Allocation for the variable named P3 with scope P4 of type P2 was unsuccessful. FDBK P1 was returned.

System Action:

The Icon Manager terminates.

User Action:

Resolve the reason for the variable allocation failure. This may be that the region is short of storage and it may be necessary to restart the region with more storage.

RMIM0002**RECURSIVE PANEL PATH. ICON(P1) POINTING TO PANEL(P2)****Reason:**

A panel path has been invoked in which the ICON (Resource Group) known as *P1* points to the PANEL *P2* which has either been referenced earlier in the path or which contains the ICON (Resource Group) identified by *P1*

System Action:

Entry to the Graphical Monitor is denied as this sort of recursive path leads to excessive CPU usage and degradation of performance.

User Action:

Locate where the recursion occurs in the path and correct the situation and retry.

RMIM0101**Call <P1> is invalid****Reason:**

You invoked the Icon Manager Service procedure with invalid parameters identified by *P1*.

System Action:

The Icon Manager Service procedure terminates.

User Action:

These are internal calls and should not provide invalid parameters. Contact Technical Support.

RMIM0102

Panel name(*P1*) is invalid

Reason:

You invoked the Icon Manager Service procedure to resolve the icons in an icon panel, but the name of the panel, identified by *P1*, is not a valid panel name.

System Action:

The Icon Manager Service procedure terminates.

User Action:

Correct the source of the invalid panel name. It may be stored in a user's profile.

RMIM0103

Panel(*P1*) does not exist in panel library(*P2*)

Reason:

You invoked the Icon Manager Service procedure to resolve the icons in the icon panel identified by *P1* but the panel cannot be read from the panel library identified by *P2*.

System Action:

The Icon Manager Service procedure terminates.

User Action:

Ensure that the region has initialized without errors. The most likely cause of this error is that the ICOPANL data set is not allocated.

RMINIT01

LOAD STARTED FOR SYSTEM *P1* VERSION *P2*

Reason:

The System Image *P1* of version *P2* is being loaded as the current system.

System Action:

None.

User Action:

None.

RMINIT02**MULTI-SYSTEM REGISTRATION TABLE ALLOCATED****Reason:**

The registration table used to support multiple systems was successfully allocated.

System Action:

None.

User Action:

None.

RMINIT03**STATUS TABLE LOAD COMPLETED****Reason:**

The status table was successfully loaded.

System Action:

None.

User Action:

None.

RMINIT04**STATUS TABLE LOAD FAILED****Reason:**

The loading of the status table failed. See associated message(s) for the reason.

System Action:

System load terminates.

User Action:

See the associated messages and correct the error indicated by these messages.

RMINIT05

INITIALIZING APPC LINK MANAGERS

Reason:

The processes that manage APPC communication sessions with this system are being started and initialized.

System Action:

None.

User Action:

None.

RMINIT06

STARTING LONG RUNNING PROCESSES

Reason:

The various SSO long running processes which manage message traffic and event flows are being started and initialized.

System Action:

None.

User Action:

None.

RMINIT07

INITIALIZATION FAILED FOR BACKGROUND PROCESS P1

Reason:

The long running background process *P1* failed to initialize.

System Action:

Load of the system fails.

User Action:

See the associated messages for the reason that the process failed.

RMINIT08**BACKGROUND PROCESS P1 INITIALIZED SUCCESSFULLY****Reason:**

The long running background process *P1* successfully initialized.

System Action:

None.

User Action:

None.

RMINIT09**INITIALIZATION FAILED FOR LONG RUNNING PROCESSES****Reason:**

The action of starting and initializing all the required long running background process failed.

System Action:

System load fails.

User Action:

See the associated messages.

RMINIT10**STARTING THE AVAILABILITY STATISTICS MONITOR PROCESS****Reason:**

The Availability Statistics Monitor is being started in the background.

System Action:

None.

User Action:

None.

RMINIT11

SYSTEM IMAGE STARTUP PROCESS STARTED

Reason:

The process responsible for Starting all the resources of the current System Image is being started.

System Action:

None.

User Action:

None.

RMINIT12

CONSOLE CONSOLIDATION INITIALIZATION FAILED

Reason:

Initialization of Console Consolidation processing failed.

System Action:

System load fails.

User Action:

See the associated messages for the reason.

RMINIT13

STARTING CONSOLE CONSOLIDATION ISR MANAGER PROCESS

Reason:

The Console Consolidation ISR link manager process is being started.

System Action:

None.

User Action:

None.

RMINIT14**INVALID COMMAND****Reason:**

An invalid command was entered.

System Action:

The command is rejected.

User Action:

Specify a valid command.

RMINIT15**LOAD COMPLETED****Reason:**

The system image load has completed.

System Action:

None.

User Action:

None.

RMINIT16**SYSTEM LOAD REJECTED, ALREADY IN PROGRESS (P1)****Reason:**

An request to load a new system image was rejected because there is already a system load in progress. The currently running load was started at P1.

System Action:

Request rejected.

User Action:

None.

RMINIT17

MONITOR PROCESS ALREADY INITIALIZED

Reason:

The system load process detected that the monitor process was already running. This is normal, the process will not be restarted.

System Action:

None.

User Action:

None.

RMINIT18

RETRYING COMPONENTS THAT ARE NOT INITIALIZED

Reason:

The system load process had previously been unsuccessful with the initialization of some components which are not critical but which resulted in a load status of WARNING. This message indicates that a user has initiated a Retry request in order to initialize these components.

System Action:

None.

User Action:

None.

RMINIT19

RETRY ISSUED

Reason:

A request to retry the initialization of non-critical components was issued.

System Action:

None.

User Action:

Wait for subsequent messages, which indicate the results of the request.

RMINIT20**RETRY FAILED****Reason:**

An attempt to initialize non-critical components failed.

System Action:

Initialization remains in the warning state.

User Action:

Determine the reason for the errors and retry the request.

RMINIT21**RETRY COMPLETED SUCCESSFULLY****Reason:**

An attempt to initialize non-critical components completed successfully and the components are now initialized.

System Action:

None.

User Action:

None.

RMINIT22**LOAD OF SYSTEM P1 VERSION P2 COMPLETED****Reason:**

The load of System Image *P1* with Version *P2* has completed.

System Action:

None.

User Action:

None.

RMINIT23

INITIALIZATION FAILED FOR PROCESS P1, PROCESS P2

Reason:

The long running background process *P1* failed to initialize. The reason is *P2*. If the reason is ended then the process prematurely ended before notifying the loader.

System Action:

Load of the system fails.

User Action:

See the associated messages (also in the activity log) for the reason that the process failed.

RMINIT24

SYSNAME(P1) VERSION(P2) NOT FOUND IN DATABASE - USING P3

Reason:

A system image load was requested but the supplied system image name was not found in the database.

System Action:

A dummy system image is loaded.

User Action:

Load a valid system image.

RMINIT25

SYSNAME(P1) VERSION(P2) IS ACTIVE ON A LINKED REGION - USING P3

Reason:

A system image load was requested but the supplied system image name is the active system image on a linked region.

System Action:

A dummy system image is loaded.

User Action:

Load a different system image on this region or the linked region, or unlink the regions and retry.

RMINIT26**TEMPLATE SYSTEM IMAGE VERSION (P1) DOES NOT EXIST****Reason:**

The indicated Template System Image Version does not exist in the RAMDB. System load cannot proceed without a valid Template System Image Version.

System Action:

System load fails.

User Action:

Update ICS parameter member OPSYSIDS with a valid Template System Image Version.

RMINIT27**STARTING MONITORS FOR DATA SAMPLING FRAMEWORK****Reason:**

The monitors defined to the Data Sampling Framework are being started in the background.

System Action:

None.

User Action:

None.

RMINLO01**SERVICE PROCEDURE ~P1 INVOKED WITH INVALID KEYWORD
~P2(~P3)****Reason:**

The service procedure identified by P1 was invoked with an invalid value for the keyword identified by P2 of P3.

System Action:

Request rejected

User Action:

Correct the keyword value and re-try

RMINLO02

NO LOG RECORDS FOUND

Reason:

There were no records in the log.

System Action:

None

User Action:

None

RMINLO03

RECORD LIMIT EXCEEDED. UNABLE TO VIEW ALL LOG RECORDS

Reason:

There were more than 9999 log records.

System Action:

The first 9999 log records will be displayed.

User Action:

None

RMINW100

P1 EXCLUDED OR NOT LICENSED ON THIS CPU

Reason:

The feature or features *P1* are either excluded or not licensed for this CPU.

System Action:

Function is terminated.

User Action:

Contact your Systems Administrator.

RMINWI01**P1 IS REQUIRED****Reason:**

The field *P1* is required and must not be null.

System Action:

Field is set in error.

User Action:

Specify a value for *P1*.

RMINWI02**P1 IS REQUIRED IF P2 IS P3****Reason:**

The field *P1* is required when the value of field *P2* is *P3* .

System Action:

Field is set in error.

User Action:

Specify a value for *P1* .

RMINWI03**P1 REQUIRED IF P2 SPECIFIED****Reason:**

The field *P1* is required if the field *P2* is specified.

System Action:

Field is set in error.

User Action:

Specify a value for *P1* or blank out the value for *P2* .

RMINWI04

INVALID JES SYSTEM TYPE, SPECIFY P1

Reason:

An invalid job entry subsystem was specified. The only valid job entry subsystems are:

- For MVS: JES2 or JES3 - For MSP: JES - For VOS3: JSS3 or JSS4

System Action:

Field is set in error.

User Action:

Specify a valid value.

RMINWI05

INVALID CHARACTER P1, SPECIFY ONE OF P2

Reason:

The specified character, *P1* , is invalid. Specify one of the characters in *P2* .

System Action:

The field in error is highlighted.

User Action:

Specify a valid character.

RMINWI06

P1 MUST BE DIFFERENT TO P2

Reason:

The field *P1* must have a different value to the field *P2* .

System Action:

Field is set in error.

User Action:

Specify different values for *P1* and *P2* .

RMINWI07**INVALID P1 TYPE, MUST BE GLOBAL OR LOCAL****Reason:**

The *P1* type specified was invalid. The only valid values are GLOBAL or LOCAL. *P1* will be either JES3 or JSS4.

System Action:

Field is set in error.

User Action:

Specify either GLOBAL or LOCAL.

RMINWI08**MUST BE NO IF P1 IS NO****Reason:**

The field must have the value NO if the field *P1* is NO.

System Action:

Field is set in error.

User Action:

Specify NO for the field or specify YES for *P1* .

RMINWI09**PPO procedure name must be \$RSPPOPR****Reason:**

This region is configured with the NetMaster Automation product that requires the \$RSPPOPR PPO procedure.

System Action:

The parameter group fails.

User Action:

Either specify the correct PPO procedure name, or clear the field for it to default to the required value.

RMINWI10

INVALID VALUE, MUST BE ACTIVE OR INACTIVE

Reason:

The field contains an invalid value. The only valid values are ACTIVE or INACTIVE.

System Action:

Field is set in error.

User Action:

Specify either ACTIVE or INACTIVE.

RMINWI11

INVALID VALUE, FORMAT: *n-m* (*n* & *m* ARE NUMERIC IN RANGE 1-128)

Reason:

The field contains an invalid value. The field must be in the format *n-m*, where *n* and *m* are both numeric and in the range 1 to 128. Also *n* must be less than or equal to *m*. For example 17-128.

System Action:

Field is set in error.

User Action:

Specify a valid range.

RMINWI12

INVALID VALUE, FORMAT: *n,n,n:m* (*n* and *m* ARE NUMERIC IN RANGE 1-128)

Reason:

The field contains an invalid value. The field must be in the format *n,n,n:m* where *n* and *m* are numeric and in the range 1 to 128. For example 1,2,8:12,29,36:123

System Action:

Field is set in error.

User Action:

Specify a valid series of route codes.

RMINWI13**INVALID VALUE, MUST BE SMFID OR NMDID****Reason:**

The field contains an invalid value. The only valid values are SMFID or NMDID.

System Action:

Field is set in error.

User Action:

Specify either SMFID or NMDID.

RMINWI14**AOMPROC FAILED TO INITIALIZE****Reason:**

The AOMPROC was started and did not return an indication that it had successfully initialized within the time allowed.

System Action:

The parameter group fails.

User Action:

Determine the reason the AOMPROC failed or did not issue a notification.

RMINWI16

CANNOT CHANGE P1, AOM IS CURRENTLY P2

Reason:

The parameter *P1* could not be changed because AOM is currently in a status which does not allow the altering of this parameter. The current status of AOM is *P2* . AOM must be inactive to action this parameter. *P1* gives the name of the parameter and in parentheses the current value.

System Action:

Parameter is not set.

User Action:

Save the parameters value and it will become effective at next startup or stop AOM, set the parameter and then restart AOM.

Warning: Stopping AOM will affect the functioning of the system. No messages will be received, no automation will be taken and the resource status changes will be lost. You will need to reload the system image.

RMINWI17

INVALID VALUE, MUST BE AUTOMATED OR MANUAL

Reason:

The field contains an invalid value. The only valid values are AUTOMATED or MANUAL.

System Action:

Field is set in error.

User Action:

Specify either AUTOMATED or MANUAL.

RMINWI18**INVALID VALUE, MUST BE 0 OR BETWEEN 128 AND 255****Reason:**

The field contains an invalid value. The only valid values are 0 or a number between 128 and 255.

System Action:

Field is set in error.

User Action:

Specify either 0 or a number between 128 and 255.

RMINWI19**MINIMUM FOR P1 IS 00.10****Reason:**

The field contains an invalid value. The field must be greater than or equal to 10 minutes (00.10) and less than 24 hours (ie less than or equal to 23.59).

System Action:

Field is set in error.

User Action:

Specify a time interval between 00.10 and 23.59.

RMINWI20**AOMGNUM P1 SET TO " P2"****Reason:**

The AOM global number variable *P1* was set to the value *P2*.

System Action:

None.

User Action:

None.

RMINWI21

(P1) P2

Reason:

This is an informational message which describes an NDB error code.

System Action:

None.

User Action:

See related messages.

RMINWI22

NDB FILE IS NOT VALID FOR THIS VERSION OF THE PRODUCT

Reason:

The NDB specified was invalid because the NDB was not defined for the current version.

System Action:

The RAMDB is not allocated.

User Action:

Specify a valid RAMDB.

RMINWI23

P1 MUST BE GREATER THAN P2

Reason:

The value for field *P1* must be greater than the value specified for field *P2*.

System Action:

Field is set in error.

User Action:

Specify a higher value for *P1* or a lower value for *P2*.

RMINWI24**P1 MUST BE A VALID NUMERIC IP ADDRESS****Reason:**

The value for field *P1* must be a valid IP address in numeric form.
AAA.BBB.CCC.DDD where AAA, BBB, CCC, DDD are numbers less than 256.

System Action:

Field is set in error.

User Action:

Specify a proper numeric format IP address for *P1*.

RMINWI25**P1 = NO WAS SPECIFIED. FURTHER WSPEER PARAMETERS IGNORED****Reason:**

The value for field *P1* was specified as NO, and thus no further WSPEER parameters were processed.

System Action:

None.

User Action:

If you wish to use a Workstation peer system, then change the setting of the field to YES, and specify all of the other parameters correctly. Otherwise this message can be ignored.

RMINWI26**SYSTEM IMAGE IS ALREADY ACTIVE ON REGION P1****Reason:**

The selected System Image cannot be loaded on this region because it is active on a linked region.

System Action:

Field is set in error.

User Action:

Select another System Image.

RMINWI27

NULL IP ADDRESS DETECTED IN WSPEER CUSTOMIZATION PARMS

Reason:

The value for the IP address in the WSPEER customization parms was found to be null.

System Action:

WSPEER parameter processing is terminated.

User Action:

Specify a proper numeric format IP address in the WSPEER customization parameters. If WSPEER processing is not required, set the 'Workstation peer in use' field to NO.

RMINWI31

TEMPLATE SYSTEM IMAGE VERSION (P1) INVALID FOR P2

Reason:

The Template System Image Version specified is not valid for the JES identified by *P2*.

System Action:

The field is highlighted and a message is displayed to the user.

User Action:

Correct the Template System Image Version entered in the field.

RMINWI33

INVALID VALUE, MUST BE YES OR NO

Reason:

The field contains an invalid value. The only valid values are YES or NO.

System Action:

Field is set in error.

User Action:

Specify either YES or NO.

RMINWI34**PPO procedure failed to initialize****Reason:**

The PPOPROC was started and did not return an indication that it had successfully initialized within the time allowed.

System Action:

The parameter group fails.

User Action:

Determine the reason the PPOPROC failed. Use the \$LOG command to access the activity log. Look for any messages that indicate that the procedure has ended, either normally or as a result of an abend.

RMINWI36**SCREENING TABLE STORAGE EXCEEDED BY P1 BYTES, CONSOLE CONSOLIDATION DISABLED****Reason:**

There is insufficient storage to load all the console consolidation message profiles.

System Action:

Console consolidation profiles are unloaded and the screening table activation is reattempted.

User Action:

Reduce the amount of storage needed by the console consolidation profiles by:

- inactivating unused profiles
- reducing the size (complexity) of the profiles

Reactivate the profiles from the customization parameter for console consolidation (CCONSOLIDATN).

RMINWI37

***Warning* One or more Background Users have not been defined for this region.**

Reason:

Background user IDs must be defined to execute the procedure that operates the product. If they are not defined, the product may not operate correctly.

System Action:

Processing continues.

User Action:

From a session with UAMS authority, run procedure \$NMUAINI with no arguments to generate the background user IDs. Then go to /BCAST.L and delete this broadcast message or it will be retained until the region is stopped.

RMINWI38

The \$NMUAINI procedure has either failed to add the Background User IDs,

Reason:

See message RMINWI37.

System Action:

See message RMINWI37.

User Action:

See message RMINWI37.

RMINWI39

or the NMSUP security user prefix has changed.

Reason:

See message RMINWI37.

System Action:

See message RMINWI37.

User Action:

See message RMINWI37.

RMINWI40

Refer to the LOGnn DD for your started task for details.

Reason:

See message RMINWI37.

System Action:

See message RMINWI37.

User Action:

See message RMINWI37.

RMINWI41**P1 DOES NOT EXIST AND YOU ARE NOT AUTHORIZED FOR USER MAINTENANCE****Reason:**

To activate the use of the Workstation Peer, the Workstation Peer User ID must be defined in this system. P1 is the Workstation Peer User ID and it does not exist. The system wanted to create *it* automatically for you but you are not authorized for UAMS maintenance access and hence the request was not attempted.

System Action:

Validation for this parameter group fails.

User Action:

Either obtain the required authority to perform user maintenance or ask a suitably authorized user to update this parameter group. You can also ask a suitably authorized user to run the following procedure to automatically define the required user ID. Run this procedure from OCS:
\$RMUAINI ACTION=DEFINE NAME=WSPU

RMINWI42

Screening table storage exceeded by *P1* bytes, event simulation disabled

Reason:

There is insufficient storage to load all the event simulation code.

System Action:

Event simulation is disabled, and the screening table activation is retried.

User Action:

If event simulation is not required, disable it permanently through the MSGAWARENESS parameter group. In future, no attempt to enable its code will be made. This improves the performance of system initialization.

If event simulation is required, reduce the amount of storage used by console consolidation and/or NetMaster Automation. This can be done in the following ways:

- Inactivate unused console consolidation profiles.
- Decrease the size (complexity) of the profiles.
- Restart the regions with the SNAAUTO feature excluded.

Note: If console consolidation profiles are modified, reactivate the profiles by selecting *option A* - Activate Message Profiles from the System Console Consolidation menu. Then action the MSGAWARENESS parameter group to enable event simulation.

RMINWI43**P1 SET TO P2****Reason:**

The *P1* component of Message Awareness was set to *P2*.

Message Awareness consists of the following components:

Event Simulation

This facility lets you simulate message traffic through your environment and report any EventView rules or ResourceView definitions affected.

Unmatched Message Alerting

This facility notifies you about possible critical system messages that your EventView and ResourceView environment is not set up to deal with. The messages and the alerting method are controlled through the MSGAWARENESS parameter group.

System Action:

None.

User Action:

None.

RMINWI44**GLOBAL VARIABLE P1 SET TO P2****Reason:**

The global variable *P1* was set to the value *P2* .

System Action:

None.

User Action:

None.

RMINWI45

Screening table storage exceeded by *P1* bytes, UMA disabled

Reason:

The screening table has exceeded its storage limit while loading code dynamically generated by the Unmatched Message Alerting facility, and that facility has been disabled.

