CA Product References

This document references the following CA products:

- CA Common Services™
- CA NetMaster® File Transfer Management (CA NetMaster FTM)
- CA NetMaster® Network Management for TCP/IP (CA NetMaster NM for TCP/IP)
- CA NetSpy™ Network Performance (CA NetSpy)
- CA Network and Systems Management (CA NSM)
- CA Service Desk

Contact CA

Contact Technical Support

For your convenience, CA provides one site where you can access the information you need for your Home Office, Small Business, and Enterprise CA products. At <http://ca.com/support>, you can access the following:

- Online and telephone contact information for technical assistance and customer services
- Information about user communities and forums
- Product and documentation downloads
- CA Support policies and guidelines
- Other helpful resources appropriate for your product

Provide Feedback

If you have comments or questions about CA product documentation, you can send a message to techpubs@ca.com.

If you would like to provide feedback about CA product documentation, complete our short [customer survey](#), which is also available on the CA Support website, found at <http://ca.com/docs>.

Chapter 2: Messages

\$ABEND Messages

\$ABEND001-01

NO STORAGE FOR LICENCE TABLE.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend. This abend occurs during system initialization when the storage required for processing of the product license cannot be obtained.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

This indicates that the region size for the region in which SOLVE is executing is not large enough. Increase the region size and if the abend still occurs, contact your product support representative.

\$ABEND001-02

LOAD OF FEATURE TABLE MODULE FAILED.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend. This abend occurs during system initialization when the load module NMFTAB cannot be loaded by the system.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Check the SOLVE load library to ensure that module NMFTAB is present. If it is, contact your product support representative for further assistance in determining the reason for the abend.

\$ABEND001-03

MANDATORY SYSTEM MODULE NOT LOADED

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend. This abend occurs during initialization when a load module which is considered critical to the operation of the product cannot be loaded into storage.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Check the load library to ensure it has not been corrupted. Also check the installation process if the SOLVE system has recently been installed to ensure no errors occurred during the creation of the SOLVE load library. If the problem cannot be resolved, contact your product support representative.

\$ABEND001-04

LOAD OF PATCH MODULE FAILED.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend. This abend occurs during system initialization when the load module NMPATCH cannot be loaded by the system.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Check the SOLVE load library to ensure that module NMPATCH is present. If it is, contact your product support representative for further assistance in determining the reason for the abend.

\$ABEND001-22

VSAM SHOWCB FAILED

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

\$ABEND005-01

INSUFFICIENT STORAGE FOR INITIALIZATION

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend. This abend occurs if the initialization of features of the product, which are critical to the operation of the product, fails due to a lack of storage.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Increase the region size in which SOLVE is executing. If the problem is not resolved by a larger region size, contact your product support representative for further assistance in resolving the problem.

\$ABEND005-05

MANDATORY FEAT-REL SYSTEM MODULE NOT LOADED

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend. This abend occurs if the load module for a SOLVE feature cannot be loaded into storage.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Check the SOLVE load library to ensure it has not been corrupted. Also check the installation process if the product has been recently installed to ensure that no errors occurred during the creation of the SOLVE load library. If the cause of the error is still unknown, contact your product support representative.

\$ABEND006-00

CONID=0 OR CONNAM=CONSOLE ERROR.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

Reason Action

70 Report the problem to your product support representative.
80 Check the run JCL includes a SYSIN DD statement. If present and specifies a dataset name (DSN=xx..xx) ensure that this dataset name is correct and has the correct attributes, that is, fixed (blocked) 80-byte records.
84 Report the problem to your product support representative.
8C Report the problem to your product support representative.
98 Report the problem to your product support representative.

\$ABEND0VF-01

INVALID FORMAT BASE UPDATE CODE

Reason:

An IUVE49 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

\$ABEND0VF-02

INVALID FORMAT BASE PRINT CODE

Reason:

An IUVE49 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

\$ABEND0VF-03

INVALID FORMAT DATA CODE

Reason:

An IUVE49 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

\$ABEND0VF-04

INVALID FUNCTION CODE

Reason:

An IUVE49 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

\$ABEND0VF-05

INVALID FMT=DUMP START POSITION

Reason:

An IUVE49 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

\$ABEND0VG-02

NO ENTRY IN GENERIC KEY TABLE

Reason:

The VIP has abended when processing a generic request because a record has been read from a file that is undefined to the appropriate generic key table.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Ensure that all files referred to by INDD and OUTDD operands are the correct SOLVE datasets. This abend may occur, for example, if a LIST PANELS command is issued against a MODS dataset.
If this cannot be resolved contact your product support representative.

\$ABEND0VG-06

SYSPRINT PUT failed

Reason:

The VIP has abended when processing a generic request because a write to the system print file has failed.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

\$ABEND0VJ-01

SHORT ON STORAGE

Reason:

The VIP has abended due to a storage shortage when trying to open a file.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Increase the region size and rerun the task.

\$ABEND0VM-04

SYSPRINT PUT ERROR

Reason:

The VIP has abended when processing a MODS request because a write to the system print file has failed.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

\$ABEND0VP-04

SYSPRINT PUT ERROR

Reason:

The VIP has abended when processing a PANELS request because a write to the system print file has failed.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

\$ABEND0VQ-04

SYSPRINT PUT ERROR

Reason:

The VIP has abended when processing an OSCNTL request because a write to the system print file has failed.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

\$ABEND0VS-01

GETMAIN FOR INPUT ACB/RPL FAILED

Reason:

The VIP has abended when processing a file request because of a storage shortage.

System Action:

\$ABEND266-01

INVALID RETURN CODE FROM SECURITY EXIT

Reason:

The installation written security set a non-zero return code to the system initialization call.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Review your security exit, checking the return code from the system initialization call. Register 15 must be zero from this call.

\$ABEND268-01

SECURITY EXIT ABNORMAL TERMINATION

Reason:

The installation written security exit has terminated abnormally. The subtask abend code is contained in Register 1, and Register 15 contains the function code with which the security exit was called.

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Refer to Register 1 for the abend code and Register 15 for the function code from the call to the security exit.

Refer to the system log for messages relating to the security exit abnormal termination.

This abend generally results in two system dumps being generated - one for the security exit abnormal termination and the other for this abend. The security exit system dump will contain all the necessary information for the abending TCB to resolve this problem.

\$ABEND268-02

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

\$ABEND276-01

INVALID EXIT ATTRIBUTE DEFINITION

Reason:

The product region determines the type of security exit (partial or full) being provided by the installation by examining the first full-word of the parameter list within the security exit. This parameter list is identified by an Assembler ENTRY statement.

The only acceptable values for this full word exit identifier are:

F'0' - identifies the exit as a partial security exit.

F'4' - identifies the exit as a full security exit.

The parameter list in the security exit contains a value that is not F'0' or F'4'. The value found by the region is pointed to by Register 15.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Correct your security exit by providing the correct exit identifier in the first full word of the exits parameter list from the NMUEX01 entry.

\$ABEND276-03

Ax Messages

AD0001

INVALID KEYWORD VALUE SPECIFIED, KEYWORD=*P1* VALUE=*P2*

Reason:

The MODS Administration external interface procedure \$ADEX000 failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2*.

System Action:

The request is rejected and procedure \$ADEX000 terminates. Control is returned to the NCL procedure which executed \$ADEX000. If \$ADEX000 was executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed \$ADEX000. If executed from OCS, check the command entered on the command line and retry.

AD0002**UNSUPPORTED RETURN CODE RECEIVED FROM PROCEDURE *P1*,
RC= *P2*****Reason:**

The MODS Administration external interface procedure \$ADEX000 failed during request processing because it received an unknown return code from a procedure. The name of the procedure was *P1* and the unknown return code was *P2*.

System Action:

The request is rejected and procedure \$ADEX000 terminates. Control is returned to the NCL procedure which executed \$ADEX000.

User Action:

Contact the system administrator.

AD0003**UNSUCCESSFUL PROCESSING FOR FUNCTION= *P1*****Reason:**

A request to process a MODS file export function failed.

System Action:

The request is rejected. A message is logged indicating the failure reason.

User Action:

Notify your system administrator.

AD0004**MODS CACHE TABLE FREED****Reason:**

A request to reset MODS cache table is successful.

System Action:

The command is accepted.

User Action:

None.

RULE TABLE RESET

Reason:

Table to store all rule/s selected by user is reset.

System Action:

None

User Action:

None

AD0102

ENTER File ID OR Dataset Name

Reason:

User has to specify file ID or dataset name.

System Action:

None

User Action:

Specify file ID or dataset name.

AD0103

SOURCE AND TARGET FILE CAN NOT BE THE SAME

Reason:

Copy record/s must be to a different file.

System Action:

None

User Action:

Source and target file must be different.

AD0104**Disp MUST BE 'SHR' OR 'OLD' OR 'NEW'****Reason:**

Valid values for disposition : SHR, OLD, NEW.

System Action:

None

User Action:

Specify SHR, OLD or NEW for disposition.

AD0105**P1 NOT SPECIFIED****Reason:**

Required field not specified.

System Action:

None

User Action:

Specify field in error.

AD0106**ONLY YES OR NO FOR P1****Reason:**

Only YES or NO can be specified for replace records and log.

System Action:

None

User Action:

Specify YES or NO for replace record and log.

AD0107

~P1 IS NOT A VALID MODS CONTROL FILE

Reason:

Specified file is not a valid MODS control file. Key has different length.

System Action:

None

User Action:

Check file to be used for copy process, make sure it is a MODS control file. Try the process again.

AD0108

File ID P1 IS NOT AVAILABLE

Reason:

The check against file specified failed with non zero return code.

System Action:

None

User Action:

Check file to be used for copy process, make sure it is a MODS control file. Try the process again.

AD0109

P1 ALREADY EXISTS, SPECIFY Disp SHR OR OLD

Reason:

Dataset name to be created already exists.

System Action:

None

User Action:

Use SHR or OLD for disposition or specify new dataset name.

AD0110**DATASET ~P1 IS IN USE BY ~P2****Reason:**

Dataset name is in use by other user.

System Action:

None

User Action:

Try again later, or use different file.

AD0111**INVALID COMMAND****Reason:**

The command entered on the command line was not recognized by the procedure.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

AD0112**INVALID P1 SPECIFIED****Reason:**

Invalid value encountered and rejected by system

System Action:

The command is rejected.

User Action:

Check and correct file ID or dataset name in error then restart process.

AD0113

UNABLE TO ACCESS P1, FILERC= P2

Reason:

Process failed to open file for processing.

System Action:

Validation failed.

User Action:

Check FILERC code in the NCL Reference under &FILE OPEN.

AD0114

NO MODS DEFINITIONS FOUND WITH LANGUAGE= P1

Reason:

Language code specified is not found in source file.

System Action:

Request rejected.

User Action:

Check language code required and rerun the process.

AD0115

FILE P1 IS EMPTY

Reason:

There are no records found in the file specified to process.

System Action:

Request rejected.

User Action:

Can not use this file.

AD0116**USERID P1 NOT AUTHORIZED FOR ADMINISTRATION FUNCTIONS****Reason:**

A request to access the MODS Administration functions was denied because the userid *P1* was not authorized.

System Action:

The request is rejected.

User Action:

None.

AD0117**P1 SHOULD BE OPENED WITH READ, UPDATE AND DELETE ACCESS****Reason:**

To perform the function successfully, this file need read, update and delete access. If Dataset Name specified, this dataset has already been defined by other process with read only access.

System Action:

It will not pass validation.

User Action:

Open file with read, update and delete access. If the dataset has already been defined by other process with read only access, wait until that process finished then try again.

AD0118**FUNCTION IS NOT SUPPORTED IN VM****Reason:**

Function to create a new dataset with dynamic allocation is not supported in VM operating system.

System Action:

It will not pass validation.

User Action:

Create dataset/file with other methods and retry the process.

AD0119

Disp=NEW SPECIFIED, ~P1

Reason:

Disposition new specified, the requirement to create a new dataset is the dataset name, volume disk, primary and secondary allocation.

System Action:

None

User Action:

Specify datasetname of the dataset to be created.

AD0120

DATASET ALLOCATION FAILED, REFER TO LOG FOR MESSAGES PRODUCED

Reason:

Dataset allocation failed. Check log file for more explanation of the error.

System Action:

The command is rejected.

User Action:

Check and correct dataset in error then restart process.

AD0121

COMMAND ASSIGNED TO FUNCTION KEY *P1* IS INVALID

Reason:

Function key *P1* was pressed on the Copy/Move File Specification panel and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

AD0122**Language Code MUST BE 2 CHARACTERS IN LENGTH****Reason:**

An invalid Language Code was entered in the Language Code Field. The value entered was not 2 characters long.

System Action:

Validation of the Language Code field fails.

User Action:

Correct the Language Code and retry.

AD0201**RULE TABLE RESET****Reason:**

Table to store all rule/s selected by user is reset.

System Action:

None

User Action:

None

AD0202**ENTER File ID OR Dataset Name****Reason:**

User has to specify file ID or dataset name.

System Action:

None

User Action:

Specify file ID or dataset name.

AD0203

ONLY YES OR NO FOR ~P1

Reason:

Only YES or NO can be specified for replace records and log.

System Action:

None

User Action:

Specify YES or NO for replace record and log.

AD0204

P1 IS NOT A VALID MODS CONTROL FILE

Reason:

Specified file is not a valid MODS control file. Key has different length.

System Action:

None

User Action:

Check file to be used for copy process, make sure it is a MODS control file. Try the process again.

AD0205

File ID P1 IS NOT AVAILABLE

Reason:

The check against file specified failed with non zero return code.

System Action:

None

User Action:

Check file to be used for copy process, make sure it is a MODS control file. Try the process again.

AD0206**~P1 NOT SPECIFIED****Reason:**

Required field not specified.

System Action:

None

User Action:

Specify field in error.

AD0207**INVALID COMMAND****Reason:**

The command entered on the command line was not recognized by the procedure.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

AD0208**INVALID P1 SPECIFIED****Reason:**

Invalid value encountered and rejected by system

System Action:

The command is rejected.

User Action:

Check and correct file ID or dataset name in error then restart process.

AD0209

UNABLE TO ACCESS P1, FILERC= P2

Reason:

Process failed to open file for processing.

System Action:

Validation failed.

User Action:

Check FILERC code in the NCL Reference under &FILE OPEN.

AD0210

NO MODS DEFINITIONS FOUND WITH LANGUAGE= P1

Reason:

Language code specified is not found in source file.

System Action:

Request rejected.

User Action:

Check language code required and rerun the process.

AD0211

FILE ~P1 IS EMPTY

Reason:

There are no records found in the file specified to process.

System Action:

Request rejected.

User Action:

Can not use this file.

AD0212**USERID P1 NOT AUTHORIZED FOR ADMINISTRATION FUNCTIONS****Reason:**

A request to access the MODS Administration functions was denied because the userid *P1* was not authorized.

System Action:

The request is rejected.

User Action:

None.

AD0213**P1 SHOULD BE OPENED WITH READ, UPDATE AND DELETE ACCESS****Reason:**

To perform the function successfully, this file need read, update and delete access. If Dataset Name specified, this dataset has already been defined by other process with read only access.

System Action:

It will not pass validation.

User Action:

Open file with read, update and delete access. If the dataset has already been defined by other process with read only access, wait until that process finished then try again.

AD0214**COMMAND ASSIGNED TO FUNCTION KEY P1 IS INVALID****Reason:**

Function key *P1* was pressed on the Delete File Specification panel and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

AD0301

INVALID File ID SPECIFIED

Reason:

File ID specified is rejected by system.

System Action:

The command is rejected.

User Action:

Check and correct file ID in error then restart process.

AD0302

REFER TO LOG, P2

Reason:

Dataset allocation failed. May be dataset does not exist. Check log file for more explanation of the error.

System Action:

The command is rejected.

User Action:

Check and correct dataset in error then restart process.

AD0303

DEALLOCATION FAILED FOR DATASET= P1 REASON= P2

Reason:

Dataset deallocation failed.

System Action:

The command is rejected.

User Action:

Contact technical support.

AD0304**OPEN FAILED FOR File ID=~P1 REASON=~P2****Reason:**

Can not open file specified.

System Action:

The command is rejected.

User Action:

Check and correct file ID, restart process.

AD0305**CLOSE FAILED FOR File ID= P1 REASON= P2****Reason:**

Can not close file specified.

System Action:

The command is rejected.

User Action:

Check and correct file ID, restart process.

AD0306**File ID= P1 IN USE BY ANOTHER USER= P2 WITH NCLID= P3****Reason:**

File specified is used by another user.

System Action:

The command is rejected.

User Action:

Try again later.

AD0307

File ID=~P1 OPEN TYPE=~P2 STATUS=~P3

Reason:

File has already allocated and open.

System Action:

The command is rejected.

User Action:

None.

AD0308

File ID= P1 NOT AVAILABLE

Reason:

File specified is not available.

System Action:

The command is rejected.

User Action:

None.

AD0309

INVALID Dataset Name SPECIFIED

Reason:

Dataset name specified to allocate is rejected by system.

System Action:

The command is rejected.

User Action:

Check and correct dataset name in error then restart process.

AD0310**INVALID FUNCTION CODE=~P1 SPECIFIED****Reason:**

Function code specified is invalid.

System Action:

The command is rejected.

User Action:

Contact support.

AD0701**MISSING REQUIRED PARAMETER= P1****Reason:**

Required parameter is not found.

System Action:

The command is rejected.

User Action:

Check with the system administrator.

AD0702**P1 VARTABLE FAILED, ID= P2 ZFDBK= P3****Reason:**

Request issued against the vartable failed, with non zero return code.

System Action:

The command is rejected.

User Action:

Check with the system administrator.

AD0703

~P1 VARTABLE FAILED, ID=~P2 KEY=~P3 ZFDBK=~P4

Reason:

Request issued against the vartable failed, with non zero return code.

System Action:

The command is rejected.

User Action:

Check with the system administrator.

AD0704

TABLE CLEARED

Reason:

A request was issued to clear all records from the table. The table is used to store user selected record/s or log records.

System Action:

The command is accepted.

User Action:

None.

AD0801

UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE= P1

Reason:

The service procedure \$ADEX08L for the Application ID List failed because it received an unknown call type in variable \$SLCALLTYPE from procedure \$CASL000. The unknown call type was *P1*.

System Action:

Procedure \$ADEX08L terminates.

User Action:

Contact the system administrator.

AD0802**NO RESELECT AFTER 'ALL' SELECTED****Reason:**

The record can not be reselect because ALL select already defined for this record.

System Action:

The command is rejected.

User Action:

Unselect the record with ALL selected then reselect.

AD0803**RECORD/S ALREADY SELECTED FOR APPL= P1****Reason:**

The record can not be ALL select because individual component or record already selected previously.

System Action:

The command is rejected.

User Action:

Unselect the selected record then do ALL select.

AD0804**RECORD HAS NOT BEEN SELECTED****Reason:**

Unselect action failed because record has not been selected.

System Action:

The command is rejected.

User Action:

Record must be selected before unselect.

AD0805

NOT ALLOWED TO EXPORT CAS COMPONENT RECORD FROM ~P1

Reason:

CAS component record exported from CAS control file only.

System Action:

The command is rejected.

User Action:

Specify CAS control file as the source file.

AD0806

MUST DO 'ALL' SELECT BEFORE EXCLUDE SELECTION

Reason:

Before excluding selection, ALL select must be done first

System Action:

The command is rejected.

User Action:

Try again.

AD0901

UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE= P1

Reason:

The service procedure \$ADEX09L for the Application ID List failed because it received an unknown call type in variable \$SLCALLTYPE from procedure \$CASL000. The unknown call type was *P1*.

System Action:

Procedure \$ADEX09L terminates.

User Action:

Contact the system administrator.

AD0902**NO RESELECT AFTER 'ALL' SELECTED****Reason:**

The record can not be reselect because ALL select already defined for this record.

System Action:

The command is rejected.

User Action:

Unselect the record with ALL selected then reselect.

AD0903**RECORD/S ALREADY SELECTED FOR APPL= P1 AND COMP= P2****Reason:**

The record can not be ALL select because individual record already selected previously.

System Action:

The command is rejected.

User Action:

Unselect the selected record then do ALL select.

AD0904**RECORD HAS NOT BEEN SELECTED****Reason:**

Unselect action failed because record has not been selected.

System Action:

The command is rejected.

User Action:

Record must be selected before unselect.

AD0905

NO MODS COMPONENTS FOUND

Reason:

There are no MODS components found to be displayed on the selection list

System Action:

The command is rejected.

User Action:

Contact system administrator.

AD0906

MUST DO 'ALL' SELECT BEFORE EXCLUDE SELECTION

Reason:

Before excluding selection, ALL select must be done first

System Action:

The command is rejected.

User Action:

Try again.

AD0907

UNSELECT FROM PREVIOUS LEVEL

Reason:

ALL select already specified therefore one or more component has to be remained selected.

System Action:

The command is rejected.

User Action:

Try again.

AD0908**NO EXCLUDE FACILITY FOR THIS COMPONENT****Reason:**

No facility to exclude record/s for component selected.

System Action:

The command is rejected.

User Action:

If component is not needed then use unselect instead.

AD0909**NO RECORDS FOUND****Reason:**

There are no records satisfy the selection criteria.

System Action:

The command is rejected.

User Action:

None.

AD0910**NO MESSAGE PREFIX SPECIFIED FOR APPL= P1****Reason:**

There are no prefix message specified to display messages in selection list.

System Action:

Request rejected.

User Action:

Specified message prefix for the application in Application Register and try again.

AD0911

~P1 DEFINITION CAN NOT BE BROWSED THROUGH THIS UTILITY

Reason:

There is no facility provided to browse the MODS component specified.

System Action:

Request rejected.

User Action:

To browse the definitions, use function available through MODS Primary Menu.

AD0912

THERE ARE NO NATIONAL LANGUAGE ENABLED COMMON SERVICES AVAILABLE

Reason:

There are no National Language Enabled Common Services supported. Common services can only be selected when a language code of UK is specified.

System Action:

The action is rejected.

User Action:

Specify a language code of UK to process common services definitions.

AD1001

UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE= P1

Reason:

The service procedure \$ADEX10L for the Application ID List failed because it received an unknown call type in variable \$SLCALLTYPE from procedure \$CASL000. The unknown call type was *P1*.

System Action:

Procedure \$ADEX10L terminates.

User Action:

Contact the system administrator.

AD1002**RECORD HAS NOT BEEN SELECTED****Reason:**

Unselect action failed because record has not been selected.

System Action:

The command is rejected.

User Action:

Record must be selected before unselect.

AD1003**UNKNOWN COMPONENT= P1****Reason:**

Component selected is unknown to the system.

System Action:

The command is rejected.

User Action:

Contact system administrator.

AD1004**NO COMPONENT ID FOUND TO BE DISPLAYED****Reason:**

No component id to be displayed in the selection list.

System Action:

The command is rejected.

User Action:

Contact system administrator.

AD1005

NO RESELECT AFTER 'ALL' SELECTED

Reason:

The record can not be reselect because ALL select already defined for this record.

System Action:

The command is rejected.

User Action:

Unselect the record with ALL selected then reselect.

AD1006

RECORD/S ALREADY SELECTED FOR APPL= P1 AND COMP= P2

Reason:

The record can not be ALL select because individual record already selected previously.

System Action:

The command is rejected.

User Action:

Unselect the selected record then do ALL select.

AD1007

MUST DO 'ALL' SELECT BEFORE EXCLUDE SELECTION

Reason:

Before excluding selection, ALL select must be done first

System Action:

The command is rejected.

User Action:

Try again.

AD1008**UNSELECT FROM PREVIOUS LEVEL****Reason:**

ALL select already specified therefore one or more component has to be remained selected.

System Action:

The command is rejected.

User Action:

Try again.

AD1009**NO RECORD TO EXCLUDE****Reason:**

There is only one record selected therefore no more records to exclude

System Action:

The command is rejected.

User Action:

None.

AD1010**NO RECORDS FOUND****Reason:**

There are no records satisfy the selection criteria.

System Action:

The command is rejected.

User Action:

None.

AD1101

UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE=~P1

Reason:

The service procedure \$ADEX11L for the Application ID List failed because it received an unknown call type in variable \$SLCALLTYPE from procedure \$CASL000. The unknown call type was P1 .

System Action:

Procedure \$ADEX11L terminates.

User Action:

Contact the system administrator.

AD1102

RECORD HAS NOT BEEN SELECTED

Reason:

Unselect action failed because record has not been selected.

System Action:

The command is rejected.

User Action:

Record must be selected before unselect.

AD1103

UNSELECT FROM PREVIOUS LEVEL

Reason:

ALL select already specified therefore one or more records has to be remained selected.

System Action:

The command is rejected.

User Action:

Try again.

AD1104**NO RECORDS FOUND****Reason:**

No records satisfy the selection criteria.

System Action:

The command is rejected.

User Action:

None.

AD1201**ERROR ENCOUNTERED, P1 P2 P3 P4****Reason:**

Error encountered during processing.

System Action:

The command is rejected.

User Action:

Contact technical support.

AD1301**INVALID PARAMETERS****Reason:**

Parameters passed to \$ADEX13F are invalid

System Action:

None

User Action:

This is an internal error - contact your product support representative.

AD1302

NO ITEMS SELECTED

Reason:

Action was initiated without selecting any items

System Action:

None

User Action:

Select items and then retry action

AD1303

UNABLE TO ACCESS P1, FILERC= P2

Reason:

Process failed to open file for processing.

System Action:

Validation failed.

User Action:

Check FILERC code in the NCL Reference under &FILE OPEN.

AD1304

UNABLE TO ALLOCATE EXPANDED RULES TABLE - ZFDBK= P1

Reason:

An attempt to allocate the expanded rules table failed with the indicated feedback code

System Action:

None

User Action:

Internal error - contact your product support representative.

AD1305**ANALYSIS COMPLETE, PRESS ACTION TO ~P1****Reason:**

An analysis of the selections made previously has been completed, press the ACTION key to proceed with the action indicated, or the CANCEL key to cancel the process.

System Action:

None

User Action:

Press ACTION or CANCEL key.

AD1306**ANALYSIS IN PROGRESS****Reason:**

An analysis of the selections made previously is currently in progress

System Action:

None

User Action:

Wait until the analysis has been completed

AD1307**P1 COMPLETE****Reason:**

The requested action has been completed

System Action:

None

User Action:

none

AD1308

~P1 CANCELLED

Reason:

The requested action was cancelled due to user request

System Action:

None

User Action:

None

AD1309

ANALYSIS COMPLETE, NO RECORDS TO P1 (THERE IS NOTHING TO ACTION)

Reason:

An analysis of the selections made previously has been completed but no records matching your selections were found to be processed. If records already exists in the target file then specify REPLACE=YES from the menu.

System Action:

None

User Action:

Press F3 or F4 to return to the menu. If replacing records in the target file, specify REPLACE=YES then restart the process.

AD1310

UNABLE TO ALLOCATE LOG TABLE - ZFDBK= P1

Reason:

An attempt to allocate the log table failed with the indicated feedback code

System Action:

None

User Action:

Internal error - contact your product support representative.

AD1311**~P1 IN PROGRESS****Reason:**

The requested action is now being executed

System Action:

Executing action

User Action:

Wait

AD1312**INVALID COMMAND****Reason:**

The command entered on the command line was not recognized by the procedure.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

AD1313**UNABLE TO ALLOCATE RULES TABLE - ZFDBK= P1****Reason:**

An attempt to allocate the rules table failed with the indicated feedback code

System Action:

None

User Action:

Internal error - contact your product support representative.

AD1314

WRITE ERROR ON TARGET FILE - FILE FULL OR UNABLE TO EXTEND ALLOCATION

Reason:

An attempt to write to the target file resulted in a non-zero return code. The VSAM feedback code was 1C which indicates that the file is full and could not be extended by VSAM. Possible causes include insufficient space allocated to the file, insufficient space on disk or VSAM SHAREOPTIONS=4 and DISP=SHR.

System Action:

Processing terminated

User Action:

Examine the allocation details of the target file to determine which of the possibilities is the exact cause. Correct the problem and retry the action.

AD1315

WRITE ERROR ON TARGET FILE - FILE= P1 FILERC= P2 VSAMFDBK= P3

Reason:

An attempt to write to the target file resulted in a non-zero return code. The file name, write return code and VSAM feedback code are displayed.

System Action:

Processing terminated

User Action:

The most likely explanation is that there is insufficient space remaining on the file.

AD1316**WRITE ERROR ON TARGET FILE - CI STILL LOCKED AFTER P1 RETRIES****Reason:**

An attempt to write to the target file resulted in a non-zero return code. The VSAM feedback code was 14 which indicates that the VSAM CONTROL INTERVAL has been locked by another write operation. A number of retries were attempted with increasing delays before the write operation was abandoned.

System Action:

Processing terminated

User Action:

Issue the SH UDBUSER command from an OCS window to determine what other process(s) have the file open. Wait until there are none and then retry the original processing.

AD1317**COMMAND ASSIGNED TO FUNCTION KEY P1 IS INVALID****Reason:**

Function key *P1* was pressed on the Control File Entity Process panel and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

AD1501

UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE= P1

Reason:

The service procedure \$ADEX15E for the Application ID List failed because it received an unknown call type in variable \$SLCALLTYPE from procedure \$CASL000. The unknown call type was *P1*.

System Action:

Procedure \$ADEX15E terminates.

User Action:

Contact the system administrator.

AD1502

NO RECORDS FOUND

Reason:

There were no LOG records found in the table to be displayed.

System Action:

None.

User Action:

Rerun the process with LOG=YES.

AD1503

LOG TABLE NOT FOUND

Reason:

The table which stored all log records is not found. May be the table has not been created.

System Action:

Process cancelled.

User Action:

Rerun process with LOG=YES.

AD1504**P1 LOG RECORDS PRINTED ON PRINTER P2, PSM REQ#= P3****Reason:**

The content of the log table is being printed through Print Services Manager on printer and PSM request number specified.

System Action:

None.

User Action:

None.

AD1505**NO RECORDS FOUND TO BE PRINTED****Reason:**

The log table is empty, therefore there is nothing to print.

System Action:

Request rejected.

User Action:

To get the same log records, user need to redo the process and do not clear/reset the table.

AD1601**INVALID COMMAND****Reason:**

The command entered on the command line was not recognized by the procedure.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

AD1602

ENTER File ID OR Dataset Name

Reason:

User has to specify file ID or dataset name.

System Action:

None

User Action:

Specify file ID or dataset name.

AD1603

~P1 NOT SPECIFIED

Reason:

Required field not specified.

System Action:

None

User Action:

Specify field in error.

AD1604

P1 IS NOT A VALID MODS CONTROL FILE

Reason:

Specified file is not a valid MODS control file. Key has different length.

System Action:

None

User Action:

Check file to be used for copy process, make sure it is a MODS control file. Try the process again.

AD1605**File ID P1 IS NOT AVAILABLE****Reason:**

The check against file specified failed with non zero return code.

System Action:

None

User Action:

Check file to be used for copy process, make sure it is a MODS control file. Try the process again.

AD1606**INVALID ~P1 SPECIFIED****Reason:**

Invalid value encountered and rejected by system

System Action:

The command is rejected.

User Action:

Check and correct file ID or dataset name in error then restart process.

AD1607**NO MODS DEFINITIONS FOUND WITH LANGUAGE= P1****Reason:**

Language code specified is not found in source file.

System Action:

Request rejected.

User Action:

Check language code required and rerun the process.

AD1608

UNABLE TO ACCESS *P1*, FILERC= *P2*

Reason:

Process failed to open file for processing.

System Action:

Validation failed.

User Action:

Check FILERC code in the NCL Reference under &FILE OPEN.

AD1609

FILE ~*P1* IS EMPTY

Reason:

There are no records found in the file specified to process.

System Action:

Request rejected.

User Action:

Can not use this file.

AD1610

USERID *P1* NOT AUTHORIZED FOR ADMINISTRATION FUNCTIONS

Reason:

A request to access the MODS Administration functions was denied because the userid *P1* was not authorized.

System Action:

The request is rejected.

User Action:

None.

AD1611**COMMAND ASSIGNED TO FUNCTION KEY *P1* IS INVALID****Reason:**

Function key *P1* was pressed on the Browse/Unformatted File Specification panel and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

AD1901**UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE=~P1****Reason:**

The service procedure \$ADEX10L for the Application ID List failed because it received an unknown call type in variable \$SLCALLTYPE from procedure \$CASL000. The unknown call type was *P1* .

System Action:

Procedure \$ADEX19L terminates.

User Action:

Contact the system administrator.

AD2001**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= *P1* VALUE= *P2*****Reason:**

The service procedure \$ADEX20M for the CAS export/import Menu failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2*.

System Action:

Procedure \$ADEX20M terminates.

User Action:

Contact the system administrator.

AD2002

ONLY ALL OR SEL FOR SELECT TYPE

Reason:

Only ALL or SEL can be specified for selection type.

System Action:

Command rejected.

User Action:

Specify ALL or SEL for selection type.

AD2003

ALL SELECT SPECIFIED FOR APPLICATION=~P1

Reason:

All MODS component already been selected for this application.

System Action:

The command is rejected.

User Action:

None.

AD2004

RECORD/S ALREADY SELECTED FOR APPLICATION= P1

Reason:

The record can not be ALL select because individual component or record already selected previously.

System Action:

The command is rejected.

User Action:

Unselect the selected record then do ALL select.

AD2005**ALL MODS COMPONENTS SELECTED FOR APPLICATION= P1****Reason:**

All MODS components selected for this application.

System Action:

The command is accepted.

User Action:

None.

AD2006**USERID P1 NOT AUTHORIZED FOR ADMINISTRATION FUNCTIONS****Reason:**

A request to access the MODS Administration functions was denied because the userid *P1* was not authorized.

System Action:

The request is rejected.

User Action:

None.

AD2007**ONLY 'YES' OR 'NO' FOR P1****Reason:**

Only YES or NO can be specified for this option.

System Action:

Command rejected.

User Action:

Specify YES or NO for this option.

AD2009

LOG TABLE NOT FOUND

Reason:

The table which stored all log records is not found. May be the table has not been created.

System Action:

Process cancelled.

User Action:

Rerun process with LOG=YES.

AD2010

INVALID COMMAND

Reason:

The command entered on the command line was not recognized by the procedure.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

AD2011

Appl ID MUST CONTAIN 3 ALPHANUMERIC AND/OR NATIONAL CHARACTERS

Reason:

An invalid application ID was entered in the Appl ID field. The value entered was less than 3 character long or contained characters other than alphabetic (A - Z), numerics (0 - 9) and nationals (@, # and \$).

System Action:

The selection of the option is rejected and the Appl ID field is set in error.

User Action:

Correct the application ID and retry.

AD2012**Language Code MUST BE 2 CHARACTERS IN LENGTH****Reason:**

An invalid Language Code was entered in the Language Code Field. The value entered was not 2 characters long.

System Action:

The selection of the option is rejected and the Language Code field is set in error.

User Action:

Correct the Language Code and retry.

AD2101**INVALID KEYWORD VALUE SPECIFIED, KEYWORD=~P1 VALUE=~P2****Reason:**

The service procedure \$ADEX21M for the Administration Menus failed because it received an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

Procedure \$ADEX21M terminates.

User Action:

Contact the system administrator.

AD2102**USERID *P1* NOT AUTHORIZED FOR ADMINISTRATION FUNCTIONS****Reason:**

A request to access the MODS Administration functions was denied because the userid *P1* was not authorized.

System Action:

The request is rejected.

User Action:

None.

AD2103

NO APPLICATIONS SELECTED FROM LIST

Reason:

A list of applications was displayed for object class compilation but no entries were selected from the list.

System Action:

The object class compilation (or test compilation) request is cancelled.

User Action:

None.

AD2104

P1 is not a valid MODS file

Reason:

The specified file is not a valid MODS file.

System Action:

None

User Action:

Specify a valid MODS control file. Select '?' for prompting.

AD2105

P1 value not selected from list

Reason:

No value was selected from the list of MODS control files.

System Action:

None

User Action:

Enter the name of a MODS file ID in the *P1* field.

AD2106***P1* and *P2* cannot be the same****Reason:**

Fields *P1* and *P2* have the same value. The values must be different.

System Action:

None

User Action:

Change either *P1* or *P2*.

AD2107***P1* is open for input only****Reason:**

The *P1* MODS file specified is open for input only.

System Action:

None

User Action:

Specify another MODS file.

AD2201**UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE= *P1*****Reason:**

The service procedure \$ADEX22E for the Application ID List failed because it received an unknown call type in variable \$SLCALLTYPE from procedure \$CASL000. The unknown call type was *P1*.

System Action:

Procedure \$ADEX22E terminates.

User Action:

Contact the system administrator.

AD2203

UNABLE TO ACCESS *P1*, FILERC= *P2*

Reason:

Process failed to open file for processing.

System Action:

Process stops.

User Action:

Check FILERC code in the NCL Reference under &FILE OPEN.

AD2204

FAILED TO CLOSE *P1*, FILERC= *P2*

Reason:

Process failed to close file.

System Action:

Process stop.

User Action:

Check FILERC code in the NCL Reference under &FILE CLOSE.

AD3001

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= *P1* VALUE= *P2*

Reason:

The MODS NLE Copy Utility interface procedure \$ADEX30F failed during request processing because it was passed an invalid keyword value The keyword was *P1* and the invalid value was *P2*.

System Action:

The request is rejected and procedure \$ADEX30F terminates.

User Action:

Correct the NCL procedure which executed \$ADEX30F. If executed from OCS, check the command entered on the command line and retry.

AD3002**THE 'MESSAGE' KEYWORD MUST BE SPECIFIED****Reason:**

When copying CAS messages using the CAS NLE copy procedure \$ADEX30F, the 'NAME' parameter must contain the 'MESSAGE' keyword parameter.

System Action:

NLE copy procedure \$ADEX30F terminates.

User Action:

Specify a message ID or a generic message ID (using an asterisk as a wildcard character) in the MESSAGE keyword, which is encapsulated by the NAME parameter.

AD3003**ERROR RETRIEVING APPL ID INFORMATION FOR APPL ID ' P1'****Reason:**

It was not possible to obtain APPL ID information from the application register for the Application ID P1 .

System Action:

Function terminates.

User Action:

Check that the Application ID that you have specified is correct.

AD3004**P1 SHOULD BE OPENED WITH READ, UPDATE AND DELETE ACCESS****Reason:**

To perform the function successfully, this file needs read, update and delete access.

System Action:

Function terminates.

User Action:

Open file with read, update and delete access.

AD3101

P1 exists on P2. REPLACE=NO specified.

Reason:

An attempt to move or copy MIB *P1* has failed. The MIB already exists on the target MODS file *P1* and REPLACE=NO was specified for the operation.

System Action:

None

User Action:

Select another MIB file.

AD3102

MIB not found on P1

Reason:

An attempt to move or copy a MIB has failed. The MIB was not found in the source MODS file *P1*.

System Action:

The operation fails.

User Action:

Select another MIB file.

AD4001

SEARCH OF RECORDS WITH APPL ID= P1 AND COMPONENT= P2 FOR STRING P3

Reason:

This message is a heading line on the MODS search utility report. The message just states which MODS records were searched and for what. *P1* is the Appl ID of the searched records. *P2* is the component of the searched records. *P3* is the string being looked for.

System Action:

None.

User Action:

None. The message is just informational.

AD4003**STRING FOUND *P1* TIMES ON FILE *P2*****Reason:**

This message is a summary of the results of a string search of a file. *P1* is the number of times that the string was found on the file and *P2* is the file ID of the file that was searched.

System Action:

None.

User Action:

None.

AD4004**STRING FOUND *P1* TIMES ON FILE *P2* - SEE PSM # *P3*****Reason:**

This message is a summary of the results of a string search of a file. *P1* is the number of times that the string was found on the file, *P2* is the file ID of the file that was searched and *P3* is the PSM request number of the report that was produced.

System Action:

None.

User Action:

Refer to the PSM report for detailed results from the search.

AD4005**INVALID COMMAND****Reason:**

An invalid command was entered in the Command field on the Search Definitions panel.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

AD4006

COMMAND ASSIGNED TO FUNCTION KEY ~P1 IS INVALID

Reason:

Function key P1 was pressed on the Search Definitions panel and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

AD4101

UNSUPPORTED FIELD RECEIVED FOR EXIT, FIELD= P1 EXIT= P2

Reason:

The MODS : Definition Utility Search panel field validation exit procedure \$ADUT41X failed because it received an invalid field name for the type of exit. The field name was *P1* and the exit type was *P2*.

System Action:

Validation of the search panel fails.

User Action:

Contact the system administrator.

AD4102

P1 IS NOT A VALID MODS CONTROL FILE

Reason:

Specified file is not a valid MODS control file. Key has different length.

System Action:

None.

User Action:

Check file to be used for the search process, make sure it is a MODS control file. Try the process again.

AD4103**FILE ID NOT SELECTED FROM CONTROL FILE LIST****Reason:**

A Control File List was presented and a file was not selected.

System Action:

None.

User Action:

None.

AD4104**Language Code MUST BE 2 CHARACTERS IN LENGTH****Reason:**

An invalid Language Code was entered in the Language Code Field. The value entered was not 2 characters long.

System Action:

Validation of the Language Code field fails.

User Action:

Correct the Language Code and retry.

AD5001**SORTING NOT SUPPORTED BY SERVICE PROCEDURE****Reason:**

A call requesting sort fields was made to the MODS report writer service procedure. The procedure does not support sort fields.

System Action:

None.

User Action:

Remove the sort fields from the report definition rerun the report. Also update the application definition in the Report Writer Application Table and set the 'Maximum Sort Fields' to 0.

AD6003

STRING FOUND ~P1 TIMES ON FILE ~P2

Reason:

This message is a summary of the results of a string search of a file. P1 is the number of times that the string was found on the file and P2 is the file ID of the file that was searched.

System Action:

None.

User Action:

None.

AD6004

STRING FOUND P1 TIMES ON FILE P2 - SEE PSM # P3

Reason:

This message is a summary of the results of a string search of a file. P1 is the number of times that the string was found on the file, P2 is the file ID of the file that was searched and P3 is the PSM request number of the report that was produced.

System Action:

None.

User Action:

Refer to the PSM report for detailed results from the search.

AD6005

INVALID COMMAND

Reason:

An invalid command was entered in the Command field on the Search Panel Definitions panel.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

AD6006**COMMAND ASSIGNED TO FUNCTION KEY ~P1 IS INVALID****Reason:**

Function key P1 was pressed on the Search Panel Definitions panel and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

AD6201**UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALL TYPE= P1****Reason:**

The service procedure \$ADUT62X for the panel library list failed because it received an unknown call type in variable \$SLCALLTYPE from procedure \$CASL000. The unknown call type was *P1*.

System Action:

Procedure \$ADUT62X terminates.

User Action:

Contact your systems administrator.

AD6202**INVALID KEYWORD VALUE IN CALL TO \$CASL000, KEYWORD= P1
VALUE= P2****Reason:**

The service procedure \$ADUT62X for the panel library list failed because it received an invalid keyword value from the procedure that invoked procedure \$CASL000. The keyword was *P1* and the invalid value was *P2*.

System Action:

Procedure \$ADUT62L terminates.

User Action:

Provide a valid keyword value on the call.

AD6203

NO PANEL LIBRARIES DEFINED

Reason:

A request to present an panel library list failed because there were no panel libraries defined.

System Action:

The request is rejected.

User Action:

This should never happen that no panel libraries are defined. Contact your product support representative.

AD6204

NO PANEL LIBRARIES DEFINED WITH AN ID STARTING WITH 'P1'

Reason:

A request to present a panel library list failed because there were no panel libraries defined with an identifier starting with the characters *P1*.

System Action:

The request is rejected.

User Action:

None.

AD6205

PANEL LIBRARY NOT SELECTED FROM PANEL LIBRARY LIST

Reason:

A panel library list was presented and a panel library was not selected.

System Action:

None.

User Action:

None.

ADDF01**MODS PATH INITIALIZATION FAILED: P1****Reason:**

This message is issued during MODS Library path initialization for the specified reason (*P1*). Possible reasons and causes are:

LIBRARY PATH ALREADY EXISTS

The MODS library path has already been defined.

LIBRARY P2 NOT DEFINED

The path definition includes a library (*P2*) which was not previously defined.

VARIABLE GET ERROR - TABLE= P3 , FDBK= P4

When retrieving an entry from vartable (*P3*) an error (*P4*) was detected.

VARIABLE PUT ERROR - TABLE= P3 , FDBK= P4

When storing an entry in vartable (*P3*) an error (*P4*) was detected.

System Action:

MODS Library path initialization is aborted.

User Action:

For reason: LIBRARY PATH ALREADY EXISTS

Check that the SOLVE initialization procedure(s) do not define the MODS path twice. The path is defined using \$ADLIBDF OPT=DEFPATH.

For reason: LIBRARY *P1* NOT DEFINED

Ensure that the list of libraries that make up the path name (LIB=) is specified correctly. Ensure that all libraries specified in the list have been defined using \$ADLIBDF OPT=DEFLIB.

For reason: VARIABLE GET ERROR - TABLE= *P1*, FDBK= *P2* and reason: VARIABLE PUT ERROR - TABLE= *P1*, FDBK= *P2*

Contact your product supplier.

For all reasons, correct the error and restart the SOLVE region to alter the current MODS path.

ADDF02

LIBRARY NAME OMITTED OR INVALID

Reason:

A request to define a Library failed because the library name, as specified by the LIB= operand, was either omitted or the value is invalid. Library names must be 1-8 characters starting with an alphabetic character.

System Action:

The request is rejected.

User Action:

Specify a valid Library Name and retry.

ADDF03

DD NAME INVALID

Reason:

The DD name value is invalid.

System Action:

The request fails.

User Action:

Correct the DD Name and retry.

ADDF05

LIBRARY NAME(S) INVALID OR OMITTED

Reason:

A request to define a Library Path failed because a (list of) library names was invalid. The LIB= operand specifies the list of libraries which make up the path. This operand was either omitted or was invalid. The operand value should be either:

- a single library, e.g. LIB=libname
- a sublist of libraries, e.g. LIB=(libname1,libname2,...,libnamen)

System Action:

The request is rejected.

User Action:

Correct the operand(s) and retry.

ADDF07**DATASET NAME OMITTED****Reason:**

The Dataset Name was required but was omitted.

System Action:

The request is rejected.

User Action:

Enter a value for the Dataset Name and retry.

ADDF08**MEMBER NOT PERMITTED IN DATASET NAME****Reason:**

A dataset to be allocated as a MODS library must be a VSAM dataset, therefore a member name may not be specified.

System Action:

The request is rejected.

User Action:

Correct the dataset name and retry.

ADDF09**INVALID DATASET NAME****Reason:**

The Dataset Name specified was invalid.

System Action:

The request is rejected.

User Action:

Enter the name of a VSAM dataset without quotes and retry.

ADDF10

INVALID FILE ID

Reason:

An invalid File ID was entered.

System Action:

The request fails.

User Action:

Correct the File ID and retry.

ADDF11

MODS library= P1 defined

Reason:

A MODS library (*P1*) was defined successfully.

System Action:

None.

User Action:

None.

ADDF12

MODS library pathname= P1 successfully initialized

Reason:

The MODS library path initialization is complete. The pathname (*P1*) is shown.

System Action:

None.

User Action:

None.

ADDF21**FILEID DDNAME DSN****Reason:**

This message is issued during MODS Library path initialization and precedes a display of the initialized path.

System Action:

None.

User Action:

None.

ADDF22

Reason:

This message was issued during MODS Library path initialization and precedes a display of the initialized path.

System Action:

None.

User Action:

None.

ADDF23**P1 P2 P3****Reason:**

This message is issued during MODS Library path initialization and is a detail line of a display of the initialized path. In the message
P1 = File ID, *P2* = DD name, *P3* = DatasetName

System Action:

None.

User Action:

None.

ADDF24

END

Reason:

This message was issued during MODS Library path initialization and indicates the end of a display of the initialized path.

System Action:

None.

User Action:

None.

AMADMNM01

ACTION *P1* IS NOT SUPPORTED BY PROCEDURE *P2*

Reason:

The action indicated by *P1* is not supported by procedure *P2* which was invoked to perform it.

System Action:

The action is not performed.

User Action:

Amend the procedure *P2* to support this action type.

AMAGTP01

APPC *P1* FAILED. RC: *P2* FDBK: *P3* DOMAIN: *P4* MSG: *P5*

Reason:

An APPC error occurred whilst communicating with the remote domain *P4* . The APPC verb that encountered the error was *P1* , the return code set by the verb was *P2* and the feedback code set by the verb was *P3* . If a sysmsg was set it will be displayed as *P5* .

System Action:

None.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

AMAGTP02**UNEXPECTED MESSAGE ENCOUNTERED: P1****Reason:**

The Alert Monitor's proxy agent appc transaction \$AMAGTPZ encountered a message that it did not expect. The message is *P1*.

System Action:

Processing continues.

User Action:

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMAGTP03**UNEXPECTED DATA RECEIVED. VERB: P1 WRI: P2 STATE: P3
DOMAIN: P4****Reason:**

The Alert Monitor proxy agent appc transaction (\$AMAGTPZ) received some unexpected data whilst communicating with the remote domain *P4*. The APPC verb that encountered the error was *P1*, the what received indicator had a value of *P2*, the conversation state was *P3*.

System Action:

None.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

AMAGTT01

APPC *P1* FAILED. RC: *P2* FDBK: *P3* DOMAIN: *P4* MSG: *P5*

Reason:

An APPC error occurred whilst communicating with the remote domain *P4*. The APPC verb that encountered the error was *P1*, the return code set by the verb was *P2* and the feedback code set by the verb was *P3*. If a sysmsg was set it will be displayed as *P5*.

System Action:

None.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

AMAGTT02

UNEXPECTED MESSAGE ENCOUNTERED: *P1*

Reason:

The Alert Monitor's agent appc transaction \$AMAGTTZ (which is started by a remote SOLVE system) encountered a message that it did not expect. The message is *P1*.

System Action:

Processing continues.

User Action:

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMAGTT03

UNEXPECTED DATA RECEIVED. VERB: *P1* WRI: *P2* STATE: *P3* DOMAIN: *P4*

Reason:

The alert monitor agent appc transaction (\$AMAGTTZ) received some unexpected data whilst communicating with the remote domain *P4*. The APPC verb that encountered the error was *P1*, the what received indicator had a value of *P2*, the conversation state was *P3*.

System Action:

None.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

AMAGTT04

CANNOT QUEUE REQUEST FROM REMOTE DOMAIN: *P1* TO AGENT. RC: *P2*

Reason:

The Alert Monitor's agent appc transaction (\$AMAGTTZ) (which is started by a remote SOLVE system) could not queue a request to an alert monitor agent process (\$AMPAGTZ).

System Action:

Processing continues.

User Action:

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMALRCV01

**Alert receiver - *P1* - EPS request rejected (RETCODE=*P2*
ERRORNO=*P3*) REASON: *P4***

Reason:

The alert receiver failed when issuing an EPS request.

P1 is the type of EPS request (for example, CONNECT).

P2 is the return code.

P3 is the error number.

P4 is the reason (for example, EPS UNAVAILABLE).

If possible, recovery will be attempted as indicated by the next message (see also AMALRCV04, AMALRCV05, or AMALRCV06).

System Action:

The alert receiver will attempt recovery.

User Action:

If the message is not followed by a recovery message, the error is probably related to data corruption. The event is discarded, and processing continues.

If the problem cannot be resolved, contact Technical Support.

AMALRCV02

**MDO assign FAILED: RC= *P1* FDBK= *P2* MAP= *P3* COMPONENT= *P4*
TAG= *P5* TYPE= *P6***

Reason:

The alert receiver failed due to an MDO error. The failure is identified by the following:

- The statement type, ASSIGN
- The MDO return code, *P1* (&ZMDORC)
- The MDO feedback code, *P2* (&ZDMOFDBK)
- The map name, *P3* (&ZMDOMAP)
- The full map component name, *P4* (&ZMDONAME)
- The map component tag value, *P5* (&ZMDOTAG)
- The ASN.1 type of the component, *P6* (&ZMDOTYPE)

This failure indicates one of the following causes:

- An invalid record has been received.
- There is a mismatch between the ASN.1 map and the record.

System Action:

The procedure terminates.

User Action:

Contact Technical Support.

AMALRCV03

Alert receiver active. EPS receiver ID is *P1*

Reason:

The alert receiver procedure is now ready to receive alert events using EPS Services. The associated EPS receiver ID is *P1* .

System Action:

The region is ready to receive alerts from external applications.

User Action:

None.

AMALRCV04

Alert receiver attempting EPS reconnection

Reason:

This message follows message AMALRCV01. The recovery is attempted after an EPS request failure (see AMALRCV01).

System Action:

Reconnection to EPS is attempted.

User Action:

See message AMALRCV01 for the EPS return and error codes.

If the problem cannot be resolved, contact Technical Support.

AMALRCV05

Alert receiver waiting for EPS services availability

Reason:

This message follows message AMALRCV01. The required EPS services are currently unavailable. Alert events processing will resume as soon as EPS services are restored.

System Action:

Waiting on EPS to become available.

User Action:

Ensure that an SSI region is currently active with its event processor is enabled.

Enter the */PARMS* shortcut, and check the SSI parameter group. Ensure that the Sub- System Interface ID field contains the correct ID.

AMALRCV06**Alert receiver terminated - EPS services unusable****Reason:**

This message follows message AMALRCV01. An unrecoverable error occurred during an EPS request (see message AMALRCV01). Alert event processing has stopped.

System Action:

The alert receiver is terminated.

User Action:

Contact Technical Support.

AMALRCV07**P1 request rejected - no SERIALNM specified****Reason:**

A *P1* request was received but rejected because the SERIALNM field of the incoming MDO was blank. The SERIALNM field is used to uniquely identify the ALERT that is to have action *P1* performed on it.

System Action:

Request rejected.

User Action:

Ensure the SERIALNM field in the MDO contains a unique alert identifier.

AMALRCV08**P1 request rejected - unable to match SERIALNM****Reason:**

A *P1* request was received but rejected because the SERIALNM field of the incoming MDO contained a value that the Alert Receiver was unable to match to any value in the internal Alert Identifier table (\$AMALRCV)

System Action:

Request rejected.

User Action:

Ensure the SERIALNM field in the MDO contains a value that had previously been used to CREATE an alert.

AMALRCV09

Registered application(*P1*) DESC(*P2*)

Reason:

The Alert Receiver has successfully registered application *P1* with a description of *P2* to the Alert Monitor. This application is now able to raise alerts.

System Action:

The application is registered with the Alert Monitor and is able to raise alerts using the Alert Receiver.

User Action:

None.

AMALRCV10

Registartion request rejected. Missing *P1*

Reason:

The Alert Receiver has received a request to register an application but the field identified by *P1* was missing. The value of *P1* may be APPLID or DESCRIPTION.

System Action:

The request is rejected.

User Action:

Ensure both APPLID and DESCRIPTION are specified for a registration request.

AMALRCV11

Alert Receiver cannot run on *P1* operating system

Reason:

The Alert Receiver cannot run on an operating system identified by *P1*

System Action:

The alert receiver is terminated.

User Action:

None.

AMALRP01**ERROR LOADING PROC: *P1* IN PACKAGE: *P2*. OML ERROR CODE: *P3*****Reason:**

The Alert Monitor attempted to call back an application to process an automated action for an alert, but an error was encountered loading the application's OML call-back package. The procedure being loaded was *P1* which was in the package *P2*. The OML error code was *P3*.

System Action:

Processing of the automated action for the alert is terminated.

User Action:

Determine why the application package is not loading by referring to messages in the log.

AMALRP02**ERROR RETURNED FROM PROC: *P1* IN PACKAGE: *P2*. RETURN CODE: *P3*****Reason:**

The Alert Monitor attempted to call back an application to process an automated action for an alert, but the application returned an error. The application procedure that was called was *P1* which was in the OML package *P2*. The return code set by the application was *P3*.

System Action:

None.

User Action:

Refer to the log for the message that was returned by the application.

AMALRP03

ACTION *P1* FOR CLASS *P2* NOT IMPLEMENTED IN PACKAGE *P3*

Reason:

The Alert Monitor attempted to call back an application to process an automated action for an alert, but the application's call-back package did not contain a procedure for processing the action. The action being performed was *P1* for the alert class *P2*. The application OML package that was called was *P3*.

System Action:

Processing of the automated action for the alert is terminated.

User Action:

Implement the procedure in the application's call-back package to process the action.

AMARED01

Action *P1* deleted from list of actions

Reason:

The automated action *P1* was removed from the list of defined actions.

System Action:

None.

User Action:

None.

AMARED02**Error deleting action *P1*. FDBK: *P2*****Reason:**

An error occurred whilst attempting to remove the automated action *P1*. *P2* is the feedback code from &VARIABLE DELETE.

System Action:

None.

User Action:

FDBK value of 4 indicates that the action has already been deleted. For other FDBK values, ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

If you cannot resolve the problem, contact Technical Support at <http://ca.com/support>.

AMARED03**CALLTYPE *P1* NOT RECOGNIZED BY SELECTION LIST SERVICE PROCEDURE****Reason:**

The selection list service procedure \$AMAREDL does not support the calltype *P1* from the selection list manager.

System Action:

Selection list terminates.

User Action:

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMARED04

NO ACTION SELECTED

Reason:

When asked to select an action you pressed F3=Exit instead of selecting an action. The add request is cancelled.

System Action:

None.

User Action:

Retry the add request, selecting an action from the list of available actions.

AMARED05

ERROR - COULD NOT ADD ACTION AS YOU HAVE TOO MANY OF THEM

Reason:

You attempted to add an automated action, but another action could not be added as there are too many actions already.

System Action:

None.

User Action:

None.

AMARED06

Request canceled

Reason:

A request to add or update a list of actions has been canceled.

System Action:

Current changes have been abandoned.

User Action:

None.

AMARPC02**Link to remote system *P1* is unavailable****Reason:**

You have attempted to perform an operation which was to be routed to a remote system but the link to the remote system with a domain ID of *P1* was unavailable.

System Action:

Request rejected.

User Action:

Determine why the link to the remote system was not available. Issue a **SHOW LINKS** command to see the status of links. Issue a **SHOW DOMAINS** command to see the status of domains that are known to the local system. A LINK START command may be required.

AMARPC03**Userid *P1* is not defined on remote system *P2*****Reason:**

You have attempted to perform an operation which was to be routed to a remote system, but the userid *P1* was not defined on the remote system that has a domain ID of *P2*.

System Action:

Request rejected.

User Action:

Contact the administrator for the remote system and arrange for your userid to be defined. To see a list of domain IDs and their details issue a SHOW DOMAINS command. The output from this command will help identify the remote system.

AMAVAC01

CALLTYPE *P1* NOT RECOGNIZED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The selection list service procedure \$AMAVACL does not support the calltype *P1* from the selection list manager.

System Action:

Selection list terminates.

User Action:

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMCALL01

Alert not created - mandatory attributes not present in alert

Reason:

The creation of an Alert in the Alert Monitor was rejected because the passed alert did not have all the mandatory attributes set.

System Action:

Create of alert rejected.

User Action:

Make sure the Alert MDO has all the mandatory attributes set in it before you call \$AMCALL:Alert_Create to create the alert.

AMCALL02**Error starting Alert Monitor Alert Receiver server. RC: P1****Reason:**

Whilst processing an alert create request, the Alert Monitor attempted to start the Alert Monitor Alert Receiver (which is a long running server process). An error occurred when attempting to start the server. The return code set by the &APPC START verb is *P1*.

System Action:

Create of alert rejected.

User Action:

Refer to the log for any related error messages.

AMCALL03**Alert not created - alert server process at queue limit****Reason:**

The creation of an Alert in the Alert Monitor was rejected because the the alert server process that the alert is queued to has reached its queue limit (32767).

System Action:

Creation of alert rejected.

User Action:

Investigate the reasons for excessive alert creation.

AMCALL04**Alert not created - alert MDO exceeds maximum size****Reason:**

The creation of an Alert in the Alert Monitor was rejected because the passed alert MDO exceeded the maximum allowable size.

System Action:

Create of alert rejected.

User Action:

Make sure the Alert MDO does not exceed the maximum MDO size.

AMCALL05

Alert not created - alert server process not running

Reason:

The creation of an Alert in the Alert Monitor was rejected because the alert server process was not running (even after the alert create processing attempted to automatically start it).

System Action:

Create of alert rejected.

User Action:

Check the log for any related error messages. Contact your Systems Administrator.

AMCALL06

P1 request failed. Attribute P2 has an invalid value of ' P3'.

Reason:

The request of type *P1* to \$AMCALL failed because the attribute *P2* had an invalid value of *P3* .

System Action:

None.

User Action:

Contact your Systems Administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMCALL07**Fatal VARIABLE error - ID: P1 FUNC: P2 FDBK: P3****Reason:**

An error occurred while manipulating an NCL VARIABLE in the procedure \$AMCALL. *P1* is the varable Identifier, *P2* is the function being performed and *P3* is the feedback code set by the vartable verb.

System Action:

None.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

AMCALL08**Error - mandatory parameters not set in \$AMALERTRULE MDO****Reason:**

You have attempted to edit the automated actions in an alert rule but the procedure which invoked \$AMCALL:AlertRule_Edit did not set all of the mandatory parameters in the &\$AMALERTRULE MDO.

System Action:

Request fails.

User Action:

Contact your Systems Administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMCALL09

Error - mandatory parameters not set in \$AMALERT MDO

Reason:

An application has attempted to create an alert, but the alert MDO that it shared with \$AMCALL:AlertCreate did not have all the mandatory fields set in it.

System Action:

Request fails.

User Action:

Contact your Systems Administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMCALL10

Link to system *P1* unavailable

Reason:

You have attempted to access alert information from a remote system, but the link to the remote system is currently unavailable.

System Action:

Request rejected.

User Action:

Check that the remote system is running and that the link to the remote system is active. Use the SHOW LINKS command to see the status of the INMC links.

AMCBPKG01**REQUIRED ATTRIBUTE *P1* OMITTED FOR ACTION *P2*****Reason:**

The action *P2* was not performed because the required attribute *P1* was not set.

System Action:

The action is not performed.

User Action:

Make sure the MDO has all the mandatory attributes set in it before you attempt to perform the action again.

AMCBPKG02**P1 REQUEST FAILED. ATTRIBUTE P2 HAS AN INVALID VALUE OF ' P3'****Reason:**

The request of type P1 failed because the attribute P2 had an invalid value of P3 .

System Action:

The action is not performed.

User Action:

Ensure that all attributes are correctly set before retrying the action.

AMCBPKG03**HISTORY ONLY AVAILABLE FOR ALERTS THAT HAVE RESOURCE FIELD SET****Reason:**

You requested resource history for an alert that does not have the resource field set. You can only get resource history for alerts that have the resource field set.

System Action:

None.

User Action:

None.

AMCBPKG04

FILE *P1* ERROR FILERC= *P2* KEY= *P3* ERROR= *P4*

Reason:

The file action *P1* failed, the file return code was *P2*. If applicable, *P3* is the key value and *P4* is the specific VSAM error code.

System Action:

The action is not performed.

User Action:

Determine the cause of the error and retry.

AMCBPKG05

FIELD VALUE MUST BE SPECIFIED

Reason:

The field highlighted in error is a required field but no value was entered.

System Action:

None.

User Action:

Enter a value for the field.

AMCBPKG06

ALERT MONITOR TROUBLE TICKET INTERFACE HAS NOT BEEN CONFIGURED

Reason:

You cannot use the alert monitor trouble ticket interface because it has not yet been configured.

System Action:

None.

User Action:

The system administrator should configure the trouble ticket interface. Enter the /ALTTI shortcut to start configuring the interface.

AMCBPKG07**UNSUPPORTED TROUBLE TICKET INTERFACE TYPE: P1****Reason:**

The configured trouble ticket interface type is *P1* but it is not supported on this system.

System Action:

None.

User Action:

Contact your System Administrator.

AMCBPKG08**TROUBLE TICKET REQUEST STOPPED BY USER EXIT P1****Reason:**

The trouble ticket user exit routine *P1* stopped the creation of a trouble ticket from the alert monitor by setting a non-zero return code.

System Action:

None.

User Action:

None.

AMCBPKG09**TROUBLE TICKET MAIL SENT TO P1****Reason:**

The trouble ticket request was sent by e-mail to the address *P1* . This message indicates that the request was queued to the MVS based SMTP agent. It does not guarantee that the message was received by the address.

System Action:

None.

User Action:

None.

AMCBPKG10

ALERT BEING TRACKED BY USERID *P1*

Reason:

The alert is now being tracked by the userid *P1*. This is due to the user *P1* using the T=Track selection list option against the alert on the list of alerts.

System Action:

None.

User Action:

None.

AMCBPKG11

ALERT NO LONGER BEING TRACKED

Reason:

The alert is no longer being tracked. This is due to the user who was tracking the alert using the T=Track option against the alert on the list of alerts having turned tracking off.

System Action:

None.

User Action:

None.

AMCBPKG12

ALERT SEVERITY CHANGED FROM *P1* TO *P2* BY USERID *P3*

Reason:

The alert's severity has been changed from the level *P1* to the level *P3* by the userId *P3* .

System Action:

None.

User Action:

None.

AMCBPKG13**USERID P1 IS INVALID****Reason:**

The value entered for the user ID is invalid.

System Action:

None.

User Action:

Correct the value entered and retry the operation.

AMCBPKG14**INVALID PROCEDURE NAME****Reason:**

The value entered for the procedure name is invalid.

System Action:

None.

User Action:

Correct the value entered and retry the operation.

AMCBPKG15**INVALID COMMAND****Reason:**

The value entered for the command name is invalid.

System Action:

None.

User Action:

Correct the value entered and retry the operation.

AMCBPKG16

EMAIL TROUBLE TICKET USER EXIT PROCEDURE *P1* NOT FOUND

Reason:

The call to the user exit procedure *P1* for the email trouble ticket interface failed because the procedure could not be found in the procedure library.

System Action:

No further calls to the procedure will be made while creating the current trouble ticket but trouble ticket creation will continue.

User Action:

Ensure the correct name is specified for the exit procedure in the trouble ticket definition or remove the procedure name.

AMCBPKG17

ERROR LOADING EMAIL USER EXIT *P1*, OML ERROR CODE: *P2*. SEE *P3*

Reason:

The call to the user exit procedure *P1* for the email trouble ticket interface failed. *P2* is the error number associated with the cause of the failure. *P3* contains the ID of an error message that may provide a more detailed explanation of the failure.

System Action:

Trouble Ticket processing continues.

User Action:

Correct the indicated error or remove the procedure name from the User Exit field.

AMCBPKG18**CUSTOM TROUBLE TICKET PROCEDURE *P1* NOT FOUND****Reason:**

The call to the user specified procedure *P1* for the Custom Trouble Ticket interface failed because the procedure could not be found in the procedure library.

System Action:

The trouble ticket creation is terminated.

User Action:

Ensure the correct name is specified for the procedure in the trouble ticket interface definition.

AMCBPKG19**ERROR LOADING CUSTOM USER EXIT *P1*, OML ERROR CODE: *P2*. SEE *P3*****Reason:**

The call to the user specified procedure *P1* for the Custom Trouble Ticket interface failed. *P2* is the error number associated with the cause of the failure. *P3* contains the ID of an error message that may provide a more detailed explanation of the failure.

System Action:

Generation of the Trouble Ticket is terminated.

User Action:

Correct the indicated error in the procedure.

AMCBPKG20

Processing to create a CA Service Desk record has started

Reason:

A request has been made to create a Service Desk record that corresponds to this alert.

This message indicates that this region sent the request to the external Web services SOAP client CALSDI/soap. It does not guarantee that the request was received by the Service Desk server, or that a Service Desk record has been created.

System Action:

Internal processing of this request commences. This processing uses the CA Common Services for z/OS components CAICCI and CAISDI/soap to communicate using HTTP(S)/IP, and invoke a Web service provided by the Service Desk server.

User Action:

None.

When all processing and communication completes successfully, a Service Desk record corresponding to this alert should be created.

If the Service Desk server supports the ITIL user interface, an *Incident* record is created; otherwise, a *Request* record is created.

AMCBPKG21**Service Desk record *P1* created on *P2*****Reason:**

CA Service Desk Request/Incident record *P1* has been created by one of the following:

- A user issuing a TT command
- An auto-trouble ticket action being triggered

This alert has a trouble ticket type of SERVICEDESK. *P2* is the Service Desk server that created this record.

If the Service Desk server supports the ITIL user interface, an *Incident* record is created; otherwise, a *Request* record is created.

System Action:

None.

User Action:

This record is now accessible to CA Service Desk users.

Authorized users can log in to the CA Service Desk client application on this server and administer this record.

By default, this record appears as an assigned Request or Incident record with an assignee and user of *System_NetMaster_User* (Your Service Desk Administrator can change these values.)

AMCBPKG22**ALERT SEVERITY ALREADY *P1*, SEVERITY NOT CHANGED****Reason:**

The severity level of the alert has not changed because it is already set to level *P1* .

System Action:

None.

User Action:

None.

AMCBPKG23**Alert *p1* to CA Service Desk failed, server= *p2***

Reason:

An attempt was made to create a CA Service Desk record from a CA NetMaster alert, but the attempt failed due to an error condition in the CA NetMaster to CA Service Desk interface.

This interface involves multiple components, including the CA Common Services for z/OS 'CAICCI' and 'CAISDI/soap' SOAP Client components. These combine to communicate from the z/OS systems using HTTP/s to the CA Service Desk server.

Specific error details are written to the activity log.

Some likely causes of these failures include the following:

- CA Common Services for z/OS CAISDI/soap (SOAP client) started task is not active
- CA Service Desk server is not active
- Web server for CA Service Desk server is not active
- Network problems prevent IP access to CA Service Desk server
- Incorrect or incomplete implementation of the CA Common Services for z/OS component CAISDI/soap
- Incorrect or incomplete implementation of CA Service Desk
- Incorrect login user ID or password for CA Service Desk
- CA Service Desk hostname cannot be resolved
- Incorrect setup of the SERVICEDESK destination:
 - The URL of the CA Service Desk server is incorrect.
 - The CCI SYSID is incorrect.

System Action:

No CA Service Desk record is created.

User Action:

Examine the activity log for further error details in message BASOAP03.

Examine the output of the CA Common Services for z/OS CAISDI/soap SOAP Client started task.

To diagnose these conditions, you may need help from your Systems Programmer (who implemented CAISDI/soap) and your CA Service Desk Administrator.

For more information, see the *Service Desk Integration Guide*, and the *CA Common Services for z/OS Message Guide*.

AMCBPKG24**Trouble Ticket Email Address ' P1 ' cannot be resolved.****Reason:**

The *P1* email address cannot be resolved.

System Action:

The trouble ticket email is not sent.

User Action:

Ensure that the values specified in the following panels are correct:

- Alert Monitor : Email A Trouble Ticket
- Alert Monitor : Trouble Ticket Data Entry Definition

If you use an exit procedure, ensure that all values and code are correct.

Correct any errors.

AMDBMS01**ERROR ADDING ALERT TO ACTIVE ALERTS TABLE. FDBK: P1****Reason:**

An error occurred whilst attempting to add an alert to the active alerts vartable. The feedback code set by the vartable add verb is *P1*.

System Action:

Alert creation rejected.

User Action:

Check the log for any related error messages. Contact your Systems Administrator.

AMDBMS02

ERROR SETTING ALERT - NOT ALLOWED TO SET ATTRIBUTE: *P1*

Reason:

A call was made to the Alert Monitor to set the attributes of an alert, but the alert object that was passed on the set request contained one or more attributes that cannot be set. The first attribute found in the request that cannot be set was *P1*.

System Action:

Set of alert rejected.

User Action:

Check the log for any related error messages. Contact your Systems Administrator.

AMDBMS03

P1

Reason:

An error occurred whilst starting the alert rule processor. *P1* is a description of the error.

System Action:

No rule processing performed for alert.

User Action:

Check the log for any related error messages. Contact your Systems Administrator.

AMDBMS04**APPLID: P1 NOT REGISTERED WITH ALERT MONITOR****Reason:**

The Alert Monitor attempted to process an Alert or a user request but could not proceed because it needed to call back the application id *P1* which currently is not registered with the alert monitor.

System Action:

None.

User Action:

Determine why the application has not registered with the Alert Monitor.

AMDBMS05**ERROR LOADING PROC: P1 IN PACKAGE: P2. OML ERROR CODE: P3****Reason:**

The Alert Monitor attempted to call back an application that has registered with the alert monitor, but an error was encountered loading the call-back package. The procedure being loaded was *P1* which was in the package *P2*. The OML error code was *P3*. This message is written to the log.

System Action:

None.

User Action:

Determine why the application package is not loading by referring to messages in the log.

AMDBMS06

ERROR RETURNED FROM PROC: *P1* IN PACKAGE: *P2*. RETURN CODE: *P3*

Reason:

The Alert Monitor attempted to call back an application that has registered with the alert monitor, but the application returned an error. The application procedure that was called was *P1* which in the package *P2*. The return code set by the application was *P3*.

System Action:

None.

User Action:

Refer to the log for the message that was returned by the application.

AMDBMS07

APPLID: *P1* DID NOT SPECIFY A CALL-BACK PACKAGE WHEN IT REGISTERED

Reason:

The Alert Monitor attempted to call back an application that has registered with the alert monitor, but the application had not specified a call-back package when it registered with the alert monitor. The applId was *P1* .

System Action:

None.

User Action:

Determine why the application did not specify a call-back package when it registered.

AMDBMS08**FATAL VARIABLE ERROR - ID: *P1* FUNC: *P2* FDBK: *P3* KEY: *P4*****Reason:**

An error occurred while manipulating an NCL VARIABLE in the procedure \$AMDBMS. *P1* is the vartable Identifier, *P2* is the function being performed, *P3* is the feedback code set by the vartable verb and *P4* is the vartable key being accessed.

System Action:

None.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

AMDBMS09**PROC: *P1* IN PKG: *P2* DID NOT RETURN A VALID OBJECT****Reason:**

The Alert Monitor called back an application that has registered with the alert monitor, but the application's call-back procedure *P1* in the package *P2* returned an object that was the same as the object that was shared with it (the application call-back procedure did not set any data in the object mdo). The application call-back procedure also set a return code of 0.

System Action:

None.

User Action:

Determine why the application package is not setting data in the object that is returned to the alert monitor.

AMDBMS10

ALERT CLOSED SUCCESSFULLY

Reason:

The Alert Monitor successfully closed an active alert. The alert will now only be in the alert history file.

System Action:

None.

User Action:

None.

AMDBMS11

ALERT CLOSED BY USERID *P1*

Reason:

This message is placed in the alert annotation text and identifies that the user *P1* closed the alert.

System Action:

None.

User Action:

None.

AMDBMS12

ALERT CONDITION CLEARED

Reason:

This message is placed in the alert annotation text and identifies that the alert was cleared by another alert. To find the time that the alert was cleared, look at the alert closed time.

System Action:

None.

User Action:

None.

AMDBMS13**ALERT REPLACED****Reason:**

This message is placed in the alert annotation text and identifies that the alert was replaced by another alert. To find the time that the alert was replaced, look at the alert closed time.

System Action:

None.

User Action:

None.

AMDBMS14**ALERT DOES NOT EXIST****Reason:**

The selected alert does not exist.

System Action:

None.

User Action:

None.

AMDBMS15**ACTION P1 NOT IMPLEMENTED BY APPL P2 CLASS P3 OR ANY PARENT CLASSES****Reason:**

The action **P1** is not supported by the application Id **P2** for the alert class **P3** or any of its parent alert classes.

System Action:

None.

User Action:

Check the log for other errors as this error may be due to an OML call-back package not being able to load (compile error) or it could be due to no call-back packages specifying they support the action.

AMDBMS16

P1

Reason:

An error occurred attempting to start the Alert Monitor history NDB.
P1 is the message returned from the NDB START command.

System Action:

None.

User Action:

Refer to the AMDBMS17 message(s) in the log which describe the NDB return code set in the message from the NDB start command.

AMDBMS17

P1

Reason:

This message contains text that is an interpretation of an NDB return code.
This message follows a AMDBMS16 message.
P1 contains text from the NETINFO database for the NDB return code.

System Action:

None.

User Action:

Refer to the AMDBMS16 message in the log which contains the message returned from the NDB start command.

AMDBMS18**RESPONSE FROM COMMAND TIMED OUT. CMD: P1****Reason:**

A response from the command *P1* was not received within an adequate amount of time by the procedure \$AMDBMS.

System Action:

Could not complete requested function.

User Action:

Determine why there is no response to the *P1* command and correct problem. Check for the message AMDBMS19 in the log which will contain the last message received. If no messages were received, this message will not be in the log.

AMDBMS19**LAST RESPONSE: P1****Reason:**

This message is written to the log as a result of a command not completing within an adequate amount of time. *P1* is the text of the last message that was received before the command timed-out.

System Action:

Command times out.

User Action:

Determine why the command is timing out. Also look for the message AMDBMS19 in the log which identifies the command that was issued.

AMDBMS20

NDB OPEN FAILED. ID= P1 NDBRC= P2

Reason:

The Alert Monitor procedure \$AMDBMS was unable to open the Alert History NDB. The name of the NDB being accessed was *P1* and the NDB return code was *P2* .

System Action:

Processing is terminated.

User Action:

Interpret the NDB return codes using the appendix titled NDB Response Codes in the *Network Control Language Programmer Guide*.

AMDBMS21

NDB ADD FAILED. ID= P1 NDBRC= P2 NDBERRI= P3

Reason:

The Alert Monitor procedure \$AMDBMS was unable to add an Alert to the Alert History NDB. The name of the NDB being accessed was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Processing is terminated.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMDBMS22

NDB CLOSE FAILED. ID= P1 NDBRC= P2

Reason:

The Alert Monitor procedure \$AMDBMS was unable to close the Alert History NDB. The name of the NDB being accessed was *P1* and the NDB return code was *P2* .

System Action:

Processing is terminated.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMDBMS23**NDB FIELD ADD FAILED. ID= P1 NDBRC= P2 FIELD= P3****Reason:**

The Alert Monitor procedure \$AMDBMS was unable to add a field definition to the History NDB. The name of the NDB being accessed was *P1* , the NDB return code was *P2* and the field name was *P3* .

System Action:

Processing is terminated.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMDBMS24**NDB FORMAT DEFINE FAILED. ID= P1 NDBRC= P2 FORMAT= P3****Reason:**

The Alert Monitor procedure \$AMDBMS was unable to define a format to the History NDB. The name of the NDB being accessed was *P1* , the NDB return code was *P2* and the format name was *P3* .

System Action:

Processing is terminated.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMDBMS25**NDB UPDATE FAILED. ID= P1 NDBRC= P2 NDBERRI= P3****Reason:**

The Alert Monitor procedure \$AMDBMS was unable to update an Alert in the Alert History NDB. The name of the NDB being accessed was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Processing is terminated.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMDBMS26

ALERT ALREADY CLOSED

Reason:

The alert that you selected to close has already been closed.

System Action:

None.

User Action:

None.

AMDBMS27

NDB GET FAILED. ID= P1 NDBRC= P2 NDBERRI= P3

Reason:

The Alert Monitor procedure \$AMDBMS was unable to get an Alert from the Alert History NDB. The name of the NDB being accessed was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Processing is terminated.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMDBMS28

NDB DELETE FAILED. ID= P1 NDBRC= P2 NDBERRI= P3

Reason:

The Alert Monitor procedure \$AMDBMS was unable to delete an Alert from the Alert History NDB. The name of the NDB being accessed was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Processing is terminated.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMDBMS29**NDB SCAN FAILED - ID: P1 NDBRC: P2 NDBERRI: P3****Reason:**

An error occurred whilst scanning the Alert History NDB for records. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

None.

User Action:

Interpret the NDB return codes using the appendix titled NDB Response Codes in the NCL Programmer Guide.

AMDBMS30**P1 ALERTS DELETED FROM HISTORY FILE****Reason:**

The Alert Monitor history file cleanup processing has ended and deleted *P1* alerts from the history file.

System Action:

None.

User Action:

None.

AMDBMS31**UNABLE TO GET HISTORY PARMS DEFINITION - FDBK= P1****Reason:**

The Alert History parameters definition cannot be updated because of an unknown file error. *P1* is the VSAM feedback code.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your Systems Administrator.

AMDBMS32

INSTALLATION ERROR - VFS FILE IS OPEN WITH READ ONLY ACCESS

Reason:

The current function cannot complete because the VFS file is opened for read only access and cannot be written to.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your Systems Administrator.

AMDBMS33

ERROR - VFS FILE IS INACCESSIBLE

Reason:

The current function cannot complete because the VFS file cannot be accessed.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your Systems Administrator.

AMDBMS34

ERROR OPENING VFS FILE - FILE RC: *P1*

Reason:

The Alert History parameters definition cannot be updated because of an unknown file error on the VFS file. *P1* is the return code of the file open command.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your Systems Administrator.

AMDBMS35**ALERT HISTORY PARMS DEFINITION SUCCESSFULLY UPDATED****Reason:**

The Alert History parameters definition has been successfully updated and saved.

System Action:

None.

User Action:

None.

AMDBMS36**UNABLE TO P1 ALERT HISTORY PARMS DEFINITION - FDBK= P2****Reason:**

The Alert History parms definition cannot be updated because of an unknown file error on the VFS file. *P1* is file action that failed and *P2* is the VSAM feedback code.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your Systems Administrator.

AMDBMS37

APPLID: P1 CLASSID: P2 RULEID: P3

Reason:

This message follows a AMDBMS09 message and contains information that can aid the diagnosis of the problem.

P1 is the applId attribute that was returned from the AlertRule_Get call to the application call-back package.

P2 is the classId attribute that was returned from the AlertRule_Get call to the application call-back package.

P3 is the ruleId attribute that was returned from the AlertRule_Get call to the application call-back package.

This message is issued because one or more of the above attributes was not set in the &\$AMAlertRule MDO by the application call-back package.

System Action:

Automated Action for an alert not processed.

User Action:

Determine why the application package is not setting data in the object that is returned to the alert monitor.

AMDBMS38

P1 OF ALERT FAILED. APPLID: P2 CLASSID: P3 RESOURCE: P4

Reason:

This message is issued when an attempt is made to create an alert that is greater than 30K in size.

P1 can be ADD or UPDATE

P2 is the Application Id that attempted to add the alert

P3 is the Class Id of the alert (optional)

P4 is the resource name in the alert (optional)

You could get this message if you attempt to add an excessive amount of notes to an alert.

System Action:

If creating a new alert, the alert is discarded (not created). If updating an alert, the update will be rejected.

User Action:

Determine what is issuing such large alerts and change it so that the alert does not contain so much information.

AMDBMS39**ALERT HISTORY FILE UNAVAILABLE****Reason:**

This message is issued if the alert history NDB is not started. This could be due to the alert history DD ALERTH was not allocated in the RUNSYSIN member for the SOLVE system.

System Action:

History information unavailable.

User Action:

Allocate the history NDB with a DDNAME of ALERTH. Once allocated issue the following command to open and start the history database:

\$CAPKCAL \$AMDBMS HistoryNdb_Start

AMDBMS40

ALERT HISTORY DATABASE LOCKED - POSSIBLY DUE TO DATABASE BEING FULL

Reason:

The alert history NDB is locked due to an error (such as running out of space).

System Action:

History information is not available, and alerts are not logged in history NDB.

User Action:

See the region log for any other errors that indicate why the NDB is locked. For example, in a situation where the file is full, you should see a VSAM I/O error message in the log.

To recover from a full NDB

1. Issue a **UDBCTL CLOSE=ALERTH** command.
The history NDB closes when no users are using it.
2. Unallocate the ALERTH DD by issuing the command: **UNALLOC DD=ALERTH**.
The closed NDB is unallocated from the region.
3. Use the IDCAMS REPRO command to back up the NDB.
4. Delete and redefine the existing history NDB (increase allocation if appropriate).
5. Use REPRO to restore the history information.
The information is restored to the redefined NDB.
6. Reallocate the history file to the region by issuing the command: **ALLOC DD=ALERTH DSN=data_set_name DISP=SHR**.
7. Start the Alert Monitor history processing by issuing the command:
\$CAPKCAL \$AMDBMS HistoryNdb_Start.

Note: If you do not need to keep the records in the existing history NDB, you do not need to back up the NDB. Define a new NDB, and update the ALERTHIST parameter group with the new data set name and apply the change.

AMDISP01**ACTIVITY HAS OCCURRED OFFSCREEN (P1) FOR A SEVERITY P2 ALERT****Reason:**

This is an information message issued by the Alert Monitor indicating that some change has occurred to an Alert with a severity of P2 , which is not in the current window. P1 is either ABOVE or BELOW and indicates the direction in which the change is to be found.

System Action:

None.

User Action:

If it is desired to see the change which has occurred, scroll the list in the indicated direction.

AMDISP02**The P1 action is not applicable to the selected alert****Reason:**

You have requested an action to be performed on an alert appearing on the Alert Monitor display, but this action is not applicable to or not supported for the type of alert selected.

System Action:

The requested action is not performed. Alert Monitor processing continues as normal.

User Action:

Check that the action code that you specified is correct. Check that you have selected the correct alert, as the actions supported depend upon the class of the alert and the application it came from.
Not all alerts support all actions. Enter a ? next to an alert to display the full list of actions available.

AMDISP03

NO ACTION SELECTED

Reason:

You placed a ? next to an alert on the alert selection list to get a list of available actions. F3=Exit was pressed instead of selecting an action.

System Action:

You are returned to the Alert selection list.

User Action:

Redisplay the actions list by entering a ? in front of the alert and then S next to the desired action.

AMDISP04

P1 IS AN INVALID SORT COLUMN

Reason:

You specified *P1* as a column name to sort on on the SORT command but the column name is not recognized.

System Action:

Sort command rejected.

User Action:

Specify a valid column name.

AMDISP05

P1 IS AN INVALID SORT ORDER

Reason:

You specified *P1* as a sort order for a column on the SORT command but the sort order is invalid.

System Action:

Sort command rejected.

User Action:

Specify a valid sort order. Valid values are A, ASCENDING, D and DESCENDING. For example, to sort on the severity column in decending order then issue the command SORT SEVERITY D.

AMDISP06**P1****Reason:**

An unexpected message was received by the procedure \$AMDISPL.
P1 is a message that was received.

System Action:

None.

User Action:

Check the log for any related error messages. Contact your Systems Administrator.

AMDISP07**CANNOT PERFORM '*' LOCATE AS THERE ARE NO RECORDS DISPLAYED****Reason:**

You have requested to locate the first alert that has a date that is equal to the date of the record currently displayed on the top of the list (by specifying '*' as the date), but since the list is empty this is not possible.

System Action:

None.

User Action:

Make sure the list has something displayed before you specify '*' as a date on the locate command.

AMDISP08

INVALID DATE SPECIFIED AS PART OF LOCATE COMMAND

Reason:

A request to access a specific date failed because the format of the data does not match one of the following: DD-MON-YYYY YY.DDD DD/MM/YY or MM/DD/YY (if US language code) YY/MM/DD YYMMDD YYYYMMDD = (today's date) * (the date of the record displayed on the top of the list)

System Action:

None.

User Action:

Correct the date entered to match one of the supported formats.

AMDISP09

CALLTYPE P1 NOT RECOGNIZED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The selection list service procedure \$AMDISPL did not support the calltype P1 from the selection list manager.

System Action:

Selection List Terminates.

User Action:

Contact your System Administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMDISP10**END DATE SPECIFIED ON DATE COMMAND MUST BE > START DATE****Reason:**

You have specified two dates on the DATE command indicating a start date and an end date, but the end date is not greater than the start date.

System Action:

None.

User Action:

Correct the end date entered so that it is greater than the start date. The end date is the second operand specified on the date command.

AMDISP11**P1 IS AN INVALID DATE FORMAT****Reason:**

A request to access a specific date failed because the format of the data does not match one of the following: DD-MON-YYYY YY.DDD DD/MM/YY or MM/DD/YY (if US language code) YY/MM/DD YYMMDD YYYYMMDD = (today's date) * (the date of the record displayed on the top of the list)

System Action:

None.

User Action:

Correct the date entered to match one of the supported formats.

AMDISP12

ALERT DISPLAY HELD. NO UPDATES OR NEW ALERTS WILL BE DISPLAYED.

Reason:

You have pressed F6=Hold to stop the alert monitor display from being updated. This means that any new alerts or updates to alerts will not be reflected on the alert monitor display until you press F6=Resume. Be aware that if you change the attributes of an alert such as the severity for example, the display will not be updated to indicate the new alert severity.

System Action:

None.

User Action:

None.

AMDISP13

ALERT DISPLAY RESUMED. UPDATES AND NEW ALERTS WILL BE DISPLAYED.

Reason:

You have pressed F6=Resume to resume the display of updates and new alerts. The alert monitor display will be refreshed with the current alert information.

System Action:

None.

User Action:

None.

AMDISP14**FILTER DOES NOT EXIST****Reason:**

The Filter that you specified is not defined.

System Action:

Command ignored.

User Action:

Specify an existing Filter. (Selection list available)

AMDISP15**FILTER NAME NOT SUPPLIED.****Reason:**

You entered the 'FILTER' command with no name specified and when the list of available filters was displayed you pressed F3=Exit instead of selecting one.

System Action:

The Filter Command is ignored.

User Action:

Select a Filter from the available Filters list by entering an *S* next to the desired Filter.

AMDISP16**DEFINE COMMAND INCOMPLETE****Reason:**

The DEFINE command format is DEFINE 'command type' 'name' where 'command type' can be either FILTER or FORMAT and where name is optional.

System Action:

The DEFINE command is ignored.

User Action:

Complete the DEFINE command as specified.

AMDISP17

P1 command is not valid within HISTORY

Reason:

Command *P1* was issued from within the Alert Monitor History Display. This command is not valid within the history display.

System Action:

None.

User Action:

Do not use this command here.

AMDISP18

P1 SET TO (P2)

Reason:

The Specified Profile element *P1* has been set to the displayed value *P2*

System Action:

None.

User Action:

The Alert Monitor will use the new Value for its Displays.

AMDISP19

THE NAMED LINK (P1) IS UNAVAILABLE OR INVALID.

Reason:

The link specified, *P1* is not currently known. The link may not be active or the name may be invalid.

System Action:

The History command is terminated.

User Action:

Check the Link named. The 'SHOW LINKS' command will display all Links and their status or use the 'HISTORY ?' command to get a selection list of all active Links.

AMDISP20

WARNING: The following links are uncontactable - P1.

Reason:

A request to monitor Alerts for a number of links was made but the links indicated are currently not contactable.

System Action:

Warning message only.

User Action:

Check the Links.

AMDISP21

P1 not supported, issue PROFILE command.

Reason:

You have requested action *P1* to be performed, but this action is not supported. To update the filter or format defined in your user profile, issue the *PROFILE* command.

System Action:

The requested action is not performed.

User Action:

Issue the *PROFILE* command to update your user profile.

AMDISP22

Value not selected from list

Reason:

No value selected from the selection list displayed.

System Action:

None.

User Action:

None.

AMDISP23

Filter P1 SYSTEM expression not valid; expression ignored

Reason:

The current filter has a SYSTEM field expression in its definition. SYSTEM field filter expressions are not valid in Alert Monitor History. This individual expression is ignored, and the remaining filter expressions are used.

System Action:

System filter expression ignored, remaining filter expressions used.

User Action:

Use another filter if required.

AMDISP24

Link to system P1 unavailable

Reason:

You have attempted to access alert information from a remote system, but the link to the remote system is currently unavailable.

System Action:

Request rejected.

User Action:

Check that the remote system is running and that the link to the remote system is active. Use the *SHOW LINKS* command to see the status of INMC links.

AMDISP25

No filters defined within specified range.

Reason:

A request to present a list of filters failed because there were no filters defined within the range specified.

System Action:

The request is rejected.

User Action:

New filters can be created via the *DEFINE FILTER* command.

AMDISP26**No alerts found matching supplied criteria****Reason:**

You issued a CLOSE command; however, no alerts were found that match the criteria.

System Action:

CLOSE command is ignored.

User Action:

None.

AMDISP27**P1 alert(s) closed successfully****Reason:**

The Alert Monitor CLOSE command successfully closed *P1* active alerts.

System Action:

None.

User Action:

None.

AMDISP28**Confirm close of P1 alerts****Reason:**

This is a confirmation message, which lets you confirm that you want to close the *P1* alerts identified by the CLOSE command.

System Action:

None.

User Action:

Press F6 (Action) to action the CLOSE command or press F12 (Cancel) to cancel the action.

AMDISP29

***P1* action cancelled**

Reason:

The *P1* action was cancelled at your request.

System Action:

None.

User Action:

None.

AMDISP30

***P1* alert(s) closed successfully with errors on *P2* close attempts**

Reason:

The Alert Monitor CLOSE command successfully closed *P1* active alerts but failed to close *P2* alerts because of errors.

System Action:

None.

User Action:

See log for error messages on the failed attempts.

AMDISP31

Note: Lines marked + came after a backwards time change

Reason:

This message appears when one or more alerts displayed on the alert monitor have a time that occurred after a backwards local time offset change on this LPAR.

Alerts are normally sorted by time. When a backward time change occurs, such as for Daylight Saving, the most recent alerts may be interleaved with earlier alerts.

To distinguish the alerts that occurred during the second time through the same local time interval, a + is displayed after the time.

System Action:

None.

User Action:

None.

AMEMAI01**EMAIL INTERFACE RECORD DUMP FOR RECORD P1 LENGTH= P2****Reason:**

This message contains a dump of the data about to be written to the mail dataset. This message is followed by multiple AMEMAI02 messages that contain the dump data.

System Action:

None.

User Action:

Send the output to your local support representative.

AMEMAI02

P1 P2 P3 P4 P5 * P6*

Reason:

This message follows a AMEMAI01 message in the activity log. This message contains a dump of the data about to be written to the mail dataset. The fields are:

P1 - the offset into the datastream

P2-P5 - the hexadecimal display of the ASCII characters

P6 - the EBCDIC character form of the data

System Action:

None.

User Action:

Refer to the earlier AMEMAI01 message.

AMEVFWD01

Destination type omitted or invalid

Reason:

The destination type, specified by the DESTTYPE parameter, either was omitted or had an invalid value specified. The DESTTYPE parameter must be specified as one of the following values:

NMVT - Indicates that the alert is to be forwarded to the NETVALRT PPI receiver as an NMVT. This allows the alert to be processed by the SOLVE:Netmaster NEWS component, or by IBM's NetView (TME10). The format of the NMVT can be controlled by using the NMVTTYTYPE parameter.
SNMPTRAP - Indicates that the alert is to be forwarded to an IP Host as an SNMP Trap. The host is identified by the DESTADDR, DESTPORT, and COMMNAME parameters.

System Action:

The command is rejected.

User Action:

Correct the operand and retry.

AMEVFWD02**Destination address omitted****Reason:**

The destination address, specified by the DESTADDR parameter, was omitted. The DESTADDR parameter must take one of the following formats:

* an IP address in dotted notation, for example 123.123.123.123 * an IP host name which can be resolved by the Domain Name Server to an IP address.

System Action:

The command is rejected.

User Action:

Correct the operand and retry.

AMEVFWD03**Destination address *P1* invalid. SOCKETS API is not IPv6 enabled.****Reason:**

The destination address *P1* is an IPv6 address; however, the SOCKETS API for the region is not enabled for IPv6.

System Action:

The command is rejected.

User Action:

Correct the operand and retry, or change the SOCKETS parameter group to use type IBMV6.

AMEVFWD04

Socket P1 error, Retcode= P2 Zfdbk= P3 Errno= P4- P5 Verrin= P6

Reason:

A socket error occurred. The socket action was *P1* , the return code was *P2* , the feedback code was *P3* , the error number was *P4* - *P5* is the name of the error, and the TCPIP vendor specific error code is *P6* .

System Action:

The action fails, but recovery is attempted.

User Action:

If the problem persists determine the cause from the error codes and correct the problem.

AMEVFWD05

Destination port invalid

Reason:

The destination port number, specified by the DESTPORT parameter, was invalid. If specified, the DESTPORT parameter must be numeric in the range 1 to 65535. If omitted, port number 162 is used.

System Action:

The command is rejected.

User Action:

Correct the operand and retry.

AMEVFWD06**Destination address P1 cannot be resolved****Reason:**

The destination address, specified by the DESTADDR parameter, was entered as a host name but the name cannot be resolved to an IP address.

System Action:

The command is rejected.

User Action:

Check the following:

- the name you have specified is correct.
- the IP Interface is active
- the Domain Name Server (DNS) is active and functioning normally.

Correct and retry.

AMEVFWD07**NMVT format type invalid****Reason:**

The NMVT format type, specified by the NMVTTYPE parameter, has an invalid value. The NMVTTYPE parameter must be specified as one of the following values:

GENALERT - Indicates that the alert is to be forwarded to the NETVALRT PPI receiver as an NMVT, formatted as a Generic Alert, major vector type x'0000'. This is the default value.

OPERMSG - Indicates that the alert is to be forwarded to the NETVALRT PPI receiver as an NMVT, formatted as a Send Message to Operator NMVT, major vector type x'006F', accompanied by a Text Data major vector, type x'1300'.

System Action:

The command is rejected.

User Action:

Correct the operand and retry.

AMEVFWD08

Alert Clear option is invalid

Reason:

The Alert Clear option, specified by the CLEAR parameter, has an invalid value. The CLEAR parameter must be specified as one of the following values:

YES - Indicates that Alert Clear events are to be forwarded. This is the default if the operand is omitted.

NO - Indicates that Alert Clear events are not to be forwarded.

System Action:

The command is rejected.

User Action:

Correct the operand and retry.

AMEVFWD09

NMVT receiver ID invalid

Reason:

The NMVT receiver ID, specified by the NETVALRT parameter, has an invalid value. If specified, the name must conform to PDS member name rules.

System Action:

The command is rejected.

User Action:

Correct the operand and retry.

AMEVFWD10

Alert forwarding enabled. Process ID is P1

Reason:

Alerts will be forwarded to specified destination. *P1* identifies the alert forwarding process. It is the NCL ID of the particular instance of the \$AMEVFWD procedure.

This message forms part of a group of messages: AMEVFWD10, AMEVFWD11, AMEVFWD12, AMEVFWD13, and AMEVFWD17.

System Action:

The group of messages is written to the activity log. Alerts that match the criteria outlined in AMEVFWD13 will be reformatted and sent to the specified destination.

User Action:

If the particular process needs to be stopped, enter the following command:

FLUSH ID=n
where *n* is *P1* .

AMEVFWD11

Alert forwarding as NMVTs

Reason:

Alerts will be forwarded as NMVT generic alerts to the NetView region by using the NETVALRT PPI receiver ID.

This message forms part of a group of messages: AMEVFWD10, AMEVFWD11, AMEVFWD12, AMEVFWD13, and AMEVFWD17.

System Action:

The group of messages is written to the activity log. Alerts that match the criteria outlined in AMEVFWD13 will be reformatted and sent to the specified destination.

User Action:

None.

AMEVFWD12

**Alert forwarding as SNMP Traps. Destaddr= P1 Destport= P2
Commname= P3**

Reason:

Alerts will be forwarded as SNMP traps to the following destination:

P1 is the address of the destination.

P2 is the port number.

P3 is the community name.

This message forms part of a group of messages: AMEVFWD10, AMEVFWD11, AMEVFWD12, AMEVFWD13, and AMEVFWD17.

System Action:

The group of messages is written to the activity log. Alerts that match the criteria outlined in AMEVFWD13 will be reformatted and sent to the specified destination.

User Action:

None.

AMEVFWD13

Alert forwarding criteria: P1

Reason:

P1 displays the criteria that determine whether an alert will be forwarded. The criteria consist of a string of parameters. For example, APPL=XYZ indicates that only alerts from the XYZ application are forwarded. If the value of a parameter is *all*, no filtering is applied to that parameter.

This message forms part of a group of messages: AMEVFWD10, AMEVFWD11, AMEVFWD12, AMEVFWD13, and AMEVFWD17.

System Action:

The group of messages is written to the activity log. Alerts that match the criteria outlined in AMEVFWD13 will be reformatted and sent to the specified destination.

User Action:

None.

AMEVFWD14**Send method invalid****Reason:**

An invalid value was specified for the SEND parameter. Valid values are:
UDP - alerts will be forwarded to the specified host using the UDP protocol.
This is the default.

WRITE - alerts will be written to the response queue of the parent process. If this method is used, \$AMEVFWD must be invoked by using INTCMD.

System Action:

The command is rejected.

User Action:

Correct the operand and retry.

AMEVFWD15**Alerts option invalid****Reason:**

An invalid value was specified for the ALERTS parameter. Valid values are:
NEW - Only new alerts are forwarded as they occur. This is the default if the operand is omitted.

ALL - All current alerts are forwarded, followed by any new alerts as they occur.

System Action:

The command is rejected.

User Action:

Correct the operand and retry.

AMEVFWD16

Inactive TCP/IP Interface option is invalid

Reason:

The Inactive TCP/IP Interface action option, specified by the IPINACT parameter, has an invalid value. The parameter must be specified as one of the following values:

WAIT - Indicates that alert forwarding is to be suspended until the TCP/IP interface becomes active. This is the default if the operand is omitted.

IGNORE - Indicates that alerts will not be forwarded while the TCP/IP interface is not active.

System Action:

The command is rejected.

User Action:

Correct the operand and retry.

AMEVFWD17

Alert forwarding to CA NSM. Destaddr= *P1*

Reason:

Alerts will be passed as messages to CA NSM. *P1* identifies the destination.

This message forms part of a group of messages: AMEVFWD10, AMEVFWD11, AMEVFWD12, AMEVFWD13, and AMEVFWD17.

System Action:

The group of messages is written to the activity log. Alerts that match the criteria outlined in AMEVFWD13 will be reformatted and sent to the specified destination.

User Action:

None.

AMEVFWD18**Alert forwarding to CA NSM failed RC= P1****Reason:**

Alert forwarding using the CA NSM API received a non-zero return code.

Return code values are:

4 ENF not active.

8 Error in ENF processing.

16 Error in EMWTO parameter list.

System Action:

This message will be logged once on first failure. Message AMEVFWD19 will be logged if alert forwarding to CA NSM recovers.

User Action:

Check that CA NSM has been installed. If necessary, contact Technical Support.

AMEVFWD19**Alert forwarding to CA NSM resumed****Reason:**

Alert forwarding using the CA NSM API received a zero return code following prior failures. The interface is now operational.

System Action:

None.

User Action:

None.

AMEVFWD20

**Alert forwarding to CA Service Desk. SD URL= p1 CCI Sysid= P2
Format= p3**

Reason:

A CA Service Desk Request will be created for every alert passing the associated filter criteria.

P1 is the URL of the Web Services definitions on the CA Service Desk server.

P2 is the CCI SYSID of the CCI system that will locate and pass requests to the CAISDI/soap SOAP Client started task.

P3 is the request format: HTML (default) or TEXT

The Login, CreateRequest and Logout, Web Services are invoked. A Service Desk Request Number is returned and placed in the alert.

System Action:

Alerts that match the criteria outlined in AMEVFWD13 are reformatted and sent to the specified CA Service Desk server.

User Action:

Requests, after they are opened, are accessible to CA Service Desk users.

Authorized users can log in to the CA Service Desk application and administer the requests.

By default, these requests appear as 'assigned' requests, with an assignee and end user of System_NetMaster_User. (Your Service Desk Administrator may change these values.)

AMEVFW21

PPI Alert failed. Fdbk= P1 Reason= P2**Reason:**

Alert Forwarding as NMVTs has been requested (EXEC \$AMEVFW DESTTYPE=NMVT) but an attempt to send an alert failed with the indicated feedback code (*P1*). This is translated as a failure reason (*P2*).

System Action:

The alert is not forwarded but processing continues.

User Action:

Check the feedback/reason.

If the reason is shown as 'Internal Error', you should contact your product supplier, providing the exact text of the message.

Other reasons indicate a usage error as follows:

* *NETVALRT Receiver not defined* (FDBK=26) There is no (SOLVE, NetView, or other) NETVALRT PPI Receive process active in this LPAR.

For NetMaster you should ensure that procedure \$NWPPIAR is running in a background region for the NetMaster system in this LPAR.

For TME 10 NetView you should ensure that the CNMCALRT task is defined and active.

* *NETVALRT Receiver queue full* (FDBK=35) The NETVALRT PPI Receive process is defined to the system, that is, was active since the last IPL.

However, the current state of the process is one of the following:

- Inactive, and its receive queue limit has been reached. (See the explanation for NETVALRT Receiver not defined, above.)

- Active, but is not emptying the queue at a fast enough rate.

To display the receiver queues:

- For NetMaster, send the SHOW PPIUSERS command to the SOLVE SSI started task which owns the PPI. For example, from OCS: SYSCMD F SOLVESSI,SHOW PPIUSERS

- For TME 10 NetView, issue the DISPPI command. For example, from OCS: SYSCMD F TMESSI,DSIPPI BUFQ ALL from a NetView terminal: DSIPPI BUFQ ALL

* *PPI is not active* (FDBK=24) PPI has not been started. Ensure that the PPI started task is running.

* *Storage shortage* (FDBK=32) There is a storage shortage either in this domain or in the PPI domain. Other messages in the relevant domain will indicate which domain has the storage shortage.

AMEVFWD22

PPI Send failed. Fdbk= P1 Reason= P2 ID= P3

Reason:

Alert Forwarding as NMVTs has been requested (EXEC \$AMEVFWD DESTTYPE=NMVT) but an attempt to send an alert failed with the indicated feedback code (*P1*). This is translated as a failure reason (*P2*). The PPI Receiver ID (*P3*) is also shown.

System Action:

The alert is not forwarded but processing continues.

User Action:

Check the feedback/reason.

If the reason is shown as 'Internal Error', you should contact your product supplier, providing the exact text of the message.

Other reasons indicate a usage error as follows:

* *NETVALRT Receiver not defined* (FDBK=26) There is no (SOLVE, NetView, or other) NETVALRT PPI Receive process active in this LPAR.

For NetMaster for SNA you should ensure that procedure \$NWPPIAR is running in a background region for the NetMaster for SNA system in this LPAR.

For TME 10 NetView you should ensure that the CNMCALRT task is defined and active.

* *NETVALRT Receiver queue full* (FDBK=35) The NETVALRT PPI Receive process is defined to the system, that is, was active since the last IPL.

However, the current state of the process is one of the following:

- Inactive, and its receive queue limit has been reached. (See the explanation for NETVALRT Receiver not defined, above.)

- Active, but is not emptying the queue at a fast enough rate.

To display the receiver queues:

- For NetMaster for SNA, send the SHOW PPIUSERS command to the SOLVE SSI started task which owns the PPI. For example, from OCS: SYSCMD F SOLVESSI,SHOW PPIUSERS

- For TME 10 NetView, issue the DISPPI command. For example, from OCS: SYSCMD F TMESSI,DSIPPI BUFQ ALL from a NetView terminal: DSIPPI BUFQ ALL

* *PPI is not active* (FDBK=24) PPI has not been started. Ensure that the PPI started task is running.

* *Storage shortage* (FDBK=32) There is a storage shortage either in this domain or in the PPI domain. Other messages in the relevant domain will indicate which domain has the storage shortage.

AMEVFWD23**Alert forwarding failed to destination P1, CA Service Desk, server= P2****Reason:**

An attempt was made to create a CA Service Desk Request from a CA NetMaster alert, but the attempt failed due to an error condition in the CA NetMaster to CA Service Desk interface.

This interface involves multiple components, including the CA Common Services for z/OS 'CAICCI' and 'CAISDI/soap' SOAP Client components. These combine to communicate from the z/OS systems using HTTPs to the CA Service Desk server.

Specific error details are written to the activity log.

Some likely causes of these failures include the following:

- CA Common Services for z/OS CAISDI/soap (SOAP client) started task is not active
- CA Service Desk server is not active
- Web server for CA Service Desk server is not active
- Network problems prevent IP access to CA Service Desk server
- Incorrect or incomplete implementation of the CA Common Services for z/OS component CAISDI/soap
- Incorrect or incomplete implementation of CA Service Desk
- Incorrect login user ID or password for CA Service Desk
- Incorrect setup of the SERVICEDESK destination:
 - The URL of the CA Service Desk server is incorrect
 - The CCI SYSID is incorrect

System Action:

This message is logged once at the first failure. Message AMEVFWD24 is logged if alert forwarding to CA Service Desk recovers.

User Action:

Examine the activity log for further error details in message BASOAP03.

Examine the output of the CA Common Services for z/OS CAISDI/soap SOAP Client started task.

To diagnose these conditions, you may need help from your Systems Programmer (who implemented CAISDI/soap) and your CA Service Desk Administrator.

For more information, see the Service Desk Integration Guide, and the CA Common Services for z/OS Message Guide.

AMEVFWD24

Alert forwarding to CA Service Desk resumed

Reason:

Alert forwarding to CA Service Desk received a zero return code following prior failures. The interface is now operational.

System Action:

None.

User Action:

Use the CA Service Desk client interface to administer the Service Desk requests.

AMEVFWD25

CA Service Desk Request *P1* created by alert forwarding to *P2*

Reason:

The identified CA Service Desk request has been created by forwarding an alert to a destination type of SERVICEDESK.

P2 is the CA Service Desk server on which this request was created.

System Action:

None.

User Action:

This request is now accessible to CA Service Desk users.

Authorized users can log in to the CA Service Desk application on the indicated server and administer this request.

By default, this request appears as an assigned request, with an assignee and user of System_NetMaster_User. (Your Service Desk Administrator may change this default.)

AMEVFWD26

Duplicate alert forwarding request ignored, desttype= P1, destination details: P2

Reason:

An alert forwarding process is already active for the destination. The forwarding type is P1 and the destination details are described by P2 .

System Action:

This alert forwarding process terminates.

User Action:

Check the \$NM ALERTS parameter group to ensure that duplicate details are not present.

AMEVFWD31

Alert forwarding for Process ID P1 suspended - TCP/IP interface is not active

Reason:

This message is issued when an alert has arrived which needs to be forwarded as an SNMP Trap using UDP, but the TCP/IP interface is not active. The Process ID (P1) is the NCLID of the particular instance of procedure \$AMEVFWD that has been suspended. This relates to the group of messages, headed by AMEVFWD10, that were written to the log when the process was started.

System Action:

The process is suspended until the TCP/IP interface becomes active. When the process is resumed, message AMEVFWD32 is issued.

User Action:

If the particular process needs to be stopped, use the following SOLVE command:

FLUSH ID=nnnnnn

where *nnnnnn* is the process ID (*P1*) in this message.

AMEVFWD32

Alert forwarding for Process ID P1 resumed

Reason:

This message is issued when alert forwarding has been resumed after it was previously suspended.

The Process ID (*P1*) is the NCLID of the particular instance of procedure \$AMEVFWD that had been suspended. This relates to message AMEVFWD31 that was written when the process was suspended.

System Action:

Alert forwarding for this process continues.

User Action:

None.

AMHISL01

Warning: History data lost - NMIQLIM limit exceeded

Reason:

The number of alert history records waiting to be processed by the alert history listener exceeded the NMIQLIM setting. All records exceeding the limit are discarded.

System Action:

The listener continues processing. Lost data cannot be accumulated and subsequent details may be inaccurate.

User Action:

Investigate why the message build up occurred.

If you are collecting history data in a very large network, you may have reached maximum NMIQLIM value. Consider redesigning your application or contact Technical Support.

AMHISL02**The Alert History Logging Listener is now active****Reason:**

The alert history listener has started to receive and log history data.

System Action:

Alert history logging commences.

User Action:

None.

AMHIST01**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The call to the procedure failed because the Keyword identified by *P1* had an invalid value, identified by *P2* .

System Action:

The request is rejected.

User Action:

Contact your Systems Administrator.

AMHIST02**REQUIRED FIELD OMITTED****Reason:**

The indicated field must be completed.

System Action:

The required field is highlighted.

User Action:

Specify a value in the indicated field.

AMINWI32

Alert forwarding request: P1

Reason:

P1 displays the criteria that determine whether an alert is forwarded. The criteria consist of a string of parameters. For example, APPL=XYZ indicates that alerts from the XYZ application only are forwarded. If the value of a parameter is **all**, no filtering is applied to that parameter. See the alert forwarding messages that follow: AMEVFWD10, AMEVFWD11,

System Action:

The group of messages is written to the activity log. Alerts that match the displayed criteria are reformatted and sent to the specified

User Action:

AMINWI33

Destination address P1 cannot be resolved

Reason:

The destination address, specified in the Dest Address field, was entered as a host name, but the name cannot be resolved to an IP

System Action:

User Action:

Check the following:

- The name you have specified is correct
- The IP interface is active
- The Domain Name Server (DNS) is active and functioning normally

AMINWI34**Destination address cannot be IPv6, SOCKETS API is not IPv6 enabled****Reason:**

The destination address specified in the Dest Address field is entered as an IPv6 address; however, the sockets API set by the SOCKETS parameter group is not enabled for IPv6 support.

System Action:

The field is set in error.

User Action:

Choose an IPv4 address or change the SOCKETS parameter group to use type IBMV6.

AMINWI40**No filters defined****Reason:**

A request to present a list of filters failed because there are no filters defined.

System Action:

The request is rejected.

User Action:

New filters can be created using the Alert Monitor Filter Definition List (/ALFILT).

AMINWI41**Filter (P1) does not exist****Reason:****System Action:****User Action:**

Specify an existing filter from the Filter List. To display the list,

AMINWI42

No filters found beginning with ' P1'

Reason:

A request was made to list filters beginning with the characters *P1* but

System Action:

User Action:

AMINWI43

No filter selected

Reason:

System Action:

User Action:

AMINWI44

Duplicate destination details

Reason:

The destination details are the same in this entry as an earlier alert

System Action:

User Action:

Change the destination details (address, port, PPI receiver) to avoid

AMINWI45**Invalid field separator character****Reason:**

You specified an invalid field separator character. The 1-byte separator should be a non-blank and can be one of the following characters:

> * + | \ ^ ; < > ? / ,

The literal delimiter character TAB is allowed and internally represented as EBCDIC X'05'.

System Action:

The field in error is highlighted.

User Action:

Specify a valid character separator.

AMINWI46**IPv6 socket support not enabled****Reason:**

An IPv6 address has been entered in the URL field, but the sockets API supports IPv4 addresses only.

System Action:

The field is highlighted in error.

User Action:

Specify a host name or IPv4 address in the URL field. Alternatively, check the SOCKETS parameter group (/PARMS). For IPv6 support, the TCP/IP Software Type must specify IBMV6.

AMLO8201

Extract of alert records in progress

Reason:

The extraction of alert records is in progress.

System Action:

None.

User Action:

None.

AMLO8202

Extract of alert records ended: *P1* OF *P2* records written

Reason:

The extraction of alert records ended. The number of records written (*P2*) of the total extracted (*P3*) is indicated.

System Action:

None.

User Action:

If the number of updated records is less than the total, review the activity log to determine the error reason.

AMLO8203

Extract DSN processing error: action= *P1* return-code= *P2* *P3*

Reason:

An error occurred when a *P1* command is being performed on the extract data set. *P2* is the return code and, optionally, *P3* describes the error condition.

System Action:

Processing terminates.

User Action:

Review the activity log to determine the cause of the error.

Note: For information about abend error conditions, see the z/OS MVS System Codes manual.

AMMI0101**Alert Filter Definition File unavailable; DD= P1 RC= P2****Reason:**

This message is issued if the alert monitor filter definition database is not available. The DD name (*P1*) and file open return code (*P2*) are shown. For return code 16, an additional message is written to the activity log before this message.

System Action:

The filter definition information is unavailable.

User Action:

Check that the filter definition database is allocated and opened.

AMMI0102**Alert Filter Definition File Get Error. DD= P1 RC= P2 FDBK= P3****Reason:**

This message is issued if an attempt to read a record from the alert monitor filter definition database fails. The DD name (*P1*), file get return code (*P2*) and file error code (*P3*) are shown. For return code 16, an additional message is written to the activity log before this message.

System Action:

The filter definition is unavailable.

User Action:

Use the return code and feedback (error code) to determine the cause of the error.

AMMI0103**Alert Filter Definition P1 does not exist****Reason:**

The specified alert monitor filter definition (*P1*) does not exist.

System Action:

None

User Action:

None

AMMI0104

Alert Filter Definition File Delete Error. DD= P1 RC= P2 FDBK= P3

Reason:

This message is issued if an attempt to delete a record from the alert monitor filter definition database fails. The DD name (P1), file delete return code (P2) and file error code (P3) are shown. For return code 16, an additional message is written to the activity log before this message.

System Action:

The filter definition is not written.

User Action:

Use the return code and feedback (error code) to determine the cause of the error.

AMMI0105

Value must be Y(ES) or N(O)

Reason:

The only possible values are YES and NO.

System Action:

Request rejected.

User Action:

Input either YES or NO.

AMMX0101

Extract DSN not valid with selected option

Reason:

The Extract DSN is not valid with the selected option.

System Action:

The field in error is highlighted.

User Action:

Clear the Extract DSN field and retry the selected option.

AMMX0102**Filter (*P1*) does not exist****Reason:**

The specified filter *P1* is not defined.

System Action:

The field in error is highlighted.

User Action:

Enter ? to display a list of filters.

AMMX0103**No filters found beginning with ' *P1* '****Reason:**

You requested a list of filters beginning with the characters *P1* but none were found.

System Action:

The field in error is highlighted.

User Action:

Enter ? to display a list of filters.

AMMX0104**No filter selected****Reason:**

No selection was made from the filter selection list.

System Action:

None.

User Action:

None.

AMMX0105

Invalid data set attributes for Extract DSN

Reason:

The data set name specified in the Extract DSN field does not have the required data set attributes.

System Action:

The field in error is highlighted.

User Action:

Ensure that the data set specified is allocated as a sequential data set with a variable length record format and a record length of at least 300 bytes.

AMMX0106

No filters defined

Reason:

A request to present a list of filters failed because there are no filters defined.

System Action:

The request is rejected.

User Action:

New filters can be created using the Alert Monitor Filter Definition List (/ALFILT).

AMNOTE01

ADD OF ALERT NOTES CANCELLED

Reason:

You pressed the F12=Cancel function key whilst in the Add Notes panel.

System Action:

None.

User Action:

None.

AMPAGT01**P1 P2 P3****Reason:**

This is a message that is sent to another process by an alert monitor agent object. An MDO is usually carried with the message.

P1 is the message type and can be one of: *REQUEST CHAINEDREPLY*
FINALREPLY EVENT ERROR

P2 is the object class and can be one of: *ALERT AGENT*

P3 is the operation and can be one of: *GETALERTS*

System Action:

None.

User Action:

None.

AMPAGT02**P1****Reason:**

An error occurred whilst starting the peer system manager (\$AMPSMGZ). *P1* is a description of the error. The peer system manager is required for obtaining alerts from remote SOLVE systems.

System Action:

None.

User Action:

Check the log for any related error messages. Contact your systems administrator.

AMPAGT03

FATAL VARIABLE ERROR - ID: P1 FUNC: P2 FDBK: P3 KEY: P4

Reason:

An error occurred while manipulating an NCL VARIABLE in the procedure \$AMPAGTZ. *P1* is the vartable Identifier, *P2* is the function being performed, *P3* is the feedback code set by the vartable verb and *P4* is the key specified on the verb.

System Action:

None.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

AMPAGT04

NO ALERTS FOUND MATCHING SUPPLIED CRITERIA

Reason:

There were no alerts in the history file that matched the criteria that was supplied for building the selection list.

System Action:

List terminates.

User Action:

If you were asked to specify some form of criteria, check that it is correct and retry.

AMPAGT05**NDB SCAN FAILED - ID: P1 NDBRC: P2 NDBERRI: P3****Reason:**

An error occurred whilst scanning the NDB for records to build the list with. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Selection List Terminates.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMPAGT06**NDB GET FAILED - ID: P1 NDBRC: P2 NDBERRI: P3****Reason:**

An error occurred getting a record from the NDB whilst building the list. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Selection List Terminates.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMPAGT07**NDB OPEN FAILED - ID: P1 NDBRC: P2 NDBERRI: P3****Reason:**

The NDB which the list was accessing could not be opened. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Request rejected.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMPAGT08

NDB FMT DEFINE FAILED. NDBRC: P1 NDBERRI: P2

Reason:

An error has occurred whilst defining an NDB format for the list. The NDB return code was *P1* and the NDB error information was *P2* .

System Action:

The selection list terminates.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMPAGT09

NDB CLOSE FAILED - ID: P1 NDBRC: P2 NDBERRI: P3

Reason:

The NDB which the list was accessing could not be closed. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Request rejected.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMPAGT10

P1

Reason:

An unexpected message was received by the procedure \$AMPAGTZ. *P1* is a message that was received.

System Action:

None.

User Action:

Check the log for any related error messages. Contact your systems administrator.

AMPAGT11**ERROR - ATTR P1 CANNOT BE SET****Reason:**

A set request was queued to the alert monitor agent containing the *P1* attribute which is not settable.

System Action:

Message written to Log. Processing continues.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMPAGT12**Alert History file unavailable****Reason:**

This message is issued if the alert history NDB is not started. This could be due to the alert history file ID not being set in ICS.

System Action:

History information unavailable.

User Action:

Set up Alert History File Specification in ICS parameter group ALERTHIST.

AMPAGT13

ALERT HISTORY DATABASE LOCKED - POSSIBLY DUE TO DATABASE BEING FULL

Reason:

This message is issued if the alert history NDB is locked due to an error (such as running out of space).

System Action:

History information unavailable and alerts will not be logged in history file.

User Action:

Refer to the log for any other errors that indicate why the database is locked. For example, in a situation where the file is full you should see a VSAM I/O error message in the log.

If the file is full, do the following:

1. Issue a *UDBCTL CLOSE=ALERTH* command.
2. Unallocate the ALERTH DD by issuing the following command: *UNALLOC DD=ALERTH*
3. Repro the NDB out.
4. Delete and redefine the existing history NDB (increase allocation if appropriate).
5. Repro the history information back in.
6. Reallocate the history file to solve by issuing the following command: *ALLOC DD=ALERTH DSN=????? DISP=SHR*
7. Issue the following commands to reset the locked status of the history NDB:
UDBCTL OPEN=ALERTH ID=\$ALERTH LSR EXIT=NO NDB START \$ALERTH UNLOCK NDB STOP \$ALERTH
8. Issue the following command to start the alert monitor history processing:
\$CAPKCAL \$AMDBMS HistoryNdb_Start

AMPAGT14**FILTER DOES NOT EXIST****Reason:**

The Filter that you specified is not defined.

System Action:

Command ignored.

User Action:

Specify an existing Filter. (Selection list available)

AMPAGT15**P1 P2 P3****Reason:**

This message is sent to another process by a timer started by an Alert Monitor request agent object. An MDO is not included with the message.

P1 is the message type and can be one of: *REQUEST*

P2 is the object class and can be one of: *TIMER*

P3 is the operation and can be one of: *UPDATECLOCK*

System Action:

None.

User Action:

None.

AMPAGT16**No alerts found matching supplied criteria****Reason:**

There were no active alerts that matched the criteria that was supplied.

System Action:

None.

User Action:

None. Alerts matching the resource criteria will appear automatically.

AMPARM02

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The procedure \$AMPARMP failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure \$AMPARMP terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMPARM03

INVALID COMMAND

Reason:

The command that was specified on the command line is not valid.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

AMPARM04

Action *P1* added to list

Reason:

The automated action *P1* was added to the list of actions.

System Action:

None.

User Action:

None.

AMPARM05**Action *P1* updated****Reason:**

The automated action *P1* was updated.

System Action:

None

User Action:

None

AMPARM06**P1 OF ACTION P2 CANCELLED****Reason:**

The operation *P1* (which can be add, update or copy) on the automated action *P2* was cancelled.

System Action:

None.

User Action:

None.

AMPD01P01

Invalid value for Service Desk Trouble Ticket *P1*

Reason:

One of the fields required for the CA Service Desk Trouble Ticket interface has an incorrect value.

The fields, their usage, and their valid values are described below.

CA Service Desk Server Web Services HTTP URL

This is the HTTP URL of the Web Services definitions on the CA Service Desk server. This server is where requests are created from alerts when you use the TT command.

In some cases, you can leave this value blank to let the CAISDI/soap component determine the default server.

This value must satisfy the following:

- Conform to valid HTTP URL syntax
- Include the correct Web Services subdirectory

This URL points to the Web Services definitions that CAISDI/soap invokes to create the requests. It is not the same as the URL that is used to log in to the CA Service Desk client application.

Example: http://hostname:8080/axis/services/USD_R11_WebService

CCI Sysid

This is the CCI system ID of the system (MVS LPAR) where the target CAISDI/soap task is active. This value is the SYSID name specified in the CAICCI startup JCL.

Typically, you should leave this value blank to use the CAICCI facilities on this system.

Request Description Format

This controls whether the Request Description field is produced in HTML (HTML) or in plain text (TEXT).

HTML formatting provides CA Service Desk operators with features such as hyperlinks back to this region's WebCenter interface.

Typically, you should set this value to HTML. If there are third party procedures that extract request descriptions and cannot render HTML, then set this value to TEXT.

Note: In many cases, the following values are sufficient:

- HTTP URL and CCI SYSID are both blank.
- Request Description Format is HTML.

If this does not work, review these values with your Systems Programmer who implemented the CAISDI/soap component and your CA Service Desk Administrator.

You may also need to refer to the Service Desk Integration Getting Started guide.

System Action:

None.

User Action:

Correct the field in error, and retry the operation.

AMPSLK01

APPC P1 FAILED. RC: P2 FDBK: P3 DOMAIN: P4 MSG: P5

Reason:

An APPC error occurred whilst communicating with the remote domain *P4* . The APPC verb that encountered the error was *P1* , the return code set by the verb was *P2* and the feedback code set by the verb was *P3* . If a sysmsg was set it will be displayed as *P5* .

System Action:

None.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

AMPSLK02

UNEXPECTED DATA RECEIVED. VERB: P1 WRI: P2 STATE: P3 DOMAIN: P4

Reason:

The alert monitor peer link process (\$AMPSLKZ) received some unexpected data whilst communicating with the remote domain P4 . The APPC verb that encountered the error was P1 , the what received indicator *had* a value of P2 , the conversation state was P3 .

System Action:

None.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

AMPSLK03

UNEXPECTED MESSAGE ENCOUNTERED: P1

Reason:

The Alert Monitor's peer link process \$AMPSLKZ encountered a message that it did not expect. The message is P1 .

System Action:

Processing continues.

User Action:

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMPSLK04**INFORMATION MAY BE UNRELIABLE AS LINK TO P1 IS UNAVAILABLE****Reason:**

The link to the system P1 which is where this alert originated from is currently unavailable. Because the link is unavailable you will not be getting updates to this alert from the remote system.

System Action:

None.

User Action:

Check why the link to the remote system is unavailable.

AMPSMG01**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The procedure \$AMPSMGZ failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure \$AMPSMGZ terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMPSMG02

P1

Reason:

The Alert Monitor's peer link manager procedure \$AMPSMGZ encountered an error and terminated. The error message is *P1* .

System Action:

Peer System Manager will be restarted when a user goes into the SOLVE : Alert Monitor display.

User Action:

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMPSMG03

P1

Reason:

This is an internal message that is qyeued to a peer link process indicating an Alert Monitor Agent has ended. *P1* is the NCLID of the agent that ended.

System Action:

None.

User Action:

None.

AMPSMG04**UNEXPECTED MESSAGE ENCOUNTERED: P1****Reason:**

The Alert Monitor's peer link manager procedure \$AMPSMGZ encountered a message that it did not expect. The message is *P1* .

System Action:

Processing continues.

User Action:

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMPSMG05**STOP****Reason:**

This is an internal message that is qyeued to a peer link process telling it to shut down the link to the remote system and end.

System Action:

None.

User Action:

None.

AMPSMG06

ERROR STARTING PEER LINK PROCESS. MSG: P1

Reason:

The Alert Monitor's peer link manager procedure \$AMPSMGZ attempted to start a peer link process (\$AMPSLKZ) to communicate with a remote SOLVE system, but encountered an error starting the process. The error message returned was *P1* .

System Action:

Processing continues.

User Action:

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMST0100

Alert Monitor Self Test for *P1* run on *P2*

Reason:

The diagnostic test for the alert monitor is starting.

System Action:

None.

User Action:

None.

AMST0101

No active alerts have been found for the Alert Monitor

Reason:

This is a warning to inform you that the alert monitor currently has no active alerts.

System Action:

None.

User Action:

None.

AMST0102

The Alert Monitor is currently active on this region.

Reason:

This is an informational message, which informs you that the alert monitor is currently active on this region.

System Action:

None.

User Action:

None.

AMST0103

The Alert Monitor has P1 active P2 from region P3

Reason:

This is an informational message, which displays the number of active alerts for each linked region running the alert monitor.

System Action:

None.

User Action:

None.

AMST0104

The Alert Monitor is running on the linked region P1

Reason:

This is an informational message, which displays the name of a linked region running the alert monitor.

System Action:

None.

User Action:

None.

AMST0105

An alert has been successfully created

Reason:

This informational message is displayed by the alert monitor selftest when an alert is created without errors.

System Action:

None.

User Action:

None.

AMST0106

An alert has been successfully closed

Reason:

This informational message is displayed by the alert monitor selftest when an alert is closed successfully.

System Action:

None.

User Action:

None.

AMST0107**Parm P1 Invalid issue ALTEST HELP for list of valid parms.****Reason:**

This message is issued in response to an ALTEST command, which specifies an invalid parmameter.

System Action:

None.

User Action:

Reissue the ALTEST command with a valid parmameter.

The syntax of the ALTEST command is:

ALTEST <info=Y|N> <output=TERM|LOG>

All parameters are optional.

If <info=Y|N> is not specified, it defaults to INFO=Y INFO=N suppresses all information- only messages. If <output=TERM|LOG> is not specified, it defaults to OUTPUT=TERM OUTPUT=LOG writes all messages to the activity log.

Examples: ALTEST ALTEST INFO=N ALTEST INFO=N OUTPUT=LOG

AMST0108**The link is inactive to region P1****Reason:**

This warning indicates that the link to region *P1* is no longer active.

System Action:

None.

User Action:

Investigate why the region is no longer available.

AMST0109

The Peer System Manager \$AMPSMGZ has been initiated by P1

Reason:

This is an informational message, which indicates that the Peer System Manager procedure was initiated by the user ID specified in *P1*.

System Action:

None.

User Action:

None.

AMST0110

The Peer System Manager \$AMPSMGZ was not active

Reason:

This is a warning message, which indicates that there is a problem with the handling of linked systems running the alert monitor.

System Action:

None.

User Action:

Stop and restart the alert monitor. To do this, exit the M.A option and then select M.A again.

AMST0111

Peer Link Process \$AMPSLKZ or \$AMAGTTZ was initiated by P1 NCLID P2

Reason:

This is an informational message, which indicates that the Peer Link Process procedure \$AMPSLKZ, or the Agent APPC Transaction procedure \$AMAGTTZ, were initiated by the user ID specified in P1 with NCLID P2. These processes ensure that the APPC communication is handled correctly.

System Action:

None.

User Action:

None.

AMST0112**Peer Link Processes \$AMPSLKZ or \$AMAGTTZ are not active****Reason:**

This is a warning, which indicates that the Peer Link Processes are not active. The alert monitor is not connected to any remote regions.

System Action:

None.

User Action:

Investigate why the regions are not available.

AMST0113**The Alert Monitor Agent \$AMPAGTZ has been initiated by P1 NCLID P2****Reason:**

This is an informational message, which indicates that the Alert Monitor Agent procedure \$AMPAGTZ was initiated by the user ID specified in P1 and is running under the NCLID specified in P2.

System Action:

None.

User Action:

None.

AMST0114**The Alert Monitor Agent \$AMPAGTZ was not active****Reason:**

This is a warning, which indicates that the Alert Monitor Agent procedure \$AMPAGTZ is not active. If this procedure is not running, new alerts are not added to the alert monitor.

System Action:

None.

User Action:

Restart the alert monitor on this region. To do this, exit the M.A. option and then reselect it.

AMST0115

An error was found P1 P2

Reason:

The action described in *P1* found an error. This is described in *P2*.

System Action:

None.

User Action:

Investigate the error and take the appropriate action.

AMST0116

Application P1 P2 is registered

Reason:

The application ID described in *P1* and *P2* is registered with the Alert Monitor. Alerts are only displayed by the Alert Monitor if their application has been registered previously. If there is a discrepancy between the Alert Monitor count in the self test and the alerts displayed on your screen, it may be because the alert's application has not been registered.

System Action:

None.

User Action:

If the application is not user-defined, report the error to your Technical Support representative.

AMST0117**The External Alert Receiver \$AMALRCV has been initiated by P1 NCLID P2****Reason:**

This is an informational message that indicates that the External Alert Receiver procedure, \$AMALRCV, was initiated by the user ID specified in P1 and is running under the NCLID specified in P2.

System Action:

None.

User Action:

None.

AMST0118**The External Alert Receiver \$AMALRCV was not active****Reason:**

This is a warning that indicates that the External Alert Receiver procedure, \$AMALRCV, is not active. If this procedure is not running, external applications are unable to raise/modify alerts.

System Action:

None.

User Action:

If alerts from external applications are required, update the ALERTS parameter group (/PARMS) and set the field "Enable External Alerts?" to YES.

AMST0120

P1

Reason:

This message displays the destinations of the Alert Monitor Trouble Ticket Interface, and the Alert Forwarding Interfaces.

The Trouble Ticket Interface is specified by menu shortcut */ALTTI* .

The Alert Forwarding Destinations are specified by Customer Parameter Group \$NM ALERTS 'Alert Monitor Interface'.

System Action:

None

User Action:

None

AMST0121

CA Service Desk Server was successfully contacted

Reason:

The CA Desk server was contacted by this region, and a successful test login was performed.

This indicates that it should be ready to create CA Service Desk Requests when required by Alert Monitor Trouble Ticket and/or Alert Forwarding processing.

System Action:

None.

User Action:

None.

AMST0122**Contact with the CA Service Desk server failed *P1 P2*****Reason:**

An attempt was made to contact the CA Service Desk server, but this failed. Additional error details are written to the activity log.

System Action:

None.

Until this failure condition is rectified, no alerts can be sent as Trouble Tickets or through Alert Forwarding to CA Service Desk.

User Action:

Ensure that the CA Service Desk server is operational and is in a state where Service Desk Requests can be created.

Verify that the CA Common Services CAISDI/soap component has been completely and correctly installed and set up. The CAISDI/soap MVS started task must be running and be configured with the correct Service Desk server details.

For more information, see the CA Common Services publication: Service Desk Integration Guide.

AMST0133**Alert Monitor Exit *P1* in use****Reason:**

The Alert Monitor exit specified in *P1* is in use.

System Action:

None.

User Action:

None.

AMST0180

P1

Reason:

This message displays the following help information, issued in response to an ALTTEST ? or ALTTEST HELP command.

ALTTEST can be run from OCS by using the following command:

ALTTEST <INFO=Y|N> <OUTPUT=TERM|LOG|ALL>

All parameters are optional.

Other optional parameters: INFO=Y|N (default Y) OUTPUT=TERM|LOG|ALL (default TERM)

INFO=N suppresses information-only messages OUTPUT=LOG writes the output to the activity log only OUTPUT=ALL writes the output to the log and terminal

System Action:

None

User Action:

Enter the ALTTEST OCS command with the desired parameters.

AMST0199

Alert Monitor Self Test completed with P1

Reason:

Alert Monitor Self Test is complete. The total number of warnings and errors are indicated. In general, severities are allocated as follows:

Errors Affect all or a large number of alert monitor functions. Errors should never be disregarded.

Warnings Affect at least one function, but other functions may be unaffected. If you do not require the function, warnings can be disregarded.

Notes Informational only. May not affect any processing.

System Action:

None.

User Action:

None.

AMTTDED01**UNABLE TO UPDATE TROUBLE TICKET DEFINITION - FILE STATUS P1****Reason:**

The Trouble Ticket data entry definition cannot be updated because of security restrictions on the VFS file. You need read-write access; the access allowed is P1 .

System Action:

The action is rejected.

User Action:

Contact your systems administrator.

AMTTDED02**A NEW FIELD MUST BEGIN WITH 'FIELD', EG FIELD NAME=PRIORITY****Reason:**

The Trouble Ticket data entry definition lines consist of the word 'FIELD' followed by keyword=value pairs to set various characteristics of the field. Field definitions can span multiple lines, but new field definitions must begin with the word 'field'.

System Action:

None

User Action:

Insert the word 'field' before the field definition.

AMTTDED03**DATA ENTRY DEFINITION IS ALREADY BEING UPDATED BY P1****Reason:**

The Trouble Ticket data entry definition is already being updated by the user P1 and can be updated by only one user at a time.

System Action:

The action is rejected.

User Action:

Retry the operation later.

AMTTDED04

PUT STRING IN QUOTES

Reason:

The Trouble Ticket data entry definition is invalid - this could be caused by a string which needs to be quoted.

System Action:

None

User Action:

Correct the definition and retry.

AMTTDED05

KEYWORD PARAMETER P1 MUST BE ENTERED

Reason:

The Trouble Ticket data entry definition is invalid - A FIELD statement is missing a value for the keyword specified as *P1*

System Action:

None

User Action:

Correct the definition and retry.

AMTTDED07

UNABLE TO P1 TROUBLE TICKET DATA ENTRY DEFINITION - FILE ERROR= P2

Reason:

The Trouble Ticket data definition cannot be updated because of an unexpected file error. P1 is the file action that failed and P2 is the VSAM feedback code.

System Action:

The action is rejected.

User Action:

Contact your systems administrator.

AMTTDED08**TROUBLE TICKET DATA ENTRY DEFINITION SAVED****Reason:**

The Trouble Ticket data entry definition has been stored.

System Action:

None.

User Action:

None.

AMTTDEF01**REQUIRED INTERFACE TYPE OMITTED****Reason:**

No value was found for the required keyword IFACE.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your system administrator.

AMTTDEF02**INTERFACE TYPE P1 IS UNKNOWN****Reason:**

The Trouble Ticket definition procedure does not recognize the interface type specified by the IFACE keyword parameter.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your system administrator.

AMTTDEF03

INTERFACE DEFINITION IS ALREADY BEING UPDATED BY P1

Reason:

The Trouble Ticket interface definition template is already being updated by the user *P1* and can only be updated by one user at a time.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Retry the operation later.

AMTTDEF04

UNABLE TO UPDATE TROUBLE TICKET DEFINITION - FILE OPEN READ ONLY

Reason:

The Trouble Ticket definition template cannot be updated because the file it is saved in cannot be written to.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your systems administrator.

AMTTDEF05

UNABLE TO UPDATE TROUBLE TICKET DEFINITION - FILE INACCESSIBLE

Reason:

The Trouble Ticket definition template cannot be updated because the file it is saved in cannot be accessed.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your systems administrator.

AMTTDEF06**UNABLE TO UPDATE TROUBLE TICKET DEFINITION - FILE RC= P1****Reason:**

The Trouble Ticket definition template cannot be updated because of an unknown file error. *P1* is the return code of the file open command.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your systems administrator.

AMTTDEF07**UNABLE TO P1 TROUBLE TICKET DEFINITION - FDBK= P2****Reason:**

The Trouble Ticket definition template cannot be updated because of an unknown file error. *P1* is the file action that failed and *P2* is the VSAM feedback code.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your systems administrator.

AMTTDEF08**TROUBLE TICKET P1 DEFINITION TEMPLATE SUCCESSFULLY UPDATED****Reason:**

The Trouble Ticket interface definition template has been successfully updated and saved.

System Action:

None.

User Action:

None.

AMTTDEF09

UPDATE OF P1 TROUBLE TICKET DATA DETAILS CANCELLED

Reason:

The user has cancelled the update of the Trouble Ticket data details. No data has been modified.

System Action:

None.

User Action:

None.

AMTTDEF10

ENTER Host, Node and Jobname, OR Destination id.

Reason:

You must specify host name, node name and jobname, or, if you are using TCPAccess, you can specify destination ID. On IBM systems specify: * Host Name, which is the name of the local host * SMTP Node Name, which is the NJE node name of the local system * SMTP Jobname, which is the jobname of the SMTP task On TCPAccess systems specify: * DestId, which is the JES destination of the TCPAccess SPOOL#4 process.

System Action:

None

User Action:

Enter valid values and retry.

AMTTDEF11

Alert Monitor Trouble Ticket Interface Type has been reset to none.

Reason:

You specified NONE in the Interface Type field on the Alert Monitor Trouble Ticket Interface Definition panel. This clears any previous interface type. The Alert Monitor TT command and auto-trouble-ticket action are not available until you define a specific trouble ticket interface type.

System Action:

None.

User Action:

None.

AMTTIFP01

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The call to the procedure failed because the keyword identified by *P1* had an invalid value, identified by *P2* .

System Action:

The request is rejected.

User Action:

Contact your local system administrator.

AMTTIFP02

REQUIRED FIELD OMITTED

Reason:

The indicated field must be completed.

System Action:

The required field is highlighted.

User Action:

Specify a value in the indicated field.

AMTTIFP03

INTERFACE DEFINITION IS ALREADY BEING UPDATED BY P1

Reason:

The Trouble Ticket interface definition template is already being updated by the user *P1* and can only be updated by one user at a time.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Retry the operation later.

AMTTIFP04

UNABLE TO UPDATE TROUBLE TICKET DEFINITION - FILE OPEN READ ONLY

Reason:

The Trouble Ticket definition template cannot be updated because the file it is saved in cannot be written to.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your systems administrator.

AMTTIFP05

UNABLE TO UPDATE TROUBLE TICKET DEFINITION - FILE INACCESSIBLE

Reason:

The Trouble Ticket definition template cannot be updated because the file it is saved in cannot be accessed.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your systems administrator.

AMTTIFP06**UNABLE TO UPDATE TROUBLE TICKET DEFINITION - FILE RC= P1****Reason:**

The Trouble Ticket definition template cannot be updated because of an unknown file error. *P1* is the return code of the file open command.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your systems administrator.

AMTTIFP07**UNABLE TO GET TROUBLE TICKET DEFINITION - FDBK= P1****Reason:**

The Trouble Ticket definition template cannot be updated because of an unknown file error. *P1* is the VSAM feedback code.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your systems administrator.

AMTTIFP08**EMAIL INTERFACE NOT AVAILABLE ON THIS OPERATING SYSTEM****Reason:**

The EMAIL interface not available on MSP or VOS3 operating systems.

System Action:

The action is rejected.

User Action:

Chose another interface type.

AMW3AGT01

P1

Reason:

This is a trace message generated by the Alert Monitor Web Agent procedure when the TRACE keyword parameter is set to YES.

System Action:

None.

User Action:

None.

AMW3AGT02

INVALID REQUEST DATA, ELEMENT= P1 REASON= P2

Reason:

A request passed to the Alert Monitor Web Agent procedure contained invalid data. *P1* is the name of the element that was in error *P2* is an explanation of the error

System Action:

The request is not processed.

User Action:

Contact your local support representative.

AMW3AGT03

INVALID PARAMETER, P1= P2

Reason:

A request passed to the Alert Monitor Web Agent procedure contained an invalid parameter name or value. *P1* is the parameter name *P2* is the value assigned to the parameter

System Action:

The request is not processed.

User Action:

Contact your local support representative.

AMW3AGT04**NO VALID VALUES IN SET REQUEST: P1****Reason:**

A set request passed to the Alert Monitor Web Agent procedure did not contain any field values to be set. *P1* is the command that was passed

System Action:

The request is not processed.

User Action:

Contact your local support representative.

AMW3AGT05**INVALID REQUEST SYNTAX: P1****Reason:**

A request passed to the Alert Monitor Web Agent procedure could not be parsed because it was incorrectly quoted or contained an invalid parameter name. *P1* is an explanation of the error

System Action:

The request is not processed.

User Action:

Contact your local support representative.

AMW3AGT06**SET COMMAND REJECTED - ALERT AGENT HAS NOT BEEN STARTED****Reason:**

A request to modify the attributes of the alert collection process failed because the process has not been started.

System Action:

The request is not processed.

User Action:

Contact your local support representative.

AMW3AGT07

INTERNAL ERROR: P1

Reason:

An indeterminate error occurred in the Alert Monitor Web agent. *P1* is an explanation of the error

System Action:

The request is not processed.

User Action:

Contact your local support representative.

AMW3AGT08

ALERT BEING TRACKED BY USERID P1

Reason:

User *P1* entered the Track command against the alert and is now tracking the alert.

System Action:

None

User Action:

None

AMW3AGT09

ALERT NO LONGER BEING TRACKED

Reason:

A user entered the Track command for an alert that he/she was tracking, causing the tracking flag to be turned off.

System Action:

None

User Action:

None

AMW3AGT10**ALERT SEVERITY CHANGED TO P1 BY USERID P2****Reason:**

User *P2* entered a command against the alert to change its severity to *P1* .

System Action:

None

User Action:

None

AN0001**USERID *P1* NOT AUTHORISED FOR NETWORK MANAGEMENT FEATURE****Reason:**

User *P1* has attempted to invoke a function of the Network Management feature but is not authorised to do so.

System Action:

The process is terminated.

User Action:

Contact your systems administrator if you feel you should have access to the Network Management feature.

AN0005**INVALID KEYWORD *P1*****Reason:**

P1 is not a valid keyword.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

AN0006

INVALID SYNTAX - DUPLICATE KEYWORD P1

Reason:

The keyword *P1* has been specified more than once.

System Action:

The process is terminated.

User Action:

Correct the parameters and retry.

AN0007

INVALID VALUE P1 FOR KEYWORD P2

Reason:

P1 is not valid for keyword *P2*.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

AN0008

REQUIRED VALUE OMITTED FOR KEYWORD P1

Reason:

The value required for keyword *P1* has been omitted.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

AN0009**REQUIRED PARAMETER OMITTED - P1=VALUE****Reason:**

Required parameter *P1* has been omitted.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

AN0010***END*****Reason:**

This indicates the end of data for the current display.

System Action:

None.

User Action:

None.

AN0011**ACCESS TO RESOURCE P1 DENIED FOR USER P2****Reason:**

User *P2* has no access privilege to the resource *P1*.

System Action:

Access to the resource is denied.

User Action:

Contact your security administrator if you require access to this resource.

AN0012

REQUEST TIMEOUT - NO RESPONSE WITHIN P1 SECONDS

Reason:

A request has timed out whilst waiting for a response from a device. *P1* is the amount of time waited for before the request was abandoned.

System Action:

The process is terminated.

User Action:

Retry the function.

AN0013

PARAMETER P1 IS INVALID FOR P2

Reason:

P1 is not valid for *P2* .

System Action:

The process is terminated.

User Action:

Correct the error and retry.

AN0014

SNAMS FEATURE NOT LICENCED

Reason:

The SNAMS feature is not licenced.

System Action:

The requested function is not performed.

User Action:

If the SNAMS feature was excluded at SOLVE startup, include it. Otherwise arrange to have the SNAMS feature licenced.

AN0101**Request accepted - FP/EP relationship established****Reason:**

A request for a focal point relationship has been accepted. This message is followed by messages AN0102 and AN0103, which contain the MS category code, application name, focal point, and entry point nodes for the established FP/EP relationship.

System Action:

None

User Action:

None

AN0102**Category= P1, FP_appl= P2****Reason:**

This message appears after AN0101 when a focal point relationship is accepted. It contains the MS category *P1* and the focal point application name *P2* for the established focal point.

System Action:

None

User Action:

None

AN0103**FP= P1, EP= P2****Reason:**

This message appears after AN0101 when a focal point relationship is accepted. It contains the focal point node *P1* and entry point node *P2* of the established FP/EP relationship.

System Action:

None

User Action:

None

AN0104

Request rejected - P1 Node= P2 Req= P3

Reason:

A request for a focal point relationship has been rejected.

P1 describes the reason for the rejection, *P2* is node name, and *P3* is the type of request, one of:

EP - acquire Explicit Primary Entry Point

DEFAULT - acquire Network Node Entry Point

FP - acquire Implicit Primary Focal Point

BACKUP - acquire Backup Focal Point

DOMAIN - notification of active Focal Point to Entry Point

System Action:

None

User Action:

Correct the condition if possible and retry. Use the /CODES menu shortcut to access SNA Sense Code information. The cause is normally either a misspelt node name, or the node cannot be reached due to a connectivity problem.

AN0105

Unexpected response - P1

Reason:

An unexpected reply *P1* is received by the \$ANCALL procedure in response to an MS Capabilities request previously sent.

System Action:

The process is terminated.

User Action:

Contact your product support representative.

AN0106**Internal error - unable to send MS Capabilities request****Reason:**

An unexpected error has occurred when the \$ANCALL procedure sent an MS Capabilities request to the indicated node.

System Action:

The process is terminated.

User Action:

Contact your product support representative.

AN0107**Internal error - unable to receive MS Capabilities reply****Reason:**

An unexpected error has occurred when the \$ANCALL procedure attempted to receive an MS Capabilities request from the indicated node.

System Action:

The process is terminated.

User Action:

Contact your product support representative.

AR0003**Application ID P1 not defined****Reason:**

A request to get an application definition failed because the application definition was not defined. The identifier of the application was *P1* .

System Action:

The request is rejected.

User Action:

Specify an application identifier previously defined and retry.

AR0004

? in P1 can only be preceded by alphanumerics and nationals

Reason:

A question mark (?) was entered in the *P1* field and was preceded by an invalid value. The value preceding the ? contained characters other than alphabetics (A - Z), numerics (0-9) and nationals (@, # and \$).

System Action:

The panel displays with the *P1* field set in error.

User Action:

Correct the value in the *P1* field and retry.

AWFAWF01

Agent not run. Package= P1

Reason:

The agent implemented in the package *P1* returned a nonzero return code from its MainInit procedure.

System Action:

The agent terminates.

User Action:

Contact Technical Support.

AWFAWF02

Unexpected message: p1

Reason:

The agent received an unexpected message during processing. The message received was *p1* .

System Action:

The message is ignored.

User Action:

Refer to the explanation of the message.

AWFAWF03**TRACE: P1****Reason:**

This is a trace message indicating the Agent Technology activity for an agent.

System Action:

None.

User Action:

None.

AWFAWF04

tngAWF *P1* Error RC= *P2* FDBK= *P3* DIAG= *P4*

Reason:

The agent received a nonzero return code from the tngAWF verb. The verb operand was *P1* , the return code was *P2* , the feedback code was *P3* , and the diagnostic code was *P4* . This message may be followed by the SYSMSG returned by the verb itself.

Common feedback values are:

- 10 - INVALID FUNCTION INDEX
- 11 - WRONG INPUT MAP FOR FUNCTION
- 12 - NO INPUT SUPPLIED FOR FUNCTION
- 13 - INPUT NOT ALLOWED FOR FUNCTION
- 14 - NO OUTPUT SUPPLIED FOR FUNCTION
- 15 - OUTPUT NOT ALLOWED FOR FUNCTION

- 20 - STRING OVERFLOW

- 80 - AGENT TECHNOLOGY SUBTASK INIT FAILURE
- 81 - AGENT TECHNOLOGY SUBTASK TERMINATED
- 82 - AGENT TECHNOLOGY DLL LOAD FAILED
- 83 - AGENT TECHNOLOGY FUNC LOCATE FAILED

- 90 - NOT SUPPORTED
- 91 - ABEND
- 92 - CANCEL
- 93 - INSUFFICIENT STORAGE
- 94 - AGENT TECHNOLOGY NOT ACTIVE
- 99 - SHUTDOWN

The diagnostic code may contain additional information about the cause of the error.

System Action:

None.

User Action:

Feedback code (FDBK) 81 errors may be due to problems with CA Common Services. Check that Agent Technology is active by using the UNIX System Services (USS) 'awsservices status' command. Ensure that the agent's MIB is loaded using the USS 'agentctrl -m' command.

Refer also to accompanying message or feedback information. If the problem cannot be resolved, contact Technical Support.

AWFAWF05**Agent P1 not run. ENVFILE not allocated.****Reason:**

The *P1* NSM agent failed to start because the required ENVFILE data set is not allocated to the region. The data set specifies the environment variables for the agent.

System Action:

The agent fails to start.

User Action:

Ensure that:

- You have created an ENVFILE data set for the agent.
- You have allocated the data set to the region.

For detailed information about how to set up the ENVFILE data set, see the product documentation.

AWFAWF06**Agent P1 failed to start. Check awsservices status.****Reason:**

The *P1* NSM agent failed to start. A likely reason is that awsservices is not running or is incorrectly configured in USS.

System Action:

The agent fails to start.

User Action:

In OMVS, enter **awsservices status**.

If awsservices is not running, enter **awsservices start**.

If awsservices is running, ensure that the agent you are attempting to run is defined in the awsservices.cfg file. For detailed information about how to define an agent in the awsservices.cfg file, see the product documentation.

AWFAWF07

Agent *P1* subtask terminated

Reason:

The NSM agent subtask for *P1* terminated.

System Action:

The agent enters a failed state.

User Action:

In OMVS, enter **awservices status**.

If awservices is not running, enter **awservices start**.

If awservices is running, contact Technical Support.

Bx Messages

BA0001

Invalid shortcut or option. (For help:put cursor on this line, press F1)

Reason:

An invalid shortcut, menu option, panel path or command was entered from the Primary Menu.

Navigating to the function you want from the Primary Menu can be done in any of these ways:

- Entering a shortcut (/levels)
- Entering a combined shortcut and menu option (/bcast.s)
- Repeatedly entering a series of menu options (H then I then P)
- Entering a panel path (H.I.P)

System Action:

None.

User Action:

Enter a valid shortcut, menu option, panel path, or command.

SHORTCUTS

Enter a shortcut name, preceded by a slash, at the ==> prompt (for example, /levels or /parms or /ipmon). This will take you directly to the function.

To see a list of all shortcuts and their associated functions, enter a single slash (/) at the ==> prompt. Select the desired shortcut from the list by entering 'S' beside it.

If a shortcut exists for a menu option, it is displayed in turquoise, to the right of the option description.

Shortcuts may also be combined with menu options (for example, /bcast.s or =/bcast.s).

Shortcuts can be invoked in two ways:

1. A 'nested' shortcut
2. A shortcut skip

To retain and nest the current screen level, use a nested shortcut:

/shortcut_name

Exit will bring you back to the last nested screen in this window. Screens may be nested to a maximum of 64 levels.

To close all currently nested screen levels, use a shortcut skip:
`=/shortcut_name`

Exit will take you back to the Primary Menu. If you no longer need any nested screens, a shortcut skip saves storage and resources.

(If you are currently at the Primary Menu, a nested shortcut and a shortcut skip behave the same.)

MENU OPTION

Each menu option is identified by a 1 to 3 character option string, displayed in yellow. Enter the option you want at the `===>` prompt.

