILE aaaaa ERROR, ID=bbbb - NO CURRENT KEY IS SET.

Reason:

No key has been set for a file processing request which requires a key. e.g. GET/PUT/ADD/DEL. aaaaa = {PUT/ADD/GET/DEL}. bbbbb = File name.

System Action:

None.

User Action:

Specify a file key for the operation to be carried out. For the new file verbs, specify a key using the KEY=filekey operand. For the old file verbs, use the &FILEKEY verb to set a key.

N24A10

FILE aaaaa ERROR, ID=bbbb - DATA INVALID FOR KEY ONLY FILE.

Reason:

The particular file has been defined as a key only file, and yet data has been specified on a file PUT/ADD operation. aaaaa = {PUT/ADD} bbbbb = File name.

System Action:

None.

User Action:

Don't specify data, or change file definition.

N24A11

FILE aaaa ERROR, ID=bbbb - KEY LENGTH EXCEEDS MAXIMUM OF cccc FOR FILE.

Reason:

The specified key exceeds the maximum key length for the file. aaaaa = {SET/KEY/PUT/ADD/GET/DEL} bbbbb = File name. cccc = Maximum key length for the file.

System Action:

None.

User Action:

Make the length of the key correct. If the key is specified in HEX it may be necessary to Halve it's length.

N24A12

FILE aaaaa ERROR, ID=bbbb - ACCESS MUST BE VIA BASE CLUSTER.

Reason:

Access to a file using an alternate index must be via it's base cluster. This usually applies to PUT/ADD/DEL requests, where although a record is retrieved using the alternate index, processing must be switched to the base cluster for update requests.

System Action:

None.

User Action:

Swap processing to the base cluster before issuing the request.

N24A13

FILE aaaaa ERROR, ID=bbbb - ACCESS RESTRICTED.

Reason:

Access to the file is restricted (e.g. Read only, or Read/Write but no Delete etc.). aaaaa = {PUT/ADD/GET/DEL}. bbbbb = File name.

System Action:

Request discarded.

User Action:

Access may have been restricted by NCLEX01, or because the UDB was opened for INPUT only. Update the users authority, or reopen the UDB for read/write.

N24A14

FILE aaaaa ERROR, ID=bbbb - KEY SPECIFIED FOR NON-KEYED FILE.

Reason:

A key was specified for a non-keyed file. E.G. A key was specified for an ESDS, or SYSOUT. aaaaa = {KEY/SET/PUT/ADD/GET/DEL} bbbbb = File name.

System Action:

None.

User Action:

Correct the NCL code and retry.

N24A15

FILE aaaaa ERROR, ID=bbbb - DATA EXCEEDS FILE MAX OF ccccc.

Reason:

The data being written to a file on a PUT/ADD is larger than the maximum record length specified for that file. aaaaa = {PUT/ADD} bbbbb = File name. ccccc = Maximum record length for this file (in bytes).

System Action:

None.

User Action:

Write less data to the file.

N24A16

FILE aaaaa ERROR, ID=bbbb - DATA FORMAT INVALID.

Reason:

The format of the data being written to the file is invalid. (e.g. writing Text to a Hexadecimal format file)

System Action:

None.

User Action:

Use correct format for this file.

N24A17

FILE aaaaa ERROR, ID=bbbb - DATA INCONSISTENT WITH FILE FORMAT.

Reason:

Indicates that the operands used are invalid for a file opened in the current format. For example, using the DATA= operand on a mapped file, or the VARS= operand on a mapped file which uses a map other than the \$NCL map, or specifying the MAP= operand on a file that was not opened in mapped format.

System Action:

None.

User Action:

Make sure the file has been opened in the desired format, and that the operands are valid for that particular format.

N24A18

FILE aaaaa ERROR, ID=bbbbbb - PRTCNTL INVALID WITH RECFM=M.

Reason:

An invalid PRTCNTL option has been specified on an FILE ADD/PUT statement when writing to a SYSOUT file that was defined with machine control characters, i.e. DCB=RECFM=M, which is indicated by specifying PRTCNTL=M on the ALLOCATE command for the SYSOUT dataset.

When machine control characters are used the only allowable options for &FILE ADD/PUT are DATA, LEFT, CENTRE, and RIGHT.

System Action:

None.

User Action:

Correct the NCL procedure and rerun. You should either use ASA control characters by specifying PRTCNTL=A on the ALLOCATE command, or use PRTCNTL=DATA and specify the machine control character in the first character of the data line.

N24A19

FILE aaaaa ERROR, ID=bbbbbb - OPTION INVALID FOR CURRENT FILE PROCESSING.

Reason:

An option was specified on a file verb which is invalid for the current processing mode. In particular when print control options are used on a file which is not opened in external or unmapped mode.

System Action:

None.

User Action:

Use a different processing mode, or don't use the options.

N24A20

FILE aaaaaa ERROR, ID=bbbb - MDS MAPPING ERROR. MAP=cccccccc

Reason:

A Mapping error occurred while trying to map an mdo during an FILE request. This error should only occur when processing a file using MAPPED format.
aaaaa = OPEN|SET|GET|PUT|ADD|DEL bbbbb = File id ccccccc = Map name

System Action:

For &FILE GET, the incoming data is placed in the mdo as is, and the mdo remains unmapped.

User Action:

Make sure the file processing mode is intended to be MAPPED. If so, ensure the correct map name is being specified on the &FILE OPEN and/or the &FILE GET. Check that the map definition accurately describes the incoming data.

N24A21

FILE aaaaaaaaa ERROR, ID=bbbbbbbb - GENERIC KEY LENGTH OF 0 SPECIFIED.

Reason:

An NCL procedure has fallen over on an FILE verb because GENLEN=0 was specified. aaaaaaaaa = ADD/DEL/GET/PUT/SET. bbbbbbbb = *file id*.

System Action:

Procedure is flushed.

User Action:

Modify procedure to ensure the GENLEN field always has a none-zero value.

N24E01

FILE OPERAND MISSING/INVALID.

Reason:

An operand is missing from an *FILE verb*.

System Action:

None.

User Action:

Correct the syntax.

N24K10**ENCODE/DECODE ATF ERROR, R15=rr MDO COMP=cccc - information****Reason:**

During the processing of an ENCODE or DECODE NCL statement, with the Advanced Translation Facility in use, ATF returned an error. This error occurred while the translation of a specific component of the MDO was being processed.

The message shows the ATF return code, the MDO component name, and specific error information as follows:

R15 Information

4 OUTPUT OVERFLOW, LENGTH GT nnnnnn The output string exceeded the allowable length

8 INPUT STRING ERROR, CODE=cc APPROX. OFFSET=oo DATA FOLLOWS A syntax error was detected in the input data. The approximate offset in the data is indicated. A dump of the input data will follow this message (Message ID N24K11).

The error codes are:

2 Double-byte string or substring has odd length

3 Invalid input character detected

4 Input exhausted unexpectedly for example, in the middle of a multi-byte character

5 Invalid unicode surrogate pair

6 Invalid or truncated shift sequence

12 SOURCE TYPE UNKNOWN: ssssss The requested source character set name is not defined to ATF

20 TARGET TYPE UNKNOWN: ssssss The requested target character set name is not defined to ATF

24 SOURCE TABLE LOAD FAILURE: ssssss The requested source character set table failed to load. (If this is the first request, additional messages will be logged describing the error)

28 TARGET TABLE LOAD FAILURE: ssssss The requested target character set table failed to load. (If this is the first request, additional messages will be logged describing the error.)

System Action:

&ENCODE or &DECODE fails.

User Action:

Look at the reason description and rectify as appropriate.

N24K11**off hex-data char-data****Reason:**

This message follows the N24K10 message and displays the input data that was being translated by ATF.
It can be used to determine why a syntax error occurred during translation.

System Action:

&ENCODE or &DECODE fails.

User Action:

Refer to message N24K10.

N24M01**ENCODE ERROR DETECTED. aaaaa****Reason:**

This is a warning against possible errors detected by an *ENCODE* operation.
aaaaa = Warning Description

System Action:

&ENCODE ignores the warning and proceeds to completion.

User Action:

Look at the warning description to determine its severity.

N24M02

ENCODE ERROR. aaaaa COMPONENT: bbbbb

Reason:

A terminal error has occurred while processing an &ENCODE operation. aaaaa = Reason description bbbbb = Component in error

System Action:

&ENCODE fails.

User Action:

Look at the reason description and rectify as appropriate. Possible reasons are:

Invalid data encountered in MDO. :- Check data of component in error.

Mandatory component not found. :- Assign data to the component, or modify its MAP definition.

N24N01

DECODE ERROR DETECTED. aaaaa

Reason:

This is a warning against possible errors detected by an &DECODE operation. aaaaa = Warning Description

System Action:

&DECODE ignores the warning and proceeds to completion.

User Action:

Look at the warning description to determine its severity.

N24N02**DECODE ERROR. aaaaa OFFSET: bb/cc COMPONENT: ddddd****Reason:**

The &DECODE operation has encountered a non-recoverable error in the data string being decoded. aaaaa = Description of the error bb = Offset(hex) of the structure in error cc = Offset(hex) from the structure bb ddddd = Component in error

System Action:

&DECODE fails.

User Action:

Look at the error description and rectify as appropriate. Possible reasons are: Invalid BER encoding detected. Mandatory component not found. Implementation limit exceeded.

N24S01**INSUFFICIENT STORAGE TO PROCESS MDO REQUEST.****Reason:**

MDO processing was unable to obtain enough storage from the system pool to satisfy the last MDO request.

System Action:

Procedure is flushed.

User Action:

Retry request later.

N24S02**SYNTAX ERROR USING MDO.****Reason:**

An assign statement with an MDO= operand has invalid syntax.

System Action:

Procedure is flushed.

User Action:

Check syntax.

N24S03

MDO NAME CHECK ERROR - BAD INDEX POSITION OR VALUE.

Reason:

An index was used in an MDO= operand where it wasn't expected, or the index value is out of range.

System Action:

Procedure is flushed.

User Action:

Check map definition, and see that this is a valid indexable component, and if so, check that the index does not exceed 32767, or any maximum imposed by a SIZE specification.

N24S04

MDO MAPPING ERROR.

Reason:

An error occurred while trying to map an MDO's data during an MDO request.

System Action:

Procedure is flushed.

User Action:

Check program logic. Test that map connection has been performed, and that it was successful. Ensure correct map is in use.

N24S05

RECURSION STACK OVERFLOW OCCURRED.

Reason:

The internal recursion stack limit was exceeded while attempting to process an MDO request, possibly caused by having too many segments in a compound name.

System Action:

Procedure is flushed.

User Action:

Reduce number of name segments in MDO name. May require redefinition of the map.

N24S06**SYNTAX ERROR - VARIABLE INDEX {*} USED INVALIDLY.****Reason:**

A variable indexed MDO name (e.g. MDO=a.b.{*}) was used invalidly.

System Action:

Procedure is flushed.

User Action:

Check use of index on MDO operand.

N24S07**SYNTAX ERROR - MUTUALLY EXCLUSIVE OPERANDS.****Reason:**

Mutually exclusive operands were used on an &ASSIGN verb using MDO.

System Action:

Procedure is flushed.

User Action:

Check syntax.

N24S08**UNEXPECTED FEEDBACK DETECTED.****Reason:**

A feedback was returned during &ASSIGN processing of an MDO which was unexpected.

System Action:

None.

User Action:

Contact your product support representative.

N24S09

MDO TYPE|DATA|NAME CHECK ERROR.

Reason:

This message is only issued if &CONTROL MDOCHK is on. The message indicates a ZMDORC of 8 or 12 was obtained. MDO TYPE CHECK ERROR: ZMDORC=8, ZMDOFDBK=0 MDO DATA CHECK ERROR: ZMDORC=8, ZMDOFDBK=1 MDO NAME CHECK ERROR: ZMDORC=12, ZMDOFDBK=0

System Action:

Procedure is flushed.

User Action:

Determine the reason for the error. Type check: Attempt made to assign invalid data into or from an MDO. Data check: Physical limitations exceeded assigning data to an MDO. Name check: Component name used in MDO assign is not defined in the map.

N24S10

MAP CHECK ERROR, MAP xxxxxxxxxxxx NOT FOUND| LOAD FAILED| DATA MISMATCH.

Reason:

Message is only issued if CONTROL MDOCHK is set. xxxxxxxxxxxx = Map name
An attempt to attach a map to an MDO failed because:

- The map wasn't found on the map database.
- The map failed to load due to definition errors.
- The data in the mdo doesn't conform to the map definition.

System Action:

Procedure is flushed.

User Action:

Check that the map is defined, and loads ok, and that the data in the MDO agrees with the map definition. (Issue SYSPARMS MAPLOAD=mapname command to see if map loads ok.)

N24W01**MAP LOAD REQUEST ACCEPTED.****Reason:**

This message is the response obtained when a SYSPARMS MAPLOAD=mapname command is entered. It indicates that the map load process has begun.

System Action:

Map loading commences.

User Action:

None.

N24W02**MAP aaaaa LOADED.****Reason:**

Indicates that the map has been loaded. Issued in response to a SYSPARMS MAPLOAD=mapname command. aaaaa = mapname.

System Action:

Map has been loaded into memory. Errors during load will have been displayed.

User Action:

None.

N24W03

MAP DELETE REQUEST ACCEPTED. aaaaa ACTIVE CONNECTIONS.

Reason:

This is the response to a SYSPARMS MAPDEL=map or MAPRESET=map command. It indicates that the map delete process has begun. aaaaa = the number of map connections still in use which includes any MDO's using this map, or any other maps that import definitions from this map. When the use count goes to zero the map is completely purged.

System Action:

Map deletion commences.

User Action:

None.

N24W04

MAP aaaaa UNLOADED.

Reason:

This is issued in response to a SYSPARMS MAPDEL=mapname command, and indicates that the map deletion process is complete. aaaaa = the name of the map which was deleted from memory.

System Action:

Map has been deleted from memory.

User Action:

None. Issue SYSPARMS MAPLOAD=MAPNAME to reload the map into memory.

N24W05**MAP aaaaa NOT FOUND.****Reason:**

This message is issued in response to a SYSPARMS MAPDEL=mapname command and indicates that the map specified is not currently loaded into memory. aaaaa = Name of map not found.

System Action:

None.

User Action:

Check that the correct map name was used on the SYSPARMS MAPDEL command. Use the SHOW MAPS command to display a list of maps currently loaded into memory.

N24W07**LOAD FOR MAP aaaaa FAILED. bbbbbb****Reason:**

This message is issued in response to a SYSPARMS MAPLOAD=mapname command and indicates that the load failed completely. aaaaa = Map name. bbbbbb = Reason.

System Action:

Map is not loaded.

User Action:

Look at reason (bbbbbb) and investigate further. Possible reasons include: File unavailable/error: Check OSCNTL file is allocated and valid. Map not found, in error: Check map name is correct or recompile. Dictionary unavail: Check that the VFS is allocated and available. Dictionary error: An error occurred accessing the Data Dictionary. Storage Shortage: Try again later.

N24W09

MAP CONNECTION FAILED, DATA INVALID FOR MAP.

Reason:

An attempt to connect an MDO to a map failed. The data in the map load records was invalid.

System Action:

Map connection fails.

User Action:

Recompile the map and retry.

N24X02

MAP FILE GET ERROR. VSAM FDBK=aa.

Reason:

An error occurred while loading a map.

System Action:

Map load processing is not completed.

User Action:

Check the feedback code, correct and retry.

N24X03

MAP LOAD RECORD IN ERROR, KEY FOLLOWS.

Reason:

An error occurred during a map load. The key for the record in error is dumped following this message.

System Action:

Map is not loaded.

User Action:

Recompile map and retry.

N24Z01**MAP LOAD ERROR. REASON aa. bbbbbbbb****Reason:**

An error occurred during a map load. aa = Reason code. bbbbbbbb = Reason description

System Action:

Map connection or map load failed.

User Action:

Recompile or otherwise correct, and retry.

N24Z02**MAP COMPONENT/TYPE IN ERROR:**

aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa

Reason:

issued when a mapping error occurs, and displays the name of the component of type definition that was in error.

System Action:

None.

User Action:

Recompile the map, or correct the problem, and retry

N24Z03**MAP RECORD ERROR OFFSET: aaaaaaaaaa****Reason:**

Issued when a mapping error occurs, and indicates the offset within the particular map load record at which the error was detected.

System Action:

Map is not loaded.

User Action:

Use this combined with output from message N24Z02 to determine the error in the map definition record.

N24Z04

hex dump of record data

Reason:

This message is issued when an error occurs in a map definition. It displays the contents of the map load record that was in error.

System Action:

Map is not loaded.

User Action:

Use this in conjunction with messages N24Z03, and N24Z02 to determine the error within the map load record.

N25001

INVALID VARIABLE ON RETURN.

Reason:

An RETURN statement has specified an invalid variable name.

System Action:

The procedure terminates.

User Action:

Correct and re-enter.

N25002

INVALID USE OF &xxxx KEYWORD.

Reason:

The specified keyword cannot be used on an &RETURN statement.

System Action:

The procedure terminates.

User Action:

See the NCL Reference for restrictions that apply to the use of this variable, then correct and retry.

N25003**RETURN VARIABLES****Reason:**

This message, together with messages N25004 and N25005 are issued when an NCL procedure (with CONTROL ENDMSG in effect) terminates as a result of the RETURN statement but there is no higher level procedure to return to, for example, the procedure was invoked from OCS. Message N25004 provides a heading for multiple occurrences of message N25005, each of which lists a variable specified on the RETURN statement together with its length and value.

System Action:

None.

User Action:

None.

N25004**NAME LENGTH VALUE****Reason:**

Refer to message N25003.

System Action:

None.

User Action:

None.

N25005**name length value****Reason:**

Refer to message N25003.

System Action:

None.

User Action:

None.

N25301

INVALID ROUTCDE LIST

Reason:

An &WRITE verb has specified an invalid list for the ROUTCDE operand.

System Action:

The procedure terminates.

User Action:

Correct the procedure and retry.

N25302

INVALID AOMTIME VALUE

Reason:

An &WRITE verb has specified an invalid value for the AOMTIME operand.

System Action:

The procedure terminates.

User Action:

Correct the procedure and retry.

N25303

INVALID AOMJOBID VALUE

Reason:

An &WRITE verb has specified an invalid value for the AOMJOBID operand.

System Action:

The procedure terminates.

User Action:

Correct the procedure and retry.

N25309**MESSAGE ATTRIBUTES (ALARM, COLOUR, ETC) INVALID WITH TYPE=REQ.****Reason:**

The &WRITE verb was issued with a type=req operand. This operand is mutually exclusive with display attribute operands such as COLOUR=, ALARM=, HIGHLIGHT=.

System Action:

The NCL procedure is terminated.

User Action:

Correct the *WRITE NCL statement*.

N25310**SERVER=, LUNAME=, USERID=, AND NCLID= ARE MUTUALLY EXCLUSIVE.****Reason:**

An &WRITE verb has specified operands which are mutually exclusive. Only one of the SERVER, LUNAME, USERID or NCLID operands are permitted.

System Action:

The procedure terminates.

User Action:

Correct the procedure and retry.

N25311**TERM=NO INVALID WITH LUNAME=, USERID=, SERVER= OR NCLID=.****Reason:**

An &WRITE verb has specified either the LUNAME, USERID, SERVER or NCLID operand together with TERM=NO. If any of these operands are present, then TERM=YES must be specified (or allowed to default).

System Action:

The procedure terminates.

User Action:

Correct the procedure and retry.

N25312

MON, AOM, FTS, ALL, MSGCODE INVALID WITH LUNAME=, USERID=, NCLID= OR SERVER=

Reason:

An &WRITE verb has specified either the LUNAME, USERID, NCLID or SERVER operand together with either MSGCODE, MON=YES, AOM=YES, FTS=YES or ALL=YES. These groups of operands are mutually exclusive.

System Action:

The procedure terminates.

User Action:

Correct the procedure and retry.

N25313

NO MESSAGE DESTINATIONS SPECIFIED, MESSAGE UNDELIVERABLE.

Reason:

An &WRITE verb has specified TERM=NO but no message destination is present. If TERM=NO is present, either LOG=YES, MON=YES, AOM=YES, FTS=YES or ALL=YES must be specified.

System Action:

The procedure terminates.

User Action:

Correct the procedure and retry.

N25320

INVALID AOM JOB, USER, SOS, AND/OR TYPE COMBINATION.

Reason:

The AOM operands on an &WRITE indicate that the message is sourced from both VM and MVS systems. This is not possible.

System Action:

The procedure terminates.

User Action:

Correct the procedure and retry. Refer to the AOM Installation and Reference manual for a description of the &WRITE operands.

N25321**AOMUFLG1-8 NOT ALLOWED IF AOMUFLGS CODED.****Reason:**

An &WRITE verb has specified AOMUFLGS= as well as AOMUFLGn These operands are mutually exclusive.

System Action:

The procedure terminates.

User Action:

Correct the procedure and retry. Refer to the AOM Installation and Reference manual for a description of the &WRITE operands.

N25401**INVALID SYNTAX****Reason:**

The &PARSE statement is incorrect.

System Action:

The procedure terminates.

User Action:

Correct and retry. For a description of the &PARSE built-in function see the NCL Reference.

N25402**INVALID RANGE****Reason:**

The &PARSE statement has specified an invalid RANGE operand.

System Action:

The procedure terminates.

User Action:

Correct and retry. Refer to the NCL Reference for a description of the &PARSE function.

N25403

DUPLICATE OR CONFLICTING OPERANDS

Reason:

The &PARSE statement has duplicate or inconsistent operands.

System Action:

The procedure terminates.

User Action:

Correct and retry. Refer to the NCL Reference for a description of the &PARSE function.

N25404

REQUIRED OPERANDS OMITTED

Reason:

The &PARSE statement does not have mandatory operands specified.

System Action:

The procedure terminates.

User Action:

Correct and retry. Refer to the NCL Reference for a description of the &PARSE function.

N25405

VAR=aaaa PREFIX TOO LONG FOR specified/default RANGE

Reason:

The &PARSE statement variable prefix is too long for the specified, or default, RANGE suffix to be added.

System Action:

The procedure terminates.

User Action:

Correct and retry. Refer to the NCL Reference for a description of the &PARSE function.

N25406**INVALID DELIMITER(S) SPECIFICATION****Reason:**

The &PARSE statement has no, or too many, characters in the DELIM= delimiter string.

System Action:

The procedure terminates.

User Action:

Correct and retry. Refer to the NCL Reference for a description of the &PARSE function.

N25407**VARIABLE NAME varname IS INVALID OR RESERVED****Reason:**

The variable name is invalid or is the name of a reserved keyword.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N25408**DATA OPERAND OMITTED****Reason:**

The &PARSE statement does not have a DATA operand coded.

System Action:

The procedure terminates.

User Action:

Correct and retry. Refer to the NCL Reference for a description of the &PARSE function.

N25501

INVALID SYNTAX

Reason:

The syntax in an *&SECCHK statement is invalid.*

System Action:

The NCL procedure terminates.

User Action:

Correct the statement and retry. Refer to the NCL User Reference for a description of the &SECCHK function.

N25502

INVALID USERID SPECIFIED

Reason:

You may only specify your own userid on the &SECCHK CHANGE statement unless the procedure is being run from EASINET.

System Action:

The procedure terminates.

User Action:

See the NCL Reference for details and restrictions on the use of this facility.

N25503

INVALID USE OF &SECCHK STATEMENT

Reason:

The &SECCHK CHECK statement is only valid in a procedure that is being run from EASINET.

System Action:

The procedure terminates.

User Action:

Refer to the NCL Reference for details and restrictions on the use of this facility.

N25601**MASK AND/OR DATA OMITTED.****Reason:**

The syntax of the &MASKCHK statement is invalid.

System Action:

The procedure terminates.

User Action:

See the NCL Reference for details on the use of this statement.

N25602**INVALID WILDCARD CHARACTER.****Reason:**

The mask specified on the &MASKCHK statement must be a single character.

System Action:

The procedure is terminated in error.

User Action:

See the NCL Reference for details on the use of this statement.

N25702**INVALID USE OF &PROMPT STATEMENT****Reason:**

The &PROMPT statement is valid only for use with LU-1 type terminals.

System Action:

The procedure is terminated in error.

User Action:

See the NCL Reference for details on the use of this statement.

N25A01

DUPLICATE OR CONFLICTING OPERANDS

Reason:

An &LOCK statement contains duplicate or conflicting operands. The statement is invalid.

System Action:

The procedure terminates.

User Action:

Correct and retry. For a description of the &LOCK built-in function see the NCL Reference.

N25A02

LOCKMAX LIMIT EXCEEDED

Reason:

The maximum number of LOCKs is already held. The &LOCK request is

System Action:

User Action:

Determine the number of currently active LOCKs using the &SHOW LOCKS command and determine if the number of requests is excessive.

N25A03

INVALID SYNTAX

Reason:

The &LOCK statement is incorrect.

System Action:

The procedure terminates.

User Action:

Correct the statement and retry.

N25A04**OPERAND aaaaaaaaa HAS AN INVALID VALUE****Reason:**

The &LOCK operand aaaaaaaaa is invalid.

System Action:

The procedure terminates.

User Action:

Correct the statement and retry.

N25A05**REQUIRED OPERAND aaaaaaaaa OMITTED****Reason:**

The nominated &LOCK operand is required and must be coded.

System Action:

The procedure terminates.

User Action:

Correct the statement and retry.

N25A06**RESOURCE NAME INVALID****Reason:**

The &LOCK statement specifies a resource name that is too long.

System Action:

The procedure terminates.

User Action:

Resource names may be 1 to 16 characters. Correct the statement and retry.

N25B01

SMFWRITE SPECIFIES INVALID RECORD TYPE OR DATA

Reason:

An &SMFWRITE NCL statement specified an invalid RECID value or invalid hexadecimal data.

System Action:

The procedure is terminated.

User Action:

Determine the cause of the error. Correct and retry.

N25B02

USER NOT AUTHORISED FOR &SMFWRITE REQUEST

Reason:

An unauthorized user or procedure attempted to issue an &SMFWRITE NCL statement.

System Action:

The procedure terminates unless the TEST option is specified or the SMFTRACE system parameter is set to YES. In TEST mode, the contents of the SMF record is written to the activity log instead of SMF.

User Action:

The &SMFWRITE statement is subject to an authorization check. The installation may have restricted its use to certain user IDs or from certain procedures.

See your systems administrator.

N25C01**INVALID USERID SPECIFIED****Reason:**

An &SECCALL CHANGE=user has been issued for a user other than the user logged on or the user does not have UAMS authority to CHANGE another users password.

System Action:

None.

User Action:

Correct the userid specified and retry.

N25C02**INVALID USE OF SECCALL STATEMENT****Reason:**

An &SECCALL CHECK USER=user was issued for a user other than the user logged on, or an &SECCALL QUERY was issued from EASINET.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N25C03**UNAUTHORISED USER OF SECCALL STATEMENT****Reason:**

An &SECCALL DELETE USER=user has been issued by a user without UAMS authority.

System Action:

None.

User Action:

Contact your installation help desk if necessary.

N25C04

INVALID PARAMETER - DETAILS MUST BE Y OR N, OR A FIELD LIST SUPPLIED

Reason:

An &SECCALL CHANGE USER=user DETAILS=x has been issued. DETAILS=x (where 'x' must be Y(es) or N(o)) or FIELDS=list operand must be specified.

System Action:

None.

User Action:

Correct the parameter and retry.

N25C05

INVALID PARAMETER - PASSWORD INVALID ON FORCE PASSWORD CHANGE

Reason:

An &SECCALL CHANGE USER=user has been issued by a UAMS authorized user to force change the password of another user. The password parameter is invalid on this operation.

System Action:

None.

User Action:

Correct the statement and retry.

N25C06

PARAMETER REQUIRED - DETAILS=Y OR NEW PASSWORD

Reason:

An &SECCALL CHANGE USER=user has been issued without a new password or the user details to be updated.

System Action:

None.

User Action:

Correct the statement and retry.

N25C07**USER userid PASSWORD ~P1 AND USER DETAILS ~P2****Reason:**

This message indicates the outcome of a Password/details change for the indicated user.

The possible values for both P1 and P2 are :

UPDATED - the password/user details were updated

NOT UPDATED - the password/user details were not updated

UPDATE FAILED - the password/user details update failed

System Action:

None.

User Action:

None.

N25C08**UAMS DEFINITION user DELETED****Reason:**

The UAMS definition for the specified user has been successfully deleted.

System Action:

None.

User Action:

None.

N25C09**FIELD LIST SPECIFICATION INVALID****Reason:**

The field list specified in the FIELDS operand of an &SECCALL QUERY or &SECCALL CHECK is invalid.

System Action:

The procedure is flushed.

User Action:

Correct the FIELDS syntax and retry the operation.

N25C10

FIELD LIST CONTAINS INVALID FIELD(S)

Reason:

The field list specified in an &SECCALL function contains invalid fields. If the request is an &SECCALL QUERY then the list of valid fields is a sub-set of structured fields that are retained in storage for this user. If the request is an &SECCALL CHANGE then the list of valid fields is a restricted to the user details and the user notification details. See the NCL Reference for the list of valid fields.

System Action:

The NCL procedure is flushed.

User Action:

Correct the field list and retry the operation.

N25C11

STRUCTURED FIELD xxxx IN ERROR - REFER TO LOG FOR FURTHER DETAILS

Reason:

An &SECCALL CHANGE USER=user FIELDS= has been issued. An error has been found in processing one or more structured fields. Refer to the log for details of the structured field in error.

System Action:

The NCL procedure is flushed.

User Action:

Correct the field and retry.

N25D01**SECCALL EXIT INVALID WITHOUT SECURITY EXIT****Reason:**

The &SECCALL EXIT command was issued when there was no security exit installed.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N25E01**INSUFFICIENT STORAGE TO CALL NCLEX01 USER EXIT****Reason:**

An NCL statement required a call to the NCL authorisation exit NCLEX01 but there was insufficient storage to complete the linkage and call.

System Action:

The procedure is terminated.

User Action:

Investigate the reason for the storage shortage. Correct and retry.

N25E02**NCL EXIT exitname - ATTACH/LINK FAILED****Reason:**

An NCL statement required a call to the NCL authorisation exit NCLEX01 but linkage to the module failed.

System Action:

The procedure is terminated.

User Action:

Determine the reason for failure from an accompanying message.

N25E03

NCL EXIT exitname - INVALID RETURN CODE

Reason:

The return code passed back from the NCL authorisation exit NCLEX01 was not one of the allowable values.

System Action:

The procedure is terminated.

User Action:

Correct the exit return code and retry the request.

N25E04

NCL EXIT exitname HAS ABENDED SYS-bbb

Reason:

A call to the NCL authorisation exit NCLEX01 failed with the system abend code shown in the message.

System Action:

The procedure is terminated.

User Action:

Correct the problem in the exit and retry the request.

N25G01

INVALID USE OF SECCALL STATEMENT

Reason:

An &SECCALL UPDATE/ADD USER=user has been issued by a user without UAMS authority.

System Action:

The NCL procedure is flushed.

User Action:

If necessary contact your systems administrator.

N25G02**INVALID OPTION ON SECCALL GET STATEMENT****Reason:**

An &SECCALL GET USER=user OPTION=opt has been issued. 'opt' must be KEQ (Key Equal), KGT (Key Greater Than) or KLT (Key Less Than).

System Action:

The NCL procedure is flushed.

User Action:

Correct the parameter and retry.

N25G03**STRUCTURED FIELD xxxx IN ERROR****Reason:**

An &SECCALL GET/UPDATE/ADD USER=user FIELDS= has been issued. A structured field 'xxxx' has been found in error.

System Action:

The NCL procedure is flushed.

User Action:

Correct the field and retry.

N25G04**STRUCTURED FIELD xxxx IN ERROR - REFER TO LOG FOR FURTHER DETAILS****Reason:**

An &SECCALL GET/UPDATE/ADD USER=user FIELDS= has been issued. An error has been found in processing one or more structured fields. Refer to the log for details of the structured field in error.

System Action:

The NCL procedure is flushed.

User Action:

Correct the field and retry.

N25G05

FIELD LIST SUPPLIED GREATER THAN 256 CHARACTERS

Reason:

The FIELDS operand on the &SECCALL function contains an entry that is more than 256 characters.

System Action:

The NCL procedure is flushed.

User Action:

Correct the FIELDS operand and retry the procedure.

N25G06

FIELD STARTING xxxx GREATER THAN FOUR CHARACTERS

Reason:

An &SECCALL GET/UPDATE/ADD USER=user FIELDS=field has been issued. A field specified exceeded the maximum supported. Structured fields are normally represented as 4 hex characters and leading zeroes may be omitted.

System Action:

The NCL procedure is flushed.

User Action:

Correct the field and retry.

N25G07

FIELD xxxx IS NOT VALID HEXADECIMAL CHARACTERS

Reason:

An &SECCALL GET/UPDATE/ADD USER=user FIELDS=field has been issued. The specified field 'xxxx' is invalid as hexadecimal characters.

System Action:

The NCL procedure is flushed.

User Action:

Correct the field and retry.

N25G08**FIELD xxxx IS AN UNDEFINED STRUCTURED FIELD****Reason:**

An &SECCALL GET/UPDATE/ADD USER=user FIELDS=xxxx has been issued.
The specified field 'xxxx' is not a defined structured field.

System Action:

The NCL procedure is flushed.

User Action:

Correct the field and retry.

N25G09**FIELD xxxx IS DEFINED IN AN EXCLUDED FEATURE****Reason:**

An &SECCALL GET/UPDATE/ADD USER=user FIELDS=xxxx has been issued.
The specified field 'xxxx' is processed by a feature that is not configured for this system.

System Action:

The NCL procedure is flushed.

User Action:

Correct the field and retry.

N25G10**INVALID SYNTAX - TYPE MUST BE USER OR GROUP****Reason:**

An SECCALL ADD USER=user TYPE=type has been issued. 'type' must be either 'USER' to ADD a user definition, or 'GROUP' to ADD a group definition.

System Action:

The NCL procedure is flushed.

User Action:

Correct the type and retry.

N25G11

INVALID SYNTAX - PASSWORD INVALID WITH TYPE=GROUP

Reason:

An &SECCALL ADD USER=user PASSWORD=pwd TYPE=GROUP has been issued. The password field is invalid as a group definition is not available for logon.

System Action:

The NCL procedure is flushed.

User Action:

Correct the type and/or the password and retry.

N25G12

INVALID SYNTAX - PASSWORD MUST BE SUPPLIED WITH TYPE=USER

Reason:

An &SECCALL ADD USER=user TYPE=USER has been issued. A password must be supplied to add a user definition.

System Action:

The NCL procedure is flushed.

User Action:

Correct the statement and retry.

N25G13

UAMS DEFINITION user ADDED

Reason:

An &SECCALL ADD USER=user has been issued. The add of the definition 'user' has completed successfully.

System Action:

The user details are stored on the UAMS file or via an external security manager. The user may be prompted to change their initial password when they logon.

User Action:

Inform the new user of the password to be used when they log on.

N25G14**UAMS DEFINITION user UPDATED****Reason:**

An &SECCALL UPDATE USER=user has been issued. The update of the definition 'user' has completed successfully.

System Action:

None.

User Action:

None.

N25G15**FIELD LIST SPECIFICATION INVALID****Reason:**

The FIELDS operand on the &SECCALL function contains entries that are not contained within paired brackets. If there is more than one field to be processed by the &SECCALL function, then these must be contained within brackets.

System Action:

The NCL procedure is flushed.

User Action:

Correct the FIELDS operand and retry the operation.

N25G16**USERID SPECIFIED CONTAINS INVALID CHARACTERS****Reason:**

An &SECCALL ADD USER= has been issued. The user id specified contains characters that are invalid. Valid characters are A-Z, 0-9 and national characters @, # and \$.

System Action:

The ADD operation is rejected, &RETCODE is set to 8.

User Action:

Correct the user id value and retry the ADD operation.

N25H01

INVALID MDO NAME FOR REQUEST.

Reason:

The MDO supplied to an &ENCODE or &DECODE statement is invalid.

System Action:

None.

User Action:

Ensure that different source and target MDOs are used. Check the syntax of the MDO names and verify them against their respective MAP definitions.

N25H02

MDS MAPPING FAILURE.

Reason:

An internal MDS error has occurred.

System Action:

None.

User Action:

Contact your product support representative.

N25H03

STACK OVERFLOW.

Reason:

The internal recursion stack limit was exceeded while processing an &ENCODE or &DECODE operation, possibly caused by too many segments in a compound name.

System Action:

None.

User Action:

Reduce number of name segments in mdo name. May require redefinition of the map.

N25H04**INVALID ENCODE/DECODE SYNTAX.****Reason:**

An &ENCODE or &DECODE statement has invalid syntax.

System Action:

None.

User Action:

Check syntax.

N25H05**INVALID TRANSLATE OPERAND.****Reason:**

The TRANSLATE= operand supplied to an &ENCODE or &DECODE statement is invalid.

System Action:

None.

User Action:

Check supported TRANSLATE operands, e.g. ISO, DEC, ASCII...

N25H06**ENCODED STRING INVALID FOR TARGET MDO.****Reason:**

The encoded string cannot be assigned to the target MDO of an &ENCODE statement, possibly due to its defined type.

System Action:

None.

User Action:

Check the type definition of the target MDO and rectify as appropriate.

N25H07

MAP NOT FOUND.

Reason:

The procedure has abended on an &ENCODE or &DECODE verb because an MDO was invalidly mapped because of one of the following:

- the map was not found on the mapping services database
- it failed to load
- it did not successfully attach to the MDO because it mismatched the data in the MDO.

System Action:

Procedure is flushed.

User Action:

Ensure map exists, loads and correctly maps the underlying MDO data.

N25H08

TARGET MDO IS INVALID

Reason:

The specified target mdo contains invalid data.

System Action:

None.

User Action:

Delete the invalid component, or use a new MDO.

N25H20**ATF NOT AVAILABLE OR NOT LICENCED****Reason:**

An &ENCODE or &DECODE statement specified operands that indicate that ATF is to be used. However, ATF is not available or is not licenced on this SOLVE system.

System Action:

An error is indicated.

User Action:

Check your SOLVE licence for ATF support.

N25H21**UNKNOWN SOURCE CHARACTER SET NAME****Reason:**

An &ENCODE or &DECODE statement has a SRC_CHARSET operand that names a character set that is not recognized by ATF.

System Action:

An error is indicated.

User Action:

Check the character set name.

N25H22**UNKNOWN TARGET CHARACTER SET NAME****Reason:**

An &ENCODE or &DECODE statement has a TGT_CHARSET operand that names a character set that is not recognized by ATF.

System Action:

An error is indicated.

User Action:

Check the character set name.

N25L01

PROC NAME INVALID OR OMITTED.

Reason:

Procedure name specified on PROC parameter of &CALL verb is invalid or missing.

System Action:

NCL procedure terminates.

User Action:

Correct NCL procedure and restart it.

N25L02

SYSTEM IS SHORT ON STORAGE.

Reason:

The system could not obtain storage for new control blocks.

System Action:

NCL procedure terminates.

User Action:

Determine the reason for storage shortage. Rerun the proc.

N25L03

SYNTAX ERROR.

Reason:

&CALL PROC= statement contains invalid syntax.

System Action:

NCL procedure terminates.

User Action:

Correct NCL procedure and rerun it.

N25M01**OSCALL Processing Failure.****Reason:**

An error was detected during an &OSCALL NCL request but the specific error condition could not be accessed.

System Action:

&SYSMSG is set to the error message and processing continues.

User Action:

Correct &OSCALL statement and re-run.

N25M02**MODE=UNCONFIRMED Invalid for OSCALL CONVERSE.****Reason:**

An &OSCALL CONVERSE request SDU specified MODE=UNCONFIRMED. For UNCONFIRMED requests no response can be processed by the receive end of the CONVERSE, hence the request is invalid.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25M03

SDU EMPTY.

Reason:

An &OSCALL SEND or CONVERSE request specified a non-existent SDU.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25N02

OSCALL KEYWORD ERROR IN aaaaaaaa LIST.

Reason:

A syntax error was detected in the PARM, ATTR, or NAME keyword of an &OSCALL SEND or CONVERSE statement.

System Action:

&OSCALL retcode is set to 12, and SYSMSG is set to this message

User Action:

Correct &OSCALL statement and re-run.

N25N10**OSCALL COMPONENT ASSIGNMENT ERROR ON****aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa****aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa.****Reason:**

An MDS error occurred while attempting to process an &OSCALL SEND or CONVERSE keyword request.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement. &ZMDOFDBK and &ZMDORC are also set to indicate the MDS error.

User Action:

Check the MDS feedback variables to determine cause of MDS check and correct procedure. This error is most likely the result of an invalid data value specified for an SDU component.

N25O01**OBJECT SERVICES STORAGE REQUEST FAILED.****Reason:**

An object services internal storage request failed.

System Action:

The request return code is set to 16 and processing is terminated.

User Action:

Determine the reason for storage shortage. Restart SOLVE region with larger virtual address space size.

N25O02

OBJECT SERVICES MDS MAP CONNECTION FAILED.

Reason:

This message indicates that an error occurred while attempting to map an object services object using mapped data services (MDS).

System Action:

The service fails and the mds return code is set.

User Action:

Determine the reason for the mapping error. Correct the request or the object map and retry.

N25O03

OBJECT MDS ASSIGNMENT FAILED, RC=00/00

Reason:

An MDS error occurred when object services attempted to assign a mapped component. The MDS return code and feedback are set in the message.

System Action:

The request fails with retcode 8.

User Action:

Use the MDS retcode/fdbk information to diagnose the mapping error.

N25O04

REQUEST MUST SPECIFY A VALID OBJECT NAME.

Reason:

An object services request did not contain a valid object name.

System Action:

The request fails with return code 4.

User Action:

Ensure the object name is correctly specified in the request.

N25O05**OBJECT ALREADY EXISTS.****Reason:**

An object services create request specified an object name which already exists.

System Action:

The request fails with return code 4.

User Action:

Check that the object name does not already exist.

N25O06**INVALID OBJECT CLASS.****Reason:**

The class specified for an object services request is not defined in the MIB or is invalid.

System Action:

The request is rejected.

User Action:

Specify the correct object class.

N25O07**INVALID DELETE REQUEST - OBJECT IN USE.****Reason:**

An attempt was made to delete an object which is being updated by the same process.

System Action:

The delete request is rejected.

User Action:

Check the request.

N25P01

OSCALL RECEIVE SDU MAPPING ERROR.

Reason:

A MDS mapping error occurred while attempting to process an OSCALL RECEIVE statement. The message is returned to the NCL procedure in the &SYSMSG variable.

System Action:

NCL processing continues at the next statement. &ZMDORC and &ZMDOFDBK are set.

User Action:

Check the &ZMDORC and &ZMDOFDBK fields to determine the reason for the MDS error.

N25P02

&OSCALL SDU PARSE DATA ERROR.

Reason:

An Object services reply SDU could not be parsed by MDS.

System Action:

NCL processing continues at the next statement.

User Action:

None.

N25P03

METHOD REPLY SDU ASSIGNMENT FAILED MDORC=00 MDOFB=00.

Reason:

Object services could not build the reply SDU because of a mapping error during assignment.

System Action:

The reply is not built.

User Action:

Check the MDS maps for the request objects.

N25P04**OSCALL SDU PARSE DATA ERROR.****Reason:**

An internal error occurred while processing an &OSCALL RECEIVE statement

System Action:

NCL processing continues at the next statement. &ZMDORC and &ZMDOFDBK are set.

User Action:

Check &ZMDORC and &ZMDOFDBK values to determine cause of MDS check.

N25Q01**INSUFFICIENT STORAGE TO PROCESS MDO REQUEST.****Reason:**

MDO processing was unable to obtain enough storage from the system pool to satisfy the last MDO request.

System Action:

Procedure is flushed.

User Action:

Retry request later.

N25Q02**SYNTAX ERROR USING MDO.****Reason:**

An assign statement with an MDO= operand has invalid syntax.

System Action:

Procedure is flushed.

User Action:

Check syntax.

N25Q03

MDO NAME CHECK ERROR - BAD INDEX POSITION OR VALUE.

Reason:

An index was used in an MDO= operand where it wasn't expected, or the index value is out of range.

System Action:

Procedure is flushed.

User Action:

Check map definition, and see that this is a valid indexable component, and if so, check that the index does not exceed 32767, or any maximum imposed by a SIZE specification.

N25Q04

MDO MAPPING ERROR.

Reason:

An error occurred while trying to map an MDO's data during an MDO request.

System Action:

Procedure is flushed.

User Action:

Check program logic. Test that map connection has been performed, and that it was successful. Ensure correct map is in use.

N25Q05

RECURSION STACK OVERFLOW OCCURRED.

Reason:

The internal recursion stack limit was exceeded while attempting to process an MDO request, possibly caused by having too many segments in a compound name.

System Action:

Procedure is flushed.

User Action:

Reduce number of name segments in MDO name. May require redefinition of the map.

N25Q06**SYNTAX ERROR - VARIABLE INDEX {*} USED INVALIDLY.****Reason:**

A variable indexed MDO name (e.g. MDO=a.b.{*}) was used invalidly.

System Action:

Procedure is flushed.

User Action:

Check use of index on MDO operand.

N25Q07**SYNTAX ERROR - MUTUALLY EXCLUSIVE OPERANDS.****Reason:**

Mutually exclusive operands were used on an &ASSIGN verb using MDO.

System Action:

Procedure is flushed.

User Action:

Check syntax.

N25Q08**UNEXPECTED FEEDBACK DETECTED.****Reason:**

A feedback was returned during &ASSIGN processing of an MDO which was unexpected.

System Action:

None.

User Action:

Contact your product support representative.

N25Q09

MDO TYPE|DATA|NAME CHECK ERROR.

Reason:

This message is only issued if &CONTROL MDOCHK is on. The message indicates a ZMDORC of 8 or 12 was obtained. MDO TYPE CHECK ERROR: ZMDORC=8, ZMDOFDBK=0 MDO DATA CHECK ERROR: ZMDORC=8, ZMDOFDBK=1 MDO NAME CHECK ERROR: ZMDORC=12,ZMDOFDBK=0

System Action:

Procedure is flushed.

User Action:

Determine the reason for the error. Type check: Attempt made to assign invalid data into or from an MDO. Data check: Physical limitations exceeded assigning data to an MDO. Name check: Component name used in MDO assign is not defined in the map.

N25Q10

MAP CHECK ERROR, MAP NOT FOUND|MAP LOAD FAILED|MAP/DATA MISMATCH.

Reason:

Message is only issued if &CONTROL MDOCHK is set. An attempt to attach a map to an MDO failed because:

- The map wasn't found on the map database.
- The map failed to load due to definition errors.
- The data in the mdo doesn't conform to the map definition.

System Action:

Procedure is flushed.

User Action:

Check that the map is defined, and loads ok, and that the data in the MDO agrees with the map definition. (Issue SYSPARMS MAPLOAD=mapname command to see if map loads ok.)

N25R01**REGISTRATION REQUEST INVALID FOR SYSTEM PROCEDURE.****Reason:**

An &OSCALL REGISTER statement was executed from a system procedure environment. This is not allowed.

System Action:

The procedure is terminated.

User Action:

Remove &OSCALL register statement from system level procedure.

N25R02**DEREGISTER PROCESS IS NOT REGISTRATION OWNER.****Reason:**

An &OSCALL deregistration statement was issued for an object which was not owned by the requestor.

System Action:

The procedure is terminated.

User Action:

Correct object definition for request.

N25R03**REGISTRATION REQUEST CONFLICTS WITH CURRENT PROCESS REGISTRATIONS.****Reason:**

An NCL process may only register for a single server type and an OSCALL REGISTER_SERVER statement was issued with a server type which conflicts with the server type specified on a previous registration.

System Action:

The server registration request is rejected and *SYSMSG* set.

User Action:

Ensure all server registration requests are for the same server type and correct the server registration.

N25R04

REGISTRATION Name is invalid.

Reason:

The name specified in the OBJECT operand of a REGISTER_SERVER request could not be parsed.

System Action:

The server registration request is rejected and *SYSMSG* set.

User Action:

Check the name assignment for the OBJECT MDO.

N25R05

REGISTRATION LOGIC ERROR IN mod

Reason:

An invalid internal SOLVE call was detected by the registration processor.

System Action:

The server registration request is rejected and &SYSMSG set.

User Action:

Note the module id and call your SOLVE support center.

N25R06

INSUFFICIENT STORAGE FOR REGISTRATION REQUEST

Reason:

The dynamic storage available for SOLVE internal processing was exhausted.

System Action:

The processing thread is terminated.

User Action:

Investigate the reason for the storage shortage and increase the SOLVE task region size if necessary.

N25R07**REGISTRATION INVALID IF BASE PROCEDURE NOT OML****Reason:**

An &OSCALL TYPE=REGISTER-SERVER verb has been issued to register the NCL process as a server, but the base procedure of the process is not an NCL procedure. OML does not support server registration, thus the registration can only be performed if the base procedure is NCL.

System Action:

The process is terminated.

User Action:

Convert the base procedure to NCL.

N25R08**OBJECT CREATE REQUEST FAILED - PARENT DOES NOT EXIST.****Reason:**

An create request attempted to create an object for which the parent did not exist.

System Action:

The create request fails.

User Action:

Ensure the parent object exists before creating the child.

N25R09**OBJECT DELETE REQUEST FAILED - OBJECT LOCATE FAILED.****Reason:**

An object services DELETE request failed because the object did not exist.

System Action:

No deletion takes place.

User Action:

Check the name specified in DELETE request.

N25R10

OBJECT DELETE REQUEST REJECTED FOR OBJECT WITH CHILDREN.

Reason:

An attempt was made to delete an object with children.

System Action:

The delete request is rejected.

User Action:

Delete all of an object's children before issuing a DELETE request for the object.

N25R11

OBJECT CREATE REQUEST FAILED - DUPLICATE.

Reason:

An attempt was made to create an object which already existed.

System Action:

The request is rejected.

User Action:

Ensure a unique object name is specified when creating an object.

N25S01

NO ACTIVE SERVER.

Reason:

An &OSCALL RECEIVE request was issued when no client server conversation was active for the request.

System Action:

The procedure is terminated.

User Action:

Correct NCL processing logic to ensure Object Services conversation is active when receive is issued.

N25S02**CONNECTION TO OBJECT METHOD FAILED.****Reason:**

An attempt to invoke an object method via the &OSCALL verb failed.

System Action:

&SYSMSG is set. Processing continues with next NCL statement.

User Action:

Check return code information to determine reason for failure to connect to method.

N25S03**NO ACTIVE CLIENT.****Reason:**

An attempt by an object server to reply to a client failed. Either the server incorrectly sent the reply, or the client connection was broken during processing.

System Action:

&SYSMSG and return codes are set. Processing resumes at the next statement in the server procedure.

User Action:

Look for other APPC messages to find reason for conversation failure and retry.

N25S04

CLIENT CONNECTION FAILED.

Reason:

An &OSCALL request on the Client/Server conversation failed.

System Action:

&SYSMSG and return codes are set. Processing resumes at the next statement in the server procedure.

User Action:

Look for other APPC messages to find reason for conversation failure and retry.

N25S05

CLIENT CANCELLED REQUEST.

Reason:

A server issued an &OSCALL REPLY but the client had already cancelled the request with an &OSCALL CANCEL.

System Action:

Server procedure continues at next NCL statement.
&RETCODE is set to 8. &ZFDBK is set to 5. &SYSMSG contains the message.

User Action:

The message may be the result of a desired client action.

N25S07**OSCALL CLIENT/SERVER PROTOCOL ERROR.****Reason:**

An &OSCALL RECEIVE statement was issued for a request, after the final reply was detected. This condition indicates some internal logic error as the finalreply should always terminate the session.

System Action:

&SYSMSG, &RETCODE and &ZFDBK are set and processing continues.

User Action:

Get details of procedure which issued request and report to product support representative.

N25T01**OSCALL ERROR - TRANSACTION PROTOCOL ERROR****Reason:**

An APPC protocol violation occurred while attempting to process an &OSCALL request during backend processing.

System Action:

The error message is written to the SOLVE system log.

User Action:

Look for other APPC messages to find reason for conversation failure and retry.

N25T02**OSCALL ERROR - RESOURCE SHORTAGE****Reason:**

A storage shortage occurred while attempting to process the OSCALL backend transaction.

System Action:

The error message is written to the log. The object method fails.

User Action:

Investigate the reason for storage shortage. Correct and retry.

N25T03

OSCALL ERROR - DATA ASSIGNMENT ERROR MDS RC=rc/fb

Reason:

The OSCALL backend transaction could not map the data received into an SDU. rc/fb represents the MDS RETCODE and FDBK values.

System Action:

The error message is written to the SOLVE system log and the OSCALL backend processing is terminated.

User Action:

Only data in valid SDU format should be sent to the OSCALL backend transaction. Ensure no errant APPC requests are processed.

N25T04

OSCALL ERROR - INVALID SERVICE DATA UNIT

Reason:

The request flag was not set in an SDU received by the OSCALL back-end transaction processor.

System Action:

The OSCALL backend transaction is terminated.

User Action:

Ensure the OSCALL transaction is only operated via a valid &OSCALL request.

N25T05

OSCALL ERROR - REQUEST TO SERVER TYPE NOT SUPPORTED.

Reason:

The request server located by the OSCALL back end transaction was not for a method or agent server. Requests for other server types are not supported.

System Action:

The OSCALL backend transaction is terminated.

User Action:

Ensure the object services configuration does not involve indirect system registrations.

N25U01

&OSCALL error SDU BUILD FAILED ON
aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa
aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa MDORC=rc,MDOFDBK=fb.

Reason:

An MDS error occurred while attempting to process an &OSCALL error condition.
The MDS component name, retcode, and feedback are shown in the message.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement if NCL is executing.

User Action:

Check the MDS feedback variables to determine cause of MDS check. Verify the component is defined to the SDU map.

N25U02

METHOD REPLY SDU NOT AVAILABLE TO FRAMEWORK.

Reason:

An object services reply failed because the reply SDU was deleted.

System Action:

No reply is returned to the caller.

User Action:

Check the object methods do not delete the reply SDU.

N25V01

INVALID OSCALL KEYWORD aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa.

Reason:

The keyword shown in the message is not a valid OSCALL SEND or CONVERSE keyword.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V02

OSCALL CLASS OPERAND IS INVALID.

Reason:

An &OSCALL SEND/CONVERSE statement specified an invalid object class.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V03**OSCALL REQID OPERAND IS INVALID.****Reason:**

REQID is not a valid operand on the &OSCALL SEND/CONVERSE NCL statement.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25T03**OSCALL ACTION OPERAND IS INVALID.****Reason:**

An &OSCALL SEND NCL statement specified an ACTION operand that was not valid, or was in conflict with the SERVICE keyword. ACTION may only be specified for SERVICE=ACTION and must not exceed 12 bytes in length.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V05

OSCALL KEYWORD MISSING

Reason:

A &OSCALL SEND/CONVERSE statement contained an invalid or missing keyword.

System Action:

&SYSMSG is set to this message and the RETCODE is set to 12. processing continues at the next NCL statement.

User Action:

Correct the &OSCALL statement syntax.

N25V06

OSCALL MAP NAME IS INVALID.

Reason:

The &OSCALL SEND/CONVERSE MAP= operand, if specified, must be a valid MDS map name.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V07**OSCALL aaaaaaaaaa KEYWORD MUST BE SPECIFIED.****Reason:**

The keyword named in the message text is mandatory and was left out of the &OSCALL SEND or CONVERSE NCL statement.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V08**OSCALL DUPLICATE KEYWORD SPECIFIED.****Reason:**

An &OSCALL NCL statement specified a duplicate keyword.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V09

OSCALL ACTION KEYWORD MISSING.

Reason:

An &OSCALL SEND/CONVERSE SERVICE=ACTION NCL statement did not specify an action keyword.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V10

OSCALL COMPONENT ASSIGNMENT ERROR ON

aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa
aaaaaaaaaaaaaaaaaaaaaaaaaaaaaa.

Reason:

An MDS error occurred while attempting to process an OSCALL SEND or CONVERSE keyword request.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement. &ZMDOFDBK and &ZMDORC are also set to indicate the MDS error.

User Action:

Check the MDS feedback variables to determine cause of MDS check and correct procedure. This error is most likely the result of an invalid data value specified for an SDU component.

N25V11**OSCALL CLASS MAP FAILED MAP=aaaaaaaaaaaa.****Reason:**

The object class specified on the &OSCALL NCL statement could not be mapped.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement. &ZMDOFDBK and &ZMDORC are also set.

User Action:

Check the object class specified on the &OSCALL statement is a valid class and that an MDS map exists for it. Correct the &OSCALL statement and re-run procedure.

N25V12**OSCALL INVALID OPERATION oooooooooooooo.****Reason:**

The SERVICE operand oooooooooooooo on an &OSCALL SEND or CONVERSE NCL statement was not a valid object services SERVICE.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V13

&OSCALL SCOPE OPERAND IS NOT A VALID LEVEL.

Reason:

The SCOPE operand on an &OSCALL statement is not supported.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V14

OSCALL INVALID SCOPE VALUE.

Reason:

An &OSCALL NCL statement specified an invalid SCOPE operand value.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V15

OSCALL PARMS NOT VALID FOR REQUESTED SERVICE.

Reason:

The PARMS keyword is only valid for ACTION service requests on the &OSCALL SEND and CONVERSE NCL statement.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V16**OSCALL NOTIFY operand must be YES or NO.****Reason:**

An &OSCALL SEND NCL statement specified an invalid NOTIFY operand value.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V17**OSCALL REPLYSDU operand is invalid.****Reason:**

An &OSCALL CONVERSE statement specified an invalid REPLYSDU operand value.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V18

OSCALL NOTIFY not valid with converse.

Reason:

An &OSCALL CONVERSE NCL statement specified the NOTIFY operand. This is not allowed.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V19

OSCALL keyword operands not allowed with SDU.

Reason:

The &OSCALL SEND and CONVERSE NCL statements may specify the request in keyword form, or as a pre-defined SDU mdo, but these operands may not be mixed.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25X01**OSCALL SDU OPERAND IS REQUIRED.****Reason:**

The &OSCALL NCL statement must specify an SDU MDO.

System Action:

&SYSMSG is set to the error message and processing continues.

User Action:

Correct &OSCALL statement and re-run.

N25X02**xxxxxx MUST BE SPECIFIED FOR OSCALL REGISTER/DEREGISTER****Reason:**

The xxxxxx keyword is required for the OSCALL (de)register statement.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25X03**SDU EMPTY.****Reason:**

An &OSCALL send request specified a non-existent SDU.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25X04

OSCALL ACCEPT NOT VALID FROM THIS PROCEDURE.

Reason:

The &OSCALL ACCEPT NCL statement is only valid from a registered agent server.

System Action:

&SYSMSG is set to the error message and processing continues.

User Action:

Correct &OSCALL statement and re-run.

N25X05

OSCALL INVALID OPERAND SPECIFIED: operand

Reason:

An &OSCALL NCL statement specification of the named operand was invalid.

System Action:

&SYSMSG is set to the error message and processing continues.

User Action:

Correct &OSCALL statement and re-run.

N25X06

&OSCALL XCTL INVALID - METHOD CONTAINS ACTIVE OML

Reason:

An &OSCALL TYPE=XCTL verb has been issued to exchange control between the current method and another method. The current method contains active OML procedures, so the XCTL request is invalid. XCTL cannot be done unless all procedures in the method are NCL.

System Action:

The process is terminated.

User Action:

Make sure all procedures in the method are NCL.

N25X07**&OSCALL XCTL INVALID - METHOD CONTAINS ACTIVE OML****Reason:**

An *&OSCALL TYPE=XCTL* verb has been issued to exchange control between the current method and another method. The current method contains active OML procedures, so the XCTL request is invalid. XCTL cannot be done unless all procedures in the method are NCL.

System Action:

The process is terminated.

User Action:

Make sure all procedures in the method are NCL.

N25Y01**INVALID OBJECT.****Reason:**

The object specified on the *OSCALL (DE)REGISTER statement* could not be parsed.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Check that the MDO for the object is valid and re-run.

N25Y02

INVALID SDU - aaaaaaaaaaaaaaaaaaaaaaaaaaaaaa COMPONENT MISSING.

Reason:

A required SDU component was not present in the OSCALL request.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the SDU build procedure to include the named component, and re-run request.

N25Y03

INVALID SDU - aaaaaaaaaaaaaaaaaaaaaaaaaaaaaa COMPONENT VALUE INVALID.

Reason:

An OSCALL statement specified an SDU which contained the component named in the message. The component value was not valid.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the SDU component value and re-run procedure.

N25Y04**INVALID OBJECT - aaaaaaaaaaaaaaaaaaaaaaaaaaaaaa COMPONENT MISSING.****Reason:**

A mandatory request component was missing from an object services request.

System Action:

The missing component name is returned in the message.

User Action:

Correct the object services request SDU.

N25Z01**CLASS DEFINITION aaaaaaaa NOT FOUND.****Reason:**

The class specified by the &OSCALL request did not exist in the MIB.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the class or ensure it is added to the system definition tables before re-running procedure.

N25Z02**SCOPE NOT SUPPORTED.****Reason:**

Scoped requests are not valid for the service requested by an &OSCALL.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL request.

N25Z03

CLASS ccccccc UNAVAILABLE.

Reason:

The &OSCALL request for object class ccccccc could not proceed because the class was not initialized.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Ensure object services class is initialized before you re-run the request.

N25Z04

ACTION action NOT VALID FOR CLASS m_o_class.

Reason:

An &OSCALL SERVICE=ACTION request could not be satisfied because the action was not valid for the specified object class.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the action requested and re-run procedure.

N25Z05**SYSTEM NOT INITIALIZED.****Reason:**

An Object Services request was received, but Object Services initialization failed.

System Action:

&SYSMSG is set to the message, and processing continues with the next NCL procedure statement.

User Action:

Check the activity log to determine reason for initialization failure, and verify and that you are running with the correct version of the Object Services tables and maps.

N25Z06**xxxxxx METHOD NOT DEFINED FOR CLASS cccccccc.****Reason:**

The requested method procedure was defined for an *OSCALL* service request for class cccccccc.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Ensure the &OSCALL request was correctly specified and that the class service definition is correct.

N25Z07

OBJECT SERVICES NOT INITIALIZED

Reason:

An Object Services request was made before Object Services initialization was complete.

System Action:

Request is terminated.

User Action:

Ensure object services is initialized before re-issuing request.

N25Z08

OBJECT SELECTION NOT SUPPORTED FOR CLASS m_o_class.

Reason:

No selection method is defined for the Managed Object Class for which the Object Services selection request was issued.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the request and re-run procedure.

N26301

UAMS RECORD FROM EXTERNAL SECURITY EXIT NOT WRITTEN TO USER DATABASE

Reason:

During logon process an error was encountered when the user record was being written to the user database.

System Action:

The logon is processed.

User Action:

None.

N26302**USERID NOT DELETED****Reason:**

An attempt was made to delete a user definition from the user database. The user's definition was not deleted. This message is issued if the security exit does not provide a specific reason for not deleting the user record from the user database.

System Action:

The user definition was not deleted.

User Action:

Determine if the required user record exists and retry operation.

N26303**I/O ERROR READING USER FROM UAMS DATABASE****Reason:**

An error occurred whilst attempting to read a user from the user database. No specific reason applies.

System Action:

The user definitions was not read.

User Action:

Determine if the required user record is available and retry the operation.

N26304**INSUFFICIENT STORAGE FOR function REQUEST****Reason:**

There is insufficient system storage available for SOLVE to complete the request. The request is either a LOGON or a READ of a user record.

System Action:

The user logon/read is failed.

User Action:

Determine the amount of storage available to SOLVE and retry the operation when there is storage available to complete the request.

N26305

USERID RECORD FOR uuuuuuuu CREATED, MODELLED ON modelid

Reason:

The user attempted a logon to SOLVE where a partial security exit was installed. The partial security exit provided a userid modelid whose user definition is to be used as a model for this user's logon.

System Action:

The logon is successful and a new user record is created.

User Action:

None.

N26306

USERID NOT AUTHORISED FOR USE AT THIS TERMINAL

Reason:

An attempt to logon has been rejected because the user attempted to logon from a terminal other than those to which the userid is restricted.

System Action:

The logon attempt is unsuccessful.

User Action:

Logon from an authorized terminal.

N26307

LOGONS STOPPED. SYSTEM IN SHUTDOWN.

Reason:

If the system is in a shutdown-pending state, no further logons are allowed.

System Action:

The logon is rejected.

User Action:

The SHUTDOWN CANCEL command could be used to reverse the shutdown process and allow further logons.

N26308**MAXIMUM USERS LOGGED ON, TRY LATER.****Reason:**

A logon attempt is denied because the maximum number of users as limited by a MAXUSERS command are already logged on.

System Action:

None.

User Action:

Retry later, or the maximum number of users may be increased with the MAXUSERS command.

N26309**userid ALREADY LOGGED ON AT ANOTHER TERMINAL.****Reason:**

An attempt was made to log on by a user who is already logged on elsewhere. The user is not authorized for multiple logons.

System Action:

The logon is rejected.

User Action:

Determine why the userid is already in use.

N26310**USERID HAS BEEN SUSPENDED, LOGON DENIED****Reason:**

An attempt to logon has been rejected because the userid has been 'suspended', that is, has been temporarily invalidated for use.

System Action:

The logon fails.

User Action:

Refer to your systems administrator.

N26311

SIGNON REJECTED

Reason:

A logon attempt has been rejected by the security exit. No other information was supplied by the security exit.

System Action:

None.

User Action:

Contact your systems administrator.

N26312

PASSWORD NOT CHANGED.

Reason:

The logon request or password change was denied. The security exit did not provide a specific message indicating the reason for the failure.

System Action:

None.

User Action:

Logon again and change password if requested.

N26313

USERID INFORMATION UNAVAILABLE

Reason:

A request to obtain userid information failed. The security exit did not provide a specific reason for the failure.

System Action:

The read request is rejected.

User Action:

Contact your systems administrator as this may indicate that the UAMS dataset is corrupted.

N26314**USERID INFORMATION NOT UPDATED****Reason:**

An error occurred when attempting to update userid information on the UAMS dataset, or the security exit supplied by the system rejected the update request. No specific reason was provided by the security exit.

System Action:

None.

User Action:

Contact your systems administrator.

N26315**USERID NOT ADDED.****Reason:**

An attempt to add a new user record has failed. No specific reason was provided by the security exit for the failure.

System Action:

The user record is not added.

User Action:

Contact your systems administrator for more information.

N26316

LOGON DENIED FOR userid AT TERMINAL luname - PASSWORD VIOLATION.

Reason:

This message reports a logon attempt that failed because the user entered their password in error more than the maximum number of times. It is sent to the system Log and to OCS operators who have monitor status.

System Action:

None.

User Action:

This may indicate an illegal attempt to gain access to the system. If the attempts continue you should report the matter to your systems administrator.

N26317

INVALID RETURN CODE FROM SHUTDOWN - SHUTDOWN CONTINUING

Reason:

The security exit has returned a non-zero return code. This return code is invalid. SHUTDOWN processing continues.

System Action:

Shutdown continues.

User Action:

None.

N26318

ACCESS DENIED FOR P1 (PORT RESTRICTION)

Reason:

The Access Control feature has denied access to this port.

System Action:

The logon is rejected.

User Action:

This may be a time restriction. Try again when access is allowed. If necessary contact your system administrator.

N26319**ACCESS DENIED FOR P1 (HOST RESTRICTION)****Reason:**

The Access Control feature has denied remote host access.

System Action:

The logon is rejected.

User Action:

This may be a time restriction. Try again when access is allowed. If necessary contact your system administrator.

N26320**ACCESS DENIED TO PORT FOR P1****Reason:**

The security subsystem has denied user *P1* access to this port.

System Action:

The logon is rejected.

User Action:

Contact your system administrator to provide authorization.

N26321**ACCESS DENIED TO HOST FOR P1****Reason:**

The security subsystem has denied user *P1* host access.

System Action:

The logon is rejected.

User Action:

Contact your system administrator to provide authorization.

N26323

NETMASTER STILL INITIALIZING, TRY LATER

Reason:

You attempted to connect to the region while it is initializing.

System Action:

None.

User Action:

Wait until the region completes initialization, and then try again.

N26401

USERID INFORMATION FOR uuuuuuuu UNAVAILABLE

Reason:

An attempt to read a user record has failed because the user record 'uuuuuuuu' does not exist on the UAMS user database.

System Action:

The security function fails.

User Action:

Refer to your systems administrator.

N26402

USERID RECORD FOR uuuuuuuu CREATED, MODELLED ON modelid

Reason:

The user attempted a logon to SOLVE when there was no UAMS user record on the user database. However, a model user was defined to SOLVE using SYSPARMS MODLUSER=. The password that was provided by the user matches that of the model user and the logon proceeds. A user record is created for userid 'uuuuuuuu' based on 'modelid'.

System Action:

The logon is successful and a new user record is created.

User Action:

None.

N26403**MODEL USER (modelusr) NOT FOUND****Reason:**

'modelusr' was specified as a model user through the SYSPARMS command. The model userid is not defined on the UAMS dataset.

System Action:

The logon is rejected.

User Action:

Define the required model userid to UAMS.

N26404**UAMS UDB RECORD FOR userid FAILED DECRYPTION****Reason:**

The UDB record is stored in an encrypted form. Record retrieval was unable to decrypt the record. The wrong file may be in use or it contains invalid records.

System Action:

The function terminates.

User Action:

Refer this problem to your systems administrator for action.

N26405**UAMS UDB RECORD FOR X'aaaaaaaaaaaaaaaa' FAILED DECRYPTION****Reason:**

The UDB record is stored in an encrypted form. Record retrieval was unable to decrypt the record. The wrong file may be in use or it contains invalid records. The record key contains non-display characters and is displayed in hex format.

System Action:

The function terminates.

User Action:

Refer this problem to your systems administrator.

N26406

USER userid IS A GROUP DEFINITION - LOGON REJECTED

Reason:

An attempt was made to logon to a UAMS Group definition. Group definitions are not available for logon and the logon is rejected.

System Action:

The logon request is rejected.

User Action:

Logon to a valid user definition.

N26407

USER userid HAS AN INVALID GROUP DEFINITION

Reason:

An attempt was made to logon or retrieve a user definition from the UAMS database. The user definition has a group user defined; however, this group definition is not a valid group definition.

System Action:

The request is rejected.

User Action:

Contact your systems administrator.

N26408

UAMS DATASET IS FULL - REQUESTED function FOR USERID uuuuuuuu FAILED

Reason:

The UAMS dataset is full and the requested 'function' for userid 'uuuuuuuu' failed.

System Action:

The request is rejected.

User Action:

Contact your systems administrator to increase the size of the UAMS dataset or to delete obsolete user definitions.

N26409**UAMS DATA SET I/O ERROR - REQUESTED function FOR USERID
uuuuuuuuu FAILED.****Reason:**

An I/O error occurred whilst performing security 'function' for the userid 'uuuuuuuuu'. The request is rejected.

System Action:

The request is rejected.

User Action:

Refer the problem to your systems administrator to determine the reason for the error.

N26410**USERID RECORD FOR uuuuuuuuu ADDED BY UPDATE FUNCTION.****Reason:**

An internal request to update a user definition resulted in the userid uuuuuuuuu being added to the UAMS dataset.

System Action:

The user definition was added to the UAMS database.

User Action:

None; the update request completed successfully.

N26411**USERID RECORD FOR uuuuuuuuu ALREADY EXISTS.****Reason:**

An attempt was made to add a new user definition to the UAMS database. The userid uuuuuuuuu already exists in the UAMS database.

System Action:

The request to add the new user definition to the UAMS database is rejected.

User Action:

Correct the userid on the ADD function and retry.

N26412

USER RECORD userid NOT DELETED - USERID INFORMATION UNAVAILABLE

Reason:

An attempt was made to delete a user record ('userid') from the UAMS database. The user record was not found.

System Action:

None.

User Action:

Correct the userid and retry the DELETE operation.

N26413

USERID RECORD FOR uuuuuuuu IS INVALID - GET OPT=KGT OR KLT.

Reason:

An &SECCALL GET OPT=KGT or KLT command was issued. The next sequential record on the user database for userid uuuuuuuu was invalid and was ignored. The next sequential record following or preceding *the invalid* record was read. This message is written to the activity log.

System Action:

The next sequential record is read.

User Action:

Contact your systems administrator in order that the user record in error can be corrected.

N26414

PASSWORD CHANGE INVALID FOR GROUP DEFINITION groupname

Reason:

An attempt was made to change the password of the group definition 'groupname'. This is invalid as group definitions cannot be logged on.

System Action:

The password change terminates.

User Action:

Correct the userid and retry.

N26415**GROUP USER NOT FOUND OR IN ERROR, PRIVILEGES RESET FOR
USERID uuuuuuuuu****Reason:**

A user 'uuuuuuuuu' is defined as using the privileges of a group definition. The group definition is not available. The user's privileges have been reset to the defaults. The logon, or the read, continues.

System Action:

The user's privileges are reset. The logon, or read, continues.

User Action:

Contact your systems administrator.

N26601**STRUCTURED FIELD IN ERROR - REFER TO LOG FOR DETAILS.****Reason:**

The structured field processor determined that one (or more) structured field(s) passed to, or returned from the security exit was in error. The details of the structured field(s) in error are written to the activity log.

System Action:

The structured field is ignored.

User Action:

Correct the structured field(s) in error and retry the operation.

N26602**INSUFFICIENT STORAGE TO COMPLETE REQUEST.****Reason:**

There was insufficient storage available to complete the security request.