System Action:

Unmatched Message Alerting is disabled, and the screening table activation is retried.

User Action:

If Unmatched Message Alerting is not required, disable it permanently through the MSGAWARENESS parameter group. In future, no attempt to enable its code will be made. This improves the performance of system initialization.

- If Unmatched Message Alerting is required, reduce the amount of storage used by console consolidation, event simulation and/or NetMaster Automation. This can be done in the following ways:
- Inactivate event simulation.
- Inactivate unused console consolidation profiles.
- Decrease the size (complexity) of the profiles.
- Restart the regions with the SNAAUTO feature excluded.

RMINWI47

AOMGFLAG P1 SET TO " P2"

Reason:

The AOM global flag variable *P1* was set to the value *P2*.

System Action:

None.

User Action:

None.

RMINWI48**Invalid character in the AOM SSI Command String Prefix****Reason:**

The AOM SSI Command String Prefix contains an invalid character. The supported characters are:

A B C D E F G H I J K L M N O P Q R S T U V W X Y Z 0 1 2 3 4 5 6 7 8 9 @ \$
' , . / () * & + - > < | ! ; % _ > ? : "

System Action:

Field is set in error.

User Action:

Correct the AOM SSI Command String Prefix or leave the input field blank if no Command String Prefix is required.

RMINWI49**INVALID DATASET ORGANIZATION P1, MUST BE "PO" OR "PS"****Reason:**

The dataset specified does not have the correct dataset organization. *P1* is dataset organization of the dataset. Valid values are PO or PS.

System Action:

Field is set in error.

User Action:

Specify a partitioned (PO) dataset with a member name or a physical sequential (PS) dataset.

RMINWI50

MEMBER NAME REQUIRED FOR PARTITIONED DATASETS

Reason:

The dataset specified was a partitioned dataset however a member name was not specified. A member name must be specified if the dataset is partitioned.

System Action:

Field is set in error.

User Action:

Specify a partitioned (PO) dataset with a member name or a physical sequential (PS) dataset.

RMINWI53

FILE P1 ERROR - FILE(P2) RC(P3) MSG(P4)

Reason:

An error was encountered when attempting to access a file. *P1* is the operation being performed, *P2* is the ID of the file, *P3* is the return code, and *P4* is the message set by the FILE verb.

System Action:

Processing terminates.

User Action:

Contact your local support representative.

RMINWI54

MULTISYSTEM LINK RECORD P1 P2

Reason:

The link record indicated by *P1* has been successfully processed. *P2* indicates if the record was CREATED, REPLACED or SKIPPED. The record is SKIPPED if there is an existing multisystem link record with the key *P1* that has been customized.

System Action:

None.

User Action:

None.

RMINWI55**P1 IS NOT AN EXISTING RULESET NAME****Reason:**

Ruleset name given must be a valid defined rulest under File Transfer Ruleset definition.

System Action:

Validation for this parameter fails.

User Action:

Enter a valid defined Ruleset name.

RMINWI56**CANNOT CHANGE P1 WHILE SYSTEM IS ALREADY LINKED****Reason:**

The Communication Access Methods cannot be changed once the system has been linked to another system. The field *P1* cannot be changed.

System Action:

Field is set in error.

User Action:

Cancel the change or set the field back to the original value.

RMINWI57**AT LEAST ONE COMMUNICATION ACCESS METHOD MUST BE ENABLED****Reason:**

You must enable at least one of the communication access methods.

System Action:

The fields that cause the error are highlighted.

User Action:

Specify *YES* to at least one access method.

RMINWI60

TCP/IP NOT AVAILABLE ON THIS SYSTEM

Reason:

The TCP/IP? field cannot be set to YES, because the interface to TCP/IP has not been started on this system.

System Action:

The field in error, TCP/IP?, is highlighted.

User Action:

If you want to use TCP/IP, investigate why the TCP/IP interface has not been started. Review the TCIPCNLT parameter group.

RMINWI61

EPS ACCESS METHOD REQUIRES A SOLVE SSI

Reason:

You cannot specify YES in the EPS? field because the interface to the SSI has not been defined.

System Action:

The field in error, EPS?, is highlighted.

User Action:

If you want to use EPS, specify an SSI in the SSI parameter group to provide the EPS service.

RMINWI62

EPS ACCESS METHOD NOT SUPPORTED ON THIS SYSTEM

Reason:

You cannot specify YES in the EPS? field because this is not an MVS system. EPS is available on MVS only.

System Action:

The field in error, EPS?, is highlighted.

User Action:

Specify NO in the EPS? field.

RMINWI64**P1 CANNOT BE GREATER THAN P2****Reason:**

The value in the *P1* field cannot be greater than the value in the *P2* field.

System Action:

The field in error is highlighted.

User Action:

Specify a lower value in the *P1* field or a higher value in the *P2* field.

RMINWI65**MANAGEMENT SERVICES CONSOLE SUPPORT LEVEL IS INCORRECT****Reason:**

This region requires the console support level of Management Services 3.7 (plus APARs).

System Action:

Initialization cannot complete.

User Action:

Contact Technical Support.

RMINWI66**INVALID VALUE, MUST BE PRIMARY OR ALTERNATE****Reason:**

The highlighted field contains an invalid value. The only valid value is PRIMARY or ALTERNATE, indicating which set of resource relationships will be used when the SHUTSYS or SHUTFORCE command is used to shut down a system image.

System Action:

The field in error is highlighted.

User Action:

Specify either PRIMARY or ALTERNATE.

RMINWI68

REGION HAS BEEN STARTED WITH A NEW PRIMARY NAME EXISTING MULTISYSTEM LINKS HAVE BEEN REMOVED

Reason:

During region startup, no records were found in the knowledge base (RAMDB) that match the primary (ACB) name of this region. However, other records exist matching other primary names. This is an abnormal situation, usually indicating that the PRI JCL parameter of the region has changed. The change means that remote regions become inaccessible. As a consequence, the region is unlinked automatically from other regions.

System Action:

The region is unlinked, and the message is broadcasted to all users.

User Action:

If new multisystem links are required, the administrator will need to relink the region by using the Link Region and Synchronize Database option on the Multi-System Support Menu (= /MADMIN.SD).

RMINWI69

Agent Instance name must be alphanumeric

Reason:

The value specified for the NSM Agent Instance name contains special characters such as '@#\$-'. Only alphabetic or numeric characters are valid in the instance name and should start with an alphabetic character.

System Action:

The field in error is highlighted.

User Action:

Specify a valid value.

RMINWI70**System Image(P1) not loaded - P2****Reason:**

The *P1* system image was not loaded because of reason *P2* .

System Action:

The *P1* image is not loaded. A default image, \$&ZNMDID Version NONE, is loaded instead. &ZNMDID contains the domain identifier of the region.

User Action:

Enter the */PARMS* shortcut to display the list of parameter groups, and enter *U* beside the AUTOIDS group. Specify a system image that is appropriate for the region. If no appropriate images exist, define one and specify it in the AUTOIDS group.

RMINWI71**VTAM Application ID does not exist****Reason:**

The VTAM Application ID specified in the Terminal Prefix field does not exist.

System Action:

Field is set in error.

User Action:

Specify a valid VTAM Application ID that is currently defined to VTAM. The ID can be for a pool of Application IDs with the same prefix and numeric suffixes starting from 001 and up to 999. Alternatively the Application ID can be a generic prefix.

RMINWI72**NSM Agent Filter must be NONE****Reason:**

The NetMaster for TCP/IP agent does not support filtering.

System Action:

Field is set in error.

User Action:

Specify **NONE** as the filter value.

RMINWI73

An absolute directory path is required.

Reason:

An absolute directory path is required.

System Action:

Field in error is highlighted.

User Action:

Provide an absolute path directory.

RMINWI74

P1 file is empty

Reason:

The *P1* file is empty.

System Action:

Field is set in error and the agent is not started.

User Action:

Specify a valid *P1* dataset.

RMINWI75

Contents of P1 ' P2'

Reason:

The contents of *P2* is displayed after this message.

System Action:

None.

User Action:

None.

RMINWI76**P1 could not be opened****Reason:**

An attempt to OPEN the *P1* file failed and the system could not read its contents.

System Action:

Initialization continues.

User Action:

None.

RMINWI77**Invalid value, must not be less than 5 or greater than 60.****Reason:**

The value provided is not in the valid range of 5-60.

System Action:

Field is set in error.

User Action:

Specify a number within the valid range.

RMINWI78**Invalid value, CA-7 USERID****Reason:**

The CA-7 User ID field contains an invalid value.

System Action:

Field is set in error.

User Action:

Specify other values.

RMINWI79

Invalid value, CA-7 PASSWORD

Reason:

The CA-7 User Password field contains an invalid value.

System Action:

Field is set in error.

User Action:

Specify other values.

RMINWI80

Invalid value, CA-7 Subsystem ID

Reason:

The CA-7 SSID field contains an invalid value.

System Action:

Field is set in error.

User Action:

Specify other values.

RMINWI81

Value set to NO because no security exit installed

Reason:

The option is set to NO because the security exit is not installed.

System Action:

Message displayed. Processing continues.

User Action:

Install the security exit, if required.

RMINWI82**User not added to UAMS - P1****Reason:**

The automatic password option of the SCHEDAPI parameter group requires the CA-7 user to be defined to UAMS. If the option is set to YES, the system attempts to automatically add the user to the UAMS file. If the attempt is unsuccessful, this message is displayed. *P1* is the message returned by the *SECCALL ADD* function.

System Action:

Message displayed. Processing continues.

User Action:

Determine why the ADD failed. The user may already be defined. Correct the problem and add the user manually.

RMINWI83**Invalid value for Web Address Override****Reason:**

The value provided is not a valid host with port specification. A valid IP address or host name, optionally followed by a port number (*:nnnnn*), is required.

If a host name is specified, special characters, including @ and #, are not permitted.

If an IPv6 address is specified with a port number, the address must be enclosed in square brackets.

Examples:

192.10.23.24
my.host.com
los-angeles.ARN24

192.10.23.128:1080
[fd00:7a06:a20:100::1]:1080
my.host.com:31076

System Action:

The field is highlighted in error.

User Action:

Specify an alphanumeric IP host name or address.

RMINWI84

The AOM Message Suppression Charcter is invalid

Reason:

The specified AOM Message Suppression Character is invalid. The supported characters are:

@ # , . / & + - > < | ! ; % _ > ? : ^

System Action:

Field is set in error.

User Action:

Specify a valid character.

RMINWI85

SYSPARM *P1* already set to *P2*

Reason:

The system parameter (SYSPARM) with name *P1* is already set to the value *P2*.

System Action:

None.

User Action:

None.

RMINWI86

Default size must be less than or equal to the maximum

Reason:

The default size must have a value less than or equal to the value specified for the maximum size.

System Action:

None.

User Action:

Correct the field value, and retry.

RMINWI87**Invalid Alert Severity, must be 1 to 4 or blank****Reason:**

An Alert Severity field must contain 1, 2, 3, 4, or be blank.

System Action:

None.

User Action:

Correct the value, and retry.

RMINWI88**IPv6 socket support not enabled****Reason:**

An IPv6 address has been entered in the Web Address Override field, but the sockets API supports IPv4 addresses only.

System Action:

The field is highlighted in error.

User Action:

Specify a host name or IPv4 address in the Web Address Override field. Alternatively, check the SOCKETS parameter group (/PARMS). For IPv6 support, the TCP/IP Software Type must specify IBMV6.

RMINWI99

Deprecated attribute processing *P1*

Reason:

CA NetMaster NM for TCP/IP r11.6 SP1 deprecated some monitoring attributes and replaced them with new ones. When the region starts, the RAMDB is scanned and if the deprecated attributes are found, defined EE resources are checked and if they are using the deprecated attributes, they are replaced with the new attributes. When all defined EE resources are updated, the deprecated attributes are deleted.

The deprecated attributes are:

LowPriorityData

HighPriorityData

MediumPriorityData

NetworkPriorityDat

SignalTraffic

The replacement attributes are:

EEBytesPriLow

EEBytesPriHigh

EEBytesPriMedium

EEBytesPriNetwork

EEBytesPriSignal

This message is issued at the start and end of this processing, as identified by *P1* . Messages issued in between detail any action taken.

System Action:

Deprecated attributes in resource monitoring definitions are replaced and the deprecated attributes deleted.

User Action:

None.

RMIPAPI01**NO HOST SAMPLES EXIST FOR THIS STACK****Reason:**

The Telnet, FTP or Connection 'Workload' option was selected but no host samples exist for this option.

System Action:

None.

User Action:

None.

RMIPAPI02**STACK NOT REGISTERED****Reason:**

The selected STACK resource is not registered internally.

System Action:

The command is rejected.

User Action:

This message may occur transiently following a system image load or when remote stack resources are accessed. Try the command again later. If the situation persists, there may be a mismatch in the information provided about the stack. Check the stack name, type and SSID (if applicable) are correct in the following places:

- The stack resource definition (A.R.R)
- SOCKETS parameter group (/PARMS)

RMIPAPI03**NO MATCHING DATA FOR P1 IN WORKLOAD MANAGER****Reason:**

A display query for *P1* has no matching data in Workload Manager (WLM).

System Action:

None.

User Action:

None.

RMIPAPI04

Resource definition does not contain associated Stack Name

Reason:

The definition of the selected resource does not include the associated TCP/IP stack job name.

System Action:

The request is rejected.

User Action:

Update the resource definition to include the associated stack job name.

RMIPAPI05

NO SAMPLES EXIST FOR THIS CIP

Reason:

The Telnet option was selected but no samples exist for this option.

System Action:

None.

User Action:

None.

RMIPAPI06

Command P1 only available if P2 is used

Reason:

The command *P1* is not valid against the selected resource. The command requires *P2* (OSA/SF or SNMP) and the OSA resource definition specifies that *P2* is not used.

System Action:

The command is rejected.

User Action:

None.

RMIPAPI07**' P1' command canceled****Reason:**

The command request identified by *P1* has been canceled.

System Action:

None

User Action:

None

RMIPAPI08**' P1' command canceled, NetSpy not configured.****Reason:**

The command request identified by *P1* has been canceled because CA NetSpy is not configured.

System Action:

None.

User Action:

None.

RMIPAPI09**RECORD NOT SAVED, NO CHANGES MADE****Reason:**

You tried to file or save a definition that has not been changed. The requested action is not performed.

System Action:

The definition is not saved again.

User Action:

None.

RMIPAPI10

ASSOCIATED STACK ' P1' NOT REGISTERED

Reason:

The associated STACK jobname *P1* for the selected resource is not registered internally.

System Action:

The command is rejected.

User Action:

This message may occur transiently following a system image load or when remote stack resources are accessed. Try the command again later.

If the situation persists, there may be a mismatch in the information provided about the associated stack jobname. Check the stack jobname, type and SSID (if applicable) are correct in the following places:

- The *Associated STACK Jobname* field definition for the selected resource (A.R.R)
- The stack's own resource definition (A.R.R)
- SOCKETS parameter group (/PARMS)

RMIPAPI11

Update in progress by P1 for group P2

Reason:

Another user is updating this definition.

System Action:

The request is rejected.

User Action:

Try again later.

RMIPAPI12

UDP Connection command is not supported. PF1 on this message for info.

Reason:

The IP Resource Monitor IU command (List IP UDP Connections) is no longer supported. You can list UDP end points using the Connection List function.

System Action:

None.

User Action:

To display current UDP end points and their total traffic counts, use a Connection List */CONN*C (not */CONN*CF) with the criteria *Connection Status EQ UDP*.

RMIPAPI13

Command not available. Associated stack is TCPaccess

Reason:

The entered command is not valid against the selected resource. The stack associated with this resource is type TCPaccess. The command is not supported for TCPaccess stacks.

System Action:

The command is rejected.

User Action:

None.

RMIPAPI14

Link *p1* is not active

Reason:

The link name identified by *p1* is not currently active.

System Action:

The request is rejected.

User Action:

Investigate the cause of the link failure, and retry the operation.

RMIPAPI15

Command not available on remote region *p1*

Reason:

The requested command is not supported by the remote region, *p1*. The link is in Migration Mode. This type of linkage is used during the migration of the remote region to a new release level.

System Action:

Processing of the command terminates.

User Action:

This command will be available in the remote region when you have upgraded the remote region to the same release level as this region.

RMIPLN01

P1 initialization completed. Connecting to remote host.

Reason:

Initialization has successfully completed. The process will now attempt to connect to the remote host. *P1* is the protocol used in the connection.

System Action:

None.

User Action:

None.

RMIPLN02

P1 processing terminated.

Reason:

The connection manager has terminated for protocol *P1*.

System Action:

None.

User Action:

See previous messages.

RMIPLN03

Invalid keyword value received, Keyword= P1 Value=" P2".

Reason:

A keyword parameter was either not specified or was specified with an invalid value. The keyword parameter was *P1* and the value was *P2*.

System Action:

The request is rejected and processing terminates.

User Action:

Specify the keyword parameter with a valid value.

RMIPLN04

Unable to obtain exclusive control to act as the P1 for P2.

Reason:

A request to act as the *P1* process for *P2* failed because another process was already performing the function. If *KILLPREV=YES* was specified then this process could not be flushed.

System Action:

The request is rejected and processing terminates.

User Action:

Try the action later or specify *KILLPREV=YES* to terminate the current process acting as the *P1* for *P2*.

RMIPLN05

Service package P1 does not exist or does not contain P2 procedure.

Reason:

The link manager could not continue processing because the service package *P1* did not exist or the necessary procedure *P2* did not exist in the package.

System Action:

Processing terminates.

User Action:

Ensure all required procedures are supported by the package or that the package name is correct.

RMIPLN06

TCP/IP Socket P1 error, SOCID= P2 RC= P3 FDBK= P4. For protocol P5, po rt P6 and host name/address= P7

Reason:

An error occurred executing a TCP/IP socket function. *P1* is the function being performed, *P2* is socket ID, *P3* is the return code from the function, *P4* is the feedback code from the function, *P5* is the protocol being used, *P6* is the port number at the remote host and *P7* is the remote host name or address (if applicable).

System Action:

The request fails and the connection will be retried.

User Action:

Ensure that the Host Name/Address and Port Number are correct. Check the error codes to determine the exact nature of the error. More information may follow in subsequent messages.

RMIPLN07

VCode=" P1", ErrNoDesc=" P2"

Reason:

This message described additional information associated with a previous error. *P1* is the vendor software specific error code and *P2* is a description of the socket error number received. The vendor specific code may not be present.

System Action:

None.

User Action:

See related messages. Check the error codes and description to determine the exact nature of the error.

RMIPLN08**P1 termination request received, P1 ending.****Reason:**

A request to terminate the *P1* protocol client/server process *P2* was accepted. The process will terminate.

System Action:

Processing terminates as requested.

User Action:

None.

RMIPLN09**P1 connection established, socket ID is P2 port is P3 connected to P 4 on port P5****Reason:**

A connection was successfully established with a remote system. The protocol being used is *P1*, the socket identifier is *P2* and the port is *P3*. The remote system is on address *P4* with port *P5*.

System Action:

None.

User Action:

None.

RMIPLN10**P1 connection will be automatically retried in P2 minutes.****Reason:**

A connection failed and has been automatically scheduled to be retried in *P2* minutes. The connection is for protocol *P1*.

System Action:

None.

User Action:

None.

RMIPLN11

Unable to contact P1.

Reason:

A request to act as the Client process failed because the remote host name/address *P1* did not respond.

System Action:

Processing terminates.

User Action:

Ensure that the correct host name/address is specified and retry the request again.

RMIPLN12

P1 initialization completed. Registering on port P2.

Reason:

Initialization has completed successfully. The process is now attempting to register on a port. *P1* is the protocol used in the connection, and *P2* is the port number being registered for.

System Action:

None.

User Action:

None.

RMIPLN13

P1 registered for port P2 using socket ID P3.

Reason:

Registration was successful for protocol *P1* . The port that was registered is *P2*, and the socket identifier is *P3* .

System Action:

None.

User Action:

None.

RMIPLN14**P1 connection closed by client, server terminating.****Reason:**

The remote client for a specific connection has terminated the connection to *P1*.

System Action:

Processing terminates as requested.

User Action:

None.

RMIPLN15**P1 initialization completed. Accepting client on port P2 socket P3.****Reason:**

Initialization has completed successfully for a specific server. The protocol is *P1* and the port which the client connected to is *P2* . The socket being transferred is *P3* .