PANEL PATH

Like shortcuts, panel paths move directly to a function without having to access each submenu between it and the current menu. A panel path consists of multiple menu options separated by periods (for example `=U.M`).

Also like shortcuts, the `=` sign functions as a skip character, closing all nested screens and effectively entering the path from the primary menu. (If you are currently at the Primary Menu, the skip character is not required.)

Frequently used panel paths have associated shortcuts. If you don't remember a shortcut, enter `/` at the `===>` prompt for a list. Select one from the list, or enter it at the `===>` prompt.

There is no difference between accessing a function using a panel path skip or a shortcut skip, although the shortcut should be easier to remember. Both close the current screen and go straight to the function.

Entering `==` at the `===>` prompt from any panel closes all nested screens and returns you to the Primary Menu.

BA0002

MAI-FS SESSIONS EXIST - PRESS ENTER TO CONTINUE SESSION OR F3 TO LOGOFF

Reason:

An attempt was made to exit with Fullscreen MAI sessions still in existence.

System Action:

None.

User Action:

Press Enter to return to the menu. Press F3/F15 to resume the logoff and terminate all MAI sessions.

BA0003**MAI-FS SESSIONS EXIST - PRESS ENTER TO CONTINUE SESSION****Reason:**

A user has attempted to exit the Primary Menu while current MAI sessions exist. The MAIESC system parameter is set to NO, preventing a user from exiting while there are current MAI sessions.

System Action:

The request is rejected.

User Action:

Terminate your MAI sessions before attempting to exit. If required the MAIESC system parameter may be set to YES or WARN to allow users to exit with active MAI sessions. In which case active MAI sessions will be force terminated.

BA0004**RECONNECT ENVIRONMENTS IGNORED****Reason:**

The user's request to continue processing without reconnection to earlier processing regions has been honoured.

System Action:

None.

User Action:

The RECONN command may be used to perform reconnection.

BA0005

RECONNECT ENVIRONMENTS CANCELED - P1

Reason:

The user's request to continue processing without reconnection to earlier processing regions has been honoured. In addition cancel processing for the disconnected region(s) was initiated.

System Action:

None.

User Action:

None.

BA0006

PANEL ERROR ON ~P1

Reason:

The primary menu is unable to display the named panel. The following message indicates the nature of the problem. In most cases a Panel Services message stating that the panel is undefined or incorrectly coded is related.

System Action:

The primary menu procedure terminates and the window is closed. This may result in user logoff.

User Action:

Report the problem to your installation help desk. If necessary a panels LIBPATH DEFINE may need to be issued. Also ensure that the distribution panels library is available.

BA0007

INVALID FUNCTION KEY PRESSED

Reason:

A function key was pressed which has no defined action in the current window.

System Action:

None.

User Action:

None.

BA0008

Select an option, press a function key, or enter a shortcut to proceed.

Reason:

The ENTER key was pressed, but no option, command or shortcut was entered.

System Action:

None.

User Action:

Enter a valid shortcut, menu option, panel path, or command.

SHORTCUTS

Enter a shortcut name, preceded by a slash, at the ==> prompt (for example, /levels or /info or /ipmon) This will take you directly to the function. To see a list of all shortcuts and their associated functions, enter a single slash (/) at the ==> prompt. Select the desired shortcut from the list by entering 'S' beside it.

If a shortcut exists for a menu option, it will be displayed in turquoise, to the right of the option description.

Shortcuts may also be combined with menu options (for example, /bcast.s or =/bcast.s).

Shortcuts can be invoked in two ways: 1. A 'nested' shortcut 2. A shortcut skip To retain and nest the current screen level, use a nested shortcut:

/shortcut_name

Exit will bring you back to the last nested screen in this window. Screens may be nested to a maximum of 64 levels.

To close all currently nested screen levels, use a shortcut skip:

=/shortcut_name

Exit will take you back to the Primary Menu. If you no longer need any nested screens, a shortcut skip saves storage and resources.

(If you are currently at the Primary Menu, a nested shortcut and a shortcut skip behave the same.)

MENU OPTION

Each menu option is identified by a 1 to 3 character option string, displayed in yellow. Enter the option you want at the ==> prompt.

PANEL PATH

Like shortcuts, panel paths move directly to a function without having to access each submenu between it and the current menu. A panel path consists of multiple menu options separated by periods (for example =U.M).

Also like shortcuts, the = sign functions as a skip character, closing all nested screens and effectively entering the path from the primary menu. (If you are currently at the Primary Menu, the skip character is not required.)

Frequently used panel paths have associated shortcuts. If you don't remember a shortcut, enter / at the ===> prompt for a list. Select one from the list, or enter it at the ===> prompt.

There is no difference between accessing a function using a panel path skip or a shortcut skip, although the shortcut should be easier to remember. Both close the current screen and go straight to the function.

Entering == at the ===> prompt from any panel closes all nested screens and returns you to the Primary Menu.

BA0009

USER SERVICES PROCEDURE ~P1 UNDEFINED OR IN ERROR

Reason:

The User Services option was selected from the Primary Menu, but the User Services procedure defined for the user was either:

- not found in the COMMANDS library
- has attempted to execute another NCL procedure that was not found in the COMMANDS library at the next, or a nested level.

System Action:

The request is rejected.

User Action:

Correct the name of the User Services procedure in the user's UAMS definition, or place the procedure in the user's commands library.

This message can occur for an undefined NCL procedure at a nesting level below the procedure defined in the user's UAMS record. As a result, the procedure name in the message text (P1) is the name of the User Services procedure in the user's UAMS record and is not necessarily the procedure that is in error or undefined.

BA0010**COMMAND RETURNED NON-ZERO RETURN CODE AND NO ERROR MESSAGE WAS SET****Reason:**

A command was invoked from the Primary Menu that ended with a non-zero return code. This non-zero return code was not accompanied with an error message and the success or otherwise of the command could not be determined.

System Action:

The command is highlighted.

User Action:

Check the success of the command from another source.

BA0011**USERID P1 IS NOT AUTHORIZED TO EXECUTE COMMANDS****Reason:**

The userid *P1* is not authorized to access Operator Control Services and therefore the execution of commands is not allowed.

System Action:

The command is rejected.

User Action:

Contact the System Administrator if the function is required.

BA0012**PROCEDURE ~P1 WAS NOT FOUND****Reason:**

The procedure *P1* was not found when the selected option was made. This procedure is defined as the procedure to execute when the selection is made.

System Action:

The selection is rejected.

User Action:

Contact the System Administrator.

BA0013

ALL RECONNECT ENVIRONMENTS CANCELLED

Reason:

The user's request to continue processing without reconnection to earlier processing regions has been honoured. In addition cancel processing for the disconnected region(s) was initiated.

System Action:

None.

User Action:

None.

BA0014

Continue logon and ignore disconnected sessions

Reason:

This message appears as the option description for the CI option on the Reconnection menu.

System Action:

None.

User Action:

TOP OF DATA REACHED

Reason:

The specified character string was not found from the point of the search start to the top of the data.

System Action:

None.

User Action:

Repeat the find to continue the search from the end of the data.

BA0043**NO ENVIRONMENT MESSAGES TO DISPLAY****Reason:**

A request to display messages from the owning environments message queue could not be performed because there were no messages to display.

System Action:

None.

User Action:

None.

BA0044**INVALID FIND COMMAND OPTION. VALID OPTIONS ARE FIRST, LAST, NEXT OR PREV****Reason:**

An invalid find command option was specified.

The valid options are FIRST or F, LAST or L, NEXT or N, PREV or P.

The general syntax of the find command is - FIND xxx yyy , where xxx and yyy are both positional parameters and xxx represents the character string to be searched (the default and '*' are equivalent to the last string searched) and yyy is a directional option which can be one of FIRST, LAST, NEXT or PREV (the default being NEXT).

The search string can contain any characters and must be quoted if it contains blanks, asterisks, single quotes or double quotes. Quotes that are part of the search argument and are of the same type as the string is quoted in must be doubled up. For example to search for the string abc'xyz you can specify FIND "abc'xyz" and to search for the string abc'xyz"lmn you can specify FIND 'abc'xyz"lmn' .

The command name and the options can be abbreviated to their first character.

System Action:

The find command is rejected.

User Action:

Correct the option and retry the command.

BA0045

INVALID FIND COMMAND SYNTAX. FIND STRING MUST BE A VALID QUOTED STRING

Reason:

An invalid find command string was entered.

The search string can contain any characters and must be quoted if it contains blanks, asterisks, single quotes or double quotes. Quotes that are part of the search argument and are of the same type as the string is quoted in must be doubled up. For example to search for the string abc'xyz you can specify FIND "abc'xyz" and to search for the string abc'xyz"lmn you can specify FIND 'abc"xyz"lmn' .

The general syntax of the find command is - FIND xxx yyy , where xxx and yyy are both positional parameters and xxx represents the character string to be searched (the default and '*' are equivalent to the last string searched) and yyy is a directional option which can be one of FIRST, LAST, NEXT or PREV (the default being NEXT).

The command name and the options can be abbreviated to their first character.

System Action:

The find command is rejected.

User Action:

Correct the string and retry the command.

BA0046

CHARACTERS "~P1" NOT FOUND

Reason:

The search character string P1 was not found.

System Action:

None.

User Action:

None.

BA0047**BOTTOM OF DATA REACHED****Reason:**

The specified character string was not found from the point of the search start to the bottom of the data.

System Action:

None.

User Action:

Repeat the find to continue the search from the start of the data.

BA0048**TOP OF DATA REACHED****Reason:**

The specified character string was not found from the point of the search start to the top of the data.

System Action:

None.

User Action:

Repeat the find to continue the search from the end of the data.

BA0049**CHARACTERS "~P1" FOUND****Reason:**

The search character string P1 was found.

System Action:

None.

User Action:

None.

BA0050

ENVIRONMENT MESSAGES SAVED IN NOTEPAD

Reason:

The environment messages were successfully saved in the notepad.

System Action:

None.

User Action:

None.

BA0051

Default Profile in use. Enter the PROFILE command to set the menu style**Reason:**

Your menu profile does not exist and the default menu style is being used. This message will be presented when you display the primary menu and there is no menu profile on the database. The default menu style settings of Classic primary menu format and Collapsed IP Summary (only available on TCP/IP products) were taken.

System Action:

Defaults used for rendering primary menu display.

User Action:

Use the PROFILE or PROF command to view and/or update your profile settings.

BA0052

Option P1 (P2) completed.**Reason:**

The menu option *P1* was invoked and the user returned back to the primary menu. *P2* is the menu option's description.

System Action:

None.

User Action:

None.

BA1001**VARIABLE NAME CONTENTS****Reason:**

This is the title line issued by NCL procedure \$NMSYVAR. This procedure is used to determine the current value of system variables on remote regions.

System Action:

Information lines follow for each variable requested.

User Action:

None.

BA1002**~P1 - ~P2****Reason:**

This is the information line issued by NCL procedure \$NMSYVAR. P1 is the full name of the system variable. P2 is the actual contents of this variable.

System Action:

None.

User Action:

None.

BA1003***END* -- P1 SYSTEM VARIABLES DISPLAYED****Reason:**

This message indicates the end of the display generated by the NCL procedure \$NMSYVAR. It summarizes the number of variables displayed

System Action:

None.

User Action:

None.

BA9900

ENTER PASSWORD TO RESUME PROCESSING

Reason:

The terminal has been locked by the LOCK command or the terminal inactivity facility. The processing is interrupted until your current password is entered and verified.

System Action:

Waits for entry of the password. If the password verification fails then the user is reprompted. If the number of retries is exceeded then the user is disconnected.

User Action:

Enter your password to be verified.

BA9901

LOCK FUNCTION FAILED - PANEL ~P1 UNAVAILABLE

Reason:

A LOCK request has been unable to perform panel processing. The panel P1 is not in the users panel path.

System Action:

The LOCK function terminates.

User Action:

Report the error to your system administrator.

BA9902

TERMINAL SUCCESSFULLY UNLOCKED

Reason:

A LOCK function has verified the password and is terminating.

System Action:

The LOCK function terminates and the interrupted processing resumes.

User Action:

Continue the interrupted work.

BA9903**USER VERIFY FAILED - ~P1 DISCONNECTED****Reason:**

A LOCK function has reached the number of password retries allowed for the system.

System Action:

The user region is disconnected.

User Action:

Signon and reconnect to resume processing.

BA9904**USER VERIFY FAILED - P1 CANCELLED****Reason:**

A LOCK function has reached the number of password retries allowed for the system and has attempted to disconnect the region. The disconnect has failed and the user has been cancelled.

System Action:

The user region is terminated.

User Action:

Refer to the SOLVE log for messages indicating why the disconnection failed. The system may be in shutdown.

BA9905**PASSWORD FAILED VERIFICATION****Reason:**

The password entered to unlock the terminal is not valid for the user ID.

System Action:

The terminal is not unlocked. The retry counter is incremented. If the counter reaches the system password retry limit then the region is disconnected.

User Action:

Correct and re-enter.

BA9906

USERID P1 NOT KNOWN TO SECURITY SUBSYSTEM

Reason:

The password entered to unlock the terminal failed verification because the userid is not defined to the security subsystem.

System Action:

The terminal is not unlocked. The retry counter is incremented. If the counter reaches the system password retry limit then the region is disconnected.

User Action:

Notify your system administrator.

BACCI01

CCI RC= P1 ERR= P2 ERRX= P3 DESC= P4 FDBK= P5

Reason:

A CA CCI call has completed.

P1 is the return code.

P2 is the error code.

P3 is the extended error code.

P4 is the error description.

P5 is the feedback code that indicates the kind of CCI call.

System Action:

The CA CCI call has completed.

User Action:

If the return code is not zero, investigate and correct the cause of the error.

BACMD01**Command Entry function not valid in this environment****Reason:**

The Command Entry function has been requested from a region which does not have a full-screen interface, for example:

- A background user
- A remote operator (using ROUTE from another system)

System Action:

The command is rejected.

User Action:

Execute Command Entry (or a function which requires Command Entry) from an environment which has a real window; that is:

- Avoid submitting the command to a background region.
- Execute the command locally.

BACMD02**Keyword=Variable format is not valid in this environment****Reason:**

The Command Entry function has been requested and the first parameter specifies OPT=COMMAND which indicates *keyword=variable* format. This format is only valid when \$CMDENT is executed from another NCL procedure.

System Action:

The command is rejected.

User Action:

Use positional parameter format when invoking Command Entry in this environment.

BACMD03

Unable to change profile, P1

Reason:

An attempt to change the internal command profile options has failed. - PROFILE ENV=CURRENT HOLD=9999 &&000CEPOP returned an unexpected message (*P1*) .

System Action:

The profile was not changed

User Action:

Contact your systems administrator to determine why your profile cannot be changed. Verify that GLBL CPOP is blank or contains a profile option which is valid for this environment

BACMD04

Maximum capture limit reached

Reason:

The maximum number of messages to be captured has been reached.

System Action:

Additional messages are discarded and cannot be viewed.

User Action:

Either: * use the ERASE (K) command to clear the captured messages, or * increase the capture limit by entering a higher value in the LIMIT input field.

BACMD05

No lines captured - nothing to print

Reason:

The F4 key was pressed to request that the captured lines be printed but there are no lines captured.

System Action:

The function is ignored.

User Action:

Issue one or more commands, and so capture lines of data, before using this function.

BACMD06**Print request P1 starting, P2 lines to print****Reason:**

A request to print the captured lines has started. The Print Services request number (*P1*) and number of lines to print (*P2*) are shown.

System Action:

Lines are spooled to Print Services. Additional progress messages are displayed.

User Action:

Wait for the completion message.

BACMD07**P1 of P2 lines printed****Reason:**

This is a print spooling progress message showing the number of lines spooled so far (*P1*) and the total number of lines to print (*P2*).

System Action:

Print spooling continues.

User Action:

Wait for the completion message.

BACMD08**Print request P1 complete****Reason:**

A request to print the captured lines has ended. The Print Services request number (*P1*) is shown.

System Action:

None.

User Action:

None.

BACMD09

Invalid maximum capture limit

Reason:

The value specified in the LIMIT field is invalid because it was either: * omitted, or * a non- numeric value.

System Action:

None.

User Action:

Specify a numeric value and retry.

BACMD10

Command Stack is empty

Reason:

The F6 key was pressed to retrieve a command from the Command Stack but there are no commands stacked.

System Action:

The function is ignored.

User Action:

Issue one or more commands before using this function.

BACMD12

Valid values are ON and OFF

Reason:

A value other than ON or OFF was specified in the highlighted field.

System Action:

None.

User Action:

Specify either ON or OFF and retry.

BACMD13**EDIT ON and SCROLL ON are mutually exclusive****Reason:**

A value of ON has been specified for both the EDIT and SCROLL fields. These are mutually exclusive and cannot both be specified as ON.

System Action:

None.

User Action:

Change the EDIT and/or SCROLL fields so that at least one of these is OFF.

BACMD14**Invalid color specification****Reason:**

When editing lines, an invalid color was specified.

System Action:

None.

User Action:

Either omit the color specification to use the default (Green), or specify a valid color using one of the following:

G for Green

B for Blue

R for Red

Y for Yellow

W for White

P for Pink

T for Turquoise

BACMD15

Invalid highlighting specification

Reason:

When editing lines, an invalid highlighting option was specified.

System Action:

None.

User Action:

Either omit the highlight specification to use the default (None), or specify a valid highlight option using one of the following:

N for None

U for Underline

B for Blink

R for Reverse

BAIN0001

INMC link definition for P1 not found

Reason:

An attempt to read an INMC Link definition failed because the requested definition for link name (*P1*) no longer exists on the VFS dataset.

System Action:

The request is rejected.

User Action:

Choose a different link name. This error may occur during browse or update of a definition when the record is deleted by another user.

BAIN0002**Link definition P1 already exists****Reason:**

An attempt to add a new INMC link definition failed because there is already a definition of the same name.

System Action:

The request is rejected.

User Action:

Use the reason explanation to rectify the situation. If the problem is not obvious contact your systems administrator.

BAIN0003**File error: Action= P1 reason= P2****Reason:**

An attempt to access the VFS dataset to read or write an INMC link definition failed. The file action (*P1*) and failure reason (*P2*) are shown.

System Action:

The request is rejected.

User Action:

Use the reason explanation to rectify the situation. If the problem is not obvious contact your systems administrator.

BAIN0201**INVALID KEYWORD VALUE SPECIFIED, P1= P2****Reason:**

The call to the procedure failed because the Keyword identified by *P1* had an invalid value, identified by *P2* .

System Action:

The request is rejected.

User Action:

Contact your systems administrator.

BAIN0202

INVALID ID= P1 FOR TYPE= P2

Reason:

The call to the procedure failed because the identifier *P1* is not of the correct type specified by *P2* . For example: * TYPE=DOMAIN but ID= was the wrong format for a domain name

System Action:

The request is rejected.

User Action:

Contact your systems administrator.

BAIN1101

No INMC link definitions

Reason:

There are no INMC link definitions on file.

System Action:

None.

User Action:

Use the F4=Add function to add link definitions.

BAIN1102

No INMC link definitions starting with P1

Reason:

There are no INMC link definitions on file whose link name starts with the specified prefix (*P1*).

System Action:

None.

User Action:

Use the F4=Add function to add link definitions, or return to the previous panel and specify a different prefix.

BAIN1201**No sessions to display****Reason:**

The transmission mode is neither Preferential or Rotate. As a result there are no sessions to display.

System Action:

None.

User Action:

None.

BAIN1202**Link name and/or transmission mode required****Reason:**

The F5=Sessions command was used but either the link name or the transmission mode was blank.

System Action:

The request is rejected.

User Action:

Specify the link name and transmission mode and retry.

BAIN1203**Mandatory field required: P1****Reason:**

A required field (*P1*) was not specified.

System Action:

The request is rejected.

User Action:

Specify a value in the field and retry.

BAIN1204

Invalid value for P1

Reason:

An invalid value was specified for the field (*P1*).

System Action:

The request is rejected.

User Action:

Specify a value in the field and retry. Refer to the full-screen help for field validation details.

BAIN1205

Field only required for simple transmission mode: P1

Reason:

A field was specified (*P1*) that is only applicable to simple transmission mode.

System Action:

The request is rejected.

User Action:

Either clear the field, or change the transmission mode.

BAIN1206

Field only required when logmode specified: P1

Reason:

A field was specified (*P1*) but the logmode field for the same session detail line was not present. The presence of the logmode field indicates that a session is to be defined; the field's absence means that the session is not defined.

System Action:

The request is rejected.

User Action:

Either clear the field, or specify the logmode for the session.

BAIN1207**At least one active session must be defined****Reason:**

When defining a Rotate and Backup mode link, at least one session must be defined with a status of A (Active). No sessions were defined as active.

System Action:

The request is rejected.

User Action:

Ensure that at least one session is defined as active by specifying a status of A.

BAIN1208**Session details omitted****Reason:**

Details were specified for a session, but the previous session details were omitted. Session details must be entered in consecutive rows and intermediate blank rows are not permitted.

System Action:

The request is rejected.

User Action:

Specify session details for the missing session(s).

BAIN1209**No session details specified****Reason:**

The F3=File or F4=Save function for the link definition was requested. The transmission mode specifies either Preferential or Rotate but there are no session details (the F5=Sessions function was not used).

System Action:

The request is rejected.

User Action:

Use the F5=Sessions function to define at least two sessions.

BAIN1210

Session details incomplete or invalid

Reason:

The F3=File or F4=Save function for the link definition was requested. The transmission mode was changed to Preferential or Rotate mode from another transmission mode. The session details for new transmission mode are incomplete or invalid because the session details have not been displayed (the F5=Sessions function was not used).

System Action:

The request is rejected.

User Action:

Use the F5=Sessions function to update the session details.

BAIN1301

INMC link for P1 no longer exists

Reason:

An attempt to display the status of an INMC link (*P1*) failed because the link has been reset.

System Action:

The request is rejected.

User Action:

Use the F6=Refresh function to refresh the list.

BAIN7001

P1 initialization errors occurred

Reason:

Errors were detected during the initialization process. *P1* identifies the product name.

System Action:

None

User Action:

Examine the product activity log, determine the cause of the errors, and correct them.

BAIN7002**Map P1 not found on this system****Reason:**

The initialization process has detected that a required map (*P1*) is not installed in this region.

System Action:

None.

User Action:

Ensure the setup steps described in the installation and setup instructions have been performed to load the OSCNTL file with the appropriate map definitions for SOLVE.

Check that any maintenance has been applied.

BAIN7003**Loading of Persistent Variables disabled by XOPT****Reason:**

Region started with JCL parameter XOPT=NOPVLOAD, which disables the automatic option of loading persistent variables.

System Action:

Persistent variables are not loaded in this run.

User Action:

If the parameter is specified to fix the problem, restart the region without specifying XOPT=NOPVLOAD after correcting the situation. Default action, equal to specifying XOPT=PVLOAD is taken on restart.

BAIN7006

Error *P1 P2*

Reason:

The initialization process has detected an internal error.

P1 is the error number.

P2 is the error message.

System Action:

Initialization continues; however, the region is probably unusable.

User Action:

If you are using \$NMPARMS, fix the errors and start the region.

If you are not using \$NMPARMS, contact your local Technical Support representative with a copy of the JCL log.

Ensure that maintenance is applied.

This message is followed by message BAIN7007 with more details.

BAIN7007

Proc= *P1* Statement= *P2* at position= *P3* in line= *P4*

Reason:

This message follows message BAIN7006 and provides more information about the error detected.

P1 is the NCL/OML procedure name.

P2 is the NCL/OML statement name.

P3 is the statement position in the line.

P4 is the source line number.

System Action:

Initialization continues; however, the region is probably unusable.

User Action:

If you are using \$NMPARMS, fix the errors and start the region.

If you are not using \$NMPARMS, contact your local Technical Support representative with a copy of the JCL log.

Ensure that maintenance is applied.

This message is followed by message BAIN7007 with more information.

BAIN7008**Initialization internal error****Reason:**

This message, following messages BAIN7007 and BAIN7007 indicates that there is another error in the initialization process.

System Action:

Initialization continues; however, the region is probably unusable.

User Action:

If you are using \$NMPARMS, fix the errors and start the region.

If you are not using \$NMPARMS, contact your local Technical Support representative with a copy of the JCL log.

Ensure that maintenance is applied.

This message is followed by message BAIN7007 with more information.

BAIN7009**Initialization terminating****Reason:**

This is the last message, issued when it is not possible to resume the program.

System Action:

Initialization continues; however, the region is probably unusable.

User Action:

If you are using \$NMPARMS, fix the errors and start the region.

If you are not using \$NMPARMS, contact your local Technical Support representative with a copy of the JCL log.

Ensure that maintenance is applied.

This message is followed by message BAIN7007 with more information.

BAIN7091

P1 initialization phase P2 started

Reason:

The initialization process for the product has started. The product name (*P1*) and initialization phase (*P2*) are indicated.

This message is only issued if the initialization process is under diagnostic control.

System Action:

None.

User Action:

None, diagnostic information only.

BAIN7092

P1 initialization phase P2 ended

Reason:

The initialization process for the product has started. The product name (*P1*) and initialization phase (*P2*) are indicated.

This message is only issued if the initialization process is under diagnostic control.

System Action:

None.

User Action:

None, diagnostic information only.

BAINWI01**Error from procedure p1 RC= p2****Reason:**

The procedure *P1* which was nominated in a Parameter Group to be invoked to perform processing for that Parameter Group failed with return code *P2*.

System Action:

Processing terminates.

User Action:

Correct the error in procedure *P1* and retry the request.

BAINWI02**Number of buffers for buffer size p1 is invalid****Reason:**

The number of buffers specified in the pool with buffer size *P1* is invalid. The value must be numeric, greater than 2, less than 32,767 and less than 16,777,216 divided by *P1*.

System Action:

Field is set in error.

User Action:

Specify a valid number of buffers value.

BAINWI03

P1 must be a list of Path IDs, YES or NO or blank

Reason:

You specified an invalid value in the *P1* field. The field selects the paths by which the panels in the library are editable. The valid values are as follows:

- List of path IDs separated by blanks or commas indicates that the panels in the library are editable by using those paths only.
- Blank or NO indicates that the panels in the library are not editable.
- YES indicates that the panels in the library are editable by using any of the specified paths.

System Action:

The field in error is highlighted.

User Action:

Correct the value.

BAINWI04

p1 required if p2 specified

Reason:

The field *P1* is required if the field *P2* is specified.

System Action:

Field is set in error.

User Action:

Specify a value for *P1* or clear the value for *P2*.

BAINWI05

p1 invalid must be yes, no, 1-999 or 1k-9999k

Reason:

The field *P1* is invalid. It must contain either YES or NO, a number between 1 and 999 or a kilobyte value between 1K and 9999K.

System Action:

Field is set in error.

User Action:

Specify a valid value for *P1*.

BAINWI06**The value in p1 has already been specified****Reason:**

The value *P1* has already been specified in this Parameter Group.

System Action:

Field is set in error.

User Action:

Specify a unique value.

BAINWI07**File ID p1 not defined****Reason:**

The File ID *P1* is not defined; therefore, it cannot be used in the

System Action:**User Action:****BAINWI08****At least one MODS file must be specified****Reason:**

The system cannot function correctly without at least the distributed MODS file being specified.

System Action:

Fields set in error.

User Action:

Specify at least one MODS file.

BAINWI09

At least one panel path ID must be specified

Reason:

The system cannot function correctly without at least one panel path specified.

System Action:

Fields set in error.

User Action:

Specify at least one panel path.

BAINWI10

Link start to P1 request complete

Reason:

A request to start an INMC link (*P1* is linkname) was successful.

System Action:

The link will only become active if/when the remote system starts a link back to this system (or one is defined dynamically).

User Action:

None

BAINWI11

p1 is required if p2 is p3

Reason:

The field *P1* is required when the value of field *P2* is *P3*.

System Action:

Field is set in error.

User Action:

Specify a value for *P1*.

BAINWI12**Log procedure p1 no longer active****Reason:**

The log procedure *P1* was started. The system then waited a few seconds before checking if the procedure was still running and found that it was no longer active. This indicates that the log procedure has errors and either terminated abnormally or ended prematurely.

System Action:

Parameter Group action fails.

User Action:

Check the log for the reason the procedure failed. Correct the error and reset the Parameter Group.

BAINWI13**Invalid buffer size p1****Reason:**

The LSR pool specification specified an invalid buffer size.

System Action:

Field set in error.

User Action:

Enter a valid buffer size.

BAINWI14**Log file p1 not allocated, key length p2 is invalid****Reason:**

The log file with ID *P1* was not allocated because the key length for the file was invalid. The key length of the file was *P2* and it should be a length of 20.

System Action:

The log file is not available for use.

User Action:

Change the parameters to specify a valid log file dataset and Action the parameter group.

BAINWI15

At least one SYSDB file must be specified

Reason:

The system cannot function correctly without at least the distributed

System Action:

User Action:

BAINWI16

Unable to start link to P1

Reason:

A request to start a link to the indicated system has failed.

System Action:

The link is not started.

User Action:

Review the Initialization Log for additional messages that indicate why the link failed to start.

BAINWI17

p1 invalid, must be a valid 3 or 4 byte hex number

Reason:

The field *P1* is invalid. It must contain a valid hexadecimal number of three or four bytes.

System Action:

Field is set in error.

User Action:

Specify a valid value for *P1*.

BAINWI18**SSI status could not be set to p1, current status is p2****Reason:**

An attempt to set the SSI into a particular state could not be achieved. The current status of the SSI is *P2* and this could not be changed to *P1*. This condition results in the SSI parameter group not completing its action of setting the required SSID and potentially attaching terminals. If the current status is RETRY-WAIT, then it indicates that the SSI started task has not started or that its SSID is incorrect.

System Action:

The attempt to set the SSI status is aborted. If the status of the SSI is RETRY-WAIT, then the system will retry connecting to the SSI every 30 seconds or as specified in the SSI Connection Retry Interval field.

User Action:

If the status of the SSI is RETRY-WAIT, then ensure that the SSI started task is started and that its SSID is correct. The SSI will be connected automatically when the SSI started task has initialized.

For other values of status, check the activity log for messages indicating the cause of the error.

BAINWI19**p1 must be null if p2 is p3****Reason:**

The field *P1* must be null if the field *P2* has a value of *P3*.

System Action:

Field is set in error.

User Action:

Clear field *P1* or change the value of *P2*.

BAINWI20

Equate string contains invalid characters

Reason:

You specified an invalid string for an equate. The string must not have embedded blanks and must not contain ampersand (&) characters.

System Action:

The field in error is highlighted.

User Action:

Correct the string.

BAINWI21

p1 of single + is invalid

Reason:

The use of + indicates that a blank character is required at the end of the equated text or string, consequently a single + is equivalent to equating to a blank, which is invalid. The field in error is *P1* .

System Action:

Field set in error.

User Action:

Correct the field.

BAINWI22

The panel path must include libraries which contain distributed panels

Reason:

The panel path specifies a collection of one or more libraries. Each library was searched and none of them contained the required distributed panels. The path must contain the distributed panels for the system to function correctly.

System Action:

Field set in error.

User Action:

Ensure that at least one library contains the distributed panels. It is recommended that the distributed panel libraries be specified as the last libraries of the path.

BAINWI23**Invalid ID. p1 requires name in range p2 to p3****Reason:**

The file ID specified is invalid for the log procedure *P1*. The log procedure *P1* requires log file IDs to be of a specific format. The format is a fixed prefix followed by a two-character number in the range 01 to 07. The file ID must fall in the range *P2* to *P3*.

System Action:

Field set in error.

User Action:

Ensure that the log file IDs are in the required format for the log procedure specified.

BAINWI24**No log files allocated, activity logging disabled****Reason:**

No log files were allocated because of errors. Logging cannot be enabled until at least one log file is available for logging. The activity logging function is disabled until logs are allocated.

System Action:

Activity logging is disabled.

User Action:

1. From any panel, enter `=/PARMS` to list the parameter groups.
2. Review the LOGFILES parameter group. Change the parameters to specify valid log file datasets.
3. Press F6 (Action) to reactivate the logging function.
4. Press F3 (File) to save the changes.

BAINWI25

Log file errors occurred, some logs not allocated

Reason:

One or more log files were successfully allocated and logging was started. However some of the log files were not allocated. See any accompanying messages for further details of errors.

System Action:

Activity logging continues with those logs that were successfully allocated.

User Action:

Determine the reason the logs were in error. Correct the situation and action the parameter group.

BAINWI26

Invalid value, must be 3270 or 560/20

Reason:

The field contains an invalid value. The only valid values are 3270 or 560/20.

System Action:

Field is set in error.

User Action:

Specify either 3270 or 560/20.

BAINWI27

Pool ID must be 0 on this system

Reason:

The LSR POOL ID must be 0 on this operating system. The other values are valid on OS/390 and z/OS systems only.

System Action:

Field is set in error.

User Action:

Specify 0.

BAINWI28**Invalid characters encountered****Reason:**

DBCS data was encountered during validation. DBCS data is not valid in this field.

System Action:

The panel is redisplayed with the field in error highlighted.

User Action:

Enter a non-DBCS value in the highlighted field.

BAINWI29**ISR request complete for P1 (P2) on link P3****Reason:**

A request was made to enable a data flow, using ISR, from a remote system. This request was successful. *P1* indicates the data flow type (PPO, CNM, or SAW), *P2* the direction (IN or OUT), and *P3* is the linkname that identifies the remote system.

However, the data flow is also dependent on being enabled locally on the remote system (in the opposite direction).

System Action:

The data flow becomes active only if/when the remote system enables the relevant interface (PPO, CNM or SAW) locally in the opposite direction.

User Action:

If the data flow is not happening, check whether it has been enabled locally on the remote system, and that the flows are in opposite directions, for example:

- Local=IN and Remote=OUT
- Local=OUT and Remote=IN

That is, use the ISRIN parameter group on one system, and the ISROUT parameter group on the other system.

BAINWI30

Unable to enable ISR for P1 (P2) on link P3

Reason:

A request to enable ISR for a specific data flow type (*P1* is PPO, CNM, or SAW) for the direction (*P2* is IN or OUT) on the indicated link (*P3*) has failed.

System Action:

The ISR data flow is not enabled.

User Action:

Review the Initialization Log for additional messages that indicate why the ISR enable failed.

BAINWI31

NetView links not supported for p1

Reason:

Connections to NetView regions require the Netmaster Automation region to be configured with the NetView Connect option.

System Action:

The field in error is highlighted.

User Action:

Specify *NO* in the highlighted Is the ISR Link to NetView? field. If connections to NetView regions are required, contact your systems administrator and request that the region is reconfigured with the NetView Connect option (PROD=NVC).

BAINWI34

SSID has not been set in VTAM Generic Resource environment

Reason:

This region is configured to run in a VTAM Generic Resource Environment, but the Sub System Interface ID field is not set correctly.

System Action:

Initialization fails.

User Action:

Set the Sub System Interface ID field and action this parameter group.

BAINWI35**System SYSDB path dropped****Reason:**

The system SYSDB path definition has been dropped.

System Action:

There is no system SYSDB path until one is redefined.

User Action:

None.

BAINWI36**SYSDB file ID p1 closed****Reason:**

File ID *P1* has been removed from the system SYSDB path, closed, and unallocated.

System Action:

None.

User Action:

None.

BAINWI37**SYSDB file ID p1 opened, access= P2, share= P3, DSN= P4****Reason:**

File ID *P1* has been allocated and opened for use as a SYSDB with the indicated access (*P2* = RW or RO) and share option (*P3* =NONE, LSR, or RLS). The data set name is *P4*.

System Action:

None.

User Action:

None.

BAINWI38

System SYSDB path defined, access= P1

Reason:

The system SYSDB path definition has been defined with the indicated access path (*P1*):

- INPUT: Entities can be retrieved.
- UPDATE: Entities can be retrieved and maintained (add, update, delete) in the first SYSDB file ID only.

Note: The access level is determined by the access defined for the first (or only) SYSDB file ID in the concatenation:

- UPDATE if the file access is RW (read-write)
- INPUT if the file access is RO (read-only)

System Action:

None.

User Action:

None.

BAINWI39

Pool prefix value already defined

Reason:

This prefix value is already defined as an MAI ACB pool prefix.

System Action:

The update is rejected.

User Action:

Ensure unique values are used for each MAI pool prefix specification.

BAINWI40**SYSDB file ID p1 open failed: P2****Reason:**

An attempt to allocate and open a file for use as a SYSDB (file ID *P1*) has failed. The failure message (*P2*) indicates the reason.

System Action:

The system SYSDB concatenation is restored. The restoration is recorded by a set of messages starting with BAINWI41 and ending with BAINWI43.

User Action:

Use the failure reason to identify the cause, make the appropriate changes, and retry.

BAINWI41**System SYSDB definition error(s), System SYSDB path will be restored****Reason:**

An error occurred while redefining the system SYSDB concatenation path. As a result, the current SYSDB path is restored.

System Action:

The current system SYSDB concatenation path is restored. Additional messages indicate the files that are restored and the completion of the restoration.

User Action:

None.

BAINWI42

SYSDB file ID p1 restored

Reason:

This message occurs after BAINWI41, while the system SYSDB concatenation path is being restored. The message indicates that file ID *P1* has been reallocated and opened for use as a SYSDB.

System Action:

None.

User Action:

None.

BAINWI43

System SYSDB path restored

Reason:

This message occurs after BAINWI41, while the system SYSDB concatenation path is being restored. The message indicates that the SYSDB path has been restored.

System Action:

None.

User Action:

None.

BAINWI45

NO is invalid for Sub-System Interface ID. Field set to blank.

Reason:

The value specified for Sub-System Interface ID is invalid. The special value NO indicates that the region is not to be connected to an SSI. The value NO is equivalent to setting the field to blank and, for this reason, the field is blanked out.

System Action:

The field is set to blank.

User Action:

None.

BAINWI46**Buffer minimums set for pool *p1*: *p2*****Reason:**

The number of buffers specified in pool *p1* for the *p2* buffer sizes was increased to the required system minimum. This pool and these buffer sizes are used by system data sets to maintain system performance and integrity.

System Action:

The number of buffers is altered to the minimum values for the *p2* buffer sizes in pool *p1*.

User Action:

None. You can specify more buffers for these sizes, but not less.

BAIPWI01**Enter a valid port number or "NONE".****Reason:**

The highlighted field must be one of the following:

- A number between 257 and 65535
- The word "NONE" indicating that this system should not listen for inbound connections
- Omitted, to reinstate the previous value

System Action:

The field is highlighted as an error.

User Action:

Enter a correct value.

BAIPWI02

P1 cannot be the same as the P2

Reason:

The value entered for the port defined in *P1* (which is either the web interface port or the connections port) is already assigned to the port indicated by *P2* . These two ports must have different values.

System Action:

The port number is highlighted as an error.

User Action:

Enter a different value for the port number.

BAIPWI03

Enter a valid PPI queue name

Reason:

The highlighted field must have a valid 1 to 8 character name.

System Action:

The field is highlighted as an error.

User Action:

Enter a correct value.

BAIPWI04

WARNING: P1 Events are not generated by TCPaccess 3.1 or 4.1

Reason:

You have requested that events of type *p1* be received. However this type of event is not available from TCPaccess versions prior to 5.2

System Action:

The information based on these events is not available.

User Action:

None.

BAIPWI05***WARNING* TCP/IP Interface not started.****Reason:**

The TCP/IP software type and the type's specific details have not been specified. The TCP/IP software type must be specified in the SOCKETS parameter group.

System Action:

The TCP/IP interface is not started. This may affect the functioning of other licensed components.

User Action:

Specify the TCP/IP software type and the type's specific details in the SOCKETS parameter group. You can access the list of parameter groups by entering the /PARMS shortcut.

BAIPWI06**Invalid TCP/IP software type " P1". Assuming IBM.****Reason:**

The TCP/IP software type of *P1* was invalid. The system will assume that the software type is IBM.

System Action:

A software type of IBM is used and processing continues.

User Action:

Update the parameter with a valid value.

BAIPWI07**P1 cannot be less than 5 minutes****Reason:**

The value for field *P1* cannot be less than 5 minutes (00.05).

System Action:

Field is set in error.

User Action:

You must set a value greater than or equal to 5 minutes.

BAIPWI08

Timeout waiting for TCP/IP to stop. TCP/IP interface in P1 state

Reason:

The TCPIP STOP command was issued and confirmation for its activation has not arrived. The current status of the interface is *P1*.

System Action:

The request fails.

User Action:

Check the log for additional messages and correct any parameter errors. If the error persists then contact your system administrator.

BAIPWI09

Port P1 already used as Inbound Connections Port

Reason:

The port number *P1* is already being used as the Inbound Connections Port. The Telnet port must be a different number or SHARED.

System Action:

Field is set in error.

User Action:

Specify a different port number or SHARED.
You can specify SHARED to share the Inbound Connections Port.

BAIPWI10

Port P1 already used as WebCenter Port

Reason:

The port number *P1* is already being used as the WebCenter Port. The Telnet port must be a different number, it cannot be shared with the Web Interface.

System Action:

Field is set in error.

User Action:

Specify a different port number or SHARED.
You can specify SHARED to share the Inbound Connections Port.

BAIPWI11**Port P1 already specified for P2****Reason:**

The port number *P1* has already been specified for field *P2*. The Telnet port must be a different number or SHARED.

System Action:

Field is set in error.

User Action:

Specify a different port number or SHARED.

BAIPWI12**Cannot change TPC/IP Software Type: multisystem link(s) exists****Reason:**

The TCP/IP Software Type cannot be changed because there are linked regions that use this information to communicate with this region.

System Action:

The field in error is highlighted.

User Action:

To change the TCP/IP Software Type, you must first *unlink* this region.

BAIPWI13**Cannot change port: multisystem link(s) exist using old port****Reason:**

The IP Port for Inbound Connections cannot be changed because the old IP port is used by linked regions to communicate with this region.

System Action:

Field is set in error.

User Action:

To change the IP port number, you must first *unlink* this region.

BAIPWI14

TCP/IP START will be retried, interval is P1

Reason:

The TCP/IP interface failed to start. Another attempt to start the interface will be made after the interval *P1* has expired.

System Action:

The parameter group completes successfully and a timer is set to re-action it after the interval *P1* expires.

User Action:

None.

BAIPWI15

TCPIP P1 failed - see previous message(s)

Reason:

The TCPIP command was issued to either START or STOP the TCP/IP interface. *P1* is either START or STOP. The request failed and the previous message or messages will indicate the reason.

System Action:

The request fails.

User Action:

Contact your systems administrator.

BAIPWI16

Unable to find dataset for DD name P1

Reason:

The initialization for TCP/IP tried to allocate a dataset to the DD name *P1*. No suitable data sets could be found.

System Action:

The DD is not allocated.

User Action:

Specify a valid data set name that exists.

BAIPWI17**Unable to allocate DD P1 to data set P2****Reason:**

Initialization failed to allocate a data set *P2* with the DD name *P1* .

System Action:

The DD is not allocated. Processing continues.

User Action:

Enter a valid data set name for the data set required.

BAIPWI18**Web menu registered for P1****Reason:**

The web menu options for *P1* have been registered to the WebCenter interface *P1* is the name of the component for which the menu was registered.

System Action:

None.

User Action:

None.

BAIPWI19**P1 must be NONE. No web interface products configured.****Reason:**

The web port cannot be set if there are no components configured that have a web interface implemented.

System Action:

Field set in error.

User Action:

You must set the field to NONE. Alternatively, you can restart the system with a product specified that has a web interface.

BAIPWI21

Invalid HFS path: P1

Reason:

The value provided for the WebCenter SDK User Directory is not a valid HFS path.

System Action:

Field set in error.

User Action:

Either provide a valid HFS path or leave the field blank.

BAIPWI22

Value must be SAF or FILE.

Reason:

You have entered an incorrect value.

System Action:

The value is rejected.

User Action:

Enter SAF if your server certificates are stored by your security system (CA Top Secret, CA ACF2, or RACF) or FILE if your server certificates are stored in an HFS file.

BAIPWI23

SSL profile P1 created

Reason:

An SSL profile named *P1* has been created. SSL processing of WebCenter requests will use this profile.

System Action:

Processing continues.

User Action:

None.

BAIPWI24**Using SSL certificate handle P1, certificate name is: P2****Reason:**

The server certificate named *P2* will be used for SSL processing. A handle named *P1* has been created to refer to this certificate.

System Action:

Processing continues.

User Action:

None.

BAIPWI25**SSL certificate is specified to be in P1, keyring name is: P2****Reason:**

Server certificates will be retrieved from *P1*. *P2* identifies which certificate to use.

Note: No validation is performed for the existence of the server certificate.

System Action:

Processing continues.

User Action:

None.

BAIPWI26**Secure Socket Layer P1 used by WebCenter****Reason:**

Specifies whether SSL is used by web browsers to access WebCenter.

System Action:

Processing continues.

User Action:

None.

BAIPWI27

Invalid value for Access URL Host Override

Reason:

The value provided is not a valid host name, or IPv4 or IPv6 address. If a host name is specified, it must be a label or a sequence of labels separated by dots. Labels must start with a letter and can contain letters, numbers, and the hyphen character (-). Other special characters are not permitted.

Examples:

192.10.23.24

my.host.com

los-angeles.ARN24

System Action:

The field is highlighted in error.

User Action:

Specify a valid IP host name or address.

BAIPWI28

Access URL Host Override P1 may not be valid

Reason:

Host override *P1* cannot be confirmed as valid. Either the overriding host name is not recognized by NSLOOKUP or the IP address is not associated with the stack used by this region, as specified in the SOCKETS Parameter Group (/PARMS).

System Action:

None.

User Action:

If the override value is invalid, correct it in the WEBCENTER parameter group (/PARMS). The value may be valid; this message can be caused by a domain name server problem.

BAIPWI29**NetMaster WebCenter status could not be determined****Reason:**

WebCenter initialization has failed, and its status could not be determined.

System Action:

No recovery is possible, and initialization fails.

User Action:

Contact Technical Support.

BAIPWI30***P1* hostnames read from *P2*****Reason:**

The data set *P2* has been read in preparation for building the DNR static cache. *P1* host names were retrieved from the data set.

System Action:

None.

User Action:

None.

BAIPWI31**No entries loaded into DNR static cache****Reason:**

The DNR static cache is not in use in this region. The DNR static cache is loaded from the hosts.local or the etc.ipnodes data set, or both, specified in the SOCKETS parameter group. If the data set is not specified, or the data sets are empty, DNR functions without a static cache, that is, all NSLOOKUP requests are resolved using the Domain Server only.

System Action:

None.

User Action:

None.

BAIPWI32

IPv6 socket support not enabled

Reason:

An IPv6 address has been entered in the Access URL Host Override field, but the sockets API supports IPv4 addresses only.

System Action:

The field is highlighted in error.

User Action:

Specify a host name or IPv4 address in the Access URL Host Override field. Alternatively, check the SOCKETS parameter group (/PARMS). For IPv6 support, the TCP/IP Software Type must specify IBMV6.

BAIPWI33

Invalid filter on line *p1*: *p2*

Reason:

The filter statement specified on line *p1* was invalid. *p2* provides the reason for the error.

System Action:

The filter is rejected, and the panel set in error.

User Action:

Correct the filter statement on line *p1* and retry.

BALK0001

P1 initialization completed. Connecting to remote host.

Reason:

Initialization has successfully completed. The process will now attempt to connect to the remote host. *P1* is the protocol used in the connection.

System Action:

None.

User Action:

None.

BALK0002**P1 processing terminated.****Reason:**

The connection manager has terminated for protocol *P1*.

System Action:

None.

User Action:

See previous messages.

BALK0003**Invalid keyword value received, Keyword= P1 Value=" P2".****Reason:**

A keyword parameter was either not specified or was specified with an invalid value. The keyword parameter was *P1* and the value was *P2*.

System Action:

The request is rejected and processing terminates.

User Action:

Specify the keyword parameter with a valid value.

BALK0004**Unable to obtain exclusive control to act as the P1 for P2.****Reason:**

A request to act as the *P1* process for *P2* failed because another process was already performing the function. If KILLPREV=YES was specified then this process could not be flushed.

System Action:

The request is rejected and processing terminates.

User Action:

Try the action later or specify KILLPREV=YES to terminate the current process acting as the *P1* for *P2*.

BALK0005

Service package P1 does not exist or does not contain P2 procedure.

Reason:

The link manager could not continue processing because the service package P1 did not exist or the necessary procedure P2 did not exist in the package.

System Action:

Processing terminates.

User Action:

Ensure all required procedures are supported by the package or that the package name is correct.

BALK0006

TCP/IP Socket P1 error, SOCID= P2 RC= P3 FDBK= P4. For protocol P5, po rt P6 and host name/address= P7

Reason:

An error occurred executing a TCP/IP socket function. *P1* is the function being performed, *P2* is socket ID, *P3* is the return code from the function, *P4* is the feedback code from the function, *P5* is the protocol being used, *P6* is the port number at the remote host and *P7* is the remote host name or address (if applicable).

System Action:

The request fails and the connection will be retried.

User Action:

Ensure that the Host Name/Address and Port Number are correct. Check the error codes to determine the exact nature of the error. More information may follow in subsequent messages.

BALK0007**VCode=" P1", ErrNoDesc=" P2"****Reason:**

This message described additional information associated with a previous error. *P1* is the vendor software specific error code and *P2* is a description of the socket error number received. The vendor specific code may not be present.

System Action:

None.

User Action:

See related messages. Check the error codes and description to determine the exact nature of the error.

BALK0008**P1 termination request received, P1 ending.****Reason:**

A request to terminate the *P1* protocol client/server process *P2* was accepted. The process will terminate.

System Action:

Processing terminates as requested.

User Action:

None.

BALK0009

P1 connection established, socket ID is P2 port is P3 connected to P 4 on port P5

Reason:

A connection was successfully established with a remote system. The protocol being used is P1, the socket identifier is P2 and the port is P3. *The remote system is on address P4 with port P5.*

System Action:

None.

User Action:

None.

BALK0010

P1 connection will be automatically retried in P2 minutes.

Reason:

A connection failed and has been automatically scheduled to be retried in P2 minutes. The connection is for protocol P1.

System Action:

None.

User Action:

None.

BALK0011

Unable to contact P1.

Reason:

A request to act as the Client process failed because the remote host name/address P1 did not respond.

System Action:

Processing terminates.

User Action:

Ensure that the correct host name/address is specified and retry the request again.

BALK0012**P1 initialization completed. Registering on port P2.****Reason:**

Initialization has completed successfully. The process is now attempting to register on a port. *P1* is the protocol used in the connection, and *P2* is the port number being registered for.

System Action:

None.

User Action:

None.

BALK0013**P1 registered for port P2 using socket ID P3.****Reason:**

Registration was successful for protocol *P1* . The port that was registered is *P2* , and the socket identifier is *P3* .

System Action:

None.

User Action:

None.

BALK0014**P1 connection closed by client, server terminating.****Reason:**

The remote client for a specific connection has terminated the connection to *P1* .

System Action:

Processing terminates as requested.

User Action:

None.

BALK0015

P1 initialization completed. Accepting client on port P2 socket P3.

Reason:

Initialization has completed successfully for a specific server. The protocol is *P1* and the port which the client connected to is *P2* . The socket being transferred is *P3* .

System Action:

None.

User Action:

None.

BAM01001

Link or Domain Name is not allowed from a subordinate system

Reason:

The Link or Domain Name field cannot be specified for certain options when the system is a subordinate in a multisystem complex.

System Action:

None.

User Action:

Blank out the Link or Domain Name field and work on the local system only.

BAM01002

Domain ID ' P1' is not a valid domain ID

Reason:

The Domain ID identified by *P1* does not conform to the specification for a valid Domain ID.

System Action:

None

User Action:

Correct the entry and retry the operation.

BAM01003**No domain id(S) selected from list****Reason:**

No domains were selected from the displayed list.

System Action:

None

User Action:

None

BAM01004**Option invalid with multiple domains selected****Reason:**

The selected option is invalid if multiple domains have been selected. The option is valid only for a single domain ID.

System Action:

None

User Action:

Correct the entry and retry the operation.

BAMC00001**Return code P1 from attempt to acquire lock****Reason:**

An attempt to acquire the lock with primary name=Monitor and minor name=Record.Collector failed with return code *P1*.

System Action:

The Monitor Record Collector procedure terminates.

User Action:

This usually indicates that there is already an instance of \$NMMC000 (the Monitor Record Collector) running.

BAMC00002

Attempt to load named segment P1 failed with return code P2

Reason:

A DIAG64 call to load the named segment *P1* failed with return code *P2*.

System Action:

The calling procedure terminates.

User Action:

For more information, see the supplied return code in Responses in the chapter "DIAGNOSE Code X'64' - Named Saved Segment Manipulation" in CP Programming Services.

BAMC00003

IUCV P1 failed with return code P2 and errno P3

Reason:

An Inter User Communication Vehicle (IUCV) *P1* operation has failed.

System Action:

The calling procedure terminates.

User Action:

Check that the other virtual machine in this IUCV connection is running. Check the OPTION IUCV statements in the directory entries for both virtual machines involved in this IUCV connection.

BAMC00004***MONITOR data overwritten****Reason:**

An Inter User Communication Vehicle (IUCV) REPLY was issued to release a *MONITOR block of storage. The response indicates that the data was overwritten before it was copied.

System Action:

The current block of *MONITOR data is discarded. Processing continues.

User Action:

Ensure that the CA NetMaster virtual machine is assigned the necessary priority to ensure that it can process the data received from the *MONITOR system service in a timely manner.

BAMC00006**Return code P1 from CP command P2 - CP output follows****Reason:**

The CP command *P2* failed with return code *P1*.

System Action:

Processing terminates.

User Action:

Dependent on CP command. Check subsequent NMMC00007 messages containing CP command output.

BAMC00007**P1****Reason:**

This is output from a failed CP command.

System Action:

Processing terminates.

User Action:

Use this output to diagnose why the CP command from message NMMC00006 failed.

BAMC00008

End of CP command output.

Reason:

This message indicates the end of CP command output contained in the series of NMMC00007 messages preceding this.

System Action:

Processing terminates.

User Action:

Use output from preceding LMDS00006 and LMDS00007 messages to determine which CP command failed and why.

BAMX0102

OPTION P1 ONLY SUPPORTED ON FOCAL POINT SYSTEMS

Reason:

The menu option you selected is available only on focal point systems within your multi- system complex. This region is not a focal point system.

System Action:

The request is rejected.

User Action:

Logon to a focal point system to use this option.

BASEC000

FUNCTION COMPLETED

Reason:

SAF authorization check completed successfully.

System Action:

Access is authorized.

User Action:

None.

BASEC001**INVALID CALL TO SECURITY PROCEDURE****Reason:**

An internal call to the \$NMSEC security procedure was invalid.

System Action:

Access is denied.

User Action:

If the security procedure has been modified, check to see if the code is correct. If it is correct or if the procedure has not been modified, contact Technical Support.

BASEC002**INVALID CALL TYPE P1****Reason:**

An internal call to the \$NMSEC security procedure used an invalid call type.

System Action:

Access is denied.

User Action:

If the security procedure has been modified, check to see if the code is correct. If it is correct or if the procedure has not been modified, contact Technical Support.

BASEC003**USER P2 NOT AUTHORIZED TO P1****Reason:**

The user, *P2*, was not authorized for the *P1* function.

System Action:

User access is denied, and the attempt is logged.

User Action:

Contact your system security personnel to gain access.

BASEC004

UAMS SECCALL GET FAILED FOR USERID(P1) REGION(P2)

Reason:

A call to the UAMS security subsystem failed. The call was made on behalf of the *P1* user ID from the *P2* region.

System Action:

User access is denied, and the attempt is logged.

User Action:

This is an internal error. Contact Technical Support.

BASEC011**SECURITY CHECK FAILED RC= P1 SFRC= P2 SFREAS= P3 ENV= P4 P5****Reason:**

A SAF call to verify access to a resource failed.

RC is the return code from the SAF interface (UTIL0039) SFRC is the sub-function return code SFREAS is the sub-function reason code ENV is environmental information

The most common RC/SFRC combinations are:

04 PROGRAM ACTIVATION FAILURE 04 Program not APF-authorized 08 Invalid parameter 0C Missing parameter 10 Parameters inconsistent

08 SAF INTERFACE FAILURE SAF/RACROUTE return codes: 04 Requested function was not processed 08 Requested function was processed, but failed

12 ACCESS VERIFICATION FAILURE RACROUTE REQUEST=VERIFY return codes: 04 No security profile defined 08 Password invalid 0C Password expired 10 New password invalid 14 Group definition is missing 18 Security exit denied access 1C User temporarily revoked 20 Security system not active 24 Access to group is revoked ?? Others as per specific security subsystem

16 ACCESS AUTHORIZATION FAILURE RACROUTE REQUEST=AUTH return codes: 04 Resource is not security protected 08 Resource access not allowed 99 NO ENTRY PARAMETERS

System Action:

User access is denied.

User Action:

Contact your system administrator. Use the error codes and messages provided above to investigate the cause of the error.

You also need:

- The SAF RACROUTE macro documentation
- The messages and codes documentation for your external security system (RACF, ACF2, or Top Secret)

Ensure that the region is running out of an authorized load library. Ensure that your external SAF security system is active.

Ensure that your security administrator has set up SAF security for use with this region correctly.

BASEC012

AUTHORIZATION FAILURE - RESOURCE IS NOT SECURITY PROTECTED

Reason:

A user tried to access a resource. A SAF call was done to check the user's authority level, but failed because the resource was not SAF protected. This message was written to the activity log, followed by the NMSEC019 message that lists the user ID, resource, and requested access.

System Action:

User access is denied.

User Action:

Ensure that your security administrator has set up SAF security for use with the region correctly.

BASEC013

AUTHORIZATION FAILURE - ACCESS DENIED

Reason:

A user did not have the level of access required to perform the requested function. This message was written to the activity log, followed by the NMSEC019 message that lists the user ID and requested access.

System Action:

User access is denied.

User Action:

Contact your security administrator to gain access.

BASEC019**P1****Reason:**

This message was logged following any SAF check failure messages. It contains the parameters used by the failing SAF RACROUTE macro call. These parameters may include:

USRID - the ID of the user requesting access

GRPID - the user ID's SAF default group

CHKENV - the SAF checking environment (APPL|USER|FULL)

ACCTYP - the access type requested (READ|UPDATE|ALTER)

RSNAME - the SAF resource name

RSCLSS - the SAF class

System Action:

None.

User Action:

Use this information, and the information in the previous error message, to determine the cause of the error. The previous error message's User Action contains more specific suggestions.

BASOAP00**Service Desk record *P1 P2* created from alert *P3 P4*****Reason:**

A CA Service Desk record was created from the alert identified by the resource and description of *P3*.

The record is identified by *P1*. *P2* is its internal reference number. *P4* indicates whether the record was created by automatic alert forwarding or by a trouble ticket request.

If the Service Desk server supports the ITIL user interface, an *Incident* record is created. Otherwise, a *Request* record is created.

System Action:

None.

User Action:

This record is now accessible to CA Service Desk users.

BASOAP01

Service Desk record not created, insufficient details for alert serial *P1*

Reason:

A request was received to create a CA Service Desk record from the CA NetMaster alert with the serial number shown; however, the alert description field was not provided.

System Action:

None.

User Action:

None.

BASOAP02**Service Desk record could not be created due to interface error.****Reason:**

An attempt was made to create a CA Service Desk record from a CA NetMaster alert, but the attempt failed because of a communications error between CA NetMaster and the CA Service Desk server.

Specific error details are written to the activity log. The following are some likely causes of these failures:

- CA Common Services CAISDI/soap started task is not active
- Service Desk server is not active - Web server for Service Desk server is not active
- Network problems prevent IP access to Service Desk server
- Incorrect or incomplete implementation of the CA Common Services for z/OS SOAP Client component CAISDI/soap
- Incorrect or incomplete implementation of CA Service Desk
- Incorrect login user ID or password for CA Service Desk
- Service Desk server hostname cannot be resolved
- Incorrect authority to access Service Desk through SSL
- Incorrect setup of the SERVICEDESK destination:
 - The URL of the Service Desk server is incorrect
 - The CCI SYSID is incorrect

System Action:

None.

User Action:

Perform the following steps:

1. Examine the activity log for further error details in message BASOAP03.
2. Examine the output of the CA Common Services for z/OS CAISDI/soap SOAP Client started task. You may need to turn the DEBUG flag on for this started task (F ?*taskname*,APPL=DEBUG).

You may need help from your Systems Programmer who implemented CAISDI/soap or your Service Desk Administrator to diagnose these conditions.

BASOAP03**P1 P2 P3 P4 P5 P6 P7 P8 P9****Reason:**

This message provides diagnostic information for communication failures between CA NetMaster and CA Service Desk.

This communication uses the Web services SOAP protocol with the CA Common Services for z/OS CAISDI SOAP Client component named CAISDI/soap.

(CA NetMaster does not use CAISDI components CAISDI/med or CAISDI/els.)

Return Code	Feedback Code	
4	0	RC 4 Feedback 0 can have a variety of causes, including, but not limited to: <ul style="list-style-type: none">■ The SD Server URL is incorrectly specified in the Trouble Ticket interface or in the Alerts Parameter Group. If using the defaults, the URL may be incorrect in the CAISDI/soap startup parameters.■ The CCI SYSID is incorrectly specified in the Trouble Ticket interface or in the Alerts Parameter Group.■ If using SSL, there may be initialization errors in the gsk environment in the CAISDI/soap started task. If CASD169E gsk_environment_init error appears in the CAISDI/soap log, it can indicate setup and/or security errors in the certificate or keyring tasks of the SSL setup.
4	4	CA Common Services component CAISDI/soap returned a non-zero return code; sets the values for: <ul style="list-style-type: none">■ CAISDI/soap Return Code■ CAISDI/soap Error Code■ CAISDI/soap Error Message
8	0	Storage failure
8	4	Shutdown request in progress
8	8	NM SOAP subtask abend on this request

Return Code	Feedback Code	
8	12	NM SOAP interface disabled, excessive abends
8	16	<ul style="list-style-type: none"> Load failed for CAISDI/soap API modules; sets CAISDI/soap Error Message

For more information, see the following:

- Service Desk Integration Guide
- CA Common Services for z/OS Message Guide

System Action:

None.

User Action:

Perform the following steps:

1. Ensure that the following are correctly and completely implemented:
 - The CA Common Services for z/OS SOAP Client CAISDI/soap component
 - The CA Service Desk product
2. Ensure that the SERVICEDESK Trouble Ticket or Alert Forwarding destination is correctly set up on this region, that is, that the CCI SYSID and CA Service Desk URL values are correct.

The following are some likely causes of these failures:

- CA Common Services for z/OS CAISDI/soap SOAP client started task is not active.
- CA Service Desk server is not active.
- Web server for CA Service Desk server is not active.
- Network problems prevent IP access to Service Desk server.
- Service Desk server host name cannot be resolved.
- Incorrect setup of the SERVICEDESK destination:
 - The URL of the CA Service Desk server is incorrect.
 - The CCI SYSID is incorrect.
- Incorrect or incomplete implementation of the CA Common Services for z/OS SOAP Client component CAISDI/soap.

You may need help from the systems programmer who implemented CAISDI/soap and/or your CA Service Desk Administrator to diagnose these conditions.

BASOAP04

P1

Reason:

This message is the detail line for the response to a SD* command help subcommand. A subcommand of '?' or 'HELP' lists the available SD commands and their parameters.

System Action:

None.

User Action:

None.

BASOAP98**CA Service Desk Integration is not yet fully implemented****Reason:**

You specified the SERVICEDESK type for the alert monitor trouble ticket interface or the alert forwarding destination.

Currently, Service Desk integration in this region is not fully implemented and you cannot specify the SERVICEDESK type.

Service Desk integration requires the following products:

- CA Service Desk r11 or later
- CA Common Services for z/OS r11 or later

System Action:

None.

User Action:

Discuss the implementation of CA Service Desk integration with your Systems Programmer and your CA Service Desk Administrator.

Before you can integrate with CA Service Desk from your region, you must complete the following tasks:

1. Install and set up CA Service Desk.
Ensure that Web Services access is also set up for this product. See the CA Service Desk documentation.
Note the URL/name of the server where this product is installed.
2. Install and set up the following:
 - CA Common Services for z/OS r11 or later, CAISDI/soap component
 - CA Common Services for z/OS r11 or later, CAICCI componentSee the CA Common Services documentation and the Service Desk Integration Guide.
3. Contact Technical Support and request the CA NetMaster APARs to enable integration. Apply these APARs and read any accompanying documentation.

After you complete the tasks, you should be able to specify the SERVICEDESK type for the alert monitor trouble ticket interface or an alert forwarding destination.

BASOAP99

P1

Reason:

This is a CAISDI/soap interface trace message. It contains details of OML SOAP verb invocations and results. OML global variable gbl\$SOAPTRC=YES controls the production of these messages.

System Action:

None.

User Action:

None.

BASY9101

P1 not updateable - last set by parameter group P2

Reason:

The SYSPARM (*P1*) cannot be updated because it was previously updated by a Customizer parameter group (*P2*).

System Action:

None.

User Action:

System parameters that are set by Customizer parameter groups can only be changed by updating and actioning the parameter group.

BAUAIN01

UAMS Add error, User(*P1*) Msg(*P2*)

Reason:

An attempt to add a user or group definition to the UAMS database failed. *P1* is the ID of the user, and *P2* is the message set by the &SECCALL verb.

System Action:

The UAMS record is not added, and processing continues.

User Action:

Determine the cause of the error from the &SECCALL message. Correct the error, and rerun the \$NMUAINI procedure to generate the default UAMS records.

BAUAIN02**Add failed for P1 UAMS records, refer to log****Reason:**

The default UAMS record generator encountered one or more errors when attempting to add user and group definition records to the UAMS database. *P1* is the number of UAMS records which were not successfully created.

System Action:

None.

User Action:

Review the messages (with a prefix of 'BAUAIN') on the activity log to determine the cause of the errors.

BAUAIN03**SIGNON command failed for background user P1, refer to log****Reason:**

A SIGNON command was issued for the background user identified by *P1* . This command failed. The reasons may be found in the activity log.

System Action:

Processing continues.

User Action:

Review the messages associated with the SIGNON command to determine the problem.

BAUAIN04

UAMS Get error, User(P1) Msg(P2)

Reason:

An attempt to get a user from the UAMS database failed.
P1 is the ID of the user and *P2* is the message set by the &SECCALL verb.

System Action:

Processing continues.

User Action:

Determine the cause of the error from the &SECCALL message, correct the background user name or rerun \$NMUAINI with no parameters to define the background users for the region.

BAUAIN05

Check failed to find P1 UAMS records, refer to log

Reason:

A number of UAMS records were not found in the UAMS database. *P1* is the number of UAMS records which were not found.

System Action:

None.

User Action:

Review the messages (with a prefix of 'BAUAIN') on the activity log to determine the cause of the errors.

BAUAIN06

Full security exit in effect, UAMS definitions for background users not added.

Reason:

On this region, the UAMS dataset has been replaced by a full security exit.

System Action:

UAMS definitions will not be added for the background user IDs. Processing continues.

User Action:

None required. Default definitions are used if the security exit does not contain definitions for background user IDs.

BAUAIN07

User ~P1 does not have UAMS authority

Reason:

The user ID executing \$NMUAINI does not have UAMS update authority.

System Action:

Background UAMS definitions are not added, and processing continues.

User Action:

To define the background users, log on to a user ID with UAMS update authority and run \$NMUAINI again, with no parameters.

BAVL01

VSAM levels are not available

Reason:

The system maintenance level indicates a service pack has not been applied to the region. The VSAM file levels are not checked.

System Action:

None.

User Action:

If the region is created from a generally available (GA) product, apply service pack maintenance.

BAVL02

System VSAM base is: MODS *P1* PANELS *P2* OSCNTL *P3* *P4* *P5*

Reason:

The system maintenance level for distributed VSAM data is shown as follows:

P1 is the MODS level - menus, messages, web records, and so on.

P2 is the panels level.

P3 is the OSCNTL level - ASN1 maps.

P4 is RAMDB if Automation Services is licensed.

P5 is the RAMDB level.

Maintenance levels are in *yymm*, the year and month of service pack creation.

The level can also be one of the following values:

N/A indicates that the maintenance level cannot be found for the file.

user_id identifies the user that last changed the file record used to check maintenance levels. It is displayed if the maintenance level field does not start with "GL", indicating that the file may be corrupted or incorrect.

System Action:

None.

User Action:

If the levels match the LEVEL field in message N11416, the VSAM files are correct. If they do not match, check that the VSAM data installation performed at product installation is correct.

BAVSAM00

The VSAM Monitor is monitoring File Full, Errors, *P1*, *P2*

Reason:

The VSAM Monitor is active. *P1* and *P2* are optional monitoring conditions.

System Action:

The VSAM Monitor waits for VSAM EDS events.

User Action:

None.

BAVSAM01**The VSAM Monitor is waiting for NCLID *P1* to terminate****Reason:**

The VSAM Monitor is initializing and a procedure with NCLID *P1* holds the lock required to complete initialization.

System Action:

The VSAM Monitor waits for the lock to be released.

User Action:

If this message persists, contact Technical Support.

BAVSAM02**Message queue overflow for the VSAM Monitor****Reason:**

The VSAM Monitor has experienced message queue overflow. Some events may not be processed.

System Action:

The VSAM monitor continues to wait for events.

User Action:

Contact Technical Support.

BAVSAM03**Response queue error for the VSAM Monitor, FDBK= *P1*****Reason:**

The VSAM Monitor has experienced message queue errors when profiling for events. *P1* is the feedback code - 4 indicates a timeout and 8 is message queue overflow.

System Action:

VSAM monitoring terminates.

User Action:

Contact Technical Support.

BAVSAM04

VSAM file full or extent count threshold exceeded

Reason:

The VSAM Monitor has detected a file full or exceeding a threshold extent count defined in the Customizer Parameter Group, VSAMMONITOR. The Alert Text shows the extent count and High Allocated Relative Byte Address (HARBA) for data and index components. If extent count monitoring is active, data for any extent increase above the threshold is shown for up to the last 20 extensions. If a contiguous extent is obtained, the extent count does not increase; however, the HARBA for data or index is increased.

System Action:

If the file is full, no records can be added and attempts to add records fail; otherwise, file use continues.

User Action:

If the file is full, it must be increased in size. In some cases, for example, the VFS, USERIDS, OSCNTL, or RAMDB files, the region must be stopped to free the datasets that are crucial to system operation. In other cases, the file can be freed and another file allocated through a Customizer Parameter Group.

To recover from a file full:

1. Define a new and larger VSAM cluster.
2. Use REPRO to save the old file records in the new file.
3. Do one of the following:
 - Change the name of the file in the region, for example, in the RUNSYSIN member.
 - Rename the new and old files.

If the extent count threshold is reached, a file full condition can probably be avoided by increasing the file size as described.

BAVSAM05**VSAM monitor internal error *P1 P2*****Reason:**

The VSAM Monitor has received an event *P2* but cannot process it. *P1* is the error as follows:

No DD name

Indicates that the DD name cannot be found in the event message.

No UDB info for ddname

Indicates that the UDB INFO request has failed with return code 8 or greater.

No UDB usage for ddname

Indicates that the UDB INFO request failed to retrieve usage data.

ON ERROR count

Indicates that the Monitor procedure encountered processing errors and has stopped monitoring. The errors are logged in messages GP1015 and GP1016 and can be seen by issuing the ILog command for the Customizer Parameter Group VSAMMONITOR.

MDO RC: *rc* FDBK: *fdbk* for ddname

Indicates that the UDB INFO request failed with an MDO error. The MDO return code and feedback code are shown.

System Action:

The event is ignored and monitoring continues, except for ON ERROR count where monitoring terminates.

User Action:

For ON ERROR count or if the DD name is missing, contact Technical Support; otherwise, issue a `SHOW UDB=ddname` command from OCS or command entry. If the UDB does not display, the error has occurred because the UDB was closed before the VSAM event monitor could retrieve data. If the UDB is displayed, contact Technical Support.

BAVSAM06

VSAM Monitor unexpected response *P1*

Reason:

The VSAM Monitor has received an unexpected message when profiling for events. *P1* is the message.

System Action:

VSAM monitoring terminates.

User Action:

Contact Technical Support.

BAVSAM07

File resize failed for *p1 p2*

Reason:

The VSAM Monitor was attempting to resize the file with DD name *p1* but was unable to complete the request for the reason *p2*. The following reasons can be given:

NDB files not supported

The file is an NDB, and the resize function does not support NDB files.

Unsupported dataset type *x*

The data set allocated to file *p1* is not supported. It must be a VSAM cluster with data and index components (KSDS). The file is of type *x*.

Cannot rename existing dataset

The existing data set cannot be renamed because an automatically generated new data set name that was not already defined could not be determined.

UDB get info error *rc=n* MDO *rc=m* fdbk=*p*

This error is returned from the VSAM file information retrieval utility. The return code was *n*, and the MDO return code and feedback code were *m* and *p* respectively.

IDCAMS error call-*rc=n* utility-*rc=m*

This error is returned from the IDCAMS utility. The return code from the utility invocation interface was *n* and the utility return code was *m*. Contact Technical Support, providing all the related messages from the log.

phase x error, MSG=y

The resize utility could not proceed because of an error that was encountered during one of the processing phases of the operation. The message *y* describes the error. The possible processing phases are:

GETATTR indicates that the resize utility was attempting to get information about the file (including data set name, open options, and current size allocation). This action failed, and the file was not resized; however the existing file is still allocated, open, and in use.

CL-UNALL indicates that the resize utility tried to close and unallocate the file so that it could be resized, but the action was unsuccessful. The message was returned from the close/unallocate utility. The file may be in an inaccessible state if it was closed.

RENAME indicates that the resize utility tried to rename the existing file to a new name, but the action failed. The output from the IDCAMS utility that performed the operation is written to the log. The file may be in an inaccessible state if it was partially renamed. Check the log for the IDCAMS output to determine what the problem was and manually resize the data set (see User Action).

DEFINE indicates that the resize utility tried to define a new VSAM file with more available space, but the action failed. The output from the IDCAMS utility that performed the operation is written to the log. The original file has been renamed to a temporary name and is used to REPRO into the new file when you manually resize the file (see User Action).

ALL-OP indicates that the resize utility successfully completed the resize operation on the file, but was unable to re-allocate and re-open the file to the region. The message was returned from the allocate/open utility. The file may be in an inaccessible state and will need to be manually allocated and opened.

Unsupported DD name

The data set allocated to file *p1* is not supported. Only specially identified files are eligible for the automatic resizing option.

System Action:

File resizing terminates.

User Action:

Check the reason for the error, and check the log for any additional messages describing the situation.

When you know what the problem is, you can resize the data set manually. The following steps guide you in resolving the problem and resizing the file:

1. Depending on where in the resize process the failure occurred, you may need to unallocate the file from the region. Issue the following commands in this order to free the file from the region:

```
UDBCTL CLOSE=ddname
```

```
UNALLOC DD=ddname
```

Note: *ddname* is the file identified in the message.

2. After the file has been freed from the region, create an IDCAMS batch job to delete and define a new file, and then REPRO the contents of the old file into the new one.

Note: If the resize process failed and left the original file renamed, then use this file as the INDATASET for the REPRO command of your IDCAMS job.

Important! Do not delete the original file until you have verified that the REPRO was successful, the file is allocated to the region, and no errors are issued in the log regarding this file.

3. After the file has been resized, you can reallocate the file to the region by actioning the parameter group that allocates the file. The following list relates the possible files to the parameter groups:

MSDB is allocated by the MSDB - MSDB File Specification parameter group.

Alternatively, you can issue the following commands to reallocate the file to the region, but be sure that you use the correct file disposition and UDBCTL OPEN parameters for that particular file:

```
ALLOC DD=ddname DSN=datasetname DISP=SHR
```

```
UDBCTL OPEN=ddname
```

Note: *ddname* is the file identified in the message and *datasetname* is the data set to be allocated to the DD (check the parameter group for the correct dataset name)

BAVSAM08***p1*****Reason:**

This message is a wrapper message issued by the VSAM resizing utility. It encapsulates errors and informational messages encountered during the resizing process for a VSAM data set.

p1 is either another message or text output from the IDCAMS utility.

System Action:

None.

User Action:

Check other messages that indicate the overall success or failure of the resize process. Check the message in *p1* for details of the condition being reported.

BAVSAM09**Resizing of file *p1* initiated due to file full or excessive extents****Reason:**

The file *p1* has exceeded the allowable number of VSAM extents or the file is full. The file will be extended to ensure that new data can be saved into the file. This message indicated that the file resizing process has begun for the file *p1*.

System Action:

The file resizing process begins.

User Action:

No action is required. Subsequent messages are issued to indicate the success of the operation.

BAVSAM10

Resizing of file *p1* completed successfully

Reason:

The file *p1* had exceeded the allowable number of VSAM extents, or the file was full. The file was successfully extended, and new data can be saved into the file.

System Action:

None.

User Action:

No action is required. The file was resized, and operations continue normally.

BAVSAM88

P1 : P2

Reason:

This message displays a VSAM monitor trace message. *P1* is the trace ID and *P2* is the trace text.

System Action:

None.

User Action:

None.

BS0101

FUNCTION KEY P1 IS NOT ACTIVE IN THIS WINDOW

Reason:

Function key *P1* was pressed and it has no action assigned to it.

System Action:

None.

User Action:

None.

BS0102**INVALID COMMAND ' P1'****Reason:**

The specified command was not recognized by broadcast services.

System Action:

Command Rejected

User Action:

Respecify a valid command.

BS0103**GENERAL BROADCAST LINES SET AND STORED.****Reason:**

The general broadcast lines have been updated on the VFS file and also the broadcast variables &BROLINE1..4 have been updated.

System Action:

The broadcast text stored will be used to rebuild the general broadcast lines when SOLVE is restarted.

User Action:

The message confirms the update request.

BS0104**INVALID MASK SPECIFIED, MUST BE A VALID USER ID****Reason:**

The broadcast type requested requires the MASK operand to be specified as a valid single user id value.

System Action:

The broadcast is not sent.

User Action:

Supply a valid userid for the MASK operand/field and retry the request.

BS0105

Field prompting not supported

Reason:

The destination field contains a ?. The broadcast option entered does not support field prompting for the destination. The U option supports destination field prompting.

System Action:

The broadcast is not sent.

User Action:

Supply a destination mask.

BS0106

BROADCAST ~P1 DELETED

Reason:

The requested broadcast has been deleted.

System Action:

The broadcast is no longer available for display.

User Action:

None.

BS0107

MASK MUST BE SPECIFIED FOR THE REQUESTED BROADCAST TYPE

Reason:

The broadcast type requested requires the MASK operand to be specified.

System Action:

The broadcast is not sent.

User Action:

Supply a value for the MASK operand/field and retry the request.

BS0108**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The Broadcast Services menu service procedure \$BS0000M failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure \$BS0000M terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

BS0109**BROADCAST CANCELLED****Reason:**

You have pressed the F12 key or entered the Cancel command whilst in the Broadcast Text Editor. Any changes you have made to the text have been cancelled and the broadcast has not been sent/set.

System Action:

None.

User Action:

None.

BS0110

NO USERS FOUND FOR APPLICATION MASK ~P1. BROADCAST NOT SENT/STORED.

Reason:

The broadcast send request has specified an application for which there are no current users. The broadcast was not sent to any users and was not temporarily stored in the global variable.

System Action:

If the broadcast was specified with the retain processing option then it is stored for deferred display. Otherwise the broadcast request is ignored.

User Action:

None.

BS0111

'Immediate Broadcast' MUST BE (Y)ES OR (N)O

Reason:

A broadcast send request has specified a value other than 'Y' or 'N' for the 'Immediate Broadcast' field.

System Action:

The broadcast is not performed.

User Action:

Correct the value specified and retry the request.

BS0112

USERID NOT SELECTED FROM SELECTION LIST

Reason:

A list of userids was presented and at least one userid was not selected.

System Action:

None.

User Action:

Select at least one userid on the list or specify a destination mask on the Broadcast Send menu.

BS0113**'Retain Broadcast' MUST BE P(ERM) OR (V)IEWED OR (N)O****Reason:**

The value specified in the 'Retain Broadcast' field did not contain one of the following values:

PERM - The broadcast is to be retained permanently (not across SOLVE restarts)

VIEWED - The broadcast is to be retained until all receivers have viewed the broadcast.

NO - Do not retain the broadcast. The broadcast will only be available to users who are currently logged on to SOLVE.

System Action:

The broadcast is rejected.

User Action:

Correct the value specified for the 'Retain Broadcast' field.

BS0114**BROADCAST NOT DELETED - ~P1****Reason:**

A broadcast delete request has failed for the reason specified by P1.

System Action:

None.

User Action:

If deleting a broadcast with outstanding receivers then use the force delete option.

BS0115

BROADCAST ID '~P1' DOES NOT EXIST

Reason:

An attempt to retrieve a broadcast from the global variable has failed. The broadcast may have been deleted.

System Action:

None.

User Action:

None.

BS0116

AT LEAST ONE TEXT LINE MUST BE SPECIFIED FOR A USER BROADCAST

Reason:

You have attempted to send a broadcast that does not contain any text to SOLVE users. This is not allowed.

System Action:

The broadcast is not performed.

User Action:

Enter some broadcast text in at least one of the four broadcast lines on the panel and retry sending the broadcast,

BS0117**BROADCAST P1 - SENT TO P2 TERMINALS, P3 USERS. BROADCAST P4****Reason:**

This message indicates whether a broadcast was sent successfully and if so how many terminals/users received the broadcast.

P1 indicates the broadcast identifier associated with the request.

P2 indicates the *number* of terminals that received the broadcast.

P3 indicates the number of SOLVE users that received the broadcast.

P4 indicates whether the broadcast was saved in the global vartable. The possible values are :

TMP STORED

The broadcast has been temporarily stored in a global vartable and will be deleted when all outstanding receivers have viewed the broadcast.

NOT STORED'

The broadcast was not stored in the global vartable.

RETAINED

The broadcast will be retained in the global vartable until it has been deleted from the active broadcasts selection list. The broadcast will not be retained across SOLVE restarts.

System Action:

None.

User Action:

None.

BS0118**PRIMARY MENU BROADCAST LINE SET AND STORED.****Reason:**

The primary menu broadcast line has been updated on the VFS file and the system variable &ZPMTEXT1 has also been updated.

System Action:

The broadcast text stored will be used to rebuild the primary menu broadcast line when SOLVE is restarted.

User Action:

The message confirms the update request.

BS0119

ERROR - BROADCAST TEXT LINE(S) LONGER THAN 78 CHARACTERS

Reason:

\$BSCALL has been called with text lines(s) longer than the maximum allowed 78 characters.

System Action:

The broadcast is not issued.

User Action:

Correct the text line(s) in error.

BS0120

NO BROADCASTS SELECTED FOR DISPLAY

Reason:

A broadcast review has determined that there no active broadcasts pertinent to the requesting userid.

System Action:

None.

User Action:

None.

BS0121

UNABLE TO RETRIEVE USER INFORMATION

Reason:

The &SECCALL statement was used to check user authorization for the requested operation. This request was unsuccessful.

System Action:

The request is rejected.

User Action:

Determine the cause of the failure in the security system, and retry.

BS0122**USER NOT AUTHORIZED FOR BROADCAST SERVICES****Reason:**

You attempted to access Broadcast Services facilities, but you are not authorized.

System Action:

The request is rejected.

User Action:

Request authorization for Broadcast Services from your installation, and retry the request.

BS0126**ERROR - ONLY THE FIRST TEXT LINE CAN BE SET FOR A PRIMARY MENU BROADCAST****Reason:**

When setting a primary menu broadcast, only the first broadcast line is used for the broadcast.

System Action:

Broadcast not set.

User Action:

Erase text from broadcast lines 2 - 4 and retry setting the broadcast.

BS0128**INVALID KEYWORD VALUE SPECIFIED, KEYWORD=~P1 VALUE=~P2****Reason:**

The call to the Broadcast Services API \$BSCALL failed because it received an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

Procedure \$BSCALL terminates.

User Action:

Contact the system administrator. Ensure that the keywords/values passed to the Broadcast Services API match the keywords/values stated in the documentation for the API.

BS0129

GROUP P1 NOT DEFINED

Reason:

The call to the Broadcast Services API \$BSCALL failed because it specifies a Group name that is not defined to this system.

System Action:

The broadcast request is ignored.

User Action:

Contact the system administrator. Use Broadcast Services List System Groups to determine the broadcast groups defined on your system.

BS0130

'System Group' MUST SPECIFY A VALID NAME

Reason:

A group name was entered that is not a valid name.

System Action:

The broadcast is not issued.

User Action:

Reissue the broadcast using a valid name. Use '?' to select a name from the list of defined groups.

BS0131

GROUP NOT SELECTED FROM SELECTION LIST

Reason:

A list of broadcast groups was presented but a group was not selected.

System Action:

The broadcast request is not actioned.

User Action:

Reissue the broadcast if desired without a group.

BS0132**FATAL VARIABLE ERROR, FUNC=~P1 ID=~P2 FDBK=~P3 KEY=~P4****Reason:**

An error occurred while processing an NCL variable in broadcast services. The variable operation was P1, the variable ID was P2, the feedback code set by the VARIABLE verb was P3 and the variable key was P4.

System Action:

This message is written to the log.

User Action:

Contact your support representative.

BS0133**FATAL VARIABLE ERROR, BROADCAST SECONDARY KEY DOES NOT EXIST, KEY=~P1****Reason:**

An error occurred whilst processing a broadcast. A variable entry that was expected to be found did not exist.

System Action:

None.

User Action:

Contact your support representative.

BS0134**MASK CANNOT BE SPECIFIED FOR OPT=REVIEW TYPE=*****Reason:**

The broadcast mask cannot be specified when reviewing broadcasts when specifying a type of '*' in the 'TYPE=' keyword parameter.

System Action:

\$BSCALL terminates.

User Action:

Do not specify the MASK= keyword parameter or change the value of the TYPE= keyword parameter.

BS0135

BROADCAST SERVICES MAP ERROR, RC=~P1 FDBK=~P2

Reason:

An error occurred whilst attempting to use the broadcast services map \$BSMAP. The mapping services return code was P1 and the feedback code was P2 .

System Action:

None.

User Action:

Make sure the broadcast services map \$BSMAP is defined to mapping services.

BS0136

RETAIN=PERM NOT VALID FOR TYPE=APPL BROADCASTS

Reason:

When sending a broadcast specifying TYPE=APPL, it is not valid to have RETAIN=PERM set. The only valid values for the RETAIN keyword when using TYPE=APPL are 'NO' AND 'VIEWED'.

System Action:

None.

User Action:

Correct the call to \$BSCALL.

BS0137

NCL application broadcast issued by P1 at P2 on P3 :

Reason:

The broadcast displayed was issued by the user *P1* at the time and the date specified by *P2* and *P3* respectively.

System Action:

None.

User Action:

None.

BS0138**MAI application broadcast issued by P1 at P2 on P3 :****Reason:**

The broadcast displayed was issued by the user *P1* at the time and the date specified by *P2* and *P3* respectively.

System Action:

None.

User Action:

None.

BS0139**Specific broadcast issued by P1 at P2 on P3 :****Reason:**

The broadcast displayed was issued by the user *P1* at the time and the date specified by *P2* and *P3* respectively. The broadcast was issued on the basis of your terminal's identification.

System Action:

None.

User Action:

None.

BS0140**User broadcast issued by ~P1 at ~P2 on ~P3 :****Reason:**

The broadcast displayed was issued by the user *P1* at the time and the date specified by *P2* and *P3* respectively.

System Action:

None.

User Action:

None.

BS0141

General broadcast issued by ~P1 at ~P2 on ~P3 :

Reason:

The broadcast displayed was issued by the user P1 at the time and the date specified by P2 and P3 respectively.

System Action:

None.

User Action:

None.

BS0142

Broadcasts current for ~P1 on LU ~P2

Reason:

The following broadcasts are active and applicable to your userid and terminal.

System Action:

None.

User Action:

None.

BS0143

The following ~P1 broadcast message has been issued.

Reason:

A broadcast message has been sent to your user region. The broadcast types are:

General - for all users

Specific - for selected terminals

User - for selected users

System Action:

None.

User Action:

None.

BS0144

The broadcast was sent at ~P1 on ~P2

Reason:

The broadcast displayed was issued at the time and the date specified.

System Action:

None.

User Action:

None.

BS0146

You must view all broadcast text before you can confirm receipt.

Reason:

You have not viewed all the broadcast text. This is because the broadcast text is larger than what can be displayed on one broadcast panel. You must scroll forward to view the remaining text before you can confirm receipt of the broadcast.

System Action:

None.

User Action:

Press the F8=Forward function key to scroll forwards through the broadcast text. The message at the bottom of the broadcast panel will change to indicate you need to press F6=Confirm when all the broadcast text has been viewed.

BS0147

NO MORE TEXT TO VIEW IN A FORWARDS DIRECTION

Reason:

You have viewed all the broadcast text. There is no more broadcast text to be seen in a forwards direction.

System Action:

None.

User Action:

Press the F6=Confirm key to confirm the receipt of the broadcast.

BS0148

NO MORE TEXT TO VIEW IN A BACKWARDS DIRECTION

Reason:

There is no more broadcast text to be seen in a backwards direction.

System Action:

None.

User Action:

None.

BS0149

ALL BROADCASTS WILL NOT BE DISPLAYED - MAXIMUM DISPLAY P1 EXCEEDED

Reason:

There are too many broadcasts to display on the selection list. The list of broadcasts will be truncated at P1 broadcasts.

System Action:

None.

User Action:

Perform broadcast message maintenance and delete some of the existing broadcasts.

BS0150

BROADCAST ISSUED ON P1 RC= P2. MSG= P3

Reason:

A broadcast issued to a remote system gave a non-zero return code. *P1* indicates the remote systems identification. *P2* is the return code received. *P3* is the associated error message.

System Action:

The message is logged and broadcasting to multiple systems continues.

User Action:

Use the *P3* value to determine the cause of the failure. Error messages associated with APPC may indicate that the system is not configured for APPC communication.

BS0151**BROADCAST ISSUED ON P1 WITH ID= P2. MSG= P3****Reason:**

A broadcast was issued successfully to a remote system. *P1* indicates the remote systems identification. *P2* is the broadcast identifier on the remote system. *P3* is the resulting message from the remote system.

System Action:

The message is logged and broadcasting to multiple systems continues.

User Action:

None.

BS0152**GROUP P1 NOT DEFINED****Reason:**

A request to access the broadcast group *P1* failed because the group is not defined to the system.

System Action:

The request fails.

User Action:

Check that the broadcast group name used specifies a defined broadcast group. Use Option MS.B.LS to list the defined broadcast groups.

BS0153**P1 REQUEST FAILED RC= P2 FDBK= P3 FOR KEY= P4****Reason:**

A file request for a broadcast group failed. *P1* is the file request type *P2* is the FILERC value returned *P3* is the VSAM feedback code *P4* is the file key

System Action:

The request fails.

User Action:

Retry the request. If necessary report the problem to your product support representative.

BS0154

GROUP P1 ALREADY DEFINED

Reason:

An attempt to add a broadcast services group definition has failed because a group of the same name already exists.

System Action:

The request fails.

User Action:

Retry the request specifying a unique name for the group.

BS0155

GROUP P1 ADDED

Reason:

The broadcast group *P1* has been successfully added.

System Action:

The system VFS is updated.

User Action:

None.

BS0156

GROUP P1 UPDATED

Reason:

The broadcast group *P1* has been successfully updated.

System Action:

The system VFS is updated.

User Action:

None.

BS0157**GROUP P1 DELETED****Reason:**

The broadcast group *P1* has been successfully deleted.

System Action:

The system VFS is updated.

User Action:

None.

BS0158**BROADCAST ISSUED ON P1 SYSTEM(S). P2 ERRORS, REFER TO LOG****Reason:**

A broadcast was issued to multiple systems. *P1* indicates the number of systems on which it was issued and *P2* the number of systems from which a non-zero return code resulted.

System Action:

Message BS0151 is written to the log for each successful broadcast to a remote system. Message BS0150 is logged for each unsuccessful broadcast.

User Action:

Refer to the log for error details.

BS0159**BROADCAST ISSUED ON P1 SYSTEM(S)****Reason:**

A broadcast was issued using a system group. *P1* indicates the number of systems on which the broadcast was issued.

System Action:

Message BS0151 is written to the log for each remote system.

User Action:

None.

BS0160

BROADCAST FAILED - INTERNAL QUEUE LIMITS EXCEEDED

Reason:

The number of messages to be processed exceeded the maximum that could be processed.

System Action:

The broadcast is not performed.

User Action:

Reissue the broadcast as a general broadcast to all users.

BS0161

FUNCTION NOT SUPPORTED FOR GENERIC RESOURCE GROUP *P1*

Reason:

The broadcast group *P1* is a dynamically added group representing a VTAM generic resource region. Maintenance functions are not supported for these dynamic system groups.

System Action:

The request is rejected.

User Action:

None.

BS0201

INVALID KEYWORD VALUE SPECIFIED, KEYWORD=*~P1* VALUE=*~P2*

Reason:

The Notification Service procedure \$BSNS02Z for Broadcast Services failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure \$BSNS02Z terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

BS0202**UNSUPPORTED NOTIFICATION MODE ENCOUNTERED, MODE=~P1
USER=~P2****Reason:**

When actioning a request to notify the user P2 via their preferred method of notification, an unsupported notification mode was encountered. The unsupported mode was P1 .

System Action:

No notification is performed.

User Action:

Replace the invalid notification mode for user P2 with a supported mode.

BS0203**NOTIFICATION REQUEST ACCEPTED FOR USER ~P1****Reason:**

A request to send a notification to user P1 via their preferred method of notification was accepted.

System Action:

None.

User Action:

None

BS0204

NOTIFICATION MODE EXIT PROCEDURE NOT FOUND, PROC=~P1 USER=~P2

Reason:

When actioning a request to notify the user P2 via their preferred method of notification, an EXIT mode was selected. The EXIT mode specified a procedure that could not be found. The procedure specified was P1 .

System Action:

No notification is performed.

User Action:

Ensure that the exit procedure P1 exists in the commands library concatenation or specify a different exit procedure in the notification details of user P2 .

BS0205

NOTIFICATION MODE EXIT PROCEDURE ERROR, PROC=~P1 RC=~P2 USER=~P3

Reason:

When actioning a request to notify the user P3 via their preferred method of notification, an EXIT mode was selected. The EXIT mode specified the procedure P1 which returned a non-zero return code of P2 . A non-zero return code indicates that an error condition occurred, however the exit procedure did not specify an error message to further describe the error.

System Action:

None.

User Action:

Contact your system administrator specifying the exit procedure name, return code received and the user being notified.

BS0206**NOTIFICATION FAILED, DOMAIN P1 NOT DEFINED****Reason:**

A request to notify a user failed because the user's preferred method of notification specified a Domain that is not defined to this system.

System Action:

The request is rejected.

User Action:

Define the Domain to this SOLVE system or change the user's preferred method of notification to specify a different Domain ID.

BS2201**'Local System' MUST SPECIFY 'YES' OR 'NO'****Reason:**

The local system field should contain a Yes to include the local system in the broadcast group or a No to exclude it.

System Action:

The broadcast group is not updated.

User Action:

Correct the value specified in the Local System field to Yes or No.

BS2202**'Resource Type' OMITTED OR INVALID****Reason:**

The resource type field is mandatory and must contain one of 'LINK', 'LU' or 'DOMAIN'.

System Action:

The broadcast group is not updated.

User Action:

Correct the value specified in the type field to one of the valid values.

BS2203

'Resource Name' OMITTED OR INVALID

Reason:

The resource name field is mandatory and must contain a valid name. The first character must be an alphabetic or national character and the remaining characters may be alphabetic, numeric, or national ('#','\$','@'). The name must be of the correct length for the Resource Type:

APPCLINK - 1 to 12 characters

DOMAIN - 1 to 4 characters

LU - 1 to 8 characters

System Action:

The group is not updated.

User Action:

Correct the resource name to specify a valid name.

BS2204

'Resource Name' SPECIFIED IS INCORRECT LENGTH FOR RESOURCE TYPE

Reason:

A resource name was entered that is longer than the maximum allowed for the resource type. An LU name has a maximum length of 8. A domain name has a maximum length of 4. A LINK name has a maximum length of 12.

System Action:

The group is not updated.

User Action:

Correct the resource name to specify a valid name for the resource type.

BS2205**'Group Name' IS NOT A VALID NAME****Reason:**

A group name was entered that is not a valid name.

System Action:

The group is not updated.

User Action:

Correct the group name to specify a valid name. The first character must be alphabetic or national character. The remaining characters can be alphabetic, numeric, or national '#', '@', '\$'.

BS2206**DUPLICATE RESOURCE DEFINITION****Reason:**

A resource of the same name and type already exists in the group.

System Action:

The group is not updated.

User Action:

Correct the resource definition to specify a unique resource type and name combination.

BS2207**ID OPERAND REQUIRED FOR ACTION= P1****Reason:**

The group action *P1* requires that the ID operand specify the group name.

System Action:

None

User Action:

Correct the \$BSCALL invocation to supply an ID keyword that specifies the group name.

BS2208

Broadcast P1 - sent to all terminals, on P2 regions. Broadcast P3

Reason:

This message indicates whether a broadcast was sent successfully and if so how many regions in the VTAM Generic Resource group received the broadcast.

Review the activity log for each region for details about the number of terminals and users who received the broadcast.

P1 indicates the broadcast identifier associated with the request. *P2* indicates the number of regions that form the VTAM Generic Resource Group. *P3* indicates whether the broadcast was saved in the global variable. Valid values are : 'TMP STORED' The broadcast has been temporarily stored in a global variable and will be deleted when all outstanding receivers have viewed the broadcast. 'NOT STORED' The broadcast was not stored in the global variable. 'RETAINED' The broadcast will be retained in the global variable until it has been deleted from the active broadcasts selection list. The broadcast will not be retained across SOLVE restarts.

System Action:

None.

User Action:

None.

BU0001

SERVICE PROCEDURE NOT SPECIFIED

Reason:

The service procedure name was not provided in the call to the Browse Utility.

System Action:

The call to the Browse Utility is rejected.

User Action:

Specify the service procedure name on the call to the Browse Utility.

BU0002**SERVICE PROCEDURE ~P1 NOT FOUND IN LIBRARY****Reason:**

The specified service procedure was not found in the NCL procedure library.

System Action:

The Browse Utility is terminated.

User Action:

Correct the service procedure name and retry.

BU0003**NO DATA TO DISPLAY****Reason:**

The Browse Utility did not find any data to display. Either a return code of 14 was returned from the Browse Utility service procedure, or no records were returned from the Browse Utility and the \$BUEMPTYEXIT variable was set to 'YES'.

System Action:

The Browse Utility is terminated.

User Action:

None.

BU0005**FUNCTION KEY ~P1 IS NOT ACTIVE IN THIS WINDOW****Reason:**

The function key that was pressed does not perform any function in the panel currently being displayed.

System Action:

The function key request is ignored.

User Action:

Press a valid function key. The function keys which are used in this panel are displayed at the bottom of the screen.

BU0006

SCROLL AMOUNT MUST BE SPECIFIED

Reason:

A value must be specified in the SCROLL FIELD. Valid values are CSR, HALF, DATA, PAGE, MAX or a number.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Enter a valid value in the scroll field.

BU0007

INVALID SCROLL AMOUNT

Reason:

An invalid scroll amount was specified. Some valid scroll amounts are CSR, MAX, HALF, DATA, PAGE or an amount.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Enter a valid scroll amount.

BU0008

~P1 IS AN INVALID FIND OPERAND

Reason:

The operand specified with the Find command was invalid. Some valid operands are FIRST, NEXT, PREV and LAST.

System Action:

The Find command is rejected.

User Action:

Correct the parameters on the Find command and retry.

BU0015**INVALID RETURN CODE SET BY SERVICE PROCEDURE - RETCODE=~P1****Reason:**

An invalid return code was set by a Browse Utility service procedure.

System Action:

None.

User Action:

Contact the System Administrator.

BU0016**INVALID COMMAND****Reason:**

The command entered on the command line was not recognized by the Browse Utility.

System Action:

The command is rejected.

User Action:

Enter a valid command and retry.

BU0017**~P1 RECORDS SEARCHED****Reason:**

P1 records (P1) were searched for the specified text string but the string was not found.

System Action:

None.

User Action:

Press the FIND key if you wish to continue the search.

BU0019

CHARACTERS '~P1' FOUND

Reason:

The character string P1 specified in the FIND command was found.

System Action:

The cursor is placed at the beginning of the character string that was found.

User Action:

None.

BU0020

RECORD ID NOT SPECIFIED FOR LOCATE COMMAND

Reason:

The locate command was entered, but no record id was specified.

System Action:

The command is rejected.

User Action:

Re-enter the Locate command specifying the full or partial record id which is to be located.

BU0021

SCROLL AMOUNT MUST BE BETWEEN 1 AND 99999

Reason:

The scroll amount that was specified was too large. The scroll amount must be in the range 1 to 99999.

System Action:

The scroll request is rejected.

User Action:

Re-enter the scroll command specifying a valid scroll amount.

BU0023**BOTTOM OF DATA REACHED****Reason:**

The bottom of data was reached when trying to find a string specified with the Find command.

System Action:

None.

User Action:

To continue the search press the Find function key. The search will continue from the top of the list.

BU0024**TOP OF DATA REACHED****Reason:**

The top of data was reached when trying to find a string specified with the Find command.

System Action:

None.

User Action:

To continue the search press the Find function key. The search will continue from the bottom of the data.

BU0025

CHARACTER STRING NOT SPECIFIED

Reason:

An asterisk (*) was entered as a parameter for the Find command, but no previous find command has been entered. When an asterisk is entered as the character string for a find command, the character string from the last find command issued is used. If a literal asterisk is to be found, it should be entered in quotes (ie: '*').

System Action:

The Find command is rejected.

User Action:

Re-enter the Find command specifying a valid character string.

BU0026

LABEL MUST NOT EXCEED 8 CHARACTERS IN LENGTH

Reason:

A command was entered specifying a label which was more than 8 characters long.

System Action:

The command is rejected.

User Action:

Correct the label name and retry.

BU0027

LABEL MUST BE SPECIFIED

Reason:

A dot (.) was entered on the command line without a label name. A label must follow the dot in order to 'name' the current position in the data.

System Action:

The command is rejected.

User Action:

Correct the label name and retry.

BU0028**LABEL .~P1 DOES NOT EXIST****Reason:**

The requested label has not been defined.

System Action:

The command is rejected.

User Action:

Correct the label name and retry, or enter the command 'locate .?' to display a pick list of the currently defined labels.

BU0029**LABEL .~P1 FOUND****Reason:**

The label P1 that you specified was found.

System Action:

The data line to which the label was defined is positioned at the top of the window.

User Action:

None.

BU0030**LABEL .~P1 DEFINED****Reason:**

The label name has been stored in memory and associated with the current position in the data.

System Action:

None.

User Action:

None.

BU0031

UNKNOWN CALLTYPE ~P1 PASSED TO PROCEDURE ~P2

Reason:

An unknown calltype of P1 was passed to procedure P2 .

System Action:

The Browse Utility is terminated.

User Action:

Contact the System Administrator.

BU0032

VARIABLE DUMP COMPLETED

Reason:

A dump of variables currently in memory have been successfully dumped to your window.

System Action:

None.

User Action:

None.

BU0033

VARIABLE NAME EXCEEDS 12 CHARACTERS

Reason:

A variable was specified on the DEBUG command but it was greater than 12 characters in length.

System Action:

The command is rejected.

User Action:

Correct the variable name and retry.

BU0034**HEX DUMP DATA WRITTEN TO ACTIVITY LOG****Reason:**

The output of the DEBUG command was written to the activity log in hexadecimal format. The dumped data is prefixed with the message id BU0036.

System Action:

None.

User Action:

None.

BU0035**DUMP OF VARIABLE: ~P1****Reason:**

The contents of variable P1 have been written to the activity log. The output was prefixed with message id BU0036.

System Action:

None.

User Action:

None.

BU0036**~P1****Reason:**

P1 is the contents of a variable in HEX expanded format. The variable name is shown in the message BU00035.

System Action:

None.

User Action:

None.

BU0037

~P1

Reason:

P1 is the contents of a variable. The variable name is shown in the message BU0035.

System Action:

None.

User Action:

None.

BU0038

FIND STRING MUST BE SPECIFIED

Reason:

The Find command could not be actioned because no character string was entered.

System Action:

The command is rejected.

User Action:

Re-enter the Find command specifying a character string to be found.

BU0039

NO PREDEFINED LABELS FOUND

Reason:

There were no predefined labels found to place in a pick list.

System Action:

The command is rejected.

User Action:

None.

BU0040**LOCATE COMMAND IS NOT SUPPORTED****Reason:**

The *Locate* command is not supported on this display.

System Action:

The *Locate* command is rejected.

User Action:

You must scroll up/down to find the desired record(s).

BU0041**FINDMAX AMOUNT MUST BE BETWEEN 100 AND 9999****Reason:**

The entered maximum find amount was incorrect. It must be in the range 100 to 9999.

System Action:

The scroll request is rejected.

User Action:

Re-enter the scroll command specifying a valid scroll amount.

Cx Messages

CA0001**INVALID KEYWORD VALUE SPECIFIED, KEYWORD=*P1* VALUE=*P2*****Reason:**

The CAS external interface procedure \$CACALL failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2*.

System Action:

The request is rejected and procedure \$CACALL terminates.

User Action:

Check the syntax of the call to procedure \$CACALL.

CA0002

LOCK ERROR : PNAME=*P1* MNAME=*P2* TEXT=*P3*

Reason:

The CAS API procedure \$CACALL failed during processing because it was unable to obtain an NCL procedure lock. *P1* is the primary name of the lock, *P2* is the minor name of the lock and *P3* is the text message set by the current holder of the lock.

System Action:

Procedure \$CACALL ends.

User Action:

Wait and then retry the request. If the request still fails then contact the System Administrator.

CA0003

VARIABLE ERROR : TABLE=*P1* ACTION=*P2* FEEDBACK=*P3*

Reason:

An error occurred performing an action on a VARIABLE. *P1* is the name of the VARIABLE, *P2* is the action that was being performed and *P3* is the feedback code returned from the VARIABLE action.

System Action:

The request is rejected.

User Action:

Contact the systems administrator.

CA0004**INVALID RETURN CODE, PROCEDURE=*P1*, RETURN CODE=*P2*****Reason:**

A procedure invoked by \$CACALL return an invalid return code. *P1* is the name of the procedure in error and *P2* is the invalid return code that was returned by it.

System Action:

\$CACALL ends with return code 8

User Action:

Contact the systems administrator.

CA0005**INVALID FEEDBACK CODE, PROCEDURE=*P1*, FEEDBACK CODE=*P2*****Reason:**

A procedure invoked by \$CACALL returned an invalid feedback code. *P1* is the name of the procedure in error and *P2* is the invalid feedback code that was returned by it.

System Action:

\$CACALL ends with return code 8 and feedback 8

User Action:

Contact the systems administrator.

CA0006

VARIABLE \$LHCRT1 AND KEYWORD CRITERIA ARE MUTUALLY EXCLUSIVE

Reason:

The CAS external interface procedure \$CACALL failed during request processing because it was invoked with a value set in variable \$LHCRT1 and a value set in keyword CRITERIA. Variable \$LHCRT1 and keyword CRITERIA are *mutually* exclusive.

System Action:

The request is rejected and procedure \$CACALL terminates.

User Action:

Correct the execution of \$CACALL and retry.

CA0007

MAXIMUM NESTING LEVEL REACHED

Reason:

The CAS external interface procedure \$CACALL failed during request processing because the current nesting level exceeds the maximum allowed for actions processed via \$CACALL.

System Action:

The request is rejected and procedure \$CACALL terminates.

User Action:

None.

CA0008**VARIABLE \$LHCRT1 AND MDO \$LHCRT1 ARE MUTUALLY EXCLUSIVE****Reason:**

The CAS external interface procedure \$CACALL failed during request processing because it was invoked with a value set in variable \$LHCRT1 and a value set in MDO \$LHCRT1. Variable \$LHCRT1 and MDO \$LHCRT1 are *mutually exclusive*.

System Action:

The request is rejected and procedure \$CACALL terminates.

User Action:

Correct the execution of \$CACALL and retry.

CA0009**MDO \$LHCRT1 AND KEYWORD CRITERIA ARE MUTUALLY EXCLUSIVE****Reason:**

The CAS external interface procedure \$CACALL failed during request processing because it was invoked with a value set in MDO \$LHCRT1 and a value set in keyword CRITERIA. MDO \$LHCRT1 and keyword CRITERIA are *mutually exclusive*.

System Action:

The request is rejected and procedure \$CACALL terminates.

User Action:

Correct the execution of \$CACALL and retry.

CACS0100

P1 ID= P2 - P3

Reason:

Context Services External Interface Package trace is active. This message displays a Context Services trace record.

P1 is the NCL ID.

P2 is the trace ID.

P3 is the trace text.

System Action:

None.

User Action:

Contact Technical Support.

CACS0101

P1 request has terminated in error

Reason:

The Context Services External Interface package *P1* procedure has terminated in error.

This message is the first of a group of messages that traps the related error. It is followed by a set of *CACS0102* messages that describe the error.

System Action:

The request terminates.

User Action:

Contact Technical Support.

CACS0102**P1****Reason:**

The Context Services External Interface package procedure has terminated in error.

This message is part of a group of messages that describe the error condition. *P1* is the error text.

Message *CACS0101* was the first message of the group; it identifies the failed request.

System Action:

The request terminates.

User Action:

Contact Technical Support.

CACS0103**P1 request has failed on a RUN-TIME error (See log)****Reason:**

The Context Services External Interface package procedure *P1* has terminated due to a run-time error.

Error details are written to the activity log; see messages *CACS0102* .

System Action:

The request terminates.

User Action:

Contact Technical Support.

CACS0109

P1 request failed - Internal error

Reason:

The Context Services External Interface package *P1* procedure has failed due to an unknown error.

System Action:

The request is terminated.

User Action:

Contact Technical Support.

CACS0110

P1 request failed - P2

Reason:

The Context Services External Interface package *P1* procedure has failed.

P2 is the error text.

System Action:

The request is terminated.

User Action:

Contact Technical Support.

CACS0120

P1 parameter P2 is in error - P3 P4

Reason:

The Context Services External Interface package *P1* procedure was called with an incorrect parameter.

P2 is the parameter keyword, *P3* is the specified value, and *P4* is the error text.

System Action:

The request is terminated.

User Action:

Contact Technical Support.

CACS0121**P1 parameter P2 is missing****Reason:**

The Context Services External Interface package *P1* procedure was called with an incorrect parameter list.
The required *P2* parameter was not specified.

System Action:

The request is terminated.

User Action:

Contact Technical Support.

CACS0122**P1 was unable to start the Server Process \$CACS10B - APPC START failed with rc: P2 - P3****Reason:**

The Context Services External Interface package **P1** procedure was unable to start the Server Process Initiator \$CACS10B (front-runner).

P2 is the APPC START verb return code.

P3 is the associated error message.

System Action:

The request is terminated.

User Action:

Contact Technical Support.

CACS0123

**P1 request failed - No active server found for Context Services handle:
P2**

Reason:

The Context Services External Interface package P1 procedure could not locate the Context Server.

P2 was the specified Context Services handle.

System Action:

The request is terminated.

User Action:

Contact Technical Support.

CACS0200

P1 ID= P2 - P3

Reason:

Context Services Server facilities package trace is active. This message displays a Context Services trace record.

P1 is the NCL ID.

P2 is the trace ID.

P3 is the trace text.

System Action:

None.

User Action:

Contact Technical Support.

CACS0201**P1 request has terminated in error****Reason:**

The Context Services Server Facilities package *P1* procedure has terminated in error.

This message is the first of a group of messages that traps the related error. It is followed by a set of *CACS0202* messages that describe the error.

System Action:

The request terminates.

User Action:

Contact Technical Support.

CACS0202**P1****Reason:**

The Context Services Server facilities package procedure has terminated in error.

This message is part of a group of messages that describe the error condition. *P1* is the error text.

Message *CACS0201* was the first message of the group; it identifies the failed request.

System Action:

The request terminates.

User Action:

Contact Technical Support.

CACS0203

P1 request has failed on a RUN-TIME error (See log)

Reason:

The Context Services Server Facilities package procedure *P1* has terminated due to a run-time error.
Error details are written to the activity log; see messages *CACS0202* .

System Action:

The request terminates.

User Action:

Contact Technical Support.

CACS0209

P1 request failed - Internal error

Reason:

The Context Services Server Facilities package *P1* procedure has failed due to an unknown error.

System Action:

The request is terminated.

User Action:

Contact Technical Support.

CACS0210

P1 request failed - P2

Reason:

The Context Services Server Facilities package *P1* procedure has failed.
P2 is the error text.

System Action:

The request is terminated.

User Action:

Contact Technical Support.

CACS0220**P1 parameter P2 is in error - P3 P4****Reason:**

The Context Services Server Facilities package *P1* procedure was called with an incorrect parameter.

P2 is the parameter keyword, *P3* is the specified value, and *P4* is the error text.

System Action:

The request is terminated.

User Action:

Contact Technical Support.

CACS1000**P1 ID= P2 - P3****Reason:**

Context Services Server Initiator (front-runner) trace is active. This message displays a Context Services trace record.

P1 is the NCL ID.

P2 is the trace ID.

P3 is the trace text.

System Action:

None.

User Action:

Contact Technical Support.

CACS1001

Context Services Server Initiator has terminated - Server Name: P1 - Handle: P2

Reason:

The Context Services Server Initiator has terminated in error.
This message is the first of a group of messages that traps the related error.
P1 is the Context Services Server procedure name.
P2 is the Context Services Server handle.
This message is followed by a set of *CACS1002* messages that describe the error.

System Action:

The request terminates.

User Action:

Contact Technical Support.

CACS1002

P1

Reason:

The Context Services Server Initiator has terminated in error.
This message is part of group of messages that describe the error condition.
P1 is the error text.

System Action:

The request terminates.

User Action:

Contact Technical Support.

CACS1010

**Context Services Server Initiator failure - Server Name: P1, Handle: P2
- Reason: P3**

Reason:

The Context Services Server Initiator has failed.
P1 is the Context Services Server procedure name.
P2 is the Context Services Server handle.
P3 is the error text.

System Action:

The request terminates.

User Action:

Contact Technical Support.

CACS11001

Sort length for the P1 field is invalid-must be in the of Range 1 to 40

Reason:

The data type specified in *P1* requires a length to be specified. This length must be greater than 1 and less than 41.

System Action:

\$CACS11S terminates in error.

User Action:

Correct the initiating procedure calling \$CACS12I to specify a length field for all CHAR and REMSTR data types. The length must be in the range of 1 to 40.

CACS11002

The list processing environment has timed-out. Click the P1 tab to refresh the list

Reason:

If this list is inactive for more than two hours, the environment is cleared from the host. This ensures unused storage is cleared.

P1 specifies the name of the list displayed.

System Action:

The list processing environment is cleared.

User Action:

Click the tab that displays the name of the list (near the top of the page) to refresh the page, then click Execute to display the list.

If this does not correct the problem, review the Activity Log and look for any other error conditions that may have caused this problem. If the problem persists, contact Technical Support.

CACS11003

No data available.

Reason:

A request has been made to context services to retrieve data; however, there is no data available.

System Action:

None.

User Action:

Ensure the application using \$CACS11S has returned data.

CACS11004

The list processing environment has timed-out. Click Execute to refresh the list

Reason:

If this list is inactive for more than two hours, the environment is cleared from the host. This ensures unused storage is cleared.

System Action:

The list processing environment is cleared.

User Action:

Click the Execute button to refresh the page.

If this does not correct the problem, review the Activity Log and look for any other error conditions that may have caused this problem. If the problem persists, contact Technical Support.

CACS11005

Data amount too large to display

Reason:

The amount of data returned in response to your request is too large for this environment to display.

System Action:

None.

User Action:

Click the Preferences button and reduce the number of items per page, then click Execute.

If the problem persists, contact Technical Support.

CACS1101

Trace P1 Phase(P2) P3 on P4

Reason:

This message displays an CSVM trace record. It includes the following information:

P1 -Procedure Name

P2 -Processing Phase

P3 -Time

P4 -Date

System Action:

None.

User Action:

Review messages as requested by Technical Support to determine if any delays are occurring during CSVM processing.

CACS1102

Trace P1 Phase(P2) P3

Reason:

This message displays an CSVM trace record. It includes the following information:

P1 - Procedure Name

P2 - Processing Phase

P3 - Function

System Action:

None.

User Action:

Review messages as requested by Technical Support to determine if any delays are occurring in CSVM processing.

CACS12001**P1 is invalid****Reason:**

P1 is an invalid call type. Review procedure \$CACS12I for more information about the following valid call types:

STARTSERVER
REFRESH
GETDATA
GETSORT
STOPSERVER
MESSAGEGET
MESSAGECLEAR

System Action:

The request terminates.

User Action:

Correct the call type and rerun the procedure.

CACS12002**The P1 call did not include SPROC parameter****Reason:**

P1 requires a SPROC parameter that specifies the service procedure name for this context environment.

System Action:

The request terminates.

User Action:

Specify the SPROC procedure name and rerun the procedure.

CACS12003

MAXREC value P1 is invalid or out of range

Reason:

The MAXREC value specified in *P1* is out of range; it must be a number in the range of *500* to *10000* .

System Action:

The request terminates.

User Action:

Specify a valid MAXREC value.

CACS12004

P1 requires a valid handle specified on the HANDLE parameter

Reason:

The call type specified in *P1* does not have a handle specified.

System Action:

The request terminates.

User Action:

Specify a valid HANDLE value.

CACS12005

P1 is an invalid RECSTART value

Reason:

P1 is invalid; it must be a number greater than *1* .

System Action:

The request terminates.

User Action:

Specify a valid RECSTART value.

CACS12006**P1 is an invalid RECLIMIT value****Reason:**

P1 is invalid; it must be a number greater than 1 and less than 100 .

System Action:

The request terminates.

User Action:

Specify a valid RECLIMIT value.

CACS12007**P1 does not include all mapping parameters****Reason:**

P1 has been used with one of the following mapping paremeters specified:

MAPNAME

MAPSEG

MAPFIELD

System Action:

The request terminates.

User Action:

Specify a valid mapping parameter.

CACS12008**P1 is an invalid MAPDATA type****Reason:**

P1 must be either NUM or CHAR.

System Action:

The request terminates.

User Action:

Specify a valid MAPDATA parameter.

CACS12009

P1 is invalid for \$CACS12I or \$CACS11S

Reason:

The Trace parameter *P1* is invalid; it must be set to one of the following:
0 -Trace messages are logged, detailing time, date, and parameters passed to \$CACS12I and \$CACS11S.

1 -Trace messages are logged, detailing time, date, passed parameters, and subroutine name.

System Action:

The request terminates.

User Action:

Specify a valid Trace parameter when invoking either \$CACS12I or \$CACS11S.

CACS1201

Trace P1 Phase(P2) P3 on P4

Reason:

This message displays an CSVM trace record. It includes the following information:

P1 -Procedure Name

P2 -Processing Phase

P3 -Time

P4 -Date

System Action:

None.

User Action:

Review messages as requested by Technical Support to determine if any delays are occurring during CSVM processing.

CACS1202**Trace P1 Phase(P2) P3****Reason:**

This message displays an CSVM trace record. It includes the following information:

P1 - Procedure Name
P2 - Processing Phase
P3 - Function

System Action:

None.

User Action:

Review messages as requested by Technical Support to determine if any delays are occurring in CSVM processing.

CADB0011**VSAM error on file open: FileID *P1*, FileRC= *P2*****Reason:**

An error occurred attempting to read a PSM definition. In the message:

P1 is the file ID
P2 is the file return code (&FILERC)

System Action:

The procedure terminates.

User Action:

For return code values, see the &FILE GET verb description in the NCL Reference.

CADB0021

Open_DB Error: Action= P1 RC= P2 Fdbk= P3

Reason:

An error has occurred as part of a SYSDB migration action.

System Action:

This message is written to the activity log.

User Action:

This message and an additional diagnostic message (N4D0nn) are written to the activity log. It indicates a product failure, which you should report to your product supplier.

CADB0022

Open_Entity Error: Action= P1 RC= P2 FDBK= P3 Class= P4 Name= P5 DBID= P6

Reason:

An error has occurred as part of a SYSDB migration action.

System Action:

This message is written to the activity log.

User Action:

This message and an additional diagnostic message (N4D0nn) are written to the activity log. It indicates a product failure, which you should report to your product supplier.

CADB0023

**Get_Entity Error: Action= P1 RC= P2 FDBK= P3 Class= P4 Section= P5
ENID= P6**

Reason:

An error has occurred as part of a SYSDB migration action.

System Action:

This message is written to the activity log.

User Action:

This message and an additional diagnostic message (N4D0nn) are written to the activity log. It indicates a product failure, which you should report to your product supplier.

CADB0024

**Put_Entity Error: Action= P1 RC= P2 FDBK= P3 Class= P4 Section= P5
ENID= P6**

Reason:

An error has occurred as part of a SYSDB migration action.

System Action:

This message is written to the activity log.

User Action:

This message and an additional diagnostic message (N4D0nn) are written to the activity log. It indicates a product failure, which you should report to your product supplier.

CADB0025

Close_Entity Error: Action= P1 RC= P2 FDBK= P3 Class= P4 ENID= P5

Reason:

An error has occurred as part of a SYSDB migration action.

System Action:

This message is written to the activity log.

User Action:

This message and an additional diagnostic message (N4D0nn) are written to the activity log. It indicates a product failure, which you should report to your product supplier.

CADB0026

Close_DB Error: Action= P1 RC= P2 FDBK= P3 DBID= P4

Reason:

An error has occurred as part of a SYSDB migration action.

System Action:

This message is written to the activity log.

User Action:

This message indicates a product failure, which you should report to your product supplier.

CADB1101

No P1 definitions to display within selected criteria

Reason:

No CAS definitions exist for the type indicated (P1) after applying selection criteria.

System Action:

None.

User Action:

None.

CADB1201**No P1 definitions to display within selected criteria****Reason:**

No CAS definitions exist for the type indicated (*P1*) after applying selection criteria.

System Action:

None.

User Action:

None.

CADB1202**No P1 selected from list****Reason:**

No CAS entity was selected from the prompt list.

System Action:

The request is ignored.

User Action:

Enter a unique entity name or select an item from the list.

CAGLBL01

P1 P2 with value: P3

Reason:

This message is issued for operations performed between Global Variables in memory and their persistent copies.

P1 is the Global Variable name.

P2 is the operation performed:

- Loaded
- Saved

P3 is the value of the Global Variable.

System Action:

None.

User Action:

None.

CAGLBL02

P1 P2 Persistent Global Variables

Reason:

An operation is performed on persistent global variables.

P1 is the operation performed:

- Loaded
- Listed
- Purged
- Saved (issued only when more than one variable is saved in a single call)

P2 is the number of persistent global variables affected.

System Action:

The indicated operation was performed on a number of persistent global variables.

User Action:

None.

CAGLBL03***P1* Global: *P2* Saved: *P3*****Reason:**

This message displays the values of the Persistent Global Variable.

P1 is the name of the Persistent Global Variable

P2 is the current (in storage) value of the Global Variable.

P3 is the external (persistent) value of the Global Variable.

Note: The values may be different if the Global Variable value is changed after it is loaded from the external storage and not saved.

System Action:

None.

User Action:

None.

CAGLBL09

Error: *P1 P2 P3 P4 P5*

Reason:

This message is issued when an error occurs while processing Persistent Variables. It can be issued during object verification or the manipulation phase.

P1 describes the object that is the subject of verification or operation failure. It can be one of the following:

- Variable name or value.
- Operation performed on the variable, for example, like, load.

P2 describes the error. The following may be reported:

- Syntax or value errors, variable name too long (over 8 characters), value too long (over 256 bytes), name does not conform to the global variable name rules, and so on.
- Missing or mismatched specifications, for example, when the number of variables listed in Name is different to the list in Vars.
- Failed input or output operations. The message contains the additional, optional, information provided by the underlying interfaces.
- Exceeds the limit of Persistent Variables that can be defined, which is set to 999.
- Internal error, which indicates run time problems with the code.

The following additional information is provided for failed input and output operations:

P3 is the Return Code (RC).

P4 is the Feedback (FDBK), when provided.

P5 is the additional message, when provided.

System Action:

None.

User Action:

Perform corrective action depending on the type of error and the additional information provided.

Contact your local Technical Support if the error is internal.

CAGLBL10**Name Len Text****Reason:**

This is a copy of message N15110.

System Action:

None.

User Action:

None.

CAGLBL11

variablename variablename variablename variablename

Reason:

This is a copy of message N15111; however, persistent global variables are marked with # at the beginning.

System Action:

None.

User Action:

None.

CAGLBL12

variablename leng text....

Reason:

This is a copy of message N15112 with the following applied:

- Names of persistent global variables are marked with # at the beginning.
- The text displays as many characters as fit the screen width; truncation is indicated by ... at the end of the line.
- The text value appears in blue if the first 230 characters are different to the corresponding persistent value.

System Action:

None.

User Action:

None.

CAGLBL13

****END* -- P1 GBLs, P2 PGVs, Maximum chain P3***

Reason:

This is a copy of message N15113; however, *P2* specifies the number of persistent global variables in the selection.

System Action:

None.

User Action:

None.

CAGLBL14

variablename leng text....

Reason:

This is an exact copy of message N15112; however, the text that appears is the value of the persistent global variable.

The text displays as many characters as fit the screen width; truncation is indicated by ... at the end of the line.

System Action:

None.

User Action:

None.

CAGLBL19

P1 list of global variables follows (# indicates persistent):

Reason:

This is the heading line issued in response to a SHOWGLBL (full) or SHOWGLBL *Name=varname* (selective) command (equated). Subsequent information lines follow.

Persistent global variables are indicated by # preceding their name.

Note: The SHOWGLBL command is defined by the EQUATE command. Another name can be selected by your installation.

System Action:

None.

User Action:

None.

CAGLBL20

The proper use of SHOWGLBL is:

Reason:

This is the first message issued when improper usage of the SHOWGLBL command is detected. It is followed by more messages giving usage details.

System Action:

None.

User Action:

Change the call syntax, using the guidelines provided in the messages that follow.

CAGLBL21

SHOWGLBL - Display all variables names

Reason:

This is one of the messages issued when improper usage of the SHOWGLBL command is detected.

SHOWGLBL without operands lists the names of all global variables used by the region. Names of global variables having persistence are prefixed with #. Four variables are listed per line.

System Action:

None.

User Action:

Change the call syntax to follow the guidelines provided by the messages.

CAGLBL22**SHOWGLBL Name= - Display names and values of selected variables****Reason:**

This is one of the messages issued when improper usage of the SHOWGLBL command is detected.

SHOWGLBL NAME= lists the global variables with names starting with the given prefix and their values. Variables are listed one per line. If the variable has persistence, the persistent value is displayed in a separate line. If the persistent value is different from the current value, it is displayed in a different color.

System Action:

None.

User Action:

Change the call syntax to follow the guidelines provided by the messages.

CAGLBL23**SHOWGLBL Name=* - Display names and values of all variables****Reason:**

This is one of the messages issued when improper usage of the SHOWGLBL command is detected.

SHOWGLBL Name=* lists all global variables with their values. Variables are listed one per line. If the variable has persistence, the persistent value is displayed in a separate line. If the persistent value is different from the current value, it is displayed in a different color.

System Action:

None.

User Action:

Change the call syntax to follow the guidelines provided by the messages.

CAPD0001

No service procedure provided for the panel driver

Reason:

No service procedure is specified in the parameter for the panel driver.

System Action:

The request is rejected.

User Action:

Contact your systems administrator.

CAPKG009**DNR SET ERROR ENCOUNTERED. SEE LOG****Reason:**

An error occurred issuing the DNR SET command. The command and its responses are logged following this message.

System Action:

None.

User Action:

Refer to the following messages and determine the cause of the error.

CAPKG010**Action failed, the map P1 does not exist****Reason:**

An MDO assignment failed with Return Code 16 and Feedback Code 0. This indicates that the map *P1* does not exist in this system.

System Action:

The action terminates.

User Action:

Ensure that the OSCNTL file has been correctly updated during the installation and/or maintenance of this product.

CAPKG011

MDO action failed with RC= P1 FDBK= P2 for P3

Reason:

An MDO assignment failed. The Return Code was *P1* and the Feedback Code was *P2*. The map and component for which the error occurred was *P3*.

System Action:

The action terminates.

User Action:

See the NCL Reference for details of the codes.

CAPKG012

Function not supported for this operating system

Reason:

Some system functions are not supported for all operating systems. This includes writing output members to a PDS - not supported for VM.

System Action:

The action is not performed.

User Action:

None. This function is not supported for this operating system.

CAPKG013

P1 already exists

Reason:

The target member specified already exists and the Replace Member? option was set to NO.

System Action:

The member is not written.

User Action:

Specify a unique member name or change the Replace Member? field to YES.

CAPKG014**Output file is not a partitioned dataset****Reason:**

The target file must specify a partitioned dataset.

System Action:

Field is set in error.

User Action:

Specify a partitioned dataset name.

CAPKG015**Timer ID****Reason:**

This is the first line of a multi-line heading for the simple timer function.

System Action:

None.

User Action:

See the detailed line messages for an explanation of the timer details.

CAPKG016**Type Interval Trigger Limit Count Next Hit Time****Reason:**

This is the second line of a multi-line heading for the simple timer function.

System Action:

None.

User Action:

See the detailed line messages for an explanation of the timer details.

CAPKG017

P1

Reason:

This is the first detail line for a simple timer. *P1* is the name of the Timer ID that is being displayed. Subsequent lines describe the timer in detail.

System Action:

None.

User Action:

None.

CAPKG018

P1 P2 P3 P4 P5

Reason:

This is the second detail line for a simple timer.

P1 indicates the type of the timer, it can be:

AT - The timer is scheduled to run at a specific time of the day on the date(s) that match the timer specification.

EVERY - The timer is scheduled to run after a specific time interval has passed.

P2 is the interval trigger. For an AT timer this is the time of day at which the timer will run on the dates that match the date pattern. For an EVERY timer this is the time interval between successive runs of the timer.

P3 is the limit of the timer, that is, the maximum number of executions that the timer is allowed to run.

P4 is hit count or the number of times that the timer has actually run.

P5 is the next time the timer is due to run.

System Action:

None.

User Action:

None.

CAPKG019**P1****Reason:**

This is the third detail line for a simple timer.

P1 shows the command that runs when the timer is triggered. Only the first 100 bytes of the command are shown.

System Action:

None.

User Action:

None.

CAPKG020**Timer set failed for timer P1 at time P2, MSG= P3****Reason:**

The timer *P1* failed because the system could not schedule the timer at *P2*. The error message received is *P3*.

System Action:

The timer is deleted and processing continues with the next timer.

User Action:

Contact your local support representative and supply the timer details and when the timer failure occurred.

CAPKG021**P1****Reason:**

This is a debugging message issued by the simple timer function.

System Action:

None.

User Action:

Collect these messages and send them to the support representative that requested them.

CAPKG022

No timers match the specified pattern or there are no defined timers.

Reason:

The request to display timers could not be satisfied because no timers matched the specified pattern, or if no pattern was specified, then no timers are currently defined.

System Action:

None.

User Action:

None.

CAPKG023

**Timer dump: ID= P1 AT?= P2 HC= P3 HT= P4 LM= P5 NH= P6 OD= P7
SPEC= P8 T R= P9 HI= P10**

Reason:

This is a timer dump display for timer **P1**. This message is only issued when errors are encountered during timer setting. This message is used by support for debugging purposes.

System Action:

None.

User Action:

Contact your local support representative and supply this timer message and when the timer failure occurred.

CAPKG024

Timer P1 not defined.

Reason:

The request to delete timer *P1* failed because the timer does not exist.

System Action:

None.

User Action:

None.

CAPKG025**P1 timers deleted.****Reason:**

The request to delete a timer(s) was successful and *P1* timers were deleted.

System Action:

None.

User Action:

None.

CAPKG026**P1 is not a valid SYSDB dataset****Reason:**

The SYSDB ID specified (*P1*) is not allocated or is not a SYSDB data set because one of the following reasons apply:

- The file is not allocated and open.
- The SYSDB ID is not a KSDS.
- The keylength is incorrect. The keylength for a SYSDB is 120.

System Action:

The request is rejected.

User Action:

Specify a valid SYSDB data set ID.

CAPKG027**P1 is not open with read-write access****Reason:**

The SYSDB ID specified (*P1*) is open with read-only access. Read-write access is required.

System Action:

The request is rejected.

User Action:

Specify a valid SYSDB data set ID.

CAPKG028

P1 is not open with correct share option

Reason:

The SYSDB ID specified (*P1*) is open but does not have the correct share option. A share option of LSR or RLS was requested, but the file was not opened with either option.

System Action:

The request is rejected.

User Action:

Specify a valid SYSDB data set ID.

CAPKG029

P1 is not a valid SYSDB dataset

Reason:

The SYSDB data set name specified (*P1*) does not exist or is not a SYSDB data set.

System Action:

The request is rejected.

User Action:

Specify a valid SYSDB data set name and retry.

CAPKG030

P1

Reason:

This is a diagnostic message; it contains variable information to use for support issues.

System Action:

None.

User Action:

Collect all of these messages and send them to the support representative that requested the diagnostic process.

CAPLOG01

No data to display.

Reason:

There is no log data available to display.

System Action:

None.

User Action:

None.

CAPLOG02

Log cleared.

Reason:

The CLEAR command was actioned and the log is clear.

System Action:

None.

User Action:

None.

CAVS001

Identical Values

Reason:

Refresh operation requested but both active and saved values are identical.

System Action:

None.

User Action:

None.

CAVS002

Value was not changed

Reason:

Update operation resulted in value not changed.

System Action:

None.

User Action:

None.

CAVS003

P1 Cancelled

Reason:

Operation *P1* cancelled.

System Action:

None.

User Action:

None.

CAVS004

Variable is being updated by P1

Reason:

Variable selected for update is being updated by *P1*.

System Action:

None.

User Action:

Coordinate your update with the user listed by the message.

CAVS009**Persistent Variables API failed, *P1*****Reason:**

Procedure providing persistent variables services failed with RC=8. *P1* is the accompanying message.

System Action:

None.

User Action:

Investigate possible I/O problems, and check the activity log for more details. If Internal Error reported, contact local Technical Support with log details.

CAWV0001

Invalid shortcut/command (for help:put cursor on this line, press F1)

Reason:

An unrecognized shortcut or command was entered.

System Action:

None.

User Action:

Enter a valid shortcut, menu option, panel path, or command.

SHORTCUTS

Enter a shortcut name, preceded by a slash, at the ==> prompt (for example, /levels or /parms or /ipmon). This will take you directly to the function.

To see a list of all shortcuts and their associated functions, enter a single slash (/) at the ==> prompt. Select the desired shortcut from the list by entering 'S' beside it.

If a shortcut exists for a menu option, it is displayed in turquoise, to the right of the option description.

Shortcuts may also be combined with menu options (for example, /bcast.s or =/bcast.s).

Shortcuts can be invoked in two ways:

1. A 'nested' shortcut
2. A shortcut skip

To retain and nest the current screen level, use a nested shortcut:

/shortcut_name

Exit will bring you back to the last nested screen in this window. Screens may be nested to a maximum of 64 levels.

To close all currently nested screen levels, use a shortcut skip:

=/shortcut_name

Exit will take you back to the Primary Menu. If you no longer need any nested screens, a shortcut skip saves storage and resources.

(If you are currently at the Primary Menu, a nested shortcut and a shortcut skip behave the same.)

MENU OPTION

Each menu option is identified by a 1 to 3 character option string, displayed in yellow. Enter the option you want at the ==> prompt.

PANEL PATH

Like shortcuts, panel paths move directly to a function without having to access each submenu between it and the current menu. A panel path consists of multiple menu options separated by periods (for example =U.M).

Also, like shortcuts, the = sign functions as a skip character, closing all nested screens and effectively entering the path from the primary menu. (If you are currently at the Primary Menu, the skip character is not required.)

Frequently used panel paths have associated shortcuts. If you don't remember a shortcut, enter / at the ==> prompt for a list.

Select one from the list, or enter it at the ==> prompt.

There is no difference between accessing a function using a panel path skip or a shortcut skip, although the shortcut should be easier to remember. Both methods close the current screen and go straight to the function.

Entering == at the ==> prompt from any panel closes all nested screens and returns you to the Primary Menu.

CAWV0002

Invalid scroll amount. Must be CSR, DATA, HALF, PAGE, MAX or 1 to 9999

Reason:

An invalid scroll amount was specified. Valid scroll amounts are CSR, DATA, HALF, MAX, PAGE or a number between 1 and 9999.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Enter a valid value in the scroll field.

CAWV0003

Press ENTER to confirm selection or press CANCEL

Reason:

This is a prompt message which is displayed to allow the user to verify that the selected actions are correct before they are carried out.

System Action:

None.

User Action:

Press the ENTER key to execute the highlighted selections, or press the CANCEL function key to cancel the requested actions.

CAWV0004

***p1* is not a valid action on this line. Select from the following list**

Reason:

Action *P1* was entered but could not be processed because of one of the following reasons:

- The action does not exist. It may have been mistyped.
- The action is recognized, but it does not work on this line.

The action may be valid on other lines. This display may contain lines at different levels of hierarchy, such as headings, subheadings, and data. Lines may also present data from very different functions. Because of this, actions that work on one line may not make sense on another.

The *HLP* (Help) action is available on every line. Alternatively, use F1=Help with the cursor on the required line.

Pressing *Enter* , with the cursor anywhere on a line, invokes the default action for that line. This is particularly useful with expandable and collapsible lines.

System Action:

The valid list of supported actions is presented. You should choose an action from this list.

User Action:

Check that you have not mistyped the action or entered it on an incorrect line.

Select an action from the list of valid actions presented.

Use the online help for more information about available actions.

CAWV0005

Timeout processing request! No response received from requested action

Reason:

A user request failed and the process did not return to the caller. The viewer waited up to 5 seconds but no response was received.

System Action:

Action is terminated and processing continues.

User Action:

Check the log for any error messages and retry the request.

CAWV0006**Invalid FIND command. Syntax is Find 'string' {NEXT|PREV|FIRST|LAST}****Reason:**

A user requested the FIND command but specified invalid parameters. The valid syntax for the find command is:

FIND string {NEXT|PREV|FIRST|LAST} ----

The string can be specified as a single string with no imbedded blanks or a quoted string with imbedded blanks or other special characters. The default find option is NEXT. The valid abbreviations for FIND are: F, FI and FIN.

System Action:

Command is rejected.

User Action:

Correct the syntax and re-issue the command.

CAWV0007**No previous locate command has been entered. Specify key to locate****Reason:**

A user requested the Locate command but specified invalid parameters. The valid syntax for the locate command is:

LOCATE key [NEXT|PREV|FIRST|LAST]

The key can be specified as a single string with no imbedded blanks or a quoted string with imbedded blanks or other special characters. The default locate option is NEXT. The valid abbreviations for LOCATE are L, LO, LOC, LOCA and LOCAT.

Once a locate command has been specified, then specifying locate without parameters will do the same locate from the next key position.

System Action:

Command is rejected.

User Action:

Specify a complete locate command.

CAWV0008

**Invalid LOCATE command. Syntax is LOCATE key
□NEXT|PREV|FIRST|LASTÙ**

Reason:

A user requested the Locate command but specified invalid parameters. The valid syntax for the locate command is:

LOCATE key □NEXT|PREV|FIRST|LASTÙ ----

The key can be specified as a single string with no imbedded blanks or a quoted string with imbedded blanks or other special characters. If you do NOT want the key to be automatically uppercased then specify it as:

c'key'

The default locate option is NEXT. The valid abbreviation for LOCATE is L.

System Action:

Command is rejected.

User Action:

Correct the syntax and re-issue the command.

CAWV0009

Key ' P1' located

Reason:

A user request to locate the key *P1* in the display completed successfully.

System Action:

The display is positioned with the located record as the first line on the display.

User Action:

None.

CAWV0010**Bottom of key ranges reached****Reason:**

The repeat locate command was entered and the locate position is already at the last set of key ranges in the display.

System Action:

None.

User Action:

You can repeat locate to have the locate begin at the first key range.

CAWV0011**Top of key ranges reached****Reason:**

The repeat locate command was entered and the locate position is already at the top set of key ranges in the display.

System Action:

None.

User Action:

You can repeat locate to have the locate begin at the last key range.

CAWV0012

No previous find command has been entered. Specify string to find

Reason:

A user requested the FIND command but specified invalid parameters. The valid syntax for the command is:

FIND string [NEXT|PREV|FIRST|LAST]

The string can be specified as a single string with no imbedded blanks or a quoted string with imbedded blanks or other special characters. The default find option is NEXT. The valid abbreviations for FIND are: F, FI and FIN.

Once a find command has been specified, then specifying find without parameters will do the same find from the next cursor position.

System Action:

Command is rejected.

User Action:

Specify a complete find command.

CAWV0013

Invalid FIND command. Syntax is FIND string

□NEXT|PREV|FIRST|LASTÙ

Reason:

A user requested the Locate command but specified invalid parameters. The valid syntax for the locate command is:

FIND string □NEXT|PREV|FIRST|LASTÙ ----

The string can be specified as a single word with no imbedded blanks or a quoted string with imbedded blanks or other special characters. If you do NOT want the string to be automatically uppercased then specify it as:

c'string'

The default find option is NEXT. The valid abbreviation for FIND is F.

System Action:

Command is rejected.

User Action:

Correct the syntax and re-issue the command.

CAWV0014**Characters ' P1' found****Reason:**

A user request to find the string *P1* in the display completed successfully.

System Action:

The display is positioned with the found string visible on the display and the cursor on the first character of the string.

User Action:

None.

CAWV0015**Invalid widget share prefix " P1" specified!****Reason:**

An invalid widget share prefix was defined for a widget. Valid shares must be at least 3 characters long and cannot start with @ or #. *P1* is the share specified.

System Action:

Widget viewer terminates.

User Action:

Contact Technical Support.

CAWV0016**No default option defined for this line****Reason:**

The default selection option '/' is not valid on this line because the line has no default option.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the selection option and retry.

CAWV0017

The zoom option is not relevant on this line

Reason:

The zoom selection option is not valid on this line because the line does not define a zoomable presentation component.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the selection option and retry.

CAWV0018

The expand/collapse option is not relevant on this line

Reason:

The expand/collapse selection option is not valid on this line because the line does not define an expandable/collapsible presentation component.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the selection option and retry.

CAWV0019

Remote system *P1* is not active. Cannot display presentation component

Reason:

A presentation component could not be displayed because it is a remote component and the system on which it is located is not active or the link to that system is not active. The remote system is *P1*.

System Action:

None.

User Action:

Ensure that the remote system and the links to that system are active.

CAWV0020**Bottom of data reached****Reason:**

The bottom of data was reached when trying to find a string specified with the Find command.

System Action:

None.

User Action:

To continue the search press the Find function key. The search will continue from the top.

CAWV0021**Top of data reached****Reason:**

The top of data was reached when trying to find a string specified with the Find command.

System Action:

None.

User Action:

To continue the search press the Find function key. The search will continue from the bottom.

CAWV0022

***p1* lines searched**

Reason:

A request to find characters stopped because the search limit was reached. *P1* is the number of lines searched since the search was initiated.

System Action:

Searching stops.

User Action:

Repeat the find command without any parameters or press the Find function key to continue the search. The search continues from where it finished last.

You can use the FPROPT command to change the number of lines searched before this message is re-issued. The FPROPT command has the following syntax:

```
FPROPT [ 0 | NO | OFF | DFLT | DEFAULT | number ]
```

You can turn off the find prompt message by using the 0 or NO or OFF parameters with the command. Specifying DFLT or DEFAULT resets the current setting to the system default. Specify a number to set the maximum number of records to search before the prompt message is issued. If no parameters are passed, a message is issued indicating the current setting.

CAWV0023

p1* records searched and didn't find text: *p2

Reason:

The text *P2* was not found. The total number of records searched was *P1*.

System Action:

The find command terminates.

User Action:

None.

CAWV0024**APPC error for p1: p2****Reason:**

An APPC error occurred attempting to remotely execute a procedure on system *P1*. The error may be link-related or the target procedure failed during execution. *P2* provides more information about the error; however, you should check the log for all related error messages that fully describe the error.

System Action:

Processing terminates.

User Action:

Check the log for more details about the cause of the problem. The following are the most common problems:

- The link specified in *P1* is not defined or does not support APPC.
- The target procedure does not exist on the remote system. This may be due to incompatible versions or the function attempted is not available on the remote system
- The target procedure terminated in error on the remote system.

The log messages assist in determining what the actual cause is and what further action may be required.

CAWV0025**Find prompt is set to p1****Reason:**

The maximum number of lines searched for a find command before a prompt is issued is set to *P1*.

System Action:

None.

User Action:

None.

CAWV0026

Find prompt turned off

Reason:

The maximum number of lines searched for a find command before a prompt is issued has been turned off. Prompting will not occur for the find command.

System Action:

None.

User Action:

None.

CAWV0027

Find prompt value invalid, must be a number between 100 and 9999999999

Reason:

The parameter to the FFPROMPT command is invalid. It must be a number between 100 and 9999999999.

System Action:

Command rejected.

User Action:

Correct the parameter and retry the command.

CAWV0028

The maximum number that can be selected has been exceeded, maximum=*p1*

Reason:

The maximum number of entries that could be selected on this list was exceeded. The maximum is *P1*.

System Action:

The list is redisplayed with fields set in error.

User Action:

Reduce the number of selected entries to be less than or equal to the maximum, and retry.

CAWV0029**Request canceled****Reason:**

The user pressed the CANCEL key or entered the CANCEL command, and the function was canceled.

System Action:

The function is terminated.

User Action:

None.

CAWV0030**Expanded section empty****Reason:**

You tried to expand an expandable/collapsible presentation component. However, there were no lines to display.

System Action:

None.

User Action:

None.

CAWV0031**Widglets exceeded system maximum of *p1*. ID= *p2.p3.p4*****Reason:**

The number of widglets contained within a widget has exceeded the system maximum of *P1*. The ID identifies the current widget being processed and consists of package *P2*, class *P3* and name *P4*.

System Action:

Processing is terminated.

User Action:

Please contact your local support representative.

CAWV0050

Invalid action. Use S,Q,/ or cursor to select item

Reason:

An invalid action was used to select an item from a list of valid values.

System Action:

Field is set in error.

User Action:

Use the S, Q or / action to select the required value from the list.

Alternatively you can place the cursor beside the required value on the list and press the enter key; this automatically selects the item from the list.

CM0002

Commands are already being loaded by P1, try later

Reason:

A request to load the Command Handler Commands failed because another user was already loading the commands. The other user was *P1* .

System Action:

The request is rejected.

User Action:

Retry the request later.

CM0003**Error encountered while clearing out old commands, ZFDBK= P1****Reason:**

The Command Handler failed to load the commands because the vartable that contains the command tables was in error. The feedback code from the GET operation was *P1*.

System Action:

Procedure \$CACM000 terminates.

User Action:

This condition can occur if the NCL/CAS environment has not been initialized successfully. Ensure that NCL/CAS initialized successfully; if so, contact your system administrator. Ensure that the installation was performed as stated in the installation instructions because the cause of the error may be due to incorrect installation.

CM0005**Commands and menu shortcuts successfully loaded****Reason:**

The commands and menu shortcuts were successfully loaded in the region, and are now available for use.

System Action:

None.

User Action:

None.

CM0007

Duplicate shortcut P1 for menu P2 not added

Reason:

The *P2* menu shortcut, *P1* , was not loaded because a shortcut of the same name already existed.

System Action:

The loading of shortcuts continues.

User Action:

Rename this or the other duplicated shortcut.

CM0008**" P1" is an invalid P2****Reason:**

The value identified by *P1* is not a valid *COMMAND* or *SHORTCUT* .

System Action:

None.

User Action:

Correct the shortcut or command and retry.

COMMANDS

To see a list of all valid CAS Commands enter the shortcut */CAS.L* at the *==>* prompt.

SHORTCUTS

Enter a shortcut name, preceded by a slash, at the *==>* prompt (for example, */LEVELS* or */INFO*). This will take you directly to the function. To see a list of all shortcuts and their associated functions, enter a single slash (*/*) at the *==>* prompt. Select the desired shortcut from the list by entering 'S' beside it.

If a shortcut exists for a menu option, it is displayed in turquoise, on the same line as the option description.

Shortcuts may also be combined with menu options (for example, */CAS.CM*)

Shortcuts can be invoked in two ways:

1. A 'nested' shortcut
2. A shortcut skip

To retain and nest the current screen level, use a nested shortcut:

/shortcut_name

Exit will bring you back to the last nested screen in this window. Screens may be nested to a maximum of 64 levels.

To close all currently nested screen levels, use a shortcut skip:

=/shortcut_name

Exit will take you back to the Primary Menu. If you no longer need any nested screens, a shortcut skips saves storage and resources.

If you are currently at the Primary Menu, a nested shortcut and a shortcut skip behave the same.

Entering *==* at the *==>* prompt from any panel closes all nested screens and returns you to the Primary Menu.

CR0005

Criteria P1. P2. P3. P4 not defined

Reason:

A request to get a criteria failed because the criteria definition is not defined. The criteria to access belongs to application ID *P1* , its type is *P2* , its owner's user ID if private is *P3* , and its name is *P4* .

System Action:

The request is rejected.

User Action:

Specify a criteria definition previously defined and retry.

CR0009

Request rejected, not in full-screen mode

Reason:

A request to recall a criteria was rejected because the Criteria panel was to be displayed and the request was not invoked from a full-screen environment.

System Action:

The request is rejected.

User Action:

Invoke the request from a full-screen environment.

CR2003

Criteria P1. P2. P3. P4 not defined

Reason:

A request to recall a criteria failed because the criteria definition is not defined. The criteria to recall belonged to application ID *P1* , with type *P2* , and owner's user ID (if private) *P3* , and name *P4* .

System Action:

The request is rejected.

User Action:

Specify a criteria definition previously defined and retry.

CR2005**Criteria exit procedure not found, proc= P1****Reason:**

A request to recall a criteria failed because the criteria exit procedure for the criteria was not found in the procedure library. The name of the procedure was *P1* .

System Action:

The request is rejected.

User Action:

Correct the criteria exit procedure name in the criteria definition, or create the procedure and retry.

CR2006**Invalid return code received from exit, proc= P1 RC= P2****Reason:**

A request to recall a criteria failed because the criteria exit procedure returned an invalid return code. The name of the procedure was *P1* and the invalid return code was *P2* .

System Action:

The request is rejected.

User Action:

Correct the setting of the return code by the criteria exit procedure and retry.

CR2007**RC 4 from exit invalid when &\$CROPT set to P1, proc= P2****Reason:**

A request to recall a criteria failed because the criteria exit procedure returned a return code that was not valid for the option set in variable &\$CROPT. The value of variable &\$CROPT was *P1* and the name of the procedure was *P2* .

System Action:

The request is rejected.

User Action:

Correct the setting of the return code by the criteria exit procedure and retry.

CR2008

RC 4 from exit invalid when &\$CRCOMMAND set to P1, proc= P2

Reason:

A request to recall a criteria failed because the criteria exit returned a return code that was not valid for the command set in variable &\$CRCOMMAND. The value of variable &\$CRCOMMAND was *P1* and the name of the procedure was *P2* .

System Action:

The request is rejected.

User Action:

Correct the setting of the return code by the criteria exit procedure and retry.

CR2009

RC P1 from exit and &SYSMSG null, proc= P2

Reason:

During a request to recall a criteria, the criteria exit set return code *P1* and did not set variable &SYSMSG to an error message. The name of the procedure was *P2* .

System Action:

None.

User Action:

Correct the criteria exit procedure to set &SYSMSG to an error message and retry.

CR2010

Command assigned to function key P1 is invalid

Reason:

Function key *P1* was pressed and the command assigned to it is invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

CR2011

Criteria P1. P2. P3. P4 not processed; requires full-screen mode.

Reason:

A request to recall a criteria was rejected because a run time panel was to be displayed and the request was not invoked from a full-screen environment. The criteria belonged to appl ID *P1* , type was *P2* , owner's user ID (if private) was *P3* , and name was *P4* .

System Action:

The request is rejected.

User Action:

Invoke the request from a full-screen environment.

CS0001

User ID P1 is not authorized for NCS feature

Reason:

The user ID *P1* is not authorized to use the Network Control System.

System Action:

The request is rejected.

User Action:

Contact your System Administrator if the function is required.

CS2002

Ping not valid for virtual nodes

Reason:

You entered the P (APING) action against a line entry for a virtual node.

System Action:

The action field in error is highlighted.

User Action:

Blank the action field in error. Enter the P action against real hosts, for example, type BN, NN, or EN.

CS0003

Find string not specified

Reason:

A character string was not specified on the find command.

System Action:

The command is rejected.

User Action:

Enter the character string to be found with the find command and retry.

CS0004

Characters ' P1' not found

Reason:

The specified character string was not found in the data.

System Action:

None.

User Action:

None.

CS0005

End of data reached

Reason:

The end of the data was reached before finding the specified character string.

System Action:

None.

User Action:

Press the Find key to continue the search from the top/bottom of the data.

CS0006**NETINFO file unavailable, RC= P1****Reason:**

An attempt to access the NETINFO failed because it was unavailable. The return code (*P1*) indicates the cause.

System Action:

None.

User Action:

Determine if the file should be available and if so, why it isn't. The meaning of the return code can be found in NCL Reference.

CS0007**Invalid action P1****Reason:**

The select action specified was invalid. Possible reasons are:

* The action is not defined * The action is not applicable to the selected line for the reason shown (*P1*)

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the selection action and retry. Valid actions are listed in the function help which can be obtained by pressing the F1 key.

CS0008**Configuration procedure \$NCCNFG not found****Reason:**

Configuration details were requested from an NCS display but the NCS Configuration Details Service procedure (\$NCCNFG) cannot be located.

System Action:

No configuration details are available.

User Action:

Refer to your systems administrator as the service procedure, \$NCCNFG, may be in a library that is not included in your COMMANDS concatenation.

CS0009

Characters ' P1' found

Reason:

The text string specified in the FIND command was found. The cursor is positioned at the beginning of the text string.

System Action:

None.

User Action:

None.

CS0010

Invalid command

Reason:

The command specified was invalid.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the command and retry. Valid commands are listed in the function help which can be obtained by pressing the F1 key.

CS0011

Resource P1 is not known to VTAM

Reason:

The resource name specified *P1* is unknown to VTAM.

System Action:

None.

User Action:

Specify a correct resource name and retry.