System Action:

The request is not completed.

User Action:

Try the request later. If the problem persists, contact your product support representative.

N26701

STRUCTURED FIELD P1 IN ERROR

Reason:

A security sub-system exit has passed an invalid structured field (*P1*) or an invalid structured field was passed by an &SECCALL verb.

System Action:

This message is written to the activity log. The security request proceeds; however, the particular structured field in error is ignored.

User Action:

Identify the structured field in error and correct the error, either by correcting the NCL or the security exit.

N26A01

OBJECT INSTANCE METHOD CANCELLED BY RETCODE aaa FROM PROCEDURE bbbbbbbb.

Reason:

The NCL procedure bbbbbbbb set a return code indicating that update of its target object instance was to be ignored. Execution of the system method routine is bypassed and the Object Instance is not updated in the repository.

System Action:

The message is returned to the client in the reply SDU.

User Action:

None.

N26A02

OBJECT METHOD REPLY FAILED.

Reason:

Object Services Framework generated reply to client failed.

System Action:

Message is logged.

User Action:

Check system log for possible causes.

N26A03**INSUFFICIENT STORAGE FOR OBJECT SERVICES REQUEST.****Reason:**

An Object Services request could not be processed due to insufficient virtual storage.

System Action:

The request is terminated.

User Action:

Look for possible causes of high storage utilisation. Increase virtual storage address space size.

N26A04**OBJECT *aaaaaa* METHOD DATA INITIALIZATION FAILED.****Reason:**

The Object Services Request Broker could not initialize the method for an object request. This usually indicates a problem with building the Mapped Data Objects (MDOs) or may indicate a resource shortage.

System Action:

The service routine is not executed.

User Action:

1. Check that the object maps are valid.
2. Check the activity log for additional messages.

N26B01

REPOSITORY OPEN FAILED FOR aaaaaaaa - bbbbbbbbbbbbbbbbbbbb

Reason:

The Object Services Data Domain aaaaaaaa open failed either because the file could not be opened, or the dataset keylength was invalid.

System Action:

The request is rejected.

User Action:

Verify that the repository data domain is correctly defined and available for the required access level.

N26B02

OBJECT NAME IS INVALID.

Reason:

The instance name passed to the object services access method could not be parsed.

System Action:

Access to the system repository is rejected.

User Action:

Check the request parameters, and verify mds maps for object class.

N26B03

INSUFFICIENT STORAGE.

Reason:

The object services repository access method could not acquire sufficient storage to process the request.

System Action:

The request is rejected.

User Action:

Check that sufficient storage has been allocated to the *SOLVE* address space and that there are no errant processes holding excess storage.

N26B04**DUPLICATE OBJECT INSTANCE.****Reason:**

A request to CREATE an object instance was issued and an instance with the same name already exists.

System Action:

The request is rejected.

User Action:

Check the name passed in the request.

N26B05**REPOSITORY aaaa ERROR. VSAM FDBK=bb.****Reason:**

An attempt to access the repository dataset failed with the VSAM FDBK bb. The access type is aaaa.

System Action:

The request is rejected.

User Action:

Review the VSAM FDBK for the function specified in the message.

N26B06**PARENT OBJECT NOT FOUND.****Reason:**

A CREATE request was issued for an object whose parent did not exist.

System Action:

The request is rejected.

User Action:

Review the service request parameters.

N26B07

PERSISTENT OBJECT INSTANCE NOT FOUND.

Reason:

The object instance specified in the service data unit did not exist.

System Action:

ERRORID of NOSUCHOBJECTINSTANCE is set in the reply SDU.

User Action:

Check the name specified in the Service Data Unit.

N26B08

REPOSITORY RECORD SIZE TOO SMALL FOR OBJECT

Reason:

An attempt was made to CREATE or update an object instance in the repository, and the maximum data domain record size was too small to contain the object.

System Action:

The request is rejected.

User Action:

Check the size requirements for the object instance.

N26B09

INVALID UPDATE REQUEST FOR READ ONLY REPOSITORY

Reason:

An update request was issued for a repository which was in read-only mode.

System Action:

The request is rejected.

User Action:

Check the access mode for the repository.

N26B10**OBJECT DELETE REQUEST REJECTED FOR OBJECT WITH CHILDREN.****Reason:**

A DELETE request was recieved for an object with dependant children.

System Action:

The request is rejected.

User Action:

Review the request.

N26B11**REPOSITORY ACCESS FAILED - CREATE REQUEST REJECTED****Reason:**

An attempt to maintain the data domain root record failed. This message usually indicates a logical error exists on the data domain dataset.

System Action:

The request is rejected.

User Action:

Check the integrity of the data domain dataset. It may be neccessary to restore the data domain from backup.

N26B12**DATA DOMAIN aaaaaaaaaa NOT INITIALIZED.****Reason:**

The data domain required to service the object services request is not available.

System Action:

The request is rejected.

User Action:

Look for other messages in the log to determine why data domain initialization failed.

N26C02

MODE=UNCONFIRMED INVALID FOR &&OSCALL CONVERSE.

Reason:

No reply is expected for an unconfirmed request. &OSCALL CONVERSE anticipates a reply, hence it is not valid to issue an unconfirmed request using &OSCALL CONVERSE.

System Action:

The request is rejected.

User Action:

Use &OSCALL SEND, or change the type to CONFIRMED.

N26D01

REGISTRATION NAME IS INVALID.

Reason:

The object instance name passed in the service request could not be parsed.

System Action:

The request is rejected.

User Action:

Check the request parameters.

N26D06

INSUFFICIENT STORAGE FOR REGISTRATION REQUEST.

Reason:

An attempt to access the system directory failed because not enough storage was available to process the request.

System Action:

The request is rejected.

User Action:

Check your system storage utilisation.

N26D07**Transient OBJECT INSTANCE NOT FOUND.****Reason:**

The object name specified in the service data unit could not be located in the system directory.

System Action:

The reply ERRORID is set to NOSUCHOBJECTINSTANCE.

User Action:

Check the instance name passed in the request.

N26E01**EVENT SELECTION FILTERING ERROR ON EFD**

aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa

Reason:

An attempt to compare an event to the filter specified on the Event Forwarding Discriminator (EFD) failed.

System Action:

Processing of the event continues with the next Event Forwarding Discriminator.

User Action:

Check the EFD filter is valid. It may also be necessary to check that the event mdo is correctly mapped.

N26F01

SCOPED REQUEST INVALID - aaaaaaaaaaaaaaaaaaaaaa

Reason:

An object services selection request could not be processed for one of the following reasons:

- The request CMISFILTER parameters were invalid.
- The NAMEFILTER was invalid.
- A data domain for the object was not available.

System Action:

The request is rejected.

User Action:

Correct the request parameters depending on the reason for the failure.

N26F02

SELECTION METHOD FAILED. TOO MANY SUBTREE LEVELS.

Reason:

An Object Services selection method could not continue because the number of levels in the Base Object hierarchy exceeded 28.

As it is unusual to have this many levels in the naming hierarchy, this error may indicate a recursive naming structure exists.

System Action:

The Selection method is terminated.

User Action:

Verify the integrity of the repository data structure.

N26F03

MDS ERROR PROCESSING aaaaaaaaaaaaaaaaaaaaaaa **MDORC=bb,**
MDOFDBK=cc.

Reason:

The Object Services Selection method detected an error while processing an internal mapped data structure. The component is: aaaaaaaaaaaaaaaaaaaaaaa, mds retcode bb, mds fdbk is cc.

System Action:

Processing of the selection request is terminated.

User Action:

Verify the map definitions for all object classes which are the target of the request. Check the request parameters.

N26F08

INSUFFICIENT STORAGE FOR OBJECT SERVICES REQUEST.

Reason:

The Object Services selection method could not acquire sufficient storage to process a request.

System Action:

The selection method is terminated.

User Action:

Check system storage utilisation.

N26G01

INVALID MIB OBJECT FOR CLASS aaaaaaaaaaaaaa.

Reason:

A system error occurred when the object services request broker attempted to access the class record aaaaaaaaaaaaaa.

System Action:

The request is rejected.

User Action:

Review the activity log to determine the cause of the class initialization failure. Particularly note any object services initialization errors that occurred during NetMaster initialization.

N26G02

MDS MAP CONNECTION FAILED FOR OBJECT MDO. MDSRC=00 FDBK=00 MAPNAME=aaaaaa aaaaaaa.

Reason:

An internal MDS assignment failed while processing an object services request.

System Action:

The request is rejected.

User Action:

Determine the reason for the MDS error from the return code, feedback and mapname in the message.

N26G03

OBJECT INSTANCE NOT FOUND.

Reason:

The object instance named in the object services request could not be located in the system repository.

System Action:

The reply ERRORID is set to NOSUCHOBJECTINSTANCE.

User Action:

Check the request name parameters.

N26G05**OIS NOT SUPPORTED FOR MANAGED OBJECT CLASS: aaaaaaaaaaaaaa.****Reason:**

A request was passed to the object services access method for an unsupported object data domain type.

System Action:

The request is rejected.

User Action:

Check the object class specification.

N26G06**DATA DOMAIN NOT AVAILABLE FOR OBJECT CLASS aaaaaaaaaaaaaa.****Reason:**

A request was passed to the Object Services access method, which required access to an unavailable data domain.

System Action:

The request is rejected.

User Action:

Check the activity log for messages indicating why the data domain is not initialized.

N26G07**UPDATE INHIBITED FOR MANAGED OBJECT CLASS aaaaaaaaaaaaaa.****Reason:**

An update request was passed to the object services access method routines and the class for the managed object instance is not available for update.

System Action:

The request is rejected.

User Action:

Check request parameters.

N26G08

OBJECT NAME IS INVALID.

Reason:

The object services access method could not parse the name of the object instance passed in the request.

System Action:

The request is rejected.

User Action:

Check the request name parameters.

N26H01

CLASS DEFINITION aaaaaaaaaa NOT FOUND.

Reason:

Lookup of the object class by the object services broker failed. Class aaaaaaaaaa was not defined to the MIB.

System Action:

The request is rejected.

User Action:

Check the class specification for the request.

N26H02

SYSTEM NOT INITIALIZED.

Reason:

Object Services is disabled because system initialization failed.

System Action:

The request is rejected.

User Action:

Check the activity log for initialization messages that indicate why the initialization of Object Services failed.

N26I01**ZOSMIB OBJECT INITIALIZATION FAILED. OBJECT SERVICES NOT AVAILABLE.****Reason:**

The system MIB object ZOSMIB load failed. This is the root object for the MIB.

System Action:

Object Services is disabled.

User Action:

Check the SOLVE activity log for other messages which indicate the reason for the load failure. Correct and re-start SOLVE.

N26I02**MIB LOAD FAILED FOR *aaaaaaaaaaaa* CLASS RECORD. <OBJECT SERVICES INITIALISATION FAILED.>****Reason:**

The Object Services kernel class *aaaaaaaaaaaa* could not be loaded. This is usually because the ZOSMIB data domain cannot be accessed or the MIB has not been created.

If initialization is unable to continue, the message says: OBJECT SERVICES INITIALISATION FAILED. If this is not present in the message, initialization proceeds using default values for the missing object.

Note: By default the ZOSMIB data domain is in the OSCNTL file.

System Action:

Initialization continues.

User Action:

If the error was due to file errors on the OSCNTL file, you must recover the OSCNTL file and restart SOLVE.

If your MIB has not been compiled, compile it before proceeding with Object Services initialization.

N26I03

MIB LOAD FAILED FOR aaaaaaaaaa DOMAIN RECORD.

Reason:

The data domain definition for aaaaaaaaaa could not be loaded.

System Action:

Object Services is disabled.

User Action:

Check the SOLVE system log for the reason and re-start SOLVE.

N26I04

MIB LOAD FAILED FOR aaaaaaaaaa ACTION RECORD.

Reason:

The action definition for aaaaaaaaaa cannot be loaded.

System Action:

Initialization continues. Some Object Services functions are disabled.

User Action:

Review the activity log for the reason for the failure.

N26I05

MDS MAP FAILED DURING OBJECT SERVICES INITIALIZATION - OS INITIALIZATION TERMINATED.

Reason:

An system object map failed during Object Services initialization.

System Action:

Object Services is disabled.

User Action:

Ensure that the OSCNTL file has been correctly installed. It may be necessary to re-install and re-compile if the ZOSMIB map is invalid. Alternatively re-generate the ZOSMIB map from source and re-start system.

N26I06**OBJECT SERVICES INITIALIZATION FAILED - STORAGE SHORTAGE.****Reason:**

There was insufficient storage to initialize Object Services.

System Action:

Object Services is disabled.

User Action:

Increase the SOLVE region size.

N26J01**EVENT DELIVERY TO DESTINATION**

**aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa FAILED: b
bbbbbbbbbbbbbbbbbbbb**

Reason:

Delivery of an event to server aaaaaaaaaaaaaaaaaaaaaaaaaaaaaa failed for one of the following reasons:

- Insufficient Storage; MDS mapping error; The connection to the server failed.

System Action:

The event report is not delivered.

User Action:

Check the server specified on the EFD is active.

N26K01**REPOSITORY OPEN FAILED FOR aaaaaaaa - bbbbbbbbbbbbbbbbbbbb****Reason:**

An attempt to open the VSAM data set for repository data domain aaaaaaaa failed for reason bbbbbbbbbbbbbbbbbbbb.

System Action:

The data domain is unavailable and the data domain initialization action terminates.

User Action:

Review system log for reason for dataset open failure.

N26K02

DATA DOMAIN OBJECT aaaaaaaaaa - bbbbbbbbbbbb ATTRIBUTE REQUIRED. INIT IALISATION FAILED.

Reason:

The data domain attribute bbbbbbbbbbbb must be set before the data domain aaaaaaaaaa can be opened.

System Action:

The data domain is disabled.

User Action:

Ensure that the data domain is correctly specified. Re-compile MIB if necessary.

N26K03

DATA DOMAIN COULD NOT BE ACCESSED - SEE LOG.

Reason:

Dataset allocation failed for repository data domain.

System Action:

The data domain is disabled.

User Action:

Review allocation error messages in the activity log.

N26K05

REPOSITORY GET ERROR. VSAM FDBK=aa.

Reason:

A VSAM error occurred when the Object Services data domain initialization routine attempted to retrieve the data domain definition record.

System Action:

The data domain is disabled.

User Action:

Check dataset integrity for the data domain.

N26K06**DATA DOMAIN aaaaaaaaaaaaaa INTEGRITY ERROR DETECTED.****Reason:**

The instance identifier set in the system is invalid. This indicates possible corruption of the repository data domain.

System Action:

The data domain root record is not updated.

User Action:

Verify integrity of the repository dataset.

N26K07**DATA DOMAIN aaaaaaaaaaaaaa INITIALIZATION FAILED. FILE ALREADY ASSIGNED T O bbbbbbbbbbbbbb.****Reason:**

The dataset allocated to Data Domain aaaaaaaaaaaaaa was previously opened for a different Data Domain definition bbbbbbbbbbbbbb.

System Action:

The data domain is disabled.

User Action:

Ensure that each dataset is allocated to only one Data Domain.

N26L02**OBJECT MDO IS INVALID - aaaaaaaaaaaaaaaaaaaaaaaaaaaaaa****Reason:**

The object mdo specified for an object services method is invalid for one of the following reasons:

- OBJECT CLASS MISSING - CLASSID is required component of object.
- OBJECT MDO NOT FOUND - The object mdo could not be found.

System Action:

The request is rejected.

User Action:

Correct the &OMCALL NCL statement.

N26L03

OBJECT NOT LOCATED FOR aaaaaa.

Reason:

The object name specified for an object services method does not exist in the Object Instance Repository.

System Action:

The request is rejected.

User Action:

Verify the object name.

N26L04

INVALID MIB OBJECT FOR CLASS aaaaaaaaaaaaaa.

Reason:

The Managed Object Class aaaaaaaaaaaaaa has not initialized in the MIB.

System Action:

The request is rejected.

User Action:

Check the activity log for messages indicating why the MIB class build failed.

N26L05

OIS NOT SUPPORTED FOR MANAGED OBJECT CLASS: aaaaaaaaaaaaaa.

Reason:

The OIS method service routine was passed a request for an object which is not defined with OIS support.

System Action:

The request is rejected.

User Action:

This is a system error. Ensure that the class definitions have been specified correctly and that they have not been dynamically modified.

N26L06

**MDS MAP CONNECTION FAILED FOR OBJECT MDO. MDSRC=00
FDBK=00 MAPNAME=aaaaa aaaaaaa.**

Reason:

An internal MDS assignment failed in the Object Services OIS method routine.

System Action:

The request is rejected.

User Action:

Use the MDS RETCODE and FDBK to determine the cause of the failure.

N26M01

**&OMCALL \$OSOBJECT MDO MUST BE AVAILABLE IN NCL OR SPECIFIED
ON OBJECT OP ERAND.**

Reason:

The OBJECT operand was not specified on an &OMCALL statement and the \$OSOBJECT MDO was not available in the NCL procedure.

System Action:

The &OMCALL statement is ignored.

User Action:

Specify the OBJECT operand on the &OMCALL statement, or ASSIGN an MDO to \$OSOBJECT.

N26O03

OBJECT DELETION REJECTED BY SYSTEM METHOD.

Reason:

A DELETE request for a Managed Object Instance was rejected by a the system resource manager. System methods may reject deletion requests for protected resources.

System Action:

The DELETION request is rejected.

User Action:

N/A

N26P01

OBJECT MDS INVALID.

Reason:

An invalid object was passed to the Object Services ZOSEFD system method

System Action:

The request is rejected.

User Action:

Correct the EFD request SDU.

N26P02

EFD FILTER INVALID.

Reason:

The CMIS filter passed in an EFD service request could not be parsed.

System Action:

The EFD request is rejected.

User Action:

Correct the CMIS filter specification.

N26P03

EFD CONTAINS TOO MANY DESTINATIONS.

Reason:

An EFD service request contained more than the maximum number of destinations allowed.

System Action:

The EFD service request is rejected.

User Action:

Reduce the number of destinations for the EFD.

N26R01**SELECTION METHOD FAILED FOR m_o_class m_o_instance****Reason:**

The system object services selection method failed for the managed_object_instance of managed_object_class.

System Action:

A message containing the reason for the failure is returned in the reply SDU.

User Action:

Check the reply SDU and correct the selection request.

N26R02**CMISFILTER PROCESSING FAILED.****Reason:**

The Object Services system selection method could not process the CMIS filter against a selected object.

System Action:

Selection processing is terminated.

User Action:

Check the CMIS filter specified on the selection request.

N26R03**NESTED SELECTION METHOD FAILED FOR m_o_class m_o_instance****Reason:**

A nested NCL selection procedure was required to complete a selection request by the system selection routine. The NCL selection method execution failed.

System Action:

Processing of the selection request is terminated.

User Action:

Check that selection methods defined to the MIB are correctly installed.

N26R04

MDS ERROR ON SELECTED OBJECT. MDORC=aa,MDOFDBK=bb.

Reason:

An attempt to return a selected object by the Object Services selection method failed because an MDS error occurred on object assignment.

System Action:

Processing for the selection method is terminated.

User Action:

Check object maps are correctly defined.

N26R05

OPERATION FAILED.

Reason:

Object Services Selection method processing failed.

System Action:

Processing for the selection method is terminated.

User Action:

Check selection request parameters.

N26T01

DIRECTORY QUERY - TRANSACTION PROTOCOL ERROR

Reason:

An APPC protocol violation occurred while attempting to process a DIRECTORY_QUERY system transaction.

System Action:

The error message is written to the SOLVE system log.

User Action:

Look for other APPC messages to find reason for conversation failure and retry.

N26T02**DIRECTORY QUERY - STORAGE SHORTAGE.****Reason:**

A storage shortage occurred while attempting to process the DIRECTORY_QUERY APPC transaction.

System Action:

The error message is written to the log. The object method fails.

User Action:

Investigate the reason for storage shortage. Correct and retry.

N26U02**MDS MAP CONNECTION FAILED FOR OBJECT MDO. MDSRC=00
FDBK=00 MAPNAME=aaaaaa aaaaaa.****Reason:**

An MDS error occurred while the system action routine was attempting to build a request SDU.

System Action:

The system action request is not issued.

User Action:

Check the MDS feedback information to determine cause of mapping failure.

N26V06**OBJECT SERVICES TERMINATION FAILED - STORAGE SHORTAGE.****Reason:**

During Object Services Termination, a system request could not be processed because there is insufficient storage.

System Action:

Object Services Termination can not continue.

User Action:

Ensure that sufficient Virtual Storage is allocated to the SOLVE address space.

N27G01

CURRENT PASSWORD INCORRECT, RE-ENTER

Reason:

An attempted password change operation has been rejected because the password supplied as the CURRENT password was incorrect.

System Action:

None.

User Action:

Enter correct password.

N27G02

NEW PASSWORD TOO SHORT OR TOO LONG, RE-ENTER

Reason:

An installation defined minimum or maximum password length applies.

System Action:

None.

User Action:

Choose a password whose length conforms with you installation's security standards. If in doubt contact your systems administrator.

N27G03

NEW PASSWORD CANNOT BE THE SAME AS CURRENT PASSWORD

Reason:

In response to a request to change passwords a replacement password has been entered that is the same as the existing password. A replacement password must be different.

System Action:

None.

User Action:

Enter a different password.

N28101**FIELD MUST BE Y OR N****Reason:**

The field marked by the cursor is invalid. The only values that can be assigned are Y or N.

System Action:

None.

User Action:

Correct and re-enter.

N28102**INVALID VALUE****Reason:**

The field marked by the cursor is invalid.

System Action:

None.

User Action:

Correct and re-enter.

N28127**IT IS INVALID TO HAVE 'X' AS INITIAL OCS COMMAND****Reason:**

If X were allowed as the initial command executed automatically on entry to Operator Control Mode it would cause immediate exit to the primary menu. For this reason it is not allowed.

System Action:

None.

User Action:

Correct the command field and retry.

N28136

RECEIVE ALL PPO AND UNDELIVERABLES CANNOT BOTH BE Y

Reason:

These two fields are mutually exclusive and cannot both be set to the same value.

System Action:

None.

User Action:

Correct the fields and retry.

N28137

RECEIVE ALL PPO AND UNDELIVERABLES CANNOT BOTH BE N

Reason:

These two fields are mutually exclusive and cannot both be set to the same value.

System Action:

None.

User Action:

Correct the fields and retry.

N28501

VSAM INITIAL LOAD COMPLETED SUCCESSFULLY, DD= P1

Reason:

This message appears on the activity log only. Indicates that the system has initialized an empty VSAM dataset and shows the associated DD name (*P1*).

System Action:

For a VSAM KSDS, a low key record x'00' is inserted and then deleted. For an ESDS, a record consisting of message N28510 is inserted as the first record in the dataset and remains in the dataset.

User Action:

None.

N28502**OPEN FAILED FOR VSAM ACB, CODE P1 - DD=P2****Reason:**

A VSAM dataset failed to open in CREATE mode for the specified error reason code (*P1*), in the format X'xy'. The DD name associated with the dataset is shown (*P2*). Empty VSAM datasets are opened in CREATE mode in order to perform an initial load.

System Action:

The system terminates with a user abend code if the dataset is a system dataset. If the dataset is a User DataBase (UDB) processing continues but the dataset is not available for NCL procedure processing.

User Action:

Enter **/VSAMRC** at the command prompt to access NETINFO : Browse VSAM OPEN Macro Return Codes. Enter the ACB code value in the VSAM error code field and press Enter.

Refer to the appropriate *VSAM Programming* manual for an explanation of the error code.

N28503**OPEN FAILED FOR VSAM ACB, CODE P1 - DD=P2****Reason:**

A VSAM dataset failed to open in UPDATE mode for the specified error reason code (*P1*), in the format X'xy'. The DD name associated with the dataset is shown (*P2*).

System Action:

The system terminates with a user abend code if the dataset is a system dataset; if the dataset is a User DataBase (UDB) processing continues but the dataset is not available for NCL procedure processing.

User Action:

Enter **/VSAMRC** at the command prompt to access NETINFO : Browse VSAM OPEN Macro Return Codes. Enter the ACB code value in the VSAM error code field and press Enter.

Refer to the appropriate *VSAM Programming* manual for an explanation of the error code.

N28504

VSAM INITIAL LOAD FAILED, DD=*P1*

Reason:

When a UDB is opened, it is tested to determine if it is empty (not previously loaded). If the dataset is empty, VSAM requires that it be loaded before it can be processed in update mode. In such cases the dataset is opened in create mode and inserts an initialization record. The attempt to do this has failed. The DD name (*P1*) is shown.

System Action:

The UDB is not available for further processing.

User Action:

Determine the cause of the error, correct and retry.

N28506

BUILD FAILED FOR VSAM LSR POOL, R15= *P1*

Reason:

An attempt to build an LSR pool, by calling module NMDEFLSR, resulted in the module returning the indicated value (*P1*) in Register 15.

System Action:

The UDB requesting LSR processing will not be opened.

User Action:

Use the VSAM Programming Guide to determine the reason for the error, the R15 value is the return code from the BLDVRP macro.

N28507**VSAM LSR POOL P1 BUILT****Reason:**

A UDB was opened requested LSR processing. The open request was the first that required the indicated LSR pool (*P1*).

System Action:

The LSR pool has been built using the specifications as defined in the LSRPOOL command.

User Action:

None.

N28508**VSAM LSR POOL P1 DELETED****Reason:**

The last UDB using the indicated LSR pool has been closed. The LSR pool (*P1*) has been deleted.

System Action:

None.

User Action:

If necessary the format of the LSR pool can be changed by modifying the LSRPOOL command. Any such changes will be utilized when the next UDB is opened that requires LSR processing.

N28509

VSAM ACB OPEN WARNING, CODE= P1, DD= P2 PROCESSING CONTINUING

Reason:

During open processing a VSAM warning class message was detected. The warning code (P1) is shown in the format X'xy'. The associated DD name is also shown (P2).

System Action:

Processing continues and the dataset is classified as having been opened successfully.

User Action:

Investigate the reason for the error using the VSAM Programming Guide and determine if the error will impact processing. Take corrective action if necessary.

N28510

VSAM INITIAL LOAD PERFORMED AT P1 ON P2

Reason:

This message is inserted as the first record in an ESDS UDB that required load processing. VSAM necessitates that new datasets be opened in create mode and a minimum of one record be inserted before the dataset can be shared. For KSDS datasets this record is later deleted. For ESDS datasets it is not possible to delete the record. The time (P1 - hh.mm.ss) and date (P2 -day-dd.mon-year) are included as part of the data.

System Action:

This record remains as the first record in the dataset and provides a record of the date and time the dataset was loaded.

User Action:

If not required in the dataset, this record can be dropped by using the VSAM IDCAMS utility to REPRO the dataset specifying the SKIP(1) operand to start the copy at the second record.

N28511**VSAM DATASET OPEN FAILED, DD= P1 - P2****Reason:**

An attempt to open a VSAM dataset, (DD name *P1*), has failed for the stated reason (*P2*).

System Action:

If the dataset is a system dataset, for example the VFS, PANELS or USERIDS dataset, the region will abend with message N92049, abend code 285-09. If the dataset is a UDB (being opened by a UDBCTL command) the open fails.

User Action:

Examine the reason for the failure. Use Access Method Services to delete and redefine the dataset correctly.

N28512**CLOSE FAILED FOR VSAM ACB, R15= P1, EC= P2, DD= P3 UNUSABLE****Reason:**

An error occurred trying to open an optional system dataset, and a subsequent attempt to close the VSAM ACB failed.

P1 = Return code from ACB CLOSE (X'xy').

P2 = Error Code from SHOWCB.

P3 = JCL DD name associated with the dataset.

System Action:

If the dataset is not a mandatory system dataset, then the system continues this dataset.

User Action:

Investigate why the dataset is in error.

N28601

LOAD FOR VSAM UTILITY utilname FAILED

Reason:

An attempt to invoke the VSAM utility program *utilname* failed.

System Action:

The system terminates with a user abend code.

User Action:

Determine the reason for the load failure and restart SOLVE.

N28801

***ERROR* EXTENDED ADDRESSABILTY ESDS NOT SUPPORTED ON P1**

Reason:

A request for an Extended Format / Extended Addressability ESDS has failed for the DD name indicated (P1). ESDS support is limited to datasets below 4GB.

System Action:

The request fails.

User Action:

Change your NCL procedure to use either:

- a smaller ESDS
- a KSDS.

N28802***WARNING* VSAM P1 SHORTAGE FOR P2 - LSR POOL****Reason:**

This Monitor message indicates that one or more VSAM string or buffer shortages has occurred. In the message:

P1 is the shortage type, for example, STRING or BUFFER

P2 is the DD name.

The SHOW VSAM command can be used to determine the total number of string and buffer shortages that have occurred. A large number indicates that system tuning is required to avoid significantly impacting performance.

System Action:

Processing is suspended for that request until sufficient resources are available.

User Action:

If the LSR pool is indicated as the source of the problem, use the LSRPOOL command to provide more VSAM processing strings or buffers. For more information, see your systems administrator.

N28803***ERROR* VSAM ERROR P1 DETECTED ON P2 USING LSR POOL****Reason:**

When using deferred I/O an attempt to write a record has resulted in an error although the system previously indicated that the record was written successfully. In an MVS-type environment, message N28805 will follow with additional details. In the message:

P1 is the VSAM error code (X'xy')

P2 is the DD name.

System Action:

Processing continues.

User Action:

Refer to the VSAM Programmers Guide to determine the reason for the error and if it is likely to impact processing. Deferred I/O should not be used for critical datasets where errors of this nature could result in the loss of data. If necessary avoid using the DEFER option on the UDBCTL command when opening the dataset. Refer to your systems administrator.

N28804

***ERROR* VSAM PHYSICAL I/O ERROR FDBK= P1 DETECTED ON P2**

Reason:

During processing of the VSAM file, described by the ddname in the message, a VSAM macro return code indicated a physical error had occurred. The message provides the corresponding RPL feedback code (P1) and DD name (P2).

System Action:

The file processing request fails.

User Action:

Refer to the VSAM Programming manual to determine the meaning of the feedback from the message and the appropriate course of corrective action. If the dataset with the I/O error has been opened using the LSR option, it should be closed and opened to free the LSR Buffer that was being used at the time of the error.

N28805

INFO P1

Reason:

This message is issued as a result of a physical I/O error on a VSAM dataset on an MVS (or equivalent) system. It will be preceded by message N28803. The information contained in the message is as returned by VSAM (P1) in the form: *yyddd,hhmmssst,rbaaddr ,d-or-i,volser,jobname ,j*

System Action:

The file I/O request fails.

User Action:

Refer to message N28803.

N28806**GENERIC REQUEST HAS INVALID KEYLENGTH OR NULL KEY VARIABLE.****Reason:**

A &FILE verb has been issued using an invalid generic key length or with the GENLEN= parameter supplied with a null variable.

System Action:

The &FILE verb fails with &FILERC=8 and &SYSMSG set to the N28806 message text.

User Action:

Investigate the reason for the error and correct the NCL program logic as required.

N29501**INVALID SYNTAX****Reason:**

The failing statement contains invalid syntax.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29502**REQUIRED DATA OMITTED****Reason:**

The required source data is missing from the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29503

REQUIRED KEYWORD NOT FOUND

Reason:

The failing statement does not contain a required keyword.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29504

REQUIRED DATA OMITTED

Reason:

The required source data for the function has been omitted from the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29505

INVALID NUMBER

Reason:

An invalid number has been specified on the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29506**INVALID HEXADECIMAL NUMBER****Reason:**

An invalid hexadecimal number has been encountered on the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29507**INVALID HEXADECIMAL STRING****Reason:**

An invalid hexadecimal string has been encountered on the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29508**INVALID NAME****Reason:**

An invalid name has been encountered on the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29509

INVALID VARIABLE NAME

Reason:

An invalid variable name has been encountered on the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29510

INVALID NAME

Reason:

An invalid resource name has been encountered on the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29511

DATA IS INVALID LENGTH

Reason:

An invalid data length is specified on the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29512**NUMBER NOT IN RANGE****Reason:**

A number has been specified on the failing statement which is outside of the range of expected values.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29513**DUPLICATE KEYWORD****Reason:**

A duplicate keyword has been encountered on the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29514**INVALID SYNTAX OR OMITTED KEYWORD****Reason:**

The failing statement is either invalid or a required keyword is missing.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29515

REQUIRED KEYWORD NOT FOUND

Reason:

A required keyword has been omitted from the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29516

INVALID KEYWORD AFTER '='

Reason:

An invalid or reserved keyword has been encountered on the failing statement or command.

System Action:

The entered command or NCL procedure fails.

User Action:

Correct and retry.

N29517

MUTUALLY EXCLUSIVE KEYWORDS

Reason:

The failing statement cannot be processed because of conflicting keywords.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29518**INVALID (A,B) NUMBERS****Reason:**

Invalid range numbers have been found on the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29519**FIRST NUMBER TOO LOW, OR SECOND TOO HIGH****Reason:**

Invalid range numbers have been found on the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29520**REQUIRED KEYWORD OMITTED****Reason:**

A required keyword has been omitted from the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29521

INVALID SYNTAX, NOT YES OR NO

Reason:

The failing statement has invalid syntax.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29522

UNBALANCED PARENTHESIS

Reason:

The failing statement has a missing parenthesis or incorrectly paired parentheses.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29523

REQUIRED VARIABLE(S) OMITTED

Reason:

The failing statement requires one or more variables for the requested function.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29524**INVALID NAME OR GENERIC NAME****Reason:**

The failing statement contains an invalid variable name or generic prefix.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29525**NULL VALUE INVALID****Reason:**

The failing statement specifies a null variable.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29526**QUOTED STRING HAS NO CLOSING QUOTE****Reason:**

The failing statement contains a string enclosed in quotes but there is no closing quote to delimit the string.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29527

SINGLE QUOTE NOT FOLLOWED BY QUOTE/BLANK/VALID-CHAR

Reason:

The failing statement contains a single quote that is neither enclosed in quotes itself nor is delimiting a string enclosed in quotes.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29528

INVALID DOMAIN NAME

Reason:

The failing statement contains a domain name which does not comply with the syntax rules for domain names. That is, it is longer than 4 characters or contains invalid values.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29529**INVALID NAME PATTERN****Reason:**

This message is produced while parsing a command or NCL verb when an invalid name pattern is found.

A name pattern must be a valid PDSNAME-format character string, where the first character is alphabetic or national, and the remaining characters alphanumeric or national.

The name pattern can have two additional characters in any position, the question mark (?) meaning a 1-character wildcard (matches any single pattern), and the asterisk (*), meaning that 0 or more characters will match at this point.

For example, ABC? matches ABCD, ABCX. ABC* matches ABC, ABCD, ABC1

*ABC matches ABC, XXABC, X7ABC

System Action:

The command or NCL statement is rejected.

User Action:

Correct the name pattern.

N29530**STRING EXCEEDED MAXIMUM ALLOWABLE****Reason:**

The failing statement contains a character or hex data string which is longer than the maximum allowed.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29531

INVALID PREFIX

Reason:

The operand in error requires an NCL prefix value. An NCL prefix value must start with a non-numeric and contain valid NCL naming characters.

System Action:

The function is terminated in error. Message N29549 is issued indicating the operand in error.

User Action:

Correct the operand indicated by message N29549.

N29548

USER EXIT INDICATED ERROR

Reason:

The failing statement has been signalled as being in error by a user exit.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29549

PARAMETER IN ERROR: *parm*

Reason:

This message will follow another N295xx message if the parameter that caused the error can be detected. *parm* displays up to 50 characters of the parameter in error.

System Action:

As for the preceding message.

User Action:

As for the preceding message.

N29E01**CONNECT OF P1 FAILED - P2****Reason:**

This message is issued when an attempt to connect to another region fails. It indicates that the outgoing connect request failed. The fields in the message are:

P1 - The target region's primary APPL name.

P2 - The failure reason:

UNABLE TO CHOOSE ACCESS METHOD The system was unable to pick an access method (eg VTAM) for the connection request; no access method was specified on the LINK START or DEFLINK command, and a domain definition (DOMAIN command) for the target prevented choice of an active access method.

REQUESTED ACCESS METHOD DENIED The connection request had a specific access method eg VTAM. However a DOMAIN DEFINE command has been entered for the target and that access method has been specified as NO.

System Action:

The connection is not started.

User Action:

Examine the reason. Common causes are having a wrong DOMAIN definition table entry (Wrong access methods enabled), or not having all the required access methods active (eg TCP/IP).

N29K10**Unable to set Generic Resource at this time****Reason:**

An attempt was made to set the VTAM Generic Resource System Parameter (GENRSRC) while the region's primary VTAM ACB is open.

System Action:

The command is ignored.

User Action:

To change the GENRSRC parameter, the region's primary VTAM ACB must be closed. This parameter should be set either by the GENRSRC JCL parameter in your region's RUNSYSIN, or by setting the name in the \$AC INIT parameter group and recycling this region.

N29K11

Generic Resource Name delete failed, see the Activity Log

Reason:

An attempt to set the VTAM Generic Resource system parameter (GENRSRC) to NO failed.

System Action:

The command is ignored.

User Action:

Refer to the activity log for details about this failure.

N29N01

INSUFFICIENT AUTHORITY FOR OPNDST COMMAND: NOT AN LU1 PRINTER

Reason:

An OPNDST command was rejected because your command authority restricts you to LU1 printers.

System Action:

The command is rejected.

User Action:

Contact your systems administrator.

N29X01

APPL NAME P1 MONITORING REQUEST ACCEPTED

Reason:

This message is issued in response to an APPLSTAT command and indicates that the request to monitor a VTAM application name (*P1*) was accepted.

System Action:

The system monitors the application.

User Action:

None.

N29X02**APPL NAME P1 MONITORING REQUEST ALREADY EXISTS****Reason:**

This message is issued in response to an APPLSTAT command. The message indicates that the request to monitor a VTAM application name (*P1*) failed because there is already an active request for this application.

System Action:

The request is ignored.

User Action:

Use the SHOW APPLSTAT command to list active monitoring requests.

N29Y01**APPLNAME STATUS LAST UPDATED****Reason:**

This message is the heading line for a SHOW APPLSTAT command. For more information, see message N29Y02.

System Action:

None.

User Action:

None.

N29Y02**P1 P2 P3****Reason:**

This message is the detail line for a SHOW APPLSTAT command. The following fields are displayed:

P1 - The VTAM application name

P2 - The current status

P3 - The time that the status was last updated

System Action:

None.

User Action:

None.

N29Y03

NO MONITORED APPLICATIONS FOUND

Reason:

This message is issued in response to a SHOW APPLSTAT command where one of the following applies:

- No application monitoring requests exist
- No definitions match the application name criteria provided

System Action:

None.

User Action:

If an application name pattern was provided, try using a different pattern.

N2A101

INVALID DEBUG SYNTAX OR OMITTED KEYWORD

Reason:

A DEBUG command has been entered but the keyword following the DEBUG keyword is not valid. This second keyword is used to identify the type of DEBUG command entered.

System Action:

The DEBUG command is rejected.

User Action:

Correct the DEBUG command and retry.

N2A201**DEBUGID nnnnnnn DOES NOT EXIST****Reason:**

A DEBUG START command has been entered with the DEBUGID operand to connect to a suspended debug session but no suspended debug session exists with the specified debugid.

System Action:

The DEBUG command is rejected.

User Action:

Correct the DEBUGID operand and retry. The SHOW DEBUG command can be used to obtain the debugid.

N2A202**NCL PROCESS nclid IS ALREADY BEING DEBUGGED****Reason:**

A DEBUG START command has been entered with the NCLID operand to gain debug control over an executing NCL process. The NCL process is already under control of debug.

System Action:

The DEBUG command is rejected.

User Action:

The SHOW DEBUG command may be used to find out which user is debugging the NCL process.

N2A203

ANOTHER USER IS ALREADY DEBUGGING WITH THE SAME SCOPE SPECIFICATION

Reason:

A DEBUG START command has been entered which has targeted exactly the same scope as another DEBUG START in the system. It is invalid for different debug scopes to specify exactly the same criteria.

System Action:

The DEBUG command is rejected.

User Action:

Correct the DEBUG command operands and retry. The SHOW DEBUG command can be used to find out which user has entered the identical DEBUG START command.

N2A204

NCL PROCESS nclid IS NOT EXECUTING

Reason:

A DEBUG START command has been entered with the NCLID operand to target a specific NCL process but the NCL process is not executing in the system.

System Action:

The DEBUG command is rejected.

User Action:

Correct the NCLID operand and retry.

N2A205**NOT AUTHORISED TO DEBUG ANOTHER USERS NCL****Reason:**

A DEBUG START command has been entered to debug NCL which is executing in another users region but the command issuer does not have sufficient authority to debug NCL owned by another user.

System Action:

The DEBUG command is rejected.

User Action:

None.

N2A206**INSUFFICIENT STORAGE TO SATISFY REQUEST****Reason:**

A DEBUG START command has been entered but a storage shortage has prevented the system from starting the debug session.

System Action:

The DEBUG command is rejected.

User Action:

Investigate the reason for the storage shortage.

N2A207**DEBUG START REJECTED, DEBUG ALREADY ACTIVE****Reason:**

A DEBUG START command has been entered with the DEBUGID operand to connect to a suspended debug session but the command issuer already has a debug session active.

System Action:

The DEBUG command is rejected.

User Action:

The DEBUG STOP command may be used to suspend the current debug session. The DEBUG START command may then be used to connect to the suspended debug session.

N2A208

DEBUG SESSION STARTED.

Reason:

A DEBUG START command has been entered and has successfully begun debug processing.

System Action:

Debug processing begins.

User Action:

Other DEBUG commands may be used to control the NCL processes which are being debugged.

N2A209

THE WINDOW/REGION/USER IS NOT ACTIVE. THIS IS REQUIRED IF KEEP=NO IS SPECIFIED OR DEFAULTED.

Reason:

A DEBUG START command has been entered without the KEEP=YES operand and the targeted WINDOW/REGION/USER does not currently exist.

System Action:

The DEBUG command is rejected.

User Action:

The KEEP=YES operand may be entered to allow the debug to begin without the window/region/user existing. This allows debug to be started on user region such as APPC which are transient and to not exist for long periods of time.

N2A210**DEBUG OF NCL PROCESS nclid STOPPED****Reason:**

A DEBUG STOP command has been entered with the NCLID= operand to stop debug of a particular NCL process. The command has been successfully processed.

System Action:

Debug control has been removed from the specified NCL process.

User Action:

None.

N2A211**NCL PROCESS nnnnnn IS INELIGIBLE FOR DEBUG****Reason:**

A DEBUG START command has been entered which specified the NCLID of a procedure which is not eligible for debug. This may be for one of the following reasons:

- the process is a LOCKPROC system process
- the process is a MSGPROC and the DEBUG START command was entered from the environment in which the MSGPROC is executing. This is invalid because if the process became suspended the debugging user would no longer be able to see command responses.
- the DEBUG START command was entered from within the dependent (&INTCMD) environment of the nominated process. This is invalid because if the process became suspended it could not enter any DEBUG commands to resume execution.

System Action:

The DEBUG START command is rejected.

User Action:

None.

N2A212

DEBUG SESSION STOPPED

Reason:

A DEBUG STOP command has been entered to stop all debugs owned by the command issuer. The command has been successfully processed.

System Action:

Debug control has been removed from all NCL processes which were under debug control from the command issuer's environment.

User Action:

None.

N2A213

THE USER OPERAND IS REQUIRED AS NO USER IS LOGGED ON TO THE SPECIFIED REGION

Reason:

A DEBUG START command has been entered with the REGION operand and no USER operand and without the KEEP=YES operand. To prevent the debug session maintaining control over NCL in the region for an excessive period of time and to increase security, the USER operand must be included on the DEBUG START command.

System Action:

The command is rejected.

User Action:

Specify a userid on the USER operand of the DEBUG START command.

N2A214**THE REGION OPERAND IS REQUIRED AS THE USER HAS MULTIPLE SESSIONS****Reason:**

A DEBUG START command has been entered with the USER operand and no REGION operand and without the KEEP=YES operand. To identify which region is to be debugged the REGION operand must be included on the DEBUG START command.

System Action:

The command is rejected.

User Action:

Specify a region name on the REGION operand of the DEBUG START command.

N2A215**DEBUG SESSION ENDED BY ENVIRONMENT/PROCEDURE TERMINATION****Reason:**

This message is sent to the SOLVE activity log when the environment (eg. OCS, dependent environment) which has an active debug session or the procedure terminates.

System Action:

The debug session is terminated.

User Action:

None.

N2A216

INSUFFICIENT AUTHORITY FOR REQUESTED FUNCTION

Reason:

A DEBUG START or DEBUG STOP command has been entered with the DEBUGID operand to reconnect to or terminate a suspended debug session. The command issuer is not authorized to issue the command to action another users debug session.

System Action:

None.

User Action:

None.

N2A217

DEBUG SESSION SUSPENDED, DEBUGID nnnn

Reason:

A DEBUG STOP TYPE=SUSPEND command has been issued to suspend a debug session and has completed successfully. A unique number, the 'DEBUGID', has been assigned to the suspended debug session. This number must be included on any DEBUG START or DEBUG STOP command which are to action the suspended debug session.

System Action:

The debug session has been suspended.

User Action:

None.

N2A218**NO DEBUG SESSION ACTIVE FROM THIS ENVIRONMENT****Reason:**

A DEBUG STOP command was issued and no previous DEBUG START command had been issued. There was no debug environment (established by a DEBUG START command) which the stop command could terminate.

System Action:

None.

User Action:

None.

N2A219**PROCEDURE procname NCLID nnnnnn IS UNDER DEBUG CONTROL****Reason:**

This message is issued to the owner of a restarted debug session to document a process as being under debug control. This occurs when the DEBUG START command has been issued and the DEBUGID operand was specified. The message is issued for every NCL process that is under the previously suspended debug sessions control at the time the DEBUG START command is processed.

The NCL process remains under debug control until a DEBUG STOP command is issued, or the NCL process no longer satisfies the criteria specified on the DEBUG START command, or the NCL process terminates.

System Action:

None.

User Action:

The owner of the debug session may now issue DEBUG commands to debug the NCL process.

N2A220

DEBUG OF NCL PROCESS nnnnnn SUSPENDED, DEBUGID mmmmmm

Reason:

A DEBUG STOP ID=nnnnnn TYPE=SUSPEND command has been issued to suspend the debug of a particular NCL process and has completed successfully. A unique number, the 'DEBUGID', has been assigned to the suspended debug session. This number must be included on any DEBUG START or DEBUG STOP command which are to action the suspended debug session. The NCL ID of the process that was targeted is nnnnnn.

System Action:

The debug for the NCL process has been suspended.

User Action:

None.

N2A301

BREAKPOINT TYPE HAS BEEN OMITTED

Reason:

A DEBUG BREAKPOINT command has been omitted but the breakpoint type cannot be determined. One of the breakpoint type operands (STMT, ARGS, VARS, VERB, EXEC) must be entered.

System Action:

The command is rejected.

User Action:

Enter one of the breakpoint operands required to identify the breakpoint type.

N2A302**SPECIFIED VARIABLE NAME IS INVALID****Reason:**

A *DEBUG BREAKPOINT* command has been entered to set a variable breakpoint but the variable name specified is invalid.

System Action:

The command is rejected.

User Action:

Change the name of the variable and retry.

N2A303**SPECIFIED VARIABLE CANNOT BE THE TARGET OF A BREAKPOINT****Reason:**

A *DEBUG BREAKPOINT* command has been entered to set a variable breakpoint but the *variable is not one* which can support a breakpoint (e.g. system variable, global variable).

System Action:

The command is rejected.

User Action:

Change the name of the variable and retry.

N2A305**VAR=prefix PREFIX TOO LONG FOR SPECIFIED/DEFAULT RANGE****Reason:**

A *DEBUG BREAKPOINT* command has been entered which specified a generic variable prefix. The length of the prefix plus the length of the numeric suffix determined by the specified or default range produces a variable name which is longer than the maximum allowed.

System Action:

The command is rejected.

User Action:

Correct the prefix or range.

N2A306

0 INVALID AS A RANGE

Reason:

A DEBUG BREAKPOINT command has been entered which specifies a generic variable prefix of ARGS or VARS=*. The specified or default range starts at 0 which produces a variable name of 0, *which is invalid*.

System Action:

The command is rejected.

User Action:

Correct the prefix or range.

N2A401

PROCEDURE procname NCLID nnnnnn HAS ALREADY BEEN SUSPENDED

Reason:

A DEBUG HOLD command has been issued which specified an NCL process which is already in a suspended state due to DEBUG HOLD command, DEBUG STEP command which stepped the procedure and it has reached the step statement limit, profile NEWHOLD=YES setting or a breakpoint being hit.

System Action:

The command is rejected.

User Action:

None.

N2A402

PROCEDURE procname NCLID nnnnnn IS NOT SUSPENDED

Reason:

A DEBUG RESUME command was entered which specified an NCL process which is not in a suspended state.

System Action:

The command is rejected.

User Action:

None.

N2A403**HOLD COMMAND FOR PROCEDURE procname NCLID nnnnnn ACCEPTED****Reason:**

A DEBUG HOLD command has been entered to halt execution of an NCL process and has been successfully processed.

System Action:

Execution of the NCL process will be suspended when the next statement in the currently executing procedure is encountered.

User Action:

None.

N2A404**RESUME COMMAND FOR PROCEDURE procname NCLID nnnnnn ACCEPTED****Reason:**

A DEBUG RESUME command has been entered to resume execution of an NCL process and has been successfully processed.

System Action:

Execution of the NCL process will be resume at the next statement.

User Action:

None.

N2A405**DEBUG PROFILE CHANGED****Reason:**

A DEBUG SET command has been entered to modify the debug profile for a debug session. This message confirms the success of the profile modification.

System Action:

None.

User Action:

None.

N2A406

STEP COMMAND FOR PROCEDURE procname NCLID nnnnnn ACCEPTED

Reason:

A DEBUG STEP command has been entered to invoke statement level stepping or NCL process execution until the next procedure entry or exit, and the command has been successfully processed.

System Action:

Execution of the NCL process will be suspended after the specified number of statements have been executed or when the next procedure entry or procedure exit occurs.

User Action:

None.

N2A407

OPERAND FUNCTION

Reason:

This message is the heading message for the display of a debug profile. A DEBUG SET command that is entered with no operands specified is interpreted as a request to display the current debug profile. When the debug profile is displayed the first message issued is a heading and subsequent messages describe each individual profile option.

System Action:

None.

User Action:

None.

N2A408**(NEWHOLD=aaa.) NEW PROCESSES WILL bbb BE SUSPENDED ON FIRST STATEMENT****Reason:**

This message is issued as a result of a DEBUG SET command. It indicates the current setting for the NEWHOLD debug profile option. The valid values are YES or NO. If NEWHOLD=YES is set then all NCL processes which come under debug control will be suspended immediately. If NEWHOLD=NO is indicated then 'bbb' will be 'NOT' to indicate that NCL processes will not be suspended when they come under debug control.

System Action:

None.

User Action:

None.

N2A409**(LOG=aaa.....) DEBUG MESSAGES WILL bbb BE SENT TO THE LOG****Reason:**

This message is issued as a result of a DEBUG SET command. It indicates the current setting for the LOG debug profile option. The valid values are YES or NO. If LOG=YES is set then messages issued by debug will also be sent to the activity log. If LOG=NO is indicated then 'bbb' will be 'NOT' to indicate that debug messages will not be logged.

System Action:

None.

User Action:

None.

N2A410

(NCLTRACE=aaa) DEBUGGED NCL'S TRACE MSGS WILL bbb BE SENT TO DEBUGGER

Reason:

This message is issued as a result of a DEBUG SET command. It indicates the current setting for the NCLTRACE debug profile option. The valid values are YES or NO. If NCLTRACE=YES is set then NCL trace messages issued by any process under the control of this debug session will be sent to the debugger. The trace messages will be issued if the NCL procedure has either CONTROL TRACE, CONTROL TRACE LAB or CONTROL TRACE ALL set. Alternatively the NCLTRACE command can be issued to set the tracing on for a particular process. If NCLTRACE=NO is indicated then 'bbb' will be 'NOT' to indicate that NCL trace messages will not be sent to the debugger.

System Action:

None.

User Action:

None.

N2A411

DISPLAY OF DEBUG PROFILE COMPLETE

Reason:

This message is issued as a result of a DEBUG SET command with no operands specified. It indicates the end of the debug profile display.

System Action:

None.

User Action:

None.

N2A412**(CALLTRC=....) CALL TRACE OUTPUT WILL NOT BE PRODUCED****Reason:**

This message is part of the display which is produced when a DEBUG SET command is entered with no other operands. This display shows the current profile settings for the debug session. This message shows the setting of the CALLTRC option (YES or NO).

System Action:

None.

User Action:

None.

N2A413**CALL TRACE FOR NCLID bbbbbbb SET ccc CALL TRACE FOR PROCEDURE
aaaaaaaaa NCLID bbbbbbb SET ccc****Reason:**

A DEBUG CALLTRC command has been entered to change the 'call trace' status of an NCL process. This message confirms the change in status (ccc = ON or OFF).

System Action:

None.

User Action:

None.

N2A504

NCLID BASEPROC W TYPE INIT OWNER STATUS

Reason:

This message is the title line for the DEBUG TRACE display. The DEBUG TRACE display shows the procedure calls and subroutine calls which resulted in execution of the NCL process reaching its current state. Refer to message N2A505 for a description of the display.

System Action:

The DEBUG TRACE display will follow this message.

User Action:

None.

N2A505

nclid baseproc w type init owner status

Reason:

This message is part of the DEBUG TRACE display. It shows information about the NCL process which is shown in the display.

nclid - the unique NCLID of the NCL process

baseproc - the name of the base procedure in the NCL process

w - the window in which the NCL process is executing (1 or 2)

type - the type of NCL process (eg MSGPROC)

init - the initiator of the NCL process. This may be a userid or the NCLID of the process which started this one

owner - the userid of the user whose region contains the executing NCL process

status - shows if the process is currently ACTIVE or has been SUSPENDED due to user command or a breakpoint being hit

System Action:

None.

User Action:

None.

N2A506**PROC LIBRARY S LEVEL LINE NO. STMT****Reason:**

This message is the title line for the call trace display of an NCL process and is part of the DEBUG TRACE display. This display shows all NCL procedure calls and subroutine calls which were made for the NCL process to reach its current state.

System Action:

None.

User Action:

None.

N2A507**procname ddname s ll.mm line-no statement****Reason:**

This message is the detail display for the call trace display which is part of the DEBUG TRACE display. This display shows all NCL procedure calls and subroutine calls which were made for the NCL process to reach its current state. The field meanings are as follows:

procname - the name of the NCL procedure

ddname - the ddname of the library from where the NCL procedure was loaded from

s - the status of the loaded NCL procedure. The following values are possible:
A - AUTOSHR, C - CMDREPL, L - PRELOADED, N - NCLTEST, O - LOADING, P - PRIVATE, R - RETAINED, U - P-UNLOAD

ll - the nesting level of the procedure

mm - the subroutine call level within the procedure

line no - the line number from which the EXEC/FSPROC or &GOSUB was executed

statement - the first 256 bytes of the statement

System Action:

None.

User Action:

None.

N2A511

line# *statement

Reason:

This message is the detail display for the DEBUG SOURCE display. It shows the line number containing the source, and the first 256 bytes of the statement on that line. the '*' indicator is present on the current statement if it is displayed.

System Action:

None.

User Action:

None.

N2A512

STATEMENT NUMBER IS GREATER THAN MAXIMUM FOR PROCEDURE

Reason:

This message is issued when a DEBUG SOURCE command is issued and the statement number entered on the STMT= operand is greater than the statement number of the last line in the procedure. If the statement number does not exist but would be before the last line in the procedure the display starts at the next line.

System Action:

The command is rejected.

User Action:

Correct the statement number and retry.

N2A513

mmmm STATEMENTS LISTED FOR PROCEDURE procname NCLID nnnn

Reason:

This message is the summary line for the DEBUG SOURCE display and shows how many lines of source were displayed and which procedure and NCL process they came from.

System Action:

None.

User Action:

None.

N2A514

PROCEDURE aaaaaaaa NCLID nnnnn HAS NO CURRENT STATEMENT FOR DISPLAY

Reason:

This message is issued when a DEBUG SOURCE command is issued without the STMT= operand (which indicates the display is to start at the current statement) and the procedure has no current statement.

System Action:

The command is rejected.

User Action:

This indicates that the procedure has completed execution. Specify the STMT= operand on the DEBUG SOURCE command to nominate the statement which the display should start at.

N2A601

INVALID HEX DATA SUPPLIED

Reason:

A DEBUG MODIFY command has been entered to modify the contents of one or more variables but the data supplied contains invalid hex characters or is not an even number of characters.

System Action:

The command is rejected.

User Action:

Correct the data supplied.

N2A602

EXCESSIVE DATA SUPPLIED FOR MODIFY

Reason:

A DEBUG MODIFY command has been entered to modify the contents of one or more variables but the data supplied exceeds the maximum allowable amount of data which can be assigned to a variable.

System Action:

The command is rejected.

User Action:

Correct the data supplied.

N2A603**VARIABLE(S) NOT CURRENTLY MODIFIABLE****Reason:**

A DEBUG MODIFY command has been entered to modify the contents of one or more variables but one or more of the variables specified are currently in use by a verb which will update the variable when it completes (eg. *INTREAD*, *MSGREAD*). When the verb completes any data assigned to the variable would be destroyed.

System Action:

The command is rejected.

User Action:

Modify the variables after the current verb completes.

N2A604**DATA FORMAT IS INVALID FOR SPECIFIED MDO****Reason:**

A DEBUG MODIFY command has been entered to update MDO contents but the data does not adhere to the format defined for the specified MDO structure.

System Action:

The command is rejected.

User Action:

Correct the data format and retry.

N2A605

VARs=prefix PREFIX TOO LONG FOR SPECIFIED/DEFAULT RANGE

Reason:

A DEBUG DISPLAY or DEBUG MODIFY command has been entered with a generic variable prefix. The length of the prefix plus the length of the numeric suffix determined by the specified or default range produces a variable name which is longer than the maximum allowed.

System Action:

The command is rejected.

User Action:

Correct the prefix or range.

N2A606

0 INVALID AS A RANGE

Reason:

A DEBUG DISPLAY or DEBUG MODIFY command has been entered with a generic variable prefix of ARGs or VARs=*. The specified or default range starts at 0 which produces a variable name of 0, which is invalid.

System Action:

The command is rejected.

User Action:

Correct the prefix or range.

N2A607

VARIABLE/MDO DISPLAY FROM PROCEDURE procname NCLID nnnnnn

Reason:

This is the title line for the display produced by the DEBUG DISPLAY command. The procedure name and NCLID of the NCL procedure are shown.

System Action:

None.

User Action:

None.

N2A608**REQUESTED VARIABLES/MDO UPDATED****Reason:**

A DEBUG MODIFY command has been entered and the variables or MDO specified on the command have been successfully updated.

System Action:

None.

User Action:

None.

N2A609**NO DATA IN MDO TO DISPLAY****Reason:**

A DEBUG DISPLAY command has been entered to display the contents of an MDO and the MDO exists but the length of the data contained within the MDO is zero.

System Action:

None.

User Action:

None. The DEBUG MODIFY command may be used to modify the MDO.

N2A610**OFFSET HEX CHAR****Reason:**

This message is the title line for the character and hex dump format display produced by the DEBUG DISPLAY command when a single variable name or MDO name is entered. The display shows the contents of the variable or MDO in hexadecimal and character format. Refer to the description of message N2A611 for more information.

System Action:

None.

User Action:

None.

N2A611

+ooo xxxxxxxx xxxxxxxx xxxxxxxx xxxxxxxx cccccccc

Reason:

This message is produced by the DEBUG DISPLAY command when the FORMAT=DUMP operand is specified. The message contains a hex and character dump format display of the data in the variable. The meanings of the fields are as follows:

+ooo - shows the offset into the variable at which the data starts

xxxxxxx - the hexadecimal format of the data

ccccccc - the character format of the data

System Action:

None.

User Action:

None.

N2A612

SPECIFIED MDO NOT FOUND IN PROCEDURE procname NCLID nnnnnn

Reason:

A DEBUG DISPLAY command has been entered to display the contents of an MDO but the MDO does not exist.

System Action:

The command is rejected.

User Action:

Correct the MDO name and retry. This message could indicate that the map in which the MDO name belongs has not been loaded and assigned correctly.

N2A613**MAP NAME: mapname****Reason:**

A DEBUG DISPLAY command has been entered to display the names (and maybe contents) of an MDO. This message displays the name of the MAP which has been used to map the MDO structure.

System Action:

None.

User Action:

None.

N2A614**SPECIFIED MDO NAME IS INVALID****Reason:**

A DEBUG DISPLAY or DEBUG MODIFY command has been entered which specified an invalid MDO name on the MDO= or MDONAME= operand.

System Action:

The command is rejected.

User Action:

Correct the MDO name and retry.

N2A615**SPECIFIED MDO RANGE IS INVALID****Reason:**

A DEBUG DISPLAY command has been entered which specified a variable indexed MDO name and a range which specified zero as the starting value in the range (eg MDO=AAAA.BBBB{*} RANGE=(0,4)). A value of zero is invalid as the start of a range.

System Action:

The command is rejected.

User Action:

Correct the range start value on the RANGE= operand and retry.

N2A616

COMMAND REJECTED. PROCEDURE procname NCLID nnnnnn IS status

Reason:

A DEBUG MODIFY command has been entered to modify the contents of an MDO but the command has been rejected. 'reason' indicates why. The modification of MDOs is valid only whilst the procedure is suspended by DEBUG and not after the procedure has terminated (abnormally or due to normal end of procedure condition).

System Action:

The command is rejected.

User Action:

None.

N2A617

DISPLAY PREVENTED BY STORAGE SHORTAGE

Reason:

SOLVE was unable to obtain storage for a DEBUG DISPLAY command.

System Action:

The display command is ignored.

User Action:

Contact your systems administrator and examine the reason for the storage shortage.

N2A618**MDO NAME: mdoname****Reason:**

This message is part of the DEBUG DISPLAY MDO=/MDONAMES= display and shows the name of an MDO which satisfied the criteria specified on the DEBUG DISPLAY command. In the case of a DEBUG DISPLAY MDO= command, this message is followed by the data contents of the named MDO.

System Action:

None.

User Action:

None.

N2A619**FMT=MDO ONLY VALID FOR SINGLE MDO STEM DISPLAY****Reason:**

A DEBUG DISPLAY command has been entered with the FMT=MDO option specified, but the display requested is not a single MDO stem display.

System Action:

The command is rejected.

User Action:

The FMT=MDO option is only valid for DEBUG DISPLAY MDO=aaaaaa where aaaaaa is a single (ie. not compound such as aa.bb.cc) MDO stem name. Re-enter the command with a single MDO name.

N2A620

SPECIFIED VAR/MDO NAME NOT VALID IN NCL

Reason:

A DEBUG DISPLAY or DEBUG MODIFY command specified an invalid variable or MDO name for an NCL procedure.

System Action:

The command is rejected.

User Action:

Correct the variable name and retry. To display global OML variables, debug an OML procedure.

N2A621

SPECIFIED VARIABLE NAME IS INVALID

Reason:

A DEBUG DISPLAY or DEBUG MODIFY command specified an invalid variable name on the VARS= operand.

System Action:

The command is rejected.

User Action:

Correct the variable name and retry.

N2A701

BREAKPOINT OPERANDS CONFLICT WITH BREAKPOINT nnnn

Reason:

A DEBUG BREAKPOINT command has been entered but the operands conflict with (are the same as or specify variables in common with) another breakpoint (breakpoint number 'nnnn'). Each breakpoint created within a debug session must be unique.

System Action:

The command is rejected.

User Action:

None.

N2A702**xxxxxxx IS NOT A VALID VERB NAME****Reason:**

A DEBUG BREAKPOINT command has been entered with the VERB= operand but the verb name entered is not a valid verb.

System Action:

The command is rejected.

User Action:

Correct the verb name and retry. This may mean that the verb specified does not exist because the verb belongs to a feature which is not licensed on the system.

N2A703**BREAKPOINT nnnn DOES NOT EXIST****Reason:**

A DEBUG CLEAR command has been entered to clear a breakpoint but no breakpoint exists with the specified breakpoint number.

System Action:

The command is rejected.

User Action:

Obtain the correct breakpoint number and retry. The DEBUG LIST BREAKPOINTS command can be used to list all breakpoints within a debug session.

N2A704**BREAKPOINT nnnn RESET****Reason:**

A DEBUG CLEAR command has been entered to clear a breakpoint and has been processed successfully.

System Action:

The breakpoint is cleared.

User Action:

None.

N2A705

BREAKPOINT nnnn SET

Reason:

A DEBUG BREAKPOINT command has been entered to create a breakpoint and has been processed successfully. The breakpoint has been assigned a number 'nnnn' which is unique within a debug session called the breakpoint number. The breakpoint number must be entered on the DEBUG CLEAR command to clear the breakpoint.

System Action:

The breakpoint is set.

User Action:

None.

N2A706

nnnn BREAKPOINTS RESET

Reason:

A DEBUG CLEAR command has been entered to clear breakpoints within a debug session. This message confirms successful processing of the command and shows how many breakpoints were reset.

System Action:

The specified number of breakpoints have been cleared.

User Action:

None.

N2A707

BREAKPOINT NOT SET DUE TO STORAGE SHORTAGE

Reason:

A DEBUG BREAKPOINT command has been entered to create a breakpoint but a storage shortage has prevented successful processing of the command.

System Action:

The breakpoint has not been set.

User Action:

Investigate the cause of the storage shortage.

N2A708**BP# PROCEDURE NCLID TYPE DESCRIPTION****Reason:**

This message is the title line of the DEBUG LIST BREAKPOINTS display. This display lists all breakpoints within a debug session. Refer to message N2A709 for a description of the display.

System Action:

None.

User Action:

None.

N2A709**nnnnnn procname nclid type description****Reason:**

This message is the detail line of the DEBUG LIST BREAKPOINTS display. This display lists all breakpoints within a debug session. The meanings of the fields are as follows:

nnnnnn - the unique breakpoint number of the breakpoint

procname - the name of the procedure to which the breakpoint applies

nclid - the nclid of the process to which the breakpoint applies

type - the type of breakpoint

STMT - a statement breakpoint

VAR - a variable breakpoint

VERB - an NCL verb breakpoint

EXEC - an ENTRY or EXIT breakpoint

description - shows the criteria which were specified on the DEBUG BREAKPOINT command (statement number, variables names or verb name)

System Action:

None.

User Action:

None.

N2A710

nnnn BREAKPOINTS ACTIVE. mmmm SELECTED FOR DISPLAY.

Reason:

This message is the summary line of the DEBUG LIST BREAKPOINTS display. It shows how many breakpoints were displayed ('nnnn') and how many exist within the debug session ('mmm').

System Action:

None.

User Action:

None.

N2A711

NO BREAKPOINTS EXIST IN DEBUG SCOPE

Reason:

A DEBUG LIST BREAKPOINTS command has been entered but no breakpoints exist within the debug session.

System Action:

None.

User Action:

None.

N2A712

WARNING: BREAKPOINT CANNOT BE APPLIED TO NCL

Reason:

A *DEBUG BREAKPOINT* command has been entered to set a breakpoint. The breakpoint specification is valid in OML but not in NCL, so this warning message is sent to notify that the breakpoint will only be applied to OML procedures, not NCL. For example, VARS=A.B.C is a valid breakpoint specification in OML, but not NCL (NCL does not support compound vars).

System Action:

The breakpoint is set as requested but will only be applied to OML procedures.

User Action:

None.

N2A713**INVALID HEX DATA SUPPLIED****Reason:**

A DEBUG BREAKPOINT command has been entered to create a breakpoint but the data supplied for the conditional breakpoint which was specified in hexadecimal format contains invalid hexadecimal characters or is not of even length.

System Action:

The command is rejected.

User Action:

Correct the data and retry.

N2A714**EXCESSIVE DATA SUPPLIED FOR BREAKPOINT****Reason:**

A DEBUG BREAKPOINT command has been entered to create a breakpoint but the length of the data supplied for the conditional breakpoint exceeds the maximum allowed for an NCL variable.

System Action:

The command is rejected.

User Action:

Correct the data and retry.

N2A715**VERB verbname CANNOT BE THE TARGET OF A BREAKPOINT****Reason:**

A &DEBUG BREAKPOINT command has been entered to set a breakpoint. The verb named in the breakpoint is a known verb but is not suitable for a breakpoint because it is not executable.

System Action:

The command is rejected.

User Action:

None.

N2A716

WARNING: BREAKPOINT CANNOT BE APPLIED TO OML

Reason:

A &DEBUG BREAKPOINT command has been entered to set a breakpoint. The breakpoint specification is valid in NCL but not in OML, so this warning message is sent to notify that the breakpoint will only be applied to NCL procedures, not OML. For example, VERB=NDBADD is a valid breakpoint specification in NCL, but not OML (OML does not have an NDBADD verb).

System Action:

The breakpoint is set as requested but will only be applied to NCL procedures.

User Action:

None.

N2A801

BREAKPOINT xxxx HIT (STMT mmmmmmmmm). PROC name NCLID nnnnnn SUSPENDED

Reason:

A statement type breakpoint which was set on procedure 'name' at statement 'mmmmmmmm' has been hit. The next statement to be executed will be the specified statement.

System Action:

Execution of the NCL process has been suspended.

User Action:

Other DEBUG commands may be used to obtain information about the NCL process. The DEBUG STEP and DEBUG RESUME commands may be used to allow execution of the NCL process to continue.

N2A802

**BREAKPOINT xxxx HIT (VAR varname). PROC name NCLID nnnnnn
SUSPENDED AT STMT mmmmmmmm**

Reason:

A variable type breakpoint which was set on variable 'varname' in procedure 'name' has been hit. The variable has been updated. If the breakpoint was conditional, the variable now contains the value specified on the DEBUG BREAKPOINT command.

System Action:

Execution of the NCL process has been suspended.

User Action:

Other DEBUG commands may be used to obtain information about the NCL process. The DEBUG STEP and DEBUG RESUME commands may be used to allow execution of the NCL process to continue.

N2A803

**BREAKPOINT xxxx HIT (VERB verbname). PROC name NCLID nnnnnn
SUSPENDED AT STMT mmmmmmmm**

Reason:

A variable type breakpoint which was set on verb 'verbname' in procedure 'name' has been hit. The next statement to be executed contains the specified verb.

System Action:

Execution of the NCL process has been suspended.

User Action:

Other DEBUG commands may be used to obtain information about the NCL process. The DEBUG STEP and DEBUG RESUME commands may be used to allow execution of the NCL process to continue.

N2A804

**BREAKPOINT xxxx HIT (PROCEDURE ENTRY). PROC name NCLID
nnnnnn SUSPENDED AT STMT mmmmmmmm**

Reason:

A procedure ENTRY breakpoint has been set to cause suspension of the specified NCL procedure. The procedure has begun execution and has been suspended due to the breakpoint setting.

System Action:

Execution of the NCL process has been suspended.

User Action:

Other DEBUG commands may be used to obtain information about the NCL process. The DEBUG STEP and DEBUG RESUME commands may be used to allow execution of the NCL process to continue.

N2A805

**BREAKPOINT xxxx HIT (PROCEDURE EXIT). PROC name NCLID nnnnnn
SUSPENDED AT STMT mmmmmmmm**

Reason:

A procedure EXIT breakpoint has been set to cause suspension of the specified NCL procedure. The procedure has completed execution and has been suspended due to the breakpoint setting.

System Action:

Execution of the NCL process has been suspended.

User Action:

Other DEBUG commands may be used to obtain information about the NCL process. The DEBUG STEP and DEBUG RESUME commands may be used to allow execution of the NCL process to continue.

N2A901**WARNING - STMT NUMBER nnnnnnnnn NOT FOUND IN PROC procname
NCLID nnnnnn****Reason:**

A breakpoint has been set on the statement number and procedure or NCLID specified in this message but when an attempt was made to apply the breakpoint the specified statement number could not be found in the procedure 'procname'.

System Action:

The breakpoint is not applied.

User Action:

Correct the statement number or procedure name/nclid on the breakpoint definition and retry.

N2A902**WARNING - BREAKPOINT nnnnnnnnn NOT APPLIED, PROC procname
NCLID nnnnnn NOT PRIVATELY LOADED****Reason:**

A statement type breakpoint has been set on the procedure or NCLID specified in this message but when an attempt was made to apply the breakpoint it was found that the procedure was not a private copy. The statement type breakpoint can only be applied to a procedure which was loaded privately or under the NCLTEST option. To allow future occurrences of the procedure to be breakpointed without any unnecessary inconvenience to the debugging user, the breakpoint remains valid, but has not been applied to the procedure specified in this message.

System Action:

The breakpoint is not applied.

User Action:

Determine why the procedure was not privately loaded. If the breakpoint is set before the procedure begins execution, the procedure will automatically be privately loaded by the system.

N2AA01

NO NCL DEBUG SESSIONS EXIST

Reason:

A SHOW DEBUG command has been entered but there are no active debug sessions in the system.

System Action:

None.

User Action:

None.

N2AA02

OWNER K STATUS NCLID USER REGION W PROCEDURE DEBUGID

Reason:

This message is the title line for the SHOW DEBUG display. The SHOW DEBUG command is used to list the debug sessions active in the system and the scope over which the debug session has control. See the description of message N2AA03 for the meanings of the column headings.

System Action:

None.

User Action:

None.