System Action:

None.

User Action:

None.

RMIWTO01**P1 SYSTEM IMAGE LOAD REQUESTING CONFIRMATION****Reason:**

System image load processing has started and will be requesting confirmation of the system image name and version, the automation mode, and whether a cold or a warm load is to be performed. The system ID is *P1* .

System Action:

This message is followed by a RMIWTO06 message requesting a reply.

User Action:

Reply to the RMIWTO06 message, or allow it to time out to continue the load process.

RMIWTO02

P1 SYSTEM= P2

Reason:

The region is initializing and will be requesting confirmation of the system image and version to use. The system ID is *P1* , and the currently nominated system image name is *P2* .

System Action:

This message is followed by a RMIWTO06 message requesting a reply.

User Action:

Reply to the RMIWTO06 message, or allow it to time out to continue initialization.

RMIWTO03

P1 VERSION= P2

Reason:

The region is initializing, and will be requesting confirmation of the system image and version to use. The system ID is *P1* , and the currently nominated system image version is *P2* .

System Action:

This message is followed by a RMIWTO06 message requesting a reply.

User Action:

Reply to the RMIWTO06 message, or allow it to time out to continue initialization.

RMIWTO04**P1 MODE= P2****Reason:**

The region is initializing, and will be requesting confirmation of the system image and version to use. The system ID is *P1* , and the currently nominated automation mode is *P2* .

System Action:

This message is followed by a RMIWTO06 message requesting a reply.

User Action:

Reply to the RMIWTO06 message, or allow it to time out to continue initialization.

RMIWTO05**P1 INITIALIZATION (SYSTEM= P2 VERSION= P3 MODE= P4 COLD= P5) REPLY "U" TO ACCEPT****Reason:**

The region is initializing, and is requesting confirmation of the system image name and version, automation mode, and cold load setting to use for the region. The system ID is **P1** , and the currently nominated system image name is **P2** , the version is **P3** , the automation mode is **P4** , and cold load is **P5** .

System Action:

The system waits for a reply.

User Action:

Reply to the message, or allow it to time out to continue initialization.

RMIWTO06**P1 REPLY "PARM=VALUE" OR "U" TO ACCEPT****Reason:**

The region is starting system image load or network discovery, and is requesting override or confirmation of the parameters listed in the previous messages (RMIWTOnn). The messages display the current setting of parameter values. See AUTOIDS or AUTOSNACNTL for further details of the parameters in the group. *P1* is the system ID of the region.

System Action:

The system will wait for a reply, or will use the values shown when the timeout value expires. The timeout value is determined by the Confirm via WTOR at Startup? field in the parameter group. The default is 120 seconds.

User Action:

Check that the parameter values are correct.

If they are correct, reply as follows: R n,U

If a value is not correct, reply with the parameter name and its correct value in the format, PARM=VALUE. The following example changes the system image to be loaded:

R n,SYSTEM=SOLVPROD,VERSION=0002,MODE=AUTOMATED

RMIWTO07**P1 CHECKPOINT COLD START: COLD= P2****Reason:**

The region is initializing, and will be requesting confirmation of the system image and version to use. The system ID is *P1* , and *P2* indicates if there will be a cold start of checkpointing.

System Action:

This message is followed by a RMIWTO06 message requesting a reply.

User Action:

Reply to the RMIWTO06 message, or allow it to time out to continue initialization.

RMIWTO08**P1 NETWORK DISCOVERY REQUESTING CONFIRMATION****Reason:**

The region is starting its network discovery processing, and will be requesting confirmation of the discovery rate (number of commands per time frame) and whether a cold start is required. The system ID is *P1* .

System Action:

This message is followed by a RMIWTO06 message requesting a reply.

User Action:

Reply to the RMIWTO06 message, or allow it to time out to continue network discovery.

RMIWTO09**P1 DISCOVERY COLD START: COLD= P2****Reason:**

The region is starting network discovery and will be prompting for confirmation of the discovery parameters. *P1* is the system ID, and *P2* indicates whether a cold start will be done. *P2* can be changed in response to a subsequent WTOR message by replying COLD=YES or COLD=NO.

System Action:

This message is followed by a RMIWTO06 message requesting a reply.

User Action:

Reply to the RMIWTO06 message, or allow it to time out to continue network discovery.

RMIWTO10

P1 COMMANDS PER TIME FRAME: CMDS= P2

Reason:

The region is starting network discovery and will be prompting for confirmation of the discovery parameters. *P1* is the system ID, and *P2* indicates the maximum number of commands that can be issued within the time frame displayed in a subsequent message. *P2* can be changed in response to a subsequent WTOR message by replying CMDS=*n*, where *n* is the new number of commands per time frame.

System Action:

This message is followed by a RMIWTO06 message requesting a reply.

User Action:

Reply to the RMIWTO06 message, or allow it to time out to continue network discovery.

RMIWTO11

P1 TIME FRAME IN SECONDS: TIME= P2

Reason:

The region is starting network discovery and will be prompting for confirmation of the discovery parameters. *P1* is the system ID, and *P2* indicates the time frame within which the specified maximum number of commands can be issued (see previous message). *P2* can be changed in response to a subsequent WTOR message by replying TIME=*n*, where *n* is the new value for the time frame in seconds.

System Action:

This message is followed by a RMIWTO06 message requesting a reply.

User Action:

Reply to the RMIWTO06 message, or allow it to time out to continue network discovery.

RMIWTO12**P1 DISCOVERY (COLD= P2 CMDS= P3 TIME= P4) REPLY "U" TO ACCEPT****Reason:**

The region is starting network discovery and is requesting confirmation of the Cold Start, Commands per Time Frame, and Time Frame in Seconds discovery control parameters. The system ID is P1 and the current value for Cold Start is P2 , Commands per Time Frame is P3 , and Time Frame in Seconds is P4 .

System Action:

None.

User Action:

Check that the Cold Start, Commands per Time Frame, and Time Frame in Seconds are correct, and if so, reply "U".

RMIWTO13**P1 INVALID VALUE FOR KEYWORD P2, MUST BE P3****Reason:**

A reply received to confirm System Image Load or Network Discovery specified an invalid value for the keyword parameter P2. This parameter must be P3. The system's ID is P1.

System Action:

None.

User Action:

Reply to the subsequent WTOR the correct value for the keyword P1.

RMIWTO14

P1 SYSTEM IMAGE P2 NOT FOUND ON DATABASE, RC= P3 MSG= P4

Reason:

A reply to change the System Image name and/or Version was rejected because the specified system and version combination could not be found in the database. P1 is the system's ID, P2 is the system image name and version, P3 is the database return code and P4 is the message returned from the database manager.

System Action:

None.

User Action:

Reply to the subsequent WTOR with a valid system name and version that exist.

RMIWTO15

P1 CONFIRMATION OF PARAMETERS TIMED OUT, P2 PARAMETERS ACCEPTED

Reason:

No reply to change the parameter for the P2 process was received within 2 minutes. The current values will be accepted as confirmed. The system's ID is P1.

System Action:

None.

User Action:

None.

RMIWTO16**P1 P2 PARAMETERS ACCEPTED****Reason:**

Confirmation of the parameter for the *P2* process was acknowledged. The system's ID is *P1*.

System Action:

None.

User Action:

None.

RMIWTO17**P1 REPLY RECEIVED < P2>****Reason:**

Indicates the reply that was received to the last request for parameter confirmation. *P1* is the system's ID and *P2* is the reply received.

System Action:

None.

User Action:

None.

RMIWTO18**P1 INVALID REPLY SYNTAX, MSG= P2****Reason:**

The reply received for confirmation of parameters was invalid. It was not in valid keyword format. *P1* is the system's ID and *P2* is the error message received.

System Action:

None.

User Action:

None.

RMIWTO19

P1 P2 PARAMETERS RESET

Reason:

The parameters for the *P2* process were reset to their initial values. The system's ID is *P1*.

System Action:

None.

User Action:

None.

RMJ3GR01

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(P1) VALUE(P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMJ3GR02

INVALID VALUE FOR (P1) MUST BE NUMERIC

Reason:

An non-numeric value was entered into the field identified by *P1* .

System Action:

The field is highlighted and an error message is displayed to the user.

User Action:

Correct the value entered and retry.

RMJ3GR03**INVALID COMMAND P1****Reason:**

The command *P1* is invalid.

System Action:

Command field is set in error.

User Action:

Enter a valid command.

RMJ3GR04**MODIFY COMPLETE - NUMBER OF INITIATOR CHANGED TO (P1)****Reason:**

The number of Defined Initiators has been changed to *P1* .

System Action:

None

User Action:

The message is informational only.

RMJ3GR05**MODIFY FAILED - INVALID GROUP (P1)****Reason:**

The Group identified by *P1* is does not exist on the system specified.

System Action:

The modify command fails.

User Action:

Check the Group is named correctly and that it is defined to JES3.

RMJB0001

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMJB0002

NO JOBS FOUND

Reason:

No scheduler jobs found.

System Action:

None

User Action:

None

RMJCL001

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMJCL002**DATASET ALLOCATION FAILED - SYSMSG(P1)****Reason:**

The dataset which contains the required JCL member could not be allocated.
P1 contains the error message received.

System Action:

The procedure terminates in error.

User Action:

Contact your system administrator.

RMJCL003**JOB SUBMISSION SUCCESSFUL - JOBID(~P1)****Reason:**

The JCL for this job has been successfully submitted to JES.

System Action:

None.

User Action:

None.

RMJCL004**JOB SUBMISSION FAILED - RC(~P1) SYSMSG(~P2)****Reason:**

The JCL for this job has not be submitted successfully to JES.

System Action:

Job is placed in automation failed state.

User Action:

Investigate.

RMJCL005

MEMBER LIST FAILED - SYSMSG(~P2)

Reason:

The List of the JCL member has failed.

System Action:

Procedure terminates in error.

User Action:

Contact your system administrator.

RMJES001

JES2 NOT STOPPING - ACTIVE P1 = P2

Reason:

JES2 termination has been requested however the resource *P2* of type *P1* is still active.

System Action:

The system waits for a reply to the WTOR.

User Action:

Reply P if the active resource is to be terminated with a JES2 PURGE command. Reply C if the active resource is to be terminated with a CANCEL or N for IGNORE if the resource has been terminated already using operator intervention.

RMJEST01

JES TYPE SET TO ~P1

Reason:

The JES type has been determined.

System Action:

None

User Action:

None

RMJEST02**JES TYPE COULD NOT BE DETERMINED - JES2 DEFAULT USED****Reason:**

The JES type has not been determined. JES Default assumed.

System Action:

None

User Action:

None

RMJEST03**JES TYPE PROCESSING INWAIT TIMEOUT - JES2 DEFAULT USED****Reason:**

The JES type has not been determined. JES Default assumed.

System Action:

None

User Action:

RMJEST07

UNEXPECTED RESPONSE - ~P1

Reason:

Unexpected response received.

System Action:

None

User Action:

Contact your System Administrator.

RMKWDK01**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE=" P2"****Reason:**

An invalid keyword value was passed. The keyword is P1 and the invalid value is P2.

System Action:

The request is rejected.

User Action:

Correct the invalid value and retry the request.

RMKWM001**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE=" P2"****Reason:**

An invalid keyword value was passed. The keyword is P1 and the invalid value is P2.

System Action:

The request is rejected.

User Action:

Correct the invalid value and retry the request.

RMKWM002**KEYWORD P1 DELETED****Reason:**

The keyword *P1* was deleted.

System Action:

None.

User Action:

None.

RMKWM003

KEYWORD P1 IS BEING UPDATED BY USER P2

Reason:

The keyword *P1* cannot be updated because it is already being updated by user *P2*.

System Action:

Request is rejected.

User Action:

Try later.

RMKWM101

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE=" P2"

Reason:

An invalid keyword value was passed. The keyword is *P1* and the invalid value is *P2*.

System Action:

The request is rejected.

User Action:

Correct the invalid value and retry the request.

RMKWM102

RECORD ALREADY BEING UPDATED BY P1

Reason:

The selected record is already being updated by user *P1*.

System Action:

Request rejected.

User Action:

Try later.

RMKWM103**REQUIRED FIELD(S) OMITTED****Reason:**

One or more required fields were not entered.

System Action:

Field(s) set in error.

User Action:

Enter values for the omitted field(s).

RMKWMK01**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE=" P2"****Reason:**

An invalid keyword value was passed. The keyword is P1 and the invalid value is P2.

System Action:

The request is rejected.

User Action:

Correct the invalid value and retry the request.

RMKWMK02**ACTIONS ARE NOT ALLOWED FOR SYSTEM KEYWORDS****Reason:**

All system keywords are reserved and cannot have actions applied against them.

System Action:

The request is rejected.

User Action:

None.

RMKWMT01

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE=" P2"

Reason:

An invalid keyword value was passed. The keyword is P1 and the invalid value is P2.

System Action:

The request is rejected.

User Action:

Correct the invalid value and retry the request.

RMKWYT01

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE=" P2"

Reason:

An invalid keyword value was passed. The keyword is P1 and the invalid value is P2.

System Action:

The request is rejected.

User Action:

Correct the invalid value and retry the request.

RMLG0001

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMLG0002**LOG SWAP INITIATED****Reason:**

The activity log will be swapped.

System Action:

The next available activity log will be emptied and will then become the active log.

User Action:

None.

RMLG0003**NO LOG IS AVAILABLE FOR THE REQUEST DATE AND TIME****Reason:**

A log browse request has been received, but no log can be found for the requested starting date and time.

System Action:

Request is rejected.

User Action:

None.

RMLG0004**LOG SWAP REQUEST CANCELLED BY USER****Reason:**

The user cancelled the log swap request.

System Action:

The log is not swapped.

User Action:

None.

RMLG0101

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMLG0201

NO AUTOMATION LOG IS AVAILABLE - VSAM LOGGING IS TERMINATING

Reason:

No log file are available.

System Action:

Logproc will terminate.

User Action:

Contact your system administrator.

RMLG0301

NO AUTOMATION LOG IS AVAILABLE - VSAM LOGGING IS TERMINATING

Reason:

No log file are available.

System Action:

Logproc will terminate.

User Action:

Contact your system administrator.

RMLG0302**NCLID ~P1 FLUSHED BY ~P2****Reason:**

The executing NCL process with the specified NCLID has been flushed to enable a Log Swap to take place.

System Action:

None.

User Action:

None.

RMLG0303**USER ~P1 CANCELLED BY ~P2****Reason:**

The specified User was has been cancelled to enable a Log Swap to take place.

System Action:

None.

User Action:

None.

RMLIC001**NOT LICENSED FOR AUTOMATED MODE****Reason:**

This region is licensed as a SOLVE:Operations for IT/Operations or OpenView agent only and cannot be run in automated mode.

System Action:

The request is rejected.

User Action:

If a full license is required, contact Technical Support.

RMLINK01

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMLINK02

PARAMETERS IN ERROR - NOT IN KEYWORD FORMAT - PARMS(~P1)

Reason:

\$RMLINK has been called with parameters which are not consistent with Keyword format (ie. KEYWORD=<value>).

System Action:

Procedure completed in error.

User Action:

Correct the calling procedure and rerun exec.

RMLINK03

COMMAND REQUIRES THE FOLLOWING KEYWORDS (~P1)

Reason:

\$RMLINK has not be supplied with all required details. The list provides the keywords that are needed.

System Action:

Request is rejected.

User Action:

Correct command and retry.

RMLINK04

~P1 ~P2 IS NOT AN ELIGIBLE ~P3 OF ~P4

Reason:

The link request made is not valid.

System Action:

Request is rejected.

User Action:

None.

RMLINK05

~P1 ~P2 LINKED AS A ~P3 TO ~P4

Reason:

The link request has completed successfully.

System Action:

None.

User Action:

None.

RMLK0001

Invalid keyword value specified - KEYWORD(P1) VALUE(P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMLK0002

Starting P1 for region P2

Reason:

The link manager is attempting to start the component specified in *P1* for connected region *P2* .

System Action:

None.

User Action:

None.

RMLK0004

Dynamic database definition failed for P1 - RC(P2) SYMSG(P3)

Reason:

An attempt was made to dynamically define a component, but it has failed. *P1* contains the name of the failed component, while *P2* and *P3* contain the return code and failure message respectively.

System Action:

Processing continues.

User Action:

None.

RMLK0005

Region P1 unlinked

Reason:

The region specified in *P1* has been unlinked.

System Action:

None.

User Action:

None.

RMLK0006**P1 database blocked****Reason:**

The local or remote database is blocked against link access.

System Action:

The traffic manager terminates.

User Action:

Synchronize the databases if you require contact between the regions.

RMLK0007**P1 Database does not have a correlator****Reason:**

The Database does not have a Database Information Record defined. Therefore no correlator ID checking can be performed.

System Action:

The traffic manager terminates.

User Action:

The database has not been initialized correctly. Contact your Systems Administrator.

RMLK0008**Database P1 ERROR - OBJID(P2) RC(P3) SYMSG(P4)****Reason:**

An error was encountered when trying to retrieve a record from the database.

System Action:

Traffic is not received from the linked system until the Link Manager is restarted.

User Action:

Contact your System Administrator.

RMLK0009

P1 FAILED - RC(P2) FDBK(P3) SYSMSG(P4)

Reason:

A Traffic Manager attempted the APPC verb *P1* which resulted in the error.

System Action:

The conversation is terminated and will be retried later.

User Action:

Determine whether the remote system is still available. Contact your System Administrator.

RMLK0013

Remote database correlator ID mismatch, region P1

Reason:

The database correlator does not match the database correlator on the connected region. This indicates that the connected region has been unlinked.

System Action:

The traffic manager will terminate.

User Action:

None.

RMLK0014

Remote database error - refer to remote log

Reason:

The database at the remote end of the link could not be accessed.

System Action:

The traffic manager will terminate.

User Action:

See the remote log for the cause of the error.

RMLK0015**Unlink request received from region P1 for region P2****Reason:**

An Unlink request has been received from the indicated region.

System Action:

The traffic manager will terminate and the indicated region will be unlinked.

User Action:

None.

RMLK0016**Region P1 Unlinked from P2 remote region(s)****Reason:**

An Unlink was performed on the local region, *P1*. This resulted in *P2* connected regions being unlinked from this region.

System Action:

All connected regions were unlinked from the local region.

User Action:

None.

RMLK0017**P1 Traffic Manager for P2 terminated by Unlink request****Reason:**

Either the current region or the linked region was Unlinked and therefore the Traffic Manager is no longer required and has been shut down.

System Action:

None.

User Action:

None.

RMLK0018

Stopping P1 for region P2 - NOT LICENSED

Reason:

The link manager is stopping the traffic manager specified in *P1* for the connected region *P2* because the connected region does not have the required license.

System Action:

The traffic manager stops and the internal resource that represents it is deleted.

User Action:

If the remote region should be licensed for the specified type of traffic, stop the region, update it to include the licence, and then restart it.

RMLK0101

P1 is an invalid value for keyword parameter P2

Reason:

The Linked Regions list service procedure was called with keyword *P2* set to a value (*P1*) which the procedure does not support.

System Action:

The request is rejected.

User Action:

Check the defined allowed values for the keyword *P2* and retry.

RMLK0102

No records found

Reason:

No records found to be displayed in the selection list.

System Action:

None.

User Action:

None.

RMLK0103**Region P1 unlinked****Reason:**

The *P1* region has been unlinked.

System Action:

None.

User Action:

None.

RMLK0104**Region P1 Unlinked from P2 remote region(s)****Reason:**

An Unlink was performed on the home region, *P1*. This resulted in *P2* remote region(s) being unlinked from this region.

System Action:

None.

User Action:

None.

RMLK0105**P1 failed for vartable P2 - ZFDBK= P3, KEY= P4****Reason:**

An error occurred while performing function *P1* on vartable *P2*. The FDBK code returned was *P3* and *P4* the key of the record being processed.

System Action:

Request rejected.

User Action:

Contact your Systems Administrator.

RMLK0106

Unlink is only permitted for the current region (P1)

Reason:

The Unlink option was selected for an ACB other than the current ACB. This option is only supported for the current region.

System Action:

The request is rejected.

User Action:

Log on to the region that you wish to Unlink and select the Unlink (D) option from the Linked Regions list on that region.

RMLK0107

Variable P1 error. ID= P2. ZFDBK= P3. KEY= P4

Reason:

A variable error occurred while performing function(P1) on variable(P2). The FDBK was P3 and the entry key was P4.