CS0012**Invalid value for P1****Reason:**

The value supplied for the field (*P1*) has an incorrect syntax or value Possible causes are:

* For the *Node Name* or *Node/CP Name* field

- The field contains embedded blanks
- The field is not a valid node (resource) name. Node names may be either:

1) A 1-8 character non-qualified name (for example, TERM01)

2) A network-qualified name in the form *netid.node* where the *netid* and *node* parts are each 1-8 character values separated by a full stop (period) without spaces (for example, NET01.TERM01). The *netid* value can also be expressed as an asterisk (*).

Note: Network-qualified names are not supported for the *List SNA Resources (/SNADIAG.L)* option. You must use a non-qualified name. A trailing asterisk is permitted and is assumed if omitted, and the name is less than 8 characters.

* For the *Resource Type* field

- Valid values are XCF, TCP, or MPC

* For the *Link Name* field

- The field contains embedded blanks

System Action:

None

User Action:

Review the full-screen help for the panel, correct the value, and retry.

CS0201

Invalid value for shared variable, Keyword= P1 Value= P2

Reason:

The NCS list handler service procedure \$NCGP02L failed because it received an invalid value for a shared variable. The variable name was *P1* and its value was *P2* .

System Action:

Procedure \$NCGP02L terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

CS0202

Unexpected message ID= P1 - full message on log

Reason:

The NCS list handler service procedure \$NCGP02L failed because an unexpected message was returned from a SHOW LINKS command. The message ID was *P1* and it has been written to the log.

System Action:

Procedure \$NCGP02L terminates.

User Action:

Contact the system administrator. Browse the activity log for the message ID and review the description of that message. If necessary contact your product supplier.

CS0203**Link P1 not selected, cannot deselect****Reason:**

The "D" selection line command was entered against the entry for the linkname *P1* but this had not been previously selected.

System Action:

The command is ignored.

User Action:

Only entries marked as ** SELECTED ** may be deselected.

CS0205**Warning: No systems selected, defaults to local system****Reason:**

You have exited from the INMC Links Selection List without selecting any systems. The local system is automatically selected by default.

System Action:

None, warning message only.

User Action:

If you intend using any of the summary displays and do not want the local system to be the only system included in the displays you should respecify your choice(s) from the list. The local system may be excluded (deselected) in which case at least one other system must be selected.

CS0206**Invalid selection - link is not active****Reason:**

You have selected an INMC link which is not active.

System Action:

The selection is ignored.

User Action:

Correct the error and retry. If necessary determine why the link is not active.

CS0301

Directory display not supported for node type *P1*

Reason:

The VTAM D DIRECTORY command is supported on Network Nodes only. The following message was received:

IST1258I D DIRECTORY IS NOT VALID FOR *p1*

System Action:

None.

User Action:

Choose a link for a system that is configured as a Network Node.

CS0401

Enter resource name

Reason:

The resource (node) name was not specified.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Specify a resource (node) name and retry.

CS0402**Name P1 is too long****Reason:**

The node name specified was more than 8 characters. This error should not occur if the node name was entered on the NCS Node display panel. However it may occur if the Graphic Node display procedure is called from another source specifying an invalid name, for example use of the DG command from OCS or Command Entry.

System Action:

The cursor is placed in the field in error, the field is highlighted, and the name truncated to 8 characters.

User Action:

Specify a correct node name and retry.

CS0403**Resource has no associated status****Reason:**

The description for a resource status code was selected but the resource selected has no associated status.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

None.

CS0404

CDRM P1 is unavailable

Reason:

The X selection option has been used to display a cross-domain resource in the home domain. The home domain is unavailable because either:

1. The selection has been made against a node which forms part of the hierarchical display which is invalid. The option is only available for nodes in the scrollable subordinate nodes list on the left hand side of the display
2. The INMC link to the NetMaster for SNA system that resides on the home domain has not been selected.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

If the selection was made against an entry in the node hierarchy clear the selection and make another selection.

If the selection was made against an entry in the list of subnodes the INMC link must be selected. To do this you must exit the display and go to the NCS Primary Menu, select the INMC Link Selection option and select the appropriate INMC link(s).

CS0501

No status description found for P1

Reason:

The description for a resource status code was selected but there is no description on the NETINFO database.

System Action:

None.

User Action:

None.

CS0502**NETINFO file error. VSAMFDBK= P1, KEY= P2****Reason:**

The NCS NETINFO Database Access procedure (\$NCINFO) was called to read a record but a VSAM file error occurred (FILERC=8). The VSAM feedback Code (*P1*) and file key (*P2*) are shown.

System Action:

Procedure \$NCINFO terminates with return code 8.

User Action:

Use the VSAM Feedback code to determine the exact cause of error, correct the NETINFO file allocation or calling procedure and retry.

CS0503**NETINFO file error. RC= P1, MSG= P2****Reason:**

The NCS NETINFO Database Access procedure (\$NCINFO) was called to read a record but a file error occurred. The file return Code (FILERC= *P1*) and system message (*P2*) are shown.

System Action:

Procedure \$NCINFO terminates with return code 8.

User Action:

Use the return code and message to determine the exact cause of error, correct the NETINFO file allocation or calling procedure and retry.

CS0601**No configuration details for P1****Reason:**

There are no configuration details for the specified node (*P1*).

System Action:

No configuration details are available.

User Action:

None.

CS0602

Configuration details unavailable

Reason:

Configuration details were requested from an NCS display but the NCS Configuration Details Service procedure (\$NCCNFG) has been unable to obtain details from the Configuration system, and no other message is available.

System Action:

No configuration details are available.

User Action:

Refer to your systems administrator as the service procedure, \$NCCNFG, may have been updated for your site's requirements.

CS0603

Configuration procedure P1 not found

Reason:

The NCS Configuration Details Service procedure (\$NCCNFG) has attempted to call another procedure to supply configuration details but the procedure (*P1*) cannot be located.

System Action:

No configuration details are available.

User Action:

Refer to your systems administrator as the specified procedure may be in a library that is not included in your COMMANDS concatenation.

CS0604**Configuration system details incomplete****Reason:**

Configuration details were requested from an NCS display but the NCS Configuration Details Service procedure (\$NCCNFG) has been unable to obtain details because the INFO/MASTER configuration system details are incomplete.

System Action:

No configuration details are available.

User Action:

Refer to your systems administrator as the Configuration Database system to be used by NCS has not been set up correctly.

To access an INFO/MASTER system you must have the INFO/MASTER system, category and NDB name set up. These are defined in the following global variables:

&&000\$NCSCSYS - INFO/MASTER System

&&000\$NCSCCAT - INFO/MASTER Category

&&000\$NCSCNDB - INFO/MASTER NDB name

These variables are normally initialized in the NMINIT or \$NSINIT procedure by your systems administrator.

CS1001**Invalid external option - P1****Reason:**

The NCS External Interface procedure, \$NCXTRNL, has been called to process the option (*P1*) but this option is not supported.

System Action:

The request is rejected.

User Action:

Contact your product supplier.

CS1101

Resource P1 is not known to VTAM

Reason:

The node name specified (*P1*) is unknown to VTAM (or VTAM-G).

System Action:

None.

User Action:

Specify a correct node name and retry.

CS1201

Network node name missing - use 'RECYCLE name'

Reason:

The NCS Recycle procedure was called without specifying a node name. This is required.

System Action:

The request is rejected.

User Action:

Correct the command and retry.

CS1202**Timeout waiting for P1 to P2****Reason:**

The NCS Recycle procedure timed out while attempting to activate or inactivate the indicated network node. The necessary responses have not been received from VTAM.

P1 identifies the network node.

P2 indicates the action: ACTIVATE or INACTIVATE.

System Action:

The request is rejected.

User Action:

Retry.

If the problem persists, contact your network systems administrator. This may be due to a congested network or to a new release of VTAM.

CS1203**Resource P1 is not known to VTAM****Reason:**

The node name specified (*P1*) is unknown to VTAM (or VTAM-G).

System Action:

None.

User Action:

Specify a correct node name and retry.

CS1204**Recycle complete - node P1 now active****Reason:**

The node name (*P1*) has been successfully recycled and is now active.

System Action:

None.

User Action:

None.

CS1205

Recycle failed - P1

Reason:

An attempt to recycle a network node (*P1*) has failed as an unexpected message (*P2*) has been received.

System Action:

The node is not recycled.

User Action:

Contact your network systems administrator.

CS1206

INACT P1 accepted

Reason:

VTAM has accepted the request to inactivate a network node (*P1*) and inactivation is in progress.

System Action:

The recycle process continues.

User Action:

None.

CS1207

Node P1 now inactive - attempting activation

Reason:

VTAM has successfully inactivated a network node (*P1*) and activation is now in progress.

System Action:

The recycle process continues.

User Action:

None.

CS1301**Network node name missing - use 'DG name'****Reason:**

The NCS Display Graphic procedure was called without specifying a node name. This is required.

System Action:

The request is rejected.

User Action:

Correct the command and retry.

CS1501**APPN directory entries not supported by operating system - P1****Reason:**

A request was made to display an APPN Directory Entry from a system that is running on an Operating System *P1* for which there is no APPN support by either the related VTAM product, or the NetMaster version.

The error occurs when the SOLVE system is not running on an IBM OS/390 (z/OS) or VM (z/VM) operating system.

This may apply to either the local system, or, if an INMC Link Name was specified, to the remote system for that link.

System Action:

The request is rejected.

User Action:

Correct the NetMaster system name (INMC Link Name) and retry.

CS1504**Directory entry P1 is not known to VTAM****Reason:**

The name specified *P1* is unknown to VTAM as a Directory Entry.

System Action:

None.

User Action:

Specify a correct node name and retry.

CS1601

Invalid value for shared variable, Keyword= P1 value= P2

Reason:

The NCS List Handler service procedure \$NCND16L failed because it received an invalid value for a shared variable. The variable name was *P1* and its value was *P2*.

System Action:

Procedure \$NCND16L terminates.

User Action:

Contact your system administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

CS1901

APPN topology not supported by operating system - P1

Reason:

A request was made to display APPN Topology data from a system that is running on an Operating System *P1* for which there is no APPN support by either the related VTAM product, or the NetMaster version.

The error occurs when the SOLVE system is not running on an IBM OS/390 (z/OS) or VM (z/VM) operating system.

This may apply to either the local system, or, if an INMC Link Name was specified, to the remote system for that link.

System Action:

The request is rejected.

User Action:

Correct the NetMaster system name (INMC Link Name) and retry.

CS2001**Invalid value for shared variable, Var= P1 Value=" P2"****Reason:**

The NCS List Handler service procedure \$NCND20L failed because it received an invalid value for a shared variable. The variable name was *P1* and its value was *P2*.

System Action:

Procedure \$NCND20L terminates.

User Action:

Contact the system administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

CS2002**Action invalid on this line****Reason:**

The selected action is not valid on this line. The first line in the list is the Origin Control Point. Subsequent lines are Destination Control Points that are adjacent to the Origin. Possible causes for this error are:

Option A (Display Adjacent Control Points) * Not to be used on the first line in the list as it would provide the same list as is currently displayed. Note: Use the F6 key to refresh the list.

* Only valid if the adjacent Control Point is a Network Node (NN).

Option TG (Display Transmission Group Attributes) * Not to be used on the first line in the list as it is used to display attributes of the Transmission Group between the Origin Control Point (the first line on the display) and a nominated Destination Control Point.

System Action:

None.

User Action:

Correct the error and retry.

CS2102

APING function is not available

Reason:

The D NET,APING function is not supported by this VTAM.

System Action:

None.

User Action:

None.

CS2103

APING failed with sense P1.

Reason:

A request for APING information failed with the sense code *P1* .

System Action:

None.

User Action:

Use the sense code to determine the cause of the error.

CS2104

APING to P1 completed, allocation time P2 ms, PING time= P3/ P4/ P5 ms

Reason:

A request for APING information completed for node P1 . The session allocation took P2 milliseconds. The data echo times (minimum/average/maximum) are shown in milliseconds as *P3*, *P4*, *P5* respectively.

System Action:

None.

User Action:

None.

CS2401**No Sessions using ALS P1****Reason:**

An ALS command has specified a name that is not in the list of adjacent link stations for this logical unit.

System Action:

None.

User Action:

Check that the name specified appears in the ALS column of the session list.

CS4001**No CP-CP sessions found****Reason:**

A request to list CP-CP sessions failed. No adjacent nodes have CP-CP sessions with this local node.

System Action:

None.

User Action:

None.

CS4002**No connections found****Reason:**

A request to list an adjacent CP's connections to the local node failed. No transmission group connections were found.

System Action:

None.

User Action:

None.

CS4101

No resources found with prefix= P1

Reason:

A request to list resources has failed. No resources match the specified prefix (*P1*).

System Action:

None.

User Action:

Correct the resource name (prefix) and retry.

CS4103

Action invalid on this line

Reason:

The specified action is not valid on this line. Possible causes for this error are:

Option P (APING) * The resource is not an APPN resource.

System Action:

None.

User Action:

Correct the error and retry.

CS4201**No RTP pipes found****Reason:**

A request to list RTP pipes has failed. If the list was qualified by CPname, then there are no RTP pipes for the specified CPname. If the list was not qualified, then there are no RTP pipes active.

System Action:

None.

User Action:

If using */RTP* then review the HPR options for VTAM and APPN connection PUs. Issue command *D VTAMOPTS,OPTION=HPR* to check that the VTAM default is to support HPR.

If listing RTP pipes for a CP or connection, display the PU and review the High Performance Routing setting. If HPR is enabled, idle connections can be automatically closed by coding *DISCNT=DELAY* for the PU or model PU for dynamic connection PUs.

In some situations a configuration error may result in unwanted CP connections. Review the requirements for CP connections and modify the network configuration accordingly.

CS4202**Display RTP pipe p1 failed****Reason:**

A request to display an RTP pipe (*p1*) failed. When the VTAM resource was displayed, it was not identified as an RTP, or it no longer exists.

System Action:

None.

User Action:

Contact your product supplier. Provide the following diagnostic information: 1. Output from *D RTPS* command 2. Output from display of specific pipe(s), that is, *D p1* command.

CS4203

Action invalid on this line

Reason:

The specified action is not valid on this line. Possible causes for this error are:

Options DA (Display) and SA (Select) Adjacent Link Station * The Adjacent Link Station could not be determined. This is only available in OS/390 V2R10 and later.

System Action:

None.

User Action:

Correct the error and retry.

CS4301

No TRL entries found

Reason:

A request to list TRL entries has failed. If the list was qualified by control type, then there are no TRL entries for the specified type. If the list was not qualified, then there are no TRL entries defined.

System Action:

None.

User Action:

If a Control Type was specified, specify another type and retry.

CS4302**Display TRL entry p1 failed****Reason:**

A request to display an TRL entry (*p1*) failed. When the VTAM resource was displayed, it was not identified as a TRLE, or it no longer exists.

System Action:

None.

User Action:

Contact your product supplier. Provide the following diagnostic information: 1. Output from D TRL command 2. Output from display of specific TRL entry(s), that is, the D TRL,TRLE= *p1* command.

CS4303**Action invalid on this line****Reason:**

The specified action is not valid on this line. Possible causes for this error are:

XCF options (DX, SX, AX, and PX) which apply to the XCF Adjacent CP * The TRL Control Type is not XCF, or the Adjacent Control Point has not been determined.

ULPID options (DU, SU, AU, and PU) which apply to the ULPID CP Name * The Upper Layer Protocol Control Point has not been determined.

System Action:

None

User Action:

Correct the error and retry.

CS4401

No answer from VTAM APING command

Reason:

Expected APING results were not received from the internal command interface.

System Action:

None

User Action:

Review the panel input for any logical errors, and retry the command in manual mode. If manual mode works, report the problem to the developer.

CS4402**Invalid value for P1****Reason:**

The value supplied for the field (*P1*) has an incorrect syntax or value.

Possible causes are:

- * For the *Resource Name* field

- The field contains embedded blanks.

- The field is not a valid node (resource) name. Node names can be either:

- 1) A 1-8 character non-qualified name (for example, TERM01)

- 2) A network-qualified name in the form *netid.node* where the netid and node parts are each 1-8 character values separated by a period, without spaces (for example, NET01.TERM01). The netid value can also be expressed as an asterisk (*).

- * For the *Count* field

- The field is not a valid number or is greater than 999. Default is 3 if the field is left empty.

- * For the *Packet Count* field

- The field is not a valid number or is greater than 32763. Default is 1 if the field is left empty.

- * For the *Packet Size* field

- The field is not a valid number, or is greater than 32763 or less than 1. Default is 100 if the field is left empty.

- * For the *ECHO* field

- The field must be empty or YES or NO. YES is the default.

System Action:

None

User Action:

Review the full-screen help for the panel, correct the value, and retry.

CS4501

No DLURs found

Reason:

A request to list DLURs has failed as there are no DLURs defined.

System Action:

None.

User Action:

None.

CS5101

No P1 found

Reason:

A request to list Major Nodes or Pending Nodes (*P1*) *failed as there are no nodes that match the specific type.*

System Action:

None.

User Action:

If a CPname was specified, specify another CPname and retry.

CS5201

No P1 found

Reason:

A request to provide a summary list of a given major node type (*P1*) failed as there are no nodes that match that type.

System Action:

None.

User Action:

If a CPname was specified, specify another CPname and retry.

CS5202**Action not supported on Totals line****Reason:**

An action was entered next to a line reserved for totals. Actions are only valid against data lines, that is, those with resource names.

System Action:

None.

User Action:

If a CPname was specified, specify another CPname and retry.

CSAP2901**SNANMI request failed, USS *P1* error: Retcode= *P2* Reason= *P3*****Reason:**

A SNANMI request to the SOLVE SSI failed with a USS error.

P1 is the USS function name, for example, BPX1CON, BPX1SND, BPX1RCV. *P2* is the USS return code.

P3 is the USS reason code.

System Action:

The request fails.

User Action:

Use the USS return and reason codes to determine the error:

*BPX1CON RC=0000081 RSN=****006C* USS Connection to VTAM SNANMI failure This indicates a problem with the SNAMGMT API of VTAM.

Check that SNAMGMT option is active.

For all other errors, contact Technical Support.

CSAP2902

**SNANMI request failed, SNANMI interface terminated, RC= *P1*
Reason= *P2***

Reason:

The SNANMI interface between the SOLVE SSI and VTAM has terminated.

P1 is the SNANMI return code from the termination call.

P2 is the SNANMI reason code from the termination call.

System Action:

The request fails.

User Action:

Use the return and reason codes to determine the error. Typically, return and reason codes of zero indicate an orderly shutdown of the interface.

CSAP2903

SNANMI request failed - *P1*

Reason:

A SNANMI request issued from the SOLVE SSI has failed.

P1 is the return code from the SNANMI call.

System Action:

The request fails.

User Action:

SUBTASKUNAVAIL - The SNANMI subtask is inactive in the SSI. Ensure that the VTAM option SNAMGMT is active and the PKTANALYZER and SNANMI options are set to YES in the SSI configuration.

For all other errors, contact Technical Support.

CSAP2904**EE session for CPNAME= *P1* restarted****Reason:**

EE Data Sampling has detected that an EE session to a particular CPname has been restarted within the last data sampling interval.

Any retransmission packet counts that may have occurred on the earlier terminated session will be lost.

System Action:

None. This is an informational message only.

User Action:

Any retransmission packet counts reported by this CPNAME in the last interval may not be accurate. Packet counts pertaining to the previous terminated session after the last sampling call are indeterminate.

CSAP2905**Attribute *P1* sampling error: *P2*****Reason:**

A Data Sampling error occurred on attribute *P1*. *P2* notes the reason for the sampling error.

System Action:

The data sampling procedure sets a null value and an error message for the attribute. In addition, this message CSAP2905 is logged to the transient log.

User Action:

Investigate the reason for the sampling error, based on the associated error message and the transient log entry.

CSCALLG01

Unknown link name P1

Reason:

An APPC request to the remote system identified by *P1* failed; the INMC link name (*P1*) does not exist.

System Action:

The request is ignored.

User Action:

Use the SHOW LINKS command to verify INMC Link names and status.

CSCALLG02

Link name P1 is not active : status = P2

Reason:

An APPC request to the remote system identified by *P1* failed; the INMC link name (*P1*) is not active - the current status is *P2*

System Action:

The request is ignored.

User Action:

Use the SHOW LINKS command to verify INMC Link names and status.

CSCALLG03

Function not available on back-level system P1: requires P2

Reason:

An APPC request to the remote system identified by *P1* failed. The remote system is running a back-level version which does not support the type of request. The minimum requirement is *P2* .

System Action:

The request is ignored.

User Action:

None.

CSCALLG04**P1 not available on region P2: P3****Reason:**

A function identified by *P1* failed on the indicated region (*P2*) for the reason shown (*P3*).

System Action:

The request is ignored.

User Action:

None.

CSCALLG05**APPC call to system P1 failed with RC= P2 FDBK= P3****Reason:**

An APPC request to the remote system identified by *P1* failed with return code *P2* and feedback code *P3* .

System Action:

An additional error message may be written to the activity log if RC=16.

User Action:

Contact your System Administrator.

CSCALLG06**Aping message time out****Reason:**

Predefined time out expired while waiting for consecutive message from D APING VTAM command.

System Action:

The request is ignored.

User Action:

None.

CSCALLG07

Function not supported by VTAM - P1

Reason:

The VTAM command *P1* is not supported. Message IST039I or IST452I was returned in response to the command.

System Action:

The requested function is unavailable.

User Action:

None.

CSCALLG08

DLUR not supported on this host

Reason:

The VTAM command DISPLAY NET,DLURS is not supported. The host nodetype is probably a Migration Data Host and not an Interchange Node. DLUR is supported for VTAM systems with Nodetype NN only. Nodetype EN is not supported for DLUR. Use D VTAMOPTS to display VTAM's parameters.

System Action:

The requested function is unavailable.

User Action:

None.

CSCALLG09**Timeout waiting for response (*P1*)****Reason:**

The display of the NCS resource list timed out while waiting for a VTAM response. There is a 30-second wait for VTAM to respond.

P1 is the command that was issued through the SPO interface.

System Action:

The display request is terminated.

User Action:

Retry.

If the problem persists, contact your network systems administrator. The number of output lines may be exceeding the VTAM message limit (POAQLIM).

CSCALLG10**VTAM message limit exceeded (*P1*)****Reason:**

The responses to the indicated command exceeded the VTAM POAQLIM value.

P1 is the command issued through the SPO interface.

System Action:

The display request is terminated.

User Action:

Contact your network systems administrator. Increase the POAQLIM value defined for the primary ACB.

CSCALLG11

No link found for CP *P1*

Reason:

There is no active INMC link to a region on the CP *P1*. Management of resources on the remote CP is not possible.

System Action:

The display request is terminated.

User Action:

Issue command SHOW ISR=ALL to determine the linked regions and the CP's they manage.

CSCALLG12

***P1* list truncated - size limit reached**

Reason:

The processing for a list of *P1* elements reached the implementation maximum. For most lists this is the maximum MDO size of 32768.

System Action:

The list displayed is truncated.

User Action:

For an RTP list, use the /APPNCP function and list RTPs by connection. For an APPLICATION list, press F4 (Display) and view the native VTAM command output.

CSEE001**Use PT to start tracing an EE Remote CP, then PTV to view the trace****Reason:**

From the EE XCA Major Node Summary, you can use simple line commands to start, view, and manage SmartTrace packet traces.

The following SmartTrace line commands are available:

PT starts a packet trace.

PTV views the packets in the trace. (You can view packets while the trace is active.)

PTI inactivates the packet trace. (When inactivated, the trace is automatically deleted after a certain interval. Save it if you want to keep it permanently.)

PTD inactivates and immediately deletes the packet trace.

On the EE XCA Major Node Summary, you can use these commands against the following:

- Any Line name in any line group
This traces all packets on the EE Connection to the EE Remote CP.
- Any Line Group name
This traces all EE packets on the VIPA associated with the Line Group. If multiple Line Groups share the VIPA, the trace will include packets from all Line Groups using the VIPA.

System Action:

A panel of optional EE trace criteria appears. A SmartTrace packet trace is then started for the Remote CP or VIPA.

User Action:

After the trace is activated, use the *PTV* command to view and manage the active trace.

More About SmartTrace

To list all EE-related SmartTraces, for all resources and users, use the *L* option from the EE SmartTrace Menu (shortcut */EETRALL*).

More About the EE XCA Major Node Summary

As well as packet tracing, many more actions are available from this display, including EE connectivity testing, RTP details and checking, UDP Connection information, and more. Type *?* on any line, to see all available commands for that CP or VIPA.

CSEE002

Use PT to start tracing an EE Local VIPA, then PTV to view the trace

Reason:

From the EE XCA Major Node Summary, you can use line commands to start, view, and manage SmartTrace packet traces.

The following SmartTrace line commands are available:

PT starts a packet trace.

PTV views the packets in the trace. (You can view packets while the trace is active.)

PTI inactivates the packet trace. (When inactivated, the trace is automatically deleted after a certain interval. Save it if you want to keep it permanently.)

PTD inactivates and immediately deletes the packet trace.

On the EE XCA Major Node Summary, you can use these commands against the following:

- Any Line Group name
This traces all EE packets on the VIPA associated with the Line Group. If multiple Line Groups share the VIPA, the trace will include packets from all Line Groups using the VIPA.
- Any Line name in any line group
This traces all packets on the EE Connection to the EE Remote CP.

System Action:

A panel of optional EE trace criteria appears. A SmartTrace packet trace is then started, for the Remote VIPA or CP.

User Action:

After the trace is activated, use the *PTV* command to view and manage the active trace.

Tracing a VIPA traces all EE Connections that use the VIPA. If you know which EE Connection has the problem, consider tracing only that EE Connection.

More About SmartTrace

To list all EE-related SmartTraces, for all resources and users, use the *L* option from the EE SmartTrace Menu (shortcut */EETRALL*).

More About the EE XCA Major Node Summary

Type *S* against a line group name to expand it and see the EE Connections that use that VIPA.

As well as packet tracing, many more actions are available from this display, including EE connectivity testing, RTP details and checking, UDP Connection information, and more. Type ? on any line to see all available commands for that VIPA or CP.

CSEE003

Packet trace not available - stack *P1* unknown to packet analyzer

Reason:

A packet trace request has been rejected because the stack *P1* is not known to the Packet Analyzer. The stack is not defined as a monitored IP resource in the region.

System Action:

The packet trace request terminates.

User Action:

Define the stack using the resource administration panels

1. Enter */RADMIN.R* to access the Resource Definition panel.
2. Specify the system name and version number of the system image to use to store the resource definition of the stack.
3. Enter *S* next to the STACK resource class.
The TCP/IP Stack List panel appears.
4. Press F4 (Add) to create a definition for the stack.

CSEE004

Packet trace activated for IP address *P1*

Reason:

A request to activate a packet trace completed successfully.

System Action:

Tracing of IP address (VIPA) *P1* commences. All EE packets using the VIPA will be traced. If multiple line groups share the VIPA, packets from all line groups using the VIPA will be traced, and the line groups will each be tagged *PT*.

User Action:

None.

CSRT001

P1 stalled, P2 congested, P3 switching

Reason:

Abnormal conditions have occurred for one or more of the listed RTP pipes.

System Action:

None.

User Action:

Use the SORT command to group the affected RTP pipes at the top of the list. For example, SORT CONGEST D groups RTP pipes with congestion at the top of the list.

CSRT002

SORT fields are *P1*

Reason:

A SORT command has been entered on the RTP Pipe List panel with no parameter or a ?. *P1* names the display fields that are supported by the SORT command.

The SORT command syntax is *SORT field [A | D]*.

The SORT command syntax supports a field followed by an optional *A* for ascending or *D* for descending. The initial sort is the CP field (CP Name column) in ascending order.

System Action:

None.

User Action:

Use the SORT command with one of the named fields to reorder the RTP pipe list as required.

CSRT003**SORT order not A or D****Reason:**

A SORT command has been entered on the RTP Pipe List panel where the last value is not a valid sort order operand.

The SORT command syntax supports a field followed by an optional *A* for ascending or *D* for descending.

System Action:

The SORT command is not processed.

User Action:

Reenter the SORT command with a valid operand.

CSRT004**SORT field *P1* not supported****Reason:**

A SORT command has been entered on the RTP Pipe List panel with a field name that is not supported.

System Action:

The SORT command is highlighted in error.

User Action:

Correct the specified sort field name. If necessary, enter SORT without operands to view the list of supported sort fields.

CSRT005

Use PT to start tracing an RTP Pipe, then PTV to view the trace

Reason:

From the EE RTP Pipe List, you can use line commands to start, view, and manage SmartTrace packet traces of individual RTP Pipes.

The following SmartTrace line commands are available:

PT starts a packet trace.

PTV views the packets in the trace. (You can view packets while the trace is active.)

PTI inactivates the packet trace. (When inactivated, the trace is automatically deleted after a certain interval. Save it if you want to keep it permanently.)

PTD inactivates and immediately deletes the packet trace.

System Action:

A panel of optional EE trace criteria appears. A SmartTrace packet trace is then started, for the individual RTP Pipe.

User Action:

After the trace is activated, use the *PTV* command to view and manage the active trace.

More About SmartTrace

To list all EE-related SmartTraces, for all resources and users, use the *L* option from the EE SmartTrace Menu (shortcut */EETRALL*).

More About the EE RTP Pipe List

As well as packet tracing, many other actions are available from this list. Use *F8 (Right)* for more information. Type *?* on any line to see all available commands.

To health check all EE RTPs, use the EE RTP Health Check (*/EERH*).

Note: SmartTrace only traces RTP Pipes that use EE. It cannot trace RTP Pipes that use transport other than EE.

CSRT006**SELFTEST ACTIVATED. ALL RTPS DISPLAYED.****Reason:**

You entered the SELFTEST command on an RTP Health Check panel. The list of RTPs that were checked is displayed for all health checks.

System Action:

Display the RTPs that have been evaluated for health checks.

User Action:

Verify that the list includes all expected RTPs and that the formatting of values is correct.

Dx Messages

DB0001**INVALID PARAMETERS FOR *P1* ACTION****Reason:**

The parameters passed to the Database Manager are not compatible with the action requested.

System Action:

The call is rejected.

User Action:

Correct the Database Manager call and retry.

DB0002**SEQUENCE *P1* NOT FOUND****Reason:**

The specified sequence name does not exist.

System Action:

The Database Manager call is rejected.

User Action:

Correct the Database Manager call and retry.

DB0003

INVALID PARAMETERS FOR *P1* SEQUENCE

Reason:

The Database Manager call parameters conflict with those used when the sequence was created.

System Action:

The Database Manager call is rejected.

User Action:

Correct the Database Manager call and retry.

DB0004

FATAL DATABASE ERROR - FILE= *P2* FUNC= *P1* FILERC= *P3* VSAMFDBK= *P4*

Reason:

An error occurred when trying to access the database file.

System Action:

The Database Manager call is rejected.

User Action:

Determine the cause of the error from the return code and feedback code indicated and retry.

DB0005

FILE *P1* NOT AVAILABLE

Reason:

The file in which the requested category resides has not been opened.

System Action:

The Database Manager call is rejected.

User Action:

Open the file in which the requested category resides and retry.

DB0006**FILE ACCESS DENIED****Reason:**

The requesting user is not authorized to access the requested file.

System Action:

The Database Manager call is rejected.

User Action:

Contact your systems administrator to obtain appropriate file access authorization and retry.

DB0007**P1 ALREADY IN USE BY P2****Reason:**

The user or job name has exclusive use of the requested application, category or record.

System Action:

The Database Manager call is rejected.

User Action:

Wait until the application, category or record becomes available and retry.

DB0008**FATAL LOCK ERROR - RETCODE= P1 ZFDBK= P2****Reason:**

A fatal error occurred when attempting to access an NCL LOCK.

System Action:

The Database Manager call is rejected.

User Action:

Determine the cause of the error and retry.

DB0009

INVALID ACTION - ~P1

Reason:

The requested action is not a valid Database Manager action.

System Action:

The Database Manager call is rejected.

User Action:

Correct the Database Manager call and retry.

DB0010

KEY NOT SUPPLIED

Reason:

No key was supplied for the requested record.

System Action:

The Database Manager call is rejected.

User Action:

Correct the Database Manager call and retry.

DB0011

VARTABLE ERROR - FUNC= P1 ID= P2 ZFDBK= P3

Reason:

An error occurred whilst processing an NCL VARTABLE.

System Action:

The Database Manager call is rejected.

User Action:

Determine the cause of the error and retry.

DB0014**APPLICATION OR CATEGORY INVALID****Reason:**

Either the application ID or the category ID is not defined to the Database Manager.

System Action:

The Database Manager call is rejected.

User Action:

Correct the Database Manager call or register the application/category in the Database Manager and retry.

DB0015**RECORD ALREADY EXISTS****Reason:**

The record could not be added because it already exists.

System Action:

The Database Manager call is rejected.

User Action:

Change the key of the record being added, or change the function to PUT and retry.

DB0016**INVALID PARAMETER FOR CATEGORY - P1= P2****Reason:**

A parameter specified on the call to the Database Manager was inconsistent with the category definition. For instance, a generic delete request may not be made on records with alternate keys or records which are cached.

System Action:

The Database Manager call is rejected.

User Action:

Correct the Database Manager call and retry.

DB0017

FATAL DATABASE ERROR - PRIMARY KEY RECORD NOT FOUND

Reason:

A fatal error occurred because the requested alternate key was found, but the primary key record was not found.

System Action:

The Database Manager call is rejected.

User Action:

Delete the alternate key from the database and recreate the record if necessary.

DB0018

VSAM FDBK=14 OCCURRED, RETRYING - FILE= P1 FUNC= P2 KEY= P3

Reason:

A VSAM feedback code of 14 was returned from an add, delete or put request. This means that the VSAM control interval in which the record resides was locked by another job or user. The Database Manager automatically retries the operation until successful.

System Action:

The requested action is retried automatically until successful.

User Action:

None.

DB0019

INVALID MAINTENANCE OPTION - P1

Reason:

The requested maintenance option is invalid.

System Action:

The Database Manager call is rejected.

User Action:

Correct the Database Manager call and retry.

DB0020**FILE STATUS IS INVALID FOR P1 REQUEST****Reason:**

The file processing action *P1* was not consistent with the options specified when the file was opened. The most likely cause of this error is when an add, update, or delete request is made for a file which is open for read only.

System Action:

The Database Manager call is rejected.

User Action:

If the file is shared by more than one SOLVE region and therefore is only opened for update on one of those regions then perform the required action on the SOLVE region that has update capability. If the file is only accessed by one SOLVE region then close and re-open the file with the appropriate operands for the requested action and then retry.

DB0021**P1 RECORD NOT FOUND****Reason:**

The record type identified by *P1* could not be found on the file. This message usually indicates that database corruption has occurred due to a system failure.

System Action:

The Database Manager call is rejected with a return code of 4.

User Action:

This message is usually only issued when a record *should* be on file but is not. Contact your systems administrator who may be able to run a database clean up to rectify the problem.

DB0022

DELETE REJECTED - ENTITY NOT AT PRIMARY CONCATENATION LEVEL (P1)

Reason:

A delete was attempted on an NCL/CAS entity that is present at a level lower than the primary level in the NCL/CAS concatenation path. *P1* is the primary level. Only the primary level in an NCL/CAS concatenation path may be modified.

System Action:

The delete request is rejected and the target entity remains intact.

User Action:

Use the NCL/CAS Copy/Delete/Compare/Apply/Browse facility to delete the entity.

DB0037

P1 ERROR RETRIEVING MODS PATH. FDBK= P2

Reason:

This message indicates that the MODS library path environment was not initialized. The MODS Database Manager failed to find a defined concatenation path. *P1* is set to the name of the NCL procedure that issued the message and *P2* is set to the feedback code set by the &VARIABLE GET verb.

System Action:

The database operation is unsuccessful.

User Action:

The MODS path is defined in the MODSFILES Customizer parameter group. Additional messages that relate to file allocation failures might also be present in the activity log prior to this message.

Review the data set names in your INI procedure for this group. The group is preceded by a label .MODSFILES.

Correct the data set names in the INI procedure and restart the region.

DB0038**ERROR RETRIEVING MODS PATH DATA DURING PATH INQUIRY PROCESSING****Reason:**

This message indicates that the MODS library path environment was not initialized properly. A call to the MODS Database Manager failed to find specific data associated with the current path.

System Action:

The path inquiry fails

User Action:

Ensure that path initialization is properly executed.

DB0039**ERROR - SUBSIDIARY RECORD ACCESS ATTEMPTED WITHOUT PRIOR PRIMARY ACCESS****Reason:**

This indicates an internal logic failure. An attempt was made to access a subsidiary record without previously having accessed the related primary record.

System Action:

The database request is rejected.

User Action:

Contact your product support representative.

DB0040**PARAMETER ID=DBID IS NO LONGER SUPPORTED****Reason:**

The parameter ID=dbid passed to the Database Manager is no longer supported since files concatenation.

System Action:

The call is rejected.

User Action:

Correct the Database Manager call and retry.

DB0041

ERROR RETRIEVING MSG " *P1*". MODS PATH NOT ESTABLISHED

Reason:

This message indicates that a message could not be retrieved from the message database because the MODS library path environment was not initialized. The MODS Database Manager failed to find a defined concatenation path. *P1* is the ID of the message being retrieved.

System Action:

The database operation is unsuccessful.

User Action:

The MODS path is defined in the MODSFILES Customizer parameter group. Additional messages that relate to file allocation failures might also be present in the activity log prior to this message.

Review the data set names in your INI procedure for this group. The group is preceded by the .MODSFILES label.

Correct the data set names in the INI procedure, and restart the region.

DB0050

USER NOT AUTHORIZED

Reason:

The user is not authorized to access the function requested.

System Action:

The Database Manager call is rejected.

User Action:

Contact your systems administrator for appropriate authorization if the function is required and retry.

DB0051**INVALID COMMAND****Reason:**

An invalid command was entered.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

DB0052**INPUT/OUTPUT RECORDS MUST HAVE A DIFFERENT LANGUAGE CODE OR FILE ID.****Reason:**

Records can only be moved or copied within the same file if the language code is changed. This is to reduce the possibility of accidental corruption of the original records.

System Action:

The move/copy request is rejected.

User Action:

Specify a different input file id, output file id, or language code and retry.

DB0201**INVALID COMMAND****Reason:**

An invalid command was entered.

System Action:

The command is rejected.

User Action:

Correct and retry.

DB0202

SYSTEM PARAMETERS SET SUCCESSFULLY

Reason:

The NDB system parameters were set successfully.

System Action:

None.

User Action:

None.

DB0203

SYSPARMS P1= P2 FAILED - REFER TO LOG

Reason:

The NDB system parameter indicated was unable to be set. Refer to the activity log for details.

System Action:

The system parameter is not changed.

User Action:

Determine the cause, correct and retry.

DB0301

ANALYSING DATA ON FILE: ~P1

Reason:

The copy/conversion procedure is analysing the data on the file P1

System Action:

Informational Message.

User Action:

None.

DB0302**CAS CONTROL FILE FILEID: *P1* IS VERSION *P2*****Reason:**

The copy/conversion procedure has determined that the *P1* CAS control file is for NetMaster or SOLVE Version *P2*.

System Action:

None.

User Action:

None.

DB0303**OBJECT COPIED : ~P1****Reason:**

The object P1 was successfully copied from the OLD CAS file to the NEW CAS file. P1 is a description of the object that was copied.

System Action:

Informational Message.

User Action:

None.

DB0304

OBJECT NOT COPIED: P1

Reason:

The object *P1* was not copied from the OLD MODS control file to the NEW MODS control file. *P1* is a description of the object that was not copied. This could be because the object modified was a SOLVE object and not a user application object. Only objects with a non SOLVE application prefix will be copied to the new MODS control file.

System Action:

Informational Message.

User Action:

Note the object and check why the object was added/modified to the old CAS file. If you wish these changes to be made to the new file, they must be done manually.

DB0305

ERROR. COPY OBJECT SUBROUTINE: ~P1 NOT FOUND IN PROCEDURE ~P2

Reason:

The subroutine P1 was not found in the procedure P2 . This subroutine is required so that a records for a particular application and category can be copied.

System Action:

Procedure Terminates.

User Action:

Note the subroutine and procedure names and contact your support representative.

DB0306**FILEID LANGUAGE CASAPPL APPL****Reason:**

This message is the column headings for message DB0307. See the message DB0307 for further information.

System Action:

None.

User Action:

None.

DB0307

Reason:

This message is the column headings for message DB0308. See the message DB0308 for further information.

System Action:

None.

User Action:

None.

DB0308**~P1****Reason:**

This message notifies you of data that is present on your CAS file. P1 will contain the following sections (from left to right) : * The fileid of the file. * The Language Code * CAS application Id. * Application Id.

System Action:

None.

User Action:

None.

DB0309

**** COPY ENDED ****

Reason:

The copy of CAS records has completed.

System Action:

None.

User Action:

None.

DB0310

**FATAL DATABASE ERROR - FILE=~P2 FUNC=~P1 FILERC=~P3
VSAMFDBK=~P4**

Reason:

A error occurred when trying to access the database file.

System Action:

The copy utility terminates.

User Action:

Determine the cause of the error from the return code and feedback code indicated and retry.

DB0311

ERROR COPYING OBJECT IN SUBROUTINE ~P1 RC: ~P2 KEY: ~P3

Reason:

A error occurred when copying an object in the subroutine P1 . The subroutine had a return code of P2 . P3 is the key of the object being copied.

System Action:

The copy utility terminates.

User Action:

Determine the cause of the error from the return code indicated and retry.

DB0312**FATAL VARIABLE ERROR - ID=~P1 FUNC=~P2 OPT=~P3 ZFDBK=~P4****Reason:**

A error occurred when trying to access a vartable.

System Action:

The copy utility terminates.

User Action:

Determine the cause of the error from the return code and feedback code indicated and retry.

DB0313**CANNOT RETRIEVE CAS FILE VERSION. FILEID: ~P1****Reason:**

The copy utility was not able to determine the version of the CAS file with a fileid of P1 .

System Action:

The copy utility terminates.

User Action:

Check that you have the correct CAS file allocated.

DB0314**ERROR RETRIEVING OBJECT DBMS: ~P1 RC: ~P2 KEY: ~P3****Reason:**

A error occurred when retrieving an object. The DBMS procedure P1 ended with a return code of P2 . The key of the object is P3 .

System Action:

The copy utility terminates.

User Action:

Determine the cause of the error from the return code indicated and retry.

DB0326

OBJECT DELETED : ~P1

Reason:

The object P1 has been deleted from the installation's cas file by the CAS put file apply procedure because it was marked for deletion in the CAS put file. This is probably because the object is now obsolete.

System Action:

Informational Message.

User Action:

None.

DB0328

CAS PUT FILE NOT APPLIED DUE TO MODIFIED OBJECTS ON CAS FILE

Reason:

The CAS put file was not applied to the installation's CAS file because one or more of the objects that are being replaced on the installation's CAS file have been modified by a user. These modified objects would have been identified by the message DB0327.

System Action:

Informational Message.

User Action:

Check why the objects were modified on the CAS file. The CAS put file will not be applied unless you set the OVERRIDE option to YES in the procedure \$CADB05U.

DD0001**VFS FILE ~P1 ERROR - FILERC=~P3 VSAMFDBK=~P4****Reason:**

An error occurred during Data Dictionary maintenance file processing. P1 is the file option that was being performed.

System Action:

The file processing request fails.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

DD0002**HELP ERROR ~P1 - RETCODE=~P2****Reason:**

An error occurred when trying to display or retrieve help. P1 is the SYSMMSG returned from the Help Manager.

System Action:

The help request fails and processing continues.

User Action:

Determine the cause of the error from the return code and retry.

DD0003**COMMAND P1 NOT RECOGNIZED****Reason:**

An invalid command was entered.

System Action:

The command is ignored.

User Action:

Correct the command and retry.

DD0004

SELECTION LIST ERROR ~P1 - RETCODE=~P2

Reason:

An error occurred on the call to the Selection List Manager. P1 is the SYSMSG returned from the Selection List Manager.

System Action:

Processing is terminated.

User Action:

Determine the cause of the error from the return code and retry.

DD0005

UPDATE ERROR ~P1 - RETCODE=~P2

Reason:

An error occurred while updating an element. P1 is the error message returned from the update procedure.

System Action:

The update may not have completed successfully.

User Action:

Determine the cause of the error from the retcode and retry.

DD0006

ADD ERROR ~P1 - RETCODE=~P2

Reason:

An error occurred during group/field/element add procedure. P1 is the SYSMSG returned from the update procedure.

System Action:

The add operation may not have completed successfully.

User Action:

Determine the cause of the error from the retcode and retry.

DD0007**GRP/FLD ERROR ~P1 - RETCODE=~P2****Reason:**

An error occurred during group/field processing. P1 is the SYSMMSG returned from the update procedure.

System Action:

Group/field processing is terminated.

User Action:

Determine the cause of the error from the return code and retry.

DD0008**NAMELIST ERROR - RETCODE=~P2****Reason:**

An error occurred in the call to \$DDNAMEC.

System Action:

The name list obtained for group and field validation may not be correct.

User Action:

Determine the cause of the error from the return code and retry.

DD0009**PANEL DISPLAY ERROR ~P1 - RETCODE=~P2****Reason:**

An error occurred while trying to display a data dictionary editor panel. P1 is the SYSMMSG returned from panel services.

System Action:

The procedure is terminated.

User Action:

Determine the cause of the error from the return code and retry.

DD0010

INVALID COMMAND

Reason:

An unknown command was entered on the command line.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

DD0011

ELEMENT SAVED

Reason:

The element(s) were successfully saved in the database.

System Action:

None.

User Action:

None.

DD0012

~P1 CANCELLED

Reason:

The element add or update was cancelled at the user's request.

System Action:

None.

User Action:

None.

DD0013**ALL DATA VALID****Reason:**

The data entered on a data dictionary editor data entry panel is valid.

System Action:

None.

User Action:

Use the File or Save function key to save the data on the database.

DD0014**PANEL BUILD ERROR ~P1 - RETCODE=~P2****Reason:**

An error occurred while trying to build a panel for the data dictionary editor. P1 is the SYSMMSG returned from panel services.

System Action:

The panel is not issued.

User Action:

Determine the cause of the error from the return code and retry.

DD0015**SETFKA ERROR ~P1 - RETCODE=~P2****Reason:**

An error occurred in the SETFKA call to the General Purpose Procedure Library. P1 is the SYSMMSG set by the General Purpose Procedure Library.

System Action:

Processing is terminated.

User Action:

None.

DD0016

KEYTYPE MUST BE 'L' OR 'I'

Reason:

The key type for an element must be 'L' for local, or 'I' for inherited.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the field value.

DD0017

ELEMENT NAME '~P1' IS NOT UNIQUE

Reason:

The element name entered is already defined at this level in this map definition.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Change the element name or use the update option to change the existing element.

DD0018

ELEMENT WITH THIS KEY ALREADY EXISTS

Reason:

The key entered for this element has already been used at this level in this map definition.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Change the key value.

DD0019**INCLUDED MAP DOES NOT EXIST IN DATA DICTIONARY****Reason:**

The included map specified on the element data entry panel is not defined in the data dictionary.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the name of the include map or erase the field value.

DD0020**INVALID ENCODING RULE****Reason:**

The encoding rule entered in the element data entry panel of the data dictionary editor is invalid.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the encoding rule.

DD0021**INVALID HEX STRING FOR ENCODING RULE - 2ND BYTE MUST BE X'00'****Reason:**

If the user is entering the encoding rule in hex format, the second byte must be 00 (Eg: 12000202).

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the encoding rule.

DD0022

INVALID HEX STRING FOR ENCODING RULE - 3RD BYTE MUST EQUAL 4TH BYTE

Reason:

The second and third bytes of the encoding rule (the length length and the key length) must be equal.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the encoding rule.

DD0023

INVALID SYMBOLIC ENCODING RULE - FORMAT IS XXZ(m,n)

Reason:

An invalid encoding rule was entered.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the encoding rule.

DD0024

LENGTH VALUE MUST BE LESS THAN 5

Reason:

The encoding rule entered is invalid.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the encoding rule.

DD0025**MISSING COMMA IN SYMBOLIC ENCODING RULE - FORMAT IS
XXZ(m,n)****Reason:**

The encoding rule entered is invalid.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the encoding rule.

DD0026**KEY FIELD VALUE MUST BE LESS THAN 5****Reason:**

The encoding rule entered is invalid.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the encoding rule.

DD0027**MISSING BRACKET IN SYMBOLIC ENCODING RULE - FORMAT IS
XXZ(m,n)****Reason:**

The encoding rule entered is invalid.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the encoding rule.

DD0028

NO ENCLOSED FIELDS OR GROUPS

Reason:

There are no fields or groups defined within this element or group.

System Action:

None.

User Action:

None.

DD0029

DUPLICATE GRP/FLD NAME '~P1' FOR THIS ELEMENT

Reason:

A group or field by this name has already been defined for this element.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Enter a unique group or field name.

DD0030

INVALID FORMAT

Reason:

The format entered for the group or field is invalid.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the field value.

DD0031**OFFSET MUST BE GREATER THAN PREVIOUS OFFSET****Reason:**

Groups and fields must be added in order of offsets - the validation procedure enforces this.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

IF you want a field with this particular offset, exit back to the selection list and add after the field/group with the largest offset smaller than this one.

DD0032**OFFSET MUST BE LESS THAN PREVIOUS OFFSET****Reason:**

Groups and fields must be added in order of offsets, the validation procedure enforces this.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

IF you want a field with this particular offset, exit back to the selection list and add after the field/group with the largest offset smaller than this one.

DD0034**GRP/FLD SAVED****Reason:**

The groups/fields entered have been queued for saving on exit from the group/field update function.

System Action:

None.

User Action:

None.

DD0035

PROCESSING ERROR DURING GROUP/FLD SAVE

Reason:

An error occurred while saving the group(s) or field(s) entered.

System Action:

The save function is terminated.

User Action:

Determine the cause of the error and retry.

DD0036

~P1 CANCELLED

Reason:

The add or update request was cancelled at the user's request.

System Action:

None.

User Action:

None.

DD0037

NO ELEMENTS CURRENTLY DEFINED AT THIS LEVEL

Reason:

There are no elements defined within the enclosing element.

System Action:

None.

User Action:

None.

DD0038**NO ~P1 MAPS DEFINED****Reason:**

There are no maps defined for the specified type. P1 is the requested type (System or User).

System Action:

None.

User Action:

Try the name/key toggle option to check if there is inconsistency in the name and key definitions.

DD0039**~P1 MAP NAMES ~P2 BE PREFIXED WITH '\$'****Reason:**

The message is either: SYSTEM MAP NAMES MUST BE PREFIXED WITH '\$' or USER MAP NAMES CANNOT BE PREFIXED WITH '\$' This convention is used to distinguish system map names from user map names.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

If a system map name is being entered, prefix it with a '\$'. If a user map name is being entered, it must not have a '\$' prefix.

DD0040**MAP NAME OR MAP KEY MUST BE SPECIFIED FOR ~P1 OPTION****Reason:**

An update or delete of a map was requested from the Mapped Data Services Primary Menu, but no map name or key name was specified.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Enter the map name or map key and retry.

DD0041

MAP NAME AND MAP KEY ARE MUTUALLY EXCLUSIVE, SPECIFY ONE OR THE OTHER.

Reason:

A map name and map key cannot be specified at the same time.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Erase the value from either the Map Name field or the Map Key field.

DD0042

MAP ~P1 DOES NOT EXIST

Reason:

The requested map does not exist on the database.

System Action:

The request is rejected.

User Action:

Correct the map name and retry.

DD0043

MAP TYPE MUST BE EITHER 'S' OR 'U'

Reason:

An invalid value was entered into the map type field on the MDS Data Dictionary Editor Primary Menu.

System Action:

The request is rejected.

User Action:

Correct the field value and retry.

DD0045**MAP DELETED****Reason:**

The requested map was successfully deleted.

System Action:

None.

User Action:

None.

DD0046**DELETE CANCELLED****Reason:**

The delete request was cancelled as requested by the user.

System Action:

The map is not deleted.

User Action:

None.

DD0047**MAXIMUM DEPTH OF ELEMENT ENCLOSURE REACHED****Reason:**

Only 7 levels of enclosure are allowed for elements. This message is issued when the 7th level is reached, and no more elements can be added or viewed within this enclosure.

System Action:

None.

User Action:

None.

DD0048

SYSTEM MAP '\$DDMAP' UNAVAILABLE.

Reason:

The system map '\$DDMAP' was not found on the OSCNTL file, or the SYSPARMS MAPLOAD=\$DDMAP command failed.

System Action:

MDS Data Dictionary maintenance is not available.

User Action:

Contact your product support representative.

DD0049

GROUP/FIELD DIMENSIONS EXCEED ENCLOSING GROUPS BOUNDARY

Reason:

The offset + length of this group/field make it lie fully or partially outside the boundaries of the enclosing group.

System Action:

Group/field not saved.

User Action:

Reduce either the offset or the length in this group definition, or alternately, cancel the update or add and adjust the enclosing groups boundaries.

DD0051

NAME IS MANDATORY FOR FIELDS.

Reason:

A field with no name is invalid, so a name must be entered when adding or updating a field. This is different for groups, which can have a blank name.

System Action:

None.

User Action:

Put a name into the name field on the field data entry panel.

DD0052**LENGTH MUST BE LESS THAN 5 FOR BINARY,PACKED OR ZONED
FORMAT FIELDS****Reason:**

Fields with binary, packed decimal or zoned decimal formats are stored as fullwords, and thus cannot be more than 4 bytes in length.

System Action:

None.

User Action:

Change length field.

DD0053**MAP KEY MUST BE A HEXADECIMAL VALUE****Reason:**

When entering a map key on the primary menu, the key must be hexadecimal.

System Action:

None.

User Action:

Change key field.

DD0054**RECORD DOES NOT EXIST****Reason:**

The record selected has been deleted, and is overlayed with the *** DELETED *** message, and thus can't be selected.

System Action:

None.

User Action:

Press the refresh function key (F6), and then make a new selection.

DD0055

UNABLE TO RETRIEVE USER INFORMATION

Reason:

The &SECCALL statement was used to check user authorization for the requested operation. This request was unsuccessful.

System Action:

The request is rejected.

User Action:

Determine the cause of the failure in the security system, and retry.

DD0056

USERID P1 IS NOT AUTHORIZED FOR MDS MAINTENANCE

Reason:

Userid *P1* is not authorized to use the MDS dictionary maintenance facility. System Support Services access is required.

System Action:

The request is rejected.

User Action:

Contact the System Administrator if the function is required.

DD0057

REPLACE OPTION NOT SPECIFIED BUT IS REQUIRED

Reason:

For the CA (Convert All) option on the old MDS primary menu, the replace option must have been filled in with Y or N (YES/NO), indicating whether conversion is to replace existing converted maps or not.

System Action:

none.

User Action:

Fill in the REPLACE field.

DD0058**REPLACE OPTION MUST BE SPECIFIED AS 'Y' OR 'N'****Reason:**

The REPLACE option is used to indicate whether conversion is to replace existing asn maps, and must be Y or N.

System Action:

The request is rejected.

User Action:

Correct the field value and retry.

DD0059**~P1 CONVERTED, ~P2 NOT REPLACED, ~P3 CONVERSION FAILED, ~P4 BYPASSED.****Reason:**

This is the message returned after converting all maps. P1 is the number successfully converted. P2 is the number not converted because no replace was specified, and they existed already. P3 is the number which had errors occur during conversion. P4 is the number for which conversion was bypassed completely because the source was in error.

System Action:

none.

User Action:

Investigate which maps were in error by converting individually. Change replace option to YES if necessary.

DD0060**SOURCE MAP DATA NOT FOUND****Reason:**

For conversion, the source map wasn't found.

System Action:

none.

User Action:

Check if source map exists.

DD0061

ASN.1 MAP ALREADY EXISTS.

Reason:

The map specified couldn't be converted because the target asn.1 map already exists, and REPLACE=NO was specified.

System Action:

none.

User Action:

Change REPLACE option to Y.

DD0062

FILE ERROR ADDING ASN.1 MAP DIRECTORY RECORD.

Reason:

During conversion, a file processing error occurred trying to write one of the target ASN.1 map records.

System Action:

None.

User Action:

Ensure that OSCNTL file is open for update.

DD0063

MAP ~P1 CONVERTED.

Reason:

Message indicates conversion to ASN.1 was successful.

System Action:

none.

User Action:

none.

DD0064**FILE ERROR GETTING SOURCE MAP RECORD.****Reason:**

During conversion a file processing error occurred trying get one of the source MDS map records.

System Action:

none.

User Action:

Check that the source map exists, and is defined correctly.

DD0065**CONVERSION TO ASN.1 FAILED, OSCNTL FILE NOT OPEN FOR UPDATE.****Reason:**

Conversion of a map to ASN.1 failed because the OSCNTL file is not opened for update.

System Action:

none.

User Action:

The OSCNTL file must be opened for update during SOLVE startup. It is necessary to add the OSINP=NO JCL parm to the SOLVE startup in order to be able to define and modify maps.

DD0066**CONVERSION FAILED, CANNOT REPLACE SYSTEM MAP ~P1****Reason:**

The map specified couldn't be converted because the target asn.1 map is a reserved system map and cannot be replaced. P1 = Map name.

System Action:

none.

User Action:

Create the map under a different name.

DD0067

AUTOMATIC CONVERSION FAILED. ASN.1 SOURCE EXISTS FOR MAP.

Reason:

When an attempt to automatically convert this map was made, it was detected that ASN.1 source already exists for a map of this name, implying that the map has already been defined using SOLVE V3.0 Mapping Services.

System Action:

Conversion fails.

User Action:

To override this safety mechanism, explicitly convert the map using option C on the V2.2 MDS Data Dictionary Editor, with REPLACE=Y .

DD0081

OBJECT SERVICES CONTROL FILE IS NOT OPEN FOR UPDATE

Reason:

The Object Services Control file has been opened for input only and cannot be written to.

System Action:

The requested action is rejected.

User Action:

The SOLVE region must be restarted using the OSINP=NO start-up parameter before any actions can be used which write to this file.

DD0082

FILE P1 ERROR, ID= P2 RC= P4 FDBK= P5 KEY= P3

Reason:

An error occurred while processing an VSAM file. If RC=16 then a message was written to the activity log. *P1* is the file action. *P2* is the file ID. *P3* is the record key. *P4* is the return code. *P5* is the feedback code.

System Action:

None.

User Action:

Determine the cause of the error from the return code and retry.

DD0083**RECORD ALREADY EXISTS - CLASS= P1 NAME= P2****Reason:**

A file add request failed because the specified record already exists on the control file.

System Action:

The request fails.

User Action:

Delete the existing record from the control file or change the name of the record to be added.

DD0084**RECORD NOT FOUND - CLASS= P1 NAME= P2****Reason:**

A file processing request failed because the specified record was not on the control file.

System Action:

The request fails.

User Action:

Correct the name or class of the record to be processed and retry.

DD0085**USER P1 NOT AUTHORIZED FOR P2 REQUEST - FILE= P3****Reason:**

A file processing request was rejected either because the user with the indicated Userid was not authorized for the request (by NCLEX01) or the file was opened for input only and an update request was made against the file.

System Action:

The request is rejected.

User Action:

If the file update is required, either close and reopen the file without the INPUT parameter, or change the authority of the user in the security exit to permit the action.

DD0086

P1 ALREADY IN USE - USER= P2

Reason:

Either the entire MIB database or the requested record was already in use by another user. *P1* is either DATABASE or RECORD.

System Action:

The request is rejected.

User Action:

Retry the action after a period of time.

DD0087

MAPPING ERROR, ID= P1 RC= P3 MAP= P4 FDBK= P5 COMP= P6 KEY= P2

Reason:

A mapping error occurred when retrieving a record from the MIB. *P1* is the file ID. *P2* is the record key. *P3* is the Mapping Services return code. *P4* is the map name. *P5* is the Mapping Services feedback code. *P6* is the map component in error (if applicable). A message was also written to the activity log.

System Action:

The request is rejected.

User Action:

Determine the cause of the error from the return and feedback codes. This type of problem can occur when the map definition in Mapping Services is missing or is not compatible with the version used to create the record.

DD0090**INVALID KEYWORD VALUE SPECIFIED, KEYWORD=~P1 VALUE=~P2****Reason:**

The Mapping Services external interface procedure received an invalid value for a keyword parameter. The keyword was P1 and the invalid value was P2 .

System Action:

The request is rejected and procedure \$DDCALL terminates.

User Action:

Correct the keyword value and retry the request.

DD0091**USERID P1 IS NOT AUTHORIZED FOR MAPPING SERVICES MAINTENANCE****Reason:**

Userid P1 is not authorized to use the Mapping Services maintenance facility.

System Action:

The request is rejected.

User Action:

Contact the System Administrator if the function is required.

DD0092**TIMEOUT WHEN READING SUBSYSTEM RESPONSE MESSAGES, ASN1COMP START FAILED****Reason:**

The ASN1COMP subsystem start request failed because invalid messages or no response has been received from commands issued.

System Action:

None.

User Action:

None.

DD0093

SUBSYSTEM IS ALREADY ACTIVE

Reason:

The ASN1COMP subsystem start request was not processed because the subsystem is already active.

System Action:

None.

User Action:

None.

DD0200

REQUIRED KEYWORD OMITTED - ~P1

Reason:

A procedure has been invoked without ALL required keywords being specified.

System Action:

Procedure ends with error message

User Action:

Re-invoke the procedure, specifying ALL required keywords.

DD0201

INVALID VALUE SPECIFIED FOR KEYWORD ~P1 - ~P2

Reason:

A procedure has been invoked with an invalid value specified for the nominated keyword.

System Action:

Procedure ends with error message

User Action:

Re-invoke the procedure, specifying correct values for all keywords.

DD0202**MAPPING ERROR. MDO=~P1 MAP=~P2 RETCODE=~P3 FDBK=~P4****Reason:**

An error was detected while assigning a MAP to an MDO. The names of the MDO and the MAP are supplied as well as the return code and feedback.

System Action:

Procedure ends with error message

User Action:

Correct the error and re-try

DD0310**Error: line ~LINENO - unresolved typereference ~TYPEREFERENCE****Reason:**

Error has occurred during compilation of ASN.1 module. The TYPEREFERENCE appearing in LINENO of ASN.1 source module is not a standard ASN.1 type and it has not been defined elsewhere in ASN.1 source module.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0311**Error: line ~LINENO - Only base 10 or 2 allowed for real values****Reason:**

Error has occurred during compilation of ASN.1 module. When real number is referenced in a standard form, ASN.1 allows a use of BASE 2 or BASE 10.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0312

Error: line ~LINENO - missing modulename

Reason:

Error has occurred during compilation of ASN.1 module. Module name has not been specified in ASN.1 source module.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0313

Error: line ~LINENO - invalid character string

Reason:

Error has occurred during compilation of ASN1 module. ASN1 module contains invalid character string in line LINENO.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0314

Error: line ~LINENO - invalid assignment operator

Reason:

Error has occurred during compilation of ASN1 module. ASN1 module contains invalid assignment operator in line LINENO.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0315**Error: line ~LINENO - invalid bstring or hstring****Reason:**

Error has occurred during compilation of ASN1 module. ASN1 module contains invalid binary or hex string in line LINENO.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0316**Error: line ~LINENO - duplicate name definition - ~NAME****Reason:**

Error has occurred during compilation of ASN1 module. ASN1 module contains definition of a NAME in line LINENO, that has been already defined within the current definition segment.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0317**Error: line ~LINENO - duplicate equate definition - ~NAME****Reason:**

Error has occurred during compilation of ASN1 module. ASN1 module contains definition of a NAME in line LINENO, that has been already defined within the current definition segment.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0318

Error: line ~LINENO - duplicate definition of type ~TYPE

Reason:

Error has occurred during compilation of ASN1 module. ASN1 module contains definition of a TYPE in line LINENO, that has been already defined elsewhere in the ASN1 source module.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0319

Error: line ~LINENO - string length ~LENGTH exceeds 256 bytes

Reason:

Error has occurred during compilation of ASN1 module. ASN1 module contains definition that results in a long string reference, which can not be handled by NCL.

System Action:

Load records are not generated, compile process terminates.

User Action:

Split up the definition into 2 or more smaller definitions and recompile the module.

DD0321

Error: line ~LINENO - tag clash on element ~NAME tag=~TAG

Reason:

Error has occurred during compilation of ASN1 module. ASN1 module contains definition with a Mapped Services tag TAG, that has been already used previously within current segment definition.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0322

Error: line ~LINENO - syntax error: current symbol: ~SYMBOL

Reason:

Error has occurred during compilation of ASN1 module. ASN1 module contains invalid syntax in line LINENO, near symbol SYMBOL.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0323

Error: line ~LINENO - invalid range specified

Reason:

An error has occurred during compilation of an ASN1 module. ASN1 source contains invalid range specification.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0324

Error: line ~LINENO - SIZE range exceeds 32767 limit

Reason:

An error has occurred during compilation of an ASN1 module. ASN1 source contains a SIZE constraint with range exceeding 32767 limit.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0325

Error: line ~LINENO - range does not start with 1

Reason:

An error has occurred during compilation of an ASN1 module. ASN1 source contains a SIZE constraint for SEQUENCE/SET definition with range not starting with 1.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0326

Error: line ~LINENO - FIX is valid only within a SEQUENCE

Reason:

An error has occurred during compilation of an ASN1 module. ASN1 source contains a FIX constraint within a definition that is not a SEQUENCE.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0327

Error: line ~LINENO - mapname=~MAPNAME and modulename=~MODULENAME are different

Reason:

The ASN1 source defines the map under MODULENAME, however the mapname being compiled is different from the MODULENAME.

System Action:

Compilation terminates. Load records are not generated.

User Action:

Correct MODULENAME and/or MAPNAME and recompile.

DD0328**Error: line ~LINENO - invalid integer number****Reason:**

An error has occurred during compilation of an ASN1 module. ASN1 source contains an integer number that is larger than 2,147,483,647 or smaller than -2,147,483,648.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0329**Error: line ~LINENO - invalid format for REAL type****Reason:**

An external format has been specified for REAL type definition. However the specification is not valid.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0330**Error: line ~LINENO - invalid format for INTEGER type****Reason:**

An external format has been specified for INTEGER type definition. However the specification is not valid.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0331

Error: line ~LINENO - invalid external format specified

Reason:

An external format has been incorrectly specified. The valid range for external format specification is 0 - 255.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0332

Error: line ~LINENO - range constraint is invalid for ~TYPE

Reason:

Range constraint has been specified for a type that can not have range constraint.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0333

Error: line ~LINENO - size constraint is invalid for ~TYPE

Reason:

Size constraint has been specified for a type that can not have size constraint.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0334

Error: line ~LINENO - alphabet limitation is invalid for ~TYPE

Reason:

Alphabet limitation has been specified for a type that can not have limited alphabet.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0335

Error: line ~LINENO - invalid hex number specified.

Reason:

An attempt to specify integer value in hex format has been made. However specification is not correct or integer value is too large.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0336

Error: line ~LINENO - mixed case invalid in Permitted Alphabet

Reason:

An attempt to specify character value in mixed case format within character set constraint has been made. This specification is not allowed.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0337

Error: line ~LINENO - NULL string is invalid

Reason:

An attempt to specify null string in quotes has been made. This is invalid specification.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0338

Error: line ~LINENO - exported type ~TYPE is imported

Reason:

ASN.1 source contains EXPORT statement for the imported type.

System Action:

Load records are not generated, compile process terminates.

User Action:

Correct the error and recompile the module.

DD0339

Error: line ~LINENO - missing END statement

Reason:

ASN.1 source module does not end with END statement.

System Action:

Load records are not generated, compile process terminates.

User Action:

Make sure there is an END statement at the end of ASN.1 source and recompile the module.

DD0361**Warning: line ~LINENO - unnamed component****Reason:**

This is a warning message. A component is defined in an ASN1 type and it is not named. If definition is a CHOICE then all components within the definition must be named, otherwise an error will occur during the loading of the map.

System Action:

Compilation continues.

User Action:

Correct ASN1 module if required and recompile.

DD0362**Warning: hyphens have been converted to underscores****Reason:**

This is a warning message. References with a hyphen appear in ASN1 source module. In order not to cause problems in NCL procedure, the hyphen is converted to underscore on compiler output.

System Action:

Compilation continues.

User Action:

Correct ASN1 module if required and recompile.

DD0363**Warning: line ~LINENO - ~STATEMENT statement not supported****Reason:**

This is a warning message. ASN1 source contains the statement STATEMENT, which is not supported by object services.

System Action:

Compilation continues, the compiler produces no output for the statement

User Action:

None.

DD0364

Warning: line ~LINENO - ~REF1 is different from ~REF2 in line ~LINEN

Reason:

This is a warning message. ASN1 source contains two references, REF1 and REF2, which are spelled syntactically the same way, however some letters in REF1 are in a different case (upper or lower) from the same letters in REF2.

System Action:

Compilation continues, REF1 and REF2 are treated as two different entities.

User Action:

None.

DD0365

Warning: underscore is used - ASN.1 source not portable

Reason:

This is a warning message. References with an underscore appears in ASN1 source module. Underscore is not supported by standard ASN.1, therefore ASN.1 source is not portable.

System Action:

Compilation continues.

User Action:

Correct ASN1 module if required and recompile.

DD0401**INVALID KEYWORD VALUE SPECIFIED, KEYWORD=~P1 VALUE=~P2****Reason:**

The maintenance procedure \$DDMD04P for Mapping Services failed because it received an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

Procedure \$DDMD04P terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

DD0402**PRESS ENTER KEY TO CONFIRM DELETE OR CANCEL KEY TO CANCEL REQUEST****Reason:**

The Mapping Services maintenance panel was displayed requesting the user to confirm the deletion of the Map Definition presented.

System Action:

None.

User Action:

Press the ENTER key to allow the deletion, or press the CANCEL key to cancel the delete request.

DD0403**INVALID COMMAND****Reason:**

An invalid command was entered in the Command field.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

DD0404

MAP DEFINITION ~P1 DELETED

Reason:

The Map Definition P1 was successfully deleted.

System Action:

None.

User Action:

None.

DD0405

MAP DEFINITION ~P1 ADDED

Reason:

The Map Definition P1 was successfully added.

System Action:

None.

User Action:

None.

DD0406

MAP DEFINITION ~P1 UPDATED

Reason:

The Map Definition P1 was successfully updated.

System Action:

None.

User Action:

None.

DD0407**DELETE CANCELLED****Reason:**

A request to delete a Map Definition was cancelled.

System Action:

None.

User Action:

None.

DD0408**ADD CANCELLED****Reason:**

A request to add a Map Definition was cancelled.

System Action:

None.

User Action:

None.

DD0409**UPDATE CANCELLED****Reason:**

A request to update a Map Definition was cancelled.

System Action:

None.

User Action:

None.

DD0410

MAP DEFINITION ~P1 NOT FOUND

Reason:

A request to modify, browse or retrieve a Map Definition failed because the definition was not found in the database. The Map Definition name requested was P1 .

System Action:

The request is rejected.

User Action:

Specify a Map Definition that was previously added to the database.

DD0411

MAP APPL ID CORRELATOR MISMATCH FOR MAP ~P1

Reason:

A request to update a Map failed because the Map Appl ID correlator specified did not match the Appl ID already defined in the Map or there is no Appl ID correlator in the specified map definition. The Map specified was P1 .

System Action:

The request is rejected.

User Action:

Use the facilities provided by the application identified in the Map Definition or use Mapping Services fullscreen facilities if the map does not belong to an application.

DD0412

USERID P1 IS NOT AUTHORIZED FOR MAPPING SERVICES MAINTENANCE

Reason:

Userid P1 is not authorized to use the Mapping Services maintenance facility.

System Action:

The request is rejected.

User Action:

Contact the System Administrator if the function is required.

DD0413**MAP IS APPLICATION PROTECTED BY ~P1, REQUEST REJECTED****Reason:**

A request to update a Map failed because the Map was generated by an application. Maps that are generated by applications are not permitted to be updated outside the context of the application. The Appl ID of the application that owns the map is P1 .

System Action:

The request is rejected.

User Action:

Use the facilities provided by the application identified in the application register with Appl ID P1 to modify the map.

DD0414**MAP ~P1 PRINTED AS PRINT REQUEST ~P2****Reason:**

The map P1 was successfully printed. The PSM print request is P2 .

System Action:

None.

User Action:

None.

DD0415

INVALID SHARED VARIABLE VALUE RECEIVED, VAR=~P1 VALUE=~P2

Reason:

The maintenance procedure \$DDMD04P for Mapping Services failed because it received an invalid variable value. The variable was P1 and the invalid value was P2 .

System Action:

Procedure \$DDMD04P terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

DD0416

LOAD MODULE NOT FOUND FOR MAP ~P1

Reason:

The load module for the map P1 was not found in the Mapping Services database. This may be because the map has not yet been compiled successfully.

System Action:

None.

User Action:

Compile the map.

DD0417

MAPPING ERROR FOR MAP=~P1 RETCODE=~P2 FDBK=~P3

Reason:

An error was detected while assigning a MAP to an MDO. The name of the the MAP is P1 and the MDO return code is P2 and the MDO feedback code is P3 .

System Action:

None.

User Action:

Correct the error and re-try.

DD0501**INVALID VALUE FOR SHARED VARIABLE, VAR=~P1 VALUE=~P2"****Reason:**

The list service procedure \$DDMD05L for Mapping Services failed because it received an invalid value for a shared variable. The variable name was P1 and its value was P2 .

System Action:

Procedure \$DDMD05L terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

DD0502**** DELETED ******Reason:**

This message replaces the line of a selection list to indicate that the Map Definition that the line represented was deleted since the list had been built.

System Action:

None.

User Action:

None.

DD0503**USERID P1 IS NOT AUTHORIZED FOR MAPPING SERVICES MAINTENANCE****Reason:**

Userid P1 is not authorized to use the Mapping Services maintenance facility.

System Action:

The request is rejected.

User Action:

Contact the System Administrator if the function is required.

DD0601

INVALID KEYWORD VALUE SPECIFIED, KEYWORD=~P1 VALUE=~P2

Reason:

The maintenance procedure \$DDCM06Z for Mapping Services failed because it received an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

Procedure \$DDCM06Z terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

DD0602**ASN.1 COMPILER ERROR - FUNCTION= P1 RETCODE= P2****Reason:**

An invalid return code was received from the ASN.1 compiler. The function requested was *P1* and the return code was *P2* . The following table indicates the possible return codes for each function and the table after that explains the return codes.

Function Possible Return Codes

OPEN 12,16,24,28

CLOSE 12,20,24

INPUT 12,16,24

other 12,24

Return Code Explanation

4 No more data to read from the compile.

8 The ASN.1 compiler detected compilation errors in the source.

12 ASN.1 Compiler subsystem not initialized. Mapping services will automatically start the ASN.1 compiler as a SOLVE subsystem.

16 GETMAIN error. The compiler was unable to obtain enough storage to satisfy the request.

20 A request other than OPEN was issued, however no previous OPEN had been issued.

24 Invalid or missing operands were passed to the compiler.

28 A duplicate request to OPEN was issued.

32 An insufficient number of parameters were specified for a READ request.

System Action:

Compile of ASN.1 source is terminated.

User Action:

Determine the cause of the error from the return code. Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

DD0603

INVALID SHARED VARIABLE VALUE RECEIVED, VAR=~P1 VALUE=~P2

Reason:

The maintenance procedure \$DDCM06Z for Mapping Services failed because it received an invalid variable value. The variable was P1 and the invalid value was P2 .

System Action:

Procedure \$DDCM06Z terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

DD0604

ERRORS DETECTED IN ASN.1 SOURCE FOR MAP ~P1

Reason:

The ASN.1 compiler was invoked to compile the source for map P1 and it detected errors.

System Action:

The request is terminated.

User Action:

Correct the errors in the source as indicated in the accompanying messages and retry the request.

DD0605**UNEXPECTED END OF COMPILER OUTPUT****Reason:**

The ASN.1 compiler was invoked to compile the source for a map. The compile was successful, however no load module records were returned.

System Action:

Procedure \$DDCM06Z terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

DD0606**WARNINGS ISSUED FOR COMPILE OF ASN.1 SOURCE FOR MAP ~P1****Reason:**

The ASN.1 compiler was invoked to compile the source for map P1 and it issued warning messages. The compile was still successfully completed and the load module saved.

System Action:

None.

User Action:

Check the warnings as indicated in the accompanying messages to ensure that the desired results have been produced.

DD0607**ASN.1 SOURCE FOR MAP ~P1 COMPILED SUCCESSFULLY****Reason:**

The ASN.1 compiler was invoked to compile the source for map P1 and it completed successfully.

System Action:

None.

User Action:

None.

DD0608

LOAD MODULE FOR MAP ~P1 NOT FOUND

Reason:

A request to retrieve or delete map load module records for the Map P1 failed because the load module records were not found in the database.

System Action:

The request is rejected.

User Action:

Specify a Map that was previously compiled.

DD0609

~P4 MDO ASSIGN ERROR RC=~P1 FDBK=~P2 VAL=~P3" COMP=~P4"

Reason:

An assign of the load module object failed with an MDO error. The return code was P1 and the feed back code was P2 . The value being assigned was P3 and it was being assigned to component P4 .

System Action:

The compile is aborted.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

DD0610

USERID P1 IS NOT AUTHORIZED FOR MAPPING SERVICES MAINTENANCE

Reason:

Userid P1 is not authorized to use the Mapping Services maintenance facility.

System Action:

The request is rejected.

User Action:

Contact the System Administrator if the function is required.

DD0701**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The maintenance procedure \$DDSM07D for Mapping Services failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure \$DDSM07D terminates.

User Action:

Contact your Systems Administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

DD0702**USERID P1 IS NOT AUTHORIZED FOR MAPPING SERVICES MAINTENANCE****Reason:**

Userid P1 is not authorized to use the Mapping Services maintenance facility.

System Action:

The request is rejected.

User Action:

Contact your Systems Administrator if this function is required.

DD0703**SOURCE FOR MAP ~P1 NOT FOUND****Reason:**

A request to retrieve a source records for the Map P1 failed because the source records were not found in the database.

System Action:

The request is rejected.

User Action:

Specify a Map that was previously compiled or had its source records added to the database.

DD0704

MAP DEFINITION P1 NOT FOUND

Reason:

A request to retrieve a Map Definition failed because the definition was not found in the database. The Map Definition name requested was *P1* .

System Action:

The request is rejected.

User Action:

Specify a Map Definition that has previously been added to the database.

DD0705

SOURCE DDNAME ~P1 NOT FOUND OR INVALID FOR MAP ~P2

Reason:

A request to retrieve the source for a Map failed because the DDNAME contained in the Map Definition (or overwritten by the request) was not found or was an invalid DDNAME. The DDNAME used was P1 and the Map was P2 .

System Action:

The request is rejected.

User Action:

Check the Map Definition for the correct DDNAME or verify that the DDNAME has been allocated and retry the request.

DD0706

SOURCE MEMBER ~P1 NOT FOUND OR INVALID FOR MAP ~P2

Reason:

A request to retrieve the source for a Map failed because the PDS member contained in the Map Definition (or overwritten by the request) was not found or was an invalid name. The member name used was P1 and the Map was P2 .

System Action:

The request is rejected.

User Action:

Check the Map Definition for the correct member name or verify that the member exists in the library allocated to the DDNAME.

DD0707**SOURCE MEMBER ~P1 IS EMPTY FOR MAP ~P2****Reason:**

A request to retrieve the source for a Map failed because the PDS member contained in the Map Definition (or overwritten by the request) was an empty member. The member name used was P1 and the Map was P2 .

System Action:

The request is rejected.

User Action:

Check the Map Definition for the correct member name or verify that the DDNAME used has the correct libraries allocated. Make sure the ASN.1 source is added to the specified member.

DD0708**SOURCE MEMBER OVERFLOW. MEMBER ~P1 MUST NOT EXCEED 9999 LINES****Reason:**

A request to retrieve the source for a Map failed because the PDS member contained too many source lines. The member name used was P1 and the Map was P2 .

System Action:

The request is rejected.

User Action:

Redefine your ASN.1 source into smaller units that include other source members.

DD0709

SOURCE SAVED FOR MAP ~P1

Reason:

The changes made to the Map P1 were saved.

System Action:

None.

User Action:

None.

DD0710

EDIT OF SOURCE CANCELLED FOR MAP ~P1

Reason:

The changes made while in the Map source editor for Map P1 were cancelled as requested.

System Action:

The changes since the last SAVE are cancelled.

User Action:

None.

DD0711

Internal queue limit overflow

Reason:

A request to retrieve the source for a map failed because the number of source lines in the PDS member exceeded the internal queue limit of 32767.

System Action:

The request fails.

User Action:

Redefine your ASN.1 source into smaller units that include other source members.

DD0801**INVALID KEYWORD VALUE SPECIFIED, KEYWORD=~P1 VALUE=~P2****Reason:**

The text editor service procedure \$DDSM08X for Mapping Services source editor failed because it received an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

Procedure \$DDSM08X terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

DD0802**SOURCE SAVED FOR MAP ~P1****Reason:**

The changes made to the Map P1 were saved.

System Action:

None.

User Action:

None.

DD0803**MAP ~P1 COPIED****Reason:**

The Map P1 was successfully copied into the edit session.

System Action:

None.

User Action:

None.

DD0901

INVALID VALUE FOR SHARED VARIABLE, VAR=~P1 VALUE=~P2"

Reason:

The list service procedure \$DDCM09L for Mapping Services failed because it received an invalid value for a shared variable. The variable name was P1 and its value was P2 .

System Action:

Procedure \$DDCM09L terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

DD0902

USERID P1 IS NOT AUTHORIZED FOR MAPPING SERVICES MAINTENANCE

Reason:

Userid P1 is not authorized to use the Mapping Services maintenance facility.

System Action:

The request is rejected.

User Action:

Contact the System Administrator if the function is required.

DD0903

INVALID LINE NUMBER ~P1

Reason:

A request to locate message line P1 failed because P1 is not numeric.

System Action:

The request is rejected.

User Action:

Specify a numeric message line number.

DD0904**THE FOLLOWING MESSAGES WERE ISSUED BY COMPILER FOR MAP
~P1****Reason:**

The map P1 was compiled and the compiler issued the messages accompanying this one.

System Action:

None.

User Action:

See the accompanying messages.

DD1001**UNSUPPORTED FIELD RECEIVED FOR EXIT, FIELD=~P1 EXIT=~P2****Reason:**

The field validation exit \$DDMD10X for Mapping Services failed because it received an invalid field name for the exit type. The field name was P1 and the exit type was P2 .

System Action:

Procedure \$DDMD10X terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

DD1002**MAP ~P1 ALREADY DEFINED****Reason:**

The map name P1 cannot be specified because a map with that name already exists.

System Action:

The panel is redisplayed and the field is set in error.

User Action:

Specify a unique map name and retry.

DD1101

INVALID KEYWORD VALUE SPECIFIED, KEYWORD=~P1 VALUE=~P2

Reason:

The maintenance procedure \$DDMD11M for Mapping Services failed because it received an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

Procedure \$DDMD11M terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

DD1102

USERID P1 IS NOT AUTHORIZED FOR MAPPING SERVICES MAINTENANCE

Reason:

Userid P1 is not authorized to use the Mapping Services maintenance facility.

System Action:

The request is rejected.

User Action:

Contact the System Administrator if the function is required.

DD1201

TRANSCATION PROTOCOL VIOLATION, RECEIVED "~P1" NOT "~P2"

Reason:

The transaction processor to retrieve a map failed because the program that invoked it violated the transactions protocol. The transaction program expected to receive P2 but in fact received P1 .

System Action:

The procedure terminates.

User Action:

Ensure that the caller adheres to the protocol and then retry the transaction.

DD1202**INVALID MAP REQUEST, COMMAND=" P1"****Reason:**

The transaction processor to retrieve map details failed as the program that invoked it passed an invalid request. The request passed a command of " *P1*" *which is not supported.*

System Action:

The procedure terminates.

User Action:

Ensure that the caller sends a valid map name to be retrieved and retry the transaction.

DD1203**SEND MAP DATA ERROR, APPC SEND RC=~P1 FDBK=~P2****Reason:**

The transaction processor to retrieve a map failed because the APPC send of a map component failed with return code P1 and feedback code P2 .

System Action:

The procedure terminates.

User Action:

Check the return code and feedback code for the appropriate action.

DD1204**MAP "~P1" NOT FOUND****Reason:**

The transaction processor to retrieve a map failed because the map was not found in the Mapping Services database. The name of the map not found was P1 .

System Action:

The request is rejected.

User Action:

Specify a Map that was previously added to the database and retry the request.

DD9001

MDO KEYWORD MUST BE SPECIFIED

Reason:

The MDO keyword must specify the name of an MDO to be dumped.

System Action:

None.

User Action:

Correct call to \$DEMDODP.

DD9002

OFFSETF KEYWORD HAS AN INVALID VALUE. MUST BE 'DEC' OR 'HEX'

Reason:

The OFFSETF (offset format) keyword must specify 'DEC' (decimal) or 'HEX' (hexadecimal). The default is 'DEC'.

System Action:

None.

User Action:

Correct call to \$DEMDODP.

DD9003

DUMP OF MDO: ~P1 USERID: ~P2 NCLID: ~P3 MAPNAME: ~P4

Reason:

The MDO P1 has been dumped by userid P2 with an NCLID of P3 . The mdo has the map P4 attached to it.

System Action:

None.

User Action:

None.

DD9004**~P1****Reason:**

This is a description of the dump.

System Action:

None.

User Action:

None.

DD9005**~P1****Reason:**

Dump with a decimal offset

System Action:

None.

User Action:

None.

DD9006**~P1****Reason:**

Dump with a hexadecimal offset

System Action:

None.

User Action:

None.

DD9007

END

Reason:

End of Dump

System Action:

None.

User Action:

None.

DFAL0501

Alert threshold value must be an unsigned integer

Reason:

Alert threshold values for high and low value alerts for attributes of type gauge, counter, and total can only be an unsigned integer.

System Action:

The alert definition is not updated.

User Action:

Correct the value field.

DFAL0502

Alert threshold value must be P1 the previous threshold value

Reason:

When defining multiple alert values, the threshold values for High Value, Above Baseline, and Below Baseline alerts must be defined in ascending order, and those for Low Value alerts must be defined in descending order.

System Action:

The alert definition is not updated.

User Action:

Correct the value field.

DFAL0503**Alert value must be provided if a severity has been specified****Reason:**

An alert severity has been provided for an alert definition, but no alert threshold value has been specified.

System Action:

The alert definition is not updated.

User Action:

Specify an alert threshold value in the Value field.

DFAL0504**Severity must be an integer between 1 and 4 inclusive****Reason:**

Alert severity values can only be an integer between 1 and 4 inclusive.

System Action:

The alert definition is not updated.

User Action:

Correct the severity field.

DFAL0505**Severity must be provided if an alert value has been specified****Reason:**

An alert value has been provided for an alert definition, but no severity has been specified.

System Action:

The alert definition is not updated.

User Action:

Specify a severity value in the Severity field.

DFAL0506

Clear alert value conflicts with an alert threshold value

Reason:

When specified, the clear alert value must be less than or equal to the lowest alert value specified for a High Value, Above Baseline alert, and Below Baseline alert or greater than or equal to the highest alert value specified for a Low Value.

System Action:

The alert definition is not updated.

User Action:

Correct the Clear Alert Value field.

DFAL0507

Only one clear alert value may be defined

Reason:

When defining a Value alert, you have the option to define a clear alert condition that is either equal to or not equal to a specific value. However, you cannot define both conditions.

System Action:

The alert definition is not updated.

User Action:

Correct the Clear Alert Value field.

DFAL0508

Position the cursor on a text field and press F11

Reason:

F11 was pressed to view the full alert text, but the cursor was not positioned over a text field.

System Action:

No text was selected so no text is displayed.

User Action:

Place the cursor on the text field you want to view and press F11.

DFAL0509**Invalid alert details - alert action has no associated threshold****Reason:**

An attempt to save the alert details failed because an alert action was defined but there was no associated threshold.

System Action:

The request to save the alert details is rejected.

User Action:

Specify an alert threshold or delete the action.

DFAL0510**Invalid alert details - alert text has no associated threshold****Reason:**

An attempt to save the alert details failed because alert text was specified but there was no associated threshold.

System Action:

The request to save the alert details is rejected.

User Action:

Specify an alert threshold, or delete the alert text.

DFAL0511**Invalid alert details - clear alert value has no associated threshold****Reason:**

An attempt to save the alert details failed because a clear alert value was specified but there was no associated threshold.

System Action:

The request to save the alert details is rejected.

User Action:

Specify an alert threshold or delete the clear alert value.

DFAL0512

Clear Alert value must be an unsigned integer

Reason:

Clear Alert value can only be an unsigned integer.

System Action:

The alert definition is not updated.

User Action:

Correct the value field.

DFAL0513

Below Baseline Alert threshold cannot exceed 100%.

Reason:

The valid range for a *Below Baseline Alert* threshold is 0-100 .

System Action:

The alert definition is not updated.

User Action:

Correct the value field.

DFAL0514

Threshold overlaps with the P1 value set for P2

Reason:

The threshold value overlaps with a range of values previously set for *P2* .
When defining alert thresholds, the *High Value* range of values should always be greater than the *Low Value* range of values.

System Action:

The alert definition is not updated.

User Action:

Correct the value field.

DFAL0515**No Alert Description to view****Reason:**

An invalid request was made to view a non-existent Alert Description.

System Action:

Request is rejected.

User Action:

None.

DFAL0516**Low Alert value must be an unsigned non-zero integer****Reason:**

Low Alert value can only be an unsigned non-zero integer.

System Action:

The alert definition is not updated.

User Action:

Correct the value field.

DFAL0517**Severity must be provided if an alert action has been set****Reason:**

An alert action has been set for an alert definition, but no severity has been specified.

System Action:

The alert definition is not updated.

User Action:

Specify a severity value in the Severity field.

DFAL0518

Invalid alert details - alert text has no associated severity

Reason:

An attempt to save the alert details failed because alert text was specified but there was no associated severity.

System Action:

The request to save the alert details is rejected.

User Action:

Specify an alert severity.

DFAL0519

Alert value cannot be the same as clear alert value

Reason:

The value specified to create an alert must not be the same as the value specified to clear the alert.

System Action:

The alert definition is not updated.

User Action:

Correct either the Alert Value field or the Clear Alert Value field.

DFAL0520

Alert value cannot be the same as another alert value

Reason:

The value specified to create an alert for an enumerated attribute must not be the same as another value.

System Action:

The alert definition is not updated.

User Action:

Correct or remove one of the duplicate alert values.

DFAL0521**Clear alert value NOT must be the same as the first alert value****Reason:**

The value for the "Clear Alert When Value is NOT" field must be the same value as that specified to create the alert. It does not make sense to say: 1.Create alert when value is X 2.Clear the alert when the value is NOT Y The two statements contradict each other. Thus the only sensible value that the field can have is the same value as that specified to create the alert.

System Action:

The alert definition is not updated.

User Action:

You can either blank out the 'Clear Alert When Value is NOT' field or change it to the same value as the alert value field.

DFAL0522**Clear alert value NOT cannot be specified if multiple alert values are****Reason:**

The value for the "Clear Alert When Value is NOT" field cannot be specified if there are multiple alert values specified. It does not make sense to say: 1. Create alert when value is X 2. Create alert when value is Y 3. Clear the alert when the value is NOT X Statement 3 contradicts statement 2. Thus you cannot have a value in the 'Clear Alert When Value is NOT' field when there is more than one alert value.

System Action:

The alert definition is not updated.

User Action:

You can either blank out the 'Clear Alert When Value is NOT' field, or you can clear all the alert values except one.

DFAM0101

ERROR LOADING PROC: P1 IN PACKAGE: P2. OML ERROR CODE: P3

Reason:

The Data Sampling framework attempted to call back an application, but an error was encountered loading the call-back package. The procedure being loaded was P1 which was in the package P2 . The OML error code was P3 . This message is written to the log.

System Action:

The associated application function is not performed.

User Action:

To determine why the application package is not loading, refer to the messages in the log. Notify the systems administrator.

DFAT0201

INVALID KEYWORD VALUE SPECIFIED, P1= P2

Reason:

The call to the procedure failed because the keyword identified by *P1* had an invalid value identified by *P2* .

System Action:

The request is rejected.

User Action:

Contact your system administrator.

DFAT0202

'Name' CONTAINS EMBEDDED BLANKS

Reason:

The field highlighted in the error is not a valid monitor group name.

System Action:

The request is rejected.

User Action:

Correct the name to remove embedded blanks.

DFAT0203**'Description' IS A REQUIRED FIELD****Reason:**

A monitor group description has not been entered.

System Action:

The group is not updated nor added.

User Action:

Specify a group description.

DFAT0204**'Collection Status' IS NOT ONE OF Active, Inactive****Reason:**

The Collection Status field is not set to a valid value.

System Action:

The group is not updated nor added.

User Action:

Correct the Collection Status field.

DFAT0205

'Send to ReportCenter' must be either Yes or No.

Reason:

The 'Send to ReportCenter' field must be set to a valid value. If ReportCenter is not enabled in this region, the only valid value is 'No'.

System Action:

Definition cannot be saved.

User Action:

Correct the 'Send to ReportCenter' field. Valid values are:

No - Do not send any data to ReportCenter. This is the default value. If ReportCenter is not enabled in this NetMaster region, leave this value set to 'No'.

Yes - Send data to ReportCenter.

A value of 'Yes' specifies that you want hourly summaries of all monitored IP Node attributes for this group to be sent to ReportCenter.

Hourly data summaries will be queued to this region's Data Warehouse Service for delivery to ReportCenter, which adds the data into its SQL database.

You can then use ReportCenter to generate a variety of web-based graphical reports from this data.

Web reports may be run on demand, or scheduled for regular generation.

DFAT0206

MONITOR GROUP P1 UPDATED OR ADDED

Reason:

The monitor group definition *P1* has been saved to the IPFILE.

System Action:

The monitoring activities for the associated nodes are updated.

User Action:

None.

DFAT0207**FUNCTION CANCELLED****Reason:**

The CANCEL command was used to terminate the action.

System Action:

None.

User Action:

None.

DFAT0208**MONITOR GROUP P1 ALREADY EXISTS****Reason:**

The monitor group definition *P1* is already defined.

System Action:

The ADD operation is prevented.

User Action:

Change the monitor group name to be a unique value.

DFAT0209**No activities defined - use F4=Add to define monitoring activities.****Reason:**

The monitor group is new or does not contain any activities.

System Action:

None.

User Action:

Use F4=Add to add monitoring activities to the group definition.

DFAT0210

ReportCenter is not enabled on this region

Reason:

An attempt was made to set the Send to ReportCenter field to YES, but the ReportCenter feature is not enabled in this region.

System Action:

The group is neither updated nor added.

User Action:

When the ReportCenter feature is not enabled on a region, the only valid value for this field is NO.

ReportCenter is an optional and non-chargeable feature of many CA NetMaster products, including CA NetMaster NM for TCP/IP and CA NetMaster FTM.

ReportCenter stores performance data collected by various monitors in a z/OS SQL database. You can then use its web interface to generate web-based graphical reports from this data.

These web reports can be run on demand or scheduled for regular generation. A variety of historical and trend reports are provided. Report output consists of HTML and graphic files stored as standard HFS files.

ReportCenter can be enabled on any region that is licensed for one of its supporting products.

Enabling ReportCenter involves these steps:

- Mainframe SQL Database setup, which is usually done by your DBA.
- Implementation of the ReportCenter Java Task.
This z/OS Java application runs in the z/OS UNIX System Services environment and provides services including SQL database access and report generation.
- Inclusion of the Reporter component in a region, which is done by the Install Utility Setup function.
- Updating and actioning the REPORTCENTER parameter group.

Note: For more information, see the *Installation Guide* and also the *ReportCenter Guide*.

Even without ReportCenter enabled, you can see an example of a report at the following URL:

<http://?your-host-and-port/public/reports/example1/report.html>

?your-host-and-port specifies the IP name/address and port of the WebCenter web server on this region (for example, 192.168.66.44:8744).

The WebCenter URL appears on the Primary Menu. You can also use OCS command SELFTEST to display it.

DFAT0211**MONITOR GROUP P1 NOT SAVED, NO CHANGES MADE****Reason:**

You tried to file the Monitor Group identified by *P1* which has not been changed. The requested action is not performed.

System Action:

The definition is not saved again.

User Action:

None.

DFAT0212**'Name' is a required field****Reason:**

A monitor group name has not been entered.

System Action:

The group is not added.

User Action:

Specify a group name.

DFAT0213**'Monitor Rate' must be numeric between P1 - P2****Reason:**

The value specified must numeric and fall in the range specified.

System Action:

The value is rejected.

User Action:

Specify a value within the range.

DFAT0214

New qualified alert added to monitoring definition

Reason:

A new qualified alert is saved in the database.

System Action:

The monitoring activities for the associated nodes are updated.

User Action:

None.

DFAT0215

Selected attribute not present in current monitoring definition

Reason:

A request to update the alert details for a selected attribute has failed because the attribute is not in the current monitoring definition for this resource. This can occur when an attribute was removed manually from the monitoring definition and the history report reflects the sampled data prior to removal. This condition can also occur for resource classes that have special internal attributes that are always present regardless of the monitor definition.

System Action:

The request is rejected.

User Action:

To restore an attribute that has been removed, exit the Performance Display panel, issue the *UM* line command for the resource, and add the desired attribute. You cannot specify alerts for special internal attributes.

DFAT0216**ReportCenter Data Feed not configured on this region****Reason:**

An attempt was made to set the 'Send to ReportCenter' field to 'Yes', but the ReportCenter Data Feed parameter group was not configured correctly on this NetMaster region.

System Action:

The group is not updated nor added.

User Action:

Review parameter group '\$WR REPORTDATA' via the 'Customizer : Parameter Groups' panel (/PARMS) and ensure that all required fields are specified correctly.

DFAT0301**No attribute selected****Reason:**

No selection was made from the attribute selection list.

System Action:

None.

User Action:

None.

DFAT0302**Invalid keyword value specified, P1= P2****Reason:**

The call to the procedure failed because the keyword identified by *P1* has an invalid value identified by *P2* .

System Action:

The request is rejected.

User Action:

Contact your system administrator.

DFAT0303

No selectable attributes

Reason:

A request to add attributes has failed because all available attributes have already been selected for monitoring.

System Action:

None.

User Action:

None.

DFAT0401

Baseline Type must be either Daily, DayOfWeek or HourOfDay

Reason:

An invalid value for Baseline Type has been specified. It must be either Daily, DayOfWeek, or HourOfDay.

System Action:

The attribute definition is not updated.

User Action:

Specify a valid Baseline Type.

DFAT0402

Baseline Type must be specified

Reason:

Alerting details have been defined for Baseline alerting, but no baseline has been specified.

System Action:

The attribute definition is not updated.

User Action:

You must specify a valid Baseline Type if you want to alert against baselines.

DFAT0403**Rate must be an integer value between 5 and 60 inclusive****Reason:**

An invalid value for the monitoring rate has been specified. The rate value specifies the monitoring interval in minutes and it must be at least 5 and not greater than 60 minutes.

System Action:

The attribute definition is not updated.

User Action:

Specify a valid Rate value.

DFAT0407**FUNCTION CANCELED****Reason:**

The CANCEL command was used to terminate the action.

System Action:

None.

User Action:

None.

DFAT0408**Application P1 not defined****Reason:**

The application ID *P1* is not defined to the Data Sampling framework.

System Action:

The Data Sampling action is terminated.

User Action:

Report the error to Technical Support.

DFAT0409

No alert threshold(s) defined

Reason:

A request to update a list of *Alert Automated Actions* has failed because the selected alert does not specify any threshold(s).

System Action:

The request is rejected.

User Action:

Update the selected alert and specify an alert threshold before defining an action.

DFAT0410

No alert actions to clear

Reason:

A request to *Clear Actions* has failed because the selected alert has no associated actions.

System Action:

The request is rejected.

User Action:

None.

DFAT0411

No alert threshold(s) to reset

Reason:

A request to *Reset Alert* has failed because the selected alert has no threshold(s) defined.

System Action:

The request is rejected.

User Action:

None.

DFAT0412**Baseline Alert Type thresholds must be specified****Reason:**

A *Baseline Type* has been specified, but no Baseline Alert Type threshold (*Above/Below Baseline*) has been defined.

System Action:

The attribute definition is not updated.

User Action:

You must specify a Baseline Alert Type threshold or if not required, clear the *Baseline Type* field.

DFAT0413**No alert actions to display****Reason:**

A request to display a list of Alert Automation Actions has failed because none have been defined.

System Action:

The request is rejected.

User Action:

None.

DFAT0415**No known qualifiers found for attribute P1****Reason:**

A request was made to view a list of known qualifiers for a qualified attribute, but nothing was found.

System Action:

None.

User Action:

Try again after monitoring has been in progress for this class-resource-attribute-qualifier combination for at least one hour.

DFAT0417

The rate field has been cleared for a qualified attribute.

Reason:

A qualifier has been specified for an attribute and the corresponding rate field has been cleared. Qualified attributes are only used to contain information that is necessary to generate alerts based on a qualifier. They do not require the rate field.

System Action:

The rate field is cleared. When issued from the Alert Control Details panel, the rate field also becomes unavailable for update.

User Action:

None.

DFAT0418

Qualifier already in use as an alert criteria for this resource

Reason:

A selected or supplied qualifier is already in use as an alert criteria for this resource.

System Action:

Qualifier is highlighted in error.

User Action:

Supply another qualifier or consider using the qualifier that is already defined as an alert criteria.

DFAT0419**Maximum internal buffer size exceeded - too many qualifiers****Reason:**

A request to define a new alert qualifier has exceeded the maximum internal buffer size of 64 KB.

System Action:

Request is rejected and the qualifier is highlighted in error.

User Action:

Consider removing or reusing alert qualifiers that are already defined for this resource.

DFAT0601**Baseline data is not currently available P1 P2 P3****Reason:**

A request was made to view the baseline data for a specific class- resource- attribute- qualifier combination, but no baseline data exists in storage.

- The resource may not have been monitored for long enough for any baseline data to be collected
- The baseline data may not yet have been loaded from disk to storage

System Action:

The baseline values display is not presented.

User Action:

Try again after monitoring has been in progress for this class-resource- attribute-qualifier combination for at least one hour.

DFAT0602

P1 qualifiers found for attribute P2

Reason:

A request was made to view the baseline data for a qualified attribute without specifying a qualifier. In this case, a list of all known qualified attributes is returned.

System Action:

The baseline display shows a list of qualified baseline data.

User Action:

Select the qualifier that you want to view.

DFCALL01

ERROR LOADING PROC: P1 IN PACKAGE: P2. OML ERROR CODE: P3

Reason:

The Data Sampling framework attempted to call back an application, but an error was encountered loading the call-back package. The procedure being loaded was P1 which was in the package P2 . The OML error code was P3 . This message is written to the log.

System Action:

The associated application function is not performed.

User Action:

To determine why the application package is not loading, refer to the messages in the log. Notify the systems administrator.

DFCALL02

FUNCTION P1 CANCELLED

Reason:

The CANCEL command was used to terminate an update. *P1* was the function name.

System Action:

None.

User Action:

None.

DFCALL03**FUNCTION P1 FOR P2 FAILED, REASON= P3****Reason:**

The Data Sampling action indicated by *P1* failed due to one of the following:
APPLICATION ID 'applid' INVALID - The application is not recognized.
EVERY COMMAND NOT ACCEPTED - Refer to the activity log.

System Action:

None

User Action:

Notify your systems administrator.

DFCALL04**OPERAND P1 HAS AN INVALID VALUE ' P2'****Reason:**

A call to the Data Sampling framework omitted an operand or incorrectly specified a value for the keyword *P1* .

System Action:

None.

User Action:

Correct the keyword value and retry the operation.

DFCALL05**ACTIVITY NUMBER P1, TYPE P2 STOPPED FOR P3****Reason:**

The specified Data Collection activity has been stopped for the resource *P3* .

System Action:

The scheduled activity is stopped.

User Action:

None.

DFCALL06

ALL ACTIVITIES FOR P1 P2 STOPPED

Reason:

All data collection activities have been stopped for type *P1* resource *P2*

System Action:

All scheduled activities for the resource are stopped.

User Action:

None.

DFCALL07

ACTIVITY NUMBER P1 FOR P2 NOT ACTIVE

Reason:

A call to the Data Sampling framework to stop an activity for the resource *P2* failed because the activity is not scheduled.

System Action:

None.

User Action:

None.

DFCALL08

ACTIVITY P1 FOR P2, TIMER PURGE FAILED

Reason:

A call to the Data Sampling framework to stop an activity failed because the PURGE TIMER command returned an unexpected response.

System Action:

None.

User Action:

Notify your system administrator.

DFCALL09**P1 REQUEST FAILED. ATTRIBUTE P2 HAS AN INVALID VALUE OF ' P3'****Reason:**

The request of type P1 to \$DFCALL failed because the attribute P2 had an invalid value of P3 .

System Action:

None.

User Action:

Contact the system administrator.

DFCALL10**FATAL VARTABLE ERROR - ID: P1 FUNC: P2 FDBK: P3****Reason:**

An error occurred while manipulating an NCL VARTABLE in the procedure \$DFCALL. *P1* is the vartable identifier, *P2* is the function being performed and *P3* is the feedback code set by the vartable verb.

System Action:

None.

User Action:

Notify your systems administrator.

DFCALL11**Collection for P1 resource P2 started****Reason:**

Data Collection activities have been started for a resource. *P1* is a description of the data collection application *P2* is the name of the resource

System Action:

None.

User Action:

None.

DFCALL12

ACTIVITY SCHEDULE FOR RESOURCE P1 CLASS P2 NOT FOUND

Reason:

Scheduled data collection for the resource *P1* failed because the \$DFREGISTRY variable does not contain the activity schedule.

System Action:

None.

User Action:

Notify your systems administrator.

DFCALL13

ATTRIBUTE P1 NOT IN HISTORY SAMPLE.

Reason:

A request to present the statistics for the attribute *P1* failed because the attribute was not present in the history sample.

System Action:

Processing terminates.

User Action:

Check that sampling is activate for the resource. It may be that statistics have not yet been gathered because the sampling interval has not expired.

DFCALL14

ALERT CLEAR FAILED FOR RESOURCE P1, SEE PREVIOUS MESSAGE

Reason:

The Data Sampling framework attempted to clear an alert. However an error occurred, as described in the previous message.

System Action:

None.

User Action:

Refer to the help for the previous AMCALLxx message.

DFCALL15**NO ARGUMENTS ON SAMPLE COLLECT CALL****Reason:**

A call to the Sample Collect procedure of \$DFCALL did not pass any arguments or \$DFCNTRL object.

System Action:

None.

User Action:

Report the error to your system administrator.

DFCALL16**No sampling history exists****Reason:**

A request to display the sampling history for a resource has failed because no history exists.

System Action:

None

User Action:

If necessary update the resource and set monitoring to active.

DFCALL18**MAP ERROR: MAP P1, MDORC= P2, MDOFDBK= P3****Reason:**

An internal error occurred. The map *P1* experienced the error described by MDORC= *P2* and MDOFDBK= *P3* .

System Action:

The request is rejected.

User Action:

Contact your local systems administrator.

DFCALL19

Invalid gauge value ' P2' for sample P1 of P3(P4), Resource P5

Reason:

Summary processing for a gauge attribute has detected a non-numeric value.

System Action:

The value is ignored.

User Action:

Report the error to your product support representative.

DFCALL20

Collection for resource P1 to be done using updated attribute information

Reason:

The current cycle for data collection of resource P1 will use an updated attribute information.

System Action:

None.

User Action:

Scan previous RMDFAP03 log entries to determine the attribute ID.

DFCALL21

Collection for resource P1 to be recycled due to changes in the sampling definition

Reason:

The current cycle for data collection of resource P1 will be restarted to implement recent changes to the sampling definition.

System Action:

None.

User Action:

None.

DFCALL30**SUMMARY FOR RESOURCE *P1* *P2* CONTAINS *P3* SUMMARIES FROM *P4* ATTRIBUTES****Reason:**

A data sampling summary has been collated for a resource with ID *P2* and class *P1*. The summary contains *P3* entries from the *P4* attributes in the sampling history. This message is a diagnostic used for determining data sampling activity.

System Action:

A sample summary event is generated if recording level for the resource is not NONE.

User Action:

Refer to your product support representative.

DFCALL31**SAMPLE FOR RESOURCE *P1* *P2* CONTAINS *P3* SAMPLES FOR *P4* ATTRIBUTES****Reason:**

A data sampling sample has been collected for a resource with ID *P2* and class *P1*. The sample contains *P3* entries from the *P4* attributes in the sampling history. This message is a diagnostic used for determining data sampling activity.

System Action:

A sample detail event is generated if recording level for the resource is DETAIL.

User Action:

Refer to your product support representative.

DFCALL32

P1 REQUEST FAILED. ATTRIBUTE ID P2 IS INVALID

Reason:

The request of type *P1* to \$DFCALL failed because the attribute ID is either null or has a length greater than 20 bytes.

System Action:

Processing continues.

User Action:

Contact the system administrator.

DFCALL33

Failed registration for attribute P1 using the application P2

Reason:

The attribute *P1* failed registration because an identical attribute is already registered with an application different from *P2* .

System Action:

Registration is ignored and an error message is written to the log.

User Action:

Notify your systems administrator.

DFCALL34

P1 for P2 failed: No attributes in resource definition

Reason:

The Data Sampling action indicated by *P1* failed because no attributes were selected in the monitoring definition for resource *P2* .

System Action:

No sample is taken.

User Action:

Review the definition of the affected resource and, if required, select at least 1 attribute from the Monitoring Definition panel. If monitoring is not desired, set the 'Monitoring Activity' field to INACTIVE in the 'General Description' panel.

DFCV0001**Condition monitor initialization in progress****Reason:**

The condition monitor is still being initialized.

System Action:

No conditions are displayed.

User Action:

None.

The monitor will refresh when initialization has completed.

DFCV0002**Conditions not available for *p1*****Reason:**

The conditions for *P1* were not available at the time the display was being generated.

System Action:

No conditions are displayed.

User Action:

Try again later.

DFCV0003**Sample details not available****Reason:**

The sample details are not available for the selected condition. This may be because the resource is not active and sampling cannot be done, or monitoring has not yet started for the condition.

System Action:

None.

User Action:

Try again later. If the resource is inactive, then ensure that it is started before trying again.

DFCV0004

Invalid VIEWCOND command options: *P1*

Reason:

The parameter passed to the VIEW command is invalid. The passed parameter is P1.

System Action:

Command rejected.

User Action:

Enter a valid parameter for the VIEWCOND command. The syntax for the command is:

VIEWCOND [ALL | NOTOK]

If no parameters are specified then the view is toggled between ALL and NOTOK. You can abbreviate the view keywords to the smallest number of characters to make them unique.

The ALL view (default) will show all the conditions sorted in logical order of importance.

The NOTOK view shows conditions sorted by status. Problem conditions first then warning conditions and lastly OK conditions, which are grouped and collapsed under a heading at the bottom of the list.

Examples:

1. Toggle the view: VIEWCOND
2. View by NOTOK status: VIEWCOND NOTOK
3. View all conditions: VIEWCOND ALL

DFCV0005

Condition summary view changed to: *P1*

Reason:

A request to change the view of the condition summary completed successfully. The new view settings are P1.

System Action:

None.

User Action:

None.

DFCV0006**Conditions not accessible for *p1*****Reason:**

The conditions for region *P1* were not accessible at the time the display was being generated. This may be because the region is not currently executing or there is a communications link problem between *P1* and this region.

System Action:

No conditions are displayed.

User Action:

Try again later.

DFCVPKG01**Recursive condition definitions encountered! Cond ID="*p1*"****Reason:**

The initialization of the condition monitor failed because the definitions of conditions were recursive.

System Action:

Initialization of the condition monitor is terminated.

User Action:

Contact Technical Support.

DFCVPKG02

Not monitored

Reason:

The condition is not being monitored because of one of the following reasons:

The underlying performance attribute is not being monitored.

The resource's monitoring definition does not include the performance data attribute that this condition is based on.

The resource is not active.

For example, an address space or stack is not running.

Monitoring Activity is not set active.

The Monitoring Activity parameter of the resource is set to INACTIVE or OFF. This may be set in the resource definition or set dynamically by a monitoring map.

SNMP functions are not available.

Many condition attributes come from SNMP. SNMP may be inactive or incorrectly configured for the z/OS stack.

System Action:

The condition is shown as not monitored.

User Action:

The underlying performance attribute is not being monitored.

To get the name of the attribute that needs to be monitored, enter **I** or **H** next to the condition.

To add this attribute to the monitoring definition for this resource, enter **E** next to the condition.

After this attribute has been monitored for a while and you have an idea of its likely values, you can use the UA action to set alert criteria and warning/problem limits for the condition.

For more information about condition actions and limits, use the IP Condition Summary online help.

The resource is not active.

Start the address space or stack. Consider placing this under the control of operations automation.

Monitoring Activity is not set active.

To make the condition available, do *one* of the following:

- Update the resource definition (shortcut */RADMIN*), and set Monitoring Activity to ACTIVE.
- Change the monitoring map to keep monitoring active.

SNMP functions are not available.

Check that the z/OS TCP/IP SNMP agent is active on this system.

Ensure that the SNMP agent has been set up correctly.

For more information, see topics related to SNMP agent in the *CA NetMaster Network Management for TCP/IP Installation Guide*.

DFCVPKG03**Not available****Reason:**

The condition's value is currently not available. The sample returned from the sampling infrastructure is null and cannot be plotted on a graph.

System Action:

The condition is shown as not available.

User Action:

None.

DFCVPKG04**Sampling error****Reason:**

The condition's value is currently not available due to a sampling error in the sampling infrastructure.

System Action:

The condition is shown as sampling error.

User Action:

Enter **H** next to the condition to get help on the specific error encountered with the sampling infrastructure.

DFCVPKG05

Pending

Reason:

The condition's value is currently not available because there are too few samples. There needs to be at least two samples for certain types of attributes.

1. The first sample provides a starting point.
2. Subsequent samples are used to determine the amount of change since the previous sample was taken.
3. The amount of change is used to determine the rate of change, which is then plotted on a graph.

System Action:

The condition is shown as pending.

User Action:

None.

A subsequent sample will be taken in due course, and the determined rate of change will be plotted.

DFCVPKG06

Condition DB integrity error on ID="P1"

Reason:

The condition monitor failed to find a mandatory record in the database. The missing condition is *P1*.

System Action:

Processing is terminated.

User Action:

Contact Technical Support.

DFCVPKG07**No stacks monitored****Reason:**

No stacks are being monitored for this system because of the following possible reasons:

- The defined stacks have monitoring activity INACTIVE or OFF.
- The defined stacks have IP, TCP, and UDP monitoring turned off.
- The IP, TCP, and UDP monitoring has excluded the required attributes needed for monitoring the stack conditions.

System Action:

No stack related conditions are shown.

User Action:

If no stacks are defined, define them.

If stacks are defined, turn on monitoring for them.

DFCVPKG08**No stack interfaces monitored****Reason:**

No stack interfaces are being monitored for this system because of the following possible reasons:

- No stack resources are defined.
- The defined stacks have monitoring activity INACTIVE or OFF.
- The defined stacks have interface monitoring turned off.
- Interface monitoring has excluded the required attributes needed to monitor the interface conditions.

System Action:

No stack interface related conditions are shown.

User Action:

If no stacks are defined, define them.

If stacks are defined, turn on monitoring for the stack interfaces.

DFCVPKG09

No ports monitored (by number)

Reason:

No ports are being monitored for this system because of the following possible reasons:

- No stack or address space resources are defined.
- The defined stacks or address spaces have monitoring activity INACTIVE or OFF.
- The defined stacks or address spaces have port monitoring turned off.
- The monitored ports or address spaces have excluded the required attributes needed to monitor the ports.

System Action:

No port related conditions are shown.

User Action:

If no stacks or address spaces are defined, define them.

If stacks and address spaces are defined, turn on monitoring for them.

DFCVPKG10

No ports monitored (by address space)

Reason:

No ports are being monitored for this system by address space because of the following possible reasons:

- No stack or address space resources are defined.
- The defined stacks or address spaces have monitoring activity INACTIVE or OFF.
- The defined stacks or address spaces have port monitoring turned off.
- The stacks or address spaces monitored have excluded the required attributes needed to monitor the ports.

System Action:

No port related conditions are shown.

User Action:

If no stacks or address spaces are defined, define them.

If stacks and address spaces are defined, turn on monitoring for them.

DFCVPKG11***P1* is not monitored****Reason:**

The resource of type *P1* is not being monitored for this system for one of the following possible reasons:

- The *P1* resource has not been defined for this system.
- The defined resource has monitoring activity set to INACTIVE or OFF.

System Action:

None of the conditions for this resource are shown.

User Action:

If the *P1* resource has not been defined, define it.

If defined, turn on monitoring by entering *U* beside the condition and selecting the first panel from the Panel Display List. Ensure that the Monitoring Activity field is set to ACTIVE and press F3.

DFDB0001**Baseline deleted by *P1* for *P2* *P3* *P4* *P5*****Reason:**

The user *P1* deleted the baseline sampling statistics for class *P2* and resource *P3* . If *P4* is present, it indicates that only the statistics for attribute ID *P4* were deleted; if *P5* is present, only the statistics for qualifier *P5* of attribute *P4* were deleted.

System Action:

None.

User Action:

None.

DFDB0002

No attributes with baselines for resource P1 P2

Reason:

A request to display a list of attributes with baselines for a resource cannot be performed because the resource does not have any attributes that have baselines. This may be because another user has deleted the baselines. The resource class is *P1* and the name is *P2*.

System Action:

None.

User Action:

None.

DFDBPKG01

No performance history exists for P1

Reason:

A request to display the performance history for a resource has failed because no history exists.

System Action:

None.

User Action:

If necessary, update the resource and set monitoring to active.

DFDBPKG02

View P1 does not exist

Reason:

A request to display the sampling history for a resource using the view *P1* failed because the view does not exist.

System Action:

None.

User Action:

Create the view before issuing the request.

DFDBPKG03

P1 on P2 failed: MSG=P6 RC=P3 ERR=P4 KEY=P5.

Reason:

A request to the Data Framework database failed. The failed action is *P1* and the file ID is *P2*. *P3* is the file return code, *P4* is the file error code, *P5* is the key (only present for some actions) and *P6* is an optional error message.

System Action:

Processing terminates.

User Action:

Check the file error code in the VSAM Macro Return and Reason Codes section of the *DFSMS Macro Instructions for Data Sets* SC26-7408-01 manual.

If the reason indicates a macro error, contact Technical Support.

DFDBPKG04

Invalid DF attribute found in DB. KEY= P1 MSG= P2

Reason:

An attribute read from the DF database is invalid. *P1* is the key of the record in error and *P2* is the error message indicating the error.

System Action:

The attribute data that may have been saved on the database is ignored.

User Action:

Contact Technical Support.

DFDBPKG05

DFDB cleanup processing started

Reason:

The Data Framework database cleanup process searches the performance statistics database and deletes all unreferenced baseline data older than 70 days. This data represents baseline performance metrics for attributes that are no longer being sampled and hence no longer provide value. This helps to keep the database size under control.

This message indicates that the cleanup process has started.

System Action:

The cleanup process removes unreferenced attributes.

User Action:

None.

DFDBPKG06

DFDB cleanup processing completed, P1 attributes removed

Reason:

The Data Framework database cleanup process searches the performance statistics database and deletes all unreferenced baseline data older than 70 days. This data represents baseline performance metrics for attributes that are no longer being sampled and hence no longer provide value. This helps to keep the database size under control. This message indicates that this process has completed and that *P1* attributes were removed from the database.

System Action:

None.

User Action:

None.

DFDBPKG07**MSDB file full or unable to allocate additional extents.****Reason:**

Data sampling is unable to add or update baseline data in the MSDB file. The file is full or unable to expand to an additional extent due to a lack of DASD space.

System Action:

Attempts to add or update baseline records fail. Details of each failure appear in the activity log (see message DFDBPKG03).

User Action:

If the file is full, you must increase its size.

To recover from a file-full condition

1. Stop the region.
2. Define a new and larger VSAM cluster.
3. Use REPRO to save the old file records in the new file.
4. Rename the new and old files.
5. Restart the region.

DFDBPKG08**Resource *P1(&P2)* not found.****Reason:**

The resource identified by class *P1* and name *P2* was not found in the data framework sampling database. This may be because the resource is not defined or it is defined and has had its monitoring activity turned off.

System Action:

Processing terminates.

User Action:

The resource can be added or have its monitoring activity turned on via the /RADMIN menu.

DFDBPKG09

p1 p2 p3 p4* migrated to *p5* from *p6

Reason:

The baseline for the indicated attribute is migrated to the *p5* file from the *p6* file.

p1 is the resource class.

p2 is the resource name.

p3 is the attribute ID.

p4 (optional) is an attribute qualifier.

System Action:

Processing continues.

User Action:

None.

DFDBPKG10

Migration to *p1* from *p2* completed with *p3* errors and *p4* warnings.

Reason:

The migration of attribute baselines to the *p1* file from the *p2* file is complete. During the migration process, there were *p3* errors and *p4* warnings.

System Action:

Processing continues.

User Action:

If there are errors, check and review other messages for more details of the process, and for details of the errors that occurred.

DFDBPKG11***p1* baseline attributes found on file *p2*****Reason:**

During the migration process, *p1* baseline attributes were found in the *p2* file.

System Action:

Processing continues.

User Action:

For more details on the baseline migration process, check the other messages prefixed with DFDBPKG.

DFDBPKG12***p1* existing baseline records deleted from file *p2* before migration.****Reason:**

Before the start of migration, *p1* baseline records were deleted from the *p2* file.

System Action:

Processing continues.

User Action:

For more details on the baseline migration process, check the other messages prefixed with DFDBPKG.

DFDBPKG13**Baseline record missing from file *p1* key=*p2*****Reason:**

A baseline cannot be retrieved from the *p1* file because an expected record with the *p2* key was not found. The baseline for the attribute cannot be recovered and is ignored.

System Action:

Processing continues.

User Action:

None.

DFDBPKG14

***p1* baselines written as *p2* records to *p3* (LRECL min=*p4* avg=*p5* max=*p6*, total bytes *p7*)**

Reason:

There were *p1* attribute baselines converted and saved as *p2* records in the *p3* file.

p4 is the minimum record length.

p5 is the average length.

p6 is the maximum length.

p7 is the total of number of bytes.

System Action:

Processing continues.

User Action:

None.

DFDBPKG15

***p1* baseline records deleted from file *p2* after migration.**

Reason:

There were *p1* baseline records deleted from the *p2* file after the migration process completed.

System Action:

Processing continues.

User Action:

For more details on the baseline migration process, see the other messages prefixed with DFDBPKG.

DFDBPKG16**Migration to *p1* from *p2* started.****Reason:**

The process of migrating sampled attribute baselines has started.

p1 identifies the file *to* which the baselines are migrated.

p2 identifies the file *from* which the baselines are migrated.

System Action:

Processing continues.

User Action:

For more details of the process and for any errors, see the other messages prefixed with DFDBPKG.

DFDBPKG17**Migration to *p1* from *p2* bypassed, baselines already exist.****Reason:**

The migration of sampled attribute baselines does not start because there are existing baselines in the output file.

p1 identifies the output file *to* which the baselines are to be migrated.

p2 identifies the input file *from* which the baselines are to be migrated.

System Action:

Processing terminates.

User Action:

If you want to force the migration to occur even though there are existing baseline records in the *P1* file, you must use the FORCE=YES parameter.

FORCE=YES allows you to migrate into a file that has existing baseline records. If the RESET=YES parameter is *also* specified, then *all* the existing baseline records will be *deleted* before the migration takes place. If you do not specify the RESET= parameter or specify RESET=NO, then existing baseline records in the *P1* file will *not* be deleted; however if an existing baseline record conflicts with a migrating record, then the migrating record will *overwrite* the existing record.

DFDBPKG18

Warning, invalid data for baseline: *p1*

Reason:

The migration process encountered a baseline record, *p1* , that is invalid and cannot be interpreted. The baseline data is ignored.

This condition can occur if baselines were not saved successfully to the VFS.

System Action:

Processing continues. The discarded baseline cannot be recovered.

User Action:

None.

DFDBPKG19

Migration to *p1* from *p2* progressing... *p3*

Reason:

During the migration process, this message appears approximately every 30 seconds to indicate the stage of the process that is being performed.

p1 identifies the file *to* which the baselines are migrated.

p2 identifies the file *from* which the baselines are migrated.

p3 indicates the current stage of the migration.

System Action:

Processing continues.

User Action:

None.

DFDBPKG20**Migration to *p1* from *p2* completed. No baselines found on file *p2*****Reason:**

The migration of sampled attribute baselines has completed and there were no existing baselines in the input file to convert and transfer to the output file.

p1 identifies the output file *to* which the baselines are to be migrated.

p2 identifies the input file *from* which the baselines are to be migrated.

System Action:

Processing terminates.

User Action:

None. If baselines were expected to exist in the file *P2* then check that the dataset specified was correct or that the baselines have not already been migrated.

DFDBPKG21**Parameter *p1* mutually exclusive to *p2*****Reason:**

The *p2* parameter cannot be specified if the *p1* parameter is already specified.

System Action:

Processing terminates.

User Action:

Specify either *p1* or *p2* but not both parameters.

DFDBPKG22**Parameter *p1* must specify a different value to *p2*****Reason:**

The value of the 2 parameter cannot be the same as the value of the *p1* parameter.

System Action:

Processing terminates.

User Action:

Specify different values for *p1* and *p2*.

DFDBPKG23

Identical input and output dataset not allowed: *p1*

Reason:

p1 is both the input and the output data set. The data sets must be different.

The input data set (or the data set containing the data you want to migrate) is specified by one of the following parameters:

FFID=

Specifies the file ID of an allocated and open input data set.

FDSN=

Specifies the name of the input data set. The command will allocate and open this data set.

The output data set (or the data set to which you want to migrate data) is specified by one of the following parameters:

TFID=

Specifies the file ID of an allocated and open output data set.

TDSN=

Specifies the name of the output data set. The command will allocate and open this data set.

Note: If the parameters are omitted, then the defaults are FFID=VFS and TFID=MSDB.

System Action:

Processing terminates.

User Action:

Specify different input and output data sets.

DFDBPKG24**Baseline migration aborted: *p1*****Reason:**

A request to migrate baselines from an old VFS file to a new MSDB file was aborted because an error was encountered while processing the command parameters. *p1* displays the error.

The correct command syntax is as follows:

```
$CAPKCAL $DFDBPKG DFDBMIGRATE { FFID=vfs_file_id |  
                                FDSN=data_set_name }  
    [ TFID=MSDB | TDSN=data_set_name ]  
    [ RESET={ NO | YES } ]  
    [ FORCE={ NO | YES } ]  
    [ CLEANUP={ NO | YES } ]
```

FFID or FDSN

Specifies the file ID or data set name of the VFS that contains the data to be migrated.

TFID or TDSN

Specifies the file ID or data set name of the MSDB file to which data is to be migrated.

Default: TFID=MSDB

RESET

Specifies whether existing baseline data is deleted from the MSDB before migration.

Default: NO

FORCE

Specifies whether to migrate the data even when the MSDB contains baseline data. If data exists for an attribute in both the VFS and the MSDB, the data in the MSDB is overwritten. That is, any data collected for that attribute in the MSDB is lost.

Default: NO

CLEANUP

Specifies whether to delete the migrated baseline data from the VFS.

Default: NO

We recommend that you submit the command to the background system user because migration can take a while and you may not want to wait for the command to complete before logging off. Use the command:

```
SUBMIT BSYS $CAPKCAL $DFDBPKG DFDBMIGRATE...
```

System Action:

Processing terminates.

User Action:

Correct the command parameters as indicated by the error message *p1*.

DFDBPKG25

Migration process ended

Reason:

The migration of baselines from an old VFS file to a new MSDB file has ended.

System Action:

Processing terminates.

User Action:

Check previously issued messages prefixed with DFDBPKG that indicated the success of the migration process.

DFDBPKG26

Error for dataset *p1*

Reason:

During the migration of baselines, an error occurred with the *p1* data set.

System Action:

Processing terminates.

User Action:

Check a message prefixed with DFDBPKG that follows this message and identifies the specific error.

DFDBPKG27**Invalid dataset characteristic: *p1*****Reason:**

During the migration of baselines, a data set error occurred. The characteristics of the data set are not compatible, and the data set cannot be used for baseline migration.

p1 identifies the specific characteristic that is not compatible.

In general, both data sets must be VSAM key-sequenced data sets. The data set from which to migrate baselines must have a key length of 36 and is a VFS from a region running a previous version. The data set to which baselines are migrated must have a key length of 132 and is a MSDB created for newer versions.

System Action:

Processing terminates.

User Action:

An earlier DFDBPKG message identifies the data set in error. Retry the command, specifying a valid VFS or MSDB data set.

DFPG0101**Baseline Type must be either Daily, DayOfWeek or HourOfDay****Reason:**

An invalid value for Baseline Type has been specified. It must be either Daily, DayOfWeek, or HourOfDay.

System Action:

The attribute definition is not updated.

User Action:

Specify a valid Baseline Type.

DFPG0102

Baseline Type must be specified

Reason:

Alerting details have been defined for Baseline alerting, but no baseline has been specified.

System Action:

The attribute definition is not updated.

User Action:

You must specify a valid Baseline Type if you want to alert against baselines.

DFPG0103

Rate must be an integer value between 5 and 60 inclusive

Reason:

An invalid value for the monitoring rate has been specified. The rate value specifies the monitoring interval in minutes and it must be at least 5 and not greater than 60 minutes.

System Action:

The attribute definition is not updated.

User Action:

Specify a valid Rate value.

DFPG0104

Packet size must be an integer value between 64 and 65519 inclusive

Reason:

An invalid value for the PING Packet size has been specified. The value sets the size of each echo request to be sent to the TCP/IP host. The default value is 256.

System Action:

The attribute definition is not updated.

User Action:

Specify a valid packet size value.

DFPG0105**Count must be an integer value between 1 and 10 inclusive****Reason:**

An invalid value for the PING Count has been specified. The value sets the number of echo requests to send to the TCP/IP host. The default value is 3.

System Action:

The attribute definition is not updated.

User Action:

Specify a valid count value.

DFPG0106**Wait must be an integer value between 1 and 10 inclusive****Reason:**

An invalid value for the PING Wait has been specified. The value sets the number of seconds to wait for a response to each echo request. The default value is 3.

System Action:

The attribute definition is not updated.

User Action:

Specify a valid Wait value.

DFPG0107**FUNCTION CANCELLED****Reason:**

The CANCEL command was used to terminate the action.

System Action:

None.

User Action:

None.

DFPG0108

Application P1 not defined

Reason:

The application ID *P1* is not defined to the Data Sampling framework.

System Action:

The Data Sampling action is terminated.

User Action:

Report the error to your technical support representative.

DFPG0109

No alert threshold(s) defined

Reason:

A request to update a list of *Alert Automated Actions* has failed because the selected alert does not specify any threshold.

System Action:

The request is rejected.

User Action:

Update the selected alert and specify an alert threshold before defining an action.

DFPG0110

No alert actions to clear

Reason:

A request to *Clear Actions* has failed because the selected alert has no associated actions.

System Action:

The request is rejected.

User Action:

None.

DFPG0111**No alert threshold(s) to reset****Reason:**

A request to *Reset Alert* has failed because the selected alert has no thresholds defined.

System Action:

The request is rejected.

User Action:

None.

DFPG0112**Baseline alert thresholds must be specified****Reason:**

A baseline type has been specified, but no alert threshold has been defined.

System Action:

The attribute definition is not updated.

User Action:

You must specify a baseline alert threshold or if not required, clear the *Baseline Type* field.

DFPG0113**No alert actions to display****Reason:**

A request to display a list of Alert Automation Actions has failed because none have been defined.

System Action:

The request is rejected.

User Action:

None.

DFPG0114

P1 qualifiers listed for attribute P2

Reason:

A request was made to view a list of known qualifiers for a qualified attribute.

System Action:

None.

User Action:

None.

DFPG0115

No known qualifiers found for attribute P1

Reason:

A request was made to view a list of known qualifiers for a qualified attribute but nothing was found.

System Action:

None.

User Action:

Try again after monitoring has been in progress for this class-resource-attribute-qualifier combination for at least 1 hour.

DFPG0116

999 out of P1 qualifiers listed for attribute P2

Reason:

A request was made to view a list of known qualifiers for a qualified attribute but only the first 999 qualifiers were shown.

System Action:

None.

User Action:

To show the full list of qualifiers clear the Qualifier field and hit PF10=Baseline. This is not an option for enumerated attributes.

DFPKG01**Sev P1 alert raised, text: P2****Reason:**

A severity *P1* alert was raised for a resource. The alert text is *P2* .

System Action:

None.

User Action:

Use the Alert Monitor (shortcut /ALERTS) to see the alert details.

DFPKG02

P1: P2 P3, P4% above P5 baseline of P6

Reason:

An Above Baseline data sample was returned for the *P2* attribute of resource *P1 P8*.

The latest sample value or rate is *P3*. This is *P4* % above the *P5* baseline of *P6*.

A baseline is a moving average of hourly summary values. This alert is raised if a *P2* sample value or hourly rate is more than *P7*% above the *P5* baseline.

A sample which is a significant percent higher than an established baseline indicates atypical activity and might signify an impending performance problem.

Note: For counter or total attributes, the sample value is converted to its equivalent hourly rate before it is compared to the baseline. For gauge attributes, the unchanged sample value is compared to the baseline.

System Action:

If an alert already exists for this attribute and resource, its elapsed time and occurrence count are incremented.

If not, a new alert is raised..

User Action:

Use the IP Resource Monitor, IP Node Monitor, or the Performance options to view the performance history of this resource.

- To see the observed values of all recent samples, use the Sample Values Graph.
- To see the equivalent hourly rates of all recent sample values, use the Sample Hourly Rates Graph.

To specify what performance attributes are sampled and when performance data alerts are raised and cleared, update the monitoring definition for this resource.

- For stack, OSA, CIP, VIPA, EE, CSM, and address space resources, use the UM command on the resource from the IP Monitor (3270 shortcut /IPMON). This controls performance monitoring for this single resource.
- For IP nodes, update their monitoring group (3270 shortcut /IPMONG). This controls performance monitoring for all IP nodes in this group.
- Where required, specify a Three Strike Alert value of YES.

DFPKG03***P1: 3x P2 P3, P4% above P5 baseline of P6*****Reason:**

An Above Baseline value was returned by each of the last three data samples of the *P2* attribute of resource *P1 P8*.

The last sample value/rate is *P3*.

This is *P4%* above the *P5* baseline of *P6*.

A baseline is a moving average of hourly summary values.

This is a "Three Strike Alert". This alert is only raised after a value exceeding the *P5* baseline by more than the specified percent of *P7%* is returned for three successive sampling intervals.

Back-to-back samples a significant percent higher than an established baseline indicate a pattern of atypical activity and might signify an impending performance problem.

Note: For counter or total attributes, the sample value is converted to its equivalent hourly rate before it is compared to the baseline. For gauge attributes, the unchanged sample value is compared to the baseline.

System Action:

If an alert already exists for this attribute and resource, its elapsed time and occurrence count are incremented. If not, a new alert is raised.

Note: For Three Strike Alerts, no action is taken for the 1st or 2nd above baseline sample. Alerting is triggered only by the 3rd consecutive above baseline sample.

User Action:

Use the IP Resource Monitor, IP Node Monitor, or the Performance options to view the performance history of this resource.

- To see the observed values of all recent samples, use the Sample Values Graph.
- To see the equivalent hourly rates of all recent sample values, use the Sample Hourly Rates Graph.

To specify what performance attributes are sampled and when performance data alerts are raised and cleared, update the monitoring definition for this resource.

- For stack, OSA, CIP, VIPA, EE, CSM, and address space resources, use the UM command on the resource from the IP Monitor (3270 shortcut /IPMON). This controls performance monitoring for this single resource.

- For IP nodes, update their monitoring group (3270 shortcut /IPMONG). This controls performance monitoring for all IP nodes in this group.

DFPKG04

P1: P2 P3, P4% below P5 baseline of P6

Reason:

A Below Baseline data sample was returned for the *P2* attribute of resource *P1 P8*.

The latest sample value or rate is *P3*.

This is *P4%* below the *P5* baseline of *P6*.

A baseline is a moving average of hourly summary values. This alert is raised if a *P2* sample value or hourly rate falls more than *P7%* below the *P5* baseline.

A sample which is a significant percent lower than an established baseline indicates atypical activity and might signify an impending performance problem.

Note: For counter or total attributes, the sample value is converted to its equivalent hourly rate before it is compared to the baseline. For gauge attributes, the unchanged sample value is compared to the baseline.

System Action:

If an alert already exists for this attribute and resource, its elapsed time and occurrence count are incremented. If not, a new alert is raised.

User Action:

Use the IP Resource Monitor, IP Node Monitor, or the Performance options to view the performance history of this resource.

- To see the observed values of all recent samples, use the Sample Values Graph.
- To see the equivalent hourly rates of all recent sample values, use the Sample Hourly Rates Graph.

To specify what performance attributes are sampled and when performance data alerts are raised and cleared, update the monitoring definition for this resource.

- For stack, OSA, CIP, VIPA, EE, CSM, and address space resources, use the UM command on the resource from the IP Monitor (3270 shortcut /IPMON). This controls performance monitoring for this single resource.
- For IP nodes, update their monitoring group (3270 shortcut /IPMONG). This controls performance monitoring for all IP nodes in this group.
- Where required, specify a Three Strike Alert value of YES.

DFPKG05

P1: 3x P2 P3, P4% below P5 baseline of P6**Reason:**

A Below Baseline value was returned by each of the last three data samples of the P2 attribute of resource P1 P8.

The last sample value/rate is P3.

This is P4% below the P5 baseline of P6.

A baseline is a moving average of hourly summary values.

This is a "Three Strike Alert". This alert is only raised after a value below the P5 baseline by more than the specified percent of P7% is returned for three successive sampling intervals.

Back-to-back samples a significant percent lower than an established baseline indicate a pattern of atypical activity and might signify an impending performance problem.

Note: For counter or total attributes, the sample value is converted to its equivalent hourly rate before it is compared to the baseline. For gauge attributes, the unchanged sample value is compared to the baseline.

System Action:

If an alert already exists for this attribute and resource, its elapsed time and occurrence count are incremented. If not, a new alert is raised.

Note: for Three Strike Alerts, no action is taken for the 1st or 2nd below baseline sample. Alerting is triggered only by the 3rd consecutive below baseline sample.

User Action:

Use the IP Resource Monitor, IP Node Monitor, or the Performance options to view the performance history of this resource.

- To see the observed values of all recent samples, use the Sample Values Graph.
- To see the equivalent hourly rates of all recent sample values, use the Sample Hourly Rates Graph.

To specify what performance attributes are sampled and when performance data alerts are raised and cleared, update the monitoring definition for this resource.

- For stack, OSA, CIP, VIPA, EE, CSM, and address space resources, use the UM command on the resource from the IP Monitor (3270 shortcut /IPMON). This controls performance monitoring for this single resource.

- For IP nodes, update their monitoring group (3270 shortcut /IPMONG). This controls performance monitoring for all IP nodes in this group.

DFPKG06

P1: P2 High, P3 > P4

Reason:

A High Value data sample was returned for the *P2* attribute of resource *P1* *P5*.

The latest sample value or rate is *P3*.

This alert is raised when a sample value or rate exceeds the specified high limit of *P4*.

A sample significantly higher than the limit may indicate unusual activity and might signify an impending performance problem.

Note: For counter or total attributes, the sample value is converted to its equivalent hourly rate before it is compared to the limit. For gauge attributes, the unchanged sample value is compared to the limit.

System Action:

If an alert already exists for this attribute and resource, its elapsed time and occurrence count are incremented. If not, a new alert is raised.

User Action:

Use the IP Resource Monitor, IP Node Monitor, or the Performance options to view the performance history of this resource.

- To see the observed values of all recent samples, use the Sample Values Graph.
- To see the equivalent hourly rates of all recent sample values, use the Sample Hourly Rates Graph.

To specify what performance attributes are sampled and when performance data alerts are raised and cleared, update the monitoring definition for this resource.

- For stack, OSA, CIP, VIPA, EE, CSM, and address space resources, use the UM command on the resource from the IP Resource Monitor (3270 shortcut /IPMON). This controls performance monitoring for this single resource.
- For IP nodes, update their monitoring group (3270 shortcut /IPMONG). This controls performance monitoring for all IP nodes in this group.
- Where required, specify a Three Strike Alert value of YES.

DFPKG07**P1: 3x P2 High, P3 > P4****Reason:**

A High Value sample above the limit of *P4* was returned by each of the last three data samples of the *P2* attribute of resource *P1 P5*.

The last sample value or rate was *P3*.

This is a "Three Strike Alert". This alert is raised only after a sample value or rate exceeding the specified high limit of *P4* has been returned for three successive sampling intervals in a row.

Back-to-back samples significantly higher than the limit may indicate a pattern of unusual activity and may signify an impending performance problem.

Note: For counter or total attributes, the sample value is converted to its equivalent hourly rate before it is compared to the limit. For gauge attributes, the unchanged sample value is compared to the limit.

System Action:

If an alert already exists for this attribute and resource, its elapsed time and occurrence count are incremented. If not, a new alert is raised.

Note: For Three Strike Alerts, no action is taken for the 1st or 2nd high sample. Alerting is triggered only by the 3rd consecutive high sample.

User Action:

Use the IP Resource Monitor, IP Node Monitor, or the Performance options to view the performance history of this resource.

- To see the observed values of all recent samples, use the Sample Values Graph.
- To see the equivalent hourly rates of all recent sample values, use the Sample Hourly Rates Graph.

To specify what performance attributes are sampled and when performance data alerts are raised and cleared, update the monitoring definition for this resource.

- For stack, OSA, CIP, VIPA, EE, CSM, and address space resources, use the UM command on the resource from the IP Resource Monitor (3270 shortcut /IPMON). This controls performance monitoring for this single resource.
- For IP nodes, update their monitoring group (3270 shortcut /IPMONG). This controls performance monitoring for all IP nodes in this group.

DFPKG08

P1: P2 Low, P3 < P4

Reason:

A Low Value data sample was returned for the *P2* attribute of resource *P1 P5*.

The latest sample value or rate is *P3*.

This alert is raised when a sample value or rate falls below the specified low limit of *P4*.

A sample significantly lower than the limit may indicate unusual activity and may signify an impending performance problem.

Note: For counter or total attributes, the sample value is converted to its equivalent hourly rate before it is compared to the limit. For gauge attributes, the unchanged sample value is compared to the limit.

System Action:

If an alert already exists for this attribute and resource, its elapsed time and occurrence count are incremented. If not, a new alert is raised.

User Action:

Use the IP Resource Monitor, IP Node Monitor, or the Performance options to view the performance history of this resource.

- To see the observed values of all recent samples, use the Sample Values Graph.
- To see the equivalent hourly rates of all recent sample values, use the Sample Hourly Rates Graph.

To specify what performance attributes are sampled and when performance data alerts are raised and cleared, update the monitoring definition for this resource.

- For stack, OSA, CIP, VIPA, EE, CSM, and address space resources, use the UM command on the resource from the IP Resource Monitor (3270 shortcut /IPMON). This controls performance monitoring for this single resource.
- For IP nodes, update their monitoring group (3270 shortcut /IPMONG). This controls performance monitoring for all IP nodes in this group.
- Where required, specify a Three Strike Alert value of YES.

DFPKG09***P1: 3x P2 Low, P3 < P4*****Reason:**

A Low Value sample below the limit of *P4* was returned by each of the last three data samples of the *P2* attribute of resource *P1 P5*.

The last sample value or rate was *P3*.

This is a "Three Strike Alert". This alert is only raised after a sample value or rate below the specified low limit of *P4* has been returned for three successive sampling intervals in a row.

Back-to-back samples significantly lower than the limit may indicate a pattern of unusual activity and may signify an impending performance problem.

Note: For counter or total attributes, the sample value is converted to its equivalent hourly rate before it is compared to the limit. For gauge attributes, the unchanged sample value is compared to the limit.

System Action:

If an alert already exists for this attribute and resource, its elapsed time and occurrence count are incremented. If not, a new alert is raised.

Note: For Three Strike Alerts, no action is taken for the 1st or 2nd low sample. Alerting is triggered only by the 3rd consecutive low sample.

User Action:

Use the IP Resource Monitor, IP Node Monitor, or the Performance options to view the performance history of this resource.

- To see the observed values of all recent samples, use the Sample Values Graph.
- To see the equivalent hourly rates of all recent sample values, use the Sample Hourly Rates Graph.

To specify what performance attributes are sampled and when performance data alerts are raised and cleared, update the monitoring definition for this resource.

- For stack, OSA, CIP, VIPA, EE, CSM, and address space resources, use the UM command on the resource from the IP Resource Monitor (3270 shortcut /IPMON). This controls performance monitoring for this single resource.
- For IP nodes, update their monitoring group (3270 shortcut /IPMONG). This controls performance monitoring for all IP nodes in this group.

DFPKG10

P1: P2 is P3

Reason:

A value of *P3* was returned by the last data sample of the *P2* attribute of resource *P1 P4*.

An alert is raised when this value is detected.

Status related enumerated attributes generally indicate whether a device is operational or in a desired state.

Device statuses may be other than normal if one of the following conditions occurs:

- A device is reporting a problem condition.
- A device has been started but has not yet completely initialized.
- A device has not been started.
- A device has been deactivated or stopped.
- A problem has occurred while accessing the device.

System Action:

If an alert already exists for this attribute and resource, its elapsed time and occurrence count are incremented. If not, a new alert is raised.

User Action:

Use the IP Resource Monitor, IP Node Monitor, or the Performance options to view the performance history of this resource.

To see the values of all recent samples, use the Sample Values Graph.

Use the IP Monitors or the Diagnostics options to look for possible problems with this resource.

To specify what performance attributes are sampled and when performance data alerts are raised and cleared, update the monitoring definition for this resource.

- For stack, OSA, CIP, VIPA, EE, CSM, and address space resources, use the UM command on the resource from the IP Monitor (3270 shortcut /IPMON). This controls performance monitoring for this single resource.
- For IP nodes, update their monitoring group (3270 shortcut /IPMONG). This controls performance monitoring for all IP nodes in this group.
- Where required, specify a Three Strike Alert value of YES.

DFPKG11**P1: 3x P2 is P3****Reason:**

A value of *P3* was returned by the last of three data samples of the *P2* attribute of resource *P1 P4*.

This is a "Three Strike Alert". This alert is raised only after the value of attribute *P2* has returned error values for three successive sampling intervals in a row. The last error value sampled was *P3*.

Status related enumerated attributes generally indicate whether a device is operational or in a desired state.

Device statuses may not be normal for the following conditions:

- A device is reporting a problem condition.
- A device has been started but has not yet completely initialized.
- A device has not been started.
- A device has been deactivated or stopped.
- A problem has occurred while accessing the device.

System Action:

If an alert already exists for this attribute and resource, its elapsed time and occurrence count are incremented. If not, a new alert is raised.

Note: For Three Strike Alerts, no action is taken for the 1st or 2nd sample with this value. Alerting is triggered only by the 3rd consecutive sample that returns the specified value.

User Action:

Use the IP Resource Monitor, IP Node Monitor, or the Performance options to view the performance history of this resource.

To see the values of all recent samples, use the Sample Values Graph.

Use the IP monitors or the Diagnostics options to look for possible problems with this resource.

To specify what performance attributes are sampled and when performance data alerts are raised and cleared, update the monitoring definition for this resource.

- For stack, OSA, CIP, VIPA, EE, CSM, and address space resources, use the UM command on the resource from the IP Resource Monitor (3270 shortcut /IPMON). This controls performance monitoring for this single resource.

- For IP nodes, update their monitoring group (3270 shortcut /IPMONG). This controls performance monitoring for all IP nodes in this group.

DFPKG13

Update is not valid for resources from a migration region

Reason:

The resource is monitored by a remote region that has been linked using migration mode. You cannot update the definition of such resources from this region.

System Action:

The action is rejected.

User Action:

Perform the action from the resource's home region or any region linked as a focal point to that home region.

DFPKG14

Update in progress by *P1*

Reason:

Another user is updating this definition.

System Action:

The request is rejected.

User Action:

Try again later.

DFPKG15

Update in progress by *P1* for group *P2*

Reason:

The user *P1* is updating the IP node monitor group *P2*.

System Action:

The request is rejected.

User Action:

Try again later.

DFPKG16**Alert details saved and will be effective next sample/period****Reason:**

The updated alert details are saved to the database. The values will be effective the next time a sample is taken. For IP conditions, the values will be reflected on the display at the next five-minute period.

System Action:

None.

User Action:

None.

DFPKG17**No changes made, record not saved****Reason:**

An attempt to save an unchanged definition was rejected.

System Action:

The definition is not saved.

User Action:

None.

DFPKG18**Monitoring for *P1* already enabled for *P2*****Reason:**

The monitoring of attribute *P1* (which may have a qualifier in parenthesis) is already enabled for resource *P2*.

System Action:

None.

User Action:

None.

The resource already has the attribute in its monitoring definition.

DFPKG19

Condition enabled and will be effective next sample/period

Reason:

The selected condition has been enabled for monitoring. The related attribute will be sampled on the next scheduled interval. The condition will be effective at the next five-minute period after the sample is taken.

System Action:

None.

User Action:

None.

DFRR0101

Unsupported call type received from \$CASL000, CALLTYPE= P1

Reason:

An unsupported CALLTYPE was requested of a selection list service procedure. The unsupported call type is *P1*.

System Action:

Processing terminates.

User Action:

Contact your local technical support representative.

DFRR0102

Option P1 is not valid on this line

Reason:

A line command was entered against a record that does not support the command. The E (expand) and C (contract) line commands can only be entered against grouping records. The S (summary) and D (detail) commands can only be entered against data records.

System Action:

The command is rejected.

User Action:

Choose a different line command.

DFRR0103

Total number of lines exceeded maximum of 9999, cannot display list.

Reason:

The list cannot be displayed because the total number of lines in the list has exceeded the maximum of 9999.

System Action:

Display of the selection list terminates.

User Action:

The maximum number of lines that can be presented is 9999. Do not expand attributes or qualifiers that cause this limit to be exceeded. It may be preferable to limit the number of attributes or qualifiers that are sampled by your monitoring application.

DFRR0104

Display refreshed. New samples will automatically cause refresh

Reason:

The sample display will be automatically refreshed when new samples are made for the resource currently displayed.

System Action:

Display has been refreshed and automatic refresh has been turned ON.

User Action:

None.

DFRR0105

Display held. New samples will NOT cause the display to refresh

Reason:

The sample display will not be automatically refreshed when new samples are made for the resource currently displayed.

System Action:

Display has been refreshed and automatic refresh has been turned OFF.

User Action:

None.

DFRR0107

Option UA is not valid for this entry

Reason:

You entered *UA* beside an entry that does not support the action. For a column heading of *Qualifier/Attribute* , the action can only be used on attributes.

System Action:

The action is rejected.

User Action:

Enter the action beside an attribute.

DFRR0108

Update in progress by P1

Reason:

Another user is updating this definition.

System Action:

The request is rejected.

User Action:

Try again later.

DFRR0109

Updated alert details saved

Reason:

The updated alert details are saved to the database.

System Action:

None.

User Action:

None.

DFRR0110**No changes made, record not saved****Reason:**

An attempt to save an unchanged definition was rejected.

System Action:

The definition is not saved.

User Action:

None.

DFRR0111**Update in progress by P1 for group P2****Reason:**

Another user is updating this definition.

System Action:

The request is rejected.

User Action:

Try again later.

DFRR0112**UA is not valid for resources from a migration region****Reason:**

The resource displayed is running on a region linked in MIGRATION mode. The UA action is not supported for these resource.

System Action:

The action is rejected.

User Action:

Issue the action from the resource's home region, or any region linked as a focal to the resource's home region.

DFRR0201

Unsupported call type received from \$CASL000, CALLTYPE= P1

Reason:

An unsupported CALLTYPE was requested of a selection list service procedure. The unsupported call type is *P1*.

System Action:

Processing terminates.

User Action:

Contact your local technical support representative.

DFRR0202

Attribute P1 not in history sample.

Reason:

A request to present the statistics for the attribute *P1* failed because the attribute was not present in the history sample.

System Action:

Processing terminates.

User Action:

Check that sampling is activated for the resource. It is possible that statistics have not yet been gathered because the sampling interval has not expired.

DFRR0203

MAXIMUM SCALE REACHED, CANNOT INCREASE SCALE FURTHER

Reason:

A request to increase the scale was rejected because the current scale is already at the maximum allowed.

System Action:

Request rejected.

User Action:

None.

DFRR0204**MINIMUM SCALE REACHED, CANNOT DECREASE SCALE FURTHER****Reason:**

A request to reduce the scale was rejected because the current scale is already at the minimum allowed.

System Action:

Request rejected.

User Action:

None.

DFRR0205**No P1 samples available yet****Reason:**

A request to display a bar chart of *P1* values failed because no samples are available yet. Summary values are available on the hour while detail values are reported on the next sampling period.

For example, if the current time is 4:30PM, the next summary value will be reported at 5.00PM while the next detail value will be reported at 4:45PM for a sampling period of 15 minutes.

System Action:

None.

User Action:

Retry till the next reporting period. Summary charts are reported on the hour while detail charts are reported on the next sampling period.

DFRR0301

UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE= P1

Reason:

An unsupported CALLTYPE was requested of a selection list service procedure. The unsupported call type is P1.

System Action:

Processing terminates.

User Action:

Contact your local technical support representative.

DFRR0302

Attribute P1 not in history sample.

Reason:

A request to present the statistics for the attribute *P1* failed because the attribute was not present in the history sample.

System Action:

Processing terminates.

User Action:

Check that sampling is activated for the resource. It is possible that statistics have not yet been gathered because the sampling interval has not expired.

DFRR0303

MAXIMUM SCALE REACHED, CANNOT INCREASE SCALE FURTHER

Reason:

A request to increase the scale was rejected because the current scale is already at the maximum allowed.

System Action:

Request rejected.

User Action:

None.

DFRR0304**MINIMUM SCALE REACHED, CANNOT DECREASE SCALE FURTHER****Reason:**

A request to reduce the scale was rejected because the current scale is already at the minimum allowed.

System Action:

Request rejected.

User Action:

None.