N2AA03**owner k status nclid userid region w proc debugid****Reason:**

This message is the detail line for the SHOW DEBUG display. The SHOW DEBUG command is used to display the active debug sessions within the system and the scope over which each session has control. The information in each field is as follows:

owner - shows the userid of the user who owns the debug session
k - shows the 'KEEP' option specified on the DEBUG START command
status - shows the current status of the debug session ACTIVE indicates the debug session is active SUSPENDED indicates that the DEBUG STOP TYPE=SUSPEND command has been issued to suspend the debug session
nclid - shows the NCLID specified on the DEBUG START command
userid - shows the USERID specified on the DEBUG START command
region - shows the REGION specified on the DEBUG START command. This may be a region name or a link name
w - shows the WINDOW specified on the DEBUG START command
proc - shows the PROCEDURE specified on the DEBUG START command
debugid - when the DEBUG STOP TYPE=SUSPEND command is issued to suspend a debug session, this unique identification number is assigned to the suspended debug session. This number is shown here if the debug session is suspended.

System Action:

None

User Action:

None

N2AA04**nnnn DEBUG SESSIONS ACTIVE mmmm SELECTED FOR DISPLAY****Reason:**

This message terminates the SHOW DEBUG display. It shows the total number of debug sessions active in the system (nnnn) and the number displayed (mmmm).

System Action:

None

User Action:

None

N2AA05

NCLID BASEPROC CURRENT LEV W TYPE INIT OWNER STATUS

Reason:

This message is the title line for the NCL display of the SHOW DEBUG display. If the SHOW DEBUG command requests a specific NCLID a display of the NCL process is appended to the SHOW DEBUG DISPLAY. If the NCL=YES operand is entered on SHOW DEBUG a detailed display is produced of all NCL within the debug sessions displayed. See the description of message N2AA06 for details about this display.

System Action:

None

User Action:

None

N2AA06**nclid baseproc current lv w type init owner status****Reason:**

This message forms the detail display for one NCL process of the NCL display in the SHOW DEBUG display. The NCL display is produced when a specific NCLID is entered on the SHOW DEBUG command or when the NCL=YES operand is entered on the SHOW DEBUG command. The meanings of the fields are as follows:

nclid - the NCLID of the NCL process

baseproc - the name of the base procedure in the NCL process

current - the name of the procedure which is the currently executing nesting level

lv - the number of active nesting levels in the process

w - the window in which the ncl process is executing (1 or 2)

type - the type of ncl process eg. MSGPROC

init - the initiator of the NCL process. This may be a userid or the NCLID of the process which started this one

owner - the userid of the user whose region contains the executing NCL process

status - shows if the process is currently ACTIVE or has been SUSPENDED due to user command or a breakpoint being hit

System Action:

None

User Action:

None

N2AA07**nnnn NCL PROCESSES WITHIN SCOPE(S)****Reason:**

If the SHOW DEBUG command is entered with a specific NCLID or with the NCL=YES operand, a detailed display of each NCL process under the control of the debug scopes displayed is produced. This message is a summary of the NCL display, stating how many NCL processes were displayed.

System Action:

None

User Action:

None

N2AB01

PROCEDURE procname NCLID nnnnnn NOW UNDER DEBUG CONTROL

Reason:

This message is issued to the owner of a debug session when an NCL process is placed under debug control. This is either when a DEBUG START command is issued or subsequently when a procedure starts which satisfies the scope specified on the DEBUG START command.

The NCL process remains under debug control until a DEBUG STOP command is issued, or the NCL process no longer satisfies the criteria specified on the DEBUG START command, or the NCL process terminates.

System Action:

The NCL process is placed under control of the NCL debug facility.

User Action:

The owner of the debug session may now issue DEBUG commands to debug the NCL process.

N2AB02

PROCEDURE procname NCLID nnnnnn NO LONGER UNDER DEBUG CONTROL

Reason:

This message is issued when the NCL debug facility relinquishes debug control over an NCL process. This could occur because of a DEBUG STOP command being issued, or because the NCL process no longer satisfies the criteria on the DEBUG START command, or because the NCL procedure has terminated.

System Action:

Debug control over the NCL process is removed.

User Action:

No more DEBUG commands can be applied to this process.

N2AB03**PROCEDURE procname NCLID nnnnnn IS INELIGIBLE FOR DEBUG****Reason:**

An NCL process has matched the criteria specified on a DEBUG START command but has not been placed under debug control for one of the following reasons:

- the process is a LOCKPROC system process.
- the process is a MSGPROC and the DEBUG START command was entered from the environment in which the MSGPROC is executing. This is invalid because if the process became suspended the debugging user would no longer be able to see command responses.
- the DEBUG START command was entered from within the dependent (&INTCMD) environment of the nominated process. This is invalid because if the process became suspended it could not enter any DEBUG commands to resume execution.
- The NCL process is executing as a command replacement (see SYSPARMS CMDREPL=xxxx), and debug has been refused for security reasons.

System Action:

The NCL process is not placed under debug control.

User Action:

None.

N2AB04**DEBUG OF NCLID nnnnnn STOPPED BECAUSE NCL PROCESS ENDED****Reason:**

This message is sent to the owner of a debug session when the scope of a DEBUG START was a specific NCL process ID and the process has ended.

System Action:

The debug scope is terminated.

User Action:

None.

N2AC01

DEBUG STOPPED BY ENVIRONMENT TERMINATION

Reason:

This message is sent to the owner of a debug session which has a debug scope which targets a specific environment (eg. OCS or dependent environment) and the environment terminates.

System Action:

The debug scope is terminated.

User Action:

None.

N2AC02

DEBUG OF WINDOW n IN REGION regname STOPPED BY WINDOW TERMINATION

Reason:

This message is sent to the owner of a debug session when the scope of a DEBUG START was a specific window within a region and the window which was specified has terminated.

System Action:

The debug scope is terminated.

User Action:

None. The KEEP=YES operand on DEBUG START can be used to prevent the debug scope from terminating when the window terminates.

N2AD01**DEBUG OF REGION regname STOPPED BY REGION TERMINATION****Reason:**

This message is sent to the owner of a debug session when the scope of a DEBUG START was a specific region and the region has terminated.

System Action:

The debug scope is terminated.

User Action:

None. The KEEP=YES operand on the DEBUG START command can be used to prevent the termination of the debug scope when the region terminates.

N2AD02**DEBUG OF USER userid IN REGION regname STOPPED BY USER SIGNOFF****Reason:**

This message is sent to the owner of a debug session when the scope of a DEBUG START was a specific user in a specific region and the user has signed off.

System Action:

The debug scope is terminated.

User Action:

None. The KEEP=YES operand on the DEBUG START command can be used to prevent termination of the debug scope when the user signs off.

N2AD03

DEBUG OF USER userid STOPPED BY USER SIGNOFF

Reason:

This message is sent to the owner of a debug session when the scope of a DEBUG START was a specific user and the user has just signed off. The user is no longer signed on in any region so the debug scope has been terminated.

System Action:

The debug scope is terminated.

User Action:

None. The KEEP=YES operand on the DEBUG START command can be used to prevent termination of the debug scope when the last occurrence of the userid signs off.

N2AE01

NO ACTIVE DEBUGS OWNED BY THIS ENVIRONMENT

Reason:

A DEBUG command has been entered which should have targeted a procedure which is currently being debugged by the environment issuing the DEBUG command. The environment does not have any active debug scopes.

System Action:

The DEBUG command is rejected.

User Action:

None. The DEBUG START command can be used to place procedures under debug control.

N2AE02**NCL PROCESS nclid NOT EXECUTING****Reason:**

A DEBUG command has been entered which specified an NCLID but there is no NCL procedure active in the system with this NCLID.

System Action:

The DEBUG command is rejected.

User Action:

Obtain the correct NCLID and retry the command.

N2AE03**NCL PROCESS nclid NOT BEING DEBUGGED****Reason:**

A DEBUG command has been entered which specified an NCLID and the specified NCL process is active in the system but is not currently being debugged by any user.

System Action:

The DEBUG command is rejected.

User Action:

The DEBUG START command can be used to place the process under debug control.

N2AE04

DEBUG ON NCL PROCESS nclid IS CURRENTLY SUSPENDED

Reason:

A DEBUG command has been entered which specified an NCLID and the specified NCL process is active in the system and is being debugged but the debug session which is debugging it is currently suspended.

System Action:

The DEBUG command is rejected.

User Action:

The SHOW DEBUG command can be used to obtain the 'debugid' of the suspended debug session. A DEBUG START DEBUGID=nnnn command can be used to obtain debug control over the suspended session.

N2AE05

NCL PROCESS nclid IS BEING DEBUGGED BY ANOTHER USER

Reason:

A DEBUG command has been entered which specified an NCLID and the specified NCL process is active in the system but is being debugged by another user.

System Action:

The DEBUG command is rejected.

User Action:

The SHOW DEBUG command can be used to find out which user is debugging the process. Only the environment which issued the DEBUG START command to obtain debug control over the NCL process may issue this DEBUG command to control the process.

N2AE06**NCL PROCESS nclid NOT BEING DEBUGGED BY THIS ENVIRONMENT****Reason:**

A DEBUG command has been entered which specified an NCLID and the specified NCL process is active in the system and is being debugged by this user but the environment from which the command was issued is not the environment which has debug control over the process.

System Action:

The DEBUG command is rejected.

User Action:

None. Only the environment which issued the DEBUG START command to obtain debug control over the process may issue this DEBUG command to control the debugged NCL process.

N2AE07**NO DEFAULTS SET - NCLID OR PROCEDURE NAME MUST BE ENTERED****Reason:**

A DEBUG command has been entered which did not specify an NCLID or procedure name and no default NCLID or NCL process exists for the debuggers environment. Therefore the NCL process to which the command is to be applied cannot be determined.

System Action:

The DEBUG command is rejected.

User Action:

Enter the NCLID or PROCEDURE operand on the DEBUG command to identify which NCL process is to be targeted by the command.

N2AE08

NCL PROCESS aaaaaa DOES NOT HAVE ANY ACTIVE NESTING LEVEL

Reason:

A DEBUG command has been entered which requires the target NCL process to have an active nesting level. The command has been rejected because the NCL process is currently dormant (ie. has no NCL procedure executing).

System Action:

The command is rejected.

User Action:

The command entered requires an NCL procedure to be executing at the time the command is processed (for example, DEBUG DISPLAY requires some NCL variables or MDOs to be associated with the NCL process, but if the NCL process is dormant then no variables or MDOs exist). Re-enter the command when the NCL process becomes active.

N2AE09

PROCEDURE procname NOT FOUND IN NCL PROCESS nclid

Reason:

A DEBUG command has been entered which specified the NCLID and PROCEDURE operands but the specified procedure does not exist at the required levels in the specified NCL process. Most commands require the procedure to exist only at base or current level, DEBUG DISPLAY and DEBUG MODIFY allow the procedure to exist at any level.

System Action:

The DEBUG command is rejected.

User Action:

Correct the NCLID or PROCEDURE operand and retry the command.

N2AE10**PROCEDURE procname DOES NOT EXIST IN DEBUG SCOPE****Reason:**

A DEBUG command has been entered which specified the PROCEDURE operand but the specified procedure does not exist at the required nesting level any NCL process under debug control from that environment. Most commands require the procedure to exist only at base or current level, DEBUG DISPLAY and DEBUG MODIFY allow the procedure to exist at any level.

System Action:

The DEBUG command is rejected.

User Action:

Correct the PROCEDURE operand and retry the command.

N2B201**STRUCTURED FIELD xxxx IN ERROR****Reason:**

A security sub-system exit has passed an invalid structured field to SOLVE or an invalid structured field was passed by an &SECCALL verb.

System Action:

This message is written to the SOLVE activity log. The security request proceeds however, the particular structured field in error is ignored.

User Action:

Identify the structured field in error and correct the error, either by correcting the NCL or the security exit.

N2B701

STRUCTURED FIELD xxxx IN ERROR

Reason:

A security sub-system exit has passed an invalid structured field to SOLVE or an invalid structured field was passed by an &SECCALL verb.

System Action:

This message is written to the SOLVE activity log. The security request proceeds however, the particular structured field in error is ignored.

User Action:

Identify the structured field in error and correct the error, either by correcting the NCL or the security exit.

N2BC01

STRUCTURED FIELD xxxx IN ERROR

Reason:

A security sub-system exit has passed an invalid structured field to SOLVE or an invalid structured field was passed by an &SECCALL verb.

System Action:

This message is written to the SOLVE activity log. The security request proceeds however, the particular structured field in error is ignored.

User Action:

Identify the structured field in error and correct the error, either by correcting the NCL or the security exit.

N2BH01**STRUCTURED FIELD xxxx IN ERROR****Reason:**

A security sub-system exit has passed an invalid structured field to SOLVE or an invalid structured field was passed by an &SECCALL verb.

System Action:

This message is written to the SOLVE activity log. The security request proceeds however, the particular structured field in error is ignored.

User Action:

Identify the structured field in error and correct the error, either by correcting the NCL or the security exit.

N2BM01**STRUCTURED FIELD xxxx IN ERROR****Reason:**

A security sub-system exit has passed an invalid structured field to SOLVE or an invalid structured field was passed by an &SECCALL verb.

System Action:

This message is written to the SOLVE activity log. The security request proceeds however, the particular structured field in error is ignored.

User Action:

Identify the structured field in error and correct the error, either by correcting the NCL or the security exit.

N30001**VFS OPEN ERROR - BROADCAST RECORD INACCESSIBLE.****Reason:**

An attempt has been made to read the general broadcast from the VFS file but an error has occurred and the broadcast cannot be read.

System Action:

None.

User Action:

Determine the cause of the failure.

N30006

SAVED type TEXT WAS action BY userid AT time ON date.

Reason:

This message shows the userid that last modified the broadcast that is stored on the VFS file. It is issued as a result of the SHOW BRO command or is displayed when you update the broadcast text of a primary menu or general broadcast.

type The type of broadcast: *MENU* for a primary menu broadcast. *GENERAL* for a general broadcast.

action The last action on the broadcast. *SET* the broadcast text was set by the user. *RESET* the broadcast text was reset (deleted) by the user.

userid The userid of the the person who set or reset the broadcast.

time The time that the broadcast was set or reset in the format HH.MM.SS.

date The date that the broadcast was set or reset in the format DD-MM-YYYY.

System Action:

If you entered the SHOW BRO command, this message is followed by the text of the new broadcast if it has been set.

User Action:

None.

N30007

broadcast text

Reason:

This message shows each line of general broadcast text stored on the VFS file. It is issued as a result of the broadcast being set or reset or a SHOW BRO command.

System Action:

None.

User Action:

None.

N30008**I/O ERROR WHILE ATTEMPTING TO STORE BROADCAST MSG, MSG NOT STORED****Reason:**

An error occurred when attempting to store a broadcast message in the VFS dataset.

System Action:

None.

User Action:

Retry. If the condition persists, check the status of the VFS dataset.

N30009**NO STORED BROADCAST EXISTS.****Reason:**

A request was made to display the stored logo or primary menu broadcast, but no broadcast has been stored.

System Action:

None.

User Action:

None.

N30010**I/O ERROR READING BROADCAST DATA****Reason:**

An I/O error occurred while attempting to read broadcast information from the VFS dataset.

System Action:

The broadcast function is terminated.

User Action:

Retry. If the condition persists, refer the error to your systems administrator.

N30011

THE FOLLOWING PRIMARY MENU BROADCAST IS SAVED:

Reason:

The SHOW BRO command lists the contents of the general and primary menu broadcasts stored on the VFS file. This heading message precedes the primary menu broadcast text in the SH BRO display.

System Action:

None.

User Action:

None.

N30012

BROADCAST RECORD UPDATED.

Reason:

The general broadcast or primary menu broadcast saved on the VFS file has been updated.

System Action:

None.

User Action:

None.

N30801

luname CLOSED

Reason:

The session with the LU1 device indicated in the message has been terminated following a CLSDST WAIT=YES command.

System Action:

None.

User Action:

None.

N30802**CLSDST luname IGNORED, MESSAGES QUEUED****Reason:**

The luname shown in the message was the target of a CLSDST WAIT=YES command, but the CLSDST has been ignored due to the subsequent arrival of more messages for the terminal.

System Action:

The CLSDST command is ignored.

User Action:

None.

N31201**THE FOLLOWING MESSAGES WERE GENERATED DURING PROCESSING****Reason:**

The processing of NCL procedures in a fullscreen mode may cause messages to be generated that cannot be displayed on the screen because it has been taken over for fullscreen displays. Such messages may originate from error conditions or as a result of commands issued within the procedure. When possible all such messages are listed in the order in which they were generated, on multiple screen pages if necessary. This message acts as a heading for that list.

System Action:

None.

User Action:

Review the messages displayed as appropriate. The messages may indicate a possible processing problem and need to be reported to your installations help desk facility.

N31202

PROCESSING

Reason:

Input was received (eg: Clear key was pressed) when the window was executing an NCL procedure in fullscreen mode, but the procedure was not expecting input.

System Action:

The input is ignored and the keyboard unlocked.

User Action:

Wait for the procedure to display a panel and accept input. An authorized user may wish to swap to the other window and use a 'SHOW NCL=REGION' command to determine the reason for the delay in &PANEL output. If necessary 'FLUSH' the process or use 'CANCEL WINDOW'.

N31301

INSUFFICIENT STORAGE TO QUEUE PANEL EVENT NOTIFY.

Reason:

SOLVE could not obtain storage to queue an event to an NCL procedure which is processing with an asynchronous panel. The procedure may be executing any NCL statement following the &PANEL statement.

System Action:

The procedure terminates.

User Action:

Contact your systems administrator.

N32101**ERROR - FUNCTION NOT AVAILABLE****Reason:**

The INMC/EF option of System Support Services was selected but the load module required for this function could not be loaded.

System Action:

Processing is terminated.

User Action:

Contact your systems administrator.

N32901**APPLID DEFAULTED TO linkname****Reason:**

A LINK START=linkname command was requested for a link that has not been started before and has no link definition on the VFS database. The APPLID operand was not included on the command, and the APPLID has defaulted to the linkname.

System Action:

Further messages will follow regarding the status of the link.

User Action:

None.

N32902**APPLID applname IS ALREADY IN USE AS TERMINAL OR LINK.****Reason:**

The APPLID operand must specify a resource not already in session with this system.

System Action:

The command is rejected.

User Action:

Correct and retry.

N32903

LINK COMMAND FOR linkname FAILED, INSUFFICIENT STORAGE.

Reason:

A storage shortage prevented successful completion of the LINK START command.

System Action:

The command fails.

User Action:

Retry. Determine the cause of the storage shortage condition.

N32904

LINK DEFINITION FROM systemid TO linkname COMPLETE, ACTIVATION PENDING.

Reason:

A LINK START= command has completed successfully. The link will be activated automatically when the remote system is available.

System Action:

None.

User Action:

Wait for the remote system to become active.

N32905

MSGID DEFAULTED TO msid

Reason:

A LINK START=linkname command was requested for a link that has not been started before and no INMC/EF definition exists on VFS. The MSGID operand was not included within the command, and the MSGID has defaulted to the first four characters of the linkname.

System Action:

Link activation continues.

User Action:

None, unless the MSGID operand has been accidentally omitted.

N32906**LINK DEFINITION INVALID, APPLID applname IS AN ACBNAME USED BY THIS HOST****Reason:**

The APPLID specified cannot be the name of an APPL definition used by this region.

System Action:

None.

User Action:

Correct and retry.

N32907**DEFINITION RECORD FOR linkname READ FROM VFS, EXCESS OPERANDS IGNORED.****Reason:**

APPLID or MSGID operands specified on a LINK START= command are ignored if the link definition exists on VFS.

System Action:

Link activation continues.

User Action:

None.

N32908**LINK START FOR linkname FAILED, I/O ERROR ON VFS DATASET.****Reason:**

The INMC/EF definition for the specified link could not be retrieved from the VFS database due to an I/O error.

System Action:

The command fails.

User Action:

Contact your systems administrator.

N32909

linkname NOT DEFINED ON VFS, ATTEMPTING SIMPLE-MODE DEFINITION

Reason:

A LINK START= command was issued in a system configured for INMC/EF, but no record was found of the definition on the VFS database. The system will build a simple-mode link definition.

System Action:

None.

User Action:

None.

N32910

LINK COMMAND FOR linkname FAILED, LINK TYPE=type IS INVALID.

Reason:

A LINK START= command was issued to start an INMC link but the link type is invalid. Valid values are INMC, APPC and NVC. Note: TYPE=NVC is only valid if the region is configured with the NetView Connect option.

System Action:

None.

User Action:

Correct the TYPE= operand and retry. If you require connections to NetView regions, contact your Systems Administrator to reconfigure the region with the NetView Connect option (PROD=NVC).

N32911**LINK NAME P1 CONFLICTS WITH EXISTING LINK P2****Reason:**

A LINK START command was entered and has been rejected because the name of the link matches the application name in use for a dynamic link.

System Action:

The command is rejected.

User Action:

Use a different link name, or change the identifier of the dynamic link.

N32F01**INMC EXIT exitname NOT LOADED, LINK TO linkname DISABLED****Reason:**

An INMC link was starting and the INMC EX01 exit was to be loaded, but the load failed. The link has been disabled.

System Action:

Link activation will not continue for security reasons.

User Action:

Refer this problem to your systems administrator for resolution. The nominated link module may not be available in SOLVE's load library.

N33901**COMMAND REJECTED. YOU CANNOT USE OPN/CLS COMMANDS FOR ANOTHER SOLVE SYSTEM****Reason:**

An OPN or CLS command was issued specifying the ACBNAME of a remote SOLVE system with which this system has a connection. Control of links to remote SOLVE systems is handled only by the LINK command.

System Action:

The command is rejected.

User Action:

Use the LINK command to control the link to the remote SOLVE system.

N34001

ERROR ON LINK linkname : error-type

Reason:

A serious error has occurred on INMC link *linkname* , from which it cannot recover automatically. The *error-type* in the message will be either SNA Sense codes, or an explanatory message.

System Action:

The link is forced inactive, and put into 'failed' status.

User Action:

If the *error-type* consists of SNA sense information, the sense codes should be checked to see what type of network problem occurred. An *error-type* of 'INVALID DATA RECEIVED' on an NMPC link may mean there is a hardware problem on the PC. The link can be restarted using a 'LINK START=*linkname*' command. If this error recurs, contact your product support representative.

N34601

ERROR ON LINK AAAAAA : STORAGE SHORTAGE

Reason:

The INMC link AAAAAA has failed due to a lack of storage.

System Action:

The link is forced inactive and placed in 'failed' status.

User Action:

When the storage shortage is relieved, the link may be restarted by entering 'LINK START=*linkname*'.

N35001**LINK FROM *systemid* TO *linkname* NOW INACTIVE.****Reason:**

The link from this system (*systemid*) to the remote system known as *linkname* is inactive.

System Action:

If the link has become inactive as a result of an earlier LINK STOP=*linkname* command, the link will remain inactive until a subsequent LINK START=*linkname* command. Otherwise, the system will attempt to re-establish the link at regular intervals.

User Action:

Determine the cause of link deactivation if no LINK STOP=*linkname* was entered. Possible causes may be a failure of the network path between the two systems or the remote system may have terminated.

N35002**LINK FROM *systemid* TO *linkname* NOW ACTIVE.****Reason:**

Issued when the connection from this SOLVE system (*systemid*) to the remote SOLVE system (*linkname*) has been established.

System Action:

None.

User Action:

The Remote Operator Facility may now be used to route commands and enquiries to the remote system using the ROUTE command.

N35003

LINK DEFINITION FOR linkname RESET

Reason:

Confirms successful processing of an earlier LINK RESET=linkname command issued to delete the definition of the remote SOLVE system *linkname*.

System Action:

None.

User Action:

A LINK START= command will have to be entered to redefine the remote system linkname before connection can be re-established.

N35004

LINK linkname - SESSION DEFINITION nn DISABLED.

Reason:

The system has stopped all further attempts to establish session number nn with the remote SOLVE system *linkname* , where the remote system was to be the secondary end of the session.

System Action:

No retries will be performed.

User Action:

This message is followed by message N35005 indicating the reason for the disabling of the session definition. If the fault indicated by N35005 is correctable, correct it, then reset and redefine the link.

N35005**REASON: xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx****Reason:**

This message identifies the reason why the system issued message N35004. Possible reasons are 'INVALID LOGMODE TABLE' or 'PARALLEL SESSION REFUSED'.

System Action:

None.

User Action:

Report the failure to your system administrator.
If INVALID LOGMODE TABLE, correct the DLOGMOD operand specified on the APPL definition statement used by the remote system. If PARALLEL SESSION REFUSED then if the level of VTAM being used supports parallel sessions check the APPL definition statements of both systems to ensure that they include the PARSESS operand. If the level of VTAM being used does not support parallel sessions ignore this message; the system will operate satisfactorily with one session between the two systems.

N35006**LNKTRACE - LINK aaaaaaaaaa -
bbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbb****Reason:**

This message is issued to all Monitor status operators when a session request to a remote system fails for any reason. The message is issued only if the SYSPARMS LNKTRACE=YES command has been entered. The text bbbbbbbbbbbb describes the error which has occurred.

System Action:

None.

User Action:

This trace message may be of use to systems administrator if difficulty is experienced in establishing a connection between two systems.
Use the SYSPARMS LNKTRACE=NO command to reset the trace option that produces this message when the cause of the error has been established.

N35007

LINK linkname - SESSION NUMBER nn OPENED ° FAILED

Reason:

If the SYSPARMS SESSMSG=YES option is in effect the system will report the loss or establishment of all sessions on INMC links. If INMC/EF is in use the session number specified corresponds to the session number displayed on the link status panels available through System Support Services.

System Action:

None.

User Action:

None.

N35008

LINK FROM *systemid* TO *linkname* STARTING.

Reason:

This message is issued during link activation. It indicates that at least one VTAM session has been established between this system and the system known as *linkname*. The initial handshaking is now taking place. When it is complete, message N35002 is logged.

System Action:

Link initialization continues.

User Action:

None.

N35009**LINK linkname HAS FAILED AND IS BEING FORCED INACTIVE.****Reason:**

This message indicates that a serious error has occurred on the INMC link to the system known as linkname . The link is now inoperative and will remain in 'failed' status until a 'LINK START' command is entered to restart it.

System Action:

The link is inactivated and put into 'failed' status. All sessions of the link are terminated.

User Action:

Other messages should precede this message indicating the cause of the original error. Refer to these messages to see what corrective action is necessary. When the error condition has been corrected, issue a 'LINK START' command to reactivate the link.

N35010**RESETSR ERROR ON LINK linkname : RC=xx FBK2=xx
SENSE=xxxxxxxx****Reason:**

During session establishment for one of the sessions making up an INMC link, a VTAM RESETSR operation failed, giving error code and sense information as listed.

System Action:

The link will attempt to operate without this session. If no other sessions are available, the link will be inoperative.

User Action:

Check the sense information to see why the RESETSR failed, and whether corrective action is possible. If the condition persists, contact your product support representative.

N35011

SESSION DENIED BY PARTNER FOR LINK P1 - P2

Reason:

This message is issued to all Monitor status operators when a session request to a remote system fails with sense 080A permission denied. The *P2* text describes the error.

This error indicates that the remote partner has no LINK or DEFLINK that matches this system's LU. This may be a temporary condition while the remote system is initializing.

System Action:

The session is retried, based on the link retry interval.

User Action:

Ensure that a LINK START or DEFLINK command is issued in the remote system for the local system's application name.

Note: Do not use VTAM USERVARs in link definitions. The application name is presented to the logon exit, not the USERVAR value.

N35301

ERROR ON LINK linkname : LOST TPE

Reason:

A serious error has occurred on INMC link linkname , from which it cannot recover automatically.

System Action:

The link is forced inactive, and put into 'failed' status.

User Action:

The link can be restarted using a 'LINK START=linkname' command. This error should be reported to your product support representative.

N35801**INVALID DATA RECEIVED ON LINK linkname : reason****Reason:**

A protocol error has occurred on link linkname, from which automatic recovery is not possible. The reason for the data being invalid may be one of: INVALID SEQUENCE NUMBER, SEGMENTATION ERROR or LENGTH ERROR.

System Action:

The link is forced inactive, and put into 'failed' status.

User Action:

The link can be restarted using a 'LINK START=linkname' command. This error should be reported to your product support representative.

N35901**ERROR ON LINK linkname : error-type****Reason:**

A protocol error has occurred on link linkname, from which automatic recovery is not possible. The error-type may be one of: INVALID RESPONSE SEQUENCE or LOST OMR.

System Action:

The link is forced inactive, and put into 'failed' status.

User Action:

The link can be restarted using a 'LINK START=linkname' command. This error should be reported to your product support representative.

N35A03

LINK START FAILED. UNABLE TO LOAD NM030 : R15=NNNN R1=NNNN

Reason:

A LINK START command has failed because loadmodule NM030 could not be loaded. The reason for the failure to load NM030 may be determined by the values of r15 and r1.

System Action:

The LINK command fails.

User Action:

Ensure load module NM030 is in a library accessible to SOLVE.

N36101

linkname OFFSET: aaaa SECS. PROPAGATION DELAY: bbbb SECS.

Reason:

This message is issued when link linkname becomes active. The offset (aaaa seconds) is the difference between the hardware clock values (STCK values) on this system and the remote system, expressed relative to this system. This offset will not necessarily match the apparent difference between the time-of-day clocks on the two systems. The propagation delay (bbbb seconds) is the average time taken for a message to be sent one-way between the two systems, as measured during link activation.

System Action:

None.

User Action:

None.

N36102**aaaaaaa TIME OFFSET COULD NOT BE CALCULATED, SET TO ZERO****Reason:**

During INMC link activation, the values of the hardware clocks on each end of the link are compared, and the difference calculated. This 'time offset' is used to correlate network information containing timestamps, which may be propagated across the INMC link. Link activation of aaaaaa could not calculate the time offset, perhaps because one end of the link is running a back-level SOLVE system, or is not an IBM compatible mainframe system.

System Action:

The time offset for link aaaaaa is set to zero.

User Action:

None.

N36103**LINK TO P1 DISABLED. INCOMPATIBLE REGION.****Reason:**

An attempt to establish an INMC link to *P1* has been disallowed. Remote region *P1* was successfully contacted, but the products licensed in the remote region are not compatible with this region.

System Action:

The INMC link is flagged as DISABLED.

User Action:

The INMC link cannot be used.

N36401

userid CONTACTED ON PC LINK linkname -- username

Reason:

This message is logged to all monitor status users when a session is established with a NMPC user. *userid* the userid at the PC.
linkname the name of the link to the PC. *username* the name of the user taken from their UAMS definition.

System Action:

None.

User Action:

None.

N36402

CONTACT ON PC LINK linkname REJECTED DUE TO SECURITY VIOLATION

Reason:

An NMPC user has attempted to establish a session on link *linkname* , however during *userid*/password validation the maximum number of password *retries* was exceeded.

System Action:

The session is rejected.

User Action:

See your systems administrator.

N36403

PASSWORD UPDATED FOR USERID uuuuuuuuu

Reason:

Confirms a successful change of password for user *uuuuuuuuu* during session establishment from an NMPC system.

System Action:

None.

User Action:

The new password will be required the next time the userid *uuuuuuuuu* is used.

N36404**PASSWORD UPDATE FOR USERID uuuuuuuu FAILED, CONTACT ABORTED****Reason:**

During session establishment, an NMPC user has attempted unsuccessfully to change his password.

System Action:

The session is rejected.

User Action:

For more information on the cause of the failure, refer to the journal file on the PC.

N36C01**UNABLE TO INITIATE INMC/AM CONNECTION TO LINK: III LU: iii VERS: vvv REASON: rrrrr****Reason:**

This message is issued when link *linkname* becomes active. It indicates that the INMC access method used to transport APPC conversations over an INMC link could not connect. The LU name and SOLVE version of the other system is shown. The reason indicates why the connection could not be established:
NO DTE FOUND - the target SOLVE system is possibly extremely back-level.
UNSUPPORTED SOLVE VERSION - the target SOLVE system does not support the INMC/AM facility
STORAGE SHORTAGE - a storage shortage occurred.

System Action:

INMC/AM facilities are not available to this system.

User Action:

If a storage shortage is the reason, increase the storage available to the SOLVE region.

N36E01

**INMC/AM CONTACT INITIATED. LINK=IIII DOMAIN=dddd
LU=uuuuuuuuu**

Reason:

This message is issued when the INMC/AM (for APPC) initiated contact over a starting INMC link.
The linkname, domain id, and LUname are shown.

System Action:

INMC/AM link initiation starts.

User Action:

none.

N36E02

**INMC/AM CONTACT COMPLETED. LINK=IIII DOMAIN=dddd
LU=uuuuuuuuu VERSION=v**

Reason:

This message is issued when the INMC/AM (for APPC) completes contact over an INMC link.
The linkname, domain id, and LUname are shown. The SOLVE version is also displayed.

System Action:

INMC/AM link initiation is complete. APPC sessions may use INMC as an access method.

User Action:

none.

N36E03

INMC/AM CONTACT LOST. LINK=IIII DOMAIN=dddd LU=uuuuuuuuu

Reason:

This message is issued when the INMC/AM (for APPC) loses contact over an INMC link.

The linkname, domain id, and LUname are shown.

System Action:

The INMC/AM link is closed.

User Action:

Confirm that the INMC link was supposed to be stopped.

N36E10

INMC/AM CONTACT WITH LINK=IIII DOMAIN=dddd LU=uuuuuuuuu NOT ESTABLISHED. INMC/AM NOT SUPPORTED

Reason:

This message is issued when the INMC/AM (for APPC) tried to initiate contact over a starting INMC link. The target SOLVE system does not support the INMC access method for APPC.

System Action:

INMC/AM link initiation terminates.

User Action:

If the target SOLVE system is back-level, consider upgrading it.

N36P01

PROCESSING OF INPUT FOR nnnnnnnnn FAILED DUE TO STORAGE SHORTAGE

Reason:

This message indicates that the INMC/AM access method was unable to process input from the indicated INMC source node due to a storage shortage.

System Action:

The session is closed.

User Action:

ensure that the SOLVE region has sufficient storage available.

N36Q01

CONNECT OF nnnnnnnn FAILED, STORAGE SHORTAGE

Reason:

An attempt to establish a session using INMC/AM failed due to a lack of storage.

System Action:

The session establishment fails.

User Action:

Ensure that the SOLVE region has sufficient storage.

N36Q02

CONNECT-ffffff PROCESSING FOR nnnnnnnn FAILED, reason

Reason:

INMC/AM session connection failed for the indicated target system name. The specific type of processing is indicated (the fffffff operand), and a reason is displayed.

For each processing type, the possible reasons are:

-type- -reason... ACCEPT INTERNAL ERROR - UNKNOWN EPS CID ACCEPT
STORAGE SHORTAGE ACCEPT INTERNAL ERROR - INVALID USERDATA
LENGTH REJECT INTERNAL ERROR - UNKNOWN EPS CID REJECT STORAGE
SHORTAGE REJECT INTERNAL ERROR - INVALID USERDATA LENGTH

System Action:

The session establishment fails.

User Action:

Examine the reason and if possible, correct the problem.

N36R01**CONNECT OF nnnnnnnnn FAILED, STORAGE SHORTAGE****Reason:**

An attempt to establish a session using INMC/AM failed due to a lack of storage.

System Action:

The session establishment fails.

User Action:

Ensure that the SOLVE region has sufficient storage.

N36U01**SEND OF DATA FOR nnnnnnnnn FAILED, STORAGE SHORTAGE****Reason:**

An attempt to send data across an INMC/AM session failed due to a lack of storage.

System Action:

The send fails.

User Action:

Ensure that the SOLVE region has sufficient storage.

N36U02

INMC/AM SEND PROCESSING FOR nnnnnnnnn FAILED, reason

Reason:

An attempt to send data across an INMC/AM session failed. The target SOLVE system name is shown. The reasons are:

INTERNAL ERROR - INVALID CID

STORAGE SHORTAGE

INTERNAL ERROR - INVALID USERDATA LENGTH

REQUEST GAVE RC nnnnnnnnn

System Action:

The send fails.

User Action:

Correct the problem if possible. It is possible that the target SOLVE system has terminated or INMC contact was lost. If the problem persists, contact your SOLVE product support office.

N36Z01

CONNECT OF nnnnnnnnn FAILED, STORAGE SHORTAGE

Reason:

An attempt to establish an APPC session using INMC failed due to a lack of storage.

System Action:

The session establishment fails.

User Action:

Ensure that the SOLVE region has sufficient storage.

N36Z02**CONNECTION TO nnnnnnnn INMC/AM LINK LOST****Reason:**

A INMC/AM (APPC) connection to the named SOLVE system has been lost

System Action:

Any active INMC/AM (APPC) sessions are terminated.

User Action:

Determine why the INMC/AM connection was lost and reestablish it if possible.

N36Z04**PROCESSING OF INPUT FOR nnnnnnnn FAILED DUE TO STORAGE SHORTAGE****Reason:**

This message indicates that the INMC/AM access method was unable to process input from the indicated INMC/AM source node due to a storage shortage.

System Action:

The session is closed.

User Action:

ensure that the SOLVE region has sufficient storage available.

N37201

NEWS CNM ACB acbname OPEN FAILED, ACBERFLG=X'yy'. FEATURE NOT RECORDING.

Reason:

The NEWS feature was unable to open the CNM ACB for the specified reason code.

System Action:

None.

User Action:

Refer to the appropriate VTAM Programming Guide for an explanation of the error code specified. When the condition has been corrected NEWS recording may be started from within the NEWS option of the System Support Services function.

N37202

NEWS CNM ACB acbname OPEN FAILED, INSUFFICIENT STORAGE.

Reason:

NEWS recording could not be started because of a storage shortage.

System Action:

None.

User Action:

Increase the SOLVE region size.

N37203

NEWS CNM ACB NOW OPEN.

Reason:

Confirms that NEWS has opened its CNM ACB and that the CNM interface is available.

System Action:

None.

User Action:

None.

N37204**NEWS RECEIVE FAILED. RC=rc,FBK2=fb,SENSE=sense****Reason:**

NEWS encountered a RECEIVE error attempting to receive CNM records from the network.

System Action:

The CNM ACB is closed.

User Action:

Refer to the appropriate VTAM Programming Guide for an explanation of the error codes. Re-opening the CNM ACB may be attempted from the NEWS System Support panel.

N37206**NEWS CNM ACB HAS BEEN CLOSED.****Reason:**

Notifies all Monitor status Operator Control Services users that the NEWS feature has stopped recording.

System Action:

None.

User Action:

None.

N37207**NEWS CNM EXIT exitname TERMINATED PREMATURELY.****Reason:**

The NEWS CNM exit exitname has abended or terminated prematurely.

System Action:

The exit can no longer process CNM records.

User Action:

Refer this to your systems administrator for problem determination.

N37209

CNM SEND REJECTED, SENSE sense. explanation.

Reason:

An attempt to send data across the CNM interface failed with the stated sense and feedback codes. If known, a brief explanation of the sense code is also provided.

System Action:

NEWS continues processing.

User Action:

Determine the meaning of the sense codes to diagnose why the failure occurred.

N37210

POSITIVE RESPONSE RECEIVED

Reason:

Confirms that the message sent across the CNM interface has been received by the target device.

System Action:

NEWS continues processing.

User Action:

None.

N37211

LOCAL CNM RECEIVE - NEGATIVE RESPONSE, SEQ=aaaa SENSE=bbbb

Reason:

This message is part of a CNM trace display and supplies the sense code when a CNM RECEIVE macro completes with a negative response returned.

System Action:

NEWS continues processing.

User Action:

Determine the meaning of the sense information to diagnose the reason for the negative response.

N37212**LOCAL CNM RECEIVE - POSITIVE RESPONSE, SEQ=aaaa****Reason:**

This message is part of a CNM trace display and indicates that a CNM RECEIVE has completed with a positive response.

System Action:

NEWS continues processing.

User Action:

None.

N37301**data****Reason:**

Solicited data returned through the CNM Interface as the result of a REQMS command being issued.

System Action:

None.

User Action:

None.

N37302**NEWS CNM EXIT NAME MISSING****Reason:**

No CNM exit name has been specified.

System Action:

NEWS continues processing with no CNM exit.

User Action:

Provide an exit name if required.

N37303

UNABLE TO OBTAIN STORAGE FOR EXIT

Reason:

Communication with the CNM exit was prevented by a lack of storage.

System Action:

NEWS continues processing with no CNM exit.

User Action:

Increase the SOLVE region size.

N37502

CNMPROC QUEUE LIMIT REACHED. DATA BEING DISCARDED.

Reason:

NEWS has received a CNM record to be processed by CNMPROC but the number of records in the queue waiting to be processed has reached its maximum.

System Action:

The record is discarded.

User Action:

The queue may be full for several reasons. Use the SH NCL command to determine if a CNM processing procedure is hung on an *xxxREAD* (*INTREAD*, for example) or an *FILExxx* (*FILEADD*, for example). You may find that one of the CNM processing procedures has begun looping or that a resource contention of some sort has halted processing. An NCL procedure producing alerts using *CNMALERT* may be looping. It is also possible that a device in the network is producing large volumes of CNM records due to an error. If there is a high volume of ISR traffic, the ISR queue limit may have been reached. If you wish to clear the backlog, simply use the SYSPARMS CNMPROC= command to stop and restart CNMPROC.

N37701**INVALID HEX DATA SPECIFIED****Reason:**

The data supplied on an &CNMSEND statement was not valid hexadecimal display data.

System Action:

The procedure is terminated.

User Action:

Correct the error and retry the request.

N37702**NO DATA SPECIFIED****Reason:**

No data was specified on an &CNMSEND statement.

System Action:

The procedure is terminated.

User Action:

Correct the error and retry the request.

N37703

CNM REQUEST FAILED. SYSTEM UNAVAILABLE, DISABLED OR AT QUEUE LIMIT.

Reason:

An attempt has been made using &CNMALERT or &CNMSEND to deliver a CNM record to a local or remote NEWS system for processing, but has failed due to one or more error conditions.

System Action:

The issuing NCL procedure continues, with &RETCODE set to 8 to indicate that the send has failed.

User Action:

Check that the INMC link to the remote host has been activated, and that the NEWS facilities in ISR (Inter-System Routing) have been enabled using the ISR command, from both the remote and local ends of the link. Also check that the NEWS ACB at the remote end has been opened, and (for &CNMALERT) that the CNMPROC in the destination host is active.

N37704

NEWS ACB NOT OPEN.

Reason:

An attempt has been made using &CNMSEND to send a CNM record to VTAM through the CNM interface for processing, but the NEWS ACB is not open and the record cannot be sent.

System Action:

The send fails, and the NCL procedure is notified by setting the &RETCODE system variable to a value of 8.

User Action:

The NEWS ACB should be opened, using the CNM START command or through the \$SN CNM parameter group.

N37705**INSUFFICIENT STORAGE TO PROCESS CNM REQUEST****Reason:**

The CNM request failed because of a storage shortage.

System Action:

NEWS continues processing.

User Action:

Determine the cause of the storage shortage. If necessary increase the SOLVE region or partition size.

N37706**UNABLE TO ALLOCATE CORRELATOR.****Reason:**

Each CNM request is assigned a unique number from 1 to 4095. This message indicates that a number could not be assigned because there were already 4095 requests outstanding.

System Action:

The request is rejected, and the NCL procedure is notified with a return code of 8 in the *RETCODE* system variable.

User Action:

Retry the request. If the condition persists, the queue has become clogged for some reason. Attempt to find out why the queue has become full. If you require assistance, contact your product support representative.

N37707

NEWS SEND FAILED, RC=aa, FBK2=bb, SENSE=cccccccc. dddd

Reason:

VTAM has rejected a CNM record sent by NEWS across the CNM interface and has supplied information in the RPL to describe the reason(s) for the rejection.

System Action:

NEWS extracts the information from the RPL and attempts to interpret it to supply a meaningful explanation for the failure of the send.

User Action:

Take action depending on the explanation given. For example, the rejection may indicate that the targeted resource does not exist or does not support the function you have requested. More information about the Return Code, Feedback and Sense codes may be found in the VTAM Programming Guide for your release of VTAM.

N37708

LOST CONTACT WITH REMOTE SYSTEM.

Reason:

A &CNMSEND was used to deliver a CNM record to a remote SOLVE system for processing but before a reply was received the communication between the local and remote systems failed, preventing the reply from being returned.

System Action:

The NCL procedure is notified by a value of 8 in the &RETCODE system variable and SOLVE will automatically try to re-establish contact with the remote system.

User Action:

If the INMC link to the remote system does not recover, you may find that another user has deliberately disabled the INMC link between the local and remote systems, or a permanent hardware or software error has occurred in the communications between the two hosts. Contact your systems administrator.

N37709**CNM SEND REJECTED.****Reason:**

VTAM has rejected the send of a CNM record by NEWS, but has given no explanation for the rejection. No Return code, Feedback or Sense code has been supplied in the RPL to explain the reason for the rejection.

System Action:

The NCL procedure is notified by setting the *RETCODE system variable* value to 8.

User Action:

None.

N37710**INVALID REQUEST TO INSERT A CNM ALERT.****Reason:**

An attempt to queue a CNM alert to CNMPROC using &CNMALERT MODE=INSERT has been rejected because either the NCL procedure which issued the &CNMALERT was not CNMPROC or executed by CNMPROC, or the context of the current record has been lost due to a CNMDEL or a non-specific &CNMCONT.

System Action:

The NCL procedure is flushed.

User Action:

Remove the MODE=INSERT parameter from the &CNMALERT statement, or issue the &CNMALERT before issuing a &CNMCONT or &CNMDEL.

N37711

INVALID LENGTH IN DELIVER RU aaaa.

Reason:

An &CNMSEND or &CNMALERT statement has been rejected because the length (aaaa) found in the DELIVER RU supplied was greater than the imbedded RU which followed and whose length it represents.

System Action:

&RETCODE is set to 8 and processing of the NCL procedure continues. This message is available in the SYSMSG variable.

User Action:

Correct the CNM request data specified on the &CNMALERT or &CNMSEND statement.

N37712

INVALID CNM INPUT RECORD DETECTED.

Reason:

A CNM record passed on an &CNMALERT or &CNMSEND statement could not be processed because its format was invalid.

System Action:

The message is returned in the &SYSMSG NCL variable, and the statement completes with RETCODE 8.

User Action:

Correct the data passed on the &CNMALERT or &CNMSEND statement.

N37801**INSUFFICIENT STORAGE TO PROCESS RECEIVED CNM REPLY****Reason:**

This message is written to the SOLVE activity log if an NCL procedure issues a &CNMREAD verb to receive a solicited reply from the CNM interface and a storage shortage condition has prevented the successful processing of the reply.

System Action:

The NCL procedure waiting for the reply is notified by a value of 8 in the &RETCODE system variable and message N37801 in the &SYSMSG variable.

User Action:

Contact your product support representative and report the storage shortage condition.

N37802**INVALID CNM RECORD RECEIVED, RECORD NOT PROCESSED.****Reason:**

A message received by a &CNMREAD statement contained invalid CNM format data.

System Action:

Processing continues with error data.

User Action:

Investigate cause of possible invalid CNM format record.

N37D01**INVALID MDO NAME FOR REQUEST****Reason:**

The MDO supplied to an &CNMPARSE statement is invalid.

System Action:

None.

User Action:

Check the syntax of the MDO name and verify it against its corresponding MAP definition.

N37D02

SOLVE MAPPING FAILURE

Reason:

An internal error has occurred while processing Mapping Services.

System Action:

None.

User Action:

Contact you product support representative.

N37D03

STACK OVERFLOW

Reason:

The internal recursion stack limit was exceeded while processing an &CNMPARSE operation.

System Action:

None.

User Action:

Contact your product support representative.

N38001

description of CNM record origin/destination captured by CNMTRACE command

Reason:

This message contains the destination/origin, type and status of a CNM record captured by the CNMTRACE command and is issued immediately prior to message(s) N38002.

System Action:

Processing continues.

User Action:

None.

N38002**hex-data****Reason:**

This message contains the hexadecimal data captured when the CNMTRACE command is in effect.

System Action:

None.

User Action:

None.

N38201**REQUIRED OPERANDS MISSING****Reason:**

Required operands on the DEFALIAS, REPALIAS or DELALIAS command were omitted.

System Action:

The command is rejected.

User Action:

Correct the error and retry the command. For a description of the commands refer to the command help.

N38202**OPERAND xxxxxxxx HAS INVALID VALUE****Reason:**

An attempt was made to provide an invalid value to the operand described in the message.

System Action:

The command is rejected.

User Action:

Determine the correct value and retry the command.

N38203

OPERAND xxxxxxxx CONTAINS INVALID CHARACTER(S)

Reason:

An attempt was made to provide an invalid value to the operand described in the message.

System Action:

The command is rejected.

User Action:

Determine the correct value and retry the command.

N38204

GENERIC (R)NAME VALUE SPECIFIED BUT (R)NAME VALUE IS NOT GENERIC.

Reason:

When specifying a generic alias name (or real name) on the DEFALIAS command a generic real name (or alias name) must also be provided to preserve the single name-to- name mapping of the Alias Name Translation Facility.

System Action:

The command is rejected.

User Action:

Correct the error and retry the command.

N38205

ALIAS NAME=alias DELETED/REPLACED/DEFINED.

Reason:

The alias name, previously defined by a DEFALIAS command, has been either deleted or replaced following a DELALIAS or REPALIAS request.

System Action:

As described above.

User Action:

None.

N38206**OPERAND xxxxxxxx NOT RECOGNISED****Reason:**

An invalid operand was specified on the command.

System Action:

The command is rejected.

User Action:

Correct the error and retry the command.

N38207**** WARNING ** ALIAS NAME=aliasnam NET=aliasnet ALSO DEFINES RNAME=realnam RNET=realnet ; POSSIBLE NAME CONFLICT****Reason:**

This is a warning message indicating that the DEFALIAS command just processed refers to a real name and network previously allocated an alias name. This may be intentional.

System Action:

Processing continues.

User Action:

Ensure that the result was intentional, otherwise delete one of the alias name definitions (using the DELALIAS command) as the reverse name mapping (real to alias) is no longer unique.

N38208**ALIAS NAME=aliasnam NET=aliasnet NOT FOUND, IS NOT REPLACED/DELETED.****Reason:**

A REPALIAS or DELALIAS command referenced an alias name and network which was not defined.

System Action:

The command is ignored.

User Action:

Determine the correct action and retry.

N38210

ALIAS NAME=aliasnam NET=aliasnet ALREADY EXISTS. DEFALIAS REJECTED.

Reason:

An attempt was made to define an alias name/network pair but a previous DEFALIAS command had already defined this name and network.

System Action:

The command is rejected.

User Action:

Correct and retry the command if necessary.

N38301

aliasnam aliasnet realnam realnet cdrmname

Reason:

This message provides details solicited with the SHOW DEFALIAS command. Refer to message N38304 which provides the column headings for more details on the contents.

System Action:

None.

User Action:

None.

N38302

OPERAND xxxxxxxx HAS INVALID VALUE.

Reason:

An attempt was made to use the invalid operand described in the message on the SHOW DEFALIAS command.

System Action:

The command is rejected.

User Action:

Correct the error and retry the command.

N38303**OPERAND xxxxxxxx NOT RECOGNISED****Reason:**

An invalid operand was specified on the SHOW DEFALIAS command.

System Action:

The command is rejected.

User Action:

Correct and retry.

N38304**-ALIAS-- --NET--- -RNAME-- --RNET-- -RCDRM--****Reason:**

This message provides the heading describing the line contents for a SHOW DEFALIAS command. Following this message one or more N38301 messages will format the details of those DEFALIAS entries selected by the SHOW DEFALIAS. ALIAS and NET define the resource as known in this system. RNAME and RNET describe the real name of the resource and the network which owns that resource. For a TYPE=LU display the RCDRM field indicates the owning CDRM if known.

System Action:

None.

User Action:

None.

N38305

count type ENTRIES DISPLAYED.

Reason:

This message terminates a SHOW DEFALIAS display. count provides the total number of DEFALIAS entries selected for display, and type describes the type of entries selected and may be either LU, MODE or COS.

System Action:

None.

User Action:

None.

N38306

NO ACTIVE CNM TRACES FOUND.

Reason:

This message is in response to a SHOW CNMTRACE command when no CNM traces are active.

System Action:

None.

User Action:

None.

N38307**USERID ID# COUNT RU-TYPE RESOURCE I-O S-U L-R LINK****Reason:**

This message provides the heading describing the line contents for a SHOW CNMTRACE display. Following this message one or more messages N38308 will format the details of those CNMTRACE entries selected by the SHOW CNMTRACE. USERID is the user starting the trace. ID# is the unique trace identification number. COUNT is the number of traces matching this trace request that have been counted. RU-TYPE is the RU type (if any is specified) that the trace request is tracing. RESOURCE is the network name of the PU to be traced. I-O is 'Y' or 'N' to indicate if inbound and/or outbound RUs are being traced. L-R is 'Y' or 'N' to indicate whether or not tracing is being performed for local and/ or remote systems. If tracing is performed for a remote system, LINK may contain the name of a specific remote system being traced.

System Action:

None.

User Action:

None.

N38308**userid trcnum trccnt ru-type rescname a b c d e f linkname****Reason:**

This message provides details solicited with the SHOW CNMTRACE command. Refer to message N38307 which provides the column headings for more details on the contents.

System Action:

None.

User Action:

None.

N38309

aaaaaaaa CNM TRACES ACTIVE. bbbbbbbb SELECTED FOR DISPLAY.

Reason:

This message terminates a SHOW CNMTRACE display. 'aaaaaaaa' provides the total number of active CNMTRACE entries, and 'bbbbbbbb' shows the number of CNMTRACE entries displayed.

System Action:

None.

User Action:

None.

N38310

DUPLICATE OPERANDS ENTERED.

Reason:

A parameter has been used twice on the SHOW CNMTRACE command.

System Action:

None.

User Action:

Review SHOW CNMTRACE command usage.

N38311

OPERAND xxxxxxxx IS INVALID

Reason:

An invalid operand was specified on the SHOW CNMTRACE command.

System Action:

The command is rejected.

User Action:

Correct and retry.

N38402**INSUFFICIENT STORAGE TO PROCESS ALIAS NAME TRANSLATION REQUEST****Reason:**

An alias name translation request failed because of a storage shortage.

System Action:

The request is not processed.

User Action:

Determine the cause of the storage shortage. If necessary increase the SOLVE region or partition size.

N38501**REQUIRED OPERANDS MISSING****Reason:**

One or more operands required on the XLATE command were omitted.

System Action:

The command is rejected.

User Action:

Correct and retry the command.

N38502**OPERAND xxxxxxxx NOT RECOGNISED****Reason:**

An invalid operand was specified on the XLATE command.

System Action:

The command is rejected.

User Action:

Correct and retry.

N38503

OPERAND xxxxxxxx HAS AN INVALID VALUE

Reason:

An attempt was made to specify an invalid value for the XLATE command operand described in the message.

System Action:

The command is rejected.

User Action:

Correct and retry.

N38504

LU|COS|MODE ALIAS|REAL NAME/NET = name1/net1 ; REAL|ALIAS NAME/NET = name2/net2. cdrm IS CDRM.

Reason:

This message displays the results of an XLATE command. The name1/net1 provide the name and network of the input resource requiring translation, which may be an LU, COS or MODE name of type ALIAS or REAL. The name2/net2 are the names that the name1/net1 pair would be translated to in the target network as specified on the XLATE command.

System Action:

None.

User Action:

None.

N38505

LU|COS|MODE ALIAS|REAL NAME/NET = name1/net1 WAS NOT TRANSLATED, SENSE xxxxxxxxx RETURNED.

Reason:

The name1/net1 input to an XLATE command was not successfully translated by the Alias Name Translation Facility. The sense code shown was returned.

System Action:

None.

User Action:

None.

N38506

TARGET OPERAND REQUIRED UNLESS CLASS ALIAS, TYPE LU

Reason:

The TARGET operand of the XLATE command must be specified unless the input name is an LU and alias to real name conversion was requested explicitly or by default.

System Action:

The command is rejected.

User Action:

Correct and retry.

N38801

CNM START COMMAND ACCEPTED.

Reason:

The CNM START command has been issued to start CNM processing.

System Action:

NEWS will attempt to open the CNM ACB and start receiving records across the CNM interface from the local SSCP.

User Action:

None.

N38802

CNM STOP COMMAND ACCEPTED.

Reason:

The CNM STOP command has been issued to stop CNM processing.

System Action:

NEWS will close the CNM ACB and CNM records will no longer be received from the local SSCP.

User Action:

None.

N38803

CNM OPERANDS MISSING OR INVALID.

Reason:

The CNM or CNMTRACE command has been issued but the required operands have been omitted or are invalid.

System Action:

The command is rejected.

User Action:

The CNM command accepts two operands, START and STOP. You should have only one of these operands on the command (not both). The CNMTRACE command also accepts a CANCEL=id operand (id must be in the range 1 - 999999).

N38804

CNM IS ALREADY ACTIVE. NEWS CNM ACB acbname

Reason:

The CNM START command has been issued but CNM processing has already been activated.

System Action:

The command is rejected.

User Action:

None.

N38805**CNM IS NOT ACTIVE.****Reason:**

The CNM STOP command has been issued but CNM processing was not active and hence cannot be stopped.

System Action:

The command is rejected.

User Action:

None.

N38806**CNM ACB FAILED TO OPEN, ACBERFLG X'yy'.****Reason:**

An attempt to open the CNM ACB failed, for the specified reason code.

System Action:

None

User Action:

Refer to the appropriate VTAM Programming Guide for an explanation of the error code specified.

Note: A common error code is x'5A', which indicates that the ACB name is not defined to VTAM. Correct the name, or define the ACB name to VTAM, and retry.

N38807**OPERAND xxxxxxxx NOT RECOGNISED****Reason:**

An invalid operand was specified on the CNMTRACE command.

System Action:

The command is rejected.

User Action:

Correct and retry.

N38808

CNM TRACE REQUEST ACCEPTED, ID=aaaaaa.

Reason:

A CNMTRACE command has been issued to start CNM record tracing. aaaaaa is the identifier for the trace initiated.

System Action:

NEWS will begin tracing CNM records of the type specified by the CNMTRACE command.

User Action:

None.

N38809

aaaaaaaa CNM TRACES TERMINATED.

Reason:

A CNMTRACE CANCEL=n or CNMTRACE STOP command has been issued where aaaaaaaaa is the number of CNMTRACE requests terminated (if greater than 1).

System Action:

The specified CNM trace(s) will terminate.

User Action:

None.

N38810

NO CNM TRACES FOUND.

Reason:

A CNMTRACE STOP command has been issued but no CNM traces were active at the time.

System Action:

None.

User Action:

None.

N38811**DUPLICATE OPERANDS ENTERED****Reason:**

Duplicate operands were entered for a CNMTRACE command.

System Action:

The CNMTRACE command is rejected.

User Action:

Correct the error and retry the command.

N38812**INSUFFICIENT STORAGE FOR REQUEST.****Reason:**

A CNM record matching a CNMTRACE request mask arrived but insufficient storage was available to process the trace.

System Action:

The request is not processed.

User Action:

Determine the cause of the storage shortage. If necessary increase the SOLVE region or partition size.

N38813**SPECIFIED CNM TRACE NOT ACTIVE.****Reason:**

A CNMTRACE CANCEL=n command has been issued but no CNM trace with an identifier matching that specified by 'n' was found.

System Action:

The command is rejected.

User Action:

Check that the correct identifier was specified and re-issue the command.

N38814

CNM ACB RETRY CANCELLED, CNM IS NOT ACTIVE

Reason:

The CNM ACB was in retry mode and a CNM STOP command was issued.

System Action:

The open retry against the CNM ACB is cancelled.

User Action:

N/A

N38B01

REMOTE CNM RECEIVE/SEND - POSITIVE RESPONSE, SEQ=aaaa

Reason:

This message is part of a CNM trace display and indicates that a CNM RECEIVE or SEND has completed on a remote SOLVE system with a positive response.

System Action:

NEWS continues processing.

User Action:

None.

N38B02

REMOTE CNM RECEIVE/SEND - NEGATIVE RESPONSE, SEQ=aaaa SENSE=bbbb

Reason:

This message is part of a CNM trace display and indicates that a CNM RECEIVE or SEND has completed on a remote SOLVE system with a negative response.

System Action:

NEWS continues processing.

User Action:

Determine the meaning of the sense information to diagnose the reason for the negative response.

N38B03**ERROR ON LINK AAAAAAAAAAAAAA - INVALID NEWS RECORD RECEIVED.****Reason:**

An invalid NEWS record was received across ISR on link name AAAAAAAAAA.

System Action:

The LINK is stopped and processing on the record ignored.

User Action:

Correct source of invalid ISR format input.

N38C01**NEWS ISR CONTACT INITIATED WITH LINK aaaa DOMAIN bbbb.****Reason:**

This message is written to the activity log to indicate that NEWS is initiating the establishment of ISR communication with the indicated remote SOLVE system.

System Action:

Establishment of the ISR connection is initiated.

User Action:

None. This message is informational only.

N38C02**NEWS ISR CONTACT COMPLETED WITH LINK aaaa DOMAIN bbbb
VERSION cccc.****Reason:**

This message indicates the successful establishment of ISR communication with the indicated remote SOLVE system.

System Action:

The NEWS ISR facilities are enabled.

User Action:

Proceed to use the NEWS ISR facilities.

N38C03

NEWS ISR CONTACT LOST WITH LINK aaaa DOMAIN bbbb.

Reason:

This message indicates that the NEWS ISR facilities have been disabled. Communication between the local SOLVE system and the indicated remote SOLVE system has been interrupted.

System Action:

An attempt is made to re-establish INMC contact at regular intervals if the link has actually failed. It is possible that the link was deliberately shut down by an operator.

User Action:

Take no immediate action. It is possible for the INMC link to recover automatically from most communications failures. Normally, a communications line has had an error and as soon as the line is restarted, INMC will be able to recover the link.

N39001

Load failed for NEWS EXIT exitname.

Reason:

The installation provided NEWS exit (exitname) could not be loaded. Possible reasons are that it was not available in the SOLVE STEPLIB DD, or there was insufficient storage to load the exit into the SOLVE address space.

System Action:

No calls will be made to the exit.

User Action:

Check the system log and SOLVE job log for possible causes. Correct and attempt to reinitialize the exit.

N39101**NEWS USER EXIT ABEND: xxx-yyyy MODULE NAME *module*. EXIT TERMINATED****Reason:**

The installation provided NEWS exit (load module name *module*) has abended with the specified abend code. If the abend was a system abend, xxx is set to SYS; for a user abend xxx will be set to USR. This message is issued during system initialization only.

System Action:

No further calls are made to the exit.

User Action:

Identify and correct the abend cause. The exit may be restarted from the NEWS option of System Support Services.

N39302**OPERAND xxxxxxxx IS INVALID OR OUT OF RANGE****Reason:**

The operand xxxxxxxx of the SYSMON command is not recognized.

System Action:

The command is rejected.

User Action:

Correct and retry.

N39303**NO PU NAME SPECIFIED****Reason:**

No PU name was specified on the SYSMON command.

System Action:

The command is rejected.

User Action:

Correct and retry.

N39304

INVALID PU NAME SPECIFIED

Reason:

The PU name specified on the SYSMON command is longer than 8 characters.

System Action:

The command is rejected.

User Action:

Correct and retry.

N39305

INSUFFICIENT STORAGE TO PROCESS COMMAND

Reason:

A lack of storage prevented successful execution of the SYSMON command.

System Action:

The command is rejected.

User Action:

If the condition persists, consider increasing the SOLVE region size.

N39306

NO TEXT SUPPLIED

Reason:

No text to be sent to the PU was supplied on the SYSMON command.

System Action:

The command is rejected.

User Action:

Correct and retry.

N39401**INVALID HEX DATA SPECIFIED****Reason:**

The data supplied on the REQMS command either was not an even number of characters long or contained other than hexadecimal characters.

System Action:

The command is rejected.

User Action:

The data on a REQMS command must be character format hexadecimal, where each two characters represents one hexadecimal byte. The characters can only be A to F and 0 to 9. Correct the error and retry.

N39402**LENGTH OF SUPPLIED DATA EXCEEDS MAXIMUM****Reason:**

The data supplied on the REQMS command cannot exceed 512 characters in length.

System Action:

The command is rejected.

User Action:

Correct and retry.

N39403**NO DATA SPECIFIED****Reason:**

No data was supplied on the REQMS command.

System Action:

The command is rejected.

User Action:

Correct and retry.

N39404

LENGTH OF SUPPLIED DATA LESS THAN MINIMUM

Reason:

The data supplied on a REQMS command must be at least 32 characters in length.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N39405

INSUFFICIENT STORAGE TO PROCESS THE COMMAND

Reason:

The REQMS command cannot be processed because of a storage shortage.

System Action:

NEWS continues processing.

User Action:

If necessary increase the SOLVE region or partition size.

N39501

UNABLE TO ALLOCATE CORRELATOR

Reason:

NEWS was unable to allocate a correlator number to a request to be sent to VTAM across the CNM interface. All available correlator numbers were in use by outstanding requests.

System Action:

The command is rejected.

User Action:

Wait, then retry the command.

N39502**NEWS ACB NOT OPEN****Reason:**

NEWS was unable to send a request to VTAM across the CNM interface because the NEWS CNM ACB was not open.

System Action:

The command is rejected.

User Action:

Review the log for the \$SN CNM parameter group (CNM Interface Details). If necessary, update the details and action the parameter group to activate the CNM ACB used by the NEWS component.

N39503**NEWS SEND FAILED, RC=xx, FBK2=yy, SENSE=zzzzzzzz****Reason:**

NEWS was unable to send a request to VTAM across the CNM interface because a VTAM SEND macro failed.

System Action:

The command is rejected.

User Action:

xx, yy and zzzzzzzz are, respectively, the VTAM return code, feedback and sense information which may be interpreted from the VTAM Programming Guide .

N39505

**LOCAL CNM SEND - NEGATIVE RESPONSE, SEQ=aaaaaaaa
SENSE=bbbbcccc**

Reason:

This message is part of a CNM trace display and supplies the sense code when a CNM SEND macro completes with a negative response returned.

System Action:

NEWS continues processing.

User Action:

Determine the meaning of the sense information to diagnose the reason for the negative response.

N39506

LOCAL CNM SEND - POSITIVE RESPONSE, SEQ=aaaaaaaa.

Reason:

This message is part of a CNM trace display and indicates that a CNM SEND has completed with a positive response.

System Action:

NEWS continues processing.

User Action:

None.

N39601

INVALID RECFMS REPLY DATA RECEIVED.

Reason:

Data received in reply to a SYSMON command is not of the correct format.

System Action:

The data is ignored.

User Action:

This could be a problem with the generation of the data by the controller from which the data was received. A VTAM buffer trace of the NEWS VTAM ACB will show the data received, which should be a RECFMS type 4 response.

N39602**SYSMON puname REJECTED, SENSE ssssssss. reason text****Reason:**

A negative response was received in reply to the data sent to VTAM as a result of a SYSMON command. puname is the name of the PU to which the data was sent, ssssssss is the sense code returned, and reason text is the meaning of the sense code, if known.

System Action:

Processing of the SYSMON command ends.

User Action:

Interpret the meaning of the sense code, and retry the command if appropriate.

N39603**MESSAGE TO xxxxxxxx DISPATCHED****Reason:**

Confirms the successful sending of a message to the control operator of the 3600/4700 controller xxxxxxxx via a SYSMON TYPE=MSG command.

System Action:

None.

User Action:

None.

N39701

hexadecimal data

Reason:

This is the reply to a REQMS command. The data is exactly as received across the CNM interface. Multiple N39701 messages will be returned if the data received is longer than 60 bytes, each message formatting 60 bytes into character format hexadecimal.

System Action:

None.

User Action:

Refer to the REQMS command description.

N39702

REQMS REJECTED, SENSE ssssssss. reason text

Reason:

A negative response was received in reply to the data sent to VTAM as a result of a REQMS command. ssssssss is the sense code returned, and reason text is the meaning of the sense code, if known.

System Action:

Processing of the REQMS command ends.

User Action:

Interpret the meaning of the sense code, and retry the command if appropriate.

N39703

END

Reason:

Signifies the end of N39701 messages received in reply to a REQMS command.

System Action:

None.

User Action:

None.

N39704**POSITIVE RESPONSE RECEIVED****Reason:**

This message is received when the positive response from the network resource is received following the sending of CNM data using the REQMS command and where the data content indicated that no solicited data was expected in reply.

System Action:

None.

User Action:

None.

N39901**SYSTEM CONFIGURED WITH NEWS FEATURE - nlvl****Reason:**

Issued in response to the STATUS command to show that this SOLVE is configured with the NEWS feature, which is at release level nlvl.

System Action:

None.

User Action:

None.

N39902**CNMPROC procname IS/IS NOT LOADED****Reason:**

Issued in response to the STATUS command to show the status of the CNMPROC procname.

System Action:

None.

User Action:

None.

N39903

NEWS ACB IS/IS NOT OPEN

Reason:

Issued in response to the STATUS command to show whether the NEWS VTAM ACB is open.

System Action:

None.

User Action:

None.

N39904

CNMPROC NOT ACTIVE, CANNOT FLUSH.

Reason:

Issued in response to a SYSPARMS CNMPROC=FLUSH command if a CNMPROC is not currently active, or is not currently waiting on an *CNMREAD* statement.

System Action:

None.

User Action:

Retry the command. If a CNMPROC is active, this condition could indicate that it has not been written to always loop around to an &CNMREAD statement, as should be the case.

N39905

CNMPROC REQUEST INVALID, ALREADY ACTIVE

Reason:

Issued in response to a SYSPARMS CNMPROC=procname command if a CNMPROC is already active.

System Action:

None.

User Action:

If you wish to invoke a new CNMPROC, the active one must first be flushed using the SYSPARMS CNMPROC=FLUSH command.

N39906**UNABLE TO CHANGE CNM ACB NAME - ACB IS CURRENTLY OPEN****Reason:**

To change the NEWS ACB name the ACB must be closed first using the NEWS option of the System Support Services function.

System Action:

None.

User Action:

Close the NEWS ACB then retry.

N39907**MODCB FOR ACB NAME acbname FAILED, R15=X'xx', R0=X'yy'.****Reason:**

A MODCB macro for the acbname shown failed with the return codes shown.

System Action:

None.

User Action:

Determine the cause of the error. Correct and retry.

N39908**SYSTEM CONFIGURED WITH XIS FEATURE - nlvl****Reason:**

Issued in response to the STATUS command to show that this SOLVE system is configured with the XIS feature, which is at release level nlvl.

System Action:

None.

User Action:

None.

N39B01

STRUCTURED FIELD aaaa IN ERROR

Reason:

A NEWS security structured field value was invalid.

System Action:

The value is ignored.

User Action:

Correct the security exit value returned and restart the exit.

N39D01

STRUCTURED FIELD aaaa IN ERROR

Reason:

A SOLVE:Attach for Netware security structured field value was invalid.

System Action:

The value is ignored.

User Action:

Correct the security exit value returned and restart the exit. Check the processing for SF x'0535'.

N39F09

INVALID USE OF CNMCONT STATEMENT

Reason:

An NCL procedure has tried to use the &CNMCONT verb but permission has been denied. Use of the &CNMCONT verb is only valid from CNMPROC or from an NCL procedure executed by CNMPROC.

System Action:

The procedure is flushed.

User Action:

Remove the &CNMCONT statement from the procedure, or ensure the procedure is executed as or by CNMPROC. Normally only CNMPROC would ever issue a &CNMCONT, unless it is required by a CNM processing procedure executed by CNMPROC to re- route the record to a remote system for processing.

N39F10**INSUFFICIENT STORAGE TO PROCESS RECEIVED CNM REPLY****Reason:**

A CNM reply message cannot be processed because of a storage shortage.

System Action:

NEWS continues processing.

User Action:

If necessary increase the SOLVE region or partition size.

N39F11**NEGATIVE RESPONSE RECEIVED, SENSE=aaaa. bbbb****Reason:**

A negative response was received across the CNM interface specifying the nominated sense and feedback information.

System Action:

NEWS continues processing.

User Action:

Determine the meaning of the sense code to diagnose the reason for the negative response.

N39F12**CNM READ FAILED, RPL RTCD=aa, FDBK=bb, SENSE=cccc. dddd****Reason:**

A CNM read failed for the stated reason codes.

System Action:

NEWS continues processing.

User Action:

Determine the meaning of the RPL return and sense code information.

N39F13

CNM READ FAILED. aaaa

Reason:

An NCL procedure has issued the &CNMREAD verb but due to an error the read has failed. The text aaaa explains the reason for the failure.

System Action:

The failure is indicated by a value of 8 in the &RETCODE system variable.

User Action:

The message text should explain the reason for the failure - take action to correct the cause of the failure.

N3AC01

SYNTAX ERROR: VARS/ARGS NOT SUPPORTED.

Reason:

Current release of SOLVE:LINK for TCP/IP does not support VARS and ARGS operands on &SOCKET verb.

System Action:

NCL procedure terminates.

User Action:

Correct NCL procedure.

N3AE01

nn errno-desc

Reason:

This message is issued when a socket error occurs after a TCP/IP call. It is a translation of the errno number to the errno returned from the call.

System Action:

Dependent on the calling program.

User Action:

A more specific error message should precede this. See the "NCL REFERENCE" for a list of errno values.

N3AF01**USERID NCLID NCL-PROC LUNAME SOC#****Reason:**

The heading displayed in response to a SHOW TCPIP USERS command. This information is used to determine who is using TCP/IP services and how many sockets are in use.