System Action:

Request rejected.

User Action:

Contact your Systems Administrator.

RMLK0201

Remote database correlator ID mismatch, region= P1

Reason:

The database correlator does not match with the database correlator on a connected region. This indicates that the connected region has been unlinked.

System Action:

The traffic manager will terminate.

User Action:

None.

The status of the Link Managers can be checked at any time by issuing *FILTER INTNL* from within the Status Monitor.

RMLK0202**Local database blocked****Reason:**

The local database is blocked against link access.

System Action:

The traffic manager terminates.

User Action:

Synchronize the databases if you require contact between the regions.
The status of the Link Managers can be checked at any time by issuing *FILTER INTNL* from within the Status Monitor.

RMLK0203**Local database does not have a correlator****Reason:**

The Database does not have a Database Information Record defined.
Therefore no correlator ID checking can be performed.

System Action:

The traffic manager terminates.

User Action:

The database has not been initialized correctly. Contact your Systems Administrator.
The status of the Link Managers can be checked at any time by issuing *FILTER INTNL* from within the Status Monitor.

RMLK0204

Database P1 ERROR - OBJID(P2) RC(P3) SYSMSG(P4)

Reason:

An error was encountered when trying to retrieve a record from the database.

System Action:

Traffic is not sent to the linked system until the Link Manager is restarted.

User Action:

Contact your Systems Administrator.

The status of the Link Managers can be checked at any time by issuing *FILTER INTNL* from within the Status Monitor.

RMLK0205

P1 FAILED - RC(P2) FDBK(P3) SYSMSG(P4)

Reason:

A Traffic Manager attempted the APPC verb *P1* which resulted in the error.

System Action:

The conversation is terminated and will be retried later.

User Action:

Determine whether the remote system is still available. Contact your Systems Administrator.

The status of the Link Managers can be checked at any time by issuing *FILTER INTNL* from within the Status Monitor.

RMLK0206**Region P1 has been Unlinked****Reason:**

A region attempted to commence communications with another region, but the former region had been Unlinked while it was not active. A signal will be returned to that region to permanently terminate the connection.

System Action:

None.

User Action:

None.

The status of the Link Managers can be checked at any time by issuing *FILTER INTNL* from within the Status Monitor.

RMLK0207**Regions P1 and P2 have the same active System Image. P3 connection failed.****Reason:**

A region attempted to commence communications with another region, but the two regions had the same active System Image and could not be connected. P3 identifies the type of connection being attempted.

System Action:

The regions are not connected. Events and database updates are not transmitted between the regions but are held in staging files until the regions are connected.

User Action:

Two connected regions should not have the same active System Image. Load a different System Image in one of the regions, and the regions will be connected automatically.

The status of the Link Managers can be checked at any time by issuing *FILTER INTNL* from within the Status Monitor.

RMLK0208

Database synchronization is in progress

Reason:

A link manager from a connected region attempted to start communication with the current region but could not because database synchronization was in progress on the current region.

System Action:

The request is rejected and will be re-attempted when database synchronization has completed.

User Action:

None.

The status of the Link Managers can be checked at any time by issuing *FILTER INTNL* from within the Status Monitor.

RMLK0209

Region P1 has previously been Unlinked - closing link

Reason:

A link manager from a connected region attempted to start communication with the current region but the connecting region has been Unlinked by user request at some earlier time.

System Action:

The link manager is terminated and the connected region will be permanently disconnected.

User Action:

None.

The status of the Link Managers can be checked at any time by issuing *FILTER INTNL* from within the Status Monitor.

RMLK0210**Regions P1 and P2 have same Domain ID. P3 connection to P4 failed****Reason:**

A region attempted to commence communications with another region, but the two regions had the same Domain ID and could not be connected. P3 identifies the type of connection being attempted, and P4 is the region to which *the* connection was being attempted.

System Action:

The regions are not connected. Resource status events are not transmitted between the regions. Database updates are held in staging files until the regions are connected.

User Action:

Two connected regions must not have the same domain ID. Restart one of the regions with a different Domain ID, and the regions will be connected automatically.

The status of the Link Managers can be checked at any time by issuing *FILTER INTNL* from within the Status Monitor.

RMLK0301**P1 is an invalid value for keyword P2****Reason:**

The Link Record definition panel display service procedure was called with keyword *P2* set to a value (*P1*) which the procedure does not support.

System Action:

The request is rejected.

User Action:

Check the defined allowed values for the keyword *P2* and retry.

RMLK0302

Required field/s not entered

Reason:

Validation found no entry specified on mandatory field/s.

System Action:

The request is rejected.

User Action:

Specify entry on field/s in error.

RMLK0303

Invalid command

Reason:

The command entered on the command line was not recognized by the procedure.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RMLK0304

Unable to determine Object ID parameter

Reason:

The Object ID was not found and can not be created because there is not enough information passed to the procedure.

System Action:

The request is rejected.

User Action:

Contact your System Administrator.

RMLK0305**Update in progress BY P1****Reason:**

An Update is in progress on this definition by other user.

System Action:

The request is rejected.

User Action:

Try again later.

RMLK0306**P1 failed for vartable P2 - ZFDBK= P3, KEY= P4****Reason:**

An error occurred while performing function *P1* on vartable *P2*. The FDBK code returned was *P3* and *P4* the key of the record being processed.

System Action:

Request rejected.

User Action:

Contact your Systems Administrator.

RMLK0308**Link Name P1 already in use by P2****Reason:**

The Link Name assigned to a link definition is already assigned to another link definition.

System Action:

The Link Name field is highlighted as in error.

User Action:

Change the value in the Link Name field.

RMLK0501

Invalid parm passed to Link Resource process, PARM(P1) VALUE(P2)

Reason:

An invalid parameter value was passed to the Link Resource activation/inactivation process (\$RMLK05P).

System Action:

The link resource process terminates.

User Action:

Contact Technical Support.

RMLL0101

INVALID COMMAND

Reason:

The command entered on the command line was not recognized by the procedure.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RMLL0102

COMMAND ASSIGN TO FUNCTION KEY(~P1) IS INVALID

Reason:

Function key P1 was pressed but the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Contact System Administrator.

RMLL0103**INVALID CLASS(~P1) SPECIFIED****Reason:**

An invalid class specified.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMLL0104**SYSTEM NAME OR VERSION NOT SPECIFIED****Reason:**

Both System name and Version are mandatory field.

System Action:

The request is rejected.

User Action:

Specify System name and Version or use '?' to display available System name and Version to the system.

RMLL0105**INVALID SYSNAME(~P1) AND VERSION(~P2) SPECIFIED****Reason:**

Sysname and Version specified is unknown to the system.

System Action:

The request is rejected.

User Action:

Use '?' to list a selection list of Sysname and Version known to system.

RML0106

NOT ALLOWED TO ACCESS SYSNAME(\$TEMPLAT) FROM THIS OPTION

Reason:

Template definition is a special definition which must be access only from Customisation Menu option "T".

System Action:

The request is rejected.

User Action:

Access Template definition from Customisation menu option "T".

RMLO0001

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMLO0003

Error found in unsolicited event data P1

Reason:

An invalid format was received for an unsolicited event data.

System Action:

The event data is not processd; however, the text of the event message is written to the activity log.

User Action:

Contact your local support representative and provide the details of the event message.

RMLO0004**NO DISPLAY PROFILES IN EFFECT****Reason:**

The profile was requested to be reset, but no profile was in effect.

System Action:

The request is rejected.

User Action:

None.

RMLO0005**Transient Log Handler *P1 P2* initialized****Reason:**

A restart of the transient log handler completed without errors.

System Action:

None.

User Action:

None.

RMLO0006**Transient Log Handler *P1 P2* terminated****Reason:**

The transient log handler terminated because a restart of the handler was requested.

System Action:

None.

User Action:

None.

RMLO0007

Transient Log Handler already running: *P1*

Reason:

You attempted to start the transient log handler; however, it is already running.

The transient log handler is always restarted during a system image load and should never be stopped while the region is active.

System Action:

None.

User Action:

None.

RMLO0008

NO LOG RECORDS FOUND

Reason:

No Log records exist.

System Action:

No further processing.

User Action:

None.

RMLO0009

INVALID COMMAND

Reason:

The command which was entered is not supported on this screen.

System Action:

Command is rejected.

User Action:

None.

RMLO0010**COMMAND ASSIGNED TO FUNCTION KEY ~P1 IS INVALID****Reason:**

Function key P1 was pressed and the command assigned to it was invalid

System Action:

Command is rejected.

User Action:

Contact System Administrator.

RMLO0011**Transient logging disabled****Reason:**

You attempted to view transient log records; however, logging is disabled for this resource.

Logging is disabled by one of the following methods:

- Setting Transient Log Size to 0 in the resource definition
- Setting the Transient Log Size Maximum to 0 in the Customizer parameter group, \$RM AUTOTABLES.

System Action:

None.

User Action:

None.

RMLO0012

PROFILE EDS COMMAND FAILED, MSG(P1)

Reason:

A PROFILE EDS command, issued internally by Resource Learning, failed with message *P1*.

System Action:

Resource Learning fails.

User Action:

Contact your local support representative.

RMLO0013

WAITING FOR RESOURCE MESSAGES

Reason:

Resource Learning is listening for any messages concerned with the resource that is being created. These will be displayed on the list automatically as soon as they are detected.

System Action:

None.

User Action:

None.

RMLO0023

PROFILE parms invalid - valid keywords are (SEV|NCLID|PROC|RESET)

Reason:

The profile command entered is invalid.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun the executable.

RMLO0025**Display profile reset****Reason:**

The profile is reset.

System Action:

None.

User Action:

None.

RMLO0026**Display profile set to *P1*****Reason:**

The profile was modified successfully.

System Action:

None.

User Action:

None.

RMLO0027**Display profile not set****Reason:**

The profile command was not successful.

System Action:

None.

User Action:

Correct and retry.

RMLO0031

Transient log size *P1* from *P2* to *P3* : *P4*

Reason:

The transient log size for the current resource is *P1* (increased or decreased) from *P2* to *P3* for one of the following reasons, *P4*:

RESOURCE DEFINITION UPDATED

Indicates that the transient log size for this resource has been updated.

DEFAULT SIZE UPDATED

Indicates that the default value specified in the AUTOTABLES parameter group has been updated.

MAXIMUM SIZE UPDATED

Indicates that the maximum value specified in the AUTOTABLES parameter group has been updated.

MAXIMUM SIZE EXCEEDED

Indicates that the maximum value specified in the AUTOTABLES parameter group has been updated and the current value specified for this resource exceeds this maximum.

System Action:

None.

User Action:

None.

RMLO0032

Transient log resizing in progress - try later

Reason:

The current view of the transient log browser ended because the log is being resized.

System Action:

None.

User Action:

Retry the L command to restart the transient log browser.

RMLO0033***P1* log entries deleted****Reason:**

The indicated number, *P1*, of messages in the transient log are deleted according to the retention period specified in the AUTOTABLES parameter group.

System Action:

None.

User Action:

None.

RMLO0099**(*P1*: *P2*) *P3* *P4* *P5* *P6*****Reason:**

A message was received by the logger procedure for a resource that has the 'Log to Activity Log' flag set to YES.

P1 is the class of the resource.

P2 is the resource name.

P3 is the severity level of the message.

P4 is the ID of the NCL process that raised the message.

P5 is the name of the NCL procedure that raised the message.

P6 is the actual message received by the logger procedure.

System Action:

None.

User Action:

None.

RMLO0101

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(P1) VALUE(P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Please contact your local support representative.

RMLO0102

P1 FAILED - RC(P2) FDBK(P3) SYMSG(P4)

Reason:

As this resource exists in a remote region, an APPC conversation is required to process this log request. APPC function *P1* has ended in error. *P2* contains the return code, *P3* the feedback code, and *P4* the message describing the failure.

System Action:

Processing terminated in error.

User Action:

Determine whether the remote system is still available. Contact your systems administrator.

RMLO0103

PROFILE PARMS INVALID - VALID KEYWORDS ARE (SEV|NCLID|PROC|RESET)

Reason:

The profile command entered was invalid.

System Action:

The request is rejected.

User Action:

Respecify the profile with the correct keywords.

DISPLAY PROFILE NOT SET

Reason:

The user cancelled the profile command.

System Action:

None.

User Action:

None.

RMLO0508**NO LOG RECORDS FOUND****Reason:**

No Log records exist.

System Action:

No further processing.

User Action:

None.

RMLO0509**INVALID COMMAND****Reason:**

The command which was entered is not supported on this screen.

System Action:

Command is rejected.

User Action:

None.

RMLO0510**COMMAND ASSIGNED TO FUNCTION KEY P1 IS INVALID****Reason:**

Function key *P1* was pressed and the command assigned to it was invalid

System Action:

Command is rejected.

User Action:

Contact System Administrator.

RMLO0601

NO LOG RECORDS FOUND

Reason:

No Log records exist.

System Action:

No further processing.

User Action:

None.

RMLO0701

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(P1) VALUE(P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Please contact your local support representative.

RMLO0702

NO ASSOCIATED RESOURCE RECORDS FOUND FOR P1 P2

Reason:

You have selected a service or an owner resource. No resource records were found to match the service or ownership criteria for the resource. The type is identified by *P1*, and the name of the service or owner is identified by *P2*.

System Action:

None.

User Action:

The message is informational only.

RMLO0703**ERROR RETRIEVING RESOURCES FOR P1****Reason:**

An error occurred while attempting to build a resource list for the entity identified by *P1* .

System Action:

None.

User Action:

Contact your local support representative.

RMLO0704**VARIABLE GET ERROR - FDBK= P1 OPT= P2 KEY= P3****Reason:**

An error occurred while getting the first record in the vartable.

System Action:

None.

User Action:

Contact your local support representative.

RMLO0705**FATAL ERROR - UNABLE TO ADD RECORD TO VARTABLE****Reason:**

An error occurred while adding a record to the vartable.

System Action:

None.

User Action:

Contact your local support representative.

RMLO0706

FATAL ERROR - UNABLE TO GET RECORD FROM VARTABLE

Reason:

An error occurred while getting a record from the vartable.

System Action:

None.

User Action:

Contact your local support representative.

RMLO0707

ERROR GETTING RECORD FOR P1 FROM \$RM\$\$LOGOBJ VARTABLE - FDBK P2

Reason:

An error occurred while getting a record from the \$RM\$\$LOGOBJ vartable.

System Action:

None.

User Action:

Contact your local support representative.

RMLOAD01

\$RMLOAD INVOKED WITH KEYWORD(~P1) CONTAINING INVALID VALUE(~P2)

Reason:

Procedure \$RMLOAD was invoked with an invlaid value of P2 for keyword P1.

System Action:

Request rejected.

User Action:

Correct call and retry.

RMLOAD02

THE ONLY VALID VALUES FOR AUTOMATION MODE ARE 'AUTOMATED' AND 'MANUAL'

Reason:

Self Explanatory

System Action:

Request rejected.

User Action:

Specify one of the correct values

RMLOAD03

P1 SHUT DOWN DUE TO SYSTEM IMAGE RE-LOAD REQUESTED BY P2

Reason:

The entity identified by P1 has been shut down due to a request for a system image load made by the user identified by P2.

System Action:

Informational only.

User Action:

None.

RMLOAD04

INVALID COMMAND

Reason:

The command entered on the command line was not recognized by the procedure.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RMLOAD05

P1

Reason:

This message indicates an action being performed by the system image load procedure.

System Action:

None.

User Action:

None.

RMLOAD06

SYSTEM IMAGE IS ALREADY ACTIVE ON REGION P1

Reason:

A System Image load request was rejected because the System Image is loaded on a linked region.

System Action:

None.

User Action:

None.

RMLOAD07

LOAD REQUEST CANCELLED

Reason:

A System Image load request was cancelled by the user.

System Action:

None.

User Action:

None.

RMLOAD09**SYSDNAME(P1) VERSION(P2) NOT AN ACTIVE IMAGE****Reason:**

The System Image name supplied in a load command is not the name of an active System Image.

System Action:

The load request is rejected.

User Action:

Correct the System Image name and retry.

RMLOAD10**NOT LICENSED FOR AUTOMATED MODE****Reason:**

This region is licensed as a SOLVE:Operations for IT/Operations or OpenView agent only and cannot be run in automated mode.

System Action:

The request is rejected.

User Action:

If a full license is required, contact Technical Support.

RMLOAD11**THE ONLY VALID VALUES FOR P1 ARE 'YES' AND 'NO'****Reason:**

The valid values for *P1* are 'YES' or 'NO'.

System Action:

Request rejected.

User Action:

Specify one of the correct values either 'YES' or 'NO'.

RMLOAD12

CHECKPOINT RESTART NOT ACTIVE - CANNOT WARM START

Reason:

Cannot Warm Start as Checkpoint Restart is not active.

System Action:

Value changed to 'YES', error message displayed to user.

User Action:

None.

RMLOAD13

SYSTEM LOAD REJECTED, ALREADY IN PROGRESS (P1)

Reason:

A request to load a new system image was rejected because there is already a system load in progress. The current load was started at *P1*.

System Action:

Request rejected.

User Action:

None.

RMM02901

Database P1 Error - DB(P2) RC(P3) SYMSG(P4)

Reason:

The database function has ended in error. P1 is the function being performed, P2 is the name of the database, P3 is the system return code, and P4 is the system error message.

System Action:

The current processing terminates in error.

User Action:

Check the status of the NDB database using the SH ALLOC command.

RMM02902**Unknown ruleset name P1 specified****Reason:**

The ruleset name specified is not defined.

System Action:

The request is rejected.

User Action:

Correct and retry. Enter ? in the Ruleset Name field to view a list of rulesets.

RMM02903**Value not selected from list****Reason:**

A prompt list was presented, but you did not choose an item.

System Action:

No value is entered.

User Action:

None.

RMM02904**Invalid System Name " P1" AND Version " P2" specified****Reason:**

The specified system name and version combination does not exist.

System Action:

The request is rejected.

User Action:

Correct and retry. Use ? to display a list of valid system image names.

RMM02905

P1 failed for file P2 Error P3

Reason:

The file operation specified by P1 failed on file P2 and the error is contained in P3.

System Action:

The file operation failed.

User Action:

Check that the file is not allocated to another application.

RMM02906

Invalid Import Mode P1 MUST BE REPLACE, OVERLAY OR MERGE

Reason:

You have selected an incorrect mode when adding records to your Automation Services database.

MERGE adds the imported records that are new but does not affect any existing records. OVERLAY adds the imported records that are new and updates existing records. REPLACE deletes any existing target records before importing records to the RAMDB.

System Action:

The request is rejected.

User Action:

Correct and retry.

RMM02907

P1 is not a valid sequential dataset

Reason:

The specified dataset is not valid. Either it does not exist, or it is not sequential with a record length of at least 80 characters (LRECL=80).

System Action:

The request is rejected.

User Action:

Specify a valid dataset and retry.

RMM03101**P1 NOT ALLOWED WHILE ANOTHER TRANSMIT/SYNCHRONIZE IN PROGRESS****Reason:**

The request, P1 , has been rejected because there is a multisystem task already in progress. The request cannot be performed while another task is in progress.

System Action:

The request is rejected.

User Action:

Wait for the current task to complete.

RMM03102**THIS REGION IS ALREADY LINKED TO OTHER REGION(S)****Reason:**

You have attempted to link this region into a multi-system network. However, this region is already part of a multi-system network.

System Action:

The request is rejected.

User Action:

If you want to proceed with this request, you must first disconnect this region from the existing multi-system network using the UNLINK option (U).

RMM03103**THIS REGION IS NOT LINKED TO OTHER REGION(S)****Reason:**

You have selected the U option to unlink this region from a multi-system network. However, this region is not currently part of a multi-system network.

System Action:

The request is rejected.

User Action:

None.

RMM03401

The system image (P1) and version (P2) already exists

Reason:

The specified system image already exists in the knowledge base. You cannot autopopulate an existing sysplex system image.

System Action:

The field in error is highlighted.

User Action:

Change the value in the Version field to specify a sysplex system image that is not already in the knowledge base and retry.

RMM03402

Special system image(P1) is invalid for resource learning

Reason:

The *P1* system image is not an image that is defined in the knowledge base and cannot have resources defined to it.

System Action:

Access to the resource learning feature is prevented.

User Action:

Define a system image in the knowledge base, and load it in the region.

RMM03403**TCP/IP socket interface is not active, cannot do express setup for IP****Reason:**

The TCP/IP sockets interface is not active. The express setup of IP resources cannot continue unless this interface is active.