DFRR0305**No P1 samples available yet****Reason:**

A request to display a bar chart of *P1* values failed because no samples are available yet. Summary values are available on the hour while detail values are reported on the next sampling period. For example, if the current time is 4:30PM, the next summary value will be reported at 5:00PM while the next detail value will be reported at 4:45PM for a sampling period of 15 minutes.

System Action:

None.

User Action:

Retry till the next reporting period. Summary charts are reported on the hour while detail charts are reported on the next sampling period.

DFUI0099

This message contains performance data display trace information.

Reason:

Trace information produced by many performance data displays is written to the activity log as this message.

Usually, performance display tracing is disabled. Enable this tracing only when requested by Technical Support.

Tracing may produce a large number of trace messages and should be left enabled only as long as necessary.

Performance data displays that produce trace data include the following:

- 3270 Performance Overview
- Baseline, Samples, Hourly/Daily Summary, and Weekly Interval lists
- Some WebCenter performance pages

The format of the message varies but is frequently as follows:

- The first word of the message is always the name of the issuing procedure.
- The second or third word is usually a keyword, such as the following:

Parmdata indicates the parameter data input to the procedure.

Exitdata indicates the summary/count of the output data from the procedure.

Callrc indicates the return code from an external call made by the procedure.

Diag indicates diagnostic information for the procedure.

System Action:

Messages with ID DFUI0099 are written to the activity log.

User Action:

If requested, enable tracing and provide these messages to Technical Support. Disable tracing when enough trace messages have been produced. You can perform these tasks from an OCS window.

To enable tracing, enter the following command:

```
$glbl $dftrui 1
```

To disable tracing, enter the following command:

```
$glbl $dftrui 0
```

DFUI00L01**Action P1 is not applicable to an enumerated attribute****Reason:**

A performance history action (hours, days, weeks, or baseline values) was requested for an enumerated attribute. Performance history data is kept for numeric attributes (attribute types counter, total, gauge) only. The only action available for enumerated attributes is S (samples).

System Action:

None.

User Action:

None.

DFUI00L02**p1 could not be displayed, due to processing error****Reason:**

A run-time error was detected when processing a *P1* display. This is generally caused by unexpected data values, which may be the result of device or data sampling errors.

System Action:

None.

User Action:

Retry the action.

If the problem persists, provide your support staff with any additional error details from Activity Log message DFUI00L03.

DFUI00L03

Error details: P1 P2 P3 P4 P5 P6 P7 P8 P9 P10

Reason:

A run-time error was detected during a performance data display. This message contains all available details of the error.

System Action:

None.

User Action:

None.

DFUI00L04

Data unavailable from remote link or domain P1 P2

Reason:

A request was made to display performance data sourced from a remote NetMaster region, via link or domain name *P1* .
This is not possible because the remote region cannot be contacted. Either the region itself, or the link to it, is not active.

System Action:

None.

User Action:

None. This function is not available until the remote NetMaster region restarts, and/or the link to it recovers.

DFUI01L01**P1 performance data is not currently available P2****Reason:**

A request was made to show a Performance Overview; however, no performance history data of this type is currently available.

In most cases this is not an error. It may indicate a normal condition, such as one of the following:

- There may be no resources of this type.
- There may be resources of this type, but they are not monitored.
- There may be resources of this type monitored, but the region has not loaded the performance history data.
- There may be resources of this type monitored, but monitoring for the specific attributes displayed by the Overview may not be enabled.
- The Overview attributes may be sourced from a component that is not currently active, such as the the Packet Analyzer, SSI, or SMF.

System Action:

None.

User Action:

Ensure that all necessary resources are monitored by the IP Resource Monitor.

Ensure that performance monitoring is active for these resources (use command UM - Update Monitoring, from the IP Resource Monitor), and that all required attributes are enabled.

If this region has been active for a very short time, wait for an hour for hourly performance summarization to occur, then retry the request.

Confirm that the Packet Analyzer, SSI, and SMF interface are set up correctly and that they are active.

DFUI01L02

Performance Overviews not supported on domain *P1*

Reason:

A request was made to display Performance Overviews from domain *P1*. This is not possible because *P1* is running an earlier version of the product, which does not support this display.

System Action:

None.

User Action:

None.

This function is not available until the linked region is upgraded to r11.5 or later.

DFUI01L03

No *P1* resources are monitored *p2***Reason:**

A request was made to show a Performance Overview; however, no resources of this type are currently being monitored.

The type refers to one of the IP Monitor resource classes: STACK, ASMON, EE, APPNHPR, CIP, CSM, IPNODE, VIPA or OSA.

No *P1* resources are being monitored by this region. This is displayed when the Overview is requested from the local system. This region must be monitoring resources before they appear on any local Performance Overviews.

No *P1* resources are being monitored by region ?nmid on ?sysid is displayed when the Overview is requested from a remote system. The remote region ?nmid on system ?sysid must be monitoring resources, before they appear on any Performance Overviews from that remote link/domain.

Note: Resources of this type may appear in this region's IP Summary, even if they are not known to the IP Resource Monitor. The IP Summary gets real/near-time data from the Packet Analyzer for all resources involved in IP activity. To collect longer-term performance history data, resources must be defined to the IP Resource Monitor.

System Action:

None.

User Action:

If the system does not include any resources of this type, no action is possible or necessary.

If the system does include resources of this type, check the following:

- Are these resources being monitored by the IP Resource Monitor (or IP Node Monitor) on that system's CA NetMaster region?

IP resources are found by the auto-discovery (Express Setup), which is run the first time the region is initialized.

To add new resources to the IP Resource Monitor, you can rerun auto-discovery at any time.

To add new IP Nodes to the IP Node Monitor, add their details to the required IP Node Monitor group.

- Are performance attributes being monitored for these resources?

Use the UM command next to a resource on the IP Resource Monitor, and ensure that all attributes that you are interested in are listed.

For more information about how to set up performance monitoring, see the User Guide.

DFUI02L01

Sort column P1 P2

Reason:

A sort command was entered on a Performance Overview; however, the sort column specified is not valid.

- *Sort column 99 does not exist; it must be between 1 and N inclusive*

The integer that you specified does not indicate a valid column.

- *Sort column XX does not match the start of any column heading*

No column heading starts with the characters XX.

Sort command format:

`SORT ?sort-column ?optional-sort-direction`

?sort-column can be one of the following:

- An integer that indicates the column number.

- A character string that partially or fully matches a column heading. This string is case- insensitive. It cannot contain blanks. If it matches more than one column heading, the first one is sorted. *?optional-sort-direction* can be A (ascending) or D (descending) The default is descending for numeric columns; otherwise ascending.

System Action:

None.

User Action:

Retry the command with a correct sort column specification.

You can also press *F4 (Sort)* repeatedly, to sort on each column in turn.

DFUI02L02

Sort direction p1 is not valid, must be either a (asc) or d (desc)**Reason:**

A sort command was entered on a Performance Overview; however, the sort direction specified is not valid.

Sort command format:

`SORT ?sort-column ?optional-sort-direction`

?sort-column can be one of the following:

- An integer that indicates the column number.
- A character string that partially or fully matches a column heading. This string is case- insensitive. It cannot contain blanks. If it matches more than one column heading, the first one is sorted.

?optional-sort-direction is either *a* (ascending) or *d* (descending). If omitted, the default sort direction is used - descending for numeric columns, ascending for character columns.

A frequent reason for this error is that you have specified a sort column with embedded blanks. Column headings that appear with blanks or on multiple lines on the display should be specified without blanks, for example, TelnetB for Telnet Bytes, or TCPOpensP for TCP Opens Passive.

In general, for column headings with long unique prefixes it is easier to specify the sort column as an integer. Alternatively, use F4 (Sort).

System Action:

None.

User Action:

Retry the command with the correct sort direction. Omit the direction, to use the default. You can also press *F4 (Sort)* repeatedly, to sort on each column in turn.

DFUI02L03

Sort cmd format: Sort ?sort_column_number_or_name (?direction A|D)

Reason:

Performance Overviews are initially sorted by resource name. Use the SORT command to sort the data by any column and direction.

Sort command format:

SORT ?sort-column ?optional-sort-direction

?sort-column can be one of the following:

- An integer that indicates the column number.

- A character string that partially or fully matches a column heading. This string is case- insensitive. It cannot contain blanks. If it matches more than one column heading, the first one is sorted.

Column headings that appear with blanks or on multiple lines should be typed without blanks, for example, TelnetB for Telnet Bytes or TCPOpensP for TCP Opens Passive. In general, for column headings with long unique prefixes it is easier to type the sort column as an integer. Alternatively, use F4 (Sort).

?optional-sort-direction is either *a* (ascending) or *d* (descending). If omitted, the default sort direction is used - descending for numeric columns, ascending for character columns.

Sort Command Examples:

sort 6 a Ascending sort on 6th column

sort bytesi Descending sort on Bytes Inbound column

sort byteso a Ascending sort on Bytes Output column sort s Descending sort on the first column whose name starts with s

sort ippkts Descending sort on the first column whose name starts with IP Pkts

sort ippktsr Descending sort on column IP Pkts Received

System Action:

None.

User Action:

Enter a valid SORT command.

You can also press *F4 (Sort)* repeatedly, to sort on each column in turn.

DFUI02L04**Sorted on column P1 (P2), in P3 order****Reason:**

This Performance Overview display is sorted as requested.

P1 is the position of the sort column. *P2* is the column heading of the sort column. *P3* is the sort order, either descending or ascending.

Sort command format:

`SORT ?sort-column ?optional-sort-direction`

?sort-column can be one of the following:

- An integer that indicates the column position.
 - A character string that partially or fully matches a column heading. This string is case- insensitive. It cannot contain blanks. If it matches more than one column heading, the first one is sorted. *?optional-sort-direction* can be either A (ascending) or D (descending) The default is descending for numeric columns, otherwise ascending.
- You can also press *F4 (Sort)* repeatedly, to sort on each column in turn.

System Action:

None.

User Action:

None.

DFUI02L05**User P1 not authorized to see this P2 Performance Overview****Reason:**

User *P1* attempted to display a *P2*-related Performance Overview, but did not have the necessary authorization.

- TCP/IP-related Overviews need authorization to Network Services and TCP/IP Services.
- SNA-related Overviews need authorization to Network Services.

System Action:

None.

User Action:

Contact your security administrator.

DFUI02L06

Related Performance Overview (p1) cannot be displayed

Reason:

A request was made from a Performance Overview display to show a related workload display. *P1* is the related display type. However, the related display cannot be shown due to insufficient data.

Stack monitoring is active, but no workload samples of this type have been recorded since this region was restarted. This may be because of the following reasons:

- Stack monitoring has detected no Connection, Telnet, or FTP activity. Use the other Connection Workload, Telnet Workload, and FTP Workload Performance Overviews to see if any recent workload activity has been detected.
- Connection, Telnet, or FTP activity may have been detected, but the specific attributes that record this activity on a 'by network' or 'by interface' (home address) basis are not being monitored. Unlike other workload attributes, the 'by network' and 'by interface' attributes are not monitored by default and must be explicitly added.

System Action:

None.

User Action:

Ensure you are monitoring the necessary attributes for this Overview.

To add and administer monitored attributes

1. Enter */IPMON* .

IP Resource Monitor appears.

2. Enter *UM* beside the required stack.

The Monitoring Definition panel appears. From this panel, you can administer the monitoring attributes.

For Connection, Telnet, and FTP Workload by Network, you need to monitor the *Con*ByNet* , *Tel*ByNet* , and *&FTP*ByNet* &attributes.

For Connection by Home Address, you need to monitor the *Con*ByIf* attributes.

When these attributes are being monitored, this is a normal and expected condition after a region restart.

Retry the request after waiting for activity to occur. All Telnet and FTP Workload attribute values are derived from SMF records issued when a Telnet connection or FTP transfer terminates. Statistics for a connection are reported in the sampling interval in which the connection terminates. For Telnet and FTP throughput rates during connections, define Telnet and FTP as business applications, and use the Business Application Overview to supplement this Overview.

DFUIAPI10**Option not currently available, error detected in data values****Reason:**

A run-time error was detected when processing the data for this action. This is generally caused by unexpected data values, which may be the result of device or data sampling errors.

System Action:

None.

User Action:

Retry the action. As new samples summaries become available, the data values may change.

If the problem persists, provide your support staff with any additional error details from Activity Log message DFUIAPI11.

DFUIAPI11**Data error details: P1 P2 P3 P4 P5 P6 P7 P8 P9 P10****Reason:**

A run-time error was detected when processing the data for this action. This message contains all available details of the error.

System Action:

None.

User Action:

None.

DFUIAPI20

P1 Performance Overview data is not currently available

Reason:

A request was made to show a Performance Overview; however, no performance history data of this type is currently available.

In most cases, this is not an error. It may indicate a normal condition, such as one of the following:

- There may be no resources of this type on this system.
- There may be resources of this type, but they are not monitored.
- There may be resources of this type monitored, but the region has not loaded the performance history data or produced the initial performance summary data.
- There may be resources of this type monitored, but monitoring of the specific attributes displayed by the Overview may not be enabled.
- The Overview attributes may be sourced from a component that is not currently active, such as the the Packet Analyzer, SSI, or SMF.

System Action:

None.

User Action:

Ensure that all necessary resources are monitored by the IP Resource Monitor.

Ensure that performance monitoring is active for these resources (use command UM - Update Monitoring, from the 3270 IP Resource Monitor), and that all required attributes are enabled.

If this region has been active for a very short time, wait for an hour for hourly performance summarization to occur, then retry the request.

Confirm that the Packet Analyzer, SSI, and SMF interface are set up correctly and that they are active.

DFUIAPI21**No *p1* resources are being monitored by NetMaster *p2* on *p3*****Reason:**

A request was made to show a Performance Overview; however, no resources of type *p1* are currently being monitored.

The type refers to one of the IP Monitor resource classes: STACK, ASMON, EE, APPNHPR, CIP, CSM, IPNODE, VIPA or OSA.

This region must be monitoring resources of this type, before they can appear on any Performance Overviews.

Note: Resources of this type may appear in this region's IP Summary, even if they are not known to the IP Resource Monitor. The IP Summary gets real/near-time data from the Packet Analyzer for all resources involved in IP activity. To collect longer-term performance history data, resources must be defined to the IP Resource Monitor.

System Action:

None.

User Action:

If the system does not include any resources of this type, no action is possible or necessary.

If the system does include resources of this type, check the following:

- Are these resources being monitored by the IP Resource Monitor (or IP Node Monitor) on that system's CA NetMaster region?

IP resources are found by the auto-discovery (Express Setup), which is run the first time a CA NetMaster region is initialized.

To add new resources to the IP Resource Monitor, you can rerun auto-discovery at any time.

To add new IP Nodes to the IP Node Monitor, add their details to the required IP Node Monitor group.

- Are performance attributes being monitored for these resources?

Use the UM command next to a resource on the 3270 IP Resource Monitor and ensure that all attributes that you are interested in are listed.

For more information about setting up performance monitoring, see the User Guide.

Note: All monitoring setup is done using the 3270 interface.

DFUIAPI22

***P1* monitoring has detected no recent *P2* activity**

Reason:

A request was made to show a Performance Overview. While monitoring of *P1* resources is active, no relevant performance samples have been taken for any individual *P2* since this region last started.

Sampling commences after activity occurs.

System Action:

None.

User Action:

After a region restart, this is a normal condition for some types of performance data. Retry the request after waiting for activity to occur.

Ensure you are monitoring the required attributes for this Overview. For Connection, Telnet, and FTP Workload by Network, you need to monitor the Con*ByNet, Tel*ByNet, and FTP*ByNet attributes.

DFUIAPI23**Stack monitoring recorded no P1 by network activity****Reason:**

A request was made to show a workload by network Performance Overview. *P1* is the type of stack workload (Connection, Telnet, or FTP).

Stack monitoring is active, but no network or interface (home address) workload samples of this type have been recorded since this region was restarted. This may be because of the following reasons:

- Stack monitoring has detected no Connection, Telnet, or FTP activity.

Use the other Connection Workload, Telnet Workload, and FTP Workload Performance Overviews to see if any recent workload activity has been detected.

- Connection, Telnet, or FTP activity may have been detected, but the specific attributes that record this activity on a 'by network' or 'by interface' (home address) basis are not being monitored.

Unlike other workload attributes, the 'by network' and 'by interface' attributes are not monitored by default and must be explicitly added.

System Action:

None.

User Action:

Ensure you are monitoring the necessary attributes for this Overview.

To add and administer monitored attributes

1. Enter */IPMON* .

IP Resource Monitor appears.

2. Enter *UM* beside the required stack.

The Monitoring Definition panel appears. From this panel, you can administer the monitoring attributes.

For Connection, Telnet, and FTP Workload by Network, you need to monitor the *Con*ByNet* , *Tel*ByNet* , and *FTP*ByNet* attributes. For Connection by Home Address, you need to monitor the *Con*ByIf* attributes.

When these attributes are being monitored, this is a normal and expected condition after a region restart.

Retry the request after waiting for activity to occur. All Telnet and FTP Workload attribute values are derived from SMF records issued when a Telnet connection or FTP transfer terminates. Statistics for a connection are reported in the sampling interval in which the connection terminates. For Telnet and FTP throughput rates during connections, define Telnet and FTP as business applications, and use the Business Application Overview to supplement this Overview.

DFUIAPI30

No recent performance activity has been recorded for this resource

Reason:

A request was made to show a Baseline List; however, no performance activity (sample observations, or hourly summaries) has been recorded for this resource since the monitoring region restarted, so there is no current performance data to compare.

System Action:

None.

User Action:

None.

DFUIAPI40

Performance history record could not be read

Reason:

A request was made to show performance history data for a specific resource, attribute and qualifier, but the corresponding data record cannot be read. Possible reasons for this may include:

- The data record has recently been deleted.
- An internal error occurred accessing the data sampling in-storage variable tables.
- An error occurred loading the data into storage from the VFS file.

System Action:

None.

User Action:

None.

DFUIAPI41**Function not supported on remote region &P1****Reason:**

A request was made to view historical performance data sourced from a linked region, *P1*. This is not possible because region *P1* is running an earlier version of the product, which does not support this type of display.

System Action:

None.

User Action:

None.

This function is not available until the linked region is upgraded to r11.5 or later.

DFUIAPI42**No recent performance samples are available for this attribute****Reason:**

A request was made to show a Samples List but no recent samples are available for this attribute, qualifier, and resource.

Recent samples are those which have been taken since the monitoring region was last restarted. Sample values are not retained across region restarts.

In some cases, sample values are available after the sample interval has passed. In others, sample values are only available after activity occurs.

System Action:

None.

User Action:

None.

DFUIAPI43

No Hourly Summary data is available for this attribute

Reason:

A request was made to show an Hourly Summary List, but this attribute /qualifier/resource has no hourly performance data.

Possible reasons for this may include:

- Monitoring of this attribute/qualifier/resource has only been active for a short time.
- The baseline data has very recently been deleted.
- The monitoring region has been restarted and performance history data is not yet loaded.

System Action:

None.

User Action:

None.

DFUIAPI44

P1 performance data cannot be displayed

Reason:

A request was made to show a Daily Summary List or a Weekly Interval List, but this data cannot be displayed for this resource/attribute /qualifier.

Possible reasons for this may include:

- The available performance history data is too sparse to be aggregated into daily totals.
- Monitoring of this attribute/qualifier/resource has only been active for a short time.
- The baseline data has been deleted.
- The monitoring region has been restarted and performance history data is not yet loaded.

Contact your systems administrator.

DQ0310**NDB SCAN FAILED ID= P1 RC= P2 ERRI= P3****Reason:**

An error occurred whilst scanning the NDB for records to build the selection list.

P1 is the name of the NDB.

P2 is the NDB response code.

P3 is the NDB error information. If no NDB error information is available, then it displays the error description from the NETINFO database.

System Action:

The selection list terminates.

User Action:

The /NDBERR shortcut lets you find out more about the NDB response codes. For response codes 5 through 8, check the limits in the NDBLIMITS - NDB Processing Limits parameter group. You can change the following parameters:

- Maximum Logical I/O Limit for Response Code 5.
- Maximum Record Limit for Response Code 8.
- Maximum Storage Limit for Response Code 7.
- Maximum Elapsed Time Limit for Response Code 6.

If a value is already at the maximum, consider changing the selection criteria for the list to reduce the number of records read. If this is not practical, contact Technical Support.

DQ0311**NO RECORDS FOUND MATCHING SUPPLIED CRITERIA****Reason:**

There were no records in the NDB that matched the criteria that was supplied for building the selection list.

System Action:

List terminates.

User Action:

If you were asked to specify some form of criteria, check that it is correct and retry.

DQ0312

Invalid LOCATE operand: P1

Reason:

The LOCATE command has failed because of an invalid operand. The format of the operand depends on the NDB data format of the current sorting field that is in effect. The reason for the failure is described in *P1*:

Value not numeric or exceeds allowable range

Indicates that the operand contains nonnumeric characters or exceeds the allowable range (-2,147,483,648 to +2,147,483,647).

Value not a valid hexadecimal string

Indicates that the operand contains characters other than hexadecimal characters (0 to 9, A to F, or a to f) or contains an odd number of characters. For example, specify 02 instead of 2.

Value not a valid date format

Indicates that the operand does not conform with any of the supported NCL date formats.

For more information about the supported date formats, see *NCL Reference Guide*.

Value not a valid time format

Indicates that the operand is not in a valid time format (*hh:mm:ss*, *hh.mm.ss*, or *hhmmss*) with a value that ranges from 00.00.00 to 23.59.59.

Value not a valid timestamp format

Indicates that the operand is not in a valid timestamp format (NCL system variable &DATE11).

Value not a valid floating point number

Indicates that the operand is not in valid floating point number notation or exceeds the limit of 0.1e+71.

System Action:

The LOCATE command is rejected.

User Action:

Specify the operand in a correct data format, and retry the command.

DQ0313**Bottom of data reached****Reason:**

The bottom of data was reached when trying to locate a record with a string specified with the LOCATE command.

System Action:

None.

User Action:

None.

DQ0401**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

Procedure \$NDCR04Z failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

None.

User Action:

Contact the system administrator.

DQ0402**INVALID SEARCH LINE****Reason:**

Right and left parentheses were entered without any search information between them. This is an invalid situation.

System Action:

Field highlighted in error.

User Action:

Enter some search information between the parentheses.

DQ0403

' P1' IS A REQUIRED FIELD

Reason:

While specifying a search the field identified by P1 was not entered and is a required field.

System Action:

Field highlighted in error.

User Action:

Enter a value for the specified field

DQ0404

' P1' IS THE ONLY VALID VALUE FOR THIS FIELD

Reason:

While defining a search the field highlighted as being in error will only accept the value identified by P1 as being valid.

System Action:

Field highlighted in error.

User Action:

Enter the valid value for the specified field

DQ0405

UNBALANCED PARENTHESES - LEFT P1 RIGHT P2

Reason:

An unbalanced number of parentheses have been specified in the search expression. *P1* parentheses were specified on the left and *P2* parentheses were specified on the right. There must be an equal number of parentheses on the left and right.

System Action:

Field highlighted in error.

User Action:

Add or remove parentheses to balance them.

DQ0406**NDB ERROR ON p1 NDBRC: p2 NDBERRI: p3****Reason:**

There was an NDB error on the database *P1* . - The &NDBRC return code is *P2* and the &NDBERRI error information is *P3* .

System Action:

None

User Action:

Refer to the NCL Programmer Guide for information on the return code.

DQ0407**' P1' IS AN INVALID FIELD NAME****Reason:**

The field name *P1* that you specified is not a valid field name.

System Action:

Field highlighted in error.

User Action:

Enter a valid field name or place a '?' in the field to get a list of valid field names. You can also enter a field prefix followed by a ? for a list of field with that prefix.

DQ0408**' P1' IS AN INVALID LINE COMMAND****Reason:**

The line command *P1* is an invalid line command. Valid line commands are:

I - Insert a line
D - Delete a line
R - Repeat a line

System Action:

Field highlighted in error.

User Action:

Enter a valid line command.

DQ0410

ONLY THE CHARACTER P1 ALLOWED IN FIELD

Reason:

The field in error contains characters other than the character *P1* .

System Action:

None.

User Action:

Correct the field value and retry.

DQ0411

INVALID VALUE SPECIFIED FOR ' P1'

Reason:

The field in error contains characters which are invalid.

System Action:

None.

User Action:

Correct the field value and retry.

DQ0412

VFS OPEN FAILED - FILERC= P1 - INSUFFICIENT ACCESS

Reason:

An attempt to open the VFS database failed with the FILERC identified by *P1* which may be 0 or 12. If it is 0 then the file has been opened but may not be written to, if the FILERC is 12 it is that the user does not have the authority to access the database.

System Action:

None.

User Action:

Contact your Security Administrator for assistance.

DQ0413**SEARCH CRITERIA WITH KEY ' P1' ALREADY EXISTS****Reason:**

An attempt to ADD a search criteria with a key of *P1* failed because a record with this key already exists.

System Action:

ADD fails.

User Action:

Choose a different name for the search criteria or set the 'Replace?' field to YES.

DQ0414**VFS ' P1' FAILED. FILERC= P2 ERROR= P3****Reason:**

An attempt to perform the function identified by *P1* on the VFS file failed with the Return Code identified by *P2* and the Error identified by *P3*

System Action:

Request is rejected.

User Action:

Contact your System Administrator for assistance.

DQ0415**SEARCH CRITERIA P1 SUCCESSFULLY SAVED****Reason:**

The search criteria *P1* was successfully saved to the VFS file.

System Action:

None

User Action:

None

DQ0416

NO PRE-DEFINED SEARCH CRITERIA FOUND

Reason:

No search criteria have previously been saved for this search.

System Action:

None

User Action:

None

DQ0501

NDB OPEN FAILED - ID: P1 NDBRC: P2 NDBERRI: P3

Reason:

The NDB which the fields list was accessing could not be opened. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Request rejected.

User Action:

Correct the NDB name or open the requested NDB and retry.

DQ0502

VARTABLE P1 ERROR, FDBK: P2 ID: P3

Reason:

A request to present a field List failed because an error was encountered allocating a variable table. The request was *P1* , the identifier of the vartable was *P3* and the feedback code was *P2* .

System Action:

The request is rejected.

User Action:

Interpret the feedback code using the NCL Reference.

DQ0503**VARIABLE P1 ERROR, FDBK: P2 ID: P3 KEY: P4****Reason:**

A request to present a fields List failed because an error was encountered accessing a vartable. The request was *P1* , the identifier of the vartable was *P3* , the feedback code was *P2* and the key value used was *P4* .

System Action:

The request is rejected.

User Action:

Interpret the feedback code using the NCL Reference.

DQ0601**NDB OPEN FAILED. ID= P1 NDBRC= P2****Reason:**

The NCL/EF Report Writer service procedure \$NDRW06Z was unable to open the Database File (NDB). The name of the NDB to be opened was *P1* and the NDB return code was *P2* .

System Action:

Processing is terminated.

User Action:

Interpret the NDB return codes using NCL Programmer Guide.

DQ0603**&NDBFMT DELETE FAILED. NDBRC: P1 NDBERRI: P2****Reason:**

An error has occurred whilst deleting an NDB format for the report. The NDB return code was *P1* and the NDB error information was *P2* .

System Action:

The report terminates.

User Action:

Look up the NDB return codes in the appropriate manual.

DQ0604

&NDBFMT DEFINE FAILED. NDBRC: P1 NDBERRI: P2

Reason:

An error has occurred whilst defining an NDB format for the report. The NDB return code was *P1* and the NDB error information was *P2* .

System Action:

The report terminates.

User Action:

Look up the NDB return codes in the appropriate manual.

DQ0605

NO RECORDS FOUND MATCHING REPORT CRITERIA

Reason:

There were no records found in the NDB that passed the report's criteria.

System Action:

None.

User Action:

None.

DQ0606**NDB scan of P1 failed with NDBRC P2 NDBERRI P3****Reason:**

An error occurred while scanning the NDB for records that pass the report's criteria. The NDB return code set by the &NDBSCAN verb was *P2* and the NDB error information was *P3* .

System Action:

None.

User Action:

For information about diagnosing the error, see the Network Control Reference Guide. Some common NDBRC values are:

- 5 - I/O limit exceeded
- 6 - Time limit exceeded
- 7 - Storage limit exceeded
- 8 - Record limit exceeded

For these values, modify the criteria to be more specific or review the NDBLIMITS parameter group.

DQ0607**FIELD VARIABLE GET FAILED. ID: P1 ZFDBK: P2****Reason:**

An error occurred whilst attempting to retrieve field information from the variable *P1* . The feedback code set by the &VARIABLE verb was *P2* .

System Action:

Request rejected.

User Action:

Contact your systems administrator.

DQ0608

NDB GET FAILED - ID: P1 NDBRC: P2 NDBERRI: P3

Reason:

An error occurred getting a record from the NDB whilst building the report. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Report Terminates.

User Action:

Contact your systems administrator.

DQ0701

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

Procedure \$NDUT07P failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

None.

User Action:

Contact the system administrator.

DQ0702

NDB RECORD ID: P1 DOES NOT EXIST

Reason:

The NDB record ID *P1* that was to be displayed does not exist.

System Action:

Request Rejected.

User Action:

None.

DQ0705**NDB OPEN FAILED - ID: P1 NDBRC: P2 NDBERRI: P3****Reason:**

The NDB which the display was accessing could not be opened. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Request rejected.

User Action:

Correct the NDB name or open the requested NDB and retry.

DQ0707**NDB GET FAILED - ID: P1 NDBRC: P2 NDBERRI: P3****Reason:**

An error occurred getting a record from the NDB whilst building the display. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Dump of NDB Record Terminates.

User Action:

Contact you Systems Administrator.

DQ0708**NDB DEL FAILED - ID: P1 NDBRC: P2 NDBERRI: P3****Reason:**

An error occurred deleting a record from the NDB. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Delete of NDB record fails.

User Action:

Contact your Systems Administrator.

DQ0709

FORCE DELETE OF RECORD CANCELLED

Reason:

You pressed the Cancel function key on the Confirm Force Delete panel so the delete request was cancelled.

System Action:

None.

User Action:

None.

DQ0710

NDB RECORD ID: P1 FORCE DELETED

Reason:

The NDB record *P1* was successfully force deleted.

System Action:

None.

User Action:

None.

DQ1001

VSAM DATASET OPEN FAILED, DD=ddname - reason

Reason:

An attempt by the NDB forward recovery utility (UTIL0010) to open a VSAM journal dataset or NDB failed for the reason given in the message.

System Action:

If it is the JOURNAL dataset that failed, processing is discontinued, otherwise processing continues with the next NDB.

User Action:

Check the JCL for the job and other job output. Correct and re-run.

DQ1002**NDB FORWARD RECOVERY COMMENCED FOR ndbname****Reason:**

This message is issued by the NDB forward recovery utility when forward recovery is about to commence for an NDB.

System Action:

N/A

User Action:

N/A

DQ1003**JOURNAL GET FAILED, R15=rc, R0=fdbk****Reason:**

This message shows the VSAM retcode and feedback that occurred for a journal record GET during NDB forward recovery processing.

System Action:

Forward recovery processing is terminated.

User Action:

Correct the job and re-run. If necessary restore the journal dataset.

DQ1004**NDB UPDATE FAILED FOR ndbname R15=rc, R0=fdbk****Reason:**

The NDB forward recovery utility (UTIL0010) detected an unexpected VSAM return code while updating the NDB copy dataset.
VSAM retcode and feedback are displayed in the message.

System Action:

Forward recovery for the NDB is terminated and processing continues with the next NDB.

User Action:

Use the VSAM retcode information to diagnose the dataset error. If forward recovery can not be re-run, stop the primary NDB and copy it to the backup copy.

DQ1005

Z999999 UPDATES APPLIED, Z999999 TRANSACTIONS IN Z999999 JOURNAL RECORDS

Reason:

This is an information message issued by the NDB forward recovery utility. no. UPDATES APPLIED shows the number of NDB records modified, no. TRANSACTIONS shows the number of NDB transactions found, no. JOURNAL RECORDS shows the number of journal records read.

System Action:

none.

User Action:

This message provides an indication of the activity against an NDB.

DQ1006

JOURNAL DATASET IS INVALID. FORWARD RECOVERY TERMINATED.

Reason:

The journal dataset specified to the NDB forward recovery utility was not a valid NDB journal.

System Action:

NDB forward recovery is terminated.

User Action:

Correct the forward recovery JCL.

DQ1007

INVALID SYSIN CONTROL CARD, FORWARD RECOVERY TERMINATED.

Reason:

A SYSIN control card provided to the forward recovery utility was invalid.

System Action:

The control card is echoed with this message. Processing is terminated.

User Action:

Correct the SYSIN control card and re-submit job.

DQ1008**SOLVE NDB FORWARD RECOVERY FOR DOMAIN xxxx hh.mm.ss yy.ddd****Reason:**

This message is issued by the NDB forward recovery utility once the journal dataset has been successfully opened.

System Action:

Forward Recovery processing proceeds.

User Action:

N/A

DQ1009**NDB CONTROL RECORD VALIDATION FAILED - reason****Reason:**

A journal validation error was detected by the NDB forward recovery utility (UTIL0010).

This was either because the journal being applied to the NDB is out of sequence, or the NDB domain id does not match the domain id of the journal.

System Action:

Processing for this NDB is terminated and continues for the NDB.

User Action:

Check the NDB with the reported error. It may be necessary to stop the primary NDB and restore the duplicate copy from it.

DQ1010**FORWARD RECOVERY TERMINATED FOR NDB ndbname.****Reason:**

This message follows a previous error message issued by the NDB Forward Recovery Utility, to warn of abnormal recovery termination for an NDB.

System Action:

N/A

User Action:

See related message.

DQ1011

JOURNAL SEQUENCE ERROR DETECTED - SKIPPING REMAINING RECORDS.

Reason:

This message is issued if an error is detected in the time stamp sequence of records on the NDB journal. This may indicate that the journal was not correctly closed.

System Action:

Out of sequence journal records are not processed.

User Action:

This message usually may be taken as a warning only. Only records in the correct time sequence will be applied to the NDB copies.

DS0001

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The Dataset Services Manager external interface procedure \$DSCALL failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$DSCALL terminates. Control is returned to the NCL procedure which executed \$DSCALL. If \$DSCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed \$DSCALL. If executed from OCS, check the command entered on the command line and retry.

DS0002**EITHER KEYWORD DD OR KEYWORD DSN MUST BE SPECIFIED ON THE REQUEST****Reason:**

Processing requires that one of these keyword parameters be provided on the request. Keyword DD is the DDNAME. Keyword DSN is the dataset name. Since neither of these were provided the request is terminated.

System Action:

None.

User Action:

Provide either the DDNAME or the dataset name on the request.

DS0003**MEMBER NAME MUST BE SPECIFIED IN PDS NAME P1****Reason:**

The data function being performed for a partitioned data set(PDS) requires a member name. *P1* is the name of the PDS provided as input.

System Action:

None.

User Action:

Run the data function again providing a member name in the PDS name.

DS0004**P1 IS NOT A PARTITIONED DATASET****Reason:**

A data function was requested which required a partitioned data set. The dataset *P1* is not a partitioned dataset. The data function is cancelled.

System Action:

None.

User Action:

Check the dataset name supplied on the request. If it is correct think about what you are trying to do.

DS0005

P1 IS NOT A PHYSICAL SEQUENTIAL DATASET

Reason:

A data function was requested which required a physical sequential dataset. The dataset *P1* is not a physical sequential dataset. The data function is cancelled.

System Action:

None.

User Action:

Check the dataset name supplied on the request. If it is correct think about what you are trying to do.

DS0006

FILE P1 AND FILE P2 MUST HAVE SAME LOGICAL RECORD LENGTH

Reason:

A data operation was requested using two files. P1 is the keyword parameter for the first file. P2 is the keyword parameter for the second file. The data operation requires the files to have the same logical record length. This is not the case so the data operation is cancelled.

System Action:

None.

User Action:

Examine the input parameters for the operation. Verify that the file names were entered correctly.

DS0007**FILE P1 AND FILE P2 MUST HAVE SAME RECORD FORMAT****Reason:**

A data operation was requested using two files. *P1* is the keyword parameter for the first file. *P2* is the keyword parameter for the second file. The data operation requires the files to have the same record format. This is not the case so the data operation is cancelled.

System Action:

None.

User Action:

Examine the input parameters for the operation. Verify that the file names were entered correctly.

DS0008**PATH P1 DOES NOT EXIST****Reason:**

A data operation tried to use a path to access a file. The path did not exist. *P1* is the name of the non-existent path. The data operation is terminated.

System Action:

None.

User Action:

Examine the input parameters for the operation. Verify that the parameters were entered correctly.

DS0009

FILE P1 HAS UNSUPPORTED RECORD FORMAT U

Reason:

An operation was requested for a file with record format U. This record format is not supported for the \$DSCALL operation. *P1* is the file name. The request is terminated.

System Action:

None.

User Action:

Perform the operation using a system utility instead of \$DSCALL.

DS0010

P1 CANCELLED

Reason:

A request to process an object was cancelled at the users request. *P1* is the action that was cancelled.

System Action:

None.

User Action:

None.

DS0011**Dataset Services not supported on this operating system****Reason:**

Dataset Services is supported on the following operating systems only:

- z/OS
- MSP

System Action:**User Action:****DS0012****PRESS CONFIRM TO CONTINUE PROCESSING OR PRESS CANCEL****Reason:**

A user confirmation is required before processing a requested action.

System Action:

None.

User Action:

Press either the Confirm or Cancel key (or enter the corresponding command) to continue.

DS0013**UTILITY P1 NOT SUPPORTED****Reason:**

A request to call an operating system utility program was cancelled because the utility program is not supported by Dataset Services. *P1* is the name of the utility program which is not supported.

System Action:

None.

User Action:

Use a supported utility or do the desired processing another way.

DS0014

NO RECORDS IN FILE FOR P1

Reason:

A data operation was requested against a file. The operation is cancelled because the file has no records. *P1* is the data operation.

System Action:

None.

User Action:

None.

DS0015

FILE TO BE EDITED CAN NOT HAVE MORE THAN 32767 RECORDS

Reason:

A request to edit a file was rejected because the file contains more than 32767 records. This is the maximum number of records that the CAS text editor can process.

System Action:

None.

User Action:

None.

DS0016

FILE TO BE BROWSED HAS MORE THAN 32767 RECORDS, REMAINDER NOT DISPLAYED

Reason:

A request to browse a file that has more than 32767 records cannot be completed successfully. Only the first 32767 records are displayed. This is the maximum number of records that the CAS text editor can process.

System Action:

Browse of the first 32767 records.

User Action:

None.

DS0017**MEMBER NAME MUST NOT BE USED IN REQUEST - P1****Reason:**

A data set services request was terminated because a member name was specified on a request for a partitioned dataset. The request does not allow a member name to be specified. *P1* is the fully qualified dataset name used on the request.

System Action:

None.

User Action:

Either do not specify a member name on the request or request a different dataset service which allows the specification of a member name.

DS0018**PDS MEMBER CAN ONLY BE RENAMED TO PDS MEMBER OF SAME DATASET****Reason:**

An attempt was made to rename a PDS member to a sequential data set or to a PDS member of a different dataset. The request is terminated since a PDS member can only be renamed to a PDS member of the same dataset.

System Action:

None.

User Action:

Use the ALLOC, COPY, and DELMEM options to perform the rejected request.

DS0019

DATASET NAME MUST NOT INCLUDE MEMBER NAME - P1

Reason:

A request was made where a dataset name contained a member name. The use of the member name as part of the dataset set name was invalid in this request. *P1* is the dataset name used in the request. The request is terminated.

System Action:

None.

User Action:

Examine what you were trying to do. Perhaps the use of a member name is inappropriate. Also, the problem may be that the member name should be specified using the MEMBER keyword in the request.

DS0020

READ IBM UTILITY SYSPRINT OUTPUT TO DETERMINE FAILURE REASON

Reason:

The DSS_CALL verb was used to execute an IBM utility. The IBM utility did not execute successfully. The error messages from the utility have been written to the SYSPRINT output.

System Action:

None.

User Action:

Read the SYSPRINT output if it is available.

DS0021**A MAXIMUM OF 50 DDNAMES CAN BE CONCATENATED****Reason:**

A maximum of 50 DDNAMEs can be concatenated using the \$DSCALL utility. This limit has been surpassed in the request. The request is terminated with no concatenation done.

System Action:

None.

User Action:

Reduce the number of DDNAMEs in the concatenation request.

DS0022**TEXT CONTAINS NON-DISPLAYABLE CHARACTERS****Reason:**

The text being edited or browsed contains characters which can not be displayed. This message is informational only.

System Action:

None.

User Action:

None.

DS0023**BROWSE OF SYSOUT FILE NOT PERMITTED****Reason:**

A request was made to browse an IBM utility SYSPRINT file which was a SYSOUT file. The request was terminated. The SYSPRINT file must be a dataset to be browsed.

System Action:

None.

User Action:

Request that the SYSPRINT file be a dataset. Then the SYSPRINT file can be browsed. On a \$DSCALL request, add parameter SYSPRINT=DSN to direct SYSPRINT to a dataset.

DS0024

ONE OF THE KEYWORD PARAMETERS DD OR RELNUM MUST BE PROVIDED

Reason:

The OPT=ALLOCINFO request requires one of the keyword parameters DD or RELNUM. Neither was provided. The request is terminated.

System Action:

None.

User Action:

Provide one of the two parameters on the request.

DS0025

DATASET ORGANIZATION P1 IS INVALID OR NOT SUPPORTED

Reason:

An attempt was made to allocate (create) a dataset with an invalid or non-supported dataset organization. *P1* is the dataset organization supplied on the request. The request is terminated.

System Action:

None.

User Action:

Examine the dataset organization parameter to see if it is correct. If the dataset organization is correct, then create the dataset using some means other than \$DSCALL.

DS0026**DIRECTORY BLOCK ALLOCATION IS REQUIRED FOR DATASET ORGANIZATION P1****Reason:**

An attempt was made to allocate (create) a dataset. The dataset organization required that directory blocks be allocated at creation time but no directory blocks were requested. P1 is the dataset organization. The request is terminated.

System Action:

None.

User Action:

Provide the number of directory blocks on the request. This is done by using the keyword parm DIR on the \$DSCALL call.

DS0027**DIRECTORY BLOCK ALLOCATION INVALID FOR DATASET ORGANIZATION P1****Reason:**

A dataset is being created with an allocation of directory blocks. However, directory blocks are not required for that dataset organization. P1 is the dataset organization. The request is terminated.

System Action:

None.

User Action:

Remove the directory block allocation from the request.

DS0028

SPACE COMPONENT P1 HAS INVALID VALUE P2

Reason:

The space parameter on a new dataset creation(allocation) request is incorrect. *P1* is the component of the space parameter which is wrong. *P2* is the invalid value provided in the request.

System Action:

The request is terminated.

User Action:

Correct the space parameter and try again.

DS0029

MEMBER P1 NOT REPLACED

Reason:

A copy was requested and the target dataset was a PDS member. The REPLACE=NO option was specified on the request as well. However, the target PDS member *P1* exists.

System Action:

The copy is terminated without writing over the target PDS member.

User Action:

Either specify REPLACE=YES on the copy or specify a non-existing target member name.

DS0030**ONLY PROVIDE ONE OF KEYWORD PARAMETERS DD OR DSN ON ENQ/DEQ REQUEST****Reason:**

A request to ENQ or DEQ a dataset was received with both the DD keyword parm and the DSN keyword parm specified. Only one of these parameters should be specified on the request.

System Action:

The request is terminated.

User Action:

Try the request again only specifying one of the keyword parameters.

DS0031**NO NON-BLANK VARIABLES FOUND FOR VARS= P1****Reason:**

A data operation was terminated because no non-blank variables were found starting with the string provided with the VARS keyword parm.

System Action:

None.

User Action:

Check that the value of the keyword parm VARS is correct and that the variables starting with this keyword parm are shared on the call.

DS0032**NO MEMBERS MATCH MASK P1****Reason:**

An attempt was made to copy all PDS member matching a mask. *P1* is the mask used on the request. No member names matched the mask.

System Action:

None.

User Action:

None.

DS0033

NO PATH ID PROVIDED ON OPEN AND DDNAME P1 IS IN USE AS PATH ID

Reason:

No path ID was provided on an open request. The DDname P1 was checked for use as a path ID. The DDname was already in use as a path ID.

System Action:

The open request is terminated.

User Action:

Examine the logic in your program. It may be that an attempt was made to open a file which was already open.

DS0034

MEMBER NAME MUST NOT BE SPECIFIED IN \$DSCALL OPT=DELETE REQUEST

Reason:

A \$DSCALL OPT=DELETE request was made and the keyword MEMBER was given a value. The member name is not a valid parameter on this request.

System Action:

The request is terminated.

User Action:

Use \$DSCALL OPT=DELMEM to delete a PDS member.

DS0035

MEMBER NAME MUST NOT BE SPECIFIED IN \$DSCALL OPT=RENAME REQUEST

Reason:

A \$DSCALL OPT=RENAME request was made and the keyword MEMBER was given a value. The member name is not a valid parameter on this request.

System Action:

The request is terminated.

User Action:

Use \$DSCALL OPT=RENMEM to rename a PDS member.

DS0036**MUTUALLY EXCLUSIVE MEMBER NAME INFORMATION PROVIDED ON COPY REQUEST****Reason:**

The copy request specified member information in the MEMBER parameter and in the dataset name(s). These two methods are mutually exclusive.

System Action:

The COPY request is terminated.

User Action:

Provide member information on COPY request in just one place.

DS0037**MEMBER PARAMETER ALLOWED ONLY IF BOTH DATASETS ARE PARTITIONED****Reason:**

A \$DSCALL OPT=COPY request had the MEMBER parm specified and at least one of the FROMDSN and TODSN was not a partitioned dataset. The member parameter is valid only if both of these datasets are partitioned.

System Action:

The COPY request is terminated.

User Action:

Resubmit the request including the member information in the dataset name.

DS0038

IEHLIST UTILITY OUTPUT HAS FEWER LINES THAN EXPECTED

Reason:

The OPT=VOLSPACE call uses the IEHLIST utility to compute the number of free tracks on the volume. The IEHLIST utility output had fewer than the minimum expected number of lines. The OPT=VOLSPACE call terminates with this message.

System Action:

None.

User Action:

Contact Technical Support.

DS0039

DATASET SPACE CALCULATION NOT SUPPORTED FOR DSORG P1

Reason:

The dataset space calculation is not supported for the this particular dataset organization. The unsupported dataset organization is P1.

System Action:

None.

User Action:

None.

DS0040**EXPECTED STRING "CYLINDERS" NOT FOUND IN IEHLIST UTILITY OUTPUT****Reason:**

The string "CYLINDERS" was expected to be found in the IEHLIST utility output. The line with the string contains the number of free cylinders on the volume. The free space on the volume could not be calculated because this line could not be located.

System Action:

None.

User Action:

Contact Technical Support.

DS0041**IDCAMS UTILITY OUTPUT HAS NO LINES****Reason:**

The OPT=DSNSPACE call uses the IDCAMS utility to determine the data and index component names of a VSAM dataset. There was no output from the IDCAMS call. The OPT=DSNSPACE call terminates with this message.

System Action:

None.

User Action:

Contact Technical Support.

DS0042

VARTABLE ERROR - FUNC= P1 NAME= P2 KEY= P3 FDBK= P4

Reason:

An error occurred while processing a VARTABLE. *P1* is the function that was being performed when the error occurred. *P2* is the name of the VARTABLE. *P3* is the VARTABLE key. *P4* is the &ZFDBK code.

System Action:

None.

User Action:

Determine the cause of the error from the feedback code.

DS0043

DATASET MOVE REQUIRES A VOLUME WITH P1 FREE TRACKS

Reason:

A request to move a dataset to volume was terminated because the target volume did not have enough free space. *P1* is the number of free tracks required on the target volume.

System Action:

None.

User Action:

Select a different target volume with the required number of free tracks or make the required space available on the original target volume.

DS0044

TRUNCATE NOT SPECIFIED AND LOGICAL RECORD LENGTH > 250

Reason:

A read/write operation was requested to a file which had logical record length greater than 250 bytes. No truncate option was specified on the request. The request is terminated.

System Action:

None.

User Action:

Specify a valid truncate length or read the record into multiple variables.

DS0045**MEMBER NAME CANNOT BE SPECIFIED, DATASET IS NOT A PDS****Reason:**

A request has been received by Dataset Services to perform an action on a member of a Partitioned Dataset (PDS), but the dataset specified is not a PDS.

System Action:

The request is rejected.

User Action:

Remove the MEMBER= operand or specify the name of a dataset which is a PDS.

DS0046**MEMBER NAME MUST BE SPECIFIED, DATASET IS A PDS****Reason:**

A request has been received by Dataset Services to perform an action on a specified DD or dataset, and the DD or dataset is a Partitioned Dataset (PDS). The name of the member to be actioned has not been specified, and is required for this request.

System Action:

The request is rejected.

User Action:

Specify a member name using the MEMBER= operand.

DS0047**DATA LENGTH EXCEEDS UTILITY MAXIMUM****Reason:**

The requested function uses a utility which supports a maximum data length of 256. The data in the selected dataset exceeds this maximum.

System Action:

The request is rejected.

User Action:

None.

DS0048

RECORD LENGTH > 250, DATA TRUNCATED. PRESS CANCEL KEY TO ABORT EDITING

Reason:

The requested function uses \$DSCALL OPT=READ and OPT=WRITE which support records length up to 250. The data in the selected dataset exceeds this limit and is truncated. You can press Cancel key to abort the editing.

System Action:

The request is rejected.

User Action:

None.

DS0049

INVALID RELATIVE GENERATION NUMBER

Reason:

The requested function supplied a relative GDG number on a dataset name. The number is invalid for this function. For example, a positive number (greater than 0) for the OPT=INFO function.

System Action:

The request is rejected.

User Action:

Correct the number.

DS0050**IDCAMS PROCESSING FAILED RC= P1 FDBK= P2 MSG= P3****Reason:**

A call to the IDCAMS program failed whilst attempting to derive the full dataset name for a relative generation number.
The actual \$DSCALL return information is displayed

System Action:

The request is rejected.

User Action:

Examine the embedded error information to determine the cause of the problem.

DS0051**IDCAMS UTILITY OUTPUT HAS NO LINES****Reason:**

The OPT=INFO call uses the IDCAMS utility to determine the full dataset name of a relative GDG reference. There was no output from the IDCAMS call. The OPT=INFO call terminates with this message.

System Action:

None.

User Action:

Contact Technical Support.

DS0052**P1 IS NOT A GDG BASE NAME****Reason:**

The OPT=INFO call was passed a relative GDG reference (For example, A.B(-1)). However, the passed dataset name was not a GDG base name.

System Action:

The OPT=INFO request is terminated.

User Action:

Correct the GDG base name.

DS0053

P1 HAS NO DATASETS

Reason:

The OPT=INFO call was passed a relative GDG reference (For example, A.B(-1)). However, the GDG currently has no entries.

System Action:

The OPT=INFO request is terminated.

User Action:

None.

DS0054

P1(P2) IS NOT A VALID GDG REFERENCE

Reason:

The OPT=INFO call was passed a relative GDG reference (For example, A.B(-1)). However, the reference is outside the range of current GDG entries. (For example, -5 when only 5 datasets (-4 up to 0)).

System Action:

The OPT=INFO request is terminated.

User Action:

None.

DS0055

Invalid request - dataset is a SYSOUT file

Reason:

The requested action is not valid because the dataset is a SYSOUT file.

System Action:

The request is rejected.

User Action:

None.

DS0101**INVALID VALUE FOR SHARED VARIABLE, VAR= P1 VALUE=" P2"****Reason:**

The selection list service procedure for the \$DSCALL PDS member list displays failed because it received an invalid value for a shared variable. The variable name was *P1* and its value was *P2*.

System Action:

The selection list service procedure terminates.

User Action:

Contact your Systems Administrator.

DS0102**INVALID COMMAND****Reason:**

An invalid command was entered in the Command field on the panel.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

DS0103**COMMAND ASSIGNED TO FUNCTION KEY P1 IS INVALID****Reason:**

Function key *P1* was pressed on the new member name data entry panel and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

DS0104

RENAME OF P1 CANCELLED

Reason:

A request was received to rename a dataset or a member of a Partitioned dataset (PDS). When the new name was requested, the user cancelled the function.

System Action:

None.

User Action:

None.

DS0201

INVALID VALUE FOR SHARED VARIABLE, VAR= P1 VALUE=" P2"

Reason:

The selection list service procedure for the \$DSCALL allocated files list display failed because it received an invalid value for a shared variable. The variable name was *P1* and its value was *P2*.

System Action:

The selection list service procedure terminates.

User Action:

Contact your Systems Administrator.

DS0202

NO RESPONSE RECEIVED FOR AN INTREAD COMMAND

Reason:

No response was received for a command issued in the INTCMD environment in the allotted time. The procedure waiting for the response terminates.

System Action:

None.

User Action:

The system is extremely sluggish. That is why the response was not received in a reasonable time. Try what you were doing again when your system's performance is better.

DS0203**UNEXPECTED RESPONSE - P1****Reason:**

An unexpected response was received from a command issued in the INTCMD environment. *P1* is the unexpected response. This response is not normally received from the command which was issued and could indicate a problem with your system. The procedure processing the response terminates after issuing this message.

System Action:

None.

User Action:

Contact your Systems Administrator.

DS0204**VARIABLE ERROR - FUNC= P1 NAME= P2 KEY= P3 FDBK= P4****Reason:**

An error occurred while processing an NCL VARIABLE. *P1* is the function that was being performed when the error occurred. *P2* is the name of the VARIABLE. *P3* is the VARIABLE key. *P4* is the &SYS.FDBK code.

System Action:

None.

User Action:

Determine the cause of the error from the feedback code.

DS0205

CAN NOT DEALLOCATE CONCATENATED DATASET

Reason:

A dataset which is not the first in a concatenation can not be deallocated. The request is terminated.

System Action:

None.

User Action:

Perform a deconcatenation, then the deallocation, and then do the concatenation again if you like.

DS0301

INVALID VALUE FOR SHARED VARIABLE, VAR= P1 VALUE=" P2"

Reason:

The selection list service procedure for the \$DSCALL CATLIST list display failed because it received an invalid value for a shared variable. The variable name was *P1* and its value was *P2*.

System Action:

The selection list service procedure terminates.

User Action:

Contact your Systems Administrator.

DS0302

INVALID COMMAND

Reason:

An invalid command was entered in the Command field on the panel.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

DS0303**COMMAND ASSIGNED TO FUNCTION KEY P1 IS INVALID****Reason:**

Function key *P1* was pressed on the new name data entry panel and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

DS0304**UNEXPECTED SYSOUT RECORD - P1****Reason:**

The expected sysout output from a LISTCAT command has the dataset name followed by the catalog that the dataset is in on the next line. The catalog name did not follow the dataset name. *P1* is the line which followed the dataset name. The procedure terminates when the unexpected line is found.

System Action:

None.

User Action:

Contact your Systems Administrator.

DS0305**NO CATALOG ENTRIES FOR QUALIFIER P1****Reason:**

A display of catalog entries for a qualifier was requested. *P1* is the qualifier. However, there were no entries for the qualifier.

System Action:

The procedure terminates without a display.

User Action:

None.

DS0306

**FOR ERROR INFO - \$DSCALL OPT=LISTC SYSPRINT=DSN
DISPLAY=YES QUAL= P1 PARM=VOLUME**

Reason:

There was a problem in obtaining the display of cataloged datasets for a qualifier. *P1* is the qualifier used in the display request.

System Action:

None.

User Action:

To see the error information for the request run: \$DSCALL OPT=LISTC SYSPRINT=DSN DISPLAY=YES QUAL=P1 PARM=VOLUME where *P1* is the qualifier used in the original display request.

DS0401

Invalid option: dataset organization is P1

Reason:

The selected option is invalid because the the dataset organization (*P1*) does not support the type of request:

- * to Browse, Edit, or Print a dataset the dataset organization must be either PO (Partitioned Organization - a PDS) or PS (Partitioned Sequential).

- * to display a Member List the dataset must be a PDS; the dataset organization must be PO (Partitioned Organization)

System Action:

The request fails.

User Action:

Specify a different dataset or DD name.

DS0402**Dataset Name and DD Name are mutually exclusive****Reason:**

A request to browse a dataset or provide a member list cannot be actioned because both the Dataset Name and the DD Name are specified. Only one of these may be specified.

System Action:

The request fails.

User Action:

Remove either the Dataset Name or DD name and retry.

DS0403**P1 contains embedded blank/s****Reason:**

The field contains embedded blank/s which is invalid.

System Action:

The request fails.

User Action:

Specify a correct name.

DS0404**MENU/FUNCTION NOT SUPPORTED, MENU= P1 OPT= P2****Reason:**

The DSS menu service procedure \$DS0004M failed because it received a menu number (\$MHMENUNUM= P1) and/or function (\$MHOPT= P2) that it does not support.

System Action:

Procedure \$DS0004M terminates.

User Action:

Contact your Systems Administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

DS0405

Invalid request - dataset is a SYSOUT file

Reason:

The requested action is not valid because the dataset is a SYSOUT file.

System Action:

The request is rejected.

User Action:

None.

DS0501

MEMBER P1 NOT FOUND IN THIS DATASET

Reason:

An attempt has been made to browse, delete, print, or rename a member of a dataset that does not exist.

System Action:

None.

User Action:

None.

Ex Messages

ED0001

Unable to retrieve user information

Reason:

The &SECCALL statement was used to check user authorization for the requested operation. This request was unsuccessful.

System Action:

The request is rejected.

User Action:

Determine the cause of the failure in the security system and retry.

ED0002**User not authorized to maintain panels****Reason:**

You attempted to access Panel Maintenance, but you are not authorized.

System Action:

The request is rejected.

User Action:

Request authorization for panel maintenance from your installation and retry the request.

ED0003**Path P1 is not defined****Reason:**

The path name entered on the Edit Services Primary Menu is not defined to the system.

System Action:

The requested selection list is not displayed.

User Action:

The path name is derived from your user definition. Contact your security system administrator.

ED0004**Library P1 is not defined****Reason:**

The specified library name is not defined to the system.

System Action:

The requested selection list is not displayed.

User Action:

Enter a valid library name.

ED0008

Library is not in path

Reason:

The library name entered is not part of your panel services path.

System Action:

The request is rejected.

User Action:

Enter a correct library name. Enter ? next to the Library Name field to display a list of valid library names.

ED0009

Edit not allowed on library P1

Reason:

You attempted to update the contents of a panel library (*P1*), but the library is not authorized for editing.

System Action:

The request is rejected.

User Action:

Correct the library name and retry. Panel library specifications are controlled by the PANELLIBS Customizer parameter group.

ED0010

Invalid panel name

Reason:

You entered an invalid panel name.

System Action:

None.

User Action:

Correct the panel name and retry.

ED0011**Not authorized for supplied path****Reason:**

You specified a path name that you are not authorized to access.

System Action:

The request is rejected.

User Action:

Enter your authorized path name and retry.

ED0012**Panel already exists****Reason:**

The panel being added already exists in the library.

System Action:

The request is rejected.

User Action:

Use a different panel name.

ED0101**UNABLE TO RETRIEVE USER INFORMATION****Reason:**

The &SECCALL statement was used to check user authorization for the requested operation. This request was unsuccessful.

System Action:

The request is rejected.

User Action:

Determine the cause of the failure in the security system and retry.

ED0102

User not authorized for Edit Services

Reason:

You attempted to access Edit Services facilities, but you are not authorized.

System Action:

The request is rejected.

User Action:

Contact your security administrator.

ED0103

PATH ~P1 IS NOT DEFINED

Reason:

The path name entered on the Edit Services Primary Menu is not defined to the system.

System Action:

The requested selection list is not displayed.

User Action:

Enter a correct path name and retry.

ED0105

SELECT AN OPTION OR PRESS A FUNCTION KEY TO PROCEED

Reason:

An option must be entered in the Select Option field, or a function key pressed in order to perform the desired action.

System Action:

None.

User Action:

Enter a valid selection on the menu.

ED0106**INVALID OPTION****Reason:**

An invalid selection was entered in the Select Option field.

System Action:

None.

User Action:

Enter a valid selection on the panel.

ED0107**REQUIRED FIELD OMITTED****Reason:**

A field which is required for the option selected was omitted.

System Action:

The cursor is placed in the field which must be entered and the field is highlighted.

User Action:

Enter a value for the required field.

ED0108**LIBRARY IS NOT IN PATH****Reason:**

The library name entered on the Edit Services selection menu is not part of your panel services path.

System Action:

The request is rejected.

User Action:

Enter a correct library name. A selection list of valid library names is presented if a ? is entered next to the library field on the Edit Services Panel Move/Copy Menu.

ED0109

EDIT NOT ALLOWED ON LIBRARY

Reason:

You attempted to update the contents of a panel library, but the library may not be edited.

System Action:

The request is rejected.

User Action:

The EDITability of a library is controlled by the LIBRARY and LIBPATH commands. Correct the library name, or alter its attributes to allow EDIT.

ED0110

PANEL NAME INVALID

Reason:

An invalid name was entered where a panel name was required.

System Action:

None.

User Action:

Correct the panel name and retry.

ED0111

NOT AUTHORIZED FOR SUPPLIED PATH

Reason:

A path name was supplied which you are not authorized to access.

System Action:

The request is rejected.

User Action:

Enter your authorized path name, and retry.

ED0112**EDIT SERVICES RESTRICTED FROM THIS SYSTEM****Reason:**

You attempted to access Edit Services facilities, but they are not available on this system. Panel move and copy is therefore not available.

System Action:

The request is rejected.

User Action:

Edit Services is restricted by the SYSPARMS EDITMAXK=NONE command. Either make Edit Services available by resetting this operand, or work on another system.

ED0113**FIELD MUST BE YES OR NO****Reason:**

The field containing the cursor must be either YES or NO.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the field value and retry.

ED0114**'FROM' AND 'TO' LIBRARIES MUST NOT BE THE SAME****Reason:**

Panels may be moved or copied from one library to another, but not into the same library.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the library names and retry.

ED0115

ONLY ONE LIBRARY IN PATH - CANNOT COPY

Reason:

Panels may be moved and copied from one library to another, but not to the same library. There is only one library in the path, therefore the Panel Move/Copy utility is disabled for this path.

System Action:

The request is rejected.

User Action:

None.

ED1001

Tab to the required panel and enter S beside it to select it

Reason:

You have pressed F1 while in the Icon Panel selection list. To select an icon panel from the list, tab to the required panel and enter S beside it. The list is cursor-sensitive, so tabbing to the required panel and pressing Enter also selects that panel.

System Action:

None.

User Action:

None.

ED1002

Unable to open ICOPANL library, FILERC= P1

Reason:

An attempt to open the ICOPANL library to present a selection list of panels has failed with return code *P*.

System Action:

The list does not appear.

User Action:

Correct the file error and retry.

ED1101**LIBRARY NOT SELECTED FROM PANEL LIBRARY LIST****Reason:**

A Panel Library List was presented and a library was not selected.

System Action:

None.

User Action:

None.

ED1201**PATH ~P1 IS NOT DEFINED****Reason:**

The path name entered on the Edit Services Primary Menu is not defined to the system.

System Action:

The requested selection list is not displayed.

User Action:

Enter a correct path name and retry.

ED1301**LIBRARY IS NOT DEFINED****Reason:**

The library name entered on the Edit Services Panel Move/Copy Menu is not defined to the system.

System Action:

The requested selection list is not displayed.

User Action:

Enter a correct library name. A selection list of valid library names is presented if a ? is entered next to the library field on the Edit Services Panel Move/Copy Menu.

ED1302

UNABLE TO OPEN LIBRARY - FILERC=~P1

Reason:

The library name entered on the Edit Services Move/Copy Menu cannot be opened. The return code from the *FILE ID statement* is shown.

System Action:

The request is rejected.

User Action:

Check that the library is open and accessible using the SH LIB and SH UDB commands.

ED1303

TOO MANY SORT FIELDS

Reason:

The SORT command on the Edit Services Panel Copy List has been issued. The command supports two sort fields but more than two were entered.

System Action:

None.

User Action:

Enter a valid SORT command and retry.

ED1304

INVALID SORT FIELD

Reason:

The SORT command on the Edit Services Panel Copy List has been issued. An unsupported sort field was entered.

System Action:

None.

User Action:

Enter a valid SORT command. The valid sort fields are NAME, CREATED, MODIFIED, SIZE, MLEV and ID, corresponding to the column headings on the selection list.

ED1305**~P1 RECORDS SORTED****Reason:**

The SORT command on the Edit Services Panel Copy List has been issued and the displayed number of records was sorted.

System Action:

None.

User Action:

None.

ED1306**UNABLE TO RETRIEVE USER INFORMATION****Reason:**

The &SECCALL statement was used to check user authorization for the requested operation. This request was unsuccessful.

System Action:

The request is rejected.

User Action:

Determine the cause of the failure in the security system and retry.

ED1307**USER NOT AUTHORIZED FOR EDIT SERVICES****Reason:**

You attempted to access Edit Services facilities but you are not authorized.

System Action:

The request is rejected.

User Action:

Request authorization for Edit Services from your installation and retry the request.

ED1308

EDIT SERVICES RESTRICTED FROM THIS SYSTEM

Reason:

You attempted to access Edit Services facilities but they are not available on this system. Panel Move/Copy is therefore not available.

System Action:

The request is rejected.

User Action:

Edit Services is restricted by the SYSPARMS EDITMAXK=NONE command. Either make Edit Services available by resetting this operand, or work on another system.

ED1309

LIBRARY IS NOT IN PATH

Reason:

The library name entered on the Panel Services Primary Menu is not part of your panel services path.

System Action:

The request is rejected.

User Action:

Enter a valid library name. A selection list of valid library names is presented if a '?' is entered next to the library field on the Panel Services Primary Menu.

ED1310

EDIT NOT ALLOWED ON LIBRARY

Reason:

You attempted to update the contents of a panel library but the library may not be edited.

System Action:

The request is rejected.

User Action:

The EDITability of a library is controlled by the LIBRARY and LIBPATH commands. Correct the library name, or alter its attributes to allow EDIT.

ED1311**NOT AUTHORIZED FOR SUPPLIED PATH****Reason:**

An incorrect path name was supplied to the selection list. You are not authorized to access that path.

System Action:

The request is rejected.

User Action:

Enter the your authorized path name and retry.

ED2001**MEMBER IN USE BY ~P1****Reason:**

The panel you wish to edit or delete is being edited or deleted by you (in another window) or another user. The userid is shown.

System Action:

The request is rejected.

User Action:

Wait until the panel is no longer in use, then retry the action.

ED2002**UNABLE TO ACCESS FILE - FILERC=~P1****Reason:**

The panel library could not be opened. The return code from the *FILE ID* statement is shown.

System Action:

The request is rejected.

User Action:

Check that the library is open and accessible using the SHOW LIB and SHOW UDB commands, then retry.

ED2003

LIBRARY P1 IS NOT DEFINED

Reason:

The library name entered on the Edit Services Primary Menu is not defined to the system.

System Action:

The requested selection list is not displayed.

User Action:

Enter a correct library name. A selection list of valid library names is presented if a '?' is entered next to the library field on the Edit Services Primary Menu.

ED2004

PANEL ~P1 DOES NOT EXIST IN LIBRARY

Reason:

The library name entered on the Edit Services Primary Menu does not contain the specified panel.

System Action:

The request is rejected.

User Action:

Correct the library or panel name and retry.

ED2005

UNABLE TO OPEN '~P1' LIBRARY - FILERC=~P2

Reason:

The library name entered on the Edit Services Primary Menu cannot be opened. The return code from the *FILE ID statement* is shown.

System Action:

The requested selection list is not displayed.

User Action:

Check that the library is open and accessible using the SHOW LIB and SHOW UDB commands.

ED2006**PANEL ALREADY EXISTS IN 'TO' LIBRARY****Reason:**

The panel being copied (with replace set to NO) already exists in the target library.

System Action:

The request is rejected.

User Action:

Correct the panel name or libraries, or use the REPLACE option to over-write the existing panel in the target library.

ED2007**~P1 PANELS ~P2 BEFORE ERROR ON THE 'TO' LIBRARY -
VSAMFDBK=~P3****Reason:**

Some panels were moved or copied to the 'TO' library before an error on the destination library occurred. The VSAMFDBK code explaining the error is shown.

System Action:

The move or copy operation is terminated.

User Action:

Check the reason for the error, correct and retry.

ED2008**PANEL ~P1 SUCCESSFULLY****Reason:**

The panel has been moved or copied successfully.

System Action:

None.

User Action:

None.

ED2009

~P1 PANELS ~P2

Reason:

The number of panels displayed was moved or copied to the 'TO' library.

System Action:

None.

User Action:

None.

ED2010

~P1 PANELS ~P2, ~P3 NOT ~P2 BECAUSE REPLACE=NO

Reason:

The number of panels displayed was moved or copied to the 'TO' library. Some panel were not moved or copied, because the replace option was set to 'NO'.

System Action:

The panels which could be moved or copied without replacing an existing panel were moved or copied.

User Action:

If existing panels in the target library are to be replaced, then reissue the command with the replace option set to 'YES'.

ED2011

PANEL DEFINITION PRINTED

Reason:

The print command was used to print a panel definition. The print has been accepted by the print spooler (PSM).

System Action:

None.

User Action:

None.

ED2012**ERROR DURING PANEL ~P1 - VSAMFDBK=~P2****Reason:**

Error occurred during panel rename or copy within library. The VSAMFDBK code explaining the error is shown.

System Action:

The rename or copy operation is terminated.

User Action:

Check the reason for the error, correct and retry.

ED9001**NO DATA TO BROWSE****Reason:**

No data was found to be browsed.

System Action:

None.

User Action:

None.

ED9002**BLOCK COMMAND INCOMPLETE****Reason:**

A block line command has been partially specified. That is, either the start line or end line has been specified but not both.

System Action:

The block command remains pending.

User Action:

Specify the start line and end line for the block command.

ED9003

MOVE/COPY PENDING

Reason:

A move or copy line command has been specified, but the position the lines are to be moved or copied to has not been specified.

System Action:

The move/copy command remains pending.

User Action:

Use the 'A' line command to indicate that the blocked data is to be moved or copied after that line, or use the 'B' line command to indicate that the blocked data is to be moved or copied before that line.

ED9004

'~P1' KEYWORD NOT SPECIFIED

Reason:

The mandatory keyword parameter identified by P1 was not specified when the editor was invoked.

System Action:

Processing is terminated.

User Action:

Correct and retry.

ED9005

'~P1' PARAMETER SPECIFIED WITH INVALID VALUE '~P2'

Reason:

The parameter identified by P1 was specified with an invalid value identified by P2 .

System Action:

Processing is terminated.

User Action:

Correct and retry.

ED9006**EDIT CANCELLED****Reason:**

The user has cancelled the edit. No data has been modified.

System Action:

None.

User Action:

None.

ED9007**INVALID COMMAND****Reason:**

An invalid command has been entered.

System Action:

The command is rejected.

User Action:

Correct and retry.

ED9008**'FLOW' NOT ALLOWED WITH OUTSTANDING LINE COMMAND****Reason:**

The flow command cannot be entered when line commands are pending.

System Action:

The command is rejected.

User Action:

Complete or remove the line commands and retry.

ED9009

CURRENT MARGINS ARE: LEFT=~P1 RIGHT=~P2

Reason:

The margins are currently set to the displayed values.

System Action:

None.

User Action:

None.

ED9010

MARGINS SET: LEFT=~P1 RIGHT=~P2

Reason:

The margins have been set to the indicated column positions.

System Action:

None.

User Action:

None.

ED9011

INVALID VALUE FOR LEFT MARGIN - ~P1

Reason:

An invalid left margin value has been specified.

System Action:

The command is rejected.

User Action:

Correct and retry.

ED9012

INVALID VALUE FOR RIGHT MARGIN - ~P1

Reason:

An invalid right margin value has been specified.

System Action:

The command is rejected.

User Action:

Correct and retry.

ED9013

MARGINS MUST BE BETWEEN 1 AND ~P1

Reason:

An invalid right or left margin value has been specified.

System Action:

The command is rejected.

User Action:

Correct and retry.

ED9014

RECOVERY NOT SUPPORTED

Reason:

The recovery function is not supported by the application.

System Action:

The command is rejected.

User Action:

None.

ED9015

FIND STRING NOT SPECIFIED

Reason:

A character string was not specified on the find command.

System Action:

The command is rejected.

User Action:

Enter the character string to be found with the find command and retry.

ED9016

CHANGE STRING NOT SPECIFIED

Reason:

A character string was not specified for the change command.

System Action:

The command is rejected.

User Action:

Reenter the change command, specifying the character string to be changed and the new value of the character string.

ED9017

COPY NOT SUPPORTED

Reason:

The copy function is not supported in this application.

System Action:

The command is rejected.

User Action:

None.

ED9018**BEFORE OR AFTER MUST BE INDICATED****Reason:**

A move or copy command has been entered but the position that the lines are to be copied or moved to has not been specified.

System Action:

The move or copy command remains pending.

User Action:

Specify where the lines are to be copied or moved by entering an 'A' or 'B' line command.

ED9019**COMMAND CONFLICT****Reason:**

A number of mutually exclusive commands have been entered.

System Action:

The commands are not processed.

User Action:

Correct and retry.

ED9020**COPY SUCCESSFULLY COMPLETED****Reason:**

A copy function has completed successfully.

System Action:

None.

User Action:

None.

ED9021

CREATE NOT SUPPORTED

Reason:

The create command is not supported in this application.

System Action:

The command is rejected.

User Action:

None.

ED9022

CREATE SUCCESSFULLY COMPLETED

Reason:

A create function has completed successfully.

System Action:

None.

User Action:

None.

ED9023

~P1 COMMAND NOT SUPPORTED IN ~P2 MODE

Reason:

A command has been entered that is invalid in the mode indicated.

System Action:

The command is rejected.

User Action:

None.

ED9024**SERVICE PROCEDURE ~P1 NOT FOUND****Reason:**

The service NCL procedure was not found in the NCL procedure library.

System Action:

The function is terminated.

User Action:

Correct the service procedure name and retry.

ED9025**INVALID SCROLL AMOUNT****Reason:**

An invalid scroll amount has been specified. Valid scroll amounts are (P)AGE, (H)ALF, (C)SR, (D)ATA, (M)AX or a number.

System Action:

None.

User Action:

Correct and retry.

ED9026**INVALID PARAMETER****Reason:**

An invalid command parameter has been specified.

System Action:

The command is rejected.

User Action:

Correct and retry.

ED9027

CHARACTERS '~P1' CHANGED ~P2

Reason:

A change command has successfully completed.

System Action:

None.

User Action:

None.

ED9028

LINE TOO LONG TO APPLY CHANGE

Reason:

A line containing the character string to be changed would be longer than the maximum line length if the change was applied.

System Action:

The change is not applied.

User Action:

None.

ED9029

CHARACTERS '~P1' FOUND ~P2

Reason:

The character string specified on a find command has been found. If P2 is present it indicates that ALL was specified on the FIND command and the string was found the number of times indicated.

System Action:

The cursor is positioned at the beginning of the character string.

User Action:

None.

ED9030***~P1 OF DATA REACHED*****Reason:**

The end of the data, either in a forward (bottom) or backward (top), was reached before finding the specified character string.

System Action:

None.

User Action:

Press the Find key to continue the search from the top/bottom of the data.

ED9031**CHARACTERS '~P1' NOT FOUND****Reason:**

The specified character string was not found in the data.

System Action:

None.

User Action:

None.

ED9032**COMMAND INVALID ON THIS LINE****Reason:**

A line command was entered that is not valid on the line indicated.

System Action:

The command is rejected.

User Action:

Correct and retry.

ED9033

INVALID LINE COMMAND

Reason:

An invalid line command was specified.

System Action:

The command is rejected.

User Action:

Correct and retry.

ED9034

SCROLL MUST BE CSR, PAGE, HALF, DATA OR A NUMBER

Reason:

An invalid scroll amount was specified.

System Action:

None.

User Action:

Correct the scroll amount.

ED9035

FIELD MUST BE SPECIFIED

Reason:

The indicated field must be specified.

System Action:

None.

User Action:

Enter a valid value in the field.

ED9036**~P1 MUST BE A VALID ~P2****Reason:**

An invalid value was entered in the field indicated.

System Action:

None.

User Action:

Enter a valid value in the field.

ED9037**RIGHT MARGIN MUST EXCEED LEFT MARGIN BY AT LEAST 20 CHARACTERS****Reason:**

An attempt was made to set margins where the value of the right margin was less than the value of the left margin. The right margin value must be greater than the left margin and allow a minimum of 20 characters to be entered between the margins.

System Action:

The request is rejected.

User Action:

Change the values of the margins so that the value of the right margin is greater than the left margin and allows a minimum of 20 characters to be entered between them.

ED9038**CREATE ONLY VALID WHEN TEXT IS ENTERED****Reason:**

User has attempted to issue a CREATE command without any text being present

System Action:

Request is rejected. CREATE fails.

User Action:

Enter text and retry.

ED9039

LINE CONTAINS CHARACTERS NOT SUPPORTED BY THIS DEVICE

Reason:

This message overlays a line of data if the line contains DBCS characters and the terminal is not DBCS capable.

System Action:

The line of data may be deleted, moved, copied but may not be edited.

User Action:

None.

ED9040

FUNCTION ONLY AVAILABLE IN 3270 ENVIRONMENT

Reason:

An edit screen can only be displayed in a fullscreen 3270 environment.

System Action:

The command is not processed.

User Action:

None.

ED9101

COMMAND CONFLICT

Reason:

A number of mutually exclusive commands have been entered.

System Action:

The commands are not processed.

User Action:

Correct and retry.

ED9102**UNABLE TO PROCESS COMMANDS. TEXT LINE LIMIT WILL BE EXCEEDED****Reason:**

The editor has a physical restriction of 9999 text lines. The current set of commands will cause this limit to be exceeded.

System Action:

Restore the editor environment to the state prior to attempting to process this set of commands, and highlight all commands as being in error.

User Action:

Modify the line commands to a combination which will not cause the line limit to be exceeded. If the functions being performed are being done to facilitate further editing which will eventually lead to fewer than 9999 lines, it is possible to 'export' a subset of lines to the NOTEPAD where they may be freely edited and then 'imported' back to the editor.

ED9103**INCOMPLETE STRING SPECIFIED****Reason:**

A change command was issued where either the "from" string or the "to" string were not completely specified. This error usually occurs when quotes are being used to delimit the string(s).

System Action:

Highlight the command in error.

User Action:

Re-enter the change strings taking care to ensure that quotes are balanced.

ED9104

REQUIRED STRING OMITTED

Reason:

A change command was issued where the "change to" string was not specified.

System Action:

Highlight the command in error.

User Action:

Enter the "change to" string and retry.

ED9105

~P1 NOT ALLOWED. ONE OR MORE TEXT LINES MUST BE SPECIFIED

Reason:

The P1 action is not allowed because no text lines were specified.

System Action:

Highlight the command in error.

User Action:

Specify one or more text lines and retry the command.

ED9106

LINE(S) NOT DELETED. NOT ALL DATA COULD BE MOVED

Reason:

This message is issued when a MOVE and OVERLAY command resulted in not all the text being moved. This could be caused by non-blank characters being positioned in the target line(s) in the same positions as non-blank characters in the source lines. It will also occur if more source lines are specified than target lines e.g. entering M6 on one line and O3 on another.

System Action:

Issue warning message, and don't delete source lines.

User Action:

Delete the source lines using D or DD, or specify a larger target area.

ED9107**MAXIMUM TEXT LINE LIMIT (~P1) EXCEEDED. TEXT CANNOT BE SAVED****Reason:**

This message is issued when the application-supplied maximum text line limit (P1) has been exceeded. It is a warning message only, and normal processing will continue. However, you will not be permitted to exit from the editor, other than by cancelling, until the total number of lines is below the limit.

System Action:

Issue warning message, only allow exit via CANCEL.

User Action:

Reduce the number of text lines or CANCEL the edit session.

ED9108**TEXT LINE LIMIT EXCEEDED. ~P1 LINES LOST****Reason:**

This message is issued when the physical maximum text line limit of 9999 has been exceeded as a result of Text Entry. The number of excess lines lost is contained in P1.

System Action:

Delete excess lines.

User Action:

None.

ED9109**AUTOMATIC RECOVERY IS ~P1****Reason:**

This message is issued when the RECOVERY command is issued with no operands. It indicates the current state of RECOVERY processing.

System Action:

None

User Action:

None

ED9110

PRINT REQUEST ~P1 SENT TO PRINTER ~P2

Reason:

This is an informational message indicating that a print request has successfully been sent to the requested printer.

System Action:

None

User Action:

None

ED9111

'~P1' VALUE ~P2 INVALID WHEN '~P3' VALUE IS ~P4

Reason:

The value P2 that has been assigned to parameter P1 is invalid when parameter P3 has a value of P4.

System Action:

The procedure is terminated and an error message is returned.

User Action:

Correct the invalid parameter and retry the operation.

ED9112**AMBIGUOUS FIND STRING SPECIFIED****Reason:**

A find command has been specified which the CAS Editor has been unable to satisfactorily parse. This message is issued when it is unclear what the string to be searched for is. An example of a FIND command which could cause this message to issue is "F FIRST LAST" in this case it is unclear whether the first occurrence of the word 'last' is being searched for, or the last occurrence of the word 'first'. Another example would be "F 'dog' cat" as it is again unclear what the actual text to be searched for is.

System Action:

The command is rejected and highlighted in error.

User Action:

Use single (') or double (") quotes to make the command unambiguous.

ED9113**LINE COMMAND DOES NOT SUPPORT DBCS DATA****Reason:**

A line command has been entered on a line containing DBCS data. The command is not supported on this line.

System Action:

The command is rejected and highlighted in error.

User Action:

Correct and retry.

ED9114

CHARACTER NOT ELIGIBLE

Reason:

You have selected the 'HEX ATTR' option with the cursor positioned on a special character, for example, a DBCS shift character. This character is not eligible for display or alteration.

System Action:

None.

User Action:

Position the cursor elsewhere and retry.

ED9115

CURSOR MUST BE WITHIN TEXT

Reason:

You have selected the 'HEX ATTR' edit option, but the cursor is not positioned in the body of the text.

System Action:

None.

User Action:

Position the cursor in the body of the text and retry.

EDDB0001

Panel P1 saved in library P2

Reason:

Panel (*P1*) was saved in library (*P2*).

System Action:

None.

User Action:

None.

EDDB0002**Panel P1 does not exist in library P2****Reason:**

The requested panel name (*P1*) was not found in the specified library (*P2*).

System Action:

The procedure is terminated.

User Action:

Correct the panel name or library name and retry.

EDDB0003**Cannot save panel P1, length P2 exceeds maximum of P3****Reason:**

Panel *P1* exceeds the maximum length for a panel record. The maximum length for a panel record is *P3* .

System Action:

Request rejected.

User Action:

Reduce the size of the panel.

EDDB0004**Panel P1 deleted from library P2****Reason:**

Panel (*P1*) was deleted from library (*P2*).

System Action:

None.

User Action:

None.

EDDB0005

Panel P1 renamed to P2 in library P3

Reason:

Panel (*P1*) was renamed (to *P2*) in library (*P3*).

System Action:

None.

User Action:

None.

EDDB0006

Panel P1 copied as P2 in library P3

Reason:

Panel (*P1*) was copied (as *P2*) in library (*P3*).

System Action:

None.

User Action:

None.

EDDB0007

Panel P1 P2 to library P3

Reason:

Panel (*P1*) was copied or moved (*P2*) to library (*P3*).

System Action:

None.

User Action:

None.

EDDB0008**P1 panels P2 to library P3 P4****Reason:**

A request to copy or move panels from one library to another was successful.
In the message:

P1 is the number of panels copied or moved

P2 is the action performed (copied or moved)

P3 is the target library

P4 indicates the number of panels not replaced This message is suppressed if all panels are copied or moved because:

- The replace action is specified, or
- None of the selected panels exist in the target library.

System Action:

None.

User Action:

None.

EDDB0011**File ID P1 unavailable - FILERC P2****Reason:**

The file from which you attempted to read a panel from is unavailable.

System Action:

Procedure terminated.

User Action:

See the NCL Reference for return codes from the &FILE OPEN verb.

EDDB0012

VSAM error on file get: Panel= P1, FileID P2, FileRC= P3 FDBK= P4

Reason:

An error occurred attempting to read a panel from a library. In the message:

P1 is the name of the panel

P2 is the library name (file ID)

P3 is the file return code (&FILERC)

P4 is the file feedback code (&VSAMFDBK)

System Action:

The procedure is terminated.

User Action:

See the &FILE GET verb description in the NCL Reference for return code and feedback values.

EDDB0013

VSAM error on file put: Panel= P1, FileID P2, FileRC= P3 FDBK= P4

Reason:

An error occurred attempting to write a panel to a library. In the message:

P1 is the name of the panel

P2 is the library name (file ID)

P3 is the file return code (&FILERC)

P4 is the file feedback code (&VSAMFDBK)

System Action:

The procedure is terminated.

User Action:

See the &FILE PUT verb description in the NCL Reference for return code and feedback values.

EDDB0014

VSAM error on file delete: Panel= P1, FileID P2, FileRC= P3 FDBK= P4

Reason:

An error occurred attempting to delete a panel from a library. In the message:

P1 is the name of the panel

P2 is the library name (file ID)

P3 is the file return code (&FILERC)

P4 is the file feedback code (&VSAMFDBK)

System Action:

The procedure is terminated.

User Action:

See the &FILE DEL verb description in the NCL Reference for return code and feedback values.

EDDB0021

Panel P1 already exists in P2 library

Reason:

You attempted to copy or move a panel (*P1*) to another library (*P2*) but the panel already exists in that library.

System Action:

Request rejected.

User Action:

If you want to replace the panel, use the replace action.

EDDB0101

Panel P1 successfully P2

Reason:

The panel identified by *P1* performed the action by *P2* successfully.

System Action:

None.

User Action:

None.

EDDB0102

Panel P1 not saved, no changes were made

Reason:

The panel identified by *P1* was not saved because no changes were detected.

System Action:

None.

User Action:

None.

EDDB0103

Panel P1 already exists

Reason:

You attempted to create a new panel; however, the name specified already exists in that library.

System Action:

Request rejected.

User Action:

Specify a unique panel name and retry.

EDDB0104

Library P1 is not defined

Reason:

The library identified by *P1* is not defined.

System Action:

Request rejected.

User Action:

None.

EDDB0105**Path P1 is not defined****Reason:**

The path name entered on the Edit Services Primary Menu is not defined to the system.

System Action:

The requested selection list is not displayed.

User Action:

The path name is derived from your user definition. Contact your security system administrator.

EDDB0109**Edit not allowed on library P1****Reason:**

You attempted to update the contents of a panel library (*P1*), but the library is not authorized for editing.

System Action:

The request is rejected.

User Action:

Correct the library name and retry. Panel library specifications are controlled by the PANELLIBS Customizer parameter group.

EDDB0111**Invalid syntax - panel name must be specified****Reason:**

You issued a command that requires a panel name to be specified; however, you omitted the panel name.

System Action:

Request rejected.

User Action:

Specify a panel name and retry.

EDDB0112

Invalid syntax - panel name P1 is invalid

Reason:

You entered an invalid panel name in the command.

System Action:

Request rejected.

User Action:

Specify a valid panel name and retry.

EDDB0113

Invalid syntax

Reason:

You issued a command with invalid syntax.

System Action:

Request rejected.

User Action:

See the online help. Correct syntax and retry.

EDDB0201

Panel P1 already exists

Reason:

The panel being renamed or copied already exists in the library.

System Action:

The request is rejected.

User Action:

Use a different new panel name or delete the existing panel name before doing rename or copy in the library.

EDDB0204**Invalid sort field****Reason:**

You specified an invalid sort field name as part of the SORT command.

System Action:

None.

User Action:

Enter a valid SORT command. The valid sort fields are NAME, CREated MODified, SIZE, MLEV, and ID, corresponding to the column headings on the selection list.

EDDB0205**P1 records sorted****Reason:**

The SORT command on the Edit Services Panel Selection List has been issued, and the displayed number of records was sorted.

System Action:

None.

User Action:

None.

EECN3501**No EE traffic recorded by the Packet Analyzer on P1****Reason:**

A Packet Analyzer request to the SOLVE SSI on LPAR *P1* failed because the Packet Analyzer has no EE statistics.

System Action:

The request fails.

User Action:

If the SOLVE SSI on *P1* has recently started, retry later; otherwise, check that EE is operational on *P1*. If EE is operational, contact Technical Support.

EECN4501

Invalid sort option. Use SORT ? to display valid options

Reason:

You entered an invalid SORT command.

System Action:

SORT command is rejected.

User Action:

Enter SORT ? and select an option from the list.

EECN4502

P1 is not an IP address or partial IP address

Reason:

You issued the LOCATE command with invalid operand *P1* . The connection list is sorted by local or remote address, so *P1* must be an IP address or part thereof.

System Action:

None.

User Action:

Do one of the following:

- Change the locate command to specify a valid or partial IP address.
- Use the SORT ? command to sort the connection list by a different field.

EECN4503

No RTPs on port P1. Signal Traffic only

Reason:

You issued the R action against a UDP connection, but the selected connection is using port *P1* , which is used for EE signal traffic only. No RTPs use this connection.

System Action:

None.

User Action:

Select a different connection.

EECN4505**No sort field selected****Reason:**

You used the SORT ? command to present a prompt list of connection list sort fields, but did not select a sort field.

System Action:

None.

User Action:

Specify a sort field or select a field from the prompt list.

EECN4506**No EE UDP connections found****Reason:**

A request to list EE UDP connections has found nothing. If the request is for a CP name, the packet analyzer has seen no EE packets to the selected CP name.

System Action:

None.

User Action:

Retry later. This may be a transient condition if the packet analyzer has recently been restarted, or if it has not yet seen an RTP to the remote CP.

EECN4507

Use PT to start tracing a UDP Connection, then PTV to view the trace

Reason:

From the EE UDP Connection List, you can use simple line commands to easily start, view, and manage SmartTrace packet traces.

The following SmartTrace line commands are available:

PT starts a packet trace.

PTV views the packets in the trace. (You can view packets while the trace is active.)

PTI inactivates the packet trace. (When inactivated, the trace is automatically deleted after a certain interval; save it if you want to keep it permanently.)

PTD inactivates and immediately deletes the packet trace.

An EE UDP Connection is identified by its remote and local IP address and port number. Tracing an EE UDP Connection traces all traffic for that port's priority, between the local and remote addresses.

For EE ports carrying application data (generally, local ports 12001 - 12004), the trace includes all RTP Pipes using that priority or class of service.

System Action:

A panel of optional EE trace criteria appears. A SmartTrace packet trace starts for the EE UDP Connection.

User Action:

After the trace is activated, use the *PTV* command to view and manage the active trace.

More About SmartTrace

To list all EE-related SmartTraces, for all resources and users, use the *L* option from the EE SmartTrace Menu (shortcut */EETRALL*).

More About the EE UDP Connection List

As well as packet tracing, actions are available from this list to show connection traffic, packet breakdowns, and to drill down to the specific RTP Pipes that flow over any connection. Type *?* on any line, to see all available commands.

EECN4508**Connections protected by IPSec are not included****Reason:**

The Packet Analyzer has determined that IPSec is used by this stack. If the list is for a specific remote address, traffic protected by IPSec has been seen for the remote address.

If the IPSec-protected traffic includes EE data, the EE connections cannot be identified by Packet Analyzer, so cannot be included in the list.

System Action:

None.

User Action:

None.

EECN4509**No EE UDP connections found. IPSec may be in use.****Reason:**

A request to list EE UDP connections has found nothing. However, Packet Analyzer has seen IPSec traffic on this stack, and if the request is for a CP name, IPSec traffic has been seen for the remote address. If the IPSec-protected traffic includes EE data, the EE connections cannot be identified by Packet Analyzer, so cannot be included in the list.

System Action:

None.

User Action:

If IPSEC is being used for EE traffic, this option is not useful.

If IPSec is not being used, retry later. This condition can be transient if Packet Analyzer has recently been restarted or if it has not yet seen an RTP to the remote CP.

EECN5001

Packet Analyzer statistics not available

Reason:

The SSI is currently running with its Packet Analyzer PALEVEL parameter set to a value other than FULL.

Packet statistics are available only when PALEVEL is FULL.

System Action:

No packet statistics are displayed.

User Action:

Check why the SSI is not running with the parameter *PALEVEL=FULL*.

When including Packet Analyzer functions in an SSI, it is recommended to always set the PALEVEL parameter to FULL. If you run with a level other than FULL, various IP monitoring functions will not be available.

Only use a PALEVEL other than FULL if instructed by Technical Support.

EPPKG01

SSI *P1* on *P2* not contactable or Packet Analyzer not configured**Reason:**

A packet analyzer request to the SOLVE SSI failed because the SSI region cannot be contacted or does not include support for the packet analyzer. The SSID (*P1*) and system (*P2*) identify the SSI region where the request is issued. This can be the local SSI region or a remote region, possibly on another LPAR.

System Action:

The request fails.

User Action:

Do the following in the region running on *P2*:

1. Ensure that the region is connected to the correct SSI. To do this, display the list of Customizer parameter groups (/PARMS) and select the SSI group (from the INTERFACES section). Ensure that the SSID is specified and is the correct value. Display the parameter group's initialization log (Ilog). Update and action the parameter group, as required.
2. Display the activity log and check for other SSI-related error messages and action these accordingly.
3. Ensure that the SSI initialization parameters include support for the packet analyzer. To do this, display the SSIPARMS member in the SOLVE SSI region's JCL library.

Ensure that Packet Analyzer support is enabled by specifying *PKTANALYZER=YES*.

Also ensure that the parameters include *PALEVEL=FULL*

Only use a *PALEVEL* other than *FULL* if instructed by Technical Support.

Note: Only one SOLVE SSI region (per LPAR) can include support for the packet analyzer.

EEPKG02

Packet Analyzer on *P1* not enabled for EE analysis

Reason:

A Packet Analyzer request to the SOLVE SSI on LPAR *P1* failed because the Packet Analyzer is not enabled for EE processing.

System Action:

The request fails.

User Action:

Check why EE analysis is disabled on *P1*.

1. Check the Packet Analyzer version using the SSI STATUS command.
EE analysis requires Packet Analyzer version 116.01 or greater.
2. Check that the Packet Analyzer is configured to detect EE traffic.

To detect EE traffic, these two things must be set up:

- SSI 'SNANMI' communication must be enabled. SNANMI is a Communications Server function that provides EE information.
- The Packet Analyzer must know the name of the EE stack.

Both of these are specified as parameters in the SOLVE SSI JCL. Enter OCS command *SELFTEST* and look for messages similar to:

NSN101 SNANMI EPS REGISTERED, NAME=\$SYS.\$EE.?SYS

NSN103 0 ACTIVE SNANMI REQUEST(S), SUBTASK STATUS: STARTED

or

IPDI5201 SNANMI interface is active (via a remotely connected SSI) and
IPDI52FB EE Packet Analysis enabled: stack ?STACK, port base UDP 12000

If the SNANMI interface is not active on the local or a remote SSI, see the Installation Guide.

If EE Packet Analysis is not enabled, see the Installation Guide

Make sure the EE ?STACK stack name is correct. If there are multiple TCP/IP stacks on this LPAR, only one of them will support EE.

IBM do not recommend changing the EE port base to other than 12000.

Check that EE is defined and active to VTAM on this LPAR.

Enter the VTAM command *D NET,EE* to display any active EE Connections.

If the SSI and Packet Analyzer are correctly set up, and this error occurs even when there are active EE connections, contact Technical Support and provide them with the output of the OCS *\$\$SYSPRO EE* command.

EEPKG03**No EE traffic seen by the Packet Analyzer on *P1*****Reason:**

A Packet Analyzer request to the SOLVE SSI on LPAR *P1* failed because the Packet Analyzer has no EE statistics.

System Action:

The request fails.

User Action:

If the SOLVE SSI on *P1* has recently started, retry later; otherwise, ensure that EE is operational on *P1*. If EE is operational, contact Technical Support.

EEPKG04**No EE Connections have been detected by the *P1* Packet Analyzer****Reason:**

A request for Enterprise Extender (EE) traffic information was received but failed because the Packet Analyzer on LPAR *P1* is not aware of any EE connections. The following causes are possible:

- The Packet Analyzer is not correctly configured to detect EE Traffic.
- There has been no EE traffic since the last SSI restart. (The Packet Analyzer runs within the SSI.)
- All EE traffic is protected by IPSec. IPSec-protected traffic is not visible to the Packet Analyzer.

System Action:

The request fails.

User Action:

1. Check that the Packet Analyzer is configured to detect EE traffic.

To detect EE traffic, these two things must be set up:

- SSI 'SNANMI' communication must be enabled. SNANMI is a Communications Server function that provides EE information.
- The Packet Analyzer must know the name of the EE stack.

Both of these are specified as parameters in the SOLVE SSI JCL.

Enter the **SELFTEST** OCS command and look for messages similar to:

```
NSN101 SNANMI EPS REGISTERED, NAME=$SYS.$EE.?SYS
```

```
NSN103 0 ACTIVE SNANMI REQUEST(S), SUBTASK STATUS: STARTED
```

or

```
IPDI5201 SNANMI interface is active (via a remotely connected SSI)
```

```
IPDI52FB EE Packet Analysis enabled: stack ?STACK, port base UDP 12000
```

If the SNANMI interface is not active on the local or a remote SSI, see the *Installation Guide*.

If EE Packet Analysis is not enabled, see the *Installation Guide*.

Make sure the EE ?STACK stack name is correct. If there are multiple TCP/IP stacks on this LPAR, only one of them will support EE.

IBM does not recommend changing the EE port base to other than 12000.

2. Check that EE is defined and active to VTAM on this LPAR.

Enter the **D NET,EE** VTAM command to display any active EE Connections.

If the SSI and Packet Analyzer are set up correctly, IPsec is not used, and this error occurs even when there are active EE connections.

For assistance, contact Technical Support. Provide the output of the \$\$SYSPRO EE OCS command.

EEPKG05**EE Traffic Statistics unavailable due to error****Reason:**

A request to aggregate the cumulative EE statistics from the Packet Analyzer EEI records failed with a run-time error.

System Action:

The request fails. Additional run-time error details are written to the activity log under the same message ID.

User Action:

Browse the activity log for the error details.

Retry the request.

For assistance, contact Technical Support. Provide them with the text of the EEPKG05 messages from the log.

EEPKG06

EE traffic statistics for timeframe *P1* are not yet available

Reason:

A request to return the EE traffic statistics for the timeframe *P1* cannot be satisfied because the timeframe has not passed.

For EE statistics collection, the SSI region and this NetMaster region must both be active for the whole of the timeframe.

For the HOUR timeframe, there has not been a whole hour since this region and its SSI have been collecting EE statistics.

For the DAY timeframe, there has not been a whole day since this region and its SSI have been collecting EE statistics.

System Action:

The next best timeframe is used.

For the DAY timeframe, the HOUR data is returned (if available).

For the HOUR timeframe, the cumulative total since the SSI and NetMaster regions were both started is returned.

User Action:

None.

The HOUR timeframe will be available after the SSI and NetMaster regions have collected statistics for at least one full clock hour.

The DAY timeframe will be available after the SSI and NetMaster regions have collected statistics for at least one full calendar day.

EEPKG07

EE traffic statistics unavailable: *P1*

Reason:

The EE traffic statistics collector process could not gather the required statistics because of the reason stated in message *P1*.

System Action:

Statistics collection is rescheduled for the next interval.

User Action:

Determine the cause stated in the encapsulated message *P1*.

EEPKG08**SNANMI SSI function not available on P1****Reason:**

EE traffic statistics collection and performance attribute sampling cannot be performed by this region because the SNANMI SSI function does not appear to be supported by any SSI known to LPAR *P1* .

EE traffic statistics and performance attribute values come from a combination of Packet Analyzer data, and from the z/OS Communications Server SNA Network Management Interface.

A local or remotely connected SSI can provide SNANMI functions to a region. This is controlled by the SSI parameter *SNANMI=YES*

System Action:

Requests for EE traffic statistics fail.

Performance data attribute sampling may fail.

User Action:

Do the following on this region:

1. Issue the OCS command

SSI STATUS

If messages *NSN101* and *NSN103* appear, then the local SSI on this LPAR is providing the SNANMI functions to this region. Retry the request.

2. Issue the OCS command

SH EPS SERV=\$SYS.\$EE.?sysname

where *?sysname* is the system name of this LPAR.

If message *N99755* appears, then a remotely connected SSI is providing the SNANMI functions to this region.

Retry the request.

3. If the local SSI is active, but neither the local nor a remote SSI is providing the SNANMI functions, you may need to add the SNANMI keyword to the SSI parameters, and possibly also enable SNANMI processing in VTAM.

See the product installation instructions.

EL0001

INVALID PARAMETER ON \$ELSV000 CALL. PARAMETER IN ERROR: P1 = P2

Reason:

An invalid parameter was passed on the \$ELSV000 command.
P1 is the keyword operand that was in error, and P2 is the invalid value.

System Action:

Topology and EventView processing not started.

User Action:

Correct operand and retry.

EL0002

INVALID OPTION SPECIFIED ON \$ELCM000 CALL

Reason:

The \$ELCM000 procedure/command was issued with an invalid OPT parameter.

System Action:

None.

User Action:

Correct OPT= value, and retry.

EL0003

&P1 COMMAND ACCEPTED.

Reason:

A SOLVE:Ops OV/NV command was issued, and command processing has started.
P1 is the command.

System Action:

Command processing commences.

User Action:

None. (Informational)

EL0004**REQUIRED OPERAND &P1 MISSING ON &P2 COMMAND.****Reason:**

A command was issued and a required operand is missing.
P1 is the missing operand.
P2 is the command.

System Action:

Command not issued.

User Action:

Re-issue the command with the required operand included.

EL0005**ATTEMPT TO CONNECT SOLVE:OPS OV/NV FROM &P1 FAILED. NOT CONFIGURED.****Reason:**

A workstation peer system running SOLVE:OPS OV/NV attempted to open the SOLVE:Ops OV/NV event flow on this SOLVE:Operations region. The connection was rejected because this region is not configured to use SOLVE:Ops OV/NV.

P1 Is the host name of the Unix Workstation that tried to connect.

System Action:

The SOLVE:Operations component of SOLVE:Ops OV/NV is not started.

User Action:

To configure SOLVE:Operations to connect to SOLVE:Ops OV/NV system, update the \$RM WSPEER Customisation parameter group in SOLVE:Operations.

EL0101

VARIABLE ALLOCATE FAILED IN SOLVE:OPS OV/NV TOPOLOGY PROCESSING

Reason:

The SOLVE:OPS OV/NV ServiceView/ResourceView component failed because a vartable allocation failed.

System Action:

SOLVE:OPS OV/NV topology processing fails.

User Action:

Terminate and re-start SOLVE:OPS OV/NV topology processing.

EL0102

PROFILE COMMAND FAILED

Reason:

An error occurred when a procedure in SOLVE:OPS OV/NV tried to profile itself for a certain event type.

System Action:

SOLVE:OPS OV/NV transaction fails.

User Action:

Check SOLVE:OPS OV/NV userid Event Distribution Services (EDS) authority. Contact technical support.

EL0103**SOLVE:OPS OV/NV TRAP SEND FAILED. TRAP SENDER NOT ACTIVE.****Reason:**

SOLVE:Ops OV/NV attempted to send a trap but failed because the component which sends the traps to the workstation was not active, or was not profiled to receive resource status events.

System Action:

Resource status events are not sent to WorkStation.

User Action:

Check event daemon started with the ServiceView/ResourceView option set or defaulted to active. Re-start the event daemon. Re-start SOLVE:OPS OV/NV using the \$ELCM000 command if the initial population of the topology diagram was not complete at time of error.

EL0104**SOLVE:OPS OV/NV - INVALID PARAMATER ON CALL TO \$ELSV01T****Reason:**

An invalid parameter was used on a procedure call in SOLVE:Ops OV/NV.

System Action:

SOLVE:Ops OV/NV topology processing fails.

User Action:

Contact technical support.

EL0105

SOLVE:OPS OV/NV TOPOLOGY MAP FLOW STARTED TO P1 WITH FILTER P2

Reason:

The SOLVE:Ops OV/NV topology map processing was started. (via the \$ELSV000 command). Topology processing is the flow of ServiceView and ResourceView events to the WorkStation.

P1 is the host name of the workstation to which the events are sent.

P2 is the resource filter being used.

System Action:

Topology information should soon be sent to the workstation.

User Action:

None. (Informational)

EL0106

SOLVE:OPS OV/NV UNKNOWN FILTER SPECIFIED. DEFAULT USED.

Reason:

The FILTER specified in the SOLVE:Ops OV/NV initialization script on the workstation is unknown on this SOLVE region. The normal default filter has been used instead.

System Action:

Default filter is used.

User Action:

Check filter specification in the installation script on the workstation. Check that filter exists on the SOLVE region.

EL0201**APPC RECEIVE ERROR OCCURRED ON SOLVE:OPS OV/NV LINK.
RC/FB= P1/ P2****Reason:**

An APPC receive error starting the conversation that sends events to the workstation event manager.

System Action:

SOLVE:Operations OV/NV event flow terminates.

User Action:

Check installation details for SOLVE:Operations client on workstation, OV/NV and also on the product region server.

EL0202**APPC SEND ERROR SENDING EVENTS IN SOLVE:OPS OV/NV. RC/FB=
P1/ P2****Reason:**

An APPC SEND error occurred while sending events to the workstation event manager.

System Action:

SOLVE:Operations OV/NV event flow terminates.

User Action:

Check that workstation is active. Check that link is still active. Check Installation of SOLVE:Operations OV/NV on workstation and on the product server region.

EL0203

ERROR ENCODING SOLVE:OPS OV/NV EVENT INTO SNMP TRAP. RC/FB= P1/ P2

Reason:

An error occurred while BER encoding a SOLVE:Ops OV/NV event into an SNMP trap for sending to the workstation event manager.

System Action:

Skips this event without sending it and waits for the next.

User Action:

Contact systems programmer. Check installation, including ASN1 maps are compiled on this version the product region.

EL0204

PROFILE COMMAND FAILED

Reason:

An error occurred when a procedure in SOLVE:Ops OV/NV tried to profile itself for a certain event type.

System Action:

SOLVE:Ops OV/NV server terminates.

User Action:

Check SOLVE:Ops OV/NV userid Event Distribution Services (EDS) authority. Contact technical support.

EL0205

SOLVE:OPS OV/NV SNMP TRAP FLOW TERMINATING, TERMINATE EVENT RECEIVED

Reason:

The SOLVE:Ops OV/NV SNMP trap flow is terminating because it received a termination event, probably as the result of a terminate command.

System Action:

SOLVE:Ops OV/NV server terminates completely.

User Action:

Re-start SOLVE:Ops OV/NV from workstation if required.

EL0207**SOLVE:Ops OV/NV event overflow. Events discarded.****Reason:**

The SOLVE:Operations OV/NV process that receives events and sends them as traps to the workstation has reached its queue limit, and events received discarded.

The NMIQLIM parameter controls the maximum size of the event queue. The default is 32767.

System Action:

Events are discarded until queue size drops.

User Action:

Investigate why so many events are queued.

EL0208**SOLVE:OPS OV/NV ERROR ENCODING ALERT EVENT TRAP.
ZMDORC/FB= P1/ P2****Reason:**

An error occurred trying to BER encode an event in to an SNMP trap.

P1 is the ZMDORC value,

P2 is the ZMDOFDBK value.

System Action:

SOLVE:Ops OV/NV processing terminates.

User Action:

Contact technical support.

EL0209

ERROR STARTING SOLVE:Ops OV/NV LINK MONITOR, RC/MSG= P1/ P2

Reason:

An error occurred trying to start the link monitor in SOLVE:Ops OV/NV.
P1 is the return code from the start.
P2 is any error message returned from the start.

System Action:

SOLVE:Ops OV/NV processing terminates.

User Action:

Contact technical support.

EL0210

SOLVE:OPS OV/NV SNMP TRAP FLOW STARTED TO &P1

Reason:

SOLVE:Ops OV/NV has been started from the workstation, and the SNMP trap sender has been activated.
P1 is the host name of the workstation to which the events are sent.

System Action:

SOLVE:Ops OV/NV should receive events as they arise.

User Action:

None. (Informational)

EL0211**SOLVE:OPS OV/NV TRAP FLOW NOT STARTED. SOLVE:OPS OV/NV NOT CONFIGURED.****Reason:**

A workstation peer system running SOLVE:Ops OV/NV attempted to open an SNMP trap flow from this SOLVE:Operations region, however this region is not configured to use SOLVE:Ops OV/NV, so the connection was rejected. SOLVE:Ops OV/NV is configured by setting the SOLVE:Operations \$RM WSPEER Customization parameter group.

System Action:

The SOLVE:Operations component of SOLVE:Ops OV/NV is not started.

User Action:

To configure SOLVE:Operations to connect to a SOLVE:Ops OV/NV system, update the \$RM WSPEER Customization parameter group in SOLVE:Operations.

EL0212**SOLVE:OPS OV/NV TRAP FLOW NOT STARTED. SOCKET ERROR. RC/FB=&P1/&P2.****Reason:**

A Socket error occurred while trying to start the flow of SNMP traps from SOLVE:Operations to SOLVE:Ops OV/NV running on a workstation.

System Action:

The SOLVE:Operations component of SOLVE:Ops OV/NV is not started.

User Action:

Check that the \$RM WSPEER parameter group in SOLVE:Operations has been configured correctly. Check that the TCP/IP port numbers are not in use by any other applications.

EL0213

ALERT MONITOR ERROR: P1

Reason:

An error occurred when the alert monitor was invoked to create an agent to receive alerts that are to be sent to SOLVE:Operations for OpenView and NetView. *P1* contains more details of the error.

System Action:

The SOLVE:Operations for OpenView and NetView server terminates.

User Action:

Contact your support representative.

EL0301

DEFMODE FOR SOLVE:OPS OV/NV W/S TRANSACTION FAILED: P1

Reason:

During initialization of SOLVE:Ops OV/NV, an attempt to define an APPC mode failed.

System Action:

Mode not defined. SOLVE:Ops OV/NV may not run.

User Action:

Contact systems programmer.

EL0302

DEFLINK FOR SOLVE:OPS OV/NV W/S TRANSACTION FAILED: P1

Reason:

During initialization of SOLVE:Ops OV/NV an attempt to define an APPC link failed.

P1 is the error message received.

System Action:

Link not defined, meaning SOLVE:Ops OV/NV may not run.

User Action:

Contact systems programmer to check installation.

EL0303**DEFTRANS FOR SOLVE:OPS OV/NV W/S TRANSACTION FAILED: P1****Reason:**

A DEFTRANS for an APPC transaction failed during SOLVE:Ops OV/NV initialization.

P1 is the error message received.

System Action:

Transaction not defined, meaning SOLVE:Ops OV/NV can't run.

User Action:

Contact systems programmer to check installation.

EL0304**DEFOPSET FOR SOLVE:OPS OV/NV W/S TRANSACTION FAILED: P1****Reason:**

During initialization of SOLVE:Ops OV/NV, an attempt to define an APPC opset failed.

System Action:

Opset not defined. SOLVE:Ops OV/NV may not run.

User Action:

Contact systems programmer.

EL0305**SOLVE:OPS OV/NV APPC LINKS DEFINED FOR LU'S &P1 AND &P2****Reason:**

During initialization of SOLVE:Ops OV/NV, appc links were defined successfully.

P1 and P2 are the lunames for which the links were defined.

System Action:

None.

User Action:

None. (Informational)

EL0501

PROFILE COMMAND FAILED. REASON: P1

Reason:

An error occurred when a procedure in SOLVE:Ops OV/NV tried to profile itself for a certain event type.

P1 is the message with the reason the profile command failed.

System Action:

SOLVE:Ops OV/NV transaction fails.

User Action:

Check SOLVE:Ops OV/NV userid Event Distribution Services (EDS) authority.
Contact technical support.

EL0502

SOLVE:OPS OV/NV SENDING TOPOLOGY EVENT FAILED

Reason:

A SOLVE:Ops OV/NV procedure was unable to send an EDS event because the listener was not there.

System Action:

Topology event is not sent.

User Action:

Check whether any other procedures have ended abnormally.

EL0601

SOLVE:OPS OV/NV EVENTVIEW MESSAGE RECEIVER INACTIVE, SYSTEM= P1

Reason:

The event flow transaction in SOLVE:Ops OV/NV appears to have terminated.
P1 is the remote system id.

System Action:

EventView flow to SOLVE:Ops OV/NV terminates.

User Action:

Check APPC links in SOLVE:Ops OV/NV.

EL0602**SOLVE:OPS OV/NV EVENTVIEW FLOW STARTED TO &P1****Reason:**

The SOLVE:Ops OV/NV EventView message flow was started. (via the \$ELSV000 command). This is the flow of raw MVS and SNA message data as SNMP traps.

P1 is the host name of the workstation to which the events are sent.

System Action:

EventView messages should be sent to the workstation as they arise.

User Action:

None. (Informational)

EL0603**SOLVE:OPS OV/NV EVENTVIEW MESSAGE EXIT " P1" NOT FOUND OR INVALID, EXIT DISABLED****Reason:**

The SOLVE:Operations OV/NV EventView message flow was started. The message processor invoked the message exit procedure, **P1** , but it does not exist in the COMMANDS library or the procedure name is invalid.

System Action:

The exit is disabled.

User Action:

Ensure that the EventView message exit procedure name specified in the WSPEER parameter group identifies a procedure that is available to the region.

EL0701

ERROR DEFINING SOLVE:OPS OV/NV USERID. RETCODE=*P1*

Reason:

An error occurred when defining the SOLVE:Ops OV/NV user ID. *P1* is the return code from the call to UAMS. Message EL0702 follows with a description of the error.

System Action:

SOLVE:Ops OV/NV User ID is not defined.

User Action:

Look at the error reason in message EL0702 which follows, and check the USERID parameter in the SOLVE:Ops OV/NV initialization parameters. Check that the user is defined correctly to SOLVE:Operations.

EL0702

P1

Reason:

This message is the result of a failed attempt to define the SOLVE:Ops OV/NV user id. It follows EL0701, and provides a description of the error reason. See EL0701 for additional information.

System Action:

SOLVE:Ops OV/NV User Id is not defined.

User Action:

See EL0701 message for explanation of user action.

EL0703**SOLVE:OPS OV/NV HOST IP ADDRESS INITIALIZATION PARAMETER NOT SPECIFIED****Reason:**

As part of SOLVE:Ops OV/NV installation it is necessary to specify the host IP address in the initialization parameters. The IP address parameter is missing and this parameter is mandatory. A new IP address parameter value can be specified while the SOLVE system is running by entering \$ELIN07I OPT=ALLOCIP IPADDR=xxx from an OCS or command window.

System Action:

SOLVE:Ops OV/NV will not run.

User Action:

Include the IP address parameter in the SOLVE:Ops OV/NV initialization parameters.

EL0704**SOLVE:OPS OV/NV IP ADDRESS ALLOCATION COMPLETE****Reason:**

As part of SOLVE:Ops OV/NV initialization the IP address parameter was successfully processed. This message is also issued in response to dynamic specification of the IP address parameter from a command or OCS window.

System Action:

SOLVE:Ops OV/NV will use the new IP address in traps it generates.

User Action:

None. (Informational)

EL0801

SOLVE:OPS OV/NV LINK CLOSE OR ERROR DETECTED, APPL TERMINATING. LU= P1

Reason:

The SOLVE:Ops OV/NV process which receives events and sends them as traps to the workstation has detected that the appc link it uses has terminated.

P1 is the LU name at the remote end of the APPC link.

System Action:

SOLVE:Ops OV/NV processing terminates completely, but should re-start automatically once the link is available again.

User Action:

Check that the SOLVE:Ops OV/NV communication path (See LUNAME indicated message parameter *P1*) is active.

EL0802

SOLVE:OPS OV/NV EVENT DAEMON HOST END PROCEDURE TERMINATED, NCLID= P1

Reason:

The SOLVE:Ops OV/NV event daemon host end terminated, meaning no traps can be sent to SOLVE:Ops OV/NV. This triggers SOLVE:Ops OV/NV cleanup to enable a re- start. The cause of the error could be an APPC link failing, or an NCL error. Check the log for details.

P1 is the NCLID of the event daemon procedure that failed.

System Action:

SOLVE:Ops OV/NV processing terminates completely, and should re-start if/when communication links are available.

User Action:

Check log for error messages relating to the NCL procedure that terminated, and SOLVE:Ops OV/NV error messages in general.

EL0803**SOLVE:OPS OV/NV TERMINATING FOR &P2 DUE TO CANCELLATION OF USERID &P1****Reason:**

SOLVE:Ops OV/NV processing is terminating completely because the special SOLVE:Director userid has been cancelled.

P1 is the SOLVE:Ops OV/NV user id.

P2 is the host name of the workstation system that SOLVE:Ops OV/NV is connected to.

System Action:

SOLVE:Ops OV/NV processing terminates completely, and should re-start automatically.

User Action:

Wait for SOLVE:Ops OV/NV to re-start. Look at log for messages relating to userid cancellation.

EL0804**SOLVE:OPS OV/NV TERMINATING FOR P1 DUE TO SYSTEM IMAGE RELOAD****Reason:**

SOLVE:Ops OV/NV processing is terminating completely because a system image reload occurred. SOLVE:Ops OV/NV should re-start automatically.

P1 is the host name of the workstation system that SOLVE:Ops OV/NV is connected to.

System Action:

SOLVE:Ops OV/NV processing terminates completely and should re-start automatically.

User Action:

Wait for SOLVE:Ops OV/NV to re-start.

EL0900

P1

Reason:

This message is displayed in response to a LOGMSG request received from SOLVE:Operations for OpenView/NetView.

System Action:

None.

User Action:

As indicated by the message from SOLVE:Operations for OpenView/NetView.

EL0901

TRANSACTION PROTOCOL VIOLATION, RECEIVED P1 NOT P2

Reason:

Unexpected data was received on the SOLVE:Ops OV/NV host command APPC transaction.

P1 is what was received.

P2 is what was expected to be received.

System Action:

Host command transaction ends.

User Action:

Retry. Contact systems administrator.

EL0902

HOST COMMAND SEND ERROR, RC= P1 FDBK= P2

Reason:

An APPC error occurred sending data in the OV/NV host command transaction.

P1 is the RETCODE value after the APPC SEND.

P2 is the ZFDBK value after the APPC SEND.

System Action:

Host command transaction ends.

User Action:

Retry. Check that all OV/NV links/PU's LU's are active. Contact systems administrator.

EL0903**HOST COMMAND TIMED OUT BEFORE RESPONSE WAS RECEIVED.****Reason:**

There is a timeout period on the SOLVE:Ops OV/NV host command facility. If no response is received from a command within the timeout period then this message is issued.

System Action:

Host command transaction ends. Command may not have completed.

User Action:

Retry the command. The timeout may have been caused by slow system response times. Check that the command is intended to be a short running command. This command facility is not useful for starting long running background procedures, or commands that display panels.

EL1001**COMMAND ERROR. OPERAND P1 MISSING OR INVALID.****Reason:**

A command was issued against an object or resource, but one of the operands was missing or invalid.

P1 is the missing or invalid operand.

System Action:

The host command transaction ends.

User Action:

Correct the command, and retry.

EL1002

COMMAND NOT SUPPORTED IN THIS ENVIRONMENT

Reason:

The command requested is not supported by this command facility.

System Action:

The command is not issued.

User Action:

Ensure that the spelling and syntax of the command is correct.

EL1003

ERROR ALLOCATING COMMAND LIST VARIABLE

Reason:

A variable allocation error occurred while the region was trying to run the remote command facility.

System Action:

The command does not run.

User Action:

Contact your systems programmer. The error may be because of storage shortage in the region.

EL1004

COMMAND ERROR. EXTRA OPERANDS INVALID WITH OPT=LISTCMD.

Reason:

When issuing a command with OPT=LISTCMD specified, it is invalid to also specify either the COMMAND or OBJID operands.

System Action:

The command is not issued.

User Action:

For OPT=LISTCMD, do not specify any other operands.

EL1005**COMMAND P1 IS NOT VALID FOR AN SNA RESOURCE****Reason:**

The *P1* command is invalid for an SNA resource.

System Action:

The command is not issued.

User Action:

Use a command that is applicable for SNA resources.

EL1006**NEL COMMAND FOR SNA RESOURCES NOT SUPPORTED IN THIS ENVIRONMENT****Reason:**

The NEL command is not supported by this command processor.

System Action:

The command is not issued.

User Action:

None.

EL1101**VARIABLE ERROR, ID= P1 FUNC= P2 FDBK= P3 KEY= P4****Reason:**

An error occurred while manipulating an NCL VARIABLE.

System Action:

None.

User Action:

Contact your local support representative.

EL1102

COMMAND PROCESSED SUCCESSFULLY

Reason:

The command was processed successfully.

System Action:

None.

User Action:

None.

EL1201

SNA GROUP: P1 NOT PROCESSED, SYSTEM IMAGE: P2 VERSION: P3 NOT ACTIVE

Reason:

The system image that manages this SNA group resource is not currently active/available.

P1 is the SNA group name.

P2 is the System Image name.

P3 is the System Image version.

System Action:

SOLVE:Ops OV/NV processing not performed for this SNA group.

User Action:

If due to a remote region not being available, rectify and re-start SOLVE:Ops OV/NV processing.

EL1202

SOLVE:OPS OV/NV SENDING SNA RESOURCE EVENT FAILED

Reason:

A SOLVE:Ops OV/NV procedure was unable to send an EDS event because the listener was not there.

System Action:

SNA resource event is not sent.

User Action:

Check whether any other procedures have ended abnormally.

EL1203**SOLVE:OPS OV/NV RETRIEVING SNA RESOURCE INFORMATION FOR P1 FAILED****Reason:**

An error occurred when SOLVE:Ops OV/NV attempted to retrieve information about an SNA resource.

P1 is the name of the SNA resource.

System Action:

SNA resource information is not sent.

User Action:

Check whether any other procedures have ended abnormally.

EL1204**SOLVE:OPS OV/NV DOMAIN LIMIT OF P1 EXCEEDED****Reason:**

The maximum domain limit manageable by SOLVE:Ops OV/NV was exceeded.

P1 is the maximum number of domains.

System Action:

Resources in domains above the limit not monitored by SOLVE:Ops OV/NV.

User Action:

Contact technical support.

EL1301

APPC START FAILED FOR \$ELSN22T. RC=&P1. REASON=&P1.

Reason:

An attempt to start the process which sends remote SNA Group status change events for SOLVE:Operations for OV/NV failed.

P1 is the return code from the APPC start request.

P2 is the sysmsg returned from the APPC start request.

System Action:

Remote SNA Group status change events are not forwarded to SOLVE:Operations for NV/OV.

User Action:

None.

EL1401

SOLVE:OPS OV/NV MONITOR REMOTE GROUP P1 ON P2 FAILED. RC/FB= P3/ P4

Reason:

An attempt to attach a process to monitor SNA resource status change events for a remotely managed SNA group resource failed.

P1 is the name of the SNA group that is on the remote system.

P2 is the ACB name of the remote SOLVE:Operations region.

P3 and *P4* are the APPC return code and feedback from the attach.

System Action:

Status change events are not forwarded to SOLVE:Ops OV/NV for resources that are part of this SNA resource group. The status events for the group itself are still sent.

User Action:

Check that the remote system is running. Check the status of links to the remote system by looking at the internal SOLVE:Operations resource that represents the connection to this system. Use the APPC return code and feedback information to determine the cause of the APPC error.

EL1402**SOLVE:OPS OV/NV APPC RECEIVE FROM P1 FAILED. RC/FB= P2/ P3****Reason:**

An APPC receive to get SNA resource status change events for a remote SNA group failed.

P1 is the ACB name of the remote SOLVE:Operations region.

P2 and P3 are the APPC return code and feedback from the attach.

System Action:

Status change events are not forwarded to SOLVE:Ops OV/NV for resources that are part of this SNA resource group. The status events for the group itself are still sent.

User Action:

Check that the remote system is running. Check the status of links to the remote system by looking at the internal SOLVE:Operations resource that represents the connection to this system. Use the APPC return code and feedback information to determine the cause of the APPC error.

EL1403**SOLVE:OPS OV/NV REMOTE GROUP SERVER START FAILED ON &P1.
RC/FB &P2/&P3.****Reason:**

Attempt to start a server to process requests for remote SNA group events from a linked SOLVE:Operations region failed.

P1 is the ACB name of the remote region.

P2 is the return code from the attach request.

P3 is the feedback from the attach request.

System Action:

Remote SNA Group status change events are not forwarded to SOLVE:Operations for NV/OV.

User Action:

Check that the maximum number of parallel APPC sessions between the two systems has not been exceeded by issuing a SHOW LINK MODE command.

EL1501

SOON TRAP FLOW ERROR. RC/FB= P1/ P2, SOCKERR= P3, CMD= P4

Reason:

An attempt to start SNMP trap flow to SOLVE:Ops OV/NV from SOLVE:Operations using TCP/IP failed on a call to TCP/IP functions.
P1 IS THE RETURN CODE FROM THE TCP/IP CALL.
P2 IS THE FEEDBACK CODE FROM THE TCP/IP CALL.
P3 IS THE SOCKET ERROR, P4 IS THE SOCKET COMMAND

System Action:

No SNMP traps flow to SOLVE:Ops OV/NV.

User Action:

Contact technical support.

EL1502

NO PORT NUMBER SPECIFIED FOR SOLVE:OPS OV/NV TRAP FLOW CONNECTION.

Reason:

An attempt to start SNMP trap flow to SOLVE:Ops OV/NV from SOLVE:Operations using TCP/IP failed because no port number was specified for use by the connection.

System Action:

No SNMP traps flow to SOLVE:Ops OV/NV.

User Action:

Update the WSPEER customisation parameter group in SOLVE:Operations to specify a TCP/IP port number.

EL1503

SOLVE:Operations OV/NV TCP/IP SUPPORT NOT STARTED. TCP/IP NOT ACTIVE.

Reason:

SOLVE:Operations OV/NV didn't successfully start its TCP/IP connections, because TCP/IP support in the product region is not active, or failed to start.

System Action:

SOLVE:Operations OV/NV TCP/IP connections are not started.

User Action:

Check the status of TCP/IP using the SHOW TCPIP command. Check that the TCP/IP dataset prefix specified in the \$RM WSPEER customization parameters in SOLVE:Operations is correct.

EL1601

SOON HOST COMMAND ERROR. RC/FB= P1/ P2, SOCKERR= P3, CMD= P4

Reason:

An attempt to start SNMP host command flow to SOLVE:Ops OV/NV from SOLVE:Operations using TCP/IP failed on a call to TCP/IP functions.

P1 IS THE RETURN CODE FROM THE TCP/IP CALL.

P2 IS THE FEEDBACK CODE FROM THE TCP/IP CALL.

P3 IS THE SOCKET ERROR, P4 IS THE SOCKET COMMAND

System Action:

No host commands issued from SOLVE:Commander.

User Action:

Use SHOW TCPIP command to check the status of TCP/IP. Check that the correct TCP/IP dataset prefix was specified in the \$RM WSPEER customisation parameters in SOLVE:Operations. Check that SOLVE:Commander port numbers are correct and not being used by anything.

EL1602

NO PORT NUMBER SPECIFIED FOR SOLVE:OPS OV/NV HOST COMMAND CONNECTION.

Reason:

An attempt by SOLVE:Ops OV/NV to issue a host command on SOLVE:Operations using TCP/IP failed because no port number was specified for use by the connection.

System Action:

No host commands over TCP/IP issued by SOLVE:Ops OV/NV.

User Action:

Update the WSPEER customisation parameter group in SOLVE:Operations to specify a TCP/IP port number.

EL1603

SOLVE:Operations OV/NV TCP/IP SUPPORT NOT STARTED. TCP/IP NOT ACTIVE.

Reason:

SOLVE:Operations OV/NV didn't successfully start its TCP/IP connections, because TCP/IP support is not active, or failed to start.

System Action:

SOLVE:Operations OV/NV TCP/IP connections are not started.

User Action:

Check the status of TCP/IP using the SHOW TCPIP command. Check that the TCP/IP dataset prefix specified in the \$RM WSPEER customization parameters in SOLVE:Operations is correct.

EL1701**LOGON SUCCESSFUL.****Reason:**

A logon from SOLVE:Ops OV/NV via TCP/IP was succesful.

System Action:

None.

User Action:

None.

EL1702**LOGON FAILED FOR UNKNOWN REASON.****Reason:**

A logon from SOLVE:Ops OV/NV via TCP/IP failed for unknown reasons.

System Action:

Command fails.

User Action:

Contact technical support.

EL1703**PASSWORD EXPIRED.****Reason:**

A logon from SOLVE:Ops OV/NV failed because the users password has expired.

System Action:

Command fails.

User Action:

Enter new password in dialog box on the workstation.

EL1704

NEW USER. PASSWORD CHANGE REQUIRED.

Reason:

A logon from SOLVE:Ops OV/NV failed because the user is a new user, and must supply a new password.

System Action:

Command fails.

User Action:

Enter new password in dialog box.

EL1705

LOGON FAILED, INVALID PASSWORD.

Reason:

A logon from SOLVE:Ops OV/NV failed because an invalid password was entered.

System Action:

Command fails.

User Action:

Re-enter correct password.

EL1706

LOGON FAILED, UNKNOWN USER.

Reason:

A logon from SOLVE:Ops OV/NV failed because the user is not defined.

System Action:

Command fails.

User Action:

Enter a valid userid and password.

EL1707**USER VERIFICATION FAILED.****Reason:**

A logon from SOLVE:Ops OV/NV failed because user verification failed.

System Action:

Command fails.

User Action:

Check user ID and password are valid.

EL1708**LOGON REJECTED BY PARTIAL SECURITY EXIT.****Reason:**

A logon from SOLVE:Ops OV/NV failed because the security exit rejected the userid and password.

System Action:

Command fails.

User Action:

Enter valid userid and password.

EL1710**TCP/IP FAILURE IN SOLVE:OPS OV/NV HOST COMMAND TRANSACTION.****Reason:**

A host command transaction from SOLVE:Ops OV/NV to SOLVE:Operations using TCP/IP failed on a call to TCP/IP functions.

System Action:

Command fails.

User Action:

Check that TCPIP is active using the SHOW TCPIP command.

EL1711

LOGON FAILED, NEW PASSWORD EXCEEDS MAXIMUM OF 8 CHARACTERS.

Reason:

A logon from SOLVE:Ops OV/NV failed because the new password sent was longer than the 8 character maximum password length.

System Action:

Command fails.

User Action:

Re-enter a shorter new password.

EL1801

SECURITY ERROR - RC/FB P1/ P2, REASON: P3

Reason:

An attempt to change a users password on the host command transaction over TCP/IP failed.

P1 is the return code from the security check call.

P2 is the feedback code from the security check call.

P3 is the message set by the security check call (may be null).

System Action:

Command fails.

User Action:

Contact systems programmer to check password/user details on the region on which the command was being issued.

EL1802**COMMAND COMPLETED.****Reason:**

Internal message used to indicate to host command processing using TCP/IP that all command results have been returned.

System Action:

Command results sent to workstation over TCP/IP connection.

User Action:

None. Internal message not seen by user.

EL2001**CLEANUP COMMENCED FOR SNA GROUP DISPLAY BACKEND SERVER.****Reason:**

A SOLVE:Ops OV/NV SNA Group display has been terminated, and the backend server NCL process for the utility is being terminated.

System Action:

Backend Server NCL process terminates normally.

User Action:

None.

EL2101

SNA GROUP: P1 NOT PROCESSED, SYSTEM IMAGE: P2 VERSION: P3 NOT ACTIVE

Reason:

The system image that manages this SNA group resource is not currently active/available.

P1 is the SNA group name.

P2 is the System Image name.

P3 is the System Image version.

System Action:

SOLVE:Ops OV/NV processing not performed for this SNA group.

User Action:

If due to a remote region not being available, rectify and re-start SOLVE:Ops OV/NV processing.

EL2103

SOLVE:OPS OV/NV RETRIEVING SNA RESOURCE INFORMATION FOR P1 FAILED

Reason:

An error occurred when SOLVE:Ops OV/NV attempted to retrieve information about an SNA resource.

P1 is the name of the SNA resource.

System Action:

SNA resource information is not sent.

User Action:

Check whether any other procedures have ended abnormally.

EL2104**SOLVE:OPS OV/NV DOMAIN LIMIT OF P1 EXCEEDED****Reason:**

The maximum domain limit manageable by SOLVE:Ops OV/NV was exceeded.
P1 is the maximum number of domains.

System Action:

Resources in domains above the limit not monitored by SOLVE:Ops OV/NV.

User Action:

Contact technical support.

EL2105**END OF SNA RESOURCE LIST OUTPUT****Reason:**

Internal message used to indicate to calling procedure that output from SNA resource discovery command is complete.

System Action:

Procedure that requested SNA Resource discovery terminates.

User Action:

None.

EL2106**START OF SNA RESOURCE LIST OUTPUT FROM NCLID: P1****Reason:**

Internal message used to indicate to calling procedure that output from SNA resource discovery command has started.
P1 is the NCLID of the NCL process that issued this message.

System Action:

None.

User Action:

None.

EL2107

SOLVE:OPS OV/NV SNA GROUP TRAP SEND FAILED. TRAP SENDER INACTIVE.

Reason:

The process that listens for changes to SNA resources for the SOLVE:Ops OV/NV SNA Group display utility and forwards them as SNMP traps has terminated, because the SNMP trap sending process is not active.

System Action:

Back end for the SNA Group display utility terminates.

User Action:

Determine why the connection to SOLVE:Ops OV/NV was terminated, and if necessary attempt to restart SOLVE:Ops OV/NV on the workstation.

EL2108

SOLVE:OPS OV/NV SNA GROUP &P1 CONTAINS NO RESOURCES.

Reason:

The process that does discovery for the SOLVE:Ops OV/NV SNA Group display and monitoring utility could not find any resources within the SNA Group that was requested.

System Action:

Back end for the SNA Group display utility terminates.

User Action:

Check that the definition for the requested SNA Group is correct, and that the group contains resources.

EL2109**SOLVE:OPS OV/NV SNA GROUP &P1 NOT FOUND.****Reason:**

The process that does discovery for the SOLVE:Ops OV/NV SNA Group display and monitoring utility could not find the SNA Group that was requested.

System Action:

Back end for the SNA Group display utility terminates.

User Action:

Check that the SNA Group requested is defined on this system. Check SOLVE:Ops OV/NV configuration on Unix. Check when SOLVE:Ops OV/NV on Unix was last refreshed, and that the active system image is the same as the one that was active when SOLVE:Ops OV/NV initialized on Unix.

EL2110**SOLVE:OPS OV/NV SNA GROUP &P1 NOT FOUND OR CONTAINS NO RESOURCES.****Reason:**

The SNA Group that was being retrieved resides on a remote SOLVE:Operations region to the one SOLVE:Operations for OV/NV is connected to, and an attempt to retrieve its resources failed, either because the group does not exist, or contains no resources.

p1 is the name of the SNA Group.

System Action:

Back end for the SNA Group display utility terminates.

User Action:

Check that the SNA Group requested is defined on the SOLVE:Operations region, and does contain resources.

EL2201

ERROR STARTING REMOTE GROUP STATUS RECEIVER TO &P1. RC/FB=&P2/&P3.

Reason:

The procedure which sends SNA Group status change events to a remote system failed to start the process which receives those events on the remote system.

P1 is the remote system that was to receive the events.

P2 and P3 are the APPC return code and feedback respectively.

System Action:

SNA Group status change events are not forwarded to the remote system, and thus not forwarded to the SOLVE:Operations for OV/NV that is connected to the remote system.

User Action:

Check that the remote system is running. Check the status of links to the remote system by looking at the internal SOLVE:Operations resource that represents the connection to this system. Use the APPC return code and feedback information to determine the cause of the APPC error.

EL2202

ERROR SENDING SNA GROUP STATUS EVENT TO &P1. RC/FB=&P2/&P3.

Reason:

An error occurred sending an SNA Group status change event to a remote SOLVE:Operations region.

p1 is the name of the remote region.

P2 is the return code from the APPC send.

P3 is the feedback code.

System Action:

SNA Group status change events are not forwarded to the remote system, and thus not forwarded to the SOLVE:Operations for OV/NV that is connected to the remote system.

User Action:

Check that the remote system is running. Check the status of links to the remote system by looking at the internal SOLVE:Operations resource that represents the connection to this system. Use the APPC return code and feedback information to determine the cause of the APPC error.

EL2301**RECEIVE FROM REMOTE SNA GROUP STATUS EVENT SENDER FAILED.
RC/FB=&P1/&P2****Reason:**

An attempt to receive an SNA Group status change event from a remote SOLVE:Operations region failed.

P1 is the APPC return code.

P2 is the feedback code.

System Action:

The receiver terminates. SNA Group status change events are no longer received from the remote region, and thus not forwarded to the SOLVE:Operations for OV/NV connected to the local region.

User Action:

Check that the remote system is running. Check the status of links to the remote system by looking at the internal SOLVE:Operations resource that represents the connection to this system. Use the APPC return code and feedback information to determine the cause of the APPC error.

EL2501**SECURITY LEVEL P1 IS NOT SUPPORTED****Reason:**

A logon request from SOLVE:Operations for OV/NV could not be processed because the security level used is not supported in this region.

System Action:

The command is not processed.

User Action:

Either change the security level used in SOLVE:Operations for OV/NV by updating the \$SOLVE_DIR/etc/hcmd.conf file, or apply the appropriate APAR (if available) to the current region so that it supports the security level that is being used.

EL2502

PASSWORD IS NOT IN EXPANDED HEXADECIMAL

Reason:

A logon request from a SOLVE:Link or SOLVE:Operations for OV/NV/ITO workstation was flagged as an encrypted string, but was not in the expected format.

System Action:

The command is not processed.

User Action:

Contact your local support representative.

ELRG3001

PANEL(P1) BEING UPDATED BY P2

Reason:

The panel, P1, you have chosen to be displayed as a graphical monitor is currently being updated by the user identified by P2.

System Action:

Request rejected.

User Action:

Use another panel or wait until the user currently updating the panel is finished with it.

ELRG3002

VARIABLE P1 ERROR. ID= P2. ZFDBK= P3. KEY= P4

Reason:

A variable error occurred while performing function(P1) on vartable(P2). The FDBK was P3 and the entry key was P4.

System Action:

Request rejected.

User Action:

Contact your systems administrator.

ELRG3003**SOLVE:OPS OV/NV SENDING TOPOLOGY EVENT FAILED TO P1****Reason:**

A SOLVE:Ops OV/NV procedure was unable to send an EDS event because the listener for the server *P1* was not there.

System Action:

Topology event is not sent.

User Action:

Check whether any other procedures have ended abnormally.

ELRG3004**THE ICON VIEW FUNCTION IS NOT ACTIVE****Reason:**

The Icon view procedure is started and the ENABLE ICON VIEW flag is set to NO. This could occur if someone manually starts the procedure outside the WSPEER customisation panel.

System Action:

The procedure stops.

User Action:

Use the WSPEER panel to change the ENABLE ICON VIEW flag value and press the ACTION Key.

ELRG3101

VARIABLE ALLOCATION FAILED. FDBK: P1 TYPE: P2 NAME: P3 SCOPE: P4

Reason:

Allocation for the vartable named P3 with scope P4 of type P2 was unsuccessful. FDBK P1 was returned.

System Action:

The SOON Icon Manager terminates.

User Action:

Resolve the reason for the vartable allocation failure. This may be that the region is short of storage and it may be necessary to restart the region with more storage.

ELRG3102

VARIABLE P1 ERROR. ID= P2. ZFDBK= P3. KEY= P4

Reason:

A vartable error occurred while performing function(P1) on vartable(P2). The FDBK was P3 and the entry key was P4.

System Action:

Request rejected.

User Action:

Contact your systems administrator.

ELRG3103

SOLVE:OPS OV/NV SENDING TOPOLOGY EVENT FAILED TO P1

Reason:

A SOLVE:Ops OV/NV procedure was unable to send an EDS event because the listener for the server *P1* was not there.

System Action:

Topology event is not sent.

User Action:

Check whether any other procedures have ended abnormally.

ELRG3104**RECURSIVE PANEL PATH. ICON(P1) POINTING TO PANEL(P2)****Reason:**

A panel path has been invoked in which the ICON (Resource Group) known as *P1* points to the PANEL *P2* which has either been referenced earlier in the path or which contains the ICON (Resource Group) identified by *P1*

System Action:

Entry to the Graphical Monitor is denied as this sort of recursive path leads to excessive CPU usage and degradation of performance.

User Action:

Locate where the recursion occurs in the path and correct the situation and retry.

ELRG3105**TOO MANY PARENTS FOR RESOURCE P1, PARENT P2 IGNORED****Reason:**

The resource *P1* has too many parents. The parent resource *P2* is not stored and it will be ignored.

System Action:

The parent is ignored.

User Action:

Verify the Panel Icon definition. Review the resource groups filters.

ESINWI01**Applid P1 already specified for P2****Reason:**

The VTAM applid *P1* has already been specified for field *P2*. The NetSpy Application ID must be unique.

System Action:

Field is set in error.

User Action:

Specify a different applid.

ESINWI02

NetSpy alerts will not be processed

Reason:

The NetSpy Alert Processing is disabled.

System Action:

NetSpy Alerts processing is not activated.

User Action:

Controls for the NetSpy Alerts processing is managed via the NETSPYLINKS Initialization Parameters.
From any panel, enter */PARMS* and check the setting of the \$ES NETSPYLINKS parameter group. Ensure that *Enable NetSpy Alert Processing* is set correctly.

ESNS0000

NCLID= P1 : Id= P2 - P3

Reason:

The message displays a NetSpy API trace record. *P1* is the API NCL ID
P2 is the trace ID, and *P3* is the trace text.

System Action:

None.

User Action:

Contact Technical Support.

ESNS0001

Error: Required parameter missing or invalid: P1

Reason:

The required *P1* parameter is missing or has an invalid value.

System Action:

The API to the NetSpy region returns the error message to the caller.

User Action:

Add the parameter or correct its value as required.

ESNS0002**Error: NetSpy interface is not RUNNING****Reason:**

The NetSpy API detected that the connection to NetSpy is not running. This situation may indicate that the connection to NetSpy failed, NetSpy is not active, or the NETSPYLINKS Customizer parameter group has not been activated.

If this message is issued while saving a NetSpy Monitor definition and activating the Monitor, it confirms the saving of the Monitor definition.

System Action:

The API returns the error message to the caller. In the case of the NetSpy Monitor definition, the Monitor definition panel is retained.

User Action:

Ensure that there is at least one NetSpy connected, and that the NetMaster to NetSpy interface is started and in the RUNNING state. You may need to go to /PARMS and activate the \$NETSPYLINKS parameter group. If the message is received whilst saving the Monitor definition, Cancel (PF12) should be used to exit the panel, unless the updates to the definition, like the NetSpy link name, are to be retained.

ESNS0003

Error: NetSpy Define failed: RC= P1 FDBK= P2 P3

Reason:

A DEFINE request to the NetSpy Interface failed.

P1 is the return code.

P2 is the feedback code (FDBK).

If shown, *P3* is a message that explains the error (SYSMSG).

The following lists possible combinations of RC/FDBK:

4/01 - Partial results received

8/81 - Duplicate Internal connection ID

8/82 - Connection Define failed, see SYSMSG

8/83 - Internal connection ID not found

8/84 - Outstanding asynchronous requests on this link, see SYSMSG

8/85 - No NetSpy(s) to send the request to

8/86 - Monitor command without exact NetSpy Filter

8/87 - Send error, see SYSMSG

8/88 - Storage shortage for SEND results

8/89 - MDS error on send results

System Action:

The NetSpy API returns the error message to the caller.

User Action:

Depending on the RC/FDBK combination and MSG presence, the following actions are recommended:

4/01 - The amount of returned data is too big to be handled by the interface. Try to limit the scope of the request and resubmit your request. Check if there is a serious virtual storage shortage in the NetMaster, NetSpy or the Operating System, resolve it and resubmit the request.

8/81 - Restart the NetSpy link, if the problem persists, contact Technical Support.

8/82 - Try to address the problem as per MSG indication (start the NetSpy link for example). If unable to resolve the problem, contact Technical Support.

8/83 - Retry the request, restart the NetSpy link, if problem persists, contact Technical Support.

8/84 - Retry the request, restart the NetSpy link, if problem persists, contact Technical Support.

8/85 - Either no NetSpy connection present or the request asks for the data which is not currently collected by any of the connected NetSpys (for example request for NCP data and no NetSpy collecting it is connected/available). Modify your request or make sure that requested data is collected by one of the available NetSpys.

8/86 - Verify if your request satisfies NetSpy Monitor command, modify your request accordingly. If still receiving the error, contact Technical Support.

8/87 - Try to address the problem as per SMSG indication (address the link time-outs, for example). If unable to resolve the problem, contact Technical Support.

8/88 - Check if there is a virtual storage shortage in the NetMaster, NetSpy or the Operating System, resolve it and resubmit the request.

8/89 - Internal error, contact Technical Support.

ESNS0004

Error: NetSpy Send failed: RC= P1 FDBK= P2 P3

Reason:

A SEND request to the NetSpy Interface failed. See ESNS0003 message for details.

P1 is the return code.

P2 is the feedback code (FDBK). If shown, *P3* is a message that explains the error (SYSMSG).

System Action:

The NetSpy API returns the error message to the caller.

User Action:

See ESNS0003 message for details.

ESNS0005

Error: NetSpy Delete failed: RC= P1 FDBK= P2 P3

Reason:

A DELETE request to the NetSpy Interface failed. See ESNS0003 message for details.

P1 is the return code.

P2 is the feedback code (FDBK). If shown, *P3* is a message that explains the error (SYSMSG).

The situation may be caused by the NetSpy link going down since the command was defined.

System Action:

The NetSpy API returns the error message to the caller.

User Action:

See ESNS0003 message for details.

ESNS0006

Error: Negative reply received: P1

Reason:

The NetSpy Interface request returned code 0, but the reply code was not OK.

P1 is the received reply. Possible causes include:

- In a multiple NetSpy configuration, the request was accepted but not all requests were satisfied.
- None of the linked NetSpy regions are configured to collect the data of the type requested. For example, the NetSpy dedicated to collecting NCP data is not connected (directly or indirectly) to the NetMaster link.

System Action:

In the case of some requests being satisfied, the NetSpy API proceeds to find out if one of interfaces provided the answers requested.

User Action:

Verify the status of the NetMaster to NetSpy links. Check if all required resources are collected by at least one of the NetSpy regions.

ESNS0007**Error: No data returned****Reason:**

A NetSpy synchronous reply was received, but it contained no data. Either there was no data for a given resource or data was not collected yet (normally at the beginning of the collection interval of 15 minutes).

System Action:

The NetSpy API receives the reply, which does not contain the expected data or NODATA *condition* was returned by NetSpy.

User Action:

Repeat the request later in the interval. Ensure that:

- The specified request produces output from an interactive NetSpy session
- The specified resources are known to NetSpy
- The NetSpy collecting data for a specified resource is linked to NetMaster
- There are no errors listed on the NetSpy Audit Log.

If the region is still unable to receive data, contact Technical Support.

ESNS0008**Error: Unsupported NetSpy command: P1****Reason:**

The command is either not supported by the API to NetSpy or is not a valid NetSpy command. The current implementation of NetMaster to NetSpy interface supports the following synchronous commands: *DA, DAR, DN, DNETH, DNFR, DNLIST, DNS, DNTIC3, DNTR, DNX25, DT, DTA, DTR, and DV* . The supported asynchronous command is *MONITOR* .

System Action:

The NetSpy API returns the error message to the caller.

User Action:

Ensure that the command is a valid NetSpy command and is supported by the API and the low level interface.

ESNS0009

Error: Required data not found: P1

Reason:

The NetSpy synchronous request returned data in multiple, repeated units, but none of those matches the specific request. For example, DV returns information on multiple TPs but there is no data for the required one.

System Action:

The NetSpy API returns the error message to the caller.

User Action:

Check the logic of the request, pattern, and scope. If errors exist, change and resubmit the request. Verify that the required resource is known to the NetSpy regions linked to the NetMaster Interface.

ESNS0010

Error: Vartable lock operation failed: P1 P2

Reason:

An attempt to obtain exclusive lock for the monitor list vartable failed. *P1* is the return code, and *P2* is the feedback code.

The error might be because of simultaneous requests for vartable access. The condition, though unlikely, might occur during region initialization.

System Action:

The NetSpy API terminates the update request.

User Action:

Check that the region completed initialization. Check for indications of virtual memory shortages. If the error persists, contact Technical Support.

ESNS0011**Error: Variable update failed: P1 P2****Reason:**

An attempt to allocate, add, or update the table that contains the monitors list failed. *P1* is the return code, and *P2* is feedback code.

System Action:

The NetSpy API terminates the request.

User Action:

Retry the operation. If the error persists, contact Technical Support.

ESNS0012**Error: NetSpy Define returned null ID.****Reason:**

A DEFINE request to the NetSpy Interface returned a 0 return code, but the returned definition ID (&SYS.NETSPY.ID) is null.

System Action:

The NetSpy API returns the error message to the caller.

User Action:

Repeat the operation. If the error persists, contact Technical Support.

ESNS0013**No Netspy data for resource: P1****Reason:**

The response to an asynchronous request did not contain data that matched the request. *P1* is name of the resource for which data was requested. *Unspecified* is reported when no resource (generic request) was specified.

System Action:

The NetSpy API returns the error message to the caller.

User Action:

Verify the logic of the request, scope, and pattern. Verify that the resource is known to the NetSpy region. If the error persists, contact Technical Support.

ESNS0014

Monitor add received: mynclid: P1

Reason:

The process (NCL ID *P1*) received a request to add a monitor. The NCLID is used to communicate with the receiver which, after having the monitor defined, switches to the listening mode.

System Action:

The NetSpy API confirms receiving the request. The message is sent to the requester that provides the NCL ID of the receiver.

User Action:

None.

ESNS0015

Monitor definition sent: P1 : P2

Reason:

A NetSpy Interface request for the monitor definition was sent to the NetSpy region. *P1* is the definition and *P2* is the NCL ID of the listener. The NetSpy API entered the alert listening mode and all requests are sent through the INTREAD interface.

The request has not been confirmed by NetSpy. It is possible (for example, under severe virtual memory shortage) for the request to be received but not acted on.

System Action:

The NetSpy API confirms sending the request and enters alert listening mode.

User Action:

To ensure that the monitor is defined, go to the NetSpy region to verify that the monitor exists (action 7.1.3). There may be some delay before the monitor appears on the display (up to the monitoring interval value).

ESNS0016**Monitor Delete received from nclid: P1****Reason:**

The synchronous part of the API received a request to delete a monitor from the process identified by *P1* . The request was verified to be for a monitor definition monitored by this listener.

System Action:

The NetSpy API confirms receiving the request. The request will be sent to the NetSpy region.

User Action:

None.

ESNS0017**Monitor delete sent: P1****Reason:**

A request to delete a monitor was sent to the NetSpy region. The definition is identified by *P1* .

System Action:

The NetSpy API confirms sending the request. The request is sent, and the list of defined monitors is updated. The API processing terminates.

User Action:

None.

ESNS0018

Error: No NETSPYLINKS defined

Reason:

The Netspy API detected that there are no Netspy connections defined in the NETSPYLINKS Customizer paramameter group.

System Action:

The NetSpy API listener notifies the NetSpy Alert Processor, updates the list of defined monitors, and terminates.

User Action:

Ensure that the NetSpy region is running and the NetMaster-to-NetSpy interface is defined and in the RUNNING state. You may need to go to */PARMS* and reactivate the \$ES NETSPYLINKS parameters. Redefine the monitor after the link has restarted.

ESNS0019

Error: Alert event mapping failed: P1 P2 P3

Reason:

The asynchronous part (listener) of the NetSpy API failed while interpreting an incoming alert event.

P1 is the return code.

P2 is the map name.

P3 is the component name.

System Action:

The listener discards the received data and continues to listen for events.

User Action:

If the error persists, contact Technical Support.

ESNS0020**NetSpy Alert Processor started: P1****Reason:**

The asynchronous part (listener) of the NetSpy API detected that the NetSpy Alert Processor was not active. The NetSpy Alert Processor was started. *P1* is the process NCL ID.

This message indicated that the Alert Processor, which should have been started automatically, was not started or failed.

System Action:

The NetSpy API started the necessary processor before entering the listening mode.

User Action:

None.

ESNS0021**NetSpy Alert Processor running: P1****Reason:**

The asynchronous part (listener) of the NetSpy Interface detected that the NetSpy Alert Processor was already active. *P1* is the process NCL ID.

System Action:

The listener reports that the processor is already active.

User Action:

None.

ESNS0022

Monitor delete received from nclid: P1 by the Monitor listener

Reason:

The API listener received a request to delete a monitor through the INTREAD interface from the *P1* process. The request was verified to be for a monitor definition monitored by this listener.

System Action:

The NetSpy API listener confirms receiving the request. The request will be sent to the NetSpy region.

User Action:

None.

ESNS0023

Monitor Listener stopped: P1

Reason:

The *P1* NetSpy API listener was stopped as the result of a request to delete the monitor.

System Action:

The NetSpy API reports stopping the listening process for the monitor definition. The list of defined monitors is updated, and the API is terminated.

User Action:

None.

ESNS0024**Listener Intread queue congested: P1****Reason:**

The NetSpy API listener (NCL ID *P1*) was unable to receive alerts and other notifications because of congestion in the INTREAD queue. Possible causes are as follows:

- Receipt of alerts was constrained by the virtual memory.
- Alert processing was running with a priority much lower than the alert producing process, and the number of alerts were excessive. This might indicate a logical error in the monitor definition (for example, monitoring all applications with an average host response time greater than zero).

System Action:

The API listener terminates.

User Action:

Check for system congestion and the monitoring criteria. Compare the dispatching priority of the alert processing tasks with that of the alert producing tasks.

ESNS0025**Error: Resource unknown to NetSpy(s) connected: P1****Reason:**

An request was made to define a monitor for a resource that was unknown to any of the NetSpy regions linked to this NetMaster region. *P1* is the resource name.

System Action:

The request is rejected.

User Action:

Check the resource name. If it is correct, check that the links to the NetSpy regions are active. Check if the type of resource is defined to any of the linked agents.

ESNS0026

Error: NetSpy interface stopped: P1

Reason:

The asynchronous part (listener) of the NetSpy API received EDS notification that the NetSpy link servicing the monitor was stopped.
p1 is link name.

System Action:

The NetSpy API listener notifies the NetSpy Alert Processor, updates the list of defined monitors, and terminates.

User Action:

Restart the link, and reactivate the monitor.