System Action:

None.

User Action:

None.

N3AF02**userid nclid procname luname soc****Reason:**

A detail line displayed in response to the SHOW TCPIP USERS command. The fields are as follows:

userid The ID of the user of TCP/IP services.

nclid The ID of the NCL process using TCP/IP services.

procname The name of the NCL procedure using TCP/IP services.

luname The user region name.

soc The number of open sockets used by the NCL process.

System Action:

None.

User Action:

None.

N3AF03

SOCKET TYPE OWNER CLIENTID LPORT PPORT PEER-IP-ADDRESS

Reason:

The heading is displayed in response to a SHOW SOCKETS command.

System Action:

None.

User Action:

For more information, see help for messages N3AF04 and N3AF42.

N3AF04***socket type owner clientid lport pport peer-ip-address*****Reason:**

A detail line displayed in response to the SHOW SOCKETS command. The fields are as follows:

socket

Displays the ID of the socket used internally.

type

Displays the type of socket, for example, RAW, UDP, TCP. A TCP Listener is TCPL and TCPI is an associated inbound connection. TCPO is an outbound connection.

owner

Displays the ID of the NCL process using TCP/IP services.

clientid

Displays the ID of the socket used by the TCP/IP stack.

lport#

Displays the local port number assigned to the socket.

pport#

Displays the port number of a peer host if the socket is a TCP connection. Also, the last sent to or received from port for a UDP socket.

peer-ip-address

Displays the IP address of the peer host.

System Action:

None.

User Action:

None.

N3AF05**TCP/IP INTERFACE IS *status* NAME=*name* PRIMARY=*pri* IPVERS=*vers*****Reason:**

This message is issued in response to a SHOW TCPIP STATUS command. The fields are as follows:

- *status* is the status of the TCP/IP socket interface. Possible values are:
 - ACTIVE—The TCP/IP sockets interface is active and TCP/IP requests may be issued.
 - INACTIVE—The TCP/IP sockets interface is inactive.
 - STARTING—The TCPIP START command has been issued and the the sockets interface is initializing.
 - STOPPING—The TCPIP STOP command has been issued and the sockets interface is terminating.
- *name* is the name assigned to the instance of the TCP/IP sockets interface displayed. CA NetMaster can use multiple TCP/IP sockets interfaces concurrently and each is assigned a name. The name is used in commands such as TCPIP STOP, SHOW TCPIP, and others to control and display information about specific interfaces.
- *pri* indicates whether the TCP/IP sockets interface displayed is the primary sockets interface.
 - The primary TCP/IP sockets interface is used by all of the CA NetMaster TCP/IP functions, for example, the IP Node Monitor, IP Diagnostics, and so on. It is also the default interface stopped by a TCPIP STOP command and altered by a TCPIP MODIFY command.
- *vers* is the IP version supported by the TCP/IP sockets interface displayed.
 - 4 indicates that the sockets interface uses IPv4 sockets and 6 indicates that the interface uses IPv6 sockets.
 - When using IPv4 sockets, CA NetMaster can communicate with IPv4 partner applications only. When using IPv6 sockets, CA NetMaster can communicate with IPv4 and IPv6 partner applications.

System Action:

None.

User Action:

None.

N3AF06**TCP/IP PARMS *string*****Reason:**

This message is issued in response to a SHOW TCPIP STATUS command.

string is the options string specified following the OPTIONS operand of the TCPIP START, TCPIP DEFINE, or TCPIP MODIFY command.

System Action:

None.

User Action:

None.

N3AF07**TCP/IP LOCAL HOST ADDRESS=*ipaddress*****Reason:**

This message is issued in response to a SHOW TCPIP STATUS command. The fields are as follows:

ipaddress The IP address of the local host.

System Action:

None.

User Action:

None.

N3AF08

TCP/IP LOCAL HOST NAME=hostname

Reason:

This message is issued in response to a SHOW TCPIP STATUS command. The fields are as follows:

hostname The short name of the local host.

System Action:

None.

User Action:

None.

N3AF09

TCP/IP type PORT=port

Reason:

This message is issued in response to a SHOW TCPIP STATUS command. It shows the server's type and port number. The fields are as follows:

type is either INMC or APPC.

port is the server's port number.

System Action:

None.

User Action:

None.

N3AF10**TCP/IP TRACE=*status*****Reason:**

This message is issued in response to a SHOW TCPIP STATUS command.

status specifies the trace settings for the TCP/IP sockets interface. Possible values are:

NO—The TCP/IP trace is not active.

SUMMARY—The TCP/IP trace is active, summary trace data is written the log.

YES—The TCP/IP trace is active, all trace data is written to the log.

ASCII—The TCP/IP trace is active, all trace data is written to the log, character data is assumed to be ASCII.

System Action:

None.

User Action:

None.

N3AF11**TCP/IP LOCAL HOST FULL NAME=*hostname*****Reason:**

This message is issued in response to a SHOW TCPIP STATUS command. The fields are as follows:

hostname The full name of the local host.

System Action:

None.

User Action:

None.

N3AF12

TCP/IP SHARED SERVER IS *status* PORT=*port*

Reason:

This message is displayed in response to a SHOW TCPIP STATUS command. The fields are as follows:

- *status* is the status of the TCP/IP shared server. Possible values are:
ACTIVE—The TCP/IP shared server is active.
INITIALISING—The TCP/IP shared server is initializing.
INACTIVE—The TCP/IP shared server is inactive.
- *port* is the TCP/IP shared server port number. If no port number is set, it displays NONE.

System Action:

None.

User Action:

None.

N3AF13

luname pid last-request soc

Reason:

A detail line displayed in response to the SHOW TCPIP LINKS command. The fields are as follows:

luname The user's LU name (logical user name).

pid Unique process number. A process number is allocated when the &SOCKET ALLOCATE verb is executed.

last-request The last function executed by TCP/IP services.

soc The number of open sockets used by the process.

System Action:

None.

User Action:

None.

N3AF15**TYPE NAME SOCKET LPORT PPORT PEER-IP-ADDRESS****Reason:**

This message is displayed in response to a SHOW TCPIP AM command. It provides the following headings for the individual TCPIP AM sessions.

The headings are:

- TYPE is the session type:
 - UNKNOWN—The session type has not yet been determined.
 - AM- PRI—A TCPIP AM (INMC/APPC) session, primary (connector).
 - AM-SEC—A TCPIP AM (INMC/APPC) session, secondary (acceptor).
 - TELNET—A TCPIP Telnet session, under negotiation.
 - TELNET-3270—A TCPIP TN3270 session.
 - TELNET-3270E—A TCPIP TN3270E terminal session.
 - TELNET-PRINT—A TCPIP TN3270E printer session (LU1 printer).
 - TELNET-NVT—A TCPIP NVT session (treated as LU1).
- NAME is the logical LU name (APPL or simulated terminal).
- SOCKET is the socket ID.
- LPORT is the local port number.
- PPORT is the peer port number.
- PEER-IP-ADDRESS is the peer IP address.

System Action:

None.

User Action:

None.

N3AF16

type name socket lport pport peer-ip-address

Reason:

This message is displayed in response to a SHOW TCPIP AM command. It displays session information for individual TCPIP AM sessions.

For more information, see message N3AF15.

System Action:

None.

User Action:

None.

N3AF17

TCP/IP DNR=status

Reason:

This message is issued in response to a SHOW TCPIP STATUS command.

status is one of the following:

VENDOR - TCP/IP domain name lookup is using the vendor supplied interface.

SOLVE - TCP/IP domain name lookup is using the SOLVE domain name resolver (DNR).

System Action:

None.

User Action:

None.

N3AF20**USING *type* INTERFACE...****Reason:**

This message is issued in response to a SHOW TCPIP STATUS command.
type is the type of TCP/IP sockets interface.

System Action:

None.

User Action:

None.

N3AF21**interface-description****Reason:**

This message is issued in response to a SHOW TCPIP STATUS command. The message text identifies the type and version of SOLVE's TCP/IP interface. The following message identifies the host operating system TCP/IP software.

System Action:

None.

User Action:

None.

N3AF22**Message from vendor****Reason:**

This message is issued in response to a SHOW TCPIP STATUS command. The message text comes directly from the vendor stack.

System Action:

None.

User Action:

None.

N3AF29

Reason:

The heading displayed is in response to a SHOW TCPIP STATUS command.

System Action:

None.

User Action:

None.

N3AF30

SERVER NAME PORT SOCKET TAKEOVER

Reason:

This message is issued in response to a SHOW TCPIP SERVER command. It is a heading line preceding msg N3AF31.

System Action:

None.

User Action:

None.

N3AF31

ssssssssssssss ppppp cccccc ttt

Reason:

This message is issued in response to a SHOW TCPIP SERVER command. sssssssssssssss is the server name ppppp is the port number cccccc is the socket ID ttt is either YES or NO indicating if this is a TAKEOVER server.

System Action:

None.

User Action:

None.

N3AF40**SERVER-NAME****Reason:**

The heading displayed is in response to a SHOW SOCKETS command.

System Action:

None.

User Action:

For more information, see the help for messages N3AF04 and N3AF42.

N3AF41

Reason:

This heading is displayed in response to a SHOW SOCKETS command.

System Action:

None.

User Action:

For more information, see the help for messages N3AF04 and N3AF42.

N3AF42***server-name*****Reason:**

A detail line displayed in response to the SHOW SOCKETS command.

server-name is the CA NetMaster server name.

System Action:

None.

User Action:

None.

N3AF90

OPERAND *operand* IS INVALID OR OUT OF RANGE

Reason:

This message is issued in response to a SHOW TCPIP or SHOW SOCKETS command.

It indicates that the command cannot be processed because an invalid or unknown operand was specified.

operand is the invalid or unknown operand.

System Action:

The SHOW TCPIP or SHOW SOCKETS command is ignored.

User Action:

Correct or remove the invalid operand and reenter the command.

N3AF91

SHOW *optname* FAILED, NAME=*name* IS NOT DEFINED

Reason:

This message is issued in response to a SHOW TCPIP or SHOW SOCKETS command.

It indicates that the NAME operand of the command specified the name of a TCP/IP sockets interface that is not defined.

The fields are as follows:

- *optname* is the SHOW command option specified, TCPIP or SOCKETS.
- *name* is the NAME operand value specified.

System Action:

The SHOW TCPIP or SHOW SOCKETS command is ignored.

User Action:

Correct or remove the NAME operand and reenter the command.

N3AI01

request FAILED: RC=rc RSN=rsn ERR=err PID=pid SID=sid

Reason:

Execution of a TCP/IP request has failed. The fields are as follows:

request is the TCP/IP request that failed.

rc is the return code.

rsn is the reason code.

err is the error code as set by the TCP/IP API.

pid is the process ID.

sid is the socket ID.

System Action:

The APPC server terminates.

User Action:

Contact your technical support helpdesk.

N3AI02

SUBTASK ALLOCATE FAILED.

Reason:

The address space could not allocate a TCP/IP subtask.

System Action:

APPC server terminates.

User Action:

Check system log for additional error messages.

N3AI03

APPC SERVER HAS TERMINATED.

Reason:

The APPC server has stopped. No further APPC TCP/IP connections are possible.

System Action:

Connect request to APPC server port are rejected.

User Action:

None.

N3AI01

SYSPARM=ssssssss REJECTED, TCP/IP ACCESS METHOD IS NOT ACTIVE

Reason:

An attempt to modify a TCP/IP SYSPARM was made when the TCP/IP access method was not active.

System Action:

The command is ignored.

User Action:

Ensure the TCP/IP access method is active.

N3AI02

SYSPARM=ssssssss rejected; port number is same as a TELNET port

Reason:

You attempted to modify the IPPORT SYSPARM value. However, the new port number is presently defined as a TELNET port (via the TNCTL command).

System Action:

The command is ignored.

User Action:

Select a port number that is not the same as a defined TELNET port.

N3AN01**TCP/IP SERVER ACTIVE ON PORT: pppp SOCKET: ssss****Reason:**

The TCP/IP shared port server is active. Its port number and socket number are displayed.

System Action:

None.

User Action:

None.

N3AN90**TCP/IP SERVER REGISTER FAILED. PORT: pp RC: rc FB: fb ERRNO: er****Reason:**

The TCP/IP shared port server was unable to register the port. The error information is displayed.

System Action:

The server will retry registration in 30 seconds.

User Action:

Additional information follows this message.

Check the error information. If ERRNO indicates that the port is in use, change it using the SOCKETS parameter group.

N3AN91

**TCP/IP SERVER ACCEPT FAILED. SOCKET: ss PORT: pp RC: rcFB: fb
ERRNO: er**

Reason:

The TCP/IP shared port server has an error on ACCEPT. The error information is displayed.

System Action:

The server terminates. It restarts when the primary TCP/IP sockets interface is restarted.

User Action:

Additional information follows this message.

Usually, no user action is required. It is likely that a TCP/IP sockets interface problem has occurred. When the primary TCP/IP sockets interface restarts, the server restarts.

N3AO85

**TCP/IP SERVER PEER=paddr:pport S=sss ERR: error RC=rc FB=ff
ERRNO=errno VERRIN=verr**

Reason:

A TCP/IP error occurred when negotiating an incoming connection request. The error information relates to the &SOCKET NCL verb.

System Action:

The connection is not accepted.

User Action:

Review the error information to identify the problem and correct it.

Note: For information about the &SOCKET return code, feedback code, and error number, see the Network Control Language Reference Guide.

N3AO86

TCP/IP SERVER PEER=paddr:pport S=sss ERR: error

Reason:

An error occurred when negotiating an incoming connection request.

This message may be followed by the N3AO87 message, which dumps the incoming data buffer.

System Action:

The connection is not accepted.

User Action:

Review the error information, and correct the problem.

N3AO87

off hex hex hex hex char

Reason:

This message follows an N3AO86 message and contains the dump of an incoming connection request.

It is followed by N3ZJ91 messages that display the incoming data buffers, which may help you diagnose the problem.

System Action:

None.

User Action:

See N3AO86.

N3AP90

SOCKET *socket* CONNECT TO *server* AT *paddr/pport* FAILED - *errdesc* - DATA FOLLOWS

Reason:

An attempt to connect to another CA NetMaster system using the TCP/IP access method failed. The fields are as follows:

- *socket* is the socket identifier.
- *server* is the server name.
- *paddr/pport* is the TCP/IP address and port number of the remote system.
- *errdesc* is the error description.

This message is logged and precedes N3ZJ91 messages that contain an incoming data buffer that may help diagnose the error.

System Action:

None.

User Action:

Dependant on the error description in the message.

N3AP91

off hex hex hex hex char

Reason:

This message is logged following an N3AP90 message and contains a dump of an incoming data buffer.

This message is logged, and precedes N3ZJ91 messages containing an incoming data buffer that may help diagnose the error.

System Action:

None.

User Action:

Dependant on N3AP90

N3AR01

request FAILED: RC=rc RSN=rsn ERR=err PID=pid SID=sid

Reason:

Execution of a TCP/IP request has failed. The fields are as follows:

request is the TCP/IP request that failed.
rc is the return code.
rsn is the reason code.
err is the error code as set by TCP/IP API.
pid is the process ID.
sid is the socket ID.

System Action:

Connect processing terminates.

User Action:

Contact your technical support help desk.

N3AR02

SUBTASK ALLOCATE FAILED.

Reason:

The address space could not allocate a TCP/IP subtask.

System Action:

Connect processing terminates.

User Action:

Check system log for additional error messages.

N3AS01

request FAILED: RC=rc RSN=rsn ERR=err PID=pid SID=sid

Reason:

Execution of a TCP/IP request has failed. The fields are as follows:

request is the TCP/IP request that failed.
rc is the return code.
rsn is the reason code.
err is the error code as set by TCP/IP API.
pid is the process ID.
sid is the socket ID.

System Action:

The error is handled by the calling service.

User Action:

Contact your technical support help desk.

N3AT01

TCPIP option COMMAND PROCESSED

Reason:

This message is issued in response to a TCPIP command.
It indicates that the command has been processed.
'option' is the command option that was specified.

System Action:

None.

User Action:

None.

N3AT02**TCPIP *option* IGNORED, NAME=*name* IS *status*****Reason:**

This message is issued in response to a TCPIP command. It indicates that the command was not processed because the TCP/IP sockets interface that the command was directed to is in a status that prevents processing, for example, a TCPIP START command when the TCP/IP sockets interface is already active.

The fields are as follows:

- *option* is the command option specified.
- *name* is the name of the TCP/IP sockets interface to which the command was directed.
- *status* is the status of the TCP/IP sockets interface.

System Action:

The TCPIP command is ignored.

User Action:

Determine if the TCPIP command is needed.

N3AT05**TCPIP START FAILED, PRIMARY ALREADY ACTIVE****Reason:**

This message is issued in response to a TCPIP START command. It indicates that the command was not processed because the command operand PRIMARY=YES was specified or was selected by default, and a primary TCP/IP sockets interface is already active.

System Action:

The TCPIP START command is ignored.

User Action:

Determine if the TCPIP START command is needed.

N3AT10

TCPIP *option* FAILED, UNKNOWN TYPE: *type*

Reason:

This message is issued in response to a TCPIP command. It indicates that the command cannot be processed because the TYPE operand specified an unknown TCP/IP sockets interface.

The fields are as follows:

- *option* is the command option specified.
- *type* is the sockets interface type specified. Valid types are:
 - IBM: Interfaces to IBM Communications Server using IPv4 HPNS (High Performance Native Sockets).
 - IBMV4: Interfaces to IBM Communications Server using IPv4 HPNS. IBMV4 is a synonym for IBM.
 - IBMV6: Interfaces to IBM Communications Server using IPv6 HPNS.
 - TCPAXS: Interfaces to CA TCPaccess Communications Server 5.2 or later.
 - VM: Interfaces to IBM VM TCP/IP.
 - XNFTCP: Interfaces to Hitachi XNF/TCP.
 - TISP: Interfaces to Fujitsu TISP.

In most cases, the TYPE operand can be omitted. CA NetMaster selects the correct TCP/IP sockets interface based on the current environment.

System Action:

The TCPIP command is ignored.

User Action:

Correct or remove the TYPE operand and reenter the command.

N3AT11**TCPIP *option* FAILED, TYPE: *type* IS INVALID FOR THIS OPERATING SYSTEM****Reason:**

This message is issued in response to a TCPIP command. It indicates that the command cannot be processed because the TYPE operand specified a TCP/IP sockets interface that is not supported in this environment.

The fields are as follows:

- *option* is the command option specified.
- *type* is the sockets interface type specified. Valid types are:
 - IBM: Interfaces to IBM Communications Server using IPv4 HPNS (High Performance Native Sockets).
 - IBMV4: Interfaces to IBM Communications Server using IPv4 HPNS. IBMV4 is a synonym for IBM.
 - IBMV6: Interfaces to IBM Communications Server using IPv6 HPNS.
 - TCPAXS: Interfaces to CA TCPaccess Communications Server 5.2 or later.
 - VM: Interfaces to IBM VM TCP/IP.
 - XNFTCP: Interfaces to Hitachi XNF/TCP.
 - TISP: Interfaces to Fujitsu TISP.

In most cases, the TYPE operand can be omitted. CA NetMaster selects the correct TCP/IP sockets interface based on the current environment.

System Action:

The TCPIP START command is ignored.

User Action:

Correct or remove the TYPE operand and reenter the command.

N3AT12

TCPIP *option* FAILED, NO VENDOR INTERFACE AVAILABLE

Reason:

This message is issued in response to a TCPIP command. It indicates that the command cannot be processed because the TYPE operand was omitted from the command and CA NetMaster was unable to determine a default TCP/IP sockets interface to use.

option is the command option specified.

System Action:

The TCPIP command is ignored.

User Action:

Determine the correct TCP/IP sockets interface and reenter the TCPIP command, with the TYPE=*type* operand.

N3AT13

TCPIP option FAILED, STORAGE SHORTAGE

Reason:

This message is issued in response to a TCPIP command. It indicates that the command could not be processed as a temporary storage shortage was encountered.

System Action:

The TCPIP command is ignored.

User Action:

Determine why a storage shortage condition exists.

N3AT21**TCPIP DEFINE FAILED, NAME=*name* ALREADY DEFINED****Reason:**

This message is issued in response to a TCPIP DEFINE command. It indicates that the command cannot be processed because a TCP/IP sockets interface is already defined with the same name specified by the NAME operand or selected by default.

name is the sockets interface name specified or selected by default.

System Action:

The TCPIP DEFINE command is ignored.

User Action:

Determine if the TCPIP DEFINE command is needed.

N3AT22**TCPIP *option* FAILED, NAME=*name* IS RESERVED****Reason:**

This message is issued in response to a TCPIP command. It indicates that the command cannot be processed because the NAME operand specified a reserved name.

The fields are as follows:

- *option* is the command option specified.
- *name* is the TCP/IP sockets interface name specified.

System Action:

The TCPIP command is ignored.

User Action:

Correct the NAME operand and reenter the command.

N3AT30

TCPIP MODIFY FAILED, *operand* OPERAND NOT ALLOWED

Reason:

This message is issued in response to a TCPIP MODIFY command. It indicates that the command cannot be processed because an operand was specified that is allowed only when the TCP/IP sockets interface is inactive.

name is the name of the operand that is not allowed.

System Action:

The TCPIP MODIFY command is ignored.

User Action:

Use the TCPIP STOP command to stop the TCP/IP sockets interface, reissue the TCPIP MODIFY command, and then use the TCPIP START command to restart the TCP/IP sockets interface.

N3AT31

TCPIP *option* FAILED, NO PRIMARY VENDOR INSTANCE

Reason:

This message is issued in response to a TCPIP command. It indicates that the command cannot be processed because the NAME operand was omitted and a primary TCP/IP sockets interface is not active.

option is the command option specified.

System Action:

The TCPIP command is ignored.

User Action:

Reissue the TCPIP command with the NAME=*name* operand.

N3AT32**TCPIP *option* FAILED, NO DEFINED VENDOR INSTANCES****Reason:**

This message is issued in response to a TCPIP command. It indicates that the command cannot be processed because the NAME=ALL operand was specified but no TCP/IP sockets interfaces are defined.

option is the command option specified.

System Action:

The TCPIP command is ignored.

User Action:

Determine if the TCPIP command is needed.

N3AT33**TCPIP *option* FAILED, NAME=*name* IS NOT DEFINED****Reason:**

This message is issued in response to a TCPIP command. It indicates that the command cannot be processed because the TCP/IP sockets interface is not defined with the name specified by the NAME operand.

The fields are as follows:

- *option* is the command option specified.
- *name* is the TCP/IP sockets interface name specified.

System Action:

The TCPIP command is ignored.

User Action:

Correct the NAME operand and reenter the command.

N3AT34

TCPIP *option* FAILED, NO ACTIVE VENDOR INSTANCES

Reason:

This message is issued in response to a TCPIP command. It indicates that the command cannot be processed because the NAME=ALL operand was specified but no TCP/IP sockets interfaces are active.

option is the command option specified.

System Action:

The TCPIP command is ignored.

User Action:

Determine if the TCPIP command is needed.

N3AV01

DNR *option* COMMAND PROCESSED

Reason:

This message is issued in response to a DNR command. It indicates that the command has been processed. 'option' is the command option that was specified.

System Action:

None.

User Action:

None.

N3AV02***count* DNR CACHE ENTRIES DELETED****Reason:**

This message is issued in response to a DNR command with the PURGE operand.

count is the number of DNR cache entries deleted.

System Action:

None.

User Action:

None.

N3AV03**STATIC DNR CACHE LOADED, ADD=*add*, REPLACE=*replace*,
NOREPLACE=*noreplace*, ERROR=*error*****Reason:**

This message is issued in response to a DNR command with the STATIC operand. The fields are as follows:

- *add* is the number of cache entries in the VARTABLE for which there is no identically-named entry in the static cache and that were added to the static cache.
- *replace* is the number of cache entries in the VARTABLE for which there is an identically-named entry in the static cache and the entry in the static cache is replaced because the REPLACE option is specified.
- *noreplace* is the number of cache entries in the VARTABLE for which there is an identically-named entry in the static cache and the entry in the static cache is not replaced because the NOREPLACE option is specified (or defaulted).
- *error* is the number of cache entries in the VARTABLE that were in error.

System Action:

None.

User Action:

None.

N3AV10

WARNING, CALCULATED TOTAL TIMEOUT: aaa SECONDS EXCEEDS LIMIT TIMEOUT: bbb SECONDS

Reason:

This message is issued in response to a DNR command. It indicates that at least one of the TIMELIM, RETRY, and NS operands was specified, and that the calculated maximum time needed to query all name servers in turn (allowing for retries) exceeds the specified (or current) TIMELIM setting.

System Action:

This is a warning. The command is still processed and the requested values are set.

User Action:

You may wish to adjust the values of the TIMELIM and RETRY operands (taking into account the number of name servers) to be consistent. For example, if you have 2 name servers (NS=(ns1,ns2)) and wish to have 2 retries, the first after 5 seconds, the second after 10, then you could specify: DNR SET NS=(addr1,addr2) RETRY=(2,5,5,0) (This assumes an additive delay. The last delay would be 15 seconds)

This means that for each name server, the resolver would issue sends as follows:

NS1 send 1 wait 5 seconds NS1 send 2 wait 10 seconds NS1 send 3 wait 15 seconds <start NS2 sends)

For each name server, this is a total of 30 seconds. With 2 name servers, the total required time to satisfy the RETRY specification would be 60 seconds. If you specify (or currently have) a TIMELIM value less than 60, this message is issued in response to the DNR command as a warning. You may then decide to adjust either the TIMELIM value or the RETRY settings.

N3AV80**ooooo OPERAND INVALID****Reason:**

This message is issued in response to a DNR command.
It indicates that the named operand is invalid.
'ooooo' is either DOMAIN or RETRY.

System Action:

The command is ignored.

User Action:

Correct the indicated operand and reissue the command.

N3AV99**P1 OPERAND IS OBSOLETE AND IS IGNORED****Reason:**

A DNR command is entered with an obsolete operand.
The *P1* operand is obsolete and is ignored.

System Action:

The obsolete operand is ignored, and command processing continues.

User Action:

Remove the obsolete operand from the command string.

N3AW10

CURRENT TCP/IP DNR PARMS... (DNR=type)

Reason:

The heading displayed in response to a SHOW DNR command. This information is used to determine the parameter settings of the SOLVE Domain Name Resolver (DNR). It also displays current statistics.

The current setting of the TCPIP START or MODIFY command DNR operand is shown (in the 'type' field). It will be VENDOR or SOLVE.

System Action:

None.

User Action:

None.

N3AW11**parmname value****Reason:**

This response message to a SHOW DNR command, displays various DNR parameter names and their current settings.

The following names are displayed:

DOMAIN The current setting of the DOMAIN operand, showing the domain suffix that will be applied to names with no fullstops.

MAXSTG The current setting of the MAXSTG operand, showing the maximum amount of storage that will be used for the DNR dynamic cache.

TIMELIM The current setting of the TIMELIM operand, showing the absolute time limit that will be applied to a DNR request.

CNRSP The current setting of the CNRSP operand, showing the time (in seconds) that the results of a request that received no answer (in the timeout period) will be cached.

CNFND The current setting of the CNFND operand, showing the time (in seconds) that the results of a request that was answered with no relevant information (and no cache timeout information) will be cached.

RETRY The current settings of the RETRY operand, will display as 'NO' or a list of 4 numbers, representing the retry count, initial timeout, additive timeout, and timeout multiplier.

TRACE The current settings of the TRACE operand.

System Action:

None.

User Action:

None.

N3AW12

NS *n* ADDR: *hostaddr*

Reason:

This message is issued in response to a SHOW DNR command. The fields are as follows:

- *n* is the name server number (1 to 3).
- *hostaddr* is the name server IP address.

System Action:

None.

User Action:

None.

N3AW13

NO NAME SERVERS DEFINED

Reason:

This response message to a SHOW DNR command, indicates that there are presently no name servers defined.

System Action:

None.

User Action:

None.

N3AW14**NS *n* PORT: *port* VENDOR: *name*****Reason:**

This message is issued in response to a SHOW DNR command. The fields are as follows:

- *n* is the name server number (1 to 3).
- *port* is the name server port number (normally 53).
- *name* is the name of the TCP/IP sockets interface used to communicate with the name server, or PRIMARY if the primary sockets interface is used.

N3AW32

TOT-RCVD GHBN GHBA NSLOOKUP DNR-CTL

Reason:

This response message to a SHOW DNR command, provides column headings for the following N3AW33 message.

Column meanings are:

TOT-RCVD The total number of requests received by the SOLVE DNR. GHBN The number of GetHostByName requests received. GHBA The number of GetHostByAddr requests received. NSLOOKUP The number of NSLOOKUP requests received. DNR- CTL The number of DNR control requests received.

System Action:

None.

User Action:

None.

N3AW33**tot-rcvd ghbn ghba nslookup dnr-ctl****Reason:**

This response message to a SHOW DNR command, provides request statistics. Refer to message N3AW32 for the meanings of each number.

System Action:

None.

User Action:

None.

N3AW34**FND-CACH (%) ATTACH NEW-SCH****Reason:**

This response message to a SHOW DNR command, provides column headings for the following N3AW35 message.

Column meanings are:

FND-CACH The number of GetHostByName and GetHostByAddr requests that were satisfied from the cache. (%) The percentage of (total) requests that were satisfied from the cache.

ATTACH The number of new requests that were attached to an in-progress search.

NEW-SCH The number of new requests that caused a new search (that is, query to a name server) to be started. (NSLOOKUP requests always cause a new search; they are never cached and do not attach to in-progress requests).

System Action:

None.

User Action:

None.

N3AW35

fnd-cach (%) attach new-sch

Reason:

This response message to a SHOW DNR command, provides request statistics. Refer to message N3AW34 for column meanings.

System Action:

None.

User Action:

None.

N3AW36

TOT-CMPL FOUND TIMEOUT N-FOUND

Reason:

This response message to a SHOW DNR command, provides column headings for the following N3AW37 message.

Column meanings are:

TOT-CMPL The total number of requests that have completed. FOUND The total number of requests that completed with a 'found' result. TIMEOUT The total number of requests that completed with a 'timeout' result. N-FOUND The total number of requests that completed with a 'not found' result.

Note: These statistics include requests that were satisfied from the DNR cache. The cache will remember searches that timed out or received a not-found response.

System Action:

None.

User Action:

None.

N3AW37**tot-cmpl found timeout n-found****Reason:**

This response message to a SHOW DNR command, provides result statistics. Refer to message N3AW36 for column descriptions.

System Action:

User Action:

None.

N3AW38**BAD-NAME OPN-ERR SND-ERR RCV-ERR STG-ERR NNS-ERR****Reason:**

This response message to a SHOW DNR command, provides column headings for the following N3AW39 message.

Column meanings are:

BAD-NAME The total number of requests that were rejected because the supplied domain name was invalid.

OPN-ERR The total number of requests that were rejected because the DNR was unable to open a UDP socket.

SND-ERR The total number of requests that were rejected because a UDP SEND to a name server failed.

RCV-ERR The total number of requests that were rejected because a UDP RECEIVE failed.

STG- ERR The total number of requests that were rejected due to a storage shortage.

NNS- ERR The total number of requests that were rejected because the current DNR parameter settings did not provide any name server addresses.

System Action:

None.

User Action:

None.

N3AW39

bad-name opn-err snd-err rcv-err stg-err nns-err

Reason:

This response message to a SHOW DNR command, provides request statistics. Refer to message N3AW38 for column descriptions.

SERVER-ADDRESS SENDS RESENDS RECEIVES

Reason:

This response message to a SHOW DNR command provides column headings for the following N3AW52 messages.

Column meanings are:

SERVER-ADDRESS—The IP address of a name server.

SENDS—The number of sends to the name server.

RESENDS—The number of resends to the name server.

RECEIVES—The number of receives from the name server.

System Action:

None.

User Action:

None.

N3AW52

server-address sends resends receives

Reason:

This response message to a SHOW DNR command provides name server statistics.

For more information, see message N3AW51.

System Action:

None.

User Action:

None.

N3AW81**CANNOT DISPLAY DNR STATISTICS, SOLVE DNR NOT IN USE****Reason:**

This response message to a SHOW DNR command, indicates that DNR statistics could not be displayed, as the current TCP/IP interface is not using the SOLVE DNR (Domain Name Resolver).

System Action:

The command is ignored.

User Action:

None. DNR statistics are only available if using the SOLVE DNR.

N3B001**request FAILED: RC=rc RSN=rsn ERR=err PID=pid SID=sid****Reason:**

Execution of a TCP/IP request has failed. The fields are as follows:

request is the TCP/IP request that failed.

rc is the return code.

rsn is the reason code.

err is the error code as set by TCP/IP API.

pid is the process ID.

sid is the socket ID.

System Action:

APPC link manager terminates.

User Action:

Contact your technical support help desk.

N3B002

SUBTASK ALLOCATE FAILED.

Reason:

The address space could not allocate a TCP/IP subtask.

System Action:

APPC link manager terminates.

User Action:

Check system log for additional error messages.

N3B003

INVALID SESSION TERMINATED - REMOTE ADDRESS:aaa.aaa.aaa.aaa PORT: bbbbbb

Reason:

An attempt was made to establish a new connection by a remote system on a link that is already connected or local system does not allow connections from the remote address aaa.aaa.aaa.aaa .
bbbbbb is the remote system's APPC server port number.

System Action:

Session terminates.

User Action:

Check the link definitions of local and remote systems.

N3B101

**IP TRACE: P1 SOCKET= P2 RC= P3 FDBK= P4 ERRNO= P5 VERRIN= P6
LENGTH= P7 XLEN= P8**

Reason:

This is a TCP/IP trace message. The fields are as follows:

P1 - TCP/IP request

P2 - Socket ID

P3 - Return code

P4 - Reason code

P5 - TCP/IP API error code

P6 - TCP/PI API vendor error information

P7 - Length of data in decimal

P8 - Length of data in hexadecimal

The message is logged if TCP/IP services have been started with the TRACE=YES, TRACE=ASCII, or TRACE=SUMMARY option, and a call has been made to the TCP/IP API that required data exchange on the connection.

System Action:

None.

User Action:

N3B201

TCPIP START COMPLETE (TYPE=*type*, NAME=*name*)

Reason:

A TCP/IP sockets interface has been activated by the TCPIP START command.

The fields are as follows:

- *type* is the type of TCP/IP sockets interface.
- *name* is the name assigned to the TCP/IP sockets interface.

System Action:

None.

User Action:

None.

N3B202

TCP/IP INTERFACE FAILED TO INITIALIZE - RC=*rc* RSN=*rsn* ERR=*err*

Reason:

Execution of a TCP/IP request has failed. The fields are as follows:

rc is the return code.

rsn is the reason code.

err is the error code as set by TCP/IP API.

System Action:

TCP/IP services are not available.

User Action:

Contact your technical support help desk.

N3B203

TCPIP AUTOMATIC RESTART IN PROGRESS (TYPE=*type*, NAME=*name*)

Reason:

A TCP/IP sockets interface is automatically restarting after being stopped by a vendor stack shutdown (for example, TCP/IP started task termination).

The fields are as follows:

- *type* is the type of TCP/IP sockets interface.
- *name* is the name assigned to the TCP/IP sockets interface.

System Action:

The TCP/IP sockets interface attempts to restart.

User Action:

None.

N3B210**TCPIP START (TYPE=*type*, NAME=*name*) INITIALIZATION FAILURE, RETRY in *nn* SECONDS****Reason:**

The TCP/IP sockets interface cannot be started by the TCPIP START command. A soft or retrievable failure occurred (messages preceding this describe the error).

A retry occurs in the indicated interval. To stop retry, issue a TCPIP STOP command.

The fields are as follows:

- *type* is the type of TCP/IP sockets interface.
- *name* is the name assigned to the TCP/IP sockets interface.
- *nn* is the retry interval, in seconds.

System Action:

After the indicated interval, initialization of the TCP/IP sockets interface is retried.

User Action:

Determine the reasons for the failure and correct them if required.

N3B220**TCPIP START (TYPE=*type*, NAME=*name*) FAILED, *rsn* - *info*****Reason:**

A TCP/IP sockets interface cannot be started by the TCPIP START command.

The fields are as follows:

- *type* is the type of TCP/IP sockets interface.
- *name* is the name assigned to the TCP/IP sockets interface.
- *rsn* is the reason code associated with the failure.
- *info* is the reason information associated with the failure.

The reason code and information is as follows:

1 - LOAD FOR *type* INTERFACE MODULE *mmmm* FAILED, INFO: *information*

CA NetMaster is unable to load the named module for the indicated sockets interface type. Load error information is displayed.

2 - ATTACH FOR *mmmm* FAILED, REFER TO LOG

CA NetMaster is unable to attach the named sockets interface module. For more information, see the CA NetMaster log.

3 - SUBTASK *mmmm* TERMINATED OR ABENDED, REFER TO LOG

The indicated subtask abended or unexpectedly terminated. For more information, see the CA NetMaster log.

4 - SUBTASK *mmmm* INITIALIZATION FAILURE 1

The indicated subtask cannot perform basic initialization.

5 - SUBTASK *mmmm* INITIALIZATION FAILURE 2, RC: *nn*

The indicated subtask cannot perform subtask engine initialization. The RC values are as follows:

- 1: STQE eyecatcher invalid (internal error)
- 2: Engine already active (internal error)
- 3: Engine previously active (internal error)
- 4: No shared subpool available (internal error)
- 5: Initial getmain failed
- 6: Initial ESTAE failed

If a return code other than getmain failure occur, contact Technical Support.

6 - *type* MODULE *mmmm* FAILED, RC=*rr*

The indicated sockets interface module returned a non-zero return code.

7 - type MODULE *mmmm* INITIALISATION FAILURE, RC: *rr*

The indicated sockets interface module cannot initialize. The message preceding this describes the specific problem.

20 - type MODULE *mmmm* INVALID VECTOR HEADER:

xxxxxxxxxxxxxxxxxxxx

The indicated sockets interface module returned an invalid information vector header.

21 - type MODULE *mmmm* INVALID VECTOR *xxxxxxxx*

The indicated sockets interface module returned an invalid information vector.

22 - type MODULE *mmmm* CAPABILITY ERROR *ee*

The indicated sockets interface module has errors in the returned capability list. Contact Technical Support.

30 - STORAGE SHORTAGE

Insufficient storage is available to complete initialization.

40 - ATTACH OF SECONDARY SUBTASK FAILED

An attempt to attach a required secondary subtask failed.

41 - TCP/IP SUBTASK *ssss* ABEND, SEE LOG

A secondary subtask abended. For more information, see CA NetMaster log.

42 - TCP/IP SUBTASK *ssss* INIT FAILURE: *aa-bb*

A secondary subtask failed to initialize. The codes (*aa-bb*) are as follows:

1-0: Unable to obtain storage

2-x: Internal initialization error

3-y: TCP/IP sockets interface initialization error. An additional message is displayed. *y* is the return code from the TCP/IP sockets interface.

50 - UNABLE TO OBTAIN RECEIVE BUFFER POOL

There was insufficient storage to obtain a pool of receive buffers.

System Action:

Initialization of the TCP/IP sockets interface fails.

User Action:

Determine the reasons for the failure and correct them if required.

N3B280

TCPIP START (TYPE=*type*, NAME=*name*) HALTED BY TCPIP STOP COMMAND

Reason:

A TCP/IP sockets interface initialization was terminated by a TCPIP STOP command.

The fields are as follows:

- *type* is the type of TCP/IP sockets interface.
- *name* is the name assigned to the TCP/IP sockets interface.

System Action:

Initialization of the TCP/IP sockets interface stops.

User Action:

None.

N3B290

TCPIP START (TYPE=*type*, NAME=*name*) WARNING - UNABLE TO OBTAIN TCP/IP HOST NAME, USING 'LOCALHOST'

Reason:

The TCP/IP sockets interface cannot determine the local host name. The value LOCALHOST is used to let the sockets interface initialize.

The fields are as follows:

- *type* is the type of TCP/IP sockets interface.
- *name* is the name assigned to the TCP/IP sockets interface.

System Action:

Initialization of the TCP/IP sockets interface completes.

User Action:

Determine why the correct host name is not available.

N3B291**TCPIP START (TYPE=*type*, NAME=*name*) WARNING - UNABLE TO OBTAIN TCP/IP HOST ADDRESS, USING 127.0.0.1 (LOOPBA CK)****Reason:**

A TCP/IP sockets interface cannot determine the local host IP address. The LOOPBACK address is used to let the sockets interface initialize.

The fields are as follows:

- *type* is the type of TCP/IP sockets interface.
- *name* is the name assigned to the TCP/IP sockets interface.

System Action:

Initialization of the TCP/IP sockets interface completes.

User Action:

Determine why the correct host address is not available.

N3B301**request FAILED: RC=*rc* RSN=*rsn* ERR=*err* PID=*pid* SID=*sid*****Reason:**

Execution of a TCP/IP request has failed. The fields are as follows:

request is the TCP/IP request that failed.

rc is the return code.

rsn is the reason code.

err is the error code as set by TCP/IP API.

pid is the process ID.

sid is the socket ID.

System Action:

INMC link manager terminates.

User Action:

Contact your technical support help desk.

N3B302

SUBTASK ALLOCATE FAILED.

Reason:

The address space could not allocate a TCP/IP subtask.

System Action:

INMC link manager terminates.

User Action:

Check system log for additional error messages.

N3B303

INVALID SESSION TERMINATED - REMOTE ADDRESS:aaa.aaa.aaa.aaa PORT: bbbbbb

Reason:

An attempt was made to establish a new connection by a remote system on a link that is already connected or local system does not allow connections from the remote address aaa.aaa.aaa.aaa .
bbbbbb is the remote system's INMC server port number.

System Action:

Session terminates.

User Action:

Check the link definitions of local and remote systems.

N3B401

**TCPIP STOP IN PROGRESS (TYPE=*type*, NAME=*name*), REASON:
*reason***

Reason:

A TCP/IP sockets interface enters shutdown.

The fields are as follows:

- *type* is the type of TCP/IP sockets interface.
- *name* is the name assigned to the TCP/IP sockets interface.
- *reason* is the reason the TCP/IP sockets interface entered shutdown.

Valid values are:

SYSTEM SHUTDOWN IN PROGRESS

An FSTOP or SHUTDOWN command has caused CA NetMaster to commence shutdown.

TCP/IP STACK SHUTDOWN

The TCP/IP vendor stack (interface/job/etc) has shut down or abended.

INTERFACE SUBTASK ABEND

The CA NetMaster TCP/IP sockets interface subtask has ABENDED. For more information, see the log.

TCPIP STOP COMMAND ENTERED

A TCPIP STOP command was entered

System Action:

The TCP/IP sockets interface enters shutdown.

User Action:

None.

N3B402

TCPIP STOP COMPLETE (TYPE=*type*, NAME=*name*)

Reason:

A TCP/IP sockets interface has shut down.

The fields are as follows:

- *type* is the type of TCP/IP sockets interface.
- *name* is the name assigned to the TCP/IP sockets interface.

System Action:

None.

User Action:

None.

N3BH01

SOCKET P1 OPENED AS UDP PORT P2

Reason:

A socket open request has completed successfully. The UDP Port Number *P2* is now in use by the socket *P1* .

System Action:

None.

User Action:

None.

N3BH02

RAW SOCKET P1 OPENED

Reason:

A socket open-raw request has completed successfully.

System Action:

None.

User Action:

None.

N3BH03**SOCKET P1 CLOSED****Reason:**

A socket close request has completed successfully.

System Action:

None.

User Action:

None.

N3BH04**SOCKET P1 REGISTERED AS TCP PORT P2****Reason:**

A socket register request has completed successfully. The TCP Port Number *P2* is now in use by the socket *P1* .

System Action:

None.

User Action:

None.

N3BH05**SOCKET P1 FOR TCP PORT P2 ACCEPTED CONNECTION FROM P3
USING TCP PORT P4****Reason:**

A socket accept request has completed successfully. The TCP Port Number **P2** has accepted a new TCP connection using local TCP port **P4** . The peer host address is **P3** .

System Action:

None.

User Action:

None.

N3BH06

SOCKET P1 CONNECTED TO P2 USING TCP PORT P3

Reason:

A socket connect request has completed successfully. The TCP Port Number *P2* is now connected to the peer host address *P3* .

System Action:

None.

User Action:

None.

N3BH10

IP TRACE: RECEIVE SOCKET=ssssss LEN=ll PREFIX=pp xxxxxxxx

Reason:

This message is written to the SOLVE log only if TCP/IP tracing is enabled (Summary or Yes).

It is written when a SOCKET RECEIVE operation with a length prefix length of 1 to 4 has received sufficient data to analyze the length prefix value on the incoming data.

The socket ID, length prefix length (1 to 4), and length prefix value (from the incoming data) are displayed.

The incoming length prefix value is displayed in both decimal and hexadecimal notations.

System Action:

None.

User Action:

If the SOCKET RECEIVE does not complete, this message may show an expected length that is too long. SOLVE is waiting for more data but the sender is not sending it. This could indicate a problem with the length prefix length.

For example, if the SOCKET RECEIVE specified LENGTH=4, but the sender used LENGTH=3, and the length of the buffer was data (x'0400'), the 3-byte length prefix sent would be X'000400'. The receiver would receive X'000400??' (where ?? represents the first actual data byte) and expect a buffer approximately 240K bytes long. This may not be satisfied for quite a while!

Note: If an invalid length prefix is received, then this message is not produced. Messages N3BH90 and N3BH91 are produced instead.

Invalid length prefix values are 0, negative values (for LENGTH=4 only), or greater than 16,777,215.

N3BH90**SOCKET ssssss RCV LEN=II INVALID LENGTH PREFIX: pp - BUFFER FOLLOWS****Reason:**

This message is written to the SOLVE log when a SOCKET RECEIVE operation fails due to a bad length prefix detected on incoming data.

The length prefix is 0, negative (for LENGTH=4 only), or greater than 16,777,215.

The socket ID, length prefix length (1 to 4), and length prefix value are shown.

Messages N3BH91 will follow, containing a dump of the received data.

System Action:

The SOCKET RECEIVE operation fails with a feedback code of 17.

User Action:

Check the prefix length specification on the SOCKET RECEIVE and the associated sending application SOCKET SEND (or equivalent).

You can examine the data by looking at the following N3BH91 messages.

N3BH91

ooo xxxxxxxx xxxxxxxx xxxxxxxx xxxxxxxx cccccccccccccccc

Reason:

This message is written to the SOLVE log following an N3BH90 message. It contains a hexadecimal/character dump of the received data, up to 64 bytes.

System Action:

See the preceding message N3BH90.

User Action:

See the preceding message N3BH90.

N3BI01

request FAILED: RC=rc RSN=rsn ERR=err PID=pid SID=sid

Reason:

Execution of a TCP/IP request has failed. The fields are as follows:

request is the TCP/IP request that failed.
rc is the return code.
rsn is the reason code.
err is the error code as set by TCP/IP API.
pid is the process ID.
sid is the socket ID.

System Action:

INMC server terminates.

User Action:

Contact your technical support help desk.

N3BI02

SUBTASK ALLOCATE FAILED.

Reason:

The address space could not allocate a TCP/IP subtask.

System Action:

INMC server terminates.

User Action:

Check system log for additional error messages.

N3BI03**INMC SERVER HAS TERMINATED.****Reason:**

The INMC server has stopped. No further INMC TCP/IP connections are possible.

System Action:

Connect request to INMC server port are rejected.

User Action:

None.

N3C101**MDS error assigning data to mdo****Reason:**

A SOCKET verb failed when attempting to assign data to an MDO.

xxxxxxx - The session SOLVE primary APPL name.

aaaaaa - the TCP/IP IP address of the session.

ppp - the TCP/IP port of the session.

sss - the assigned socket number of the session.

rr - the socket return code (normally 8)

The most likely cause of an error is a TCPIP STOP or the other SOLVE region has terminated the connection.

System Action:

The SOCKET call is rejected.

User Action:

Check that the MDO specified is correct.

N3C102

ADDRESS= operand specifies invalid value

Reason:

A SOCKET verb specified an invalid IP address value.

xxxxxxx - The session SOLVE primary APPL name.

aaaaaa - the TCP/IP IP address of the session.

pppp - the TCP/IP port of the session.

sss - the assigned socket number of the session.

rr - the socket return code (normally 8)

The most likely cause of an error is a TCPIP STOP or the other SOLVE region has terminated the connection.

System Action:

The SOCKET call is rejected.

User Action:

Check the IP address specified in the ADDRESS= operand.

N3C103

HOSTNAME= operand specifies invalid value

Reason:

A SOCKET NSLOOKUP verb specified an invalid HOSTNAME value.

The hostname contains invalid characters or is not formatted correctly.

Hostnames must consist of the A-Z, 0-9, -, and . (fullstop) characters, and cannot have more than 63 characters between fullstops, and 2 adjacent fullstops are not permitted.

System Action:

The SOCKET call is rejected.

User Action:

Check the hostname specified in the HOSTNAME= operand.

N3C104**NSADDRESS= operand specifies invalid value****Reason:**

A SOCKET NSLOOKUP verb specified an invalid name server IP address value.

System Action:

The SOCKET call is rejected.

User Action:

Check the IP address specified in the NSADDRESS= operand.

N3C105**SRCIP= operand specifies invalid value****Reason:**

A SOCKET PING or SOCKET TRACEROUTE verb specified an invalid source IP address value.

System Action:

The SOCKET call is rejected.

User Action:

Correct the IP address specified in the SRCIP= operand.

N3D690

**PING/TRACEROUTE RAW SOCKET OPEN FAILURE, NAME=*name*
PROTO=*pppp* RC=*rr* RSN=*rrr* ERRNO=*eee* VERRIN=*vvv***

Reason:

An attempt to open a raw TCP/IP socket to process SOCKET PING and SOCKET TRACEROUTE requests failed. The sockets interface name, protocol (RAW, ICMPV4, or ICMPV6), return code, reason code, errno, and vendor error information are shown.

System Action:

The current PING or TRACEROUTE request fails with an error.

User Action:

Examine the error codes and determine why the open failed. Often it is because the CA NetMaster region is not authorized to open RAW sockets.

For more information about the socket error code (ERRNO=*eee*), see the *NCL Reference Guide*.

For more information about the Vendor Error Code (VERRIN=*xxx*), see the appropriate TCP/IP error codes reference guide.

N3D691

**PING/TRACEROUTE RAW SOCKET RECV FAILURE, NAME=*name* RC=*rr*
RSN=*rrr* ERRNO=*eee* VERRIN=*vvv***

Reason:

A receive operation on a raw TCP/IP socket used to process SOCKET PING and SOCKET TRACEROUTE has failed. The sockets interface name, return code, reason code, errno, and vendor error information are shown.

System Action:

The current PING or TRACEROUTE request fails with an error.

User Action:

Examine the error codes and determine why the receive failed. It may be transient (for example, TCP/IP shutdown).

N3D692

***P1 RAW SOCKET SEND FAILURE, NAME=name RC=rr RSN=rrr
ERRNO=eee VERRIN=vvv DESTIP=destip***

Reason:

A send operation on a raw TCP/IP socket used to process a SOCKET request has failed. The request type *P1* can be PING or TRACEROUTE. The sockets interface name, return code, reason code, errno, vendor error and destination IP address information are shown.

System Action:

The current PING or TRACEROUTE request fails with an error.

User Action:

Examine the error codes and determine why the send failed. It may be transient (for example, TCPIP shutdown).

N3DB80

DNDR @ aaaaaaaa - information

Reason:

This message is issued to the NetMaster log when the NetMaster DNR is tracing activity.

It is only issued if NetMaster DNR tracing is activated. This will only be done when requested by a NetMaster Support Engineer.

System Action:

None.

User Action:

Provide the trace information to Technical Support as requested.

N3DC90

**SOLVE DNR SOCKET *request* FAILURE, NAME=*name* RC=*rr* RSN=*rrr*
ERRNO=*eee* VERRIN=*vvv***

Reason:

A socket request has failed for the CA NetMaster DNR socket. The request type, sockets interface name, return code, reason code, errno, and vendor error information are shown.

System Action:

DNR requests can be rejected (typically with a timeout error).

User Action:

Examine the error codes and determine why the request failed.

N3DC91

NETMASTER DNR RCV BUFFER ERROR - *iiiiiii* OFF=*oooo*

Reason:

This message is issued to the NetMaster log when an incoming message from a name server contains structural errors.

A description of the problem and the approximate offset in the message where the problem was found is shown.

System Action:

The message is discarded.

User Action:

Contact Technical Support.

N3DC98

N3U101

PARM 1 INVALID: MUST BE INIT|GET**Reason:**

An invalid call was made to module NM0003U1. For a call to be valid, the first parameter must be either "INIT" or "GET".

System Action:

The call is rejected.

User Action:

Correct the code which calls NM0003U1.

N3U103**LINK TO T01PNSIP FAILED****Reason:**

An attempt was made to call module T01PNSIP. The Link SVC returned an error response. (T01PNSIP is a utility module which is provided as a component of CA TCPaccess.

System Action:

The call fails.

User Action:

Ensure that T01PNSIP is available for use in your region by placing it in either the steplib or linklist.

N3U104**NO RESPONSE FROM TCPACCESS****Reason:**

A Netstat command was issued to gather information from CA TCPaccess. A timeout occurred while waiting for a response to the command.

System Action:

The request for information from CA TCPaccess fails.

User Action:

Determine why CA TCPaccess cannot respond to the request.

N3U105**INVALID RESPONSE FROM GET CALL****Reason:**

NM0003U1 attempted to issue a Netstat command to CA TCPaccess, but the interface module (T01PNSIP) returned an unrecognized return code.

System Action:

The call is rejected.

User Action:

Determine why T01PNSIP returned an unrecognized response. Correct the situation, and reissue the request.

N3U106

INVALID RESPONSE FROM FINISH CALL

Reason:

Module NM0003U1 was attempting cleanup after receiving information from CA TCPaccess. The cleanup call to the interface module (T01PNSIP) returned an unrecognized response.

System Action:

The call fails.

User Action:

Determine why the cleanup call to T01PNSIP failed, correct the situation, and retry the call.

N3U107

INVALID SSID

Reason:

A call was made to NM0003U1 to obtain information from CA TCPaccess. The second parameter of the call is the subsystem identifier that names the CA TCPaccess system to be queried. The SSID passed is invalid. To be valid, the SSID must be from one to four characters long.

System Action:

The call is rejected.

User Action:

Correct the code which calls NM0003U1, and retry the operation.

N3U108

NOT ENOUGH PARMS TO DO ANYTHING USEFUL

Reason:

A call was made to NM0003U1 to obtain information from CA TCPaccess. Not enough parameters were provided for NM0003U1 to return any information.

System Action:

The call fails.

User Action:

Amend the call to NM0003U1 to pass more parameters.

N3U109**SUBSYSTEM CALL WITH OLD-FORMAT PARAMETER LIST****Reason:**

A call was made to the \$IPNETAX subsystem, using the old-format subsystem parameter list. \$IPNETAX requires the use of the new-format parameter list.

System Action:

The call is rejected.

User Action:

Use the OCS command "SHOW SUBSYS=\$IPNETAX" to diagnose the subsystem. The subsystem must be defined to use the new-format parameter list.

N3Z301**TCP/IP SERVER ACTIVE ON PORT: pppp SOCKET: ssss****Reason:**

The TCP/IP server has started. It identifies the server port being used and the assigned TCP/IP socket number.

System Action:

The TCP/IP server becomes available.

User Action:

None.

N3Z390

TCP/IP SERVER REGISTER FAILED. PORT: ppp RC: rr FB: ff ERRNO: ee

Reason:

The TCP/IP server is unable to start.

The likely cause is a port conflict. Other software on this system may be using the port (indicated by ERRNO 37 (EADDRINUSE)).

Other errors can be analyzed by referring to the return code (RC), feedback code (FB), and error number (ERRNO) of the SOCKET NCL verb. For more information, see the NCL Reference Guide.

This message is followed by an N3AE01 message that describes the error number in more detail.

System Action:

The TCP/IP server is unavailable.

User Action:

If the port number is already in use, change it using the SOCKETS parameter group.

N3Z391

TCP/IP SERVER ACCEPT FAILED. SOCKET: sss PORT: ppp RC: rr FB: ff ERRNO: err

Reason:

The TCP/IP server is unable to accept an incoming connection request.

This can occur when the connecting system closes the connection before it is complete or a storage shortage occurs.

This message is followed by an N3AE01 message that describes the error number in more detail.

System Action:

The connection is not accepted. The server stops accepting connections until TCP/IP is restarted.

User Action:

None.

N3Z401**TELNET SESSION INITIATED WITH *hostaddr:port* LUNAME: // TYPE: *tt*****Reason:**

A new client has successfully completed initial negotiation.

The message shows the TCP/IP address and port of the client, and the allocated LUsername and Telnet session type.

Session types are as follows:

NVT is a Network Virtual Terminal (a linemode session that appears as an LU1 terminal).

TN3270 is a standard TN3270 session.

TN3270E TERMINAL is a TN3270E terminal session.

TN3270E PRINTER is a TN3270E printer session (that appears as an LU1 printer).

System Action:

The session is connected.

User Action:

None.

N3Z410**TELNET SESSION WITH *nnnn* FAILED, NO TERMINALS AVAILABLE****Reason:**

This message is displayed on a TN3270 or NVT session Telnet client when SOLVE has refused the session due to all generic terminals being in use.

System Action:

The connection is closed.

User Action:

None.

N3Z411

TELNET SESSION WITH nnnn FAILED, TERMINAL tttt NOT VALID

Reason:

This message is displayed on a TN3270 session Telnet client when SOLVE has refused the session. The session was refused because the requested terminal name was invalid or in use.

System Action:

The connection is closed.

User Action:

Check that the supplied terminal name is valid. The TNSPREFIX and TNANYNAM sysparm settings are relevant.

N3Z480

TELNET PEER=*hostaddr:port* ERR: *err*

Reason:

An error occurred during session negotiation. A description of the error is in the message.

System Action:

The connection closes.

User Action:

Contact Technical Support.

N3Z481

TELNET S=*sss* ERR: *err*

Reason:

This message is issued by the SOLVE Telnet Server connection processor when an error occurs during session negotiation. A description of the error is in the message.

System Action:

The connection is closed.

User Action:

Report the error to your SOLVE support office.

N3Z482

TELNET PEER=*hostaddr:port* **ERR: err RC=rr FB=ff ERRNO=eee**

Reason:

A TCP/IP error occurred during session negotiation. A description of the error and the return information from the TCP/IP request is shown.

System Action:

The connection closes.

User Action:

Contact Technical Support.

N3Z483

CS=aa LS=bb LAST RCVD CMD FOLLOWS...

Reason:

This message is issued by the SOLVE Telnet Server connection processor following an N3Z480 message when the last received Telnet command was related to the error.

It is followed by a set of N3Z484 messages that show the received command.

System Action:

A dump of the command follows.

User Action:

Report the error to your SOLVE support office.

N3Z484

off hex hex hex hex char

Reason:

This message is logged following an N3Z483 message and contains a dump of an incoming data buffer.

This message is logged, and precedes N3ZJ91 messages containing an incoming data buffer that may help diagnose the error.

System Action:

See N3Z483.

User Action:

See N3Z483.

N3Z680

TELNET PEER=*hostaddr:port* ERROR: *err* RC=*rr* FB=*ff* ERRNO=*eee*

Reason:

A TCP/IP error occurred. A description of the error and the return information from the TCP/IP request is shown.

System Action:

The connection closes.

User Action:

Ensure that the client did not close the connection.

N3Z681

TELNET PEER=*hostaddr:port* STORAGE SHORTAGE

Reason:

There is a storage shortage. The return information from the TCP/IP request is shown.

System Action:

The connection closes.

User Action:

None.

N3Z682

**TELNET PEER=*hostaddr:port* INVALID/UNEXPECTED TELNET
COMMAND RECEIVED...**

Reason:

Invalid input data from the Telnet client was detected.

It is followed by a dump of the buffer and the return information from the TCP/IP request.

System Action:

The connection closes.

User Action:

None.

N3Z683

off hex hex hex hex char

Reason:

This message is logged following an N3Z682 message and contains a dump of a data buffer.

This message is logged, and precedes N3ZJ91 messages containing an incoming data buffer that may help diagnose the error.

System Action:

See N3Z682.

User Action:

See N3Z682.

N3Z684

TELNET PEER=*hostaddr:port* INVALID/UNEXPECTED TN3270E DATA RECEIVED...

Reason:

Invalid input data from a TN3270E Telnet client was detected.

It is followed by a dump of the buffer and the return information from the TCP/IP request.

System Action:

The connection closes.

User Action:

None.

N3Z685

off hex hex hex hex char

Reason:

This message is logged following an N3Z684 message and contains a dump of a data buffer.

This message is logged, and precedes N3ZJ91 messages containing an incoming data buffer that may help diagnose the error.

System Action:

See N3Z684.

User Action:

See N3Z684.

N3Z901**SYSPARM=ssssssss REJECTED - TCP/IP INTERFACE IS NOT ACTIVE****Reason:**

An attempt to modify a TCP/IP Telnet sysparm was made when the TCP/IP interface was active.

Some of these sysparms can be altered only when the TCPIP interface is not active.

System Action:

The command is ignored.

User Action:

Issue TCPIP STOP, alter the sysparm, then issue TCPIP START.

N3ZA01**PROCESSING OF INPUT FOR xxxxxxxx FAILED DUE TO STORAGE SHORTAGE****Reason:**

This message is issued during input message processing for terminals and INMC/APPC sessions that are using the TCP/IP access method.

It indicates that no storage was available for the input data.

System Action:

The session is terminated.

User Action:

Determine why the storage shortage occurred.

N3ZB01

CONNECT OF xxxxxxxx (aaaaaa:pppp id=sss) FAILED, rrrrrrrr

Reason:

This message is issued during an incoming connect request for a session using the TCP/IP access method.

It indicates that the incoming connect failed.

The fields in the message are:

xxxxxxx - The incoming SOLVE primary APPL name.

aaaaaa - the TCP/IP IP address of the incoming request

pppp - the TCP/IP port of the incoming request

sss - the assigned socket number of the incoming request

rrrrrr - the failure reason:

STORAGE SHORTAGE - a storage shortage has occurred

REJECTED - the request was rejected, for example no LINK START or DEFLINK matched the request.

System Action:

The session is refused.

User Action:

For storage shortages, determine why the storage shortage occurred.

For rejections, check the current DEFLINK and LINK requests.

N3ZB10

**IP SEND TO xxxxxxxx (aaaaaa:pppp id=sss) FAILED, RC=rr FB=ff
ERRNO=ee**

Reason:

This message is issued when a TCP/IP send on a TCPIP access method session fails.

The fields in the message are:

xxxxxxx - The session SOLVE primary APPL name.

aaaaaa - The TCP/IP IP address of the session.

pppp - The TCP/IP port of the session.

sss - The assigned socket number of the session.

rr - The socket return code (normally 8)

ff - The socket feedback (see the NCL SOCKET verb &ZFDBK values)

ee - The socket errno (see the NCL SOCKET verb &ZSOCERRN values)

The most likely cause of this error is a TCPIP STOP or the other SOLVE domain has terminated the connection.

System Action:

The session is closed.

User Action:

Use the feedback and errno values to determine the cause of the failure and take appropriate corrective action.

N3ZB11

IP ASY RCV FOR xxxxxxxx (aaaaaa:pppp id=sss) FAILED, RC=rr

Reason:

This message is issued when a TCP/IP receive on a TCP/IP access method session fails.

The fields in the message are:

xxxxxxx - The session SOLVE primary APPL name.

aaaaaa - The TCP/IP IP address of the session.

pppp - The TCP/IP port of the session.

sss - The assigned socket number of the session.

rr - The socket return code (normally 8)

The most likely causes of the error are a TCPIP STOP or the other SOLVE domain has terminated the connection.

System Action:

The session is closed.

User Action:

Check that the other SOLVER system has not closed the connection.

N3ZB12

**INITIAL RCV FAILED, PEER=(aaaaaa:pppp ID=sss) RC=rr FB=ff
ERRNO=ee**

Reason:

This message is issued when a TCP/IP receive on a TCP/IP access method fails.

aaaaaa:pppp are the IP address and port number of the peer rr, ff, ee are the return code, feedback and ERRNO from the RECEIVE.

xxxxxxx - The session SOLVE primary APPL name.

aaaaaa - The TCP/IP IP address of the session.

pppp - The TCP/IP port of the session.

sss - The assigned socket number of the session.

rr - The socket return code (normally 8)

The most likely causes of an error are a TCPIP STOP or the other SOLVE domain has terminated the connection.

System Action:

The session is closed.

User Action:

Check that the remote SOLVE domain has not closed the connection.

N3ZB13**INITIAL RCV TIMED OUT, PEER=(aaaaaa:pppp ID=sss)****Reason:**

This message is issued when a TCP/IP RECEIVE on a TCP/IP access method times out.

aaaaaa:pppp are the IP address and port number of the peer

xxxxxxx - The session SOLVE primary APPL name.

aaaaaa - The TCP/IP IP address of the session.

pppp - The TCP/IP port of the session.

sss - The assigned socket number of the session.

rr - The socket return code (normally 8)

The most likely causes of an error are a TCPIP STOP or the other SOLVE domain has terminated the connection.

System Action:

The session is closed.

User Action:

Check that the remote SOLVE domain has not closed the connection.

N3ZB14**INVALID INCOMING CONN REQ, PEER=(aaaaa:ppp ID=sss)
REASON=rrr****Reason:**

Invalid data is detected from an initial RECEIVE.

aaaaaa:pppp are the IP address and port number of the peer

rrr describes the reason the data is considered invalid

xxxxxxx - The session region primary APPL name.

aaaaaa - The TCP/IP IP address of the session.

pppp - The TCP/IP port of the session.

sss - The assigned socket number of the session.

rr - The socket return code (normally 8).

Likely causes of the an error are:

- A TCPIP STOP command has been issued

- A connected region has terminated the connection

System Action:

The session is closed.

User Action:

Contact Technical Support and quote the message number and reason code.

N3ZB15

**INVALID INCOMING CONN REQ, PEER=(aaaaa:ppp ID=sss)
REASON=TARGET LU UNMATCHED, TARGET=ttttttt
EXPECTED=eeeeeeee**

Reason:

The target LU to log on to is incorrect.
aaaaaa:pppp are the IP address and port number of the peer.
ttttttt is the target specified by the logon request.
eeeeeeee is the lu of the system issuing the message.
xxxxxxx - The session SOLVE primary APPL name.
aaaaaa - The TCP/IP IP address of the session.
pppp - The TCP/IP port of the session.
sss - The assigned socket number of the session.
rr - The socket return code (normally 8).
Likely causes of an error are:
- A TCPIP STOP command has been issued
- The other SOLVE domain has terminated the connection

System Action:

The session is refused.

User Action:

Check the luname specified in the preceding DOMAIN DEFINE for the link.

N3ZB17

IP ASY SND FOR xxxxxxxx (aaaaaa:pppp id=sss) FAILED, RC=rr

Reason:

This message is issued when a TCP/IP send on a TCP/IP access method session fails.

The fields in the message are:

xxxxxxx - The session SOLVE primary APPL name.

aaaaaa - The TCP/IP IP address of the session.

pppp - The TCP/IP port of the session.

sss - The assigned socket number of the session.

rr - The socket return code (normally 8).

The most likely causes of the error are a TCPIP STOP or that the other SOLVE domain has terminated the connection.

System Action:

The session is closed.

User Action:

Check that the other SOLVE domain has not closed the connection.

N3ZC01

CONNECT OF xxxxxxxx FAILED - rrrrrr

Reason:

This message is issued when an attempt to connect to another SOLVE system using the TCP/IP access method fails.

It indicates that the incoming connect failed.

The fields in the message are:

xxxxxxx - The incoming SOLVE primary APPL name.

rrrrrr - the failure reason:

IP AM NOT INITIALIZED

The TCP/IP access method is not active, for example no TCPIP START has been issued, or no IPAMPORT has been set.

CANNOT CONNECT TO SELF

A request to connect to the same SOLVE system was received.

STORAGE SHORTAGE (1)

An internal storage shortage occurred.

STORAGE SHORTAGE (2)

An internal storage shortage occurred.

INTERNAL REJECT (1)

An internal error occurred.

INTERNAL REJECT (2)

An internal error occurred.

xxxxxxx FAILED RC=rr FB=ff E=eee

The named SOCKET request failed with the displayed return code, feedback, and errno.

xxxxxxx SCHED FAILED RC=rr

the named SOCKET request schedule failed with the displayed return code.

INIT. RECEIVE TIMED OUT 60 seconds.

BAD RSP BUF, REAS=xx

The initial response buffer was invalid. Reasons are:

01 - buffer too short

02 - invalid eyecatcher

03 - length mismatch

04 - invalid response code

REFUSED, SENSE: sxxx

The target SOLVE system refused the connection with the indicated (SNA) sense code.

CANCELLED DURING LOGON

The connect request was cancelled by this system during processing.

System Action:

The connection is not started.

User Action:

Examine the reason. Common causes are having a wrong DOMAIN definition table entry (wrong IP address/port), or the target system not accepting the request due to no LINK START or DEFLINK in effect.

N3ZF01

SEND OF DATA FOR xxxxxxxx FAILED, STORAGE SHORTAGE

Reason:

This message is issued when a TCP/IP send on a TCPIP access method session fails due to a storage shortage.

System Action:

The session is closed.

User Action:

Determine the cause of the storage shortage.

N3ZF02

TCP/IP SEND PROCESSING FOR xxxxxxxx FAILED, RC=rr

Reason:

This message is issued when a TCP/IP send on a TCPIP access method session fails.

System Action:

The session is closed.

User Action:

The most likely reason for the send failing is either a TCPIP STOP command being issued or the other SOLVE system closing the connection. Thus there is normally no specific action to take.

N3ZJ01

CONNECT OF xxxxxxxx FAILED - rrrrrr

Reason:

This message is issued when an attempt to connect to another SOLVE system using the TCP/IP access method fails.

It indicates that the incoming connect failed.

The fields in the message are:

xxxxxxx - The incoming SOLVE primary APPL name.

rrrrrr - the failure reason:

TCP/IP ACCESS METHOD NOT ACTIVE

The TCP/IP access method is not active, for example no TCPIP START has been issued, or no IPAMPORT has been set.

NO DOMAIN DEF FOR xxxxxxxx

there is no defined DOMAIN table entry for the requested target.

The DOMAIN DEFINE command can be used to define the target name and TCP/IP address/port information.

DOMAIN DEF FOR xxxxxxxx HAS NO TCPIP INFO

there is a defined DOMAIN table entry for the requested target, however the entry has no TCP/IP address/port information.

The DOMAIN DEFINE command can be used to update the target name and TCP/IP address/port information.

CONNECT TIMED OUT

The TCPIP CONNECT did not complete within 60 seconds.

RECEIVE TIMED OUT

The TCPIP RECEIVE did not complete within 60 seconds.

PEER CLOSED CONNECTION

The target system closed the connection.

STORAGE SHORTAGE (1)

xxxxxxx FAILED RC=rr FB=ff E=eee

The named SOCKET request failed with the displayed return code, feedback, and errno.

xxxxxxx SCHEDULE FAILED RC=rr

the named SOCKET request schedule failed with the displayed return code.

PROTOCOL ERROR xx, SEE LOG

The initial handshake encountered a protocol error. The SOLVE log will contain additional messages. The codes are:

- 1 - unexpected data received
- 2 - unexpected TELNET command received
- 3 - received 2nd DO TN3270E
- 4 - received 2nd DO TERMTYPE
- 5 - received 2nd SEND TERMTYPE
- 6 - received TERMTYPE IS, not yet sent
- 7 - received TERMTYPE IS, invalid length
- 8 - received TERMTYPE IS, invalid name
- 9 - received TERMTYPE IS, invalid num2
- 10 - received TELNET command too long

System Action:

The connection is not started.

User Action:

Examine the reason. Common causes are having a wrong DOMAIN definition table entry (wrong IP address/port), or the target system not accepting the request due to no LINK START or DEFLINK in effect.

N3ZJ02**TCPIP AM CONNECT REQUEST TO xxxxxxxxx FAILED: rrrrrrr****Reason:**

This message is issued to all SOLVE Monitor status users when an attempt to connect to another SOLVE system using the TCP/IP access method fails.

It indicates the failure was related to DOMAIN definitions.

The fields in the message are:

xxxxxxx - The incoming SOLVE primary APPL name.

rrrrrrr - the failure reason:

NO DOMAIN TABLE ENTRY FOUND

there is no defined DOMAIN table entry for the requested target.

The DOMAIN DEFINE command can be used to define the target name and TCP/IP address/port information.

DOMAIN TABLE ENTRY HAS NO TCPIP INFORMATION

there is a defined DOMAIN table entry for the requested target, however the entry has no TCP/IP address/port information.

The DOMAIN DEFINE command can be used to update the target name and TCP/IP address/port information.

System Action:

The connection is not started.

User Action:

Correct the Domain table entries as required, using the DOMAIN DEFINE or DOMAIN REPLACE commands.

N3ZJ90

CONNECT TO xxxxxxxx FAILED - rrrrrr - DATA FOLLOWS

Reason:

An attempt to connect to another region using the TCP/IP access method fails.
xxxxxxx identifies the region.

rrrrrr is the reason.

Note: For more information about the reason, see the help for the N3ZJ01 message.

This message is followed by N3ZJ91 messages that display the incoming data buffers, which can help you diagnose the problem.

System Action:

See N3ZJ01.

User Action:

See N3ZJ01.

N3ZJ91

off hex hex hex hex char

Reason:

This message follows an N3ZJ90 message and contains the dump of an incoming data buffer.