System Action:

Request rejected.

User Action:

The TCP/IP sockets interface is started by the \$NM SOCKETS parameter group in Customizer. Enter /PARMS to access the Customizer parameter groups and check that the \$NM SOCKETS parameter group specifies the correct values. Check the parameter group log for any errors. Ensure that this parameter group has been actioned.

RMM03404**NETSTAT interface is not available, cannot do express setup for IP****Reason:**

The NETSTAT interface is not available. The express setup of IP resources cannot continue unless this interface is active.

System Action:

Request rejected.

User Action:

The NETSTAT interface is activated by the Sub-System Interface (SSI) hat is connected to this region. Ensure that the SSI that this region is connected to is active.

Enter **/PARMS** to access the Customizer parameter groups and check that the \$NM SSI parameter group specifies the correct SSI ID. Check the parameter group log for any errors.

Ensure that the parameters of the SSI task specify UNIX=YES (this enables the NETSTAT interface).

If your region is running CA NetMaster File Transfer Management, you must specify UNIX=YES in a separate SSI to the one this region is connected to. Both SSI tasks must be active. Ensure that both SSIs have the same XCFGROUP= value specified.

RMMC0001

INVALID MACRO CALL - INVALID SERVICE(~P1) REQUESTED

Reason:

A macro was invoked with the SERVICE keyword set to value P1 which is not supported.

System Action:

Request is rejected.

User Action:

Correct the SERVICE keyword and re-try.

RMMC0002

INVALID MACRO CALL - INVALID OPTION(~P1) REQUESTED

Reason:

A macro was invoked with the OPTION keyword set to value P1 which is not supported.

System Action:

Request is rejected.

User Action:

Correct the SERVICE keyword and re-try.

RMMC0003

INVALID MACRO CALL - OPTION(~P1) NOT VALID FOR SERVICE(~P2)

Reason:

A macro was invoked with an invalid SERVICE and OPTION combination.

System Action:

Request is rejected.

User Action:

Correct either the SERVICE or OPTION keyword and re-try.

RMMC0004**MACRO(~P1) INVOKED WITHOUT REQUIRED PARAMETER '~P2'****Reason:**

The macro identified by P1 was invoked without the required parameter identified by P2

System Action:

Request is rejected

User Action:

Correct call and re-try.

RMMC0005**MACRO(P1) REQUIRES THAT ' P2' OR ' P3' BE PROVIDED****Reason:**

The macro identified by P1 was invoked without one of the two parameters identified by P2 and P3. One of these must be specified for successful execution.

System Action:

Request is rejected.

User Action:

Correct call and re-try.

RMMC0006**SERVICE PROCEDURE ~P1 INVOKED WITH INVALID KEYWORD
~P2(~P3)****Reason:**

The service procedure identified by P1 was invoked with an invalid value for the keyword identified by P2 of P3.

System Action:

Request rejected

User Action:

Correct the keyword value and re-try

RMMC0007

'~P1' IS A REQUIRED FIELD

Reason:

While defining macro parameters the field identified by P1 was not entered and is a required field.

System Action:

Field highlighted in error.

User Action:

Enter a value for the specified field

RMMC0008

' P1' IS NOT A VALID VALUE FOR ' P2'

Reason:

The value, *P1* , is not valid for the field, *P2* .

System Action:

The field in error is highlighted.

User Action:

Enter a valid value for the field, *P2* .

RMMC0009

IMBEDDED BLANKS ARE INVALID IN '~P1'

Reason:

The data entered in the field identified by P1 contains imbedded blanks. Blanks are not allowed anywhere in this field except at the end.

System Action:

Field highlighted in error.

User Action:

Remove the imbedded blanks

RMMC0010**'~P1' IS REQUIRED WHEN VALUE ENTERED IN '~P2'****Reason:**

The field identified by P1 is required if a value has been entered into the field identified by P2.

System Action:

Field highlighted in error.

User Action:

Enter a value for the specified field

RMMC0011**'~P1' IS INVALID WHEN NO VALUE ENTERED IN '~P2'****Reason:**

The field identified by P1 cannot contain any data if none was entered into the field identified by P2.

System Action:

Field highlighted in error.

User Action:

Enter a value in the field identified by P2 or clear the field identified by P1

RMMC0012**VALID VALUE(S) FOR SELECT CODE - ~P1****Reason:**

The value/values identified by P1 are the only acceptable values for this selection field.

System Action:

Field highlighted in error.

User Action:

Enter one of the valid values in the specified field

RMMC0013

EITHER ' P1' OR ' P2' MUST BE SPECIFIED

Reason:

One of the two paramaters identified by P1 and P2 must be specified for successful execution of this macro.

System Action:

Fields highlighted in error.

User Action:

Specify one of the required fields.

RMMC0014

'~P1' AND '~P2' ARE MUTUALLY EXCLUSIVE

Reason:

The two paramaters identified by P2 and P3 cannot both be specified for successful execution of this macro.

System Action:

Fields highlighted in error

User Action:

Blank out one of the fields.

RMMC0015

SINGLE QUOTE(') AND DOUBLE QUOTE(") CANNOT BOTH BE USED AS DELIMITERS

Reason:

When specifying delimiters for a PARSE macro, single and double quotes cannot both be specified in the one delimiter string.

System Action:

Fields highlighted in error

User Action:

Use only a single or double quote in the delimiter string.

RMMC0016**MESSAGE TEXT CANNOT BEGIN WITH A WILDCARD CHARACTER - P1****Reason:**

It is invalid, when specifying message text to begin the message text with a wildcard character (in this case identified by P1).

System Action:

Field(s) highlighted in error.

User Action:

Do not specify a wildcard character as the first character of message text.

RMMC0017**INVALID CHARACTER(P1) SPECIFIED****Reason:**

Invalid character value specified.

System Action:

Field in error highlighted.

User Action:

Correct and try again.

RMMC0018**AT LEAST ONE P1 FIELD MUST BE ENTERED****Reason:**

There is a choice of fields to be entered. Although none is mandatory in itself, at least one of the fields must be entered.

System Action:

Field in error is highlighted

User Action:

Please enter data in one of the fields indicated or cancel

RMMC0019

P1 MUST BE NUMERIC - RANGE P2

Reason:

A numeric field must be entered and it must be in the indicated range.

System Action:

Field in error is highlighted.

User Action:

Please enter data in the range indicated.

RMMC0020

P1 MUST BE OF TYPE P2

Reason:

Field *P1* must be of type *P2*.

System Action:

Field in error is highlighted.

User Action:

Enter the correct type of data.

RMMC0021

P1 MUST BE NULL IF P2 IS P3

Reason:

The field *P1* must be null if the field *P2* has the value *P3*.

System Action:

Field in error is highlighted.

User Action:

Please enter data in the range indicated.

RMMC0022**P1 CANNOT BE P2 IF P3 IS SPECIFIED****Reason:**

The field *P1* cannot have the value *P2* when field *P3* has been specified.

System Action:

Field in error is highlighted.

User Action:

Change the value of *P1* or blank out the value for *P3*.

RMMC0023**P1 MUST NOT BE IN THE PAST****Reason:**

The field *P1* cannot have a value that specifies a date or time from the past, it must always be in the future.

System Action:

Field in error is highlighted.

User Action:

Change the value of *P1* to specify a future moment.

RMMC0024**INVALID CHARACTERS ENCOUNTERED IN P1****Reason:**

DBCS data was encountered during validation. DBCS data is not valid in this field.

System Action:

The value is rejected.

User Action:

Enter a non-DBCS value.

RMMC0025

INVALID VARIABLE NAME IN FIELD ' P1'

Reason:

The data in field *P1* contains an invalid variable name. A variable must start with an & followed by a name that:

- Consists of national and alphanumeric characters
- Does not start with a numeric character
- Contains no embedded blanks

System Action:

The field in error is highlighted.

User Action:

Correct the variable name.

RMMC0026

State cannot be changed for SYSPLX resources

Reason:

You cannot change the actual state of a SYSPLX class resource.

System Action:

If the error occurs on the SETSTATE Macro Parameter Definition panel, the field in error is highlighted. If the error occurs during the execution of the macro, the state change is not honored while the other settings are honored.

User Action:

Review the process definition to ensure that the process is not defined to change the actual state of a sysplex resource.

RMMC0027***P1* is an invalid EventView Variable name****Reason:**

The EVVARSET or EVVARGET macro failed because the name of the EventView variable is invalid. *P1* is the invalid name.

System Action:

The process step fails.

User Action:

Correct the process or if a variable is used to specify the Eventview variable name at execution time, ensure that the variable resolves to a valid name.

RMMC0028**EventView Variable name *P1* is not specified.****Reason:**

The EVVARSET or EVVARGET macro failed because the name of the EventView variable is not provided. *P1* is the variable used to set the EventView variable name.

System Action:

The process step fails.

User Action:

Ensure that variable *P1* resolves to a valid name at execution time.

RMMC0301**'LAST WTOR' WAS SPECIFIED BUT NO RECORD OF A WTOR EXISTS****Reason:**

The macro to reply to an outstanding WTOR was invoked, and the parameter "LAST WTOR?" was set to "YES". However, there was no record of an outstanding WTOR message.

System Action:

The request is rejected.

User Action:

Determine the reason for the absence of the expected WTOR. Make any necessary corrections and re-try.

RMMC0302

NO OUTSTANDING WTOR FOUND MATCHING '~P1'

Reason:

The macro to reply to an outstanding WTOR was invoked, and the parameter "WTORTEXT" was specified. However, no outstanding WTOR was found which matched the supplied text (P1).

System Action:

The request is rejected.

User Action:

Determine the reason for the absence of the expected WTOR. Make any necessary corrections and re-try.

RMMC0303

AT LEAST ONE FORM OF WTOR IDENTIFICATION MUST BE ENTERED

Reason:

This message will issue when defining parameters to reply to a WTOR, but none of the three methods of identifying the WTOR has been indicated. The WTOR to be replied to may be identified by entering, YES in the LASTWTOR field, the name of the job which issued the WTOR or by entering text to match an outstanding WTOR against.

System Action:

All WTOR Identification fields are highlighted in error.

User Action:

Specify at least one of the identification methods.

RMMC0304**'JOBNAME' AND 'TEXT' CANNOT BE SPECIFIED WITH 'LASTWTOR'****Reason:**

When specifying WTOR Identification the 'JOBNAME' and 'TEXT' fields cannot be entered if the 'LASTWTOR' field has been set to 'YES'. Specifying 'YES' in this field indicates that the last recorded WTOR is to be replied to and so no further forms of identification are required.

System Action:

Field(s) in error are highlighted.

User Action:

Clear either the 'LASTWTOR' field or the highlighted field(s)

RMMC0305**NO OUTSTANDING WTOR FOUND FOR JOB(~P1)****Reason:**

The macro to reply to an outstanding WTOR was invoked, and the parameter "JOBNAME" was specified. However, no outstanding WTOR was found for this job.

System Action:

The request is rejected.

User Action:

Determine the reason for the absence of the expected WTOR. Make any necessary corrections and re-try.

RMMC0306

JOB(~P1) IS NOT ACTIVE

Reason:

A request was made to answer an outstanding WTOR for a job, identified by P1. However, it was determined during processing that the required job is not active.

System Action:

Request is rejected.

User Action:

Determine why the required job was not active.

RMMC0307

WAIT PERIOD (~P1) EXPIRED

Reason:

While trying to identify the required outstanding WTOR the macro has timed out.

System Action:

None

User Action:

None

RMMC0308

'JOBNAME' IGNORED - UNSUPPORTED ON VOS3

Reason:

During execution of a REPLY macro, the parameters of the macro were found to include a JOBNAME in the WTOR Identification field. JOBNAME selection is only supported if the process is executed on an MVS or MSP system. On VOS3, it is not possible to identify WTORs by their issuing Jobname.

System Action:

Process continues. Jobname is ignored.

User Action:

Ensure LAST WTOR or WTOR MESSAGE TEXT is included in the REPLY macro parameters to identify the WTOR to be replied to.

RMMC0601**PROCESS PARAMETERS MUST BE IN KEYWORD FORMAT
(KEYWORD=value)****Reason:**

Parameters for a process must be in the KEYWORD format acceptable as input to a SETVARS NCL statement.

System Action:

Highlight the field in error.

User Action:

Enter the parameters in a valid KEYWORD format. i.e. KEYWORD=value

RMMC0701**PROCESS PARAMETERS MUST BE IN KEYWORD FORMAT
(KEYWORD=value)****Reason:**

Parameters for a process must be in the KEYWORD format acceptable as input to a SETVARS NCL statement.

System Action:

Highlight the field in error.

User Action:

Enter the parameters in a valid KEYWORD format. i.e. KEYWORD=value

RMMC0801**NESTING LIMIT WILL BE EXCEEDED IF PROCESSING IS ALLOWED TO
CONTINUE****Reason:**

The RUNPRCSS Macro has detected that if it allowed processing to continue the NCL nesting limit will be exceeded.

System Action:

Process is terminated.

User Action:

Check for unintentional recursion.

RMMC1101

'DATASET NAME' MUST CONTAIN A VALID MEMBER NAME

Reason:

When specifying the dataset name where the JCL to be submitted resides no member name was specified. The member which contains the JCL must be specified in dataset name.

System Action:

Field highlighted in error.

User Action:

Specify the member name which contains the required JCL

RMMC1201

'CLASS' DOES NOT MATCH PREVIOUSLY SELECTED COMMAND CLASS (P1)

Reason:

In the SVAPI macro, you specified a value in the Class field that does not match the class associated with the command to be issued. P1 identifies the command.

System Action:

Field in error is highlighted.

User Action:

To correct the problem, do one of the following:

- Change the value of the Class field to match the selected command.
- Enter ? in the Command field, and select a suitable command for the specified class.

RMMC2001**COMPARE RESULT (LEFTOPER(P1) OP(P2) RIGHTOPER(P3)) RC= P4****Reason:**

The compare defined within the parentheses was processed successfully. P1 contains the value being tested, P2 contains the compare operator and P3 contains *the* constant or variable value to which *P1* was compared. *P4* contains the return code from the compare - '0' is returned when the compare result is true and '4' when it is false.

System Action:

None.

User Action:

None.

RMMC2101**TIMEOUT FOR EVENT PROFILE REACHED RESOURCE= P1 WAITTIME= P2****Reason:**

No EVENT for specified Event profile arrived within defined timeframe.

System Action:

Macro Execution terminates with user defined return code.

User Action:

Adjust Event profile or time window.

RMMC2102**FROMSTATE P2 for RESOURCE= P1 NE ACTUAL STATUS TABLE VALUE****Reason:**

The defined From Status does not match with the actual Resource Value.

System Action:

Macro Execution terminates with return code 4.

User Action:

Adjust Event profile.

RMMC2501

IMBEDDED BLANKS ARE INVALID IN A VARIABLE NAME IN FIELD ' P1'

Reason:

The data entered in the field identified by P1 contains a variable name which has imbedded blanks. Blanks are not allowed within a variable name except at the end.

System Action:

Field highlighted in error.

User Action:

Remove the imbedded blanks

RMMC2502

ALERT ACTION RECORD MISSING - OBJID: P1

Reason:

A record defining the action to be taken when an alert is raised is missing.

System Action:

None.

User Action:

To recreate the action, ensure that Function=UPDATE and press F10 (Actions).

RMMC2801

A MAXIMUM OF TWO RESOURCES MAY BE DEFINED SEPARATED BY A COMMA

Reason:

An attempt has been made to include more than 2 resources in the resource field for this macro.

System Action:

The field in error is highlighted.

User Action:

Re-enter the resource field data so that it conforms to the rules for an event.

RMMC2802**FIELD ' P1' DOES NOT CONFORM TO EVENT NAME RULES****Reason:**

Field *P1* does not conform to the rules specified for EVENT names.

System Action:

The field in error is highlighted.

User Action:

Correct the data entered according to the rules for event names as specified for the &EVENT verb in the NCL Reference.

RMMC2803**RESOURCE P1 DOES NOT CONFORM TO RESOURCE NAME RULES****Reason:**

Resource *P1* does not conform to the rules specified for resource names. Resource names are *allowed* to contain alphanumeric characters and the special characters '@#\$.-:' and can be a maximum of 64 bytes long.

System Action:

The field in error is highlighted.

User Action:

Correct the data entered according to the rules for resource names.

RMMC2901**A MAXIMUM OF TWO RESOURCES MAY BE DEFINED SEPARATED BY A COMMA****Reason:**

An attempt has been made to include more than 2 resources in the resource field for this macro.

System Action:

The field in error is highlighted.

User Action:

Re-enter the resource field data so that it conforms to the rules for an event.

RMMC2902

FIELD ' P1' DOES NOT CONFORM TO EVENT NAME RULES

Reason:

Field *P1* does not conform to the rules specified for EVENT names.

System Action:

The field in error is highlighted.

User Action:

Correct the data entered according to the rules for event names as specified for the &EVENT verb in the NCL Reference.

RMMC2903

RESOURCE P1 DOES NOT CONFORM TO RESOURCE NAME RULES

Reason:

Resource P1 does not conform to the rules specified for resource names. Resource names are *allowed* to contain alphanumeric characters and the special characters '@#\$.-:' and can be a maximum of 64 bytes long.

System Action:

The field in error is highlighted.

User Action:

Correct the data entered according to the rules for resource names.

RMMC2904

PROFILED FOR EVENT: xxxxxxxxxx

Reason:

This message is logged during process execution of a WAITEVNT macro. It records the event on which the process is waiting. Message RMMC2904 is followed by one or more messages RMMC2904A with details of the event profile.

System Action:

The process waits for the event to occur.

User Action:

None.

RMMC2905**EVENT RECEIVED: xxxxxxxxxx****Reason:**

This message is logged during process execution of a WAITEVNT macro. The event on which the process is waiting has occurred. Message RMMC2905 is followed by one or more messages RMMC2905A with details of the received event.

System Action:

The process continues.

User Action:

None.

RMMC2906**EVENT NOT RECEIVED WITHIN TIMEOUT PERIOD OF ~P1 SECONDS****Reason:**

This message is logged during process execution of a WAITEVNT macro. The event on which the process is waiting has not occurred during the nominated timeout period of P1 seconds.

System Action:

The WAITEVNT macro completes with a return code of 4. Any subsequent steps in the process are executed.

User Action:

None.

RMMC3101**PROCEDURE(P1) INVOKED WITHOUT REQUIRED PARAMETER ' P2'****Reason:**

Procedure, P1, was invoked without the required parameter, P2.

System Action:

Request is rejected.

User Action:

Contact your local support representative.

RMMC3102

NO RESPONSE RECEIVED FROM SERVICE PROCEDURE WITHIN TIMEOUT

Reason:

Procedure \$RMMC31S timed out on an &INTREAD statement waiting for a response from the service procedure.

System Action:

Processing continues.

User Action:

Contact your local support representative.

RMMC3103

' P1' IS NOT A VALID VALUE FOR ' P2' MUST BE ' P3'

Reason:

The value, P1, is not valid for the field, P2. Valid values are identified by P3.

System Action:

Field in error is highlighted.

User Action:

Enter a valid value for the specified field.

RMMC3104

ERROR: MIXED VARIABLE AND STATIC DATA FOUND

Reason:

The user has entered static data together with one or more variables in the same field. Static data and variables cannot be mixed in the same field.

System Action:

Field in error is highlighted.

User Action:

Re-enter the data into separate fields.

RMMC3105**ERROR: INVALID VARIABLE NAME****Reason:**

An illegal variable name has been entered into the field highlighted.

System Action:

Field in error is highlighted.

User Action:

Correct the variable name and re-enter.

RMMC3201**P1 IS NOT A VALID JOB ID****Reason:**

The value *P1* is not a valid Job Identifier.

System Action:

Field is set in error.

User Action:

Specify a valid Job Identifier. There are two valid formats allowed:
xxxxnnnnn - where xxx is either JOB, STC, or TSU and nnnnn is a numeric value from 1 to 5 digits.
xnnnnnnnn - where x is either J, S, or T and nnnnnnn is a numeric value from 1 to 7 digits.

RMMC3501**PROCESS P1 WITH ID P2 IS IN P3 STATUS****Reason:**

The process with name *P1* and with process identifier *P2* is in status *P3* which is the required status.

System Action:

Macro processing completed.

User Action:

None.

RMMC3502

PROCESS P1 WITH IDENTIFIER P2 NOT FOUND

Reason:

A process with the name *P1* and identifier *P2* was not found.