ESNS0027

Error: Monitor Add/Delete time out: P1

Reason:

You were adding or deleting a NetSpy monitor. The request timed out before an Event Distribution Services (EDS) notification was received by the asynchronous part of the NetSpy API. *P1* identifies the link to the NetSpy region where the monitor was to be added or deleted.

System Action:

The NetSpy API issues the message.

User Action:

Check for system congestion. Try the action later.

ESNS0028**Error: Monitor definition P1 rejected: P2****Reason:**

An attempt to define a new monitor to NetSpy was rejected. *P2* provides the reason.

DUP indicates that a duplicate monitor name exists. It may happen in situations where the region loses track of the definitions, while NetSpy still maintains the definition.

System Action:

None.

User Action:

Use the ADD, COPY, or UPDATE function to create a new definition.

ESNS0029**A Listener start was issued for monitor P1 on NetSpy P2****Reason:**

A NetSpy API Listener start command was issued for *P1* on Netspy *P2* as a result of the activate command.

System Action:

The NetSpy API reports stopping the listening process for the monitor definition. The list of defined monitors is updated, and the API is terminated.

User Action:

None.

ESNS0030

Monitor Listener start issued for P1 on NetSpy P2 failed

Reason:

A NetSpy API Listener start command was issued for *P1* on NetSpy *P2* as a result of the activate command. Due to a failure, the Listener was not activated.

System Action:

The NetSpy API reports stopping the listening process for the monitor definition. The list of defined monitors is updated, and the API is terminated.

User Action:

None.

ESNS0031

Error: Incomplete data. The lines returned exceeds the maximum: P1

Reason:

While formatting the results returned by NetSpy, the number of data lines returned has exceeded the maximum value indicated. The displayed data is incomplete.

System Action:

None.

User Action:

Modify your request by refining your selection criteria.

ESNS0032

Error: Update request rejected: status active

Reason:

An attempt to update a monitor was rejected because the monitor is active.

System Action:

None.

User Action:

Inactivate the monitor and then request an update.

ESNS0301**Command executed****Reason:**

A command was sent to the operator command queue, and confirmation was received.

System Action:

The NetMaster command environment executes the command.

User Action:

None.

ESNS0302**Command failed: P1****Reason:**

A command failed. *P1* is the message related to the failure. Possible causes are as follows:

- Logical errors were detected during the execution of the NSPCONN command (for example, starting an active link or stopping an inactive one).
- The list of NetSpy links was not refreshed for a long time before executing the command, and the command was sent from the OCS environment before.

System Action:

The command failed, and message is displayed.

User Action:

Review the *P1* message, and take appropriate correcting measures. Refresh (PF6) the list of links before trying the command again.

ESNS0303

Command sent

Reason:

The command was sent to the operating system for execution.

System Action:

The NetMaster command environment confirms sending the command to the operating system.

User Action:

None.

ESNS0304

Command execution timed out

Reason:

The response to a command did not arrive within a time limit.

System Action:

Waiting for the response is terminated, and the command failed.

User Action:

Check that the system is responding to interactive requests in less than 60 seconds. Try to repeat the operation.

ESNS0305

Inquiry failed: P1

Reason:

A request for details on the link to a NetSpy region failed to return the expected information. *P1* is the APPL to which the command was sent.

System Action:

The message is displayed, and the list of links is updated to reflect the condition.

User Action:

Refresh the link display to ensure that the link status has not changed since the last time you used the command line interface. At the command line interface, enter *SHOW NETSPY* to verify the status of the link and *D ID=P1* to retrieve the required information.

ESNS0306**NetSpy jobname unknown****Reason:**

An attempt was made to stop or modify a link for which the job name for the NetSpy region was unknown. Possible causes are as follows:

- Link is down.
- NetSpy was terminated, but the link status was not refreshed.

System Action:

The action will not be performed.

User Action:

Refresh the list. Ensure that the STC field is not blank or ***NA***. Repeat the action.

ESNS0307**Required argument(s) not specified****Reason:**

The command required at least one argument, but none were specified.

System Action:

The command is not executed.

User Action:

Retry the command with the required argument(s).

ESNS0308**Command selection table error: P1 P2****Reason:**

Selection table driver returned non zero return code *P1* accompanied by sysmsg *P2*

System Action:

None.

User Action:

If it is 'VM0010 Value not selected from list' make sure to make the selection. If the problem persists, contact Technical Support.

ESNS0309

Operation canceled

Reason:

You canceled the action.

System Action:

You are returned to the list of NetSpy connections.

User Action:

None.

ESNS0310

Command not authorized

Reason:

You did not have authority to execute the command.

System Action:

The operation is rejected.

User Action:

Ensure that you have authority to perform the required action.

ESNS0501

Specified command not supported : P1

Reason:

The region does not support the *P1* command. The supported commands are DA, DAR, DN, DNETH, DNFR, DNLIST, DNS, DNTIC3, DNTR, DNX25, DT, DTA, DTR, DV, and MONITOR.

System Action:

The command is not processed.

User Action:

Ensure that the command is supported. If you want to issue an unsupported command, enter the *=SP* path to access the NetSpy region and issue the command there.

ESNS0502**Panel list item selection is not numeric: P1****Reason:**

You entered *P1* to select an item, but the value was not a number. The value must be a number that corresponds to the item you want to select.

System Action:

The selection is rejected.

User Action:

Enter the number that corresponds to the item you want to select.

ESNS0503**Invalid value for P1****Reason:**

The value supplied for the *P1* field is incorrect.

If *P1* is *Nodename* or *LUname* , the value must be:

- A 1-8 character non-qualified name (for example, TERM01)
- A network-qualified name in the form *netid.node* , where the netid and node parts are each 1-8 character values separated by a full stop (period) without spaces (for example, NET01.TERM01). The netid value can also be expressed as an asterisk (*).

If *P1* is *Mode* , the value can be INTERVAL, SUMMARY, or DELTA. The default is INTERVAL.

If *P1* is the *LU62 Selection* field, the value can be ONLYLU62, EXCLU62, or blank.

If *P1* is *Scope* , the value can be ONLY or ALL. The default is ALL. ? will show the panel with all possible scopes for the selected command.

If *P1* is the *SA* , *VR* ,or *TP* field, the value must be a valid number.

If *P1* is the *Threshold Variable* field, enter ? to list the valid values.

If *P1* is the *Threshold Value* field, the value must be a number that is compatible with the defined threshold.

System Action:

None.

User Action:

Correct the value, and retry.

ESNS0504

Operation canceled

Reason:

You canceled the action.

System Action:

You are returned to the command arguments menu.

User Action:

None.

ESNS0101

The Listener for Monitor P1 failed to start

Reason:

The Listener for the Monitor, *P1* failed to obtain the lock necessary to start.

System Action:

The NetSpy API reports stopping the listening process for the monitor definition. The list of defined monitors is updated, and the API is terminated.

User Action:

None.

ESNS1001

Monitor listener not active: P1

Reason:

The API listener was not running. *P1* is the last known NCL ID of the listener.

System Action:

The NetSpy Monitor Manager will not send requests to the listener. The list of defined monitors is refreshed to indicate the condition.

User Action:

If the region was restarted (recreating the list of monitors), it might indicate that the monitor requires activation. If the listener terminated abnormally without valid reason, please contact Technical Support.

ESNS1002**NetSpy interface is not RUNNING: P1****Reason:**

The Monitor Manager detected that the NetMaster to NetSpy Interface was not in the RUNNING state. *P1* is the detected state. This situation may indicate that the link failed, NetSpy failed or the NETSPYLINKS parameter group was not activated.

System Action:

The list of monitors is updated.

User Action:

Ensure that NetSpy is running, and the NetMaster to NetSpy interface is started and in the RUNNING state. You may need to go to */PARMS* and activate the \$NETSPYLINKS parameters. Redefine the monitor after the link has restarted.

ESNS1003**Monitor definition time out****Reason:**

A monitor definition was sent to the NetSpy Interface, but the confirmation was not received within time limit.

System Action:

The waiting is terminated. The monitor definition table might not have been updated by the API with the latest monitor definition.

User Action:

Ensure that NetSpy is responding to interactive requests in less than 120 seconds. Ensure that the monitor can be displayed from the NetSpy region. If you cannot resolve the problem, contact Technical Support.

ESNS1004

NetSpy API time out

Reason:

The reply to a request to the NetSpy API did not arrive within time limit. The API might not be active.

System Action:

The waiting is terminated, and the request fails.

User Action:

Ensure that the NetSpy region is responding to interactive requests in less than 60 seconds. Try to repeat the operation. Ensure that there are no abnormal procedure terminations. If the problem persists, contact Technical Support.

ESNS1005

Unmatched reply: P1 P2

Reason:

A request was made to a monitor (*P1*), but the received reply was for a different monitor (*P2*).

System Action:

The request fails.

User Action:

Retry the request. If the problem persists, contact Technical Support.

ESNS1006**Error updating vartable: P1 P2 P3****Reason:**

An attempt to allocate, add, or update the table that contains the list of monitors, has failed.

P1 is the return code

P2 is feedback code

P3 is a message that describes the error

System Action:

The action fails.

User Action:

Retry the operation. If the error persists, contact Technical Support.

ESNS1007**Error reading vartable: P1****Reason:**

An error occurred while the internal table that held the list of monitors was being read. *P1* is the feedback code.

System Action:

The action fails.

User Action:

Look out for abnormal situations (for example, virtual memory shortage) in the region. If the error persists, contact Technical Support.

ESNS1008

No monitors defined for resource: P1

Reason:

The Monitor Manager was called for the *P1* resource but discovered that no monitors were defined for the resource.

System Action:

An empty list is presented.

User Action:

If you want to add a monitor, press F4 (Add) to go to the monitor definition panel.

ESNS1009

Monitor is active : P1

Reason:

You tried to activate an active monitor. *P1* is the NCL ID of the monitor listener.

System Action:

The action is rejected.

User Action:

Press F6 to refresh the list of monitors. To make sure, find out its status in the NetSpy region directly.

ESNS1101**Monitor definition time out****Reason:**

A monitor definition was sent to the API, but the response was not received in the specified time.

System Action:

The waiting is terminated. The monitor definition table might not have been updated by the NetSpy API with the latest monitor definition.

User Action:

Ensure that NetSpy is responding to interactive requests in less than 120 seconds. Ensure that the monitor is visible from NetSpy. Check for system congestion.

ESNS1102**Error reading variable: P1****Reason:**

An error occurred while the internal table that held the list of monitor definitions was being read. *P1* is the system feedback code.

System Action:

The action fails.

User Action:

Look out for abnormal situations (for example, virtual memory shortage) in the region. If the error persists, contact Technical Support.

ESNS1103

Monitor deletion time out

Reason:

A request to delete a monitor timed out.

System Action:

The waiting for confirmation is terminated. The monitor definition table might not have been updated by the NetSpy API with the latest monitor definition.

User Action:

Ensure that NetSpy is responding to interactive requests in less than 120 seconds. Ensure that the monitor is visible from NetSpy. If the problem persists, contact Technical Support.

ESNS1104

Invalid value for P1**Reason:**

The value supplied for the *P1* field was incorrect.

If *P1* is *Resource Name* , the value must be:

- A 1-8 character non-qualified name (for example, TERM01)
- A network-qualified name in the form *netid.node* , where the netid and node parts are each 1-8 character values separated by a full stop (period) without spaces (for example, NET01.TERM01). The netid value can also be expressed as an asterisk (*), or as a name mask containing the asterisk (*) or the question mark (?) in any place of the mask.
- A Virtual Route definition starting from *VR=* . Optional Subarea (SA) and Transmission Priority (TP) can be specified as well.

If *P1* is *Monitor Class* , the value can be VTAM or NCP.

If *P1* is *Resource Type* , enter ? to list the valid values.

If *P1* is *Match Type* , the value can be ALL or ANY. The default is ALL.

If *P1* is *Monitor Interval* , the value is a number in seconds. The minimum value is 30.

If *P1* is *LU62 Selection* , the value can be ONLYLU62, EXCLU62, or blank.

If *P1* is *Monitor Title* , the value must not contain quotation marks.

If *P1* is the *Threshold Variable* field, enter ? to list the valid values.

If *P1* is the *Threshold Relation* field, the value can be GT, LT, <, or >.

If *P1* is the *Threshold Value* field, the value is a number that is compatible with the defined threshold.

System Action:

None.

User Action:

Correct the value, and retry.

ESNS2500

ID= P1 - P2

Reason:

The message displays a NetSpy Alert Events receiver trace record.
P1 is the trace ID, and *P2* is the trace text.

System Action:

None.

User Action:

Contact Technical Support.

ESNS2501

Invalid parameter value specified, keyword= P1

Reason:

An invalid call was made to the procedure. The keyword in error is identified by *P1* .

System Action:

None.

User Action:

Contact your System Administrator.

ESNS2502

Another copy of the NetSpy Alert Events receiver \$ESNS25Z is currently running - P1

Reason:

A copy of the NetSpy Alert Events receiver (EPS) procedure is already active on this system.
P1 is the NCL Id and the EPS Receiver Id.

System Action:

A new copy of the procedure is not started.

User Action:

Check the activity log to search for previous ESNS25* messages which would indicate when the receiver was started.

ESNS2503**NetSpy Alert Events receiver - EPS request: *P1* rejected (RetCode=*P2* ErrorNo=*P3*) Reason: *P4*****Reason:**

The events receiver failed when issuing an EPS request.

P1 is the type of EPS request (for example, CONNECT).

P2 is the return code.

P3 is the error number.

P4 is the reason (for example, EPS UNAVAILABLE).

If possible, recovery is attempted as indicated by the next message (see also ESNS2504, ESNS2505, or ESNS2506).

System Action:

The events receiver attempts recovery.

User Action:

If the message was not followed by a recovery message, the error was probably related to data corruption. The event is discarded, and processing continues.

If the problem cannot be resolved, contact Technical Support.

ESNS2504**NetSpy Alert Events receiver attempting EPS reconnection****Reason:**

This message follows message ESNS2503. The recovery is attempted after an EPS request failure (see ESNS2503).

System Action:

Reconnection to EPS is attempted.

User Action:

See message ESNS2503 for the EPS return and error codes.

If the problem cannot be resolved, contact Technical Support.

ESNS2505

NetSpy Alert Events receiver waiting for EPS services availability

Reason:

This message follows message ESNS2503. The required EPS services are currently unavailable. NetSpy Alert Events processing will resume as soon as EPS services are restored.

System Action:

Waiting on EPS to become available.

User Action:

Ensure that an SSI region is currently active with its event processor enabled. From any panel, enter */PARMS* and check the SSI parameter group. Ensure that the Sub- System Interface ID field contains the correct ID.

ESNS2506

NetSpy Alert Events receiver terminated - EPS Services unusable

Reason:

This message follows message ESNS2503. An unrecoverable error occurred during an EPS request (see message ESNS2503). NetSpy Alert Events processing has stopped.

System Action:

The NetSpy Alert Events Receiver is terminated.

User Action:

Contact Technical Support.

ESNS2507

MDO ASSIGN failed: RC= P1 FDBK= P2 Map= P3 Component= P4 Tag= P5 Type= P6

Reason:

The NetSpy Alert Events receiver failed due to an MDO error. The failure is identified by the following:

- The statement type, ASSIGN
- The MDO return code, P1 (&ZMDORC)
- The MDO feedback code, P2 (&ZDMOFDBK)
- The map name, P3 (&ZMDOMAP)
- The full map component name, P4 (&ZMDONAME)
- The map component tag value, P5 (&ZMDOTAG)
- The ASN.1 type of the component, P6 (&ZMDOTYPE)

This failure indicates one of the following causes:

- An invalid record has been received.
- There is a mismatch between the ASN.1 map and the record.

System Action:

The procedure terminates.

User Action:

Contact Technical Support.

ESNS2508

Unrecognized NetSpy Alert Events received, ignored - x' P1'

Reason:

The NetSpy Alert Events receiver has received an event which it does not recognize, the event is ignored. The record received has a hexadecimal value of P1 at offset 1.

System Action:

The NetSpy Alert event is ignored.

User Action:

Contact Technical Support.

ESNS2509

The NetSpy Alert Events processor: P1 is starting, EPS Receiver ID: P2

Reason:

A NetSpy Alert event was received from NetSpy via the EPS receiver ID P2 . However, the events processor procedure P2 is currently not active. The procedure is started.

System Action:

The NetSpy Alert Events procedure P2 is started.

User Action:

None.

ESNS2510

NetSpy Alert Events EPS receiver active, EPS receiver ID: P1

Reason:

The NetSpy Alert Events receiver procedure is now ready to receive NetSpy Alert events via the EPS Services. The associated EPS receiver ID is P1 .

System Action:

The region is ready for NetSpy Alert Events processing. If required the NetSpy Alert Events processor will be started when the first event is received (message ESNS2509).

User Action:

None.

ESNS3000

ID= P1 - P2

Reason:

The message displays a NetSpy Alert Processor trace record. P1 is the trace ID, and P2 is the trace text.

System Action:

None.

User Action:

Contact Technical Support.

ESNS3001**Another copy of \$ESNS30Z is currently running - NCL ID: P1****Reason:**

A request to start a copy of the \$ESNS30Z procedure was ignored because another copy is currently running.

System Action:

A new copy of the procedure is not started.

User Action:

None.

ESNS3002**Possible data error at line P1 in Proc P2 RTN= P3 COND= P4 KWD= P5 MONITOR= P6 STATEMENT= P7 - NetSpy Alert Processor****Reason:**

The NetSpy Alert Processor procedure has failed because of a possible data error in the event received from NetSpy. The error is identified by the following:

- Line number, *P1* , and procedure name, *P2* , where the error occurred
- Subroutine name, *P3* , if applicable
- Error condition raised, *P4*
- Verb operand that has detected the error, *P5* , if applicable
- NetSpy Monitor Name, *P6*
- Statement text where the error occurred, *P7*

System Action:

This message is written to the activity log and is followed by a series of messages (DD9003, DD9004, DD9006, and DD9007), which display the event in dump format. The NetSpy alert event is then ignored.

User Action:

Contact Technical Support, making available the following diagnostic information:

- Full text of this message
- Record dump
- Relevant messages in the activity log

ESNS3003

P1 NetSpy Alert Processor procedure has encountered a recoverable error

Reason:

The NetSpy Alert Processor procedure has encountered a recoverable error. Check previous message(s) for the cause of the error.

System Action:

NetSpy Alert Event processing continues. However, some alert events might have been lost.

User Action:

Contact Technical Support, making available the following diagnostic information:

- Full text of this message
- Relevant messages in the activity log

ESNS3004

NetSpy Alert Processor -MDO ASSIGN failed: RC= P1 FDBK= P2 MAP= P3 Component= P4 Tag= P5 Type= P6

Reason:

The NetSpy Alert Processor procedure failed because of an MDO error. The failure is identified by the following:

- Statement type, ASSIGN
- MDO return code, *P1* =&ZMDORC
- MDO feedback code, *P2* =&ZDMOFDBK
- Map name, *P3* =&ZMDOMAP
- Full map component name, *P4* =&ZMDONAME
- Map component tag value, *P5* =&ZMDOTAG
- ASN.1 type of the component, *P6* =&ZMDOTYPE

System Action:

The message is written to the activity log and is followed by a series of messages (DD9003, DD9004, DD9006, and DD9007), which display the NetSpy alert event in dump format. The NetSpy Alert event is ignored.

User Action:

Contact Technical Support, making available the following diagnostic information:

- Full text of this message
- Record dump
- Relevant messages in the activity log

ESNS3005

Alert Rule Registration failed, message follows.

Reason:

The Alert Rule initialization action failed; the reason is given in a message (AMCALLnn) which follows.

System Action:

Alert Rule initialization is incomplete. Alert Monitoring functions will not function correctly

User Action:

Review the help for the appropriate AMCALLnn message.

ESNS3006

Alert creation failed, message follows.

Reason:

The Alert Create action failed; the reason is given in a message (AMCALLnn) which follows.

System Action:

The alert is not generated.

User Action:

Review the help for the appropriate AMCALLnn message.

ESNS3008

Unable to interpret NetSpy Alert. Monitor Name: P1 Resource: P2 Reason: P3

Reason:

NetSpy Alert could not be processed, the reason is P3 . The NetSpy Alert monitor name is: P1 . The resource name is: P2 .

System Action:

The alert is ignored. A Hex dump of the alert is written to the activity log.

User Action:

Contact Technical Support.

ESNS3009**Alert deletion failed, message follows.****Reason:**

The Alert Clear action failed; the reason is given in a message (AMCALLnn) which follows.

System Action:

The alert is not cleared. A Hex dump of the alert is written to the activity log.

User Action:

Review the help for the appropriate AMCALLnn message.

ESNS3010**NetSpy Alert Processor has failed - Reason: P1****Reason:**

The NetSpy Alert Processor procedure has failed because of an internal system error. *P1* is the reason for the failure.

System Action:

The procedure terminates.

User Action:

Contact Technical Support.

ESNS3501**P1 Action not available for this Alert****Reason:**

You have selected the *P1* action for an alert, but the alert resource Id was null.

System Action:

The action terminates.

User Action:

Select action VAM (View the Alert MDO), print the MAP display and contact Technical Support.

ESNS3502

P1 Action terminated - P2 is unknown to the region

Reason:

You have selected the *P1* action for an alert, but the resource associated with the alert is not currently known to the region.

System Action:

The action terminates.

User Action:

Review the Parameters Groups /*PARMS* SNA Automation Specifications (AUTOSNACNTL) Network Discovery Filters (page 3 of 3). Check the INCLUDE and EXCLUDE filter statements. If required Press F6 (Action) to rediscover the resources.

ESNS3503

P1 Action terminated - P2

Reason:

You have selected the *P1* action for an alert, but the request failed. The reason for the failure is *P2* .

System Action:

The action terminates.

User Action:

Review the reason for the failure. Note the resource name and contact Technical Support.

EW0002**USERID ~P1 NOT AUTHORISED FOR NEWS FEATURE****Reason:**

User P1 has attempted to invoke a function of the NEWS feature but is not authorised to do so.

System Action:

The process is terminated.

User Action:

Contact your systems administrator if you feel you should have access to NEWS.

EW0003**INVALID SELECTION****Reason:**

An invalid selection option has been chosen.

System Action:

The process waits for input from the terminal.

User Action:

Enter a valid selection and retry.

EW0004**INVALID COMMAND****Reason:**

An invalid command has been entered.

System Action:

The process waits for input from the terminal.

User Action:

Correct the command and retry or clear the command field.

EW0005

LINK AND SSCP NAMES ARE MUTUALLY EXCLUSIVE

Reason:

Both the LINK and SSCP names have been entered but only one of the two is allowed.

System Action:

The process waits for input from the terminal.

User Action:

Specify only one LINK or SSCP name (clear one of the two) and retry.

EW0006

REQUEST TIMEOUT - NO RESPONSE WITHIN ~P1 SECONDS

Reason:

A request has timed out whilst waiting for a response from a device. P1 is the amount of time that the request waited for the device to respond.

System Action:

Processing is terminated.

User Action:

Retry the function.

EW0007

REQUEST ENDED WITH RC=~P1

Reason:

Return code P1 was received in response to a request.

System Action:

Processing is terminated.

User Action:

None.

EW0008**NO PARAMETERS RECEIVED BY PROCEDURE ~P1 - REQUEST REJECTED****Reason:**

When procedure P1 was invoked, it expected to be passed some parameters but these were not supplied.

System Action:

The process is terminated.

User Action:

Retry the procedure supplying the required parameters.

EW0009**PROCEDURE ~P1 NOT FOUND IN NCL LIBRARY****Reason:**

An attempt was made to execute procedure P1, but the procedure was not found in the data set(s) that comprise the NCL library.

System Action:

An attempt is made to continue processing if possible.

User Action:

Ensure that the name of the procedure to be invoked is correct and that it resides in the correct library.

EW0010**OPTION ~P1 IS INVALID FOR COMMAND ~P2****Reason:**

Option P1 is not valid when used for command P2.

System Action:

The process is terminated.

User Action:

Correct the option and retry.

EW0011

PARAMETER ~P1 IS INVALID FOR COMMAND ~P2

Reason:

The parameter P1 is not valid when used for command P2.

System Action:

The process is terminated.

User Action:

Correct the parameter and retry.

EW0012

INVALID SYNTAX - DUPLICATE KEYWORD ~P1

Reason:

A keyword (P1) has been entered more than once.

System Action:

The process is terminated.

User Action:

Correct the parameters and retry.

EW0013

INVALID KEYWORD ~P1

Reason:

P1 is not a valid keyword.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EW0014**INVALID OPERAND ~P1****Reason:**

P1 is not a valid operand.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EW0015**INVALID VALUE ~P1 FOR KEYWORD ~P2****Reason:**

P1 is not valid for keyword P2.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EW0016**REQUIRED VALUE OMITTED FOR KEYWORD ~P1****Reason:**

The value required for keyword P1 has been omitted.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EW0017

REQUIRED PARAMETER OMITTED - ~P1=VALUE

Reason:

Required parameter P1 has been omitted.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EW0018

END

Reason:

This indicates the end of data for the current display.

System Action:

None.

User Action:

None.

EW0019

NODE = ~P1, DATE = ~P2, TIME = ~P3

Reason:

This message gives basic details for the response from a solicited device. P1 is the node name of the solicited device, P2 and P3 are the date and time the response was received in the format DAY DD-MON-YEAR and HH:MM:SS respectively.

System Action:

None.

User Action:

None.

EW0020

rtyp = ~P1, rtyp = ~P2, rtyp = ~P3, rtyp = ~P4

Reason:

This message identifies the resource hierarchy for a solicited device. rtyp is the resource type and Pn is the name of the associated resource.

System Action:

None.

User Action:

None.

EW0021

EXCESSIVE PARAMETERS FOR COMMAND ~P1

Reason:

The maximum number of allowable parameters for command P1 has been exceeded.

System Action:

The process terminates.

User Action:

Correct the error and retry.

EW0022

INVALID ~P1 NAME

Reason:

A name has been entered that is invalid for the type indicated by P1.

System Action:

None.

User Action:

Correct the error and retry.

EW0023

REQUIRED ~P1 NAME OMITTED

Reason:

A required name of the type indicated by P1 has been omitted.

System Action:

None.

User Action:

Correct the error and retry.

EW0024

~P1 IS AN INVALID ~P2 NAME

Reason:

P1 is not a valid name for the type indicated by P2.

System Action:

None.

User Action:

Correct the error and retry.

EW0025

LINK AND DOMAIN NAMES ARE MUTUALLY EXCLUSIVE

Reason:

Both the LINK and DOMAIN names have been entered but only one of the two is allowed.

System Action:

None.

User Action:

Specify only one LINK or DOMAIN name (clear one of the two) and retry.

EW0026**SSCP AND DOMAIN NAMES ARE MUTUALLY EXCLUSIVE****Reason:**

Both the SSCP and DOMAIN names have been entered but only one of the two is allowed.

System Action:

None.

User Action:

Specify only one SSCP or DOMAIN name (clear one of the two) and retry.

EW0027**UNSUPPORTED RETURN CODE (~P1) RECEIVED FROM PROCEDURE ~P2****Reason:**

Return code P1 was received from procedure P2 but is not supported.

System Action:

None.

User Action:

Determine the cause of the problem and, if possible, correct it.

EW0028**NEWSFILE UNAVAILABLE, RC= P1****Reason:**

An attempt to access the NEWSFILE failed because it was unavailable. The return code (*P1*) indicates the cause.

System Action:

None.

User Action:

Determine if the file should be available and if so, why it isn't. The meaning of the return code can be found in the NCL Reference in the section for the &FILEID verb.

EW0029

ENTER 'Y' OR 'N' ONLY

Reason:

A value other than 'Y' or 'N' or no value has been entered in the field flagged as being in error.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry.

EW0030

ENTER 'B', 'D' OR 'R' ONLY

Reason:

A value other than 'B', 'D' or 'R' or no value has been entered in the field flagged as being in error.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry.

EW0031

DISPLAY RESTRICTED BY NPF

Reason:

The entire display has not been made available because the user is not authorised by NPF to view all of it.

System Action:

Processing continues.

User Action:

None.

EW0032**PRESS ENTER TO CONFIRM DELETE(S) OR PRESS F3 TO CANCEL****Reason:**

Press the 'ENTER' key to confirm the deletion(s), or press F3 to cancel the request.

System Action:

The process waits for input from the terminal.

User Action:

Press the 'ENTER' key to confirm, or press 'F3' to cancel.

EW0033**NO CHANGES MADE****Reason:**

A NEWS Control Functions panel was exited but no changes were made to the current settings.

System Action:

None.

User Action:

None.

EW0034**INVALID SCROLL AMOUNT****Reason:**

An invalid value has been entered in a field capable of accepting a valid scroll amount value.

System Action:

None.

User Action:

Correct the error and retry. Valid scroll values are P(age), H(alf), C(ursor), D(ata) and any positive numeric value up to 100000.

EW0035

VALUE IS NOT NUMERIC

Reason:

The value supplied is not numeric.

System Action:

None.

User Action:

Correct the error and retry.

EW0036

VALUE IS NOT WITHIN RANGE ~P1 - ~P2

Reason:

The number entered is not within the range bounded by P1 and P2.

System Action:

None.

User Action:

Correct the error and retry.

EW0037

DATABASE LOCK HELD - RETRY

Reason:

A lock is in place on the NEWS database temporarily restricting access to it.

System Action:

None.

User Action:

Retry the action. If the problem persists, consult your systems administrator.

EW0038**NO HELP AVAILABLE****Reason:**

A request for a "HELP" display has been made but no help is available for this display.

System Action:

None.

User Action:

None.

EW0039**MDO ~P1 NOT AVAILABLE TO PROCEDURE ~P2****Reason:**

An attempt was made to use the MDO named P1 by procedure P2 but the MDO cannot be accessed by the procedure.

System Action:

The process is terminated.

User Action:

Ensure that the name of the MDO to be used is correct and that it is accessible to the procedure.

EW0040**TOP OF DATA****Reason:**

A backward scroll was requested but the display is already positioned at the top of the data.

System Action:

None.

User Action:

None.

EW0041

BOTTOM OF DATA

Reason:

A forward scroll was requested but the display is already positioned at the bottom of the data.

System Action:

None.

User Action:

None.

EW0042

~P1 FEATURE NOT LICENSED OR EXCLUDED

Reason:

An attempt was made to invoke feature P1, which is either excluded from use on this processor or is not licenced for use on this processor.

System Action:

The function is terminated.

User Action:

Contact the System Administrator.

EW0043

INVALID FULLY QUALIFIED NODE NAME

Reason:

The name indicated as being in error is invalid because it does not conform to the format "netid.NAUname".

System Action:

None.

User Action:

Correct the error and retry.

EW0044**PRESS CONFIRM KEY TO CONFIRM DELETE OR CANCEL KEY TO CANCEL REQUEST****Reason:**

A panel has been displayed showing details of the record that the user has requested be deleted. The user is requested to confirm or cancel the deletion of the definition presented.

System Action:

None.

User Action:

Press the CONFIRM key to allow the deletion, or press the CANCEL key to cancel the delete request.

EW0045**USERID P1 NOT AUTHORISED TO MODIFY NEWS DATABASE****Reason:**

The user *P1* attempted to modify or delete records in the NEWS database but did not have the appropriate authority level to do so.

System Action:

The process is terminated.

User Action:

Contact your systems administrator to upgrade your level of authority.

EW0046**CNM interface is not active****Reason:**

The CNM interface is not active. You can access history data; however, recent events are not recorded.

System Action:

None.

User Action:

If the CNM interface should be active, press F9 (Swap), enter /PARMS, and action the \$SN CNM Customizer parameter group.

EW0A01

NO FURTHER INFORMATION (NETINFO FILE UNAVAILABLE)

Reason:

An explanation of the status code for an event associated with a 3x74 controller cannot be found because the NETINFO file is unavailable.

System Action:

Processing continues.

User Action:

Determine whether or not the file should be available and correct take the appropriate action.

EW0A02

NETINFO1 GET FAILED, KEY=~P1, RC=~P2, FDBK=~P3

Reason:

A VSAM error occurred during a NETINFO1 file get I/O operation. P1 is the filekey of the record, P2 is the file return code and P3 is the VSAM FDBK code.

System Action:

Processing continues.

User Action:

Take note of the message and inform your systems administrator if you are unable to resolve the problem.

EW0D01

INVALID R-MODE (~P1) - UNABLE TO FORMAT

Reason:

Procedure \$NWFS032 has been called to format a RECMS record for display purposes but the recording mode (R-MODE) of the record is unknown to the procedure. The meaning of the record contents is R-MODE dependent.

System Action:

As much as possible of the meaning of the record contents is displayed.

User Action:

None.

EW1001**NEWSFILE FREED BY CNMPROC****Reason:**

CNMPROC has released the NEWSFILE.

System Action:

Processing continues.

User Action:

None.

EW1002**NO PROCESSING PATH FOUND FOR PROCESS-ID ~P1****Reason:**

PROCESS-ID P1 defined for a record by Category 003 of the NSCNTL file was not found in category 004 of the NSCNTL file.

System Action:

The record is discarded and CNMPROC processing continues.

User Action:

Correct the name of the PROCESS-ID in Cat. 003 of the NSCNTL file or add the required PROCESS-ID to Cat. 004 of the NSCNTL file.

EW1003**ERROR MAPPING MDO WITH MAP \$CNM, RC=~P1, FDBK=~P2****Reason:**

CNMPROC was unable to map the \$CNM map to an MDO to process arriving CNM records. P1 is the Return Code from the assign of the map to the MDO and P2 is the FDBK code.

System Action:

Processing continues.

User Action:

Determine the cause and take the necessary action to correct the problem.

EW1004

CNMPROC TERMINATING DUE TO MAPPING ERROR

Reason:

CNMPROC was unable to map the \$CNM map to an MDO to process arriving CNM records. Without the \$CNM map successfully loaded, CNMPROC is not able to process any data.

System Action:

CNMPROC terminates.

User Action:

Determine the cause and take the necessary action to correct the problem.

EW1099

Alert without description P1

Reason:

This message appears as an alert description, and is written to the activity log when the CNM procedure creates an alert (for the Alert Monitor) which has no description. *P1* includes additional diagnostic information

System Action:

The message is written to the activity log along with several EW4F* diagnostic messages.

User Action:

This is an internal error which should be reported to your local product support office. You should provide the except of the log showing this message and all following EW4F* messages.

EW1101**CNMPROC UNABLE TO OBTAIN DATABASE LOCK - TEXT= P1, RC= P2, FDBK= P3****Reason:**

CNMPROC attempted to set an exclusive lock on the Newsfile but was unsuccessful because it was already held by another procedure. The owner of the lock is indicated by P1. P2 is the return code and P3 is the FDBK code from the &LOCK statement.

System Action:

The record is written to the activity log and processing continues.

User Action:

If the problem persists, determine the cause and take any necessary action to correct the problem.

EW1102**NEWSFILE WRAP PROCESSING GOT END-OF-FILE - RECORD NOT DELETED, MASTERKEY=~P1****Reason:**

While attempting to delete records that were above the wrap count limit for a node, NEWS reached the limit of records for the node before the expected count of records was exceeded. P1 is the key of the master record of the node for which wrap count processing was being done.

System Action:

None.

User Action:

None.

EW1103

NEWSFILE ~P1 FAILED, KEY=~P2, RC=~P3, FDBK=~P4

Reason:

A VSAM error occurred during NEWSFILE I/O operation P1 (GET, DELETE, ADD or PUT). P2 is the filekey of the master record, P3 is the file return code and P4 is the VSAM FDBK code.

System Action:

The process is terminated.

User Action:

Determine the cause and take the necessary action to correct the problem.

EW1104

NEWSFILE FREED BY CNMPROC

Reason:

CNMPROC has released the NEWSFILE.

System Action:

None.

User Action:

None.

EW1105

~P1 RECORDS LOST SINCE LOGGING WAS SUSPENDED

Reason:

CNMPROC has been unable to log P1 records because logging to the NEWSFILE has been suspended. This message appears whenever the lost record count threshold is matched and is preceded by a message giving the reason why logging was suspended.

System Action:

None.

User Action:

Determine whether logging should still be suspended, if not take the appropriate action to resume logging.

EW1106**STATISTICAL TOTALS OVERFLOW FOR P1 - COUNTS FOLLOW****Reason:**

Counters for statistical totals for node *P1* have overflowed and will be written to the activity log before being reset.

System Action:

The counters will be written to the activity log and then cleared.

User Action:

None.

EW1107**SEND TOTAL=~P1, SEND ERR=~P2, RECV TOTAL=~P3, RECV ERR=~P4****Reason:**

This message follows message EW1106 and lists the total statistical counts for a node prior to resetting them to zero.

System Action:

None.

User Action:

None.

EW1108**SEND TRAFFIC=~P1, TOTAL ERRORS=~P2****Reason:**

This message follows message EW1107 and lists the total statistical counts for a node prior to resetting them to zero.

System Action:

None.

User Action:

None.

EW1109

STATISTICAL TOTALS FOR ~P1 NOW RESET TO ZERO

Reason:

The statistical totals for the node P1 have been reset on the NEWSFILE.

System Action:

Processing continues.

User Action:

None.

EW1110

RTM STATISTICAL DATA OVERFLOW FOR P1 - COUNTS FOLLOW

Reason:

The one of the data counts maintained in the NEWSFILE master record for node *P1* has exceeded the maximum. The counts will be written to the activity log and reset in the master record.

System Action:

Processing continues.

User Action:

None.

EW1111

DEF 1 : AVG RESPONSE=~P1/~P2 (1/10THS SECS)

Reason:

This message follows message EW1110 and details the average response time for Response Time Monitor definition 1 (first character received). P1 is the accumulated response time in 10ths of seconds and P2 is the total number of transactions recorded for this definition.

System Action:

Processing continues.

User Action:

None.

EW1112**DEF 2 : AVG RESPONSE= $\sim P1/\sim P2$ (1/10THS SECS)****Reason:**

This message follows message EW1111 and details the average response time for Response Time Monitor definition 2 (keyboard unlock). P1 is the accumulated response time in 10ths of seconds and P2 is the total number of transactions recorded for this definition.

System Action:

Processing continues.

User Action:

None.

EW1113**DEF 3 : AVG RESPONSE= $\sim P1/\sim P2$ (1/10THS SECS)****Reason:**

This message follows message EW1112 and details the average response time for Response Time Monitor definition 2 (Change Direction/End Bracket received). P1 is the accumulated response time in 10ths of seconds and P2 is the total number of transactions recorded for this definition.

System Action:

Processing continues.

User Action:

None.

EW1114

DEF 4 : AVG RESPONSE= \sim P1/ \sim P2 (1/10THS SECS)

Reason:

This message follows message EW1113 and details the average response time for Response Time Monitor definition 4 (last character received). P1 is the accumulated response time in 10ths of seconds and P2 is the total number of transactions recorded for this definition.

System Action:

Processing continues.

User Action:

None.

EW1116

TOTAL OVERFLOW COUNT= \sim P1

Reason:

P1 is the total count of overflow responses from all response definitions.

System Action:

Processing continues.

User Action:

None.

EW1117

RTM STATISTICAL TOTALS FOR \sim P1 NOW RESET TO ZERO

Reason:

The total counts maintained in the master record for node P1 have been reset.

System Action:

Processing continues.

User Action:

None.

EW1118**NEGATIVE RTM DATA RECEIVED FROM ~P1****Reason:**

The RTM statistical data from node P1 contained counts that included at least one negative number. This is not valid data.

System Action:

The record containing the incorrect data is discarded.

User Action:

If possible have corrective maintenance applied to the controller generating the invalid data to stop the problem re-occurring.

EW1120**NEWS DATABASE LOGGING - SUSPENDED BY CNMPROC (NEWSFILE UNAVAILABLE, RC= P1)****Reason:**

CNMPROC has suspended the logging of all records because the NEWSFILE is unavailable. Return code **P1** indicates the reason why the file is not available.

System Action:

Processing continues.

User Action:

Determine if the file should be available and if so, why it isn't. The meaning of the return code can be found in the NCL Reference in the section for the &FILEID verb.

EW1121

NEWS DATABASE LOGGING - SUSPENDED BY CNMPROC (GET RC= P1, FDBK= P2)

Reason:

CNMPROC has suspended the logging of all records to the NEWSFILE because it was unable to retrieve a master record for updating. **P1** is the file return code and **P2** is the VSAM FDBK code.

System Action:

Processing continues.

User Action:

Report the problem to your systems administrator. The meaning of the return code can be found in the NCL Reference in the section for the &FILEGET verb.

EW1122

NEWS DATABASE LOGGING - SUSPENDED BY CNMPROC (DEL RC= P1, FDBK= P2)

Reason:

CNMPROC has suspended the logging of all records to the NEWSFILE because it was unable to delete a record during wrap count processing. **P1** is the file return code and **P2** is the VSAM FDBK code.

System Action:

Processing continues.

User Action:

Report the problem to your systems administrator. The meaning of the return code can be found in the NCL Reference in the section for the &FILEDEL verb.

EW1123**NEWS DATABASE LOGGING - SUSPENDED BY CNMPROC (ADD RC= P1, FDBK= P2)****Reason:**

CNMPROC has suspended the logging of all records to the NEWSFILE because it was unable to add a record. **P1** is the file return code and **P2** is the VSAM FDBK code.

System Action:

Processing continues.

User Action:

Report the problem to your systems administrator. The meaning of the return code can be found in the NCL Reference in the section for the &FILEADD verb.

EW1124**NEWS DATABASE LOGGING - SUSPENDED BY CNMPROC (PUT RC= P1, FDBK= P2)****Reason:**

CNMPROC has suspended the logging of all records to the NEWSFILE because it was unable to replace a master record after updating it. **P1** is the file return code and **P2** is the VSAM FDBK code.

System Action:

Processing continues.

User Action:

Report the problem to your systems administrator. The meaning of the return code can be found in the NCL Reference in the section for the &FILEPUT verb.

EW1134

NEWSFILE UNAVAILABLE, RC= P1. REFER TO LOG MESSAGE P2

Reason:

An attempt to access the NEWSFILE failed because it was unavailable. The return code (*P1*) indicates the cause. The message *P2* written to the LOG will provide further information on the cause of the failure.

System Action:

None.

User Action:

Determine if the file should be available and if so, why it isn't. For an explanation of the return code, see the section about the &FILE SET verb in the NCL Reference.

EW1191

NEWS DATABASE LOGGING - NEWS DATABASE FULL: RE-ORG IN PROGRESS

Reason:

When attempting to log a record to the NEWSFILE, CNMPROC received a return code from VSAM indicating that the file was full. CNMPROC is now performing a re-organisation of the file to reclaim lost space.

System Action:

Processing continues.

User Action:

None.

EW1192

NEWS DATABASE LOGGING - NEWS DATABASE RE-ORG SUCCESSFUL

Reason:

The re-organisation of the NEWSFILE has completed successfully.

System Action:

Processing continues.

User Action:

None.

EW1193**NEWS DATABASE LOGGING - RESUMING NORMAL DATABASE LOGGING****Reason:**

Logging of records to the NEWSFILE by CNMPROC has now been resumed.

System Action:

Processing continues.

User Action:

None.

EW1194**NEWS DATABASE LOGGING - NEWS DATABASE RE-ORG FAILED TO RECOVER SPACE****Reason:**

The NEWSFILE is still full after a re-organisation.

System Action:

NEWSFILE database logging remains suspended.

User Action:

Determine if the NEWSFILE needs to be re-allocated with a larger amount of space or, if possible, delete from the file records you no longer require and then attempt another re- organisation of the file.

EW1195**NEWS DATABASE LOGGING - NEWS DATABASE FULL: RE-ORG REQUIRED****Reason:**

When attempting to log a record to the NEWSFILE, CNMPROC received a return code from VSAM indicating that the file was full. A re-organisation of the file is required to reclaim lost space.

System Action:

NEWS database logging is suspended.

User Action:

Follow your installation's standards to recover from this condition or notify your systems administrator.

EW1196

NEWS DATABASE LOGGING - CLOSE FAILED FOR NEWSFILE : AUTO RE-ORG NOT POSSIBLE

Reason:

When attempting to log a record to the NEWSFILE, CNMPROC received a return code from VSAM indicating that the file was full. CNMPROC is unable to close the NEWSFILE to perform a re-organisation because the file is still in use by other users.

System Action:

NEWS database logging is suspended.

User Action:

Ensure no users are accessing the file and then perform a manual re-organisation. You may use the *Perform Re-org of NEWS Database* option within NEWS Control Functions, NEWS Database Functions, NEWS Database Maintenance.

EW1198

NEWS DATABASE LOGGING - UNABLE TO REASSIGN NEWSFILE TO NEWS UDB

Reason:

Following a successful re-organisation of the NEWSFILE, CNMPROC failed to regain normal access to the NEWSFILE.

System Action:

NEWS database logging remains suspended.

User Action:

Follow your installation's standards to recover from this condition or notify your systems administrator.

EW1199**NEWS DATABASE LOGGING - NEWS DATABASE RE-ORG
UNSUCCESSFUL (SEE LOG)****Reason:**

When attempting to log a record to the NEWSFILE, CNMPROC received a return code from VSAM indicating that the file was full. CNMPROC attempted a re-organisation of the file to reclaim lost space but was unsuccessful. More details of the failure may be found in the activity log.

System Action:

Logging is suspended.

User Action:

Determine the cause of the failure, correct and retry.

EW1401**IDCAMS IS UNAVAILABLE FOR THIS OPERATING SYSTEM****Reason:**

A re-organisation of the NEWSFILE has been attempted but the operating system does not support IDCAMS (the method of re-organisation).

System Action:

The procedure is terminated.

User Action:

Perform the file re-organisation according to your installation's procedures or contact your systems administrator.

EW1402**UTIL0007 DETECTED INVALID PARAMETERS****Reason:**

The utility program UTIL0007 was passed invalid parameters.

System Action:

The procedure is terminated.

User Action:

Correct the parameters and retry.

EW1403

UTIL0007 RETURN CODE ~P1, IDCAMS COULD NOT COMPLETE

Reason:

The utility program UTIL0007 returned an error return code from IDCAMS indicating an error.

System Action:

The procedure is terminated.

User Action:

Determine and correct the reason for the error or contact your systems administrator.

EW1501

NO CNM DATA PASSED FOR PROCESSING

Reason:

The initial display formatting procedure has been invoked for a solicited record but was not passed any CNM data. No display is possible.

System Action:

None.

User Action:

Determine the cause and correct the problem.

EW1502

NO PROCESSING PATH FOUND FOR PROCESS-ID ~P1

Reason:

PROCESS-ID P1 defined for a record by Category 003 of the Network Services Control File was not found in Category 004 of the Network Services Control File.

System Action:

No display is processed.

User Action:

Correct the name of the PROCESS-ID in Category 003 of the Network Services Control File or add the required PROCESS-ID to Category 004 of the Network Services Control File.

EW1503**PROCESS-ID READ FAILED, KEY=~P1****Reason:**

No record was found in Category 003 of the Network Services Control File to match the key provided.

System Action:

Processing of the record is terminated.

User Action:

Add the required details to the Network Services Control File if desired.

EW1601**NO NSRU DATA SUPPLIED****Reason:**

Procedure \$NWCNMSR was invoked to send RU data to a device but none was supplied.

System Action:

Processing terminates.

User Action:

Correct and retry.

EW1602**NETWORK NAME '~P1' LENGTH ERROR****Reason:**

The network name was either not supplied or greater than eight characters in length.

System Action:

Processing terminates.

User Action:

Correct and retry.

EW1603

INVALID WAIT OPTION '~P1'

Reason:

The wait option P1 is not numeric or not within the range 0 to 9999.

System Action:

Processing terminates.

User Action:

Correct and retry.

EW1604

NO DATA RETURNED IN RESPONSE

Reason:

No data has been returned in response to a CNMSEND request.

System Action:

Processing terminates.

User Action:

None.

EW1605

CNMREAD RETURNED RC= P1

Reason:

An error, indicated by return code *P1* occurred during an &CNMREAD.

System Action:

Processing terminates.

User Action:

Determine the cause of the error. The meaning of the return code indicated can be found in the NCL User Guide.

EW1701**REQUESTED ALERT FORMAT NOT BASIC OR GENERIC****Reason:**

The contents of variable *CNMFORMAT* did not contain either 'BASIC' or 'GENERIC' to indicate the type of alert to be sent.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EW1702**NO ALERT TYPE SPECIFIED****Reason:**

No alert type was passed to \$NWALERT in variable *CNMALTYPE*.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EW1703**NO ALERT DESCRIPTION SPECIFIED****Reason:**

No alert description was passed to \$NWALERT in variable *CNMALDESC*.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EW1704

NO PROBABLE CAUSE SPECIFIED

Reason:

No probable cause was passed to \$NWALERT in variable *CNMPCAUSE*.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EW1705

NO ACTION SPECIFIED FOR USER CAUSE

Reason:

No User Action code was passed to \$NWALERT in variable *CNMUACTION*.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EW1706

NO ACTION SPECIFIED FOR INSTALL CAUSE

Reason:

No action code for an Installation Cause was passed to \$NWALERT in variable *CNMIACTION*.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EW1707**NO ACTION SPECIFIED FOR FAILURE CAUSE****Reason:**

No action code for a Failure Cause was passed to \$NWALERT in variable *CNMFACTION*.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EW1708**NO GENERAL CAUSE SPECIFIED****Reason:**

No General Cause code was passed to \$NWALERT in variable *CNMGCAUSE*.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EW1709**NO SPECIFIC COMPONENT SPECIFIED****Reason:**

No Specific Component code was passed to \$NWALERT in variable *CNMCOMP*.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EW1710

NO USER ACTION SPECIFIED

Reason:

No User Action code was passed to \$NWALERT in variable *CNMACTION*.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EW1711

DETAIL TEXT VECTOR ~P1 - VECTOR TYPE ~P2 IS INVALID

Reason:

The vector type P2 is not a valid Detail Text subvector. It must be type x'A0' or x'A1'. P1 is the sequence number of the Detail Text sub-vector within all Detail Text sub-vectors.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EW1712

SUPPLIED DATA NOT VALID HEXADECIMAL

Reason:

The data supplied to build an alert must be valid hexadecimal.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EW1713**ALERT SENT SUCCESSFULLY****Reason:**

An alert has been successfully built and sent.

System Action:

None.

User Action:

None.

EW1901**REQUIRED TEXT MESSAGE OMITTED****Reason:**

No text has been entered for an alert to be sent.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry.

EW1902**ALERT SENT SUCCESSFULLY****Reason:**

An alert has been successfully built and sent.

System Action:

None.

User Action:

None.

EW1C01

ERROR IN ELEMENT DATA

Reason:

Procedure \$NWDS06D encountered an error whilst verifying the Element data supplied by a 3710 in response to a request.

System Action:

The procedure terminates.

User Action:

Investigate the cause and correct the error.

EW1D01

INVALID PARM PASSED - MUST BE RECON , LOAD OR ? FOR HELP

Reason:

Procedure \$NWDS06E expected to be invoked with a parameter of either 'RECON', 'LOAD' or '?' but received an unknown parameter instead.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EW1D02

THIS NCL PROCEDURE IS USED TO CONVERT A 3710 LOAD OR

Reason:

Information only - will be followed by message EW1D03. Together, these two messages detail the function of procedure \$NWDS06E when it is invoked.

System Action:

None.

User Action:

None.

EW1D03**RECONFIGURATION CLIST TO NCL FOR EXECUTION UNDER SOLVE****Reason:**

Information only - will be preceded by message EW1D02. Together, these two messages detail the function of procedure \$NWDS06E when it is invoked.

System Action:

None.

User Action:

None.

EW1F01**ENTER 'L' OR 'R' ONLY****Reason:**

A value other than 'L' or 'R' or no value has been entered in the 'TARGET MODEM' field.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry.

EW1G01**SEGMENT NUMBER NAME****Reason:**

This message is part of the response to a list active ring command. It is followed by one or more EW1G02 messages which provide the segment number and name of all active segments on the token-ring.

System Action:

None.

User Action:

None.

EW1G02

~P1 ~P2

Reason:

This message contains details of a segment in response to a list active ring command. P1 and P2 are respectively the number and name of a segment of the token-ring.

System Action:

None.

User Action:

None.

EW1G03

SENSE DATA DESCRIPTION : ~P1

Reason:

This message is sent in response when a list active ring request is unable to be satisfied. P1 is the sense code giving the reason for the request failure.

System Action:

None.

User Action:

None.

EW1G04

MESSAGE TEXT

Reason:

Heading line to indicate free-form message text follows. All following text will be prefixed by message number EW1G05.

System Action:

None.

User Action:

None.

EW1G05**~P1****Reason:**

Free-form message text received from a response to a request.

System Action:

None.

User Action:

None.

EW2001**H/W AND S/W COMMON NAMES ARE MUTUALLY EXCLUSIVE****Reason:**

Both the hardware and software common names cannot be entered together.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2002**INVALID RESOURCE TYPE****Reason:**

A resource type other than 'SSCP', 'PU', 'LU', 'CHANNEL', 'STATION' or 'LINE' has been entered in one of the resource type fields.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2003

ALERT SENT SUCCESSFULLY

Reason:

An alert has been successfully built and sent.

System Action:

None.

User Action:

None.

EW2004

REQUIRED ~P1 OMITTED

Reason:

The required field, indicated by P1 ,has not been entered.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2005

~P1 IS NOT HEXADECIMAL

Reason:

The field indicated by P1 does not contain only hexadecimal data.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2101**H/W AND S/W COMMON NAMES ARE MUTUALLY EXCLUSIVE****Reason:**

Both the hardware and software common names cannot be entered together.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2102**INVALID RESOURCE TYPE****Reason:**

A resource type other than 'SSCP', 'PU', 'LU', 'CHANNEL', 'STATION' or 'LINE' has been entered in one of the resource type fields.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2103**ALERT SENT SUCCESSFULLY****Reason:**

An alert has been successfully built and sent.

System Action:

None.

User Action:

None.

EW2104

REQUIRED ~P1 OMITTED

Reason:

The required field, indicated by P1 ,has not been entered.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2105

~P1 IS NOT HEXADECIMAL

Reason:

The field indicated by P1 does not contain only hexadecimal data.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2701

EXPECTED X'9A' SUB-VECTOR NOT FOUND

Reason:

The mandatory sub-vector x'9A' was not found when processing a statistical record.

System Action:

The record is discarded, processing continues.

User Action:

None.

EW2801**NO NAME-LIST FOUND IN FIRST X'0025' NMVT FROM SNA_HUB****Reason:**

The mandatory X'03' name-list sub-vector was not found in a record received from an SNA_HUB.

System Action:

The record is discarded, processing continues.

User Action:

None.

EW2802**RECORD WAS NOT PROCESSED BY CNMPROC****Reason:**

This message is displayed to maintain the details of the number of records discarded.

System Action:

Processing of other CNM records continues.

User Action:

If desired, add support for the discarded record to the Network Services Control File so that future records can be processed as desired.

EW2803**2ND CNMREAD FAILED****Reason:**

The second &CNMREAD function failed to return any more data for a chained RECFMS record from an SNA_HUB. Details contained in the record are therefore incomplete. This message will be followed by another indicating the reason the &CNMREAD failed.

System Action:

The first RECFMS record is written to the activity log.

User Action:

None.

EW2804

1ST RECORD WRITTEN TO ACTIVITY LOG

Reason:

Because the second &CNMREAD for a chained record from an SNA_HUB failed, NEWS is unable to store the records in the database. Instead the contents of the first record received are written to the activity log for inspection.

System Action:

Contents of the first record are written to the activity log and processing then terminates.

User Action:

None.

EW2A01

ENTER 'L' OR 'R' ONLY

Reason:

A value other than 'L' or 'R' or no value has been entered in the 'TARGET MODEM' field.

System Action:

The process waits for input from the terminal.

User Action:

Enter an allowed value in the required field or press PF03 to exit the panel.

EW2A02

ENTER 'L', 'R' OR 'A' ONLY

Reason:

A value other than 'L', 'R' or 'A' or no value has been entered in the 'TARGET MODEM' field.

System Action:

The process waits for input from the terminal.

User Action:

Enter an allowed value in the required field or press PF03 to exit the panel.

EW2A03**ENTER 'F' OR 'B' ONLY****Reason:**

A value other than 'F' or 'B' or no value has been entered in the 'TARGET MODEM' field.

System Action:

The process waits for input from the terminal.

User Action:

Enter an allowed value in the required field or press PF03 to exit the panel.

EW2A04**PHONE NUMBERS EXCEED 41 DIGITS****Reason:**

The total number of characters entered in the 'PREFIX', '1ST NUMBER' and '2ND NUMBER' fields exceeds 41.

System Action:

The process waits for input from the terminal.

User Action:

Ensure that total number of digits does not exceed 41 and retry or press PF03 to exit the panel.

EW2B01**SEQUENCE EXCHANGE LIMIT OMITTED****Reason:**

No value for the number of test sequences to be performed has been entered.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2B02

SEQUENCE EXCHANGE LIMIT MUST BE NUMERIC

Reason:

The value entered for the number of test sequences to be performed is not numeric.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2B03

SEQUENCE EXCHANGE LIMIT IS NOT WITHIN RANGE 1 - 10

Reason:

The value entered for the number of test sequences to be performed is outside the range 1 to 10.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2C01

CURRENT VALUES NOT RETRIEVED SUCCESSFULLY

Reason:

The current values for the configuration or coupler parameters were not retrieved for a 'CHANGE' command for an LPDA-2 modem.

System Action:

Processing continues.

User Action:

Enter the new values required or press PF03 to exit the panel and cancel the change.

EW2C02**PRESS ENTER TO CONFIRM CHANGES****Reason:**

Press the 'ENTER' key to confirm the changes to the Configuration or Coupler parameters and send the request to update the same.

System Action:

The process waits for input from the terminal.

User Action:

Press the 'ENTER' key to send the update or press 'PF03' to exit the panel.

EW2C03**ENTER 'M' OR 'P' ONLY****Reason:**

A value other than 'M' or 'P' or no value has been entered in the 'Configuration' field.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2C04**ENTER 'P' OR 'S' ONLY****Reason:**

A value other than 'P' or 'S' or no value has been entered in the 'Network function' field.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2C05

ENTER 'L' OR 'S' ONLY

Reason:

A value other than 'L' or 'S' or no value has been entered in the 'Training sequence' field.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2C08

ENTER 'L' OR 'D' ONLY

Reason:

A value other than 'L' or 'D' or no value has been entered in the 'Speed control' field.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2C09

ENTER 'B' OR 'F' ONLY

Reason:

A value other than 'B' or 'F' or no value has been entered in the 'Default speed' field.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2C10**RFS DELAY VALUE IS NOT NUMERIC****Reason:**

The value entered for the RFS Delay time is not numeric.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2C11**RFS DELAY VALUE IS NOT WITHIN RANGE 0 - 255****Reason:**

The value entered for the RFS Delay time is outside the range 0 to 255.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2C12**RECEIVE LEVEL MUST BE NUMERIC****Reason:**

The value entered for the Receive level alarm threshold is not numeric.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2C13

RECEIVE LEVEL IS NOT WITHIN RANGE -43 - 0

Reason:

The value entered for the Receive level alarm threshold is not within the range -43 to 0.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2C14

LINE QUALITY VALUE IS NOT NUMERIC

Reason:

The value entered for the Line Quality alarm threshold is not numeric.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2C15

LINE QUALITY IS NOT WITHIN RANGE 0 - 14

Reason:

The value entered for the Line Quality alarm threshold is not within the range 0 to 14.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2C16**IMPULSE HITS VALUE IS NOT NUMERIC****Reason:**

The value entered for the Impulse Hits alarm threshold is not numeric.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2C17**IMPULSE HITS VALUE IS NOT WITHIN RANGE 0 - 63****Reason:**

The value entered for the Impulse Hits alarm threshold is not within the range 0 to 63.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2D01**REQUIRED RUNCMD TEXT OMITTED****Reason:**

No data for a RUNCMD command has been entered.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW2E01

NOTHING TO DISPLAY

Reason:

No textual response was received in reply to a RUNCMD request.

System Action:

None.

User Action:

None.

EW2F01

REQUEST DELIVERED

Reason:

A solicitation request to a node for Product Set Identification data has been accepted by the node.

System Action:

None.

User Action:

None.

EW2G01

LPDA-2 USER ~P1 HAS STATION ~P2

Reason:

The user in the displayed message is already using LPDA-2 services for the nominated station.

System Action:

Control is returned back to the LPDA-2 primary menu with this message.

User Action:

Try again.

EW2G02**LINE NAME AND STATION NAME MUST NOT BE SPECIFIED ON SAME COMMAND.****Reason:**

The LINE= or STATION= parm on the LPDA command must be entered but both may not appear on the same command.

System Action:

LPDA command terminated.

User Action:

Correct the error and retry.

EW2G03**LPDA SUPPORT IS INHIBITED FOR SPECIFIED LINK****Reason:**

An LPDA-2 command was attempted for the specified link but LPDA support is disabled for the link.

System Action:

LPDA-2 command is terminated.

User Action:

Setup the link to allow LPDA commands.

EW2G04**LPDA2 IS NOT SUPPORTED FOR THE DEVICE SPECIFIED****Reason:**

An LPDA-2 command was attempted against a MODEM/DSU but LPDA-2 support for that device is not valid.

System Action:

LPDA-2 command is terminated.

User Action:

Enter in the correct option for the device.

EW2G05

LPDA COMMAND RESPONSE SENSE CODE = ~P1

Reason:

Sense code has been received from LPDA command.

System Action:

The process is terminated.

User Action:

Use NETINFO1 to find out the error based upon the sense code and correct the problem.

EW2G06

PRINT DENIED, COPIES PARAMETER MUST BE IN THE NUMERIC RANGE OF (1,255)

Reason:

The data associated with this parameter must be greater than 0 and less than 256.

System Action:

The data will not be printed since the COPIES parameter is in error.

User Action:

N/A

EW2G07

PRINT DENIED, HOLD PARAMETER MUST BE EITHER 'YES' OR 'NO'

Reason:

The data associated with this parameter must be either YES or NO.

System Action:

The data will not be printed since the HOLD parameter is in error.

User Action:

N/A

EW2G08**PRINT DENIED, ~P1 LIST CONTAINS NO INFORMATION****Reason:**

If no data appears when PRINT is issued, the PRINT will be denied.

System Action:

The data will not be printed since only the title and headings would print out.

User Action:

N/A

EW2G09**PRINT REQUEST COULD NOT BE OPENED; CHECK PRINT SERVICES MANAGER****Reason:**

Check Print Services Manager (PSM) to make sure that \$PSPOOL is allocated and opened. Also make sure that the printer which was specified is set up correctly.

System Action:

The data will not be printed since a request number was not returned from \$PSCALL.

User Action:

Check PSM.

EW2G10

REQUEST ~P1 WAS SUCCESSFUL, ~P2 LIST IS HELD ON THE QUEUE

Reason:

This message tells the user that the PRINT command was successful but that the printout is on the queue because the HOLD=YES parameter was coded on the PRINT command.

System Action:

The list is on the queue.

User Action:

The printout can be seen on Print Services Manager under the USERID of the user. The request number which is contained in this message can be used as an identifier on the PSM.

EW2G11

REQUEST ~P1 WAS SUCCESSFUL, ~P2 LIST SENT TO ~P3

Reason:

This message tells the user that the PRINT command was successful and also reveals what printer the list was sent to.

System Action:

The list has been printed.

User Action:

N/A.

EW2G12

LPDA SUPPORT IS INHIBITED FOR LINK STATION ~P1

Reason:

An LPDA-2 command was attempted for the specified link station but LPDA-2 support is disabled for the link station specified.

System Action:

LPDA-2 command is terminated.

User Action:

Setup the link station to allow LPDA commands.

EW2G13**INVALID NODE NAME SPECIFIED, NODE NAME = ~P1****Reason:**

The user specified an invalid node name on the input panel.

System Action:

Control is returned back to the LPDA-2 primary menu with this message.

User Action:

Try again with a valid node name.

EW2G14**INVALID NCP NAME SPECIFIED, NCP NAME = ~P1****Reason:**

The user specified an invalid ncp name on the input panel.

System Action:

Control is returned back to the LPDA-2 primary menu with this message.

User Action:

Try again with a valid ncp name.

EW2G15**INVALID LINK NAME****Reason:**

An invalid link name has been entered.

System Action:

None

User Action:

Correct the error and retry.

EW2G16

INVALID SSCP NAME

Reason:

An invalid SSCP name has been entered.

System Action:

None

User Action:

Correct the error and retry.

EW2G17

LINK AND SSCP NAMES ARE MUTUALLY EXCLUSIVE

Reason:

Both the LINK and SSCP names have been entered but only one of the two is allowed.

System Action:

The process waits for input from the terminal.

User Action:

Specify only one LINK or SSCP name (clear one of the two) and retry.

EW2G18

INVALID LINE NAME SPECIFIED, LINE NAME = ~P1

Reason:

The user specified an invalid line name on the input panel.

System Action:

Control is returned back to the LPDA-2 primary menu with this message.

User Action:

Try again with a valid line name.

EW2G19**NCP NAME MUST BE SPECIFIED FOR LINE COMMANDS****Reason:**

The NCP name must be specified when issuing line type commands. It is not necessary for station commands as the owning NCP can be derived from the station information, this is not the case for lines.

System Action:

Command is terminated.

User Action:

Specify proper NCP name for given line.

EW3001**COMMAND ~P1 IS INVALID****Reason:**

The command P1 is not recognised by procedure \$NWDS300.

System Action:

The procedure is terminated.

User Action:

Correct the error and retry.

EW3002**SEGMENT NUMBER IS NOT WITHIN RANGE 0 - 0FFF****Reason:**

The value entered for the Ring or Bus Segment number is not within the range x'0' - x'0FFF'.

System Action:

The procedure is terminated.

User Action:

Correct the error and retry.

EW3003

ROUTE VALUE MUST BE HEXADECIMAL

Reason:

The value entered for the Routing Information is not valid hexadecimal.

System Action:

The procedure is terminated.

User Action:

Correct the error and retry.

EW3004

INVALID ROUTE INFORMATION

Reason:

The value entered for the Routing Information does not conform to the format AAAB.....ZZZ where AAA is the Source Adapter Ring Number, B is the Bridge Number and ZZZ is the Target Adapter Ring Number.

System Action:

The procedure is terminated.

User Action:

Correct the error and retry.

EW3005

BRIDGE NUMBER IS NOT WITHIN RANGE 0 - F

Reason:

The value entered for the Bridge number is not within the range x'0' - x'F'.

System Action:

The procedure is terminated.

User Action:

Correct the error and retry.

EW3006**THRESHOLD VALUE IS NOT WITHIN RANGE 0 - 99.99****Reason:**

The value entered for the Percentage Frame Lost threshold is not within the range 0 - 99.99.

System Action:

The procedure is terminated.

User Action:

Correct the error and retry.

EW3007**INTERVAL IS NOT WITHIN RANGE 0 - 99****Reason:**

The value entered for the Performance Notification Interval is not within the range 0 - 99.

System Action:

The procedure is terminated.

User Action:

Correct the error and retry.

EW3008**HOP COUNT IS NOT WITHIN RANGE 1 - 7****Reason:**

The value entered for the Adapter Hop-count is not within the range 1 - 7.

System Action:

The procedure is terminated.

User Action:

Correct the error and retry.

EW3009

LINK PASSWORD MUST BE 6 - 8 CHARACTERS IN LENGTH

Reason:

The new password for a Link must be not less than six and not greater than eight characters in length.

System Action:

The procedure is terminated.

User Action:

Correct the error and retry.

EW3010

PASSWORD ~P1 CONTAINS INVALID CHARACTERS

Reason:

The new password (P1) for a Link contains characters other than A-F, 0-9 and the symbols '@', '#', '\$' and '%'.

System Action:

The procedure is terminated.

User Action:

Correct the error and retry.

EW3101

USER ~P1 REMOVED ADAPTER ~P2 FROM SEGMENT ~P3 OF THE TOKEN-RING

Reason:

User P1 has sent a request to remove adapter P2 from segment P3 of the token-ring.

System Action:

None.

User Action:

None.

EW3102**SEGMENT NO. = ~P1, BUS TYPE = ~P2****Reason:**

This is the first message display line in response to a LAN Adapter list command. P1 is the LAN Segment number and P2 is the Bus type of the LAN manager adapter.

System Action:

None.

User Action:

None.

EW3103**ADAPTER ADDR ADAPTER NAME MAU ADDR MAU NAME LOBE STATE****Reason:**

This message is part of the response resulting from a request to list the active adapters on a LAN. It will be followed by one or more EW3104 messages which provide details of all active adapters on the LAN segment.

System Action:

None.

User Action:

None.

EW3104

~P1 ~P2 ~P3 ~P4 ~P5 ~P6

Reason:

This message is part of the response resulting from a request to list the active adapters on a LAN. It provides the adapter address P1 and name P2 (if known) of all active adapters on the LAN segment. If connected to an MAU, then its address P3 , name P4 (if known), lobe number P5 and lobe state P6 will also be displayed.

System Action:

None.

User Action:

None.

EW3105

SENSE DATA DESCRIPTION : ~P1

Reason:

This message is sent in response when a LAN adapter detail request is unable to be satisfied. P1 is the sense code which gives the reason why the request failed.

System Action:

None.

User Action:

None.

EW3106**TOKEN RING DETAILS****Reason:**

This message is part of the response resulting from a request to provide a profile of an adapter on a LAN segment and appears if the adapter is attached to a token-ring. Details of the adapter follow.

System Action:

None.

User Action:

None.

EW3107**ADAPTER ADDR = ~P1, ADAPTER NAME = ~P2****Reason:**

This message is part of an adapter profile display for an adapter attached to a LAN segment. P1 and P2 are the address and name respectively of the profiled adapter. If the adapter has no name, 'N/A' is displayed in its place.

System Action:

None.

User Action:

None.

EW3108**LAN SEGMENT NUMBER = ~P1, LAN SEGMENT TYPE = ~P2****Reason:**

This message is part of an adapter profile display for an adapter attached to a LAN segment. P1 and P2 are the number and type respectively of the LAN segment to which the profiled adapter is attached.

System Action:

None.

User Action:

None.

EW3109

NAUN ADAPTER ADDR = ~P1, NAUN ADAPTER NAME = ~P2

Reason:

This message is part of an adapter profile display for an adapter attached to a LAN segment. P1 and P2 are the address and name respectively of the active adapter immediately prior to the profiled adapter on the ring segment (Nearest Active Upstream Neighbour). If the adapter has no name, 'N/A' is displayed in its place.

System Action:

None.

User Action:

None.

EW3110

PRODUCT ID = ~P1

Reason:

This message is part of an adapter profile display for an adapter attached to a LAN segment. P1 is the serial number and machine type (Product Id) of the hardware containing the adapter card of the profiled adapter.

System Action:

None.

User Action:

None.

EW3111**MICROCODE LEVEL = ~P1, ADAPTER MONITORED = ~P2****Reason:**

This message is part of an adapter profile display for an adapter attached to a LAN segment. P1 is the microcode level of the profiled adapter and P2 indicates whether or not the adapter is monitored.

System Action:

None.

User Action:

None.

EW3112**UNIVERSAL ADDR = ~P1, GROUP ADDR = ~P2****Reason:**

This message is part of an adapter profile display for an adapter attached to a LAN segment. P1 and P2 are the universal and group addresses of the profiled adapter. If no universal address was specified then 'N/A' is displayed in its place.

System Action:

None.

User Action:

None.

EW3113**FUNCTIONAL ADDR = ~P1****Reason:**

This message is part of an adapter profile display for an adapter attached to a LAN segment. P1 is the functional address of the profiled adapter.

System Action:

None.

User Action:

None.

EW3114

PC NETWORK DETAILS

Reason:

This message is part of the response resulting from a request to provide a profile of an adapter on a LAN segment and appears if the adapter is attached to a PC network. Details of the adapter follow.

System Action:

None.

User Action:

None.

EW3115

CRC ERRORS = ~P1, ALIGNMENT ERRORS = ~P2**Reason:**

This message is part of an adapter profile display for an adapter attached to a LAN segment and shows the number of CRC and Alignment errors that have occurred for this adapter. The error counts are reset every minute.

System Action:

None.

User Action:

None.

EW3116

COLLISIONS = ~P1, ABORTED TRANSMISSIONS = ~P2**Reason:**

This message is part of an adapter profile display for an adapter attached to a LAN segment and shows the number of collision errors and aborted transmissions that have occurred for this adapter. The error counts are reset every minute.

System Action:

None.

User Action:

None.

EW3117**PACKETS SENT = ~P1, PACKETS RECEIVED = ~P2****Reason:**

This message is part of an adapter profile display for an adapter attached to a LAN segment and shows the number of packets sent and received by this adapter. These counts are reset every minute.

System Action:

None.

User Action:

None.

EW3118**RESOURCE ERRORS = ~P1****Reason:**

This message is part of an adapter profile display for an adapter attached to a LAN segment and shows the number of resource errors that have occurred for this adapter. The error counts are reset every minute.

System Action:

None.

User Action:

None.

EW3119**MESSAGE TEXT****Reason:**

Heading line to indicate free-form message text follows. All following text will be prefixed by message number EW3120.

System Action:

None.

User Action:

None.

EW3120

~P1

Reason:

Free-form message text received from a response to a request.

System Action:

None.

User Action:

None.

EW3121

DUPLICATE ADDRESS DETAILS

Reason:

This message is part of an adapter profile display for an adapter attached to a LAN segment and appears when the adapter is defined on more than one segment.

System Action:

None.

User Action:

None.

EW3122

LAN SEGMENTS NUMBER

Reason:

This message is part of an adapter profile display for an adapter attached to a LAN segment and appears when the adapter is defined on more than one segment. Message EW3123 follows and lists the segment number(s) on which the adapter is defined.

System Action:

None.

User Action:

None.

EW3123**~P1****Reason:**

This message is part of an adapter profile display for an adapter attached to a LAN segment. It lists the segment number(s) on which the adapter is defined.

System Action:

None.

User Action:

None.

EW3124**MAU ADDR = ~P1, MAU NAME = ~P2****Reason:**

This message is part of an adapter profile display for an adapter attached to a LAN segment. P1 and P2 are the address and name respectively of the MAU to which the profiled adapter is connected. If the adapter is not attached to an MAU, or if the MAU is not named, 'N/A' is displayed in the appropriate place.

System Action:

None.

User Action:

None.

EW3125**MAU LOBE NUMBER = ~P1, MAU LOBE STATE = ~P2****Reason:**

This message is part of an adapter profile display for an adapter attached to a LAN segment. If the adapter is attached to an MAU, P1 and P2 are the MAU lobe number and lobe state respectively. Otherwise 'N/A' is displayed.

System Action:

None.

User Action:

None.

EW3126

ADAPTER ADDR ADAPTER NAME ADAPTER ADDR ADAPTER NAME

Reason:

This message is part of the response resulting from a request to list the active adapters on a LAN. It will be followed by one or more EW3127 messages which provide details of all active adapters on the LAN segment.

System Action:

None.

User Action:

None.

EW3127

~P1 ~P2 ~P3 ~P4

Reason:

This message is part of the response resulting from a request to list the active adapters on a LAN. It provides the adapter address P1 and name P2 (if known) of all active adapters on the LAN segment.

System Action:

None.

User Action:

None.

EW3201

NAME = ~P1, NUMBER = ~P2, TYPE = ~P3

Reason:

This message is part of a bridge profile display for a bridge linking two LAN segments. P1 is the bridge name, P2 is the bridge number and P3 is the bridge type.

System Action:

None.

User Action:

None.

EW3202**VERSION = ~P1, PROGRAM NUMBER = ~P2****Reason:**

This message is part of a bridge profile display for a bridge linking two LAN segments. P1 is the bridge version information (in the format Vvv.rr.ll) and P2 is the bridge program number.

System Action:

None.

User Action:

None.

EW3203**FRAME FORWARDING ACTIVE = ~P1, LARGEST FRAME SIZE = ~P2****Reason:**

This message is part of a bridge profile display for a bridge linking two LAN segments. P1 indicates whether or not Frame forwarding is active and P2 is the size, in bytes, of the largest frame that can go through the bridge.

System Action:

None.

User Action:

None.

EW3204**PERCENTAGE FRAMES LOST THRESHOLD = ~P1****Reason:**

This message is part of a bridge profile display for a bridge linking two LAN segments. P1 is the percentage frames lost threshold which is the number of frames lost per ten thousand expressed as a percent. When this number is exceeded, the bridge sends an alert to the LAN manager.

System Action:

None.

User Action:

None.

EW3205

SINGLE ROUTE B'CAST MODE = ~P1, PERFORMANCE NOTIFY INTVL = ~P2

Reason:

This message is part of a bridge profile display for a bridge linking two LAN segments. P1 indicates whether or not single-route broadcasting will be performed automatically and P2 is the frequency (in minutes) with which the bridge sends performance counters to the LAN manager. If the interval is zero, no performance counters will be sent.

System Action:

None.

User Action:

None.

EW3206

ROUTING INFORMATION = ~P1

Reason:

This message is part of a bridge profile display for a bridge linking two LAN segments. P1 is the specific path taken by requests and responses through the bridge.

System Action:

None.

User Action:

None.

EW3207**PERFORMANCE COUNTERS LAST QUERIED ON ~P1 AT ~P2****Reason:**

This message is part of a bridge profile display for a bridge linking two LAN segments. P1 and P2 are the date (MM-DD-YY) and time respectively that the performance counters were last queried.

System Action:

None.

User Action:

None.

EW3208**CONNECTED SEGMENTS DETAILS****Reason:**

This message is part of a bridge profile display for a bridge linking two LAN segments. This message is the main heading for the details of the two LAN segments connected to the bridge.

System Action:

None.

User Action:

None.

EW3209**SEGMENT NUMBER = ~P1, LAN TYPE = ~P2****Reason:**

This message is part of a bridge profile display for a bridge linking two LAN segments. P1 is the segment number and P2 is the LAN type linked to the bridge.

System Action:

None.

User Action:

None.

EW3210

ADAPTER ADDR = ~P1, ADAPTER NAME = ~P2

Reason:

This message is part of a bridge profile display for a bridge linking two LAN segments. P1 and P2 are the address and name respectively of a bridge adapter. If the adapter has no name, 'N/A' is displayed in its place.

System Action:

None.

User Action:

None.

EW3211

SINGLE-ROUTE B'CAST = ~P1, HOP COUNT = ~P2

Reason:

This message is part of a bridge profile display for a bridge linking two LAN segments. P1 indicates whether or not single-route broadcasting is enabled for the adapter and P2 is the count of the maximum number of bridges a broadcast frame can pass through before being stopped by this bridge.

System Action:

None.

User Action:

None.

EW3212

BROADCAST FRAMES = ~P1

Reason:

This message is part of a bridge profile display for a bridge linking two LAN segments. P1 is the number of broadcast and single-route broadcast frames that have passed through the bridge.

System Action:

None.

User Action:

None.

EW3213**BROADCAST BYTES = ~P1****Reason:**

This message is part of a bridge profile display for a bridge linking two LAN segments. P1 is the number of broadcast and single-route broadcast bytes that have passed through the bridge.

System Action:

None.

User Action:

None.

EW3214**NON-BROADCAST FRAMES = ~P1****Reason:**

This message is part of a bridge profile display for a bridge linking two LAN segments. P1 is the number of frames directed to a specific address on a specific segment across specific bridges that have passed through the bridge.

System Action:

None.

User Action:

None.

EW3215**NON-BROADCAST BYTES = ~P1****Reason:**

This message is part of a bridge profile display for a bridge linking two LAN segments. P1 is the number of bytes directed to a specific address on a specific segment across specific bridges that have passed through the bridge.

System Action:

None.

User Action:

None.

EW3216

LAN SEGMENT INOPERATIVE = ~P1

Reason:

This message is part of a bridge profile display for a bridge linking two LAN segments. P1 is the number of frames not passed through this adapter and bridge because of any of the following reasons : i) Beaconsing adapter ii) Continuous carrier iii) No carrier iv) 16 consecutive collisions on the LAN segment of the other bridge adapter

System Action:

None.

User Action:

None.

EW3217

ADAPTER CONGESTION = ~P1

Reason:

This message is part of a bridge profile display for a bridge linking two LAN segments. P1 is the number of frames not passed through the bridge because of heavy traffic congestion on the bridge adapter.

System Action:

None.

User Action:

None.

EW3218**TELECOMMUNICATIONS LINK ERRORS = ~P1****Reason:**

This message is part of a bridge profile display for a bridge linking two LAN segments. P1 is the number of frames not passed through the bridge because of problems with the telecommunications link between the two bridge stations.

System Action:

None.

User Action:

None.

EW3219**OTHER REASONS NOT FORWARDED = ~P1****Reason:**

This message is part of a bridge profile display for a bridge linking two LAN segments. P1 is the number of frames not passed through the bridge for reasons other than those given in messages EW3216, EW3217 and EW3218.

System Action:

None.

User Action:

None.

EW3220**LAN MANAGERS USING REPORTING LINKS****Reason:**

This message is part of a bridge profile display for a bridge linking two LAN segments. This message is the main heading for the details of users of the bridge reporting links.

System Action:

None.

User Action:

None.

EW3221

REPORTING LINK ~P1

Reason:

This message is part of a bridge profile display for a bridge linking two LAN segments. This message is the heading for the details of the LAN manager using Reporting link P1, where P1 is a number in the range 0-3.

System Action:

None.

User Action:

None.

EW3222

SENSE DATA DESCRIPTION : ~P1

Reason:

This message is sent in response when a LAN bridge profile request is unable to be satisfied. P1 is the sense code which gives the reason why the request failed.

System Action:

None.

User Action:

None.

EW3223

MESSAGE TEXT

Reason:

Heading line to indicate free-form message text follows. All following text will be prefixed by message number EW3224.

System Action:

None.

EW3302

BEACON ERROR DETAILS

Reason:

This message appears when a beacon error is detected during a reset of the LAN and is the main heading for beacon error details following.

System Action:

None.

User Action:

None.

EW3303

BEACONING ADDR = ~P1, BEACONING NAME = ~P2

Reason:

This message appears when a beacon error is detected during a reset of the LAN. P1 and P2 are the address and name respectively of the beaconing adapter. If the adapter has no name, 'N/A' is displayed in its place.

System Action:

None.

User Action:

None.

EW3304**NAUN ADAPTER ADDR = ~P1, NAUN ADAPTER NAME = ~P2****Reason:**

This message appears when a beacon error is detected during a reset of the LAN. P1 and P2 are the address and name respectively of the active adapter immediately prior to the beaconing adapter on the ring segment (Nearest Active Upstream Neighbour). If the adapter has no name, 'N/A' is displayed in its place.

System Action:

None.

User Action:

None.

EW3305**BEACON TYPE = ~P1****Reason:**

This message appears when a beacon error is detected during a reset of the LAN. P1 is the type of beacon error that occurred.

System Action:

None.

User Action:

None.

EW3306**HOT CARRIER ERROR DETAILS****Reason:**

This message appears when hot carrier is detected during a reset of the LAN and is the main heading for the carrier error details following.

System Action:

None.

User Action:

None.

EW3307

CARRIER ADDR = ~P1, CARRIER NAME = ~P2

Reason:

This message appears when hot carrier is detected during a reset of the LAN. P1 and P2 are the address and name respectively of the adapter (carrier) experiencing this error. If the adapter has no name, 'N/A' is displayed in its place.

System Action:

None.

User Action:

None.

EW3901

**USER ~P1 MODIFIED ALERT FILTER ~P2 TO NEW THRESHOLD VALUE
~P3 ON SEGMENT ~P4 OF THE TOKEN-RING.**

Reason:

User P1 has sent a request to modify the threshold of alert filter P2 on segment P4 of the token-ring. The new threshold value is P3 .

System Action:

None.

User Action:

None.

EW3902

TOKEN RING DETAILS

Reason:

This message is part of the response resulting from Alert Filtering commands. Details of the token-ring follow.

System Action:

None.

User Action:

None.

EW3903

SEGMENT NO. = ~P1, OPERATING SPEED = ~P2

Reason:

This is the first message display line for token-ring details. P1 is the LAN Segment number and P2 is the operating speed of the token-ring.

System Action:

None.

User Action:

None.

EW3904

ALERT IDENTIFIER THRESHOLD

Reason:

This message is part of the response resulting from a request to list the threshold(s) of alert filter(s). It is followed by one or more EW3905 messages which provide the threshold values of alert filters.

System Action:

None.

User Action:

None.

EW3905

~P1 ~P2

Reason:

This message is part of the response resulting from a request to list the threshold(s) of alert filter(s). P1 is the description of the alert filter while P2 is its threshold value.

System Action:

None.

User Action:

None.

EW3906

SENSE DATA DESCRIPTION : ~P1

Reason:

This message is sent in response when an alert filter request is unable to be satisfied. P1 is the sense code giving the reason for the request failure.

System Action:

None.

User Action:

None.

EW3907

MESSAGE TEXT

Reason:

Heading line to indicate free-form message text follows. All following text will be prefixed by message number EW3908.

System Action:

None.

User Action:

None.

EW3908

~P1

Reason:

Free-form message text received from a response to a request.

System Action:

None.

User Action:

None.

EW3B01**USER ~P1 RESET THE LAN MANAGER AT SERVICE POINT ~P2****Reason:**

User P1 has sent a request to service point (node) P2 that the LAN manager at that service point be reset.

System Action:

None.

User Action:

None.

EW3B02**PRESS ENTER TO CONFIRM RESET OF LAN MANAGER OR PRESS PF03 TO CANCEL****Reason:**

Press the 'ENTER' key to confirm and send the request to reset the LAN manager or press PF03 to cancel the request.

System Action:

The process waits for input from the terminal.

User Action:

Press the 'ENTER' key to send the request or press 'PF03' to cancel the request.

EW3B03**REQUIRED SEGMENT NUMBER OMITTED****Reason:**

A value for the Ring or Bus Segment Number has been omitted.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry.

EW3B04

SEGMENT NUMBER IS NOT HEXADECIMAL

Reason:

The value entered for the Ring or Bus Segment Number is not valid hexadecimal.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry.

EW3B05

SEGMENT NUMBER IS NOT WITHIN RANGE 0 - 0FFF

Reason:

The value entered for the Ring or Bus Segment number is not within the range x'0' to x'0FFF'.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3B06

SPECIFY EITHER SOURCE ADAPTER NAME OR NUMBER

Reason:

The name or number of the source adapter must be entered in the respective field.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3B07**INVALID SOURCE ADAPTER NAME****Reason:**

The value entered in the Source Adapter Name field is not a valid adapter name.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3B08**SOURCE ADAPTER NUMBER IS NOT HEXADECIMAL****Reason:**

The value entered in the Source Adapter Number field is not valid hexadecimal.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3B09**INVALID SOURCE ADAPTER NUMBER****Reason:**

The value entered in the Source Adapter Number field is not a valid adapter number.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3B10

SPECIFY EITHER TARGET ADAPTER NAME OR NUMBER

Reason:

The name or number of the target adapter must be entered in the respective field.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3B11

INVALID TARGET ADAPTER NAME

Reason:

The value entered in the Target Adapter Name field is not a valid adapter name.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3B12

TARGET ADAPTER NUMBER IS NOT HEXADECIMAL

Reason:

The value entered in the Target Adapter Number field is not valid hexadecimal.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3B13**INVALID TARGET ADAPTER NUMBER****Reason:**

The value entered in the Target Adapter Number field is not a valid adapter number.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3B14**REQUIRED ROUTE INFORMATION OMITTED****Reason:**

A value for the Routing Info field has been omitted.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3B15**ROUTE INFORMATION IS NOT HEXADECIMAL****Reason:**

The value entered in the Routing Info field is not valid hexadecimal.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3B16

INVALID ROUTE INFORMATION

Reason:

The value entered in the Routing Info field does not conform to the format AAAB.....ZZZ where AAA is the Source Adapter Ring Number, B is the Bridge Number and ZZZ is the Target Adapter Ring Number.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3C01

USER ~P1 REMOVED ADAPTER ~P2 FROM SEGMENT ~P3 OF THE TOKEN-RING

Reason:

User P1 has sent a request to remove adapter P2 from segment P3 of the token-ring.

System Action:

None.

User Action:

None.

EW3C02

PRESS ENTER TO CONFIRM REMOVE REQUEST OR PRESS PF03 TO CANCEL

Reason:

Press the 'ENTER' key to confirm and send the request to remove the specified adapter from the token-ring or press PF03 to cancel the request.

System Action:

The process waits for input from the terminal.

User Action:

Press the 'ENTER' key to send the request or press 'PF03' to cancel the request.

EW3C03**REQUIRED SEGMENT NUMBER OMITTED****Reason:**

A value for the Ring or Bus Segment Number has been omitted.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3C04**SEGMENT NUMBER IS NOT HEXADECIMAL****Reason:**

The value entered for the Ring or Bus Segment Number is not valid hexadecimal.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3C05**SEGMENT NUMBER IS NOT WITHIN RANGE 0 - 0FFF****Reason:**

The value entered for the Ring or Bus Segment number is not within the range x'0' to x'0FFF'.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3C06

SPECIFY EITHER ADAPTER NAME OR NUMBER

Reason:

The name or number of the adapter must be entered in the respective field.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3C07

INVALID ADAPTER NAME

Reason:

The value entered in the Adapter Name field is not a valid adapter name.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3C08

ADAPTER NUMBER IS NOT HEXADECIMAL

Reason:

The value entered in the Adapter Number field is not valid hexadecimal.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3C09**INVALID ADAPTER NUMBER****Reason:**

The value entered in the Adapter Number field is not a valid adapter number.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3D01**USER ~P1 LINKED BRIDGE ~P2 FROM SERVICE POINT ~P3 OF THE TOKEN-RING****Reason:**

User P1 has sent a request to service point (node) P3 that the Bridge P2 be linked.

System Action:

None.

User Action:

None.

EW3D02**USER ~P1 UNLINKED BRIDGE ~P2 FROM SERVICE POINT ~P3 OF THE TOKEN-RING****Reason:**

User P1 has sent a request to service point (node) P3 that the Bridge P2 be unlinked.

System Action:

None.

User Action:

None.

EW3F01

USER ~P1 ALTERED BRIDGE NO. FOR BRIDGE ~P2 TO ~P3 FOR SERVICE POINT ~P4

Reason:

User P1 has sent a request to service point (node) P4 that Bridge P2 change its number to P3.

System Action:

None.

User Action:

None.

EW3F02

PRESS ENTER TO CONFIRM CHANGE REQUEST OR PRESS PF03 TO CANCEL

Reason:

Press the 'ENTER' key to confirm and send the request to change the Bridge/Segment number or press PF03 to cancel the request.

System Action:

The process waits for input from the terminal.

User Action:

Press the 'ENTER' key to send the request or press 'PF03' to cancel the request.

EW3F03

USER ~P1 CHANGED THE SEGMENT NO. FOR ADAPTER ~P2 ON BRIDGE ~P3 TO ~P4

Reason:

User P1 has sent a request to change the segment number for adapter P2 to P4 on Bridge P3.

System Action:

None.

User Action:

None.

EW3F04**REQUIRED BRIDGE NUMBER OMITTED****Reason:**

A value for the Bridge Number has been omitted.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3F05**BRIDGE NUMBER IS NOT HEXADECIMAL****Reason:**

The value entered for the Bridge Number is not valid hexadecimal.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3F06**SPECIFY EITHER ADAPTER NAME OR NUMBER****Reason:**

The name or number of the adapter must be entered in the respective field.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3F07

INVALID ADAPTER NAME

Reason:

The value entered in the Adapter Name field is not a valid adapter name.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3F08

ADAPTER NUMBER IS NOT HEXADECIMAL

Reason:

The value entered in the Adapter Number field is not valid hexadecimal.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3F09

INVALID ADAPTER NUMBER

Reason:

The value entered in the Adapter Number field is not a valid adapter number.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3F10**REQUIRED SEGMENT NUMBER OMITTED****Reason:**

A value for the Ring or Bus Segment Number has been omitted.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3F11**SEGMENT NUMBER IS NOT HEXADECIMAL****Reason:**

The value entered for the Ring or Bus Segment Number is not valid hexadecimal.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW3F12**SEGMENT NUMBER IS NOT WITHIN RANGE 1 - 0FFF****Reason:**

The value entered for the Ring or Bus Segment number is not within the range x'1' - x'0FFF'.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4101

LU NUMBER ~P1 IS NOT WITHIN RANGE 2 - 129

Reason:

The number specified on the 'LU=nnn' parameter was outside the range 2 - 129.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EW4102

INVALID RTM RESPONSE RECEIVED

Reason:

A request for RTM (Response Time Monitor) data has been issued but the LU responding has returned data that is not in the expected format.

System Action:

None.

User Action:

None.

EW4103

RTM DISABLED FOR THIS LU

Reason:

This is one of a series of messages issued when a request for RTM (Response Time Monitor) data has been issued. The RTM function in the LU responding to this request has been disabled. No RTM data collection has been performed.

System Action:

None.

User Action:

If RTM data is to be collected for this LU, the RTM function must be re-enabled.

EW4104**POTENTIAL RTM DATA LOSS****Reason:**

This is one of a series of messages issued when a request for RTM (Response Time Monitor) data has been issued. The LU responding to this request has possibly lost some RTM data. The reason (if known) follows in messages EW4105 and EW4106.

System Action:

None.

User Action:

None.

EW4105**COUNTER OVERFLOW = ~P1, CU IML/ACTPU COLD = ~P2****Reason:**

This is one of a series of messages issued when a request for RTM (Response Time Monitor) data has been issued. P1 and P2 contain 'YES' or 'NO' to indicate potential causes of RTM data loss.

System Action:

None.

User Action:

None.

EW4106**NEW SESSION = ~P1, DEF/BNDY RESET = ~P2****Reason:**

This is one of a series of messages issued when a request for RTM (Response Time Monitor) data has been issued. P1 and P2 contain 'YES' or 'NO' to indicate potential causes of RTM data loss.

System Action:

None.

User Action:

None.

EW4107

RTM ACTIVE = ~P1, LOCAL DISPLAY = ~P2

Reason:

This is one of a series of messages issued when a request for RTM (Response Time Monitor) data has been issued. P1 contains 'YES' or 'NO' to indicate if RTM is active for this LU and P2 contains 'ENABLED' or 'DISABLED' to indicate if RTM data can be locally displayed.

System Action:

None.

User Action:

None.

EW4108

SEND ON UNBIND = ~P1, SEND ON COUNTER OVERFLOW = ~P2

Reason:

This is one of a series of messages issued when a request for RTM (Response Time Monitor) data has been issued. P1 and P2 contain 'YES' or 'NO' to indicate when RTM data is to be sent unsolicited.

System Action:

None.

User Action:

None.

EW4109

SET RTM DEFINITION = ~P1, SET RTM BOUNDARIES = ~P2

Reason:

This is one of a series of messages issued when a request for RTM (Response Time Monitor) data has been issued. P1 and P2 contain 'CONFIGURATION' or 'HOST' to indicate where the RTM definition and boundaries were set.

System Action:

None.

User Action:

None.

EW4110**NO RTM RESPONSE AVAILABLE FOR THIS LU****Reason:**

A request for RTM (Response Time Monitor) data has been issued but the LU responding has no RTM data to send.

System Action:

None.

User Action:

None.

EW4111**RTM MEASUREMENT DEFINITION = ~P1****Reason:**

This is one of a series of messages issued when a request for RTM (Response Time Monitor) data has been issued. P1 is the definition of an event used to signify the response time measurement.

System Action:

None.

User Action:

None.

EW4112**BOUNDARY TRANSACTION****Reason:**

This is one of a series of messages issued when a request for RTM (Response Time Monitor) data has been issued. In conjunction with message EW4113, this message forms the main heading for boundary interval measurements and their transaction counts.

System Action:

None.

User Action:

None.

EW4113

INTERVAL COUNT

Reason:

This is one of a series of messages issued when a request for RTM (Response Time Monitor) data has been issued. In conjunction with message EW4112, this message forms the main heading for boundary interval measurements and their transaction counts.

System Action:

None.

User Action:

None.

EW4114

~P1 ~P2**Reason:**

This is one of a series of messages issued when a request for RTM (Response Time Monitor) data has been issued. P1 is the boundary interval for a measurement and P2 is the count of transactions falling within that interval.

System Action:

None.

User Action:

None.

EW4115

TOTAL TRANSACTIONS = ~P1, LTTI = ~P2 SECS**Reason:**

This is one of a series of messages issued when a request for RTM (Response Time Monitor) data has been issued. P1 is the total number of transactions for this LU and P2 is the duration (in seconds) of the last transaction measured.

System Action:

None.

User Action:

None.

EW4116**O'FLOW/TRANS RATIO = ~P1%, AV. RESP. TIME = ~P2 SECS****Reason:**

This is one of a series of messages issued when a request for RTM (Response Time Monitor) data has been issued. P1 is ratio of 'OVERFLOW' transactions to total transactions, expressed as a percentage. P2 is the average response time of a transaction for the LU.

System Action:

None.

User Action:

None.

EW4117**NTS CLASS SESSION NAME = ~P1, OBJECTIVE RESPONSE TIME = ~P2****Reason:**

This is one of a series of messages issued when a request for RTM (Response Time Monitor) data has been issued. P1 is the session name for the class assigned by NTS and P2 is the objective response time required for that class.

System Action:

None.

User Action:

None.

EW4118

NTS OBJECTIVE PERCENTAGE = ~P1%, ACTUAL PERCENTAGE = ~P2%

Reason:

This is one of a series of messages issued when a request for RTM (Response Time Monitor) data has been issued. P1 is the objective percentage of responses to be met for the NTS class shown in message EW4118 and P2 is the actual percentage of responses to fall within that boundary.

System Action:

None.

User Action:

None.

EW4119

COUNTERS RESET AFTER DATA SENT

Reason:

This is one of a series of messages issued when a request for RTM (Response Time Monitor) data has been issued. The RTM counters for this LU were reset after the data was sent.

System Action:

None.

User Action:

None.

EW4120

END OF RTM SOLICITATION

Reason:

This is the last of a series of messages issued when a request for RTM (Response Time Monitor) data has been issued and indicates that there is no more information to follow for this request.

System Action:

None.

User Action:

None.

EW4121

DEVICE NAME = ~P1, LOCAL ADDRESS = ~P2, APPL = ~P3

Reason:

This is one of a series of messages issued when a request for RTM (Response Time Monitor) data has been issued. P1 is the network name of the LU, P2 is its local address and P3 is the name of the application in session with it. If the name of the application is not known, 'N/A' is shown in its place.

System Action:

None.

User Action:

None.

EW4122

INVALID SNA ADDRESS LIST TYPE - ~P1

Reason:

The SNA address list common subvector returned is of a type with which NEWS is not familiar. P1 is the address format type of the subvector.

System Action:

The process is terminated.

User Action:

None.

EW4123

RTM REQUEST FOR THIS LU FAILED - SENSE P1 P2

Reason:

A request for RTM (Response Time Monitor) data has been issued and the response has indicated an error in processing the request. The System Sense code *P1* and User Sense code *P2* indicate the nature of the failure.

System Action:

None.

User Action:

Investigate the reason for the failure.

EW4201

RTM REQUEST DELIVERED

Reason:

An RTM solicitation request to a node has been accepted by the node.

System Action:

None.

User Action:

None.

EW4202

INVALID LU OR NO LU SUPPLIED

Reason:

An invalid LU number or no LU number has been passed to the procedure \$NWDS025.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EW4304

INVALID SNA ADDRESS LIST TYPE - ~P1

Reason:

The SNA address list common subvector returned is of a type with which NEWS is not familiar. P1 is the address format type of the subvector.

System Action:

Processing of the record by CNMPROC is terminated.

User Action:

None.

EW4401**ERROR ASSIGNING MAP \$NWCNMREC FOR CNM DATA, RC= P1, FDBK= P2****Reason:**

An attempt to assign the map \$NWCNMREC to an MDO for CNM data processing failed. The return code (P1) and FDBK code (P2) indicate the reason.

System Action:

None.

User Action:

Determine what has changed in the system map \$NMCNMREC or if the correct OSCNTL file has been allocated. The meaning of the return code can be found in the NCL Reference section on &ZMDORC and &ZMDOFDBK variables.

EW4402**NO VALID DATA FOUND IN MAP \$CNM****Reason:**

An attempt to map the data found in the map for processing CNM records has returned no valid CNM data.

System Action:

Processing of the CNM record is terminated.

User Action:

None.

EW4501

NSCNTL UNAVAILABLE, RC= P1 - UNABLE TO FORMAT SELECTION OPTIONS

Reason:

Because the NSCNTL file is unavailable, procedure \$NWLMSP is unable to build the options for the LAN Management menu. P1 is the code returned from the file access attempt.

System Action:

The LAN Management menu is not displayed.

User Action:

Refer the problem to your installation help desk. Determine if the file should be available. The meaning of the return code can be found in the NCL Reference in the section for the &FILEID verb.

EW4502

UNABLE TO FORMAT SELECTION OPTIONS - NO RECORDS FOUND

Reason:

\$NWLMSP is unable to format the options for the LAN Management menu because the category for the NSCNTL file containing them is empty.

System Action:

The LAN Management menu is not displayed.

User Action:

Add the necessary record to category 7 (Device Support Selection Options) of the NSCNTL file or report the problem to your System Administrator.

EW4503**NSCNTL GET FAILED, KEY=~P1, RC=~P2, FDBK=~P3****Reason:**

A VSAM error occurred during NSCNTL file I/O operation 'GET' in procedure \$NWLMSP. P1 is the filekey of the record, P2 is the file return code and P3 is the VSAM FDBK code.

System Action:

The process is terminated.

User Action:

Retry the operation, if unsuccessful, take note of the error message and report the problem to your installation help desk facility.

EW4504**UNABLE TO FORMAT SELECTION OPTIONS - NO ELIGIBLE RECORDS FOUND****Reason:**

\$NWLMSP is unable to format the options for the LAN Management menu because the category of the NSCNTL file containing them has no LAN Management type records flagged as displayable options.

System Action:

The Device Support menu is not displayed.

User Action:

Amend the exclusion option of the records you require to be displayed on the Lan Management Menu. These records are found in category 7 (Device Support Selection Options) of the NSCNTL file or report the problem to your System Administrator.

EW4A01

USER ~P1 ACTIVATED FRAME FORWARDING FOR BRIDGE ~P2 AT SERVICE POINT ~P3

Reason:

User P1 has sent a request to service point (node) P3 that 'Frame Forwarding' be activated for Bridge P2.

System Action:

None.

User Action:

None.

EW4A02

PRESS ENTER TO CONFIRM CHANGE REQUEST OR PRESS PF03 TO CANCEL

Reason:

Press the ENTER key to confirm and send the request to change the Bridge configuration or press PF03 to cancel the request.

System Action:

The process waits for input from the terminal.

User Action:

Confirm the request details before actioning.

EW4A03

USER ~P1 DEACTIVATED FRAME FORWARDING FOR BRIDGE ~P2 AT SERVICE POINT ~P3

Reason:

User P1 has sent a request to service point (node) P3 that 'Frame Forwarding' be de- activated for Bridge P2.

System Action:

None.

User Action:

None.

EW4A04**USER ~P1 SET THE NOTIFICATION INTERVAL TO ~P2 FOR BRIDGE ~P3 AT SERVICE POINT ~P4****Reason:**

User P1 has sent a request to service point (node) P4 that the Notification Interval for Bridge P3 be changed to P2.

System Action:

None.

User Action:

None.

EW4A05**USER ~P1 SET THE PERCENT FRAME LOST THRESHOLD TO ~P2 FOR BRIDGE ~P3 AT SERVICE POINT ~P4****Reason:**

User P1 has sent a request to service point (node) P4 that the 'Frame Lost threshold' for Bridge P3 be changed to P2%.

System Action:

None.

User Action:

None.

EW4A06**USER ~P1 SET THE HOP-COUNT TO ~P2 FOR ADPTR ~P3 ON BRIDGE ~P4 AT SERVICE POINT ~P5****Reason:**

User P1 has sent a request to service point (node) P5 that the Hop-count for adapter P3 on Bridge P4 be changed to P2.

System Action:

None.

User Action:

None.

EW4A07

REQUIRED PERFORMANCE NOTIFICATION INTERVAL OMITTED

Reason:

A value for the Performance Notification Interval in field 'New Value' has been omitted.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4A08

PERFORMANCE INTERVAL IS NOT NUMERIC

Reason:

The value entered for the Performance Notification Interval in field 'New Value' is not numeric.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4A09

PERFORMANCE INTERVAL IS NOT WITHIN RANGE 0 - 99

Reason:

The value entered for the Performance Notification Interval in field 'New Value' is not within the range 0 - 99.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4A10**REQUIRED PERCENTAGE FRAME LOST THRESHOLD OMITTED****Reason:**

A value for the Frame Lost threshold in field 'New Value' has been omitted.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4A11**FRAME LOST THRESHOLD IS NOT NUMERIC****Reason:**

The value entered for the Percentage Frame Lost threshold in field 'New Value' is not numeric.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4A12**FRAME LOST THRESHOLD IS NOT WITHIN RANGE 0 - 99.99****Reason:**

The value entered for the Percentage Frame Lost threshold in field 'New Value' is not within the range 0 - 99.99.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4A13

REQUIRED HOP-COUNT OMITTED

Reason:

A value for the Adapter Hop-count in field 'New Value' has been omitted.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4A14

HOP-COUNT IS NOT NUMERIC

Reason:

The value entered for the Adapter Hop-count in field 'New Value' is not numeric.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4A15

HOP-COUNT IS NOT WITHIN RANGE 1 - 7

Reason:

The value entered for the Adapter Hop-count in field 'New Value' is not within the range 1 - 7.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4A16**SPECIFY EITHER ADAPTER NAME OR NUMBER****Reason:**

The name or number of the adapter must be entered in the respective field.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4A17**INVALID ADAPTER NAME****Reason:**

The value entered in the Adapter Name field is not a valid adapter name.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4A18**ADAPTER NUMBER IS NOT HEXADECIMAL****Reason:**

The value entered in the Adapter Number field is not valid hexadecimal. All characters must be numeric or alphabetic in the range A to F.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4A19

INVALID ADAPTER NUMBER

Reason:

The value entered in the Adapter Number field is not a valid adapter number.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4B01

USER ~P1 ENABLED SINGLE-ROUTE B'CASTS FOR ADPTR ~P2 ON BRIDGE ~P3 AT SERVICE POINT ~P4

Reason:

User P1 has sent a request to service point (node) P4 that 'Single-route Broadcasts' be enabled for Adapter P2 on Bridge P3.

System Action:

None.

User Action:

None.

EW4B02

PRESS ENTER TO CONFIRM CHANGE REQUEST OR PRESS PF03 TO CANCEL

Reason:

Press the ENTER key to confirm and send the request to change the status of Single-route Broadcasts for an Adapter or press PF03 to cancel the request.

System Action:

The process waits for input from the terminal.

User Action:

Press the 'ENTER' key to send the request or press 'PF03' to cancel the request.

EW4B03**USER ~P1 DISABLED SINGLE-ROUTE B'CASTS FOR ADPTR ~P2 ON BRIDGE ~P3 AT SERVICE POINT ~P4****Reason:**

User P1 has sent a request to service point (node) P4 that 'Single-route Broadcasts' be disabled for Adapter P2 on Bridge P3.

System Action:

None.

User Action:

None.

EW4B04**USER ~P1 SET THE SINGLE-ROUTE B'CAST MODE FOR BRIDGE ~P2 TO ~P3 AT SERVICE POINT ~P4****Reason:**

User P1 has sent a request to service point (node) P4 that the Single-route Broadcast Mode be altered to P3 for Bridge P2.

System Action:

None.

User Action:

None.

EW4B05**REQUIRED BROADCAST MODE OMITTED****Reason:**

A value for the Broadcast Mode has been omitted.

System Action:

The process waits for input from the terminal.

User Action:

A broadcast mode of A or M should be entered or press PF03 to exit the panel.

EW4B06

BROADCAST MODE NOT A (AUTO) OR M (MANUAL)

Reason:

A value other than 'A' or 'M' has been entered in the 'BROADCAST MODE' field.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4B07

SPECIFY EITHER ADAPTER NAME OR NUMBER

Reason:

The name or number of the adapter must be entered in the respective field.

System Action:

The process waits for input from the terminal.

User Action:

Supply either value and retry or press PF03 to exit the panel.

EW4B08

INVALID ADAPTER NAME

Reason:

The value entered in the Adapter Name field is not a valid adapter name.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4B09**ADAPTER NUMBER IS NOT HEXADECIMAL****Reason:**

The value entered in the Adapter Number field is not valid hexadecimal. It should contain numerics or alphabetic characters in the range A to F.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4B10**INVALID ADAPTER NUMBER****Reason:**

The value entered in the Adapter Number field is not a valid adapter number.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4C01**USER ~P1 ALTERED LINK PASSWORD ~P2 FOR BRIDGE ~P3 ON SERVICE POINT ~P4****Reason:**

User P1 has sent a request to service point (node) P4 that the password for Link P2 on Bridge P3 be altered.

System Action:

None.

User Action:

None.

EW4C02

RE-ENTER NEW PASSWORD

Reason:

Type in the new password again to confirm that the password is as you wish.

System Action:

The process waits for input from the terminal.

User Action:

Re-type the new password and press 'ENTER' or press 'PF03' to cancel the password change request.

EW4C03

NEW PASSWORD WAS NOT RE-ENTERED CORRECTLY

Reason:

When the password was re-entered it did not match the password previously entered.

System Action:

The password change is cancelled.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4C04

PASSWORD CHANGE CANCELLED

Reason:

The request to change the password for a Link has been cancelled.

System Action:

None.

User Action:

None.

EW4C05**REQUIRED PASSWORD OMITTED****Reason:**

A new password for a Link has been omitted.

System Action:

The process waits for input from the terminal.

User Action:

Supply the new value or press PF03 to exit the panel.

EW4C06**PASSWORD MUST BE 6 - 8 CHARACTERS IN LENGTH****Reason:**

The new password for a Link must be not less than six and not greater than eight characters in length.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4C07**PASSWORD CONTAINS INVALID CHARACTERS****Reason:**

The new password for a Link contains characters other than A-F, 0-9 and the symbols '@', '#', '\$' and '%'.
The new password for a Link contains characters other than A-F, 0-9 and the symbols '@', '#', '\$' and '%'.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EW4D01

REQUEST TIMED OUT

Reason:

A request has timed out whilst waiting for a response from a device.

System Action:

Processing is terminated.

User Action:

Retry the function.

EW4D02

MDO ERROR DURING FINAL CNM ASSIGN, RC=~P1, FDBK=~P2

Reason:

An MDO mapping error occurred during the mapping of a CNM record using the \$CNM map. P1 is the Return Code from the assign of the map to the MDO and P2 is the associated FDBK code.

System Action:

The process is terminated.

User Action:

Determine the cause and take the necessary action to correct the problem.

EW4D03

MDO ERROR DURING NSRU ASSIGN, RC=~P1, FDBK=~P2

Reason:

An MDO mapping error occurred during the mapping of a CNM record using the \$CNM map. P1 is the Return Code from the assign of the map to the MDO and P2 is the associated FDBK code.

System Action:

The process is terminated.

User Action:

Determine the cause and take the necessary action to correct the problem.

EW4D04**RUNCMD LENGTH EXCEEDS MAXIMUM ALLOWED****Reason:**

The length of the text command to be sent in the EXECUTE request is greater than 232 characters.

System Action:

The RUNCMD is rejected.

User Action:

Shorten the text of the command and retry the function.

EW4D05**REQUEST COULD NOT BE ROUTED TO CONTROL POINT - SENSE P1****Reason:**

The request that was issued could not be routed to the control point. The sense code returned was P1 .

System Action:

None.

User Action:

Obtain information on the sense code, correct the condition if possible, and retry. Check that the specified resource name is correct.

EW4E01**NO INFORMATION AVAILABLE****Reason:**

A request to display information about a detail record, such as DUMP or VECTOR, is unable to be satisfied.

System Action:

None.

User Action:

None.

EW4F01

Hex dump of CNM record follows

Reason:

This is the heading for series of messages that contain the contents of a CNM record and associated information. It is used when a request to write the record information to the activity log has been issued.

System Action:

None.

User Action:

None.

EW4F02

P1

Reason:

This is the heading for series of messages that contain the contents of a CNM record and associated information. This message displays 16 bytes of data (*P1*) in the following format: 0000 : xxxxxxxx xxxxxxxx xxxxxxxx xxxxxxxx :
cccc cccc cccc cccc where: 0000 = offset xxxxxxxx = hex-expanded data cccc
= character data (EDCDIC)

System Action:

None.

User Action:

None.

EW4F03

Alert severity is P1

Reason:

This is one of a series of messages issued when a request to write CNM record information to the activity log has been issued. *P1* is the alert severity.

System Action:

None.

User Action:

None.

EW4F04**CNM record major vector type = P1****Reason:**

This is one of a series of messages issued when a request to write CNM record information to the activity log has been issued. If the CNM record is an NMVT (Network Management Vector Transport), then it contains a major vector. *P1* indicates the major vector type.

System Action:

None.

User Action:

None.

EW4F05**Sub-vector list = P1****Reason:**

This is one of a series of messages issued when a request to write CNM record information to the activity log has been issued. If the CNM record is an NMVT (Network Management Vector Transport), then it contains a major vector. *P1* is a list of the sub-vectors contained within the first major vector.

System Action:

None.

User Action:

None.

EW4F06

CNM record node name = P1

Reason:

This is one of a series of messages issued when a request to write CNM record information to the activity log has been issued. *P1* is the network name of the device that sent the record.

System Action:

None.

User Action:

None.

EW4F07

CNM record hierarchy = P1

Reason:

This is one of a series of messages issued when a request to write CNM record information to the activity log has been issued. *P1* is the hierarchy of nodes upstream of the node that sent the record.

System Action:

None.

User Action:

None.

EW4F08

CNM record process option = P1

Reason:

This is one of a series of messages issued when a request to write CNM record information to the activity log has been issued. *P1* is the processing option currently assigned to the record but may change later in the processing cycle.

System Action:

None.

User Action:

None.

EW4F09**CNM record description = P1****Reason:**

This is one of a series of messages issued when a request to write CNM record information to the activity log has been issued. *P1* is a description of the contents of the record.

System Action:

None.

User Action:

None.

EW4F10**CNM record process codes = P1****Reason:**

This is one of a series of messages issued when a request to write CNM record information to the activity log has been issued. *P1* contains the codes used to determine the processing and possible display of the record.

System Action:

None.

User Action:

None.

EW4F11**CNM record ID = P1****Reason:**

This is one of a series of messages issued when a request to write CNM record information to the activity log has been issued. *P1* is the record resource identifier (RID) which is usually assigned from category 1 or 2 of the NSCNTL file.

System Action:

None.

User Action:

None.

EW4F12

CNM record event ID = P1

Reason:

This is one of a series of messages issued when a request to write CNM record information to the activity log has been issued. *P1* is the record event identifier (EID) which is usually assigned from category 1 or 2 of the NSCNTL file.

System Action:

None.

User Action:

None.

EW4F13

CNM Record process ID = P1

Reason:

This is one of a series of messages issued when a request to write CNM record information to the activity log has been issued. *P1* is the record process identifier (PID) which is usually assigned from category 3 of the NSCNTL file.

System Action:

None.

User Action:

None.

EW4F14

CNM record old process ID = P1

Reason:

This is one of a series of messages issued when a request to write CNM record information to the activity log has been issued. *P1* is the record old process identifier (OPID). This is usually the same the process identifier (PID) unless changed after initial assignment.

System Action:

None.

User Action:

None.

EW4F15**Last return code set for this record was P1****Reason:**

This is one of a series of messages issued when a request to write CNM record information to the activity log has been issued. *P1* is the last NCL return code set during processing for this record.

System Action:

None.

User Action:

None.

EW4F16**CNM processing procedure P1 = P2****Reason:**

This is one of a series of messages issued when a request to write CNM record information to the activity log has been issued. *P1* is the type of CNM processing procedure and *P2* is the procedure name.

System Action:

None.

User Action:

None.

EW4F99**End of diagnostic dump****Reason:**

This is the final message of a series of messages issued when a request to write CNM record information to the activity log has been issued.

System Action:

None.

User Action:

None.

EW5101

ERROR DECODING CMIP DATA. RC= P1, FDBK= P2. REFER TO LOG MESSAGE P3

Reason:

An error has occurred decoding CMIP data present in the x'132F' major vector which accompanies the x'1330' major vector. The &RETCODE (P1) and &ZFDBK (P2) values apply to the &DECODE NCL verb. This message, *plus* another message with additional details (normally N24N02) is written to the activity log.

System Action:

As much of the display is built as possible without compromising the contents.

User Action:

Report the problem to your installation help desk.
This problem occurs because the ASN.1 map does not support the particular BER data in the x'132F' major vector and should be reported to your product supplier with the following information:

1. The messages on the log. The &DECODE failure message, normally N24N02, contains the failure reason and offset information. This message (EW5101) contains the &DECODE feedback code.
2. A hex dump of the major vector. The x'132F' major vector is usually the second major vector and can be displayed using the V2 command from the alert display. Alternatively a hex dump of the whole record (using the D command) should be provided.

EW5102

NO X'132F' MAJOR VECTOR FOUND

Reason:

An error has occurred processing the the x'132F' major vector which accompanies the x'1330' major vector. The x'132F' major vector cannot be isolated from the CNM record.

System Action:

As much of the display is built as possible without compromising the contents.

User Action:

Report the problem to your installation help desk.
This problem should not occur and should be reported to your product supplier. A hex dump of the whole CNM record (displayable using the D command) should be provided.

EW5120**UNKNOWN P1 (P2) FOR MANAGED OBJECT CLASS****Reason:**

An error has occurred processing the data in the managed object class of the CMIP record. The type of data following cannot be determined and no further processing of CMIP data for this record can be performed.

System Action:

As much of the display is built as possible without compromising the contents.

User Action:

Report the problem to your installation help desk.
This problem should not occur and should be reported to your product supplier. A hex dump of the whole CNM record (displayable using the D command) should be provided.

EW5122**DECODE ERROR DETAILS - "TO" MAP P1, "FROM" MAP P2****Reason:**

This message indicates the map components used in the failed DECODE process referred to in message EW5G01. The "to" map is the name of the map in which the decoded data is to be placed while, the "from" map is the map from which the data is extracted.

System Action:

Processing continues.

User Action:

Report the problem to your installation help desk.
This problem occurs because the ASN.1 map does not support the particular BER data and should be reported to your product supplier with the following information:

1. The messages on the log. The &DECODE failure message, normally N24N02, contains the failure reason and offset information.
2. A hex dump of the major vector. The x'132F' major vector is usually the second major vector and can be displayed using the V2 command from the alert display. Alternatively a hex dump of the whole record (using the D command) should be provided.

EW5503

No record found with key P1

Reason:

Procedure \$NWCFILE was invoked to access the NSCNTL file but the key provided (*P1*) does not match any record in the file.

System Action:

The process is terminated.

User Action:

None.

EW5504

Cache P1 failed, key= P2, FDBK= P3

Reason:

An error occurred during variable I/O operation *P1* (ADD or DELETE). *P2* is the key of the variable record and *P3* is the variable FDBK code.

System Action:

Processing continues.

User Action:

Retry the operation, if unsuccessful, take note of the error message and contact your systems administrator.

EW5505

Not authorized to access control file

Reason:

An attempt to access to NSCNTL file has returned an error code indicating that no access is allowed to the file.

System Action:

The process is terminated.

User Action:

Refer the problem to your installation help desk.

EW5506**Control file unavailable, RC= P1****Reason:**

An attempt to access the NSCNTL failed because it was unavailable. The return code (*P1*) indicates the cause.

System Action:

The process is terminated.

User Action:

Determine if the NSCNTL file is available. The meaning of the return code can be found in the NCL Reference in the section for the &FILE OPEN verb.

EW5507**User ID P1 not authorized to modify control file****Reason:**

The user *P1* attempted to modify or delete records in the NSCNTL file without the appropriate authority level.

System Action:

The process is terminated.

User Action:

Contact your systems administrator to upgrade your level of authority.

EW5508

P1 failed, key= P2, RC= P3, FDBK= P4

Reason:

An file action failed for the NSCNTL file:
P1 is the file action, GET, ADD, PUT, or DELETE.
P2 is the filekey of the record.
P3 is the file return code.
P4 is the VSAM FDBK code.

System Action:

The process is terminated.

User Action:

Use the VSAM feedback value to determine the cause of the error. Correct the problem and retry.

EW5509

Record already exists

Reason:

An attempt was made to add a record to the NSCNTL file but the record already exists.

System Action:

The process is terminated.

User Action:

Ensure that the data to be added is correct and retry.

EW5510

Record added

Reason:

A record has been successfully added to the NSCNTL file.

System Action:

None.

User Action:

None.

EW5511**Record added to cache****Reason:**

A record has been successfully added to the \$NWCACHE vartable.

System Action:

None.

User Action:

None.

EW5512**File busy, press ENTER to retry****Reason:**

An attempt to add or save a modified record to the NSCNTL failed because the file was in use.

System Action:

None.

User Action:

Retry the operation.

EW5513**Record modified****Reason:**

A record has been successfully replaced in the NSCNTL file.

System Action:

None.

User Action:

None.

EW5514

Cache error, key= P1, FDBK= P2

Reason:

An error occurred during a vartable get operation. *P1* is the key of the vartable record and *P2* is the vartable FDBK code.

System Action:

Processing continues.

User Action:

Retry the operation, if unsuccessful, take note of the error message and contact your systems administrator.

EW5515

P1 failed, file is open for INPUT only

Reason:

A file action failed for the NSCNTL file. *P1* is the file action, ADD, PUT, or DELETE. These actions requires that the file is open for output actions but the file was opened for input actions only.

System Action:

The process is terminated.

User Action:

If the output action is required, the file must be closed and reopened with the correct attributes. To do this:

1. Use the /PARMS shortcut to display the Customizer : Parameter Groups list.
2. Update the NSCNTL parameter group (in the FILES section).
3. Review the NSCNTL File VSAM Options values:
 - the value INPUT, if present, restricts the file to input actions only
 - remove the value INPUT and use F6=Action to action the group. This will cause the file to be closed and reopened.
4. Use F3=File to save the updated values
5. Retry the action.

EW5C01**FCS REQUEST DELIVERED****Reason:**

An FCS solicitation request to a node has been accepted by the node.

System Action:

None.

User Action:

None.

EW5C02**ERROR DURING ~P1 SOLICITATION****Reason:**

An undetermined error occurred during the solicitation of an FCS device. P1 is the type of request that was issued.

System Action:

The process is terminated.

User Action:

Retry the operation to try to gather more information about the error.

EW5D01**ERROR FORMATTING COMPONENT DESCRIPTION****Reason:**

No component description was found in the NSCNTL file to match the code point in this record.

System Action:

None.

User Action:

The component description category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW5D02

ERROR FORMATTING ALERT DESCRIPTION

Reason:

No Alert description was found in the NSCNTL file to match the code point in this record.

System Action:

None.

User Action:

The Alert description category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW5D03

ERROR FORMATTING PROBABLE CAUSE

Reason:

No probable cause was found in the NSCNTL file to match the code point in this record.

System Action:

None.

User Action:

The probable cause category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW5D04**ERROR FORMATTING SUB-VECTOR 31****Reason:**

While attempting to build a display from details contained in the sub-vector, an error occurred in the processing.

System Action:

The building of information from the sub-vector is discontinued.

User Action:

A display of the contents of the sub-vector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5D05**ERROR FORMATTING SUB-VECTOR 98****Reason:**

While attempting to build a display from details contained in the sub-vector, an error occurred in the processing.

System Action:

The building of information from the sub-vector is discontinued.

User Action:

A display of the contents of the sub-vector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5D06

ERROR FORMATTING SUB-VECTOR ~P1

Reason:

While attempting to build a display from details contained in the sub-vector, an error occurred in the processing. P1 is the sub-vector in error.

System Action:

The building of information from the sub-vector is discontinued.

User Action:

A display of the contents of the sub-vector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5D07

ERROR FORMATTING SUB-VECTOR ~P1

Reason:

While attempting to build a display from details contained in the sub-vector, an error occurred in the processing. P1 is the sub-vector in error.

System Action:

The building of information from the sub-vector is discontinued.

User Action:

A display of the contents of the sub-vector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5D08**ERROR FORMATTING SUB-VECTOR ~P1****Reason:**

While attempting to build a display from details contained in the sub-vector, an error occurred in the processing. P1 is the sub-vector in error.

System Action:

The building of information from the sub-vector is discontinued.

User Action:

A display of the contents of the sub-vector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5D09**ERROR FORMATTING SUB-VECTOR ~P1****Reason:**

While attempting to build a display from details contained in the sub-vector, an error occurred in the processing. P1 is the sub-vector in error.

System Action:

The building of information from the sub-vector is discontinued.

User Action:

A display of the contents of the sub-vector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5D10

ERROR FORMATTING SUB-VECTOR ~P1

Reason:

While attempting to build a display from details contained in the sub-vector, an error occurred in the processing. P1 is the sub-vector in error.

System Action:

The building of information from the sub-vector is discontinued.

User Action:

A display of the contents of the sub-vector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5D11

ERROR FORMATTING SUB-VECTOR ~P1

Reason:

While attempting to build a display from details contained in the sub-vector, an error occurred in the processing. P1 is the sub-vector in error.

System Action:

The building of information from the sub-vector is discontinued.

User Action:

A display of the contents of the sub-vector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5D12**ERROR FORMATTING SUB-VECTOR ~P1****Reason:**

While attempting to build a display from details contained in the sub-vector, an error occurred in the processing. P1 is the sub-vector in error.

System Action:

The building of information from the sub-vector is discontinued.

User Action:

A display of the contents of the sub-vector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5D13**ERROR FORMATTING SUB-VECTOR ~P1****Reason:**

While attempting to build a display from details contained in the sub-vector, an error occurred in the processing. P1 is the sub-vector in error.

System Action:

The building of information from the sub-vector is discontinued.

User Action:

A display of the contents of the sub-vector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5D14

ERROR FORMATTING SUB-VECTOR ~P1

Reason:

While attempting to build a display from details contained in the sub-vector, an error occurred in the processing. P1 is the sub-vector in error.

System Action:

The building of information from the sub-vector is discontinued.

User Action:

A display of the contents of the sub-vector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5D15

ERROR FORMATTING SUB-VECTOR ~P1

Reason:

While attempting to build a display from details contained in the sub-vector, an error occurred in the processing. P1 is the sub-vector in error.

System Action:

The building of information from the sub-vector is discontinued.

User Action:

A display of the contents of the sub-vector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5D16**ERROR FORMATTING SUB-VECTOR ~P1****Reason:**

While attempting to build a display from details contained in the sub-vector, an error occurred in the processing. P1 is the sub-vector in error.

System Action:

The building of information from the sub-vector is discontinued.

User Action:

A display of the contents of the sub-vector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5D17**ERROR FORMATTING SUB-VECTOR ~P1****Reason:**

While attempting to build a display from details contained in the sub-vector, an error occurred in the processing. P1 is the sub-vector in error.

System Action:

The building of information from the sub-vector is discontinued.

User Action:

A display of the contents of the sub-vector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5D18

ERROR FORMATTING SUB-VECTOR ~P1

Reason:

While attempting to build a display from details contained in the sub-vector, an error occurred in the processing. P1 is the sub-vector in error.

System Action:

The building of information from the sub-vector is discontinued.

User Action:

A display of the contents of the sub-vector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5D19

ERROR FORMATTING SUB-VECTOR P1

Reason:

While attempting to build a display from details contained in the sub-vector, an error occurred in the processing. P1 is the sub-vector in error.

System Action:

The building of information from the sub-vector is discontinued.

User Action:

A display of the contents of the sub-vector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5E01**MODIFY PROC ~P1 NOT FOUND, DETAIL TEXT CODE = ~P2****Reason:**

An attempt was made to execute procedure P1, but the procedure was not found in the NCL libraries accessible to the user. P2 is the code point in category 14 of the NSCNTL file that references the procedure name.

System Action:

Processing is terminated.

User Action:

Ensure that the name of the procedure to be invoked is correct and that it resides in the correct library or remove it from the appropriate record in category 14 of the NSCNTL file.

EW5E02**MODIFY PROC ~P1 NOT FOUND, DETAIL DESC CODE = ~P2****Reason:**

An attempt was made to execute procedure P1, but the procedure was not found in NCL libraries accessible to the user. P2 is the code point in category 15 of the NSCNTL file that references the procedure name.

System Action:

Processing is terminated.

User Action:

Ensure that the name of the procedure to be invoked is correct and that it resides in the correct library or remove it from the appropriate record in category 15 of the NSCNTL file.

EW5E03

MODIFY PROC ~P1 NOT FOUND, USER ACTION CODE = ~P2

Reason:

An attempt was made to execute procedure P1, but the procedure was not found in the NCL libraries accessible to the user. P2 is the code point in category 16 of the NSCNTL file that references the procedure name.

System Action:

Processing is terminated.

User Action:

Ensure that the name of the procedure to be invoked is correct and that it resides in the correct library or remove it from the appropriate record in category 16 of the NSCNTL file.

EW5E04

ERROR FORMATTING ALERT

Reason:

During the formatting of the Alert display an undetermined error occurred.

System Action:

The formatted display may be incomplete.

User Action:

Report the problem to your installation help desk. Try to determine the cause of the error - a dump of the record may reveal inconsistent data.

EW5F04

ERROR FORMATTING ALERT

Reason:

During the formatting of the Alert display an undetermined error occurred.

System Action:

As much of the display is built as possible without compromising the contents.

User Action:

Report the problem to your installation help desk. Try to determine the cause of the error - a dump of the record may reveal inconsistent data.

EW5G01**ERROR DECODING CMIP DATA. RC= P1, FDBK= P2. REFER TO LOG MESSAGE P3****Reason:**

An error has occurred decoding CMIP data present in the x'132F' major vector which accompanies the x'1330' major vector. The &RETCODE (P1) and &ZFDBK (P2) values apply to the &DECODE NCL verb. This message, *plus* another message with additional details (normally N24N02) is written to the activity log.

System Action:

As much of the display is built as possible without compromising the contents.

User Action:

Report the problem to your installation help desk.
This problem occurs because the ASN.1 map does not support the particular BER data in the x'132F' major vector and should be reported to your product supplier with the following information:

1. The messages on the log. The &DECODE failure message, normally N24N02, contains the failure reason and offset information. This message (EW5G01) contains the &DECODE feedback code.
2. A hex dump of the major vector. The x'132F' major vector is usually the second major vector and can be displayed using the V2 command from the alert display. Alternatively a hex dump of the whole record (using the D command) should be provided.

EW5G02**NO X'132F' MAJOR VECTOR FOUND****Reason:**

An error has occurred processing the the x'132F' major vector which accompanies the x'1330' major vector. The x'132F' major vector cannot be isolated from the CNM record.

System Action:

As much of the display is built as possible without compromising the contents.

User Action:

Report the problem to your installation help desk.
This problem should not occur and should be reported to your product supplier. A hex dump of the whole CNM record (displayable using the D command) should be provided.

EW5G03

ERROR FORMATTING ALERT DESCRIPTION

Reason:

No Alert description was found in the NSCNTL file to match the code point in this record.

System Action:

None.

User Action:

The Alert description category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW5G04

ERROR FORMATTING PROBABLE CAUSE

Reason:

No probable cause was found in the NSCNTL file to match the code point in this record.

System Action:

None.

User Action:

The probable cause category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW5G06**ERROR FORMATTING SUBVECTOR P1****Reason:**

While attempting to build a display from details contained in the subvector, an error occurred in the processing. *P1* is the subvector in error.

System Action:

The building of information from the subvector is discontinued.

User Action:

A display of the contents of the subvector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5G07**ERROR FORMATTING SUBVECTOR P1****Reason:**

While attempting to build a display from details contained in the subvector, an error occurred in the processing. *P1* is the subvector in error.

System Action:

The building of information from the subvector is discontinued.

User Action:

A display of the contents of the subvector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5G08

ERROR FORMATTING SUBVECTOR P1

Reason:

While attempting to build a display from details contained in the subvector, an error occurred in the processing. *P1* is the subvector in error.

System Action:

The building of information from the subvector is discontinued.

User Action:

A display of the contents of the subvector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5G09

ERROR FORMATTING SUBVECTOR P1

Reason:

While attempting to build a display from details contained in the subvector, an error occurred in the processing. *P1* is the subvector in error.

System Action:

The building of information from the subvector is discontinued.

User Action:

A display of the contents of the subvector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5G10**ERROR FORMATTING SUBVECTOR P1****Reason:**

While attempting to build a display from details contained in the subvector, an error occurred in the processing. *P1* is the subvector in error.

System Action:

The building of information from the subvector is discontinued.

User Action:

A display of the contents of the subvector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5G11**ERROR FORMATTING SUBVECTOR P1****Reason:**

While attempting to build a display from details contained in the subvector, an error occurred in the processing. *P1* is the subvector in error.

System Action:

The building of information from the subvector is discontinued.

User Action:

A display of the contents of the subvector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5G12

ERROR FORMATTING SUBVECTOR P1

Reason:

While attempting to build a display from details contained in the subvector, an error occurred in the processing. *P1* is the subvector in error.

System Action:

The building of information from the subvector is discontinued.

User Action:

A display of the contents of the subvector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5G13

ERROR FORMATTING SUBVECTOR P1

Reason:

While attempting to build a display from details contained in the subvector, an error occurred in the processing. *P1* is the subvector in error.

System Action:

The building of information from the subvector is discontinued.

User Action:

A display of the contents of the subvector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5G14**ERROR FORMATTING SUBVECTOR P1****Reason:**

While attempting to build a display from details contained in the subvector, an error occurred in the processing. *P1* is the subvector in error.

System Action:

The building of information from the subvector is discontinued.

User Action:

A display of the contents of the subvector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5G15**ERROR FORMATTING SUBVECTOR P1****Reason:**

While attempting to build a display from details contained in the subvector, an error occurred in the processing. *P1* is the subvector in error.

System Action:

The building of information from the subvector is discontinued.

User Action:

A display of the contents of the subvector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5G16

ERROR FORMATTING SUBVECTOR P1

Reason:

While attempting to build a display from details contained in the subvector, an error occurred in the processing. *P1* is the subvector in error.

System Action:

The building of information from the subvector is discontinued.

User Action:

A display of the contents of the subvector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EW5G20

UNKNOWN P1 (P2) FOR MANAGED OBJECT CLASS

Reason:

An error has occurred processing the data in the managed object class of the CMIP record. The type of data following cannot be determined and no further processing of CMIP data for this record can be performed.

System Action:

As much of the display is built as possible without compromising the contents.

User Action:

Report the problem to your installation help desk.
This problem should not occur and should be reported to your product supplier. A hex dump of the whole CNM record (displayable using the D command) should be provided.

EW5G21**UNKNOWN OBJECT ID IN LOCAL DISTINGUISHED NAME - P1****Reason:**

An unknown Object Identifier has caused processing the contents of the Local Distinguished Name to be terminated. *P1* is the Object Identifier causing the problem.

System Action:

As much of the display is built as possible without compromising the contents.

User Action:

Report the problem to your installation help desk.
This problem should not occur and should be reported to your product supplier. A hex dump of the whole CNM record (displayable using the D command) should be provided.

EW5G22**DECODE ERROR DETAILS - "TO" MAP P1, "FROM" MAP P2****Reason:**

This message indicates the map components used in the failed DECODE process referred to in message EW5G01. The "to" map is the name of the map in which the decoded data is to be placed while, the "from" map is the map from which the data is extracted.

System Action:

Processing continues.

User Action:

Report the problem to your installation help desk.
This problem occurs because the ASN.1 map does not support the particular BER data and should be reported to your product supplier with the following information:

1. The messages on the log. The &DECODE failure message, normally N24N02, contains the failure reason and offset information.
2. A hex dump of the major vector. The x'132F' major vector is usually the second major vector and can be displayed using the V2 command from the alert display. Alternatively a hex dump of the whole record (using the D command) should be provided.

EW5H01

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The NEWS Object ID to SNA code point translation procedure \$NWCMCPT failed during request processing because it was passed an invalid keyword value. The keyword is *P1* and *P2* is the invalid value.

System Action:

The request is rejected and procedure \$NWCMCPT terminates.

User Action:

Check the syntax of the call to procedure \$NWCMCPT.

EW5H02

NO CORRESPONDING ALERT CODE POINT FOR OBJECT ID P1

Reason:

The NEWS Object ID to SNA code point translation procedure \$NWCMCPT was unable to match the supplied Object Identifier to an SNA Alert code point.

System Action:

As much of the display is built as possible without compromising the contents. No substitution is performed for the Object Identifier in the resulting display.

User Action:

Report the problem to your installation help desk.

This problem occurs because an unknown Object Identifier has been encountered and should be reported to your product supplier with the following information:

- A hex dump of the major vector. The x'132F' major vector is usually the second major vector and can be displayed using the V2 command from the alert display. Alternatively a hex dump of the whole record (using the D command) should be provided.

EW6501**ENTRY POINT DEFINITION ~P1 DOES NOT EXIST****Reason:**

The requested entry point definition does not exist on the database.

System Action:

The action is rejected.

User Action:

None.

EW6502**ENTRY POINT DEFINITION ~P1 ALREADY EXISTS****Reason:**

A request was made to add an Entry Point which already exists on the database.

System Action:

The add request is rejected.

User Action:

Change the Entry Point name being added or use the update option to change the existing Entry Point definition.

EW6503**ADD CANCELLED****Reason:**

The add of an Entry Point definition was cancelled by the user.

System Action:

None.

User Action:

None.

EW6504

UPDATE CANCELLED

Reason:

The update of an Entry Point definition was cancelled by the user.

System Action:

None.

User Action:

None.

EW6505

ENTRY POINT DEFINITION ~P1 DELETED

Reason:

The Entry Point definition for node P1 was successfully deleted.

System Action:

None.

User Action:

None.

EW6506

ENTER 'ACTIVE' OR 'INACTIVE' ONLY

Reason:

An invalid value has been entered in the Desired Status field.

System Action:

None.

User Action:

Correct the error and retry or press F6 to exit the panel.

EW6507**DELETE CANCELLED****Reason:**

The deletion of an Entry Point definition was cancelled by the user.

System Action:

None.

User Action:

None.

EW6A01**ERROR PROCESSING IN \$NWCFIL, KEY=~P1****Reason:**

An undetermined error occurred during processing in procedure \$NWCFIL. P1 is the key of the NSCNTL file record passed to \$NWCFIL for retrieval.

System Action:

Building of the display is terminated.

User Action:

Report the problem to your system administrator.

EW6A02**ERROR FORMATTING COMPONENT DESCRIPTION****Reason:**

No component description was found in the NSCNTL file to match the code point in this record.

System Action:

None.

User Action:

The component description category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW6B01

ERROR PROCESSING IN \$NWCFILE, KEY=~P1

Reason:

An undetermined error occurred during processing in procedure \$NWCFILE. P1 is the key of the NSCNTL file record passed to \$NWCFILE for retrieval.

System Action:

Building of the display is terminated.

User Action:

Report the problem to your system administrator.

EW6B02

ERROR FORMATTING COMPONENT DESCRIPTION

Reason:

No component description was found in the NSCNTL file to match the code point in this record.

System Action:

None.

User Action:

The component description category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW6B03

ERROR FORMATTING DISPLAY

Reason:

Invalid data was found during the building of a 'Summary Error Data Display'.

System Action:

The building of the display is terminated.

User Action:

None.

EW6C01**ERROR PROCESSING IN \$NWCFIL, KEY=~P1****Reason:**

An undetermined error occurred during processing in procedure \$NWCFIL. P1 is the key of the NSCNTL file record passed to \$NWCFIL for retrieval.

System Action:

Building of the display is terminated.

User Action:

Report the problem to your system administrator.

EW6C02**ERROR FORMATTING COMPONENT DESCRIPTION****Reason:**

No component description was found in the NSCNTL file to match the code point in this record.

System Action:

None.

User Action:

The component description category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW6C03**UNKNOWN C/A COUNTER TYPE (~P1)****Reason:**

An unknown Communication Adapter counter type (P1) was found during the building of a 'Communication Adapter Error Statistics Display'.

System Action:

The building of the display is terminated.

User Action:

None.

EW6D01

ERROR PROCESSING IN \$NWCFILE, KEY=~P1

Reason:

An undetermined error occurred during processing in procedure \$NWCFILE. P1 is the key of the NSCNTL file record passed to \$NWCFILE for retrieval.

System Action:

Building of the display is terminated.

User Action:

Report the problem to your system administrator.

EW6D02

ERROR FORMATTING COMPONENT DESCRIPTION

Reason:

No component description was found in the NSCNTL file to match the code point in this record.

System Action:

None.

User Action:

The component description category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW6D03

EW6D03 ERROR PROCESSING CONFIGURATION TYPE P1

Reason:

An unknown RECFMS Type 4 records (PU/LU dependent data) is received with unsupported configuration type *P1* . The processing is terminated.

System Action:

Processing is terminated.

User Action:

Report the problem to your installation help desk.

EW6E01**BLK-ID (~P1) NOT SUPPORTED****Reason:**

The display of E/C level data for a device with BLK-ID P1 is not supported.

System Action:

The display is not built.

User Action:

Determine how best the information may be displayed and make the appropriate changes to the NSCNTL file or contact your systems administrator.

EW6E02**INVALID 3274 E/C LEVEL FORMAT****Reason:**

The format of E/C level data for a 3274 or equivalent device is invalid.

System Action:

The display is not built.

User Action:

Determine how best the information may be displayed and make the appropriate changes to the NSCNTL file or contact your systems administrator.

EW6E03**INVALID 3174 E/C LEVEL FORMAT****Reason:**

The format of E/C level data for a 3174 or equivalent device is invalid.

System Action:

The display is not built.

User Action:

Determine how best the information may be displayed and make the appropriate changes to the NSCNTL file or contact your systems administrator.

EW6F01

ERROR PROCESSING IN \$NWCFIL, KEY=~P1

Reason:

An undetermined error occurred during processing in procedure \$NWCFIL. P1 is the key of the NSCNTL file record passed to \$NWCFIL for retrieval.

System Action:

Building of the display is terminated.

User Action:

Report the problem to your system administrator.

EW6F02

ERROR FORMATTING COMPONENT DESCRIPTION

Reason:

No component description was found in the NSCNTL file to match the code point in this record.

System Action:

None.

User Action:

The component description category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW6F03

TEST TYPE (~P1) IS UNSUPPORTED

Reason:

Link Problem Determination Aid 1 (LPDA-1) test type P1 is not supported for display.

System Action:

The building of the display is terminated.

User Action:

None.

EW6Z02**Configuration Error: BLKNO=000 invalid PROC=~P1****Reason:**

A component description, blkno of 000, is invalid. There is a configuration mismatch between the host application and product.

System Action:

None.

User Action:

Correct generation problem.

Contact Technical Support.

EW7704**CODE POINT IS NOT HEXADECIMAL****Reason:**

The value entered in the CODE field is not valid hexadecimal.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry.

EW7B01**ERROR PROCESSING IN \$NWCFIL, KEY=~P1****Reason:**

An undetermined error occurred during processing in procedure \$NWCFIL. P1 is the key of the NSCNTL file record passed to \$NWCFIL for retrieval.

System Action:

Building of the display is terminated.

User Action:

Report the problem to your system administrator.

EW7B02

ERROR FORMATTING COMPONENT DESCRIPTION

Reason:

No component description was found in the NSCNTL file to match the code point in this record.

System Action:

None.

User Action:

The component description category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW7B03

BLK-ID (~P1) RECORD-TYPE (~P2) NOT SUPPORTED

Reason:

The formatted display of RECFMS6 data from a device identified by BLK-ID P1 with a P2 record type is not supported.

System Action:

The building of the display is terminated.

User Action:

None.

EW7B04

INVALID RECORD RECEIVED - CNM RECORD DOES NOT CONTAIN RESPONSE TIME DATA

Reason:

A CNM record indicating that it contains Response Time Data from an FCS device does not contain any valid data of that type.

System Action:

The building of the display is terminated.

User Action:

None.

EW7B05**NO STATISTICS RETURNED - ~P1 NOT RECORDING WORK STATION RESPONSES****Reason:**

Response Time data from FCS device P1 was not returned because the node is not recording work station response times.

System Action:

The building of the display is terminated.

User Action:

None.

EW7B06**RESPONSE TIME DATA NOT SUPPORTED BY CONTROLLER****Reason:**

A request for Response Time data from an FCS device returned data indicating that the device did not support such a request.

System Action:

The building of the display is terminated.

User Action:

None.

EW7C01**UNABLE TO FORMAT SUB-VECTOR 10 DATA****Reason:**

Procedure \$NWSV10 was unable to properly format Product-Set ID data from a device for an undetermined reason.

System Action:

The building of the display is terminated.

User Action:

None.

EW7C02

ERROR PROCESSING IN \$NWCFILE, KEY=~P1

Reason:

An undetermined error occurred during processing in procedure \$NWCFILE. P1 is the key of the NSCNTL file record passed to \$NWCFILE for retrieval.

System Action:

Building of the display is terminated.

User Action:

Report the problem to your system administrator.

EW7C03

ERROR FORMATTING COMPONENT DESCRIPTION

Reason:

No component description was found in the NSCNTL file to match the code point in this record.

System Action:

None.

User Action:

The component description category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW7E01

ERROR FORMATTING COMPONENT DESCRIPTION

Reason:

No component description was found in the NSCNTL file to match the code point in this record.

System Action:

None.

User Action:

The component description category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW7E02**ERROR FORMATTING EVENT DESCRIPTION****Reason:**

No Event description was found in the NSCNTL file to match the code point in this record.

System Action:

None.

User Action:

The Event description category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW7F01**ERROR PROCESSING IN \$NWCFIL, KEY=~P1****Reason:**

An undetermined error occurred during processing in procedure \$NWCFIL. P1 is the key of the NSCNTL file record passed to \$NWCFIL for retrieval.

System Action:

Building of the display is terminated.

User Action:

Report the problem to your system administrator.

EW7F02**ERROR FORMATTING COMPONENT DESCRIPTION****Reason:**

No component description was found in the NSCNTL file to match the code point in this record.

System Action:

None.

User Action:

The component description category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW8401

INVALID DETAILED DATA-ID - MUST BE HEXADECIMAL

Reason:

The value entered in the CODE field is not valid hexadecimal.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry.

EW8501

INVALID DETAILED DATA-ID - MUST BE HEXADECIMAL

Reason:

The value entered in the DATA-ID field is not valid hexadecimal.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry.

EW8502

INVALID DETAILED DATA - MUST BE HEXADECIMAL

Reason:

The value entered in the CODE field is not valid hexadecimal.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry.

EW8A01**ERROR PROCESSING IN \$NWCFIL, KEY=~P1****Reason:**

An undetermined error occurred during processing in procedure \$NWCFIL. P1 is the key of the NSCNTL file record passed to \$NWCFIL for retrieval.

System Action:

Building of the display is terminated.

User Action:

Report the problem to your system administrator.

EW8A02**ERROR FORMATTING COMPONENT DESCRIPTION****Reason:**

No component description was found in the NSCNTL file to match the code point in this record.

System Action:

None.

User Action:

The component description category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW8B01**ERROR PROCESSING IN \$NWCFIL, KEY=~P1****Reason:**

An undetermined error occurred during processing in procedure \$NWCFIL. P1 is the key of the NSCNTL file record passed to \$NWCFIL for retrieval.

System Action:

Building of the display is terminated.

User Action:

Report the problem to your system administrator.

EW8B02

ERROR FORMATTING COMPONENT DESCRIPTION

Reason:

No component description was found in the NSCNTL file to match the code point in this record.

System Action:

None.

User Action:

The component description category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW8C01

ERROR PROCESSING IN \$NWCFIL, KEY=~P1

Reason:

An undetermined error occurred during processing in procedure \$NWCFIL. P1 is the key of the NSCNTL file record passed to \$NWCFIL for retrieval.

System Action:

Building of the display is terminated.

User Action:

Report the problem to your system administrator.

EW8C02

ERROR FORMATTING COMPONENT DESCRIPTION

Reason:

No component description was found in the NSCNTL file to match the code point in this record.

System Action:

None.

User Action:

The component description category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW8D01**ERROR PROCESSING IN \$NWCFIL, KEY=~P1****Reason:**

An undetermined error occurred during processing in procedure \$NWCFIL. P1 is the key of the NSCNTL file record passed to \$NWCFIL for retrieval.

System Action:

Building of the display is terminated.

User Action:

Report the problem to your system administrator.

EW8D02**ERROR FORMATTING COMPONENT DESCRIPTION****Reason:**

No component description was found in the NSCNTL file to match the code point in this record.

System Action:

None.

User Action:

The component description category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW8D03**INVALID 3174 E/C LEVEL FORMAT (~P1)****Reason:**

The format of E/C level data for a 3174 or equivalent device is invalid.

System Action:

The display is not built.

User Action:

Determine how best the information may be displayed and make the appropriate changes to the NSCNTL file or contact your systems administrator.

EW8E01

ERROR PROCESSING IN \$NWCFIL, KEY=~P1

Reason:

An undetermined error occurred during processing in procedure \$NWCFIL. P1 is the key of the NSCNTL file record passed to \$NWCFIL for retrieval.

System Action:

Building of the display is terminated.

User Action:

Report the problem to your system administrator.

EW8E02

System Action:

None.

User Action:

The component description category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW9701

FIELD MUST BE Y OR N

Reason:

A value other than 'Y' or 'N' has been entered in a field during NEWS Control File Maintenance, but the field only allows these values to be entered. The erroneous field is highlighted.

System Action:

None.

User Action:

Correct the value to 'Y' or 'N' and retry.

EW9801

ENTER 'B', 'L' OR 'M'

Reason:

A value other than 'B', 'L' or 'M' has been entered in the Process Option field. (These are the only valid values.)

System Action:

The process waits for input from the terminal.

User Action:

Correct the value and retry.

EW9802

ENTER 'S', 'SMF', 'V' OR 'VSAM'

Reason:

A value other than 'S', 'SMF', 'V' or 'VSAM' has been entered in the File Type field. (These are the only valid values.)

System Action:

The process waits for input from the terminal.

User Action:

Correct the value and retry.

EW9803**REQUIRED SMF RECORD IDENTIFIER OMITTED****Reason:**

No value has been entered in the Identifier field.

System Action:

The process waits for input from the terminal.

User Action:

Add the correct value and retry.

EW9804**SMF RECORD ID NOT WITHIN RANGE 200-255****Reason:**

The value entered in the Identifier field is not within the numerical range 200 - 255.

System Action:

The process waits for input from the terminal.

User Action:

Correct the value and retry.

EW9901**RETURN CODE MUST BE VALID HEX****Reason:**

The value entered in the Return Code field is not a valid hexadecimal value.

System Action:

The process waits for input from the terminal.

User Action:

Correct the value and retry.

EW9A01

ERROR FORMATTING COMPONENT DESCRIPTION

Reason:

No component description was found in the NSCNTL file to match the code point in this record.

System Action:

None.

User Action:

The component description category and code can be found in the 'CODES' display for this record. Have the code point and description added to the appropriate category of the NSCNTL file.

EW9C01

ERROR IN \$NWSV50 RC=~P1

Reason:

An undetermined error occurred during the processing of LPDA-2 data in procedure in \$NWSV50. P1 is the return code from procedure \$NWSV50.

System Action:

The process is terminated.

User Action:

None.

EW9C02

NO PANEL NAME RETURNED BY \$NWSV50 PROCEDURE

Reason:

Procedure \$NWSV50 did not return the name of a panel to be displayed to its calling procedure due to an undetermined error. No formatted data will be displayed.

System Action:

A dump of the record will be displayed.

User Action:

None.

EW9D01**NO END OF DATA FLAG FOUND****Reason:**

On receipt of solicited CNM record, flags in the record indicated more data was to follow. A request for more data to the device resulted in no more data being returned.

System Action:

The process is terminated because the amount of data returned is not sufficient to build an accurate display.

User Action:

Retry the operation.

EW9D02**UNABLE TO ASCERTAIN ELEMENT TYPE****Reason:**

An unknown element type was found during the building of a configuration display for a 3710.

System Action:

The process is terminated.

User Action:

None.

EW9D03**ERROR IDENTIFYING RECORD TYPE****Reason:**

Procedure \$NWFP003 was unable to identify the record type chosen for display from a selection list.

System Action:

The procedure waits for input from the terminal.

User Action:

Retry the operation or make another selection.

EW9E01

NO KEY PROVIDED

Reason:

A procedure was invoked to access the NEWS database but was not passed a record key.

System Action:

The process is terminated.

User Action:

Retry the operation, if unsuccessful, contact your systems administrator.

EW9E04

~P1 NOT AVAILABLE FROM THIS DISPLAY

Reason:

The command P1 is not valid from this display.

System Action:

The command is rejected.

User Action:

Correct the error.

EWAA01

RECORDING MODE X'~P1' NOT SUPPORTED

Reason:

The recording mode P1 is not supported when formatting a display.

System Action:

The contents of the record are ignored.

User Action:

None.

EWAB01**NO INFORMATION AVAILABLE****Reason:**

A request to display information about a detail record, such as DUMP or VECTOR, cannot be satisfied because the requested information is not available.

System Action:

None.

User Action:

None.

EWAB02**NO CNM RECORD DATA AVAILABLE****Reason:**

A request to display the CNM record dump cannot be satisfied because the requested information is not available.

System Action:

None.

User Action:

None.

EWAB05**RESEND DESTINATION TYPE IS INVALID****Reason:**

A destination type other than 'DOMAIN', 'LINKNAME' or 'SSCPNAME' has been appended to the 'RESEND' command.

System Action:

None.

User Action:

Correct the destination type and name and retry the command.

EWAB06

ALERT SENT SUCCESSFULLY

Reason:

A CNM record has been successfully resent using the 'RESEND' command.

System Action:

None.

User Action:

None.

EWAB07

DATA DISPLAY FORMAT IS NOW P1

Reason:

This message is displayed when the ASCII or EBCDIC command has been entered during display of a NEWS record. It confirms that the command has been successful and that the character formatted data will now be displayed in the format requested (*P1* is ASCII or EBCDIC).

System Action:

None.

User Action:

None.

EWAE01

PARAMETERS IN ERROR

Reason:

One or more parameters supplied to procedure \$NWLPPA2 are in error.

System Action:

The process is terminated.

User Action:

Correct the error(s) and retry.

EWAE02**INVALID LINK SEGMENT LEVEL SPECIFIED (~P1)****Reason:**

The value P1 for parameter 'LEVEL=' is not '1' or '2'.

System Action:

The process is terminated.

User Action:

Correct the parameter in error and retry.