System Action:

See N3ZJ01.

User Action:

See N3ZJ01.

N3ZK01

**IPAM PEER=*hostaddr:port* NAME=*nnnn* HEARTBEAT SEND FAILURE.
RC=*rrr* FB=*fff* ERRNO=*ggg***

Reason:

A send failure has occurred. A description of the error is in the message..

System Action:

The connection closes.

User Action:

Determine why the send failed. It is likely that the TCP/IP connection was closed or broken.

N3ZN80

TELNET PEER=*hostaddr:port info*

Reason:

An error occurred while preparing or sending an outbound data buffer to a Telnet client.

The *info* field in the message contains one of the following reasons:

STORAGE SHORTAGE

A storage shortage was encountered during processing.

REFORMAT BUFFER OVERFLOW

A buffer overflow occurred during message reformatting.

SEND SCHED ERROR RC=*rr* FB=*ff* ERRNO=*eee*

A TCP/IP SEND error occurred.

System Action:

The connection closes.

User Action:

Determine the reason. If the SEND failed, it is likely that the client closed the connection.

N3ZP01

**TELNET PEER=*hostaddr:port* NAME=*nnnn* HEARTBEAT SEND FAILURE
RC=*rr* FB=*ff* ERRNO=*eee***

Reason:

An error occurred while sending a heartbeat message to a Telnet Client.

System Action:

The connection closes.

User Action:

Probably none. It is likely that the client closed the connection or that the client has become unreachable due to a network problem.

N3ZQ01

**ENTER LOGOFF TO CLOSE SESSION OR PRESS SYSREQ AGAIN TO
RESUME...**

Reason:

This message is issued by the SOLVE Telnet Server when a TN3270E session client user presses the SYSREQ key. The client has been switched into SYSREQ mode.

System Action:

SOLVE waits for input.

User Action:

Press SYSREQ again to resume the SOLVE Telnet session. Type LOGOFF and press the ENTER key to terminate the session.

N3ZQ02**INPUT INVALID; RE-ENTER****Reason:**

This message is issued by the SOLVE Telnet Server when a TN3270E session is in SYSREQ mode. Input from the client was not valid.

System Action:

SOLVE waits for more input.

User Action:

Press SYSREQ again to resume the SOLVE Telnet session. Type LOGOFF and press the ENTER key to terminate the session.

N3ZQ80**TELNET PEER=*hostaddr:port* NAME=*nnnn* SSCP-LU DATA SEND
FAILURE RC=*rr* FB=*ff* ERRNO=*eee*****Reason:**

An error occurred while sending SSCP-LU data (SYSREQ mode) to a Telnet client.

System Action:

The connection closes.

User Action:

Probably none. It is likely that the client closed the connection or that the client has become unreachable due to a network problem.

N3ZR01**TNCTL 00000000 command processed****Reason:**

This message is issued following a successful TNCTL ADDPORT, DEFPORT, REPORT, or DELPPORT command.

System Action:

The command was processed successfully.

User Action:

Rejoice!

N3ZR80

TNCTL ooooooooo failed; port: ppp is defined as the SOLVE shared port

Reason:

This message is issued following a TNCTL ADDPORT, DEFPORT, or REPPORT command, if the port number used in the command is the same port number presently set by the SYSPARMS IPPORT command.

Port numbers used by the TELNET server must be different from the port number used by the SOLVE shared port server.

To set up a TELNET definition for the shared port, use the TNCTL xxxPORT=SHARED command.

System Action:

The command is ignored.

User Action:

Correct the port number and reissue the command.

N3ZR81

TNCTL ooooooooo failed; port: ppp already defined

Reason:

This message is issued following a TNCTL ADDPORT or DEFPORT command. The port number in the command is already defined as a TELNET port.

System Action:

The command is ignored.

User Action:

Correct the port number and reissue the command.

N3ZR82**TNCTL ooooooooo failed; port: ppp not defined****Reason:**

This message is issued following a TNCTL DELPORT command. The port number in the command is not defined as a TELNET port.

System Action:

The command is ignored.

User Action:

Correct the port number and reissue the command.

N3ZR99**TNCTL ADDPORT 'TEDSS' OPERAND OBSOLETE. IGNORED****Reason:**

This message is issued if an entered TNCTL command has the TEDSS operand specified.

This operand is not obsolete. The operand is ignored.

System Action:

The command was processed successfully.

User Action:

remove the TEDSS operand from the command.

N3ZS10

PORT NVT ANY EAS TLS APPL T-E BI RS SR TM PR SC DS EJ

Reason:

This message is a heading message for the output from the SHOW TNCTL command. This command displays currently defined TELNET server ports. The column headings refer to following N3ZS20 messages.

The column headings are:

PORT The port number. If a definition currently exists for the shared server port, the port number field for that definition says SHARED.

NVT The NVT option (YES or NO)

ANY The ANYNAME option (YES or NO)

EAS The EASINET option (YES or NO)

TLS The TLS option (YES or NO)

APPL The APPL name (or '-' if none is set)

T-E The TN3270E option (YES or NO)

BI The TEOPTS BIND option (Y or N)

RS The TEOPTS RESPONSE option (Y or N)

SR The TEOPTS SYSREQ option (Y or N)

TM The TEOPTS TERMINAL option (Y or N)

PR The TEOPTS PRINTER option (Y or N)

SC The TEOPTS SCSCCTL option (Y or N)

DS The TEOPTS DSCTL option (Y or N)

EJ The TEOPTS EOJ option (Y or N)

System Action:

None

User Action:

None

N3ZS11**T/O TM TMINT****Reason:**

This message is a heading message for the output from the SHOW TNCTL command. This command displays currently defined TELNET server ports. This heading relates to following N3ZS21 messages.

The column headings are:

T/O Whether or not a takeover of an apparently lost TCP/IP connection is allowed

TM Whether or not timing marks will be sent on TELNET sessions using this port

TMINT The timing mark interval This will be (interval,count) or DEFAULT, meaning that the SYSPARMS TNDTMINT value will be used

System Action:

None

User Action:

None

N3ZS12**COMMENT****Reason:**

This message is a heading message for the output from the SHOW TNCTL command. This command displays currently defined TELNET server ports. This heading relates to following N3ZS22 messages.

The column headings are:

COMMENT If a comment was specified on the TNCTL command, the comment text.

System Action:

None

User Action:

None

N3ZS20

N3ZS50**LUNAME TYPE USERID SEC LPORT RPORT ADDRESS****Reason:**

This message is a heading message for the output from the SHOW TELNET command. This command displays currently-connected Telnet sessions. The column headings refer to the following N3ZS50 messages:

LUNAME

Is the assigned Logical Unit Name.

Note: This is not a VTAM-defined name.

TYPE

Is the Telnet session type:

- NT is an NVT session (to CA NetMaster, an LU1-style session).
- TN3270 is a fullscreen TN3270 session.
- TN3270E is a fullscreen TN3270E session.
- PRINTER is a TN3270E printer (3287) session.

USERID

Indicates whether this session is signed on to CA NetMaster with the NET/MASTER User ID.

SEC

Indicates whether the session is a secure session using SSL.

LPORT

Is the local port (as defined by the TNCTL command) that this session is using.

RPORT

Is the port being used by the Telnet client for this session.

ADDRESS

Is the Telnet client TCP/IP Address.

System Action:

None.

User Action:

None.

N3ZS51

luname type userid sec lport rport address

Reason:

This message is a detail message for the output from the SHOW TELNET command. Each line contains details about a Telnet session. For column headings and explanations, see message N3ZS50.

System Action:

None.

User Action:

None.

N3ZT01

TELNET server active for port pppp on socket ssss

Reason:

This message is written to the SOLVE log when a TELNET server port is defined and opened. It indicates the port number and socket number.

System Action:

None

User Action:

None

N3ZT80

TELNET server on port ppp eee S#=sss RC=rrr FB=fff E#=nnn VI=iii

Reason:

This message is written to the SOLVE log when a TELNET server port error occurs.

The following error information is logged. (Note that if a specific piece of information is not available, a '-' is displayed.)

Port number (ppp) Error description (eee) Socket number (S#=sss) Socket operation return code (RC=rrr) Socket operation feedback code (FB=fff) Socket operation error number (E#=nnn) Socket operation vendor information (VI=iii)

System Action:

The socket is closed if it was opened. If a failure occurs during open, the open is retried after a few seconds.

User Action:

Check the error information against the SOLVE socket error code tables and take corrective action if relevant.

N3ZT81

TELNET server on port ppp closed due to previous error

Reason:

This message is written to the SOLVE log when a TELNET server port error occurs. It follows a previous N3ZT80 message that provides error diagnostics.

System Action:

The socket is closed.

User Action:

Check the error information from the preceding N3ZT80 message against the SOLVE socket error code tables and take corrective action if relevant.

N40101

FTS FEATURE INITIALIZATION FAILURE - UNABLE TO LOAD NM001002

Reason:

SOLVE was unable to load module NM001002.

System Action:

FTS will be unavailable.

User Action:

Refer this problem to your systems administrator for resolution. Until the problem is resolved and SOLVE restarted, FTS will be unavailable.

N40801

USERID uuuuuuuuu NOT AUTHORISED FOR REQUEST

Reason:

An attempt has been made to access the FTS panels by a user not authorized for FTS.

System Action:

The request is rejected.

User Action:

Refer to your systems administrator.

N41306**Userid not authorized for FTS messages****Reason:**

An unauthorized user issued the PROFILE FTSMMSG command. This command allows a user that is authorized to receive FTS messages to determine whether or not he wishes to receive messages relating to FTS. The user that has issued this command is not authorized to receive FTS messages and therefore may not use this command.

System Action:

The command is rejected.

User Action:

Refer to your Systems Administrator. You need to enter Y in the File Transmission Services field in the UAMS definition of your User ID or the Group ID if specified.

N41310**(FTSMMSG=YES/NO..) FTS MESSAGES WILL/WILL NOT BE DISPLAYED****Reason:**

This message is issued in response to the PROFILE command.

System Action:

None.

User Action:

None.

N41311**SYSPARMS operand ONLY SUPPORTED UNDER DOS, IGNORED.****Reason:**

The SYSPARMS operand entered is supported in DOS/VSE system only.

System Action:

The command is rejected.

User Action:

None.

N41601

INVALID SELECTION

Reason:

An invalid selection was entered.

System Action:

The request is rejected.

User Action:

Enter a valid selection.

N41602

NAME REQUIRED

Reason:

The name of the required INMC destination (remote SOLVE system) must be entered.

System Action:

The request is rejected.

User Action:

Enter the required name.

N41603

INITIATOR(S) STATUS FOR destname UPDATED

Reason:

Any changes made to the initiator set for the destination destname have been actioned and are now in effect.

System Action:

None.

User Action:

None.

N41604**REQUESTED DESTINATION IS NOT ACTIVE****Reason:**

The specified destination is not active (no INMC link) or FTS is not yet available at that destination.

System Action:

The request is rejected.

User Action:

Determine why the destination is not active or why FTS is not yet available.

N41605**INSUFFICIENT STORAGE FOR REQUEST****Reason:**

Your request could not be completed due to a lack of storage.

System Action:

The request fails.

User Action:

Retry the request. If it continues to fail increase the region size.

N41606**nnnn DESTINATIONS LISTED****Reason:**

This message is issued on completion of a "list destinations" function. It is for information only.

System Action:

None.

User Action:

None.

N41607

INVALID NAME

Reason:

The name entered has invalid syntax.

System Action:

The input is rejected.

User Action:

Correct the field containing the cursor.

N41608

INVALID VALUE

Reason:

The field containing the cursor is invalid or out of range.

System Action:

The input is rejected.

User Action:

Correct the field and re-enter.

N41609

NO INITIATORS HAVE BEEN SPECIFIED

Reason:

No initiators have transmission classes specified. A minimum of one initiator must be specified.

System Action:

The input is rejected.

User Action:

Enter transmission classes for one or more initiators.

N41610**DUPLICATE CLASSES SPECIFIED****Reason:**

The initiator containing the cursor has been specified with duplicate classes. Classes in the range A to Z can be specified in any order. However, each class can only be specified once.

System Action:

The input is rejected.

User Action:

Correct the classes.

N41611**REQUESTED DESTINATION NOT CONFIGURED FOR FTS****Reason:**

The specified destination is not licensed for the FTS feature and cannot therefore be used to receive or transmit datasets.

System Action:

The input is rejected.

User Action:

Refer to your systems administrator.

N41C01**THERE IS NO OUTBOUND REQUEST WITH THIS NAME****Reason:**

An attempt to modify an outbound transmission request has been rejected because no request of that name exists.

System Action:

The request is ignored.

User Action:

None. If the request is associated with a transmission that has already completed, termination processing will have automatically deleted the request, unless the need for operator response was specified in the transmission definition.

N41C02

THERE IS NO INBOUND REQUEST WITH THIS NAME

Reason:

An attempt to modify an inbound transmission request has been rejected because no request of that name exists.

System Action:

The request is ignored.

User Action:

None. If the request is associated with a transmission that has already completed, termination processing will have automatically deleted the request, unless the need for operator response was specified in the transmission definition.

N41C04

NO CHANGES MADE

Reason:

This is an information message only, advising that no changes were made to the request.

System Action:

None.

User Action:

Ensure that no changes were intended.

N41C05**TRANSMISSION REQUEST NO LONGER EXISTS****Reason:**

During the period between when the transmission request was displayed and when the action was taken to invoke changes, the transmission request was deleted and no longer exists. It may have been deleted by another user or it may have been deleted automatically by termination processing, following successful completion of the transmission.

System Action:

None.

User Action:

Ensure that the request has completed successfully and has not been incorrectly deleted by another user.

N41C07**VFS VSAM ERROR - CODE=X'nn'****Reason:**

An error has occurred on the FTS VSAM database, known as VFS. This might indicate that the VFS dataset is corrupt. The code X'nn' is the VSAM RPL return code.

System Action:

The request fails.

User Action:

Determine the type of error and if possible correct it. Refer this error to your systems administrator. If necessary restore the FTS database from the most recent backup.

N42301

USER userid NOT PRIVILEGED FOR privcode FTS FUNCTION.

Reason:

The user has attempted to perform an FTS function for which their userid does not have the specified SYSTEM, PRIVATE or ANY privilege.

System Action:

The request is rejected.

User Action:

Refer to your systems administrator.

N42302

**USER userid ACCESS DENIED. PRIVATE/SYSTEM MASK :
mmmmmmmmmmmm**

Reason:

The request to access the transmission request or definition has been rejected because the user's access mask mmmmmmmmmmm does not allow access to the specified SYSTEM or PRIVATE definition.

System Action:

The request is rejected.

User Action:

None.

N42303

USER userid NOT AUTHORISED FOR REQUEST

Reason:

You are not authorized for the requested function.

System Action:

The request is rejected.

User Action:

Refer to your systems administrator.

N42304**UNABLE TO AUTHORISE, REQUESTING USER NOT IDENTIFIED****Reason:**

TRANSMIT command authorization could not be performed, because no userid was associated with the request. Possibly the request was sourced from EASINET.

System Action:

The request is rejected.

User Action:

None.

N42306**userid AUTH FAILED text****Reason:**

Internal security check for user userid failed. The specified reason was returned from the security subsystem.

System Action:

The request is rejected.

User Action:

Refer to your systems administrator.

N42401**TRANSMISSION DEFINITION NAME NOT SPECIFIED****Reason:**

A TRANSMIT command has been issued, but no transmission request name has been specified.

System Action:

The request is rejected.

User Action:

Re-enter the TRANSMIT command specifying the names of one or more transmission definitions.

N42402

TRANSMISSION DEFINITION NAME defname IS INVALID

Reason:

A TRANSMIT command has specified an incorrect transmission request name.

System Action:

The request is rejected.

User Action:

Re-enter the request correctly.

N42403

INSUFFICIENT STORAGE

Reason:

A TRANSMIT command has failed due to a lack of storage.

System Action:

The request has failed.

User Action:

Retry the request and if necessary increase the region size.

N42501

INSUFFICIENT STORAGE TO SERVICE REQUEST

Reason:

An attempt to request a transmission has failed due to a lack of storage.

System Action:

The request fails.

User Action:

Retry the request. If necessary increase the region size.

N42503**TRANSMISSION DEFINITION defname NOT DEFINED****Reason:**

A request to invoke transmission definition defname has failed because the definition does not exist.

System Action:

None.

User Action:

Enter a correct definition name.

N42505**REQUEST FOR defname QUEUED - LINK NOT ACTIVE****Reason:**

A transmission request has been accepted. However, the link to the destination specified in the transmission definition is not currently active and the request has been queued pending activation of the link.

System Action:

The request is stored on the FTS database and will be automatically invoked when the link to the nominated destination becomes active and a transmission initiator of the appropriate class becomes available.

User Action:

No further action is required. The transmission will commence when the link becomes active.

N42506

TRANSMISSION REQUEST defname ACCEPTED

Reason:

The transmission request defname has been accepted and the link to the destination specified in the transmission definition is active.

System Action:

The transmission will commence as soon as a transmission initiator of the appropriate class becomes available.

User Action:

None.

N42507

VFS VSAM ERROR - CODE=X`nn'

Reason:

An error has occurred on the FTS VSAM database known as VFS. This may indicate that the VFS dataset has been corrupted. The code X`nn' is the VSAM RPL return code.

System Action:

The request fails.

User Action:

Determine the type of error and if possible correct it. Refer this error to your systems administrator. If necessary restore the FTS database from the most recent backup.

N42508**TRANSMISSION REQUEST defname ALREADY EXISTS****Reason:**

An attempt to request a transmission has been rejected because a previous request of the same name already exists. A transmission request name must be unique.

System Action:

The request is rejected and the existing request remains.

User Action:

Determine why a previous request is still available for transmission.

N42509**VFS DATASET IS FULL - REQUEST IGNORED****Reason:**

An attempt to request a transmission has failed because the VFS dataset which contains the FTS database is full. When a transmission request is made, both the transmission request and a copy of the original transmission definition are written to the FTS database.

System Action:

The request is rejected.

User Action:

This situation must be quickly remedied. The VFS dataset is used by other system components and may result in further failures. In addition, no transmissions will be received if insufficient space remains in the dataset. Either delete unwanted items from the dataset, or take an immediate backup and increase the space allocation for the VFS VSAM dataset.

N42510

REJECTED, PREVIOUS REQUEST REQUIRES ACKNOWLEDGEMENT

Reason:

An attempt to request a transmission has failed because a previous request, which has completed transmission, requires acknowledgement by the operator. A transmission can be defined as requiring acknowledgement at either the transmitting or receiving host. If this option is selected the transmission request is not automatically deleted and must be deleted (acknowledged) by the operator from the Transmission Supervision panel. Until this is done no further request of the same name will be accepted.

System Action:

The request is rejected.

User Action:

Determine why the previous request has not been acknowledged and, if you are authorized, proceed with the acknowledgement and then re-request the rejected transmission.

N42511

REJECTED, FAILED REQUEST STILL REQUIRES ACTION

Reason:

An attempt to request a transmission has failed because a previous request, of the same name, which has failed during transmission requires corrective action by the operator. Until the reason for the failure of the previous request is corrected and the request removed from IN ERROR status so that it may resume and complete transmission, or until the request in error is deleted, no further request of the same name will be accepted.

System Action:

The request is rejected.

User Action:

Determine why the previous request failed and if possible have the transmission restarted or delete the request; then re-issue the rejected transmission request. It should be noted that changes made to a transmission definition will only be invoked when a new transmission request is made, as a copy of the definition is taken at that time.

N42601**Dest Request CI -Block Count- --Char Count-- Elap-Time****Reason:**

The heading line of the SHOW FTS display. Further detail lines follow this heading and line up underneath the categories shown. The meaning of each category is as follows:

Dest Is the name of the remote region from/to which the data set is being transmitted.

Request Is the name of the transmission request.

CI Is the class of the transmission.

Block Count Is the number of blocks read from/written to the data set so far.

Char Count Is the number of characters read from/written to the data set so far.

Elap-Time Is the elapsed transmission time regardless of restarts.

System Action:

None.

User Action:

None.

N42602**P1 P2 P3 P4****Reason:**

This message forms part of the SHOW FTS display:

P1 displays the INMC link name of the other region.

P2 displays the contact state of the FTS link with the other region.

P3 displays the status of the initiators.

P4 displays the activity of FTS transmissions on this link.

System Action:

None.

User Action:

None.

N42603

INBOUND/OUTBOUND:

Reason:

Part of the SHOW FTS display. Indicates whether subsequent display lines apply to inbound or outbound transmissions.

System Action:

None.

User Action:

None.

N42604

P1 P2 P3 P4 P5 P6

Reason:

This message forms part of the SHOW FTS display. The fields in this line contain information about outbound transmissions and line up underneath the heading line, message N42601. For further information, see the description of that message.

System Action:

None.

User Action:

None.

N42605

P1 P2 P3 P4 P5 P6

Reason:

This message forms part of the SHOW FTS display. The fields in this line contain information about inbound transmissions and line up underneath the heading line, message N42601. For further information, see the description of that message.

System Action:

None.

User Action:

None.

N42606**No P1 FTS Links found****Reason:**

This message is in response to a SHOW FTS STATUS=status command when there are no links currently in the specified status (*P1*).

System Action:

None.

User Action:

None.

N42607**SHOW FTS P1 is invalid****Reason:**

An invalid operand *P1* was specified on the SHOW FTS command.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N42608***END*****Reason:**

Indicates the end of the SHOW FTS display.

System Action:

None.

User Action:

None.

N42609

No active transmissions

Reason:

There are no links active and consequently there are no datasets being transmitted.

System Action:

None.

User Action:

None.

N42610

Outbound/Inbound: CI -Block Count- --Char Count-- Elap-time

Reason:

This is a heading line for a SHOW FTS STATUS=status display. Refer to message N42601 for explanation of the fields in the heading.

System Action:

None.

User Action:

Refer to N42601 for detailed information.

N42611**Init Classes Started Com Hi-Pr Status P/S****Reason:**

The heading line of the SHOW FTS INIT display. Further detail lines follow this heading and line up underneath the categories shown. The meaning of each category is as follows:

Init Displays the number that identifies the initiator (1-16).

Classes Displays the request classes serviced by this initiator. The order in which the classes are listed is the order in which work is allocated to the initiator.

Started Displays whether the initiator is started.

Com Displays the compression level for the initiator.

Hi-Pr Displays the high or normal transmission priority.

Status Displays the current status of the initiator (IDLE, active with named request, or draining named request).

System Action:

None.

User Action:

None.

N42612**P1 P2 P3 P4 P5 P6 P7****Reason:**

This message forms part of the SHOW FTS INIT display. The fields in this line contain information about initiators and line up underneath the heading line, message N42611. For further information, see the description of that message.

System Action:

None.

User Action:

None.

N42613

Receive limit P1 Transmit limit P2

Reason:

This message forms part of the SHOW FTS INIT display.
The receive limit (*P1*) is the number of concurrent inbound transmissions that this region will accept from the remote region.
The transmit limit (*P2*) is the number of concurrent transmissions from this region that will be accepted by the remote region.

System Action:

None.

User Action:

None.

N42614

Initiators not available for display

Reason:

The specified destination is not active (no INMC link) or FTS is not yet available at that destination.

System Action:

The request is rejected.

User Action:

None.

N42802

FIELD OMITTED

Reason:

When defining a user's FTS privilege, the user has been authorized for either SYSTEM or PRIVATE definitions. However, the associated access mask has not been defined.

System Action:

The update is rejected.

User Action:

Enter the required access mask.

N42901**IMBEDDED BLANKS****Reason:**

The field containing the cursor has been entered with imbedded blanks where no imbedded blanks are allowed.

System Action:

The request is rejected.

User Action:

Correct the field.

N42902**INVALID VALUE****Reason:**

The field containing the cursor has been entered with an invalid value.

System Action:

The request is rejected.

User Action:

Correct the field.

N42903**FIELD OMITTED****Reason:**

The field containing the cursor has been omitted. Its entry is mandatory.

System Action:

The request is rejected.

User Action:

Enter the field.

N42A01

STRUCTURED FIELD nnnn IN ERROR

Reason:

The installation's security exit has supplied an invalid value for the structured field with the key nnnn.

System Action:

The message is logged and the structured field is ignored. Processing of other structured fields continues.

User Action:

Refer the message to your systems administrator. Ensure that the security exit always returns valid data for the structured field.

N43301

TRANSMISSION REQUEST DOES NOT EXIST

Reason:

An attempt to modify a transmission request using the FTSMOD command has failed because no request of that name exists.

System Action:

The command is rejected.

User Action:

Check the request name. If the request is associated with a transmission that may have already completed, the request will have been automatically deleted by termination processing, unless the transmission definition specified that operator acknowledgement was required.

N43302**TRANSMISSION REQUEST defname (CLASS x) actioned****Reason:**

This message indicates the successful completion of an FTSMOD command. Transmission request defname has been actioned as requested.

System Action:

The action may be: HELD the transmission is now in HOLD status. ELIGIBLE FOR RESTART the 'in-error' indicator for the transmission has been reset and the request is available for scheduling (unless it is HELD). RELEASED the transmission has been released from hold status. WILL BE COLDSTARTED the transmission is available for rescheduling. The transmission will start over from the beginning.

User Action:

None.

N43307**VFS VSAM ERROR - CODE=X`nn'****Reason:**

An error has occurred on the FTS VSAM database known as VFS. This may indicate that the VFS dataset has been corrupted. The code X`nn' is the VSAM RPL return code.

System Action:

The request fails.

User Action:

Determine the type of error and if possible correct it. Refer this error to your systems administrator. If necessary restore the FTS database from the most recent backup.

N43401

INSUFFICIENT STORAGE. FTS NOT AVAILABLE FOR *destname*

Reason:

Insufficient storage was available to obtain FTS records from the VFS database. The FTS facility has been disabled for destination *destname*.

System Action:

FTS activity to that destination will not be possible.

User Action:

This condition can only be rectified by breaking and restarting the link to the other SOLVE system. This can be done using the LINK command. It should be noted that a storage shortage at this point in FTS processing is likely to lead to later failures and an increase in the region size is recommended.

N43402

FTS TO *destname* SUSPENDED.

Reason:

The link to destination *destname* has been interrupted and FTS processing has been suspended. This message will be accompanied by other messages associated with individual transmissions that may have been in progress when the link interruption occurred.

System Action:

The link will be monitored and FTS processing will resume when the link is re-established.

User Action:

Determine the reason for the link failure and rectify if possible.

N43403**FTS CONTACT WITH destname ESTABLISHED.****Reason:**

FTS has established contact with destination destname. Other factors may still prevent the actual transmission or receipt of data. These include the actual enabling of FTS on the Initiator Supervision panel, the setting of the inbound file limit and the availability of active initiators.

System Action:

Transmission will commence if no other factors remain to restrict such activity.

User Action:

None.

N43601**FTS TO destname SUSPENDED. FTS RELEASE LEVELS INCOMPATIBLE.****Reason:**

During the contact process FTS has determined that the FTS system in destination destname is incompatible with this system and further processing cannot proceed.

System Action:

FTS is not available.

User Action:

Refer to your systems administrator.

N43602

DATA COMPRESSION TO destname WILL BE BYPASSED. RELEASE LEVELS DIFFER.

Reason:

During the contact process FTS has determined that the data compression component of destination destname is incompatible with this system and data compression cannot be performed on files transmitted between the two systems.

System Action:

Dataset transmissions will proceed normally but data compression will not be performed.

User Action:

Refer to your systems administrator.

N43701

ONLY VALID FOR FAILED REQUEST

Reason:

The user has attempted to reset the IN-ERROR status of a transmission. However, the request is not IN-ERROR.

System Action:

None.

User Action:

If using a transmission supervision panel, correct the field or action. If using the FTSMOD command, check the current status of the transmission. If it is ACTIVE, restart can be achieved by HOLDing the request, then doing a RELEASE COLD=YES.

N43702**ACTIVE REQUEST defname INTERRUPTED AND HELD****Reason:**

This message is issued when FTS is instructed to HOLD an active request.

System Action:

The transmission will be interrupted and the request placed in HOLD status. To resume transmission the request will require operator intervention to remove it from HOLD status. It should be noted that there may be a slight delay from the time this message is issued and the actual suspension of processing of the transmission. This delay will vary depending on system load and the priority of the initiator in which the transmission is running. The request will show a failure reason of 'INTERRUPTED BY OPERATOR'.

User Action:

Release the request when transmission is to resume.

N43703**TRANSMISSION REQUEST STATUS UNCHANGED****Reason:**

An information only message, informing the user that no changes were made to the request. This may be because the transmission request was already in the required status. For example, attempting to restart a completed request.

System Action:

None.

User Action:

Ensure that no changes were intended.

N43704

INVALID FOR ACTIVE REQUEST

Reason:

An invalid attempt to change an active transmission has been received. If you are using the transmission supervision panel, the field where the cursor is positioned cannot be changed for an active request. Actions such as deleting a request or changing its class require that the request first be interrupted and placed in HOLD status.

System Action:

The request is rejected.

User Action:

If you wish to proceed with the change you must first HOLD the transmission. This must be followed by a separate request for the change you require.

N43705

CLASS CHANGE FAILED, CHECK CURRENT STATUS

Reason:

The process of changing the class of a request requires multiple updates to the FTS database. An error has been detected during this processing.

System Action:

The status of the request may be in doubt.

User Action:

Validate the request to ensure that the required status has been achieved. Monitor this transmission to ensure that it successfully commences and completes. Notify your systems administrator of this error.

N43707**VFS VSAM ERROR - CODE=X`nn'****Reason:**

An error has occurred on the FTS VSAM database known as VFS. This may indicate that the VFS dataset has been corrupted. The code X`nn' is the VSAM RPL return code and will be described in your installation's VSAM programmer guide.

System Action:

The request fails.

User Action:

Determine the type of error and if possible correct it. Refer this error to your systems administrator. If necessary restore the FTS database from the most recent backup.

N43713**TRANSMISSION REQUEST defname DELETED****Reason:**

Confirms that transmission request defname has been deleted. The copy of the transmission definition that was taken when the transmission request was made has also been deleted.

System Action:

None.

User Action:

If the request was deleted so that a subsequent new request could be issued to invoke changes to the transmission definition, then this request can now proceed. Any transmission request issued from this point will take a new copy of the transmission definition.

N43714

TRANSMISSION REQUEST defname ACKNOWLEDGED

Reason:

Transmission request defname has been acknowledged. This message is issued as the result of an FTSMOD ACK= or FTSMOD DEL= command, or an ACK/DELETE request from the transmission supervision panel. The status of the transmission request was COMPLETE, and the original transmission definition was defined as requiring acknowledgement after successful transmission.

System Action:

The request and associated copy of the transmission definition are deleted.

User Action:

The process of acknowledging the completion of a transmission request is similar to deletion processing. Both the transmission request and its copy of the transmission definition are deleted. A subsequent transmission request of the same name can now be issued. Any subsequent request will take a new copy of the transmission definition at the time the request is made.

N43804

INVALID FOR ACTIVE REQUEST

Reason:

An attempt to delete or acknowledge an inbound transmission has failed because the transmission is currently in progress.

System Action:

The request is rejected.

User Action:

An inbound transmission request can only be deleted or acknowledged when it is in READY or COMPLETED status. It is not possible to interrupt an inbound transmission from the receiving host. The control of a transmission rests with the transmitting operator, who has the ability to interrupt the transmission if necessary.

N43805**INVALID FOR AN INACTIVE REQUEST****Reason:**

An attempt to cancel an inbound transmission has been rejected because the request is not currently in progress.

System Action:

The request is rejected.

User Action:

None.

N43807**VFS VSAM ERROR - CODE=X`nn'****Reason:**

An error has occurred on the FTS VSAM database known as VFS. This may indicate that the VFS dataset has been corrupted. The code X`nn' is the VSAM RPL return code.

System Action:

The request fails.

User Action:

Determine the type of error and if possible correct it. Refer this error to your systems administrator. If necessary restore the FTS database from the most recent backup.

N43813**INBOUND REQUEST defname DELETED****Reason:**

Issued in response to a request to delete an inbound request. All associated records are removed from the FTS database at the receiving host.

System Action:

None.

User Action:

None.

N43814

RECEIPT OF REQUEST defname ACKNOWLEDGED

Reason:

Issued in response to a request to delete or acknowledge the transmission of an inbound request, when that request is found to be in COMPLETED status. The request is acknowledged and any associated records are deleted from the FTS database.

System Action:

None.

User Action:

None. The receipt of another request with the same request name is now possible.

N43815

CANCEL REQUESTED FOR TRANSMISSION defname

Reason:

A request to cancel the specified transmission has been accepted.

System Action:

None.

User Action:

None.

N43901

CLASS VALUES INVALID. MUST BE ALPHABETIC AND NON-DUPLICATED

Reason:

An FTSINIT command specified a new set of classes for an initiator, but the set of classes was invalid. Classes must be in the range A to Z and can be specified in any order. However, each class can only be specified once.

System Action:

The command is rejected.

User Action:

Correct the CLASS operand and reenter.

N43902**INITIATOR CHANGES SUCCESSFULLY COMPLETED****Reason:**

This message indicates the successful completion of an FTSINIT command. Any changes made to the initiator set for the destination have been actioned and are now in effect.

System Action:

None.

User Action:

None.

N43903**REQUESTED DESTINATION NOT CONFIGURED FOR FTS****Reason:**

The specified destination is not licensed for the FTS feature and cannot therefore be used to receive or transmit datasets.

System Action:

The input is rejected.

User Action:

Refer to your systems administrator.

N43904**REQUESTED DESTINATION IS NOT ACTIVE****Reason:**

The specified destination is not active (no INMC link) or FTS is not yet available at that destination.

System Action:

The request is rejected.

User Action:

Determine why the destination is not active or why FTS is not yet available.

N43905

REQUESTED DESTINATION IS NOT A PC. FTS UNAVAILABLE

Reason:

The SOLVE you are logged onto may only use FTS to transfer files to or from NMPC systems. The destination you have attempted to modify is a host SOLVE system. FTS is not available to host destinations.

System Action:

The input is rejected.

User Action:

Choose a NMPC destination or refer to your systems administrator.

N43A01

'CLASS=' INVALID FOR INBOUND REQUESTS

Reason:

A SH XMIT DIRECTION=INBOUND command has been issued, specifying a CLASS= parameter. The CLASS parameter is only valid when displaying outbound transmissions.

System Action:

The command is rejected.

User Action:

Correct the command and reissue.

N43B01**DEFINITION DIR DEST/ORIGIN CL STATUS TERMINATION MESSAGE****Reason:**

The heading line of the SHOW XMIT display. Further detail lines will follow this heading, each line describing a transmission request. The meaning of each label is as follows:

DEFINITION the name of the transmission.

DIR the direction of the transmission: inbound (I) or outbound (O).

DEST/ORIGIN the destination system for outbound transmissions, or the origin for inbound transmissions.

CL the class of the transmission (outbound only).

STATUS the transmission's current status: READY, ACTIVE, FAILED, HELD or COMPLETED.

TERMINATION MESSAGE the first part of the error message for a failed transmission, or the completion statistics for a completed transmission awaiting acknowledgement.

System Action:

None.

User Action:

None.

N43B02**defname dir dest/origin cl status message****Reason:**

Part of the SHOW XMIT display. Fields in this line contain information about a transmission request, and line up underneath the heading line, message N43B01. See the description of that message for further information.

System Action:

None.

User Action:

None.

N43B06

VFS VSAM ERROR - CODE=X'nn'

Reason:

An error has occurred on the FTS VSAM database known as VFS. This may indicate that the VFS dataset has been corrupted. The code X'nn' is the VSAM RPL return code.

System Action:

The request fails.

User Action:

Determine the type of error and if possible correct it. Refer this error to your systems administrator. If necessary restore the VFS database from the most recent backup.

N43C01

REQUEST: reqname DESTINATION: dest CLASS: c

Reason:

The first line of the SHOW XMIT=reqname display, for an outgoing transmission. It shows the name of the transmission selected for display (reqname), its destination (dest) and the class of the transmission (c).

System Action:

None.

User Action:

None.

N43C02**USER-ID: user REQUEST-DATE: dd-mon-yy TIME: hh.mm.ss****Reason:**

A line of the SHOW XMIT=reqname display, for an outgoing transmission. It shows the userid who issued the transmission request, and the date and time the request was issued.

System Action:

None.

User Action:

None.

N43C03**STATUS: status START-DATE: dd-mon-yy TIME: hh.mm.ss****Reason:**

A line of the SHOW XMIT=reqname display, for an outgoing transmission. It shows the current status of the request (ACTIVE, FAILED etc.) and the date and time at which the request started executing.

System Action:

None.

User Action:

None.

N43C04**END-DATE: dd-mon-yy TIME: hh.mm.ss****Reason:**

A line of the SHOW XMIT=reqname display, for an outgoing transmission. It shows the date and time at which the request last stopped executing.

System Action:

None.

User Action:

None.

N43C05

MESSAGE: aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa

Reason:

A line of the SHOW XMIT=reqname display, for an outgoing transmission. It shows the completion message (or failure message) for the request.

System Action:

None.

User Action:

Refer to the explanation of the completion message for more details.

N43C06

FROM DD/DSN: aaaaaaaaaaaaaaaaaaaaaaaaaaaaaa

Reason:

A line of the SHOW XMIT=reqname display, for an outgoing transmission. It shows the name of the dataset being transmitted, or the name of the DD statement(MVS), FILEDEF(VM), or DLBL/TLBL(VSE) which points to the dataset being transmitted.

System Action:

None.

User Action:

None.

N43C07

TO DD/DSN: aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa

Reason:

A line of the SHOW XMIT=reqname display, for an outgoing transmission. It shows the name of the remote dataset receiving the transmitted data, or the name of the DD statement(MVS), FILEDEF(VM), or TLBL/DLBL(VSE) on the remote SOLVE system which points at the receiving dataset.

System Action:

None.

User Action:

None.

N43C08**COMMAND AT SENDING END: aaaaaaaaaaaaaaaaaaaaaaaaaaaaaa****Reason:**

A line of the SHOW XMIT=reqname display, for an outgoing transmission. It shows the SOLVE command to be executed on successful completion of the transmission.

System Action:

None.

User Action:

None.

N43C09**XMIT DEF AT SENDING END: defname****Reason:**

A line of the SHOW XMIT=reqname display, for an outgoing transmission. It shows the name of a subsequent transmission which will be automatically executed on successful completion of this transmission.

System Action:

None.

User Action:

None.

N43C10**COMMAND AT RECEIVING END: aaaaaaaaaaaaaaaaaaaaaaaaaaaaaa****Reason:**

A line of the SHOW XMIT=reqname display, for an outgoing transmission. It shows the SOLVE command to be executed at the receiving end, on successful completion of this transmission.

System Action:

None.

User Action:

None.

N43C11

CHECKPOINT INFORMATION: RESTART BLK#1: nnnn RESTART BLK#2: nnnn

Reason:

A line of the SHOW XMIT=reqname display, for an outgoing transmission. It shows the checkpoint information which will be used to reposition the request for restarting. The checkpoint information listed is the count of physical blocks transmitted from the sending file, at the time of the last two checkpoints for the request.

System Action:

None.

User Action:

None.

N43C14

TRANSMISSION REQUEST DOES NOT EXIST

Reason:

An attempt to display a transmission request using the SH XMIT command has failed because no request of that name exists.

System Action:

The request is ignored.

User Action:

None. If the request is associated with a transmission that may have already completed, the request will have been automatically deleted by termination processing unless the transmission definition specified that operator acknowledgement was required.

N43C15**VFS VSAM ERROR - CODE=X'nn'****Reason:**

An error has occurred on the FTS VSAM database known as VFS. This may indicate that the VFS dataset has been corrupted. The code X'nn' is the VSAM RPL return code.

System Action:

The request fails.

User Action:

Determine the type of error and if possible correct it. Refer this error to your systems administrator. If necessary restore the VFS database from the most recent backup.

N43D01**REQUEST: reqname ORIGIN: orig****Reason:**

The first line of the SHOW XMIT=reqname display, for an incoming transmission. It shows the name of the transmission selected for display (reqname) , and the name of the origin system sending the transmission (orig) .

System Action:

None.

User Action:

None.

N43D02

USER-ID: user REQUEST-DATE: dd-mon-yy TIME: hh.mm.ss

Reason:

A line of the SHOW XMIT=reqname display, for an incoming transmission. It shows the remote userid who issued the transmission request, and the date and time the request was issued at the remote system.

System Action:

None.

User Action:

None.

N43D03

STATUS: status START-DATE: dd-mon-yy TIME: hh.mm.ss

Reason:

A line of the SHOW XMIT=reqname display, for an incoming transmission. It shows the current status of the request (ACTIVE, FAILED etc.) and the date and time at which the request started executing.

System Action:

None.

User Action:

None.

N43D04

END-DATE: dd-mon-yy TIME: hh.mm.ss

Reason:

A line of the SHOW XMIT=reqname display, for an incoming transmission. It shows the date and time at which the request last stopped executing.

System Action:

None.

User Action:

None.

N43D05**MESSAGE:** aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa**Reason:**

A line of the SHOW XMIT=reqname display, for an incoming transmission. It shows the completion message (or failure message) for the request.

System Action:

None.

User Action:

Refer to the explanation of the completion message for more details.

N43D06**FROM DD/DSN:** aaaaaaaaaaaaaaaaaaaaaaaaaaaaaa**Reason:**

A line of the SHOW XMIT=reqname display, for an incoming transmission. It shows the name of the dataset being transmitted, or the name of the DD statement(MVS), FILEDEF(VM), or DLBL/TLBL(VSE) on the transmitting system which points to the dataset being sent.

System Action:

None.

User Action:

None.

N43D07**TO DD/DSN:** aaaaaaaaaaaaaaaaaaaaaaaaaaaaaa**Reason:**

A line of the SHOW XMIT=reqname display, for an incoming transmission. It shows the name or dataset receiving the transmitted data, or the name of the DD statement(MVS), FILEDEF(VM), or TLBL/DLBL(VSE) which points at the dataset to receive the data.

System Action:

None.

User Action:

None.

N43D08

COMMAND AT SENDING END: aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa

Reason:

A line of the SHOW XMIT=reqname display, for an incoming transmission. It shows the SOLVE command to be executed at the sending end, on successful completion of the transmission.

System Action:

None.

User Action:

None.

N43D09

XMIT DEF AT SENDING END: defname

Reason:

A line of the SHOW XMIT=reqname display, for an incoming transmission. It shows the name of a subsequent transmission which will be automatically executed at the remote system when this transmission terminates successfully.

System Action:

None.

User Action:

None.

N43D10

COMMAND AT RECEIVING END: aaaaaaaaaaaaaaaaaaaaaaaaaaaaaa

Reason:

A line of the SHOW XMIT=reqname display, for an incoming transmission. It shows the SOLVE command to be executed on this system, on successful completion of the transmission.

System Action:

None.

User Action:

None.

N43D11

CHECKPOINT INFORMATION: RESTART BLK#1: nnnn RESTART BLK#2: nnnn

Reason:

A line of the SHOW XMIT=reqname display, for an incoming transmission. It shows the checkpoint information which will be used to reposition the request for restarting. The checkpoint information listed is the count of physical blocks transmitted from the sending file, at the time of the last two checkpoints for the request.

System Action:

None.

User Action:

None.

N43D14

TRANSMISSION REQUEST DOES NOT EXIST

Reason:

An attempt to display an incoming transmission request using the SH XMIT command has failed because no request of that name exists.

System Action:

The request is ignored.

User Action:

None. If the request is associated with a transmission that may have already completed, the request will have been automatically deleted by termination processing unless the transmission definition specified that operator acknowledgement was required.

N43D15

VFS VSAM ERROR - CODE=X'nn'

Reason:

An error has occurred on the FTS VSAM database known as VFS. This may indicate that the VFS dataset has been corrupted. The code X'nn' is the VSAM RPL return code.

System Action:

The request fails.

User Action:

Determine the type of error and if possible correct it. Refer this error to your systems administrator. If necessary restore the VFS database from the most recent backup.

N44201

FTS REQUEST defname TO destname STARTED - hh.mm.ss CLASS c.

Reason:

Issued to FTS authorized users when a transmission is started. defname is the request name, destname is the destination to which the transmission is *being* made. *hh.mm.ss* is the current time and *c* is the class of the request.

System Action:

The transmission proceeds.

User Action:

None.

N44202

**FTS REQUEST defname TO destname RESTARTED FROM BLOCK bbbb.
hh.mm.ss CLASS c.**

Reason:

Issued to FTS authorized users when a transmission is restarted following an earlier interruption. The request **defname** is being transmitted to destination **destname** and the restart has taken place from the block **bbbb** within the dataset.

System Action:

The transmission resumes.

User Action:

None.

N44301

FTS REQUEST defname TO destname ENDED - hh.mm.ss CLASS c.

Reason:

Issued following the successful completion of transmission request defname to destination destname. The current time is hh.mm.ss and the request was processed as class c.

System Action:

None.

User Action:

None.

N44302

bbbb BLKS, cccc CHRS, mm.ss MINS, rrr KB, xx% COM FOR ffffffff

Reason:

This message indicates successful completion of a transmission. The statistics show the number of blocks transmitted (bbbb), the number of characters in the dataset (cccc), the elapsed time of the transmission (mm.ss), the effective transmission rate (rrr), the data compression achieved, if applicable (xx), and the FTS requestname (fffffff). The elapsed time shown is the length of time taken to transmit the number of bytes shown, regardless of any restarts that may have taken place. The time does not include delays associated with allocations or mount operations. It is possible, in the case of extremely small datasets, for the elapsed time shown to be zero because the transmission completed in less than one second. The effective transmission rate represents the rate of data transfer achieved for this request, expressed in kilobits per second. When multiple requests are being transmitted to the same destination the effective data transfer rate for each individual request will be lower than if a single request is being transmitted, because the multiple requests are competing for use of the physical network bandwidth available between the two systems. It should be noted that the transmission rate can appear disproportionately low for small datasets because of elapsed time rounding effects and other FTS overheads associated with the transmission. If data compression was in force during the transmission the effective rate of compression is indicated, expressed as the average percentage by which the data was compressed before transmission - the higher the percentage, the greater the level of compression achieved. Note that the effective transmission rate is calculated using the number of characters transmitted after compression. If compression was not in force for the transmission no compression statistics are included in the completion message. If a counter overflow condition prevents calculation of the transmission and compression rates, these fields will be set to N/A in the completion message.

System Action:

None.

User Action:

If this message is accompanied by a message stating that the request must be acknowledged, the operator must use the Transmission Supervision panel to acknowledge the request before another request of the same name will be permitted.

N44303**FTS REQUEST defname TO destname FAILED.****Reason:**

Issued when a transmission request is interrupted or fails for any reason. This message will be followed by message N44304 giving the reason for the interruption or failure.

System Action:

The request will be placed in error status and will require operator intervention before transmission can resume.

User Action:

Determine the cause of the interruption and if necessary take corrective action and restart the request.

N44304

///-cc xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx

Reason:

This message follows message N44303 and supplies the request completion code and description associated with a failing request. /// is LOC or REM, where LOC indicates that the source of the error is the local system and REM indicates that the source of the error is the remote system. cc is the completion reason code. xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx is a description of the reason for the error or interruption. This information is also saved on the FTS database and is available for problem analysis from the Transmission Supervision panels.

System Action:

The transmission of this request has been suspended pending corrective action by the operator.

User Action:

Use the ///-cc completion code information to determine the cause of the error. If /// is LOC, action is required from this system. If /// is REM, action is required at the remote destination. /// is always LOC for link failures or interruptions. If the cause of the failure is a link interruption, no action may be necessary. However, if the transmission definition was specified with AUTO-RESTART=N, the request is placed in HOLD status and requires operator action before transmission resumes.

N44305

OPERATOR ACKNOWLEDGEMENT IS REQUIRED

Reason:

This message is issued following the successful completion of transmission when the transmission definition was specified as requiring operator acknowledgement of successful transmission. No further transmission of the same name will be possible until this transmission has been acknowledged.

System Action:

None.

User Action:

This transmission must be acknowledged by use of the Transmission Supervision panels and entry of a Y in the ACK/DELETE field. The process of acknowledging a transmission deletes associated records from the FTS database making it possible to issue another transmission request of the same name.

N44307

**www REQUEST xxxx FROMDSN yyyy www REQUEST xxxx
FROMDSN yyyy MBR zzzz**

Reason:

If the SYSPARMS FTSTRDSN=YES command has been issued, this message will be generated to indicate the name of the dataset just transmitted. www is PRIVATE or SYSTEM, indicating the classification of the transmission, xxxx is the transmission request name, yyyy is the name of the dataset transmitted, and zzzz is the name of the member transmitted in the case of a partitioned dataset.

System Action:

None.

User Action:

This message may be intercepted by LOGPROC and dynamically built JCL submitted to the internal reader to perform processing dependent upon successful transmission of the file.

N44308

transname ID= userid G= group U= userdata

Reason:

Issued when an FTS request specifies either GROUP or USERDATA.

System Action:

None.

User Action:

This message may be intercepted by LOGPROC for further processing.

N44309

**REQUESTED DELETION OF FTS DEFINITION defname FAILED. VSAM
FDBK=X`xx'.**

Reason:

Following completion of the file transmission defname, the request indicated that the FTS definition by that name should be deleted. This was attempted but failed with the VSAM feedback code xx shown in the message.

System Action:

None.

User Action:

None.

N44310

REQUESTED DELETION OF FTS DEFINITION defname COMPLETE.

Reason:

Following completion of the file transmission defname, the request indicated that the FTS definition by that name should be deleted. This message indicates that the deletion has been successful.

System Action:

None.

User Action:

None.

N44311

REQUESTED DELETION OF FTS DEFINITION defname NOT PERFORMED. RECORD HAS BEEN UPDATED.

Reason:

Following completion of the file transmission defname, the request indicated that the FTS definition by that name should be deleted. Before deleting the record FTS determined that the definition had been updated since the original transmission request. As this indicates that the definition may still be in use the deletion request is ignored.

System Action:

The deletion request is ignored.

User Action:

Delete the definition from the FTS definition maintenance options if necessary.

N44312

CHAINED TRANSMIT OF FTS DEFINITION defname REQUESTED.

Reason:

A chained transmission request was found following completion of the file transmission indicated by previous messages in the log. The FTS definition defname, specified in the chained transmission request field of the previous request, is queued for transmission.

System Action:

An implicit TRANSMIT defname command is executed.

User Action:

None.

N44313**EMPTY FAILED FOR DATASET dsname****Reason:**

The definition for the transmission just completed specified 'EMPTY INPUT=Y', indicating that the transmitting dataset should be emptied on successful termination of the transmission. The transmission ended successfully, but the attempt to empty the dataset failed. Emptying is done by opening the dataset for output, then closing it. The process fails if an error occurs on the open.

System Action:

The transmission continues to terminate normally.

User Action:

Investigate why the empty process failed. If necessary, empty the dataset manually.

N44701**FTS REQUEST reqname FROM origin STARTED - hh.mm.ss****Reason:**

This message is issued at the receiving host to indicate that an inbound transmission is commencing. The request reqname is being transmitted from the host origin . The current time is hh.mm.ss. Note that there is no class associated with the receipt of a transmission.

System Action:

None.

User Action:

None.

N44702

**FTS REQUEST reqname FROM origin RESTARTED FROM BLOCK bbbb.
hh.mm.ss**

Reason:

This message is issued at the receiving host to indicate that a previously interrupted transmission is being restarted from block bbbb. The request name is reqname and is being transmitted from host origin.

System Action:

None.

User Action:

None.

N44801

FTS REQUEST reqname FROM origin ENDED - hh.mm.ss.

Reason:

This message is issued to indicate successful completion of the receipt of transmission request reqname from host origin . hh.mm.ss is the current time.

System Action:

This message will be followed by message N44802.

User Action:

None.

N44802

bbbb BLKS, cccc CHRS, mm.ss MINS, rrr KB, xx% COM FOR ffffffff

Reason:

This message indicates successful completion of a transmission. The statistics show the number of blocks received (bbbb), the number of characters in the dataset (cccc), the elapsed time of the transmission (mm.ss), the effective transmission rate (rrr), the data compression achieved, if applicable (xx), and the FTS requestname (fffffff). The elapsed time shown is the length of time taken to receive the number of bytes shown, regardless of any restarts that may have taken place. The time does not include delays associated with allocations or mount operations. It is possible, in the case of extremely small datasets, for the elapsed time shown to be zero because the transmission completed in less than one second. The effective transmission rate represents the rate of data transfer achieved for this request, expressed in kilobits per second. When multiple requests are being transmitted to the same destination the effective data transfer rate for each individual request will be lower than if a single request is being transmitted, because the multiple requests are competing for use of the physical network bandwidth available between the two systems. It should be noted that the transmission rate can appear disproportionately low for small datasets because of elapsed time rounding effects and other FTS overheads associated with the transmission. If data compression was in force during the transmission the effective rate of compression is indicated, expressed as the average percentage by which the data was compressed before transmission - the higher the percentage, the greater the level of compression achieved. Note that the effective transmission rate is calculated using the number of characters transmitted after compression. If compression was not in force for the transmission no compression statistics are included in the completion message. If a counter overflow condition prevents calculation of the transmission and compression rates, these fields will be set to N/A in the completion message.

System Action:

None.

User Action:

None.

N44803

FTS REQUEST defname FROM origin FAILED.

Reason:

This message is issued when the receipt of a transmission fails or is interrupted. This message will be followed by message N44804 giving a reason for the failure.

System Action:

Processing of the request is suspended pending operator intervention.

User Action:

Determine the reason for the failure and if necessary correct the problem and notify the transmitting operator to restart the transmission. If you display an inbound transmission request that has failed, it will always show a status of READY. This is because the aspects of control of a transmission always rest with the transmitting host, which will have also been notified of the failure reason. At the transmitting host the request will have been placed in IN ERROR status and must be released by operator action. Having corrected the problem, you should notify the transmitting operator to remove the request from IN ERROR status to allow a restart to take place.

N44805

OPERATOR ACKNOWLEDGEMENT IS REQUIRED

Reason:

This message is issued following the successful receipt of a transmission when the transmission definition was specified as requiring operator acknowledgement at the receiving system. No further receipt of a transmission of the same name will be possible until this transmission has been acknowledged.

System Action:

None.

User Action:

The receipt of this transmission must be acknowledged by use of the Transmission Supervision panels to display the inbound transmission and entry of a Y in the ACK/DELETE field. The process of acknowledging a transmission deletes associated records from the FTS database making it possible to receive another transmission request of the same name.

N44806

WARNING : xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx

Reason:

This message is issued to alert the operator that a potential abnormal condition has been detected and further investigation may be required. The text of this message will be one of the following:

INPUT DATASET WAS CLASSIFIED UNMOVABLE

The transmission definition has specified a dataset that was classified as unmovable. This is normally because it was defined with the U option as a part of the dataset organisation (DSORG). FTS will proceed with the transmission. However, the unmovable attribute will not be retained on the output dataset.

TRANSMITTED DATASET WAS EMPTY

The transmitted dataset contained 0 blocks of data. This may be a valid situation where regular transmissions are run against datasets that may not contain information on certain occasions. You should verify that this is valid on this occasion.

INPUT PDS MEMBER NOT EMPTIED ON COMPLETION

A member of a partitioned dataset was successfully transmitted. However, the transmission definition requested that the input dataset be emptied following the transmission. This option cannot be honoured as the system regards the deletion of a member of a PDS as an integrity exposure. The member will not be deleted and independent means must be used to delete the member if required.

System Action:

Processing continues.

User Action:

Verify that the alerted condition is acceptable. If not, take corrective action.

N44807

**www REQUEST xxxx TODSN yyyy www REQUEST xxxx TODSN yyyy
MBR zzzz www REQUEST xxxx TODSN SYSOUT CLASS c**

Reason:

If the SYSPARMS FTSCDSN=YES command has been issued, this message will be generated to indicate the target of the transmission.

www is either SYSTEM or PRIVATE to indicate the classification of the transmission and xxxx is the transmission request name. If the transmission took place to a dataset, yyyy is the name of the dataset. In addition, if the transmission took place to a member of a partitioned dataset, zzzz is the member name. If the transmission took place directly into spool, c is the SYSOUT class.

System Action:

None.

User Action:

This message may be intercepted by LOGPROC and dynamically built JCL submitted to the internal reader to process the dataset just received.

N44808

transname ID=userid G=group U=userdata

Reason:

Issued when an FTS request specifies either GROUP or USERDATA.

System Action:

None.

User Action:

This may be intercepted by LOGPROC for further processing.

N45001**error text****Reason:**

This message indicates that an I/O error has occurred on a dataset involved in a transmission. It includes the error information returned from a SYNADAF macro issued in a SYNAD exit. The meaning of the various fields of the message can be found in the appropriate data management macros manual for your operating system. This message is accompanied by other messages that indicate which transmission request has failed.

System Action:

The request will be placed in error status and will require operator intervention before transmission can resume.

User Action:

Determine the cause of the error. If the error is unrecoverable, delete the request, otherwise correct the error condition and reset the request 'in error' status to retry.

N45101**error text****Reason:**

This message indicates that an I/O error has occurred on a dataset involved in a transmission. It includes the error information returned from a SYNADAF macro issued in a SYNAD exit. Reason:

This message indicates that an I/O error has occurred on a dataset involved in a transmission. It includes the error information returned in the CCB located in the file DTF. The meaning of the various fields of the message can be found in the appropriate data management macros manual for your operating system. This message is accompanied by other messages that indicate which transmission request has failed.

System Action:

The request will be placed in error status and will require operator intervention before transmission can resume.

User Action:

Determine the cause of the error. If the error is unrecoverable, delete the request, otherwise correct the error condition and reset the request 'in error' status to retry.

N46C01**APPLICATION REGISTERED BY ANOTHER PROCESS****Reason:**

A different process has already registered the application specified on an &SNAMS REGISTER request.

System Action:

The request is rejected.

User Action:

Use the SHOW SNAMS APPL command to display registered applications. Retry the request with a different application name.

N46C02**CONFLICTING REGISTRATION DETAILS****Reason:**

The application and/or routing names supplied on a SNAMS registration request conflicts with an existing registration.

System Action:

The request is rejected.

User Action:

Use the SHOW SNAMS APPL command to display registered applications.

N46C03**INVALID APPLICATION NAME OR ID****Reason:**

The application name or registration ID supplied is invalid.

System Action:

The request is rejected.

User Action:

Use the SHOW SNAMS APPL command to display registered applications. Retry the request with a different application name or ID.

N46C04

CONFLICTING NOTIFICATION EXIT ADDRESS

Reason:

The NCL notification exit address supplied to \$NMSNAMS conflicts with the existing registration.

System Action:

The request is rejected.

User Action:

Correct and retry.

N46D01

MDS-MU FORMAT EXCEPTION. SENSE CODE ssss

Reason:

Either the data supplied is not an MDS-MU, or some vital information is omitted from the MDS-MU. ssss is the sense data for this error.

System Action:

The request is rejected.

User Action:

Look up the sense data from the SNA Formats manual.

N46E01

MDS ROUTING EXCEPTION. SENSE CODE ssss

Reason:

The MDS Router has failed to deliver the MDS-MU to its destination application. ssss is the sense data for the failure.

System Action:

The request is rejected.

User Action:

Look up the sense data from the SNA Formats manual.

N46E02**INVALID ORIGIN NODE****Reason:**

The MDS-MU to be sent contains origin network id and nau name which do not correspond to those values of the local node.

System Action:

The request is rejected.

User Action:

Since the MDS-MU is sent from the local node, the origin network id and nau name must correspond to that of the local node. You may either delete them from the MDS-MU (in which case SOLVE will default their values to those of the local node) or assign the local values to the MDS-MU.

N46F01**MS-CAPABILITIES REJECTED: rrrr****Reason:**

The MDS-MU carrying an MS Capabilities major vector has been rejected by the internal SOLVE MS_CAPS application. *rrrr* is the reason and may be any of the following:

- INVALID MS CATEGORY The MS category specified is not registered with MS_CAPS.
- INVALID FP APPL FOR SPECIFIED CATEGORY The application supplied is not the focal point application for the specified category.
- A FOCAL POINT OF HIGHER RANK EXISTS A focal point for the specified category is already established and has a higher rank than that which is requested.
- INVALID REPLY The MS Capabilities reply is invalid for its corresponding request.

System Action:

The request is rejected.

User Action:

Correct the error and retry. Where appropriate, use the SHOW SNAMS APPL and/or SHOW SNAMS FP commands to display registered MS applications and existing focal points respectively.

N46G01

MS CAPABILITIES REJECTED. SENSE CODE: ssssssss

Reason:

The MS_CAPS application has failed to parse the MS Capabilities major vector within an MDS-MU. ssssssss is the sense data for this error.

System Action:

The request is rejected.

User Action:

Look up the sense data from the SNA Formats manual.

DESCRIPTION This is descriptive name for the MS category.

NODE This contains the network ID and the NAU name of the entry point.

STATUS This indicates the status/type of focal point established with respect to the entry point. Possible values are:

PENDING : Primary/Backup focal point is pending active.

ACT-PRI : Primary focal point is active.

ACT-BKUP: Backup focal point is active.

System Action:

None.

User Action:

None.

N46H31

aaaa bbbb cccc dddd

Reason:

This message is produced for each entry point node displayed on a SHOW SNAMS EP command. The information displayed is described in the explanation for message N46H30

System Action:

None.

User Action:

None.

N46P01

INVALID MDO NAME FOR REQUEST

Reason:

The MDO supplied to an *SNAMS statement* is *invalid*.

System Action:

None.

User Action:

Check the syntax of the MDO name and verify it against its corresponding MAP definition.

N46P02

SOLVE MAPPING FAILURE

Reason:

An internal error has occurred while processing Mapping Services.

System Action:

None.

User Action:

Contact your product support representative.

N46P03

STACK OVERFLOW

Reason:

The internal recursion stack limit was exceeded while processing an &SNAMS operation.

System Action:

None.

User Action:

Contact your product support representative.

N46P04**MDS-MU INVALID FOR TARGET MDO****Reason:**

The MDS-MU returned on an *SNAMS RECEIVE request is invalid for the target MDO*.

System Action:

None.

User Action:

Check the type definition of the target MDO and rectify as appropriate.

N47A01**STORAGE SHORTAGE, PSGB-BUILD FAILED****Reason:**

The system attempted to start an APPC link but there was insufficient storage to satisfy the request.

System Action:

The request is rejected.

User Action:

Investigate the storage problem.

N47A02**APPC LINK INACTIVE. LINK=aaaa LU=bbbb****Reason:**

Indicates that all sessions in the APPC link have been deactivated.

System Action:

None.

User Action:

None.

N47A03

APPC LINK ACTIVE, aaaa SESSION. LINK=bbbb LU=cccc

Reason:

Indicates that the first session of an APPC link is now active. If the link is a single session link only then aaaa is SINGLE, else aaaa is PARALLEL.

System Action:

Single session links require no further action. Parallel session links require the system to start the CNOS transaction responsible for negotiating session limits with the remote LU. The system will activate the minimum number of contention winner sessions negotiated.

User Action:

None.

N47A04

APPC LINK RETRY, SINGLE SESSION. LINK=aaaa LU=bbbb

Reason:

This message indicates that an attempt to start an APPC link as a parallel session link failed and an automatic attempt to start the link as a single session link is being retried.

System Action:

An attempt is made to start a single session link using a mode name with pending conversations, otherwise the first mode name found for the link.

User Action:

None.

N47D01

APPC CNOS aaaa: TRANSACTION ERROR, LU=bbbb - CNOS DISABLED FOR LINK.

Reason:

The CNOS transaction has failed and CNOS is now disabled. aaaa is either CLIENT or SERVER and indicates whether the transaction was started by this node (CLIENT) or the partner node (SERVER). bbbb is the fully qualified partner LU name.

System Action:

The system will attempt to activate sessions for each mode as required by pending conversations.

User Action:

Contact your systems administrator.

N47D02

APPC CNOS aaaa: COMMAND ERROR, LU=bbbb MODE=cccc - PROCESSING CONTINUES.

Reason:

The CNOS transaction has received a reply indicating abnormal completion of session limits negotiation. aaaa is CLIENT if the transaction was started by the local node, or SERVER if it was started by the partner LU.

System Action:

The system will ignore the error and continue processing.

User Action:

None.

N47D03

**APPC CNOS aaaaaa: TRANSACTION STARTED, LINK=bbbbbb
LU=cccccc**

Reason:

This message indicates that the internal CNOS transaction that performs session limit negotiation for parallel session links has started. If started in the local system aaaaaa is CLIENT, else SERVER, while bbbbbb is the link name and ccccc the fully qualified network name of the remote LU.

System Action:

This message is only seen if APPC link tracing is active.

User Action:

None.

N47D04

APPC CNOS aaaaaa: TRANSACTION ENDED, LINK=bbbbbbb LU=cccccc

Reason:

This message indicates that the internal CNOS transaction that performs session limit negotiation for parallel session links has ended. If the transaction started in this system aaaaaa is CLIENT, else its SERVER, while bbbbbb is the link name and ccccc the fully qualified network name for the remote LU.

System Action:

This message is only seen if APPC link tracing is active.

User Action:

None.

N47D05

**APPC CNOS aaaaaa: NEGOTIATION COMPLETE, LU=bbbbbbb
MODE=cccccc**

Reason:

The internal CNOS transaction has successfully negotiated session limits for the mode name ccccc. The session is with the remote LU bbbbbbb and aaaaaa is CLIENT if the transaction was started by the local system else its SERVER.

System Action:

This message is only seen if APPC link tracing is active.

User Action:

None.

N47D06

**APPC CNOS aaaaaa: COMMAND RACE DETECTED, LU=bbbbbbb
MODE=cccccc**

Reason:

The internal CNOS transaction has detected a command race whilst negotiating session limits to LU bbbbbbb for the mode name ccccc. If the transaction was started in the local system aaaaaa is CLIENT else its SERVER.

System Action:

This message is only seen if APPC link tracing is active.

User Action:

None.

N47D07

**APPC CNOS aaaaaa: DRAINING SESSIONS, LU=bbbbbb MODE=cccccc
RESP=dddddd**

Reason:

The internal CNOS transaction is draining all session for mode cccccc to LU bbbbbb. If the transaction was started by the local system then aaaaa is CLIENT, else its SERVER. If the transaction initiator is responsible for actual session termination the ddddd is set to SOURCE else its set to TARGET.

System Action:

This message is only seen if APPC link tracing is active.

User Action:

None.

N47H01

APPC aaaa bbbb cccc.

Reason:

When APPC sends an error to a remote system or receives an error from a remote system, it logs a sequence of messages describing the nature of the error. This is the first message in the sequence and shows the following information: aaaa indicates whether the error is being sent (SENDING) or has been received (RECEIVED), bbbb indicates the type of error 'ERROR DATA' or 'DEALLOCATE ABEND' and cccc indicates whether the error is contained in a GDS variable or an FMH7.

System Action:

Information describing the error follows this message, including the APPC transaction name, conversation ID and any sense code associated with the error.

User Action:

See the sequence of messages following this message for a detailed description of the error.

N47H02**APPC aaaa TRANSACTION: bbbb****Reason:**

When APPC sends an error to a remote system or receives an error from a remote system, it logs a sequence of messages describing the nature of error. This message identifies the transaction in error and shows the following information: aaaa indicates whether it is a 'USER' transaction or a 'SYSTEM' transaction, bbbb is the name of the transaction.

System Action:

The system will log another message giving more details about the error or it will issue a message indicating that error processing has been completed.

User Action:

See all messages belonging to the sequence of messages describing this error to determine which APPC conversation was in error and the exact nature of the error.

N47H03**APPC CONVERSATION ID aaaa ON LINK bbbb TO LU cccc.****Reason:**

When APPC sends an error to a remote system or receives an error from a remote system, it logs a sequence of messages describing the nature of error. This message identifies the APPC conversation ID and its remote LU connection: aaaa is the APPC conversation ID, bbbb is the APPC link name and cccc is the LU name where the conversation partner for conversation aaaa is located.

System Action:

The system will log another message giving more details about the error or it will issue a message indicating that error processing has been completed.

User Action:

See all messages belonging to the sequence of messages describing this error to determine which APPC conversation was in error and the exact nature of the error.

N47H04

APPC ERROR: SENSE aaaa bbbb.

Reason:

When APPC sends an error to a remote system or receives an error from a remote system, it logs a sequence of messages describing the nature of the error. This message gives sense code information: aaaa is the sense code data and bbbb indicates whether the error information originated from the SEND_ERROR verb being issued by the local or remote program, or it was due to the abnormal termination of the conversation.

System Action:

The system will log another message giving more details about the error or it will issue a message indicating that error processing has been completed.

User Action:

See all messages belonging to the sequence of messages describing this error to determine which APPC conversation was in error and the exact nature of the error.

N47H05

APPC ERROR PROCESSING COMPLETE.

Reason:

When APPC sends an error to a remote system or receives an error from a remote system, it logs a sequence of messages describing the nature of the error. This message indicates the end of error processing and is the last message in the sequence.

System Action:

None.

User Action:

See all messages belonging to the sequence of messages describing this error to determine which APPC conversation was in error and the exact nature of the error.

N47H06**APPC ERROR: INVALID MAP NAME GDS VARIABLE.****Reason:**

When APPC sends an error to a remote system or receives an error from a remote system, it logs a sequence of messages describing the nature of the error. This message indicates that APPC receive processing has received an invalid map name GDS variable.

System Action:

The GDS variable is discarded by the system and processing continues without mapping.

User Action:

See all messages belonging to the sequence of messages describing this error to determine which APPC conversation received the invalid GDS variable.

N47H07**APPC ERROR: CONFIRMED NOT EXPECTED.****Reason:**

The APPC conversation identified by messages N47H02 and N47H03 received a CONFIRMED response but CONFIRMED was not expected.

System Action:

Processing continues.

User Action:

Consult your systems administrator.

N47H08

APPC ERROR: USER NOT AUTHORISED.

Reason:

A request to allocate a conversation has been rejected by the remote LU because the access security information sent by the requesting procedure is invalid. The conversation was identified by messages N47H02 and N47H03 which precede this message.

System Action:

Message N47H04 is issued with sense data indicating the cause of error. The appropriate error codes are returned to the conversation in *RETCODE* and *ZFDBK*.

User Action:

Consult your systems administrator.

N47H09

APPC ERROR: ALLOCATION ERROR.

Reason:

The remote end of the conversation has detected an error during attach processing. The sense data in message N47H04 indicates the cause of the error. The conversation is identified by messages N47H02 and N47H03.

System Action:

The appropriate error codes are returned to the conversation in *RETCODE* and *ZFDBK*.

User Action:

Determine the cause of the error from the sense data in N47H04.

N47H10**APPC aaaa ERROR DATA: bbbb cccc.****Reason:**

APPC has detected a mapping error and is either sending or receiving an Error Data GDS variable indicating the error bbbb for GDS ID or map name cccc . If the local system detected the error aaaa is set to 'SENDING' else it is set to 'RECEIVED'.

System Action:

None.

User Action:

Consult your systems administrator.

N47H11**APPC ERROR FROM aaaa.****Reason:**

The remote LU has detected an error and sent an Error Log GDS variable. aaaa indicates the software product name the version and release of the remote LU.

System Action:

None.

User Action:

Consult your systems administrator.

N47H12

APPC RESOURCE FAILURE: CONVERSATION TERMINATED ABNORMALLY.

Reason:

The local LU has detected a resource failure (e.g. session outage) which has caused the conversation to terminate abnormally. The conversation is identified by message N47H02 and N47H03.

System Action:

The conversation terminates abnormally. Error codes are returned in RETCODE and ZFDBK.

User Action:

Investigate the cause of the session outage.

N47H99

aaaa.

Reason:

This message follows message N47H11 and displays the message text data received in an Error Log GDS variable.

System Action:

None.

User Action:

Consult your systems administrator.

N47J01**SIGNON FAILED FOR USERID aaaaaa - SECURITY EXIT FAILURE.****Reason:**

APPC has attempted to signon to a user region and the call to the security interface was rejected.

System Action:

The APPC request is rejected with authorisation failed.

User Action:

See all messages belonging to the sequence of messages describing this error to determine which APPC conversation was in error and the exact nature of the error. This error may be accompanied with messages from the security interface.

N47J02**SIGNON FAILED FOR USERID aaaaaa - LOGON DENIED BY SECURITY EXIT.****Reason:**

APPC has attempted to signon to a user region and the security system verified the user ID and password as correct, however, the logon will be denied for other reasons. This may be related to other attributes of the user ID that restrict access, for example time of day or terminal etc.

System Action:

The APPC request is rejected with authorisation failed.

User Action:

See all messages belonging to the sequence of messages describing this error to determine which APPC conversation was in error and the exact nature of the error.

N47J03

SIGNON FAILED FOR USERID aaaaaa - PASSWORD INVALID.

Reason:

APPC has attempted to signon to a user region and the security system rejected the signon because the supplied user ID and password were not valid.

System Action:

The APPC request is rejected with authorisation failed.

User Action:

See all messages belonging to the sequence of messages describing this error to determine which APPC conversation was in error and the exact nature of the error.

N47J04

SIGNON FAILED FOR USERID aaaaaa - USERID UNKNOWN.

Reason:

APPC has attempted to signon to a user region and the security system rejected the signon because the supplied user ID is not known to the security system.

System Action:

The APPC request is rejected with authorisation failed.

User Action:

See all messages belonging to the sequence of messages describing this error to determine which APPC conversation was in error and the exact nature of the error.