System Action:

Macro processing completes.

User Action:

None.

RMMC3503

TIMEOUT REACHED BEFORE PROCESS P1 WAS IN STATUS P2

Reason:

The timeout period expired before process with name *P1* entered the status *P2*.

System Action:

Macro processing terminates with requested return code.

User Action:

None.

RMMC3504

P1 MACRO TIMEOUT REACHED

Reason:

The timeout after period has expired for macro *P1*.

System Action:

Macro processing completes.

User Action:

None.

RMMC3505**RESPONSE QUEUE OVERFLOW FOR MACRO P1****Reason:**

The response message queue for macro *P1* has overflowed.

System Action:

Macro processing terminates.

User Action:

None.

RMMC3701**ERROR P1 P2. RC(P2) MSG(P3)****Reason:**

An error occurred while performing function *P1* against the SNMP trap destination dataset *P2* . RETCODE *P3* was returned with error message *P4* .

System Action:

Process terminates.

User Action:

Ascertain the cause of the error, correct and retry,

RMMC3702**ENCODING ERROR RETCODE= P1 ZFDBK= P2****Reason:**

An error occurred while encoding the MDO to be used to write the SNMP trap. RETCODE is *P1* with FEEDBACK *P2*

System Action:

Process terminates.

User Action:

Ascertain the cause of the error, correct and retry,

RMMC3703

SOCKET P1 ERROR. RC(P2) ZFDBK(P3) ZSOCERRN(P4)

Reason:

An error occurred while performing SOCKET function *P1* . The return code is *P2* ,with feedback *P3* and ZSOCERRN *P4* .

System Action:

Process terminates.

User Action:

Ascertain the cause of the error, correct and retry,

RMMC3704

NETMASTER FOR TCP/IP IS NOT ACTIVE. STATUS IS P1.

Reason:

The system variable ZTCP that contains the state of NetMaster for TCP/IP is not currently set to ACTIVE.

P1 identifies the current value of ZTCP.

System Action:

Process terminates.

User Action:

Ascertain the cause of the error, correct and retry.

RMMC3901**UNABLE TO FIND DATASET WITH PROCESS \$RFPNGCD. TRYING ACTION=SETPING.****Reason:**

The PINGCD macro needs to know which dataset contains the supplied CONNECT:Direct process, \$RFPNGCD. It uses the process to check the availability of remote nodes. This information is currently unavailable to it. It will issue the command, \$RFCALL ACTION=SETPING, to try to find the dataset.

System Action:

\$RFCALL OPT=SETPING is issued to try to ascertain the dataset name. If unsuccessful, an error message will be logged and the macro ended.

User Action:

If unsuccessful, try re-issuing either the PINGCD macro or \$RFCALL ACTION=SETPING.

RMMC4001**WARNING: CONCATENATION INTO VARIABLE P1 HAS EXCEEDED THE MAXIMUM ALLOWABLE AND TRUNCATION HAS OCCURED.****Reason:**

The result of the concatenation exceeds 256 characters and was truncated when stored in the *P1* variable.

System Action:

Processing continues.

User Action:

If you do not want the result to be truncated, reduce the length of the input data.

RMMC4002

AN IMBEDDED VARIABLE HAS BEEN DETECTED (P1)

Reason:

The data to be concatenated contains text and variable without an intervening blank (for example, A&B). The data must contain only pure text and pure variables separated by blanks.

System Action:

Field in error is highlighted.

User Action:

Correct the input data.

RMMC4003

INVALID VARIABLE NAME P1 FOUND

Reason:

The *P1* variable has an invalid name.

System Action:

Field in error is highlighted.

User Action:

Specify the correct variable.

RMMC4101

MUTUALLY EXCLUSIVE FIELDS NOT ALLOWED IN "Report Defintion" GROUP

Reason:

The "Exception Report Filter" field and the "FTSCHD" field details are mutually exclusive.

System Action:

The validation fails.

User Action:

Specify value for either the "Exception Report Filter" field or the "FTSCHD" fields but not both.

RMMC4102**MUTUALLY EXCLUSIVE FIELDS NOT ALLOWED IN "Period to Check" GROUP****Reason:**

The date and time fields are mutually exclusive with the "Within the last" field.

System Action:

The validation fails.

User Action:

Specify value for either the date and time fields or the "Within the last" field but not both.

RMMC4103**MUTUALLY EXCLUSIVE FIELDS NOT ALLOWED IN BOTH PARAMETER GROUPS****Reason:**

You specified mutually exclusive values in both the Report Definition Details and the Period to Check boxes.

System Action:

The validation fails.

User Action:

Refer to the RMMC4101 and RMMC4102 message Help for user actions.

RMMC4104**P1 DATE MUST BE P2 THAN P3 DATE****Reason:**

You have specified invalid dates.

System Action:

The validation fails.

User Action:

Correct the dates in the highlighted fields.

RMMC4105

P1 DATE AND TIME MUST BE P2 THAN P3 DATE AND TIME

Reason:

You have specified an invalid date-time combination.

System Action:

The validation fails.

User Action:

Correct the date and time in the highlighted fields.

RMMC4106

INPUT REQUIRED FOR EXECUTION FOR BOTH PARAMETER GROUPS

Reason:

The FTCHECK macro requires input for both the "Report Definition Details" and the "Period to Check" boxes.

System Action:

The validation fails.

User Action:

Specify the required values.

RMMC4107

NO P1 RECORDS FOUND

Reason:

No *P1* class resource definitions were found.

System Action:

The list of resource definitions is not displayed.

User Action:

None.

RMMC4108**VALUE NOT SELECTED FROM LIST****Reason:**

You did not select a value for the highlighted field.

System Action:

None

User Action:

None

RMMC4109**INPUT REQUIRED FOR EXECUTION FOR "Report Definition Details"****Reason:**

The FTCHECK macro requires input for the "Report Definition Details" box.

System Action:

The validation fails.

User Action:

Specify required value.

RMMC4110**INPUT REQUIRED FOR EXECUTION FOR "Period to Check"****Reason:**

The FTCHECK macro requires input for the "Period to Check" box.

System Action:

The validation fails.

User Action:

Specify required value.

RMMC4111

FTSCHD NAME IS REQUIRED

Reason:

The name of the FTSCHD class resource definition that contains the filter is required.

System Action:

The validation fails.

User Action:

Specify a valid FTSCHD name, or enter ? to select from a list of file transfer schedule monitor definitions.

RMMC4201

Socket connect to P1 successful

Reason:

A socket connection was successfully established to the IP Address/Host Name identified by *P1*.

System Action:

None

User Action:

None

RMMC4202

Socket connect to P1 unsuccessful

Reason:

A socket connection to the IP Address/Host Name identified by *P1* failed to be established.

System Action:

Socket connection is not made. Macro ends with RC=8.

User Action:

None

RMMC4203**An open socket connection - ID(P1) - already exists****Reason:**

A request to establish a socket connection has failed because an open connection already exists. The ID is *P1*. Only one open connection at a time is supported in a process.

System Action:

Socket connection is not made. Macro ends with RC=8.

User Action:

None

RMMC4204**IPv6 socket support not enabled on P1****Reason:**

A socket connection cannot proceed. The target address is IPv6, but the sockets API on region *P1* supports IPv4 addresses only.

System Action:

Socket connection is not made. Macro ends with RC=8.

User Action:

Check the SOCKETS parameter group (/PARMS) in the *P1* region. For IPv6 support, TCP/IP Software Type must specify IBMV6.

RMMC4301**Socket close of socket ID(P1) successful****Reason:**

A socket connection with ID *P1* was successfully closed.

System Action:

None

User Action:

None

RMMC4302

Socket close of socket ID(P1) unsuccessful

Reason:

A socket connection with ID *P1* was not successfully closed.

System Action:

Macro ends with a return code of 8.

User Action:

None

RMMC4401

Socket send to socket ID(P1) successful

Reason:

Data was successfully sent to a connection with socket ID *P1*.

System Action:

None

User Action:

None

RMMC4402

Socket send to socket ID(P1) unsuccessful

Reason:

A send to a socket connection with ID *P1* was not successful.

System Action:

Macro ends with a return code of 8.

User Action:

None

RMMC4403**Invalid hex characters encountered in P1****Reason:**

The hex string&P1&was found to contain invalid hex characters.

System Action:

The value is rejected.

User Action:

Enter only valid hex characters.

RMMC4501**Socket receive from socket ID(P1) ended with RC(P2)****Reason:**

Data was received from a connection with socket ID *P1* which caused the macro to end with Return Code *P2* .

System Action:

None

User Action:

None

RMMC4502**Socket receive from socket ID(P1) unsuccessful****Reason:**

A receive from a socket connection with ID *P1* was not successful.

System Action:

Macro ends with a return code of 8.

User Action:

None

RMMC4600

Successful completion of command issue to CA-7 subsystem P1 requested b y P2

Reason:

The macro request has successfully completed.

System Action:

The request is completed.

User Action:

No action is required.

RMMC4601

(COMMAND) P1

Reason:

This message logs the macro command to the activity log.

System Action:

None.

User Action:

Check the activity log for details. Contact your System Administrator.

RMMC4602

SERVICE PROCEDURE P1 INVOKED WITH INVALID KEYWORD P2(P3)

Reason:

The service procedure identified by P1 was invoked with an invalid value for the keyword identified by P2 of P3.

System Action:

Request rejected.

User Action:

Correct the keyword value and retry.

RMMC4603**P1 MUST BE NUMERIC - RANGE P2****Reason:**

A numeric field of the indicated range must be entered.

System Action:

Field in error is highlighted.

User Action:

Please enter data in the range indicated.

RMMC4604**P1 MUST BE ENTERED****Reason:**

A mandatory field must be entered.

System Action:

Field in error is highlighted.

User Action:

Please enter data in the range indicated.

RMMC4605**P1 MUST BE ENTERED - INVALID VALUE P2****Reason:**

A mandatory field must be entered with a valid value.

System Action:

Field in error is highlighted.

User Action:

Please enter data in the range indicated.

RMMC4606

' P1' is a required field, invalid value encountered.

Reason:

When defining macro parameters the field identified by *P1* was incorrect. This is a required field.

System Action:

Field highlighted in error.

User Action:

Enter a value for the specified field.

RMMC4607

INVALID VALUE SPECIFIED (USE "?" TO SELECT VALID VALUE)

Reason:

The value specified for this field is not valid. Use ? to display a selection list of valid values.

System Action:

The request is rejected.

User Action:

Use ? to specify a valid value.

RMMC4608

VALUE NOT SELECTED FROM LIST

Reason:

No value selected from the selection list displayed.

System Action:

None

User Action:

None

RMMC4609

CA NETMASTER SUBSYSTEM ERROR IN COMMAND: P1 P2. CHECK WHETHER THE SCHEDULER INSTANCE IS ACTIVE.

Reason:

There is either a subsystem error or the scheduler is inactive.

System Action:

The macro interface has a problem.

User Action:

Check if the scheduler is active. Contact your System Administrator.

RMMC4610

(RETCODE) P1 (SYSMSG) P2

Reason:

This message provides information about Retcode and Sysmsg for command execution.

System Action:

The request is completed.

User Action:

Check the value of Retcode and Sysmsg.

RMMC4611

Failure issuing command to CA-7 subsystem P1 requested by P2

Reason:

The command issued by the macro failed.

System Action:

The macro has encountered a problem issuing the command.

User Action:

Check the Retcode and Sysmsg.

RMMC4612

Invalid parameter in either Product, SSID, or Command

Reason:

Invalid value specified in either PRODUCT, SSID, or COMMAND.

System Action:

Macro command parameter has an error.

User Action:

Check the value entered in Product, SSID, or Command.

RMMC4613

Macro command issued. Product= P1 SSID= P2 Command= P3 Timeout= P4

Reason:

This message provides details of the macro command.

System Action:

No action is required.

User Action:

No action is required.

RMMC4614

INCORRECT PRODUCT TYPE

Reason:

Invalid product type specified in PRODUCT.

System Action:

Macro command parameter has an error.

User Action:

Check the value entered in PRODUCT.

RMMC4615**P1 SUBSYS NOT AVAILABLE****Reason:**

The subsystem is not available.

System Action:

Macro command execution has an error.

User Action:

Contact your System Administrator.

RMMC4616**SYSTEM TIMED OUT****Reason:**

The reply from the Schedule system has timed out.

System Action:

The macro has encountered a problem retrieving from the Scheduling System.

User Action:

Check the Retcode and Sysmsg.

RMMC4617**P1 Subsystem failed to connect to Scheduler Interface****Reason:**

The *P1* Subsystem cannot be started.

System Action:

Macro command processing has an error.

User Action:

Contact your System Administrator.

RMMC4618

Critical error encountered in the interface to scheduling system. Check for details in the activity log.

Reason:

There is a subsystem error.

System Action:

The macro interface has a problem. The request is rejected.

User Action:

Contact your System Administrator. Check the activity log for details.

RMMC4619

P1 P2 operation failed - RC P3. P1 not available.

Reason:

There is an error in the CA-7 subsystem.

System Action:

The macro interface has a severe problem. The request is rejected.

User Action:

Contact your System Administrator.

RMMC4620

P1 P2 operation failed - Abend Code P3. Check details from P1 manual.

Reason:

There is a subsystem error.

System Action:

The macro interface has a severe problem. The request is rejected.

User Action:

Contact your System Administrator.

RMMC4621**P1 P2 operation failed.****Reason:**

There is a subsystem error.

System Action:

The macro interface has a severe problem. The request is rejected.

User Action:

Contact your System Administrator.

RMMC4622**P1 unknown command P2 received****Reason:**

There is an unknown command passed to *P1* subsystem.

System Action:

The macro interface has a severe problem. The request is rejected.

User Action:

Check the command used and retry.

RMMC4623**P1 invalid parameter count passed. P2****Reason:**

Invalid parameter count passed to *P1* subsystem.

System Action:

The request is rejected.

User Action:

Check the parameter count and retry.

RMMC4624

P1 invalid request name passed. P2

Reason:

Invalid parameter name passed to *P1* subsystem.

System Action:

The request is rejected.

User Action:

Contact your System Administrator.

RMMC4625

P1 invalid path name passed. P2

Reason:

Invalid path name passed to *P1* subsystem.

System Action:

The request is rejected.

User Action:

Contact your System Administrator.

RMMC4626

P1 duplicated path name passed. P2

Reason:

Duplicated path name passed to *P1* subsystem.

System Action:

The request is rejected.

User Action:

Contact your System Administrator.

RMMC4627**P1 unknown path name passed. P2****Reason:**

Unknown path name passed to *P1* subsystem.

System Action:

The request is rejected.

User Action:

Contact your System Administrator.

RMMC4628**Storage shortage in P1. P2****Reason:**

Storage shortage in *P1* subsystem.

System Action:

The request is rejected.

User Action:

Contact your System Administrator.

RMMC4629**P1 function not valid in this state. P2****Reason:**

Function not valid in this state.

System Action:

The request is rejected.

User Action:

Contact your System Administrator.

RMMC4630

P1 not running as a subsys. P2

Reason:

P1 is not running as a subsystem.

System Action:

The request is rejected.

User Action:

Contact your System Administrator.

RMMC4631

P1 unknown command count P2 received

Reason:

An unknown command count has been passed to *P1* subsystem.

System Action:

The request is rejected.

User Action:

Check the command text used and retry.

RMMC4632

No command reply from CA-7 subsystem P1

Reason:

There is no command reply passed from *P1* subsystem.

System Action:

The request is rejected.

User Action:

Check the command text and scheduling system and then retry.

RMMC4633**P1 incorrect SSID****Reason:**

Invalid instance specified in product subsystem name.

System Action:

The macro command parameter has an error.

User Action:

Check the value entered in SSID.

RMMC4634**P1 Open Path error. Details - P2****Reason:**

The subsystem for CA-7 is not running due to an open path failure.

System Action:

The macro command execution has an error.

User Action:

Contact your System Administrator.

RMMC4635**Critical logon problem encountered for P1 background user.****Reason:**

The background user cannot log on to CA-7 because of a password problem.

System Action:

Macro command execution has an error.

User Action:

Contact your System Administrator.

RMMC4636

Interface invoked with invalid value(P1) for keyword(P2)

Reason:

The CA-7 API procedure was invoked with an invalid value, identified by *P1* for the keyword parameter identified by *P2*.

System Action:

The request is rejected. The interface procedure ends with return code 16.

User Action:

Correct the invalid keyword parameter.

RMMC4637

Password expired for P1 background user.

Reason:

The background user cannot log on to CA-7 because their password has expired.

System Action:

Macro command execution has an error.

User Action:

Contact your System Administrator.

RMMC4638

P1 background userid suspended.

Reason:

The background user cannot log on to CA-7 because their password has expired.

System Action:

Macro command execution has an error.

User Action:

Contact your System Administrator.

RMMC4639**Invalid macro call - option(p1) requested in unsupported Operating System p2****Reason:**

Unsupported Operating System. The macro can only be run on MVS ESA or higher.

System Action:

No action is required.

User Action:

Stop execution of the macro.

RMMF0001**INVALID FORCED STATUS RECEIVED STATUS(P1)****Reason:**

The ResourceView message filter occasionally issues a FORCE status change for a particular resource because the filter has seen a state change message that is serious but was not acted on by any message definition in the Knowledge base (for example, JCL errors in a started task procedure). In this case, however, the state change was obsolete.

If this message appears in the activity log, a resource identifier is appended to the end of the message (for example, - STC(MYTASK)).

System Action:

The FORCE state change is rejected.

User Action:

Ignore the message.

RMMF0002

FORCED STATUS CHANGE EVENT RECEIVED STATUS(*P1*)

Reason:

The ResourceView message filter occasionally issues a FORCE status change for a particular resource because the filter has seen a state change message that is serious but was not acted on by any message definition in the Knowledge base (for example, JCL errors in a started task procedure). The status being forced is indicated by *P1*.

If the message appears in the activity log, a resource identifier is appended to the end of the message (for example, - STC(MYTASK)).

System Action:

The state of the resource is changed to *P1*.

User Action:

Review the resource definition to see whether the event can be catered for by explicit message definitions. If not, there is no harm in leaving ResourceView to continue raising FORCE status events.

RMMF0003

MESSAGE EXCEPTION RECEIVED MESSAGE(*P1*)

Reason:

This message indicates that the ResourceView filter has seen a message *P1* that it does not know how to handle. It is unable to determine what resource this message should apply to in order to continue to process the rest of the filter.

System Action:

The message is skipped after raising this warning. No action is taken.

User Action:

The message *P1* would normally be a message that is issued by the operating system on behalf of a resource but is not otherwise related to the resource. Messages with JOBNAMEs such as *MASTER* or CONSOLE fall into this category. Report the message to your technical support representative.

RMMF0004**P4 ERROR ON TABLE(P1) FDBK(P2) KEY(P3)****Reason:**

Internal error in the ResourceView message filter.

System Action:

Recovery is attempted but may not be successful.

User Action:

Report the message to your technical support representative.

RMMF0005**RESOURCEVIEW MESSAGE FILTER P1 P2 INITIALIZED****Reason:**

The message indicates that the ResourceView secondary filter is now ready to process events from the ResourceView Primary filter.

System Action:

None.

User Action:

None.

RMMF0006**RESOURCEVIEW MESSAGE FILTER P1 P2 TERMINATED****Reason:**

The ResourceView Secondary Message filter has terminated. All message event processing will cease.

System Action:

The monitor will be restarted when required.

User Action:

None.

RMMF0007

MESSAGE PASSED ID FILTER, FAILED TEXT FILTER - MSG=> P1

Reason:

The ResourceView message filter is split into two parts, the Primary filter and the Secondary filter. The primary filter tests only the first 12 characters of a message while the secondary filter tests the entire message text. This message indicates that a message passed the primary filter but failed to pass the secondary filter.

System Action:

No action is taken by the system other than to issue this warning message.

User Action:

This warning message indicates a close miss for one or more messages defined in the Knowledge base. This may be because of a typing error or a system error caused by the inclusion of a variable string in the message definition such as a time stamp. Review the matching defined message(s).

RMMF0008

STATUS TABLE UPDATE FAILED - OBJID(P1) STATUS(P2) RC(P3) SYMSG(P4)

Reason:

The ResourceView Message Filter has attempted to update the status of a resource but the update failed.

System Action:

The status change for the resource listed in P1 will not be recorded.

User Action:

Report the message to your technical support representative.