EWAE03**INVALID MODEM ADDRESS SPECIFIED (~P1), LOCAL, REMOTE OR BROADCAST****Reason:**

The value P1 for parameter 'MODEM=' is not 'LOCAL', 'BROADCAST' or 'REMOTE'.

System Action:

The process is terminated.

User Action:

Correct the parameter in error and retry.

EWAE04**INVALID FILE OPTION SPECIFIED (~P1), YES, NO OR ONLY****Reason:**

The value P1 for parameter 'FILE=' is not 'YES', 'NO' or 'ONLY'.

System Action:

The process is terminated.

User Action:

Correct the parameter in error and retry.

EWAE05

DISPLAY REQUEST REQUIRES FULLSCREEN ENVIRONMENT

Reason:

The 'DISPLAY=' parameter has been specified but the procedure was not invoked from a fullscreen environment.

System Action:

The process is terminated.

User Action:

Correct the parameters of the procedure so it can be executed from the current environment or execute the command from a fullscreen environment if a display is required.

EWAE06

INVALID DISPLAY REQUEST (~P1), CONFIG OR COUPLER

Reason:

The value P1 for parameter 'DISPLAY=' is not 'CONFIG' or 'COUPLER'.

System Action:

The process is terminated.

User Action:

Correct the parameter in error and retry.

EWAE07

CHANGE REQUEST REQUIRES FULLSCREEN ENVIRONMENT

Reason:

The 'CHANGE=' parameter has been specified but the procedure was not invoked from a fullscreen environment.

System Action:

The process is terminated.

User Action:

Correct the parameters of the procedure so it can be executed from the current environment or execute the command from a fullscreen environment if a display is required.

EWAE08**INVALID CHANGE REQUEST (~P1), CONFIG OR COUPLER****Reason:**

The value P1 for parameter 'CHANGE=' is not 'CONFIG' or 'COUPLER'.

System Action:

The process is terminated.

User Action:

Correct the parameter in error and retry.

EWAE09**INVALID SPEED REQUEST (~P1), FULL OR BACKUP****Reason:**

The value P1 for parameter 'SPEED=' is not 'FULL' or 'BACKUP'.

System Action:

The process is terminated.

User Action:

Correct the parameter in error and retry.

EWAE10**INVALID CONTACT REQUEST (~P1), QUERY, OPEN OR CLOSE****Reason:**

The value P1 for parameter 'CONTACT=' is not 'QUERY', 'OPEN' or 'CLOSE'.

System Action:

The process is terminated.

User Action:

Correct the parameter in error and retry.

EWAE11

TEST REQUEST REQUIRES FULLSCREEN ENVIRONMENT

Reason:

The 'TEST=' parameter has been specified but the procedure was not invoked from a fullscreen environment.

System Action:

The process is terminated.

User Action:

Correct the parameters of the procedure so it can be executed from the current environment or execute the command from a fullscreen environment if a display is required.

EWAE12

INVALID TEST REQUEST (~P1), MS, LA OR TR(N)

Reason:

The value P1 for parameter 'TEST=' is not 'MS', 'LA' or 'TR(n)'.

System Action:

The process is terminated.

User Action:

Correct the parameter in error and retry.

EWAE13

SEQUENCE EXCHANGE LIMIT IS NOT WITHIN RANGE 1 - 10

Reason:

The number of sequence exchanges to be performed as specified in the parameter 'TEST=TR(n)' is not within the range 1 - 10 where n is the number of sequence exchanges.

System Action:

The process is terminated.

User Action:

Correct the parameter in error and retry.

EWAE14**NO STATION NAME PROVIDED****Reason:**

The value for parameter 'STATION=' or the entire parameter 'STATION=' has been omitted.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EWAE15**NO LPDA2 COMMAND PARAMETER SUPPLIED****Reason:**

A parameter specifying the LPDA2 command to be performed was omitted.

System Action:

The process is terminated.

User Action:

Add the required parameter and retry.

EWAE16**REQUEST DELIVERED****Reason:**

An LPDA2 solicitation request to a node has been accepted by the node.

System Action:

None.

User Action:

None.

EWAE17

ERROR, EXPECTED SUBVECTOR 50 NOT RECEIVED

Reason:

An NMVT sub-vector x'50', expected as part of the result to a request was not received.

System Action:

The process is terminated.

User Action:

Determine the reason why no valid data was received and retry the request if necessary.

EWAE18

ERROR IN \$NWFP002 RC=~P1

Reason:

Procedure \$NWFP002 experienced an undetermined error while processing LPDA2 data. P1 is the return code from procedure \$NWFP002.

System Action:

The process is terminated.

User Action:

Determine the cause of the error and, if possible, correct it.

EWAE19

COMMAND COMPLETED

Reason:

The LPDA2 command requested has successfully completed.

System Action:

The process terminates.

User Action:

None.

EWAE20**INVALID LINK NAME****Reason:**

An invalid link name has been entered.

System Action:

None

User Action:

Correct the error and retry.

EWAE21**INVALID SSCP NAME****Reason:**

An invalid SSCP name has been entered.

System Action:

None

User Action:

Correct the error and retry.

EWAE22**LINK AND SSCP NAMES ARE MUTUALLY EXCLUSIVE****Reason:**

Both the LINK and SSCP names have been entered but only one of the two is allowed.

System Action:

The process waits for input from the terminal.

User Action:

Specify only one LINK or SSCP name (clear one of the two) and retry.

EWAG01

USERID ~P1 NOT AUTHORISED FOR NEWS FEATURE

Reason:

User P1 has attempted to invoke a function of the NEWS feature but is not authorised to do so.

System Action:

The process is terminated.

User Action:

Contact your security administrator if you feel you should have access to NEWS.

EWAG02

INVALID PARMS ON LPDA COMMAND, LPDA COMMAND DENIED

Reason:

An error has occurred due to the user specifying invalid parms on the LPDA command.

System Action:

LPDA command is terminated.

User Action:

Specify correct parms on LPDA command.

EWAG03

INVALID "FILE=" PARM ON LPDA COMMAND, LPDA COMMAND DENIED

Reason:

An error has occurred due to the user specifying invalid FILE= parm on the LPDA command.

System Action:

LPDA command is terminated.

User Action:

Specify correct FILE= parm on LPDA command. Valid parms are: YES, NO or ONLY.

EWAG04**STATION OR LINE PARM MUST BE SPECIFIED ON LPDA COMMAND,
LPDA COMMAND DEN IED.****Reason:**

An error has occurred due to the user not specifying a STATION= or LINE= parm on the LPDA command.

System Action:

LPDA command is terminated.

User Action:

Specify a LINE= or STATION= parm on the LPDA command.

EWAG05**LINE NAME AND STATION NAME MUST NOT BE ENTERED ON SAME
COMMAND.****Reason:**

The LINE= or STATION= parm on the LPDA command must be entered but both may not appear on the same command.

System Action:

LPDA command terminated.

User Action:

Correct the error and retry.

EWAG06**INVALID SUB-VECTORS RECEIVED FROM LPDA COMMAND.****Reason:**

The LPDA command expects to see either a X'82', X'84' or X'7D' sub-vector but didn't receive any of these therefore a severe error is encountered.

System Action:

LPDA command terminated.

User Action:

Re-issue the command.

EWAG07

INVALID "COMMAND=" PARM SPECIFIED FOR THE LPDA COMMAND WHEN THE "STATION =" PARM HAS BEEN SPECIFIED.

Reason:

An error has occurred due to the user specifying invalid COMMAND= parm on the LPDA command.

System Action:

LPDA command is terminated.

User Action:

Specify correct COMMAND= parm on the LPDA command. Valid parms are: QUERY, ALLOW, BLOCK

EWAG08

INVALID "COMMAND=" PARM SPECIFIED FOR THE LPDA COMMAND WHEN THE "LINE=" PARM HAS BEEN SPECIFIED.

Reason:

An error has occurred due to the user specifying invalid COMMAND= parm on the LPDA command.

System Action:

LPDA command is terminated.

User Action:

Specify correct COMMAND= parm on the LPDA command. Valid parms are: QUERY, NONE, TYPE1, TYPE2, TYPE3

EWAG09

LPDA COMMAND RESPONSE SENSE CODE = ~P1

Reason:

Sense code has been received from LPDA command.

System Action:

The process is terminated.

User Action:

Use NETINFO1 to find out the error based upon the sense code and correct the problem.

EWAG10**INVALID LINK NAME****Reason:**

An invalid link name has been entered.

System Action:

None

User Action:

Correct the error and retry.

EWAG11**INVALID SSCP NAME****Reason:**

An invalid SSCP name has been entered.

System Action:

None

User Action:

Correct the error and retry.

EWAG12**LINK AND SSCP NAMES ARE MUTUALLY EXCLUSIVE****Reason:**

Both the LINK and SSCP names have been entered but only one of the two is allowed.

System Action:

The process waits for input from the terminal.

User Action:

Specify only one LINK or SSCP name (clear one of the two) and retry.

EWC301

NEWS DATABASE CLEARED - ~P1 RECORDS DELETED

Reason:

The NEWSFILE has been successfully cleared. P1 is the number of records deleted.

System Action:

IF logging was in force before the clear operation, it will be re-started.

User Action:

None.

EWC303

NEWS DATABASE CLEAR CANCELLED

Reason:

A request to clear the NEWSFILE was cancelled by the user when confirmation was requested.

System Action:

Processing terminates.

User Action:

None.

EWC401

USERID ~P1 NOT AUTHORISED TO MODIFY NEWS DATABASE

Reason:

The user P1 attempted to modify or delete records in the NEWS database without the appropriate authority level.

System Action:

The process is terminated.

User Action:

Contact your systems administrator to upgrade your level of authority.

EWC402**NO RECORD KEY PROVIDED****Reason:**

A procedure was invoked to access the NEWS database but was not passed record key.

System Action:

The process is terminated.

User Action:

Retry the operation, if unsuccessful, contact your systems administrator.

EWC403**INVALID KEY SUPPLIED - P1****Reason:**

The key passed to procedure \$NWDBDEL does not match any category in the NEWSFILE. *P1* is the invalid key passed to the procedure.

System Action:

The process is terminated.

User Action:

Retry the operation. If unsuccessful, contact your systems administrator.

EWC406**~P1 RECORD(S) DELETED****Reason:**

P1 records were successfully deleted as requested.

System Action:

None.

User Action:

None.

EWC408

RECORD DELETED

Reason:

The record was successfully deleted as requested.

System Action:

None.

User Action:

None.

EWC501

USER ID ~P1 NOT AUTHORISED TO UPDATE WRAP COUNTS

Reason:

The user P1 attempted to update the logging limit (wrap count) for a particular node name within a category without the appropriate authority level.

System Action:

The process is terminated.

User Action:

Contact your systems administrator to upgrade your level of authority.

EWC502

ATTNS LIMIT CAN ONLY BE UPDATED FROM CONTROL FUNCTIONS OPTION

Reason:

A change to the logging limit (wrap count) for the Attentions category was made from other than the Set NEWS Database Logging Options panel. The update is rejected.

System Action:

No change is made to the limit.

User Action:

If you wish to change the wrap count for the Attentions category, use the *Set NEWS Database Logging Options* facility within NEWS Control Functions, NEWS Database Functions.

EWC503**INVALID PARAMETERS RECEIVED CAT=~P1, NODE=~P2****Reason:**

Procedure \$NWDBLUP expected to be passed two parameters when invoked but received other than two parameters. P1 and P2 are the two parameters passed (if present).

System Action:

The process is terminated.

User Action:

Retry the operation, if unsuccessful, contact your systems administrator.

EWC505**NO UPDATE PERFORMED FOR NODE ~P1****Reason:**

The logging limit for node P1 was not changed.

System Action:

None.

User Action:

None.

EWC506**INVALID VALUE ENTERED****Reason:**

A value other than asterisk (*) or a number in the range 1 - 999 was entered in the current logging limit field.

System Action:

The process waits for input from the terminal.

User Action:

Enter the required value and press ENTER or exit by pressing PF03.

EWC507

REQUIRED LOG LIMIT OMITTED

Reason:

No value has been entered in the current logging limit field.

System Action:

The process waits for input from the terminal.

User Action:

Enter the required value and press ENTER or exit by pressing PF03.

EWC508

WRAP COUNT RESET TO CATEGORY DEFAULT (~P1) FOR NODE ~P2

Reason:

The logging limit for the node P2 has been reset to the limit for the category (P1) in which the node occurs.

System Action:

When a record next arrives, CNMPROC will adjust the number of records in the node if necessary.

User Action:

None.

EWC510

WRAP COUNT OF ~P1 HAS BEEN SET FOR NODE ~P2

Reason:

The logging limit for the node P2 has been set to P1 for the category in which the node occurs.

System Action:

When a record next arrives, CNMPROC will adjust the number of records in the node if necessary.

User Action:

None.

EWC511**UPDATE IGNORED FOR NODE ~P1, NEW LIMIT MATCHES CURRENT NODE LIMIT****Reason:**

The logging limit for the node P1 was ignored because it already matches that set for the node.

System Action:

None.

User Action:

None.

EWC512**UPDATE IGNORED FOR NODE ~P1, NODE LIMIT MATCHES CATEGORY DEFAULT****Reason:**

The logging limit for the node P1 was ignored because it already matches that set for the node (the category default).

System Action:

None.

User Action:

None.

EWC603**NO RECORDS FOUND****Reason:**

After processing the record deletion request, no records were found to match the specified criteria.

System Action:

None.

User Action:

None.

EWC702

~P1 PARAMETER (~P2) IS INVALID

Reason:

Parameter P1 is not in the format expected by procedure \$NWDBPRG. P2 is the contents of the invalid parameter.

System Action:

The process is terminated.

User Action:

Retry the operation, if unsuccessful, contact your systems administrator.

EWC704

NEWSFILE KEY HAS INVALID DATE FORMAT, KEY= P1

Reason:

A key with an invalid date format has been encountered on the NEWSFILE during a database purge operation.

System Action:

The record with this key value will not be deleted. Processing continues for remaining records.

User Action:

Notify your system support representative.

EWC705

P1 NOT SUPPLIED

Reason:

Procedure \$NWDBPRG was not supplied the required parameter described by *P1* .

System Action:

The process is terminated.

User Action:

Retry the operation. If unsuccessful, contact your systems administrator.

EWC802**~P1 ONLY SUPPORTED IN DATABASE REVIEW****Reason:**

A command P1 was entered in the command field of a node detail record display invoked from somewhere other than NEWS Database Review. The command is only supported when the selection list is invoked from NEWS Database Review.

System Action:

The process waits for input from the terminal.

User Action:

Correct the command and retry.

EWC804**INVALID CATEGORY SPECIFIED - ~P1****Reason:**

The category (P1) passed to procedure \$NWDBRDL does not match any category known to the procedure.

System Action:

The process is terminated.

User Action:

Retry the operation, if unsuccessful, contact your systems administrator.

EWC821**INVALID SNA ADDRESS LIST TYPE - P1****Reason:**

The SNA address list common subvector returned is of a type with which NEWS is not familiar. *P1* is the address format type of the subvector.

System Action:

Processing of the RTM record is terminated.

User Action:

None.

EWC901

\$NWDBREF CANNOT PROCESS WHILST CNMPROC IS ACTIVE

Reason:

Procedure \$NWDBREF must not run whilst CNMPROC is active.

System Action:

The process is terminated.

User Action:

Stop CNMPROC and retry.

EWC902

NO PROCESSING PATH FOUND FOR PROCESS-ID ~P1

Reason:

PROCESS-ID P1 defined for a record by Category 003 of the NSCNTL file was not found in category 004 of the NSCNTL file.

System Action:

The record is discarded and CNMPROC processing continues.

User Action:

Correct the name of the PROCESS-ID in Cat. 003 of the NSCNTL file or add the required PROCESS-ID to Cat. 004 of the NSCNTL file.

EWC903

NEWSFILE ~P1 FAILED, KEY=~P2, RC=~P3, FDBK=~P4

Reason:

A VSAM error occurred during NEWSFILE I/O operation P1 (READ, DELETE or PUT). P2 is the filekey of the master record, P3 is the file return code and P4 is the VSAM FDBK code.

System Action:

The process is terminated.

User Action:

Determine the cause and take the necessary action to correct the problem.

EWC904**NEWS DATABASE CONVERSION IN PROGRESS - PLEASE BE PATIENT****Reason:**

The conversion of the NEWS Database from V2.0 has begun. This may take some time depending on the amount of records in the database.

System Action:

Processing continues.

User Action:

None.

EWC905**UNABLE TO ALLOCATE REQUIRED VARTABLE - ID=\$NWMASTCAT,
FDBK= P1****Reason:**

Procedure \$NWDBREF was unable to create a VARTABLE of the name specified by the 'ID=' in the message. The reason for failure is indicated by the FDBK code in P1.

System Action:

The process is terminated.

User Action:

Determine the reason for failure, correct and retry. The FDBK code definitions may be found in the &VARTABLE ALLOC statement description in the NCL Reference.

EWC906**~P1 CATEGORY 05 RECORDS DELETED****Reason:**

P1 is a count of the Category 05 records deleted from the NEWSFILE during conversion.

System Action:

Processing continues.

User Action:

None.

EWC907

~P1 CATEGORY 9 RECORDS DELETED

Reason:

P1 is a count of the Category 9 records deleted from the NEWSFILE during conversion.

System Action:

Processing continues.

User Action:

None.

EWC908

VARIABLE \$NWMASTCAT NOT ALLOCATED - CANNOT PROCEED

Reason:

Procedure \$NWDBREF is unable reformat any more records because the required VARIABLE is not allocated.

System Action:

The process is terminated.

User Action:

Determine the reason for failure, correct and retry.

EWC909

NEWS DATABASE REFORMAT PROCESSING COMPLETE

Reason:

Procedure \$NWDBREF has successfully completed reformatting the NEWSFILE.

System Action:

Processing continues.

User Action:

None.

EWC910**CNMPROC MAY NOW BE STARTED****Reason:**

CNMPROC may now be started.

System Action:

The process terminates.

User Action:

Start CNMPROC as required.

EWC911**NEWSFILE RECORD RE-FORMATting INCOMPLETE****Reason:**

Not all records have been reformatted.

System Action:

The process is terminated.

User Action:

Determine the cause for failure, correct the error and retry.

EWC912**CANNOT ADD P1 TO VARTABLE, FDBK= P2****Reason:**

Procedure \$NWDBREF was unable to add a record identified by *P1* to the VARTABLE. The reason for failure is indicated by the FDBK code in *P2*.

System Action:

The process is terminated.

User Action:

Determine the reason for failure, correct and retry. The FDBK code definitions may be found in the &VARTABLE ADD statement description in the NCL Reference.

EWC913

RECORD ~P1 DELETED - UNABLE TO REFORMAT

Reason:

Procedure \$NWDBREF was unable to convert the record identified by the key P1 to the new NEWSFILE format. The record has been deleted.

System Action:

Processing continues.

User Action:

None.

EWC914

USER PROC ~P1 FORMERLY USED TO DISPLAY RECORD ~P2

Reason:

Procedure \$NWDBREF detected a record (identified by P1) that used a non-standard (user defined) display procedure.

System Action:

Processing continues.

User Action:

None.

EWC915

UNABLE TO UPDATE MASTER RECORD, KEY=~P1, RC=~P2, FDBK=~P3

Reason:

A VSAM error occurred during the update of a NEWSFILE master record. P1 is the filekey of the master record, P2 is the file return code and P3 is the VSAM FDBK code.

System Action:

The process is terminated.

User Action:

Determine the cause and take the necessary action to correct the problem.

EWC916**LOCK HELD ON NEWSFILE BY ~P1, RC=~P2, FDBK=~P3****Reason:**

Procedure \$NWDBREF attempted to set an exclusive lock on the NEWSFILE but was unsuccessful. The owner of the lock is indicated by P1. P2 is the return code and P3 is the FDBK code from the *LOCK statement*.

System Action:

The process is terminated.

User Action:

Determine the cause and take the necessary action to correct the problem.

EWC917**~P1 DETAIL RECORDS UPDATED, ~P2 MASTER RECORDS UPDATED,
~P3 RECORDS DELETED****Reason:**

P1, P2 and P3 are the respective number of detail records updated, master records updated and records deleted.

System Action:

Processing continues.

User Action:

None.

EWCD01**NODE IS NOT A PU OR IS NOT AVAILABLE TO THIS HOST****Reason:**

The node name passed to procedure \$NWNCPGT to determine the owning NCP does not belong to a PU or resides in another domain.

System Action:

None.

User Action:

Determine the owning NCP through other means.

EWCD02

NCP FOR NODE ~P1 IS UNKNOWN

Reason:

The owning NCP for node P1 cannot be determined.

System Action:

None.

User Action:

Ensure that the specified node name is correct, if so the owning NCP will have to be determined through other means.

EWCD03

REQUEST TIMEOUT - NO RESPONSE WITHIN 30 SECONDS

Reason:

A request has timed out whilst waiting for a response.

System Action:

Processing is terminated.

User Action:

Retry the function.

EWCE01

NO TEST TYPE AND/OR NODE NAME PASSED

Reason:

An incorrect number of parameters were passed to procedure \$NWNPFCK.

System Action:

None.

User Action:

Correct the error and retry.

EWCE02**INVALID NPF TEST TYPE****Reason:**

A value other than 'D', 'M' or 'V' was passed to procedure \$NWNPFCK as the type of check to be performed.

System Action:

None.

User Action:

Correct the error and retry.

EWCE03**NPF ACCESS DENIED FOR ~P1****Reason:**

NPF checking has determined that User P1 is denied access to the specified resource.

System Action:

Access to the resource is denied.

User Action:

Contact your systems administrator if you require access to this resource.

EWCF01**USER ~P1 NOT AUTHORISED TO FOR NSCNTL FILE UPDATE****Reason:**

The user P1 attempted to update the NSCNTL file without the appropriate authority level.

System Action:

The process is terminated.

User Action:

Contact your systems administrator if you need this level of authority.

EWCF02

REQUIRED DATA SET NAME OMITTED

Reason:

The input data set name required to update the NSCNTL file has been omitted.

System Action:

The process waits for input from the terminal.

User Action:

Enter the required data set name or press PF03 to exit the procedure.

EWCF03

INVALID DATA SET NAME

Reason:

The input data set name required to update the NSCNTL file is invalid.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the procedure.

EWCF04

UNABLE TO ALLOCATE FILE - UNKNOWN OPERATING SYSTEM ~P1

Reason:

The operating system P1 is not known, so the file cannot be dynamically allocated.

System Action:

The process waits for input from the terminal.

User Action:

Take note of the message and contact your systems administrator.

EWCF05**UNABLE TO ALLOCATE INPUT FILE - INTREAD QUEUE LIMIT EXCEEDED****Reason:**

While attempting to allocate the NSCNTL file update input data set, the INTREAD queue limit was exceeded. It cannot be determined if the file was successfully allocated.

System Action:

The process waits for input from the terminal.

User Action:

Retry the operation, if unsuccessful contact your systems administrator in order to increase the queue limit.

EWCF06**UNABLE TO OPEN INPUT FILE ~P1 - INTREAD QUEUE LIMIT EXCEEDED****Reason:**

While attempting to open the NSCNTL file update input file P1, the INTREAD queue limit was exceeded. It cannot be determined if the file was successfully opened.

System Action:

The process waits for input from the terminal.

User Action:

Retry the operation, if unsuccessful contact your systems administrator in order to increase the queue limit.

EWCF07

UNABLE TO ACCESS P1 FILE, FILERC= P2

Reason:

An attempt to access the file *P1* failed because it was unavailable. The return code (*P2*) indicates the cause.

System Action:

None.

User Action:

Determine if the file should be available and if so, why it isn't. The meaning of the return code can be found in the NCL Reference in the section for the &FILEID verb.

EWCF08

INPUT FILE READ ERROR DURING UPDATE, RC=~P1, FDBK=~P2

Reason:

A VSAM error occurred during a get I/O operation on the NSCNTL update input file. P1 is the file return code and P2 is the VSAM FDBK code.

System Action:

The process is terminated.

User Action:

Retry the operation, if unsuccessful, take note of the error message and contact your systems administrator.

EWCF09

INPUT FILE FOR UPDATE IS EMPTY - CHECK DSN

Reason:

The file specified as input to the NSCNTL file update was found to be empty.

System Action:

The process terminates.

User Action:

Ensure that the correct data set name has been specified and retry the operation.

EWCF10**NSCNTL FILE UPDATE COMPLETE****Reason:**

The update of the NSCNTL file has completed successfully.

System Action:

None.

User Action:

None.

EWCF11**NSCNTL FILE UNAVAILABLE, RC= P1****Reason:**

An attempt to access the NSCNTL file failed because it was unavailable. The return code (*P1*) indicates the cause.

System Action:

None.

User Action:

Determine if the file should be available and if so, why it isn't. The meaning of the return code can be found in the NCL Reference in the section for the &FILEID verb.

EWCF12**NSCNTL GET FAILED, KEY=~P1, RC=~P2, FDBK=~P3****Reason:**

A VSAM error occurred during a NSCNTL file get I/O operation. P1 is the filekey of the record, P2 is the file return code and P3 is the VSAM FDBK code.

System Action:

The process is terminated.

User Action:

Retry the operation, if unsuccessful, take note of the error message and contact your systems administrator.

EWCF13

PRESS ENTER TO CONFIRM UPDATE OR PRESS PF03 TO CANCEL

Reason:

Press the 'ENTER' key to confirm the update of the current NSCNTL file record or press PF03 to cancel it.

System Action:

The process waits for input from the terminal.

User Action:

Press the 'ENTER' key to confirm or press 'PF03' to cancel.

EWCF14

NSCNTL PUT FAILED, KEY=~P1, RC=~P2, FDBK=~P3

Reason:

A VSAM error occurred during a NSCNTL file put I/O operation. P1 is the filekey of the record, P2 is the file return code and P3 is the VSAM FDBK code.

System Action:

The process is terminated.

User Action:

Retry the operation, if unsuccessful, take note of the error message and contact your systems administrator.

EWCH01

BACKUP FOCAL POINT DEFINITION DOES NOT EXIST

Reason:

The Backup Focal Point definition has not been defined and therefore cannot be browsed or deleted.

System Action:

The action is rejected.

User Action:

None.

EWCH04**BACKUP FOCAL POINT UPDATE CANCELLED****Reason:**

The update of the Backup Focal Point definition was cancelled by the user.

System Action:

None.

User Action:

None.

EWCH05**BACKUP FOCAL POINT DEFINITION DELETED****Reason:**

The Backup Focal Point definition was successfully deleted.

System Action:

None.

User Action:

None.

EWCH07**BACKUP FOCAL POINT DELETE CANCELLED****Reason:**

The deletion of the Backup Focal Point definition was cancelled by the user.

System Action:

None.

User Action:

None.

EWCI01

NESTING FOCAL POINT DEFINITION DOES NOT EXIST

Reason:

The Nesting Focal Point definition has not been defined and therefore cannot be browsed or deleted.

System Action:

The action is rejected.

User Action:

None.

EWCI04

NESTING FOCAL POINT UPDATE CANCELLED

Reason:

The update of the Nesting Focal Point definition was cancelled by the user.

System Action:

None.

User Action:

None.

EWCI05

NESTING FOCAL POINT DEFINITION DELETED

Reason:

The Nesting Focal Point definition was successfully deleted.

System Action:

None.

User Action:

None.

EWCI07**NESTING FOCAL POINT DELETE CANCELLED****Reason:**

The deletion of the Nesting Focal Point definition was cancelled by the user.

System Action:

None.

User Action:

None.

EWD001**INVALID LU NUMBER****Reason:**

A value other than a number in the range 2 - 129 was entered in the LU LOCADDR field.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and press ENTER or exit by pressing PF03.

EWD002**LU NUMBER IS NOT WITHIN RANGE 2 - 255****Reason:**

A number outside the range 2 - 255 was entered in the LU LOCADDR field.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and press ENTER or exit by pressing PF03.

EWD104

INVALID CATEGORY SPECIFIED - ~P1

Reason:

The category (P1) passed to procedure \$NWDBRNL does not match any category known to the procedure.

System Action:

The process is terminated.

User Action:

Retry the operation, if unsuccessful, contact your systems administrator.

EWD201

CANNOT RE-ORG - NEWS DATABASE IN USE

Reason:

Procedure \$NWDBRO is unable to close the NEWSFILE to perform a re-organisation because the file is still in use by other users.

System Action:

Processing is terminated.

User Action:

Ensure no users are accessing the file and then retry the operation.

EWD202

NEWS DATABASE OPEN FAILED (SEE LOG)

Reason:

Following a successful re-organisation of the NEWSFILE, \$NWDBRO failed to successfully open the NEWSFILE.

System Action:

News database logging remains suspended.

User Action:

Follow your installation's standards to recover from this condition or notify your systems administrator.

EWD203**NEWS DATABASE RE-ORG CANCELLED****Reason:**

A request to re-organise the NEWSFILE was cancelled by the user when confirmation was requested.

System Action:

Processing terminates.

User Action:

None.

EWD204**NEWS DATABASE RE-ORG SUCCESSFUL****Reason:**

A request to re-organise the NEWSFILE has completed successfully.

System Action:

If CNMPROC and NEWS database logging was active, logging will now resume.

User Action:

None.

EWD205**NEWS DATABASE RE-ORG FAILED (SEE LOG)****Reason:**

\$NWDBRO received an error code indicating that the attempt to re-organise the NEWSFILE was unsuccessful. More details of the failure may be found in the activity log.

System Action:

Logging is suspended.

User Action:

Determine the cause of the failure, correct and retry.

EWD206

NEWS DATABASE LOGGING - DATABASE RE-ORG IN PROGRESS

Reason:

A re-organisation of the NEWSFILE is currently in progress.

System Action:

NEWS logging is suspended and processing continues.

User Action:

None.

EWD207

NEWS DATABASE LOGGING - OPEN FAILED AFTER RE-ORG (SEE LOG)

Reason:

Following a successful re-organisation of the NEWSFILE, \$NWDBRO failed to successfully open the NEWSFILE.

System Action:

News database logging remains suspended.

User Action:

Follow your installation's standards to recover from this condition or notify your systems administrator.

EWD208

NEWS DATABASE LOGGING - DATABASE RE-ORG FAILED (SEE LOG)

Reason:

\$NWDBRO received an error code indicating that the attempt to re-organise the NEWSFILE was unsuccessful. More details of the failure may be found in the activity log.

System Action:

Logging is suspended.

User Action:

Determine the cause of the failure, correct and retry.

EWD401**NO KEY PROVIDED****Reason:**

A procedure was invoked to access the NEWS database but was not passed a record key.

System Action:

The process is terminated.

User Action:

Retry the operation, if unsuccessful, contact your systems administrator.

EWD501**NO KEY PROVIDED****Reason:**

A procedure was invoked to access the NEWS database but was not passed a record key.

System Action:

The process is terminated.

User Action:

Retry the operation, if unsuccessful, contact your systems administrator.

EWD601**INVALID PARAMETERS RECEIVED CAT=~P1, NODE=~P2****Reason:**

Procedure \$NWDBSYN expected to be passed two parameters when invoked but received other than two parameters. P1 and P2 are the two parameters passed (if present).

System Action:

The process is terminated.

User Action:

Retry the operation, if unsuccessful, contact your systems administrator.

EWD602

~P1 RESYNCHED

Reason:

The count of detail records in the master record for node P1 within a category has been successfully resynchronised to match the count of actual detail records.

System Action:

None.

User Action:

None.

EWD603

NEWSFILE ~P1 FAILED, KEY=~P2, RC=~P3, FDBK=~P4

Reason:

A VSAM error occurred during NEWSFILE I/O operation P1 (GET or PUT). P2 is the filekey of the master record, P3 is the file return code and P4 is the VSAM FDBK code.

System Action:

The process is terminated.

User Action:

Determine the cause and take the necessary action to correct the problem.

EWD604

~P1 RESYNCH NOT REQUIRED

Reason:

The count of detail records in the master record for node P1 within a category matches the count of actual of actual detail records. No resynchronisation is necessary.

System Action:

None.

User Action:

None.

EWD605**NEWSFILE UNAVAILABLE, RC= P1. REFER TO LOG MESSAGE P2****Reason:**

An attempt to access the NEWSFILE failed because it was unavailable. The return code (*P1*) indicates the cause. The message *P2* written to the LOG will provide further information on the cause of the failure.

System Action:

None.

User Action:

Determine if the file should be available and if so, why it isn't. The meaning of the return code can be found in the NCL Reference in the section for the &FILE SET verb.

EWD701**NO INFORMATION AVAILABLE****Reason:**

A request to display information about a detail record, such as DUMP or VECTOR, is unable to be satisfied because the requested information is not available.

System Action:

None.

User Action:

None.

EWD704**NO CNM RECORD TO RESEND****Reason:**

A 'RESEND' request has been received for a record but there is no CNM data associated with the record.

System Action:

None.

User Action:

None.

EWD705

RESEND DESTINATION TYPE IS INVALID

Reason:

A destination type other than 'DOMAIN', 'LINKNAME' or 'SSCPNAME' has been appended to the 'RESEND' command.

System Action:

None.

User Action:

Correct the destination type and name and retry the command.

EWD706

ALERT SENT SUCCESSFULLY

Reason:

A CNM record has been successfully resent using the 'RESEND' command.

System Action:

None.

User Action:

None.

EWD707

DATA DISPLAY FORMAT IS NOW P1

Reason:

This message is displayed when the ASCII or EBCDIC command has been entered during display of a NEWS record. It confirms that the command has been successful and that the character formatted data will now be displayed in the format requested (*p1* = ASCII or EBCDIC).

System Action:

None.

User Action:

None.

EWD801**REQUEST DELIVERED****Reason:**

A solicitation request to a node has been accepted by the node.

System Action:

None.

User Action:

None.

EWD901**LU NUMBER IS NOT WITHIN RANGE 2 - 129****Reason:**

A number outside the range 2 - 129 was entered in the 3x74 LU LOCADDR field.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and press ENTER or exit by pressing PF03.

EWD902**STATUS LU NUMBER IS NOT WITHIN RANGE 2 - 129****Reason:**

A number outside the range 2 - 129 was entered in the RETRIEVE STATUS field.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and press ENTER or exit by pressing PF03.

EWD903

INVALID VALUE FOR RETRIEVE STATUS LU

Reason:

A value other than 'N' or a number in the range 2 - 129 was entered in the RETRIEVE STATUS field.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and press ENTER or exit by pressing PF03.

EWDB01

INVALID REQUEST OPTION - ~P1

Reason:

The request P1 passed to procedure \$NWREQMS is invalid.

System Action:

The request is rejected.

User Action:

Correct the error and retry.

EWDC01

CNMPROC DETECTED SMF NOT ACTIVE, FDBK=~P1

Reason:

When CNMPROC attempted to write an SMF record, it discovered that SMF was not active. P1 is the FDBK code from the *SMFWRITE* verb.

System Action:

The record is not written to SMF.

User Action:

Start SMF, or turn SMF logging off in the Network Services facility.

EWDC02**CNMPROC DETECTED SMF ERROR WRITING TYPE 37 RECORD,
FDBK=~P1****Reason:**

When attempting to write a record to SMF, CNMPROC received a return code indicating that the write was unsuccessful. P1 is the FDBK code from the SMFWRITE verb.

System Action:

SMF logging for NEWS records is turned off.

User Action:

Determine the cause of the error and correct it.

EWDC03**CNMPROC NOT APF AUTHORISED OR UNSUPPORTED SYSTEM****Reason:**

When attempting to write a record to SMF, CNMPROC received a return code indicating that the write failed because SMF is not supported or CNMPROC is not APF authorised to write SMF records.

System Action:

SMF logging for NEWS records is turned off.

User Action:

Have CNMPROC APF authorised to write SMF records and turn on SMF logging in the Network Services facility.

EWDC04

CNMPROC NOT AUTHORISED TO WRITE TYPE 37 SMF RECORDS

Reason:

When attempting to write a record to SMF, CNMPROC received a return code indicating that the write failed because it was not authorised to write Type 37 SMF records.

System Action:

SMF logging for NEWS records is turned off.

User Action:

Have CNMPROC authorised to write Type 37 SMF records and turn on SMF logging in the Network Services facility.

EWDD01

'RESPONSE=~P1' IS INVALID FOR EC LEVEL DATA SOLICITATION

Reason:

The value P1 cannot be specified for the 'RESPONSE=' parameter when the 'REPORT' parameter is set to 'EC'.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EWDD02

REQUEST DELIVERED

Reason:

A solicitation request for secondary end error data to a node has been accepted by the node.

System Action:

None.

User Action:

None.

EWDD03**END OF SOLICITATION****Reason:**

This is the last of a series of messages issued when a request for secondary end error data has been issued and indicates that there is no more information to follow for this request.

System Action:

None.

User Action:

None.

EWDD04**ERROR DURING ~P1 SOLICITATION****Reason:**

An undetermined error occurred during a P1 solicitation request.

System Action:

The process is terminated.

User Action:

Determine the cause of the error and, if possible, correct it before retrying the command.

EWDD05**COMPONENT DESCRIPTION = ~P1****Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the description of the component (device) being solicited.

System Action:

None.

User Action:

None.

EWDD06

COMPONENT BLOCK ID = ~P1

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the BLK-ID of the device being solicited.

System Action:

None.

User Action:

None.

EWDD07

SDLC LINK TEST COUNTS

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued and is the major heading for the results of the test performed.

System Action:

None.

User Action:

None.

EWDD08

COMMAND RECEIVED COUNT = ~P1, COMMAND RESPONSE COUNT = ~P2

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of Test commands received by the PU (with or without valid FCS) and P2 is the count of Test responses sent by the PU in response to a Test command with a valid FCS.

System Action:

None.

User Action:

None.

EWDD09**COUNT DIFFERENCE = ~P1****Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the difference between the two counts in message EWDD08.

System Action:

None.

User Action:

None.

EWDD10**SUMMARY ERROR COUNTERS****Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued and is the major heading for the results of the test performed.

System Action:

None.

User Action:

None.

EWDD11**NO VALID DATA RETURNED****Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. The PU responding to this request failed to return any valid data for the test.

System Action:

None.

User Action:

None.

EWDD12

PRODUCT DETECTED H/W ERRORS = ~P1, COMMS ADPTR ERRORS = ~P2

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of hardware errors detected by the device and P2 is the count of communication adapter errors.

System Action:

None.

User Action:

None.

EWDD13

SNA NEG. RESPONSES = ~P1

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of negative responses originated by the PU.

System Action:

None.

User Action:

None.

EWDD14**COMMS ADPTR ERRORS NOT YET REPORTED BY RECFMS TYPE 3****Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. This message indicates that communications adapter errors have occurred but have not yet been reported via a RECFMS type 3 record.

System Action:

None.

User Action:

None.

EWDD15**NO CUMULATIVE COMMS ADPTR ERRORS****Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. This message indicates that communications adapter errors have occurred but have already been reported via a RECFMS type 3 record.

System Action:

None.

User Action:

None.

EWDD16

COMMUNICATION ADAPTER ERROR STATISTICS

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued and is the major heading for the results of the test performed.

System Action:

None.

User Action:

None.

EWDD17

UNKNOWN COMMUNICATIONS ADAPTER COUNTER TYPE - ~P1

Reason:

P1 is a type of communications adapter that is not known to this procedure.

System Action:

The formatting for error statistics cannot proceed if the adapter type is unknown because the counters are device (adapter) dependent.

User Action:

None.

EWDD18

ADAPTER TYPE = ~P1

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the type of communications adapter.

System Action:

None.

User Action:

None.

EWDD19**NON-PROD. TIMEOUT = ~P1, PRIMARY STATION ABORT = ~P2****Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of the number of productive timeouts and P2 is the count of primary station aborts.

System Action:

None.

User Action:

None.

EWDD20**NON-PROD. TIMEOUT/RCV OVERRUN = ~P1, PRIMARY STATION ABORT = ~P2****Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of non-productive timeouts/receive overruns and P2 is the count of primary station aborts.

System Action:

None.

User Action:

None.

EWDD21**IDLE TIMEOUT = ~P1, SDLC COMMAND REJECT = ~P2****Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of idle timeouts and P2 is the count of SDLC command rejects caused by invalid SDLC frames.

System Action:

None.

User Action:

None.

EWDD22

WRITE RETRY = ~P1, SDLC DCE ERROR = ~P2

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of frames retransmitted and P2 is count of DCE errors.

System Action:

None.

User Action:

None.

EWDD23

OVERRUN = ~P1, WRITE TIMEOUT = ~P2

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of overruns and P2 is the count of transmit timeouts.

System Action:

None.

User Action:

None.

EWDD24

UNDERRUN = ~P1, INVALID STATUS = ~P2

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of underruns and P2 is the count of invalid status conditions caused by hardware errors.

System Action:

None.

User Action:

None.

EWDD25

CONNECTION PROBLEM = ~P1, COMMS ADAPTER MACHINE CHECK = ~P2

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of times the connection command retry count was exceeded and P2 is the count of times the communication adapter has caused a machine check.

System Action:

None.

User Action:

None.

EWDD26

FCS ERROR = ~P1

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of FCS (Frame Check Sequence) errors.

System Action:

None.

User Action:

None.

EWDD27

TOTAL ERRORS = ~P1

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the total count of all errors displayed by previous messages.

System Action:

None.

User Action:

None.

EWDD28

NON-PROD. TIMEOUT = ~P1, I-FRAMES TRANSMITTED = ~P2

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of non-productive timeouts and P2 is the count of I-frames transmitted.

System Action:

None.

User Action:

None.

EWDD29

I-FRAMES RECEIVED = ~P1, WRITE RETRY = ~P2

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of I-frames received and P2 is the count of frames retransmitted.

System Action:

None.

User Action:

None.

EWDD30**FCS ERROR = ~P1, SDLC COMMAND REJECT = ~P2****Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of FCS (Frame Check Sequence) errors and P2 is the count of SDLC command rejects caused by invalid SDLC frames.

System Action:

None.

User Action:

None.

EWDD31**DCE ERROR = ~P1****Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of DCE errors.

System Action:

None.

User Action:

None.

EWDD32

NOT INITIALISED - CONTROL = $P1$, INTERNAL PARITY. CYCLE STEAL = $P2$

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. $P1$ is the count of commands rejected because of no initialization and $P2$ is the count of data errors detected during internal cycle-steal operations.

System Action:

None.

User Action:

None.

EWDD33

COMMAND REJECT = $\sim P1$, DATA CHECK = $\sim P2$

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. $P1$ is the count of SDLC command rejects caused by invalid SDLC frames and $P2$ is the count of data checks.

System Action:

None.

User Action:

None.

EWDD34**NOT INITIALISED - SENSE = ~P1, DATA LENGTH CHECK = ~P2****Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count Sense commands received when the adapter was not initialised and P2 is the count of RUs that were too long.

System Action:

None.

User Action:

None.

EWDD35**BUS-OUT PARITY - SELECT = ~P1, CONNECT RECEIVED = ~P2****Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of parity errors detected on the channel bus-out during the selection sequence and P2 is the count of Connect commands received when already connected.

System Action:

None.

User Action:

None.

EWDD36

BUS-OUT PARITY - WRITE = $\sim P1$, DISCONNECT RECEIVED = $\sim P2$

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of errors due to a parity check on the bus-out during a Write and P2 is the count of Disconnect commands received when the PU was active.

System Action:

None.

User Action:

None.

EWDD37

INTERNAL PARITY - WRITE = $\sim P1$, LONG RU = $\sim P2$

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of internal parity errors during channel writes and P2 is the count of RUs that were too long to be accepted.

System Action:

None.

User Action:

None.

EWDD38

INTERNAL PARITY - READ, CU = $\sim P1$, CONNECT PARM ERROR = $\sim P2$

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count internal parity errors during reads and P2 is the count of Connect parameter errors.

System Action:

None.

User Action:

None.

EWDD39**INTERNAL PARITY - READ, CHAN = $\sim P1$, INCORRECT SEQUENCE = $\sim P2$** **Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count internal parity errors during channel reads and P2 is the count of frames incorrectly sequenced.

System Action:

None.

User Action:

None.

EWDD40**I-FRAMES TRANSMITTED = $\sim P1$, I-FRAMES RECEIVED = $\sim P2$** **Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count I-frames transmitted and P2 is the count of I-frames received.

System Action:

None.

User Action:

None.

EWDD41**RR FRAMES TRANSMITTED = $\sim P1$, RR FRAMES RECEIVED = $\sim P2$** **Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count RR-frames transmitted and P2 is the count of RR-frames received.

System Action:

None.

User Action:

None.

EWDD42

RNR FRAMES TRANSMITTED = \sim P1, RNR FRAMES RECEIVED = \sim P2

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count RNR-frames transmitted and P2 is the count of RNR-frames received.

System Action:

None.

User Action:

None.

EWDD43

REJ FRAMES TRANSMITTED = \sim P1, REJ FRAMES RECEIVED = \sim P2

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of reject frames transmitted and P2 is the count of reject frames received.

System Action:

None.

User Action:

None.

EWDD44

RETRANSMISSIONS = \sim P1, FCS ERRORS = \sim P2

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of retransmissions and P2 is the count of FCS (Frame Check Sequence) errors.

System Action:

None.

User Action:

None.

EWDD45**RECEIVE SIDE ERRORS = ~P1, RECEIVE SIDE OVERRUNS = ~P2****Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of errors on the receive side and P2 is the count of receive-side overruns.

System Action:

None.

User Action:

None.

EWDD46**TRANSMIT SIDE UNDERRUNS = ~P1****Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of underruns on the transmit side.

System Action:

None.

User Action:

None.

EWDD47**I-PKTS TRANSMITTED = ~P1, I-PKTS RECEIVED = ~P2****Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of I-packets transmitted and P2 is the count of I-packets received.

System Action:

None.

User Action:

None.

EWDD48

RR PKTS TRANSMITTED = \sim P1, RR PKTS RECEIVED = \sim P2

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of RR packets sent and P2 is the count of RR packets received.

System Action:

None.

User Action:

None.

EWDD49

RNR PKTS TRANSMITTED = \sim P1, RNR PKTS RECEIVED = \sim P2

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of RNR packets sent and P2 is the count of RNR packets received.

System Action:

None.

User Action:

None.

EWDD50

INTERRUPT PKTS TRANSMITTED = \sim P1, INTERRUPT PKTS RECEIVED = \sim P2

Reason:

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of interrupt packets transmitted and P2 is the count of interrupt packets received.

System Action:

None.

User Action:

None.

EWDD51**CONNECTION REQUESTS = $\sim P1$, CONNECTIONS = $\sim P2$** **Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of connection requests and P2 is the count of connections.

System Action:

None.

User Action:

None.

EWDD52**RESET INDICATIONS = $\sim P1$, CLEAR INDICATIONS = $\sim P2$** **Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count of reset indications and P2 is the count of clear indications.

System Action:

None.

User Action:

None.

EWDD53**DATA PKTS - D-BIT TRANS. = $\sim P1$, D-BIT RECEIVED = $\sim P2$** **Reason:**

This is one of a series of messages issued when a request for secondary end error data has been issued. P1 is the count data packets with the D-bit transmitted and P2 is the count of data packets with the D-bit received.

System Action:

None.

User Action:

None.

EWDF01

EXPECTED X'0C' SUB-VECTOR NOT FOUND

Reason:

Procedure \$NWSV0C was called to format a x'0C' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWDF02

NAME ~P1 IS TOO LONG

Reason:

Procedure \$NWSV0C was called to build a x'0C' sub-vector but one of the supplied hierarchy names (P1) passed is greater than eight characters in length.

System Action:

The process is terminated.

User Action:

Correct the hierarchy name and retry the operation.

EWDF03

NO RESOURCE TYPE FOR ~P1

Reason:

Procedure \$NWSV0C was called to build a x'0C' sub-vector but one of the supplied hierarchy names (P1) passed has no associated resource type.

System Action:

The process is terminated.

User Action:

Ensure each name has an associated resource type and retry the operation.

EWDF04**NO NAMES SUPPLIED****Reason:**

Procedure \$NWSV0C was called to build a x'0C' sub-vector but no hierarchy names were passed to build the sub-vector.

System Action:

The process is terminated.

User Action:

Ensure that the resource hierarchy names and associated types are supplied and retry the operation.

EWE001**UNABLE TO RETRIEVE CURRENT STATUS FOR LU ~P1****Reason:**

RTM status information is not available for LU P1.

System Action:

The process waits for input from the terminal.

User Action:

Enter required data in all fields to continue or exit by pressing PF03.

EWE002**ENTER 'Y' OR 'N' OR LEAVE BLANK****Reason:**

A value other than 'Y' or 'N' has been entered in the field flagged as being in error.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to return to the previous panel.

EWE003

INVALID BOUNDARY VALUE OR SEQUENCE

Reason:

A value less than the previous boundary value or greater than 1638.3 has been entered in one of the 'New Boundary' fields or a 'New Boundary' field has been left blank when one of the following 'New Boundary' fields contains a value.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry.

EWE004

VALUE NOT WITHIN RANGE 1 - 4 OR MUST BE NULL

Reason:

A value other than a number in the range 1 - 4 has been entered in the 'Set RTM Definition' field.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry.

EWE005

PRESS ENTER TO SEND UPDATE

Reason:

Press the 'ENTER' key to send the RTM configuration update to the specified device(s).

System Action:

The process waits for input from the terminal.

User Action:

Press the 'ENTER' key to send the update or press 'PF03' to exit the panel.

EWE006**PRESS ENTER TO SEND RESET****Reason:**

Press the 'ENTER' key to send a request to reset the RTM counters for the specified device(s).

System Action:

The process waits for input from the terminal.

User Action:

Press the 'ENTER' key to send the reset request or press 'PF03' to exit the panel.

EWE007**NO CHANGES REQUESTED****Reason:**

No fields have been changed on the 'Alter RTM Status' panel.

System Action:

The process waits for input from the terminal.

User Action:

Make the required changes and continue or press 'PF03' to exit the panel.

EWE008**STATUS UPDATE ACCEPTED****Reason:**

The request to alter RTM status for the specified LU(s) has been accepted by the PU.

System Action:

None.

User Action:

None.

EWE009

RETRIEVAL OF CURRENT STATUS FOR LU P1 FAILED - SENSE P2 P3

Reason:

A request for RTM (Response Time Monitor) status for a specific LU P1 has been sent but the response has indicated an error in processing the request. *The System Sense code P2 and User Sense code P3 indicate the nature of the failure.*

System Action:

None.

User Action:

Investigate the reason for the failure.

EWE101

PRESS 'ENTER' FOR ALTERNATE DISPLAY

Reason:

Press the 'ENTER' key to see the alternate RTM display.

System Action:

The process waits for input from the terminal.

User Action:

Press the 'ENTER' key to see the alternate RTM display, select an LU for display or press 'PF03' to exit the panel.

EWE102

INVALID RTM RESPONSE RU RECEIVED

Reason:

An RU was received that did not contain any valid RTM data.

System Action:

The contents of the RU are ignored.

User Action:

None.

EWE103**RESET COMPLETE****Reason:**

The reset of RTM counters for the specified LU(s) has completed.

System Action:

None.

User Action:

None.

EWE104**INVALID SNA ADDRESS LIST TYPE - ~P1****Reason:**

The SNA address list common subvector returned is of a type with which NEWS is not familiar. P1 is the address format type of the subvector.

System Action:

The process is terminated.

User Action:

None.

EWE301**NO STATUS TO DISPLAY****Reason:**

There are no RTM Status details available for display.

System Action:

None.

User Action:

None.

EWE302

NO ~P1 DATA TO DISPLAY

Reason:

There is no more data to be displayed following/preceding the current display. P1 indicates the current scrolling direction.

System Action:

None.

User Action:

None.

EWE501

REQUEST DELIVERED

Reason:

A solicitation request to a node has been accepted by the node.

System Action:

None.

User Action:

None.

EWE502

NEW INTERVAL SET

Reason:

The request to set a new alert generation interval for an FCS device has been accepted by the device.

System Action:

None.

User Action:

None.

EWE503**NEW TIMER INTERVAL OMITTED****Reason:**

A value for the Alert Generation Timer Interval for an FCS device has been omitted when the option to alter the interval has been chosen.

System Action:

None.

User Action:

Enter the new value for the Timer Interval and retry or press PF03 to exit the panel.

EWE504**TIMER INTERVAL MUST BE NUMERIC****Reason:**

The value entered for the new Alert Generation Interval is not numeric.

System Action:

None.

User Action:

Correct the Timer Interval value and retry or press PF03 to exit the panel.

EWE505**TIMER INTERVAL IS NOT WITHIN RANGE 10 - 9999****Reason:**

The value entered for the new Alert Generation Interval is not within the range 10 - 9999.

System Action:

None.

User Action:

Ensure that the Timer Interval value is numeric and retry or press PF03 to exit the panel.

EWE601

REQUEST DELIVERED

Reason:

A solicitation request to a node has been accepted by the node.

System Action:

None.

User Action:

None.

EWE801

REQUEST DELIVERED

Reason:

A solicitation request to a node has been accepted by the node.

System Action:

None.

User Action:

None.

EWE802

INVALID REQUEST OPTION - ~P1

Reason:

The request option (P1) passed to procedure \$NWDS051 is invalid.

System Action:

Processing is terminated.

User Action:

Correct the error and retry.

EWE803**INVALID DATA RETURNED FROM ~P1****Reason:**

The response from node P1 is invalid.

System Action:

Processing is terminated.

User Action:

Determine whether the node should support the request. If so, further investigation may be required to determine why an invalid response was returned.

EWE804**CNM PATH IS VALID AND ACTIVE****Reason:**

The CNM path between the SNA_HUB and the downstream PU is valid and currently active.

System Action:

None.

User Action:

None.

EWE805**CNM PATH IS VALID BUT NOT ACTIVE****Reason:**

The CNM path between the SNA_HUB and the downstream PU is valid but is currently inactive.

System Action:

None.

User Action:

None.

EWE806

CNM PATH IS INVALID

Reason:

The CNM path between the SNA_HUB and the downstream PU is invalid.

System Action:

None.

User Action:

Ensure that the 'DOWNSTREAM PU NAME(S)' are correct. If an invalid name was entered, this message will always be returned in response to a path validation request.

EWEA01

EXPECTED X'01' SUB-VECTOR NOT FOUND

Reason:

Procedure \$NWSV01 was called to format a x'01' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWEA02

REQUIRED X'10' SUBFIELD NOT FOUND

Reason:

Procedure \$NWSV01 was called to format a x'01' sub-vector but the mandatory Local Date/Time subfield (X'10') was not found.

System Action:

Processing continues.

User Action:

None.

EWEB01**EXPECTED X'03' SUB-VECTOR NOT FOUND****Reason:**

Procedure \$NWSV03 was called to format a x'03' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWEB02**NAME ~P1 IS TOO LONG****Reason:**

Procedure \$NWSV03 was called to build a x'03' sub-vector but one of the supplied hierarchy names (P1) passed is greater than eight characters in length.

System Action:

The process is terminated.

User Action:

Correct the hierarchy name and retry the operation.

EWEB03**NO RESOURCE TYPE FOR ~P1****Reason:**

Procedure \$NWSV03 was called to build a x'03' sub-vector but one of the supplied hierarchy names (P1) passed has no associated resource type.

System Action:

The process is terminated.

User Action:

Ensure each name has an associated resource type and retry the operation.

EWEB04

NO NAMES SUPPLIED

Reason:

Procedure \$NWSV03 was called to build a x'03' sub-vector but no hierarchy names were passed to build the sub-vector.

System Action:

The process is terminated.

User Action:

Ensure that the resource hierarchy names and associated types are supplied and retry the operation.

EWEC01

EXPECTED X'04' SUB-VECTOR NOT FOUND

Reason:

Procedure \$NWSV04 was called to format a x'04' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWEC02

UNSUPPORTED X'04' SUB-VECTOR FORMAT (~P1)

Reason:

Procedure \$NWSV04 was called to format a x'04' sub-vector but the supplied format type of the sub-vector (P1) is not supported by this procedure.

System Action:

Processing continues, ignoring the contents of the sub-vector.

User Action:

None.

EWEC03**UNSUPPORTED ADDRESS FORMAT (~P1)****Reason:**

Procedure \$NWSV04 was called to build a x'04' (SNA address list) sub-vector but the supplied address format type to be built is not supported by this procedure.

System Action:

The process is terminated.

User Action:

Correct the address format to be built and retry the operation.

EWED01**EXPECTED X'05' SUB-VECTOR NOT FOUND****Reason:**

Procedure \$NWSV05 was called to format a x'05' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWED02**EXPECTED X'05' SUB-FIELDS NOT FOUND****Reason:**

Procedure \$NWSV05 was called to format a x'05' (resource hierarchy) sub-vector but did not find any of the mandatory sub-fields it expected.

System Action:

Processing continues, ignoring the x'05' sub-vector data.

User Action:

None.

EWEE01

EXPECTED X'10' SUB-VECTOR NOT FOUND

Reason:

Procedure \$NWSV10 was called to format a x'10' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWEE02

EXPECTED X'11' SUB-VECTOR NOT FOUND IN SUB-VECTOR X'10'

Reason:

Procedure \$NWSV10 was called to format a x'10' sub-vector but no x'11' sub-vector was found within the x'10' sub-vector.

System Action:

Processing continues, ignoring the x'10' sub-vector data.

User Action:

None.

EWEE01

EXPECTED X'03' SUB-VECTOR VARIABLE \$CNMSV31XX NOT FOUND

Reason:

Procedure \$NWSV31 was called to format a x'31' (free-form text) sub-vector but the variable containing the text was not found.

System Action:

Processing continues, ignoring the free-form text not found.

User Action:

None.

EWF001**NO END OF DATA FLAG FOUND****Reason:**

The response from node P1 is invalid because no End-of-data flag was included in the RU.

System Action:

Processing is terminated.

User Action:

Determine whether the node should support the request. If so, further investigation may be required to determine why an invalid response was returned.

EWF002**NO DATA RECEIVED WITHIN 30 SECONDS****Reason:**

The wait time for response to a request expired before any data was received.

System Action:

Processing is terminated.

User Action:

Retry the command.

EWF101**REQUEST ACCEPTED****Reason:**

The request to alter the line status for a 3710 has been accepted by the PU.

System Action:

None.

User Action:

None.

EWF102

REQUIRED LINE STATUS OMITTED

Reason:

No value for the new Line Status for a 3710 device has been entered.

System Action:

None.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EWF103

INVALID LINE STATUS OPTION

Reason:

An incorrect value for the new Line Status for a 3710 device has been entered.

System Action:

None.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EWF104

ENTER EITHER LINE NAME OR PORT NUMBER

Reason:

The Line Name or Port Number of the line that is changing status must be entered.

System Action:

None.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EWF105**LINE NAME OR PORT NUMBER ARE MUTUALLY EXCLUSIVE****Reason:**

The Line Name or Port Number of the line that is changing status must be entered but both may not appear on the panel at the same time.

System Action:

None.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EWF106**PORT NUMBER MUST BE HEX****Reason:**

The Port Number must be valid hexadecimal.

System Action:

None.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EWF107**INVALID PORT NUMBER****Reason:**

The Port Number must be valid hexadecimal within the range 01AA - 16BB.

System Action:

None.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EWF204

ENTER EITHER LINE NAME OR PORT NUMBER

Reason:

The Line Name or Port Number being tested must be entered.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EWF205

LINE NAME AND PORT NUMBER ARE MUTUALLY EXCLUSIVE

Reason:

The Line Name or Port Number being tested must be entered but both may not appear on the panel at the same time.

System Action:

None.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EWF206

PORT NUMBER MUST BE HEX

Reason:

The Port Number must be valid hexadecimal.

System Action:

None.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EWF207**INVALID PORT NUMBER****Reason:**

The Port Number must be valid hexadecimal within the range 01AA - 16BB.

System Action:

None.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EWF301**REQUIRED PASSWORD OMITTED****Reason:**

No new password has been entered.

System Action:

None.

User Action:

Enter the required field and retry or press PF03 to exit the panel.

EWF302**PASSWORD MUST BE 6 - 8 CHARACTERS IN LENGTH****Reason:**

The new password must be not less than 6 and not more than 8 characters in length.

System Action:

None.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EWF303

INVALID PASSWORD

Reason:

The new password entered is invalid. It must conform to SNA naming conventions.

System Action:

None.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EWF304

NEW PASSWORD SET

Reason:

The request to set a new password for a 3710 device has been accepted by the device.

System Action:

None.

User Action:

None.

EWF401

PRESS ENTER TO CONFIRM CHANGES OR PRESS PF03 TO CANCEL

Reason:

Press the 'ENTER' key to confirm and send the request to change the threshold(s) for the specified device or press PF03 to cancel the change.

System Action:

The process waits for input from the terminal.

User Action:

Press the 'ENTER' key to send the update or press 'PF03' to cancel the change.

EWF402**REQUIRED STATION TYPE OMITTED****Reason:**

No value for the new Line Status for a 3710 device has been entered.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EWF403**STATION TYPE IS NOT NUMERIC****Reason:**

The Station Type entered must be a numeric value within the range 1 - 5.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EWF404**STATION TYPE IS NOT WITHIN RANGE 1 - 5****Reason:**

The Station Type entered is outside the range 1 - 5.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EWF405

NO THRESHOLD VALUES ENTERED

Reason:

No new Threshold values have been entered although a request to alter at least one of these values has been made.

System Action:

The process waits for input from the terminal.

User Action:

Add the required threshold values and retry.

EWF406

THRESHOLD IS NOT NUMERIC

Reason:

The new Threshold value entered must be a numeric value within the range 0-65535.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EWF407

THRESHOLD IS NOT WITHIN RANGE 0 - 65535

Reason:

The new Threshold value entered is outside the range 0 - 65535.

System Action:

The process waits for input from the terminal.

User Action:

Correct the error and retry or press PF03 to exit the panel.

EWF408**CHANGE REQUESTS ACCEPTED****Reason:**

The request to change the threshold(s) for the specified device has been accepted by the device.

System Action:

None.

User Action:

None.

EWF501**NO END OF DATA FLAG FOUND****Reason:**

The response from node P1 is invalid because no End-of-data flag was included in the RU.

System Action:

Processing is terminated.

User Action:

Determine whether the node should support the request. If so, further investigation may be required to determine why an invalid response was returned.

EWF502**NO DATA RECEIVED WITHIN 30 SECONDS****Reason:**

The wait time for response to a request expired before any data was received.

System Action:

Processing is terminated.

User Action:

Retry the command.

EWF503

COMMAND FAILED - DEVICE '~P1' SENT INVALID DATA

Reason:

The device identified by P1 failed to execute the requested command, it instead sent invalid data in response.

System Action:

Processing is terminated.

User Action:

Determine whether the node should support the request. If so, further investigation may be required to determine why invalid data was returned.

EWF601

INVALID RECFMS RU DETECTED

Reason:

An invalid RECFMS RU was received in response to a command.

System Action:

The procedure terminates.

User Action:

Investigate the cause and correct the error.

EWF602

INVALID ELEMENT ID DETECTED

Reason:

An invalid Element ID was detected in a response to a command.

System Action:

The procedure terminates.

User Action:

Investigate the cause and correct the error.

EWf801**ERROR IN TRANSLATE TABLE****Reason:**

Procedure \$NWDS069 encountered an error whilst verifying a translate table from a 3710.

System Action:

The procedure terminates.

User Action:

Investigate the cause and correct the error.

EWf802**ERROR IN USER DATA****Reason:**

Procedure \$NWDS069 encountered an error whilst verifying the User Data supplied by a 3710 in response to a request.

System Action:

The procedure terminates.

User Action:

Investigate the cause and correct the error.

EWf803**ERROR IN CONFIGURATION DATA****Reason:**

Procedure \$NWDS069 encountered an error whilst verifying Configuration data supplied by a 3710 in response to a request.

System Action:

The procedure terminates.

User Action:

Investigate the cause and correct the error.

EWFA01

EXPECTED X'42' SUB-VECTOR NOT FOUND

Reason:

Procedure \$NWSV42 was called to format a x'42' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWFB01

LPDA-2 COMMAND RESPONSE SENSE CODE=~P1

Reason:

P1 is the sense code returned when an LPDA-2 command has been executed. If the sense code indicates that an error has occurred during the command, the screen display will give a detailed reason for the error if known.

System Action:

None.

User Action:

None.

EWFB02

UNKNOWN LPDA-2 COMMAND CODE - ~P1

Reason:

Procedure \$NWSV50 was unable to determine what command was sent to an LPDA-2 modem when attempting to display the results of the command. P1 is the unknown command code.

System Action:

None.

User Action:

None.

EWFB03**SUB-VECTOR X'50' NOT PRESENT OR IN ERROR****Reason:**

Procedure \$NWSV50 attempted to format a x'50' LPDA-2 response sub-vector but the sub-vector was not passed to it or the contents of the sub-vector did not contain expected sub-fields.

System Action:

Processing of the sub-vector terminates.

User Action:

None.

EWFB04**UNKNOWN CONFIG FIELD CODE ~P1****Reason:**

Procedure \$NWSV50 was called to format a x'50' sub-vector but the configuration code (P1) used to describe the configuration data to be displayed is not known to the procedure.

System Action:

Processing the x'50' sub-vector terminates.

User Action:

None.

EWFD01**EXPECTED X'51' SUB-VECTOR NOT FOUND****Reason:**

Procedure \$NWSV51 was called to format a x'51' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWFE01

EXPECTED X'52' SUB-VECTOR NOT FOUND

Reason:

Procedure \$NWSV52 was called to format a x'52' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWFF01

EXPECTED X'53' SUB-VECTOR NOT FOUND

Reason:

Procedure \$NWSV53 was called to format a x'53' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWFF02

EXPECTED X'53' SUB-FIELDS NOT FOUND

Reason:

Procedure \$NWSV53 was called to format a x'53' (link station counters) sub-vector but did not find any of the mandatory sub-fields it expected.

System Action:

Processing continues, ignoring the x'53' sub-vector data.

User Action:

None.

EWFG01**SUB-VECTOR X'50' DOES NOT EXIST OR IS IN ERROR****Reason:**

Sub-vector X'50' of an NMVT does not exist or is in error. The sub-vector must be present and without error.

System Action:

None.

User Action:

None.

EWFG02**NETINFO1 FILE NOT AVAILABLE****Reason:**

An attempt was made to access the NETINFO1 database in order to find information on a sense code which was found in sub-vector X'50' but the file was not available.

System Action:

None.

User Action:

None.

EWFG03**NO SENSE CODE INFORMATION FOR SENSE CODE X'~P1'****Reason:**

A sense code was found in sub-vector X'50' but no information was found on NETINFO1 for this particular code.

System Action:

None.

User Action:

None.

EWG001

EXPECTED X'54' SUB-VECTOR NOT FOUND

Reason:

Procedure \$NWSV54 was called to format a x'54' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWG002

EXPECTED X'54' SUB-FIELDS NOT FOUND

Reason:

Procedure \$NWSV54 was called to format a x'54' (BSC link station counters) sub-vector but did not find any of the mandatory sub-fields it expected.

System Action:

Processing continues, ignoring the x'54' sub-vector data.

User Action:

None.

EWG101

EXPECTED X'56' SUB-VECTOR NOT FOUND

Reason:

Procedure \$NWSV56 was called to format a x'56' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWG102**EXPECTED X'56' SUB-FIELDS NOT FOUND****Reason:**

Procedure \$NWSV56 was called to format a x'56' (optional link station counters) sub-vector but did not find any of the mandatory sub-fields it expected.

System Action:

Processing continues, ignoring the x'56' sub-vector data.

User Action:

None.

EWG201**EXPECTED X'57' SUB-VECTOR NOT FOUND****Reason:**

Procedure \$NWSV57 was called to format a x'57' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWG202**EXPECTED X'57' SUB-FIELDS NOT FOUND****Reason:**

Procedure \$NWSV57 was called to format a x'57' (LAN physical link station counters) sub-vector but did not find any of the mandatory sub-fields it expected.

System Action:

Processing continues, ignoring the x'57' sub-vector data.

User Action:

None.

EWG301

EXPECTED X'58' SUB-VECTOR NOT FOUND

Reason:

Procedure \$NWSV58 was called to format a x'58' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWG302

EXPECTED X'58' SUB-FIELDS NOT FOUND

Reason:

Procedure \$NWSV58 was called to format a x'58' (NCP specific product data) sub-vector but did not find any of the mandatory sub-fields it expected.

System Action:

Processing continues, ignoring the x'58' sub-vector data.

User Action:

None.

EWG401

EXPECTED X'8A' SUB-VECTOR NOT FOUND

Reason:

Procedure \$NWSV8A was called to format a x'8A' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWG402**EXPECTED X'8A' SUB-FIELDS NOT FOUND****Reason:**

Procedure \$NWSV8A was called to format a x'8A' (link event) sub-vector but did not find any of the mandatory sub-fields it expected.

System Action:

Processing continues, ignoring the x'8A' sub-vector data.

User Action:

None.

EWG501**EXPECTED X'8C' SUB-VECTOR NOT FOUND****Reason:**

Procedure \$NWSV8C was called to format a x'8C' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWG502**EXPECTED X'8C' SUB-FIELDS NOT FOUND****Reason:**

Procedure \$NWSV8C was called to format a x'8C' (link station data) sub-vector but did not find any of the mandatory sub-fields it expected.

System Action:

Processing continues, ignoring the x'8C' sub-vector data.

User Action:

None.

EWG601

EXPECTED X'96' SUB-VECTOR NOT FOUND

Reason:

Procedure \$NWSV96 was called to format a x'96' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWG602

ERROR FORMATTING SUB-VECTOR X'96' DATA

Reason:

While attempting to build a display from details contained in the sub-vector, an error occurred in the processing.

System Action:

The building of information from the sub-vector is discontinued.

User Action:

A display of the contents of the sub-vector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EWG701

EXPECTED X'98' SUB-VECTOR NOT FOUND

Reason:

Procedure \$NWSV98 was called to format a x'98' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWG702**ERROR FORMATTING SUB-VECTOR X'98' DATA****Reason:**

While attempting to build a display from details contained in the sub-vector, an error occurred in the processing.

System Action:

The building of information from the sub-vector is discontinued.

User Action:

A display of the contents of the sub-vector is available from the main display if desired. This is shown when 'V' is entered in the command field and the ENTER key is pressed.

EWG801**~P1 STATUS REQUEST DELIVERED****Reason:**

A solicitation request to a node for P1 status data has been accepted by the node. P1 indicates whether LINK or DTE status data was requested.

System Action:

None.

User Action:

None.

EWG802**ERROR DURING ~P1 STATUS SOLICITATION****Reason:**

An undetermined error occurred during a P1 solicitation request where P1 is the type of status request made - LINK or DTE.

System Action:

The process is terminated.

User Action:

Determine the cause of the error and, if possible, correct it before retrying the command.

EWG901

FILEDD=~P1 AND RESPONSE=~P2 ARE MUTUALLY EXCLUSIVE OPERANDS

Reason:

Any parameter other than "FILE" is invalid for the "RESPONSE" keyword when a file DDNAME is specified.

System Action:

The process is terminated.

User Action:

Correct the "RESPONSE" keyword operand and retry the operation.

EWG902

Unable to P1 output file P2 - Intread queue limit exceeded

Reason:

Procedure \$NWVPDSO cannot detect whether the vital product data output file *P2* opened or closed successfully because it is unable to read the responses from the open or close command. This is because the INTREAD queue limit has been exceeded. *P1* is the operation attempted.

System Action:

The process is terminated.

User Action:

Investigate why the queue has become congested. The maximum queue limit is 32767.

EWG903

REQUEST DELIVERED

Reason:

A solicitation request for vital product data to a node has been accepted by the node.

System Action:

None.

User Action:

None.

EWG904**END OF VITAL PRODUCT DATA SOLICITATION****Reason:**

This is the last of a series of messages issued when a request for vital product data has been issued and indicates that there is no more information to follow for this request.

System Action:

None.

User Action:

None.

EWG905**ERROR DURING VITAL PRODUCT DATA SOLICITATION, RC=~P1****Reason:**

An undetermined error occurred during a vital product data solicitation request. P1 is the code returned indicating that an error occurred.

System Action:

The process is terminated.

User Action:

Determine the cause of the error and, if possible, correct it before retrying the command.

EWG906**NO PRODUCT SET ID SUB-VECTOR RECEIVED****Reason:**

All vital product data is returned as part of a x'10 sub-vector, but none was received. No vital product data can be created.

System Action:

The process continues if the option is to solicit data for the controller and all attached devices, else the process is terminated.

User Action:

None.

EWG907

COMPONENT DESCRIPTION = ~P1

Reason:

This is one of a series of messages issued when a request for vital product data has been issued. P1 is the component description of the product as defined in category 1 of the Network Services Control (NSCNTL) file.

System Action:

None.

User Action:

None.

EWG908

HARDWARE PRODUCT MACHINE TYPE = ~P1

Reason:

This is one of a series of messages issued when a request for vital product data has been issued. P1 is the type and model (if applicable) of the hardware product. e.g. 3745 (MODEL 170).

System Action:

None.

User Action:

None.

EWG909

MACHINE SERIAL NUMBER = ~P1

Reason:

This is one of a series of messages issued when a request for vital product data has been issued. P1 is the serial number of the hardware product.

System Action:

None.

User Action:

None.

EWG910**MACHINE REPAIR ID NUMBER = ~P1****Reason:**

This is one of a series of messages issued when a request for vital product data has been issued. P1 is the repair identifier number of the hardware product.

System Action:

None.

User Action:

None.

EWG911**SOFTWARE PRODUCT PROGRAM NUMBER = ~P1****Reason:**

This is one of a series of messages issued when a request for vital product data has been issued. P1 is the program number of the software product.

System Action:

None.

User Action:

None.

EWG912**CUSTOMISATION DATE AND TIME = ~P1****Reason:**

This is one of a series of messages issued when a request for vital product data has been issued. P1 is the data and time (in the format DD-MON-YEAR HH:MM) that the software product was modified by the user.

System Action:

None.

User Action:

None.

EWG913

EMULATED PRODUCT MACHINE TYPE = ~P1

Reason:

This is one of a series of messages issued when a request for vital product data has been issued. P1 is the type and model (if applicable) of the hardware product (e.g. 3745 (MODEL 170)) being emulated.

System Action:

None.

User Action:

None.

EWG914

SOFTWARE SERVICEABLE COMPONENT = ~P1

Reason:

This is one of a series of messages issued when a request for vital product data has been issued. P1 is the software serviceable component number of the product as defined by service personnel.

System Action:

None.

User Action:

None.

EWG915

SOFTWARE SERVICEABLE COMPONENT RELEASE LEVEL = ~P1

Reason:

This is one of a series of messages issued when a request for vital product data has been issued. P1 is the release level of the software serviceable component.

System Action:

None.

User Action:

None.

EWG916**SOFTWARE PRODUCT COMMON LEVEL = ~P1****Reason:**

This is one of a series of messages issued when a request for vital product data has been issued. P1 is the common level (in the format Vvv.rr.mm) of the software product.

System Action:

None.

User Action:

None.

EWG917**SOFTWARE PRODUCT COMMON NAME = ~P1****Reason:**

This is one of a series of messages issued when a request for vital product data has been issued. P1 is the common name of the software product.

System Action:

None.

User Action:

None.

EWG918**SOFTWARE PRODUCT CUSTOMISATION = ~P1****Reason:**

This is one of a series of messages issued when a request for vital product data has been issued. P1 identifies the set of executable instructions of the software product customised by the user.

System Action:

None.

User Action:

None.

EWG919

MICROCODE EC LEVEL = ~P1

Reason:

This is one of a series of messages issued when a request for vital product data has been issued. P1 is the Engineering Change (EC) level of the microcode component of the hardware product.

System Action:

None.

User Action:

None.

EWG920

HARDWARE PRODUCT COMMON NAME = ~P1

Reason:

This is one of a series of messages issued when a request for vital product data has been issued. P1 is the common name of the hardware product.

System Action:

None.

User Action:

None.

EWG921

PRIMARY LU ADDRESS = ~P1

Reason:

This is one of a series of messages issued when a request for vital product data has been issued. P1 is the LU address of a device attached to a PU.

System Action:

None.

User Action:

None.

EWG922**RECORD GENERATION RELATIVE TIME = ~P1****Reason:**

This is one of a series of messages issued when a request for vital product data has been issued. P1 may be either a sequence number to indicate the relative order of records delivered or an interval of time measurement since an alert was last sent by the device.

System Action:

None.

User Action:

None.

EWG923**UNIQUE PORT NUMBER = ~P1****Reason:**

This is one of a series of messages issued when a request for vital product data has been issued. P1 is the unique port number of the owning PU to which the device is attached.

System Action:

None.

User Action:

None.

EWG924**HARDWARE GROUP = ~P1****Reason:**

This is one of a series of messages issued when a request for vital product data has been issued. P1 is the hardware group of the attached device.

System Action:

None.

User Action:

None.

EWG925

PORT TYPE = ~P1

Reason:

This is one of a series of messages issued when a request for vital product data has been issued. P1 is the type of port to which the device is attached.

System Action:

None.

User Action:

None.

EWG926

PORT NUMBER = ~P1

Reason:

This is one of a series of messages issued when a request for vital product data has been issued. P1 is the port number relative to the hardware group in which it is defined.

System Action:

None.

User Action:

None.

EWG927

POWER-ON STATUS = ~P1

Reason:

This is one of a series of messages issued when a request for vital product data has been issued. P1 is set to 'ON', 'OFF' or 'UNKNOWN' to indicate the current power-on status of the device.

System Action:

None.

User Action:

None.

EWG928**POWERED ON SINCE LAST SOLICIT = ~P1****Reason:**

This is one of a series of messages issued when a request for vital product data has been issued. P1 is set to 'YES', 'NO' or 'UNKNOWN' to indicate whether or not the device has been powered on since the last time vital product data was sent by the device.

System Action:

None.

User Action:

None.

EWG929**~P1 FILE UNAVAILABLE, RC=~P2****Reason:**

An attempt to access the vital product data output file (identified by P1) was unsuccessful. The return code (P2) indicates the cause.

System Action:

The process is terminated.

User Action:

Determine why the file is unavailable, correct the problem and retry the operation.

EWG930

~P1 PUT FAILED, KEY=~P2, RC=~P3, FDBK=~P4

Reason:

A VSAM error occurred during a put I/O operation to the vital product data output file (identified by P1). P2 is the filekey of the record, P3 is the file return code and P4 is the VSAM FDBK code.

System Action:

Processing continues, attempting to write any more records to the file.

User Action:

Take note of the message and inform your systems administrator if you are unable to resolve the problem.

EWG931

VENDOR ID = ~P1

Reason:

This is one of a series of messages issued when a request for vital product data has been issued. P1 identifies the product vendor, e.g. the company.

System Action:

None.

User Action:

None.

EWG932

PHYSICAL LOCATION = ~P1

Reason:

This is one of a series of messages issued when a request for vital product data has been issued. P1 describes the physical location of the product.

System Action:

None.

User Action:

None.

EWG933**LAN UNIVERSAL ADDRESS = ~P1****Reason:**

This is one of a series of messages issued when a request for vital product data has been issued. P1 is the LAN universally-assigned address which is unique across all LAN adapters whose addresses are controlled by the IEEE.

System Action:

None.

User Action:

None.

EWG934**~P1****Reason:**

This is one of a series of messages issued when a request for vital product data has been issued. P1 is a description of the data following in message EWG935.

System Action:

None.

User Action:

None.

EWG935**~P1****Reason:**

This is one of a series of messages issued when a request for vital product data has been issued. P1 is data as described by the text of message EWG934 which immediately precedes this message.

System Action:

None.

User Action:

None.

EWG940

YEARFMT= P1 AND RESPONSE= P2 ARE MUTUALLY EXCLUSIVE OPERANDS

Reason:

Any parameter other than FILE is invalid for the RESPONSE keyword when the YEARFMT parameter is specified.

System Action:

The process is terminated.

User Action:

Correct the RESPONSE keyword operand and retry the operation.

EWGE01

NETVALRT receiver not started

Reason:

The PPI alert receiver procedure \$NWPPIAR has terminated during start-up processing. This message follows another message which gives the reason for the termination of the procedure.

System Action:

The process terminates.

User Action:

Determine the original failure reason, correct, and retry.

EWGE02

PPI not available

Reason:

The PPI alert receiver procedure \$NWPPIAR has terminated during start-up processing because the Program-to-Program Interface is unavailable.

System Action:

The process terminates.

User Action:

None.

EWGE03**PPI define failed, RC= P1, FDBK= P2****Reason:**

The PPI alert receiver procedure \$NWPPIAR has terminated during start-up processing because the &PPI DEFINE failed. *P1* and *P2* are, respectively, the return and FDBK codes from the &PPI DEFINE verb.

System Action:

The process terminates.

User Action:

None

EWGE04**NETVALRT receiver terminated, RC= P1, FDBK= P2****Reason:**

The PPI alert receiver procedure \$NWPPIAR has terminated. *P1* and *P2* are, respectively, the return and FDBK codes from the &PPI RECEIVE verb.

System Action:

The process terminates.

User Action:

None

EWGE05**Invalid alert length (P1) received from P2****Reason:**

Procedure \$NWPPIAR has received an alert across the PPI from *P2* but the length (*P1*) is invalid because it is outside the range of 12 to 512. Message EWGE06 follows, displaying the 12 bytes of data from the alert.

System Action:

The alert data received is ignored.

User Action:

None

EWGE06

First 12 bytes (in hex): P1

Reason:

Procedure \$NWPPIAR has received an alert across the PPI but the record is invalid. *P1* is the first 12 bytes of the rejected record.

System Action:

None

User Action:

None

EWGE07

Invalid alert header received from P1

Reason:

Procedure \$NWPPIAR has received an alert across the PPI from *P1* but the alert header is invalid. Message EWGE06 follows, displaying the first 12 bytes of data from the alert.

System Action:

The alert data received is ignored.

User Action:

None

EWGE08

Embedded alert length (X' P1') inconsistent with passed NMVT length (P2) received from P3

Reason:

Procedure \$NWPPIAR has received an alert across the PPI from **P3** but the length specified in the major vector header (**x'P1'**) does not match the total length of the data sent. Message EWGE06 follows, displaying the first 12 bytes of data from the alert.

System Action:

The alert data received is ignored.

User Action:

None

EWGE09**CNMALERT for P1 failed, RC= P2****Reason:**

Procedure \$NWPPIAR attempted to send an alert from *P1* to CNMPROC but failed. *P2* is the return code from the &CNMALERT verb. A message follows giving the reason why the alert failed.

System Action:

Processing continues.

User Action:

None

EWGE10**NETVALRT receiver successfully started - ID= P1****Reason:**

The PPI alert receiver procedure \$NWPPIAR has successfully registered to the Program- to-Program Interface as an alert receiver. The NCLID of the process is shown (*P1*).

System Action:

None

User Action:

None

EWGE11**NETVALRT receiver already active - ID= P1****Reason:**

The PPI alert receiver procedure \$NWPPIAR is already active. Only one instance of the receiver can be active. The instance that is currently active is identified by its NCLID (*P1*).

System Action:

The PPI receiver is not started.

User Action:

None

EWGE12

PPI define failed. Receiver= P1 is in use in another region

Reason:

The PPI alert receiver procedure \$NWPPIAR has terminated during start-up processing because the &PPI DEFINE failed with FDBK=16 indicating that the names receiver ID (P1) is already active in another region in this LPAR. The other region may be NetMaster or another application.

System Action:

The process terminates.

User Action:

If using the Netmaster SubSystem Interface (NMSSI), use the NMSSI's SHOW PPIUSERS command to determine which region is using it. Note that the command must be executed by the NMSSI, for example: SYSCMD F NMSSI,SHOW PPIUSERS

EWGG01

INVALID SUB-VECTORS RECEIVED IN SUB-VECTOR X'A0' FORMATTING PROC

Reason:

The formatting proc for sub-vector X'A0' couldn't interpret the vectors within the X'A0' vector.

System Action:

Format proc ends.

User Action:

Report to tech support if problem persist.

EWGH01**EXPECTED X'4A' SUB-VECTOR NOT FOUND****Reason:**

Procedure \$NWSV4A was called to format a x'4A' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWGI01**EXPECTED X'5C' SUB-VECTOR NOT FOUND****Reason:**

Procedure \$NWSV5C was called to format a x'5C' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWGJ01**EXPECTED X'5D' SUB-VECTOR NOT FOUND****Reason:**

Procedure \$NWSV5D was called to format a x'5D' sub-vector but one was not passed to the procedure.

System Action:

Processing continues.

User Action:

None.

EWI101

NEWS RECORD CATEGORY NOT SPECIFIED

Reason:

The generation of a NEWS report failed because the record category to be processed by the Report Writer service procedure was not specified.

System Action:

The generation of the report is terminated.

User Action:

Determine the cause, correct and retry.

EWI102

INVALID NEWS RECORD CATEGORY SPECIFIED - ~P1

Reason:

The generation of a NEWS report failed because an invalid record category was specified.

System Action:

The generation of the report is terminated.

User Action:

Determine the cause, correct and retry.

EWI103

SYSTEM (NEWS FILEID) NOT SPECIFIED

Reason:

The generation of a NEWS report failed because the system name (NEWS file id) was not specified.

System Action:

The generation of the report is terminated.

User Action:

Determine the cause, correct and retry.

EWI104**UNABLE TO ACCESS NEWS FILE - FILEID=~P1, FILERC=~P2****Reason:**

The generation of a NEWS report failed because the Report Writer service procedure was unable to access the specified NEWS file.

System Action:

The generation of the report is terminated.

User Action:

Determine the cause, correct and retry.

EWI105**NEWS FILE GET ERROR - FILEID=~P1, FILERC=~P2, FILEKEY=~P3****Reason:**

The generation of a NEWS report failed because the Report Writer service procedure detected an error when getting a record from the NEWS file.

System Action:

The generation of the report is terminated.

User Action:

Determine the cause, correct and retry.

EWK101**CSCF USER ~P1 HAS DEVICE ~P2****Reason:**

A X'7D' key was received in a deliver RU. A probably cause is that the session has been terminated by a NetView CSCF session.

System Action:

Control is returned back to the CSCF primary menu with this message.

User Action:

Try again.

EWK102

CSCF TIMEOUT -- NO ACTIVITY FOR ~P1 MINUTES ON DEVICE ~P2

Reason:

The INWAIT value on a PANEL statement has expired.

System Action:

User is logged off and returned to the primary menu with this message.

User Action:

Try again.

EWK103

FILE ~P1 ERROR FOR KEY:~P2 FILERC:~P3 VSAMFDBK:~P4

Reason:

An error has occurred on a *FILE* process. This is the NSCNTL file.

System Action:

User is logged off and returned to the primary menu with this message.

User Action:

Determine cause of file problem.

EWK104

FILE ERROR OPENING NSCNTL. FILERC:~P1 VSAMFDBK:~P2

Reason:

An error has occurred on a *FILE OPEN* process.

System Action:

User is logged off and returned to the primary menu with this message.

User Action:

Determine cause of file problem.

EWK105**INVALID PARMS ON PRINT COMMAND, PRINT DENIED****Reason:**

An error has occurred due to the user specifying invalid parms on the print command.

System Action:

Print function is terminated.

User Action:

Specify correct parms on print command.

EWK106**SCREEN SUCCESSFULLY PRINTED TO THE LOG.****Reason:**

A PRINT PRINTER=LOG was entered at the COMMAND line and the current screen was printed to the activity log.

System Action:

None.

User Action:

None.

EWK107**CSCF LOGOFF ON DEVICE ~P1 HAS BEEN REQUESTED. (RETURN CODE: ~P2)****Reason:**

This message is presented after a user enters an 'FL' (force logoff) command from the primary CSCF menu.

System Action:

None.

User Action:

User will now be able to use CSCF Control Functions (option 'C') against the controller. NOTE: if there was a user using CSCF against a controller that has just been forced off, the next ENTER or PFKEY will cause a timeout of their session. This is expected, and not a problem.

EWK108

UNEXPECTED PANEL INFORMATION SENT BY CONTROLLER

Reason:

This message is presented to a user if unexpected panel information is sent to CSCF by the controller.

System Action:

None.

User Action:

Call support.

EWK201

ABNORMAL TERMINATION OF CSCF SESSION. SENSE DATA = ~P1

Reason:

A 'X'7D' key was received in a deliver RU. A probable cause is that the session has been terminated by a NetView CSCF session.

System Action:

Control is returned to the CSCF primary menu with this message.

User Action:

Try again.

EWK202

CONTROLLER HAS NOT RESPONDED WITHIN SPECIFIED TIME LIMIT.

Reason:

A CNMREAD with a WAIT=NN has expired and processing has stopped. NOTE: This will be a common occurrence during an IML, since the controller will not respond.

System Action:

Control is returned back to the CSCF primary menu with this message.

User Action:

Try again.

EWK701**USER ~P1 DOESN'T HAVE NEWS RESET AUTHORITY, DELETE FAILED.****Reason:**

An attempt to delete a panel from the CSCF panel menu was unsuccessful as the user doesn't have the proper authorisation to delete CSCF PANELS. The user must have NEWS RESET authority.

System Action:

Panel is not deleted from the NSCNTL file.

User Action:

Contact your system administrator who has the proper authority to delete any CSCF panels.

EWK704**PURGE COMMAND ISSUED WITHOUT ANY PARMS, ENTER "ALL" OR "YY/MM/DD".****Reason:**

An attempt to purge panels from the command line was unsuccessful as the user didn't specify the proper parameters for the PURGE commands.

System Action:

Error message returned to user.

User Action:

Enter the correct parameters for the PURGE command.

EWK901**PARAM ~P1 IS INCORRECT, SPECIFY "ALL" OR DATE IN "YY/MM/DD" FORMAT.****Reason:**

An attempt to purge panels from the command line was unsuccessful as the user didn't specify the proper parameters for the PURGE command.

System Action:

Error message returned to user.

User Action:

Enter the correct parameters for the PURGE command.

EWK902

PANEL RECORD DELETION FAILED.

Reason:

An attempt to delete a panel from the CSCF panel menu failed.

System Action:

The CSCF panel is not deleted from the NSCNTL file.

User Action:

Display the panel again, and if it shows up on the CSCF panel menu and you can't delete it then call the support center.

EWK903

PANEL RECORD ~P1 WAS SUCCESSFULLY DELETED.

Reason:

An attempt to delete a panel from the CSCF panel menu was successful.

System Action:

Panel is deleted from the NSCNTL file.

User Action:

None.

EWK904

TOTAL NUMBER OF PANELS DELETED: ~P1.

Reason:

A purge command was issued with a purge date and the number of panels deleted is indicated in the message text.

System Action:

The panels are deleted from the NSCNTL file.

User Action:

None.

EWKA00**REQUEST ~P1 WAS SUCCESSFUL, ~P2 PANEL DISPLAY SENT TO ~P3****Reason:**

PRINT is available to the CSCF online user from any controller panel. This message informs the user that the PRINT was successful.

System Action:

The list has been printed.

User Action:

None.

EWKA01**PRINT DENIED, COPIES PARAMETER MUST BE IN THE NUMERIC RANGE OF (1,255)****Reason:**

The COPIES parameter is available to any CSCF panel on a PRINT command. However, the data associated with this parameter must be greater than 0 and less than 256.

System Action:

The data will not be printed since the COPIES parameter is in error.

User Action:

Correct the copies parameter when retrying the PRINT command so that it is within the specified range.

EWKA02**PRINT DENIED, HOLD PARAMETER MUST BE EITHER 'YES' OR 'NO'****Reason:**

The HOLD parameter is available to any CSCF menu for a PRINT command. However, the data associated with this parameter must be either YES or NO.

System Action:

The data will not be printed since the HOLD parameter is in error.

User Action:

N/A

EWKA03

PRINT DENIED, PRINT LIST CONTAINS NO INFORMATION.

Reason:

PRINT is available to any CSCF panel from the command line. However, if no data is available then the print will be denied.

System Action:

Nothing will be printed as this is an internal error. The calling proc must ensure that all of the proper variables are in place.

User Action:

N/A

EWKA04

PRINT REQUEST COULD NOT BE OPENED; CHECK PRINT SERVICES MANAGER

Reason:

When a CSCF print attempted to open up a print request, a request number could not be had. Check Print Services Manager (PSM) to make sure that \$PSPOOL is allocated and opened. Also make sure that the printer which was specified is set up correctly.

System Action:

The data will not be printed since a request number was not returned from \$PSCALL.

User Action:

Check PSM.

EWKA05**REQUEST ~P1 WAS SUCCESSFUL, ~P2 LIST IS HELD ON THE QUEUE****Reason:**

PRINT is available to the CSCF online user at any controller panel. This message tells the administrator that the PRINT command was successful but that the printout is on the queue because the HOLD=YES parameter was coded on the PRINT command.

System Action:

The list is on the queue.

User Action:

The printout can be seen on Print Services Manager under the USERID of the administrator. The request number which is contained in this message can be used as an identifier on the PSM.

EWKB01**INVALID KEYWORD PARM.****Reason:**

An error has occurred due to the user specifying invalid parms on the call to the CSCF batch interface.

System Action:

Non-zero return code and this message are returned.

User Action:

Correct keyword parm.

EWKB02**FUNC PARM MUST BE EITHER LOGON, ACTION, OR LOGOFF.****Reason:**

An error has occurred due to the user specifying invalid value for the FUNC parm for the CSCF batch interface.

System Action:

Non-zero return code and this message are returned.

User Action:

Correct keyword parm value.

EWKB03

NODE PARM VALUE REQUIRED.

Reason:

An error has occurred due to the user not providing a NODE parm for the the CSCF batch interface.

System Action:

Non-zero return code and this message are returned.

User Action:

Supply NODE parm

EWKB04

KEY PARM VALUE REQUIRED WHEN FUNC=ACTION.

Reason:

An error has occurred due to the user not providing a KEY parm for the the CSCF batch interface.

System Action:

Non-zero return code and this message are returned.

User Action:

Supply KEY parm

EWKB05

KEY PARM VALUE ~P1 IS INVALID. ONLY VALID VALUES ARE PF01-PF24 AND ENTER

Reason:

An error has occurred due to the user providing a KEY parm other than a PFKEY or ENTER for the CSCF batch interface.

System Action:

Non-zero return code and this message are returned.

User Action:

Supply correct KEY parm

EWKB06**THE SESSION ID HAS BEEN LOST. PLEASE RESTART BATCH PROCESSING WITH A FU NC=LOGON.****Reason:**

An error has occurred due to no \$NWCS#ID variable for the CSCF batch interface. Be sure that the calling procedure has *CONTROL* SHRVAR=(\$NWCS#,\$NW#USR).

System Action:

Non-zero return code and this message are returned.

User Action:

Retry Batch procedure.

EWKB07**USER ~P1 DOES NOT HAVE NEWS AUTHORITY.****Reason:**

An attempt to call the CSCF batch interface by a user that does not have NEWS authority.

System Action:

End processing.

User Action:

Obtain NEWS authority.

EWL601**NO KEY SUPPLIED****Reason:**

A procedure was invoked to access the NEWSFILE file but was not passed any record key.

System Action:

The process is terminated.

User Action:

None.

EWL602

CONTROL FILE ERROR, RC= P1

Reason:

An attempt to access the NSCNTL failed. The return code (*P1*) indicates the cause.

System Action:

The process is terminated.

User Action:

Determine if the NSCNTL file is available. The meaning of the return code can be found in the NCL Reference in the section for the &FILEID verb.

EWL603

\$CNM DECODE ERROR

Reason:

An attempt to break down a CNM record into its constituent parts has failed.

System Action:

Processing of the CNM record is terminated.

User Action:

None.

EWL604

INVALID MDO RECEIVED, UNKNOWN MAP=~P1

Reason:

The procedure for decoding CNM records for the problem management application has encountered an MDO mapped by an unrecognised map. P1 is the name of the unrecognised map.

System Action:

Processing of the CNM record is terminated.

User Action:

None.

EWL605**CNM RECORD FORMATTING ERROR****Reason:**

An attempt to break down a CNM record into its constituent parts has failed.

System Action:

Processing of the CNM record is terminated.

User Action:

None.

EWL606**NO CNM DETAIL DATA AVAILABLE****Reason:**

The procedure for decoding CNM records for the problem management application was unable to extract any valid information from a CNM record.

System Action:

Processing of the CNM record is terminated.

User Action:

None.

EWL710**NEWS PROBLEM MANAGEMENT SERVER \$NWPRMON NO LONGER SUPPORTED****Reason:**

The NEWS problem management server (\$NWPRMON) is no longer supported.

System Action:

None.

User Action:

Update your NetMaster for SNA initialization procedure, normally \$NSINIT, to remove the call.

EWL801

USER ID ~P1 NOT AUTHORISED TO MODIFY CONTROL FILE

Reason:

The user P1 attempted to modify or delete records in the NSCNTL file without the appropriate authority level.

System Action:

The process is terminated.

User Action:

Contact your security administrator to upgrade your level of authority.

EWL802

CONTROL FILE UNAVAILABLE, RC=~P1

Reason:

An attempt to access the NSCNTL failed because it was unavailable. The return code (P1) indicates the cause.

System Action:

The process is terminated.

User Action:

Determine if the NSCNTL file is available. The meaning of the return code can be found in the NCL User Reference in the section for the *FILEID* verb.

EWL803

~P1 RECORDS DELETED

Reason:

The number of records indicated by P1 have been deleted from Category 027 of the NSCNTL file.

System Action:

None.

User Action:

None.

EWL804**NSCNTL GENERIC DELETE ERROR, RC=~P1, FDBK=~P2****Reason:**

When attempting to delete Category 027 of the NSCNTL file, a VSAM error occurred. P1 is the file return code and P2 is the VSAM FDBK code.

System Action:

Processing terminates.

User Action:

Determine the cause of the error and retry after correction.

EWMR01**REQUEST TIMED OUT****Reason:**

A request has timed out whilst waiting for a response from a device.

System Action:

Processing is terminated.

User Action:

Retry the function.

EWN101**P1 NOT SUPPLIED****Reason:**

A parameter was not supplied when calling the Frame Route details procedure.

System Action:

None.

User Action:

Correct the command and retry.

EWN201

P1 NOT SUPPLIED

Reason:

A parameter was not supplied when calling the NEWSFILE common processor.

System Action:

None.

User Action:

Correct the command and retry.

EWN202

INVALID VALUE FOR P1 - P2

Reason:

The value supplied for the keyword *P1* does not match any of the valid values defined. *P2* is the invalid value.

System Action:

None.

User Action:

Correct the entry and retry.

EWN203

NEWSFILE UNAVAILABLE, RC= P1

Reason:

An attempt to access the NEWSFILE failed because it was unavailable. The return code (*P1*) indicates the cause.

System Action:

None.

User Action:

Determine if the file should be available and if so, why it isn't. The meaning of the return code can be found in the NCL Reference in the section for the &FILE SET verb.

EWN204**NEWSFILE UNAVAILABLE, RC= P1. REFER TO LOG MESSAGE P2****Reason:**

An attempt to access the NEWSFILE failed because it was unavailable. The return code (*P1*) indicates the cause. The message *P2* written to the LOG will provide further information on the cause of the failure.

System Action:

None.

User Action:

Determine if the file should be available and if so, why it isn't. The meaning of the return code can be found in the NCL Reference in the section for the &FILE SET verb.

EWN205**UNABLE TO OBTAIN LOCK FOR NEWSFILE****Reason:**

A lock is in place on the NEWS database, temporarily restricting access to it.

System Action:

None.

User Action:

Retry the action. If the problem persists, consult your systems administrator.

EWN206**NEWSFILE P1 FAILED, KEY= P2, RC= P3, FDBK= P4****Reason:**

A VSAM error occurred during NEWSFILE I/O operation *P1* (GET, DELETE, ADD or PUT). *P2* is the filekey of the record, *P3* is the file return code and *P4* is the VSAM FDBK code.

System Action:

The file operation is terminated.

User Action:

Determine the cause and take the necessary action to correct the problem.

EWN207

NEWSFILE P1 FAILED, KEY= P2, RC= P3, FDBK= P4. REFER TO LOG MESSAGE P5

Reason:

A VSAM error occurred during NEWSFILE I/O operation **P1** (GET, DELETE, ADD or PUT). **P2** is the key of the record, **P3** is the file return code and **P4** is the VSAM FDBK code. The message **P5** written to the LOG will provide further information on the cause of the failure.

System Action:

The file operation is terminated.

User Action:

Determine the cause and take the necessary action to correct the problem.

EWN208

SEQUENCE P1 NOT FOUND

Reason:

The specified sequence name does not exist.

System Action:

The call is rejected.

User Action:

Correct the call and retry.

EWN209

INVALID PARAMETERS FOR P1 SEQUENCE

Reason:

The call parameters conflict with those used when the sequence was created.

System Action:

The call is rejected.

User Action:

Correct the call and retry.

EWN210**NEWSFILE P1 FAILED, KEY= P2, RC= P3****Reason:**

A VSAM error occurred during NEWSFILE I/O operation *P1* (GET, DELETE, ADD or PUT). *P2* is the filekey of the record, *P3* is the file return code.

System Action:

The file operation is terminated.

User Action:

Determine the cause and take the necessary action to correct the problem.

EWN211**RECORD NOT FOUND****Reason:**

The NEWSFILE access procedure was invoked to retrieve a record from the NEWS database but the key provided does not match any record in the NEWS database.

System Action:

The process is terminated.

User Action:

Retry the operation, if unsuccessful, the record has probably been deleted.

EWP201**Unable to determine Backup Focal Point - name not defined****Reason:**

The name of the Backup Focal Point has not been defined for use by Entry Points registered to this Focal Point.

System Action:

No Backup Focal Point is defined.

User Action:

If this is required, use SNA : Focal Point Administration (/SNAFPA) to define the entry.

EWP202

Unable to obtain Backup Focal Point name - See message P1

Reason:

An attempt to obtain the name of the Backup Focal Point (for Entry Points registered to this system's Focal Point for Alert Management) from the NSCNTL file has failed. *P1* is the reference to the activity log message that more fully describes the file error.

System Action:

The Backup Focal Point is not defined.

User Action:

See the explanation for the referenced message.

EWP203

Unable to determine Nesting Focal Point - name not defined

Reason:

An attempt to initiate a relationship (for Problem Management) between this system's Focal Point (as an Entry Point) and our nesting Focal Point has failed because the name of the nesting Focal Point has not been defined to this system.

System Action:

No Nesting Focal Point is defined.

User Action:

If this is required, use SNA : Focal Point Administration (/SNAFPA) to define the entry.

EWP204**Unable to obtain Nesting Focal Point name - see message P1****Reason:**

An attempt to obtain the name of the Problem Management nesting Focal Point from the NSCNTL file has failed. *P1* is the reference to the activity log message that more fully describes the file error.

System Action:

The Nesting Focal Point is not defined.

User Action:

See the explanation for the referenced message.

EWP205**Access to the NSCNTL file not allowed****Reason:**

An attempt to access the NSCNTL file has returned an error code indicating that no access is allowed to the file.

System Action:

The process is terminated.

User Action:

Refer the problem to your systems administrator. This error indicates that your administrator has restricted access to the file using the NCLEX01 exit.

EWP206**NSCNTL file unavailable - see message P1****Reason:**

In attempt to access the NSCNTL failed because it was unavailable. *P1* is the reference to the activity log message that more fully describes the file error.

System Action:

The process is terminated.

User Action:

See the explanation for the referenced message.

EWP207

NSCNTL Get failed, Key= P1, RC= P2, Fdbk= P3

Reason:

A VSAM error occurred during NSCNTL file GET I/O operation. *P1* is the file key of the record, *P2* is the file return code and *P3* is the VSAM FDBK code.

System Action:

The process is terminated.

User Action:

Determine the cause and take the necessary action to correct the problem. See the NCL Reference Manual for an explanation of &FILE return code values.

EWR001

COMMAND GENERATED EXCEEDS 253 CHARACTERS

Reason:

The command generated is sent as a sub-vector 31 Self-Defining Text Message. The maximum that it can accommodate is 253 characters. This request has exceeded the limit, possibly due to lengthy names.

System Action:

The request is ignored.

User Action:

Check all inputs. If possible, split the request into two or more commands.

EWR002

SENSE DATA DESCRIPTION : ~P1

Reason:

This message is sent in response when the command request is unable to be satisfied. *P1* is the sense code giving the reason for the request failure.

System Action:

None.

User Action:

None.

EWR003**MESSAGE TEXT****Reason:**

Heading line to indicate free-form message text follows. All following text will be prefixed by message number EWR004.

System Action:

None.

User Action:

None.

EWR004**~P1****Reason:**

Free-form message text received from a response to a request.

System Action:

None.

User Action:

None.

EWS101**ACCESS TO NSCNTL FILE NOT ALLOWED****Reason:**

An attempt to access the NSCNTL file has returned an error code indicating that no access is allowed to the file.

System Action:

The process is terminated.

User Action:

Refer the problem to your installation help desk.

EWS102

NSCNTL FILE UNAVAILABLE, RC=~P1

Reason:

An attempt to access the NSCNTL failed because it was unavailable. The return code (P1) indicates the cause.

System Action:

The process is terminated.

User Action:

Determine if the NSCNTL file is available. The meaning of the return code can be found in the NCL User Reference in the section for the *FILE OPEN verb*.

EWS103

NSCNTL ~P1 FAILED, KEY=~P2, RC=~P3, FDBK=~P4

Reason:

A VSAM error occurred during NSCNTL I/O operation P1 (GET, DELETE, ADD or PUT). P2 is the filekey of the record, P3 is the file return code and P4 is the VSAM FDBK code.

System Action:

The process is terminated.

User Action:

Determine the cause and take the necessary action to correct the problem.

EWS201**ERROR MAPPING DATA RECEIVED FROM P1****Reason:**

An error occurred during an attempt to map the data received from the node *P1* .

System Action:

A dump of the data that was received and other diagnostic information are written to the log.

User Action:

Send the diagnostic information to your local support representative, with a detailed description on how the problem can be repeated.

EWS202**UNEXPECTED RESPONSE - P1****Reason:**

An unexpected response *P1* was received by the \$NWDS14S procedure in in response to an execute command that was previously sent.

System Action:

A dump of the response is written to the log along with other diagnostic information.

User Action:

This problem may be due to an SNA/Management Services application that is violating the protocol. Thus it may not be a SOLVE problem.

A dump of the request and reply MDOs will be written to the log to aid diagnosis of the problem.

If you believe it is a SOLVE problem, pass the diagnostic information to your local support representative, with a detailed description on how the problem can be repeated.

EWS203

RECEIVE REQUEST COULD NOT BE SATISFIED - NO OUTSTANDING REQUEST

Reason:

The \$NWDS14S attempted to receive some data but there was no associated outstanding request. This condition should not occur.

System Action:

A dump of the request is written to the log along with other diagnostic information.

User Action:

A dump of the request will be written to the log to aid diagnosis of the problem. Pass the diagnostic information to your local support representative, with a detailed description on how the problem can be repeated.

EWS204

REQUEST TIMEOUT - NO RESPONSE WITHIN P1 SECONDS

Reason:

A request has timed out during the wait for a response from a device. *P1* is the amount of wait time before the request was abandoned.

System Action:

The request fails.

User Action:

Retry the function.

EWS205**REQUEST REJECTED - SENSE P1****Reason:**

A request sent to the remote node *P1* was rejected with a sense code of *P2* .

System Action:

None.

User Action:

Obtain information on the sense code, correct the condition if possible, and retry.

EWS206**REQUEST COULD NOT BE ROUTED TO CONTROL POINT - SENSE P1****Reason:**

The request that was issued could not be routed to the control point. The sense code returned was P1 .

System Action:

None.

User Action:

Obtain information on the sense code, correct the condition if possible, and retry. Check that the specified resource name is correct.

EWS207**SNAMS FEATURE NOT LICENCED****Reason:**

The SNAMS feature is not licenced.

System Action:

The requested function is not performed.

User Action:

If the SNAMS feature was excluded at SOLVE startup, include it. Otherwise arrange to have the SNAMS feature licenced.

EWS208

USERID P1 NOT AUTHORISED FOR NETWORK MANAGEMENT FEATURE

Reason:

User P1 has attempted to invoke a function of the Network Management feature but is not *authorised* to do so.

System Action:

The process is terminated.

User Action:

Contact your systems administrator if you feel you should have access to the Network Management feature.

EWS210

REQUIRED PARAMETER OMITTED - P1=VALUE

Reason:

Required parameter *P1* has been omitted when calling the procedure \$NWDS14S.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

EWS211

INTERNAL ERROR - UNABLE TO SEND SNAMS CAPABILITIES REQUEST.

Reason:

An unexpected error has occurred when the \$NWDS14S procedure sent an SNAMS request to the indicated node.

System Action:

The process is terminated.

User Action:

Contact your product support representative.

Fx Messages

FACALL01

P1 required**Reason:**

The requested action requires a key field (*P1*) but it was not provided.

System Action:

None.

User Action:

Provide the field and retry.

FADB0211

Invalid range for P1**Reason:**

The low/only and high range values for a field (*P1*) do not represent a valid range. Either:

- The high value is less than the low/only value
- A high value is specified but the low/only value was omitted

System Action:

None.

User Action:

Specify a correct range and retry. A correct range is either:

- Low/only value, and no high value
- Low/only value that is lower than, or equal to the high value.

FADB0212

At least one of the highlighted fields must be specified

Reason:

All criteria were omitted; at least one field must be entered.

System Action:

None.

User Action:

Enter one or more fields.

FADB0214

Default entry, only Name Base and Processing Options can be updated

Reason:

You have selected to update the default Connection Awareness Application Name Entry. Only certain fields of the default record can be updated. These fields are: Name Base and all the fields in the Processing Options section. Attempting to change any of the other values will result in an error.

System Action:

None.

User Action:

You may only change the fields listed above. Fields not specified may not be updated.

FADB0216

***P1* is required if *P2* specified**

Reason:

A field on this panel (*P1*) has been omitted. It is a required field when the condition (*P2*) exists.

System Action:

Processing will not continue.

User Action:

Correct the value in the field, or cancel the operation.

FADB0217**High and Low remote address must be the same IP version****Reason:**

You have specified one IPv4 and one IPv6 address for the Remote Address criteria. This is not supported.

System Action:

Processing terminates.

User Action:

Correct the fields so that IPv4 or IPv6 addresses are specified. If you want to include other addresses, set up another rule.

FADB1101**Invalid action for locally defined resource****Reason:**

Stack management definitions for the local NetMaster region may not be purged if they are part of the current system image.

System Action:

None.

User Action:

Review on-line help for the TCP/IP : Packet Analysis Request List. This list provides the background to stack management requests, the impact of purging definitions, and how to remove definitions for the local region.

FADBADF01**Writing application definition records to P1****Reason:**

The export of application definitions to the *P1* data set is commencing the WRITE phase of processing.

System Action:

Processing continues.

User Action:

None.

FADBADF02

P1 lines written to the export data set

Reason:

P1 lines of Packet Analyzer definitions have been written to the nominated export data set. The data set name is shown as part of activity log message FADBADF01.

System Action:

None.

User Action:

You can use the data set to import the definitions to another region using the Packet Analyser Utilities Menu. Because definitions are visible to all regions in an LPAR, you need only import definitions from one region.

FAEV2001

FTP policy ruleset P1 loaded by P2 from region P3

Reason:

An FTP server FTP policy ruleset has been loaded. In the message:
P1 is the ruleset name.
P2 is the user ID who loaded the ruleset.
P3 is the region where the ruleset was loaded.

System Action:

The FTP server FTP policy, as defined by the named ruleset, is now active.

User Action:

None.

FAEV2002

SSI database freespace low: DB=*P1*, SSID=*P2*, Jobname=*P3*, Used=*P4***Reason:**

An SSI database buffer pool has exceeded 80%.

P1 is the database type.

P2 is the SSI's SSID.

P3 is the SSI's job (or started task) name.

P4 is the current usage (%).

System Action:

An alert is raised. The alert is automatically cleared when the used percentage drops below 80%.

User Action:

The action depends on the database that is reporting the problem.

TRACE Database

The TRACE database stores IP packets traced by SmartTrace requests. Traced packets remain in the SSI database until they expire.

To reduce database usage:

1. Use the /IPPKT shortcut to list SmartTrace traces.
2. Expand any trace definitions that have an ACTIVE status.
3. For each, review any traces that have a state of ACTIVE or ENDED.
 - If you want to keep the trace, use the SAV action to save to IPFILE.
 - Use the D=Delete action to delete the trace from the TRACE database.

DYNAMIC Database

The DYNAMIC database stores transient Packet Analyzer data such as connections, including connection history (closed connections). The IP application definitions determine how long a closed connection remains in the database. Closed connections are retained to enable viewing on a list of connections (shortcut /CONNCH).

To reduce database usage:

1. Use the /IPAPPLS shortcut to display a list of Application Name Definitions.

The Expiry Period column specifies the time (in minutes) that connections for this application remain in the database.
2. To change the expiry period:
 - a. Enter **U** next to an entry.

- b. Specify a new value in the Expiry Period field, and then press F3 (File) to save the changes.

The changes are applied to any new connections and are not applied to existing open or closed connection records.

SYNCH Database

The SYNCH database contains in-storage copies of records that are stored on the SSIDB. This includes the Application Name Definition records described above.

To reduce database usage:

1. Use the /IPAPPLS shortcut to display a list of Application Name definitions.
2. Review the list for any entries that are not required. Use the D (Delete) action to delete them.

Increasing the database size

If this condition occurs frequently, consider increasing the database size on the next restart of the SOLVE SSI region. Database size is set by the following SSI startup parameters:

PTRCDBSIZE specifies the size of the TRACE database.

PDYNDBSIZE specifies the size of the DYNAMIC database.

PSYNDBSIZE specifies the size of the SYNCH database.

FAPKG01

API Error. RC= P1 FDBK= P2 ErrFld= P3 ErrDesc= P4

Reason:

This message indicates that a Packet Analyzer request to the SOLVE SSI has failed. The message includes the following details:

P1 is the API return code

P2 is the API feedback code

P3 is the MDO Key of the error field (if applicable)

P4 is the description for the API feedback code

System Action:

The request fails.

User Action:

This is an internal error. Contact Technical Support.

FAPKG02**Incorrect data for function= P1. Name= P2 Required= P3****Reason:**

A Packet Analyzer request has failed because the data provided in the application MDO is mapped using an incorrect map name:

P1 is the package function that was called.

P2 is the map name that maps the data passed.

P3 indicates the expected map name.

System Action:

The request fails.

User Action:

This is an internal error. Contact Technical Support.

FAPKG03**Invalid connection state for action P1****Reason:**

A Packet Analyzer request failed because the state for a persistent request action (*P1*) is invalid. For example:

- A ScanGet request without a preceeding Scan request
 - A Scan request when there is an existing incomplete scan request
- (a process can have only one active connection to the SSI)

System Action:

The request fails.

User Action:

Contact Technical Support.

FAPKG04

User P1 not authorized for P2 access

Reason:

A request failed because the requesting user ID (*P1*) does not have sufficient authority for this function (*P2*). This function requires Administration and Definition authority (SF0511).

System Action:

The requested action is not performed.

User Action:

Contact your Security Administrator if access to this function is required.

FAPKG11

Invalid response MDO: State= P1 Reason= P2

Reason:

This message indicates that a Packet Analyzer request to the SOLVE SSI has failed. The message includes the following details:

P1 indicates the connection state when the error was detected:

Receive - when receiving data

Connresp - when receiving the response to a connect request

P2 describes the error reason.

System Action:

The request fails.

User Action:

This is an internal error. Contact Technical Support.

FAPKG12**EPS P1 error: Errno= P2 Reason= P3****Reason:**

This message indicates that a Packet Analyzer request to the SOLVE SSI has failed. The message includes the following details:

P1 is the EPS request type, for example Connect, Send, Receive.

P2 is the EPS error number.

P3 is an explanation of the EPS error number.

System Action:

The request fails.

User Action:

Use the EPS Error Number and Reason to determine the error:

70 No SSI Connection This indicates that the connection between this region and the SSI region is not active. Use the \$LOG command to check the activity log for related messages.

Use the \$NM SSI Customizer parameter group to restart the SOLVE Sub-System Interface.

For all other errors, contact Technical Support.

FAPKG20**End of selected records****Reason:**

A request to read the next record in a selection sequence has failed because there are no more records. This message corresponds to a Packet Analyzer API feedback code of 8.

System Action:

The request fails.

User Action:

None.

FAPKG21

Record not found

Reason:

A request to read a record failed because the record does not exist. This message corresponds to a Packet Analyzer API feedback code of 10.

System Action:

The request fails.

User Action:

None.

FAPKG22

Record already exists

Reason:

A request to add a record failed because the record already exists. This message corresponds to a Packet Analyzer API feedback code of 12.

System Action:

The request fails.

User Action:

None.

FAPKG23

Default record may not be deleted

Reason:

A request to delete a default record failed. The default record may not be deleted.

System Action:

The request fails.

User Action:

None.

FAPKG24**SSIDB file full****Reason:**

A request to add or update a record failed because the SSIDB file is full. This message corresponds to a Packet Analyzer API feedback code of 28.

System Action:

The request fails.

User Action:

Delete one or more records, or reallocate the database.

The SSIDB file contains the following record types:

- TCP/IP Application Name definitions
- SmartTrace definitions
- Packet Analyzer requests
- Managed FTP rules

Reallocating the SSIDB

The SSIDB is permanently allocated to the SSI region and is included in the JCL (using the SSISYSIN member).

To reallocate the SSIDB

1. Stop the SSI region.

Note: Stopping the SSI region results in the loss of all historical data, such as TCP/IP statistics; therefore, we recommended that this occurs as part of a scheduled change management procedure only, for example, during an IPL.

2. Use IDCAMS to do the following:
 - a. Define a new SSIDB data set, increasing the allocation.
 - b. Use REPRO to copy the records to the new SSIDB data set.
3. Amend the JCL to use the new SSIDB data set.
4. Restart the SSI region.

Record Deletion

Obsolete records can be deleted using the administration facilities in your region as follows:

TCP/IP Application Name Definitions

Use the /IPAPPLS shortcut to display the Application Name Definition List. Use the D=Delete action to delete any entries no longer required.

SmartTrace Definitions

Use the /IPPKT.L or /SMART.L shortcut to display the SmartTrace : Packet Trace Definitions. Use the D=Delete action to delete any definition no longer required.

Packet Analyzer Requests

Use the /IPPAREQ shortcut to display the Packet Analysis Request List. Use the P=Purge action to delete any records no longer required.

Managed FTP Rules

Use the /FTADMIN shortcut to display the File Transfer : Administration Menu. Select option R - Maintain File Transfer Rulesets to display a list of rule sets. Use the D=Delete action to delete any rule set no longer required.

FAPKG25

Packet Analyzer *P1* request failed - SSI short of shortage

Reason:

A request of type *P1* to the packet analyzer in the SSI region has failed because the SSI region is currently experiencing a short of storage condition. If *P1* is OPEN or SNAPSHOT, the storage shortage is in the Trace Database. For other values of *P1*, the storage shortage is in the SSI region private storage.

System Action:

The request fails.

User Action:

Storage shortages are usually transient. Wait a while and try again.

If the condition persists, review the following:

To see the current SSI trace database size, use /IPTEST.

For Trace Database short of storage:

- Free some storage by deleting any ACTIVE or ENDED traces that are no longer required.
- Consider increasing the database size on the next restart of the SOLVE SSI region. The database size is set by SSI startup parameter PTRCDBSIZE.

For SSI private storage shortage:

- Consider increasing the region size in the started task JCL on the next restart of the SOLVE SSI region.

FAPKG31**Request timed out on SSID= P1, system= P2****Reason:**

A Packet Analyzer request to the SOLVE SSI did not complete within a reasonable time. The SSID (*P1*) and system (*P2*) identify the SSI region where the request is issued to obtain or store data. This may be either the local SSI region, or a remote region, possibly on another LPAR.

System Action:

The request fails.

User Action:

Retry the request. If the problem persists, contact Technical Support.

FAPKG32**EPS ID error: Verb= P1, ID= P2, Map= P3, SSID= P4, system= P5, NCLID= P6****Reason:**

A Packet Analyzer request to the SOLVE SSI failed because of an invalid connection ID. The message includes the following:

P1 is the EPS verb name that was issued when the error was detected.

P2 is the EPS connection ID.

P3 is the Packet Analyzer map name.

P4 is the SSID that identifies the SOLVE SSI region.

P5 is the system name where the region is running.

P6 is the NCLID of the process.

This message corresponds to an EPS error number 81.

System Action:

The request fails.

User Action:

Retry the request. If the problem persists, contact Technical Support.

FAPKG40

SSI interface not defined

Reason:

A Packet Analyzer request to the SOLVE SSI has failed because the SSI interface has not been defined (SYSPARMS SSID=NO).

System Action:

The request fails.

User Action:

Enable the SSI interface. To do this: * Display the list of Customizer parameter groups (/PARMS) and update the SSI group (from the INTERFACES section).

* Enter the SSID value that corresponds to the SOLVE SSI region that includes Packet Analyzer support.

* Action the parameter group and save the changes.

FAPKG42**SSI *P1* on *P2* not contactable or Packet Analyzer not configured****Reason:**

A packet analyzer request to the SOLVE SSI failed because the SSI region cannot be contacted or does not include support for the packet analyzer. The SSID (*P1*) and system (*P2*) identify the SSI region where the request is issued. This can be the local SSI region or a remote region, possibly on another LPAR.

This message corresponds to EPS error numbers 39 and 70.

System Action:

The request fails.

User Action:

Check the following in the region running on *P2*:

1. Ensure that the region is connected to the correct SSI. To do this, display the list of Customizer parameter groups (/PARMS) and select the SSI group (from the INTERFACES section). Ensure that the SSID is specified and is the correct value. Display the parameter group's initialization log (Ilog). Update and action the parameter group, as required.
2. Display the activity log and check for other SSI-related error messages and action these accordingly.
3. Ensure that the SSI initialization parameters include support for the packet analyzer. To do this, display the SSIPARMS member in the SOLVE SSI region's JCL library. Ensure that Packet analyzer support is enabled by specifying PKTANALYZER=YES. Also ensure that packet processing is not disabled by parameter PALEVEL=NONE.

Note: Only one SOLVE SSI region (per LPAR) can include support for the packet analyzer.

FAPKG43

Action not available. SSI version does not support SmartTrace

Reason:

A Packet Analyzer request to the SOLVE SSI failed because the SSI is running with an old version of the software.

System Action:

The request fails.

User Action:

Update the SSI to the latest version of the product.

FK0001

INVALID KEYWORD VALUE SPECIFIED, KEYWORD=~P1 VALUE=~P2

Reason:

The CAS procedure \$CAFK000 failed during request processing because it was passed an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

The request is rejected and procedure \$CAFK000 terminates. Control is returned to the NCL procedure which executed \$CAFK000. If executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed \$CAFK000. If executed from OCS, check the command entered on the command line and retry.

FTCALL01

Transmission definition name required

Reason:

The requested action requires a transmission definition name but none was entered.

System Action:

None.

User Action:

Provide the transmission definition name and retry.

FTCALL02**Initiator destination name required****Reason:**

The requested action requires an initiator destination name but one was not entered.

System Action:

None.

User Action:

Provide the initiator destination name and retry.

FTDB0011**Transmission definition name required****Reason:**

The requested action requires a transmission definition name but none was entered.

System Action:

None.

User Action:

Provide the transmission definition name and retry.

FTDB0012**No transmission definitions named P1 exist****Reason:**

There are no transmission definitions that match the requested name mask (*P1*).

System Action:

None.

User Action:

None.

FTDB0013

Transmission definition P1 does not exist

Reason:

The transmission definition (*P1*) does not exist. The definition may have been deleted by another user.

System Action:

None.

User Action:

If this message occurs when selecting an action on a list of transmission definitions, use the REFRESH action to refresh the list.

FTDB0014

Transmission definition P1 P2

Reason:

A transmission definition (*P1*) was successfully actioned. The type of action (*P1* is added, updated, deleted) is shown.

System Action:

None.

User Action:

None.

FTDB0015

Transmission definition P1 not added - duplicate

Reason:

A transmission definition (*P1*) was not added. There is already a definition of the same name. This condition usually only occurs if multiple users try to add the same definition name simultaneously.

System Action:

None.

User Action:

Specify a different name and retry.

FTDB0020**Error opening file: P1****Reason:**

An attempt to open the data set that contains FTS definitions (the VFS) failed for the indicated reason (*P1*).

System Action:

None.

User Action:

Use the reason to resolve the problem.

FTDB0021**Transmission destination name required****Reason:**

The requested action requires a transmission destination name but none was entered.

System Action:

None.

User Action:

Provide the transmission destination name and retry.

FTDB0022**There are no P1 transmission requests for destination/origin P2****Reason:**

There are no transmission requests for the requested destination/origin mask (*P2*) for the indicated direction (*P1* is Inbound or Outbound).

System Action:

None.

User Action:

None.

FTDB0023

P1 transmission request P2 does not exist

Reason:

The transmission definition (*P2*) does not exist in the indicated direction (*P1* is Inbound or Outbound). The request may have been deleted by another user.

System Action:

None.

User Action:

If this message occurs when selecting an action on a list of transmission requests, use the REFRESH action to refresh the list.

FTDB0024

Transmission request P1 P2

Reason:

A transmission request (*P1*) was successfully actioned. The type of action (*P1* is added, updated, deleted) is shown.

System Action:

None.

User Action:

None.

FTDB0031

Initiator destination name required

Reason:

The requested action requires an initiator destination name but one was not entered.

System Action:

None.

User Action:

Provide the initiator destination name and retry.

FTDB0032**No initiator destinations named P1 exist****Reason:**

There are no initiator destination that match the requested name mask (*P1*).

System Action:

None.

User Action:

None.

FTDB0033**Initiator destination P1 does not exist****Reason:**

The initiator destination (*P1*) does not exist. The destination may have been deleted by another user.

System Action:

None.

User Action:

If this message occurs when selecting an action on a list of initiator destinations, use the REFRESH action to refresh the list.

FTDB0034**Initiator destination P1 P2****Reason:**

An initiator destination (*P1*) was successfully actioned. The type of action (*P1* is added, updated, deleted) is shown.

System Action:

None.

User Action:

None.

FTDB0035

Initiator destination P1 not added - duplicate

Reason:

A initiator destination (*P1*) was not added. A destination of the same name already exists. This condition usually occurs only if multiple users try to add the same destination name simultaneously.

System Action:

None.

User Action:

Specify a different name and retry.

FTID3101

There are no matching initiator destinations

Reason:

No initiator destinations match the specified selection criteria.

System Action:

None.

User Action:

None.

FTID3201

Services Class contains duplicated value &P1

Reason:

The Service Class specifies a set of single-character class values that must be unique. A class value (*P1*) is duplicated.

System Action:

None.

User Action:

Correct the list of classes and retry.

FTID3203**Cannot start an initiator until its Service Classes are defined****Reason:**

A request to define a started initiator is not valid until at least one Service Class is defined.

System Action:

None.

User Action:

Do one of the following:

- Change the value to No
- Define the Service Classes

FTMX0101**You are not authorized to P1****Reason:**

You are not authorized to perform the requested function.

System Action:

The request is rejected.

User Action:

Contact your systems administrator if the function is required.

For CA SOLVE:FTS security requirements, see the following manuals:

- *Installation Guide*
- *Security Guide*

FTPKG01

You are not authorized to *P1*

Reason:

You are not authorized to perform the requested function.

System Action:

The request is rejected.

User Action:

Contact your systems administrator if the function is required.

For CA SOLVE:FTS security requirements, see the following manuals:

- *Installation Guide*
- *Security Guide*

FTPKG02

Access denied. *P1* mask : *P2*

Reason:

The request to access the transmission request or definition has been rejected because the user's access mask *P2* does not allow access to the specified definition (*P1* is System or Private).

System Action:

The request is rejected.

User Action:

None.

FTTD1101**There are no matching transmission definitions****Reason:**

There are no transmission definitions that match the specified selection criteria.

System Action:

None.

User Action:

None.

FTTD1201**Data set name or DD name required****Reason:**

You must specify either a data set name or a DD name (but not both).

System Action:

None.

User Action:

Specify the data set name or DD name and retry.

FTTD1202**Data set name and DD name are mutually exclusive.****Reason:**

You must specify either a data set name or a DD name (but not both).

System Action:

None.

User Action:

Erase either the data set name or DD name and retry.

FTTD1203

No "TO" data set details specified

Reason:

You have tried to save a transmission definition record but have not specified any details for the "TO" data set.

System Action:

None.

User Action:

Use the ToFile or ToSYSOUT commands to display the requisite "TO" detail panel and enter the details before saving the definition.

FTTD1204

No "SYSOUT" data set details specified

Reason:

The transmission definition specifies a "TO" data set name of SYSOUT indicating that the target is SYSOUT. However, the SYSOUT class has not been specified.

System Action:

None.

User Action:

If the intention is to create a SYSOUT file, you must specify the SYSOUT details on the "To SYSOUT" panel. If you want to create a file, you must choose a different "To" data set name.

FTTD1205

P1 is not permitted for Private definitions

Reason:

The *P1* field may be specified only for system definitions.

System Action:

None.

User Action:

Erase the field in error.

FTTD1206**Volume serial and/or Device type required****Reason:**

You must specify a volume serial number or a device type (or both) for a new data set (Disposition=NEW).

System Action:

None.

User Action:

Specify the Volume serial number or device type (or both), and retry.

FTTD1207**Incomplete data set allocation details****Reason:**

You specified some but not all of the allocation details for the new data set. The space allocation details for a new data set (Disposition=NEW) are specified using the following fields:

- Space type
- Directory blocks
- Primary allocation
- Secondary allocation

You must either specify all the fields or specify none at all.

System Action:

None.

User Action:

You must specify all fields or none at all. If you specify none, then, for DASD, a default space allocation of one track with no directory blocks is assumed.

FTTD1211

CMS file name or DD name required

Reason:

You must specify either a CMS file name or a ddname (but not both).

System Action:

None.

User Action:

Specify the CMS file name or the ddname, and retry. When specifying a CMS file name, you must specify all three components: file name (FN), file type (FT), and file mode (FM).

FTTD1212

CMS file name and DD name are mutually exclusive.

Reason:

You must specify either a CMS file name or a ddname (but not both).

System Action:

None.

User Action:

Erase either the CMS file name or the ddname, and retry. To erase the CMS file name, you must erase all three components: file name (FN), file type (FT), and file mode (FM).

FTTS2101

There are no matching transmission requests

Reason:

There are no transmission requests that match the specified selection criteria.

System Action:

None.

User Action:

None.

FTTS2102**Invalid action for P1 request****Reason:**

Actions are applicable to inbound requests, outbound requests, or both. The selected action is not applicable to the request direction (*P1* is inbound or outbound).

System Action:

None.

User Action:

Use ?=More Actions to display a list of valid actions for the request.

FTTS2103**P1 is not recognized as an FTS request completion status****Reason:**

The Q action was used to display a description of the FTS request completion code associated with this request. This code is taken from the first word of the information text. However, the code does not conform to the FTS request completion code format because it is not in the form LOC-xx or REM-xx.

System Action:

None.

User Action:

None.

FTTS2104**Transmission request has no request completion status****Reason:**

The Q action was used to display a description of the FTS request completion code associated with this request. This code is taken from the first word of the information text but this is blank.

System Action:

None.

User Action:

None.

Gx to Hx Messages

GP0001

Invalid keyword parameter specified - parameter= P1

Reason:

The keyword parameter *P1* was either omitted or specified incorrectly.

System Action:

The request is rejected.

User Action:

Correct and retry.

GP0002

Product(s) P1 not configured in this region

Reason:

An attempt was made to invoke a function which requires a product that has not been configured in this region.

P1 identifies either:

- a single product name that is required
- multiple product names, one of which is required.

System Action:

The function is terminated.

User Action:

Contact your systems administrator.

Product name(s) are configured using the PROD= JCL parameter, normally specified in the RUNSYSIN member.

GP0003**NCL procedure P1 not found****Reason:**

An attempt was made to execute an NCL procedure which does not exist in the NCL procedure library allocated to the requesting user.

System Action:

The function is terminated.

User Action:

Correct the procedure name or move the procedure into a dataset in the requesting user's NCL procedure library or change the user's NCL procedure library allocation and then retry.

GP0004**P1 must be entered****Reason:**

Data must be entered into the field identified by the field label *P1* before proceeding.

System Action:

The user cannot proceed until the field is filled in.

User Action:

Fill in the field before proceeding.

GP0005**' P1' is not a valid value for P2****Reason:**

The value *P1* is not a valid value for the field identified by the field label *P2*.

System Action:

None.

User Action:

Enter a valid value before proceeding.

GP0006

Function key P1 is not active in this window

Reason:

Function key *P1* was pressed and it has no action assigned to it.

System Action:

None.

User Action:

Choose another function key.

GP0007

Processing terminated - keyword parameter format invalid

Reason:

This message is the first in a group of 3 messages issued when an NCL procedure is terminated because of invalid keyword parameters being specified.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

GP0008

Base procedure= P1, Nesting level= P2, Invalid parameter= P3

Reason:

This message is the second in a group of 3 messages issued when an NCL procedure is terminated because of invalid keyword parameters being specified. *P1* is the base NCL procedure, *P2* is the current nesting level and *P3* is the parameter which is incorrectly specified.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

GP0009**Parameters passed: P1****Reason:**

This message is the third in a group of 3 messages issued when an NCL procedure is terminated because of invalid keyword parameters being specified. *P1* is the full list of parameters specified.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

GP0010**APPL parameter must be supplied****Reason:**

The APPL (application id) parameter must be supplied to \$CAGP001.

System Action:

The NCL procedure is terminated.

User Action:

Correct the call to \$CAGP001 so that it specifies the application id in the APPL keyword and retry.

GP0011**FUNC parameter must be supplied****Reason:**

The FUNC (function name) parameter must be supplied to \$CAGP001.

System Action:

The NCL procedure is terminated.

User Action:

Correct the call to \$CAGP001 so that it specifies the function name in the FUNC keyword.

GP0012

Invalid command

Reason:

The command that was specified on the command line was invalid.

System Action:

The command is rejected.

User Action:

Enter a valid command and retry.

GP0013

Userid P1 is not authorized to execute commands

Reason:

The userid *P1* is not authorized to enter EXEC or CMD in the COMMAND and SELECT OPTION input fields on panels and therefore the execution of commands is not allowed.

System Action:

The command is rejected.

User Action:

Contact your systems administrator if the function is required.

GP0014

PANEL parameter must be supplied

Reason:

The PANEL (panel name) parameter must be supplied to \$CAGP001.

System Action:

The NCL procedure is terminated.

User Action:

Correct the call to \$CAGP001 so that it specifies the panel name in the PANEL keyword.

GP0015**Variable ADD failed - table=\$GPQDATA, FDBK= P1****Reason:**

An error occurred while adding data to the queued data region variable.

System Action:

The function is terminated.

User Action:

Determine the cause of the error from the feedback code and retry.

GP0016**No queued data found****Reason:**

No previously queued data was found in the queued data region variable.

System Action:

None.

User Action:

None.

GP0017**Userid P1 is not authorized to execute SPLIT/SWAP commands****Reason:**

The userid *P1* is not authorized to execute the SPLIT or SWAP command. This could be due to your userid not having the authority to issue SPIT or SWAP commands or due to you attempting to issue a SPLIT or SWAP command whilst nested from the Broadcast Services Broadcast Display Panel.

System Action:

The command is rejected.

User Action:

You cannot issue SPLIT or SWAP commands whilst nested from the Broadcast Services Broadcast Display Panel.

If you are not nested from the Broadcast Display panel, contact your systems administrator if the function is required.

GP0018

Variable ADD failed - table=\$GPNOTEPAD, FDBK= P1

Reason:

An error occurred while adding data to the notepad region variable.

System Action:

The function is terminated.

User Action:

Determine the cause of the error from the feedback code and retry.

GP0019

No notepad data found

Reason:

No previously noted data was found in the notepad region variable.

System Action:

None.

User Action:

None.

GP0020

There is no command to retrieve - the command stack is empty

Reason:

A RETRIEVE command was entered, however there are no commands in the command stack to retrieve.

System Action:

No command is retrieved.

User Action:

None.

GP0021**Notepad already being edited in other window or at a lower level process****Reason:**

A request to modify the contents of the Notepad failed because you were already editing or accessing the notepad in the another window or at a lower process level.

System Action:

The request is rejected.

User Action:

Retry the request at a later time.

GP0022**Invalid NCL procedure name P1****Reason:**

An attempt was made to execute NCL procedure with name *P1* . However the name is invalid for an NCL procedure.

System Action:

The function is terminated.

User Action:

Correct the procedure name and then retry the request.

GP0023**There are no commands with the specified prefix****Reason:**

A RETRIEVE command was entered, however there are no commands in the command stack with the specified prefix.

System Action:

No command is retrieved.

User Action:

None.

GP0024

PANELID parameter must be specified as ON or OFF

Reason:

The parameter specified for the PANELID command is invalid. This value must be specified as either ON or OFF. If left blank then the current setting will toggle.

System Action:

No command is rejected.

User Action:

Enter a valid command and retry.

GP0025

' P1' duplicated for P2

Reason:

The value *P1* has been specified more than once for the field identified by the field label *P2*.

System Action:

None.

User Action:

Remove the duplicate value and retry.

GP0026

' P1' conflicts with ' P2' for P3

Reason:

The value *P1* is mutually exclusive with the value *P2* for the field identified by the field label *P3*.

System Action:

None.

User Action:

Remove the duplicate value and retry.

GP0027

Release P1 of product P2 requires Systems Services version of P3 or later

Reason:

The identified product release (P2 is the product, P1 is the release) has a prerequisite minimum Systems Services release (P3).

System Action:

The product initialization fails.

User Action:

Change the RUNSYSIN member to remove the relevant PROD= value or upgrade your Management Services version.
Contact your product supplier for product availability information.

GP0028

Action is not valid on this line

Reason:

You have entered a line command, or hit enter with the cursor on a line that does not support this action.

System Action:

The action is rejected.

User Action:

Choose a different action, or a different line.

GP0029

' P1' conflicts with ' P2'

Reason:

The field P1 is mutually exclusive when P2 is specified.

System Action:

None.

User Action:

Erase the field (P1) or amend the conflicting field (P2) and retry.

GP0030

Unknown link name P1

Reason:

An APPC request to the remote system, identified by *P1* , failed; the INMC link name (*P1*) does not exist.

System Action:

The request is ignored.

User Action:

Use the SHOW LINKS command to verify INMC link names and status.

GP0031

Link name P1 is not active : status = P2

Reason:

An APPC request to the remote system, identified by *P1* , failed; the INMC link name (*P1*) is not active - the current status is *P2*

System Action:

The request is ignored.

User Action:

Use the SHOW LINKS command to verify INMC link names and status.

GP0032

Function not available on back-level system P1: requires P2

Reason:

An APPC request to the remote system, identified by *P1* , failed. The remote system is running a back-level version that does not support the type of request. The minimum requirement is shown (*P2*).

System Action:

The request is ignored.

User Action:

None.

GP0033**APPC call to system P1 failed with RC= P2 FDBK= P3****Reason:**

An APPC request to the remote system, identified by *P1* , failed with return code *P2* and feedback code *P3* .

System Action:

An additional error message may be written to the activity log if RC=16.

User Action:

Contact your System Administrator.

GP0034**P1 canceled****Reason:**

Requested action (*P1*) has been canceled.

System Action:

None.

User Action:

None.

GP0035**Either ' P1' or ' P2' must be specified****Reason:**

Field *P1* or field *P2* must be specified.

System Action:

None.

User Action:

Enter either field (*P1* or *P2*) and retry.

GP0201

INVALID KEYWORD VALUE SPECIFIED, KEYWORD=~P1 VALUE=~P2

Reason:

The function key handler maintenance procedure \$CAGP02P failed because it received an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

Procedure \$CAGP02P terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

GP0202

FUNCTION KEY PROFILE ALREADY BEING EDITED BY ~P1, TRY LATER

Reason:

A request to edit the function keys failed because another user or this user was already editing the Keys. The userid of the user who is editing the keys is P1 . If this is your userid then it is because you are editing the keys from another terminal or in another window.

System Action:

The request is rejected.

User Action:

Retry the request at a later time.

GP0203

FUNCTION KEY PROFILE SAVED

Reason:

A request to File or Save the Function Key profile was successfully performed.

System Action:

None.

User Action:

None.

GP0204**FUNCTION KEY PROFILE UPDATE CANCELLED****Reason:**

A request to update the Function Key profile was cancelled.

System Action:

None.

User Action:

None.

GP0205**INVALID COMMAND****Reason:**

An invalid command was entered in the Command field.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

GP0206**INVALID FIELD NAME RECEIVED, FIELD=~P1 DESC=~P2****Reason:**

The Function Key Handler maintenance procedure \$CAGP02P failed because it received an invalid field name. The field name was P1 and its description was P2 .

System Action:

Procedure \$CAGP02P terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

GP0207

INVALID FUNCTION KEY ACTION, FIRST WORD MUST BE A VALID NAME

Reason:

A function key action was specified that was invalid. The function key actions must consist of a valid command name (1 to 8 characters long) followed by any parameters expected by the command.

System Action:

The panel is redisplayed and the function keys action field is set in error.

User Action:

Enter a valid command name as the first word of the action and then retry.

GP0208

LABEL IS INVALID IF AN ACTION HAS NOT BEEN SPECIFIED FOR THE KEY

Reason:

A function key label was specified for a function key that didn't have an action specified. This is invalid. The label can only be specified if the action is also specified.

System Action:

The panel is redisplayed and the function keys label field is set in error.

User Action:

Enter an action for the function key or blank out the label field.

GP0209

LABEL IS REQUIRED IF AN ACTION HAS BEEN SPECIFIED FOR THE KEY

Reason:

A function key label was not specified for a function key that had an action specified. This is invalid. The label is required if the action is specified.

System Action:

The panel is redisplayed and the function keys label field is set in error.

User Action:

Enter a label for the function key or blank out the action field.

GP0210**NOT AUTHORIZED****Reason:**

You are not allowed to use the KEYS SET command to change another user's key profile. Systems Support Services access is needed for this function.

System Action:

The command is rejected.

User Action:

Obtain Systems Support Services authorization.

GP0301**INVALID KEYWORD VALUE SPECIFIED, KEYWORD=~P1 VALUE=~P2****Reason:**

The notepad handler procedure \$CAGP03Z failed because it received an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

Procedure \$CAGP03Z terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

GP0302**NOTEPAD ALREADY BEING EDITED IN OTHER WINDOW OR AT A LOWER LEVEL PROCESS****Reason:**

A request to edit the Notepad failed because you were already editing or accessing the notepad in the another window or at a lower process level.

System Action:

The request is rejected.

User Action:

Retry the request at a later time.

GP0303

INVALID USE OF PROCEDURE \$CAGP03Z, NOTEPAD NOT LOCKED

Reason:

The notepad editor service procedure \$CAGP03Z failed because the notepad facility was incorrectly invoked.

System Action:

Procedure \$CAGP03Z terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

GP0304

NOTEPAD SAVED

Reason:

A request to File or Save the Notepad was successfully performed.

System Action:

None.

User Action:

None.

GP0305

NOTEPAD UPDATE CANCELLED

Reason:

A request to update the Notepad was cancelled.

System Action:

None.

User Action:

None.

GP0306**NOTEPAD CLEARED****Reason:**

All the lines of the Notepad were deleted.

System Action:

None.

User Action:

None.

GP0401**INVALID VALUE FOR SHARED VARIABLE, VAR=~P1 VALUE=~P2"****Reason:**

The list service procedure \$CAGP04L for CAS failed because it received an invalid value for a shared variable. The variable name was P1 and its value was P2 .

System Action:

Procedure \$CAGP04L terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

GP0502

CALLTYPE P1 NOT RECOGNIZED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The selection list service procedure \$CAGP05L did not support the calltype P1 from the selection list manager.

System Action:

Selection List Terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

GP0503

OPTION P1 NOT RECOGNIZED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The selection list service procedure \$CAGP05L did not support the selection option P1 that was specified on the selection list.

System Action:

Selection rejected.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

GP0505**TIMED OUT WAITING FOR RESPONSE FROM CANCEL COMMAND****Reason:**

A response to the cancel command was not received within 20 seconds.

System Action:

Could not complete requested function.

User Action:

Determine why the response is not being returned within 20 seconds. Check the log for any error messages.

GP1000**Invalid keyword parm for P1 Keyword= P2 Value=" P3"****Reason:**

Procedure *P1* was invoked with an invalid keyword parameter value for keyword *P2* . The value (*P3*) was either omitted or incorrectly specified.

System Action:

The request is rejected and procedure *P1* terminates.

User Action:

Correct the keyword parameter value and retry the request.

GP1001**Internal error in P1. P2, RC/FB= P3/ P4 Map= P5 Comp= P6****Reason:**

An internal mapping error occurred. *P1* is the procedure that encountered the error. *P2* is the MDO name. *P3* is the return code. *P4* is the feedback code. *P5* is the map name. *P6* is the map component.

System Action:

Processing of the current action fails.

User Action:

Contact your system administrator.

GP1002

User P1 is not authorized to use P2

Reason:

Userid *P1* has not been defined with the necessary authority level to access *P2* .

System Action:

Access to the requested menu function is prevented.

User Action:

Contact your local security administrator. Your NetMaster UAMS file and/or your SAF security system (RACF, ACF2, or Top Secret) must be updated to allow the correct level of access to the required feature.

GP1003

P1 field contains embedded blanks

Reason:

The data entered into the specified field contains one or more embedded blanks.

System Action:

Option not processed.

User Action:

Correct the field and retry the operation.

GP1004

P1 is not a valid dataset name

Reason:

The value entered into the Dataset Name field is not a valid MVS dataset name.

System Action:

Option not processed.

User Action:

Enter a valid dataset name and retry the operation.

GP1005**P1 is not configured in this region****Reason:**

The selected option or action requires an optional product or component that has not been configured in this region. *P1* indicates the product(s) or component(s) that are required.

System Action:

Access to the requested menu function is prevented.

User Action:

Contact your local systems administrator. Your region must be changed to include (at least one of) the indicated product(s) or component(s) as part of the initialization parameters.

GP1006**Option P1 is only supported on Focal Point systems.****Reason:**

The menu option you selected is available only on focal point systems within your multi-system complex. This region is not a focal point system.

System Action:

The selected option is not invoked.

User Action:

Log on to a focal point system to use this option.

GP1007**VFS P1 failed, FILERC: P2 VSAM FDBK: P3 VFS KEY: P4****Reason:**

The VFS operation, *P1* , failed with file return code *P2* and VSAM feedback code *P3* for the VFS key, *P4* .

System Action:

None

User Action:

Contact your system administrator.

GP1008

Cannot update VFS file - user is not authorized

Reason:

An attempt to update the VFS database failed because the user does not have update authority.

System Action:

None

User Action:

Contact your security administrator for assistance.

GP1009

VFS OPEN failed - user is not authorized

Reason:

An attempt to open the VFS database failed because the user does not have authority to access the database.

System Action:

None

User Action:

Contact your security administrator for assistance.

GP1010

P1 must be entered

Reason:

No value was supplied for a required field.

System Action:

The field in error is highlighted.

User Action:

Enter a value in the field and retry the option.

GP1011

Variable error in P1 Table= P2 Action= P3 FDBK= P4 Key=" P5"

Reason:

A variable action failed:

P1 is the procedure name

P2 is the variable name

P3 is the variable action

P4 is the feedback value

P5 is the variable key(where relevant)

System Action:

The requested action or display is incomplete.

User Action:

This is an internal error. Contact Technical Support.

GP1012

Automation Services is not configured in this region

Reason:

The selected option or action requires the Automation Services component that has not been configured in this region. The component is automatically included by products that require Automation Services and the region does not include any of those products.

System Action:

Access to the requested menu function is prevented.

User Action:

Contact your local systems administrator. Your region must be changed to include (at least one of) the products that require Automation Services, as part of the initialization parameters.

GP1013

Function not valid in this environment

Reason:

The requested function requires a full-screen interface but the request has been issued from a region that does not have a full-screen interface, for example:

- A background user
- A remote operator (using ROUTE from another system)

System Action:

The request is rejected.

User Action:

Execute the request (or a function that initiated the request) from an environment which has a real window; that is:

- Avoid submitting the command to a background region.
- Execute the command locally.

GP1014

Invalid argument to function P1 Arg= P2 Value=" P3"

Reason:

Function *P1* was invoked with an invalid argument value for argument number *P2*. The value *P3* was either omitted or incorrectly specified.

System Action:

The request is rejected.

User Action:

Correct the argument value and retry the request.

GP1015**Procedureabend in P1 line P2. P3****Reason:**

The procedure *P1* terminated abnormally at line *P2*. *P3* is a summary of the error condition.

System Action:

Processing terminates.

User Action:

Contact your local support representative, providing this messages and associated error messages.

GP1016

P1 abend details: LINE= P2 COND= P3 STMT_NAME= P4 KEYWORD= P5 NAME= P6 SUBNAME= P7 VALUE= P8 VALUEOK= P9 VALUE2= P10 VALUE2OK= P11

Reason:

This message follows GP1015 and is issued as a result of a procedure abending. This message supplies the specific error details as follows:

P1 - the procedure that abended

LINE= P1 - the line number in the source code

COND= P2 - the error condition

STMT_NAME= P3 - the statement name (verb name)

KEYWORD= P4 - the keyword name (operand name)

NAME= P5 - the name specification

SUBNAME= P6 - the variable name causing the error

VALUE= P7 - the value that caused the error

VALUEOK= P8 - 1 if VALUE= caused the error

VALUE2= P9 - the second value that caused the error

VALUE2OK= P10 - 1 if VALUE2= caused the error

System Action:

Refer to message GP1015.

User Action:

Refer to message GP1015.

GP1017

Invalid sort option. Use SORT ? to display valid options

Reason:

You entered an invalid SORT command.

System Action:

SORT command is rejected.

User Action:

Enter **SORT ?** and select an option from the list.

GP1018**No sort value selected****Reason:**

You used the **SORT ?** command to present a prompt list of sort values, but did not select a value.

System Action:

None.

User Action:

Specify a sort value or select a value from the prompt list.

GP1019**P1 is not an IP address or partial IP address****Reason:**

You issued the **LOCATE** command with an invalid operand. *P1* must be an IP address or part thereof.

System Action:

None.

User Action:

Do one of the following:

- Change the locate command to specify a valid or partial IP address.
- Use the **SORT ?** command to sort the list by a different field.

GP1020**Locate only supported after list is sorted****Reason:**

You used the **LOCATE** command on an unsorted list. **LOCATE** is only supported if the list is sorted.

System Action:

None.

User Action:

Use the **SORT ?** command to display options for sorting this list. After the list is sorted, reenter the locate command.

HM0002

APPL keyword not specified - call rejected

Reason:

The APPL keyword was not specified on the procedure call.

System Action:

The procedure call was rejected.

User Action:

Correct the call parameters and retry.

HM0003

Unsupported help type: P1

Reason:

The type of help (*P1*) is no longer supported.

System Action:

None.

User Action:

Use the CALLINFO command to determine the help function details. Contact your product supplier.

HM0007

Help does not exist

Reason:

The help that you attempted to process does not exist on the help database. You may have specified an incorrect record or the help record may have been deleted by another user.

System Action:

None.

User Action:

If the name of the help record was specified incorrectly, correct it and retry.

HM0013**Invalid command****Reason:**

An invalid command was entered.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

HM0041**Invalid scroll amount****Reason:**

An invalid scroll amount has been specified. Valid scroll amounts are (P)AGE, (H)ALF, (C)SR, (D)ATA, (M)AX or a number.

System Action:

None.

User Action:

Correct the scroll amount.

HM0042**No more help text available in a backwards direction****Reason:**

You attempted to scroll backward in the help text and the top of the text is already displayed.

System Action:

None.

User Action:

None.

HM0043

No more help text available in a forwards direction

Reason:

You attempted to scroll forward in the help text and the bottom of the help text is already displayed.

System Action:

None.

User Action:

None.

HM0044

No more help available

Reason:

There is no more help available to view.

System Action:

None.

User Action:

None.

HM0048

Macro error in help text, line P1 - help not found

Reason:

A .CP (copy), or .MU (menu item) macro, embedded in the help text, refers to a help file that does not exist.

System Action:

The macro is ignored.

User Action:

Do one of the following:

- Edit the help text and correct the .CP or .MU macro reference
- Add new help text with the name referenced in the .CP or .MU macro

HM0049**Variable error, action= P1 FDBK= P2****Reason:**

An internal error occurred while processing a Variable. *P1* is the action that was being performed *P2* is the feedback code

System Action:

Help text generation fails.

User Action:

Contact your system administrator.

HM0050**No help available, APPL= P1 FUNC= P2 FIELD= P3****Reason:**

The requested help text does not exist.

System Action:

None.

User Action:

None.

HM0052**.AT macro error in help text, line P1 - attribute table full****Reason:**

A .AT (Define attribute) macro embedded in the help text cannot be added to the attribute table because it is already full.

System Action:

The .AT macro is ignored.

User Action:

Do one of the following:

- Edit the help text and remove the .AT macro command
- Change the attribute character to a character that was previously defined by another .AT macro

HM0061

.CP macro error in help text, line P1 - invalid keyword or data

Reason:

A .CP (copy and include) macro embedded in the help text has an invalid keyword or the data to the right of the .CP macro is invalid.

System Action:

The .CP macro is ignored.

User Action:

Edit the help text and correct the .CP macro instruction.

HM0062

.MU macro error in help text, line P1 - invalid keyword or data

Reason:

A .MU (menu) macro embedded in the help text has an invalid keyword or the data to the right of the .CP macro is invalid.

System Action:

The .MU macro is ignored.

User Action:

Edit the help text and correct the .MU macro instruction.

HM0063

.CP macro error in help text, line P1 - cannot copy current help file

Reason:

A .CP (copy and include) macro embedded in the help text references the current help file. This is not permitted, because an infinite loop would occur.

System Action:

The .CP macro is ignored.

User Action:

Edit the help text and correct the .CP macro instruction.

HM0064**.MU macro error in help text, line P1 - cannot reference current help****Reason:**

A .MU (menu) macro embedded in the help text references the current help file. This is not permitted, because an infinite loop would occur.

System Action:

The .MU macro is ignored.

User Action:

Edit the help text and correct the .MU macro instruction.

HM0065**.LI macro error in help text, line P1 - ANY or ALL not first value****Reason:**

A .LI (licence) macro embedded in the help text contains a sublist of feature names that includes ANY or ALL in a position beyond the first position in the list.

System Action:

The .LI macro is ignored.

User Action:

Edit the help text and correct the .LI macro instruction.

HM0066**Invalid select option****Reason:**

The value entered to select a help file for viewing was not an S.

System Action:

The request is rejected.

User Action:

Correct the selection option to view the help file or erase it.

HM0067

.MU macro error in help text, line P1 - exceeded limit

Reason:

A .MU (menu) macro embedded in the help text created an input field, but 999 input fields were already defined. This is the maximum.

System Action:

The .MU macro is ignored.