N47J06**SIGNON FAILED FOR USERID aaaaaa - APPC ACCESS KEY/LOCK MISMATCH. REQUESTING USERID bbbbbb.****Reason:**

APPC has attempted to signon to a user region however the requesting user bbbbbb did not have an access key that was valid for the target user aaaaaa access lock.

System Action:

The APPC request is rejected with authorisation failed.

User Action:

See all messages belonging to the sequence of messages describing this error to determine which APPC conversation was in error and the exact nature of the error.

N47J07**SIGNON FAILED FOR USERID aaaaaa - USER REGION CANCELLED.****Reason:**

APPC has attempted to signon to a user region however the region was cancelled before signon was complete.

System Action:

The APPC request is rejected with authorisation failed.

User Action:

See all messages belonging to the sequence of messages describing this error to determine which APPC conversation was in error and the exact nature of the error.

N47J08

SIGNON FAILED FOR USERID aaaaaa - P1

Reason:

APPC has attempted to signon to a user region however the security system rejected the signon and issued the message *P1* . The userid that issued the signon request was *aaaaaa* .

System Action:

The APPC request is rejected with authorisation failed.

User Action:

See the explanation for the message *P1* for further action. See all messages belonging to the sequence of messages describing this error to determine which APPC conversation was in error and the exact nature of the error.

N47J09

CHANGE PASSWORD FAILED FOR USERID aaaaaa - SECURITY EXIT FAILURE.

Reason:

An attempt was made to change the password for an APPC user but it was rejected by the security exit.

System Action:

An error indication is returned in the SIGNON transaction message.

User Action:

Determine the cause of the exit failure. Correct and retry.

N47P01**APPC SERVICE TRANSACTION aaaa ERROR : INVALID PROTOCOL OR DATA.****Reason:**

Internal APPC transaction aaaa has failed due to a protocol violation or invalid data.

System Action:

The request for the service provided by this transaction is rejected.

User Action:

Consult your systems administrator.

N47P02**SYNTAX ERROR - CHECK NCL SOURCE.****Reason:**

&APPC RPC/START statement contains invalid syntax. The following message may contain NCL statement after substitution. However syntax error was detected in original NCL buffer before substitution.

System Action:

NCL procedure terminates.

User Action:

Correct NCL procedure and rerun it.

N47Q02

**AAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAA
AAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAA**

Reason:

Message text as supplied by the LOG=msg operand on an &APPC SEND_ERROR or DEALLOCATE TYPE=ABEND.

System Action:

None.

User Action:

None.

N47S01

APPC SERVICE TRANSACTION aaaa ERROR : INVALID PROTOCOL OR DATA.

Reason:

Internal APPC transaction aaaa has failed due to a protocol violation or invalid data.

System Action:

The request for the service provided by this transaction is rejected.

User Action:

Consult your systems administrator.

N47T01

APPC SESSION TRACE - LINK: aaaa LU: bbbb MODE: cccc dddd.

Reason:

This message precedes session trace details for session id dddd MODE cccc in LINK aaaa to remote LU bbbb .

System Action:

A message with trace details will follow this message.

User Action:

None.

N47T11

APPC SESS/MGR: LOCATE-LINK.

Reason:

A request has been issued to APPC's Session Manager to locate a specific link. This message is preceded by message N47T01.

System Action:

Locate link.

User Action:

None.

N47T12**APPC SESS/MGR: BUILD-LINK.****Reason:**

A request has been issued to APPC's Session Manager to build an APPC link. This message is preceded by message N47T01.

System Action:

None.

User Action:

None.

N47T13**APPC SESS/MGR: LOCATE-BUILD-LINK.****Reason:**

A request has been issued to APPC's Session Manager to locate or build an APPC link. This message is preceded by message N47T01.

System Action:

Locate or build link.

User Action:

None.

N47T14**APPC SESS/MGR: ACTIVATE-SESSION.****Reason:**

A request has been issued to APPC's Session Manager to activate a session. This message is preceded by message N47T01.

System Action:

Commence session activation.

User Action:

None.

N47T15

APPC SESS/MGR: PROCESS-SESSION-LIMIT.

Reason:

A request has been issued to APPC's Session Manager to activate enough contention winner sessions to reach the mode's desired limit. This message is preceded by message N47T01.

System Action:

Session activation commences.

User Action:

None.

N47T16

APPC SESS/MGR: SESSION-ACTIVATED.

Reason:

This message indicates that APPC's Session Manager has received notification that a session has been activated. This message is preceded by message N47T01.

System Action:

None.

User Action:

None.

N47T17

APPC SESS/MGR: DEACTIVATE-SESSION.

Reason:

A request has been issued to APPC's Session Manager to deactivate a session. This message is preceded by message N47T01.

System Action:

Session deactivation will commence.

User Action:

None.

N47T18**APPC SESS/MGR: SESSION-DEACTIVATED.****Reason:**

This message indicates that APPC's Session Manager has received notification that a session has been deactivated. This message is preceded by message N47T01.

System Action:

None.

User Action:

None.

N47T19**APPC SESS/MGR: REQUEST-LINK-DEACTIVATION.****Reason:**

A LINK STOP=linkname TYPE=APPC command has been entered and a request has been issued to APPC's session manager to commence deactivation. This message is preceded by message N47T01.

System Action:

In a single session link deactivation commences. In a parallel session link the CNOS transaction is started.

User Action:

None.

N47T20**APPC SESS/MGR: DEACTIVATE-LINK.****Reason:**

A request has been issued to APPC's Session Manager to deactivate all sessions for this link. This message is preceded by message N47T01.

System Action:

Session deactivation commences for this link.

User Action:

None.

N47T21

APPC SESS/MGR: DEACTIVATE-MODE.

Reason:

A request has been issued to APPC's Session Manager to deactivate all sessions in this mode. This message is preceded by message N47T01.

System Action:

Session deactivation commences for this mode.

User Action:

None.

N47T22

APPC SESS/MGR: YIELD-SESSION.

Reason:

A request has been issued to APPC's Session Manager to YIELD this session. This message is preceded by message N47T01.

System Action:

A YIELD-SESSION request is sent to the remote LU.

User Action:

None.

N47T23

APPC SESS/MGR: BID-FOR-SESSION.

Reason:

A request has been issued to APPC's Session Manager to send a BID request for a contention loser session. This message is preceded by message N47T01.

System Action:

A BID request is sent to the remote LU.

User Action:

None.

N47T24**APPC SESS/MGR: READY-TO-RECEIVE.****Reason:**

A request has been issued to APPC's Session Manager to send an RTR request to the remote LU to indicate the success of a previous BID for this session. This message is preceded by message N47T01.

System Action:

An RTR request is sent to the remote LU.

User Action:

None.

N47T25**APPC SESS/MGR: REQUEST-TO-SEND.****Reason:**

A request has been issued to APPC's Session Manager to send a SIGNAL to the remote LU indicating a request to send. This message is preceded by message N47T01.

System Action:

A SIGNAL request is sent to the remote LU.

User Action:

None.

N47T26**APPC SESS/MGR: SEND-FMH12.****Reason:**

A request has been issued to APPC's Session Manager to send an FMH12 to the remote LU for session LU-LU verification. This message is preceded by message N47T01.

System Action:

An FMH12 request is sent to the remote LU.

User Action:

None.

N47T27

APPC SESS/MGR: QUIESCE-SESSION.

Reason:

A request has been issued to APPC's Session Manager to send a BIS request/reply to the remote LU to indicate the intention to deactivate this session. This message is preceded by message N47T01.

System Action:

A BIS request/reply is sent to the remote LU.

User Action:

None.

N47T28

APPC SESS/MGR: START-CNOS.

Reason:

A request has been issued to APPC's Session Manager to start the CNOS transaction. This message is preceded by message N47T01.

System Action:

The CNOS transaction is started.

User Action:

None.

N47T29

aaaaaaaa -> SESS/MGR: CONTINUE-ANY

Reason:

APPC trace - module aaaaaaaaa called the Session Manager to place the session in continue any mode.

System Action:

None.

User Action:

None.

N47T30

aaaaaaaa -> SESS/MGR: LINK-LOCK

Reason:

APPC trace - module aaaaaaaaa called the Session Manager to lock the link

System Action:

None

User Action:

None

N47T31

aaaaaaaa -> SESS/MGR: UNLOCK-LINK

Reason:

APPC trace - module aaaaaaaaa called the Session Manager to unlock the link.

System Action:

None

User Action:

None

N47T32

aaaaaaaa -> SESS/MGR: BID-FAILED

Reason:

APPC trace - module aaaaaaaaa called the Session Manager to indicate that a bid has failed.

System Action:

None.

User Action:

None.

N47T33

aaaaaaaa -> SESS/MGR: SESSION-INITIALIZED

Reason:

APPC trace - module aaaaaaaaa called the Session Manager to indicate that an LU6.2 session is now initialized and ready for conversation use.

System Action:

None

User Action:

None

N47T36

aaaaaaaa -> SESS/MGR: DELETE-LINK

Reason:

APPC trace - module aaaaaaaaa has called the Session Manager to delete the link after all activity has ceased.

System Action:

None

User Action:

None

N47T41

aaaaaaaa -> CONV/MGR: FREE-SESSION

Reason:

APPC trace - module aaaaaaaaa has called the Conversation Manager to indicate that a session is free and available for use.

System Action:

None

User Action:

None

N47T42**aaaaaaaa -> CONV/MGR: ASSIGN-SESSION****Reason:**

APPC trace - module aaaaaaaa has called the Conversation Manager to assign a session to a conversation. If none available the conversation is placed in the pending queue.

System Action:

None

User Action:

None

N47T43**aaaaaaaa -> CONV/MGR: MODE-INACTIVE****Reason:**

APPC trace - module aaaaaaaa called the Conversation Manager to indicate that a session mode is inactive and all pending conversations for the mode are failed.

System Action:

None

User Action:

None

N47T51

==> SND/RQST: aaaa SEQ=bbbb ccc dddd eee ff.

Reason:

A request RU has been sent to the remote LU. Session id, luname and linkname were identified by the previous message N47T01. The fields displayed have the following meaning:

aaaa - RU type, it can be DATA, LUSTAT, RTR, BIS, SIGNAL, BIND and NEG/BIND (negotiated BIND)

bbbb - RU sequence number,

ccc - response type,

dddd - bracket indicator,

eee - chain indicator and

ff - change direction indicator.

INSUFFICIENT STORAGE FOR REQUEST.

Reason:

A storage shortage was detected during APPC initialization.

System Action:

None.

User Action:

Investigate the storage shortage.

N48201

INSUFFICIENT STORAGE FOR REQUEST.

Reason:

The DEFTRANS or REPTRANS command has been entered but a storage shortage has been detected when processing the command.

System Action:

The request is rejected.

User Action:

Investigate the storage shortage.

N48202

DEFTRANS TRANSID = aaaa DEFINED.

Reason:

This message confirms that a Transaction Control Table (TCT) entry has been successfully defined for transaction aaaa .

System Action:

None.

User Action:

None.

N48203

DEFTRANS TRANSID = aaaa NOT ADDED - ALREADY DEFINED.

Reason:

A DEFTRANS command has been entered to define a Transaction Control Table entry (TCT) but an entry with the same TRANSID and QUAL already exists.

System Action:

The command is rejected.

User Action:

None.

N48204

DEFTRANS TRANSID = aaaa NOT DELETED - NOT DEFINED.

Reason:

The DELTRANS command has been entered to delete a Transaction Control Table (TCT) entry but the entry does not exist.

System Action:

The command is rejected.

User Action:

None.

N48205

DEFTRANS TRANSID = aaaa NOT ADDED - TPN NOT UNIQUE.

Reason:

A DEFTRANS or REPTRANS command has been entered to define or replace a Transaction Control Table (TCT) entry but the transaction program name (TPN) specified is not unique.

System Action:

The command is rejected.

User Action:

None.

N48206

OPERAND TPN = SPECIFIES AN INVALID VALUE.

Reason:

A DEFTRANS or REPTRANS command has been entered to define or replace a Transaction Control Table (TCT) entry but the transaction program name (TPN) specified has an invalid value.

System Action:

The command is rejected.

User Action:

Correct and retry.

N48207**UPDATE INVALID FOR APPC SYSTEM TRANSACTION: aaaa.****Reason:**

A REPTRANS or DELTRANS command has been entered to replace or delete a system Transaction Control Table (TCT) entry. If the REPTRANS command was issued the message indicates that replacement of one or more of the specified TCT parameters is invalid for system transaction *aaaa* . If the DELTRANS command was issued the message indicates that deletion of system transaction *aaaa* is invalid.

System Action:

The command is rejected.

User Action:

See the NCL Reference for information about the TCT parameters allowed to be changed for system transaction *aaaa* . It is invalid to delete system transaction TCT entries.

N48208**INVALID APPC SYSTEM TRANSACTION: aaaa.****Reason:**

A DEFTRANS or REPTRANS command has been entered to define or replace a Transaction Control Table (TCT) entry for system transaction *aaaa* but *aaaa* is not a valid system transaction.

System Action:

The command is rejected.

User Action:

Specify a valid system transaction name and retry. A list of the valid system transactions can be obtained by issuing the SHOW DEFTRANS command with TYPE=SYSTEM specified. Note that since system transactions are always internally defined and can not be deleted it is only valid to issue a REPTRANS command to change their TCT options.

N48209**SIGNON=YES INVALID WITH SECURITY=NONE.****Reason:**

On a DEFTRANS or REPTRANS the SIGNON=YES operand, which indicates persistent signon is to be carried out for this transaction, is not allowed with SECURITY=NONE. SECURITY=SAME|USER|USERPSWD must be specified instead.

System Action:

DEFTRANS fails.

User Action:

Change either the SIGNON or SECURITY operand settings.

N48301

**--TRANSID--- ----TPN----- QUAL -LINK/LU/DM- MODENAME --PROC-- C
S M CMD**

Reason:

This is the header message displayed in response to the SHOW DEFTRANS command. The column headings are:

TRANSID - Transaction id.

TPN - Transaction Program Name.

QUAL - Transaction qualifier.

LINK/LU/DM - Link name, LU name or Domain ID.

MODENAME - Mode name.

PROC - NCL procedure name.

C - Synchronisation level of CONFIRM in use: Y/N.

S - Conversation level security:

N - NONE, S - SAME, SS - SAME with SIGNON=YES, U - USER, US - USER with SIGNON=YES, P - USERPSWD, PS - USERPSWD with SIGNON=YES,

M - Mapped conversation: Y/N.

CMD - Command authority.

System Action:

None.

User Action:

N48825

CONNECT. aaaa ACTIVE.. bbbb

Reason:

This message is part of the display shown in response to the SHOW APPC command. It is only present when the NCL process for which conversation information is being displayed is registered as server. It shows the client-server connect mode aaaa which can be PENDING, ACCEPT, NOTIFY or REJECT, and the number of active conversations bbbb in the server.

System Action:

None.

User Action:

None.

N48826**aaaa PROCESSES DISPLAYED.****Reason:**

This message is part of the display shown in response to the SHOW APPC command. It marks the end of the display generated by the command and shows the total number aaaa of NCL processes for which APPC conversation information has been displayed.

System Action:

None.

User Action:

None.

N48827**APPCID.. aaaa TRANS...bbbb****Reason:**

This message is part of the display shown in response to the SHOW APPC command. It shows the unique APPC conversation ID aaaa and the local transaction name bbbb of the conversation running in the NCL process identified in message N48802.

System Action:

None.

User Action:

None.

N48828

LU..... aaaa DOMAIN.. bbbb STATE... cccc

Reason:

This message is part of the display shown in response to the SHOW APPC command. It shows the LU name *aaaa* and SOLVE domain ID *bbbb* (if applicable) of the remote system where the conversation partner is located. It also shows the state *cccc* of the conversation in the local system.

System Action:

None.

User Action:

None.

N48829

APPCID.. aaaa NCLID... bbbb STATE... cccc

Reason:

This message is part of the display shown in response to the SHOW APPC command. It shows the APPC conversation ID *aaaa* and NCL process ID *bbbb* of the conversation partner when the partner is located in the local SOLVE system. It also shows the state *cccc* for the local end of the conversation (identified in N48827 which immediately precedes this message).

System Action:

None.

User Action:

None.

N48830**CLIENT.....****Reason:**

This message is part of the display shown in response to the SHOW APPC command. It indicates that the APPC conversations shown following this message and belonging to the NCL process identified by N48802, are client conversations (i.e. they have been allocated).

System Action:

None.

User Action:

None.

N48C01**PARAMETER ERROR. INVALID "aaaa" "bbbb".****Reason:**

An APPC verb specified the parameter *aaaa* with invalid value *bbbb* .
If the parameter is LUNAME, a probable cause of the error is having no DEFLINK TYPE=APPC ... definition covering this LUNAME.

System Action:

The verb that specified this parameter completes with &RETCODE = 16.

User Action:

Correct this parameter and retry. If the parameter is LUNAME, do a SH DEFLINK TYPE=APPC command and ensure that there is an LUMASK that matches this LUNAME. If not, use REPLINK to correct the definition.

N48C02

STATE CHECK.

Reason:

An APPC verb was issued while the conversation was not in a valid state for that verb. This usually indicates a program error.

System Action:

The APPC verb completes with &RETCODE = 12.

User Action:

Correct and retry.

N48C03

REQUEST ERROR. NO ACTIVE CONVERSATION.

Reason:

An APPC request has been issued but no conversation is active.

System Action:

The request completes with &RETCODE = 16.

User Action:

Correct and retry.

N48C07

REMOTE PROGRAM ISSUED ERROR. PROGRAM_ERROR_PURGING.

Reason:

This message indicates that a SEND_ERROR verb was issued by the remote program while in receive or confirm state. The verb may have caused information to be purged.

System Action:

This condition is indicated by setting &RETCODE to 8 and &ZFDBK to 0. The conversation enters receive state.

User Action:

The response to this condition is application dependent.

N48C08**REMOTE PROGRAM ISSUED ERROR.
PROGRAM_ERROR_NO_TRUNCATION.****Reason:**

This message indicates that a SEND_ERROR verb was issued by the remote program from send state but no loss of data has occurred.

System Action:

This condition is indicated by setting &RETCODE to 8 and &ZFDBK to 4. No state change occurs.

User Action:

The response to this condition is application dependent.

N48C09**REMOTE PROGRAM ISSUED ERROR. PROGRAM_ERROR_TRUNCATION.****Reason:**

This message indicates that a SEND_ERROR verb was issued by the remote program from send state and truncation of data has occurred.

System Action:

This condition is indicated by setting &RETCODE to 8 and &ZFDBK to 8. The conversation remains in receive state.

User Action:

The response to this condition is application dependent.

N48C11**ALLOCATION FAILURE. ALLOCATION_FAILURE_RETRY.****Reason:**

A request to allocate a conversation has failed due to a condition that may be temporary.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 4.

User Action:

The NCL procedure can be written to retry the allocation request when this condition occurs.

N48C12

ALLOCATION FAILURE. ALLOCATION_FAILURE_NO_RETRY. LINK=linkname

Reason:

A request to allocate a conversation has failed due to a condition that is not temporary.

This failure may occur because the APPC link to another system is not recognized.

System Action:

The failure is indicated by setting &RETCODE to 16 and &ZFDBK to 8.

User Action:

Determine the reason for the failure. The NCL procedure should not retry the allocation request until the condition has been corrected.

N48C13

ALLOCATION FAILURE. SYNC_LEVEL_NOT_SUPPORTED_BY_LU.

Reason:

A request to allocate a conversation has failed because it specified a synchronisation level not supported by the local LU.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 12.

User Action:

Correct and retry.

N48C14**CONVERSATION FAILURE. FMH_DATA_NOT_SUPPORTED_BY_LU.****Reason:**

A request to SEND_DATA has failed because the data contains FM headers and the remote end of the conversation or the remote LU does not support FM headers.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 48.

User Action:

Consult your systems administrator.

N48C15**CONVERSATION FAILURE. MAPPING_NOT_SUPPORTED.****Reason:**

A request to SEND_DATA has failed because it specified a map name and the remote end of the conversation or the remote LU does not support data mapping.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 52.

User Action:

Consult your systems administrator.

N48C30**CONVERSATION FAILURE. DEALLOCATE_ABEND_PROG.****Reason:**

Indicates that the remote program has issued a DEALLOCATE TYPE=ABEND verb.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 16. The conversation enters deallocate state.

User Action:

Determine the reason for the ABEND in the remote end. Correct and retry.

N48C31

CONVERSATION FAILURE. DEALLOCATE_ABEND_SVC.

Reason:

Indicates the remote end of the conversation has been ABENDED by the remote LU.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 20. The conversation enters deallocate state.

User Action:

Determine the reason for the ABEND of the remote end. Correct and retry.

N48C32

CONVERSATION FAILURE. DEALLOCATE_ABEND_TIMER.

Reason:

Indicates the remote end of the conversation has been ABENDED by the remote LU because a time limit has been exceeded.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 24. The conversation enters deallocate state.

User Action:

Determine the reason for the ABEND. Correct and retry.

N48C33

CONVERSATION FAILURE. SVC_ERROR_PURGING.

Reason:

LU Services in the remote LU has detected a problem and issued a SEND_ERROR verb.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 28. The conversation is in receive state.

User Action:

Consult your systems administrator.

N48C34**CONVERSATION FAILURE. SVC_ERROR_NO_TRUNCATION.****Reason:**

LU Services in the remote LU has detected a problem and issued a SEND_ERROR verb.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 32. The conversation remains in receive state.

User Action:

Consult your systems administrator.

N48C35**CONVERSATION FAILURE. SVC_ERROR_TRUNCATION.****Reason:**

LU Services in the remote LU has detected a problem and issued a SEND_ERROR verb.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 36. The conversation remains in receive state.

User Action:

Consult your systems administrator.

N48C36**CONVERSATION FAILURE. RESOURCE_FAILURE_RETRY.****Reason:**

The conversation has terminated due to a failure caused by a condition that may be temporary.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 40. The conversation enters deallocate state.

User Action:

The NCL procedure can be written to retry the request when this condition is encountered.

N48C37

CONVERSATION FAILURE. RESOURCE_FAILURE_NO_RETRY.

Reason:

The conversation was terminated due to a failure caused by a condition that is not temporary.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 44. The conversation enters deallocate state.

User Action:

Determine the condition that caused the failure. The transaction should not be retried until the condition has been corrected.

N48C38

CONVERSATION FAILURE. MAP_NOT_FOUND.

Reason:

The local end of the conversation issued SEND_DATA using a map name that is unknown to the local or the remote LU.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 56. The conversation is in send state.

User Action:

Correct and retry.

N48C39

CONVERSATION FAILURE. MAP_EXECUTION_FAILURE.

Reason:

The local end of the conversation issued SEND_DATA with mapping but the local or remote LU could not map the data based on the map name.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 60. The conversation is in send state.

User Action:

Correct and retry.

N48C40**ALLOCATION FAILURE. SECURITY_NOT_VALID.****Reason:**

A request to allocate a conversation has been rejected because the access security information provided by the requesting NCL procedure is invalid.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 64.

User Action:

See your systems administrator.

N48C41**ALLOCATION FAILURE. TPN_NOT_RECOGNISED.****Reason:**

A request to allocate a conversation has been rejected by the remote LU because the request specified a transaction program name that the remote LU does not recognize.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 68.

User Action:

Check that the transaction program name (tpn) defined in the Transaction Control Table (TCT) is also defined in the remote LU.

N48C42**ALLOCATION FAILURE. PIP_NOT_ALLOWED.****Reason:**

A request to allocate a conversation has been rejected because the request specified program initialization parameters (PIP) but the remote LU does not support PIP data.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 72.

User Action:

Correct and retry.

N48C43

ALLOCATION FAILURE. PIP_NOT_SPECIFIED_CORRECTLY.

Reason:

A request to allocate a conversation has been rejected by the remote LU because the remote program expected PIP variables but the requesting NCL procedure did not specify PIP variables or specified an incorrect number of variables.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 76.

User Action:

Correct and retry.

N48C44

ALLOCATION FAILURE. CONVERSATION_TYPE_MISMATCH.

Reason:

A request to allocate a conversation has been rejected because the conversation type specified in the request is not supported by the remote program or the remote LU.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 80.

User Action:

See your systems administrator.

N48C45

ALLOCATION FAILURE. SYNC_LEVEL_NOT_SUPPORTED_BY_PGM.

Reason:

A request to allocate a conversation has been rejected because the request specified a synchronisation level not supported by the remote program.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 84.

User Action:

Consult your systems administrator.

N48C46**ALLOCATION FAILURE. TRANS_PGM_NOT_AVAIL_RETRY.****Reason:**

A request to allocate a conversation has been rejected by the remote LU because the transaction program specified in the request can not be started by the remote LU. The condition may be temporary and the requesting NCL procedure can retry the allocation request.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 88.

User Action:

An NCL procedure can be written to retry the allocation request when this condition is detected.

N48C47**ALLOCATION FAILURE. TRANS_PGM_NOT_AVAIL_NO_RETRY.****Reason:**

A request to allocate a conversation has been rejected by the remote LU because the transaction program specified in the request can not be started by the remote LU. The condition is not temporary and the requesting NCL procedure should not retry the allocation request.

System Action:

This condition is indicated by setting &RETCODE to 16 and &ZFDBK to 92.

User Action:

Consult your systems administrator.

N48F01

APPC LOGON ACCEPTED. SESSION ACTIVE FOR LU aaaa ON LINK bbbb.

Reason:

This message confirms that a logon request from LU aaaa has been accepted and the session is now active.

System Action:

None.

User Action:

None.

N48F02

APPC session error for aaaa - rrrrrr

Reason:

A request to establish an LU 6.2 session to LU aaaa has failed due to an error. The specific error reason is shown as *rrrrrr*.

System Action:

The request is rejected.

User Action:

Determine the cause of the error by examining the displayed reason.

N48F03

APPC SESSION ERROR. SESSION LU-LU VERIFICATION FAILED FOR LU aaaa.

Reason:

A request to establish an LU 6.2 session to LU aaaa has been rejected because session LU-LU verification has failed.

System Action:

The request is rejected.

User Action:

Consult your systems administrator.

N48H01

APPC BIND ACCEPTED. SESSION ACTIVE FOR LU aaaa ON LINK bbbb.

Reason:

A request by LU aaaa to establish an LU 6.2 session has been accepted and the session is now active.

System Action:

None.

User Action:

None.

N48H03

APPC SESSION ERROR. SESSION LU-LU VERIFICATION FAILED FOR LU aaaa.

Reason:

A request to establish an LU 6.2 session to LU aaaa has been rejected because LU-LU verification has failed.

System Action:

The request is rejected.

User Action:

Consult your systems administrator.

N48I01

APPC USER REGION aaaa CANCELLED.

Reason:

The APPC user region aaaa was the target of a CANCEL command. This message confirms that region termination has completed.

System Action:

None.

User Action:

None.

N48J01

APPC LOGON FAILED FOR LU aaaa ON LINK bbbb SENSE ssss

Reason:

A request to establish an LU 6.2 session to LU *aaaa* on link *bbbb* has failed due to a LOGON error.

System Action:

The request is rejected and a message is issued indicating the reason for the error.

User Action:

The next message issued contains the reason for the error. Refer this to your systems administrator.

N48J02

APPC LINK START FAILED FOR LINK aaaa TO LU bbbb.

Reason:

A request to establish the first LU 6.2 session for LINK *aaaa* has failed.

System Action:

The request is rejected and a message is issued indicating the reason for the error.

User Action:

The next message issued contains the reason for the error. Refer this to your systems administrator.

N48J03**APPC LOGON REJECTED FOR LU aaaa ON LINK bbbb.****Reason:**

A request to establish an LU 6.2 session to LU aaaa has failed due to a LOGON error.

System Action:

The request is rejected and a message is issued indicating the reason for the error.

User Action:

The next message issued contains the reason for the error. Refer this to your systems administrator.

N48J04**APPC LINK START FAILED FOR LINK aaaa TO LU bbbb - NO ACCESS METHODS AVAILABLE****Reason:**

A request to establish the first LU 6.2 session for LINK **aaaa** has failed. This is because there was no available access method for the link. Either no access method was nominated (On the LINK START or DEFLINK), or the DOMAIN table entry for this link blocked all available access methods.

System Action:

The request is rejected and a message is issued indicating the reason for the error.

User Action:

Check the LINK or DEFLINK command AM operand (if specified). Also check the SHOW DOMAINS TYPE=DEFINED command output for the available access methods for this link.

N48K01

USER NOT AUTHORISED, NCL PROCEDURE TERMINATED

Reason:

APPC has attempted to signon to a user region however the region was terminated before signon was complete.

System Action:

The APPC request is rejected with authorization failed.

User Action:

See all messages belonging to the sequence of messages describing this error to determine which APPC conversation was in error and the exact nature of the error.

N48M01

NORMAL NCL TERMINATION DETECTED.

Reason:

This message confirms normal NCL termination.

System Action:

None.

User Action:

None.

N48M02

ABNORMAL NCL TERMINATION DETECTED.

Reason:

This message confirms that clean up processing has completed for an abnormally terminating procedure.

System Action:

None.

User Action:

None.

N48P01**APPC SYNTAX INVALID.****Reason:**

An APPC verb has been issued with an invalid syntax.

System Action:

The request is rejected.

User Action:

Correct and retry.

N48P02**aaaa****Reason:**

An NCL procedure has issued *APPC DEALLOCATE TYPE=ABEND LOG=~aaaa~or APPC SEND_ERROR LOG=~aaaa~where~aaaa~is a user defined error message*. See the description of the *APPC verb* for further information on the use of the LOG= operand.

System Action:

None.

User Action:

None.

N48R09**APPC RECEIVE ERROR: RECEIVE QUEUE LIMIT EXCEEDED.****Reason:**

This message indicates that the maximum number of bytes allowed to accumulate in the receive queue has been reached.

System Action:

The conversation terminates abnormally.

User Action:

The conversation can be re-written to avoid this problem. For example using CONFIRM level synchronisation to ensure the arrival of data before the next send.

N48S01

APPC CONVERSATION ID aaaa ON LINK bbbb TO LU cccc.

Reason:

This message indicates that conversation aaaa has issued SEND_ERROR and an associated message follows.

System Action:

The error message is by the system.

User Action:

None.

N48U01

APPC SESSION SEND aaaa.

Reason:

An unrecoverable protocol violation or internal error has occurred for an LU 6.2 session. *aaaa* gives an indication of the nature of the error. The name of the remote LU is given in N48U02 which follows this message.

System Action:

The session is deactivated.

User Action:

Consult your systems administrator.

N48U02

APPC SESSION TO LU aaaa TERMINATING DUE TO ERROR.

Reason:

An unrecoverable error has occurred in an LU 6.2 session to LU *aaaa* and the session will be deactivated. Message N48U01 precedes this message and gives an indication of the nature of the error.

System Action:

The session will be deactivated.

User Action:

Consult your systems administrator.

N48W01**APPC SESSION RECEIVE aaaa.****Reason:**

An unrecoverable protocol violation or internal error has occurred for an LU 6.2 session. aaaa gives an indication of the nature of the error. The name of the remote LU is given in N48W02 which follows this message.

System Action:

The session is deactivated.

User Action:

Consult your systems administrator.

N48W02**APPC SESSION TO LU aaaa TERMINATING DUE TO ERROR.****Reason:**

An unrecoverable error has occurred in an LU 6.2 session to LU aaaa and the session will be deactivated. Message N48W01 precedes this message and gives an indication of the nature of the error.

System Action:

The session will be deactivated.

User Action:

Consult your systems administrator.

N48Y01**SCIP EXIT RECEIVED aaaa REQUEST - INVALID FOR LU 6.2, IGNORED.****Reason:**

The SCIP exit for the local LU has received a request that is invalid in an LU 6.2 session.

System Action:

The request is ignored by the system.

User Action:

None.

N48Z01

APPC SESSION FAILURE ON LINK aaaa TO LU bbbb.

Reason:

This message indicates that an LU 6.2 session failure has occurred on link aaaa to LU bbbb .

System Action:

The session is deactivated.

User Action:

Consult your systems administrator.

N49001

UNABLE TO WRITE SMF RECORD TYPE X`nn'

Reason:

An attempt to write an SMF record type X`nn' (HEX) has failed. SMF records can be optionally written to SMF to provide billing or accounting statistics for transmissions. SMF records can be written at the transmitting host, the receiving host or both. This message is written to the activity log only. It is possible that SMF is not active or the SMF datasets are full.

System Action:

Processing continues.

User Action:

Determine why the SMF records could not be written and correct the problem.

N4A001

APPC xxxxxxxx SERVER: TRANSACTION ERROR, LU=luname - REQUEST IGNORED.

Reason:

An attempt to signon/signoff a background APPC user region failed. xxxxxxxx = SIGNON/SIGNOFF.

System Action:

APPC user region signon fails.

User Action:

Check that user is defined on system being signed on to.

N4A002

APPC SIGNOFF SERVER: INVALID DATA, LU=luname - REQUEST IGNORED.

Reason:

An attempt to signoff a persistent background APPC user failed.

System Action:

Signoff transaction ignored.

User Action:

Check that background user is still logged on.

N4A101

SIGNOFF TRANSACTION ERROR , LU=luname - REQUEST IGNORED.

Reason:

An error occurred during the APPC SIGNOFF system transaction.

System Action:

SIGNOFF transaction fails.

User Action:

See if background APPC user is still logged on.

N5x to N7x Messages

N50101

MAI FEATURE INITIALIZATION FAILURE - UNABLE TO LOAD *module*

Reason:

The MAI feature failed to initialize because the module specified could not be loaded. This message indicates that the MAI feature has not been properly installed.

System Action:

No MAI functions will be available.

User Action:

Review the SOLVE installation process. The indicated load module should be made available in a load library accessible to SOLVE.

N50102

MAI FEATURE INITIALIZATION FAILURE - INSUFFICIENT STORAGE

Reason:

The MAI feature failed to initialize because there was insufficient storage.

System Action:

No MAI functions will be available.

User Action:

SOLVE should be restarted in a larger region or partition.

N50103**MAI/EF FEATURE DISABLED - UNABLE TO LOAD NM002006****Reason:**

The MAI Extended Function (MAI/EF) feature failed to initialize because the nominated module could not be loaded. This message indicates that the MAI/EF feature has not been properly installed.

System Action:

No MAI/EF functions will be available.

User Action:

Review the SOLVE installation process. The indicated load module should be available in a load library accessible to SOLVE.

N50104**MAI/NTS INTERFACE DISABLED - UNABLE TO LOAD NM002008****Reason:**

The MAI/NTS interface failed to initialize because the nominated module could not be loaded. This message indicates that the MAI feature has not been properly installed.

System Action:

The MAI/NTS interface is unavailable. NTS will not be able to correlate logical terminal and physical terminal sessions.

User Action:

Review the SOLVE installation process. The indicated load module should be available in a load library accessible to SOLVE.

N50105

MAI/FS INTERFACE DISABLED - UNABLE TO LOAD NM002007

Reason:

The MAI/FS NCL interface failed to initialize because the nominated module could not be loaded.

System Action:

The MAI NCL verb set is unavailable. MAI/FS functions will not be usable.

User Action:

This message indicates that the MAI feature has not been properly installed. The indicated load module should be available in a load library accessible to SOLVE.

N50301

MAILOGON OPERAND xxxxx NOT RECOGNISED.

Reason:

Operand xxxxx entered as part of an MAILOGON command is not recognized as a valid operand.

System Action:

The command is rejected.

User Action:

Correct and retry.

N50302

MAILOGON OPERAND xxxxx IS INVALID OR OUT OF RANGE

Reason:

Operand xxxxx entered as part of an MAILOGON command is invalid.

System Action:

The command is rejected.

User Action:

Correct and retry.

N50303**NO APPLICATION NAME SPECIFIED****Reason:**

An MAILOGON command was entered but no target application name was specified.

System Action:

The command is rejected.

User Action:

Correct and retry.

N50304**INVALID APPLICATION NAME SPECIFIED****Reason:**

An MAILOGON command was entered but the target application name specified was not valid as the name of a VTAM APPL definition.

System Action:

The command is rejected.

User Action:

Correct and retry.

N50306**SESSION ID xxxx IN USE - SPECIFY ID= PARAMETER WITH A DIFFERENT ID****Reason:**

An MAILOGON command specified an ID to be used for the session that was already in use as the ID of another MAI-OC session from the same Operator Control Services window. If the ID= parameter was not specified on the MAILOGON command it defaults to the target application name.

System Action:

The command is rejected.

User Action:

Select another ID and retry. The SHOW MAI command will display existing MAI sessions and their IDs.

N50307

INSUFFICIENT STORAGE TO START MAI SESSION

Reason:

A lack of storage prevented establishment of an MAI-OC session following entry of a valid MAILOGON command.

System Action:

The command is rejected.

User Action:

Retry. If the problem persists increase the SOLVE region size.

N50308

MAI SESSION xxxx REQUEST ACCEPTED

Reason:

Confirms that the system has accepted a valid MAILOGON command and will attempt to establish the session.

System Action:

Session establishment starts.

User Action:

None.

N50401

NO SESSION ID SPECIFIED

Reason:

An MAISEND command was entered without any operands. The MAISEND command must be followed by the ID of the session over which data is to be sent.

System Action:

The command is rejected.

User Action:

Re-enter the command specifying a session ID.

N50402**INVALID SESSION ID SPECIFIED****Reason:**

An MAISEND command specified a session ID that is invalid or out of range. The session ID must be a 1 - 8 character string.

System Action:

The command is rejected.

User Action:

Correct and retry.

N50404**NO SESSION EXISTS WITH AN ID OF aaaaaaaaa****Reason:**

An MAISEND command was entered requesting that data be sent on an MAI-OC session, but no session was located that has the specified ID.

System Action:

The command is rejected.

User Action:

Correct and retry.

N50405

INPUT TO SESSION aaaaaaaa "LOCKED".

Reason:

An MAISEND command was entered requesting that data be sent on an MAI-OC session, but the session is temporarily logically "locked" because the target application is due to send a response to an earlier message. This is functionally equivalent to the keyboard of a real terminal being locked.

System Action:

The command is rejected, the data is not sent to the application.

User Action:

Retry the command. The SHOW MAI command may be used to determine when the session becomes available for further input. In most situations the application will be ready to receive further data after it has responded to the previous send.

N50499

WARNING - COMMAND MAISEND TOO LONG FOR INTERNAL BUFFER.

Reason:

An MAISEND request has specified data greater than the Request Unit size and chaining is not supported.

System Action:

The data is truncated at the RU size and this warning message is logged.

User Action:

Review the session characteristics. It may be possible to modify the LOGMODE to specify larger RU sizes or to support chaining. Also the use of newline characters may be suppressed by use of the MAIONL system parameter.

N50501**OPERAND xxxxx NOT RECOGNISED****Reason:**

An MAIDISC or MAIINT command was entered but operand xxxxx was not recognized as a valid operand.

System Action:

The command is rejected.

User Action:

Correct and retry.

N50502**OPERAND xxxxx IS INVALID OR OUT OF RANGE****Reason:**

An MAIDISC or MAIINT command was entered but operand xxxxx was invalid.

System Action:

The command is rejected.

User Action:

Correct and retry.

N50503**NO SESSION ID SPECIFIED****Reason:**

An MAIDISC or MAIINT command was entered but no session ID included to specify the session on which data is to be sent.

System Action:

The command is rejected.

User Action:

Enter a session ID.

N50504

INVALID SESSION ID SPECIFIED

Reason:

An MAIDISC or MAIINT command was entered that specified an invalid session ID. The session ID must be a 1 - 8 character string.

System Action:

The command is rejected.

User Action:

Correct and retry.

N50505

NO MAI SESSIONS EXIST FROM THIS WINDOW

Reason:

An MAIDISC or MAIINT command was entered from an OCS window but no MAI sessions have been established from that window.

System Action:

The command is rejected.

User Action:

Enter the command from the applicable window or restart the required MAI-OC session.

N50506

NO SESSION EXISTS WITH AN ID OF xxxx

Reason:

An MAIDISC or MAIINT command was entered specifying a session ID not in use for any MAI-OC sessions that exist from this window.

System Action:

The command is rejected.

User Action:

Correct the session ID and retry.

N50507**SESSION xxxx NOT RECEIVING DATA - CNCL IGNORED****Reason:**

An MAIINT command was entered requesting that a CNCL be sent on the specified session to cancel the incoming data stream, but no data was being received on the specified session when the command was entered. The MAIINT TYPE=CNCL command is accepted only if a chain of data is being received at the time.

System Action:

The command is rejected.

User Action:

None.

N50508**PREVIOUS SEND STILL IN PROGRESS - RETRY****Reason:**

An MAIINT command was entered before an earlier MAISEND had been completed.

System Action:

The command is rejected.

User Action:

Retry. This should be a temporary condition.

N50509**DISCONNECT REQUEST ACCEPTED****Reason:**

Confirms that a valid MAIDISC command has been entered.

System Action:

Session termination is started.

User Action:

None.

N50510

ATTN REQUEST ACCEPTED

Reason:

An MAINT TYPE=ATTN command was entered and an ATTN will be presented on the specified session.

System Action:

None.

User Action:

None.

N50511

CNCL REQUEST ACCEPTED

Reason:

An MAINT TYPE=CNCL command was entered while data was being received on the specified session.

System Action:

The SNA CANCEL command will be presented on that session to terminate the output stream.

User Action:

None.

N50801

**---ID--- CON -APPLID- ---LU--- I WAIT STAT BRKT OUT TYPE -
USERID- ---ID--- CON -APPLID- ---LU--- I WAIT STAT BRKT OUT TYPE
-WINDOW-**

Reason:

The heading line of a display presented in response to a SHOW MAI or SHOW MAI=ALL command.

System Action:

None.

User Action:

Refer to help for message N50802 for details.

N50802**sessid con appl lu i wait stat brac out type userid text****Reason:**

This is a detail message displayed for each MAI session in response to a SHOW MAI command. This detail line follows the heading line message N50801. The items in this detail line are:

sessid The session ID of the session being displayed on this line

con YES, NO, or LCK. Indicates whether the session is currently established, and if so, whether it is logically locked. The LCK status indicates the LU cannot send to the application. The LU may be in receive state or, for MAI/FS, the keyboard has not been unlocked by the application

appl The name of the target application

lu The name of the LU being used by MAI for this session

i The value of the (optional) newline character associated with this MAI-OC session, or an indicator (Y or N) as to whether an MAI-FS session is ACB sharing

wait Shows the value of the WAIT= option as specified when the session was created

stat When the session is active (CON=YES/LCK), this field shows the current status of the session in SNA terms. The following values are defined:

SEND - The LU is ready to send to the application.

RCV - The LU is ready to receive from the application.

STBY - The LU is in contention state.

DRWT - The LU is waiting for a response. - - A state transition is in progress or the session is not operating as an LU type 2. When the session is not active (CON=NO), the following values are defined:

ACBW - Waiting for ACB open to complete

BNDW - Waiting for BIND from the application

UNBW - Waiting for UNBIND from the application

TRMW - Waiting for termination (ACB close/MAIEX02)

brac Indicates the current session bracket state as STBY, INB, BB, or BBP, where the meaning of these terms is as used in the IBM 3767 Component Description Manual. The bracket states are for diagnostic purposes only. They should be recorded for documenting any problems encountered with the operation of MAI sessions.

out Shows, for an MAI-FS session, if data is waiting to be displayed on the session (*out* =YES).

userid For SHOW MAI=ALL, the userid owning the MAI session. For an MAI-OC session created from EASINET, this may be blank. For SHOW MAI=OWN, this is the window that owns the session and may be:

THIS - For this window

OTH/WIND - For another window within the same region

OTH/SESS - For another region for the same userid

OCSID - The ID of the window as set by an OCSID command

text Additional descriptive text denoting some special condition. The following values are defined:

DISC - The user has disconnected.

LOCK - The user's terminal is currently locked.

END - The user's region has been terminated and the session is in the process of terminating. A session script may be running in END mode.

System Action:

None.

User Action:

None.

N50804

NO xxxxxxxxx MAI SESSIONS FOUND FOR USERID uuuuuuuuu

Reason:

A SHOW MAI command was entered but no MAI sessions of the specified type are established. The text `FOR USERID uuuuuuuu' is not included for a SHOW MAI=ALL or SHOW MAI=userid command.

System Action:

None.

User Action:

None.

N50805**SYSTEM CONFIGURED WITH MAI FEATURE - mlvl****Reason:**

Issued in response to a STATUS command to indicate that this SOLVE system is configured with the MAI feature of the specified level.

System Action:

CURRENT FULLSCREEN SESSIONS aaaaaa - MAXIMUM bbbbbb, TOTAL JUMPS cccccc

Reason:

Issued in response to a SHOW MAISTAT command. This line summarizes the number of active MAI-FS sessions and the maximum that have been active at the same time. cccccc'is the number of session jumps that have been processed.

System Action:

None.

User Action:

None.

N50812

CURRENT OPERATOR SESSIONS aaaaaa - MAXIMUM bbbbbb

Reason:

Issued in response to a SHOW MAISTAT command. This message details the number of MAI-OC sessions currently active and the maximum that have been active at the same time.

System Action:

None.

User Action:

None.

N50813

TASK -----ACTIVITY----- ---LU--- --USER-- ---ID--- --PERIOD---

Reason:

The heading line from a SHOW MAISTAT=ACTIVITY command.

System Action:

None.

User Action:

For details, refer to the online help for message N50814.

N50814**task activity luname userid sessid interval****Reason:**

This is a detail line displayed in response to a SHOW MAISTAT=ACTIVITY command. It follows the headline N50813 message. The fields are:

task Identifies the MAI task. SERV is the Service subtask responsible for ACB open/close and communicating with the MAIEX02 exit. A number in the range 1 to 16 indicates a session subtask responsible for communication with the applications.

activity The current function being performed by the task. A value of IDLE indicates the task is waiting for work. Other values are associated with a particular session and the fields *luname*, *userid*, *sessid* and *interval* are set. These values are:

BUSY A session event is being processed. *OPEN_ACB* An Open has been issued for the virtual terminal LU. *CLOSE_ACB* A Close has been issued for the virtual terminal LU. *EX02_START_CALL* MAIEX02 has been driven for session start. *EX02_OPEN_CALL* MAIEX02 has been driven for ACB open. *EX02_END_CALL* MAIEX02 has been driven for session end. *TERMINATING* The subtask is processing a terminate request. *SETLOGON* The virtual terminal LU is being modified to allow sessions. *REQUEST_SESSION* A session with the application is being requested. *OPEN_SECONDARY* A session with the application is being established. *RECEIVE* A Receive is in progress for the session. *RESETSR* A Terminate Receive processing is in progress. *TERMINATE_SESSION* A Terminate Session request is in progress. *SEND_RESPONSE* A response is being sent to the application. *SEND_SHUTC* A Shutdown Complete is being sent to the application. *SEND_DATA* Data is being sent to the application. *SEND_SIGNAL SEND_NULL* A 0 length data RU is being sent to the application.

luname The LU representing the virtual terminal.

userid The user ID owning the session.

sessid The MAI session ID.

interval The time interval since the activity started.

System Action:

None.

User Action:

Use the activity display to determine the status of MAI tasks. A time period of any significance (for example, greater than 1 second) indicates that a task has been delayed by a call to an external function. This may be the communications subsystem (VTAM) or a user exit.

If it is a communications related function (for example, ACB open/close), then a display of the LU (that is, D lname,E) may reveal the cause. You may diagnose delays caused by system contentions by issuing the system command 'D GRS,C'.

N50815

DEFLOGON SCRIPT STORAGE

Reason:

This is a heading line displayed in response to a SHOW MAI LIST=ALL command and follows the headline N50801 message.

System Action:

None.

User Action:

Refer to the N50816 message for details about the corresponding session.

N50816

P1 P2 P3

Reason:

This is a detail line displayed in response to a SHOW MAI LIST=ALL command, that corresponds to the headline N50815 message. The fields are:

P1 - The name of the DEFLOGON used to start the session

P2 - The NCL process ID if a script is running for the session

P3 - The amount in bytes of storage currently used for datastream and image buffers

System Action:

None.

User Action:

You can issue a SHOW DEFLOGON= *P1* to display the DEFLOGON details. Use SHOW NCL ID= *P2* to display the script.

N50817**AVERAGE STORAGE USED PER SESSION - P1 BYTES****Reason:**

This is a summary line displayed in response to a SHOW MAI command. *P1* is the average storage used for datastream and image buffers for the sessions previously displayed.

System Action:

None.

User Action:

None.

N51002**MAI SESSION xxxxxxxx SUBTASK ABENDED - CODE UAyyyy****Reason:**

An MAI-OC session is terminated because of an abend in the subtask associated with the session.

System Action:

The MAI-OC session is terminated.

User Action:

Report the abend condition to your systems administrator or installation help desk facility.

N51003**MAI SESSION xxxxxxxx ENDED****Reason:**

Confirms successful disconnection of the specified MAI-OC session.

System Action:

None.

User Action:

None.

N51004

WAIT=PERM SPECIFICATION ON MAI SESSION xxxxxxxx CANCELLED

Reason:

An MAI-OC session created in response to an MAILOGON command that specifies WAIT=PERM has terminated before session creation was completed, or the MAIEX02 negated the PERM option. The WAIT=PERM option is therefore cancelled to avoid the possibility of recursive session failures.

System Action:

None.

User Action:

Re-issue MAILOGON if another MAI-OC session attempt is required.

N51005

MAI SESSION xxxxxxxx HAS BEEN REQUEUED BY WAIT=PERM SPECIFICATION

Reason:

Indicates that an MAI-OC session has terminated but has been queued for re-establishment when the target application re-opens it. This is the result of WAIT=PERM having been specified on the original MAILOGON command that was entered to start the session.

System Action:

None.

User Action:

The MAI-OC session cannot be used until the application re-establishes the session. When the session is restarted the standard salutation message from the target application will be displayed. Use the MAIDISC command to terminate the pending MAI-OC session if it is no longer required.

N51006**ERROR HAS OCCURRED ON MAI SESSION xxxxxxxx:****Reason:**

Indicates that the specified MAI-OC session has been disconnected unexpectedly. The following message(s) indicate the nature of the error.

System Action:

The session is terminated, and queued for re-establishment if WAIT=PERM was specified on the original MAILOGON command and if the session had been successfully established. Subsequent messages detail the failure condition.

User Action:

None.

N51201**MODULE LOAD FAILED, xxxxxxxx****Reason:**

A SYSPARMS MAIMDTAB=xxxxxxx or SYSPARMS MAIEX03=xxxxxxx command has failed because the load module could not be loaded.

System Action:

The command is ignored.

User Action:

Check that the load module is in a load library (core-image library) that is defined to SOLVE.

N51202**MODULE DELETE FAILED****Reason:**

A SYSPARMS MAIMDTAB=NO or SYSPARMS MAIEX03=NO command has failed because the load module deletion was rejected.

System Action:

The command is ignored.

User Action:

Contact your systems administrator.

N51203

INVALID MODETAB FORMAT

Reason:

A SYSPARMS MAIMDTAB=xxxxxxx command has failed because the load module is not recognisable as a mode table.

System Action:

The command is ignored.

User Action:

Check that the correct module name has been specified and that the module was correctly assembled and linked.

N51204

P1 OPERAND IS MUTUALLY EXCLUSIVE WITH P2 OPERAND.

Reason:

A SYSPARMS operand (*P1*) was specified when another SYSPARMS operand (*P2*) was previously specified. These operands are mutually exclusive.

System Action:

The command is ignored.

User Action:

If you want this operand, you must use the SYSPARMS *P2* command to clear the conflicting operand. For example, SYSPARMS MAIEX03=NO clears the MAIEX03 operand.

N51501**THE FOLLOWING ERRORS WERE ENCOUNTERED ON SESSION ~P1****Reason:**

Indicates that errors were encountered during operation of an MAI-FS session that caused the session to fail. Other messages will follow to indicate the nature of the error.

System Action:

The session ends.

User Action:

Determine the cause of the failure from the other error messages. All these messages appear on a 'session end' panel, from which a jump can be made to another session.

N51502**MAI SESSION SUBTASK ABENDED - CODE ~P1****Reason:**

An MAI-FS session subtask abended with the specified operating system abend code.

System Action:

All sessions managed by the abending subtask end.

User Action:

Record the error messages and report the failure to your installation help desk facility.

If necessary a systems administrator should save the system abend dumps, activity logs and formatted dump output, and report the problem to your product support representative.

N51503

SESSION ~P1 WITH APPLICATION ~P2 IS USING ACB ~P3 PROC ~P4

Reason:

The MAI-FS session, ID P1 , with the application P2 has started using ACB P3 .
If a script procedure has been named for the session then P4 is the name of the script.

System Action:

The session is started.

User Action:

None. This message is written to the activity log only.

N51504

SESSION ~P1 WITH APPLICATION ~P2 STARTED

Reason:

The MAI-FS session, ID P1 , with the application P2 has been started.

System Action:

The session begins operation.

User Action:

None.

N51505

SESSION ~P1 WITH APPLICATION ~P2 ENDED, USING ACB ~P3

Reason:

The MAI-FS session, ID P1, with the application P2 has ended, and was using ACB P3.

System Action:

The session ends.

User Action:

None.

N51506

FDBK/SENSE = X`~P1', R15=X`~P2', R0=X`~P3'

Reason:

This message indicates the VTAM return code and feedback information associated with the failure of MAI-FS VTAM operations. This message will follow a message indicating the general error condition.

System Action:

None.

User Action:

Refer to the appropriate VTAM Programming Manual for explanation of the error codes.

N51507

SESSION ~P1 WITH APPLICATION ~P2 WAITING FOR CONNECTION

Reason:

The MAI-FS session, ID P1 , was started with the WAIT=YES option, and the application P2 is not currently available.

System Action:

A session request is issued and the session is maintained pending a BIND from the application.

The session will be created when the application becomes active and requests a session with the MAI Node Name (LU), The panel on which this message is displayed will remain in the session circle.

User Action:

Wait until the application starts the session. Remove the Waiting Panel from the session circle by using the Hide function ('H' session command or menu selection).

The session environment can be destroyed by using the Cancel function ('C' session command or menu selection).

N51508

SESSION RESTART CANCELLED

Reason:

An MAI-FS session has terminated either before session creation was completed, as a result of a session cancel or due to errors. The session will not be automatically restarted.

System Action:

None.

User Action:

Review the associated session termination messages. If necessary report the failure to your system administrator.

N51509

SESSION ~P1 REQUEUED BY RESTART SPECIFICATION

Reason:

The MAI-FS session has ended but has been queued for re-establishment when the target application re-opens it. This is as a result of the specification of the RESTART option when the session was created.

System Action:

The session environment is maintained.

User Action:

The 'session wait' panel will remain in the session circle until the session is re-established. The waiting session may be terminated by using the cancel option if required.

N51510**SESSION P1 CANCELLED DUE TO LACK OF STORAGE****Reason:**

An MAI-FS session has been cancelled because insufficient storage was available to operate it.

System Action:

The session is cancelled.

User Action:

Notify your installation help desk of the problem. If necessary re-establish the session.

Your systems administrator may need to increase the SOLVE region or partition size.

N51511**INSUFFICIENT STORAGE TO START SESSION SUBTASK****Reason:**

An MAI-FS session could not be started because there was insufficient storage to start a new subtask.

System Action:

The session request is refused.

User Action:

Notify your installation help desk of the problem. If necessary attempt to re-establish the session.

Your systems administrator may need to increase the SOLVE region or partition size.

N51512

RELATED SESSION SUBTASK ABENDED

Reason:

The MAI-FS session has been cancelled because a subtask managing another session that uses the same VTAM ACB has abended.

System Action:

The session is cancelled.

User Action:

Notify your installation help desk of the problem. If necessary re-establish the session.

Your systems administrator should investigate the cause of the session subtask abend.

N51513

SESSION ~P1 HAS TERMINATED IN ERROR

Reason:

An MAI session has terminated due to errors. This message is displayed on the session end panel. Message N51501 and other messages also appear on the panel and are logged indicating the errors that occurred.

System Action:

The session end panel is displayed. The session resources will be freed once the end panel is acknowledged.

User Action:

Review the error messages that are associated and notify your installation help desk if appropriate. Press a session jump key, enter a skip command or press the ENTER key to acknowledge the end panel.

N51514**SESSION ~P1 HAS COMPLETED NORMALLY****Reason:**

An MAI session has ended. This message is displayed on the session end panel.

System Action:

The session end panel is displayed. If the session is not eligible for restart the session resources will be freed when the end panel is acknowledged.

User Action:

Acknowledge the session end panel by pressing a session jump key, entering a skip command or pressing the ENTER key.

N51515**SESSION ~P1 WAITING FOR APPLICATION****Reason:**

An MAI session has been initiated but the required application is not currently active. This message appears on the session waiting panel. The target application will initiate the session when it becomes available.

System Action:

The session waiting panel is displayed.

User Action:

Acknowledge the session waiting panel by pressing a session jump key, entering a skip command or pressing the ENTER key.

N51516

SESSION ~P1 ENDED, WAITING FOR RECONNECTION

Reason:

An MAI session has ended. The session is defined as permanent and will therefore wait for re-establishment of the session.

System Action:

The session waiting panel is displayed. A new session is requested with the target application. If the application is unavailable the session will wait for the application to restart the session.

User Action:

Acknowledge the session waiting panel by pressing a session jump key, entering a skip command or pressing the ENTER key.

N51517

SESSION SUBTASK ABENDED

Reason:

The MAI-FS session has been cancelled because the subtask managing the session has abended. An N51502 monitor message is issued indicating the abend reason.

System Action:

The session is cancelled.

User Action:

Notify your installation help desk of the problem. If necessary re-establish the session.

Your systems administrator should investigate the cause of the session subtask abend.

N51518**SESSION CANCELLED BY ~P1****Reason:**

An MAISESS CANCEL command has terminated the session. The command was issued by the named user.

System Action:

The session is terminated.

User Action:

None.

N51590**ATTACH FAILED - SEE LOG****Reason:**

An MAI session subtask attach request failed. Refer to the SOLVE log for more details.

System Action:

The session fails to start.

User Action:

None.

N51601**REQUIRED FIELD OMITTED****Reason:**

The field containing the cursor is required for the function being requested.

System Action:

The request is rejected.

User Action:

Supply the required field and retry.

N51602

FIELD CONTAINS IMBEDDED BLANKS

Reason:

The field indicated by the cursor contains imbedded blanks invalidly.

System Action:

The request is rejected.

User Action:

Correct and retry.

N51603

INVALID VALUE

Reason:

The field indicated by the cursor contains an invalid value.

System Action:

The request is rejected.

User Action:

Correct and retry.

N51604

DUPLICATE FIELD VALUE

Reason:

The program function or attention key specified in the field containing the cursor has already been specified in another jump key field. Jump key values must be unique.

System Action:

The request is rejected.

User Action:

Correct and retry.

N51605**INVALID NAME SPECIFIED****Reason:**

A data type mismatch has occurred for an MAI session list attribute.

System Action:

The request is rejected and the attribute is marked as in error.

User Action:

Specify a valid name for the attribute value.

N51606**FIELD MUST BE Y OR N****Reason:**

The field indicated by the cursor must contain Y to indicate YES or N to indicate NO.

System Action:

The request is rejected.

User Action:

Correct and retry.

N51607**INVALID PROCEDURE NAME****Reason:**

The nominated MAI/EF script procedure does not have a valid procedure name.

System Action:

The request is rejected.

User Action:

Correct and retry.

N51901

SEND TO TERMINAL luname FAILED.
RC=bb,FBK2=cc,SENSE=ssssssss,SESSION ID=ssid

Reason:

The send of a datastream, received across the session ssid, to the nominated terminal failed.

System Action:

The MAI-FS session is cancelled.

User Action:

Determine the cause of the failure from the VTAM return code, feedback and sense information provided in the message, which can be found in the appropriate VTAM Programming manual and terminal Component Description manuals. It is possible that the application concerned provided an invalid datastream, or one not supported by the physical terminal.

N51C01

INSUFFICIENT STORAGE TO START SCRIPT PROCEDURE

Reason:

The script procedure could not be invoked because of a storage shortage.

System Action:

The MAI session continues.

User Action:

If necessary increase the SOLVE region or partition size.

N51D01**TRACE OF DATASTREAM SENT TO xlu ON SESSION session:****Reason:**

This message precedes the dump of a datastream sent to either the PLU or SLU on an MAI/FS session.

System Action:

None.

User Action:

The message indicates that a script procedure is being traced and that the datastream may need to be reviewed by the MAI/FS script author.

N51D02**FACILITY ONLY VALID FROM SCRIPT PROCEDURE****Reason:**

The NCL function on the failing statement is valid only if issued by an MAI/EF script procedure.

System Action:

The NCL procedure is flushed.

User Action:

Correct and retry.

N51D03**INVALID SYNTAX****Reason:**

The failing statement contains a syntax error.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N51D04

ROW/COL VALUE OUT OF RANGE

Reason:

The failing statement specified a logical screen location outside the valid ranges for the terminal being used.

System Action:

The NCL procedure is flushed.

User Action:

Correct and retry.

N51D05

INVALID HEX DATA SPECIFIED

Reason:

The failing statement specified invalid hexadecimal data. The data either contains invalid characters or is an uneven number of characters.

System Action:

The NCL procedure is flushed.

User Action:

Correct and retry.

N51D06

INSUFFICIENT STORAGE

Reason:

The MAI/EF script procedure could not continue processing because of a storage shortage.

System Action:

The procedure terminates.

User Action:

If necessary increase the SOLVE region or partition size.

N51D07**SEND BUFFER LIMIT EXCEEDED****Reason:**

An &MAIPUT statement has attempted to increase the send buffer beyond the limit of 65535 bytes.

System Action:

The script procedure is flushed.

User Action:

Check that the script procedure is not in an infinite loop building the datastream. Correct the procedure and rerun.

N51F02**INVALID SYNTAX****Reason:**

The failing statement contains a syntax error.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N51F03**FACILITY ONLY VALID IN MAI SCRIPT OR SESSION PROCEDURE****Reason:**

The NCL function on the failing statement is valid only if issued by an MAI/EF script or session procedure.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N51F04

SCREEN IMAGE NOT AVAILABLE

Reason:

An attempt to reference a session's screen image copy buffer has failed.

System Action:

The NCL procedure is flushed.

User Action:

Ensure that the failing statement is being used in the correct manner. If necessary modify the NCL procedure and retry.

N51H01

SCRIPT ALREADY ACTIVE

Reason:

An attempt to start a script NCL procedure for a session has failed. A script process is already running for the specified session.

System Action:

The request is rejected.

User Action:

None.

N51H02

INSUFFICIENT STORAGE

Reason:

An attempt to start a script NCL procedure has failed due to lack of available storage.

System Action:

The request is rejected.

User Action:

Retry the request. If the problem persists notify your installation's help desk facility.

N51H03**NO SCRIPT DEFINED****Reason:**

An attempt has been made to start a script NCL procedure for an MAI session that has no script procedure name defined.

System Action:

The request is rejected.

User Action:

Modify the session parameters to specify the required script procedure name. If necessary contact your installation help desk to update your MAI session definitions.

N51H04**SESSION NOT READY FOR SCRIPT****Reason:**

An attempt to start a script NCL procedure has been made when the session is not in a state able to run a script. The session may not be active or may be terminating.

System Action:

The request is rejected.

User Action:

Retry the request when the session is active.

N51H05**SCRIPT NOT ACTIVE****Reason:**

An attempt has been made to flush a script procedure for a specified session. The session does not currently have a script process associated with it.

System Action:

None.

User Action:

None.

N51I03

DATA NOT AVAILABLE

Reason:

A request to format session data has failed. The requested session data is not available for processing.

System Action:

The request is failed and &SYSMMSG is set to the text of this message.

User Action:

None.

N52401

INSUFFICIENT STORAGE TO PERMANENTLY UPDATE DEFAULTS

Reason:

There was insufficient storage to enable the logon panel defaults to be permanently updated on disk.

System Action:

The defaults will apply for this SOLVE execution only.

User Action:

Retry later, or increase the SOLVE region or partition size.

N52402

VFS VSAM ERROR - CODE=X`xx'

Reason:

An error has occurred attempting to write the logon panel defaults to the VFS dataset. The code X`xx' is the VSAM RPL return code.

System Action:

The defaults will apply for this SOLVE execution only.

User Action:

Determine the type of error and if possible correct it. Refer this error to your systems administrator. If necessary restore the VFS dataset from the most recent backup.

N52403**MAI DEFAULTS UPDATED****Reason:**

Confirms the successful updating of the logon panel defaults.

System Action:

The defaults will apply for future executions of this SOLVE system.

User Action:

None.

N52701**SESSION START FAILED, SESSION LIMIT FOR APPLICATION EXCEEDED****Reason:**

An attempt to start a session failed because the session limit for the application has reached the limit.

System Action:

The session start request fails.

User Action:

Wait a short while and retry. If the problem persists, contact your systems administrator.

The session limit for an application is specified using the MAXSESS parameter of the DEFLOGON (and REPLOGON) command. The SHOW DEFLOGON command can be used to display the current number of sessions for an application and the maximum number of concurrently active sessions.

N52702

SESSION START FAILED, SESSION LIMIT FOR USER EXCEEDED

Reason:

An attempt to start a session failed because you have reached the maximum number of sessions allowed in your user definition.

System Action:

The session start request fails.

User Action:

Close an existing session.

Your session limit is defined as part of your MAI-FS user privileges. Contact your security or systems administrator if you want to change the maximum session limit.

N53101

TERMINAL I/O ERROR, FDBK/SENSE = X'~P1'

Reason:

An error has occurred sending a datastream from an application to the terminal. P1 is the feedback and sense code returned by the SEND request.

System Action:

The session is cancelled.

User Action:

Determine the cause of the error from the appropriate VTAM Programming Manual. The activity log may contain more information. If necessary use a tracing tool (Session Replay Facility) to record the session flow and assist in problem determination.

N53106**~P1 OUTPUT HAS ARRIVED ON MAI-FS SESSION ~P2****Reason:**

An informational message to indicate that output has arrived on the MAI-FS session P2 . P1 is the time the data arrived.

System Action:

If the session is marked as Sleeping it is now Visible and will appear in the session circle when jumping.

User Action:

This output may be viewed by returning to MAI-FS and jumping to the session.

N53201**STRUCTURED FIELD aaaa IN ERROR****Reason:**

The nominated structured field was returned by a security exit implementation but was incorrectly defined.

System Action:

The data is rejected and defaults may be taken.

User Action:

Notify the installation help desk of the problem. Your systems administrator should verify the security exit processing is correct.

N53301**INSUFFICIENT STORAGE TO INITIALIZE MAIEX02****Reason:**

Not enough storage was available to perform the initialization call to the installation provided MAIEX02 exit.

System Action:

No MAI sessions will be allowed.

User Action:

Consider increasing the SOLVE region size.

N53302

MAIEX02 INITIALIZATION FAILED DUE TO ABEND

Reason:

An attempt to perform an initialization call to the installation provided MAIEX02 exit failed because the exit abended.

System Action:

No MAI sessions will be allowed.

User Action:

Determine the cause for the abend, re-assemble and re-link the exit, and retry the SYSPARMS MAIEX02= command.

N53303

MAIEX02 INITIALIZATION FAILED - NON-ZERO RETURN CODE

Reason:

An attempt to perform an initialization call to the installation provided MAIEX02 exit failed because the exit returned an invalid return code.

System Action:

No MAI sessions will be allowed.

User Action:

Correct the error, re-assemble and re-link the exit, and retry the SYSPARMS MAIEX02= command.

N53310

MAIEX02 ATTACH FAILURE

Reason:

An attempt to perform an initialization call to the installation-provided MAIEX02 exit failed because the attach failed.

System Action:

No MAI sessions are allowed.

User Action:

Examine the log for additional details about the failure and correct the error.

N53311**MAIEX02 ABEND/RETCODE: rrrr****Reason:**

An attempt to perform an initialization call to the installation-provided MAIEX02 exit failed. Either an ABEND occurred or a non-zero return code was returned.

System Action:

No MAI sessions are allowed.

User Action:

Determine the cause of the error, reassemble and relink the exit, and retry the SYSPARMS MAIEX02= command.

N53601**SERVICE SUBTASK ABENDED****Reason:**

The MAI-FS service subtask has abended.

System Action:

All MAI-FS sessions whose VTAM ACBs were opened by the service subtask are cancelled. The subtask will be re-attached.

User Action:

Report to your product support representative.

N53602**MAI SERVICE SUBTASK ABENDED - CODE ~P1****Reason:**

The MAI service subtask has abended.

System Action:

All MAI-FS sessions whose VTAM ACBs were opened by the service subtask are cancelled. The subtask will be re-attached.

User Action:

Report the error to your product support representative.

N53603

MAI MODCB FAILED - CODE P1

Reason:

MAI session initialization was unable to modify a VTAM request buffer.

System Action:

Processing continues. The session may fail to start.

User Action:

Report the error code and any subsequent error information to Technical Support.

N53604

SESSION START TIMED OUT

Reason:

A session start request has been terminated because the session start time limit (30 seconds) has expired. This most likely indicates a problem in ACB open/close processing. The output from a SHOW MAISTAT=ACTIVITY command will indicate the current activity for the Service subtask that processes ACB open/close.

System Action:

The MAI-FS session is terminated.

User Action:

Retry the session request. If necessary, notify your installation's help desk. Use the output from the SHOW MAISTAT=ACTIVITY command to determine the current activity for the Service subtask. You may diagnose delays caused by system contention by issuing the system command 'D GRS,C'. You may observe any delays in the communications subsystem (VTAM) processing by displaying the LU being processed.

N53605**ERROR OBTAINING ACB, RC= P1****Reason:**

An error occurred during the attempt to obtain the model ACB for MAI-FS sessions.

System Action:

The session request fails.

User Action:

Report the error to your product support representative.

N53901**INVALID SELECTION****Reason:**

An unrecognized input has been entered on the MAI Selection Menu.

System Action:

The input is ignored.

User Action:

Correct the error and retry.

N53902**NO ACTIVE SESSIONS - CANNOT JUMP****Reason:**

A jump request has been ignored, as there are no active MAI sessions.

System Action:

The request is ignored.

User Action:

None.

N53903

INVALID FUNCTION KEY PRESSED

Reason:

A function key was pressed which has no defined action in the current window.

System Action:

None.

User Action:

None.

N53904

NO MESSAGES TO SHOW

Reason:

The SHOW (or SHOWMSG) command has been issued but there are no line messages to display. Messages may be written by an MAI Script NCL procedure using the &WRITE verb or as a result of tracing the procedure using &CONTROL TRACE.

System Action:

None.

User Action:

None.

N53905

INVALID COMMAND

Reason:

An invalid command was entered on the command line.

System Action:

None.

User Action:

Correct the command and retry.

N53906**COMMAND FAILED - RC=retcode****Reason:**

The requested command failed with the specified return code.

System Action:

The command is rejected.

User Action:

Contact your systems administrator.

N53907**SESSION IS IN USE****Reason:**

An invalid command was issued for a session that is in use.

System Action:

The command is rejected.

User Action:

Re-enter the command when the target session is inactive.

N53908**SESSION IS NOT IN USE****Reason:**

A session command was issued against a session that was not currently running.

System Action:

The command is rejected.

User Action:

The command is only valid for active MAI-FS sessions. Delete the command or specify it using an active session.

N53909

SESSION IS ACTIVE IN OTHER WINDOW

Reason:

A request was made to start an MAI session, but the session is already active in the other window.

System Action:

The request is rejected.

User Action:

Use the SPLIT or SWAP command to move to the other window and then select the required session from the MAI menu in that window.

N53910

TRACE STARTED

Reason:

A request to start tracing was accepted.

System Action:

None.

User Action:

None.

N53911

CANNOT UPDATE MODELLED SESSIONS

Reason:

This user's stored definitions are modelled. The definitions may not be updated.

System Action:

The command is rejected.

User Action:

None.

N53912**USER IS NOT AUTHORISED FOR cmdname COMMAND****Reason:**

The user is not authorized to execute the requested MAI command.

System Action:

The request is rejected.

User Action:

Contact the System Administrator if the function is required.

N53913**INVALID SCROLL AMOUNT****Reason:**

An invalid scroll amount was specified. Valid scroll amounts are PAGE, MAX, HALF or an amount between 1 and 99999.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Enter a valid value in the scroll field.

N53914**FUNCTION KEY pfnn IS NOT ACTIVE IN THIS WINDOW****Reason:**

The specified function key was pressed and it has no action assigned to it.

System Action:

None.

User Action:

None.

N53C01

SCRIPT STARTED FOR SESSION sess-id

Reason:

A SCRIPT START command has completed successfully.

System Action:

The script procedure runs against the specified session.

User Action:

None.

N53C02

SESSION xxxxxxxx STARTED

Reason:

An MAISESS START command has been actioned. The session xxxxxxxx has been started.

System Action:

Session initiation is processed.

User Action:

None.

N53C03

SESSION xxxxxxxx START FAILED

Reason:

An MAISESS START command has been actioned. The session xxxxxxxx has failed to start. Earlier messages indicate the reason for the start failing.

System Action:

None.

User Action:

Determine from the previous messages the reason for the session request failing.

N53C04**aaaa SESSIONS IN SESSION LIST****Reason:**

An MAISESSION BUILD command has completed execution. aaaa is the number of sessions defined in the user's session list.

System Action:

None.

User Action:

None.

N53C05**SESSION aaaaaaaa NOT DEFINED****Reason:**

The MAISESSION or SCRIPT command has specified a session which is not defined. aaaaaaaa is either the MAI-FS session identifier or relative session number.

System Action:

The command is rejected.

User Action:

Retry the command correcting the session identifier or relative number specification.

N53C06**SESSION xxxxxxxx DELETED****Reason:**

An MAISESSION DELETE command has been actioned. xxxxxxxx is the MAI session identifier.