RMMF0009**LOCK REQUEST FAILED FOR P1 P2****Reason:**

The message filter failed to obtain exclusive control of the lock with primary name *P1* and minor name *P2*. This indicates that another process is already running and failed to end.

System Action:

Message filter terminates.

User Action:

None.

RMMF0010**OUTSTANDING WTOR ALERT RECEIVED****Reason:**

A WTOR message issued by this resource was detected but not defined in the resource definition. An alert to this effect was raised by the message filter task.

If the message appears in the activity log, a resource identifier is appended to the end of the message (for example, - STC(MYTASK)).

System Action:

An extended display message was forced on the resource display.

User Action:

Use the W command to view and respond to the WTOR messages.

RMMF0101

DB ERROR MSG(P1) RC(P2)

Reason:

The ResourceView Message filter Loader received a non-zero return code when attempting to retrieve a message rule from the Knowledge base.

System Action:

The message listed in *P1* is not loaded into the filter and its associated state change and actions will not be executed.

User Action:

Report the message to your technical support representative.

RMMF0102

P1 ERROR ON TABLE(P2) FDBK(P3) KEY(P4)

Reason:

The ResourceView message loader encountered a serious error *P1* while attempting to load all resource message rules into the filter *P2*.

System Action:

LOAD processing is stopped.

User Action:

Report the message to your technical support representative.

RMMF0103

RESOURCEVIEW MESSAGE FILTER P1 P2 INITIALIZED

Reason:

Internal diagnostic message.

System Action:

None.

User Action:

Ignore.

RMMF0104**RESOURCEVIEW MESSAGE FILTER P1 P2 TERMINATED****Reason:**

Internal diagnostic message.

System Action:

Updates to the knowledge base will no longer be reflected in the message filter.

User Action:

If this message occurred after a SHUTDOWN was issued then it can be ignored. Otherwise report it to your technical support representative.

RMMF0105**MAXIMUM NUMBER OF RESOURCES EXCEEDED****Reason:**

The maximum number of resources supported by ResourceView has been exceeded. Remaining resources will be ignored. The maximum number of resources that are currently supported in one ResourceView region is 9999.

System Action:

Remaining resources defined will be ignored.

User Action:

Use Containment Resource definitions to group numerous, like resources such as JES LINES or DASD devices instead of defining individual resource instances. Contact your technical support representative if further assistance is required.

RMMF0106

FILTER LOAD FAILED, AOM FILTER TABLE SIZE MUST BE OVER P1

Reason:

During the load of a system image, all the required message filters could not be loaded because the 'AOM Filter Table Size' parameter was too small. During automatic recovery for this failure after extending the table size, it again encountered this error.

System Action:

The system image is not loaded.

User Action:

Report the problem to your technical support representative.

RMMF0107

LOAD WARNING, SET AOM FILTER TABLE SIZE TO AT LEAST P1

Reason:

During the load of a system image, it was found that the AOM Filter Table Size initialization parameter is too small. The system has loaded successfully after automatically increasing the table limit but the default limit should be increased to at least *P1* for better performance of the system load process.

System Action:

The limit has been dynamically expanded, and the message filter table has been loaded successfully; however, the load has been attempted twice.

User Action:

Update the initialization parameter AOM Filter Table Size in the parameter group \$RM AUTOTABLES, to at least the value specified. This avoids the overhead of loading the filter table again after automatically adjusting the table size.

RMMF0300**P1****Reason:**

This message is issued when the user has defined log text to be written.
P1 contains the message text defined by the user.

System Action:

None.

User Action:

None.

RMMF0404**REPLY ' P1' ISSUED FOR WTOR ID P2****Reason:**

Reply *P1* has been issued in response to outstanding WTOR message *P2*.

System Action:

None.

User Action:

None.

RMMO0101**P1 KEYWORD ' P2' - INVALID VALUE****Reason:**

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Contact your local support representative.

RMMO0103

STATE CHANGE EXIT HANDLER FOR P1 STARTED

Reason:

This message is an audit message to provide a record that a state change exit has been run on behalf of the resource identified by *P1*.

System Action:

Processing continues.

User Action:

None.

RMMO0104

STATE CHANGE EXIT HANDLER FOR P1 ENDED RC(P2) SYMSG(P3)

Reason:

This message is an audit message to provide a record that a state change exit run on behalf of the resource identified by *P1* has ended. The return code is identified by *P2* and the sysmsg by *P3*.

System Action:

Processing continues.

User Action:

None.

RMMO0115

EXECUTING P2 FOR P1

Reason:

The NCL procedure identified by *P2* is being run on behalf of resource *P1*.

System Action:

Processing continues.

User Action:

None.

RMMO0116

P1 STATE CHANGE EXIT ERROR: NCL PROCEDURE P2 DOES NOT EXIST

Reason:

A change of state to P1 has tried to execute NCL procedure P2 which does not exist.

System Action:

The NCL procedure is not run.

User Action:

Check that the NCL procedure name is correct and that it exists.

RMMO0117

P2 COMPLETED FOR P1 - RC(P3) SYMSG(P4)

Reason:

The NCL procedure identified by P2 run on behalf of resource P1 has completed with return code P3 and the sysmsg P4.

System Action:

Processing continues.

User Action:

None.

RMMO0118

STATE CHANGE EXIT ERROR: P2 COMPLETED FOR P1 - RC(P3) SYMSG(P4)

Reason:

The NCL procedure identified by P2 run on behalf of resource P1 has completed with an error, the return code is P3 and the sysmsg P4.

System Action:

Processing continues.

User Action:

Determine the cause of the error from the RC and SYMSG and correct the problem.

RMMO0119

CAN'T DETERMINE OBJECT IDENTIFIER FROM PARAMETERS

Reason:

The State Change Exit Handler was not passed the parameters required for it to identify the object identifier of a resource.

System Action:

Processing continues.

User Action:

Contact your local support representative.

RMMO0120

EXECUTING PROCESS (P2) FOR P1

Reason:

The process identified by *P2* is being run on behalf of resource *P1*.

System Action:

Processing continues.

User Action:

None.

RMMO0121

PROCESS ERROR (P1)

Reason:

An error has occurred running a process. *P1* contains the error message.

System Action:

Processing continues.

User Action:

Determine the cause of the error and correct the problem.

RMMO0201**INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)****Reason:**

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMMO0202**VARIABLE ~P1 ERROR - RC(~P2)****Reason:**

A variable error has occurred while processing this request.

System Action:

Allocation error - no further processing. Otherwise, processing continues.

User Action:

Contact your system administrator.

RMMO0203**REQUIRED FIELD/S NOT ENTERED****Reason:**

Validation found no entry specified on mandatory field/s.

System Action:

The request is rejected.

User Action:

Specify entry on field/s in error.

RMMO0204

LIMIT OF 97 MONITOR MESSAGES REACHED

Reason:

The database is only capable of holding upto 97 monitor messages for a resource. Your request will cause this limit to be exceeded.

System Action:

The request is rejected.

User Action:

None.

RMMO0205

MESSAGE TEXT REQUIRED

Reason:

The request is invalid if the message text is blank.

System Action:

The request is rejected.

User Action:

Enter message text and retry.

RMMO0206

MESSAGE LIST UPDATE CANCELLED

Reason:

Requested process has been cancelled.

System Action:

None.

User Action:

None.

RMMODE01**INVALID COMMAND****Reason:**

The command entered on the command line was not recognized by the procedure.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RMMODE02**THE ONLY VALID VALUES FOR AUTOMATION MODE ARE 'AUTOMATED' AND 'MANUAL'****Reason:**

The values 'AUTOMATED' and 'MANUAL' are the only values recognized for the Automation Mode field.

System Action:

Request rejected.

User Action:

Specify one of the correct values.

RMMODE03**GLOBAL MODE PRESENTLY SET TO MODE(P1)****Reason:**

The Global Mode is already set to the requested mode.

System Action:

The request is rejected.

User Action:

None.

RMMODE04

NOT LICENSED FOR AUTOMATED MODE

Reason:

This region is licensed as a SOLVE:Operations for IT/Operations or OpenView agent only and cannot be run in automated mode.

System Action:

The request is rejected.

User Action:

If a full license is required, contact Technical Support.

RMMTOV01

MTO NOT SUPPORTED FOR THIS RESOURCE

Reason:

The MTO command is not supported for this resource. The MTO command is supported only for:

- Started tasks of type CICS, IMS, or SOLVE
- Other started tasks that specify an ACB name
- Jobs that specify an ACB name - CICS resources

System Action:

The command is rejected.

User Action:

If appropriate, select another command.

RMMU0101

INVALID VALUE SUPPLIED FOR P1

Reason:

You specified an invalid value in the *P1* field.

System Action:

The field value was not updated.

User Action:

Specify a valid value in the field.

RMMU0102**Unexpected result for command P1, refer to the Log****Reason:**

An unexpected result was encountered for a command that needed to use the old RAMDB. The command was UDBCTL OPEN or CLOSE, or NDB START or STOP. If the message in the activity log is N28503 or N15613 and the VSAM ACB reason code is X'A8', the old RAMDB was probably in use elsewhere.

System Action:

The migration utility waits for further input.

User Action:

Examine the activity log for messages. You can access information about the codes from the System Support : Messages and Codes Menu (/Codes).

RMMU0103**ANOTHER USER P1 OWNS MIGRATION UTILITY****Reason:**

User *P1* is currently using the migration utility, and you are not able to use it.

System Action:

None.

User Action:

Confer with the other user about the use of the utility.

RMMU0104**Function not available on VM****Reason:**

This function cannot be performed on the VM operating system

System Action:

None.

User Action:

If this region is connected to a region on another operating system it may be possible to perform the function on the other region

RMMU0105

Migration processing ended

Reason:

You have exited from the RAMDB Migration Utility.

System Action:

None.

User Action:

If you wish to perform further RAMDB migration select option *M* from the RAMDB Utilities Menu.

RMMU1101

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(P1) VALUE(P2)

Reason:

An invalid keyword value was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Contact your local Support Center.

RMMU1102

VARIABLE OPERATION FAILED. TYPE: P1 NAME: P2 SCOPE: P3 ZFDBK: P4

Reason:

The P1 operation on the P2 variable failed. P3 is the scope of the table. P4 is the returned code.

System Action:

The migration utility terminates.

User Action:

If the region is short of storage, restart the region with more storage; otherwise, contact your local Support Center.

RMMU1103**AT LEAST ONE COMPONENT SHOULD BE SELECTED FOR MIGRATION****Reason:**

You did not select any knowledge base component to migrate.

System Action:

The sction terminates.

User Action:

Select at least one component from the list, and do the action again.

RMMU1201**INVALID KEYWORD VALUE SPECIFIED - KEYWORD(P1) VALUE(P2)****Reason:**

An invalid keyword value was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Contact your local Support Center.

RMMU1202**VARIABLE OPERATION FAILED. TYPE: P1 NAME: P2 SCOPE: P3 ZFDBK: P4****Reason:**

The P1 operation on the P2 vartable failed. P3 is the scope of the table. P4 is the returned code.

System Action:

The migration utility terminates.

User Action:

If the region is short of storage, restart the region with more storage; otherwise, contact your local Support Center.

RMMU1203

AT LEAST ONE COMPONENT SHOULD BE SELECTED FOR MIGRATION

Reason:

You did not select a knowledge base component to migrate.

System Action:

The action terminates.

User Action:

Select at least one component from the list, and do the action again.

RMMU1204

NO COMPONENTS ELIGIBLE FOR MIGRATION

Reason:

There were no components of the selected class to migrate. Either the components have not changed or the components do not exist in the old knowledge base.

System Action:

None.

User Action:

Press F3 to exit from the empty list.

RMMU1301

Invalid keyword value specified - KEYWORD(P1) VALUE(P2)

Reason:

An invalid keyword value was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Contact Technical Support.

RMMU1302

Variable operation failed. TYPE: P1 NAME: P2 SCOPE: P3 ZFDBK: P4

Reason:

The P1 operation on the P2 variable failed. P3 is the scope of the table. P4 is the returned code.

System Action:

The migration utility terminates.

User Action:

If the region is short of storage, restart the region with more storage; otherwise, contact Technical Support.

RMMU1303

Distributed components cannot be reviewed

Reason:

The migration utility does not support the Review action for components which are (or are reserved for) distributed data. These are the templates (\$TEMPLAT) Versions 1 through 9 and the global processes (\$PROCESS) Version 1. Only modified records in these components can be migrated.

System Action:

The action is ignored.

User Action:

Review the RMMUAD05 messages in the activity log to identify the records that have not been migrated. If you want to migrate those records, make a copy of the affected component in the old knowledge base and then migrate the copy.

RMMU1304

****** COPY COMPLETED - REFER TO LOG FOR DETAILS ******

Reason:

The migration utility has completed copying all or selected components. You can find details of the copied records in the activity log through RMDBMS00 messages. If any records were not copied, the details of those records are in RMMUAD05 messages. You can use the TEXT log command to isolate particular messages.

System Action:

None.

User Action:

Enter */LOG* to display activity log. In the log, enter *TEXT RMMUAD05* at the Command prompt to display only RMMUAD05 messages. Review the messages to identify the records that have not been migrated. If you want to migrate those records, use the *R* (Review) action or make a copy of the affected component in the old knowledge base and then migrate the copy.

RMMU1401

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(P1) VALUE(P2)

Reason:

An invalid keyword value was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Contact your local Support Center.

RMMU1402**NEW NAME FIELD VALUE IS MISSING FOR RENAME ACTION****Reason:**

During knowledge base migration, you tried to rename a component without providing the new name.

System Action:

None.

User Action:

Specify the new name for the component you want to rename before applying the R (Rename) action.

RMMU1403**VARIABLE OPERATION FAILED. TYPE: P1 NAME: P2 SCOPE: P3 ZFDBK: P4****Reason:**

The P1 operation on the P2 variable failed. P3 is the scope of the table. P4 is the returned code.

System Action:

The migration utility terminates.

User Action:

If the region is short of storage, restart the region with more storage; otherwise, contact your local Support Center.

RMMU1404**REVIEW LIST IS EMPTY, BECAUSE COMPONENT COPY WAS COMPLETE****Reason:**

You entered R (Review) beside a component that was fully migrated. There are no outstanding items for further action.

System Action:

None.

User Action:

None.

RMMUAD01

DATABASE P1 ERROR - RC(P2) SYMSG(P3)

Reason:

An error was encountered while attempting to access the RAMDB database.

P1 is the DD name of the database.

P2 is an NDB response code.

P3 is a message.

System Action:

The procedure terminates without successfully migrating the objects.

User Action:

Contact your local Support Center.

RMMUAD02

VARIABLE OPERATION FAILED. TYPE: P1 NAME: P2 SCOPE: P3 ZFDBK: P4

Reason:

The P1 operation on the P2 variable failed. P3 is the scope of the table. P4 is the returned code.

System Action:

The migration utility terminates.

User Action:

If the region is short of storage, restart the region with more storage; otherwise, contact your local Support Center.

RMMUAD03

P1 SUCCESSFUL

Reason:

The *P1* operation for the current component was successful.

System Action:

None.

User Action:

None.

RMMUAD04**ERROR: P1****Reason:**

The knowledge base migration procedure is terminating in error. *P1* is the error condition.

System Action:

The procedure terminates without successfully migrating all of the definitions.

User Action:

Contact Technical Support.

RMMUAD05**Duplicate record - SN: *P1* V: *P2* CL: *P3* NM: *P4*****Reason:**

The knowledge base migration procedure has found a duplicate item.

P1 is the name of the system image.

P2 is the version of the image.

P3 is the class of the item.

P4 is the name of the item. This will be blank for System Image and Template Image definitions. (Class 01).

System Action:

The duplicate item is not copied.

User Action:

If you want to migrate the item, use the R (Review) action or make a copy of the affected component in the old knowledge base and then migrate the copy.

RMMUAD06

Missing Action record OBJID: P1 for Process: P2

Reason:

An action for a GENALERT macro is not in the old knowledge base. The macro is in a process with the object ID *P2* that is a concatenation of the following:

- Image name
- Image version
- 71 (class number for process definitions)
- Process name

System Action:

The process is copied without the action record.

User Action:

Note the process, and update it to recreate the missing action.

RMMUAD07

Created Action record OBJID: P1 for Process: P2

Reason:

A process contains a GENALERT macro with an action. However, the action record is in another system image in the old knowledge base. Another copy of the action record is created in the system image in which the process is defined.

System Action:

The process is copied with the action record created in the same image.

User Action:

None.

RMMUAL01

VARIABLE OPERATION FAILED. TYPE: P1 NAME: P2 SCOPE: P3 ZFDBK: P4

Reason:

The P1 operation on the P2 variable failed. P3 is the scope of the table. P4 is the returned code.

System Action:

The migration utility terminates.

User Action:

If the region is short of storage, restart the region with more storage; otherwise, contact your local Support Center.

RMMUGE01

DATABASE P1 ERROR - RC(P2) SYMSG(P3)

Reason:

The migration utility encountered an error while trying to access the P1 database.

System Action:

The procedure is terminated without migrating any objects.

User Action:

Use the P2 NDB response code and the P3 message to determine the cause of the error. To get Help about NDB codes, enter */NDBERR* to display the Browse NDB Error Codes panel.

Correct the database error, then retry the operation.

RMMV0101

Service procedure *P1* invoked with invalid keyword *P2(P3)*

Reason:

The service procedure identified by *P1* was invoked with an invalid value for the keyword identified by *P2* of *P3*.

System Action:

Request rejected.

User Action:

Correct the keyword value and retry.

RMMV0102

RESET is the only action for resources which have failed validation

Reason:

You have issued an action other than RESET for a resource that failed validation. The only valid action for these resources is RESET (RS), which revalidates the resource.

System Action:

Request rejected.

User Action:

If the error condition for this resource has been rectified, issue RS against the resource to revalidate it.

RMMV0103

' *P1* ' is only valid for *P2* resources

Reason:

You can issue action *P1* against resources of type or status *P2* only.

System Action:

Request rejected.

User Action:

None.

RMMVCM01***P1* does not exist in System Image *P2-P3*****Reason:**

The resource *P1* does not exist in the target system image. The move request is rejected. *P2* is the target system image name and *P3* is the version. When you move a local resource to another system, the resource must be defined in the system image on the remote system.

System Action:

The command is rejected.

User Action:

Ensure that the correct system image was selected and that the resource to be moved is defined in the selected image.

RMMVCM02**NO TARGET SYSTEM WAS SELECTED FROM THE LIST****Reason:**

You tried to move a resource's control from one system to another but did not select a target system.

System Action:

The request is rejected.

User Action:

Select a target system when you move a resource.

RMMVCM03

Fatal move table error. *P1*

Reason:

A fatal error occurred involving the internal table used to control the execution of the move command. The name of the table should be passed to procedure \$RMMVCMD in variable &ZRMMOVETABLE. *P1* contains a description of the error.

System Action:

The command is rejected.

User Action:

Retry the move command. If problems persist, contact Technical Support.

RMMVCM04

P1* moved to *P2*. System Image *P3-P4

Reason:

The move command successfully moved resource *P1* to system *P2*. The resource is in system image *P3-P4* (for local resources the system image will be different as a result of the move).

System Action:

None.

User Action:

None.

RMMVCM05

P1* is in *P2* Mode in *P3-P4

Reason:

Resource *P1* is in mode *P2* on the target system *P3* with version *P4*. You cannot move the resource if the target system contains the resource in a mode other than OFF.

System Action:

The move is rejected.

User Action:

None.

RMMVCM06***P1* will be placed in MANUAL mode****Reason:**

A MANUAL override is placed on resource *P1* so that it can be terminated before it is moved.

System Action:

The MANUAL override is issued against the resource.

User Action:

None.

RMMVCM07**Move command invalid for *P1*****Reason:**

The move command is not valid for the type of resource indicated by *P1*.

System Action:

The command is rejected.

User Action:

None.

RMMVCM08***P1* move in progress, *P2*****Reason:**

The move command is processing for resource *P1*. *P2* gives information about the current situation.

System Action:

The move is processing in background mode and continues when resource events occur.

User Action:

None.

RMMVCM09

P1* move to *P2* ended, *P3

Reason:

The resource *P1* is not in a state that permits the move to *P2* to progress. *P3* provides the reason.

System Action:

Processing terminates.

User Action:

None.

RMMVCM10

Move command is not valid from a subordinate region

Reason:

You issued the move command in a subordinate region. This is not valid because only a focal region has the visibility to remote regions to complete the command successfully.