User Action:

Edit the help text and remove a .MU or .SL macro instruction to reduce the number of input fields.

HM0069

.CP macro error in help text, line P1 - cannot copy previous help file

Reason:

A .CP (copy and include) macro embedded in the help text references the previous help file (the file that invoked this help file). This is not permitted, because an infinite loop would occur.

System Action:

The .CP macro is ignored.

User Action:

Edit the help text and correct the .CP macro instruction.

HM0070

CROW keyword is not numeric

Reason:

The call was made to the Help Manager with a CROW keyword (Cursor row) value that was not numeric.

System Action:

The Help Manager call terminates.

User Action:

Correct the CROW keyword parameter on the call to the Help Manager and retry.

HM0071**CCOL keyword is not numeric****Reason:**

The call was made to the Help Manager with a CCOL keyword (Cursor column) value that was not numeric.

System Action:

The Help Manager call terminates.

User Action:

Correct the CCOL keyword parameter on the call to the Help Manager and retry.

HM0072**FUNC keyword not specified****Reason:**

The FUNC keyword must be provided on the call to the Help Manager when a field name or cursor coordinates are supplied.

System Action:

The Help Manager call terminates.

User Action:

Correct the FUNC keyword parameter on the call to the Help Manager and retry.

HM0074

.CT macro error in help text, line P1

Reason:

A .CT DEFAULT= macro in the help text cannot be processed for one of the following reasons:

- The .RA or .AT macros have been used to change the default attributes
- The DEFAULT= operand did not specify exactly three characters

System Action:

The .CT macro is ignored.

User Action:

Edit the help text and correct the error.

HM0095

.MU macro error in help text, command P1 not defined

Reason:

A .MU (menu) macro embedded in the help text refers to a command that is not defined.

System Action:

The command is not executed.

User Action:

Perform one of the following steps:

- Edit the help text and correct the help file reference in the .MU instruction
- Add the command that the .MU macro is attempting to reference

Ix Messages

IA0001

P1 P2 ACTION COMPLETE**Reason:**

An initialization action has completed successfully. The specific action was started by the EXEC \$IACALL *P1 P2* command.

System Action:

Initialization continues.

User Action:

None.

IA0002

P1 P2 ACTION INCOMPLETE. REFER TO PREVIOUS MESSAGE(S)**Reason:**

An initialization action has failed. The specific action was started by the EXEC \$IACALL *P1 P2* command. Other messages have been logged that indicate the cause of the failure.

System Action:

Initialization continues.

User Action:

Refer to the SOLVE log. The failure messages should immediately precede this message. Refer to those messages to resolve the problem.

IA0003

DD=*P1* ALLOCATED, DSN=*P2*

Reason:

An initialization action has resulted in a dataset being implicitly allocated. The message indicates which DD name was allocated (*P1*) and the dataset name (*P2*). The action to which this relates can be identified in the SOLVE log by either:

- the preceding EXEC \$IACALL command echoed to the log
- the subsequent IA0001 or IA0002 message

SOLVE datasets are normally allocated by either:

- inclusion in the run JCL (including the UTIL0028 input member). In this case the EXEC \$IACALL command will open the requested dataset.
- inclusion of the dataset name using the DSN= operand on the associated EXEC \$IACALL command. In this case the command will cause the dataset to be specifically allocated before the file is opened.

This message indicates that neither action has occurred. As the dataset must be allocated before it can be opened, SOLVE has assumed a dataset name based on the relevant shared or local dataset qualifier (as specified in the DSNQSHR and DSNQLCL JCL parms), plus the DD name.

If the assumed dataset name is incorrect, the initialization action will be incomplete.

System Action:

Initialization continues.

User Action:

It is recommended that SOLVE datasets are specifically allocated in the run JCL. Alternatively, the EXEC \$IACALL command should include the DSN= operand specifying the full dataset name.

IA0011**FIRST PARAMETER IS OMITTED OR IS AN INVALID PRIMITIVE: P1****Reason:**

An initialization action has failed. The specific action was started by the EXEC \$IACALL command where the first parameter is called a primitive. The primitive is either missing or is invalid.

System Action:

Initialization continues but may be incomplete.

User Action:

Correct the command in the initialization procedure. For this to take effect either restart the region or execute the command manually using OCS or Command Entry.

IA0012**SECOND PARAMETER IS OMITTED OR IS AN INVALID QUALIFIER: P1****Reason:**

An initialization action has failed. The specific action was started by the EXEC \$IACALL command where the second parameter is called a qualifier. The qualifier is either missing or is invalid.

System Action:

Initialization continues but may be incomplete.

User Action:

Correct the command in the initialization procedure. For this to take effect either restart the region or execute the command manually using OCS or Command Entry.

IA0013

INVALID COMBINATION: QUALIFIER *P1* IS INVALID WITH PRIMITIVE *P2*

Reason:

An initialization action has failed. The specific action was started by the EXEC \$IACALL *P1 P2* command where the first parameter (*P1*) is called the primitive and the second parameter (*P2*) is called the qualifier. The qualifier is a valid qualifier but does not apply to the specific primitive.

System Action:

Initialization continues but may be incomplete.

User Action:

Correct the command in the initialization procedure. For this to take effect either restart the region or execute the command manually using OCS or Command Entry.

IA0014

P1* PARAMETER REQUIRED FOR *P2 P3

Reason:

An initialization action has failed. The specific action was started by the EXEC \$IACALL *P2 P3* command which requires parameter (*P1*) but this was not specified.

System Action:

Initialization continues but may be incomplete.

User Action:

Correct the command in the initialization procedure. For this to take effect either restart the region or execute the command manually using OCS or Command Entry.

IAICALL01**Invalid keyword value specified, keyword= *P1* value= *P2*****Reason:**

An invalid keyword parameter value was specified for procedure \$IAICALL. The keyword is *P1* and the invalid value is *P2*.

System Action:

Procedure terminates.

User Action:

Correct the invalid keyword value and retry the request.

IAICALL02**Initialization phase *P1* already in progress, request denied****Reason:**

An attempt to start an initialization phase failed because the phase was already being processed. The phase was *P1*.

System Action:

Procedure terminates.

User Action:

If the phase specified was incorrect then retry the request, specifying the correct phase.

IAICALL03**Initialization phase *P1* cannot be performed, current phase is *P2*****Reason:**

An attempt to start initialization phase *P1* failed because that phase can only be started after its defined predecessor. The current phase is *P2*. The INIT phase must always be the first phase, then the READY phase can started.

System Action:

Procedure terminates.

User Action:

Specify the correct successor phase for phase *P2*.

IAICALL04

Initialization start request denied, initialization already in progress or completed, status is *P1*

Reason:

An attempt to start initialization failed because it either has already completed or is already in progress. The current initialization status is *P1*.

System Action:

Procedure terminates.

User Action:

None

IAICALL05

Initialization phase *P1* started

Reason:

The *P1* initialization phase was successfully started.

System Action:

Initialization processing continues.

User Action:

None.

IAICALL06

System initialization completed

Reason:

Initialization for the system was completed.

System Action:

None.

User Action:

None.

IAICALL07**Initialization phase *P1* now entering debug mode****Reason:**

The initialization *P1* is entering debug mode. This mode was specified when the start service was requested.

System Action:

None

User Action:

None

IAICALL08**Invalid object \$IAINDO, RC= *P1* FDBK= *P2* type= *P3* name= *P4*****Reason:**

A set service was requested, but an invalid initialization object was passed to the API. The object must be named \$IAINDO and it must be shared to the API. The error occurred assigning component *P4*, which is of type *P3*. The MDO return code received was *P1* and the feedback code was *P2*.

System Action:

The request is rejected.

User Action:

Correct the object passed to the API and retry the request.

IAICALL09**Initialization wizard *P1* not found or in error. Component(s) may not initialize****Reason:**

The initialization objects were successfully defined for the initialization wizard *P1*.

System Action:

None.

User Action:

None.

IAICALL10

The following system symbols will be available to INI file *P1*

Reason:

The System Symbols will be made available to the INI file *P1*. This is a header message and the following messages will show the Symbols used and their values.

System Action:

None.

User Action:

None.

IAICALL11

***P1* = "*P2*"**

Reason:

This message shows the name and value of a System Symbol.

System Action:

None.

User Action:

None.

IAICALL12

****END****

Reason:

This message indicates that there are no more system symbols to display.

System Action:

None

User Action:

None

IAIN0101

Invalid keyword value specified, keyword= *P1* value= *P2*

Reason:

An invalid keyword parameter value was specified for procedure \$IAIN01U. The keyword is *P1* and the invalid value is *P2*.

System Action:

Procedure terminates.

User Action:

Contact your Systems Administrator.

IAIN0102

Initialization wizard *P1* not found or in error. Component(s) may not initialize'

Reason:

An attempt to invoke the initialization wizard procedure *P1* failed. The procedure was not found in the commands library or was in error.

System Action:

Initialization load fails.

User Action:

Contact your Systems Administrator.

IAIN0103

Initialization wizard *P1* processing completed.

Reason:

The initialization wizard *P1* has successfully completed its processing to define the system parameters.

System Action:

None

User Action:

None

IAIN0104

Set parameter group *P1* rejected

Reason:

The parameter group *P1* is a non-dynamic parameter group. This means that the parameters can be updated at any time but they will only become effective at the NEXT system startup.

System Action:

None

User Action:

None

IAIN0105

Start for parameter group failed, group in use by *P1*

Reason:

The parameter group could not be started because the lock issued to obtain exclusive control failed, indicating that user *P1* was already actioning the parameter group or was updating the parameter group.

System Action:

The request is rejected.

User Action:

Wait until user *P1* completes their update and then action the parameter group again, or if the parameter group was already being actioned then wait for this request to complete.

IAIN0106

Invalid global variable suffix " *P1*". Parameter not set

Reason:

The GLBL type parameter of a parameter group was incorrectly named. The parameter cannot be set.

System Action:

Processing for the parameter group fails.

User Action:

Contact your Systems Administrator.

IAIN0107**Parameter group *P1* bypassed, missing prereq *P2*****Reason:**

The parameter group *P1* was not defined to the system because it specified a prerequisite parameter group *P2* that did not exist. This may be because your system is not licensed for a feature which defines the parameter group *P2*.

Parameter group *P1* cannot be defined without this prerequisite.

System Action:

Parameter group *P1* is bypassed.

User Action:

None

IAIN0108**Prereq *P1* ignored for parameter group *P2*****Reason:**

The parameter group *P2* specified the parameter group *P1* as an optional prerequisite and parameter group *P1* did not exist. This may be because your system is not licensed for a feature which defines parameter group *P1* OR because the prerequisite parameter group was made obsolete by a licensed feature that is currently licensed on this system. The prerequisite is an optional prerequisite and so has been ignored.

System Action:

Prerequisite parameter group *P1* is ignored.

User Action:

None

IAIN0109

Invalid init variable suffix "*P1*". Parameter not set

Reason:

The INIT type parameter of a parameter group was incorrectly named. The parameter cannot be set.

System Action:

Processing for the parameter group fails.

User Action:

Contact your Systems Administrator.

IAIN0110

Parameter group *P1* updated

Reason:

The parameter group *P1* was successfully updated. The parameter settings will be effective for the next system startup.

System Action:

None

User Action:

None

IAIN0111

Parameter group already being updated by user *P1*

Reason:

The request to update a parameter group was denied because the user *P1* is already updating that parameter group.

System Action:

Request denied.

User Action:

Wait until no other user is updating the parameter group.

IAIN0112**Set parameter group *P1 P2*****Reason:**

The parameter group *P1* was set as requested and the status of the action was *P2*. If the status was COMPLETED then the values specified for the parameter group will be effective immediately. If the status was FAILED then view the Initialization Log for this parameter group and correct the errors indicated.

System Action:

None

User Action:

If the status was FAILED then view the Initialization Log to determine the cause of the failure. Correct the errors or update the parameter group to correct any parameter values.

IAIN0113**Processing for phase *P1* completed, *P2* failures****Reason:**

The initialization monitor process completed all possible processing for initialization phase *P1*. There are *P2* failures outstanding.

System Action:

Processing continues.

User Action:

Correct the errors encountered by any failed parameter groups from the Initialization Monitor list.

IAIN0114

Value specification invalid for option *P1*

Reason:

The keyword *P1* was specified with a value. This keyword does not support the specification of a value.

System Action:

Field is set in error.

User Action:

Remove the value specification for the keyword.

IAIN0115

Invalid DBCS keyword value *P1*

Reason:

The DBCS= keyword was specified with an invalid value *P1*. The only valid values for the UDB command operand keyword DBCS are IBM or FUJITSU.

System Action:

Field is set in error.

User Action:

Correct the value of the DBCS keyword.

IAIN0116

Open error for VFS file, filerc= *P1*

Reason:

An error occurred when opening the VFS file for processing by the initialization utilities. The file return code received was *P1* .

System Action:

Processing terminates.

User Action:

Contact your Systems Administrator.

IAIN0117

File *P1* error for VFS, filerc= *P2* VSAMFDBK= *P3* key= *P4*

Reason:

An error occurred processing the VFS file. The file request was *P1*, the file return code was *P2*, the VSAM feedback code was *P3*, and the key of the record being processed was *P4*.

System Action:

Processing terminates.

User Action:

Contact your Systems Administrator.

IAIN0118

VFS cleared of parameter groups, *P1* records deleted

Reason:

A request to clear the VFS file of all parameter groups was successful. There were *P1* records deleted.

System Action:

None

User Action:

None

IAIN0119

Invalid command

Reason:

The command specified was not recognized as a valid command.

System Action:

Request denied.

User Action:

Enter a valid command for press a valid function key.

IAIN0120

Request canceled

Reason:

The request to cancel the previous function was successful.

System Action:

None

User Action:

None

IAIN0121

System is being initialized via the Customizer for the first time.

Reason:

During system initialization it was determined that the Customizer had not been used to initialize this system before. This may be because the system has just been installed or it may be because a different VFS file has been used for this system startup.

If a different VFS file has been used, then restart the system with the correct VFS file. Otherwise, you will need to recustomize the system, because the customization parameter settings are stored on the VFS file).

System Action:

None

User Action:

You may wish to restart the system using a different VFS file if this system has been customized.

IAIN0122**Parameter *P1* not set, can only be set during phase *P2*****Reason:**

The parameter could not be set because it is only possible to set the parameter during a specific initialization phase. The current initialization phase does not match the parameter's requirement. The parameter name is *P1* and the required phase is *P2*.

System Action:

Parameter is not set.

User Action:

None. The parameter will be set during the next system initialization.

IAIN0123**Initialization monitor already running, request denied****Reason:**

An attempt to start the initialization monitor process failed because another process is already running and monitoring initialization.

System Action:

Request denied.

User Action:

None

IAIN0124**Global variable *P1* set to " *P2*"****Reason:**

The global variable *P1* was set to the value *P2* .

System Action:

None

User Action:

None

IAIN0125

All initialization parameter groups have completed processing

Reason:

The initialization monitor process has completed its processing because all initialization parameter groups have completed their processing.

System Action:

None

User Action:

None

IAIN0126

Processing for parameter group *P1* started

Reason:

The parameter group *P1* has been started by the Customizer and it will begin to process its parameters.

System Action:

None

User Action:

None

IAIN0127

Initialization wizard *P1* loading parameter groups

Reason:

The system has begun the process of loading parameter groups for the wizard procedure *P1* .

System Action:

None

User Action:

None

IAIN0128**Parameter group *P1* not found****Reason:**

The parameter group *P1* was not found in the VFS file.

System Action:

None

User Action:

None

IAIN0129**Parameter group prereqs resolved and *P1* parameter groups were bypassed****Reason:**

The system has completed the process of verifying and resolving parameter group prerequisites and because of required prerequisites not being present, *P1* parameter groups were bypassed. This may occur when parameter groups of licensed features are not defined because the feature is not licensed for this system.

System Action:

None

User Action:

Ensure that your system has the correct license.

IAIN0130**Parameter group resolution complete. Total of *P1* groups****Reason:**

The system has completed the process of loading all of its parameter groups. There were *P1* groups loaded.

System Action:

None

User Action:

None

IAIN0131

Initialization monitor process started

Reason:

The initialization monitor process has been started. This process will start the processing of parameter groups in a controlled fashion until all parameter groups have been set.

System Action:

None

User Action:

None

IAIN0132

Control table updated, set parameter group *P1* is pending

Reason:

The parameter group *P1* was successfully updated. The setting of these parameters for the current execution is either pending the completion of other parameter groups' processing or waiting for the system to schedule it. This occurs because the system has not completed its normal system initialization, when parameter groups are set in an ordered and controlled fashion.

System Action:

None

User Action:

None

IAIN0133**Parameter group *P3* action failed, proc= *P1* RC= *P2*****Reason:**

The parameter group service procedure *P1* was invoked to perform a task associated with the parameter group *P3*. The service procedure returned a failure return code of *P2*.

System Action:

Processing for the parameter group failed.

User Action:

Check preceding messages to determine the cause of the error.

IAIN0134**Initialization phase *P1* forced to completion by start of phase *P2*****Reason:**

The initialization phase *P1* was forced to completion by the initiation of phase *P2*. All parameter groups from phase *P1* will be processed in phase *P2*.

System Action:

None

User Action:

None

IAIN0135**Set request by *P1* accepted for parameter group *P2*****Reason:**

A request to set the parameters of parameter group *P2* was received from user *P1*. The initialization monitor process has accepted this request and will begin the processing of this parameter group.

System Action:

Processing for the parameter group is started.

User Action:

None

IAIN0136

Set request by *P1* for *P2* denied, status is *P3*

Reason:

A request to set the parameters of parameter group *P2* was received from user *P1*. The initialization monitor process has rejected this request because the parameter group's status indicates that it is not eligible to be set.

During system initialization, parameters can be updated and set only if they are in FAILED or COMPLETED status. If the parameter group is in QUEUED or WAITING status, then it will be set when all prerequisite parameter groups have been completed. If the parameter group is in RUNNING status, then it is currently in the process of setting the parameters and cannot be changed until after it has completed or failed.

System Action:

None

User Action:

None

IAIN0137

Ignore request by *P1* for *P2* denied, status is not failed

Reason:

A request to ignore the failed status of parameter group *P2* was received from user *P1*. The initialization monitor process has rejected this request because the parameter group's status indicates that it is not eligible to be ignored. Only parameter groups in FAILED status can be ignored.

System Action:

None

User Action:

None

IAIN0138**Ignore request by *P1* accepted for parameter group *P2*****Reason:**

A request to ignore the failed status of parameter group *P2* was received from user *P1*. The initialization monitor process has accepted this request and will ignore the failed status.

System Action:

None

User Action:

None

IAIN0139**Initiation of phase *P1* by *P2* denied, phase invalid****Reason:**

A request by user *P2* to initiate processing for phase *P1* was denied because the phase is invalid.

System Action:

Request is rejected.

User Action:

Specify a valid phase and retry the request.

IAIN0140**Initiation of phase *P1* by *P2* ignored, phase already initiated****Reason:**

A request by user *P2* to initiate processing for phase *P1* was ignored because the phase has already been initiated.

System Action:

Request is rejected.

User Action:

None

IAIN0141

Parameter *P1* set failed, proc= *P2* RC= *P3*

Reason:

The parameter group service procedure *P2* failed. The procedure was invoked to set the parameter *P1* and returned a failure return code. The return code was *P3*.

System Action:

Processing for the parameter group fails.

User Action:

Check related messages for the reason the set failed.

IAIN0142

Initialization has already completed

Reason:

The initialization monitor was invoked to display the current status of initialization. However, initialization has already completed and there is nothing to display.

System Action:

None

User Action:

None

IAIN0143

(*P1*) Initialization failures have occurred

Reason:

The initialization monitor process has detected parameter group failures. *P1* is the jobname of the system for which the message was issued.

System Action:

None

User Action:

Invoke the initialization monitor and check the reason for the failures.

IAIN0144**Procedure *P1* does not exist in DDname *P2* for userid *P3*****Reason:**

The specified procedure *P1* was not found in the target user ID's commands DDNAME. The target user ID is *P3* and their commands DDNAME is *P2*.

System Action:

Field set in error.

User Action:

Specify a procedure that is valid and exists.

IAIN0145**User *P1* not authorized****Reason:**

The user whose user ID is *P1* is not authorized to perform the action requested.

System Action:

Request rejected.

User Action:

None

IAIN0146**Parameter groups being updated by *P1*****Reason:**

There are one or more parameter groups being updated by one or more other users. INI procedures can be generated only if there are no other users updating parameters.

System Action:

Request rejected.

User Action:

Wait until no other user is updating the parameter groups.

IAIN0147

Parameter groups not defined

Reason:

There are no parameter groups defined for this system. This condition occurs if the system is never started using the PARMS specifications in the INIT and READY initialization procedures and/or the DEFINE service has never been invoked to define the parameter groups.

System Action:

Request rejected.

User Action:

Start the system using the PARMS specification in the INIT and READY initialization procedures or use the \PARMS DEFINE service.

IAIN0148

P1 is required

Reason:

The field *P1* is a required field.

System Action:

Field is set in error.

User Action:

Specify a value for *P1*.

IAIN0149

Error from IDCAMS P1 return code is P2

Reason:

The IDCAMS service *P1* failed and the return code received was *P2*.

System Action:

The request terminates.

User Action:

View the activity log for IAIN0150 messages which show the responses from IDCAMS.

IAIN0150**P1****Reason:**

This is a bracketing message for the IDCAMS messages returned from a previous call.

System Action:

None

User Action:

Determine the error as indicated in the IDCAMS message and retry your request.

IAIN0151**File P1 error for P2, filerc= P3 VSAMFDBK= P4****Reason:**

The file request *P1* failed for the file allocated with DDNAME *P2* . The file return code was *P3* and the VSAM feedback code was *P4* .

System Action:

The requested is terminated.

User Action:

Determine the reason for the error and retry the request.

IAIN0152**P1 is invalid****Reason:**

An invalid value was specified for field *P1* .

System Action:

Field is set in error.

User Action:

Correct the field and retry the request.

IAIN0153

P1 must specify a partitioned dataset

Reason:

The target INI file dataset name MUST specify a partitioned dataset.

System Action:

Field is set in error.

User Action:

Specify a partitioned dataset name.

IAIN0154

INI procedure successfully generated and saved

Reason:

The INI procedure was successfully generated and saved as requested.

System Action:

None

User Action:

None

IAIN0155

Initialization wizard procedure not defined or invalid. Proc= P1

Reason:

The Customizer initialization wizard procedure *P1* either was not defined or is invalid.

System Action:

The requested action is terminated.

User Action:

Check that the system was started using the \PARMS invocations in the INIT and READY initialization procedures or that the \PARMS define service has been invoked.

IAIN0156**Defaults set for parameter group *P1*****Reason:**

The parameter group *P1* was updated with the system defaults.

System Action:

None

User Action:

None

IAIN0157***P1* already exists****Reason:**

The target INI file member specified already exists and Replace Member was set to NO.

System Action:

Field is set in error.

User Action:

Either specify a member name that doesn't exist or change the Replace Member field to YES.

IAIN0158

No settings applied by INI *P1*. VFS customization used for *P2 P3*

Reason:

The supplied INI procedure returned a non-zero return code. This means that there was an error in setting the customized parameter values or that the INI does not support this parameter group. *P2 P3* is the Appl ID and Name of the parameter group being defined.

This condition can also occur if a new parameter group has been defined by distributed code that had not be used by this system previously, perhaps because the system was running on a different operating system environment or product maintenance has added a new parameter group.

System Action:

The parameter group is customized using the values set in the VFS file. If this is a new parameter group, then its default values will be used.

User Action:

Check your INI procedure to ensure that it sets customized values for all parameter groups. If the parameter group is new, then regenerate your INI procedure after the system has initialized. If your INI procedure specifically ignores certain parameter groups so that the customization for these parameter groups is taken from the VFS file, then ignore this message.

IAIN0159

Dataset type or key length invalid, must be KSDS with KL= *P1*

Reason:

A dataset was specified that is not a key sequenced dataset or that has an invalid key length. The dataset must be a key sequenced dataset (that is, a KSDS/BASE type dataset) and its key length must be *P1* .

System Action:

Field is set in error.

User Action:

Specify a dataset with the correct attributes.

IAIN0160**Function is not supported for Operating System *P1*****Reason:**

A requested function is not supported for the Operating System environment *P1*.

System Action:

Request is rejected.

User Action:

None

IAIN0161**Single level dataset names are not accepted****Reason:**

The specification of a single level dataset name for a parameter is not accepted.

System Action:

Field is set in error.

User Action:

Specify a fully qualified dataset name without quotes and with more than one level.

IAIN0162

P1 not authorized for APPC access to userid P2 (ref: P3)

Reason:

A request to action a parameter group by user P1 failed because the user was not authorized for APPC access to the system user P2 . The specific problem is defined by the error reference P3 , which is either N47J06 or N47J08.

If the reference is N47J06, then it indicates that the APPC access key for user P1 did not match the APPC lock for the system user ID P2 .

If the reference is N47J08, then it indicates that the user could not be signed on to the system user. This could be caused by the system user ID not having a specific user ID definition.

Check the activity log for related APPC messages that will further explain the error condition.

System Action:

The request to action the parameter group is rejected.

User Action:

Contact your systems administrator.

If you are using UAMS, the definition for user P1 must specify a matching key for the lock specified in the system user's definition. The system user must have a user ID definition specifying a lock accessible by other users.

For full SAF security, the user P1 must be defined to the security system.

IAIN0163

NDB file is not valid for this version of P1

Reason:

Specification of an NDB was invalid because the NDB was not defined for the current version of *P1* system.

System Action:

Field is set in error.

User Action:

Specify a valid NDB for system *P1*.

IAIN0164

No response from Customizer monitor for *P1* seconds. Forcing queued tasks**Reason:**

The START service for Customizer did not detect any activity for initialization for *P1* seconds. This occurs if an initialization parameter group's associated actions have *not* notified the Customizer monitor of their success or failure, but are either still running or waiting for some event to occur.

System Action:

All parameter groups that are QUEUED are reviewed by the Customizer monitor. If any of these parameter groups is waiting for a currently RUNNING parameter group to complete and that dependency is only for the purpose of ordering the execution of the parameter group, then that dependency is removed.

As a result of removing all such soft dependencies on parameter groups, any that become eligible for actioning are started.

If no parameter group can be actioned, then the current initialization phase is terminated and the next phase is initiated. If the current phase is GO, then Customizer will wait until all parameter groups have completed processing. Operator intervention may be required.

User Action:

This condition may occur if external resources are not available to the region and it has been forced, by the operating system, to wait until the resource is available.

The most common such resource is a dataset that is required for allocation to the region and the request is waiting for some external event to occur. If so, then ensure that all required resources are available when the region is started.

This condition may also occur in a system with poor response. In this case the Customizer timeout must be increased to compensate. Within the RMINIT procedure, specify the following NCL statement BEFORE the execution of the \$IICALL procedure:

```
&&000$IIINMXW = 600 -* ICS TIMEOUT IS 10 MINUTES
```

The default value for this timeout is 300 seconds (5 minutes) and it can be increased to prevent Customizer from assuming that there are problems.

If the system's response is not poor and the default of 300 seconds is considered to be reasonable, then there could be errors in the currently RUNNING parameter group's actions and you may need to contact your Technical Support representative.

IAIN0165

Phase *P1* prematurely ending due to timeout

Reason:

The phase *P1* will be terminated because no activity is occurring in ICS and all parameter groups which should have completed have not done so. This message is accompanied by message IIIN0164 (see the explanation for this message).

System Action:

The phase *P1* will be terminated and the next phase will be initiated.

User Action:

See message IIIN0164.

IAIN0166

***P1* tasks forced to continue**

Reason:

Because of a previous ICS timeout, *P1* parameter groups were evaluated as eligible for starting. All these parameter groups are started.

System Action:

P1 parameter groups will be actioned.

User Action:

See message IIIN0164.

IAIN0167**(P1) parameter group P2 failed. Error message follows****Reason:**

The processing for parameter group *P2* failed. The error message for the parameter group follows this message. *P1* is the jobname of the system for which the message was issued.

System Action:

Dependent parameter groups will be queued until this parameter group is rerun and completes successfully or is ignored. Parameter groups whose dependency is only for ordering will be started.

User Action:

See following message for more details of the actual error for the parameter group. Correct the error indicated by this message and any other error messages in the failed parameter group's log. If the failed parameter group is PANELLIBS or MODSFILES, then problems may be experienced when logging on to the system.

IAIN0168**Validation errors detected on other page(s)****Reason:**

The action requested could not be performed because validation errors were detected for fields that are not present on the current page of the parameter group's display.

System Action:

Request is rejected.

User Action:

Scroll to the other pages for the parameter group and correct the fields in error. Retry the request.

IAIN0169

View the Initialization log and correct the errors detected

Reason:

Initialization detected one or more errors in processing, but the errors were not severe enough to halt initialization. The errors detected can be found in the initialization log, accessed from the Customization Menu. The errors detected are those colored pink.

System Action:

Processing continues. Problems may be experienced with some components because of the error(s).

User Action:

View the Initialization Log, which can be accessed from the Customization Menu. Review and correct all the errors in pink.

IAIN0170

The following non-fatal error has been detected:

Reason:

This message is related to message IIIN0169 (see the explanation for that message). The message following this one represents the detected error.

System Action:

None

User Action:

See the explanation for message IIIN0169 and for the message following this one. See the Initialization Log, which can be accessed from the Customization Menu.

IAIN0171**Invalid page number P1****Reason:**

The page number *P1* is not a valid number.

System Action:

Page command is rejected.

User Action:

Specify a valid page number.

IAIN0172**Page number P1 out of range, must be between P2 and P3****Reason:**

The page number *P1* is out of range. It must be a valid number between the values *P2* and *P3* .

System Action:

Page command is rejected.

User Action:

Specify a valid page number within the indicated range.

IAIN0173**Invalid NDB, RC= P1 - P2****Reason:**

The dataset specified was not a valid NDB database. The NDB return code received from an NDBOPEN was *P1* and the description of that return code is *P2* . The description is from the NETINFO database and can be viewed in full by using the \$INFO command, under the NDB error codes category.

System Action:

The field is set in error.

User Action:

Specify a valid NDB database dataset name.

IAIN0174

Error information - NETINFO category= P1 code= P2 msg= P3

Reason:

This message is a header message for the display of the description of an error code contained in another error message. The information shown in subsequent messages is contained within the NETINFO database (this can be accessed by using the \$INFO primary command). The information displayed was from the category *P1* with error code *P2* and the error message that contained the code was *P3* .

System Action:

None

User Action:

See message *P3* and the description messages that follow this message.

IAIN0175

P1

Reason:

This message contains the descriptive text from the NETINFO database. See message IAIN0174 for more details.

System Action:

None

User Action:

For more information view the NETINFO database by using the \$INFO primary command.

IAIN0176**Invalid dataset, reason= P1 - P2****Reason:**

The dataset specified was not a valid, existing dataset. The dynamic allocation reason code (from message N19503) is *P1* and the description is *P2*. The description is from the NETINFO database and can be viewed in full by using the \$INFO command, under the Dynamic Allocation error codes category.

System Action:

The field is set in error.

User Action:

Specify a valid dataset.

IAIN0177**SYSPARM P1 already set to P2****Reason:**

The system parameter (SYSPARM) with name *P1* was already set to the value *P2* and was not set again.

System Action:

None

User Action:

None

IAIN0178

Processing for parameter group P1 ended, status is P2

Reason:

The parameter group *P1* has completed all its processing. The status of its processing is *P2* .

System Action:

Any dependent parameter groups will have their dependency on this parameter group removed. These successor parameter groups may be started if this is the last dependency.

User Action:

If the parameter group is in a FAILED status, view the Initialization Log for that parameter group and correct the error.

IAIN0179

Parameter group P1 still running. running. No responses received

Reason:

The parameter group *P1* was detected as still running and no response has been received for the timeout period. The parameter group may be legitimately waiting for a response from the operating system or there may be errors in the system.

System Action:

None

User Action:

None

IAIN0180**Parameter group P1 P2 by P3 at P4 on P5****Reason:**

This message provides an audit trail when a parameter group (*P1*) is updated or action (*P2*) and shows the user ID (*P3*), date (*P4*) and time (*P5*) that the activity occurred.

System Action:

None

User Action:

None

IAIN0181**P1 set to P2****Reason:**

This message is issued when a parameter group is actioned that resulted in a variable being set. The variable description (*P1*) and its new value (*P2*) are shown.

System Action:

None

User Action:

None

IAIN0182**P1 changed from P2 to P3****Reason:**

This message is issued when a parameter group is actioned that resulted in a variable being changed. The variable description (*P1*) and its old and new values (*P2* and *P3*) are shown.

System Action:

None

User Action:

None

IAIN0183

Set Default not allowed during initialization.

Reason:

A request to set an entire parameter group to its default was rejected. You cannot use the Set Default action for a parameter group during system initialization. Update the group and set the specific parameters required for this system.

System Action:

The request is rejected.

User Action:

Set the individual parameters as required.

IAIN0184

Processing for parameter group P1 ended, Background User Id / Password updated

Reason:

The parameter group P1 has completed all its processing. The background user id / password has been updated.

System Action:

The update of parameter groups for Scheduler Interface is completed.

User Action:

None

IAIN0201**PARAMETER GROUP HAS INVALID STATUS, MUST BE IN FAILED STATUS****Reason:**

A request to ignore a failed status for a parameter group failed because the parameter group was not already in a failed status. The ignore action can only be issued for failed parameter groups.

System Action:

Request rejected.

User Action:

None

IAIN0202**ACTION REQUEST ACCEPTED FOR P1****Reason:**

A request to Action a failed parameter group was accepted. The request was passed to the monitor process. The parameter group for which the action was accepted is *P1* . The status of the parameter group will be set by the monitor process dynamically when processing for the group has completed.

System Action:

None

User Action:

None

IAIN0203

INVALID PARAMETER GROUP STATUS P1

Reason:

A request to display parameter groups of a particular status(es) was rejected because one or more of the statuses specified was invalid. Valid statuses for the STATUS command are FAILED, RUNNING, COMPLETED, QUEUED, and WAITING.

System Action:

Request rejected.

User Action:

Specify a set of valid statuses separated by commas.

IAIN0204

PARAMETER GROUP HAS INVALID STATUS, MUST BE FAILED OR COMPLETED

Reason:

A request to action a parameter group was denied because the parameter group was not in FAILED or COMPLETED status. The action request can only be issued for failed or completed parameter groups. This is because the Initialization Monitor process is still actively managing the order of parameter group execution.

System Action:

Request rejected.

User Action:

None

IAIN0301**INVALID INITIALIZATION PHASE P1****Reason:**

A request to restrict the initialization log's view to all messages from a particular initialization phase failed. The initialization phase specified was invalid. Valid initialization phases are:

INITS - Start of initialization (this is an internal phase only)

INIT - The INIT initialization phase that is initiated from the INIT procedure nominated by the startup parameters for the region

READY - The READY initialization phase that is initiated from the READY procedure nominated by the startup parameters for the region

GO - This is an internal phase that represents all initialization that was not scheduled to be performed during the INIT or READY phases. It also includes any initialization that failed during the INIT or READY phases and that was manually actioned during the GO phase.

System Action:

Request is rejected.

User Action:

Specify a valid initialization phase.

IAIN0302**INVALID APPL ID P1****Reason:**

A request to restrict the Initialization Log's view to all messages for a particular parameter group failed. The application ID specified for the parameter group was invalid. The application ID was *P1*.

System Action:

Request rejected.

User Action:

Specify a valid application ID.

IAIN0303

INVALID PARAMETER GROUP NAME P1

Reason:

A request to restrict the Initialization Log's view to all messages for a particular parameter group failed. The parameter group name specified was invalid. The parameter group name was *P1* .

System Action:

Request rejected.

User Action:

Specify a valid parameter group name.

IAIN0501

USER P1 DOES NOT HAVE UAMS AUTHORITY AND CANNOT DO CUSTOMIZATION

Reason:

The user P1 attempted to log on to the region before customization had been performed. The user was the first user to log on; however, they do not have UAMS authority and are thus not eligible to do initial system customization.

System Action:

The request is rejected.

User Action:

Wait until another user performs system customization before logging on.

IAIN0502**USER P1 IS A MEMBER OF GROUP(P2), THE GROUP CANNOT BE MODIFIED****Reason:**

The user P1 attempted to log on to the region before customization had been performed. The user was the first user to log on; however, they are a member of the group *P2* that does not have UAMS authority. The group cannot be modified to have UAMS authority. The user is not eligible to do initial system customization.

System Action:

The request is rejected.

User Action:

Wait until another user performs system customization before logging on.

IAIN0503**UNABLE TO DISPLAY INITIALIZATION STATUS, MSG= P1****Reason:**

The system detected that initialization did not complete and attempted to display a help dialog to that effect; however, there is an error in the help presentation service. The error message returned from the help service is *P1*.

System Action:

Processing continues.

User Action:

Check the initialization log for initialization errors.

IAIN0601**NO TRACE MESSAGES FOR PROCESSES P1****Reason:**

An initialization trace could not be selected because the trace table was empty.

System Action:

Request ignored.

User Action:

None

IAIN0602

INVALID NUMBER P1

Reason:

The NEXT or PREV command was specified with the parameter *P1* and this parameter was not numeric.

System Action:

Request ignored.

User Action:

Specify a valid number.

IAIN0701

THE MNEMONIC P1 IS NOT SUPPORTED BY THE ALL COMMAND

Reason:

The ALL command was specified with the mnemonic *P1* as the parameter. For this particular list, the ALL command does not support this mnemonic.

System Action:

Request ignored.

User Action:

Specify another mnemonic that is supported by the ALL command.

IAIN0702

P1 INITIALIZATION TRACES DELETED

Reason:

The ALL command was requested to delete all the Initialization Traces. There were *P1* traces and all were deleted.

System Action:

None

User Action:

None

IAIN0703**NO TRACES TO DISPLAY****Reason:**

No ICS Debug Traces to display.

System Action:

None

User Action:

None

IAPKG001**P1 is required****Reason:**

The field *P1* is required and must not be blank.

System Action:

Field is set in error.

User Action:

Specify a value for *P1*.

IAPKG002**P1 is required if P2 is specified****Reason:**

The field *P1* is required when the field *P2* is specified.

System Action:

Field is set in error.

User Action:

Specify a value for *P1*.

IAPKG003

P1 is required if P2 is " P3"

Reason:

The field *P1* is required when the value of field *P2* is *P3*.

System Action:

Field is set in error.

User Action:

Specify a value for *P1*.

IAPKG004

P1 must be blank if P2 is specified

Reason:

The value for field *P1* must be blank if field *P2* is specified.

System Action:

Field set in error.

User Action:

Blank out the value for *P1* or the value for *P2*.

IAPKG005

P1 must be blank if P2 is " P3"

Reason:

The value for field *P1* must be blank if the value for field *P2* is *P3*.

System Action:

Field set in error.

User Action:

Blank out the value for *P1* or specify a different value for *P2*.

IAPKG006**Field must be one of: P1****Reason:**

The value for the hi-lighted field must be one of the values in *P1*.

System Action:

Field set in error.

User Action:

Specify one of the possible values listed in *P1*.

IAPKG007**Enter a valid dataset name****Reason:**

The highlighted field must have a valid dataset name specified.

System Action:

The field is highlighted as an error.

User Action:

Enter a correct value.

IAPKG008**Map error: map P1 not found****Reason:**

An internal error occurred because the map *P1* was not found in the map dataset.

System Action:

The request is rejected.

User Action:

Contact your system administrator.

IAPKG009

Map error: map P1 MDORC= P2 MDOFDBK= P3

Reason:

An internal error occurred. The map *P1* experienced the error described by MDORC= *P2* and MDOFDBK= *P3* .

System Action:

The request is rejected.

User Action:

Contact your system administrator.

IAPKG010

' P1' is not a sequential dataset

Reason:

The dataset specified by *P1* was not a sequential dataset.

System Action:

The field containing the dataset name is highlighted as an error.

User Action:

Specify a sequential dataset.

IAPKG011

' P1' is a PDS but a member name is not specified

Reason:

A partitioned dataset is specified by *P1* but a member name is not specified.

System Action:

The field containing the dataset name is highlighted as an error.

User Action:

Specify the correct dataset or member name.

IAPKG012**' P1' is not a PDS****Reason:**

The dataset specified by *P1* is not a partitioned dataset.

System Action:

The field containing the dataset name is highlighted as an error.

User Action:

Specify the correct dataset.

IAPKG013**Member P1 does not exist in ' P2'****Reason:**

The dataset specified by *P2* does not contain the member *P1* .

System Action:

The field containing the dataset name is highlighted as an error.

User Action:

Specify the correct member or dataset name.

IAPKG014**Insufficient access authority to ' P1'****Reason:**

The dataset specified by *P1* cannot be opened for read access.

System Action:

The field containing the dataset name is highlighted as an error.

User Action:

Obtain authority for the SOLVE system to access the dataset.

IAPKG015

' P1' Unsupported UNIX system services file type

Reason:

The type of file specified by *P1* is not supported. For example it may be a directory name rather than a text file name.

System Action:

The field containing the file name is highlighted as an error.

User Action:

Specify the correct file name.

IAPKG016

Enter a valid dataset or file name

Reason:

The highlighted field must contain a valid dataset name or a Unix system services file name.

System Action:

The field is highlighted as an error.

User Action:

Enter a correct value.

IAPKG017

P1 must different to P2

Reason:

The value for field *P1* must be different to the value of field *P2*.

System Action:

Field set in error.

User Action:

Specify a different value for *P1* or *P2*.

IAPKG018**' P1' is not a VSAM dataset****Reason:**

A non-VSAM dataset was specified where a VSAM dataset was needed.

System Action:

The field containing the dataset name is highlighted as an error.

User Action:

Specify the correct dataset name.

IAPKG019**P1 must not be a zero time interval.****Reason:**

The value for field *P1* must be a valid time interval greater than zero.

System Action:

Field set in error.

User Action:

Specify a non-zero time interval for *P1*.

IAPKG020**P1 must be blank if P2 is blank****Reason:**

The value for field *P1* must be blank if field *P2* is also blank.

System Action:

Field set in error.

User Action:

Blank out the value for *P1* or specify a value for *P2*.

IAPKG021

Not a valid JCL statement

Reason:

Columns 1 and 2 of the JCL statement do not contain '//'.

System Action:

Field set in error.

User Action:

Specify '/' in columns 1 and 2.

IAPKG022

No additional JCL statements allowed

Reason:

Only a JCL comment or JES3 control statement ('//*' in columns 1 to 3) or a JES2 control statement ('/*' in columns 1 and 2) is allowed.

System Action:

Field set in error.

User Action:

Review the line in error and make any necessary corrections.

IAPKG023

Not a valid JCL statement

Reason:

Only a JCL comment or JES3 control statement ('//*' in columns 1 to 3) or a JES2 control statement ('/*' in columns 1 and 2) is allowed.

System Action:

Field set in error.

User Action:

Review the line in error and make any necessary corrections.

IAPKG024**Expected continuation not received****Reason:**

A comma was found at the end of the previous line but the next line was not a continuation.

System Action:

Field is set in error.

User Action:

Review the continuation statement and ensure that it begins between columns 4 and 16, or remove the comma from the previous JCL statement.

IAPKG025**JCL JOB statement not found****Reason:**

The JCL JOB statement could not be found in the current line.

System Action:

Field is set in error.

User Action:

Review the line in error and ensure that the string 'JOB' appears after the jobname, separated by at least one blank.

IAPKG026**Invalid jobname: P1****Reason:**

A jobname must be 1-8 characters in length and can contain only alphanumeric characters or national (\$, #, @) characters. The first character must be alphabetic or national.

System Action:

Field is set in error.

User Action:

Correct the line in error.

IAPKG027

Duplicate keyword : P1

Reason:

The keyword *P1* has been specified more than once.

System Action:

Field is set in error.

User Action:

Correct the line in error.

IAPKG028

Keyword ' P1' contains an invalid value

Reason:

The keyword *P1* must contain a single character (A to Z or 0 to 9).

System Action:

Field is set in error.

User Action:

Correct the line in error.

IAPKG029

Keyword ' P1' is not allowed

Reason:

The keyword *P1* is not allowed.

System Action:

Field is set in error.

User Action:

Correct the line in error.

IAPKG030**IIAPARMS file P1 error, IIA parameters not available. P2****Reason:**

Customizer attempted to process the IIA parameter file for input but the action *P1* failed. *P2* is additional information about the error.

System Action:

IIA parameters will not be used for this initialization.

User Action:

Correct the error for the next system restart.

IAPKG031**Error in IIAPARMS file. Invalid syntax for record: " P1"****Reason:**

While processing, the IIA parameter file encountered a record with invalid syntax. The records must specify parm=value, with one parameter per record. The parm must be a valid variable syntax.

System Action:

The record is ignored and processing continues.

User Action:

Correct the error in the parameter file for the next restart of the system.

IAPKG032**IIA parameter P1 set to P2****Reason:**

The customizer successfully set the IIA parameter *P1* to the value *P2*.

System Action:

None.

User Action:

None.

IAPKG033

P1 must be P2 if P3 is P4

Reason:

The value for field *P1* must be *P2* if field *P3* is also *P4*.

System Action:

Field set in error.

User Action:

Set the value for *P1* to *P2* or change the value for *P3*.

IAPKG034

Enter HFS path name

Reason:

The value for the field is not a valid HFS path and file name.

System Action:

The value is rejected.

User Action:

Enter a valid fully-qualified Hierarchical File System path and file name.

IAPKG035

IIAPARMS data set P1

Reason:

The ddname IIAPARMS is being allocated to the *P1* data set.

System Action:

None.

User Action:

None.

IN2501**END OF FILE****Reason:**

NO MORE RECORDS FOR THE X25 CATEGORY ON THE FILE

System Action:

No action

User Action:

No action

IN2502**OVERTYPE TO MODIFY****Reason:**

To modify the record overtype all fields which should be changed.

System Action:

None.

User Action:

Overtime existing text to modify the record.

IN2503**CODE REQUIRED****Reason:**

A vcbrec code value is necessary to access to a specific record. This value is absent.

System Action:

No action

User Action:

Enter a correct value in the code field and retry.

IN2504

KEY IN TO ADD A RECORD

Reason:

A vcbrec code value is necessary to add the record. This value is absent.

System Action:

No action

User Action:

Enter a correct value in the code field and retry.

IN2505

UPDATE CANCELLED

Reason:

The F3 key was used to cancel record update.

System Action:

The record remains unchanged.

User Action:

None.

IN2508

RECORD ALREADY EXISTS

Reason:

When updating a record the key value has changed but a record with this key already exists. Update will overwrite an existing record.

System Action:

None.

User Action:

Press ENTER to proceed, F3 to cancel.

IN2509**UPDATE COMPLETE****Reason:**

A record has been updated successfully.

System Action:

None.

User Action:

None.

IN2510**DELETE IGNORED****Reason:**

The record contents were changed before pressing the F11 key to delete the record. This is not allowed.

System Action:

Delete request ignored.

User Action:

Select a record to be deleted and retry.

IN2511**RECORD DELETED****Reason:**

A delete request has been completed successfully.

System Action:

None.

User Action:

None.

IN2512

RECORD NOT FOUND

Reason:

A record with a code specified was not found.

System Action:

None.

User Action:

Specify a correct code and retry.

IN2513

VSAM ERROR : REQ=request FILE=filename VSAMFDBK=nn FILEKEY=key

Reason:

A VSAM error occurred when attempting to delete the record.

System Action:

A record remains unchanged.

User Action:

Refer to the appropriate VSAM manual for the VSAM error code above.

IPAP0201

NetSpy unavailable, no data displayed

Reason:

Some data is not displayed because it is obtained from a NetSpy region but the interface to the region is not enabled, or the NetSpy address space is not active.

System Action:

None

User Action:

Use the NETSPYLINKS Customizer Parameter Group to enable your interface to NetSpy.

IPAS0201**FILTER operand must be an address space mask****Reason:**

You entered an invalid FILTER command.

System Action:

The command is rejected.

User Action:

Reissue the FILTER command with a valid address space mask as the operand.

The mask can specify ? to match a single character, or * to match one or more characters. For example, FILTER CICS* displays all address spaces whose name starts with CICS.

IPAS0202**No traffic seen in the last hour for *p1* on stack *p2*****Reason:**

A request to display recent traffic statistics could not be satisfied because the Packet Analyzer has seen no packets to or from address space *p1* over stack *p2* in the last hour.

System Action:

The action is rejected.

User Action:

If traffic is expected, check the status of the application.

IPAS0301

No data found for *p1*

Reason:

No data was found for *p1*, and the TCP Connection Duration Times display could not be presented. This condition can happen if the SSI has been recently started and no connection information has been gathered for *p1*. It could also indicate that *p1* has not had any connection activity since the SSI started.

System Action:

The command is rejected.

User Action:

Try later when there is data to display.

IPAS0302

No duration times available, no TCP connections have ended

Reason:

The Packet Analyzer has not yet seen any TCP connections end for the selected object. Currently active connections are not represented in the graph.

System Action:

None.

User Action:

Try later when some TCP connections have ended.

IPAS1201**No TCP activity recorded *p1*****Reason:**

A request for TCP application activity has been sent to the Packet Analyzer. The request failed because the Packet Analyzer has seen no TCP connections for the stack using the indicated filter criteria, *p1*.

System Action:

The request fails.

User Action:

If the Packet Analyzer has been restarted recently, wait a while and reissue this command. If the Packet Analyzer has not been restarted recently, check the status of the indicated stack or address spaces.

If *p1* is a stack, check that the stack is correctly configured to generate SMF records for TCP connection start and end. The SMF records are used by the Packet Analyzer to associate packets with an application address space.

IPAS1202**Packet Analyzer statistics not available****Reason:**

The SSI is currently running with PALEVEL set to NOPACKETS or NOSTATS. Packet statistics are available only when PALEVEL is FULL.

System Action:

The TCP Application Activity list shows no packet statistics.

User Action:

Check why the SSI is not running with PALEVEL=FULL.

You can change the PALEVEL setting using the SSI's PACTL command.

To change the setting, enter the following command from the region:

```
SSISEND PACTL PALEVEL=FULL
```

IPAS2910

Resource definition has insufficient information for port monitoring

Reason:

Address space port monitoring failed because the resource does not specify port numbers and/or associated stack name.

System Action:

No port monitoring is performed.

User Action:

Update the resource definition, adding port number(s) and stack details.

IPAS3001

Sampling of P1 returned: P2

Reason:

An attempt to perform address space monitoring of *P1* failed. *P2* shows the error message.

System Action:

No sample is taken for *P1*.

User Action:

See message *P2* for more information.

IPAS3002

No ports found for P1 on P2

Reason:

An attempt to display traffic statistics for resource *P1* failed. No ports could be identified on stack *P1* for this resource.

System Action:

None.

User Action:

Check the status of the resource. If stack *P2* is not the correct stack for resource *P1*, update the resource definition for *P1*.

IPAS3003**Storage monitoring for P1 failed. EZBNMIFR RC= P2 Reason= P3****Reason:**

An attempt to retrieve storage utilization details for attributes ECSASStorage or PrivStorage has failed. IBM's EZBNMIFR API has returned an error condition. *P2* is the return code (errno) and *P3* is the reason code (errnojr) from EZBNMIFR.

System Action:

The request is rejected.

User Action:

Contact Technical Support.

IPAS3004**Storage monitoring for P1 failed. NMIFR RC=P2 FDBK=P3****Reason:**

An attempt to retrieve storage utilization details for attributes ECSASStorage or PrivStorage has failed. *P2* is the return code and *P3* is the feedback from NMIFR.

For return code 12, following are some possible feedback values:

- 2 Prepare MDO failure
- 3 Assign MDO failure
- 4 Connect map failure
- 5 Subtask abend processing this request
- 6 Region not authorized
- 7 API module EZBNMIFR load failed during initialization
- 8 Interface disabled due to excessive number of abends

System Action:

The request is rejected.

User Action:

This is an internal failure. Contact Technical Support.

IPAS3005

Monitoring attribute not supported for TCPaccess stack P1

Reason:

Address space monitoring has attempted to process attributes ECSASStorage or PrivStorage for TCPaccess stack *P1* . These attributes are not supported for TCPaccess stacks.

System Action:

None.

User Action:

Remove these attributes from your stack definition.

IPAS3006

Storage monitoring for P1 failed. Unexpected response from SYSCMD

Reason:

An attempt to retrieve storage utilization details for attributes ECSASStorage or PrivStorage has failed. The D TCPIP,,STOR command returned an unexpected response or timed out.

System Action:

The request is rejected.

User Action:

Contact Technical Support.

IPAS3007**Port monitoring failed. SSI not contactable or Packet Analyzer not configured****Reason:**

An attempt to monitor port traffic failed. Statistics cannot be retrieved from the Packet Analyzer for one of the following reasons:

- The SSI region is not running.
- The SSI region is not connected to this region.
- The SSI region is running with PKTANALYZER=NO or a PALEVEL value of other than FULL.

When including Packet Analyzer functions in an SSI, it is recommended to always set the PALEVEL parameter to FULL. If you run with a level other than FULL, various IP monitoring functions will not be available.

System Action:

None of the port attributes sourced from the Packet Analyzer are available.

User Action:

Check the status of the SSI region.

If the SSI is active, check why it is not running with the SSI parameter *PALEVEL=FULL*.

When including Packet Analyzer functions in an SSI, it is recommended to always set the PALEVEL parameter to FULL. If you run with a level other than FULL, various IP monitoring functions will not be available.

Only use a PALEVEL other than FULL if instructed by Technical Support.

IPAS3008

Packet Analyzer port statistics not available

Reason:

Address space monitoring queried the Packet Analyzer in the SSI and found that it is currently not collecting statistics. Packet statistics are collected only when the SSI is running with PALEVEL=FULL.

System Action:

None of the port attributes sourced from the Packet Analyzer are available.

User Action:

Check why the SSI is not running with the parameter *PALEVEL=FULL*.

When including Packet Analyzer functions in an SSI, it is recommended to always set the PALEVEL parameter to FULL. If you run with a level other than FULL, various IP monitoring functions will not be available.

Only use a PALEVEL other than FULL if instructed by Technical Support.

IPAS3009

Backlog monitoring failed. EZBNMIFR RC=P2 Reason=P3

Reason:

An attempt to retrieve listener backlog details for attribute monitoring has failed. IBM's EZBNMIFR API has returned an error condition. *P2* is the return code (errno) and *P3* is the reason code (errnojr) from EZBNMIFR.

System Action:

The backlog attributes are not monitored.

User Action:

Contact Technical Support.

IPAS3010**Backlog monitoring failed. NMIFR RC=*P2* FDBK=*P3*****Reason:**

An attempt to retrieve listener port backlog details has failed. *P2* is the return code and *P3* is the feedback value from NMIFR.

For return code 12, there are the following possible feedback values:

2 indicates that failure occurred while preparing an MDO.

3 indicates that failure occurred while assigning an MDO.

4 indicates that failure occurred while connecting to a map.

5 indicates that a subtask abended while processing this request.

6 indicates that the region is not authorized.

7 indicates that the EZBNMIFR API module failed to load during initialization.

8 indicates that the interface was disabled because of too many abends.

System Action:

The backlog attributes are not monitored.

User Action:

Contact Technical Support.

IPAW0101**NSM agent initialization failed. Retry in progress****Reason:**

The NSM agent failed during start up processing. A retry is in progress to start the agent.

System Action:

NSM Agent initialization is retried.

User Action:

Check that the Agent Technology framework is active using the Unix System Services 'awservices status' command. Ensure that the 'nmIpAgt' MIB is loaded using the USS command 'agentctrl -m' command. If necessary notify your system administrator.

The \$RM UNICENTER customization parameter group can be accessed to control the agent and review startup messages.

IPAWPK01

TNG Interface is already running

Reason:

An attempt was made to start the TCP/IP TNG interface but it was already running.

System Action:

The existing TCP/IP TNG interface continues.

User Action:

None.

IPAWPK04

TNG Agent P1 registration failed

Reason:

The TNG agent failed during start up processing.

System Action:

TNG Agent initialization terminates.

User Action:

Check that the TNG Agent Technology framework is active using the Unix System Services 'awsservices status' command. Ensure that the 'nmIpAgt' MIB is loaded using the USS command 'agentctrl -m' command. If necessary notify your system administrator.

IPAWPK05

TNG Agent P1 initialization failed, Function= P2, RC= P3

Reason:

The Netmaster for TCP/IP TNG agent failed during start up processing. *P2* is the agent technologies function that failed with return code *P3*

System Action:

TNG Agent initialization terminates.

User Action:

Refer to the log for associated failure messages. If necessary report the failure to your system administrator.

IPAWPK06**TNG Agent P1 started @ P2****Reason:**

The NetMaster for TCP/IP TNG Agent has been invoked as instance *P23*.

System Action:

TNG Agent initialization begins. Message IPAWPK07 is issued when the agent becomes active.

User Action:

None.

IPAWPK07**NSM Agent P1 active as instance @ P2****Reason:**

The CA NetMaster NM for TCP/IP NSM Agent is now running as instance *P2*.

System Action:

None.

User Action:

The CA NSM Nodeview and Worldview functions may be used to monitor resources supported by the NSM agent.

IPAWPK08**TNG Agent P1 instance @ P2 terminated****Reason:**

The Netmaster for TCP/IP TNG Agent has terminated.

System Action:

None.

User Action:

None

IPAWPK09

TNG Agent P1 instance @ P2 stop request processed

Reason:

The Netmaster for TCP/IP TNG Agent has been requested to terminate.

System Action:

Agent termination is requested.

User Action:

None.

IPAWPK10

TNG Agent task registration failed

Reason:

The TNG agent failed to initialize the regular work load check task.

System Action:

TNG Agent initialization terminates.

User Action:

Check that the TNG Agent Technology framework is active using the Unix System Services 'awsservices status' command. If necessary notify your product support representative.

IPCALL01

Invalid keyword value specified, Keyword= P1 Value= P2

Reason:

The TCP/IP external interface procedure \$IPCALL failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed \$IPCALL. If executed from OCS, check the command entered on the command line and retry.

IPCALL02

Non-keyword parms found for command P1

Reason:

The TCP/IP external interface procedure \$IPCALL failed during request processing because it was passed non-keyword parameters. Non-keyword parameters are only supported by the NETSTAT command.

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed \$IPCALL. If executed from OCS, check the command entered on the command line and retry.

IPCALL03

Keyword parameter (P2) not found for command (P1)

Reason:

The TCP/IP external interface procedure failed during request processing because a required keyword parameter was not found. The keyword is identified by *P2* and the command is identified by *P1* .

System Action:

The request is rejected and the procedure terminates. Control is returned to the calling procedure. If the procedure was executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed \$IPCALL. If executed from OCS, check the command entered on the command line and retry.

IPCALL04

P1 is not a valid IP address

Reason:

The TCP/IP external interface procedure \$IPCALL failed during request processing because an invalid IP Address was passed to the procedure.

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the IP Address and retry

IPCALL05

APPC call to system P1 failed with RC= P2 FDBK= P3

Reason:

An APPC request to the remote system identified by *P1* failed with return code *P2* and feedback code *P3* .

System Action:

An additional error message may be written to the activity log if RC=16.

User Action:

Contact your System Administrator.

IPCALL06**Cannot find an entry for P1****Reason:**

The link, stack, or device identified by *P1* is not defined to this system. This message may also appear during region startup when the internal work tables are not available or partially initialized.

System Action:

None.

User Action:

Check that *P1* is defined to the system or ensure that the name is correct, and retry the operation. If the message was issued during startup, retry the request after the region has completely initialized.

IPCALL07**Command syntax error. Optional parameters are not in keyword format.****Reason:**

You invoked the API procedure with invalid command parameters, which caused a syntax error.

System Action:

The command fails.

User Action:

Correct the parameters and retry the operation.

All parameters except the first must be in the format keyword=value, for example, PING myhost COUNT=5 WAIT=10.

For more information about the format of a specific command, position the cursor over the command and press F1 (Help).

IPCALL08

Error opening DD " P1" - VSAM dataset or no member name specified

Reason:

The file identified by P1 could not be opened for input as the file is either a partitioned dataset (PDS) with no member name specified or is a VSAM dataset.

System Action:

None

User Action:

Contact your system administrator.

IPCALL09

Help unavailable for unsupported command P1

Reason:

No help is available for the unsupported command identified by *P1* .

System Action:

None

User Action:

None

IPCALL10

Required parameter missing for command P1

Reason:

The TCP/IP external interface procedure \$IPCALL failed because a required parameter was omitted from the call to \$IPCALL. One of either ADDRESS, HOSTNAME or HOST must be specified.

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Contact your System Administrator.

IPCALL11**" P1" is not a valid IP address****Reason:**

The TCP/IP external interface procedure \$IPCALL failed because the IP address passed is not a valid IP address. Valid IP address consist of 4 numbers seperated by decimal points each having a range of 0..255.

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the IP address and retry.

IPCALL12**" P1" is not a valid dataset name****Reason:**

The TCP/IP external interface procedure \$IPCALL failed because the Dataset Name identified by *P1* is not a valid Dataset Name.

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the Dataset Name and retry.

IPCALL13

MDO assign error - Map P1 not found

Reason:

An &ASSIGN operation failed because the ASN1 map identified by *P1* could not be found.

System Action:

None

User Action:

Contact your System Administrator

IPCALL14

No member was selected from the member list

Reason:

The user exited the Partitioned Dataset Member List using PF3 and did not select a member from the list. The current function is aborted.

System Action:

None.

User Action:

None.

IPCALL15

Obeyfile processing cancelled

Reason:

The user exited from viewing the Obeyfile Dataset or Member by using PF12.

System Action:

None.

User Action:

None.

IPCALL16

MDO error, MDO= P1, MAP= P2, MDORC= P3, MDOFDBK= P4

Reason:

An MDO error occurred. The MDO is identified by *P1* the map name by *P2* the MDO return code by *P3* and the feedback code is *P4* .

System Action:

The procedure terminates.

User Action:

Contact your System Administrator.

IPCALL17

P1 is not a valid IP address

Reason:

The IP Address identified by *P1* is not a valid IP Address. A valid IP Address consists of 4 numbers separated by decimal points ("."), each number being between 0 and 255.

System Action:

None

User Action:

Correct the IP Address and retry the operation.

IPCALL18

\$IPCALL parameter P1 is not numeric

Reason:

The \$IPCALL parameter identified by *P1* is not numeric.

System Action:

None

User Action:

Correct the parameter and retry the operation.

IPCALL19

\$IPCALL parameter P1 is out of range. Must be between P2 - P3

Reason:

The \$IPCALL parameter identified by *P1* is out of the range defined by *P2* and *P3* .

System Action:

None

User Action:

Correct the identified parameter and retry the operation.

IPCALL20

User P1 is not authorized for TCP/IP functions

Reason:

The user identified by *P1* is not authorized to use TCP/IP services.

System Action:

None.

User Action:

Contact your security administrator. TCP/IP services authorization is a part of the Network Management authorization.

IPCALL21

User P1 is not authorized for function P2

Reason:

The user identified by *P1* is not authorized to use the TCP/IP function identified by *P2* .

System Action:

None.

User Action:

Contact your security administrator.

IPCALL22**Verbose keyword value " P1" invalid - Must be YES or NO****Reason:**

The VERBOSE keyword was supplied with an invalid value indicated by *P1* The value must be either YES or NO.

System Action:

None

User Action:

Correct the entry and retry the operation.

IPCALL23**Link P1 is not active****Reason:**

The Link Name identified by *P1* is not currently active.

System Action:

None

User Action:

Investigate the cause of the link failure and retry the operation.

IPCALL24**Link P1 does not exist****Reason:**

The Link Name identified by *P1* has been removed.

System Action:

None

User Action:

Contact your System Administrator.

IPCALL25

" P1" is not a valid dataset type

Reason:

The dataset type for the dataset identified by *P1* is not valid for the function being performed. The dataset must be either a Partitioned dataset with a member name or a sequential dataset.

System Action:

The request is rejected.

User Action:

Correct the Dataset Name and retry.

IPCALL26

Required parameter P1 missing for Action P2 Class P3

Reason:

The TCP/IP external interface procedure \$IPCALL failed because a required parameter was omitted from the call to \$IPCALL. One of either ADDRESS, HOSTNAME or HOST must be specified.

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Contact your System Administrator.

IPCALL27

Variable error, Table= P1, Req= P2, Key= P3, FDBK= P4

Reason:

The TCP/IP external interface procedure \$IPCALL failed because an &VARIABLE verb gave an unexpected return code. In the message:

P1 is the VARIABLE name

P2 is the &VARIABLE request type

P3 is the key for the entry

P4 is the return code

System Action:

The request is rejected and the procedure terminates. Control is returned to the procedure which executed \$IPFT33L.

User Action:

Contact your system administrator.

IPCALL28

Invalid TCP/IP interface type, System= P1 Type= P2 Routine= P3

Reason:

The TCP/IP external interface procedure \$IPCALL failed during request processing because the TCP/IP interface type (*P2*) for the requested system (*P1*) is not recognized. The internal processing routine is identified by *P3*.

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

This is an internal error: contact Technical Support.

IPCALL29

TCP/IP services have not been initialized

Reason:

The TCP/IP external interface procedure \$IPCALL failed during request processing because the TCP/IP Interface Type (IBM or TCPaccess) cannot be determined. This situation can occur if TCP/IP services have not been initialized.

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

TCP/IP services should be initialized using the TCP/IP Administration menu.

IPCALL30

Wildcard characters found in P1

Reason:

Wildcard characters were found in *P1* . Wildcard characters are not supported by the current function.

System Action:

SYSMSG is set and control returns to the calling procedure.

User Action:

Remove the wildcard characters and retry.

IPCALL31

Cannot resolve hostname P1

Reason:

The Hostname identified by *P1* could not be resolved.

System Action:

None

User Action:

Correct the IP Address and retry the operation.

IPCALL32

You are not licensed for facility Action= P1 Class= P2

Reason:

Your SOLVE product does not support the SOLVE TCP/IP function identified by the action (*P1*) and class (*P2*).

System Action:

The request is rejected.

User Action:

Contact your system administrator.

IPCALL33

Keyword parameter (P1) not found for action (P2)

Reason:

The TCP/IP external interface procedure \$IPCALL failed during request processing because a required keyword parameter was not found. The keyword is identified by *P1* and the action is identified by *P2* .

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed \$IPCALL. If executed from OCS, check the command entered on the command line and retry.

IPCALL34

NETSTAT parameter (P1) not supported

Reason:

The TCP/IP external interface procedure \$IPCALL failed during request processing for the NETSTAT command because an illegal NETSTAT parameter was found. The illegal parameter is identified by *P1* .

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed \$IPCALL. If executed from OCS, check the command entered on the command line and retry.

IPCALL35

Response from VTAM timed out. CMD: P1

Reason:

A response from VTAM was not received within 20 seconds when issuing a the VTAM command *P1* .

System Action:

Could not complete requested function.

User Action:

Determine why VTAM is not responding to a *P1* command and correct problem. Check for the message IPCALL36 in the log which will contain the last message received from VTAM. If no messages were received, this message will not be in the log.

IPCALL36**Last response: P1****Reason:**

This message is written to the log as a result of a VTAM command not completing within 20 seconds. *P1* is the text of the last message that was received before the command timed-out.

System Action:

Could not complete requested function.

User Action:

Determine why VTAM is not responding within 20 seconds. Also look_for the message IPCALL35 in the log which identifies the command that_was issued.

IPCALL37**VTAM buffer trace for LU P1 P2****Reason:**

A VTAM buffer trace for a Logical Unit has been started/stopped.

P1 - The Logical Unit Name

P2 - Trace status, *ON* or *OFF*

System Action:

None.

User Action:

None.

IPCALL38

Last response: P1

Reason:

This message is written to the log as a result of a STRACE START command not completing within 20 seconds. *P1* is the text of the last message that was received before the command timed-out.

System Action:

Could not complete requested function.

User Action:

Determine why the SOLVE system is not responding to a STRACE START command and correct problem.

IPCALL39

Response from SOLVE system timed out

Reason:

A response from the SOLVE system was not received within 20 seconds when issuing an STRACE START command.

System Action:

Could not complete requested function.

User Action:

Determine why the SOLVE system is not responding to an STRACE START command and correct problem. Check message IPCALL38 in the log which will contain the last message received. If no messages were received, this message will not be in the log.

IPCALL40

P1 is not a valid member name or member mask

Reason:

An invalid value *P1* was specified as a member name/mask.

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the member name and retry. Valid member mask characters are:

'*' - match any character

'?' - match one character

IPCALL41

This region is not configured for TCPaccess management

Reason:

You attempted to perform a TCPaccess related function on a system that is not configured for managing that TCP/IP stack type.

System Action:

The request is rejected.

User Action:

Make sure you have specified the correct link name, as you may be pointing to a system that is managing a different TCP/IP stack.

IPCALL42

Function not supported

Reason:

The requested function is not currently supported by TCPaccess.

System Action:

Processing of the function is terminated.

User Action:

None.

IPCALL43

CTRACE parameter defaults saved

Reason:

The CTRACE parameter defaults have been saved in a database. These defaults will be displayed on the Start CTRACE Confirmation panel the next time it is displayed.

System Action:

None.

User Action:

None.

IPCALL44

Function not supported on remote region *P1*

Reason:

The requested function is not supported by the remote region, *P1*. The remote region is used because it is the managing region for the resource, or has been selected by you specifying a link name.

System Action:

Processing of the function terminates.

User Action:

The remote region is currently linked to this region in Migration Mode. This type of linkage is used during migration to a new release level. Full functionality is provided when the remote region is upgraded to the same level as the current region and linked using normal region synchronization.

IPCALL45**TCP/IP Services implementation is not complete****Reason:**

TCP/IP services has not completed the implementation phase. Commands are not accepted before implementation has completed.

System Action:

Processing of the command is terminated.

User Action:

Access the TCP/IP primary menu (Option N.IP). The implementation process will start and you will be prompted for system details.

IPCALL46**P1 is not a valid member name****Reason:**

An invalid value *P1* was specified as a member name.

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the member name and retry.

IPCALL47**APPC Receive failed with RC= P1 FDBK= P2****Reason:**

An APPC request failed with return code *P1* and feedback code *P2* .

System Action:

The transaction is terminated.

User Action:

Contact your System Administrator.

IPCALL48

Remote link P1 in Channel Card definition P2 is not an INMC link

Reason:

A request was received to obtain data from a Cisco channel card, but the channel card definition specifies a remote link name which does not represent an INMC link to another SOLVE system.

System Action:

The request fails.

User Action:

Update the channel card definition to specify a link name which represents an INMC link to another SOLVE system.

IPCALL49

Extract process submitted as background task - Check log for progress

Reason:

The IPLOG extract process has been started as a background task running with the authority of the user who requested the extract. Progress messages are written to the log with the prefix IPLO82

System Action:

Extract process submitted to user's background region.

User Action:

Check the log for the progress reports.

IPCALL50

Option is not applicable to Channel Card or Router P1

Reason:

The option requested is not a valid action when applied to a channel card or a 2216 router.

System Action:

The option is not processed.

User Action:

Either select an option valid for that object or change the object to something other than a Channel Card or 2216 Router.

IPCALL51**Session monitoring not available - NTS not configured****Reason:**

The Network Tracking System (NTS) component of NetMaster for SNA provides session awareness support used for session monitoring. The function requested is only available if the region is configured with NetMaster for SNA.

System Action:

The request is rejected.

User Action:

Contact your system administrator.

IPCALL52**Function not supported by the system****Reason:**

Workload Monitor functions are available only if you are using IBM's eNetwork CS 2.5 or above.

System Action:

Processing of the function is terminated.

User Action:

None.

IPCALL55**Start of CTRACE failed due to job ~P1 being in starting state****Reason:**

The start of CTRACE failed because the job name P1 has a status of starting. The reason for this status could be that a dataset is in use, causing a dataset wait.

System Action:

None.

User Action:

Determine why the job P1 has a status of starting and rectify problem.

IPCALL56

Connection P1 no longer exists

Reason:

A specified connection has terminated.

System Action:

None.

User Action:

Refresh the connection list to view current connections.

IPCALL58

Stack P1 is inactive

Reason:

An action has been attempted against stack *P1* but the stack is not active.

System Action:

The action fails.

User Action:

Investigate why the stack is inactive.

IPCALL59

Criteria not supported by back-level system.

Reason:

The requested function is not supported by the remote SOLVE system.

System Action:

Processing of the function is terminated.

User Action:

Upgrade the remote system so that it is running at the same level as your local system for maximum functionality or do not specify a value for the User ID, LU name, or Application fields.

IPCALL60

Option P1 does not apply to P2

Reason:

The option requested is not a valid action when applied to object *P2*

System Action:

The option is not processed.

User Action:

Either select an option valid for that object or apply the option to a different object.

IPCALL61

Stack P1 not defined (P2)

Reason:

The stack, *P1* , is not defined. The system reporting the error is *P2* . This message may also appear during region startup when the internal work tables are not available or partially initialized.

System Action:

The request is rejected.

User Action:

Ensure that the stack is defined to the system or that the name is correct. Where available, use prompt lists to obtain the list of currently available stack names. If the message was issued during startup, retry the request after the region has completely initialized.

IPCALL62

Connection id P1 dropped successfully

Reason:

A connection with id *P1* was successfully dropped.

System Action:

None.

User Action:

Refresh the connection list to view current connections.

IPCALL63

Host details unavailable for stack P1

Reason:

An NSLOOKUP issued to extract host details about stack *P1* has failed.

System Action:

None

User Action:

Check the status of the stack.

IPCALL64

P1 P2 P3 P4 P5 P6

Reason:

This message contains information about a TRENDX command. The TRENDX command will submit a background procedure to roll up and extract trend data from IPFILE into a CSV file.

System Action:

None

User Action:

Check the Activity Log to see the progress of the trend data extract and CSV file creation. If there is a lot of data, this process may take a while. In order to create a trend file, you must enable trend data collection via the \$IPFILES Customizer parameter group.

IPCALL65

P1 P2 is currently migrated

Reason:

It was determined that the dataset *P2* has been migrated (for example, by DFHSM).

System Action:

Request is rejected.

User Action:

Manually recall dataset before invoking the 'Save Trace Data' option.

IPCALL66**No performance history available for P1****Reason:**

A request was made to display the performance history data collected for resource *P1*, but the request has failed because no data is available.

System Action:

None

User Action:

Investigate the following possibilities:

- Monitoring is not active for the resource. To activate monitoring issue 'AM' against the resource or update the resource definition.
- No attributes have been selected for monitoring for this resource.
- Monitoring is active but no data was available at the time of collection.
- The attempts to collect samples from the resource have failed. If this is the case, issue 'L' against the resource to view the resource transient log where any error messages will be seen.

IPCALL67

No *P1* history available for *P2*

Reason:

A request was made to display data collected for a resource, but the request has failed because no data is available.

P1 is the type of data.

P2 identifies the resource.

System Action:

None.

User Action:

Investigate the following possibilities:

- Monitoring is not active for the resource.
To activate monitoring, enter **AM** next to the resource from the IP Resource Monitor or update the resource definition.
- No attributes have been selected for monitoring for this resource.
- Monitoring is active, but no data was available at the time of collection.
- The attempts to collect samples from the resource have failed. Error messages in the transient log may provide more information.
To view the resource transient log, enter **L** next to the resource from the IP Resource Monitor.

IPCALL68

P1 monitoring not active for *P2*

Reason:

A request to display *P1* data for resource *P2* was selected, but this data is not currently being collected for this resource.

System Action:

None.

User Action:

Update resource monitoring by entering 'UM' against a resource definition.

IPCALL69**Trace command failed. LU P1 invalid for buffer trace.****Reason:**

A command to start or stop a VTAM Buffer trace for LU *P1* failed. *P1* is unknown to VTAM or is not valid for buffer tracing.

System Action:

None.

User Action:

Buffer tracing cannot be used for this connection.

IPCALL70**Remote request failed. User P1 unknown to P2****Reason:**

An action routed to a remote region failed. User ID *P1* is not known to the remote region *P2*.

System Action:

The request fails.

User Action:

Contact your systems administrator.

IPCALL71**P1 command requires a valid SmartTrace definition as a parameter****Reason:**

The *P1* command has failed because it requires an existing SmartTrace definition as a parameter but none was provided.

System Action:

The request is rejected.

User Action:

List the available SmartTrace definitions using the shortcut /TRACES, and reissue the command.

IPCALL72

ADDRTYPE keyword value "*P1*" invalid - Must be 4, 6 or ANY

Reason:

You supplied the ADDRTYPE keyword with an invalid value indicated by *P1*. The ADDRTYPE value represents the IP version, and must be 4, 6, or ANY.

System Action:

None

User Action:

Correct the entry and retry the operation.

IPCALL73

Protocol keyword value "*P1*" invalid. Must be UDP or ICMP

Reason:

The protocol parameter is invalid. Valid values are UDP or ICMP.

System Action:

The command fails.

User Action:

Correct the value and reissue the commands.

IPCALL74

IPv6 not supported

Reason:

You requested a list of IPv6 connections from a stack or device that does not support IPv6.

System Action:

The request is rejected.

User Action:

Change the criteria, and reissue the request.

IPCALL75**FTP connection list not available on this z/OS version****Reason:**

You requested a list of FTP connections, but this type of list is only available since z/OS V1R10.0.

System Action:

The request is rejected.

User Action:

Select a stack running on a later z/OS version, or select another type of list.

IPCALL99***END*****Reason:**

This message indicates the end of returned messages.

System Action:

None

User Action:

None

IPCK7601**P1 parameter specifies an invalid value - P2****Reason:**

The value of the specified parameter passed is invalid.

System Action:

None.

User Action:

Correct the parameter and retry.

IPCK7602

Response from command timed out. Cmd: P1

Reason:

A response from the command *P1* was not received within an adequate amount of time.

System Action:

Could not complete requested function.

User Action:

Determine why there is no response to the *P1* command and correct problem. Check for the message IPCK7603 in the log which will contain the last message received. If no messages were received, this message will not be in the log.

IPCK7603

Last response: P1

Reason:

This message is written to the log as a result of a command not completing within an adequate amount of time. *P1* is the text of the last message that was received before the command timed-out.

System Action:

Could not complete requested function.

User Action:

Determine why the command is timing out. Also look for the message IPCK7602 in the log which identifies the command that was issued.

IPCK7604**Could not process request due to messages being lost****Reason:**

While processing your request, the request and response queues used were congested with unprocessed messages that exceeded the NMIQLIM value (default is 32767).

System Action:

Cannot complete requested function.

User Action:

Investigate the reason for excessive messages being issued.

IPCK7605**Could not get VTAM status of LU P1. FDBK: P2 Cmd: P3****Reason:**

During the processing of your request the VTAM status of the LU *P1* was not available. This is most likely due to an internal error. The command that was issued to get the status of the LU was *P3* . The INTREAD verb set a feedback code of *P2* .

System Action:

Could not complete requested function.

User Action:

Contact your Systems Administrator. Look for the message IPCK7606 in the log.

IPCK7606**P1****Reason:**

This message contains the last message processed before it encountered the error described in message IPCK7605.

System Action:

None.

User Action:

Contact your Systems Administrator and give them this message.

IPCK7607

P1 failed for P2

Reason:

The action *P1* failed for LU name *P2* . *P1* is ACTIVATE or INACTIVATE. Possible reasons for the failure are that the LU may not exist or it may already be in the desired state.

System Action:

A message is logged to the activity log.

User Action:

Check the status of the LU before trying the command again.

IPCK7608

Command not supported on this operating system release

Reason:

The Check Telnet LUs commands require at least z/OS V1.4.

System Action:

The command is rejected.

User Action:

None.

IPCK7609

Listmax record limit reached - P1 records returned

Reason:

The LISTMAX value has been reached. The number of records returned is identified by *P1* .

System Action:

None.

User Action:

None.

IPCK7610**Stack P1 is not registered****Reason:**

The selected STACK resource is not registered internally.

System Action:

The request is rejected.

User Action:

This message may occur transiently following a system image load or when remote stack resources are accessed. Try the command again later. If the situation persists, there may be a mismatch in the information provided about the stack. Check the stack name and type are correct in the following places:

- The stack resource definition (A.R.R)
- Connection awareness stack definition (A.IP.CS)
- SOCKETS parameter group (/PARMS)

IPCK7611**P1 P2 is inactive****Reason:**

The stack or address space selected for the command is inactive.

P1 is the resource class.

P2 is the resource name.

System Action:

The command is rejected.

User Action:

None.

IPCK7612

No *p1* LUs found. Check for separate telnet server on this system

Reason:

The Check Telnet LUs command found no LUs. This probably means the stack or address space is not configured as a Telnet server.

System Action:

The command is rejected.

User Action:

If the command was issued against a stack, the Telnet server may be running in its own address space. Issue the command against the ASMON resource for the Telnet server. (Your site can define ASMON resources of type TNSERVER for such servers.)

IPCK7701

Invalid keyword value specified, keyword= *P1* value= *P2*

Reason:

The call to the procedure failed because the keyword identified by *P1* had an invalid value identified by *P2* .

System Action:

The request is rejected.

User Action:

Contact your Systems Administrator.

IPCK7702

Invalid select value specified, keyword= *P1* value= *P2*

Reason:

The TCP/IP procedure \$IPCK77L failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected.

User Action:

Contact your Systems Administrator.

IPCK7703

MDO error, MDO= P1, Map= P2, MDORC= P3, MDOFDBK= P4

Reason:

An error occurred performing an ASSIGN of an MDO. The MDO is identified by *P1* , the Map is identified by *P2* , the MDO return code is identified by *P3* and the MDO Feedback value is identified by *P4* .

System Action:

The procedure terminates.

User Action:

Contact your Systems Administrator.

IPCK7704

No TELNET LU problems found

Reason:

A search for problem TELNET LUs but did not find any problems.

System Action:

None.

User Action:

None.

IPCK7705

Invalid refresh interval specified. Must be between 30 - 1440 minutes

Reason:

You have specified a refresh interval that was not numeric or was not a minimum of 30 minutes or greater than 1440 minutes.

System Action:

Refresh Interval field placed in error.

User Action:

Correct the entry in the Refresh Interval field and retry.

IPCM2000

Invalid SMF record: P1

Reason:

The received SMF record is of an unexpected record type, *P1* , or structure. Supported SMF record types are 119 and 130.

System Action:

The record is ignored.

User Action:

If the situation persists, contact Technical Support.

IPCM2002

Telnet connection started from P1 as P2 to P3 logical device P4

Reason:

A telnet connection has started:

P1 is the IP Address (and port number) of the remote host

P2 is the LU name used by the connection

P3 is the SNA Application the connection is in session with

P4 is the logical device number assigned by the TCP/IP stack.

System Action:

None

User Action:

None

IPCM2003

Telnet connection ended from P1 as P2 to P3, bytes in P4 out P5 duration P6 days P7 user P8 reason P9

Reason:

A Telnet connection has stopped:

P1 is the IP address of the remote host.

P2 is the LU name used by the connection.

P3 is the SNA application that the connection was in session with.

P4 is the number of bytes received on the connection.

P5 is the number of bytes sent on the connection.

P6 is the number of days the connection has been active.

P7 is the time, in the form hh:mm:ss, that the connection was active.

P8 is the user ID associated with the connection, if known.

P9 is the reason for the connection termination, as given in message EZZ6034I, if known.

System Action:

None

User Action:

None

IPCM2013

Client Telnet Logon: Local addr= P1 Remote addr= P2 STCQUAL= P3 Node= P4

Reason:

A Telnet Client Logon event was received:

P1 is the local IP address and port number.

P2 is the remote IP address and port number.

P3 is the started task qualifier name and *P4* is the node name.

System Action:

None

User Action:

None

IPCM2014

**Client Telnet Logoff: Local addr= P1 Remote addr= P2 STCQUAL= P3
Node= P 4**

Reason:

A Telnet Client Logoff event was received:
P1 is the local IP address and port number.
P2 is the remote IP address and port number.
P3 is the started task qualifier name and P4 is the node name.

System Action:

None

User Action:

None

IPCM2300

Invalid SMF record: P1

Reason:

The received SMF record is of an unexpected record type, *P1* , or structure.
Supported SMF record types are 119 and 130.

System Action:

The record is ignored.

User Action:

If the situation persists, contact Technical Support.

IPCM2303**CLIENT FTP P1 BY P2 AT P3 DSN P4 P5 BYTES IN P6 SECONDS P7 BYTES/ SEC****Reason:**

An FTP client action completed.

P1 is the action performed: RETR=retrieved, STOR=stored, APPE=appended

P2 is the user performing the action

P3 is the IP address of the connection

P4 is the name of the dataset affected

P5 is the number of bytes transmitted

P6 is the number of seconds taken by the transaction

P7 is the number of bytes per second transmitted in the transaction.

System Action:

None.

User Action:

None.

IPCM2309**CLIENT FTP P1 BY P2 AT P3 FAILED. LAST REPLY P4 DSN P5 P6 BYTES IN P7 SECONDS****Reason:**

An FTP client action has completed but the action failed.

P1 is the action performed: RETR=retrieved, STOR=stored, APPE=appended

P2 is the user performing the action

P3 is the IP address of the connection

P4 is the last reply code. Refer to the note below.

P5 is the name of the dataset affected

P6 is the number of bytes transmitted

P7 is the number of seconds taken by the transaction.

The last reply code (**P4**) is the value set in bytes 28-31 of the FTP Client SMF record, as described in the appendices to the OS/390 Communications Server IP Configuration manual. A value of 0 or 2nn represents a successful transmission (and will cause message IPCM2303 to be issued rather than this message). Other values are as set by the TCP/IP stack.

System Action:

None.

User Action:

None.

IPCM2311

Connection opened: local addr= P1 remote addr= P2 jobname= P3

Reason:

A TCP/IP connection was started:

P1 is the local IP address and port number

P2 is the remote IP address and port number

P3 is the job name.

System Action:

None.

User Action:

None.

IPCM2312

**Connection closed: local addr= P1 remote addr= P2 jobname= P3
bytes in= P4 bytes out= P5 user= P6**

Reason:

A TCP/IP connection was terminated:

P1 is the local IP address and port number

P2 is the remote IP address and port number

P3 is the job name

P4 is the number of bytes in and *P5* is the number of bytes out

P6 is the user associated with the connection, if known.

System Action:

None.

User Action:

None.

IPCM2313

**CLIENT TELNET LOGON: LOCAL ADDR= P1 REMOTE ADDR= P2
STCQUAL= P3 NODE= P4**

Reason:

A Telnet Client Logon event was received:

P1 is the local IP address and port number

P2 is the remote IP address and port number

P3 is the started task qualifier name and **P4** is the node name

System Action:

None.

User Action:

None.

IPCM2314

**CLIENT TELNET LOGOFF: LOCAL ADDR= P1 REMOTE ADDR= P2
STCQUAL= P3 NODE= P 4**

Reason:

A Telnet Client Logoff event was received:

P1 is the local IP address and port number

P2 is the remote IP address and port number

P3 is the started task qualifier name and **P4** is the node name

System Action:

None.

User Action:

None.

IPCM2406

Event receiver type= P1 initializing

Reason:

An event receiver for the (*P2*) event type has been initialized.

System Action:

The event receiver is started in the BSYS region. Additional RMEV25* messages are written to the activity log indicating the ongoing status of the event receiver.

User Action:

None.

IPCN0001

Trace P1 Phase(P2) P3 on P4

Reason:

This message displays an IP Connections trace record. It includes the following information:

P1 -Procedure Name
P2 -Processing Phase
P3 -Time
P4 -Date

System Action:

None.

User Action:

Review messages as requested by Technical Support to determine if any delays are occurring during IP connections display processing.

IPCN0002**Trace P1 Phase(P2) P3****Reason:**

This message displays an IP Connections trace record. It includes the following information:

P1 - Procedure Name
P2 - Processing Phase
P3 - Function

System Action:

None.

User Action:

Review messages as requested by Technical Support to determine if any delays are occurring in IP Connections display processing.

IPCN0003**Trace P1 Phase(P2) Parm(P3) Value(P4)****Reason:**

This message displays an IP Connections trace record. It includes the following information:

P1 - Procedure Name
P2 - Processing Phase
P3 - Parameter Name
P4 - Parameter Value

System Action:

None.

User Action:

Review messages as requested by Technical Support to determine if any delays are occurring in IP Connections display processing, parameter values are invalid, or are not being adhered to.

IPCN3501

Packet analysis disabled for stack *P1*

Reason:

A list of connections has been obtained using the Packet Analyzer; however, packet analysis for the TCP/IP stack (*P1*) is disabled. Current statistical data, such as byte counts and packet counts, is incomplete.

System Action:

None.

User Action:

Use the SSI's SHOW STACKS command to display the stacks that the Packet Analyzer is aware of, and which have packet analysis enabled.

Use the SSI's STATUS command to display the status of the Packet Analyzer.

You can enter SSI commands from a CA NetMaster region using the SSISEND command, for example:

```
SSISEND SHOW STACKS
```

```
SSISEND STATUS
```

If the disabled state is unexpected, check the SSI's JES job log for error messages.

IPCN3502

Connection list limit *P1* exceeded

Reason:

An attempt to list connections using the Data Space has exceeded the control limit indicated.

System Action:

The list is truncated at the limit. Further records are ignored.

User Action:

Use more restrictive criteria to reduce the size of the list.

IPCN3503**Unknown port value P1****Reason:**

An attempt to list connections has specified a non-numeric port value of *p1* .
The equivalent port number is not known.

System Action:

The list is not performed.

User Action:

Specify the numeric port number.

IPCN3504**Search failed, Packet Analyzer unavailable. Stack P1****Reason:**

An attempt to list connections using the Packet Analyzer has failed as the
Packet Analyzer is unavailable.

System Action:

None.

User Action:

Contact your Systems Administrator to determine why the Packet Analyzer is
unavailable.

List this region's configuration details (/IPTEST) and investigate any errors.

Retry the operation selecting a Netstat-based option from the TCP/IP :
Connections menu /IPCON.

IPCN3505

Back-level Packet Analyzer, *P1* criteria unsupported

Reason:

An attempt to list connections using the Packet Analyzer has failed. The Packet Analyzer is running in an SSI region that is not at the latest product release level and does not support the *P1* criteria option.

System Action:

No connections are returned for this stack.

User Action:

Determine why the Packet Analyzer is not running in an SSI region at the latest product release level. You cannot use criteria *P1* until the SSI region is upgraded.

IPCN3506

Stack *P1* is inactive

Reason:

You attempted a connection list action for stack *P1* but the stack is not active.

System Action:

The action fails.

User Action:

Investigate why the stack is inactive.

IPCN3508**Packet analyzer access failed for stack *P1*****Reason:**

An attempt to list connections using the Packet Analyzer has failed. This has prevented accessing connections by User ID, LU name, or application name.

System Action:

No connections are returned for this stack.

User Action:

Contact your systems administrator to determine why the Packet Analyzer is unavailable.

List this region's configuration details (/IPTEST) and investigate any errors.

IPCN3509**Connection history not included for *P1*****Reason:**

An attempt to list connections using the data space has failed. This has prevented access to connection history data.

System Action:

None.

User Action:

Refer to the activity log for the reason that data space access has failed.

List this region's configuration details (/IPTEST), and investigate any errors.

IPCN4101**No saved definitions found for type *P1*****Reason:**

A request to list saved criteria definitions has failed. There are no criteria definitions on file for the specified Connection List type (*P1*).

System Action:

None.

User Action:

None.

IPCN4102

No Criteria Definition selected

Reason:

The RECALL command was used to recall a criteria definition using a prompt list but no definition was selected.

System Action:

None.

User Action:

None.

IPCN4201

Definition P1 already exists - specify Replace=Yes to overwrite

Reason:

A request to save the criteria definition (*P1*) would overwrite an existing definition, but Replace=No was specified.

System Action:

The definition was not overwritten.

User Action:

Do one of the following:

- Specify Replace=Yes and use the File command to replace the record.
- Use the Cancel command.

IPCN4301

Criteria definition P1 not found

Reason:

A request to recall the specified criteria definition (*P1*) has failed because it was not found.

System Action:

None.

User Action:

None.

IPCN4401**Criteria name required****Reason:**

The RECALL command was used to recall a criteria definition but the criteria name was omitted.

System Action:

None.

User Action:

Specify a criteria name and retry.

IPCN4402**TCP/IP sockets interface is not active****Reason:**

A request to build a selection list of stacks and servers could not be completed because the TCP/IP sockets interface was terminated or not started.

System Action:

Request is rejected.

User Action:

To start the TCP/IP sockets interface, perform the following steps:

1. Review the SOCKETS Parameter group (/PARM). Verify that all the details are correct and then press PF6 to action the group.
2. If actioning the group fails, verify that the associated stack address space is available and completely initialized. Retry and action the parameter group.

IPCN4403

List criteria for a ' P1' P2 has been cleared

Reason:

The list criteria for this selection had its *P2* field cleared because it is no longer valid for the current system environment. This is caused by system changes that occurred since the last time the criteria was used. For example, a TCP/IP address space may have been renamed or

System Action:

User Action:

If required, enter ? in the *P2* field to display a selection list of valid stacks and servers or press Enter to use the default stack or

IPCN4404

Invalid value for IP Version - must be 4 or 6

Reason:

You entered an invalid value for IP version. Valid values for this field are 4 and 6.

System Action:

The field is highlighted in error.

User Action:

Correct the IP version value.

IPCN4405

IP Version mismatch with *P1*

Reason:

The IP version specified does not match the version of the local or foreign host address.

System Action:

The fields are highlighted in error.

User Action:

Correct or remove the IP version or the highlighted host address.

IPCN4406**No external servers defined****Reason:**

A prompt list of external Telnet servers was requested, but no matching resources were found. External Telnet servers should be defined as ASMON resources of type TNSERVER.

System Action:

The field is highlighted in error.

User Action:

To ensure prompting is available, check that your resource definitions are correct. Alternatively, clear the ? and enter the name of a Telnet server in the field.

IPCN4407**P1 not selected from list****Reason:**

A prompt list of valid values for field *P1* was displayed; however, you did not select a valid value from the list.

System Action:

Field *P1* is highlighted in error.

User Action:

Retry the operation and select a value, or clear field *P1*.

IPCN4408**Connection Type must be DATA or CNTL****Reason:**

You entered an invalid value in the FTP Connection Type field. The valid values are DATA and CNTL.

System Action:

The field in error is highlighted.

User Action:

Correct the value in the Connection Type field.

IPCN4501

No entries to display

Reason:

No entries were returned for display.

System Action:

None.

User Action:

Change the criteria and retry.

IPCN4502

Action not supported for this entry

Reason:

The attempted action is valid only for IBM and TCPaccess Telnet connections. It is not valid for Telnet connections from channel cards or routers, or for non-Telnet connections.

System Action:

None.

User Action:

None.

IPCN4503

Action not supported for this entry

Reason:

The attempted action is only valid for display lines that are active connections.

System Action:

None.

User Action:

None.

IPCN4504**Action not supported for this entry****Reason:**

The attempted action is only valid for display lines that are TCPAccess connections.

System Action:

None.

User Action:

None.

IPCN4505**Action not supported for this entry****Reason:**

The drop action is only valid for active TCP connections. The selected entry is either not a connection (for example, a listener port) or has already terminated.

System Action:

None.

User Action:

None.

IPCN4506**Action not supported for this entry****Reason:**

This action is only valid for TN3270 connections where a VTAM LU name is available and TN3270 services are provided by VTAM.

The action is not available for virtual TN3270 sessions, that is, where a TCP/IP application is providing the service instead of VTAM.

System Action:

None.

User Action:

None.

IPCN4507

Action not supported for this entry

Reason:

This action is only valid for Telnet connections from a channel card.

System Action:

None.

User Action:

None.

IPCN4508

Action not supported for this entry

Reason:

The attempted action is valid only for IBM stacks. The action may be invalid for IBM Telnet connections for which the local port is not available.

System Action:

None

User Action:

None

IPCN4509

Connection list invalid for Channel Cards or Routers

Reason:

The *List Connections for a Task* diagnostic option is not valid if the selected link represents a Cisco Channel Card or IBM 2216 Router. This option is available for links to NetMaster systems only.

System Action:

None.

User Action:

Correct the entry in the Link/Channel Card Name field and retry.

IPCN4510**Connection list limit P1 exceeded****Reason:**

An attempt to list connections using the Data Space has exceeded the control limit indicated.

System Action:

The list is truncated at the limit. Further records are ignored.

User Action:

Use more restrictive criteria to reduce the size of the list.

IPCN4511**Invalid refresh interval specified. Must be a minimum of 30 seconds****Reason:**

You have specified a refresh interval that was not numeric or was not a minimum of 30 seconds.

System Action:

None.

User Action:

Correct the entry in the Refresh Interval field and retry.

IPCN4512**Option not available on a remote system****Reason:**

You attempted to execute a command against a connection on a remote system. This option is available only when viewing connections on a local system.

System Action:

None.

User Action:

None.

IPCN4513

You must sort the list before you can issue a LOCATE command

Reason:

You attempted to locate a connection on the connections list when the list was not sorted. You must sort the list using the SORT command before you can locate a connection.

System Action:

None.

User Action:

Sort the list using the SORT command and then retry the LOCATE command.

IPCN4514

Cannot perform operation on a dropped connection

Reason:

The user has attempted to execute a command against a connection that has been dropped.

System Action:

None.

User Action:

Press the refresh key to rebuild the list of connected sessions.

IPCN4515

Drop requested for connection from P1 to local port P2 by userid P3

Reason:

User P3 has issued a command to drop the connection to local port P2 from the P1 IP connection.

System Action:

None.

User Action:

None.

IPCN4516**Drop requested for Telnet connection from P1 LU name P2 by userID P3****Reason:**

Userid P3 has issued a command to drop the Telnet connection for LU P2 from the P1 IP connection.

System Action:

None.

User Action:

None.

IPCN4517**Connection not found****Reason:**

The connection was not found using either the Packet Analyzer or NetStat. The most likely cause is because the connection has ended.

System Action:

The action fails.

User Action:

Refresh your connection list to remove ended connections.

IPCN4520**Action not supported for this entry****Reason:**

The attempted action is valid for IBM and TCPaccess stack connections only. It is not valid for Telnet connections from channel cards or routers.

System Action:

None.

User Action:

None.

IPCN4521

Action not supported for this entry

Reason:

The requested action is not available for closed connections (history).

System Action:

None.

User Action:

None.

IPCN4522

Action not supported for this entry

Reason:

The requested action is not available for a Local Port of 0 or a Status of GROUND.

System Action:

None.

User Action:

None.

IPCN4523

***P1* is not an IP address or partial IP address**

Reason:

You issued the LOCATE command with invalid operand *P1*. The connection list is sorted by Foreign Host, so *P1* must be an IP address or part thereof.

System Action:

None.

User Action:

Change the locate command to specify a valid or partial IP address, or use the SORT ? command to sort the connection list by a different field.

IPCN4524**Command format is DELTA ON or DELTA OFF****Reason:**

You have specified an invalid operand on the DELTA command. Valid operands are ON and OFF.

System Action:

The command is rejected.

User Action:

Enter the correct command.

IPCN4601**P1 is not a valid sort field****Reason:**

You specified *P1* as the sort field for the list on the SORT command but *P1* is not a valid sort field for the type of connection list.

System Action:

SORT command rejected.

User Action:

Correct the sort field name (which is an operand on the SORT command) and retry.

IPCN4602**No sort field selected****Reason:**

The SORT ? command was used to present a prompt list of connection list sort fields but no sort field was selected.

System Action:

None.

User Action:

Specify a sort field or select a field from the prompt list.

IPCN4701

Stack P1 does not exist

Reason:

The selected stack is not known to the system. It may have been deleted by another user.

System Action:

The request is rejected.

User Action:

Respecify the selection criteria.

IPCN4702

TCP/IP sockets interface is not active

Reason:

A request to build a list of connections could not complete because the TCP/IP sockets interface was terminated or never started.

System Action:

Request is rejected.

User Action:

To start the TCP/IP sockets interface, perform the following steps:

- 1) Review the SOCKETS Parameter group */PARM* . Verify that all the details are correct and then press PF6 to action the group.
- 2) If actioning the group fails, verify that the associated stack address space is available and completely initialized. Retry and action the parameter group.

IPCN4703**List criteria for a ' P1' P2 is no longer valid****Reason:**

A request to build a list of connections using value *P1* for *P2* field is no longer valid because the current system environment has changed since the list criteria was specified. For example, a TCP/IP address

System Action:**User Action:**

Enter ? in the *P2* field to display a selection list of valid stacks and

IPCN4799**Variable error: Action= P1 Class= P2 Attr= P3. See preceeding message****Reason:**

An unexpected error has occurred. This message is written to the activity log along with message GP1011 that provides additional details.

System Action:

The previous display is ended.

User Action:

Retry the operation. If the problem persists, contact Technical Support.

IPCN4802**No Connection List action selected****Reason:**

The '?' action was used to display a prompt list of Connection List actions but no action was selected.

System Action:

None.

User Action:

None.

IPCN4901

P1 connection detail not found in MIB

Reason:

A request for connection detail has failed. There is no (*P1*) detail available for this connection in the MIB.

System Action:

None.

User Action:

None.

IPCN5001

Connection not found

Reason:

The connection was not found using either the Packet Analyzer or NetStat. The most likely cause is because the connection has closed and has been purged from connection history.

System Action:

None.

User Action:

None.

IPCN5002**Packet Analyzer details not available****Reason:**

Packet Analyzer details were not found for this connection. This may be a transient condition. It also occurs if the Packet Analyzer is running with PALEVEL=NOPACKETS.

System Action:

None.

User Action:

Confirm that the SSI is running with the parameter *PALEVEL=FULL*.

When including Packet Analyzer functions in an SSI, it is recommended to always set the PALEVEL parameter to FULL. If you run with a level other than FULL, various IP monitoring functions will not be available.

Only use a PALEVEL other than FULL if instructed by Technical Support.

IPCN5003**Packet Analyzer statistics not available****Reason:**

The SSI is currently running with PALEVEL set to NOPACKETS or NOSTATS. Packet statistics are available only when PALEVEL is FULL.

System Action:

No packet statistics are displayed.

User Action:

Check why the SSI is not running with the parameter *PALEVEL=FULL*.

When including Packet Analyzer functions in an SSI, it is recommended to always set the PALEVEL parameter to FULL. If you run with a level other than FULL, various IP monitoring functions will not be available.

Only use a PALEVEL other than FULL if instructed by Technical Support.

IPCN5004

Warning: Statistics may be incomplete due to Packet Analyzer warmstart

Reason:

This connection has been active since before the Packet Analyzer was last restarted. The data displayed on this panel represents only the activity since the Packet Analyzer was restarted.

System Action:

None.

User Action:

None.

IPCN5101

No UDP connections found for P1

Reason:

A request to list UDP connections has failed. There are no UDP connections to list for (*P1*).

System Action:

None.

User Action:

None.

IPCN5201

Connection not found

Reason:

The connection was not found using either the Packet Analyzer or NetStat. The most likely cause is the connection has closed and has been purged from connection history.

System Action:

None.

User Action:

None.

IPCN5301**No connections match criteria for P1****Reason:**

No connections matched the specified criteria for the stack specified in *P1* .

System Action:

None.

User Action:

None.

IPCN5302**IP Version mismatch with P1****Reason:**

The IP version specified does not match the version of the local or foreign host address.

System Action:

The execution terminates.

User Action:

Correct or remove the IP version or the host address.

IPCN5401**Connection not found****Reason:**

The connection is not known to the EZBNMIFR interface. The most likely cause is that the connection has closed.

System Action:

None.

User Action:

None.

IPCN6001

Search server process start failed for unknown reason

Reason:

The web search server process failed to start or terminated abnormally.

System Action:

Web search is terminated.

User Action:

Check the activity log for additional error messages.

For assistance, contact Technical Support at <http://ca.com/support>.

IPCN6002

NDB *p1* failed for *p2*: NDBRC=*p3*, ERRI=*p4*, MSG=*p5*

Reason:

The web search server process encountered an error accessing the NDB.

P1 is the action.

P2 is the NDB ID.

P3 is the return code.

P4 is the error indicator.

P5 is a related message (which may not always be present).

System Action:

Web search is terminated.

User Action:

Check the activity log for additional error messages.

For assistance, contact Technical Support at <http://ca.com/support>.

IPCN6003**No records matched the specified search criteria****Reason:**

The web search server could not find any records that match the search criteria specified in the criteria section.

System Action:

None.

User Action:

Change the search criteria or wait a few moments for more records to be added to the database, and then retry the search.

IPCN6004**Search server communication failed for unknown reason****Reason:**

The web search server process could not be contacted.

System Action:

Web search is terminated.

User Action:

Check the activity log for additional error messages.

For assistance, contact Technical Support at <http://ca.com/support>.

IPCN6005

Search server not running or invalid handle *p1*

Reason:

The web search could not be completed because the handle passed from the web page was not valid.

p1 was the handle passed.

System Action:

Web search is terminated.

User Action:

Check the activity log for additional error messages.

For assistance, contact Technical Support at <http://ca.com/support>.

IPCN6006

Search still processing.

Reason:

The search is still processing but the process that waits for the search to complete has timed out. If you still want to wait for the search then click the "Re-Check" button. Some searches that target a large number of records will take longer than others.

System Action:

Web search continues in the background.

User Action:

Click the "Re-Check" button if you still want to wait for the results. Change the search criteria and click "Search" if you want to cancel the pending search and try a new one.

IPCNPK02**Stack *P1* with procname *P2* is inactive****Reason:**

An attempt to use the EZBNMIFR API for the indicated stack (*P1*) has failed. The API requires the procedure (job) step name (*P2*). The request failed due to one of the following reasons:

- The stack is not active
- The procedure name of the stack is incorrectly defined

System Action:

The request is rejected.

User Action:

Check that the stack is correctly defined to ResourceView. To do this, follow these steps:

1. Enter **/RADMIN.R**, select STACK resources, and then select the indicated stack.
2. Select the TCP/IP Stack General Description panel.
3. Ensure that the TCP/IP Stack Step Name field is correct.

This field is the procname.

If this is incorrect, update the resource and retry.

If the resource definition is correct, check if the stack is active. To do this, follow these steps:

1. Enter **/IPMON**.

The Status Monitor : IP Resources dialog appears.

2. If STACK resources are not displayed, use the FILTER command to select a filter that includes stack resources.
3. Check the status using the CHK command.
4. Browse the transient log for the resource using the L command.
5. Review the latest messages and action accordingly.

IPCNPK03**EZBNMIFR *P1* failed. RC=*P2* Reason=*P3*****Reason:**

An attempt to retrieve connection details from IBM's EZBNMIFR API has failed. The type of request is shown in *P1*. *P3* is the return code (errno) and *P4* is the reason code (errnojr)

System Action:

The request is rejected.

User Action:

Contact Technical Support.

IPCNPK04**Error processing NMIFR *P1*. RC=*P2* FDBK=*P3*****Reason:**

An attempt to retrieve connection details has failed. The type of operation is shown in *P1*. *P2* is the return code and *P3* is the feedback code.

Some possible return codes and feedback values are:

RC	FDBK	Explanation
12	1	NEXT request rejected, no outstanding GET request
12	2	Prepare MDO failure
12	3	Assign MDO failure
12	4	Connect map failure
12	5	Subtask abend processing this request
12	6	NetMaster region not authorized
12	7	API module EZBNMIFR load failed during initialization
12	8	Interface disabled due to excessive number of abends
12	10	Region shutdown in progress

System Action:

The request is rejected.

User Action:

This is an internal failure. Contact CA Technical Support.

IPCNPK05**Stack P1 does not exist****Reason:**

The selected stack is not known to the system.

System Action:

The request is rejected.

User Action:

Enter ? in the Stack field to display a list of stacks.

List this region's configuration details (/IPTEST), and investigate any errors.

IPCP0903**Channel card P1 address P2 is not a valid channel card device.****Reason:**

A request was received to perform an action on a Cisco channel card, but during processing it was determined that the specified device is not a valid Cisco channel card device.

System Action:

The action terminates.

User Action:

Correct the IP Address in the channel card definition and retry.

IPCP0904**TN3270 Server is not active at device P1 address P2.****Reason:**

The TCP/IP Services Cisco Channel Card TN3270 Server Information utility procedure has determined that the TN3270 Server is not active on the specified device.

System Action:

The action terminates.

User Action:

Determine why TN3270 Server is not active.

IPCP0907

Max connections reached - P1 records returned

Reason:

The requested maximum number of connections (*P1*) has been reached but more connections satisfy the criteria. The remaining connections are ignored.

System Action:

None.

User Action:

If more connections are required, increase the Max Connections option and retry.

IPCP0911

Connection details not passed in \$IPCONN. MDO

Reason:

An action has been attempted for a TN3270 client connection through a channel card. The action required details about the connection to be passed in an MDO called \$IPCONN. This MDO has not been passed or it is not mapped correctly.

System Action:

The action terminates.

User Action:

Contact your System Administrator.

IPCP0912**Connection details passed in \$IPCONN. MDO are incomplete****Reason:**

An action was attempted for a TN3270 client connection through a channel card. The action required details about the connection to be passed in an MDO called \$IPCONN; however, some of the data that should be present in the MDO is not present.

System Action:

The action terminates.

User Action:

Contact your System Administrator.

IPCP0913**Specified connection for client P1 has ended****Reason:**

A request was received to action a TN3270 client connection, but the request failed because the specified connection has ended.

System Action:

The action terminates.

User Action:

Refresh the connection list display and check if this is the case.

IPCP0914**No channel card in slot P1, device P2 address P3****Reason:**

A request was received to perform an action on a Cisco channel card, but during processing it was determined that no channel card is installed in the specified slot number.

System Action:

The action terminates.

User Action:

Correct the slot number in the channel card definition and retry.

IPCP0915

Specified PU does not exist

Reason:

A request was received to action a specific PU defined to a Cisco channel card, but the PU specified is not known to the TN3270 Server running on the channel card.

System Action:

The action terminates.

User Action:

Refresh the current display and retry.

IPCP0916

No LUs are defined for specified PU

Reason:

A request was received to display a list of LUs defined for a specific PU defined to TN3270 Server running on a Cisco channel card. During processing, it was determined that no LUs are defined for the PU.

System Action:

The action terminates.

User Action:

None

IPCP1102

Channel card definition P1 does not exist

Reason:

A request was received to retrieve the channel card definition called *P1* , but no such channel card definition exists.

System Action:

None.

User Action:

Check the name of the channel card definition requested. If it is correct, investigate why the definition has been deleted.

IPCP1103**Update of multiple channel card definitions is not supported****Reason:**

A request was received to add or update multiple channel card definitions in a single request. This is not allowed.

System Action:

The request is rejected.

User Action:

Request only one update at a time.

IPCP1104**Channel card definition P1 already exists****Reason:**

A request was received to add a channel card definition called *P1* , but a channel card definition with that name already exists.

System Action:

The request is rejected.

User Action:

Choose a different channel card name or update the definition that already exists.

IPCP1107**Start of monitoring activity for P1 failed****Reason:**

When a channel card definition is updated, save processing issues a request to change the current monitoring status of the channel card to reflect the current settings. A request to start monitoring activity for channel card *P1* failed.

System Action:

None.

User Action:

The message preceding this message indicates the cause of the failure.

IPCP1303

Channel card P1 address P2 is not a valid channel card device

Reason:

A request was received to perform an action on a Cisco channel card, but during processing it was determined that the specified device is not a valid Cisco channel card device.

System Action:

The action terminates.

User Action:

Correct the IP Address in the channel card definition and retry.

IPCP1314

No channel card in slot P1, device P2 address P3

Reason:

A request was received to perform an action on a Cisco channel card, but during processing it was determined that no channel card is installed in the specified slot number.

System Action:

The action terminates.

User Action:

Correct the slot number in the channel card definition and retry.

IPCP1317

Monitoring for P1 is not active

Reason:

A request was received to obtain monitor data for channel card *P1* , but monitoring is not active for this channel card.

System Action:

The action terminates.

User Action:

None.

IPCP1318**Monitoring is inactive for all attributes of P1****Reason:**

A request was received to obtain monitor data for channel card *P1* , but all attributes requested have a monitoring status of inactive.

System Action:

The action terminates.

User Action:

None.

IPCP1502**System Up****Reason:**

The TN3270 server has started.

System Action:

None.

User Action:

None.

IPCP1504**PU P2 is now P3. TN3270 server address P4: P5****Reason:**

A PU has changed state.

P1 is the PUIndex (not displayed)

P2 is the PU Name

P3 is the new state: ACTIVE, INACTIVE, WAITING or STOPPING

P4 is the IP Address of the tn3270 server supported by the PU

P5 is the TCP Port number of the tn3270 server supported by the PU

System Action:

None.

User Action:

None.

IPCP1505

PU with index P1 received a bad SNA message fragment. Message: P2

Reason:

A PU received an unsupported SNA message.

P1 is the index number of the PU.

P2 contains a fragment of the message which caused the problem.

System Action:

None.

User Action:

Report problem to Service Engineer with full details.

IPCP1510

Bind received. Client P3: P4 LU P5 PU P1. Parameters: LUtype P8 RU S sizes: in P6 out P7

Reason:

A BIND was received by an LU for a TN3270 client.

P1 is the name of the PU which contains the LU

P2 is the local address (locaddr) of the LU (not displayed)

P3 is the client's IP Address

P4 is the client's TCP port number

P5 is the name of the LU

P6 is the outbound RU Size specified in the bind

P7 is the inbound RU Size specified in the bind

P8 is the lotype in the bind

System Action:

None.

User Action:

None.

IPCP15100**UNBIND for LU P8 client P3: P4 unbind type P9 Sense P10****Reason:**

An UNBIND was done for an LU used by a TN3270 client.

P1 is the index of the PU. (not displayed)

P2 is the locaddr of the LU. (not displayed)

P3 is the client IP Address.

P4 is the client TCP port number

P5 is the tn3270 server IP Address (not displayed)

P6 is the tn3270 server TCP port number (not displayed)

P7 is the PU Name

P8 is the LU Name

P9 is the unbind type

P10 is the SNA Sense code

System Action:

None.

User Action:

None.

IPCP15101**SNA/TN3270E correlator not found - client P3: P4, correlator p8****Reason:**

An SNA/TN3270E correlator in a client response was not found.

P1 is the index of the PU. (not displayed)

P2 is the locaddr of the LU. (not displayed)

P3 is the client IP Address.

P4 is the client TCP port number.

P5 is the PU Name (not displayed).

P6 is the LU Name (not displayed).

P7 is the next TN3270E sequence number for the server (not displayed).

P8 is the TN3270E sequence number in the client response.

System Action:

None.

User Action:

None.

IPCP15102

TN3270E sequence number bad - client P1 expected P2 actual p3

Reason:

An SNA/TN3270E sequence number on a client request was incorrect.

P1 is the client IP Address.

P2 is the expected TN3270E sequence number.

P3 is the TN3270E sequence number in the client request.

System Action:

None.

User Action:

None.

IPCP15103

DDDLU is not supported by the host

Reason:

DDDLU is not supported by the host.

P1 is the tn3270 server IP Address (not displayed)

P2 is the tn3270 server TCP port number (not displayed)

System Action:

None.

User Action:

None.

IPCP15104

APPN BIND reject received. Sense P3 Local CPName P1 Partner CPName P2

Reason:

An APPN BIND rejection was received.
P1 is the local CPName
P2 is the remote CPName
P3 is the SNA Sense code

System Action:

None.

User Action:

None.

IPCP15105

No response from host in 30 seconds. Local PUname p1

Reason:

The host did not respond within 30 seconds.
P1 is the PU name
P2 is the LOCADDR of the LU (not displayed)

System Action:

None.

User Action:

Check the configuration and the status of the PU on the host.

IPCP15106

TCPIP write transient failure. Telnet CB index P1 TCP error number P2

Reason:

TCPIP write had a transient failure.
P1 is the Telnet CB index
P2 is the TCPIP error number.

System Action:

None.

User Action:

None.

IPCP15107

Illegal Telnet suboption - client P1: P2, suboption p3

Reason:

An illegal Telnet suboption was provided by a client.
P1 is the client IP Address.
P2 is the client TCP port number.
P3 is the illegal Telnet suboption.

System Action:

None.

User Action:

Check the client software.

IPCP15108**Outbound pacing problem - client P3: P4.****Reason:**

A pacing error has occurred.

P1 is the index of the PU. (not displayed)

P2 is the locaddr of the LU. (not displayed)

P3 is the client IP Address.

P4 is the client TCP port number.

P5 is the PU Name (not displayed).

P6 is the LU Name (not displayed).

P7 is the next TN3270E sequence number for the server (not displayed).

P8 is the TN3270E sequence number in the client response.

System Action:

None.

User Action:

None.

IPCP15109**Telnet negotiation time expired - client P1: P2****Reason:**

A Telnet client has failed to respond within the negotiation time limit.

P1 is the client IP Address.

P2 is the client TCP port number.

System Action:

None.

User Action:

None.

IPCP1511

Invalid data received from TN3270 client on P3: P4 using LU P5

Reason:

Invalid data was received from a TN3270 client.

P1 is the PU index (not displayed)

P2 is the locaddr of the lu (not displayed)

P3 is the client IP Address.

P4 is the client TCP port number

P5 is the LU Name

System Action:

None.

User Action:

1. Check client. 2. Report problem to Service Engineer with full details.

IPCP15110

TN3270E function negotiation loop - Client P1: P2 Function P3

Reason:

A loop was detected during TN3270E function negotiation.

P1 is the client IP Address.

P2 is the client TCP port number.

P3 is the OR'd TN3270E function

System Action:

None.

User Action:

None.

IPCP15111

TCPIP Listen failure. Server P1: P2 TCP error number P3.

Reason:

A TCPIP Listen failed.

P1 is the server IP address.

P1 is the server port number.

P3 is the TCPIP error number.

System Action:

None.

User Action:

None.

IPCP15112

**PU listen state changed. Local PUname P1 Old state P2 New state P4
Event P3**

Reason:

The listen state of the server PU has changed.

P1 is the PU name.

P2 is the previous state.

P3 is the event that caused the state change.

P4 is the new state.

System Action:

None.

User Action:

None.

IPCP15113

**Timer error. TN timer opcode P1 Timer interval P2 Funct ptr P3 Ret urn
addr P4 Old funct ptr P5.**

Reason:

A timer error has occurred.

P1 is the timer opcode.

P2 is the timer interval in seconds.

P3 is the function pointer in code.

P4 is the return address in code.

P5 is the old function pointer in code.

System Action:

None.

User Action:

None.

IPCP15114

LU state error. Old state P3 New state P1 Flags P2 CB Pointer P4

Reason:

An LU state error has occurred.

P1 is the new LU SNA state.

P2 is the LU SNA state flags.

P3 is the old LU SNA state.

P4 is the LU CB pointer.

System Action:

None.

User Action:

None.

IPCP15115

Timer stats max. Expiries P1 Non-expiries P2 Relocs P3 Proc P4.

Reason:

Timer stats max.

P1 is the timer expiries.

P2 is the timer non-expiries.

P3 is the timer relocations.

P4 is the timer processing in milliseconds.

System Action:

None.

User Action:

None.

IPCP15116

Telnet termtype in loop - client P1: P2 num devtype reqs P3

Reason:

A loop was detected in Telnet termtype processing.

P1 is the client IP Address.

P2 is the client TCP port number.

P3 is the number of devtype requests.

System Action:

None.

User Action:

None.

IPCP1512

Bad BIND received by LU P5 client P3: P4

Reason:

A bad bind was received from the host.

P1 is the PU index (not displayed)

P2 is the LOCADDR of the LU

P3 is the client IP Address

P4 is the client TCP port number

P5 is the LU Name

System Action:

None.

User Action:

1. Check VTAM configuration for this LU. 2. Report problem to Service Engineer with full details.

IPCP1513

Connection rejected from P1: P2 Reason P3 (P6). Requested model P4 and LU P5

Reason:

A connection from a tn3270e client was rejected.

P1 is the client IP Address

P2 is the client TCP port number

P3 is the connection rejected reason code which can be:

CONN-PARTNER DEVICE-IN- USE - Requested LU already in use

INV-ASSOCIATE - Associate is not supported

INV- DEVICE-NAME - Requested LU name is not supported

INV-DEVICE-TYPE - Requested Terminal model is not supported

TYPE-NAME-ERROR UNKNOWN-ERROR NO PU DEFINED NO PU ACTIVE NO LU AVAILABLE

P4 is the requested device type

P5 is the requested LU name

P6 is the sub error ID

System Action:

None.

User Action:

Check client and VTAM configuration.

IPCP1514**No free LUs in generic pool for tn3270 server P1: P2. Active PUs: P3****Reason:**

The Tn3270 server has no LUs left in generic pool for assignment to incoming client DDDLUs requests.

P1 is the tn3270 server IP address

P2 is the tn3270 server TCP port number

P3 is the current number of active PUs

System Action:

None.

User Action:

1. Check DDDLUs have been configured in VTAM. 2. Check channel card configuration.

IPCP1515**Connection started. Client P3: P4 LU P10 Model P11 Specific LU flag P7****Reason:**

Connection accepted from a tn3270 client.

P1 is the PU index (not displayed)

P2 is the LU LOCADDR (not displayed)

P3 is the client IP address

P4 is the client TCP Port number

P5 is the server IP address

P6 is the server TCP Port number

P7 is the 'specific LU flag'

P8 is the telnet server index (not displayed)

P9 is the PU Name (not displayed)

P10 is the LU Name

P11 is tn3270 device type

System Action:

None.

User Action:

None.

IPCP1516

ACTLU received for P3 on PU P4

Reason:

ACTLU was received from host for a specific LU. This LU will not form part of DDDL generic pool.

P1 is the PU index (not displayed)

P2 is the LOCADDR of the LU (not displayed)

P3 is the LU Name

P4 is the PU Name

System Action:

None.

User Action:

None.

IPCP1517

Neg response sent by LU P6 client P4: P5 Message P7

Reason:

A negative response was sent to the host from an LU.

P1 is the PU index (not displayed)

P2 is the LOCADDR (not displayed)

P3 is the PU name (not displayed)

P4 is the client IP Address

P5 is the client TCP port number

P6 is the LU name

P7 is a fragment of the SNA message The message fragment is a 2 byte length 'l' followed by 'l' bytes of the SNA Message.

System Action:

None.

User Action:

This may not be a problem and is only a debugging message, but if you notice any other problem on this session, please pass this and other relevant information to Service Engineer.

IPCP1518**Negative response to LU P6 PU P3 Client P4: P5 Message P7****Reason:**

A negative response was received from the host by an LU.

P1 is the PU Index (not displayed)

P2 is the LOCADDR of the LU (not displayed)

P3 is the PU Name

P4 is the client IP Address

P5 is the client TCP port

P6 is the LU name

P7 is a fragment of the SNA message

System Action:

None.

User Action:

This may not be a problem and is only a debugging message, but if you notice any other problem on this session, please pass this and other relevant information to Service Engineer.

IPCP1525**Tn3270 server P1: P2 Listener status is now P3****Reason:**

A tn3270 server listen point has changed status.

P1 is the tn3270 server IP address

P2 is the tn3270 server TCP port

P3 is the state of the listener: SCRAP listen point has been destroyed DEAF created, but not yet listening LISTENING listen point is active and listening

System Action:

None.

User Action:

None.

IPCP1526

No memory for LU allocation

Reason:

Memory shortage on channel card for TN3270 server.

System Action:

None.

User Action:

1. Add more channel card memory. 2. Report to Service Engineer with full details.

IPCP1527

System down

Reason:

TN3270 server has stopped.

System Action:

None.

User Action:

None.

IPCP1528

DLUS protocol error. Sense P3 DLUR CPName P1 DLUS CPName P2

Reason:

There was a DLUR/DLUS protocol error.
P1 is the (local) DLUR CPName
P2 is the (remote) DLUS CPName
P3 is the SNA Sence code

System Action:

None.

User Action:

Check configuration of DLUR/DLUS

IPCP1529

Remote CP P2 is not DLUS for DLUR CP P1 of TN3270 server.

Reason:

Remote CP is not a DLUS, or is not willing to be DLUS for the local CP of the TN3270 server.

P1 is (local) DLUR CPName of tn3270 server

P2 is (remote) CPName

System Action:

None.

User Action:

1. DLUS name configured in tn3270 server might be incorrect. 2. DLUS might be configured incorrectly in VTAM. 3. Report problem to Service Engineer with full details.

IPCP1530

DLUS CPName P2 and DLUR CPName P1 in different subnets.

Reason:

Remote DLUS is in a different subnet from the DLUR of the TN3270 server.

P1 is the local DLUR CP Name

P2 is the remote DLUS CP Name

System Action:

None.

User Action:

1. DLUS name configured in tn3270 server might be incorrect.
2. Try a DLUS in the same subnet as DLUR.
3. Report problem to Service Engineer with full details.

IPCP1531

Rejecting received BIND for CP-CP session. SENSE: P3, LOCAL CPname: P1 , REMOTE CPname: P2

Reason:

A received bind on a CP-CP session is being rejected.

P1 is the local DLUR CPName

P2 is the remote DLUS CPName

P3 is the SNA Sense code.

System Action:

None.

User Action:

1. DLUR configuration in tn3270 server might be incorrect. 2. VTAM DLUS configuration might be incorrect. 3. Report problem to Service Engineer with full details.

IPCP1532

XID REJECTED FOR CP-CP SESSION. LOCAL CPNAME P1 REMOTE CPNAME P2 SENSE p3 ADAPTER P4

Reason:

An XID was rejected on a CP-CP session.

P1 is the local DLUR CPName.

P2 is the remote DLUS CPName.

P3 is the SNA Sense code.

P4 is the adapter name.

System Action:

None.

User Action:

1. XID specified in TN3270 server could be incorrect.
2. VTAM configuration could be incorrect.
3. Report full details of the problem to your technical support representative.

IPCP1533

Bad frame received on CP-CP session. LOCAL CPname P1 Remote CPName P2 Sense P3 TGN P4

Reason:

A bad frame was received on a CP-CP session.

P1 is the local DLUR CPName

P2 is the remote DLUS CPName

P3 is SNA Sense code

P4 is the TGN (Transmission group Number) which recieved the frame.

System Action:

None.

User Action:

Report problem to Service Engineer with full details.

IPCP1534

No IPC event buffers

Reason:

There is a shortage of IPC event buffers.

System Action:

None.

User Action:

Report the problem to the Service Engineer with full details.

IPCP1535

XID rejected. Sense P2 IDBLK/IDNUM P2 Adapter P3

Reason:

An XID was rejected.
P1 is the IDBLK/IDNUM value
P2 is the SNA sense code
P3 is the adapter name

System Action:

None.

User Action:

1. XID specified in tn3270 server might be incorrect. 2. VTAM configuration might be incorrect. 3. Report problem to Service Engineer with full details.

IPCP1536

No response to PSID NMVT. LU P5 PU P1 Client P3: P4

Reason:

The host did not respond to a NMVT PSID sent to it by the tn3270 server.
P1 is the puname
P2 is the LOCADDR (not displayed)
P3 is the client IP Address
P4 is the client TCP Port Number.
P5 is the LU Name

System Action:

None.

User Action:

Please pass this and other relevant information to Service Engineer. Also gather as much information about this PU and LU from VTAM and pass it on.

IPCP1537**No response to Notify Available. LU P5 PU P1 Client P3: P4****Reason:**

The host did not respond to a Notify Available sent to it by the server.

P1 is the PU Name

P2 is the LOCADDR of the LU

P3 is the Client IP Address

P4 is the Client TCP Port number

P5 is the LU Name

System Action:

None.

User Action:

Please pass this and other relevant information to Service Engineer. Also gather as much information about this PU and LU from VTAM and pass it on.

IPCP1538**No BIND received by LU P5 PU P1 Client P3: P4****Reason:**

The host did not send a bind request to the named dependent LU.

p1 is the PU Name

P2 is the LOCADDR of the LU

P3 is the client IP Address

P4 is the client TCP Port Number

P5 is the LU Name

System Action:

None.

User Action:

Please pass this and other relevant information to Service Engineer. Also gather as much information about this PU and LU from VTAM and pass it on.

IPCP1539

No SDT received by LU P5 PU P1 Client P3: P4

Reason:

The host did not send a Start Data Traffic (SDT) request to this dependent LU.

p1 is the PU Name

P2 is the LOCADDR of the LU

P3 is the client IP Address

P4 is the client TCP port number

P5 is the LU Name

System Action:

None.

User Action:

Please pass this and other relevant information to Service Engineer. Also gather as much information about this PU and LU from VTAM and pass it on.

IPCP1540

No response from client P3: P4 to Telnet Timing Mark(SDT) LU P5 PU P1

Reason:

The TN3270 Client did not respond to the Telnet Timing mark that was sent to it by the server to mark a Start Data Traffic (SDT) request from host.

P1 is the PU name

P2 is the LOCADDR of the LU

P3 is the client IP Address

P4 is the Client TCP Port Number

P5 is the LU Name.

System Action:

None.

User Action:

1. Please investigate the TN3270/E client.
2. Please pass the TN3270/E client name and version along with other relevant information to Service Engineer.

IPCP1541**No response from client P3: P4 to Telnet Timing Mark(UNBIND) LU P5
PU P1****Reason:**

The TN3270 Client did not respond to the Telnet Timing mark that was sent to it by the server to mark an UNBIND request from the host.

P1 is the PU name

P2 is the LOCADDR of the LU (not displayed)

P3 is the client IP Address

P4 is the Client TCP Port Number

P5 is the LU Name.

System Action:

None.

User Action:

1. Please investigate the TN3270/E client.
2. Please pass the TN3270/E client name and version along with other relevant information to Service Engineer.

IPCP1542**No response to Notify Unavailable. LU P5 PU P1 Client P3: P4****Reason:**

The host did not respond to a Notify Unavailable sent to it by the server.

P1 is the PU name

P2 is the LOCADDR of the LU

P3 is the client IP Address

P4 is the Client TCP Port Number

P5 is the LU Name.

System Action:

None.

User Action:

Please pass this and other relevant information to Service Engineer. Also gather as much information about this PU and LU from VTAM and pass it on.

IPCP1543

No ACTLU for DDDL. LU P5 PU P1 Client P3: P4

Reason:

The host did not send an ACTLU for this DDDL request sent to the host.

P1 is the PU name

P2 is the LOCADDR of the LU

P3 is the client IP Address

P4 is the Client TCP Port Number

P5 is the LU Name.

System Action:

None.

User Action:

Please pass this and other relevant information to Service Engineer. Also gather as much information about this PU and LU from VTAM and pass it on.

IPCP1544

No response to UNBIND. LU P5 PU P1 Client P3: P4

Reason:

The host did not respond to an UNBIND sent to it by tn3270 server.

P1 is the PU name

P2 is the LOCADDR of the LU (not displayed)

P3 is the client IP Address

P4 is the Client TCP Port Number

P5 is the LU Name.

System Action:

None.

User Action:

Please pass this and other relevant information to Service Engineer. Also gather as much information about this PU and LU from VTAM and pass it on.

IPCP1548**Link P1 disconnected by remote.****Reason:**

A link has been disconnected by remote.
P1 is the link name.

System Action:

None.

User Action:

None.

IPCP1549**Link P1 received XID control vector 22 sense P2 error offset P3****Reason:**

Link objected to a field in XID control vector 22.
P1 is the link name
P2 is the SNA Sense code
P3 is the offset within the control vector 22 of the unacceptable field

System Action:

None.

User Action:

1. The related PU may not be active at host.
2. VTAM config is not correct.
3. Report problem to Service Engineer with full details.

IPCP1550

TN3270 server could not activate link P1 in P2 retries.

Reason:

TN3270 server couldn't activate a link after several retries.

P1 is the link name

P2 is the number of unsuccessful retries.

System Action:

None.

User Action:

1. Eventually link should come up. If not, check that PU is activated on host
2. Check the config on the channel card for the PU 3. Check VTAM config.

IPCP1551

No buffers - dropped frame to Host

Reason:

TN3270 server dropped a frame going to host due to buffer shortage.

System Action:

None.

User Action:

1. Check for sufficient memory on the channel card.
2. Report problem to Service Engineer with full details.

IPCP1552**TN3270 server could not open local SAP P1. Adapter Number P3 Type P2 Retries P4****Reason:**

TN3270 server could not open a local SAP after several retries.

P1 is the local SAP number

P2 is the adapter type

P3 is the adapter number

P4 is the number of unsuccessful retries.

System Action:

None.

User Action:

Check the config on the channel card for the PU.

IPCP1553**TN3270 server could not open adapter number P2 Type P1 Retries P3****Reason:**

TN3270 server could not open an adapter after several retries.

p1 is the type of the adapter

P2 is the adapter number

P3 is the number of retries.

System Action:

None.

User Action:

Check the config on the channel card for the PU.

IPCP1554

Link P1 received XID of length P2.

Reason:

A link received an XID of invalid length.

P1 is the link name

P2 is the length of the XID received.

System Action:

None.

User Action:

1. Check the config on the channel card for the PU
2. Check VTAM config.

IPCP1555

Received LU 6.2 frame rejected. Sense P1

Reason:

A received LU 6.2 frame was rejected.

P1 is the SNA sense code.

System Action:

None.

User Action:

Report problem to Service Engineer with full details.

IPCP1556

Bad frame rejected. Link P1 Sense P2 Frame Length P3 Message P4.

Reason:

A bad frame was rejected.
P1 is the link name
P2 is the SNA sense code
P3 is the length of the rejected frame
P4 contains a fragment of the rejected message.

System Action:

None.

User Action:

Report problem to Service Engineer with full details.

IPCP1562

CP Bind rejected by NN Server for DLUR of TN3270 server. Sense P1

Reason:

A CP bind from the TN3270 server was rejected.
P1 is the SNA Sense code

System Action:

None.

User Action:

Report problem to Service Engineer with full details.

IPCP1563

**CP-CP Contention winner session unbound by NN Server. UNBIND type
P1 Sense P2**

Reason:

CP-CP Contention winner session was unbound by NN Server for EN represented by DLUR for TN3270 server.

P1 is the UNBIND type

P2 is the SNA sense code

System Action:

None.

User Action:

Report problem to Service Engineer with full details.

IPCP1564

**CP-CP contention loser session unbound by NN Server. UNBIND Type
P1 Sense P2**

Reason:

CP-CP Contention loser session was unbound by NN Server for EN represented by DLUR for TN3270 server.

P1 is the UNBIND type

P2 is the SNA sense code

System Action:

None.

User Action:

Report problem to Service Engineer with full details.

IPCP1571**No Route to DLUS from NN Server - trying NN server link.****Reason:**

DLUR is not able to find a route to configured DLUS. It is trying NN server link.

System Action:

None.

User Action:

1. DLUS name configured in Tn3270 server might be incorrect.
2. APPN network may not be fully operational/ not configured correctly.
3. Report problem to Service Engineer with full details.

IPCP1573**Link to NN Server lost.****Reason:**

EN used by TN3270 server DLUR lost link to NN Server.

System Action:

The system will attempt to re-establish the link.

User Action:

1. NN might have gone down or connection between EN-NN may have broken.
2. If possible to reach the NN through another link it should be configd.
3. If another NN is accessible, CP-CP sessions should come up on that.
4. APPN network may not be fully operational/ not configured correctly.

IPCP1576

Link lost.

Reason:

A Link has been permanently lost.

System Action:

None.

User Action:

1. NN might have gone down or connection between EN-NN may have broken.
2. If possible to reach the NN through another link it should be configd.
3. If another NN is accessible, CP-CP sessions should come up on that.
4. APPN network may not be fully operational/ not configured correctly.

IPCP1577

Link to DLUS lost.

Reason:

The DLUR-DLUS session has been lost.

System Action:

None.

User Action:

1. NN might have gone down or connection between EN-NN may have broken.
2. If possible to reach the NN through another link it should be configd.
3. If another NN is accessible, CP-CP sessions should come up on that.
4. APPN network may not be fully operational/ not configured correctly.

IPCP1582**DLUR Bind rejected by DLUS. Sense P1****Reason:**

The DLUS rejected a bind from the tn3270 server DLUR.
P1 is the SNA sense code.

System Action:

None.

User Action:

Report problem to Service Engineer with full details.

IPCP1583**DLUR-DLUS contention winner session unbound by DLUS. UNBIND type P1 Sense P2****Reason:**

A contention winner DLUR-DLUS Session was unbound.
P1 is the UNBIND type
P2 is the SNA sense code

System Action:

None.

User Action:

None.

IPCP1584**DLUR-DLUS contention loser session unbound by DLUS. UNBIND type P1 Sense P2****Reason:**

A contention loser DLUR-DLUS Session was unbound.
P1 is the UNBIND type
P2 is the SNA sense code

System Action:

None.

User Action:

None.

IPCP1590

Frame from DLUS for unknown PU.

Reason:

A frame from DLUS for unknown PU was received.

System Action:

None.

User Action:

Report problem to Service Engineer with full details.

IPCP1591

DLUS protocol error. Sense code P1.

Reason:

A DLUS protocol error has occurred.
P1 is the SNA sense code.

System Action:

None.

User Action:

Report problem to Service Engineer with full details.

IPCP1592

Rejected BIND from DLUS. Sense P1

Reason:

A bind was rejected from the DLUS.
P1 is the SNA sense code.

System Action:

None.

User Action:

Report problem to Service Engineer with full details.

IPCP1594**Link station pool exhausted.****Reason:**

Special Buffer pool in DLUR exhausted.

System Action:

None.

User Action:

Report problem to Service Engineer with full details.

IPCP1596**Disconnected Client P5: P6 From LU P8 Reason: P4****Reason:**

A tn3270 client was disconnected.

P1 is the PU index (not displayed)

P2 is the LU LOCADDR (not displayed)

P3 is the telnet server index (not displayed)

P4 is the disconnect reason: Unexpected data Header length too short

Unknown header data Function not supported Requested LU unavailable

Requested LU not configured TN3270 session timed out Unknown reason

TN3270/TN3270E couldn't be negotiated SYSREQ followed by data is taken as

Logoff PU has been shutdown TCP client shutdown Other disconnect reason

P5 is the client IP Address

P6 is the client TCP port number

P7 is the PU Name (not displayed)

P8 is the LU Name

System Action:

None.

User Action:

None.

IPCP1597

LU contention. Client P3: P4 LU P6 Message P7

Reason:

LU Contention was discovered on the LU-LU session.

P1 is the PU index (not displayed)

P2 is the LOCADDR of the LU.

P3 is the client IP Address

P4 is the client TCP port number

P5 is the PU Name

P6 is the LU Name

P7 is the message fragment

System Action:

None.

User Action:

This is probably not a problem, but if you notice any other problem, please pass this and other relevant information to the Service Engineer. Also, gather as much information about this PU and LU from VTAM and pass it on.

IPCP1598

LU unexpected response. Client P3: P4 LU P6 Message P7

Reason:

An unexpected response was detected on the LU-LU session.

P1 is the PU index (not displayed)

P2 is the LOCADDR of the LU (not displayed)

P3 is the client IP Address

P4 is the client TCP port number

P5 is the PU Name

P6 is the LU Name

P7 is the message fragment

System Action:

None.

User Action:

This is probably not a problem, but if you notice any other problem, please pass this and other relevant information to the Service Engineer. Also, gather as much information about this PU and LU from VTAM and pass it on.

IPCP1599

LU-LU Session started. Client P3: P4 LU P9 PU P8 Server P5: P6

Reason:

An LU-LU session was started for a TN3270/E client.

P1 is the PU index (not displayed)

P2 is the LOCADDR of the LU (not displayed)

P3 is the client IP Address

P4 is the client TCP port number

P5 is the server IP Address

P6 is the server TCP Port Number

P7 is the telnet server index (not displayed)

System Action:

IPCP15L00

Channel Card P1: P2 failed: IPaddr= P3, RC: P4, FB: P5, ERRNO: P6, VER RIN: P7

Reason:

On channel card P1 SOCKET P2 on IPaddr P3 failed.

System Action:

The operation will be retried every 30 seconds until successful.

User Action:

Check that the IP address for the channel card is correct.

IPCP15L01

Channel card P1: Log record retrieval terminated on P2 at P3 due to P4

Reason:

Retrieval of log records has been terminated due to P4.

System Action:

LOG record retrieval is terminated.

User Action:

None.

IPCP15L02

Channel Card P1: Connection to channel card established on P2 at P3, IPaddr: P4, Log size: P5

Reason:

A connection to the channel card has been established.

System Action:

None

User Action:

None

IPCP15L06

Channel Card P1: Return code P2 when attempting to add to table P3

Reason:

An attempted add to the varable for channel card P1 for the transient log failed. The return code (P2) and table name (P3) are shown.

System Action:

LOG record retrieval is terminated.

User Action:

None.

IPCP15L07

Channel Card P1: Message number P2 is unknown. Fields referenced: P3.

Reason:

A message was retrieved which is unknown to the logger for channel card P1 .

System Action:

None.

User Action:

None.

IPCP15L09

Channel Card P1: Field number P2 for msg P3 is unknown.

Reason:

Field number *P2* in message number *P3* has not been defined.

System Action:

The original message is issued without substitution being performed. For the first occurrence of each msg/field number combination, the entire CIP log message data is written to the activity log, in dump format, marked 'Message Error'.

User Action:

Contact Technical Support. Include the message detail and CIP log message data.

IPCP15L10

Channel Card P1: Socket P2 ID= P3 Address= P4

Reason:

A connection to the channel card has been opened or closed (*P2*). The socket ID is *P3* and the IP address used is *P4* .

System Action:

None.

User Action:

None.

IPCP1601

Transient log for channel card P1 is unavailable

Reason:

An attempt by the Log Browse utility to access the log for *P1* failed.

System Action:

Log Browse terminates.

User Action:

Ensure the logging is active for the specified channel card.

IPCP1603

Command ' P1' not supported

Reason:

A command entered on the Log Browse panel is not recognized.

System Action:

None.

User Action:

Check the spelling of the command. If necessary use the Help command, or press F1, to view the application help.

IPCP1604

No command entered

Reason:

A / command was entered without any operands.

System Action:

None.

User Action:

Re-enter the / command with a product command as the operand.

IPCP1605**Command issued****Reason:**

A command has been processed.

System Action:

None.

User Action:

None.

IPCP1606**Invalid date****Reason:**

A request to access a specific date failed because the format of the data does not match one of the following: YY.DDD DD/MM/YY or MM/DD/YY (if US language code) YY/MM/DD YYYYMMDD

System Action:

None.

User Action:

Correct the date entered to match one of the supported formats.

IPCP1607**Invalid label name ' P1'****Reason:**

A label command has specified an invalid label name. A label must be 1 to 8 characters.

System Action:

None.

User Action:

Enter a label name of 1 to 8 characters.

IPCP1608

Invalid scan limit ' P1'

Reason:

A SCANMAX command has specified an invalid value. The limit must be a number in the range 1 to 9999.

System Action:

None.

User Action:

Correct the limit entered to be a number in the range 1 to 9999.

IPCP1609

Scan limit set to P1

Reason:

A SCANMAX command has been accepted. *P1* is now the limit on the number of log records that will be searched for a Find request.

System Action:

None.

User Action:

None.

IPCP1610

Message attributes will be displayed

Reason:

An ATTR command has been used to activate message level coloring and highlighting.

System Action:

Log messages with color and highlighting will be displayed with those attributes.

User Action:

Use the ATTR command again to reset message level attributes.

IPCP1611**Message attribute display reset****Reason:**

An ATTR command has been used to deactivate message level coloring and highlighting.

System Action:

Log messages are displayed without color and highlighting.

User Action:

Use the ATTR command again to set message level attributes.

IPCP1612**Invalid scroll amount ' P1'****Reason:**

A scroll value entered is not supported.

System Action:

None.

User Action:

Correct the scroll amount entered.

IPCP1613**Invalid time****Reason:**

A request to access a specific time failed because the format of the data does not match one of the following: HH HH.MM HH.MM.SS

System Action:

None.

User Action:

Correct the time entered to match one of the supported formats.

IPCP1614

Label name omitted

Reason:

A LABEL command has not specified a label name.

System Action:

None.

User Action:

Correct the label command to specify a label name. For example .HERE or LABEL HERE.

IPCP1615

Format ' P1' not supported

Reason:

A FORMAT command has specified an unknown format name.

System Action:

The format is unchanged.

User Action:

Correct the Format command to specify one of NORMAL, SHORT, LONG, or SOURCE.

IPCP1616

Find string omitted

Reason:

A FIND command has not specified a search argument.

System Action:

None.

User Action:

Correct the Find command to specify a search argument.

IPCP1617**Label name omitted****Reason:**

A LOCATE command has not specified a label name.

System Action:

None.

User Action:

Correct the LOCATE command to specify a label name. For example, LOCATE THERE.

IPCP1618**Unknown label ' P1'****Reason:**

A Locate command has specified a label name that is not defined.

System Action:

None.

User Action:

Check that the label name is spelt correctly and matches a defined label.

IPCP1619**Label ' P1' defined****Reason:**

A Label has been defined for the line indicated by the cursor or the line displayed at the top of the screen.

System Action:

None.

User Action:

Use the *Locate P1* command to reposition to this line.

IPCP1620

Label ' P1' replaced

Reason:

A Label has been defined for the line indicated by the cursor or the line displayed at the top of the screen. This definition replaces an earlier position for the label.

System Action:

None.

User Action:

Use the *Locate P1* command to reposition to this line.

IPCP16L05

Return code P1 when attempting to add to VARTABLE named P2.

Reason:

An attempt to add to the VARTABLE for the transient log failed.

System Action:

LOG record retrieval is terminated.

User Action:

None.

IPCP1703

Required parameter (P2) missing for command P1

Reason:

The TCP/IP external interface procedure \$IPCALL failed because a required parameter was omitted from the call to \$IPCALL. You must specify ADDRESS, HOSTNAME, or HOST.

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure that executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Contact your System Administrator.

IPCP1801**No log data present for P1****Reason:**

No log data was found for the date specified.

System Action:

None.

User Action:

Specify a date that has log data. For a list of dates that contain log data, enter the DATE command without specifying a date.

IPCP1802**File error, RC= P1 VSAMFDBK= P2 on file P3****Reason:**

A delete request for the named log file *P3* failed with an unexpected return code of *P1* . *P2* is the VSAM feedback.

System Action:

If available, the system message from the FILE Verb is logged.

User Action:

See the VSAM Programming guide for an explanation of error codes.

IPCP1803**Records for date P1 not present in file P2****Reason:**

A delete request for the named log file *P3* was rejected. No records for the request date *P1* were found on the file *P2* .

System Action:

None.

User Action:

None.

IPCP1804

Channel card initialized on P1 P2 at P3.

Reason:

This message shows the data and time when the channel card was initialized.

System Action:

None.

User Action:

None.

IPCP1805

Date P1 not recognized

Reason:

A request to access a specific date failed because the format of the data does not match one of the following: YY.DDD DD/MM/YY or MM/DD/YY (if US language code) YY/MM/DD YYYYMMDD

System Action:

None.

User Action:

Correct the date entered to match one of the supported formats.

IPCP1806

Delete not supported for current day

Reason:

A request to delete log data has specified the current day. This is not supported.

System Action:

None.

User Action:

None.

IPCP1807**Transient log for channel card P1 is not available.****Reason:**

An attempt to access the named log file failed.

System Action:

None.

User Action:

Determine why the channel card log is unavailable. Possible reasons include:

1. The channel card definition does not specify that TN3270 logging is active. Review the channel card definition details (issue UM command from the IP resource monitor). Check the value for the following field: *TN3270 logging active* This will have a value of Yes (active) or No (not active).
2. If TN3270 logging is (defined as) active, check the Activity Log for error messages. Locate the following initialization message: *IPICAL07 STARTING TO INITIALIZE Miscellaneous Parameters* Any errors will be reported after that message, and most likely before: *IPICAL08 COMPLETED INITIALIZE OF Miscellaneous Parameters*
Correct and retry.

IPCP1808**Insufficient authority****Reason:**

A request to process log resources requires the System Support authority, which the current user region does not have.

System Action:

The request is rejected.

User Action:

Contact your System Administrator. System Support authority may be granted through the update user function of UAMS maintenance.

IPCP1809

Required operand P1 omitted for action P2

Reason:

A request to access Log functions has failed because a required operand is not specified.

System Action:

Request is terminated.

User Action:

Correct the request to specify the required operand.

IPCP1810

' P1' is not a valid value for P2

Reason:

The value *P1* is not a valid value for the field identified by the field label *P2* .

System Action:

The user cannot proceed until a valid value is entered.

User Action:

Enter a valid value before proceeding.

IPCP1811

Data ' P1' located in line P2, column P3

Reason:

The value *P1* has been located in the Log file. The log record number for the day is *P2* . The data was found in the field at offset *P3* .

System Action:

None.

User Action:

None.

IPCP1812**Data not found. P1 lines searched (time P2 to P3)****Reason:**

A Log search has failed to locate the requested search argument. *P1* lines were read in the time range indicated by *P2* to *P3* .

System Action:

None.

User Action:

If necessary retry the Find operation.

IPCP1813**Data not found. Top of data reached****Reason:**

A Log search has failed to locate the requested search argument. The top of data was reached for the current day.

System Action:

None.

User Action:

If necessary, retry the Find operation.

IPCP1814**Data not found. Bottom of data reached****Reason:**

A Log search has failed to locate the requested search argument. The bottom of data was reached for the current day.

System Action:

None.

User Action:

If necessary, retry the Find operation.

IPCP1815

Parameter error in call to P1, refer to log

Reason:

A parsing error occurred processing the parameters in the procedure *P1* .

System Action:

The SETVARS system message is logged.

User Action:

See the log and report the error to your product support representative.

IPCP1816

Invalid keyword parameter specified - P1= P2

Reason:

The keyword parameter *P1* was omitted or specified incorrectly.

System Action:

The request is rejected.

User Action:

Correct and retry.

IPCP1817

UserID P1 is not authorized to execute commands

Reason:

The userid *P1* is not authorized to enter EXEC or CMD in the COMMAND and SELECT OPTION input fields on panels; therefore, the execution of commands is not allowed.

System Action:

The command is rejected.

User Action:

Contact your system administrator if the function is required.

IPCP1818

Connection to channel card P1 is not available.

Reason:

The connection to the channel card *P1* is not currently active.

System Action:

None.

User Action:

This is informational and does not affect the ability to browse the log.

IPCP1819

Logging is set to "OFF" in the channel card definition.

Reason:

Log records are not being retrieved because the channel card definition has logging turned off.

System Action:

None.

User Action:

Update the channel card definition if desired.

IPCP1820

No log data present for P1

Reason:

No log data was found for the CIP specified.

System Action:

None

User Action:

Ensure that logging is enabled for the CIP and that it can be contacted.

IPCP2001

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The TCP/IP external interface procedure \$IPCALL failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed \$IPCALL. If executed from OCS, check the command entered on the command line and retry.

IPCP2002

INVALID SELECT VALUE SPECIFIED - KEYWORD= P1 VALUE= P2

Reason:

The TCP/IP procedure \$IPCP20L failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPCP20L terminates.

User Action:

Contact your System Administrator.

IPCP2003**ACTION NOT SUPPORTED FOR THIS ENTRY****Reason:**

The attempted action is not valid in the following places: * On the selected LU or, * On display lines that are not LUs.

System Action:

None.

User Action:

None.

IPCP2101**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The TCP/IP external interface procedure \$IPCALL failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed \$IPCALL. If executed from OCS, check the command entered on the command line and retry.

IPCP2102

INVALID SELECT VALUE SPECIFIED - KEYWORD= P1 VALUE= P2

Reason:

The TCP/IP procedure \$IPCP21L failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPCP21L terminates.

User Action:

Contact your System Administrator.

IPCP2103

ACTION NOT SUPPORTED FOR THIS ENTRY

Reason:

The attempted action is not valid in the following places:

- On the selected LU or,
- On display lines that are not LUs.

System Action:

None.

User Action:

None.

IPCP2104

MINITRACE NOT VALID FOR THIS ENTRY

Reason:

An attempt was made to perform a minitrace on the selected LU but the LU has never been used and therefore has no data pertaining to a minitrace.

System Action:

Option not processed.

User Action:

None.

IPCP2201**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The TCP/IP external interface procedure \$IPCALL failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed \$IPCALL. If executed from OCS, check the command entered on the command line and retry.

IPCP2202**INVALID SELECT VALUE SPECIFIED - KEYWORD= P1 VALUE= P2****Reason:**

The TCP/IP procedure \$IPCP22L failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPCP22L terminates.

User Action:

Contact your System Administrator.

IPCP2203

ACTION NOT SUPPORTED FOR THIS ENTRY

Reason:

The attempted action is not valid in the following places:

- On the selected LU or,
- On display lines that are not LUs.

System Action:

None.

User Action:

None.

IPCP2204

NO FURTHER INFORMATION AVAILABLE

Reason:

A selection was made against a Channel Card application for which no further information is available.

System Action:

None.

User Action:

None.

IPCP2301**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The TCP/IP external interface procedure \$IPCALL failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPCALL terminates. Control is returned to the NCL procedure which executed \$IPCALL. If \$IPCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed \$IPCALL. If executed from OCS, check the command entered on the command line and retry.

IPCP2302**INVALID SELECT VALUE SPECIFIED - KEYWORD= P1 VALUE= P2****Reason:**

The TCP/IP procedure \$IPCP23L failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$IPCP23L terminates.

User Action:

Contact your System Administrator.

IPCP2303

ACTION NOT SUPPORTED FOR THIS ENTRY

Reason:

The attempted action is not valid in the following places:

- On the selected LU or,
- On display lines that are not LUs.

System Action:

IPCP3001

P1 IS NOT A VALID SORT FIELD

Reason:

You specified *P1* as the sort field for the list on the SORT command but *P1* is not a valid sort field.

System Action:

SORT command rejected.

User Action:

Correct the sort field name (which is an operand on the SORT command) and retry. Use the SORT ? command to display a list of valid SORT field names.

IPCS0901

The Display command failed - expected: P1 received: P2

Reason:

A 'D NET,CSM' or 'D NET,CSM,OWNERID=ALL' command was issued, but the response received was not as expected. *P1* is the expected VTAM message ID and *P2* is the message received.

System Action:

The CSM data sample is not taken.

User Action:

Contact your system administrator.

IPCS0902**The CSM display command P1 timed out****Reason:**

A *P1* command was issued, but the expected response was not received within two minutes.

System Action:

The CSM data sample is not taken.

User Action:

Contact your system administrator.

IPCS2301**No CSM usage data is available.****Reason:**

A request to display Usage details for Communications Storage Manager failed because no information was available at the time.

System Action:

None.

User Action:

Retry the operation.

IPDH1101**INVALID KEYWORD PARAMETER VALUE, KEYWORD= P1 VALUE= P2****Reason:**

The keyword parameter P1 was either not specified or an invalid value was specified. P2 is the invalid value.