System Action:

The session definition is removed from the session list.

User Action:

None.

N53C07

SESSION xxxxxxxx MODIFIED

Reason:

An MAISESS MODIFY command has been actioned. xxxxxxxx is the MAI session identifier.

System Action:

The active session details are updated.

User Action:

None.

N53C08

SCRIPT FLUSHED FOR SESSION sess-id

Reason:

A SCRIPT CANCEL command has been successfully processed for the named session.

System Action:

The script procedure is flushed.

User Action:

None.

N53C09

INSUFFICIENT AUTHORITY FOR REGION OPERAND

Reason:

An MAISESS CANCEL command specified a region other than the issuing user region and the issuer's authority is less than the MAISESS command's operand authority.

System Action:

The command is rejected.

User Action:

Verify that the region specification is correct. If necessary contact your systems administrator to review your authority and the MAISESS's operand authority.

N53C10**REGION OR SESSION NOT ACTIVE****Reason:**

An MAISESSION command has specified a session that could not be located.

System Action:

None.

User Action:

Use SHOW MAI to determine the active sessions and reissue the command.

N53C11**SESSION aaaaaaaa CANCELLED****Reason:**

An MAISESSION CANCEL command has requested termination of an MAI session.

System Action:

The MAI session is terminated according to the options specified on the command.

User Action:

None.

N53C12**SESSION aaaaaaaa NOT ACTIVE****Reason:**

The MAISESSION or SCRIPT command has specified a session which is currently not active. aaaaaaaa is either the MAI-FS session identifier or relative session number. The command is not valid for a session in this state.

System Action:

The command is rejected.

User Action:

Retry the command when the session state is valid for the command or correct the session specification (identifier or relative number).

N53C13

SESSION aaaaaaaa ACTIVE

Reason:

The MAISESSION or SCRIPT command has specified a session which is currently ACTIVE. aaaaaaaa is either the MAI-FS session identifier or relative session number. The command is not valid for a session in this state.

System Action:

The command is rejected.

User Action:

Retry the command when the session state is valid for the command or correct the session specification (identifier or relative number).

N53C14

MAI TITLE UPDATED

Reason:

A MAITITLE command has completed successfully.

System Action:

The title is stored on the system VFS file and is accessible via the &MAITITLE system variable.

User Action:

None.

N53C15

INVALID KEY NAME

Reason:

The operand in error requires a valid MAI key name.

System Action:

The command is terminated. Message N29549 is issued indicating the operand in error.

User Action:

Correct the operand indicated by message N29549. Valid values are Fnn, PFnn (where 'nn' is in the range 1 to 24), PA1, PA2, PA3 or ATTN.

N53D01**MAI-FS SERVICES NOT AVAILABLE****Reason:**

An attempt to use MAI-FS services has failed because the MAI-FS environment is not available.

System Action:

The NCL procedure is terminated.

User Action:

Notify your installation help desk if necessary. The MAI-FS environment should be initialized prior to using MAI-FS services.

N53D02**INVALID SYNTAX****Reason:**

The failing statement contains a syntactical error.

System Action:

The NCL procedure is flushed.

User Action:

Correct the coding error and retry.

N53D03**NO MATCHING DEFLOGON FOR SESSION****Reason:**

An MAI/FS session has been defined for which no DEFLOGON entry exists. The session cannot be used until a DEFLOGON is issued that specifies the application name.

System Action:

None.

User Action:

Contact your installation help desk to arrange the application's availability or verify the application name used for the session.

N53D04

NO SESSION SELECTED

Reason:

An MAI verb has been specified without specific session selection and no session is currently active.

System Action:

The verb is not actioned. &RETCODE is set to 4. &SYSMSG is set to the text of this message.

User Action:

None.

N53D05

SESSION IS NOT DEFINED

Reason:

An MAI verb has been specified with a specific session parameter and the session does not exist.

System Action:

The verb is not actioned. &RETCODE is set to 4. &SYSMSG is set to the text of this message.

User Action:

The session may have been deleted. If you are using the MAI menu then use the REFRESH command (F6) to rebuild your menu and then retry the command. If the error persists contact your program support representative.

N53D06**INVALID NAME IN FIELDS LIST****Reason:**

The operand in error requires valid MAI session field names. At least one of the names supplied is incorrect.

System Action:

The function is terminated. Message N29549 is issued indicating the operand in error.

User Action:

Correct the operand indicated by message N29549.

N53E01**FULL SCREEN POOL NAME P1 ACCEPTED****Reason:**

This message is issued in response to an MAIFMODE command and indicates that the request to define an MAI full screen mode terminal pool (*P1*) was accepted.

System Action:

The pool is available for use in MAI sessions.

User Action:

None.

N53H01**POOL NAME****Reason:**

This message is the heading line for a SHOW MAIFPREF command. For more information, see message N53H02.

System Action:

None.

User Action:

None.

N53H02

P1

Reason:

This message is the detail line for a SHOW MAIFPREF command. The field displayed (*P1*) is the MAI full-screen terminal pool name (application name prefix).

System Action:

None.

User Action:

None.

N53H03

NO FULLSCREEN POOL NAMES FOUND

Reason:

This message is issued in response to a SHOW MAIFPREF command when no MAI full screen prefixes (pool names) are defined that match the pool name criteria provided.

System Action:

None.

User Action:

If an application name pattern was provided, try using a different pattern.

N54101

SESSION ~P1 CANCEL ACCEPTED

Reason:

Confirms that a valid session cancel request has been accepted.

System Action:

An attempt will be made to cancel the session.

User Action:

The session id cannot be reused until you have viewed the 'session end' panel for this session. If the session does not end, try a more powerful form of cancel, such as FORCE or UNCONDITIONAL.

N54102**SESSION LIST LIMIT EXCEEDED****Reason:**

The maximum number of sessions has been reached.

System Action:

The session definition request is rejected.

User Action:

Delete unwanted session definitions and retry the request.

N54103**SYNTAX ERROR****Reason:**

A syntax error was encountered in attempting to perform variable substitution on the entered logon request.

System Action:

The request is rejected.

User Action:

Correct and retry.

N54104**SESSION ID ALREADY IN USE****Reason:**

The session id entered on the logon panel is already in use by another session.

System Action:

The request is rejected.

User Action:

Choose another session id that is unique.

N54105

UPDATE OF SESSION ID IS NOT SUPPORTED

Reason:

An &MAISPUT verb has attempted to modify the session identifier of a session list item that is currently active. This action is not supported.

System Action:

The request is rejected.

User Action:

Terminate the active session before attempting to modify the session identifier.

N54106

A UNIQUE SESSION ID IS REQUIRED

Reason:

The session id chosen by default from the logon request conflicts with an existing session or is blank.

System Action:

The request is rejected.

User Action:

Enter a session identifier that is not already in use.

N54107

INVALID SESSION COMMAND.

Reason:

An unrecognized session command has been entered.

System Action:

The command is rejected.

User Action:

Correct and retry.

N54201**SESSION ~P1 SCREEN IMAGE LOST. PRESS APPLICATION'S REFRESH KEY****Reason:**

No current application image exists. The data has most likely been lost due to a session outage.

System Action:

None.

User Action:

Press the refresh key for the nominated session. This is most likely either PA2 or CLEAR. If the application is unable to refresh the image then restart the user interaction.

N54202**SESSION ~P1 SCREEN IMAGE LOST. PRESS ~P2 TO REFRESH SCREEN****Reason:**

No current application image exists. The data has most likely been lost due to a session outage. P2 is the application's refresh key.

System Action:

None.

User Action:

Press the refresh key for the session.

N54203

EXTENDED COLOUR NOT SUPPORTED

Reason:

An attempt to display application data has been rejected due to the display device being incompatible with the session. The terminal does not support extended color attributes used on the application session.

System Action:

The session incompatible panel is displayed in place of the application image.

User Action:

Press a jump key to view another session or the menu. If necessary disconnect from the current device and reconnect at a device that supports extended colors.

N54204

EXTENDED HIGHLIGHTING NOT SUPPORTED

Reason:

An attempt to display application data has been rejected due to the display device being incompatible with the session. The terminal does not support extended highlighting attributes used on the application session.

System Action:

The session incompatible panel is displayed in place of the application image.

User Action:

Press a jump key to view another session or the menu. If necessary disconnect from the current device and reconnect at a device that supports extended highlighting.

N54205**SCREEN SIZE MISMATCH****Reason:**

An attempt to display application data has been rejected due to the display device being incompatible with the session. The terminal does not support the screen sizes used on the application session.

System Action:

The session incompatible panel is displayed in place of the application image.

User Action:

Press a jump key to view another session or the menu. If necessary disconnect from the current device and reconnect at a device that supports the session's screen sizes.

N54206**560/20 DEVICE REQUIRED****Reason:**

An attempt to display application data has been rejected due to the display device being incompatible with the session. The terminal does not support 560/20 datastreams used on the application session.

System Action:

The session incompatible panel is displayed in place of the application image.

User Action:

Press a jump key to view another session or the menu. If necessary disconnect from the current device and reconnect at a 560/20 device.

N54211

APPLICATION/DEVICE MISMATCH - reason

Reason:

MAI/FS is unable to display the application image due to the indicated reason.

System Action:

None.

User Action:

Press PF03 to return to the menu. If possible disconnect your region and reconnect on a terminal that supports the application session.

N54503

VFS VSAM ERROR - CODE=X` P1'

Reason:

A user that has stored definitions, or uses the definitions of a model userid, has entered the MAI selection menu. In attempting to read the MAI session definition record from the VFS dataset an error occurred. The code *P1* is the VSAM RPL return code.

System Action:

The session list build process terminates. The session list may be incomplete.

User Action:

Determine the type of error and if possible correct it. Refer this error to your systems administrator. If necessary restore the VFS dataset from the most recent backup.

N54504**SESSION DEFINITION FILE UNAVAILABLE****Reason:**

An attempt to open the MAI session definitions file has failed.

System Action:

The MAI session list is not built.

User Action:

Issue **SHOW UDB=ACDB**, and review the file availability. The file is defined using the Customizer (/PARMS) parameter group ACDB. Review the initialization log of parameter group and, if necessary, make changes and action the parameter group.

N54506**SESSION MODEL NOT FOUND****Reason:**

Your userid requires a session model for building the MAI selection list information. This model could not be found.

System Action:

The selection menu will not be formatted containing stored session definitions.

User Action:

Stored definitions must be created for the model userid.

N54507**NO DEFINITIONS. ENTER LOGON COMMAND OR F1 FOR HELP****Reason:**

You do not have any MAI session definitions.

System Action:

None.

User Action:

Press F1 for a tutorial on MAI session establishment, or to find out how to create stored session definitions. Alternatively enter a LOGON command to create a new session.

N54508

LOGICAL ERROR IN VFS RECORD

Reason:

The MAI session definition record contains an invalid session count.

System Action:

The MAI session selection list is not formatted.

User Action:

Notify your installation help desk.

N54509

INVALID REQUEST FOR MAI SERVICES

Reason:

The MAI feature is not configured on the requesting system.

System Action:

The request for MAI/FS services is rejected.

User Action:

Notify your installation help desk of the problem circumstances. If MAI is a required feature then contact your product support representative to arrange licensing.

N54D01

SYNTAX ERROR IN LOGON STRING

Reason:

NCL Substitution has detected an error condition in the MAI logon string.

System Action:

The MAI session start is terminated.

User Action:

Review the MAI session's logon string definition. Ensure all NCL variable references resolve to valid names.

N54D02**SESSION aaaaaaaa IN USE****Reason:**

A request to process an MAI-FS session has been rejected because the session aaaaaaaa is still in use.

System Action:

The request is rejected.

User Action:

Retry the function when the session is inactive.

N54M01**INVALID MESSAGE IDENTIFIER DETECTED****Reason:**

An error has occurred processing a message for the MAI component.

System Action:

The message is suppressed.

User Action:

Report the error to your product support representative.

N54T01**SESSION aaaaaaaa TIMED OUT, USING DEFLOGON bbbbbbbb, ACTION: ccccccc****Reason:**

An MAI-FS session has not processed input within the time specified by the MTLIMIT operand of the associated DEFLOGON.

System Action:

The timeout action ccccccc is commenced.

User Action:

None.

N58001

PERIOD START: AWAITS FWAITS FWAIT% AWAIT% RATIO

Reason:

This is the heading line of a SHOW SYSWAIT display.

System Action:

None.

User Action:

See message number N58002 for a description of the display.

N58002

hh.mm.ss awaitnnn fwaitnnn fff.ff% aaa.aa% rrrrr

Reason:

This line is an output line from a SHOW SYSWAIT display. Two of these lines are displayed for every SHOW SYSWAIT command. The first line is an interval display since the system started or the previous SHOW SYSWAIT command. The second line is a long term display since the product rregion started or midnight.

hh.mm.ss In both cases this is the start interval time.

awaitnnn Is the number of operating system waits that have occurred since the interval start time.

fwaitnnn Is the number of operating system waits issued when at least one NCL process was active but forced idle due to performance controls.

fff.ff Is the percent representation of fwaitnnn to awaitnnn.

aaa.aa The percentage of elapsed time since the interval start that the product region was in a voluntary operating system wait.

rrrrr Is the average number of internal events processed between each voluntary operating system wait.

System Action:

The short term interval statistics are reset.

User Action:

This display is designed as a guide to the effect external operating system processing resource controls and internal NCL performance controls are having on performance. Low processing resource consumption observed external to the product region combined with low *AWAIT%* indicates operating system controls may need to be adjusted in order to provide more processing resource. High processing resource consumption observed external to the region combined with low *AWAIT%* indicates NCL performance controls may need to be reviewed.

N58004

pg pri active hh.mm.ss started delayed chgpri description

Reason:

This line is output from a SHOW SYSPGT command. Four lines are used to display each of the performance groups, BACKGROUND, OCS, FULLSCREEN, and SYSTEM as displayed by the *description* .

pg This is the performance group number.

pri This is the initial priority for that performance group.

active This is the number of NCL procedures currently active in the performance group.

hh.mm.ss This is the time that the performance group table was last updated by a SYSPGT command.

started This is the number of NCL processes that have started during the interval since *hh.mm.ss* .

delayed This is the number of forced waits that have occurred for all procedures that have run in this performance group.

chgpri This is the number of priority changes that have occurred for all procedures that have run in this performance group.

Description This is a descriptive name of the performance group.

System Action:

None.

User Action:

None.

N58005

PG---ACTV-INTERVAL--STARTED---DELAYS----LIMIT----CPRTY

Reason:

This line is the heading line for a SHOW SYSRCT display.

System Action:

None.

User Action:

See message number N58006 for a description of the display.

N58006**pg active hh.mm.ss started delayed limit chgpri****Reason:**

This line is output from a SHOW SYSRCT command. Four lines are used to display each of the performance groups, BACKGROUND, OCS, FULLSCREEN, and SYSTEM.

pg This is the performance group number.

active This is the number of NCL procedures currently active in the performance group.

hh.mm.ss This is the time that the resource control table was last updated by a SYSRCT command.

started This is the number of NCL processes that have started during the interval since hh.mm.ss.

delayed This is the number of forced waits that have occurred for all procedures that have run in this performance group.

limit This is the number of times that a forced wait has been issued for the maximum or minimum duration.

chgpri This is the number of priority changes that have occurred for all procedures that have run in this performance group.

System Action:

None.

User Action:

None.

N58007

**PERFORMANCE GROUP *pg*, *description* , *nnnn* STARTED SINCE -
*hh.mm.ss***

Reason:

This line is the first line output from a SHOW SYSRCT= *pg* command that displays the details of resource controls for the specified performance group *pg* .

pg This is the performance group number.

description This is the descriptive name of the performance group.

nnnn This is the number of NCL processes that have started during the interval since *hh.mm.ss* .

hh.mm.ss This is the time this performance group had its resource control table updated by a SYSRCT command.

System Action:

None.

User Action:

For more information about SHOW SYSRCT, see the Reference Guide.

N58008

**PRIORITY+--TRIGGERS+-----CONTROLS-----+-----STATISTICS---
- ----+**

Reason:

This line is the heading line of a SHOW SYSRCT detailed display.

System Action:

None.

User Action:

None.

N58009

**pri initp DELAY CPTY INIT. ADJ. LIMIT NPRTY DELAYS LIMIT CPTY
ACT**

Reason:

This line is a sub-heading for a priority grouping in a SHOW SYSRCT detail display.

pg is the performance group number.

initp is set to the value ' $\leq I$ ' on the line for the initial priority of the performance group.

System Action:

None.

User Action:

None.

N58010

SHORT tdelay tcpri cinit cadj clim cnpri sdelay slim scpri active

Reason:

This line is the first detail line for a priority grouping within a SHOW SYSRCT detail display. This line displays the short term resource controls and statistics. These controls apply to processing units consumed by an NCL process since a voluntary loss of control.

tdelay and *tcpri* are the processing unit trigger level values.

cinit , *cadj* , *clim* , and *cnpri* are the resource control measures to be actioned when the trigger levels are reached. *sdelay* , *slim* , and *scpri* are statistics on the number of resource control actions taken.

active is the number of currently active processes in that priority grouping for this performance group.

System Action:

None.

User Action:

For further information refer to the *SOLVE Management Services Implementation and Administration Guide* .

N58011

LONG tdelay tcpri cinit cadj clim cnpri sdelay slim scpri

Reason:

This line is the second detail line for a priority grouping within a SHOW SYSRCT detail display. This line displays the long term resource controls and statistics. These controls apply to processing units consumed by an NCL process since it started. *tdelay* and *tcpri* are the processing unit trigger level values. *cinit* , *cadj* , *clim* , and *cnpri* are the resource control measures to be actioned when the trigger levels are reached. *sdelay* , *slim* , and *scpri* are statistics on the number of resource control actions taken.

System Action:

None.

User Action:

None.

N58013

PG--IPRTY-ACTV-UPDATED---STARTED---DELAYS----CPRTY

Reason:

This line is the heading line of a SHOW SYSPGT display.

System Action:

None.

User Action:

See message number N58004 for a description of the display.

N58101

OPERANDS MUST BE ENTERED

Reason:

No operands have been entered on SYSPGT/SYSRCT command.

System Action:

None.

User Action:

Re-enter the command with the desired operands.

N58102**SYNTAX ERROR IN operand****Reason:**

There is either no data after the keyword *operand* or the data has an invalid format.

System Action:

The command is not executed.

User Action:

Re-enter the command with the correct format.

N58103**OPERAND aaaaaaaa INVALID****Reason:**

The supplied operand *aaaaaaa* is not recognized as a valid keyword of the command.

System Action:

The command is not executed.

User Action:

Re-enter the command with the correct operands.

N58104**INVALID VALUE IN operand****Reason:**

The supplied value for *operand* is invalid.

System Action:

The command is not executed.

User Action:

Re-enter the command with the correct operand values.

N58105

INVALID SYNTAX AT COLUMN nnn

Reason:

The command string contains unrecognisable characters.

System Action:

The command is not executed.

User Action:

Re-enter the command with the correct syntax.

N58106

INVALID NUMBER OF SUBPARAMETERS IN operand

Reason:

The operand specified contains too many subparameters to be valid.

System Action:

The command is not executed.

User Action:

Re-enter the command with the correct number of subparameters.

N58107

OPERAND opername DUPLICATED

Reason:

An opername operand has been duplicated on either the SYSPGT or SYSRCT command.

System Action:

The command is not executed.

User Action:

Re-enter the command without the duplication.

N58108

**operand VALUE HAS INVALID attribute operand SUBPARAMETER nn
HAS INVALID attribute**

Reason:

The data supplied either as a single data value or as subparameter nn of the operand is invalid. The attribute describes the nature of the error.

System Action:

The command is not executed.

User Action:

Re-enter the command with the correct values.

N58109

operand OMITTED operand VALUE OMITTED

Reason:

The first form of the message indicates that a required *operand*, such as the performance group `PG=', has not been supplied. The second form of the message indicates that the *operand* was supplied without any data value.

System Action:

The command is not executed.

User Action:

Re-enter the command with all the required operands.

N58110

NO UPDATE OPERANDS SPECIFIED

Reason:

No update values have been supplied on the update command.

System Action:

None.

User Action:

If you wish to update the resource control values supply update operands on the resource control command.

N58111

operand VALUES ARE INCOMPATIBLE

Reason:

The combined update and existing values are logically inconsistent. For example, an update has been attempted to make the delay limit less than the initial delay with the delay adjust value set to positive.

System Action:

The resource table update is not performed.

User Action:

Review the update values.

N58112

OPERAND *aaa* IS AMBIGUOUS

Reason:

The operand abbreviation *aaa* is too short to provide uniqueness.

System Action:

The command is not executed.

User Action:

Re-enter the command with a longer form of the keyword.

N58119

systable HAS BEEN UPDATED

Reason:

The specified system performance control table has been updated with the new resource control values.

System Action:

The time of update is recorded. For Resource Control Table (SYSRCT) updates, the interval statistics are accumulated into the Performance Group Table and then reset.

User Action:

Monitor the effect of resource control measures using SHOW SYSRCT and SHOW SYSPGT.

N59001**INSUFFICIENT STORAGE TO READ PANEL****Reason:**

Insufficient storage was available to retrieve a panel from a panel library.

System Action:

The request fails.

User Action:

Retry. Contact your systems administrator if the condition persists.

N59002**PANELS LIBRARY libname NOT AVAILABLE****Reason:**

The VSAM panel library is not open. A panel library may be opened using the UDBCTL OPEN command.

System Action:

The requested function cannot be performed.

User Action:

Refer to your systems administrator.

N59003**PANEL ERROR - EMPTY MEMBER****Reason:**

A panel was retrieved from a panel library but was found to be empty.

System Action:

The display of the panel fails.

User Action:

Determine why it was empty and correct the panel definition.

N59004

PANELS DATASET VSAM ERROR - CODE xx LIBRARY=libname

Reason:

An error occurred on a panel library.
xx is the VSAM RPL return code in hexadecimal.
libname is the name of the library in error.

System Action:

The request fails.

User Action:

Contact your systems administrator.

N59005

PANEL panelname NOT FOUND IN ANY LIBRARY IN PATH pathname

Reason:

A request was made to retrieve a panel that is not defined on the panel library path pathname.

System Action:

The request fails.

User Action:

The procedure invoking Panel Services is running with &CONTROL NOPANELRC, which is the default. If it is desired that the NCL procedure should ignore errors of this nature, and processing should continue having encountered such an error, attention should be given to the &CONTROL PANELRC statement, which in such a situation would return a value of 16 in the &RETCODE variable rather than terminate.

N59006**PANEL *panelname* EXPANSION ERROR****Reason:**

SOLVE could not obtain storage when attempting to build a 3270 data stream from a panel definition, or SOLVE detected a corrupt panel definition that could not be processed.

System Action:

The request fails.

User Action:

Determine why SOLVE is short on storage or update the panel definition using Edit Services and retry the panel display.

N59007**LOAD OF PANEL *panelname* FAILED, PATH *pathname* IS NOT DEFINED****Reason:**

A request was made to retrieve a panel, however the path *pathname* which is specified in the user profile is not defined to SOLVE.

System Action:

The request fails.

User Action:

Contact your systems administrator to ensure that the user profile and path definitions are correct.

N59008**LOAD OF PANEL FAILED, LIBRARY *aaaaaaaa* NOT DEFINED IN PATH****Reason:**

A 'View' request was issued for a panel in a library which is not on the users panel library path.

System Action:

The request is not performed.

User Action:

Correct the library name and retry.

N59009

PANEL aaaaaaaaaa NOT FOUND IN LIBRARY bbbbbbbb

Reason:

A 'View' request was issued for a panel in a particular library, however the panel is not present in the library.

System Action:

None.

User Action:

Correct the panel name, or use the 'Information' option to determine where the panel is defined.

N59101

#OPT ERRFLD OPERAND USED, NO #ERR STATEMENT FOUND

Reason:

The #OPT ERRFLD= statement has been coded in the panel definition but no #ERR statement exists to specify the processing that is to be performed as a result of the error condition.

System Action:

The procedure terminates.

User Action:

Correct the panel definition and include an #ERR control statement.

N59102

PANEL ERROR - NO DISPLAYABLE LINES

Reason:

A panel definition contains no lines that can be displayed after all control statements have been processed.

System Action:

The attempt to display the panel fails.

User Action:

Correct the panel definition.

N59103**INSUFFICIENT STORAGE****Reason:**

Insufficient storage was available to process the request to display a panel.

System Action:

The request fails.

User Action:

Retry. Contact your systems administrator if the condition persists.

N59104**PREPARSE VARIABLE SYNTAX ERROR OR EXCEEDED SUBSTITUTION LIMIT****Reason:**

During Preparse scanning of panel lines, an invalid variable name was encountered or the length of a line after variable substitution exceeded the system limits.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N59105**PANEL panelName EXCEEDS MAXIMUM NUMBER OF LINES****Reason:**

The maximum number of display lines allowed for a panel definition is 255 lines.

System Action:

The request is rejected.

User Action:

Correct the panel definition.

N59106

PANEL ERROR - TOO MANY #TRAILER LINES

Reason:

The #TRAILER statement is being used in a panel, but there are more trailer lines than will fit on the physical screen.

System Action:

The request is rejected.

User Action:

Check that the #TRAILER END statement is present in the panel definition or reduce the number of lines in the trailer.

N59201

PANELS CONTROL STATEMENT SYNTAX ERROR: errortext

Reason:

The specified control statement is invalid. errortext is the text of the statement in error to a maximum of 80 characters.

System Action:

The procedure fails.

User Action:

This message will be accompanied by other messages detailing the reason for the error. Correct the statement and retry the procedure.

N59202

#OPT CURSOR OPERAND SPECIFIES INVALID VARIABLE NAME OR CO-ORDINATES

Reason:

The CURSOR operand allows specification of a field or exact screen co-ordinates into which the cursor is to be placed when the panel is displayed. The variable name or co-ordinates specified are invalid.

System Action:

The procedure is terminated.

User Action:

Correct the definition and retry the procedure.

N59203**#FLD STATEMENT ATTRIBUTE CHARACTER OMITTED****Reason:**

The #FLD allows a range of attributes to be associated with a single character. This character has been omitted from the #FLD statement.

System Action:

The procedure terminates.

User Action:

Correct the panel definition and retry the procedure.

N59204**#FLD STATEMENT SPECIFIES INVALID ATTRIBUTE CHARACTER****Reason:**

The #FLD statement allows a range of attributes to be associated with a character, but the character specified is not valid for use as a #FLD character. Valid characters are any non-alpha, non-numeric characters. Hexadecimal values may also be specified as X'xx'. The values X'0E' and X'0F' are not allowed.

System Action:

The procedure terminates.

User Action:

Correct the panel definition and retry the procedure.

N59205**MORE THAN 90 #FLD ATTRIBUTE CHARACTERS SPECIFIED****Reason:**

There is a limit of 90 #FLD characters allowed for any one panel definition.

System Action:

The procedure terminates.

User Action:

Correct the panel definition and retry.

N59206

#OPT INWAIT OPERAND INVALID OR EXCEEDS MAX OF 86400

Reason:

The INWAIT operand must be numeric and in the range 0 - 86400 (seconds).

System Action:

The procedure terminates.

User Action:

Correct the panel definition and retry the procedure.

N59207

#OPT DEFAULT OPERAND SPECIFIES INVALID ATTRIBUTE CHARACTER(S)

Reason:

The #OPT DEFAULT operand allows specification of alternative field characters to replace the standard default characters (%,+,_), but invalid characters have been coded. Valid characters are any non-alpha, non-numeric characters. A hexadecimal string may be coded to represent the three bytes as well, if so the bytes must not represent alphabetic, or numeric characters in EBCDIC, or the values X'0E' or X'0F'.

System Action:

The procedure is terminated.

User Action:

Correct the panel definition and retry.

N59208**DEFAULT ATTRIBUTE CHARACTERS CONFLICT OR DUPLICATION****Reason:**

The #OPT DEFAULT operand has specified alternative default field characters but the characters chosen conflict with other field characters already defined by #FLD statements.

System Action:

The procedure terminates.

User Action:

Correct the panel definition and retry. Place the #OPT statement before the #FLD statement if it is intended to define attributes for a default field character.

N59209**#OPT ERRFLD OPERAND SPECIFIES INVALID VARIABLE****Reason:**

The #OPT ERRFLD operand allows definition of a variable located in the panel to which will be applied the attributes in the #ERR control statement if the field is entered incorrectly. The variable name specified is invalid.

System Action:

The procedure terminates.

User Action:

Correct the panel definition and retry.

N59210

PANEL STATEMENT EXCEEDS MAXIMUM SIZE: size

Reason:

After variable substitution the specified panel statement has exceeded the maximum length of 256 characters.

System Action:

The procedure terminates.

User Action:

Correct the panel definition and retry. If it is a control statement that is in error, split it into multiple statements.

N59211

#OPT PREPARSE OPERAND SPECIFIES INVALID CHARACTER(S)

Reason:

The #OPT PREPARSE operand must specify only one character which must not be A to Z or 0 to 9. Either more than one character was specified or the character specified was invalid.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N59212

#OPT WIDTH OPERAND INVALID, MUST BE 80 OR 132

Reason:

The WIDTH operand on the #OPT statement was specified, but was not one of the valid values. The only valid values are 80 and 132.

System Action:

The NCL procedure is terminated, unless &CONTROL PANELRC was in effect.

User Action:

Correct and retry.

N59213**#ALIAS NAME OMITTED****Reason:**

The panel definition requested contains a #ALIAS statement with no operands. The #ALIAS name must be specified.

System Action:

The panel display request is rejected.

User Action:

Correct the panel definition such that any #ALIAS statement contains a valid name.

N59214**#ALIAS NAME INVALID****Reason:**

The requested panel contains a #ALIAS statement which specifies an invalid name.

System Action:

The NCL procedure is terminated unless *CONTROL PANELRC was in effect*.

User Action:

The alias name must be a valid name. That is up to 8 characters made up of alphanumeric and national characters.

N59215**#ALIAS VARS LIST HAS NULL ENTRIES****Reason:**

The definition of the requested panel contains a list of variable names. The list contains null entries, this is not permitted.

System Action:

The NCL procedure is terminated unless &CONTROL PANELRC is in effect.

User Action:

Correct the panel definition and retry.

N59216

#ALIAS VARS LIST HAS TOO MANY ENTRIES

Reason:

The definition of the requested panel contains a list of variable names. There are too many entries in the list.

System Action:

The NCL procedure is terminated unless &CONTROL PANELRC is in effect.

User Action:

Split the #ALIAS statement into two statements and retry.

N59217

#ALIAS VARS LIST HAS INVALID SYNTAX

Reason:

The definition of the requested panel contains a list of variable names. The list must be a single variable name, or a list of variable names separated by commas and surrounded by parenthesis. For example: VARS=(VAR1,VAR2)

System Action:

The NCL procedure is terminated unless &CONTROL PANELRC is in effect.

User Action:

Correct the #ALIAS statement and retry.

N59218

#ALIAS RANGE CANNOT BE SPECIFIED WITH VARS LIST

Reason:

The definition of the panel requested contains an #ALIAS statement which has both the RANGE= and VARS= operands coded. Only one of these operands may be specified on a single #ALIAS statement.

System Action:

The NCL procedure is terminated unless &CONTROL PANELRC is in effect.

User Action:

Correct the panel definition and retry.

N59219**INSUFFICIENT STORAGE****Reason:**

A panel display was requested but there was insufficient storage to process the panel definition.

System Action:

The NCL procedure is terminated unless &CONTROL PANELRC was in effect.

User Action:

Retry the operation.

N59220**#ALIAS VARS SPECIFIES INVALID NAME****Reason:**

The definition of the requested panel contained a #ALIAS statement. The list of variables contains an entry which is not a valid NCL variable name.

System Action:

The NCL procedure is terminated unless &CONTROL PANELRC is in effect.

User Action:

Correct the panel definition and retry.

N59221**#ALIAS RANGE - INVALID SYNTAX****Reason:**

The definition of the requested panel contains a #ALIAS statement with the RANGE= operand specified. The value specified is not in the form RANGE=(min,max) where min and max are numbers and min is less than max.

System Action:

The NCL procedure is terminated unless &CONTROL PANELRC is in effect.

User Action:

Correct the panel definition and retry.

N59222

#ALIAS VARS - VALUE TOO LONG

Reason:

The definition of the requested panel contains a #ALIAS statement with the VARS= operand specified. The list contains a value which is too long to be an NCL variable name.

System Action:

The NCL procedure is terminated unless &CONTROL PANELRC is in effect.

User Action:

Correct the panel definition and retry.

N59301

INSUFFICIENT STORAGE

Reason:

Insufficient storage is available to display the panel.

System Action:

The display function fails.

User Action:

Retry the procedure. Contact your systems administrator if the condition persists.

N59302**PANEL ERROR - SYNTAX LINE nnnn OFFSET mmmm - errtext****Reason:**

The panel line indicated contains a syntax error. nnnn is the line number (excluding control statements) in error. errtext is the error reason as follows:

PANEL EXCEEDS 62 LINES The panel definition (excluding control statements) exceeds the maximum number of 62 lines for a panel definition.

OUTPUT VARIABLE INVALID The line in error contains a variable in an output field that does not conform to variable syntax requirements so substitution could not be performed.

MAX SUBSTITUTION LIMIT During the substitution process for a field on the line in error the substitution limit of 256 was exceeded.

INPUT VARIABLE MISSING An input field on the line in error does not specify the name of a variable that is to receive the input data entered into that field.

MULTIPLE INPUT VARIABLES An input field must only specify one input variable that is to receive data entered into the field. This error can result from failing to close an input field with another attribute character or due to the misuse of an attribute character.

INPUT VARIABLE TOO LONG The variable named in an input field exceeds the maximum length for an input variable (12 characters).

INPUT VARIABLE INVALID The input variable named in an input field on the line in error is not a valid variable name. The named variable need not be defined prior to its use in a panel definition, however, only valid variable names can be used.

INPUT VARIABLE RESERVED The input variable named in an input field on the line in error is a reserved system variable which cannot be used in an input field. System variables can only be used in output fields.

SPD FIELD INVALID FORMAT An SPD field on the line in error does not conform to the required format. The SPD field must start with one of the valid SPD characters, ``?`,` ' or a blank and must be followed by one or more spaces` and the name of the variable that is to be set to **SELECTED** if the field is selected.

SPD FIELD INV. VARIABLE An SPD field on the line in error specifies the name of an invalid variable that is to be set to **SELECTED** if the field is selected. A valid variable name must be used.

INPUT FIELD FORMAT ERROR An input field must contain the name of the variable that is to receive the data entered into the field. This variable name must commence immediately following the field character that designates an input field with no intervening blanks. The field in error will be an input field on the specified line.

System Action:

A panel error condition is raised. If **&CONTROL PANELRC** is in effect then **&RETCODE** is set to 16 and **&SYSMSG** is set to the N59302 text. Otherwise the NCL process is terminated in error. In addition an N59305 message is logged containing the failing panel line.

User Action:

Correct the panel definition and retry.

N59303

PANEL ERROR - CURSOR LOCATION VARIABLE varname - NOT FOUND

Reason:

The panel definition specifies that the cursor is to be positioned in an input variable named varname but that variable does not exist in the panel definition.

System Action:

The procedure terminates.

User Action:

Define the nominated variable in an input field on the panel, then retry. The cursor location variable can be named on either the CURSOR or ERRFLD operand of the #OPT statement.

N59304

PANEL DATASTREAM REQUIREMENTS EXCEED BUFFER SIZE

Reason:

The panel definition will produce a datastream too big for the current maximum datastream size.

System Action:

The &PANEL statement fails.

User Action:

Use SYSPARMS PANLBFSZ operand to increase the maximum buffer size available for panel definition datastreams. Then rerun the procedure.

N59305**panel definition text****Reason:**

This message is logged following a failing &PANEL request. An N59302 message identifies the cause of the failure. This message contains the text of the panel definition in error.

System Action:

The &PANEL statement fails.

User Action:

Refer to the N59302 message to determine the cause of the error. If necessary correct the panel definition and/or the procedure.

N59306**ERROR PROCESSING PANEL IMAGE****Reason:**

An error has occurred trying to generate the terminal datastream for the current panel.

System Action:

The &PANEL statement fails and diagnostic information is written to the activity log.

User Action:

This message indicates an internal error. Forward the diagnostic information to your product support representative.

N59601

INSUFFICIENT STORAGE

Reason:

Insufficient storage was available to complete the display of a panel.

System Action:

The procedure terminates.

User Action:

Retry. Contact your systems administrator if the condition persists. If necessary increase the region size. REGION=32M is enough for most SOLVE systems. Large SOLVE:Central or SOLVE:Operations regions can be specified with REGION=0M.

N59602

PANEL EXPANSION ERROR

Reason:

An internal error occurred when attempting to display a panel.

System Action:

The procedure terminates.

User Action:

Redefine the panel on the panel library. If the condition persists refer to your systems administrator, who should report the occurrence to your product support representative.

N59603

REQUIRED FIELD OMITTED

Reason:

The contents of the field shown as being in error have been omitted.

System Action:

None.

User Action:

Type the desired value into the indicated field and retry.

N59801**INVALID IMBEDDED BLANKS****Reason:**

The contents of the field shown as being in error are invalid because the data contains imbedded blanks.

System Action:

None.

User Action:

Type the correct value into the indicated field and retry.

N59802**INCOMPLETE FIELD****Reason:**

The contents of the field shown as being in error are invalid because the data contains trailing blanks. This field must be completely filled with valid characters.

System Action:

None.

User Action:

Type the corrected value into the indicated field and retry.

N59803**NOT NUMERIC****Reason:**

The contents of the field shown as being in error are invalid because it does not contain solely numeric characters.

System Action:

None.

User Action:

Type the corrected value into the indicated field and retry.

N59804

INVALID NAME

Reason:

The contents of the field shown as being in error are invalid because it does not conform to naming conventions for a PDS member (the field must commence with alpha or national characters and be followed by alphanumeric and/or national characters).

System Action:

None.

User Action:

Type the corrected value into the indicated field and retry.

N59805

NOT WITHIN RANGE

Reason:

The contents of the field shown as being in error are invalid because the number entered is not within the range defined for that field.

System Action:

None.

User Action:

Type the corrected value into the indicated field and retry.

N59806

INVALID DATE

Reason:

The contents of the field shown as being in error are invalid because they do not match the date format defined for that field.

System Action:

None.

User Action:

Type the corrected value into the indicated field and retry.

N59807**INVALID DATASET NAME****Reason:**

The contents of the field shown as being in error are invalid because it does not conform to naming conventions for valid OS/VS format dataset name. If required, a partitioned dataset (PDS) member name or Generation data Group (GDG) number can be specified as part of the name.

System Action:

None.

User Action:

Type the corrected value into the indicated field and retry.

N59808**INVALID MEMBER NAME****Reason:**

The contents of the field shown as being in error are invalid because an invalid member name was included in the dataset name. The member name must commence with alpha or national characters and be followed by alphanumeric and/or national characters.

System Action:

None.

User Action:

Type the corrected value into the indicated field and retry.

N59809**RESERVED KEYWORD****Reason:**

The contents of the field shown as being in error are invalid because the data contained in it matches a reserved NCL keyword.

System Action:

None.

User Action:

Type the corrected value into the indicated field and retry.

N59810

NOT SIGNED NUMERIC

Reason:

The contents of the field shown as being in error are invalid because it does not contain a (signed) numeric value.

System Action:

None.

User Action:

Type the corrected value into the indicated field and retry.

N59811

INVALID GENERIC NAME

Reason:

The contents of the field shown as being in error are invalid because it does not conform to naming conventions for a generic PDS member name (the field must commence with alpha or national characters and be followed by alphanumeric and/or national characters but may be terminated with a single asterisk (*)).

System Action:

None.

User Action:

Type the corrected value into the indicated field and retry.

N59812

NOT ALPHA

Reason:

The contents of the field shown as being in error are invalid because it does not contain solely alphabetic characters.

System Action:

None.

User Action:

Type the corrected value into the indicated field and retry.

N59813**NOT ALPHA NUMERIC****Reason:**

The contents of the field shown as being in error are invalid because it contains characters other than A to Z, 0 to 9, @, # and \$.

System Action:

None.

User Action:

Type the corrected value into the indicated field and retry.

N59814**NOT HEXADECIMAL****Reason:**

The contents of the field shown as being in error are invalid because it contains characters other than 0 to 9 and A to F.

System Action:

None.

User Action:

Type the corrected value into the indicated field and retry.

N59815**NOT REAL NUMBER****Reason:**

The contents of the field shown as being in error are invalid because it does not conform to the syntax for integers, signed numbers or real numbers, including scientific notation.

System Action:

None.

User Action:

Type the corrected value into the indicated field and retry.

N59816

INVALID TIME

Reason:

The contents of the field shown as being in error are invalid because they do not match the time format defined for that field.

System Action:

None.

User Action:

Type the corrected value into the indicated field and retry.

N59N01

SOLVE AND SUBSYSTEM VERSIONS DO NOT MATCH

Reason:

Message returned from \$MAINSII subsystem in variable. The subsystem version is different to the SOLVE version.

System Action:

Call to subsystem fails.

User Action:

Contact product support representative.

N59N02

NO-ERRORS

Reason:

No errors occurred on call to \$MAINSII subsystem.

System Action:

None.

User Action:

None.

N59N03**NO-WARNINGS****Reason:**

No warnings occurred on call to \$MAINSII subsystem.

System Action:

None.

User Action:

None.

N59N04**ERROR IN NSI REQUEST VECTOR****Reason:**

An error was detected in the NSI request vector on the call to the FNMNSI module from \$MAINSII. This message is returned from the \$MAINSII subsystem in a token.

System Action:

None.

User Action:

Look up FNMNSI return code and feedback code in NPM installation manual, and try to determine reason for error.

N59N05**RESERVED RETCODE FROM FNMNSI****Reason:**

The FNMNSI module returned an undocumented return code.

System Action:

MAI : NSI processing terminated.

User Action:

Verify that FNMNSI return code is not documented in NPM Installation manual, and contact product support representative.

N59N06

INTERNAL ERROR IN FNMNSI MODULE

Reason:

An internal error occurred in the FNMNSI module when it was called by the \$MAINSII subsystem.

System Action:

MAI : NSI interface terminates.

User Action:

Contact product support representative.

N59N07

CALLER HAS INVALID AUTHORITY TO CALL FNMNSI

Reason:

The FNMNSI module was called by the \$MAINSII subsystem when the subsystem was not authorized.

System Action:

MAI : NSI interface is terminated.

User Action:

SOLVE system must be running authorized to use MAI : NSI interface.

N59N08

NSI ADDRESS SPACE NOT RUNNING

Reason:

A call to the FNMNSI module was made by the \$MAINSII subsystem, when the NSI address space was not running.

System Action:

MAI : NSI interface terminated.

User Action:

NPM must be started/restarted with the NSI component of NPM activated. NPM, and the NSI component of NPM must be active in order for the MAI : NSI interface to work.

N59N09**PROGRAM ID TABLE IS FULL****Reason:**

An attempt to call the FNMNSI module from the \$MAINSII subsystem failed because the program id table in the NSI is full.

System Action:

MAI : NSI interface is terminated.

User Action:

Refer to NPM Installation manual, section on NSI.

N59N10**UNDOCUMENTED RETCODE FROM FNMNSI****Reason:**

The FNMNSI module returned a return code that is undocumented in the NPM Installation manual, when called from the \$MAINSII subsystem.

System Action:

MAI: NSI interface is terminated.

User Action:

Confirm that FNMNSI return code is not documented in the NPM Installation manual, and contact product support representative.

N59N11**NSI REQUEST MADE WHEN PROGRAM NOT CONNECTED****Reason:**

An attempt was made to call the FNMNSI module from the \$MAINSII subsystem before the subsystem connected to the NSI.

System Action:

MAI : NSI Interface is terminated.

User Action:

Re-start MAI : NSI interface. If problem continues to occur, contact product support representative.

N59N12

SOLVE CONNECT TO FNMNSI FAILED

Reason:

Connection to the FNMNSI module by the MAI interface to the NetView Synergy Interface (NSI) failed.

System Action:

MAI's interface to the NSI is not started.

User Action:

Check that Network Performance Monitor (NPM) and the NetView Synergy Interface (NSI) component of NPM are started. If there is no need to use the MAI NSI support then ignore the message.

N5A001

MAI-OC INITIALIZATION FAILURE - UNABLE TO LOAD NM055

Reason:

The program load for module NM055 has failed.

System Action:

MAI-OC initialization is not performed.

User Action:

Determine the cause of the load failure. If NM055 is not in the SOLVE load library then review the installation job messages.

N5I301**NMIFR subtask active****Reason:**

The NMIFR subtask is active. The NMIFR subtask is activated by one of the following reasons:

- After receipt of the first NMIFR verb call for this region
- After an abend and subtask reactivation, that is, after N5I302 and N5I303
- After an unrecoverable abend (message N5I304) and RESET call is issued

System Action:

The NMIFR subtask processes NMIFR verb calls as normal.

User Action:

None.

N5I302**NMIFR subtask ABENDED****Reason:**

The MIFR subtask has abended. This is preceded by messages N15Z20 and N15Z21 detailing the abend details.

System Action:

If the subtask was processing a NMIFR verb work request, that request is terminated with &SYS.RETCODE=12 and &SYS.FDBK=5. This message is followed by N5I303 or N5I304.

User Action:

Report the abend to Technical Support. See the following N5I303 or N5I304 messages.

N5I303

NMIFR subtask reactivated

Reason:

The NMIFR subtask has abended, as noted by the preceding message, N5I302. The NMIFR subtask has been reactivated.

System Action:

Subsequent work requests are processed as normal. To prevent a potential subtask abend loop, only two subtask reactivations are allowed. A third abend causes message N5I304 to be issued instead of N5I303.

User Action:

No action required.

N5I304

NMIFR subtask unrecoverable. NMIFR interface disabled

Reason:

The NMIFR subtask has abended, as noted by the preceding message N5I302. The number of abends allowed for the NMIFR subtask has been exceeded. This number is set to two; the third abend during the region lifetime causes this message. The NMIFR interface is now disabled.

System Action:

Any subsequent NMIFR verb call requests are terminated with &SYS.RETCODE=12 and &SYS.FDBK=8. This also applies to any NMIFR requests already received but still queued for subtask processing.

User Action:

To re-establish the NMIFR subtask interface, recycle the region.

N5I305**NMIFR subtask was FORCE-DETACHed****Reason:**

An attempt to shutdown the NMIFR subtask was unsuccessful. The NMIFR subtask did not terminate gracefully in five seconds. The system has forcibly detached the subtask. This may occur if the subtask is busy processing a EZBNMIFR API call.

System Action:

After forcibly detaching the subtask, the NMIFR interface is disabled.

User Action:

A forced detach should occur at region shutdown only. This message is for informational use only.

N63101**OMLCTL CMDREPL COMMAND FAILURE, cccccc IS NOT AN EXACT COMMAND NAME****Reason:**

An OMLCTL CMDREPL command named an unknown or inexact command name.

System Action:

The command is ignored.

User Action:

Check the required command name.

N63102**OMLCTL CMDREPL COMMAND FAILURE, cccccc CANNOT BE REPLACED****Reason:**

An OMLCTL CMDREPL command named a command that does not allow a CMDREPL *procedure to replace* it.

System Action:

The command is ignored.

User Action:

Check the required command name.

N63103

OMLCTL CMDREPL COMMAND FAILURE, cccccc IS REPLACED BY AN NCL PROCEDURE

Reason:

An OMLCTL CMDREPL command named a command that is presently replaced by an NCL CMDREPL procedure,

System Action:

The command is ignored.

User Action:

Check the required command name.

N63121

OMLCTL RESETLT COMMAND COMPLETE

Reason:

An *OMLCTL RESETLT* command has been successfully processed.

System Action:

The OML/NCL language recognition table has been cleared.

User Action:

None.

N63401

OMLCHECK OF mmmmmmmm (LIB=IIIIIII) HAD ee ERRORS, ww WARNINGS, PTF=pppp

Reason:

An OMLCHECK command has been processed. This message shows the result. This message is produced if no errors or warnings were detected.

System Action:

None.

User Action:

None.

N63402

OMLCHECK OF mmmmmmmm (LIB=IIIIII) HAD ee ERRORS, ww WARNINGS, PTF=pppp

Reason:

An OMLCHECK command has been processed. This message shows the result. This message is produced if warnings were found (but no errors).

System Action:

None.

User Action:

None.

N63403

OMLCHECK OF mmmmmmmm (LIB=IIIIII) HAD ee ERRORS, ww WARNINGS, PTF=pppp

Reason:

An OMLCHECK command has been processed. This message shows the result. This message is produced if errors were found.

System Action:

None.

User Action:

None.

N63410

TYPE=ttt SRCLINES=nnnn CODE-STG=nnnK

Reason:

An *OMLCHECK* command has been processed. This message is produced if *STATS=YES* was specified. The message shows the type of code loaded (SRC or OBJ), the number of lines in the member, and the amount of storage needed.

System Action:

None.

User Action:

None.

N63411**LOADTIME=ttt.ttt LOADCPU=ccc.ccc****Reason:**

An *OMLCHECK* command has been processed. This message is produced if *STATS=YES* was specified. The message shows the elapsed and CPU times taken to perform the load and compile.

System Action:

None.

User Action:

None.

N64010**NAME LIBRARY S/O TYPE STATUS USERS TOT-USE LAST-PTF
UID/AUSE****Reason:**

This is a header message from a *SHOW OMLSTAT* command. It contains column headings for the following N64015 *message(s)*.

Columns are:

NAME The name of the procedure

LIBRARY The library that the procedure was loaded from

S/O Whether the procedure is source (SRC) or object (OBJ)

TYPE The type of procedure (PROC, FUNC, PKG), LDNG if loading

STATUS The present status of the procedure:

AUTOSHR - Presently shared in use

RETAIN - Retained for future use

PRELOAD - Preloaded

CMDREPL - A command replacement

P-UNLOAD - Pending unload

PVT-xxxx - Loaded privately

USERS The number of active users of the procedure

TOT-USE The total number of users of the procedure

LAST-PTF The last PTF applied to the source

UID/AUSE The private load user ID (PRIVATE), or aged use (RETAIN)

System Action:

None

User Action:

None

N64011**ASHR>RT1 RT1>ASHR RT1>RT2 RT2>ASHR****Reason:**

This is a header message from a SHOW OMLSTAT command. It contains column headings for the following N64016 message(s).

This message is produced only if the DETAIL=YES operand is coded.

Columns are:

ASHR>RT1 The total number of moves from AUTOSHR to RETAIN status

RT1>ASHR The total number of moves from RETAIN to AUTOSHR status

RT1>RT2 Always zero RT2>ASHR Always zero

System Action:

None

User Action:

None

N64012**LD-TIME LD-CPU LD-FTIME LD-#FIND****Reason:**

This is a header message from a SHOW OMLSTAT command. It contains column headings for the following N64017 message(s).

This message is produced only if the DETAIL=YES operand is coded.

Columns are:

LD-TIME Total elapsed time to load the procedure

LD-CPU CPU time used loading the procedure (if available)

LD-FTIME Time spent issuing FIND operations

LD-#FIND Number of FIND operations performed

System Action:

None

User Action:

None

N64013

CODE-BLK RELO-BLK STG-KBYT SRCLINES

Reason:

This is a header message from a SHOW OMLSTAT command. It contains column headings for the following N64018 message(s).

This message is produced only if the DETAIL=YES operand is coded.

Columns are:

CODE-BLK Number of 4K blocks allocated to compiled code

RELO-BLK Number of 4K blocks allocated to relocation lists

STG-KBYT Total storage required in Kbytes

SRCLINES Number of source lines (for source), or the number of lines of object (if loaded from object)

System Action:

None

User Action:

User Action:

None.

N64031

item... value item... value item... value

Reason:

This is a detail message from a *SHOW OMLSTAT* command. It provides various statistics.

This message is produced only if the *STATS=YES* operand is coded.

The following items are displayed:

NUM PRELOAD - The current number of preloaded procedures

KB PRELOAD - The total preloaded procedure storage

NUM AUTOSHR - The current number of autoshared procedures

KB AUTOSHR - The total autoshared procedure storage

NUM RETAINED - The current number of retained procedures

KB RETAINED - The total retained procedure storage

NUM PRIVATE - The current number of private procedures

KB PRIVATE - The total private procedure storage

TOT EXECREQ - The total number of execution requests

FAST EXECREQ - The number of fast-path execution requests

SLOW EXECREQ - The number of slow-path execution requests

TOT EXECDROP - The total number of execution drop requests

FAST EXECDROP - The number of fast-path execution drop requests

SLOW EXECDROP - The number of slow-path execution drop requests

EXEC FROM PRELD - Number of exec requests satisfied from preload

EXEC FROM ASHR - Number of exec requests satisfied from autoshare

EXEC FROM RETN - Number of exec requests satisfied from retain

EXEC LOAD SHARE - Number of exec requests that caused a shared load

EXEC LOAD PVT - Number of exec requests that caused a private load

EXEC TOTAL LOAD - The total number of execution loads

MOVE AS -> RT - Total moves from autoshr to retain

MOVE RT -> AS - Total moves from retain to autoshare

DROP RT - Total drops from retain

ACTIVE STACKS - Current number of active stacks

FREE STACKS - Current number of available stacks

SYSGET STACKS - Number of stacks obtained from free storage

SYSPUT STACKS - Number of stacks released to free storage

ACTIVE VWAS - Current number of active verb work areas

FREE VWAS - Current number of available verb work areas

SYSGET VWAS - Number of verb work areas obtained from free storage

SYSPUT VWAS - Number of verb work areas released to free storage

STACK GARB-COLL - Number of times a stack had a garbage collection

GARB-COLL-OK - Number of times a garbage collection freed storage

BUFF- RECLAIMED - Number of buffers reclaimed by stack garbage collect

- ACTIVE STACKS - Current number of active stacks
- FREE STACKS - current number of available stacks
- SYSGET STACKS - number of stacks obtained from free storage
- SYSPUT STACKS - number of stacks released to free storage
- ACTIVE VWAS - Current number of active verb work areas
- FREE VWAS - current number of available verb work areas
- SYSGET VWAS - number of verb work areas obtained from free storage
- SYSPUT VWAS - number of verb work areas released to free storage

System Action:

The request fails.

User Action:

Examine the abend code to resolve the problem.

N6XA01**Activity log message interface initialized****Reason:**

The TCPaccess exit, NMDSPAXS, which passes messages and events has been initialized.

System Action:

TCPaccess messages will be forwarded to regions that are configured to receive them (refer to message N6XA02). If the Data Space is active, it will be updated with TCPaccess events as they occur.

User Action:

None.

N6XA02**Receiver ID P1 will monitor messages from TCPaccess****Reason:**

This message follows N6XA01 when the TCPaccess exit, NMDSPAXS, is initialized. It identifies the (EPS) receiver ID used by NetMaster and/or NetSpy regions to receive copies of TCPaccess log messages.

System Action:

See message N6XA01.

User Action:

None, for information only. Regions are configured to receive copies of TCPaccess messages via TCP/IP Administration options.

N6XA03

NetMaster AXS exit EP: *P1* Compiled: *P2*

Reason:

This message follows N6XA01 and N6X02 when the TCPaccess exit, NMDSPAXS, is initialized.

P1 is the Entry point address of the exit.

P2 is the date/time stamp of the Assembly in YYYYMMDDHHMM format.

The message helps to identify the exit code in storage and check its currency.

System Action:

None.

User Action:

None.

N72002

SESSION BETWEEN priname AND secname ENDED. FINAL TRACE DATA MISSING.

Reason:

A session being traced ended and NTS output processing started but not all trace data had arrived.

System Action:

This message is only present when SYSPARM NTSINTSV=YES.

User Action:

This condition may be common on certain sessions depending upon how the session is terminated. Refer also to the SYSPARM NTSCINTV value.

N72003**NTS RESOURCE STATISTICS NOT RECEIVED FROM SSCP sscpname - reason****Reason:**

NTS did not receive resource statistics for any resources involved in cross domain sessions under the control of the specified SSCP for the most recently expired collection interval. The reason for this is indicated in the supplied reason.

System Action:

None.

User Action:

For resource statistics to be received from another domain: 1. NTS must be executing in that domain. 2. An NTS ISR (Inter System Routing) conversation must be enabled between the systems. 3. NTS in the other domain must have resource statistics collection enabled.

N72004**NTS RESOURCE STATISTICS LOGGING COMMENCED FOR PERIOD ENDING AT time ON date.****Reason:**

NTS has commenced logging of resource statistics to the NTS user exit. These statistics are collected at the expiry of each collection interval and are written to the user exit after waiting for cross domain data to arrive or for the correlation interval (NTSCINTV) to expire.

System Action:

None.

User Action:

None.

N72101

NTS DATABASE, FILEID=fileid OPEN FAILURE. LOGGING INACTIVE.

Reason:

NTS failed to connect to the NTS database when session awareness started and logging was requested.

System Action:

Processing continues without NTS logging.

User Action:

If NTS logging is required, allocate and open a file with the fileid shown and specify SAWARE LOG=YES.

N72102

NTS DATABASE, FILEID=fileid NOW OPEN. LOGGING ACTIVE.

Reason:

NTS has opened the NTS database in preparation for logging of session awareness data.

System Action:

None.

User Action:

None.

N72103

VSAM ERROR ON NTS DATABASE, FILEID=fileid - VSAM FDBK=X"xx". NTS LOGGING SUSPENDED.

Reason:

An error occurred on the specified NTS database whilst logging session awareness data.

System Action:

NTS logging is disabled.

User Action:

Rectify the problem with reference to the VSAM feedback xx, and specify SAWARE LOG=YES to re-open database logging.

N72104**INSUFFICIENT STORAGE. NTS LOGGING SUSPENDED.****Reason:**

A storage shortage has occurred whilst logging session awareness data.

System Action:

NTS logging is disabled.

User Action:

Re-start NTS logging by issuing SAWARE LOG=YES if the storage problem has been resolved.

N72105**NTS DATABASE, FILEID=fileid RELEASED. NTS LOGGING SUSPENDED.****Reason:**

NTS logging has been suspended following a SAWARE LOG=NO command.

System Action:

NTS continues without logging.

User Action:

None.

N72106**NTS DATABASE NOW INITIALIZED.****Reason:**

NTS has initialized the database as it was found to be empty.

System Action:

None.

User Action:

None.

N72107

NTS DATABASE LAST INITIALIZED ON date.

Reason:

Provides the date on which the NTS database was last initialized.

System Action:

None.

User Action:

None.

N72108

**NTS DATABASE, FILEID=fileid CORRUPT. NTS LOGGING SUSPENDED.
RECORD KEY=recordkey.**

Reason:

The indicated NTS database has been corrupted. The indicated session master record does not contain the required information.

System Action:

NTS logging is suspended.

User Action:

Determine if the NTS database indicated is valid. If it is not then use the correct NTS database. If it is valid, then determine the cause of the corruption. If necessary, re-initialize the NTS database and re-start NTS logging.

N72201

NTS USER EXIT exitname ENDED PREMATURELY.

Reason:

The user supplied exit routine indicated has terminated prematurely. This indicates an abend or logic error in the exit routine.

System Action:

NTS detaches the NTS exit subtask and continues processing.

User Action:

Review the user supplied NTS exit code.

N72202**NTS USER EXIT RECORD TRACE NTSEXIT****Reason:**

A storage dump of SMF records that are to be passed to the NTS user exit has been requested. Message N22801 contains details of the display requested.

System Action:

None.

User Action:

Refer to message N22801.

N72301**LOCAL AND REMOTE RTM DEFINITIONS FOR RESOURCE ARE INCONSISTENT.****Reason:**

An inconsistency has been found in the RTM boundary definitions for RTM data that has been sourced remotely via NTS Single Image. The boundary definitions for the resource defined by the DEFCLASS RTM in the remote system are different to the RTM DEFCLASS that this resource matches in the local system.

System Action:

The remote RTM definition for the resource is used instead of the local RTM definition as defined in the the matching RTM DEFCLASS. Processing continues with the remote RTM DEFCLASS.

User Action:

Examine RTM DEFCLASS in both the local and remote NTS and correct the DEFCLASS RTM boundaries.

N72601

SAW DATA WARM START TO DOMAIN domid COMPLETE.

Reason:

This indicates completion of the transmission of session awareness data to the indicated domain for NTS Single Image. (See also message N72706.)

System Action:

None.

User Action:

None.

N72701

NTS ISR CONTACT INITIATED WITH LINK linkname DOMAIN domid.

Reason:

An ISR command for NTS traffic on the specified link has been accepted (either specifically or by the ISR default) and is in the process of being established. Additional message(s) will follow to indicate whether the establishment was successful or not.

System Action:

None.

User Action:

None.

N72702

NTS ISR CONTACT COMPLETED WITH LINK linkname DOMAIN domid VERSION ver.

Reason:

Contact with a remote NTS system in the indicated domain has been successfully established across an indicated ISR link. The version of the NTS in the remote system is included.

System Action:

None.

User Action:

None.

N72703**NTS ISR CONTACT LOST WITH LINK linkname DOMAIN domid.****Reason:**

Contact with a remote NTS system across the indicated ISR link has been lost. NTS data can not flow between the two systems. This is probably due to the INMC link becoming disabled, or to an ISR disable for NTS.

System Action:

NTS ISR traffic is suspended on this link. The ISR link will be automatically restarted following a link failure.

User Action:

Determine the cause of the link failure if appropriate.

N72704**UNABLE TO RECEIVE X-NET SAW DATA FROM DOMAIN domid.****Reason:**

A request has been made to receive session awareness data for the indicated domain from a remote NTS in a different network. It cannot receive cross-network session data from this domain because there is an existing NTS Single Image conversation for inbound session data from this domain.

System Action:

The request is ignored.

User Action:

Review the NTS Single Image conversations for this domain to determine the correct flow of session data. For information about the flow of session data between different domains and networks, see the NTS Single Image data sharing rules in the *Administration Guide*.

N72705

AN NTS CONVERSATION WITH DOMAIN domid IS ALREADY ENABLED FOR SAW=INBOUND

Reason:

Refer to message N72704.

System Action:

None.

User Action:

None.

N72706

SAW DATA WARM START TO DOMAIN domid INITIATED.

Reason:

A NTS Single Image conversation is enabled for outbound transmission of session awareness data with the indicated domain. The data transmission has commenced to this domain. Refer to subsequent messages to determine the result of this transmission.

System Action:

None.

User Action:

None.

N72707

SAW DATA WARM START FROM DOMAIN domid COMPLETE.

Reason:

A NTS Single Image conversation is enabled for inbound transmission of session awareness data with the indicated domain. The data transmission has completed successfully.

System Action:

None.

User Action:

None.

N72708**PURGING OF NSI DATA FROM DOMAIN domid INITIATED.****Reason:**

An NTS Single Image conversation was enabled for inbound sharing of session awareness data with the indicated domain. This conversation is no longer active and NTS has initiated the purging of all session awareness data that has been obtained from this system. This may occur due to session awareness becoming inactive in the remote NTS or the link from the remote NTS system becoming inactive. Subsequent message (N72709) will indicate when this is complete.

System Action:

All session awareness from the remote system is in the process of being purged. The session data will be re-transmitted when the link or data again becomes available.

User Action:

Determine the cause of the purging of data and, if necessary, re-establish the connection.

N72709**PURGING OF NSI DATA FROM DOMAIN domid COMPLETE.****Reason:**

The purging of NTS Single Image data from the indicated domain has completed. Refer to message N72708 for more information.

System Action:

None.

User Action:

None.

N72901

NTS RESOURCE STATISTICS RECEIVED FROM SSCP sscpname FOR ALL PERIODS UP TO time ON date.

Reason:

All resource statistics collected by the indicated SSCP for resources controlled by the local SSCP have been received over an ISR link with NTS in that domain. This message is current to time and date indicated and may be issued to indicate data integrity following a link failure and restart.

System Action:

None.

User Action:

None.

N72A01

INVALID FIELD LIST SPECIFIED ON NTSQUERY

Reason:

An *NTSQUERY* NCL Verb specified incorrect options.

System Action:

The NCL procedure terminates.

User Action:

Correct the problem and retry.

N72A02

CONFLICTING OPTIONS SPECIFIED ON NTSQUERY

Reason:

An *&NTSQUERY* NCL Verb specified conflicting options.

System Action:

The NCL procedure terminates.

User Action:

Correct the problem and retry.

N72C01**INSUFFICIENT STORAGE FOR NTS ACCOUNTING STATISTICS.****Reason:**

NTS was unable to allocate sufficient storage to hold accounting statistics.

System Action:

Accounting statistics will not be kept for some resources.

User Action:

Review storage allocation and usage.

N72E01**NMVT TO SET RTM BOUNDARIES FOR LU luname REJECTED BY PU puname - SENSE xxxx.****Reason:**

NTS attempted to set the RTM boundaries for an LU but the NMVT RU was rejected by the PU with the sense shown in the message.

System Action:

NTS disables RTM collection for the LU.

User Action:

Determine from the sense code whether the control unit supports RTM or not. If not re-define NTS session classes such that controllers which do not support RTM have no RTMCLASS assigned.

N72E02**NTS RTM CLASS IGNORED FOR nn SESSIONS FOR LU'S ON PU puname.****Reason:**

NTS attempted to set the RTM boundaries for an LU on the puname shown but the NMVT RU was rejected by the PU with the sense code indicating the PU did not support RTM. The number nn of sessions shown were then ignored for RTM class processing.

System Action:

NTS disables RTM collection for the PU.

User Action:

Review RTM/SESSION class definitions.

N72E03

NTS RTM STATS IGNORED FOR resource - NMVT REJECTED WITH SENSE xxxxxxxx.

Reason:

A negative response has been received from the resource indicated to an RTM solicitation for interval based resource statistics. The sense code contained in the response is xxxxxxxx.

System Action:

RTM statistics are no longer solicited from resource aaaa.

User Action:

None.

N72E04

NTS RTM OBJTIME CHANGED FROM time-a TO time-b FOR SESSION pri-name/sec-name.

Reason:

The RTM objective response time (OBJTIME) was changed for the session indicated as the reported boundary values did not correspond to the class values.

System Action:

RTM objectives may not agree with class values.

User Action:

Investigate any other means by which the RTM boundary values may have been altered, for example, NEWS.

N72E05

**RTM CLASS: rtmclass OBJ %: objt ACT %: actt TOTAL TRANS TIME:
nnnnnnnn TRANS COUNT: mmmmmmmm**

Reason:

This message is the reference for the Event Distribution Services event for RTM objectives not being met for a particular session at session end. It describes the rtmclass for the session, the objective response time objt, the actual response time actt, the TOTAL TRANSACTION TIME nnnnnnnn and the TOTAL TRANSACTION COUNT mmmmmmmm.

System Action:

None.

User Action:

None.

N72F01

REQUEST IGNORED. RESOURCE rsname UNKNOWN TO NTS.

Reason:

A specific NTS trace request is ignored as the resource name specified was unknown to NTS.

System Action:

The request is ignored.

User Action:

Determine the status of the resource, check the name entered, and retry the operation if necessary.

N72F02

TRACING ALREADY ACTIVE FOR REQUESTED RESOURCE.

Reason:

An STRACE start request has been entered but the requested resource is already being traced.

System Action:

The request is ignored.

User Action:

None.

N72F03

MAXIMUM NUMBER OF RESOURCES TRACED/EXCEPTED - REQUEST IGNORED.

Reason:

A specific STRACE request to start or stop tracing was entered but the maximum number of resources which can be traced, or excluded from tracing, has been reached.

System Action:

The request is rejected.

User Action:

Determine whether the SYSPARMS NTSMAXTR is sufficient.

N72F04

REQUEST IGNORED - PREVIOUS REQUEST AWAITING VTAM RESPONSE.

Reason:

A specific STRACE request has been entered but cannot be actioned as a previous request involving the same resource is awaiting a response from VTAM. Until the response arrives the resource trace status is unknown.

System Action:

The request is rejected.

User Action:

Retry the request.

N72F05**start/stop RESOURCE TRACE REQUEST ACCEPTED. ACCOUNTING ACTIVE****Reason:**

A request to start or stop tracing a particular resource has been accepted by NTS. However actual tracing of the resource continues as accounting data is being collected.

System Action:

None.

User Action:

None.

N72M01**LOC SAW=locsaw REM SAW=remsaw ACT SAW=actsaw****Reason:**

This message is displayed as a result of a SHOW ISR=NTS OPTIONS command issued from OCS. It indicates the status of the ISR NTS conversation between SOLVE systems that are potentially sharing session awareness data with the local SOLVE system.

Fields in message indicate:

LOC SAW - The status of LOCAL session awareness

REM SAW - The status of REMOTE session awareness.

ACT SAW - The actual status of the sharing of session awareness data.

Where each status may be:

NO - Session awareness is not available and the link is started via an ISR ENABLE=NTS LINK=link OPTIONS SAW=NO command.

YES - Session awareness is started both inbound and outbound via an ISR ENABLE=NTS LINK=link OPTIONS SAW=YES command.

IN - Session awareness is started inbound via an ISR ENABLE=NTS LINK=link OPTIONS SAW=INBOUND command.

OUT - Session awareness is started outbound via an ISR ENABLE=NTS LINK=link OPTIONS SAW=OUTBOUND command.

N/A - Session awareness is not available or the link is not started.

System Action:

None.

User Action:

None.

N73001

ISR CONTACT ESTABLISHED. LINK=linkname DOMAIN=domain.

Reason:

Following a LINK START between two SOLVE systems the ISR components in each system have established contact on the specified link.

System Action:

Other SOLVE components that use ISR services, for example NTS and/or AOM, may begin sending to, and requesting data from, the equivalent components in the other SOLVE system.

User Action:

None.

N73002

ISR CONTACT SUSPENDED. LINK=linkname DOMAIN=domain.

Reason:

ISR contact with the domain shown over linkname has been suspended due to the remote SOLVE system becoming unavailable (for example after LINK STOP request, or failure of the a remote SOLVE system).

System Action:

Processing continues without ISR-ISR transfers.

User Action:

Determine the reason for the suspension. If necessary, re-start the link to the remote SOLVE system.

N73003**ISR STORAGE SHORTAGE.****Reason:**

There was insufficient storage available to ISR to process an ISR request.

System Action:

The ISR-ISR communication is terminated.

User Action:

If possible, determine the cause of the storage shortage. If necessary, re-start the ISR-ISR communication after sufficient storage becomes available for the request.

N73101**ISR DATA ERROR. LINK=linkname DOMAIN=domain****Reason:**

An internal error occurred during communications across the indicated ISR link to the indicated domain.

System Action:

The conversation is terminated.

User Action:

Contact your product support representative.

N73102**ISR DATA COMPRESSION/EXPANSION ERROR. LINK=linkname
DOMAIN=domain.****Reason:**

An internal error occurred during compression or expansion of the ISR data across the indicated ISR link from the indicated domain.

System Action:

The conversation is terminated.

User Action:

Contact your product support representative.

N73501

ISR function COMPLETED SUCCESSFULLY.

Reason:

The ISR command issued has completed successfully. The indicated function is either ALTER, ENABLE, DISABLE or RESET.

System Action:

None.

User Action:

None.

N73510

UNABLE TO PROCESS ISR COMMAND - STORAGE SHORTAGE.

Reason:

SOLVE has experienced a storage shortage while attempting to process an ISR command.

System Action:

The ISR command issued is terminated.

User Action:

Review storage allocation and requirements.

N73540

`OPTIONS ...' REQUIRES EXACTLY ONE CLASS.

Reason:

Invalid ISR command parameter usage. More than one class operand (for example NTS, AOM) has been specified with the OPTIONS... operand. The OPTIONS... operand values vary depending on the class operand specified.

System Action:

The ISR command is terminated.

User Action:

Review ISR command usage. Refer to the Command Reference for details on ISR command usage.

N73541

CLASS: class DOES NOT SUPPORT `OPTIONS ...'.

Reason:

Invalid ISR command parameter usage. The specification of both the class indicated and the OPTIONS operand is invalid.

System Action:

The ISR command is terminated.

User Action:

Review ISR command usage. See the Command Reference for details on ISR command usage.

N73542

INVALID SYNTAX IN CLASS LIST.

Reason:

Invalid ISR command parameter usage. The classlist (for example, NTS,AOM) specified contains invalid syntax.

System Action:

The ISR command is terminated.

User Action:

Review ISR command usage. See the Command Reference for details on ISR command usage.

N73543

CLASS: class IS INVALID.

Reason:

Invalid ISR command parameter usage. The class specified is invalid.

System Action:

The ISR command is terminated.

User Action:

Review ISR command usage. See the Command Reference for details on ISR command usage.

N73544

CLASS: clasval DUPLICATED IN CLASS LIST.

Reason:

Invalid ISR command parameter usage. The classlist specified contains a duplicated class value *clasval*.

System Action:

The ISR command is terminated.

User Action:

Review ISR command usage. See the Command Reference for details on ISR command usage.

N73610

LINKNAME DMN STATUS SSCP NETID L-C R-C A-C QMAX

Reason:

Heading message for SHOW ISR display. One or more N73615 messages follow. Each entry represents an ISR link from the local system to a remote system and displays information relating the link name, domain in which the remote system resides, link status, remote SSCP name, remote system network name, compaction options and the outbound queue limit.

System Action:

None.

User Action:

None.

N73611**CLASS -LOCAL STATUS- -REMOTE STATUS- -ACTUAL STATUS-****Reason:**

Heading message for the link analysis section of SHOW ISR display. One or more N73617 messages follow. Each entry represents the status of a class of conversation supported on the ISR link and displays information relating the class type (for example, PPO,NTS,NEWS,AOM) and status of the local and remote systems. Also displayed is the actual status which is an interpretation of the local and remote statuses. The interpretation of these statuses is defined by a N73612 message.

System Action:

None.

User Action:

None.

N73612**E/D SOL IN OUT E/D SOL IN OUT E/D SOL IN OUT****Reason:**

Heading message for the status and protocol analysis section of SHOW ISR display. One or more N73617 messages follow. Information is provided relating the enabled/disabled status and whether solicited messages are supported inbound and outbound, for the local and remote systems.

STATS direction ccccccccccccccccccccccccccc

Reason:

The message forms the output of the SHOW ISR STATS command where the indicated direction is either IN for inbound or OUT for outbound and ccc..ccc are link compression statistics.

System Action:

None.

User Action:

None.

N73617

--local status-- --remote status-- --actual status--

Reason:

Refer to message N73612.

System Action:

None.

User Action:

None.

N73620**INVALID LINKNAME SPECIFIED.****Reason:**

An invalid link name was specified as an operands to the SHOW ISR command.

System Action:

The SHOW ISR command is terminated.

User Action:

Issue a SHOW ISR command with no link name supplied to review existing link names.

N73621**INVALID OR UNRECOGNISED PARAMETERS ON SHOW ISR COMMAND.****Reason:**

Invalid SHOW ISR command parameter usage. Unknown or mutually exclusive parameters have been specified.

System Action:

The SHOW ISR command is terminated.

User Action:

Review SHOW ISR command usage. See the Command Reference for details on SHOW ISR command usage.

N73622**CLASS LIST HAS INVALID SYNTAX OR UNRECOGNISED CLASS NAME.****Reason:**

Invalid SHOW ISR command parameter usage. The classlist has invalid syntax or contains a class that is not one of PPO, NTS, NEWS or AOM.

System Action:

The SHOW ISR command is terminated.

User Action:

Review the SHOW ISR command usage. See the Command Reference for details on SHOW ISR command usage.

N73623

DUPLICATE PARAMETER ON SHOW ISR COMMAND.

Reason:

Invalid SHOW ISR command parameter usage. The class list contains a duplicated entry.

System Action:

The SHOW ISR command is terminated.

User Action:

Review the SHOW ISR command usage. See the Command Reference for details on SHOW ISR command usage.

N73640

INVALID SYNTAX IN CLASS LIST.

Reason:

The SHOW ISR command contains invalid operands. The class list contains invalid syntax.

System Action:

The SHOW ISR command is terminated.

User Action:

Review SHOW ISR command usage. See the Command Reference for details on the SHOW ISR command.

N73641

CLASS: class IS INVALID.

Reason:

The SHOW ISR command contains invalid operands. The class list contains the entry indicated, which is not one of PPO, NTS, NEWS and AOM.

System Action:

The SHOW ISR command is terminated.

User Action:

Review SHOW ISR command usage. See the Command Reference for details on the SHOW ISR command.

N73642

CLASS: class DUPLICATED IN CLASS LIST.

Reason:

Invalid SHOW ISR command operand usage. The classlist contains a duplicate class.

System Action:

The SHOW ISR command is terminated.

User Action:

Review SHOW ISR command usage. Refer to the *SOLVE User Reference* for details of the SHOW ISR command.

N73701

DMN CLASS ACT-DATE ACT-TIME I-MSGs I-BYTES O-MSGs O- BYTES.

Reason:

Heading message for SHOW ISRSTATS display. One or more N73702 messages follow. Each entry represents an active ISR remote link domain and the associated class and displays information relating to the statistics for this domain and class. The statistics include the start date and time, the number of inbound messages and bytes, and the number of outbound messages and bytes.

System Action:

None.

User Action:

None.

N73702

dmn class act-data act-time i-msgs i-byted o-msgs o-bytes.

Reason:

Refer to message N73701.

System Action:

None.

User Action:

None.

N73E01

NTS VSAM LOG FILEID=fileid OPEN FAILURE. NO RECORDS PROCESSED.

Reason:

The NTS database 'fileid' could not be opened.

System Action:

NTSDBMOD or SHOW SKEEP processing terminates.

User Action:

Allocate and open the appropriate fileid for the NTS database.

N73E02

VSAM ERROR ON NTSLOG, FILEID=fileid - VSAM FDBK = X"xx".

Reason:

An error occurred on the NTS database 'fileid'.

System Action:

NTSDBMOD or SHOW SKEEP processing terminates.

User Action:

Determine the cause of the error with reference to the VSAM feedback xx and retry.

N73E03

NTSDBMOD PROCESSING COMPLETED SUCCESSFULLY.

Reason:

NTSDBMOD processing has successfully completed.

System Action:

None.

User Action:

None.

N73E04**NTSDBMOD PROCESSING COMPLETED DUE TO ERROR.****Reason:**

NTSDBMOD processing terminated following an error.

System Action:

None.

User Action:

Refer to other messages issued to determine the cause of the error.

N73E05**nnnn rectype RECORDS actioned.****Reason:**

Indicates the number nnnn and record type rectype (MASTER or SESSION) records actioned (UPDATED, DELETED or READ) following an NTSDBMOD command.

System Action:

None.

User Action:

None.

N73E06**SEC NETID=secnet NAME=secname PRI NETID=prinnet
NAME=priname.****Reason:**

Informational message identifying a particular session stored on the NTS database. This message provides the two network names and resource names identifying a unique session pair for which the details in message N73E07 apply.

System Action:

None.

User Action:

None.

N73E07

SESSION KEEP COUNT IS nnn, CURRENT SESSION COUNT IS mmm.

Reason:

Specifies the session keep count limit nnn and current number mmm of session incidences found in the NTS database.

System Action:

None.

User Action:

None.

N73E08

nnnn RECORDS PROCESSED. SHOW SKEEP PROCESSING COMPLETE.

Reason:

SHOW SKEEP processing completed after selecting the number of records shown for processing.

System Action:

None.

User Action:

None.

N73E09

PROCESSING CANCELLED FOR command (ID=aaaa).

Reason:

The SHOW SKEEP or NTSDBMOD process with ID=aaaa has been cancelled via the NTSDBMOD CANCEL=aaaa command.

System Action:

None.

User Action:

None.

N73F01**NTS DATABASE, FILEID=aaaa IS INCOMPATIBLE WITH THIS RELEASE OF NTS.****Reason:**

The VSAM dataset allocated for use as the NTS Database is incompatible with this release of NTS. This will occur if a database loaded by an NTS Version 2.1 system, or earlier, is allocated for use by an NTS Version 2.2 system.

System Action:

No further I/O is performed on the NTS Database.

User Action:

Refer to message N73F02.

N73F02**RUN NTS DATABASE CONVERSION BATCH UTILITY OR DELETE AND REDEFINE THE DATABASE.****Reason:**

Refer to message N73F01.

System Action:

Refer to message N73F01.

User Action:

As specified in the message text.

N73F03**VSAM ERROR ON NTS DATABASE, FILEID=fileid - VSAM FDBK=X`xx'.****Reason:**

A VSAM error occurred during an I/O operation performed by NTS on the NTS Database. The VSAM feedback code is X`xx'.

System Action:

Discontinue I/O to the NTS Database.

User Action:

Review the integrity of the VSAM dataset allocated as the NTS Database.

N74003

NTS SNA TABLE LOAD FAILED.

Reason:

The NTS user modifiable RU, FMH, and Sense Code table failed to load during NTS initialization.

System Action:

Processing continues. An attempt is made to load the user modifiable table when session awareness is started using the SAWARE START command.

User Action:

Ensure the table is available and that it has been assembled and linked correctly. The table must be available before session awareness starts.

N74004

NTS SNA TABLE VERIFICATION FAILED.

Reason:

The user modifiable RU, FMH, and Sense Code table failed verification during NTS initialization.

System Action:

Processing continues. An attempt is made to reload the user modifiable table when session awareness is started using the SAWARE START command.

User Action:

Ensure the correct user modifiable table is available and that it has been assembled and linked correctly. The table must be corrected before session awareness starts.

N74201**REQUIRED OPERANDS MISSING.****Reason:**

An NTS command (SAWARE, STRACE, NTSMOD, NTSDDBMOD or MAISESS) has required operands missing.

System Action:

The command is rejected.

User Action:

Correct the command and retry the operation. Refer to the command help for appropriate command syntax requirements.

N74202**OPERAND *keywrđ* SPECIFIES AN INVALID VALUE.****Reason:**

An NTS command (SAWARE, STRACE, NTSMOD, NTSDDBMOD or MAISESS) contains a *keywrđ* operand which specifies a value which is not valid.

System Action:

The command is rejected.

User Action:

Correct the command and retry the operation. Refer to the command help for the appropriate command syntax requirements.

N74203**OPERAND keyword NOT RECOGNISED.****Reason:**

An NTS command (SAWARE, STRACE, NTSMOD or NTSDDBMOD) has an unrecognized operand keyword.

System Action:

The command is rejected.

User Action:

Correct the command and retry the operation. Refer to the command help for the appropriate command syntax requirements.

N74204

TRACE MONITOR REQUEST ACCEPTED.

Reason:

An STRACE MONITOR request has been accepted.

System Action:

Trace monitoring commences for the resource nominated on the STRACE command.

User Action:

None.

N74205

TRACE MONITORING TERMINATED.

Reason:

NTS trace monitoring has been terminated.

System Action:

Trace message delivery ceases for the user.

User Action:

None.

N74206

TRACE MONITORING NOT ACTIVE - REQUEST IGNORED.

Reason:

A request to end NTS trace monitoring has been ignored as tracing is not active for the user.

System Action:

The request is ignored.

User Action:

None.

N74207**SESSION AWARENESS ALREADY ACTIVE.****Reason:**

An attempt was made to start session awareness processing but it was found to be already active.

System Action:

The request is ignored.

User Action:

None.

N74208**SESSION AWARENESS NOT ACTIVE.****Reason:**

An attempt was made to stop session awareness processing but it was found to be already inactive.

System Action:

None.

User Action:

None.

N74209**CONFLICTING OPERANDS ENTERED.****Reason:**

Conflicting operands were entered on an NTS command, either SAWARE, STRACE, NTSMOD, NTSDBMOD or MAISESS.

System Action:

The command is rejected.

User Action:

Correct the command and retry the operation. Refer to the command help for the appropriate command syntax requirements.

N74210

SESSION AWARENESS LOGGING REQUEST ACCEPTED

Reason:

The SAWARE command LOG request has been accepted and will be completed when the next session is processed on the NTS output queue.

System Action:

None.

User Action:

None.

N74211

NTS DATABASE FAILED TO OPEN.

Reason:

NTS failed to open the NTS database in response to a SAWARE LOG=YES command.

System Action:

NTS will continue processing without attempting I/O to the Database.

User Action:

Review the procedure for enabling NTS to connect to the Database. Refer to message N74H04.

N74212

REQUEST IGNORED. LOCAL VTAM TRACE SESSION IS UNAVAILABLE.

Reason:

A request to trace a resource via an STRACE command was entered, however, session awareness was started without the VTAM interface, that is, using the SAWARE START NOVTAM command.

System Action:

The request is ignored.

User Action:

If it is necessary to trace resources then session awareness must be re-started without the NOVTAM option.

N74301**REQUIRED OPERANDS MISSING.****Reason:**

An NTS command, NTSMOD, NTSMOD, MAISESS or SHOW SKEEP, has required operands missing.

System Action:

The command is rejected.

User Action:

Correct the command and retry the operation. Refer to the command help for the appropriate command syntax requirements.

N74302**OPERAND keyword SPECIFIES AN INVALID VALUE.****Reason:**

The value specified for the operand shown in the message is invalid.

System Action:

The command is rejected.

User Action:

Correct the command and retry the operation. Refer to the command help for the appropriate command syntax requirements.

N74303**OPERAND keyword NOT RECOGNISED.****Reason:**

The operand shown in the message was not recognized for the command NTSMOD, NTSDBMOD, MAISESS or SHOW SKEEP.

System Action:

The command is rejected.

User Action:

Correct the command and retry the operation. Refer to the command help for the appropriate command syntax requirements.

N74304

command OPERANDS MISSING OR INVALID.

Reason:

Required NTSDBMOD, NTSMOD, MAISESS or SHOW SKEEP operands are missing, or are invalid.

System Action:

The command is rejected.

User Action:

Correct the command and retry the operation. Refer to the command help for the appropriate command syntax requirements.

N74305

INSUFFICIENT STORAGE TO PROCESS command REQUEST.

Reason:

There was insufficient storage to process a SHOW SKEEP or NTSDBMOD SKEEP request.

System Action:

Command processing terminates.

User Action:

Investigate the storage problem.

N74306

command SKEEP REQUEST ACCEPTED.

Reason:

A SHOW SKEEP or NTSDBMOD SKEEP request has been accepted.

System Action:

Processing of the command commences.

User Action:

None.

N74307**NO SESSIONS FOUND.****Reason:**

An NTSMOD command found no sessions of the type requested to select for modification.

System Action:

None.

User Action:

None, if necessary correct the session and retry the operation.

N74308**nnnn SESSIONS PROCESSED.****Reason:**

Indicates the number, nnnn, of active sessions processed by an NTSMOD command.

System Action:

None.

User Action:

None.

N74309**NTSDBMOD ID aaaa NOT FOUND.****Reason:**

The NTSDBMOD process with ID=aaaa is not currently executing. Because of the asynchronous nature of the NTSDBMOD command, it is possible for several concurrent invocations of the command to exist. Attempts to issue NTSDBMOD CANCEL=aaaa commands for NTSDBMOD processes not currently executing will result in this message.

System Action:

None.

User Action:

Issue SHOW NTSDBMOD command to show processes currently executing.

N74310

CONFLICTING OPERANDS SPECIFIED.

Reason:

The operands specified on an NTSDBMOD or SHOW SKEEP command are mutually exclusive.

System Action:

None.

User Action:

Correct the command and retry the operation. Refer to the command help for the appropriate command syntax requirements.

N74311

RTM DATA NOT AVAILABLE FOR RESOURCE `resname` IN NETWORK `netname`.

Reason:

An NTSMOD RECORD=RTM command was issued. An attempt was made to obtain the RTM data for the indicated resource in the indicated network, however the data was not available either in the remote or local system.

System Action:

None.

User Action:

Ensure the resource exists in the indicated network and the required RTM data is available in the domain where the resource resides. If the data is available, then ensure the classes for RTM data collection are the same in both the remote and local NTS and the data is being distributed correctly with the necessary ISR connections for NTS Single Image.

N74312**ACCOUNTING DATA NOT AVAILABLE FOR SESSION
netid1.rsc1/netid2.rsc2****Reason:**

An NTSMOD RECORD=ACC command was issued. An attempt was made to obtain the accounting data for the network qualified resource pair indicated, however the data was not available either in the remote or local system.

System Action:

None.

User Action:

Ensure the resources exist in the indicated networks and the required accounting data is available for the indicated session in the source (primary) domain. If the data is available, then ensure the classes for accounting data collection are correct and the same in both the remote and local NTS and the data is being distributed correctly with the necessary ISR connections for NTS Single Image.

N74313**RTM SOLICITATION INITIATED FOR ALL LUS ON PU puname.****Reason:**

An NTSMOD RECORD=RTM command was issued. The RTM data is in the process of being obtained from either a remote or local NTS for all the LUs connected to the indicated PU.

System Action:

None.

User Action:

None.

N74314

RTM SOLICITATION INITIATED FOR LU resource.

Reason:

An NTSMOD RECORD=RTM command was issued. The RTM data is in the process of being obtained from either a remote or local NTS for the indicated LU.

System Action:

None.

User Action:

None.

N74315

RTM SOLICITATION NOT INITIATED. INVALID RESOURCE TYPE.

Reason:

An NTSMOD RECORD=RTM command was issued, the request was for a resource other than a PU or an LU. This command is valid only for an PU or LU resource.

System Action:

The request is ignored.

User Action:

Correct the command and retry the operation. Refer to the command help for the appropriate command syntax requirements.

N74316**UNKNOWN REFERENCE NETWORK.****Reason:**

An NTSDBMOD REFNET= command was issued. The network indicated on the command is unknown to NTS.

System Action:

The command is ignored.

User Action:

Ensure the REFNET specified on the command is valid. If it is valid then ensure that this NTS is connected through ISR and established correctly for NTS Single Image processing. If necessary, correct and retry.

N74401**INSUFFICIENT STORAGE FOR REQUEST.****Reason:**

A DEFCLASS, REPCLASS or DELCLASS command could not be processed due to a lack of storage.

System Action:

The command is rejected.

User Action:

Investigate the storage problem.

N74402**REQUIRED OPERANDS MISSING.****Reason:**

Operands required on a DEFCLASS, REPCLASS or DELCLASS command were missing.

System Action:

The command is rejected.

User Action:

Correct the command and retry the operation. Refer to the command help for the appropriate command syntax requirements.

N74403

OPERAND keyword SPECIFIES AN INVALID VALUE.

Reason:

A DEFCLASS, REPCLASS or DELCLASS command specified a value which was invalid on the indicated operand.

System Action:

The command is rejected.

User Action:

Correct the command and retry the operation. Refer to the command help for the appropriate command syntax requirements.

N74404

OPERAND keyword NOT RECOGNISED.

Reason:

A DEFCLASS, REPCLASS or DELCLASS command specified an operand which was invalid.

System Action:

The command is rejected.

User Action:

Correct the command and retry the operation. Refer to the command help for the appropriate command syntax requirements.

N74405

DEFCLASS NAME *clsname* ALREADY DEFINED - NOT ADDED.

Reason:

A DEFCLASS command specified a name *clsname* which was an existing class name.

System Action:

The command is rejected.

User Action:

Use REPCLASS or change the class name on the DEFCLASS. Correct the command and retry the operation. Refer to the command help for the appropriate command syntax requirements.

N74406**DEFCLASS NAME clsname NOT DELETED - NOT DEFINED.****Reason:**

A DELCLASS command specified a class name which was not found.

System Action:

The command is ignored.

User Action:

Correct the classname and retry.

N74407**type CLASS NAME clsname actioned.****Reason:**

An NTS class definition of the type (SESSION, SAW or RTM) and name shown, was actioned (DEFINED, REPLACED or DELETED).

System Action:

None.

User Action:

None.

N74408**CONFLICTING OPERANDS - COMMAND IGNORED.****Reason:**

A DEFCLASS or REPCLASS command specified conflicting operands.

System Action:

The command is rejected.

User Action:

Correct the command and retry the operation. Refer to the command help for the appropriate command syntax requirements.

N74409

SESSION CLASS WITH THESE ATTRIBUTES ALREADY EXISTS - COMMAND IGNORED.

Reason:

An attempt was made to add a session class but the class attributes were identical to an existing session class.

System Action:

The command is rejected.

User Action:

Correct and retry.

N74501

INSUFFICIENT STORAGE TO PROCESS CNM REQUEST.

Reason:

NTS could not send a CNM request due to insufficient storage.

System Action:

CNM request not sent.

User Action:

Investigate the storage problem.

N74502

REQUEST QUEUED - NEWS ACB NOT OPEN.

Reason:

An SAWARE or STRACE command with the QUEUE operand specified has been issued when the CNM ACB is not open.

System Action:

NTS will queue the command to be executed after the CNM ACB has been opened.

User Action:

Open the CNM ACB via the \$SN CNM parameter group or issue the CNM START command.

N74503**REQUEST REJECTED - SESSION AWARENESS IS NOT ACTIVE.****Reason:**

An attempt was made to issue a command requiring session awareness to be active (eg. SAWARE STOP, STRACE) while session awareness is inactive.

System Action:

None.

User Action:

Start session awareness.

N74702**NTS ACB IS CLOSED - NO ACTIVE NTS DATA AVAILABLE.****Reason:**

Response to the STATUS command, indicating that the NTS VTAM ACB is closed, and so no active data is available for display.

System Action:

None.

User Action:

None.

N74703**SESSION AWARENESS PROCESSING IS status - LOGGING IS status.****Reason:**

Response to the STATUS command, giving the status of session awareness processing and database logging.

System Action:

None.

User Action:

None.

N74704

SESSION TRACE PROCESSING IS status.

Reason:

Response to the STATUS command, giving the status of session trace processing.

System Action:

None.

User Action:

None.

N74705

NTS ACB NAME CANNOT BE CHANGED - ACB IS OPEN.

Reason:

An attempt was made to modify the NTS ACB name but the ACB was currently open.

System Action:

Command is rejected.

User Action:

Stop session awareness before changing the NTS ACB name.

N74706

MODCB FOR ACB FAILED, R15="xx", RO="xx".

Reason:

A SYSPARM NTSACBNM command entered to change the NTS ACB name failed on a MODCB macro with the return codes shown.

System Action:

None.

User Action:

Determine the reason for failure from the MODCB return codes and rectify the problem.

N74707**NTSACCT/NTSRSTAT VALUE CAN ONLY BE SET TO "NO" WHILE SESSION AWARENESS IS ACTIVE.****Reason:**

An attempt was made to change the global NTS accounting or resource statistics option while session awareness was active, to a value other than 'NO'.

System Action:

Command is rejected.

User Action:

Stop session awareness to change the SYSPARM NTSACCT value to other than 'NO'.

N74708**SESSION AWARENESS PROCESSING (NO VTAM MODE) IS *status* - LOGGING *status*.****Reason:**

Response to the STATUS command, giving the status of session awareness processing and database logging. Session Awareness is active in NOVTAM mode.

System Action:

None.

User Action:

None.

N74801

**SESSION PRI-NAME SEC-NAME COSNAME ER VR TP CL TY SAWCLASS
RTMCLASS**

Reason:

This is the heading line for a SHOW DEFCLASS display. Details follow in one or more N74803 messages which contain information on the defined DEFCLASS' including:

SESSION - defined session class name.

PRI-NAME - primary session partner name

SEC-NAME - secondary session partner name

COS - Class-of-Service name (COS)

ER - session Explicit Route number

VR - session Virtual Route number

TP - Transmission Priority

CL - session class (SD/XD/XN)

TY - session type (LL/SL/SP/SS)

SAWCLASS - the session awareness class associated with this class

RTMCLASS - the RTM class associated with this class

Also displayed is one or more N74802 messages which is a heading line for further information from the command. Details follow in one or more N74831 messages which contain:

SOURCE - the source of the session (LOCAL/REMOTE)

SSCPNAME - for a remote session, the source

SSCP APPNCOS - the APPN Class-of-Service

APPNTP - the APPN Transmission Priority

Note: An asterisk indicates all of the options for the display are acceptable.

N74806

STRACE --NAME--TYPE STATUS---NAME--TYPE STATUS---NAME-- TYPE STATUS

Reason:

Heading message for a SHOW STRACE display. One or more messages N74807 follow with details on current NTS trace activity including:
NAME - Name of a specific resource, *GLOBAL* for global tracing.
TYPE - Type of resource being traced (LU/PU/CDRM).
STATUS - Actual tracing status, one of:
ACTIVE - Tracing active
INACT - Tracing inactive
ACT/PND - Activation pending; the requested resource may not be active. When the resource is available, VTAM will send trace data to NTS.
ACT/A - Accounting tracing only; trace data is discarded.
ACT/P - Tracing active; partial trace data retained.
ACT/C - Tracing active; complete trace data retained.
ACT/A/P - Tracing active; partial trace data and accounting data retained.
ACT/A/C - Tracing active; complete trace data and accounting data retained.
INACT/A - Accounting tracing; global tracing selected.

INVALID OPERANDS SPECIFIED ON SHOW DEFCLASS COMMAND.

Reason:

Additional operands found on a SHOW DEFCLASS command were found to be invalid.

System Action:

The command is rejected.

User Action:

Correct the command and retry the operation. Refer to the command help for the appropriate command syntax requirements.

N74810

INVALID OPERANDS SPECIFIED ON SHOW STRACE COMMAND.

Reason:

Additional operands found on a SHOW STRACE command were found to be invalid.

System Action:

The command is rejected.

User Action:

Correct the command and retry the operation. Refer to the command help for the appropriate command syntax requirements.

N74811**SAWBUF SAWENT TRCBUF TRCENT LOGGED READS ADDS UPDS DELS****Reason:**

Heading message for a SHOW NTSSTATS display. Following this message, two N74812 messages are displayed. The first shows statistics since the last time this command was issued, the second shows the totals since NTS was started. N74812 includes statistics on the number of session awareness and session trace buffers received from VTAM since session awareness was started, the number of entries processed from these buffers, and the statistics concerning the logging of session data to the NTS database on session end. Details include:

Type - Interval COUNTS or TOTALS.

SAWBUF - Number of session awareness buffers processed.

SAWENT - Number of session awareness entries that were processed from buffers received from VTAM.

TRCBUF - Number of session trace buffers processed.

TRCENT - Number of trace PIU entries that were processed from the buffers received from VTAM.

LOGGED - Number of session incidences that were logged to the NTS database.

READS - Number of records read from the NTS database.

ADDS - Number of records added to the NTS database.

UPDS - Number of records updated on the NTS database.

DELS - Number of records deleted from the NTS database.

System Action:

USERID NTSVIEW D/B NCLBASE NCLPROC NCLID

Reason:

Heading message for SHOW NTSUSER display. One or more N74819 messages follow, each representing a different concurrent user of NTS. Each message contains:

USERID - The user id of the active user.

NTSVIEW - Details of the current NTS view for the user.

D/B - whether the user is connected to the NTS database.

NCLBASE, NCLPROC, NCLID - the current NTS NCL procedure executing.

System Action:

None.

User Action:

None.

N74819

userid ntsview d/b nclbase nclproc nclid

Reason:

Refer to message N74818.

System Action:

None.

User Action:

None.

N74820**USERID COMMAND ID READ-CNT****Reason:**

Heading message for SHOW NTSDBMOD display. One or more N74821 messages follow, each representing a currently executing invocation of a NTSDBMOD or SHOW SKEEP command. Each entry provides:
USERID - details of the userid that issued the command.
COMMAND - the command type (NTSDBMOD/SHOW SKEEP)
ID - the process identifier.
READ-CNT - the number of records in the NTS database read by this process up to the time the SHOW NTSMOD command was issued.

System Action:

None.

User Action:

None.

N74821**userid command id read-cnt****Reason:**

Refer to message N74820.

System Action:

None.

User Action:

None.

N74822

nnnn ENTRIES DISPLAYED.

Reason:

Following any SHOW DEFCLASS command this message ends the display and provides the number nnnn of NTS class entries processed. Following a SHOW NTSDBMOD command nnnn provides the number of currently executing invocations of the NTSDBMOD and SHOW SKEEP commands.

System Action:

None.

User Action:

None.

N74831

source sscpname appncos appntp

Reason:

Refer to N74801.

System Action:

None.

User Action:

None.

N74901

REQUESTED RESOURCE NOT ACTIVE OR DATA NOT AVAILABLE.

Reason:

A SHOW NTS command referred to a resource or session which was not active, or requested a display for session data which was not available for the particular session.

System Action:

None.

User Action:

None.

N74902**INVALID OPERAND OR VALUE SPECIFIED ON SHOW NTS COMMAND.****Reason:**

An operand specified on the SHOW NTS command was invalid.

System Action:

The command is rejected.

User Action:

Correct the command and retry the operation. Refer to the command help for the appropriate command syntax requirements.

N74904**INVALID OR CONFLICTING OPERANDS ON SHOW NTS COMMAND.****Reason:**

Operands on the SHOW NTS command were invalid or requested conflicting information.

System Action:

Command is rejected.

User Action:

Correct the command and retry the operation. Refer to the command help for the appropriate command syntax requirements.

N74905***END*****Reason:**

This message delimits a SHOW NTS display of multiple lines.

System Action:

None.

User Action:

None.

N74906**SUBAREA# TYPE --NAME-- --NETID- ACT-RESC ACT-PU ACT-LU****Reason:**

Heading message for SHOW NTS resource type display, or a subheading for the SHOW NTS (no operands) display. Details in message N74907 provide the following:

SUBAREA - The subarea number of the resource.

TYPE - The resource type of the subarea (SSCP or NCP). This value may be unknown (UNKN) due to NTS being aware of this subarea (for example, via a ROUTE-TEST), but NTS does not know the resource type.

NAME - The VTAM name of the resource.

NETID - The network for the subarea.

ACT-RSC - The total number active resources known to NTS.

ACT-PU - The total number of PUs known to NTS.

ACT-LU - The total number of LUs known to NTS.

System Action:

None.

User Action:

None.

N74907**subarea# type --name-- ---netid- act-resc act-pu act-lu****Reason:**

Refer to message N74906.

System Action:

None.

User Action:

None.

N74908**TYPE OF SESSION: SSCP-SSCP SSCP-PU SSCP-LU LU-LU****Reason:**

Heading message for N74009 detail message produced by the SHOW NTS command. Total numbers of SSCP-SSCP, SSCP-PU, SSCP-LU and LU-LU sessions currently active to NTS are displayed.

System Action:

None.

User Action:

None.

N74909**ACTIVE SESSIONS: sscp-sscp# sscp-pu# sscp-lu# lu-lu#****Reason:**

Detail message following N74908 gives session counts as described for message N74908.

System Action:

None.

User Action:

None.

N74911

**RESOURCE TP PRI# SEC# RESOURCE TP PRI# SEC# RESOURCE TP
PRI# SEC#**

Reason:

The message displays the headings for SHOW NTS resource display. It follows message N74907 that identifies an subarea, and is followed by one or more N74912 messages with the following details of the resources selected by the command:

RESOURCE

Displays the name of the resource.

TP

Identifies the type of resource: AL (alias), LU, LS (ALS), PU, or SS (SSCP).

PRI#

Displays the number of sessions where the resource is the primary session partner.

SEC#

Displays the number of sessions where the resource is the secondary session partner.

System Action:

None.

User Action:

None.

N74912

resource typ pri# sec# resource typ pri# sec# resource typ pri# sec

Reason:

Refer to N74911.

System Action:

None.

User Action:

None.

N74914

**PRI-NAME SUBA# ELEM# SEC-NAME SUBA# ELEM# START-TIME-DATE
ITR FTR**

Reason:

The message displays the headings for the SHOW NTS session display. One or more N74915 messages follow to provide details on the required session.

PRI-NAME

Identifies the primary session partner.

SEC-NAME

Identifies the secondary session partner.

SUBA# and ELEM#

Identify the network subarea (SUBA#) and element address (ELEM#) of both session partners.

START-TIME-DATE

Displays the start time and date for the session.

ITR and FTR

Display the current number of trace entries on the initial (ITR) and final (FTR) trace queues.

System Action:

None.

User Action:

None.

N74915

pri-nm pri-sub# pri-el# sec-nm sec-sub# sec-el# time date itrc# ftrc#

Reason:

Refer to message number N74914 for description.

System Action:

None.

User Action:

None.

N74916

PRI-NAME SEC-NAME AC-START I-BYTE I-CNT I-AVG O-BYTE O- CNT O-AVG

Reason:

Heading message for a SHOW NTS session accounting display. Details follow in N74917 messages which contain the primary and secondary session partner names (PRI-NAME and SEC-NAME), the time accounting commenced for the session (AC-START), the inbound and outbound byte counts (I-BYTES and O-BYTES), PIU counts (I-CNT and O- CNT) and average PIU lengths (I-AVG and O-AVG).

System Action:

None.

User Action:

None.

N74917

pri-name sec-name ac-start i-byte i-cnt i-avg o-byte o-cnt o-avg

Reason:

Information line for the SHOW NTS session accounting display. Refer to message number N74916 for a description of these fields.

System Action:

None.

User Action:

None.

N74918

**PRI-NAME SEC-NAME TYPE SAWCLASS COSNAME ER RE VR TP LG AC
ITRC FTRC**

Reason:

Heading line for a SHOW NTS session class display. Details follow in messages N74919 which contain:

PRI-NAME - The primary session partner name.

SEC-NAME - The secondary session partner name.

TYPE - Session type (SDOM=same domain, XDOM=cross domain, XNET=cross net, DISC=disconnected).

SAWCLASS - session awareness class name for the session.

COSNAME - Class of service entry name for the session.

ER - The explicit route.

RE - The reverse explicit route (RER).

VR - The virtual route.

TP - The transmission priority.

LG - Log option (N=no, A=All, S=Summary, E=Error, D=data)

AC - Accounting option (Y=Yes, N=No)

ITRC, FTRC - The requested depth of the initial (ITRC) and final (FTRC) trace queues.

System Action:

None.

User Action:

None.

N74919

**pri-name sec-name type sawclass cosname er rer vr tp log acct itrc
ftrc**

Reason:

Information line for the SHOW NTS session class display. Refer to message number N74918 for a description of the fields.

System Action:

None.

User Action:

None.

N74920

OSA-NAME DSA-NAME OSA-ADDR DSA-ADDR VR ER RER SESSIONS

Reason:

Heading for SHOW NTS VR/ER or VR/ER= display. One or more N74921 entries follow, each representing a specific explicit or virtual route stage. Each entry contains:

OSA-NAME, OSA-ADDR - The origin subarea name and network address.

DSA-NAME, DSA-ADDR - The destination subarea name and network address.

ER - Explicit route number.

SESSIONS - The total number of sessions active on the displayed virtual or explicit route.

If the SHOW NTS VR command is issued the the following additional information is displayed:

VR - Virtual route number.

RER - Reverse explicit route number.

System Action:

None.

User Action:

None.

N74921

osa-name dsa-name osa-addr dsa-addr vr er rer sessions

Reason:

Information line for the SHOW NTS session class display. Refer to message number N74920 for a description of the fields.

System Action:

None.

User Action:

None.

N74922**NETWORK SSCPS PUS LUS XN-LUS XN-SSCPS SESSIONS****Reason:**

The message displays the headings for the SHOW NTS display when no operands were specified. One or more N72922 messages follow, one for each network known to this NTS. If a remote network is inactive (for example, there is no active configured ISR link), the counter fields display "-".

NETWORK

Displays the network name.

SSCPS

Displays the total number of SSCPs in this network of which NTS is aware.

PUS

Displays the total number of PUs in the network of which NTS is aware.

LUS

Displays the total number of LUs in the network of which NTS is aware.

XN-LUS

Displays the total number of cross network LUs in the network of which NTS is aware.

XN-SSCPS

Displays the total number of cross network SSCP sessions in the network of which NTS is aware.

SESSIONS

Displays the total number of sessions in the network of which NTS is aware.

System Action:

None.

User Action:

None.

N74923

network sscps pus lus xn-lus xn-sscps sessions

Reason:

Information line for the SHOW NTS session class display. Refer to message number N74922 for a description of the fields.

System Action:

None.

User Action:

None.

N74924

NETWORK SPECIFIED IS NOT KNOWN TO NTS.

Reason:

A SHOW NTS command requested data for a specific network using the NETID= operand. This network is not known to NTS.

System Action:

The command is ignored.

User Action:

Correct the NETID operand and retry. Issue a SHOW NTS command for information on the networks that are known to NTS at this time. If the required network is not available, then ensure the data is being shared correctly between NTS systems for NTS Single Image by examining the ISR links and/or the status of the NTS in the required network.

N74A01

INVALID USE OF &NTSREAD, NO CURRENT &NTSVIEW ESTABLISHED.

Reason:

An &NTSREAD statement was issued but no current &NTSVIEW was found.

System Action:

The procedure is terminated.

User Action:

Issue the appropriate &NTSVIEW before an &NTSREAD statement.

N74A02**NTSREAD OPTIONS CONFLICT WITH THE TYPE OF &NTSVIEW ESTABLISHED.****Reason:**

The options specified on an &NTSREAD statement conflict with the type of NTSVIEW established.

System Action:

Procedure is terminated.

User Action:

Check options on the &NTSREAD and/or the &NTSVIEW.

N74A03**SESSION AWARENESS IS NOT ACTIVE.****Reason:**

Placed in &SYSMSG when an &NTSVIEW is attempted for active data but session awareness has not been started.

System Action:

Processing continues.

User Action:

None.

N74A04**HISTORY FILE IS NOT AVAILABLE.****Reason:**

Placed in &SYSMSG when an &NTSREAD for history is requested but no NTS database is available.

System Action:

Processing continues.

User Action:

None.

N74A05

VSAM ERROR ON NTSLOG, FILEID=fileid - VSAM FDBK = X"xx".

Reason:

Placed in &SYSMSG when &NTSREAD experiences an error on the NTS database.

System Action:

Processing continues.

User Action:

Determine the cause of the failure with reference to the VSAM feedback xx.

N74G01

+0000 xxxxxxxx xxxxxxxx xxxxxxxx xxxxxxxx *cccccccccccccccc*

Reason:

This message is used to provide a hex/character dump display of an APPN Route Selection Control Vector. The RSCV is used to produce the APPN session route display in NTS. Refer to message TSAR10 for further details. The following fields are shown:

+0000 describes the offset (in hexadecimal) of this part of the display.

xxxxxxx contains a hexadecimal dump of this part of the display.

cccccccccccccccc contains a character dump of this part of the display.

System Action:

None.

User Action:

None.

N74G02**tg# cpnetid cpname tgtype isl****Reason:**

This message is used to return APPN session route information to an NCL procedure following an &NTSREAD verb for an &NTSVIEW TYPE=APPNRSCV. The message describes the session route through the network. This message appears once for each APPN node on the session path. The following fields are shown:

tg# The TG# of the Transmission Group connecting the target node

cpnetid The Network Id of the target node

cpname The Node Name of the target node

tgtype The transmission group type of the transmission group (APPN, VRTG or ICHG)

isl 'Y' if the link represents an intersubnetwork link, else 'N'

System Action:

None.

User Action:

None.

N74H01**INSUFFICIENT STORAGE.****Reason:**

Insufficient storage was available to process the *NTSVIEW NCL* statement.

System Action:

None.

User Action:

Review storage allocation and usage.

N74H02

INVALID INDEX OR VIEW PROGRESSION.

Reason:

An attempt was made to set a new &NTSVIEW using the index parameter, however the progression from the current view to the next one is invalid.

System Action:

&NTSVIEW fails with RETCODE 8.

User Action:

Contact your product support representative.

N74H03

SESSION AWARENESS IS NOT ACTIVE

Reason:

No active session data is available because session awareness has not initialized successfully.

System Action:

None.

User Action:

The Customizer parameter group SAW controls the initial activation of session awareness using the SAWARE command and, in Update mode, can be used to control session awareness through the Currently Active field.

Review the Initialization Log for the SAW parameter group to determine the status. If necessary, set the Currently Active field to YES and press F6 (Action).

Note: The CNM interface is a prerequisite for activation of Session Awareness. Review the CNM parameter group to ensure CNM has started.

N74H04**HISTORY FILE IS NOT AVAILABLE.****Reason:**

NTS has not been connected to the NTS Database.

System Action:

None.

User Action:

The VSAM dataset acting as the NTS Database must be allocated and opened before NTS can access the database.

N74H05**NO NTS DATA IS AVAILABLE.****Reason:**

Neither active or history session data is available, that is. session awareness has not been activated and NTS is not connected to the NTS database.

System Action:

None.

User Action:

The VSAM dataset acting as the NTS database must be allocated and opened before NTS can access the database. This gives NTS access to history data. To start session awareness, use the SAWARE START command. This gives NTS access to active data.

N74H06

REFERENCE NETWORK IS UNKNOWN.

Reason:

The specified reference network is not known to NTS. Data for this network is not available.

System Action:

None.

User Action:

Ensure the correct NETID supplied is supplied. If it is, check that session data is being shared by NTS Single Image.

For information about sharing session data using NTS Single image, see the *Administration Guide*.

N74H07

INVALID DATE OR TIME SPECIFIED, explanation

Reason:

An invalid date and/or time has been specified on an &NTSVIEW verb.

System Action:

The NCL procedure in terminated.

User Action:

Correct the NCL and retry the operation.

N75001

NTS ACB NOW CLOSED.

Reason:

The NTS ACB has been closed as NTS has been stopped.

System Action:

None.

User Action:

None.

N75002**CNMRU-type REQUEST ACCEPTED BY VTAM.****Reason:**

The NTS CNMRU request type CNMRU-type has been accepted for processing by VTAM.

System Action:

None.

User Action:

None.

N75003**CNMRU-type REQUEST REJECTED BY VTAM, SENSE sense.****Reason:**

The CNMRU request indicated in the message and used to control NTS processing was rejected by VTAM with the sense code shown.

System Action:

Updates NTS status as appropriate for the request.

User Action:

Investigate the cause of the rejection.

N75101**USER NOT AUTHORISED FOR NTS REQUEST.****Reason:**

An NTS request was targeted to be sent across the CNM interface but the originating user was not authorized for that type of request.

System Action:

Request is rejected.

User Action:

None. If this function is required, refer the problem to your systems administrator to review your command authority.

N75102

NTS SESSION AWARENESS PROCESSING NOT SUPPORTED BY THIS LEVEL OF VTAM.

Reason:

An attempt was made to start NTS session awareness processing but the system VTAM level was not at a level that supports the function.

System Action:

Request is rejected.

User Action:

Check that the VTAM level of the system is Version 2.2 or greater.

N75103

SESSION AWARENESS PROCESSING IS ALREADY ACTIVE.

Reason:

A request was made to start NTS session awareness processing but it was already active.

System Action:

Request is ignored.

User Action:

None.

N75104

SESSION AWARENESS PROCESSING SESSION START FAILURE.

Reason:

A request to start NTS processing failed as the session between NTS and VTAM did not start. An accompanying message provides the reason for failure.

System Action:

NTS remains inactive.

User Action:

Determine reason for failure. Correct and retry.

N75105**SESSION AWARENESS PROCESSING IS NOT ACTIVE.****Reason:**

An NTS request requiring that session awareness be started could not be processed as session awareness was not active.

System Action:

Request is rejected.

User Action:

Start session awareness and retry the request.

N75106**SESSION TRACE PROCESSING SESSION START FAILURE.****Reason:**

NTS has started session awareness processing but the VTAM session used to collect trace data failed to start.

System Action:

NTS processing continues with trace functions disabled.

User Action:

Determine the cause of error with reference to the SYSPARMS NTSACBNM= parameter.

N75107**DEALLOCATE PIU TRACE BUFFERS REJECTED - TRACING IS ACTIVE.****Reason:**

An attempt was made to deallocate the VTAM trace buffers while NTS tracing was active.

System Action:

Request is rejected.

User Action:

Stop all tracing, and if necessary turn global accounting off, before retrying the request.

N75108

REQUESTED FUNCTION ALREADY ENABLED OR IN PROGRESS.

Reason:

An NTS request was received to start a function which was already enabled, or in the process of starting.

System Action:

Request is ignored.

User Action:

None.

N75109

SAW TERMINATION IN PROGRESS.

Reason:

A stop session awareness processing request has been detected by NTS and shutdown is in progress.

System Action:

NTS terminates when all log activity ceases.

User Action:

None.

N75110

REQUEST INVALID - SAW PROCESSING IS ACTIVE.

Reason:

A request requiring that session awareness be inactive was invalidly received while session awareness was active.

System Action:

Request is rejected.

User Action:

Stop session awareness to issue the request.

N75111**STOP ALL LU/PU/CDRM TRACE REQUEST ACCEPTED. ACCOUNTING ACTIVE.****Reason:**

A request to stop global tracing has been accepted by NTS. However the NTS global accounting function is active and actual tracing continues to collect accounting data.

System Action:

Request is accepted.

User Action:

None.

N75112**NTS ACTIVE. LOCAL SAW INACTIVE.****Reason:**

NTS has been started as a dormant NTS system via an SAWARE START NOVTAM command. NTS will not receive session awareness data from the local VTAM. Provided the correct ISR links are established, this NTS system will be able to receive session awareness data from a remote NTS system for NTS Single Image processing.

System Action:

NTS is started as a dormant NTS system.

User Action:

None.

N75201**SESSION AWARENESS PROCESSING NOW ACTIVE.****Reason:**

NTS session awareness processing has commenced.

System Action:

None.

User Action:

None.

N75202

NTS ACB acbname OPEN FAILED, ACBERFLG = X"xx".

Reason:

The NTS ACB name shown in the message failed to open with the error code shown.

System Action:

NTS session awareness start processing fails.

User Action:

Determine the reason for failure from the error code. Correct and retry.

N75203

SESSION AWARENESS PROCESSING NOW INACTIVE.

Reason:

NTS session awareness processing has terminated.

System Action:

None.

User Action:

None.

N75204

SAW SESSION NOT STARTED, error-reason-codes

Reason:

NTS could not start its session with VTAM due to the error reason codes shown.

System Action:

Session awareness processing is terminated.

User Action:

Determine the cause of the problem. Correct and restart NTS.

N75205**SAW SESSION RECEIVE ERROR, error-reason-codes****Reason:**

An error occurred during a VTAM receive operation for NTS session awareness data.

System Action:

Session awareness processing terminates.

User Action:

Determine the cause of the problem and restart NTS. The error codes specified in the message text refer to the VTAM RPL completion and feedback codes following the RECEIVE macro completion, and are described in the VTAM Programming manual.

N75206**NTS ACB NOW CLOSED.****Reason:**

NTS has closed its ACB.

System Action:

None.

User Action:

None.

N75207**INSUFFICIENT STORAGE FOR SAW PROCESSING.****Reason:**

NTS could not continue due to a lack of storage.

System Action:

NTS session awareness processing terminates.

User Action:

Investigate the storage problem.

N75208

SAW SESSION END ERROR, error-reason-codes

Reason:

During NTS closedown an error occurred ending the session with VTAM.

System Action:

Closedown continues.

User Action:

Investigate error with reference to the reason codes.

N75209

NTS SAW buffer dump

Reason:

During NTS intensive mode recording (SYSPARMS NTSINTSV=YES) the SAW buffer is written to the log.

System Action:

The SAW buffer is written to the log.

User Action:

None.

N75210

INSUFFICIENT STORAGE TO CREATE IN-STORAGE RESOURCE/SESSION INDEX FOR NTS

Reason:

An attempt to build an in-storage index for use by NTS failed due to a lack of storage.

System Action:

NTS processing continues but review functions are unavailable.

User Action:

Investigate the storage problem.

N75211**SESSION AWARENESS CLOSING. nnnn SESSIONS QUEUED FOR OUTPUT PROCESSING.****Reason:**

NTS is terminating and has placed the number 'nnnn' of sessions shown on the output queue for processing.

System Action:

Final termination awaits completion of output processing.

User Action:

None.

N75212**COLLECTION OF NTS type DATA: status****Reason:**

NTS has started collecting data as per specified parameters, where 'status' is one of SELECTIVE, GLOBAL, ACTIVE or NOT ACTIVE and 'type' is one of ACCOUNTING or RESOURCE STATISTICS.

System Action:

None.

User Action:

None.

N75213**NTS SNA TABLE LOAD FAILED. SAW START ABORTED.****Reason:**

The NTS user-modifiable RU, FMH, and Sense Code table failed to load when session awareness was started.

System Action:

Session awareness start is aborted.

User Action:

Ensure the table is available and that it has been assembled and linked correctly.

N75214

NTS SNA TABLE VERIFICATION FAILED.

Reason:

The user-modifiable RU, FMH, and Sense Code table failed verification when session awareness was started.

System Action:

Session awareness start is aborted.

User Action:

Ensure the correct user modifiable table is available and that it has been assembled and linked correctly. The table must be corrected before session awareness is started.

N75215

VTAM WARM START COMPLETE. nnnnnnnn SESSIONS PREVIOUSLY ACTIVE.

Reason:

As a result of starting NTS session awareness, VTAM has completed sending notification of all sessions that were active prior to the start of session awareness, that is, VTAM has completed WARM STARTING NTS. The number of active session sent by VTAM is indicated by 'nnnnnnnn'.

System Action:

None.

User Action:

None.

N75301**INSUFFICIENT STORAGE FOR SESSION AWARENESS PROCESSING,
SESSION DATA LOST****Reason:**

NTS could not acquire sufficient storage to keep all session data requested. Some session data is lost.

System Action:

Processing continues.

User Action:

Investigate storage or SAW class keep options.

N75302**VTAM SAW BUFFER OUT OF SEQUENCE, nnn SAW BUFFER(S) LOST.****Reason:**

A buffer received from VTAM carrying session awareness data was not the next in the sequence. The number of buffers lost is nnn which represents the difference between the expected and actual sequence numbers received from VTAM.

System Action:

Processing continues.

User Action:

Check SYSPARM NTSSAWBF values, as this failure could indicate that VTAM has insufficient buffers allocated.

N75306**SESSION ALREADY EXISTS prinet.priname/secnet.secname****Reason:**

A session notification has been received via NTS Single Image, the local NTS system is already aware of the indicated session.

System Action:

NTS updates the session information with the new session data.

User Action:

None.

N75310

offset hex1 hex2 hex3 hex4 char1 char2 char3 char4

Reason:

Intensive message recording (SYSPARMS NTSINTSV={YES|*name*}) is active for NTS. The SAW buffer for a session start from VTAM is written to the log in dump format.

System Action:

The SAW buffer is written to the log.

User Action:

Collect the activity log output for Technical Support if required.

N75311

offset hex1 hex2 hex3 hex4 char1 char2 char3 char4

Reason:

Intensive message recording (SYSPARMS NTSINTSV={YES|*name*}) is active for NTS. The SAW buffer for a session end from VTAM is written to the log in dump format.

System Action:

The SAW buffer is written to the log.

User Action:

Collect the activity log output for Technical Support if required.

N75312

offset hex1 hex2 hex3 hex4 char1 char2 char3 char4

Reason:

Intensive message recording (SYSPARMS NTSINTSV={YES|*name*}) is active for NTS. The SAW buffer for a session end from VTAM is written to the log in dump format.

System Action:

The SAW buffer is written to the log.

User Action:

Collect the activity log output for Technical Support if required.

N75320

offset hex1 hex2 hex3 hex4 char1 char2 char3 char4

Reason:

Intensive message recording (SYSPARMS NTSINTSV={YES|*name*}) is active for NTS. The SAW buffer for a session start from ISR is written to the log in dump format.

System Action:

The SAW buffer is written to the log.

User Action:

Collect the activity log output for Technical Support if required.

N75321

offset hex1 hex2 hex3 hex4 char1 char2 char3 char4

Reason:

Intensive message recording (SYSPARMS NTSINTSV={YES|*name*}) is active for NTS. The SAW buffer for a session end from ISR is written to the log in dump format.

System Action:

The SAW buffer is written to the log.

User Action:

Collect the activity log output for Technical Support if required.

N75322

offset hex1 hex2 hex3 hex4 char1 char2 char3 char4

Reason:

Intensive message recording (SYSPARMS NTSINTSV={YES|*name*}) is active for NTS. The SAW buffer for a session end from ISR is written to the log in dump format.

System Action:

The SAW buffer is written to the log.

User Action:

Collect the activity log output for Technical Support if required.

N75601

SESSION TRACE PROCESSING ENABLED.

Reason:

The session between NTS and VTAM used to collect session trace data has become active.

System Action:

NTS allows session trace requests.

User Action:

None.

N75603

SESSION TRACE PROCESSING DISABLED.

Reason:

The session between NTS and VTAM used to collect session trace data has terminated.

System Action:

All tracing is disabled.

User Action:

None. If necessary, determine the cause of this session failure, correct the failure and retry session tracing.

N75604

TRACE SESSION NOT STARTED, error-reason-codes.

Reason:

An error occurred whilst attempting to start the session between NTS and VTAM used to collect session trace data.

System Action:

Trace processing is disabled.

User Action:

Determine the cause of the error from the message. Correct and retry.

N75605**TRACE SESSION RECEIVE ERROR, error-reason-codes.****Reason:**

An error occurred receiving session trace data from VTAM.

The error-reason-code contains the error codes as set in the RPL or if there is a short on storage condition, then the VTAM RECEIVE retry condition. The following reason codes will be issued in this circumstance:

- VTAM TEMPORARY SHORT-ON-STORAGE This condition is temporary if a short on main storage error code is received from the VTAM RECEIVE. The receive is retried every 5 seconds.
- VTAM PERMANENT SHORT-ON-STORAGE This condition is permanent if a short on main storage error code is received from the VTAM RECEIVE for 12 consecutive retries (1 minute).

System Action:

Under most error conditions, the trace processing is terminated

When a temporary short on storage condition is raised, the VTAM RECEIVE will be retried automatically.

The trace processing can be restarted with a STRACE START command.

User Action:

Determine the cause of the error from the message. Correct and retry.

N75606**NTS ACB NOW CLOSED.****Reason:**

The NTS ACB has been closed.

System Action:

All session trace and session awareness processing has terminated.

User Action:

None.

N75607

INSUFFICIENT STORAGE FOR TRACE PROCESSING.

Reason:

NTS trace processing experienced a storage shortage.

System Action:

Trace processing terminates.

User Action:

Investigate the storage shortage.

N75608

TRACE SESSION END ERROR. error-reason-codes.

Reason:

An error occurred whilst NTS was closing its session trace session with VTAM.

System Action:

Termination continues.

User Action:

Investigate the problem with reference to the reason codes.

N75609

NTS trace buffer dump

Reason:

During NTS intensive mode recording (SYSPARMS NTSINTSV=YES) the VTAM trace buffer is written to the log.

System Action:

The vtam trace is written to the log.

User Action:

None.

N75701**INSUFFICIENT STORAGE FOR SESSION TRACE PROCESSOR - nnnnnnnn RECORDS LOST.****Reason:**

There was insufficient storage to process all session trace entries passed to NTS from VTAM. 'nnnnnnnn' sessions were lost as a result of this condition.

System Action:

Processing continues - some data is lost.

User Action:

Investigate the storage problem.

N75702**hex-data.****Reason:**

Dump of VTAM trace data when SYSPARM NTSINTSV=YES. This message is preceded by another which describes the type of trace entry being dumped.

System Action:

None.

User Action:

None.

N75703***offset hex1 hex2 hex3 hex4 char1 char2 char3 char4*****Reason:**

Intensive message recording (SYSPARMS NTSINTSV={YES|*name*}) is active for NTS. The session trace buffer is written to the log in dump format.

System Action:

The buffer is written to the log.

User Action:

Collect the activity log output for Technical Support if required.

N75704

ACCESS METHOD DEBUG TRACE DATA RECEIVED.

Reason:

This message precedes a dump of any access method debug trace data which was received from VTAM while NTS was in intensive message recording mode. Refer to the VTAM Diagnosis manual for the meaning of such data.

System Action:

None.

User Action:

None.

N75705

NORMAL PIU DISCARDED TRACE DATA RECEIVED.

Reason:

This message precedes a dump of any normal PIU discarded trace data which was received from VTAM while NTS was in intensive message recording mode.

System Action:

None.

User Action:

None.

N75706

NO SESSION AND PIU DISCARDED TRACE DATA RECEIVED.

Reason:

This message precedes a dump of any PIU trace data, discarded as no current session was active, and which was received from VTAM while NTS intensive recording mode was active.

System Action:

None.

User Action:

None.

N75707**VTAM TRACE BUFFER OUT OF SEQUENCE, nnn BUFFER(S) LOST.****Reason:**

A buffer received from VTAM carrying session trace data was not the next in sequence. The number of buffers lost is nnn and represents the difference between the expected number and the actual sequence number received.

System Action:

Processing continues with a loss of trace data.

User Action:

Check the SYSPARM NTSTRCBF setting and if appropriate allocate more small buffers rather than fewer large ones.

N75708**NTS CORRELATION INTERVAL EXPIRED, nnnn TRACE ENTRIES PURGED.****Reason:**

The number of trace entries shown in the message were discarded after they could not be matched to an active session and NTS had waited for a period defined in the NTS correlation interval to expire.

System Action:

Processing continues.

User Action:

Use SYSPARM NTSINTSV=YES to dump such data to determine the cause, and review the SYSPARM NTSCINTV value as necessary.

N75709

INVALID TRACE DATA RECEIVED FROM VTAM

Reason:

This message precedes a dump of the invalid data found in the trace buffer received from VTAM while NTS was in intensive message recording mode.

System Action:

The data is not processed.

User Action:

Report this message to your product support representative.

N75801

TRACE pri-name dir sec-name time SEQ=seq LEN=len.

Reason:

First line of a display of monitored session trace data. The pri-name and sec-name fields contain the primary and secondary session partner names. Between them the dir field can be either "-->" (primary to secondary) or "<--" (secondary to primary) indicating the direction in which the trace PIU was flowing. The time the PIU was traced is displayed, along with the PIU sequence number (seq in decimal) and the PIU data count field value (len in decimal).

System Action:

None.

User Action:

None.

N75802

rqst type RH=hex-data interpreted-data.

Reason:

Display line for trace data being monitored contains Request Header information. The rqst can be "RQST", "+RSP" or "-RSP" to indicate the PIU contains a request unit, a positive response unit, or a negative response unit respectively. The type field indicates the RU type as FMD (Function Management Data), DFC (Data Flow Control), NC (Network Control) or SC (Session Control). The hex-data contains the 3-byte RH in hexadecimal format, and some RH settings such as brackets, chaining, change direction etc, are interpreted.

System Action:

None.

User Action:

None.

N75803

RU-type RU=hex-data.

Reason:

Display line for trace data being monitored contains Request Unit information. For a formatted RU the RU-type can contain a short description of the RU, the hex- data displaying as much of the RU as is captured by NTS in hexadecimal format.

System Action:

None.

User Action:

None.

N75804

SENSE sense-data sense-description.

Reason:

Display line for trace data being monitored contains sense information. The sense- data is the 4 bytes of sense code from the RU in hexadecimal format, and the sense- description contains the meaning of this code.

System Action:

None.

User Action:

None.

N75805

INSUFFICIENT STORAGE FOR NTS TRACE ANALYSIS.

Reason:

NTS could not acquire sufficient storage to format some trace data.

System Action:

The display of some selected trace data is aborted.

User Action:

Investigate the storage shortage problem.

N75E01

exit-message-text.

Reason:

This message was returned from the NTS user exit.

System Action:

None.

User Action:

Refer to the NTS exit defined by your installation for further details.

N75E02**NTS USER EXIT NAME MISSING.****Reason:**

An attempt to activate the NTS user exit failed as no exit name was supplied.

System Action:

NTS processing continues without a user exit.

User Action:

Provide an exit name on the NTS System Support panel.

N75E03**UNABLE TO OBTAIN STORAGE FOR EXIT.****Reason:**

The attempt to start the NTS user exit failed due to a lack of storage.

System Action:

NTS continues processing without a user exit.

User Action:

Investigate the storage shortage.

N75F01**NTS USER EXIT ABEND abend-code MODULE NAME name. EXIT TERMINATED.****Reason:**

The NTS user exit with name name has abended with the abend-code shown in the message.

System Action:

NTS processing continues without a user exit.

User Action:

Determine the cause of the error. Correct and restart the exit.

N75Q01

NTS SAW BUFFER DUMP

Reason:

This message is produced if NTS intensive mode recording is active and an MAI buffer is de-queued incorrectly.

System Action:

The buffer is written to the activity log.

User Action:

Contact your product support representative.

N76001

INACTIVE WARNING - USERID uuuuuuuu ON lname DURATION hh.mm.ss

Reason:

The SOLVE session time-out manager has detected a session for the userid and lname shown which has been inactive for the time interval displayed. This is a warning message only and subsequent action depends upon the installation defined time-out options.

System Action:

None.

User Action:

None.

N77001**'ATTACH' COMMAND CURRENTLY IN PROGRESS****Reason:**

An *ATTACH* command to initialize SOLVE from a VM/GCS Userid has been entered whilst SOLVE is initializing as the result of an earlier *ATTACH* command.

System Action:

The command is ignored.

User Action:

Wait until SOLVE initialization is complete (and message N00503 issued) before entering commands.

N77002**ATTACH PARAMETERS EXCEED MAXIMUM****Reason:**

The length of the parameter data on the *ATTACH* command exceeds the maximum of 130 bytes (excluding NM *ATTACH*).

System Action:

Initialization fails to complete. The GCS task waits for a correct *ATTACH* command.

User Action:

Correct the *ATTACH* parameter list by removing embedded spaces or excessive parameters that may be allowed to default.

N77003**FIRST COMMAND MUST BE 'ATTACH'****Reason:**

The first command entered on the GCS task must be an *ATTACH* command.

System Action:

The command is ignored.

User Action:

Enter an *ATTACH* command and await message N00503 to indicate that initialization is complete before entering other commands.

N77004

LOAD MEMBER NM001 NOT FOUND

Reason:

An attempt to initialize the SOLVE maintask from the GCS task has failed because the maintask member cannot be found.

System Action:

SOLVE initialization fails to complete. The GCS task waits for a correct *ATTACH* command.

User Action:

Check that the initialization procedures specify the correct LOADLIB(s), that the appropriate minidisks have been accessed and that these commands were completed correctly.

N77005

ATTACH FOR NM001 FAILED

Reason:

An attempt to ATTACH the maintask from the GCS task failed.

System Action:

Initialization fails to complete. The GCS task waits for a correct ATTACH command.

User Action:

Check the return code from the ATTACH macro by reference to the formatted dump. Contact Technical Support.

N77006

COMMAND NOT ACCEPTED. PLEASE TRY LATER

Reason:

You entered a command before initialization completed.

System Action:

The command is ignored.

User Action:

Wait until initialization is complete (and message N00503 issued) before entering commands.

N77007**NM COMMAND AND PARAMETERS TOO LONG****Reason:**

The length of the SOLVE command and parameters exceeds the maximum of 256 bytes (excluding NM).

System Action:

The command is ignored.

User Action:

Correct the command or parameter list by removing embedded spaces or excessive parameters.

N77008**GVT ADDRESS IS ZERO - ABENDING****Reason:**

Internal error.

System Action:

Abnormal termination of SOLVE.

User Action:

Contact your product support representative.

N77009**SOLVE VM USERID IS NOT AUTHORISED****Reason:**

The Group Control System (GCS) group in which the SOLVE VM userid is running does not have that userid defined as an authorized machine.

System Action:

Abnormal termination of SOLVE.

User Action:

Use the (VM/SP) GROUP EXEC to add the SOLVE userid as an authorized machine. Refer to the SOLVE Installation Instructions for VM/GCS and the IBM manuals which describe GCS and group definitions.

N77201

**UNABLE TO LOAD MODULE *mmmmmmmm* REASON CODE=*rrrr*.
FORMAT FUNCTION BYPASSED.**

Reason:

The system abnormally terminated and a formatted dump is being produced. However, one of the load modules used to complete the formatted dump cannot be found.

System Action:

Termination continues. The formatted dump is incomplete.

User Action:

Check that the initialization procedures specify the correct LOADLIBs, that the appropriate minidisks have been accessed, and that these commands were completed correctly.

N77202

***** END OF FORMATTED DUMP *****

Reason:

Indicates the end of the formatted dump dataset.

System Action:

None.

User Action:

None.

N77301

SOLVE MAINTASK DETACHED

Reason:

The maintask has completed following an orderly SHUTDOWN or FSTOP, or an abnormal termination.

System Action:

The GCS task waits for an ATTACH command.

User Action:

Enter an ATTACH command to restart, and await message N00503 to indicate that initialization is complete.

N79E01

NAME ID EDIT STATUS DESCRIPTION

Reason:

This is the title line of the SHOW LIB display.
NAME is the name of the panel library.
ID is the logical fileid used by the library. To use the library this fileid must have been opened using the UDBCTL OPEN command.
EDIT indicates if this library definition allow the library to be edited using the edit services component.
STATUS is the status of the file for this library. This column will contain OPEN if the file is available for use, or UNDEF if the UDBCTL OPEN has not yet been successfully issued for the file.
DESCRIPTION a description of the library entered when the library was defined to the system.

System Action:

None.

User Action:

None.

N79E02

library fileid edit status description

Reason:

This is the detail line of the SHOW LIB display as described by the N79E01 message.

System Action:

None.

User Action:

Refer to the description of N79E01 for a description of the contents of the fields in this message.

N79E03

PATH/LIB EDIT LIBDEF DESCRIPTION

Reason:

This is the title line of the SHOW PATH display. This line is followed by N79E04 for each path definition displayed. Each N79E04 message is followed by an N79E05 message describing each library in the path.

PATH/LIB is the name of the panel concatenation path or library.

EDIT indicates if the path and library definition allow the library to be edited using the edit services component.

LIBDEF for N79E05 describes whether the library has been defined with the LIBRARY DEFINE command.

DESCRIPTION a description of the library or path entered when the library (or path) was defined to the system.

Refer to the individual message descriptions for more information.

System Action:

None.

User Action:

None.

N79E04

pathname edit - description

Reason:

This is a detail line of the SHOW PATH display. This line describes a path as a whole and is followed by N79E05 messages describing each library in the path. pathname is the name of the panel concatenation path.

edit indicates if the path allows edit of its component libraries. The possible values are:

ALL - the path definition allows all libraries to be edited.

NONE - the path definition does not allow any of its libraries to be edited.

LIST - the path definition allows some, but not all, of its libraries to be edited.

libdef always '-'.

description a description of the path entered when the path was defined to the system.

Refer to the N79E03 and N79E05 message descriptions for more information.

System Action:

None.

User Action:

None.

N79E05**libname edit libdef description****Reason:**

This is a detail line of the SHOW PATH display. This line describes a library in a path.

libname is the name of the panel library.

edit indicates if the library may be edited on this path. The possible values are:

YES - the library may be edited.

NO-PATH - the path definition does not allow the library to be edited.

NO-LIB - the library definition does not allow the library to be edited.

libdef YES if the library has been defined.

NO if the library has not been defined. The LIBRARY DEFINE command is used to define libraries.

description a description of the library entered when the library was defined to the system.

System Action:

None.

User Action:

None.

N79E06**NO MATCHING LIBRARY DEFINITIONS FOUND****Reason:**

This is the response to a SHOW LIB command where no libraries matched the library name requested for display.

System Action:

None.

User Action:

None.

N79E07

NO MATCHING PATH DEFINITIONS FOUND

Reason:

This is the response to a SHOW PATH command where no library paths matched the path name requested for display.

System Action:

None.

User Action:

None.

N79F01

DESCRIPTION IS TOO LONG

Reason:

The description entered on a LIBRARY or LIBPATH command was too long. The maximum length allowed is 40 characters.

System Action:

The command is not performed.

User Action:

Reenter the command with a description of less than 40 characters.

N79F02

LIBRARY DEFINITION libname HAS BEEN xxxx

Reason:

This is the response to a LIBRARY DEFINE, DELETE or REPLACE command for a library definition. The action xxxx has been performed. The action will be one of ADDED, REPLACED or DELETED depending on the option on the LIBRARY command.

System Action:

The action is performed.

User Action:

None.

N79F03**PATH DEFINITION pathname HAS BEEN xxxx****Reason:**

This is the response to a LIBPATH DEFINE, DELETE or REPLACE command for a library definition. The action xxxx has been performed. The action will be one of ADDED, REPLACED or DELETED depending on the option on the LIBPATH command.

System Action:

The action is performed.

User Action:

None.

N79F04**xxxxxxx name ALREADY EXISTS. COMMAND REJECTED****Reason:**

This is the response to a LIBRARY DEFINE or LIBPATH DEFINE command for the named item, however the library or path of that name was already defined.

System Action:

The command is rejected.

User Action:

None.

N79F05**INSUFFICIENT STORAGE****Reason:**

A LIBRARY or LIBPATH command was issued but there is insufficient storage available to process the request.

System Action:

The command is not performed.

User Action:

Investigate the cause of the storage shortage condition.

N79F06

xxxxxxx name IS NOT DEFINED. COMMAND REJECTED.

Reason:

This is the response to a LIBRARY DELETE or LIBPATH DELETE command for the named item, however no library (or path) of that name was found.

System Action:

The command is rejected.

User Action:

Check the library or path you are trying to delete.

N79F07

LIBRARY libname REFRESHED

Reason:

This is the response to a LIBRARY REFRESH command. The refresh has completed successfully.

System Action:

All panels stored in the active panel queue which were related to the library have been dropped from storage. This includes panels loaded for any path which contains the named library. The library dataset is not effected in any way.

User Action:

None.

N79F08

ID fileid IS RESERVED. COMMAND REJECTED

Reason:

This is the response to a LIBRARY DEFINE command which specified an invalid fileid. The fileid specified is reserved for use by the system and may not be used as a fileid for a panel library.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N79F09**EDIT LIBRARY: libname NOT IN PATH. COMMAND REJECTED****Reason:**

This is the response to a LIBPATH DEFINE or REPLACE command which incorrectly specified a list of editable libraries with the EDIT= keyword. The named library is not in the list of libraries specified by the LIB= keyword.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N79F10**REQUIRED PARAMETER LIB= OMITTED. COMMAND REJECTED****Reason:**

This is the response to a LIBPATH DEFINE or REPLACE command which omitted the LIB= parameter. The LIB= parameter is required.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N79F41**LIST HAS NULL ENTRIES****Reason:**

This is the response to a LIBPATH DEFINE or REPLACE command which specified the LIB= or EDIT= parameter incorrectly. The parameter may not specify a list with null entries.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N79F42

LIST HAS DUPLICATE ENTRIES

Reason:

This is the response to a LIBPATH DEFINE or REPLACE command which specified the LIB= or EDIT= parameter incorrectly. The parameter may not specify a list which contains the same entry more than once.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N79F43

LIST HAS TOO MANY ENTRIES

Reason:

This is the response to a LIBPATH DEFINE or REPLACE command which specified the LIB= or EDIT= parameter incorrectly. The maximum number of libraries in a path is 16.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N79F44

LIST HAS INVALID SYNTAX

Reason:

This is the response to a LIBPATH DEFINE or REPLACE command which specified the LIB= or EDIT= parameter incorrectly. The list may contain a single entry or a list of entries separated by commas and enclosed in brackets.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N79F45**LIST IS EMPTY****Reason:**

This is the response to a LIBPATH DEFINE or REPLACE command which specified the LIB= or EDIT= parameter incorrectly. The list may contain a single entry or a list of entries separated by commas and enclosed in brackets.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N79F46**LIST HAS AN INVALID LIBRARY NAME****Reason:**

This is the response to a LIBPATH DEFINE or REPLACE command which specified the LIB= or EDIT= parameter incorrectly. The list may contain only valid names, a valid name is up to 8 alphanumeric and national characters beginning with an alphabetic or national character.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N79F50**INSUFFICIENT AUTH FOR OPERAND****Reason:**

This is the response to a LIBPATH or LIBRARY command which you were not authorized to issue. A higher command authority level is required.

System Action:

The command is rejected.

User Action:

Refer this problem to your systems administrator.

N7A001

NVC INITIALIZATION FAILED - FEATURE NOT AVAILABLE.

Reason:

During NVC initialization, it was determined that PPI module CNMNETV is not available.

System Action:

NV-Connect feature is not available.

User Action:

Determine the cause for the CNMNETV unavailability and rectify the problem.

N7A201

LINK FROM systemid TO linkname NOW ACTIVE.

Reason:

Issued when the connection from this NV-Connect (systemid) to the remote NetView (linkname) has been established.

System Action:

None.

User Action:

The Remote Operator Facility may now be used to route commands and enquiries to the remote system using the ROUTE command.

N7A202**LINK FROM systemid TO linkname NOW INACTIVE.****Reason:**

The link from this NV-Connect system (systemid) to the NetView system known as linkname is inactive.

System Action:

If the link has become inactive as a result of an earlier LINK STOP= linkname command, the link will remain inactive until a subsequent LINK START= linkname command. The system will attempt to re-establish the link at regular intervals.

User Action:

Determine the cause of link deactivation if no LINK STOP= linkname was entered. Possible causes may be a failure in PPI communications or the remote NetView system may have been terminated.

N7A203**PPI COMMUNICATIONS ERROR - LAST RC=rc****Reason:**

An NV-Connect PPI receiver detected a PPI communications error. rc indicates the last return code from PPI.

System Action:

The system will try to re-contact PPI at regular intervals.

User Action:

Consult PPI documentation for explanation of rc to determine the reason for communications failure.

N7A206

SIGNON TO linkname LOST, RESTART PENDING LINK RECOVERY.

Reason:

Notifies a user that the ROF connection to the NetView system linkname has been broken because the link to the system has been lost.

System Action:

The ROF connection is scheduled for re-establishment when the link becomes active again.

User Action:

None.

N7A207

NVC VERSION IN DOMAIN domid IS NOT COMPATIBLE WITH CURRENT SOLVE RELEASE

Reason:

NetView's portion of NVC is not compatible with SOLVE's release version.

System Action:

Link to NetView system is not started.

User Action:

Bring NetView's NVC code and SOLVE code to the same level and restart the systems.

N7A301

SIGNOFF COMPLETE.

Reason:

Confirms successful completion of a SIGNOFF command.

System Action:

None.

User Action:

None.

N7A401**NVC PPI RECEIVER AND NVC LINKS WILL BE TERMINATED.****Reason:**

This is a response to NVC STOP command.

System Action:

NVC's PPI receiver is terminated. All NVC-type links are terminated. NVC receiver will restart when LINK START command is entered for NVC-type link.

User Action:

None.

N7A402**NVC PPI RECEIVER IS NOT ACTIVE.****Reason:**

This is a response to NVC STOP command, when no NVC-type links are active and NVC PPI receiver is also inactive.

System Action:

Command is ignored.

User Action:

None.

N7A601**CONSOLE NOT AUTHORISED - COMMAND REJECTED.****Reason:**

An attempt to use a command through a system console has failed because the console userid, for example SYSOPER, does not have Command Facility access privilege.

System Action:

The command is rejected.

User Action:

None.

N7A901

UNABLE TO SEND COMMAND, LINK TO nvcid IS INACTIVE.

Reason:

A NetView operator tried to issue a command to NV-Connect nvcid via ROF, however there is no connection between NetView and NV-Connect.

System Action:

The command is ignored.

User Action:

Activate communications path between NetView and NVC, then re-issue the command.

N7A902