System Action:

Request is rejected.

User Action:

Correct the call parameters and retry.

IPDH1102

NO DATA TO DISPLAY

Reason:

No data was found for display in the diagram.

System Action:

The Diagram Display call is terminated.

User Action:

None.

IPDH1103

INVALID COMMAND

Reason:

The command entered on the command line was not recognized by the Diagram Handler.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

IPDH1104

INVALID OPTION

Reason:

The selected option is invalid.

System Action:

The cursor is placed in the field in error which is highlighted.

User Action:

Select the correct option and retry. To display a list of valid actions, put a '?' on the selected entry.

IPDH1105**INVALID VARIABLE FROM SPROC= P1 VAR= P2 VALUE= P3****Reason:**

The service procedure *P1* passed an invalid value for a variable required for generating a diagram. The service procedure's name is *P1* and the variable incorrectly set is *P2* . *P3* is the invalid value that was set.

System Action:

Processing is terminated.

User Action:

Correct the variable assignments in the service procedure *P1* and retry the request.

IPDH1106**PRESS ENTER TO CONFIRM SELECTION OR PRESS CANCEL****Reason:**

This is a prompt message which is displayed to allow the user to verify that the selected actions are correct before they are carried out.

System Action:

None.

User Action:

Press the ENTER key to execute the highlighted selections, or press the CANCEL function key to cancel the requested actions.

IPDH1107**PRINT REQUEST P1 SENT TO PRINTER P2****Reason:**

This is an informational message indicating that a print request has successfully been sent to the requested printer. The print request number is *P1* and the printer is *P2* .

System Action:

None.

User Action:

None.

IPDH1108

STRING " P1" NOT FOUND

Reason:

The search string *P1* was not found.

System Action:

None.

User Action:

None.

IPDH1109

FIND STRING NOT SPECIFIED

Reason:

A find command was issued and no character string was specified as the find argument and no previous find has been issued. The find command can be specified without a character string, but only if a previous find has been specified with a character string.

System Action:

The command is rejected.

User Action:

Re-enter the command specifying a valid character string.

IPDH1110

COMPLEXITY LIMIT EXCEEDED, HIERARCHY EXCEEDS MAXIMUM DEPTH OF 245

Reason:

The hierarchical depth of the diagram to be constructed exceeds the maximum allowed. The maximum is 245.

System Action:

Processing terminates.

User Action:

None.

IPDI5200**TCP/IP Details for *P1* using *P2 P3* Communications Server****Reason:**

Configuration details for the *P1* region are being collected.

P2 P3 is the type of TCP/IP stack this region is using.

System Action:

None.

User Action:

None.

IPDI5201***P1* is active *P2*****Reason:**

The indicated service(s) are provided by the SOLVE SSI interface. The service(s) (*P1*) include:

- Simple Event Services
- Packet Analyzer (where required)
- UNIX System Services (where required)
- Communications Server SNANMI Interface (where required)

These services can be provided by:

- The local directly connected SSI
- A remote SSI connected to the local one

In the message, *P2* indicates whether a local or remote SSI is providing the indicated service.

System Action:

None.

User Action:

None.

IPDI5204

P1

Reason:

This message provides the error text or other additional details for the previous message.

System Action:

None.

User Action:

Refer to the description for the message that preceded this message.

IPDI5207

Warning: Unable to issue modify command to job P1; see log

Reason:

Self Test attempted to issue a modify command against the active job, but was unable to do so. Target job can be TCPaccess, DataSpace, or other application. Additional reason information is written to the Activity Log.

System Action:

None

User Action:

Investigate any additional messages on the Activity Log.

If the application is TCPaccess: Ensure that the TCPaccess job is running, and that the TCPaccess jobname and SSID are correctly specified in the TCP/IP administration panels. Issue SYSCMD F <jobname>,D IFS from OCS and report the results.

If the application is DataSpace: Ensure that the Data Space Manager is running. Issue SYSCMD F <jobname>,DISPLAY from OCS and report the results.

IPDI5208

Warning: Job P1 with stepname P2 is not running. Check job/step is correct.

Reason:

An attempt to issue a MODIFY command against job P1 resulted in system message 'IEE341I <jobname> NOT ACTIVE'.

P2 - stepname is provided for TCPaccess only.

System Action:

None

User Action:

Start the required application. Do a SYSCMD D A,L command to verify that it was started.

For TCPaccess: Issue a SYSCMD F <jobname>,D IFS and check the results.

Ensure that you have correctly specified the TCPaccess jobname and SSID in the TCP/IP administration panels. If the TCPaccess job was started with a stepname specified that is different from the jobname of TCPaccess, then that stepname should be specified in the *TCPaccess Job Name* field.

For DataSpace: Issue a SYSCMD F <jobname>,DISPLAY and check the results.

IPDI5209

Warning: P1 command failed; see log

Reason:

A command issued internally by the Self Test procedure has failed. The exact command is displayed in the message, and specific reason text as follows should appear on the Activity Log.

Command timed out

A response to the command was not received within a specified time.

SYSCMD interface unavailable

MVS system commands cannot be issued; this may indicate command interface congestion.

Unexpected command response

NetMaster received an unexpected response to the command.

Results unavailable

NetMaster could not correctly interpret the command results.

System Action:

Further testing in this class is abandoned. Results from testing in this class may be incomplete or inconclusive.

User Action:

Command timed out

Ensure that your region is responding to commands and that response times generally are not excessive. If so, re-run the Self Test.

SYSCMD interface unavailable

Enter an OCS command such as: SYSCMD D A,L and ensure you receive message N86510 Command passed to operating system followed by the command results. If not, contact your product administrator to investigate any error messages received. Once SYSCMD commands can be successfully processed, re-run Self Test.

The System Command Interface must be enabled using CONSOLES and OPSIDS in Customizer.

Your user ID definition must also include the System Command authority. System Command authority requires the following:

1. UAMS : Access Authorities

Operations Management Y (Y/N)

2. UAMS : AOM MVS Details

Console Authority C (I, C, M, P - SYSCMD console)

If Console Authority = 'C'

MVS System Commands Y (Y/N)

Unexpected command response

Results unavailable

Issue the failing command yourself, from OCS.

Investigate any incorrect or unexpected responses.

If the responses are normal for that command, report the problem to your product administrator.

IPDI5210

Checking Socket Interface

Reason:

The TCP/IP socket interface configuration is being checked, including:

- TCP/IP Services socket interface
- Major mandatory data sets
- SNMP interface
- NETSTAT interface

System Action:

None.

User Action:

Errors in the socket interface will result in major loss of function.

Review the region setup information in the product Installation Guide.

Many region socket-related parameters are set in the *\$NM SOCKETS* Customizer parameter group (/PARMS).

IPDI5211

Error: TCP/IP interface is not active, status is *P1*

Reason:

The current status of the TCP/IP interface between this region and the host system is *P1*.

It must be ACTIVE before NetMaster NM for TCP/IP can function correctly.

System Action:

None.

User Action:

If the status is *STARTING*, rerun the command in a few moments, after the interface has started.

If the status is *INACTIVE* or *STOPPING*, go to the *\$NM SOCKETS* Customizer parameter group (/PARMS).

Look in the initialization log for this group for any error messages.

Action the SOCKETS group, and see if any errors recur.

IPDI5212

p1 p2 P3 P4 P5 P6 P7

Reason:

This message contains general information about the configuration and setup of this region.

System Action:

None.

User Action:

None.

IPDI5213**Note: No port number has been specified for this region****Reason:**

No port number has been specified for this region.

A region uses its port number to listen for connection requests. If a port number is not specified, this region cannot accept connections from other regions, and INMC over TCP/IP cannot be used.

System Action:

None.

User Action:

If this region needs to participate in IP connection activity, specify a port number, using the *\$NM SOCKETS* Customizer parameter group (/PARMS).

Action this group, then check its initialization log for messages.

If a port number has been specified, it may already be in use by another task. Check the activity log for error messages relating to the port number (for example, N3AE01 37 - EADDRINUSE - ADDRESS ALREADY IN USE).

Use connection lists (/IPCON) to see who is currently using the port.

IPDI5214**Warning: socket interface details could not be retrieved****Reason:**

A SHOW TCPIP command was issued, which either timed out or returned errors. This may not indicate problems with the socket interface, but should be investigated as a precaution.

System Action:

None.

User Action:

Issue the **SHOW TCPIP** command from OCS, and investigate any error responses (place cursor on a message, then press F1).

Look for errors in the Customizer initialization log for the *\$NM SOCKETS* Customizer parameter group (/PARMS).

Ensure the Communications Server stack address space is active.

Look for TCP/IP or socket related errors in the activity log, including at the time of region startup.

IPDI5216

Note: SNMP response P1

Reason:

Unexpected response was received on GET of SNMP System Description.

System Action:

None.

User Action:

Errors in the SNMP interface will result in loss of data to certain functions.

Review the SNMP response, which was written to the activity log. Review the region setup information in the product Installation Guide.

IPDI5217

Checking Netspy Interface

Reason:

The Netspy interface is being checked.

System Action:

None.

User Action:

None.

IPDI5218

p1 p2 P3 P4 P5 P6 P7

Reason:

This message contains general information on the Netspy Interface.
Information shown: CONN-NAME APPL STATUS PEND-STATUS ACT-DATE ACT-TIME

System Action:

None.

User Action:

None.

IPDI5221**Dataset P1 is OK, DSN= P2****Reason:**

This is an informational message specifying the dataset name that was derived for the *P1* dataset. The actual dataset name is *P2*. The dataset is correctly defined and is accessible.

System Action:

None.

User Action:

None.

IPDI5222**Warning: Cannot access P1 dataset, see Activity Log for details****Reason:**

Self Test failed to retrieve information about the dataset. Information written to the Activity Log includes the full DSN and any error codes returned. The dataset involved may be migrated.

System Action:

None.

User Action:

Check that the dataset name shown on the Activity Log is the correct one. If it is not, correct it. If it is, check the explanation of any additional messages. One possible cause of this message is a migrated dataset. For performance reasons, Self Test does not recall migrated datasets.

IPDI5223

Error: dataset P1 has invalid attributes, see log for details

Reason:

The data set *P1* does not have the attributes required by TCP/IP Services. The actual data set name, and the attribute in error, and its required and actual values, are written to the Activity Log.

System Action:

None.

User Action:

Ensure that the IPFILES parameter group in Customizer specifies the correct data set names. Check the attributes and reallocate the files if necessary.

IPDI5224

DSN P1, required P2 is P3, actual P2 is P4

Reason:

This message describes a data set attribute in error. Both the required and actual values are displayed.

System Action:

None.

User Action:

Ensure that the IPFILES parameter group in Customizer specifies the correct data set names. Check the attributes and reallocate the files if necessary.

IPDI5228**TCPaccess NETSTAT subsystem \$IPNETAX P1****Reason:**

This message indicates the status of the CA TCPaccess Communications Server NETSTAT subsystem named \$IPNETAX. If the status is not ACTIVE, possible reasons may be as follows:

- *It is not defined.*
- *It may not be responding.*
- *It is not active.*

System Action:

None.

User Action:

For more information, enter these commands from OCS:

```
SH SUBSYS=$IPNETAX
```

```
NETSTAT HELP
```

IPDI5229**Error: TCPaccess job P1 is using SSID P2 (expected P3)****Reason:**

The TCPaccess Sockets Interface panel specifies *P3* as the SSID value. However, the currently active TCPaccess job *P1* is using SSID *P2*.

System Action:

None.

User Action:

Change either the TCPaccess jobname or subsystem ID in the TCP/IP Administration panels so that both refer to the same TCPaccess system.

IPDI5230

Checking TCP/IP Stack IP Connection Event Processing

Reason:

The configuration for TCP/IP stack IP connection events is being checked, including:

- Event receivers are running
- Event history file IPLOG is allocated and active

System Action:

None.

User Action:

None.

IPDI5231

Error: SSID error, P1**Reason:**

NetMaster NM for TCP/IP requires a connection to a SOLVE Subsystem Interface (SSI) started task to function correctly.

The SSID parameter is specified in the \$NM SSI Customizer parameter group (/PARMS).

The SSID is not correctly defined, or the SSI cannot be connected for one of the following reasons (P1):

- No SSID specified indicates that no SSID is set (SHOW SYSPARM=SSID is null).
- SSID ssid matches AOM SSID indicates that the SSID value (ssid) is the same as the SSID value specified for the AOM subsystem interface ID (as specified in the \$RM OPSYSIDS Customizer parameter group).
- SSID ssid is not connected indicates that SSID is set to ssid, but the SSI started task cannot be contacted (SSI STATUS returns SSI NOT CONNECTED).

System Action:

None.

Selftest UNIX System Services SSI Interface tests are omitted because these will always fail with no connected SSI.

User Action:

no SSID specified

The SSID is a one- to four-character value that matches the SSID parameter of the SOLVESSI started task. To connect to the started task, you must specify the same SSID in this region.

To specify the SSID:

1. Add the following JCL initialization statement to the RUNSYSIN member for this region:

```
PPREF='SSID=xxxx' (xxxx = the SSID value)
```

2. Update the SSI parameter group in Customizer to specify the SSID value and action the group.

SSID ssid matches AOM SSID

Ensure that the SOLVE SSI SSID and the AOM SSID are different. The two SSIDs are specified in the following Customizer parameter groups:

- OPSYSIDS for the AOM subsystem interface ID

- SSI for the SOLVE SSI SSID

Update the appropriate parameter group to specify the correct value and action the group.

SSID ssid is not connected

Ensure that the SOLVESSI started task is active. The SSID specified in this region is shown (ssid).

Check that the value matches the SSID= parameter for the SOLVESSI started task. To change the SSID value in this region, update the SSI parameter group in Customizer and action the group.

IPDI5232

Warning: EPS Simple Event Service unavailable**Reason:**

Many functions require a connection to a SOLVE Subsystem Interface (SSI) started task in order to receive external events. Furthermore, the SSI must be configured with the EndPoint Services (EPS) Simple Event Service.

This error usually occurs when you have specified the wrong SSID value. This region is connected to a SOLVE SSI. However, neither that SSI started task nor any interconnected SSI task is configured with the EPS Simple Event Service.

System Action:

None.

User Action:

Ensure that one of the SSI started tasks in the LPAR provides the Simple Event Service. To provide the service, an SSI started task must include the following parameter:

XEVNT=YES

The following parameters can also be included, but must not be set to any other value than as shown:

XMS=YES

XAPI=YES

Note: If you need to change the SSI started task parameters, you must restart that started task. You can have multiple SSI started tasks but only one of these can provide this service.

To determine the facilities provided by the SSI that this region is connected to, issue the following command in OCS or Command Entry:

SSI STATUS

To determine the facilities provided by any SSI started task, you must use the SYSCMD facility to send a message to that started task, for example:

F *taskname*,SSI STATUS (*taskname* is the SSI started task name)

If the SSI provides the Simple Event Service, the output from the SSI STATUS command includes the following message:

NY8001 SIMPLE EVENT SERVICE ACTIVE, NAME=\$SYS.SIMPLE.EVENT.*sysn* (*sysn* is the system name for the z/OS LPAR)

If you have connected the region to the wrong SSI started task, you need to change the SSID that is specified in the region.

To change the SSID for the region do one (or both) of the following:

- Use the SSID= JCL initialization parameter (the PPREF='SSID=xxxx' operand in the RUNSYSIN member) to set the value permanently. This value is set only when the region initializes. If you change the RUNSYSIN member, you must restart the region for any changes to take effect.
- Use the SYSPARM SSID command to set (or reset) the SSID value temporarily. This value takes effect immediately, but the value is not remembered across system restarts. To ensure that the value is specified during initialization, you should specify the SSID value in the RUNSYSIN member.

To change the SSID value in this region you must first stop the SSI.

To stop the SSI, issue the following command:

```
SYSPARM SSID=NO
```

You can then specify the new value using the following command:

```
SYSPARM SSID=xxxx (xxxx = the SSID value)
```

IPDI5237**P1****Reason:**

This message lists which stack workload events, if any, are written to the Activity Log and saved in the IP Event History dataset.

System Action:

None.

User Action:

IP Events are written to the Activity Log by specifying YES against the following fields on the IPEVENT Customizer parameter group:

- Log FTP Events?
- Log Telnet Events?
- Log Connection Events?

It is not a requirement by any other part of the NetMaster product to have these events written to the activity log and if you anticipate large volumes of events, you may prefer not to do so.

IP Events are stored in the IP Event History dataset IPLOG by specifying YES against the following fields on the IPEVENT Customizer parameter group:

- Save FTP Events?
- Save Telnet Events?
- Save Connection Events?

If you want to list, search or examine the details of individual IP events using the /IPHIST option, you must save the corresponding events. Events are only retained for a limited time period. You control this with the IPFILES Customizer parameter group.

With some mainframe IP stacks, event records can also be written to your SMF datasets. This is independent of any NetMaster processing of these events.

IPDI5238**P1 P2 Event Receiver for ID= P3 is P4****Reason:**

The event receiver for the *P2* type and class *P1* of events using a receiver ID of *P3* has a status of *P4* . Status is one of the following:

ACTIVE - The receiver is active and able to receive events.

RETRYING - Define failed and is being retried. The activity Log contains messages (IPCM2509, IPCM2510) showing the reason for the define failing when it was last attempted.

INITIALIZING - The receiver process is being initialized. Retry in a short while to see the current status.

The relationship between the event receiver types, system receiver IDs, and SMF event types is as follows:

SMF Event Type Receiver ID(*P3*) Receiver Type(*P2*)

FTP Server and FTP Client	\$IPEVENT	FTP
Telnet Server and Telnet Client	\$IPEVENT	TELNET
Connection Initialization and	\$IPEVENT	IPCONN
Connection Termination		

System event receivers are controlled by using the TCP/IP Services Logging and Data Collection Administration panel.

System Action:

None

User Action:

None

IPDI5240**Checking APPC Multi-System Support Controls****Reason:**

Controls for APPC multisystem support are being checked, including:

- DEFMODE, DEFOPSET, and DEFLINK definitions
- LU mask, active links, and dynamic link definition flag

System Action:

None.

User Action:

None.

IPDI5241**APPC Automatic Link Definition P1****Reason:**

This is an informational message specifying link definitions configuration status.

System Action:

None.

User Action:

None.

IPDI5242

Warning: APPC MODE P1 P2

Reason:

When APPC links are defined, a specific MODE called *P1* which has certain attributes required for multi-system support is used. This message indicates either that this MODE is not defined or that it has incorrect attributes. For incorrect attributes, the exact details, including the required and actual attribute values, are written to the SOLVE Log. SOLVE always defines the mode with the correct attributes. Incorrect attributes may be a result of a subsequent REPLINK command.

System Action:

None.

User Action:

Check the values specified on the Advanced Parameters Administration panel. Use the REPLINK command to correct the attributes.

IPDI5243

Warning: APPC OPSET P1 P2

Reason:

When APPC links are defined, a specific OPSET called *P1* is used. The OPSET *P2* must have a specific MODE specified as a valid mode for the OPSET and requires specific values for other OPSET attributes. This message indicates that the OPSET is either undefined, or has invalid attributes. Invalid attribute details, including the required and actual attribute values, are written to the Activity Log.

System Action:

None.

User Action:

Check the values on the Advanced Parameters Administration panel. Use the REPOPSET command to correct the parameters.

IPDI5244**Warning: APPC DEFLINK for mask P1 P2****Reason:**

When APPC links are defined, a specific DEFLINK is used which must include the LU mask *P1* and specific attribute values. This message indicates either that a DEFLINK for this mask is not defined or is defined but with incorrect attributes.

Details about incorrect attributes, including the required and actual attribute values, are written to the Activity Log.

The correct attribute values are always used. Incorrect values may be the result of a subsequent REPLINK command.

System Action:

None.

User Action:

Check the values on the Advanced Parameters Administration Panel. Use the REPLINK command to correct the attributes.

IPDI5246**Note: APPC auto-define LU mask P1 is not generic****Reason:**

You have specified a non-generic 'Automatically Defined LU Mask' in the Administration (Advanced Parameters) panel. APPC links will only be dynamically defined to this single, specific LU name.

System Action:

APPC link requests for any LU names other than this one will fail.

User Action:

If you want to allow APPC links to be defined to more than one LU, modify the LU mask to include a wildcard character.

IPDI5247

p1 p2 P3 P4 P5 P6 P7

Reason:

This message contains information on Links to synchronised regions. Status Mode MSGID MS Level

System Action:

None.

User Action:

None.

IPDI5248

Warning: z/OS UNIX STDERR output received, see log for details

Reason:

A z/OS UNIX environment has been opened. A sample SHELL command has been processed. 'STDERR' output has been received in response to the UNIX command. This output has been written to the activity log.

System Action:

None.

User Action:

Examine the STDERR output and any subsequent error messages. STDERR output is sometimes the result of shell setup problems and may not always affect NetMaster processing.

For NetMaster to be able to access the z/OS UNIX environment, the RACF/ACF2 OMVS segment for the user ID associated with the NetMaster SSI started task must have been correctly set up. The NetMaster SSI performs all z/OS UNIX functions on behalf of this NetMaster region. If this OMVS segment is not correct, error conditions can occur.

If you receive this message, and either the Self Test UNIX Test fails, or some NetMaster TCP/IP functions do not appear to work correctly, investigate the specific UNIX shell error messages that appear on your NetMaster Activity log. These should be documented in the appropriate z/OS UNIX manuals.

IPDI5252**IPLOG Event History file is P1 P2****Reason:**

The status of the IPLOG NDB is indicated by *P1* .

System Action:

None

User Action:

If the NDB is in a status other than ACTIVE, check the system log to determine the cause.

IPDI5253**Next P1 time is P2****Reason:**

This message indicates the next scheduled time that:

- Expired data records will be deleted from the IPLOG Event History File
- If you have chosen to produce the IPTREND CSV file, the IPFILE file will be input to the Trend Data Rollup process to aggregate the data and produce the IPTREND file.

Related parameters are all specified in the IPFILES parameter group.
To request an extract of event details from the IPLOG Event History file to a sequential file, use the EX option from /IPHIST.
To perform an immediate Trend Rollup to IPTREND, use the OCS command TRENDX.

System Action:

None

User Action:

None

IPDI5254

P1 P2 Event listener task is P3

Reason:

Indicates whether or not the Reporting Listener task (\$IPLO81Z) or the Trend Event Listener task (\$IPTD21W) is active.

The Reporting Listener task is required for the logging of events to the Activity Log and to the IPLOG file.

The Trend Event Listener task is required for the accumulation of summary data into the IPFILE and the production of the IPTREND file. This will only be active if the IPFILES Customizer Parameter Group (/PARMS) has the field 'Produce IPTREND file?' set to YES.

System Action:

None.

User Action:

If you require Event History logging and \$IPLO81Z is not running check the IPFILES Customizer Parameter Group (/PARMS). There needs to be an allocated dataset, keep days and delete time.

If you require expired event history to be written to the IPTREND data set and \$IPTD21W is not running also check the IPFILES Customizer Parameter Group (/PARMS) and the Activity Log. Check that the IPFILES Customizer Parameter Group (/PARMS) has the field 'Produce IPTREND file?' set to YES.

IPDI5255

Stack Events written to IPLOG: P1

Reason:

TCP/IP events of type *P1* are being written to the IPLOG Event History file.

System Action:

None

User Action:

None

IPDI5260**Checking WebCenter Interface****Reason:**

The WebCenter HTTP Interface is being checked, including:

- A port has been specified for WebCenter access. (This is separate to the port specified for the IP host itself.)
- The WebCenter Access Port has a currently open socket.

System Action:

None.

User Action:

None.

IPDI5261**P1: WebCenter interface is not P2****Reason:**

The port for WebCenter access is in a condition indicated by *P2* :

Not configured indicates that no port number has been specified.

Not active indicates that a port number was specified but the socket is not open (this generally indicates that TCP/IP may not have been started).

System Action:

None.

User Action:

If the WebCenter interface is required, update the WEBCENTER parameter group (/PARMS) to define a port number.

If the WebCenter interface is not active, investigate previous messages for errors with the socket or TCP/IP management interface.

IPDI5262

P1 P2

Reason:

This message contains details of the WebCenter HTTP port and URL.

System Action:

None.

User Action:

The specified URL may now be used to access NetMaster WebCenter.

IPDI5263

P1

Reason:

This message contains extra details about the WebCenter configuration.

System Action:

None.

User Action:

None.

IPDI5264

Checking Region Authority and Environment

Reason:

Region authority and processing environment are being checked, including:

- The background system user ID (*nmidBSYS*) is defined.
- This ID has update authority for NetMaster NM for TCP/IP.
- Whether the region is executing on a zIIP processor.
- The number and type of processors (CPs) this LPAR has.

System Action:

None.

User Action:

None.

IPDI5265

Error: BSYS user P1 not defined to security system.

Reason:

Background system (BSYS) ID is not defined. NetMaster for TCP/IP requires the BSYS ID to be defined to your security system.

System Action:

None

User Action:

Define the background system ID to UAMS or external security system.

IPDI5266

Error: BSYS user P1 user ID information unavailable. Refer to message ID P2 in log for details.

Reason:

An error occurred when obtaining user ID details. Complete text of error message is in log.

System Action:

None

User Action:

Refer to log for message ID indicated and perform appropriate action to resolve.

IPDI5267

Error: BSYS user P1 not authorized for NetMaster TCP/IP

Reason:

Authorization for the indicated BSYS user ID is defined as 0 (none) for NetMaster for TCP/IP.

System Action:

None

User Action:

Define the indicated BSYS user to have authority of at least 1 (browse).

IPDI5268

Warning: BSYS user P1 is browse only level authorization for NetMaster for TCP/IP

Reason:

Authorization for the indicated BSYS user ID is defined as 1 (browse) for NetMaster for TCP/IP.

System Action:

None

User Action:

Consider allowing the indicated BSYS user ID to have authority level 2 (update) for NetMaster for TCP/IP.

IPDI5269

BSYS user P1 is correctly authorized

Reason:

The background system user *P1* has the authority to perform the regularly scheduled tasks required for NetMaster NM for TCP/IP.

System Action:

None.

User Action:

None.

IPDI526A**Access URL Host Override *P1* may not be valid****Reason:**

Host override *P1* cannot be confirmed as valid. Either the overriding hostname is not recognised by NSLOOKUP or the IP address is not associated with the stack used by this region, as specified in the SOCKETS Parameter Group (/PARMS).

System Action:

None.

User Action:

If the override value is invalid, correct it in the WEBCENTER parameter group (/PARMS). The value may be valid; this message can be caused by a domain name server problem.

IPDI5270**Checking UNIX System Services SSI Interface****Reason:**

The UNIX System Services SSI Interface is being checked, including:

- A connected SSI has been configured with USS support.
- A connection can be established with the UNIX shell.

System Action:

None.

User Action:

Errors in the USS SSI Interface can result in loss of data to some functions.

Review the region setup information in the product *Installation Guide*, particularly relating to the OMVS segment required by the user ID of this region's MVS started task.

IPDI5271

Error: EPS UNIX SHELL service unavailable

Reason:

In order to communicate with IBM's UNIX System Services (USS), the TCP/IP Services NETSTAT and ONETSTAT functions require services from a SOLVE Subsystem Interface (SSI) started task that is configured with the EndPoint Services (EPS) UNIX SHELL Service.

The SSI configured with the USS interface may be either:

- The SSI region directly connected to this region
- Another SSI region running on the same LPAR that is interconnected with this SSI region

This error usually occurs when you have specified the wrong SSID value. This region is connected to a SOLVE SSI. However, neither that SSI started task nor any interconnected SSI task is configured with the EPS UNIX SHELL Service.

System Action:

None.

User Action:

Ensure that one of the SSI started tasks in the LPAR provides the UNIX SHELL Service. To provide the service, an SSI started task must include the following parameter:

UNIX=YES

The following parameters can also be included, but must not be set to any other value than as shown:

XMS=YES

XAPI=YES

Note: If you need to change the SSI started task parameters, you must restart that started task. You can have multiple SSI started tasks but only one of these can provide this service.

To determine the facilities provided by the SSI that this region is connected to, issue the following command in OCS or Command Entry:

SSI STATUS

To determine the facilities provided by any SSI started task, you must use the SYSCMD facility to send a message to that started task, for example:

F *taskname*,SSI STATUS (*taskname* is the SSI started task name)

If the SSI provides the UNIX SHELL Service, the output from the SSI STATUS command includes the following message:

```
NSC001 UNIX SHELL INTERFACE ACTIVE, NAME=$SYS.UNIX.SHELL.sysn
```

(*sysn* is the system name for the z/OS LPAR)

If you have connected this region to the wrong SSI started task, you need to change the SSID that is specified in this region.

To change the SSID, do one (or both) of the following:

- Use the SSID= JCL initialization parameter (the PPREF='SSID=xxxx' operand in the RUNSYSIN member) to set the value permanently. This value is set only when the region initializes. If you change the RUNSYSIN member, you must restart this region for any changes to take effect.
- Use the SYSPARM SSID command to set (or reset) the SSID value temporarily. This value takes effect immediately, but the value is not remembered across system restarts. To ensure that the value is specified during region initialization, you should specify the SSID value in the RUNSYSIN member.

To change the SSID value in this region, you must first stop the SSI.

To stop the SSI, issue the following command:

```
SYSPARM SSID=NO
```

You can then specify the new value using the following command:

```
SYSPARM SSID=xxxx (xxxx = the SSID value)
```

IPDI5272

USS/SSI support not required for NETSTAT interface

Reason:

USS/SSI support is required for issuing NETSTAT when using IBM stacks. The local system is using TCPAccess and does not require UNIX System Services for NETSTAT facilities.

System Action:

None.

User Action:

None.

IPDI5273

UNIX environment established using USS SSI interface

Reason:

A UNIX environment has been opened, and sample SHELL commands have been successfully processed. The interface between this region and the SOLVE SSI region which communicates with UNIX System Services is fully functional.

System Action:

None.

User Action:

None.

IPDI5274

User details: P1

Reason:

P1 displays the response from the *id* shell command. It displays the user ID and group name associated with the SOLVE SSI address space. This is the user ID under which all UNIX commands are executed.

The format is:

uid=runum(user) gid=rgnum(groupname)

For an explanation of this response, see the UNIX System Services Command Reference manual.

System Action:

None.

User Action:

None.

IPDI5275**Current working directory name: P1****Reason:**

P1 is the SOLVE SSI user's default working directory name. This is the initial directory path name set by the HOME=... operand specified in the OMVS segment of the security profile.

System Action:

None.

User Action:

None.

IPDI5276

Note: z/OS UNIX home directory error, see log for details

Reason:

A z/OS UNIX environment has been opened. A sample SHELL command has been processed. STDERR output has been received in response to the command, and the STDERR text indicates a problem with the home directory.

The home directory is defined in the OMVS segment for the user ID associated with the SOLVE SSI started task. See the message IPDI5274 for details of the user ID.

Common causes of home directory problems include:

- The home directory cannot be found.
- HFS file permissions prevent the SSI's user ID from accessing its home directory. Write access is required.

System Action:

None.

In general, home directory related problems do not affect normal operation because the z/OS UNIX features used by the region do not involve the home directory. However, they may indicate other problems with your user ID security or z/OS UNIX setup.

User Action:

Proceed as normal. If any operational errors are encountered, investigate and rectify the condition, and retry the operation.

Accessing z/OS UNIX

The region needs to access z/OS UNIX to issue the NETSTAT and ONETSTAT commands, and to perform other socket-related processing provided by z/OS UNIX.

For the region to be able to access the z/OS UNIX environment, the CA ACF2, CA Top Secret, or RACF OMVS segment for the user ID associated with the SOLVE SSI started task must have been correctly set up. The SOLVE SSI performs all z/OS UNIX functions on behalf of this region.

If this OMVS segment is not correct, error conditions can occur.

Setting Up the SOLVE SSI user ID OMVS segment

For information about this task, see the Installation Guide for your product. Your CA ACF2, CA Top Secret, or RACF security administrator performs this task.

Investigating a z/OS UNIX home directory error

Get the exact STDERR message text from the activity log, for example, 'cannot change to HOME directory'.

'cannot change to HOME directory' is a common error. It generally indicates that the home directory defined for the SOLVE SSI user ID's OMVS segment does not exist or cannot be accessed.

Contact your security administrator to review the home directory path name defined for the SOLVE SSI user ID.

Contact your z/OS UNIX administrator or systems programmer to ensure that the HFS file system supporting this home directory path name is defined and correctly mounted, and that the user ID has read, write, and execute permission to the home directory.

The following OCS commands may be helpful:

USS WHOAMI displays the UID name of the SOLVE SSI user ID.

USS ID displays the UNIX user and group IDs, and names of the SOLVE SSI user ID.

USS PWD displays the working directory path name of the SOLVE SSI user ID.

IPDI5277

Error: UNIX environment could not be established via SSI

Reason:

An attempt to communicate with the UNIX System Services shell has failed. This may be preceded by messages listing the exact error cause.

System Action:

None.

User Action:

Refer to any preceeding error messages for details.

IPDI5278

Warning: UNIX P1 command failed, RC/FDBK= P2, reason= P3

Reason:

A UNIX operation attempted by the TCP/IP Services Self Test procedure has failed. *P1* is the failing operation, *P2* is the return code and feedback, and *P3* is the reason text.

System Action:

None.

User Action:

If you received feedback code 5 (UNIX assembler call failed) or 9 (Subtask initialization failed), investigate the additional details provided by message IPDI5279.

Look at the SOLVE SSILOG and see if it contains any messages related to error conditions.

Confirm that you have set up the USS SSI interface correctly, including:

- Upgrading the SOLVE SSI software to the correct level
- Adding parameter UNIX=YES to the SOLVE SSI region
- Adding a RACF/ACF2/Top Secret OMVS segment, defined with a valid user ID, to the user ID associated with the SSI started task
- Verifying that, if present in the user's home directory, the .profile file is valid.

If you are unable to determine the nature of the error by using this information, contact your Technical Support Representative.

IPDI5279

Warning: UNIX call failure: Call #= P1, UNIX RETCODE= P2, UNIX REASCODE= P3

Reason:

A UNIX assembler call or subtask initialization call has failed.

P1 indicates the specific macro call which failed. The value shown corresponds to the call *offset* listed in the 'System Control Offsets to Callable Services' chapter in the OS/390 UNIX System Services Assembler Callable Services manual.

P2 and P3 are the return code and reason code from the failing macro call. These are listed in the OS/390 UNIX System Services Messages and Codes manual.

System Action:

None.

User Action:

Confirm that you have set up the USS SSI interface correctly, including:

- Upgrading the SOLVE SSI software to the correct level
- Adding parameter UNIX=YES to the SOLVE SSI region -

Adding a RACF/ACF2/Top Secret OMVS segment, defined with a valid user ID, to the user ID associated with the SSI started task

IPDI5290**Checking OSA/SF Interface****Reason:**

The OSA/SF interface is being checked, including:

- Region can communicate with the OSA/SF interface.
- The OSA/SF started task is running.

System Action:

None.

User Action:

None.

IPDI5291

OSA/SF Interface is enabled

Reason:

Communication from TCP/IP Services to the OSA/SF Interface has succeeded.

System Action:

None.

User Action:

None.

IPDI5293

P1: OSA/SF started task is currently not active

Reason:

The OSA/SF started task is not active.

System Action:

None.

User Action:

If you want to use OSA/SF functions, start the OSA/SF started task.

IPDI5294

P1: OSA/SF Interface failure, see log for details

Reason:

An attempt to communicate through the OSA/SF interface failed. Specific errors have been written to the Activity Log.

System Action:

None.

User Action:

Investigate the specific messages on the Activity Log.

IPDI5295**P1: OSA/SF API load module cannot be loaded****Reason:**

An attempt to communicate through the OSA/SF interface failed because the OSA/SF API load module IOAEXEC cannot be loaded.

System Action:

None.

User Action:

If you do not intend to use OSA/SF for OSA monitoring, disregard this message.

The OSA/SF load library SYS1.SIOALMOD must be made accessible to this region by putting it in the LINKLIST or the STEPLIB concatenation.

IPDI5296**OSA/SF not used by this region****Reason:**

The OSA/SF Interface is not used by this region. No OSA definition has the field Use OSA/SF? set to YES.

System Action:

None.

User Action:

None.

IPDI5297

~P1: No response from OSA/SF Interface

Reason:

An attempt to communicate with the OSA/SF interface failed and its status cannot be determined.

System Action:

None.

User Action:

This condition is probably caused by an OSA/SF started task that is not responding; therefore, you may have to restart the started task.

For information about how to restart the started task, see the Open Systems Adapter Support Facility User's Guide.

IPDI5299

TCP/IP details complete, P1

Reason:

Configuration details have been collected and listed for this region. *P1* indicates the existence of any of the following conditions:

Errors can affect region functions. You should investigate all errors.

Warnings may affect region functions. If you are experiencing any problems or unexpected results with region usage, you should investigate the warnings.

Notes are for information only. Assess these in the context of your specific environment.

System Action:

None.

User Action:

None.

IPDI529A

For more help, place cursor on warning/error message and press F1

Reason:

Specific help is available for many SELFTEST warning or error messages.

In OCS, Command Entry, or the activity log, place the *cursor* on the message and press *F1=Help*.

System Action:

None.

User Action:

None.

IPDI52A0

Checking System Anchor Block and related control block chains

Reason:

The SAB and related control block chains are being checked, including:

- System Anchor Block structures
- Packet Analyzer structures
- SMF exit structures

System Action:

None.

User Action:

None.

IPDI52A1

Warning: System Anchor Block has not been created

Reason:

SELFTEST has determined that the System Anchor Block (SAB) does not exist. The SAB is created by the SOLVESSI region when it is initializing.

System Action:

None.

User Action:

Verify that the SOLVESSI region has been started. If not, start the SSI and retry. Note that the SSI must be at Delivery Level 5.0 or later.

IPDI52A2

Warning: SWSS has not been created

Reason:

SELFTEST discovered that SWSS control block does not exist. This control block, part of the SAB structures, is created when the SOLVESSI region is started.

System Action:

None.

User Action:

See message IPDI52A1.

IPDI52A3

Error: DSAT has not been created

Reason:

SELFTEST discovered that DSAT control block does not exist. This control block, part of the SAB structure, is created when the SOLVESSI region is started.

System Action:

None.

User Action:

See message IPDI52A1.

IPDI52A4**Error: DSTE has not been created****Reason:**

SELFTTEST discovered that DSTE control block does not exist. This control block, part of the SAB structure, is created when the SOLVESSI region is started.

System Action:

None.

User Action:

See message IPDI52A1.

IPDI52A5**Warning: SMFS has not been created****Reason:**

SELFTTEST discovered that SMFS has not been created. It should have been created by the starting of SSI.

System Action:

None.

User Action:

None.

IPDI52A6**Error: SMFS format error: P1****Reason:**

SELFTTEST discovered that SMFS has not been completed. This indicates incomplete SMF initialization.

P1 is an error description: header - invalid eyecatcher version - invalid version

System Action:

None.

User Action:

Check the SSI log for error messages, and fix reported problems.

IPDI52A7

Error: SMCT has not been created

Reason:

SELFTEST discovered that SMCT has not been created. This indicates incomplete SMF initialization.

System Action:

None.

User Action:

Check the SSI log for error messages, and fix reported problems.

IPDI52A8

Error: SMCT format error: P1

Reason:

SELFTEST discovered that SMCT has not been completed. This indicates incomplete SMF initialization.

P1 is an error description: header - invalid eyecatcher version - invalid version

System Action:

None.

User Action:

Check the SSI log for error messages, and fix reported problems.

IPDI52A9**P1 Control Block structure OK****Reason:**

An internal control block, and any subordinate control blocks, have been tested, and they pass all checks. The control block structure (*P1*) that was tested is as follows:

System Anchor : System Anchor Block (SAB) structures

Packet Analyzer : Packet Analyzer structures

SMF exit : SMF exit and record intercept structures

System Action:

None.

User Action:

None.

IPDI52B0**CA Common Services has been initialized, version= P1****Reason:**

CA Common Services is active. Detected version (if not N/A) is *P1*
P1 denotes detected CA Common Services level in format *vvrrmm* or *N/A* if version is not available. *vv* denotes the Version level. *rr* denotes the Release level. *mm* denotes the Service Pack level.

System Action:

None.

User Action:

None.

IPDI52B1

SMF exits common code has been loaded

Reason:

NetMaster SMF exits common code load module is resident.

System Action:

None.

User Action:

None.

IPDI52B2

SMF records processing is enabled

Reason:

SMF records will be processed by NetMaster SMF exits code.

System Action:

None.

User Action:

None.

IPDI52B3

SMF exits are P1

Reason:

Shows the actual NetMaster SMF exits code status, where *P1* :
Registered - Loaded for the first time, SMF record processing active.
Deregistered - Unloaded and unactivated, SMF records processing disabled.
Reregistered - Reloaded and reactivated, SMF record processing resumed.

System Action:

None.

User Action:

None.

IPDI52B4**Default SMF action is: WRITE****Reason:**

SMF records that are intercepted by NetMaster may be written to the SMF data sets (SYS1.MANx), or suppressed. The factors that determine when a record is written or suppressed are:

- The Application Name definition entries (see /IPAPPLS). These will specify either WRITE, NOWRITE, or DEFAULT.
- If DEFAULT, the SMF default action as specified by the PASMFWRITE parameter (WRITE or NOWRITE).

The message indicates that the SMF default action is WRITE so that, by default, records are written to the SMF data set.

System Action:

None.

User Action:

None.

IPDI52B5**Warning: Old SMF exit code is active****Reason:**

SELFTTEST discovered that the old SMF exit, NMSMFIBM, is active in the system. NMSMFIBM became obsolete in Delivery Level 5.1 (Version 7.0 of your product).

System Action:

None.

User Action:

If you are no longer using a Version 7.0 product, you should remove this exit. To do this, remove all references to module NMSMFIBM in any PARMLIB members, for example:

- EXIT ADD EXITNAME(SYS.IEFU8x) commands in PROGxx members
- SETPROG EXIT,ADD commands in COMMNDxx members

For more information, see *Installation Guide*.

IPDI52B6

Error: Invalid SMF exit query data: P1

Reason:

Self-testing of SMF support is terminated because the data returned by an SMF exit query request is corrupt. The corrupt data is displayed (*P1*).

System Action:

None.

User Action:

This is an internal error. Contact Technical Support.

IPDI52B7

SMF exit: P1, version: P2, status: P3

Reason:

SELFTTEST discovered that the SMF exit *P1* of CA Common Services version *P2* has a status of *P3* . Status can be one of the following:

OK - No problems detected.

DEREG - One of the exit copies is deregistered.

System Action:

None.

User Action:

None.

IPDI52B8**Warning: SMF exit: *P1* received no SMF records****Reason:**

SELFTTEST discovered that the *P1* SMF exit did not receive any SMF records.

If the situation continues, or records seem to be missing from connection lists or workload reporting, check for the following situations:

- IBM TCP/IP stacks are inactive.
- SMF parmlib member (SMFPRMnn) has excluded the collection of Type 119 SMF records.
- IBM TCP/IP stack is not set to produce Type 119 SMF records.
- SOLVE SSI was started with the IPSMF=NO startup parameter.
- If the exit is Y7FU85, it could indicate that CA Common Services is not at least Version 2.2 SP3, resulting in Y7FU85 not receiving control.

System Action:

None.

User Action:

None.

IPDI52B9**SMF exits are processing record type *P1*****Reason:**

SELFTTEST indicates that the TCPIP SMF record currently being processed by SMF exits code is *P1* .

System Action:

None.

User Action:

None.

IPDI52C0

Error: CA Common Services Framework has not been initialized

Reason:

SELFTTEST discovered that CA Common Services was not started or failed to complete.

System Action:

None.

User Action:

Check whether CA Common Services was started or failed during execution. Check the system log for possible problems. Start CA Common Services.

IPDI52C1

Error: SMF exits common code has not been loaded

Reason:

SELFTTEST discovered that the NetMaster SMF exits common code load module is not resident. This indicates that, although SMF exit registration was attempted by the SSI, there were problems loading common NetMaster SMF exits code into memory.

System Action:

None.

User Action:

Check for error messages issued by SSI, fix the problems, and restart the SSI.

IPDI52C2**Note: Back level SMF support present****Reason:**

A version of the SSI that supports SMF has been activated with the parameter IPSMF=NO. SMF record processing may be disabled.

This may be because you are running the current version of a product with an older product.

System Action:

None.

User Action:

Investigate why this occurred.

If you want to run the current version of the SSI (that is, the one distributed with r11.6) with an r11 SSI, you must ensure that the current SSI is started last.

Note: There are no compatibility problems between SSI code from r11.6 and r11.5 - only between r11.6 and r11.

1. Check the output from the following IPDI52B7 messages:

IPDI52B7 SMF exit: Y7FU83, version: Y760, status: OK

IPDI52B7 SMF exit: Y7FU83, version: Y750, status: DERE

IPDI52B7 SMF exit: Y7FU84, version: Y760, status: OK

IPDI52B7 SMF exit: Y7FU84, version: Y750, status: DERE

IPDI52B7 SMF exit: Y7FU85, version: Y760, status: OK

IPDI52B7 SMF exit: Y7FU85, version: Y750, status: DERE

2. Check the SSI log for the occurrence of the following messages:

NY3730 SMF EXITS DEREGISTERED SUCCESSFULLY

NY3720 SMF EXITS REGISTERED SUCCESSFULLY

If you do not see the NY3730 and NY3720 messages, or IPDI52B7 messages with DERE, consider the following actions while the r11.6 SSI coexists with r11:

- Add the SMFREPLACE=YES parameter to the r11.6 SSI.
- If the current SSI (that supports SMF record collection) is active, issue one of the following commands:

F *ssiname*,SMF STATUS

F *ssiname*,STATUS

Verify that the SMF record count is growing.

If you have questions or problems with SSI compatibility between releases, contact Technical Support.

IPDI52C3

Error: SMF exits registration failed

Reason:

SELFTTEST discovered that SMF exits registration failed.

System Action:

None.

User Action:

Check SSI log for reasons, fix the problems, and restart the SSI.

IPDI52C4

Warning: SMF default action is: NOWRITE

Reason:

SMF records that are intercepted by NetMaster may be written to the SMF data sets (SYS1.MANx), or suppressed. The factors that determine when a record is written or suppressed are:

- The Application Name definition entries (see /IPAPPLS). These will specify either WRITE, NOWRITE, or DEFAULT.
- If DEFAULT, the SMF default action as specified by the PASMFWRITE parameter (WRITE or NOWRITE)

The message indicates that the SMF default action is NOWRITE so that, by default, records are not written to the SMF data set.

System Action:

None.

User Action:

None.

IPDI52C5**Error: SMF exit not registered: P1, version = P2****Reason:**

SELFTTEST discovered that the SMF exit is not registered.

P1 is the functional name of the exit, for example, IEFU83, IEFU84, IEFU85.

P2 (if present) is the CA Common Services version of the exit.

System Action:

None.

User Action:

Check the SSI log for reasons and check if the exit was deregistered by a separate action. Reregister the exit, if required.

IPDI52C6

Warning: SMF status failed, exit: *P1* reason: *P2*

Reason:

SELFTTEST was unable to obtain the status of the SMF exit that has been registered.

P1 is the name of the exit.

P2 is the reason:

NOTINSTL - TNG query function is not present or not operational.

EPSRDOWN - TNG query EPS receiver is not present (SSI not active).

NOENDPT - SSI EPS receiver servicing TNG query routine is not active.

OSLEVEL - Operating system level is lower than OS/390 2.5, or is not OS/390 or z/OS.

DYNSTOR - Serious storage constraints in SSI.

EPSRC=*nn* - Internal: Interface error *nn*.

REQSENT - Internal: Request was sent but reply was not received.

AREA - Internal: Dynamic reply area too short.

REQC - Internal: Invalid request code.

NOSRVC - Internal: SSI Query service routine has not been registered because CAISMFQ is not available.

NOSMFQ - Internal: CA Common Services (TNGFW) query routine (CAISMFQ) is not available.

System Action:

None.

User Action:

NOTINSTL - Make sure that installation did not fail.

EPSRDOWN - Make sure that SSI is running; if so, issue SSI STATUS and check message NY3201, and restart SSI if necessary.

NOENDPT - Restart SSI.

OSLEVEL - Make sure you are running OS/390 2.5+ or z/OS.

DYNSTOR - Check whether SSI has been started in a region with enough space.

EPSRC - Contact Technical Support with details.

REQSENT - Contact Technical Support with details.

AREA - Contact Technical Support with details.

REQC - Contact Technical Support with details.

NOSRVC - Verify that the current version of CA Common Services for z/OS has been installed. If yes, Contact Technical Support with details.

NOSMFQ - Verify that the current version of CA Common Services for z/OS has been installed. If yes, Contact Technical Support with details.

IPDI52C7

Error: SMF exit abended: P1

Reason:

SELFTTEST discovered that the SMF exit is flagged as abended.
P1 is the real (load module) name of the exit.

System Action:

None.

User Action:

Check the system log for information, collect the necessary debugging information (SVC dump), and If yes, contact Technical Support.

IPDI52C8

Warning: SMF processing disabled

Reason:

SELFTTEST discovered that NetMaster SMF processing was disabled. It means that SSI command SMF Deregister was executed. NetMaster SMF TCP/IP records processing was stopped and code was removed from memory.

System Action:

None.

User Action:

Check the reasons of de-registration, re-register if necessary.

IPDI52C9

Warning: CA Common Services query failed, reason: *P1*

Reason:

SELFTTEST was unable to obtain the status of CA Common Services.

P1 is the reason:

NOTINSTL - Agent Technology query function is not present or not operational.

EPSRDOWN - Agent Technology query EPS receiver is not present (SSI not active).

NOENDPT - SSI EPS receiver servicing TNG query routine is not active.

OSLEVEL - Operating system level is lower than OS/390 2.5; or not OS/390 or z/OS.

DYNSTOR - Serious storage constraints in SSI.

N/A - CA Common Services version is not available or is not valid. It is normal when SMF-aware SSI is not running or connected or IP SMF API is used to collect SMF data.

NOSMFQ - CA Common Services CAISMFQ function is not available.

EPSRC=*nn* - Internal: Interface error *nn*.

REQSENT - Internal: Request was sent but reply was not received.

AREA - Internal: Dynamic reply area is too short.

REQC - Internal: Invalid request code.

NOSRVC - Internal: Query service routine has not been registered.

System Action:

None.

User Action:

NOTINSTL- Ensure that the CA NetMaster installation did not fail.

EPSRDOWN- Ensure that SSI is running; if so, issue SSI STATUS and check message NY3201, and then restart SSI if necessary.

OSLEVEL - Ensure you are running OS/390 2.5+ or z/OS.

NOENDPT - Restart SSI.

DYNSTOR - Ensure SSI is started in a large enough region.

N/A - Contact your System Programmer to verify the level of CA Common Services installed.

NOSMFQ - Contact your System Programmer to verify the level of CA Common Services installed.

EPSRC - Contact Technical Support with details.
REQSENT - Contact Technical Support with details.
AREA - Contact Technical Support with details.
REQC - Contact Technical Support with details.
NOSRVC - Contact Technical Support with details.

IPDI52D1

Checking SocketMgmt

Reason:

Socket Management is being checked, including:

- SocketMgmt event receiver status
- SocketMgmt servers

System Action:

None.

User Action:

None.

IPDI52D2

SocketMgmt Event Receiver status is P1

Reason:

The event receiver for Socket Management has a status of *P1*. Status is one of the following:

- * ACTIVE - The receiver is active and able to receive events.
- * INACTIVE - The receiver is inactive. This is due to the system not being licensed for SocketMgmt or due to a define failure (check the activity log for SKEV25* messages for details).
- * PENDING - The receiver process is pending. Retry in a short while to see the current status.

System Action:

None

User Action:

Contact your System Administrator.

IPDI52D3

P1

Reason:

This message contains Socket Management servers information.
The information shown is a list of active *Socket Management servers* displaying CICS region name; command server address and port; whether the CICS is defined in the resource monitor; and whether CICS security is on.
Each of these active Socket Management servers is actively being monitored by the Socket Management event receiver.

System Action:

None

User Action:

None

IPDI52D4

P1

Reason:

This message contains general information about Socket Management.

System Action:

IPDI52E0

Error: CA Common Services SMF Query facility is not available

Reason:

SELFTTEST discovered that CA Common Services SMF Query facility (CAISMFO) has not been found.

System Action:

None.

User Action:

Check whether the required version of CA Common Services was installed.
Previous message IPDI52B0 shows the detected level.

IPDI52E1**Error: SMF Exit stub errors detected****Reason:**

SELFTTEST discovered that NetMaster SMF exits were started before the required environment was in place. It may indicate that the exits code was activated before SSI started or SSI may have failed to create the required environment.

Note: Although the situation may have been rectified, the error indicator stays on until the system is IPL-ed, to indicate the intermittent nature of detected errors.

System Action:

None.

User Action:

Check whether NetMaster exits were started manually or through SSI. Check if SSI was started before CA Common Services (CAS9) and if it was, restart SSI.

IPDI52E2**Error: SMF Exit stub start error, exit= P1, error= P2****Reason:**

SELFTTEST discovered that NetMaster SMF exit *P1* detected error *P2*. It indicates that NetMaster SMF exits code has been started (most probably manually) before SSI start.

P1 is exit name

P2 is an error code:

SMFS - unfinished SAB/SMFS detected

SMCT - missing/unfinished SMCT detected

CCDE - Common Code is not loaded

Note: Although the situation may have been rectified, the error indicator stays on until the system is IPL-ed, to indicate the intermittent nature of detected errors.

System Action:

None.

User Action:

Check whether NetMaster exits were started manually or through SSI. Check if SSI was started before CA Common Services (CAS9) and if it was, restart SSI.

IPDI52E3

Error: SMF Exit P1 detected invalid SMF record

Reason:

SELFTTEST discovered that the *P1* SMF exit detected an invalid SMF record. The record received for processing was not of Type 119. This is a result of logic check.

System Action:

None.

User Action:

Contact Technical Support.

IPDI52E4

Warning: SMF Exit P1 detected Type 118 SMF record containing IPv6 type address

Reason:

The P1 SMF exit detected Type 118 SMF records that contain IPv6 local or remote addresses. This indicates that IPv6 is active on an IBM TCP/IP stack and Type 118 SMF records are being produced. Type 118 SMF records are not compatible with IPv6, and should not be used with IPv6 or dual mode IBM TCP/IP stacks.

System Action:

None.

User Action:

Contact your Systems Programmer, and investigate whether you need to reconfigure the collection of SMF records to produce Type 119 SMF records instead.

IPDI52E5

Warning: SMF Exit *P1* detected Type 119 SMF record containing IPv6 type address

Reason:

The SMF exit *P1* detected type 119 SMF records that contain IPv6 local or remote host addresses. This indicates that IPv6 is active on an IBM TCP/IP stack. The current CA NetMaster release does not support IPv6 host addresses, and it ignores SMF records that contain them.

System Action:

None.

User Action:

None.

IPDI52E7

Error: More than one SMF Exit copy active: P1 P2 P3

Reason:

SELFTTEST discovered that multiple copies of SMF exits are concurrently active in the system.

P1 is the SMF exit load module name.

P2 is the CA Common Services version of the first active copy.

P3 is the CA Common Services version of the second active copy. The CA Common Services SMF version is of the format Y7ms, where *ms* is the product Delivery Level. Current versions are as follows: Y750 - Release 7.0 Y760 - r11 Y770 - r12

System Action:

None.

User Action:

Check if different versions of SSI are running concurrently. Identify which of them corresponds to each provided version. Issue the command *f ssiname,smf dereg* for the SSI that corresponds to the older version.

Rerun SELFTTEST to verify the results of the action. If the older version reported is Y750 and the SSI is not running, you can start it by issuing the deregistration command and stopping it.

If you experience problems running more than one SSI concurrently, you should consider using the *SMFDEREG* utility. It must be run from an authorized load library, the product library being the obvious choice.

The JCL example to run *SMFDEREG* is as follows:

```
// JOB //SMFDRG EXEC PGM=SMFDEREG,PARM='Y750' //STEPLIB DD  
DISP=SHR,DSN=HLQ.NMRXX.LOAD //
```

The program attempts to deregister Y750 version SMF exits. Information about the execution is provided in the form of console messages (WTO).

If you cannot determine which version to deregister, you can run *SMFDEREG* without specifying parameters. It will try to deregister all known versions of the SMF exits. You must start the latest version of the SSI with SMP support and issue *f ssiname,smf reg* after it starts.

IPDI52E8**Error: No SMF Exit copy active: P1 P2 P3****Reason:**

SELFTEST discovered that none of multiple copies of SMF exits known to CA Common Services are active in the system.

P1 is the SMF exit functional name.

P2 is the CA Common Services version of the first known copy.

P3 is the CA Common Services version of the second known copy.

System Action:

None.

User Action:

Check if any version of SSI is running. If it corresponds to the latest version of the exit, issue *f ssiname,smf reg* . If it fails, check the log and investigate. Rerun SELFTEST.

IPDI52E9**Error: SMF test terminated: P1****Reason:**

SELFTEST of SMF support was terminated.

P1 is the reason:

SAB - System Anchor Block was not created. It indicates that NetMaster SSI was not run or it failed to create SAB. If NetMaster SSI was run, check SSI log for messages related to SAB creation.

SMFS - SMF Slot in SAB was not created or invalid. It indicates that NetMaster SSI was not run or it did not create/finalise SMFS. It may indicate the fact that none of NetMaster SSIs was started with SMF=YES specification. If NetMaster SSI was run with SMF=YES specified, check SSI log for messages related to SMF activation.

SMCT - SMF Control Table was not created or invalid. It indicates that NetMaster SSI was not run or it did not create/finalise SMCT. It may indicate the fact that none of NetMaster SSIs was started with SMF=YES specification. It may also indicate that SMF registration failed. If NetMaster SSI was run with SMF=YES specified, check SSI log for messages related to SMF activation.

System Action:

None.

User Action:

Make sure that one of NetMaster SSIs is dedicated as SMF controlling and is started with SMF=YES specified.

IPDI52F0

Checking SOLVE SSI Communications and Packet Analyzer

Reason:

The SSI and Packet Analyzer configuration is being checked, including:

- Interface between this region and the SOLVE SSI region
- SOLVE SSI Simple Event Service
- SOLVE SSI Packet Analyzer

System Action:

None.

User Action:

If SOLVE SSI is not active on this system, start it.

Errors in the SSI and Packet Analyzer will result in major loss of function.

The SOLVE SSI runs as a separate started task to this region and has its own specific setup requirements.

Review the SSI setup information in the product *Installation Guide*.

IPDI52F1

SSI interface is defined with SSID P1

Reason:

The SOLVE Subsystem Interface is defined with *P1* as the SSID value.

The SSID is specified in the *\$NM SSI* Customizer parameter group (/PARMS).

System Action:

None.

User Action:

None.

IPDI52F2**Warning: Packet Analyzer unavailable to the connected SSI (*P1*)****Reason:**

The connectivity being tested requires a connection to an SSI started task that includes support for the Packet Analyzer.

Packet Analyzer support is not configured in the connected SSI task (SSID *P1*), nor any interconnected SSI task. The Packet Analyzer may have been disabled by SSI parameter PKTANALYZER=NO or PALEVEL=NONE. Also, you may have connected this region to the wrong SSID.

Although Packet Analyzer is not necessary to operate CA NetMaster, it provides data needed by the following:

- IP summary
- SmartTrace packet tracing
- Many assorted traffic statistics displays
- Connection lists (advanced)
- Many sampled performance data attributes

System Action:

None.

User Action:

Ensure that one of the SSI started tasks in the LPAR provides support for the Packet Analyzer. To provide the service, an SSI started task must include the parameter PKTANALZER=YES. Parameter PALEVEL must also be set to FULL.

Note: If you need to change the SSI started task parameters, you must restart that started task. You can have multiple SSI started tasks in an LPAR, but only one of these may be configured with Packet Analyzer support.

To determine the facilities provided by the SSI that this region is connected to, issue the following command in OCS or Command Entry:

SSI STATUS

To determine the facilities provided by any SSI started task, you must use the SYSCMD facility to send a message to that started task, for example:

F taskname,SSI STATUS

taskname is the name of the SSI started task.

If the SSI provides Packet Analyzer support, the output from the SSI STATUS command includes the following message:

NFST01 PACKET ANALYZER FEATURE IS ACTIVE

If you connected the region to the wrong SSI started task, you must change the SSID that is specified in the region. To do this, you must update the *SSI parameter group* in Customizer and action the group as follows:

1. Enter **=/PARMS** to list the parameter groups.
2. Enter **F '\$NM SSI'** to move the cursor to the SSI parameter group. 3. Enter **U** beside the SSI parameter group.
3. Update the value in the Sub-System Interface ID field.
4. Press F6 (Action) to apply the change.
5. Press F3 (File) to save the change.

IPDI52F3**Packet analysis is enabled for P1 stack(s)****Reason:**

The Packet Analyzer is active and the indicated number of TCP/IP stacks have packet analysis enabled.

System Action:

None.

User Action:

Additional details regarding the status of the Packet Analyzer and of specific stacks for which packet analysis is either requested or enabled are available using the following commands and displays.

Use the */IPPAREQ* shortcut to display the TCP/IP : Packet Analysis Request List. This list shows all packet analysis requests for this LPAR.

Use the SSI's *SHOW STACKS* command to display the stacks that the Packet Analyzer is aware of, and which have packet analysis enabled.

Use the SSI's *STATUS* command to display the status of the Packet Analyzer. SSI commands can be entered from a NetMaster region using the *SSISEND* command. For example:

SSISEND SHOW STACKS SSISEND STATUS

IPDI52F4

Warning: CA Common Services query unavailable

Reason:

The connectivity being tested requires a connection to an SSI started task that includes support for the CA Common Services query support.

This error usually occurs when you have specified the wrong SSID value. This region is connected to an SSI region (using SSID *P1*). However, neither that SSI started task, nor any interconnected SSI task, is configured with the CA Common Services query support.

Although query support is not necessary for proper operation of this region, it is a prerequisite for SMF exit registration.

System Action:

None.

User Action:

Ensure that one of the SSI started tasks in the LPAR provides support for CA Common Services query.

To provide the service, an SSI started task must include the following parameter: TNGFWQ=YES (the default).

Note: If you need to change the SSI started task parameters, you must restart that started task. You can have multiple SSI started tasks in an LPAR, but only one of these can be configured with Packet Analyzer support.

To determine the facilities provided by the SSI that this region is connected to, issue the following command in OCS or Command Entry: **SSI STATUS**.

IPDI52F5**Warning: Packet Analyzer has statistics collection disabled****Reason:**

The Packet Analyzer is currently running with statistics collection disabled. The SSI region may have started with PALEVEL=NOSTATS, or the level may have been dynamically changed to a value of NOSTATS.

When the Packet Analyzer is not collecting statistics, many of the performance data and data sampling facilities are unavailable.

System Action:

None.

User Action:

Check why the SSI is not running with the parameter *PALEVEL=FULL*.

When including Packet Analyzer functions in an SSI, it is recommended to always set the PALEVEL parameter to FULL. If you run with a level other than FULL, many IP monitoring functions will not be available.

Only use a PALEVEL other than FULL if instructed by Technical Support.

IPDI52F6**Warning: Packet Analyzer has packet intercept disabled****Reason:**

The Packet Analyzer is currently running with packet intercept disabled. The SSI region may have started with PALEVEL=NOPACKETS, or this level may have been modified dynamically.

When the Packet Analyzer has packet intercept disabled, many tracing and traffic facilities are unavailable.

System Action:

None.

User Action:

Check why the SSI is not running with the parameter *PALEVEL=FULL*.

When including Packet Analyzer functions in an SSI, it is recommended to always set the PALEVEL parameter to FULL. If you run with a level other than FULL, various IP monitoring functions will not be available.

Only use a PALEVEL other than FULL if instructed by Technical Support.

IPDI52F7

Error: An old version of the Packet Analyzer is being used.

Reason:

The Packet Analyzer is not using the current software level for this release. SmartTrace facilities are not available.

System Action:

None.

User Action:

Your region should be connected to an SSI region of the same or later release. The SSI facilities are backward-compatible, so that an older release of the region can successfully connect to a later release of SSI; however, connecting a region to a back-level SSI results in loss of functionality.

IPDI52F9

P1 Database: Size = P2 Used = P3 High Used = P4

Reason:

This message displays the usage of a Packet Analyzer database. The database is a dataspace, not a physical file.

P1 is the database type.

P2 is the maximum database size in MB.

P3 is the current percentage used.

P4 is the highest percentage used since the SSI region was last started.

System Action:

None.

User Action:

If the database utilization is approaching 100%, consider increasing the database size on the next restart of the SOLVE SSI region. The database size is set by SSI startup parameters:

Dynamic database : PDYNDBSIZE

Synch Database : PSYNDBSIZE

Trace Database : PTRCDBSIZE

IPDI52FA**Note: Packet Analyzer Subtask not running in requested mode****Reason:**

The Packet Analyzer is not running in the mode that was requested, for example, zIIP mode execution may have been requested, but cannot be provided.

System Action:

None.

User Action:

See the help for messages NF1018 and NF1019, which precede this one. The NF1019 help contains information about diagnostic codes. To access the message help, place the cursor on message ID NF1019 and press Enter.

For information about SSI configuration, use the SSI STATUS command.

IPDI52FB

EE Packet Analysis enabled: stack *P1*, port base UDP *P2*

Reason:

The SSI region has started with the PAEESTACK parameter set to the name of the z/OS stack that does Enterprise Extender (EE) processing on this LPAR.

Specifying the PAEESTACK parameter enables all of the CA NetMaster EE management functions, which you can access using shortcut */EE* .

If you do not have EE implemented on this LPAR, leave the PAEESTACK parameter to default to NONE.

Generally, PAEESTACK is generated by the Install Utility that creates the SSI JCL, when you enter an EE Packet Processing Stack Name.

System Action:

The packet analyzer recognizes EE packets, and performs specialist traffic analysis, connection analysis, and tracing for EE.

User Action:

All of the CA NetMaster Enterprise Extender functions are now available from the Enterprise Extender Management Menu, shortcut */EE* . These include the following:

- SmartTrace EE packet tracing of EE Connections, UDP Connections,
- EE VIPAs, EE Ports, and individual RTP Pipes, using */EETRACE*
- Management of EE RTP Pipes using */EER* and */EERH*
- EE Traffic information using */EEXP*
- EE UDP Connections using */EEUDP*
- EE Connectivity Testing, XCA major node diagnostics, and more

IPDI52FC**Note: EE Packet Analysis is not enabled, although EE is implemented****Reason:**

The SSI region was not started with the PAEESTACK parameter; however, an EE XCA Major Node is active on this LPAR.

Specifying the PAEESTACK parameter enables all of the CA NetMaster advanced Enterprise Extender management functions.

System Action:

The packet analyzer continues to count EE packets as part of normal UDP traffic, but does not recognize them as EE.

Specialist EE traffic analysis, connection analysis, and packet tracing are not available on this CA NetMaster region.

User Action:

Perform the following:

1. Contact your Systems Programmer or CA NetMaster Administrator and ensure that the SSI region is updated with the PAEESTACK parameter set to the name of the z/OS stack that does Enterprise Extender (EE) processing on this LPAR.

Note: If there are multiple stacks on this LPAR, only one performs EE processing.

2. Restart the SSI region.
3. Explore the CA NetMaster Enterprise Extender functions. They are available from the Enterprise Extender Management Menu, shortcut */EE* . They include the following:
 - SmartTrace EE packet tracing of EE Connections, UDP Connections, EE VIPAs, EE Ports, and individual RTP Pipes, using */EETRACE*
 - Management of EE RTP Pipes using */EER* and */EERH*
 - EE Traffic information using */EEXP*
 - EE UDP Connections using */EEUDP*
 - EE Connectivity Testing, XCA major node diagnostics, and more

IPDI52G0

Module EP VER PTF ASM

Reason:

This message provides headers for the following IPDI52G1 messages.

System Action:

None.

User Action:

None.

IPDI52G1

P1 P2 P3 P4 P5

Reason:

This message provides the following information about each of three SMF exits stubs:

P1 : SMF Exit module name.

P2 : Entry Point address of the starting module.

P3 : Management Services version of the starting module.

P4 : PFT level of the starting module.

P5 : Compilation time stamp of the starting module.

System Action:

None.

User Action:

None.

IPDI52G2**P1 by: P2 on: P3 at: P4****Reason:**

This message provides the information on the latest status change of each of the SMF exits stubs:

P1 : Type of the change, i.e: *registered* or *deregistered* . If the change is 'deregistered' it means that manual action was taken to disable SMF support.

P2 : Jobname of the STC/Job which changed exit status, i.e: registered or deregistered the exit.

P3 : The date of the status change in YYYYMMDD format.

P4 : The time of the status change in HHMMSS format.

System Action:

None.

User Action:

If the change is *registered* : None.

If the change is *deregistered* : Investigate the reasons for the deregistration, analysing the System/SSI log may help in identifying the person deregistering the SMF support. Check if SelfTest detected that the exits abended. If the reasons for deregistration were not serious, system exposure for example, it is important to enable SMF processing again to restore the full functionality of the Product. Issue 'f ssiname,SMF REGISTER' where ssiname is the STC/Jobname of the SSI controlling SMF activities of the Product.

IPDI52G9

Error: Invalid storage address encountered: L= P1

Reason:

A Self Test Collect recovery code was entered due to the invalid storage address detection. *P1* provides the line number in the Self test source. This message indicates that the control block contents chained from SMCT (SMF Control Table) is corrupted.

System Action:

None.

User Action:

1. Preserve the Self Test execution log.
2. From the OCS (Operator Console Services) command prompt, enter \$NMUT31L and press ENTER.
3. When presented with the control block selection list, select SMCT and press ENTER. You will be presented with an SMCT hexadecimal dump.
4. Preserve the SMCT hexadecimal dump.
5. Contact your local Technical support providing:
 - Self Test execution log
 - SMCT dump

IPDI52H0

Checking IBM TCPIP SMF Configuration

Reason:

The SMF configuration of the IBM z/OS Communications Server TCP/IP stack is being checked, including:

- IBM TCP/IP stack is configured to produce Type 119 SMF records that this region processes.
- All required subrecords are specified.

System Action:

None.

User Action:

None.

IPDI52H1**TCPAccess Stacks encountered****Reason:**

IBM IP SMF configuration check encountered TCPAccess Stack while scanning through the connected Stacks list.

System Action:

None.

User Action:

None.

IPDI52H2**Error: P1 - Stack Configuration does not have SMF section****Reason:**

The IBM stack configuration for stack *P1* does not contain an SMF configuration section.

This message indicates serious IP Stack configuration problems. *P1* is the stack name.

System Action:

None.

User Action:

Perform the following steps:

1. From the Operator Console Services (OCS) command prompt, enter the following command and verify the absence of the section that starts with SMF Parameters:

-onetstat - p *P1* -f

2. Verify and correct the IBM TCP/IP stack configuration.

3. Contact Technical Support if the section exists.

IPDI52H3

Error: P1 - Stack Configuration does not have 119 Subsection

Reason:

The IBM stack configuration for the *P1* stack does not contain the section for Type 119 SMF records.

This message indicates serious IP Stack configuration problems.

System Action:

None.

User Action:

1. From the Operator Console Services (OCS) command prompt, enter the following command and verify the absence of the section that starts with Type 119:
-onetstat - p *P1* -f
2. Verify and correct the IBM TCP/IP stack configuration.
3. Contact Technical Support if the section exists.

IPDI52H4

Error: P1 - Stack Configuration does not have P2 Subsection

Reason:

The IBM stack configuration for stack *P1* does not contain the section that corresponds to the TCP/IP SMF records to process by the product. *P1* is the Stack Name. *P2* is the number of the SMF record section missing.

System Action:

None.

User Action:

Perform the following steps:

1. From the Operator Console Services (OCS) command prompt, enter the following command and verify the absence of the section that starts with Type *P2* :
-onetstat - p *P1* -f
2. Verify and correct the IBM TCP/IP stack configuration.
3. Contact Technical Support if the section exists.

IPDI52H5

Error: ~P1 - Stack Configuration for SMF record ~P2 does not have ~P3 subrecord specified

Reason:

The IBM stack configuration for stack P1 , section for record P2 does not have subrecord type P3 turned on.

P1 is the Stack Name

P2 is the SMF record number

P3 is the SMF subrecord type:

- TCPINIT
- TCPTERM
- FTPCLIENT
- TN3270CLIENT

System Action:

None.

User Action:

Perform the following steps:

1. From the Operator Console Services (OCS) command prompt, enter the following command and verify the setting of the P3 subrecord type in the Type P2 : section.

-onetstat -p P1 -f

2. Verify and correct the IBM TCP/IP stack configuration.

IPDI52H6

Warning: *P1*, Port: *P2*, *P3* SMF collection not specified

Reason:

The configuration of the IBM stack Telnet server does not have SMF recording specified for the identified port.

P1 is the name of the stack.

P2 is the Telnet server port number.

P3 is the type of SMF record:

ALL - No SMF specification for the port

INIT119 - SMF initialization record for SMF record type 119

TERM119 - SMF termination record for SMF record type 119

STD - SMF records for SMF record type 118

Note: CA NetMaster NM for TCP/IP r11 supports SMF record types 118 and 119; however, r11.5 supports only record type 119. Specifying record type 118 while working with r11.5 is not an error and may be present due to the requirements of other products.

System Action:

None.

User Action:

If you do not want the port or the SMF record type, take no action; otherwise, take the following action.

If the port is an active Telnet data port, change its specification in the TELNET section of the Stack configuration to add SMF record collection.

You may consider using the TELNETGLOBALS section to activate SMF record collection if all defined Telnet ports are active.

IPDI52H7

Note: *P1* is not active - skipping IP SMF configuration check

Reason:

The stack detected is defined in the region tables but not currently active.

System Action:

None.

User Action:

Start the stack, if required.

IPDI52H8

Error: Command Failed, Stack: *P1*, RC: *P2*, Reason: *P3*

Reason:

An attempt to send a Netstat or Display command to the IBM Stack failed.

P1 is the Stack Name

P2 is the Internal Return Code

P3 is the Reason message, if provided

System Action:

None.

User Action:

Address the issue as explained in the reason message and then repeat the test.

IPDI52H9

IBM TCPIP SMF configuration test completed

Reason:

The available IP Stack SMF configuration has the parameters set for correct generation of SMF records utilized by CA NetMaster. Specified parameters, for example, port number specifications, are correct but may be incomplete, that is, some port numbers used by the IP Stack may not be configured and are not detected or verified.

System Action:

None.

User Action:

None.

IPDI52I0

Checking MVS SMF Configuration

Reason:

The IBM MVS SMF configuration is being checked, including: The TCP/IP SMF record is not excluded from processing by the MVS SMF facility.

System Action:

None.

User Action:

None.

IPDI52I1**Error: P1 - Unexpected command processing results****Reason:**

An attempt to issue *P1* MVS command ended with unexpected results.

P1 is the command executed.

System Action:

None.

User Action:

See message IPDI5209 and follow the instructions.

Contact Technical Support if you are unable to resolve the problem.

IPDI52I2**Error: TCPIP SMF Record P1 excluded by: P2****Reason:**

MVS SMF configuration excludes from processing the TCP/IP SMF record *P1* specified as processed by the product. *P2* is the SMF configuration statement that contains the exclusion.

System Action:

None.

User Action:

Verify and correct the MVS SMF configuration, removing the exclusion.

IPDI52I5**Checking SSI SMF Configuration****Reason:**

The SSI SMF exit registration and setup is being checked.

System Action:

None.

User Action:

None.

IPDI52I9

MVS SMF configuration test completed

Reason:

MVS SMF configuration has all of the required parameters set for correct generation of SMF records.

System Action:

None.

User Action:

None.

IPDI52J0

Error: SMF Exit *P1* detected invalid call code

Reason:

SMF exit *P1* detected that an invalid code was detected by one of the Common Code stages. This indicates internal error.

System Action:

None.

User Action:

Contact Technical Support.

IPDI52J1

Error: SMF Exit *P1* detected invalid return code

Reason:

SMF exit *P1* detected that an invalid return code was returned by one of the Common Code stages. This indicates internal error.

System Action:

None.

User Action:

Contact Technical Support.

IPDI52J2**Error: SMF Exit *P1* rejected SMF record(s)****Reason:**

SELFTTEST discovered that the *P1* SMF exit detected an invalid SMF record. This indicates that one of the processed SMF records failed one of the basic integrity and validity checks. It may indicate a misformatted IBM SMF record, or the occurrence of an SMF record of Type 119 that was probably produced by a program other than the IBM TCP/IP stack (IBM Communications Server for eBusiness).

System Action:

None.

User Action:

Verify that no other program is producing SMF records of Type 118 or 119.

Issue **F ssiname,SMF STATUS**, and check the rejected record count in the NY3137 message. If the count is significant compared to the number of received records, you may be able to find those records by analyzing the SMF data sets.

For assistance, contact your Systems Programmer.

IPDI52J4**Note: *P1* - Stack Configuration has *P2* Subsection****Reason:**

The IBM stack configuration for stack *P1* contains the section for SMF record 118, which is not supported.

System Action:

None.

User Action:

Remove SMF record 118 definitions from IBM stack configuration, unless SMF record 118 is collected for purposes other than connection awareness.

IPDI52J6

Warning: P1 - Port: P2, P3 SMF collection specified

Reason:

The Telnet server configuration of the IBM stack has SMF recording specified for a given port, and the Network Management API is active.

P1 is the name of the stack.

P2 is the port number of the Telnet server.

P3 (if specified) is the SMF record type:

ALL - No SMF specification for the port

INIT118 - SMF initialization record for SMF record type 118

TERM118 - SMF termination record for SMF record type 118

INIT119 - SMF initialization record for SMF record type 119

TERM119 - SMF termination record for SMF record type 119

Note: r11 product supports both SMF record types 118 and 119, while r11.5 product supports only record type 119. Specification of record type 118 when working with an r11.5 product is not an error and may be present due to the requirements of another product.

System Action:

None.

User Action:

If only an r11.5 product is processing SMF records, disable the collection of Type 118 SMF records for the identified port.

IPDI52J8**Warning: Both SMF exit processing and IP SMF API present****Reason:**

There are two ways to collect IP SMF data present at the same time. SMF Exit-based IBM TCPIP SMF record 119 collection is present on the system that is configured to use IBM Stack Network Management API. This is acceptable as a transtion situation, but should not be running on a permanent basis.

System Action:

None.

User Action:

Stop using old SMF exit-based IP data collection. Remove the definitions from STACK configurations.

IPDI52J9**Warning: More than one 'Data Space' running: *P1 P2 P3 P4 P5 P6*****Reason:**

There is more than one Data Space type data collection active at the same time.

The list of job names of those services is provided as *P1 - P6*. There is a possibility of discontinued Data Space running concurrently with the Packet Analyzer, which may introduce duplicated information.

System Action:

None.

User Action:

Discontinue using old Data Space.

IPDI52K0

Checking IBM Stack Network Monitoring SMF API status

Reason:

The NMFTP Monitor, utilizing the IBM Stack Network Management SMF API, is being checked.

System Action:

None.

User Action:

None.

IPDI52K1

Error: *P1* - Stack Network Management Configuration does not have *P2* specification

Reason:

The IBM *P1* stack network management configuration does not have *P2* specification.

P1 is the name of the Stack

P2 is one of the following:

TcpCnn - TCP connection services specification

SmfSrv - SMF services specification

System Action:

None.

User Action:

Perform the following steps:

1. From the Operator Console Services (OCS) command prompt, enter the following command and verify the absence of the required specifications in the Network Monitor Configuration Information section

-onetstat -p *P1* -f
2. Verify and correct the IBM TCP/IP stack configuration.
3. Contact Technical Support if the section exists.

IPDI52K2

Error: *P1* - Stack Network Management Configuration specification *P2* is not active.

Reason:

The IBM *P1* stack network management configuration *P2* specification is not set to Yes.

P1 is the name of the Stack

P2 is one of the following:

TcpCnn - TCP connection services specification

SmfSrv - SMF services specification

System Action:

None.

User Action:

Perform the following steps:

1. From the Operator Console Services (OCS) command prompt, enter the following command and verify the absence of the required specifications in the Network Monitor Configuration Information section

-onetstat -p *P1* -f
2. Verify and correct the IBM TCP/IP stack configuration.
3. Contact Technical Support if the section exists.

IPDI52K3

IP SMF API record writing is set to: *P1*

Reason:

If *P1* is Y, IP SMF records received from Network Management API are written to the SMF data sets (SYS1.MANx).

If *P1* is N, SMF records are not written.

System Action:

None.

User Action:

None.

IPDI52K4

Error: SMF API EPS server *P1* is not active

Reason:

The EPS server *P1* providing SMF API Network Management status information is not active. It may indicate that the NMFTP Monitor providing SMF API support is not active; however, it is required by CA NetMaster File Transfer Management for monitoring FTP events.

System Action:

None.

User Action:

If you are using CA NetMaster File Transport Management, make sure that the NMFTP Monitor providing SMF API was started. Start it if it is not active.

Perform the following steps if it is active:

1. From the Operator Console Services (OCS) command prompt, enter the following command and verify the status of the specified service:

```
SH EPS SERV=P1
```

Check the NMFTP Monitor log for possible explanations.

2. Contact Technical Support if you are unable to solve the problem.

IPDI52K5**Error: SMF API EPS server *P1* failed: *P2*****Reason:**

The EPS server *P1* providing SMF API Network Management status information returned unexpected result *P2*. This message may be issued because of the intermittent status of the EPS receiver maintained by the NMFTP Monitor. This is required by CA NetMaster File Transfer Management for Monitoring FTP events.

System Action:

None.

User Action:

If you are using CA NetMaster File Transport Management, make sure that the NMFTP Monitor providing SMF API was started. Start it if it is not active.

Perform the following steps if it is active:

1. From the Operator Console Services (OCS) command prompt, enter the following command and verify the status of the specified service:

```
SH EPS SERV=P1
```

Check the NMFTP Monitor log for possible explanations.

2. Contact Technical Support if you are unable to solve the problem.

IPDI52K6**Error: Obtaining of Packet Analyzer Information, RC: *P1*****Reason:**

An unexpected result was received while obtaining the Packet Analyzer Information (PAI) record. *P1* is the return code.

System Action:

None.

User Action:

If the error persists, contact Technical Support with the SELFTEST output.

IPDI52L0

Warning: No SMF records written

Reason:

You specified PASMFWRITE=YES, but no SMF records were written to SMF data sets. IBM's Network Management SMF API, which is used by the FTP Monitor Address Space, processes only FTP SMF record 119 subtypes 101 and 102.

This message may also indicate that there are no application definitions requesting writing of those records.

System Action:

None.

User Action:

If you want to write FTP SMF record 119 subtypes 101 and 102 only, specify PASMFWRITE=YES for the CA NetMaster FTP Monitor; otherwise, specify PASMFWRITE=NO.

IPDI52L1

Error: SMF data blocks lost

Reason:

The interface to IBM Stack Network Management lost some SMF data blocks. This indicates that it is not performing fast enough.

System Action:

None.

User Action:

Check if CA NetMaster is performing in a low priority performance group or heavily-constrained environment. If it is, correct the situation. Contact Technical Support if you cannot rectify the situation.

IPDI52L6**Network Management Interface status: *P1*****Reason:**

This message is the beginning of the Network Management Interface status information. It is followed by IPDI52L7, IPDI52L8, and IPDI52L9 messages. *P1* is the job name of the SSI running it.

System Action:

None.

User Action:

None.

IPDI52L7**API SMF records SMF blocks****Reason:**

This message provides a header for Network Management Interface status information. It is followed by IPDI52L8 and IPDI52L9 messages.

System Action:

None.

User Action:

None.

IPDI52L8**Started processed written lost****Reason:**

This message provides a header for Network Management Interface status information. It is followed by message IPDI52L9.

System Action:

None.

User Action:

None.

IPDI52L9

P1 P2 P3 P4

Reason:

This is the last message for Network Management Interface status information.

P1 is the date and time the interface started.

P2 is the number of SMF records processed.

P3 is the number of SMF records written to SMF data sets. Unless PASMFWRITE=YES is specified, it should be 0.

P4 is the number of SMF blocks that were not processed by the Interface. Under normal conditions, it should be 0.

System Action:

None.

User Action:

None.

IPDM4401

INVALID KEYWORD VALUE SPECIFIED, P1= P2

Reason:

The call to the procedure failed because the keyword identified by *P1* had an invalid value identified by *P2* .

System Action:

The request is rejected.

User Action:

Contact your Systems Administrator.

IPDM4402**VARIABLE P1 ERROR, FDBK= P2 P3****Reason:**

A variable error occurred. The variable action was *P1* , the feedback code was *P2* . If relevant *P3* contains the key value which experienced the problem.

System Action:

The action fails.

User Action:

Determine the cause of the error based on the feedback code.

IPDM4403**ENTRY ALREADY EXISTS FOR P1****Reason:**

You attempted to add an entry for the address *P1* . However the entry already exists.

System Action:

The action fails.

User Action:

None.

IPDM4404**MAP ERROR: MAP P1 NOT FOUND****Reason:**

An internal error occurred because the map *P1* was not found in the map dataset.

System Action:

The request is rejected.

User Action:

Contact your Systems Administrator.

IPDM4405

MAP ERROR: MAP P1, MDORC= P2, MDOFDBK= P3

Reason:

An internal error occurred. The map *P1* experienced the error described by MDORC= *P2* and MDOFDBK= *P3* .

System Action:

The request is rejected.

User Action:

Contact your Systems Administrator.

IPDM4406

IP NODE MONITOR IS ALREADY RUNNING

Reason:

An attempt was made to start the IP Node Monitor but a previous copy is already running. The most likely scenario is that a LOAD has been requested and the current IP Node Monitor is performing cleanup processing before terminating.

System Action:

The existing IP Node Monitor continues and this one waits for it to conclude before continuing.

User Action:

None.

IPDM4407

IP NODE MONITOR STOPPED

Reason:

The IP Node Monitor has been asked to stop.

System Action:

The IP Node Monitor terminates.

User Action:

None.

IPDM4408**IP NODE MONITOR STARTED****Reason:**

The IP Node Monitor has started.

System Action:

The IP Node Monitor continues.

User Action:

None.

IPDM4409**Node: P1 PING Status: P2****Reason:**

An alert has been created by the IP Node Monitor function. The monitor attempted to ping the node with IP address *P1*. *P2* is the status detected, it may be one of:

Timeout - The ping request for device timed out.

Unknown - Either a ping has not yet been done or the TCP/IP Services interface is unavailable.

System Action:

An alert is created.

User Action:

Check the status of the resource, by issuing the Check action against the node in the IP Node Monitor or against the alert in the Alert Monitor.

IPDM4410**Check issued for P1****Reason:**

The Check action has been issued for the IPNODE identified by *P1*.

System Action:

A sample is taken immediately.

User Action:

None.

IPDM4412

Node: P1 Average PING time P2 (ms) Threshold: P3

Reason:

An alert has been created by the IP Node Monitor function. The monitor attempted to ping the node with IP address *P1* . *P2* is the average time to respond which is over the threshold specified as *P3* .

System Action:

An alert is created.

User Action:

Check the status of the resource, by issuing the Check action against the node in the IP Node Monitor or against the alert in the Alert Monitor.

IPDM4416

Node Monitor group P1 created

Reason:

A default monitor group definition has been added to the IPFILE.

System Action:

A monitor group definition is created.

User Action:

Review IP node monitoring requirements. You may wish to use one of the supplied monitoring groups.

IPDM4418

Error adding Node Monitor group P1

Reason:

An error occurred adding a default monitor group definition to the IPFILE.

System Action:

The associated error message is logged after this message.

User Action:

Use the following log message to determine the cause of the failure. If necessary notify Technical Support.

IPDM4419**Node: P1 PING Status: P2****Reason:**

An alert has been created by the IP Node Monitor function. The monitor attempted to ping the node with IP address *P1*. *P2* is the status detected, it may be one of:

Timeout - The ping request for device timed out.

Error - The ping request received an error response.

Unknown - Either a ping has not yet been done or the TCP/IP Services interface is unavailable.

System Action:

An alert is created.

User Action:

If a Timeout status was returned, check the status of the device, using the Check action in the IP Node Monitor or Alert Monitor. If the device appears to be available, consider increasing the wait period of the ping.

In an Unknown status was returned, the TCP/IP Socket Interface may be unavailable. Ensure that TCPIP is started on this region. Consider setting up a custom event detector to monitor the Socket Interface.

Error status indicates that the TCP/IP Socket is up, but an error, other than Timeout, occurred while doing a Ping to this specific device. Possible causes including storage problems, security restrictions, and other connectivity problems.

Check the status of your TCP/IP stack, and examine the TCP/IP stack job output for messages.

An Error status may be accompanied by an error message. Check the Activity Log for messages relating to PING activity, in particular, message 'N3D692 PING/TRACEROUTE raw socket send failure'. If present, this message will indicate the specific failing return code, reason code, socket error number, and any vendor-specific error information.

Examine the error codes to determine the cause of the PING failure. For feedback and socket error codes, see Appendix F, '&SOCKET Verbs', of the Network Control Language Reference.

IPDM4420

Monitor Group P1 could not be found for IP NODE P2

Reason:

During monitor initialization, the Monitor Group *P1* associated with IP NODE *P2* was not found in the RAMDB.

System Action:

Initialization continues with IP NODE *P2* status set to *Unknown* .

User Action:

Define a Monitor Group with a name *P1* .

IPDM4430

Number of Hops is P1 Threshold: P2 Node: P3

Reason:

An alert has been created by the IP Node Monitor function. The monitor attempted to traceroute node with IP address *P3* . *P1* is the number of Hops it took which exceeds threshold specified as *P2* .

System Action:

An alert is created.

User Action:

Check the status of the node, possibly by issuing the CH=Check action for the node in the IP Node Monitor.

IPDM4431

IP node P1 is not being monitored.

Reason:

An attempt to view performance data on IP node *P1* was not successful because the node is not currently being monitored in the IP Node Monitor.

System Action:

The request is ignored.

User Action:

Add the node to the IP Node Monitor */IPNODE* via the *ADD* command.

IP Node Monitor group P1 update takes effect on the next sampling interval for (P2) resource(s).

Reason:

A change in the definition of IP Node Monitor group **P1** will take effect on the next sampling interval for **P2** resources.

System Action:

None.

User Action:

IPDM4433

IP Node Monitor group P1 update takes effect on the next sampling interval for (P2) resource(s).

Reason:

A change in a monitoring attribute for IP Node Monitor group **P1** will take effect on the sampling interval for **P2** resource(s). An RMDBMS00 message describes the attribute that was recently updated.

System Action:

None.

User Action:

IPDM4701

P1 must be a time value in the range P2 to P3

Reason:

The field *P1* must contain a time value in the range *P2* to *P3* entered in the format MM.SS.

System Action:

None.

User Action:

Correct the field value and retry.

IPDM4702

Intense monitor already active for P1 ending at P2

Reason:

Intensive Monitoring Mode is already active for IP node attribute *P1* with sampling set to complete at time *P2* .

System Action:

On completion of Intensive Monitoring Mode, the IP node attribute rate will be set back to the group attribute rate.

User Action:

You may issue an IMR command to Reset, and then issue the IMM command. The IMR command will reset the IP node to the group attribute rate. Updating the group attribute rate in the *IP Node Monitor Group List* will also reset the IP node attribute rate.

IPDM4703

Intense monitor already active for P1 ending at P2

Reason:

Intensive Monitoring Mode is already active for IP node attribute *P1* with sampling set to complete at time *P2* . Intensive Monitoring can still be set for the selected attribute; however, it will be reset once Intensive Monitoring for the reported attribute *P1* has completed.

System Action:

On completion of Intensive Monitoring Mode, the IP node attribute rate will be set back to the group attribute rate.

User Action:

You may issue an IMR command to Reset, and then issue the IMM command. The IMR command will reset the IP node to the group attribute rate. Updating the group attribute rate in the *IP Node Monitor Group List* will also reset the IP node attribute rate.

IPDM4802**IMM not permitted because Monitoring Activity is inactive.****Reason:**

Intensive Monitoring Mode is being attempted on a Node with no Monitoring Activities defined. This is due to the Monitoring Activity Operational Override being inactive, or because no Monitoring Activities have been defined to the Monitoring Group.

System Action:

None.

User Action:

Check the IP Node Monitoring Activity Operational Override via the S command. If this is inactive, set it to active and reissue IMM command. If no Monitoring Activities have been defined to the Monitoring Group, update the Monitoring Group via shortcut */IPMONG*. Otherwise, notify your Systems Administrator.

IPDS0101**P1 is not configured for TCPaccess management****Reason:**

You attempted to perform a TCPaccess related function on stack *P1* which is not configured for managing that TCP/IP stack type.

System Action:

The request is rejected.

User Action:

Make sure you have specified the correct Link and/or Stack name, as you may be pointing to a system that is managing a different TCP/IP stack.

IPDS0102

Function not supported by TCPaccess stack P1

Reason:

You attempted to perform a function not supported by TCPaccess on stack *P1* which is configured for TCPaccess management.

System Action:

The request is rejected.

User Action:

Make sure you have specified the correct Link and/or Stack name, as you may be pointing to a system that is managing a different TCP/IP stack.

IPDS0103

'Action' will save this text to P1 and execute

Reason:

This message explains what will happen if you press the action key (F6). The displayed data (along with any updates you make) will be saved to dataset *P1* overwriting any existing data. The saved statements will be executed immediately, via a VARY TCPIP,CMD=OBEYFILE issued to the stack.

System Action:

None

User Action:

Update the statements if required. Use the F6 key to save and action the change or F12 to cancel.

IPDS0104

P1 DSN is not specified in the STACK resource definition for P2

Reason:

You attempted to browse the *P1* configuration data set for stack *P2* , but the name of the data set is not available in the stack resource definition.

System Action:

The request is rejected.

User Action:

Update the stack definition for *P2* with the name of the configuration data set.

IPDS7301

APPC P1 failed. RC= P2, FDBK= P3, QRN= P4, state= P5

Reason:

An error occurred whilst processing an APPC verb.

P1 is the APPC verb that was issued

P2 is the return code set by the APPC verb

P3 is the feedback code set by the APPC verb

P4 is the qualified remote LU name

P5 is the APPC conversation state

System Action:

Request Fails.

User Action:

Check the status of the remote LU and check that TCP/IP Services has been initialized on the remote system.

IPDS7302

Invalid keyword value specified, keyword= P1, value= P2

Reason:

The call to the procedure failed because the keyword identified by *P1* had an invalid value identified by *P2*.

System Action:

The request is rejected.

User Action:

Contact your System Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

IPDS7303

Invalid action received, action= P1

Reason:

An invalid action was received from the client in a request. The action specified in the request was *P1* .

System Action:

The request is rejected.

User Action:

Contact your System Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

IPDS7304

Error opening DD " P1" VSAM dataset or no member name specified

Reason:

The file identified by P1 could not be opened for input as the file is either a partitioned dataset (PDS) with no member name specified or is a VSAM dataset.

System Action:

Request is rejected.

User Action:

Check that you have specified the correct dataset name.

IPDS7305

P1 lines retrieved from P2

Reason:

TCP/IP Services successfully read *P1* lines in the dataset *P2* .

System Action:

None.

User Action:

None.

IPDS7306**P1 lines saved in P2****Reason:**

TCP/IP Services successfully saved *P1* lines in the dataset *P2* .

System Action:

None.

User Action:

None.

IPDS7309**" P1" already exists in the dataset and REPLACE is set to "NO"****Reason:**

The member name *P1* already exists in the nominated dataset name but REPLACE=NO was specified.

System Action:

The field is highlighted as an error.

User Action:

Either specify REPLACE=YES or change the member name.

IPDS7310**P1 opened successfully****Reason:**

TCP/IP Services successfully opened the dataset *P1* .

System Action:

None.

User Action:

None.

IPDV3201

VARIABLE P1 ERROR ZFDBK= P2 KEY= P3

Reason:

The device links diagram display encountered an internal error while processing a variable.

P1 was the variable action being attempted

P2 was the feedback code

P3 was the key (if relevant)

System Action:

The diagram is not displayed

User Action:

Determine the cause of the error and retry.

IPDV3202

ACTION NOT SUPPORTED BY P1

Reason:

You requested an action on an object displayed on a device links diagram. The requested action is not supported by that object.

P1 is the name of the object.

System Action:

None.

User Action:

Correct the action request, or retry on another object.

IPDV3203

MDO ACTION FAILED, MDORC= P1 MDOFDBK= P2

Reason:

An MDO assignment failed. The MDORC was *P1* the MDOFDBK value was *P2*

System Action:

The action terminates.

User Action:

Refer to the NCL user reference for details of the codes.

IPDV3204**NO ACTIONS AVAILABLE FOR SELECTION****Reason:**

There are no actions that can be performed on your selection.

System Action:

None.

User Action:

None.

IPEE0101**Enterprise Extender is not active (XCA Major Node not found)****Reason:**

The Enterprise Extender XCA Major Node was not found. Some possible causes are:

- No XCA Major Node is defined with MEDIUM=HPRIP
- The XCA Major Node is not activated
- There is a problem with issuing VTAM display commands

System Action:

None

User Action:

If the Enterprise Extender XCA Major Node is active use the following command to diagnose the problem. \$IPEE01H TRACE=YES CLASS=EE ATTR=NODENAME ACTION=END

IPEE0102

No response from VTAM command

Reason:

An unexpected response was received from a VTAM command used to diagnose Enterprise Extender.

System Action:

The requested action does not complete successfully.

User Action:

Use the following commands to diagnose the problem. \$IPEE01H TRACE=YES
CLASS=EE ATTR=NODENAME ACTION=FIND \$IPEE01H TRACE=YES
CLASS=EE ATTR=SESSION ACTION=GET NAME=xcaNodeName

IPEE0103

P1 is not an active Enterprise Extender XCA Major Node

Reason:

The supplied XCA major node name is not a valid Enterprise Extender node. Possible causes are that the XCA major node name is not:

- The name of an active XCA Major Node
- Defined with MEDIUM=HPRIP

System Action:

The requested action does not complete successfully.

User Action:

Ensure that the supplied XCA Major Node name is correct and that the node has been activated before using the Enterprise Extender diagnosis commands.

IPEE0104**Node P1 is not active or is not an Enterprise Extender XCA major node****Reason:**

A request to display Enterprise Extender information failed because either the XCA major node is not active or the wrong node name was supplied.

System Action:

The request fails.

User Action:

If Enterprise Extender is active, determine the correct XCA major node name and retry.

IPEE0105**Stack P1 is inactive****Reason:**

A request for information about the Enterprise Extender port failed because the started task P1 for the TCP/IP stack is not active.

System Action:

The request fails.

User Action:

Verify that the started task is active, and retry the request.

IPEE0106**No Enterprise Extender lines are active****Reason:**

The Enterprise Extender XCA Major Node has been activated but there are no active lines.

System Action:

None

User Action:

None

IPEE0107

No Enterprise Extender sessions match the supplied filter

Reason:

Filter criteria such as line name, line status or remote IP address was supplied on a request to display Enterprise Extender session information. No sessions matched the criteria.

System Action:

None

User Action:

None

IPEE0108

Error accessing UDP details. NMIFR API returned RC=*P1* FDBK=*P2*

Reason:

This is an internal failure.

An attempt to retrieve UDP port details has failed. *P1* is the return code, and *P2* is the feedback code.

For RC=12, some possible feedback code values are as follows:

1 indicates that a NEXT request was rejected with no outstanding GET request.

2 indicates that failure occurred while preparing an MDO.

3 indicates that failure occurred while assigning an MDO.

4 indicates that failure occurred while connecting to a map.

5 indicates that the subtask processing this request abended.

6 indicates that this region is not authorized.

7 indicates that loading of the API module EZBNMIFR failed during initialization.

8 indicates that the interface was disabled due to excessive number of abends.

10 indicates that region shutdown is in progress.

System Action:

The request is rejected.

User Action:

Contact Technical Support.

IPEE0109**EZBNMIFR Get UDP failed. RC=*P1* Reason=*P2*****Reason:**

An attempt to retrieve UDP connection details from IBM's EZBNMIFR API failed. *P1* is the return code (errno), and *P2* is the reason code (errnojr).

System Action:

The request is rejected.

User Action:

Contact Technical Support.

IPEE0110**Stack *P1* is inactive****Reason:**

You attempted an EE action on the *P1* stack, but the stack is not active.

System Action:

The action fails.

User Action:

Check the status of the stack.

If the stack is active, check that the SOLVE SSI PAEESTACK parameter is specified correctly. PAEESTACK must match the JOBNAME of the stack that is providing EE services.

IPEE0111**Stack *P1* is not the EE stack****Reason:**

You attempted an EE action for stack *P1* but the stack is not the EE stack.

System Action:

The action fails.

User Action:

Supply the correct stackname.

IPEE0112

You are not licensed for EE management.

Reason:

Your product does not support the TCP/IP EE Management functions.

System Action:

The request is rejected.

User Action:

Contact Technical Support.

IPEE0201

EE traffic protected by IPSec is not included in these statistics

Reason:

The Packet Analyzer has determined that IPSec is used on this system. If any EE traffic is protected by IPSec, that traffic is not included in these statistics.

System Action:

None.

User Action:

None.

IPEE1103

Start of EE performance monitoring failed, refer to log

Reason:

A request to update Enterprise Extender performance monitoring was successful but the monitoring could not be restarted. A message indicating the reason for the failure was written to the activity log.

System Action:

The monitoring definition is updated but current monitoring does not reflect the changes made.

User Action:

Review the message preceding this message in the activity log to determine the cause of the problem.

IPEE1201**VTAM level *P1* does not support this function****Reason:**

The VTAM level indicated by *P1* does not support the requested function. For an EE Connectivity Test, the DISPLAY NET,EEDIAG,TEST=YES is not supported by VTAM levels less than z/OS 1.8.

System Action:

None.

User Action:

None.

IPEE1202**Resource *P1* not active****Reason:**

VTAM message IST1203I was returned for a D EEDIAG,TEST=YES,ID= *P1* . The PU is no longer active.

System Action:

None.

User Action:

Press F3 (Exit) to return to the Enterprise Extender Management panel and press F6 (Refresh) to refresh the display.

IPEE1302**EE traffic protected by IPSec is not included in these statistics****Reason:**

The Packet Analyzer has determined that IPSec is used on this system. The content of the IPSec traffic cannot be determined. If the content includes EE data, the protected EE traffic is not included in these statistics.

System Action:

None.

User Action:

None.

IPEE1401

No items to display for *p1*

Reason:

The EE traffic category *P1* did not have any items for which statistics were collected. This may indicate that no EE activity has been detected or that the TCP/IP stack identified to the Packet Analyzer SSI is not correct and no statistics for EE are being gathered.

System Action:

No items are display in the EE traffic explorer list.

User Action:

If the EE stack has not been correctly specified in the SSI then determine the correct stack that is enabled for EE traffic and specify it in the SSI's startup parameters.

IPEE1402

EE traffic protected by IPSec is not included in these statistics

Reason:

The Packet Analyzer has determined that IPSec is used by this stack. The content of the IPSec traffic cannot be determined. If the content includes EE data, the protected EE traffic is not included in these statistics.

System Action:

None.

User Action:

None.

IPEE3402**EEDIAG Warning: Connectivity not successful for *P1* interfaces****Reason:**

The EEDIAG,TEST=YES detected interfaces for which Enterprise Extender connectivity failed.

System Action:

None.

User Action:

Review the Connectivity Test results and determine if the unsuccessful interfaces are an indication of a network error condition.

IPEE3403**EEDIAG Failed: Connectivity not successful****Reason:**

The EEDIAG,TEST=YES failed for all interfaces with a route to the destination host.

System Action:

None.

User Action:

Review the Connectivity Test results to determine the cause of the failure.

For a time-out condition where all intermediate hops have responded, take the following actions:

- Verify that Enterprise Extender is active at the destination host.
- Verify that the Enterprise Extender implementation supports the LDLC probe used by EEDIAG,TEST=YES.

For a time-out condition where not all intermediate hops responded or where some ports have responded OK, review the firewall configuration of the last successful hop.

IPEE3404

No actions available for this line

Reason:

There are no actions that can be performed on your selection. There is no remote host associated with the selected line.

System Action:

The selection in error is highlighted.

User Action:

Blank the highlighted selection.

IPEE3405

EEDIAG Rejected: Connectivity test conflicts with a test in progress

Reason:

The EEDIAG,TEST=YES command was rejected by VTAM with an IST2142I message indicating that a test for the same local and remote IP address combination is currently in progress.

System Action:

The test request is rejected.

User Action:

Retry the request at a later time.

Press F4 (EEDiag) to determine if VTAM has test requests in progress.

IPEE3406**EEDIAG Rejected: EE Connection PU *P1* is not active****Reason:**

The EEDIAG,TEST=YES command was specified using NAME= *P1* and this PU is not active.

System Action:

The test request is rejected.

User Action:

Press F6 to retry the request using the IP address of the remote host.

On return to the EE Major Node Summary press F6 to refresh the display. Inactive PUs are displayed in blue.

IPEE3407**No EE remote hosts found****Reason:**

A request to perform an EE connectivity test cannot proceed because there is no remote host (CP) currently connected to EE.

System Action:

None.

User Action:

To perform a connectivity test to a specific remote host, enter the host name or address in the 'Remote Host Name/Addr' field on the /EE menu.

To check the overall status of EE, display the EE XCA Major Node Summary (/EEXCA).

IPEE3408

EEDIAG Failed: Connectivity not successful. IPSec may be in use.

Reason:

The EEDIAG,TEST=YES failed for all interfaces with a route to the destination host. However, Packet Analyzer has seen IPSec traffic for the remote address. If EE traffic is IPSec-protected, EEDIAG TEST=YES does not work.

System Action:

None.

User Action:

If the link is IPSec-protected, the connectivity test is not useful. Use the /IPSEC menu options to check on the status of the tunnel used by the EE Link.

If IPSec is not in use, review the Connectivity Test results to determine the cause of the failure.

For a time-out condition where all intermediate hops have responded, take the following actions:

- Verify that Enterprise Extender is active at the destination host.
- Verify that the Enterprise Extender implementation supports the LDLC probe used by EEDIAG,TEST=YES.

For a time-out condition where not all intermediate hops responded or where some ports have responded OK, review the firewall configuration of the last successful hop.

IPFA0101**No traffic statistics found for *p1*****Reason:**

An attempt to display traffic statistics for the *p1* address space failed. The Packet Analyzer has seen no packets to or from the monitored ports for this resource in the last hour.

System Action:

None.

User Action:

Determine what ports are being monitored for this address space. From /IPMON, enter *UM* against the address space name to view the values in the TCP Port(s), UDP Port(s), and Associated STACK Jobname fields. Update the values if necessary, and retry the operation.

If the resource definition is correct, check the status of the address space.

IPFA0201**Packet Analyzer statistics not available****Reason:**

The SSI is currently running with PALEVEL set to NOPACKETS or NOSTATS. Packet statistics are only available when PALEVEL is FULL.

System Action:

No packet statistics are displayed.

User Action:

Check why the SSI is not running with the parameter *PALEVEL=FULL*

When including Packet Analyzer functions in an SSI, it is recommended to always set the PALEVEL parameter to FULL. If you run with a level other than FULL, various IP monitoring functions will not be available.

Only use a PALEVEL other than FULL if instructed by Technical Support.

IPFA0202

Packet Analyzer scan exceeded time limit

Reason:

A Packet Analyzer scan must complete within 60 seconds so that record data is consistent. The current scan exceeded 60 seconds and has been terminated.

System Action:

The scan is terminated prior to completion.

User Action:

This message may indicate that the system is very busy, and that the requesting region or SSI region is not running with a sufficiently high priority to process requests in a timely manner. Retry the action when the system is less busy. If this condition persists, contact Technical Support.

IPFA0203

Unable to identify ports for P1 in stack P2

Reason:

An attempt to display traffic statistics for resource *P1* failed. The ports for *P1* could not be determined from stack *P2* (which is the associated stack named in the *P1* definition).

System Action:

None.

User Action:

Check that status of stack *P2* . The stack may be inactive or not processing onetstat requests.

IPFA0204**Packet Analyzer scan aborted due to excessive data****Reason:**

A Packet Analyzer scan to generate IP summary data has returned an excessive amount of data. Processing has been aborted so as not to use excessive system resources.

System Action:

Processing terminates and no summary data is available. Processing is retried on demand after a delay of at least four minutes.

User Action:

This message may occur on a busy system, and will usually self-correct. If this condition persists, contact Technical Support.

IPFA0401**No P1 traffic statistics found****Reason:**

An attempt to display *P1* traffic statistics failed. No *P1* statistics were returned from the Packet Analyzer.

System Action:

None.

User Action:

Check the status of the stack.

IPFA0402

No EE traffic statistics found. IPSec may be in use.

Reason:

An attempt to display EE traffic statistics failed. No EE statistics were returned from the Packet Analyzer. However, the packet analyzer has seen IPSec traffic on this stack. This may include EE traffic. No IPSec-protected traffic is included in the statistics.

System Action:

None.

User Action:

If IPSEC is being used for EE traffic, this option is not useful.

IPFA0403

EE traffic protected by IPSec is not included in these statistics

Reason:

The Packet Analyzer has determined that IPSec is used by this stack. The content of the IPSec traffic cannot be determined. If the content includes EE data, the protected EE traffic is not included in these statistics.

System Action:

None.

User Action:

None.

IPFM2100

Invalid SMF record: P1

Reason:

The received SMF record is of an unexpected record type, *P1* , or structure. Supported SMF record types are 119 and 130.

System Action:

The record is ignored.

User Action:

If the situation persists, contact Technical Support.

IPFM2102**FTP logon failed for P1 at P2 server P3 reason P4****Reason:**

An FTP logon failed for a user:

P1 is the user ID of the failed login attempt.

P2 is the IP address of the connection.

P3 is the FTP task name of the FTP server.

P4 is the Login Failure code:

01 - Password invalid

02 - Password expired

03 - User ID has been revoked

04 - User does not have server access

05 - FTPCHKPWD User exit rejected login

06 - Excessive bad passwords

07 - Group ID process failed

08 - User ID is unknown

System Action:

IPFM2103**FTP P1 by P2 at P3 DSN P4 P5 bytes in P6 seconds P7 bytes/sec server P8****Reason:**

An FTP server action completed.

P1 is the action performed: RETR=retrieved, STOR=stored, APPE=appended

P2 is the user performing the action

P3 is the IP address of the connection

P4 is the name of the dataset affected

P5 is the number of bytes transmitted

P6 is the number of seconds taken by the transaction

P7 is the number of bytes per second transmitted in the transaction

P8 is the task name of the FTP server.

System Action:

None.

User Action:

None.

IPFM2104

FTP DELETE by P1 at P2 DSN P3 server P4

Reason:

An FTP server delete completed.
P1 is the user performing the delete
P2 is the IP address of the connection
P3 is the name of the dataset deleted
P4 is the task name of the FTP server

System Action:

None.

User Action:

None.

IPFM2105

FTP RENAME by P1 at P2 from DSN P3 to DSN P4 server P5

Reason:

An FTP server rename completed.
P1 is the user performing the rename
P2 is the IP address of the connection
P3 is the old name of the dataset
P4 is the new name of the dataset
P5 is the task name of the FTP server

System Action:

None.

User Action:

None.

IPFM2113

FTP P1 by P2 at P3 failed. Last reply P4 DSN P5 P6 bytes in P7 seconds server P8

Reason:

An FTP server action has completed but the action failed.

P1 is the action performed: RETR=retrieved, STOR=stored, APPE=appended

P2 is the user performing the action

P3 is the IP address of the connection

P4 is the last reply code. These are documented in RFC959.

P5 is the name of the dataset affected

P6 is the number of bytes transmitted

P7 is the number of seconds taken by the transaction

P8 is the task name of the FTP server.

System Action:

None.

User Action:

None.

IPFM2114

FTP DELETE by P1 at P2 failed. Last reply P3 DSN P4 server P5

Reason:

An FTP server delete has completed but the delete failed.

P1 is the user performing the delete

P2 is the IP address of the connection

P3 is the last reply code. These are documented in RFC959.

P4 is the name of the dataset deleted

P5 is the task name of the FTP server

System Action:

None.

User Action:

None.

IPFM2115

FTP RENAME by P1 at P2 failed. Last reply P3 from DSN P4 to DSN P5 server P6

Reason:

An FTP server rename completed but the rename failed.
P1 is the user performing the rename
P2 is the IP address of the connection
P3 is the Last reply code. These are documented in RFC959
P4 is the old name of the dataset
P5 is the new name of the dataset
P6 is the task name of the FTP server

System Action:

None.

User Action:

IPFM2129

Client FTP P1 by P2 at P3 failed. Last reply P4 DSN P5 P6 bytes in P7 seconds

Reason:

An FTP client action has completed but the action failed.

P1 is the action performed: RETR=retrieved, STOR=stored, APPE=appended.

P2 is the user performing the action.

P3 is the IP address of the connection.

P4 is the last reply code. Refer to the note below.

P5 is the name of the dataset affected.

P6 is the number of bytes transmitted.

P7 is the number of seconds taken by the transaction.

The last reply code (P4) is the value set in bytes 28-31 of the FTP Client SMF record, as described in the appendices to the OS/390 Communications Server IP Configuration manual. A value of 0 or 2nn represents a successful transmission (and will cause message IPFM2123 to be issued rather than this message). Other values are as set by the TCP/IP stack.

System Action:

IPFM2199

ID= P1 - P2

Reason:

The message displays an FTP transfer event trace record. *P1* is the trace ID and *P2* is the trace text.

System Action:

None.

User Action:

Contact Technical Support.

IPFM2201**An incomplete FTP Exit event received, event status: *P1*****Reason:**

An incomplete FTP event has been received from the FTP Post Processing Exit (FTPOSTPR). The event status is as follows:

8 - One or more fields truncated.

16 - One or more fields missing.

System Action:

A hexadecimal dump of the event is written to the activity log. The event is discarded.

User Action:

Contact Technical Support.

IPFM2299**ID=*P1* - *P2*****Reason:**

This message displays an FTP transfer event trace record. *P1* is the trace ID and *P2* is the trace text.

System Action:

None.

User Action:

Contact Technical Support.

IPFO0101***P1* must be a number with no sign or decimal point****Reason:**

The field must contain either zero or a positive integer.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the field value and retry.

IPFO0102

P1 is not a valid member name or member mask

Reason:

An invalid value *P1* was specified as a member name/mask.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the member name and retry. Valid member mask characters are:

'*' - match any character

'?' - match one character

IPFO0104

Required field omitted

Reason:

No data was entered in a mandatory field.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Enter a valid value in the field.

IPFT3701

Vartable P1 error FDBK= P2 key= P3

Reason:

The FTP connection diagram display utility encountered an internal error while processing a vartable.

P1 was the vartable action being attempted

P2 was the feedback code

P3 was the key (if relevant)

System Action:

The diagram is not displayed

User Action:

Determine the cause of the error and retry.

IPFT3702**Action not supported by P1****Reason:**

You requested an action on an object displayed on an FTP connection diagram. The requested action is not supported by that object. *P1* is the name of the object.

System Action:

None

User Action:

Correct the action request, or retry on another object.

IPFT3703**MDO action failed, MDORC= P1 MDOFDBK= P2****Reason:**

An MDO assignment failed. The MDORC was *P1* the MDOFDBK value was *P2*

System Action:

The action terminates.

User Action:

Refer to the NCL User Reference for details of the codes.

IPFT3704**Drop requested for connection from P1 to local port P2 by userid P3****Reason:**

User P3 has issued a command to drop the connection to local port P2 from the P1 IP connection.

System Action:

None.

User Action:

None.

IPFT3705

SocketMgmt action not supported by P1

Reason:

You requested a CICS SocketMgmt action on an object that is not a CICS region. The requested action is not supported by that object.
P1 is the name of the object.

System Action:

None

User Action:

Correct the action request, or retry on another object.

IPGP0602

Abend in data collection procedure - see the Activity Log

Reason:

The procedure which collects data for the display has abended. No connection data is available.

System Action:

No data is collected. This message, plus messages IPGP0603 and IPGP0604 are written to the Activity Log detailing the error.

User Action:

Contact your product supplier.

IPGP0603

ABEND TEXT: P1

Reason:

This message follows IPGP0602, issued as a result of a procedure abending, supplying the error text (*P1*). The message is followed by IPGP0604 which supplies additional details.

System Action:

Refer to message IPGP0602.

User Action:

Refer to message IPGP0602.

IPGP0604

**ABEND DETAILS: LINE= P1 COND= P2 STMT= P3 KEYWORD= P4
NAME= P5 VAR= P6**

Reason:

This message follows IPGP0602 and IPGP0603, issued as a result of a procedure abending, supplying the specific error details:

LINE= **P1** - the line number in the source code

COND= **P2** - the error condition

STMT= **P3** - the statement name (verb name)

KEYWORD= **P4** - the keyword name (operand name)

NAME= **P5** - the name specification

VAR= **P6** - the variable name causing the error

System Action:

Refer to message IPGP0602.

User Action:

Refer to message IPGP0602.

IPGP0605**Selection criteria not supported by region P1****Reason:**

An attempt to list connections using a remote backlevel CA NetMaster region failed because the remote region does not support the selection criteria specified.

The remote region is linked to this region in Migration Mode. This type of linkage is used during migration to a new release level.

System Action:

Processing terminates.

User Action:

Upgrade the remote region to the latest release level.

IPGP0606

P1 criteria not supported

Reason:

An attempt to list connections for a stack failed because the stack is TCPaccess. Criteria *P1* only applies to IBM stacks.

System Action:

Processing terminates.

User Action:

Change the selection criteria to remove criteria *P1*.

IPGP0607

P1 list not supported for TCPaccess stacks

Reason:

An attempt to produce a *P1* list for a stack failed because the stack is a CA TCPaccess CS stack. *P1* lists are supported for IBM stacks only.

System Action:

Processing terminates.

User Action:

None.

IPGP0699

MDO size P1 exceeds 32K

Reason:

The procedure which collects data for the display has created a Mapped Data Object (MDO) that exceeds the system limit of 32K.

System Action:

No data is collected.

User Action:

This is an internal error. Contact your product supplier.

IPGP1202**IPv6 socket support not enabled on *P1*****Reason:**

You attempted a Ping or TraceRoute action against an IPv6 address on region *P1*. The action failed because the sockets API on region *P1* supports IPv4 addresses only.

System Action:

The request is rejected.

User Action:

Check the SOCKETS parameter group (/PARMS) on region *P1*. For IPv6 support, the TCP/IP Software Type must specify IBMV6.

IPGP1203**Address and Source Address must be the same IP version****Reason:**

You attempted a Ping or TraceRoute action, specifying a source address. The action failed because the address to ping or traceroute is not the same IP version as the Source Address.

System Action:

The request is rejected.

User Action:

Correct the request and retry.

IPGP1204**ADDRESS P1 IS NOT AVAILABLE ON THE LOCAL HOST****Reason:**

The address identified by *P1* was not available on the local host. This may have been because a network broadcast address was given.

System Action:

None.

User Action:

Correct the entry and retry the operation. If the address is valid, contact your local support representative.

IPGP1206

NO RESPONSE TO PING REQUEST FROM HOST: P1

Reason:

The TCP/IP socket interface did not receive a normal response to the PING from the host identified by *P1* .

This error normally occurs if the host specified is either incorrect or unreachable. However it may also occur if the packet size requested exceeds the maximum transmission unit (MTU) size for the first hop.

System Action:

An error message is returned to the user.

User Action:

Check the host name is a valid host name and retry. If you have specified a packet size, try reducing the size. Check also that the route to the host is available and the host is active. A TRACERTE command may be useful in determining the point where routing fails.

IPGP1207

SOCKET ERROR during P5, RC= P1 FDBK= P2 ERROR= P3 VERRIN= P4

Reason:

The TCP/IP socket interface procedure \$IPGP12H failed because a TCP/IP socket operation failed. The Return Code from the &SOCKET call is *P1* , the Feedback Code is *P2* and the Socket Error is *P3* .

P4 is the vendor-specific error information. The failing socket request was *P5* .

System Action:

Procedure \$IPGP12H terminates. Control is returned to the NCL procedure which executed \$IPGP12H.

User Action:

Contact your System Administrator.

IPGP1208

MDO ERROR, MDO= P1, MAP= P2, MDORC= P3, MDOFDBK= P4

Reason:

An MDO error occurred. The MDO is identified by *P1* the map name by *P2* the MDO return code by *P3* and the feedback code is *P4* .

System Action:

The procedure terminates.

User Action:

Contact your System Administrator.

IPGP1209

P1 FAILED. PERMISSION DENIED FOR ADDRESS: P2

Reason:

The attempted action failed because the request was denied.

System Action:

None.

User Action:

Communications Server Systems: Ensure the user ID associated with this address space is defined as a superuser (UID(0)) to UNIX system services.

IPGP1210

REQUIRED PARAMETER MISSING FOR COMMAND P1

Reason:

The TCP/IP socket interface procedure \$IPGP12H failed because a required parameter was omitted from the call to \$IPGP12H in the command *P1* .

System Action:

The request is rejected and procedure \$IPGP12H terminates. Control is returned to the NCL procedure which executed \$IPGP12H.

User Action:

Contact your System Administrator.

IPGP1211

MDO ASSIGN ERROR - MAP P1 NOT FOUND

Reason:

An &ASSIGN operation failed because the ASN1 map identified by *P1* could not be found.

System Action:

None.

User Action:

Contact your System Administrator.

IPGP1212

PING P1 (P2): P3

Reason:

A call was made to perform a PING on the host identified by *P1* with the IP address *P2* . The value *P3* is a compound of the minimum, average and maximum values delimited by the '/' character if the PING request was successful, else the value NO RESPONSE is returned.

System Action:

None.

User Action:

The message is informational.

IPGP1213

P1 PACKETS TRANSMITTED, P2 RECEIVED, P3 % PACKET LOSS

Reason:

A PING was requested for a host. The number of packets sent is *P1* . The number of packets received is *P2* . The overall packet loss is indicated by *P3* .

System Action:

None.

User Action:

The message is informational.

IPGP1214**HOSTNAME: P1 ADDRESS: P2****Reason:**

A LOOKUP was requested for hostname *P1* which has IP Address *P2* .

System Action:

None.

User Action:

The message is informational.

IPGP1215**ROUND-TRIP MIN/AVG/MAX = P1 MS****Reason:**

A PING has been requested and the Minumum, Average and Maximum trip times in milliseconds are returned concatenated with a space between the values.

System Action:

None.

User Action:

The message is informational.

IPGP1216**P1 BYTES FROM P2 ICMP_SEQ= P3 TIME= P4 MS****Reason:**

A PING request has been made which has returned values of *P1* bytes sent from host *P2* which took *P4* milliseconds. The sequence number is *P3* .

System Action:

None.

User Action:

The message is informational.

IPGP1218

Unable to find entry for: P1

Reason:

A call was made to perform a name lookup on the host identified by *P1* . No entry could be found for this host.

System Action:

None.

User Action:

None.

IPGP1219

TIMEOUT FOR P1 ICMP_SEQ= P2

Reason:

A PING request has timed out for host *P1* . The sequence number is *P2* .

System Action:

None.

User Action:

The message is informational.

IPGP1220

DEVICE NAME : P1

Reason:

The message forms part of the returned responses from the TRACEROUTE command.

System Action:

None.

User Action:

None.

IPGP1221**DEVICE ADDRESS : P1****Reason:**

The message forms part of the returned responses from the TRACEROUTE command.

System Action:

IPGP1222**PACKET SIZE : P1****Reason:**

The message forms part of the returned responses from the TRACEROUTE command.

System Action:

None.

User Action:

None.

IPGP1223

HOP RESOURCE NAME IP ADDRESS ROUND TRIP TIME NOTES

Reason:

This message forms part of the returned responses from the TRACEROUTE command and provides column headings for subsequent IPGP1225 messages, each of which represent one hop along the path to the target host.

The number of columns for Round Trip Time is determined by the value specified for the keyword parameter COUNT (default:3). Round trip times appear in milliseconds.

The Notes column provides the following information about the monitored status of the hop address:

MON - The address is defined to the IP Node Monitor but there are no outstanding alerts.

ALERT - The address is defined to the IP Node Monitor and has one or more outstanding alerts.

System Action:

None.

User Action:

None.

IPGP1224**HOP RESOURCE NAME IP ADDRESS ROUND TRIP TIME NOTES****Reason:**

This message forms part of the returned responses from the TRACEROUTE command and provides column headings for subsequent IPGP1225 messages, each of which represent one hop on the path to the target host.

The number of columns for Round Trip Time is determined by the value specified for the keyword parameter COUNT (default:3). Round trip times appear in milliseconds.

The Notes column provides the following information about the monitored status of the hop address:

MON - The address is defined to the IP Node Monitor but there are no outstanding alerts.

ALERT - The address is defined to the IP Node Monitor and has one or more outstanding alerts.

System Action:

None.

User Action:

None.

IPGP1225**P1****Reason:**

The message forms part of the returned responses from the TRACEROUTE command. Refer to message IPGP1223 for a description of the fields displayed.

System Action:

None.

User Action:

None.

IPGP1227

CANNOT RESOLVE HOSTNAME: P1

Reason:

A call was made to perform a PING on the host identified by *P1* . No entry could be found for this host.

System Action:

None.

User Action:

None.

IPGP1229

TRACEROUTE ERROR: P1

Reason:

A call was made to perform a TRACEROUTE on host identified in message IPGP1220 or IPGP1221 resulted in the error indicated by *P1*.

System Action:

None.

User Action:

None.

IPGP1232

SOCKET OPERATION REQUIRES DESTINATION ADDRESS

Reason:

No destination address was specified for the socket operation.

System Action:

None.

User Action:

Contact your local support representative.

IPGP1233**OPERATION FAILED - DESTINATION NETWORK UNREACHABLE****Reason:**

The socket operation failed because the destination network was unreachable.

System Action:

None.

User Action:

Determine the cause and retry the operation.

IPGP1234**OPERATION FAILED - DESTINATION HOST DOWN****Reason:**

The socket operation failed because the destination host was down.

System Action:

None.

User Action:

Determine the cause and retry the operation.

IPGP1235**OPERATION FAILED - DESTINATION HOST UNREACHABLE****Reason:**

The socket operation failed because the destination host was unreachable.

System Action:

None.

User Action:

Determine the cause and retry the operation.

IPGP1236

OPERATION FAILED - SUBTASK TERMINATED

Reason:

The socket operation failed because the TCP/IP stack subtask abended.

System Action:

None.

User Action:

Contact your System Administrator.

IPGP1237

OPERATION FAILED - INTERFACE NOT ACTIVE

Reason:

The socket operation failed because the TCP/IP sockets interface is not available.

System Action:

None.

User Action:

Contact your region administrator and ensure that the SOCKETS parameter group successfully activated the TCP/IP Interface. The following message should appear in the log:

N3B201 TCPIP START COMPLETE

Note: If the failing request is for an Enterprise Extender connection and the SOCKETS interface is not using the same stack as VTAM, you need to issue a TCPIP START with PRI=NO to define a secondary SOCKETS interface that is using the same stack as VTAM.

IPGP1238**APPC STATE ERROR - P1, REQUEST TERMINATED****Reason:**

An asynchronous request using APPC has been terminated due to a state error.

System Action:

The request terminates.

User Action:

Report the error to your product support representative.

IPGP1239**PING DESTINATION SPECIFIED IS INVALID. VENDOR-SPECIFIC ERROR CODE= P1****Reason:**

The IP address or remote node name specified for the PING operation is invalid. PING is only available to individual IP hosts. This error will occur if, for example, you specify the IP address of a network.
P1 is the vendor-specific error code.

System Action:

The PING operation cannot be performed.

User Action:

Correct the IP address or node name and retry the Ping.

IPGP1240

DNR on *P1* does not support resolution to IPv6 addresses

Reason:

You tried to perform a name lookup specifying ADDRTYPE=6. This is not valid on system *P1* because it is using IBM's DNR and it does not have IPv6 sockets support enabled.

System Action:

The request is rejected.

User Action:

Remove the ADDRTYPE=6 operand. Alternatively, use the /PARMS shortcut on region *P1* and review the values in the SOCKETS Customizer parameter group.

IPGP1299

END

Reason:

This message indicates the end of returned messages.

System Action:

None.

User Action:

None.

IPGP3101

Invalid keyword value specified, &P1=&P2

Reason:

The call to the procedure failed because the keyword identified by *P1* had an invalid value, identified by *P2*.

System Action:

The request is rejected.

User Action:

Contact your system administrator.

IPGP3102**Unable to determine CHPID for device P1. P2****Reason:**

An attempt to extract the Channel Path ID for device *P1* has failed. The reason is provided in *P2*. Possible reasons for failure are: DEVINFO RC=aa bb aa is the DEVINFO verb return code, bb is the FDBK. DEVINFO returned multiple CHPIDs more than one CHPID value was returned for the device.

System Action:

The request is rejected.

User Action:

Contact your System Administrator.

IPGP3109**Packet trace started with P1****Reason:**

A Packet Trace request has been issued using a VARY TCPIP command. The command operands used were *P1*.

System Action:

None.

User Action:

None.

IPGP3110**Packet trace stopped with ' P1'****Reason:**

A Packet Trace request has been issued using a VARY TCPIP command. The command operands used were *P1* .

IPGP3120

Unknown port mnemonic P1 - request rejected

Reason:

The port mnemonic identified by *P1* is not known.

System Action:

The request is rejected.

User Action:

Contact your System Administrator.

IPGP3198

VARY TCPIP processing completed. Errors detected - see log.

Reason:

A VARY TCPIP command was issued. The messages returned by TCPIP indicate that an error was detected.

System Action:

The messages returned by the VARY TCPIP command are written to the activity log.

User Action:

Refer to the activity log for the messages returned.

IPGP3199

VARY TCPIP processing completed.

Reason:

A VARY TCPIP command was issued to process the request. No errors were detected.

System Action:

The VARY TCPIP messages are written to the Activity Log.

User Action:

None.

IPGP3601

No P1 to display

Reason:

A list of TCP/IP entities was requested, but none are defined to the system. *P1* is the type of entity requested, one of:

TCP/IP Stacks - IBM and TCPaccess stacks

Telnet Servers - IBM and TCPaccess stacks, channel cards, routers

Links` - Region links, channel cards, routers

System Action:

No list is displayed.

User Action:

None.

IPGP6312

Monitor Group ' P1' successfully created

Reason:

A request to create a new monitor group has completed successfully.

System Action:

IPGP9901**ABEND in procedure P1. Refer to Activity Log on link name= P2****Reason:**

The indicated procedure (*P1*) has abended whilst running on the region indicated by the INMC link name (*P2*).

System Action:

This message, plus messages IPGP9902 and IPGP9903, are written to the Activity Log that details the error.

Note: This message is displayed on the panel of the local region domain. However the problem may have occurred when the procedure was executed on a remote region. The entire group of messages are written to the Activity Log on the system where the procedure was actually executed as indicated in the message (*P2*).

User Action:

Contact your product supplier.

IPGP9902**ABEND text: P1****Reason:**

This message follows IPGP9901 that was issued as a result of a procedure abending. This message supplies the error text (*P1*) and is followed by IPGP9903 which supplies additional details.

System Action:

Refer to message IPGP9901.

User Action:

Refer to message IPGP9901.

IPGP9903

ABEND details: LINE= P1 COND= P2 STMT= P3 KEYWORD= P4 NAME= P5 VAR= P6

Reason:

This message follows IPGP9901 and IPGP9902 that were issued as a result of a procedure abending. This message supplies the specific error details:

LINE= P1 - The line number in the source code

COND= P2 - The error condition

STMT= P3 - *The* statement name (verb name)

KEYWORD= P4 - The keyword name (operand name)

NAME= P5 - The name specification

VAR= P6 - The variable name causing the error

System Action:

Refer to message IPGP9901.

User Action:

Refer to message IPGP9901.

IPGP9911

Error: CLAW Subchannel (ESCON) support incorrectly installed.

Reason:

An attempt to connect to one of the ASN1 maps required for the CLAW Subchannel (ESCON) support has failed.

System Action:

The CLAW Subchannel List is unavailable. Attributes associated with CLAW Subchannel data are not included in the CMCC Resource List.

User Action:

Check that all maintenance regarding CLAW Subchannel (ESCON) has been installed correctly. Ensure that APARs relating to ASN1 maps have been applied and that the ASN1 maps have been compiled as instructed in the APAR(s) comments.

IPGTPK01**Trace: *p1*****Reason:**

This generic trace message is produced by IP Growth Tracker.

System Action:

Other trace messages can be written to the activity log as IP Growth Tracker processing continues.

User Action:

None.

IPGTPK02**Packet Analyzer statistics are not available****Reason:**

The IP Growth Tracker was attempting to collect statistics from the Packet Analyzer, but no Packet Analyzer record was returned. This may be due to the Packet Analyzer's SSI region not running.

System Action:

The IP Growth Tracker terminates the statistics collection process.

User Action:

Check to see whether the Packet Analyzer SSI region is running and statistics collection is enabled.

IPGTPK03**IP Growth Tracker statistics collection starting****Reason:**

The IP Growth Tracker statistics collection process has started.

System Action:

The IP Growth Tracker continues to collect statistics.

User Action:

None.

IPGTPK04

IP Growth Tracker statistics collection has ended

Reason:

The IP Growth Tracker statistics collection process has ended.

System Action:

The IP Growth Tracker has finished collecting statistics.

User Action:

None.

IPGTPK05

The IP Growth Tracker shutdown listener is already running

Reason:

An IP Growth Tracker shutdown listener was started; however, a listener is already running.

System Action:

The second shutdown listener terminates.

User Action:

Do not start an IP Growth Tracker shutdown listener if one is already running.

IPGTPK06

Could not access *p1* records

Reason:

The IP Growth Tracker statistics collector could not access the Packet Analyzer records indicated by *p1*, such as:

STK - Stack records

IPR - IP protocol records

System Action:

The IP Growth Tracker continues processing, but statistics is not calculated for the indicated records.

User Action:

Investigate whether there are any problems with the Packet Analyzer or SOLVE SSI that is causing record access to fail.

IPGTPK07**IP Growth Tracker found no records matching your criteria****Reason:**

The IP Growth Tracker web page was requested with criteria that resulted in no records being returned.

System Action:

The IP Growth Tracker web page displays this message.

User Action:

If a day-based timeframe was requested then no day records were found in the database matching the specified range. This may be caused by the IP Growth Tracker never having collected statistics, or the day statistics are too recent for the specified timeframe. Check again in 24 hours.

If a month-based timeframe was requested then no month records were found in the database. This is because the IP Growth Tracker has never rolled up day records into month records. Check again in a month's time.

If a year-based timeframe was requested then no year records were found in the database. This is because the IP Growth Tracker has never rolled up month records into year records. Check again next year.

IPGTPK08**Packet Analyzer statistics not available****Reason:**

The SSI is currently running with PALEVEL set to NOPACKETS or NOSTATS. Packet statistics are only available when PALEVEL is FULL.

System Action:

No packet statistics are displayed.

User Action:

Check why the SSI is not running with the parameter *PALEVEL=FULL*.

When including Packet Analyzer functions in an SSI, we recommend that you always set the PALEVEL parameter to FULL. If you run with a level other than FULL, various IP monitoring functions are not available.

Only use a PALEVEL other than FULL if instructed by Technical Support.

IPGTPK09

IP Growth Tracker charts require the installation of Sun's JRE

Reason:

The charts displayed on the IP Growth Tracker web page are Java applets and therefore require a Java Runtime Environment (JRE) in order to display their data. This message is displayed after 15 seconds if no JRE has been detected.

System Action:

The IP Growth Tracker charts are not displayed.

User Action:

If a Java Runtime Environment is already installed for your browser then click Refresh to reload the web page. A delay while loading may have prevented the JRE from initializing within 15 seconds.

If you are using a 32-bit browser then an auto-download and install of the JRE may have been initiated. Reload the page once the installation has completed.

If you are using a 64-bit browser then you will need to install the JRE manually. Go to <http://java.sun.com> and navigate to downloads where you can choose an appropriate JRE to install.

IPIF0102

No interfaces found in MIB table for P1

Reason:

A request to sample interface statistics failed because the IF-MIB table contained no entries. *P1* is the name of the TCP/IP stack.

System Action:

Sampling for the period is not performed.

User Action:

Check the contents of the MIB table for the stack. This can be done by using the 'MIB' command against the stack, selecting IF-MIB, and reviewing the ifTable and ifXtable contents.

IPIF0103**Unable to determine home address for stack *P1*****Reason:**

A request to sample interface statistics for stack *P1* failed because the stack's home address could not be determined.

System Action:

Interface sampling for the period is not performed.

User Action:

From Command Entry, enter **SELFTEST** and check for errors related to the socket interface. If no errors are reported, issue a Netstat command to the stack to check whether there is a problem with the Netstat interface.

For assistance, contact Technical Support.

IPIF0201**No Interfaces found for *P1*****Reason:**

A request to sample interface statistics failed because the interfaces could not be accessed. *P1* is the address of the TCP/IP stack.

System Action:

Sampling for the period is not performed.

User Action:

Check the log for related messages that will indicated the reason for the error. The most likely cause of the error would be a community name (other than 'public') not being specified. If this is the case specify the correct community name for the stack in the SNMP Community List of the TCP/IP Administration Menu.

IPIF0203

Stack *P1* not known to packet analyzer

Reason:

The interface workload monitoring procedure found stack *P1* to be unknown to the Packet Analyzer.

The most likely cause is that this is a CA TCPaccess stack that does not have the requisite level of maintenance for Packet Analyzer support.

System Action:

The interface workload attributes sourced from the Packet Analyzer are not sampled.

User Action:

Do the following:

- For CA TCPaccess stacks, see the Installation Guide for more information about the required maintenance.
- Check for Packet Analyzer error messages in the JESMSG output of the SOLVE SSI region.
- Ensure that the stack is initialized correctly.
- If the z/OS version or release has recently been upgraded, the Packet Analyzer may require a fix to support the new level.

If the cause of the problem is not apparent, contact Technical Support.

IPIF0204

Interface workload monitoring returned: *P1*

Reason:

An attempt to perform interface workload monitoring returned *P1* while attempting to access interface information from the packet analyzer.

System Action:

Attributes sourced from the packet analyzer are not sampled.

User Action:

See message *P1* for more information.

IPIF0205**Packet Analyzer interface statistics not available****Reason:**

Interface workload monitoring has queried the Packet Analyzer in the SSI and found that it is currently not collecting statistics. Packet statistics are collected only when the SSI is running with PALEVEL=FULL.

System Action:

None of the interface attributes sourced from the Packet Analyzer are available.

User Action:

Check why the SSI is not running with the parameter *PALEVEL=FULL*.

When including Packet Analyzer functions in an SSI, it is recommended to always set the PALEVEL parameter to FULL. If you run with a level other than FULL, various IP monitoring functions will not be available.

Only use a PALEVEL other than FULL if instructed by Technical Support.

IPIF1701**UNSUPPORTED VALUE SPECIFIED, KEYWORD= P1, VALUE= P2****Reason:**

The Interface list processor was passed an unsupported value for the parameter *P1* - the unsupported value was *P2* .

System Action:

The list processing stops.

User Action:

Contact your local System Administrator.

IPIF1702

UNSUPPORTED OPTION

Reason:

An unsupported option was entered on the Interface list.

System Action:

None.

User Action:

Correct the option and retry - the supported actions are shown on the 4th line of the screen.

IPIF1704

MDO ACTION FAILED, MDORC= P1, MDOFDBK= P2

Reason:

An MDO assignment failed. The MDORC was *P1* and the MDOFDBK value was *P2* .

System Action:

The action terminates.

User Action:

Refer to the NCL Reference for details of the codes.

IPIM7801

UNSUPPORTED CALLTYPE P1

Reason:

The call to the procedure failed because the call type *P1* is not supported.

System Action:

The request is rejected.

User Action:

Contact your System Administrator.

IPINIT01**TCP/IP migration started****Reason:**

\$IPINIT was run during system initialization. Any values specified as parameters to \$IPINIT are loaded as defaults.

System Action:

Records values specified on \$IPINIT.

User Action:

Remove \$IPINIT execution from your initialization procedure.

IPINIT02**NetMaster for TCP/IP initialization complete****Reason:**

The initialization process completed successfully.

System Action:

None.

User Action:

None.

IPINIT03**\$IPINIT is no longer supported****Reason:**

The \$IPINIT command was executed but it is only used for migrating initialization values from SOLVE:Netmaster for TCP/IP V1.1 systems.

System Action:

\$IPINIT terminates.

User Action:

None.

IPINIT04

Error: not licensed for P1

Reason:

The initialization of NetMaster for TCP/IP requires the feature *P1* which is not licensed or is excluded from this system.

System Action:

Initialization terminates.

User Action:

Obtain a feature license or include the feature on this system.

IPINIT05

Invalid parameter syntax:

Reason:

The initialization of NetMaster for TCP/IP failed because \$IPINIT was called with incorrect parameter syntax. This message is followed by another message detailing the nature of the error.

System Action:

Initialization terminates.

User Action:

Correct the parameter specification and retry.

IPINIT06

Invalid value for keyword= P1 value= P2

Reason:

The initialization of NetMaster for TCP/IP failed because \$IPINIT was called with an incorrect parameter value. The parameter specified in error is *P1* and *P2* is the unacceptable value.

System Action:

Initialization terminates.

User Action:

Correct the parameter specification and retry.

IPINIT07**TCP/IP interface failed to start****Reason:**

The initialization of NetMaster for TCP/IP could not start the TCP/IP interface. This message is preceded in the log by messages which detail the error.

System Action:

Initialization continues.

User Action:

Determine the cause of the error and retry.

IPINIT08**Failed to allocate DD P1:****Reason:**

The initialization of NetMaster for TCP/IP could not allocate the *P1* DD. This message is followed by a message which details the error.

System Action:

Initialization continues.

User Action:

Determine the cause of the error and retry.

IPINIT09**NetMaster for TCP/IP parameter settings:****Reason:**

The initialization of NetMaster for TCP/IP set the values of the parameters listed in the messages to follow.

System Action:

Parameter settings are displayed.

User Action:

None

IPINIT10

Parameter &P1=&P2

Reason:

The initialization of NetMaster for TCP/IP set the value of the parameter *P1* to the value *P2*

System Action:

None.

User Action:

None.

IPINIT11

Invalid value for P1= P2 DSORG is P3 (must be PS)

Reason:

The initialization of NetMaster for TCP/IP detected an incorrect DSORG for a specified dataset.

P1 is the parameter specified.

P2 is the dataset name.

P3 is the DSORG of that dataset.

System Action:

Initialization terminates.

User Action:

Specify a dataset which has a DSORG of PS and retry.

IPINIT12

Failed to allocate DSN P1:

Reason:

The initialization of NetMaster for TCP/IP could not allocate the *P1* DSN. This message is followed by a message which details the error.

System Action:

Initialization fails.

User Action:

Determine the cause of the error and retry.

IPINWI02**Unable to find dataset for DD name P1****Reason:**

The initialization for TCP/IP tried to allocate a dataset to the DD name *P1*. No suitable datasets could be found.

System Action:

The DD is not allocated.

User Action:

Specify a valid dataset name that exists.

IPINWI03**Unable to allocate dataset P1 as DD P2****Reason:**

Initialization failed to allocate a dataset *P1* with the DD name *P2* .

System Action:

The DD is not allocated. Processing continues.

User Action:

Enter a valid dataset name for the dataset required.

IPINWI04**Error opening P1 - not a VSAM file****Reason:**

TCP/IP Services initialization tried to open a dataset for VSAM processing however the file is not VSAM. *P1* is the dataset name.

System Action:

The file is not opened.

User Action:

Specify a valid VSAM dataset and action the parameter group again.

IPINWI05

Error initializing P1 - Action= P2 ID= P3 Retcode= P4

Reason:

An error occurred during the initialization of the *P1* function. The action in error is *P2*, The object that had the error is *P3*, and the return code is *P4*.

System Action:

Initialization is incomplete.

User Action:

Refer to your system administrator. Check the system log for further information.

IPINWI06

DD name P1 allocated to P2

Reason:

The DD name *P1* was successfully allocated and opened using dataset name *P2*.

System Action:

None.

User Action:

None.

IPINWI20

IPLOG P1 in progress since P2 P3

Reason:

IPLOG is undergoing database maintenance which requires exclusive control. No further action is possible.

System Action:

Request is rejected.

User Action:

Retry later.

IPINWI21***p1* Ports set to: *p2*****Reason:**

The list of ports associated with the *p1* protocol has been set to *p2*. SmartTrace uses the *p1* protocol to decode the packets to and from these ports.

System Action:

None.

User Action:

None.

IPINWI26**Global variable *P1* set to *P2*****Reason:**

The global variable *P1* was set to the value *P2* .

System Action:

None.

User Action:

None.

IPINWI27**Invalid Trace Expiry time. Must be between 00:02 and 99:59****Reason:**

The value you provided is not a valid value for Trace Expiry.

System Action:

Field is set in error.

User Action:

Specify a valid value.

IPISPK01

User ID *P1* is not authorized for ipsec *P2* functions

Reason:

Access to the IP Security *P2* facility has not been granted by your site's security system.

System Action:

Access to the selected IP Security function is denied.

User Action:

Contact your security administrator.

IPISPK02

IPSec security check failed for user id *P1*. Security is not implemented

Reason:

Verification by your external security system failed. A SAF VERIFY check on user ID *P1* resulted in SAF RC=4 and security system RC=4. This probably indicates that one of the following SERVAUTH class resources is not defined:

- EZB.IPSECCMD.*sysname.stackname*.DISPLAY
- EZB.IPSECCMD.*sysname.stackname*.CONTROL

System Action:

Access to the selected IP Security function is denied.

User Action:

Contact your security administrator.

IPISPK03**IPSec security check failed. User *P1* is unknown or revoked.****Reason:**

Verification by your external security system has failed. A SAF VERIFY check on user ID *P1* has resulted in SAF RC=8 and security system RC=28 (x'1C'), indicating that user access is revoked.

System Action:

Access to the selected IP Security function is denied.

User Action:

Contact your security administrator.

IPISPK04**IPSec security access failure****Reason:**

A SAF call to verify access to the IPSec facility failed with an unexpected error. This message is written to the activity log together with messages IPISPK05 and IPISPK06 which contain more information about the failure.

System Action:

Access to the selected IP Security function is denied.

User Action:

Review the messages in the activity log.

Contact your security administrator.

IPISPK05

SAF Parameters: *P1*

Reason:

This message is part of a message set that is written to the activity log when an unexpected SAF resource check error occurs. The message shows the parameter string that was passed to the SAF program, NM022.

System Action:

Access to the selected IP Security function is denied.

User Action:

See messages IPISPK04 and IPISPK06.

IPISPK06

SAF response: REQ=P1 SAFRC=P2 SECRC=P3 SECREAS=P4

Reason:

This message is part of a message set that is written to the activity log when an unexpected SAF resource check error occurs. The message shows the response details returned by the SAF program, NM022.

REQ=P1 is the RACROUTE REQUEST=operand

SAFRC=P2 is the SAF (RACROUTE) return code (R15)

SECRC=P3 is the security system return code

SECREAS=P4 is the security system reason code

For more information about the RACROUTE request macros, and the associated return codes and reason codes, see the (IBM) RACF System Macros manual. The most common SAFRC/SECRC combinations are:

04 PROGRAM ACTIVATION FAILURE

04 Program not APF-authorized

08 Invalid parameter

0C Missing parameter

10 Parameters inconsistent

08 SAF INTERFACE FAILURE

SAF/RACROUTE return codes:

04 Requested function was not processed

08 Requested function was processed, but failed

12 ACCESS VERIFICATION FAILURE

RACROUTE REQUEST=VERIFY return codes:

04 No security profile defined

08 Password invalid

0C Password expired

10 New password invalid

14 Group definition is missing

18 Security exit denied access

1C User temporarily revoked

20 Security system not active

24 Access to group is revoked

?? Others as per specific security subsystem

16 ACCESS AUTHORIZATION FAILURE

RACROUTE REQUEST=AUTH return codes:

04 Resource is not security protected

08 Resource access not allowed

99 NO ENTRY PARAMETERS

System Action:

Access to the selected IP Security function is denied.

User Action:

Contact your security administrator. Use the error codes and messages provided above to investigate the cause of the error. You also need:

- The SAF RACROUTE macro documentation
- The messages and codes documentation for your external security system (CA ACF2, CA Top Secret, or RACF)

Ensure that the region is running from an authorized load library. Ensure that your external SAF security system is active.

Ensure that your security administrator has set up SAF security for use with this region correctly.

IPISPK07

SAF Interface error: P1

Reason:

An error has occurred calling the SAF program, NM022. *P1* describes the error.

System Action:

Access to the selected IP Security function is denied.

User Action:

This is an internal error that should be reported to your product supplier.

IPISPK08**IP Traffic Test cancelled****Reason:**

The process to set up an IP Traffic test is cancelled.

System Action:

None.

User Action:

None.

IPISPK09**P1 of tunnel P2 canceled****Reason:**

An action against a tunnel has been canceled by the user.

System Action:

None.

User Action:

None.

IPIS0201**No tunnels associated with this filter****Reason:**

The 'T' action was entered against an IP filter with no associated tunnelId, or with an associated tunnelId of 'Y0'.

System Action:

The request is rejected

User Action:

Chose a different filter, with a valid tunnelId

IPIS0301

No dynamic tunnels associated with this IKE tunnel

Reason:

The 'T' action was entered against an IKE tunnel. No dynamic tunnels were found for this tunnel.

System Action:

The request is rejected

User Action:

None.

IPIS0601

P1 not found

Reason:

No details for the requested tunnel or filter were returned from IPSECNMI, or the tunnel or filter could not be uniquely identified.

System Action:

The request fails.

User Action:

Press F6 to refresh the list of filters or tunnels.

IPIS1201

IPSECNMI request failed, USS *P1*: RetVal=*P2* Retcode=*P3* Reason=*P4*

Reason:

An IPSECNMI request to SOLVE SSI failed with a USS error.

P1 is the USS function name, for example, BPX1CON, BPX1SND, or BPX1RCV.

P2 is the USS return value.

P3 is the USS return code.

P4 is the USS reason code.

System Action:

The request fails.

User Action:

Use the USS return and reason codes to determine the cause of the error. Check the SOLVE SSI log and IKED daemon output for other error messages. For assistance, contact Technical Support.

IPIS1202

IPSECNMI request failed, NMI RC=*P1* Reason=*P2*

Reason:

The IPSECNMI interface between SOLVE SSI and the IKE daemon has terminated in error.

P1 is the IPSECNMI return code from the termination call.

P2 is the IPSECNMI reason code from the termination call.

System Action:

The request fails.

User Action:

Use the return and reason codes to determine the error. Typically, return and reason codes of zero indicate an orderly shutdown of the interface.

IPIS1203

IPSECNMI request failed: *P1*

Reason:

An IPSECNMI request issued from the SOLVE SSI has failed. *P1* is the failure reason from the IPSECNMI call.

System Action:

The request fails.

User Action:

Contact Technical Support.

IPIS1204**SSI *P1* on *P2* not contactable or IPSECNMI not configured****Reason:**

An IPSECNMI request to the SOLVE SSI failed because the SSI region cannot be contacted or does not include support for IPSECNMI.

The SSID (*P1*) and system (*P2*) identify the SSI region where the request is issued.

This message corresponds to EPS error numbers 39 and 70.

System Action:

The request fails.

User Action:

Check the following in the region running on *P2*:

1. Ensure that the region is connected to the SOLVE SSI. To do this, display the list of Customizer parameter groups (/PARMS) and select the SSI group (from the INTERFACES section). Ensure that the SSID is specified and is the correct value. Display the parameter group's initialization log (Ilog). Update and action the parameter group, as required.
2. Display the activity log and check for other SSI-related error messages and action these accordingly.
3. Ensure that the SSI initialization parameters include support for IPSECNMI. To do this, display the SSIPARMS member in the SOLVE SSI region's JCL library. Ensure that IPSECNMI=YES is specified.

Note: In order to use IPSECNMI, the user ID associated with your SOLVE SSI region must be authorized for IBM's Network Management API. See the product Installation Guide for details.

4. Check the SOLVE SSI's SSILOG to ensure that IPSECNMI started successfully.

IPIS1205

Request timed out on SSID=*P1*, system=*P2*

Reason:

An IPSECNMI request to SOLVE SSI did not complete in a reasonable time. The SSID (*P1*) and system (*P2*) identify the SOLVE SSI region where the request is issued.

System Action:

The request fails.

User Action:

Check the SOLVE SSI log and IKED daemon output for error messages, which can help you determine the cause of the problem. For assistance, contact Technical Support.

IPIS1206

EPS *P1* error. Errno=*P2* Reason=*P3*

Reason:

An EPS request to the IPSECNMI function in the SOLVE SSI has failed. The message includes the following details:

P1 is the EPS request type, for example, Connect, Send, Receive.

P2 is the EPS error number.

P3 is an explanation of the EPS error number.

System Action:

The request fails.

User Action:

Use the EPS Error Number and Reason to determine the error:

70 No SSI Connection

This indicates that the connection between this region and the SSI region is not active. Use the \$LOG command to check the activity log for related messages.

Use the \$NM SSI Customizer parameter group to restart the SOLVE SSI.

For all other errors, contact Technical Support.

IPIS1207**IPSECNMI *P1* failed. Rc=*P2* Reason=*P3*****Reason:**

An IPSECNMI request has failed. The type of request is shown in *P1*. *P2* is the return code (NMsmRc) and *P3* is the reason code (NMsmRsn).

System Action:

The request is rejected.

User Action:

For an explanation of the return and reason code, see IBM's *Communication Server IP Programmer's Guide and Reference* manual.

If the resolution of the problem is not evident, contact Technical Support.

IPIS1208**Stack *P1* is not configured for IP security****Reason:**

The selected stack is not configured with the IPCONFIG IPSECURITY statement.

System Action:

The request is rejected.

User Action:

Select a stack that is configured for IP Security.

IPIS1209**Tunnel *P1 P2*****Reason:**

The selected tunnel has been activated or inactivated, as requested.

System Action:

None.

User Action:

None.

IPIS1210

Tunnel *P1* not found

Reason:

A request to activate, inactivate or refresh a tunnel has failed, because the tunnel was not found.

System Action:

The request failed.

User Action:

Press F6=Refresh on the list of tunnels to ensure the list is up to date.

IPIS1211

Tunnel *P1* is already *P2*

Reason:

A request to activate or inactivate a tunnel did not proceed, because the tunnel is already in the state requested.

System Action:

The request is not executed.

User Action:

None.

IPIS1212

P1* of tunnel *P2* failed. *P3

Reason:

An action request *P1* against tunnel *P2* has failed. *P3* is the failure reason.

System Action:

The request fails.

User Action:

Contact Technical Support.