System Action:

The command is rejected.

User Action:

Log on to a focal region, and issue the command from there.

RMMVCM11

Move command invalid for resources which are *P1*

Reason:

The move command is not valid for resources that are in the status indicated by *P1*.

System Action:

The command is rejected.

User Action:

None.

RMMVCM12**Shared resource has multiple instances****Reason:**

The move command is not valid for shared resources that are active on more than one system.

System Action:

The command is rejected.

User Action:

None.

RMMVCM13**Shared resource is not eligible for *P1*****Reason:**

The move command is not valid for shared resources that do not have the target system, identified by *P1*, in their system affinity list.

System Action:

The command is rejected.

User Action:

None.

RMMVCM14***P1* will now be *P2*****Reason:**

Action *P2* will be performed on resource *P1*. *P2* is TERMINATED or ACTIVATED.

System Action:

Processing continues.

User Action:

None.

RMMVCM15

***P1* is *P2*. MANUAL override will be removed**

Reason:

Resource *P1* is in status *P2*. The MANUAL mode override placed on *P1* as part of the move is removed.

System Action:

The mode override is removed.

User Action:

None.

RMMVCM16

Home System for *P1* changed from *P2* to *P3*

Reason:

Resource *P1* is part of a Shared System Image; therefore, its Home System is changed from *P2* to *P3*.

System Action:

None.

User Action:

None.

RMMX0301

Printer type must be 'LOCAL' or 'REMOTE'

Reason:

An invalid value was entered in the 'Local or Remote?' field.

System Action:

The request is rejected.

User Action:

Correct and retry.

RMMX0302**Function not available to user (P1) - insufficient authority****Reason:**

The user identified by *P1* is being prevented from accessing the function selected due to insufficient access authority. A user requires AOM message receipt, All routcodes and console authority equal to or greater than 'C'.

System Action:

A message is displayed to the user.

User Action:

Contact your system administrator.

RMMX0303**Invalid characters encountered in resource mask****Reason:**

The resource name mask contains DBCS characters. DBCS values are not valid in this field.

System Action:

The request is rejected.

User Action:

Correct the mask, and retry the operation.

RMMX0304**SYSNAME(P1) cannot be accessed from this option****Reason:**

The system image name *P1* is special and cannot be accessed from this menu option.

System Action:

The request is rejected.

User Action:

Access to the system image *P1* may be possible through other menu options or menus. Refer to the manual for more information.

RMMX0401

SYSNAME(\$TEMPLAT) cannot be accessed from this panel

Reason:

Template definitions are special and cannot be accessed from this panel.

System Action:

The request is rejected.

User Action:

Access template definitions from the Template Definition Menu.

RMMX0402

SYSNAME(P1) cannot be accessed from this option.

Reason:

The system image name *P1* is special and cannot be accessed from this menu option.

System Action:

The request is rejected.

User Action:

Access to the system image *P1* may be possible through other menu options or menus. Refer to the manual for more information.

RMNDBD01

NDB PARAMETER MEMBER P1 CANNOT BE ACCESSED

Reason:

The NDB parameter member *P1* was not found. This member contains the necessary parameters required to define all the fields in the SSO NDB.

System Action:

NDB definitions not added to the SSO NDB.

User Action:

Check the COMMANDS concatenation, ensuring that the SSO distributed libraries are available.

RMNDBD02**NDB PARAMETER MEMBER P1 PROCESSED, P2 FIELDS AND P3 DUPLICATES****Reason:**

The NDB parameter member P1 was processed and there were P2 field definitions and P3 duplicate field definitions.

System Action:

Processing continues with the definition of the fields into the NDB.

User Action:

None.

RMNDBD03**DUPLICATE FIELD P1 REJECTED****Reason:**

A duplicate field definition for field *P1* was encountered in the NDB parameter member. The duplicate field definition was ignored.

System Action:

None.

User Action:

Ensure that the field name is correctly spelt.

RMNDBD04**STARTING NDB DEFINITIONS USING PARAMETER MEMBER P1****Reason:**

The NDB parameter member *P1* is to be used in defining the necessary NDB fields.

System Action:

None.

User Action:

None.

RMNDBD05

NDB OPEN ERROR FOR P1, NDBRC= P2

Reason:

The NDB parameter member *P1* is to be used in defining the necessary NDB fields.

System Action:

Processing terminates.

User Action:

Check the reason for the error and retry the request.

RMNDBD06

NDBDEF ERROR FOR P1, FIELD= P2, ACTION= P3, NDBRC= P4

Reason:

The field *P2* could not be defined in the NDB *P1*. The action being done was *P3* and the NDB return code was *P4*.

System Action:

Processing terminates.

User Action:

Check the reason for the error and retry the request.

RMNDBD07

NDB DEFINITIONS COMPLETED FOR P1, P2 FIELDS, P3 ERRORS, P4 DUPLICATE S

Reason:

The NDB definitions for **P1** were processed and there were **P2** field definitions, **P3** errors and **P4** duplicate field definitions.

System Action:

Processing continues.

User Action:

None.

RMPAF001**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE=" P2"****Reason:**

An invalid keyword value was passed. The keyword is P1 and the invalid value is P2.

System Action:

The request is rejected.

User Action:

Correct the invalid value and retry the request.

RMPAF002**CALENDAR CRITERIA P1 DELETED****Reason:**

The Calendar Criteria *P1* was deleted.

System Action:

None.

User Action:

None.

RMPAF003**CALENDAR CRITERIA P1 BEING UPDATED BY USER P2****Reason:**

The Calendar Criteria *P1* is being updated by user *P2*.

System Action:

Request is rejected.

User Action:

Try later.

RMPAFA04

CALENDAR CRITERIA NOT SELECTED

Reason:

The Calendar Criteria select list was presented but a calendar criteria was not selected.

System Action:

None.

User Action:

None.

RMPAFA01

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE=" P2"

Reason:

An invalid keyword value was passed. The keyword is P1 and the invalid value is P2.

System Action:

The request is rejected.

User Action:

Correct the invalid value and retry the request.

RMPAFA02

THERE ARE NO ACTIVITY SCHEDULES FOR THIS SYSTEM IMAGE

Reason:

There were no Activity Schedules found for the specified System Image.

System Action:

Request is rejected.

User Action:

Specify another System and/or Version.

RMPAFF01**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE=" P2"****Reason:**

An invalid keyword value was passed. The keyword is P1 and the invalid value is P2.

System Action:

The request is rejected.

User Action:

Correct the invalid value and retry the request.

RMPAFF02**THERE ARE NO REFERENCES TO CALENDAR CRITERIA P1 IN THIS SYSTEM IMAGE****Reason:**

There were no records found which reference the Calendar Criteria **P1** in the specified System Image.

System Action:

Request is rejected.

User Action:

Specify another System Image.

RMPAFF03**P1 ' P2' DOES NOT EXIST****Reason:**

The object of type *P1* with name *P2* does not exist in the database.

System Action:

Request is rejected.

User Action:

Specify an existing object.

RMPAFM01

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE=" P2"

Reason:

An invalid keyword value was passed. The keyword is P1 and the invalid value is P2.

System Action:

The request is rejected.

User Action:

Correct the invalid value and retry the request.

RMPAFU01

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE=" P2"

Reason:

An invalid keyword value was passed. The keyword is P1 and the invalid value is P2.

System Action:

The request is rejected.

User Action:

Correct the invalid value and retry the request.

RMPAFU02

CALENDAR CRITERIA DEFINITION P1 SAVED

Reason:

The Calendar Criteria definition *P1* was saved in the database.

System Action:

None.

User Action:

None.

RMPAFU03**P1 OF CALENDAR CRITERIA DEFINITION P2 CANCELLED****Reason:**

The maintenance function *P1* for the calendar criteria definition *P2* was cancelled.

System Action:

All changes to the Calendar Criteria since the last SAVE command are discarded.

User Action:

None.

RMPAFU04**MAXIMUM OF P1 CALENDAR CRITERIA EXPRESSION LINES REACHED****Reason:**

The maximum number of Calendar Criteria expression lines allowed is *P1*. This number has already been reached and no more lines can be added.

System Action:

The request is rejected.

User Action:

None.

RMPAFU05**VARIABLE ERROR, ACTION= P1 TABLE= P2 FDBK= P3 KEY=" P4"****Reason:**

An error occurred trying to perform action *P1* with table *P2* resulting in a feedback code of *P3*. The key used was *P4*.

System Action:

Processing terminates.

User Action:

Contact your local support representative.

RMPAFU06

INVALID PARENTHESES SPECIFICATION FOR " P1"

Reason:

The parentheses specification for *P1* parenthesis is invalid.

System Action:

Field is set in error.

User Action:

Specify valid parentheses of type *P1*.

RMPAFU07

PARANTHESES INVALID IF NO OTHER FIELDS ENTERED

Reason:

An expression line was entered with parentheses but no other details.

System Action:

Fields set in error.

User Action:

Specify other fields or blank out the parentheses.

RMPAFU08

BOOLEAN VALUE REQUIRED ON LINE P1

Reason:

A boolean value is required when multiple lines of expression are specified.
The line *P1* is the line in error.

System Action:

Field set in error.

User Action:

Specify a boolean value.

RMPAFU09**UNBALANCED PARANTHESES LEFT(P1) RIGHT(P2)****Reason:**

The parentheses specified for the criteria expression are unbalanced. There are *P1* left parentheses and *P2* right parentheses.

System Action:

Fields set in error.

User Action:

Specify an equal number of left and right parentheses.

RMPAFU10**CALENDAR CRITERIA EXPRESSION REQUIRED****Reason:**

No Calendar Criteria expression was specified.

System Action:

Fields set in error.

User Action:

Specify at least one line of expression.

RMPAFU11**AT LEAST ONE CALENDAR CRITERIA EXPRESSION REQUIRED****Reason:**

At least one Calendar Criteria expression must be specified.

System Action:

Fields set in error.

User Action:

Specify at least one line of expression.

RMPB0101

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMPB0102

INFO/MASTER API CALL FAILED - RC(~P1) SYMSG(~P2)

Reason:

Infoman function unsuccessful.

System Action:

None.

User Action:

None.

RMPB0103

REMOTE SIGNON WAIT TIMEOUT

Reason:

The OIM application is running on a Remote system and therefore requires the problem details to be ROF'ed to this remote system. A remote SIGNON has been issued, but has timeout before success notification.

System Action:

Processing terminates in error.

User Action:

Ensure the INMC link to this system is available and retry.

RMPB0104**PROBLEM TICKET ACKNOWLEDGEMENT WAIT TIMEOUT****Reason:**

The region will wait 60 seconds for a response from the OIM application when raising a problem ticket. The time period has expired without any response.

System Action:

Processing terminates in error.

User Action:

None.

RMPB0201**INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)****Reason:**

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMPB0202**INFOMAN PROBLEM ~P1 SUCCESSFUL - RECORD#(~P2)****Reason:**

Infoman function successful. Record number as mentioned.

System Action:

None.

User Action:

None.

RMPB0205

INFOMAN API CALL FAILED - RC(~P1) SYSMSG(~P2)

Reason:

Infoman function unsuccessful.

System Action:

None.

User Action:

None.

RMPB0206

VARIABLE ERROR - TABLE(~P1) FDBK(~P2)

Reason:

Vartable error on nsuccessful.

System Action:

None.

User Action:

None.

RMPB0301

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMPB0302**ONE OR MORE REQUIRED FIELDS NULL****Reason:**

One or more INFOMAN required field null.

System Action:

No further processing.

User Action:

Contact your system administrator.

RMPB0303**INFOMAN PROBLEM TICKET NOT SUPPLIED****Reason:**

The INFOMAN problem ticket wasn't supplied.

System Action:

None.

User Action:

None.

RMPB0304**CALL TO INFOMAN ENDED - RC(~P1)****Reason:**

Infoman call complete.

System Action:

None.

User Action:

None.

RMPB0402

INFOMAN API INITIALIZATION FAILED - RC(P1) SYSMSG(P2)

Reason:

INFOMAN API initialization has failed.

System Action:

No further processing.

User Action:

Contact your system administrator.

RMPB0501

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMPB0502

INFOMAN API ~P1 COMMAND FAILED - CMD(~P2)

Reason:

INFOMAN API command failed.

System Action:

No further processing.

User Action:

Contact your system administrator.

RMPB0601**INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)****Reason:**

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMPB0602**REMOTE SIGNON WAIT TIMEOUT****Reason:**

The SOLVE:Problem application is running on a remote system and therefore requires the problem details to be sent by ROF to this remote system. A remote SIGNON has been issued, but has timeout before success notification.

System Action:

Processing terminates in error.

User Action:

Ensure that the INMC link to this region is available, and retry.

RMPB0603**PROBLEM TICKET ACKNOWLEDGEMENT WAIT TIMEOUT****Reason:**

The region will wait 60 seconds for a response from the SOLVE:Problem application when raising a problem ticket. The time period has expired without any response.

System Action:

Processing terminates in error.

User Action:

None.

RMPD0001

NO SERVICE PROCEDURE PROVIDED FOR THE PANEL DRIVER

Reason:

No service procedure specified in the parameter for the panel driver.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMPD0002

REQUIRED PANEL(~P1) TO DISPLAY DOES NOT EXIST IN THE PATH

Reason:

Panel to display does not exist in the library path.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMPD0005**P1 CANCELED****Reason:**

Requested process has been canceled.

System Action:

None.

User Action:

None.

RMPD0006**REQUIRED FIELD OMITTED****Reason:**

Validation found no entry specified on mandatory field.

System Action:

The request is rejected.

User Action:

Specify entry on field in error.

RMPD0007

INVALID OR NO OPTION SPECIFIED

Reason:

Invalid option specified on the panel driver menu selection.

System Action:

The request is rejected.

User Action:

Specify valid option of the menu display.

RMPD0008

NO HELP AVAILABLE FOR THIS PANEL(~P1)

Reason:

There is no help found for the panel being displayed.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMPD0009

RECORD SAVED

Reason:

Request to save the record definition to the database has been successfully completed.

System Action:

None.

User Action:

None.

RMPD0010**INVALID COMMAND****Reason:**

The command which was entered is not supported on this screen.

System Action:

Command is rejected.

User Action:

None.

RMPD0011**RECORD CREATED****Reason:**

Request to create a new record definition to the database has been successfully completed.

System Action:

None.

User Action:

None.

RMPD2401**INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)****Reason:**

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMPD2403

INVALID COMMAND

Reason:

The command entered on the command line was not recognized by the procedure.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RMPD2404

UNABLE TO DETERMINE OBJECT ID PARAMETER

Reason:

Object ID not found and can not be created because there is not enough information passed to the procedure.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMPD2501

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMPD2503**INVALID COMMAND****Reason:**

The command entered on the command line was not recognized by the procedure.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RMPD2504**UNABLE TO DETERMINE OBJECT ID PARAMETER****Reason:**

Object ID not found and can not be created because there is not enough information passed to the procedure.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMPD2505**UPDATE IN PROGRESS BY ~P1****Reason:**

Update is in progress on this definition by other user.

System Action:

The request is rejected.

User Action:

Try again later.

RMPD3001

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMPD3002

REQUIRED FIELD/S NOT ENTERED

Reason:

Validation found no entry specified on mandatory field/s.

System Action:

The request is rejected.

User Action:

Specify entry on field/s in error.

RMPD3003

PROFILE DEFINITION ALREADY EXISTS

Reason:

Profile definition to be created already exists in the database.

System Action:

The request is rejected.

User Action:

Specify a different profile name and ID.

RMPD3004**NOTHING SPECIFIED, NO MESSAGE WILL PASS THROUGH****Reason:**

There is no use saving this profile definition because nothing has been specified for the message flow criteria (from 3rd to the last panel).

System Action:

The request is rejected.

User Action:

Specify message selection criteria.

RMPD3005**PLACE CURSOR IN THE INCLUDE/EXCLUDE AREA AND PRESS THE SCRLIST KEY****Reason:**

The cursor was not placed over the include or exclude area before pressing the Scrlist function key.

System Action:

None.

User Action:

Place the cursor in the include or exclude fields on the panel and press the Scrlist function key to get a scrollable list of include or exclude values.

RMPD3101**INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)****Reason:**

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMPD3102

UNABLE TO DETERMINE OBJECT ID PARAMETER

Reason:

Object ID not found and can not be created because there is not enough information passed to the procedure.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMPD3103

PLACE CURSOR IN THE INCLUDE/EXCLUDE AREA AND PRESS THE SCRLIST KEY

Reason:

The cursor was not placed over the include or exclude area before pressing the Scrlist function key.

System Action:

None.

User Action:

Place the cursor in the include or exclude fields on the panel and press the Scrlist function key to get a scrollable list of include or exclude values.

RMPD3201

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMPD3202**REQUIRED FIELD/S NOT ENTERED****Reason:**

Validation found no entry specified on mandatory field/s.

System Action:

The request is rejected.

User Action:

Specify entry on field/s in error.

RMPD3203**UNABLE TO DETERMINE OBJECT ID PARAMETER****Reason:**

Object ID not found and can not be created because there is not enough information passed to the procedure.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMPD3204**NOTHING SPECIFIED, NO MESSAGE WILL PASS THROUGH****Reason:**

There is no use saving this profile definition because nothing has been specified for the message flow criteria (from 3rd to the last panel).

System Action:

The request is rejected.

User Action:

Specify message selection criteria.

RMPD3205

PLACE CURSOR IN THE INCLUDE/EXCLUDE AREA AND PRESS THE SCRLIST KEY

Reason:

The cursor was not placed over the include or exclude area before pressing the Scrlist function key.

System Action:

None.

User Action:

Place the cursor in the include or exclude fields on the panel and press the Scrlist function key to get a scrollable list of include or exclude values.

RMPD3301

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMPD3302

UPDATE IN PROGRESS BY ~P1

Reason:

Update is in progress on this definition by other user.

System Action:

The request is rejected.

User Action:

Try again later.

RMPD3303**UNABLE TO DETERMINE OBJECT ID PARAMETER****Reason:**

Object ID not found and can not be created because there is not enough information passed to the procedure.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMPD3304**NOTHING SPECIFIED, NO MESSAGE WILL PASS THROUGH****Reason:**

There is no use saving this profile definition because nothing has been specified for the message flow criteria (from 3rd to the last panel).

System Action:

The request is rejected.

User Action:

Specify message selection criteria.

RMPD3305**PLACE CURSOR IN THE INCLUDE/EXCLUDE AREA AND PRESS THE SCRLLIST KEY****Reason:**

The cursor was not placed over the include or exclude area before pressing the Scrllist function key.

System Action:

None.

User Action:

Place the cursor in the include or exclude fields on the panel and press the Scrllist function key to get a scrollable list of include or exclude values.

RMPD3401

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(P1) VALUE(P2)

Reason:

An invalid keyword was passed to the service procedure \$RMPD34L.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMPD3402

UPDATE CANCELLED

Reason:

Requested process has been cancelled.

System Action:

None.

User Action:

None.

RMPD3403

LIMIT OF 97 ENTRIES REACHED

Reason:

The database is only capable of holding up to 97 entries to be included or excluded. Your request exceeds this amount.

System Action:

The request is rejected.

User Action:

None.

RMPD3404**VARIABLE P1 ERROR - RC(P2)****Reason:**

A variable error has occurred while processing this request.

System Action:

Request rejected..

User Action:

Contact your systems administrator.

RMPDF001**SERVICE PROCEDURE ~P1 INVOKED WITH INVALID KEYWORD
~P2(~P3)****Reason:**

The service procedure identified by P1 was invoked with an invalid value for the keyword identified by P2 of P3.

System Action:

Request rejected

User Action:

Correct the keyword value and re-try

RMPDF002**INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)****Reason:**

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMPDF003

RECORD LIMIT EXCEEDED. UNABLE TO VIEW ALL LOG RECORDS

Reason:

There were more than 9999 log records.

System Action:

The first 9999 log records will be displayed.

User Action:

None

RMPDF004

PROCESS(~P1) IN USE BY ~P2

Reason:

The process identified by P1 has been selected for update or interactive mode but another user identified by P2 is already using it.

System Action:

Reject request

User Action:

None

RMPDFE01

REQUIRED PARAMETER(~P1) NOT SPECIFIED

Reason:

The PDF process execution procedure was invoked without the required parameter identified by P1

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMPDFE02**INVALID VALUE FOR PARAMETER(~P1) VALUE(~P2)****Reason:**

The PDF process execution procedure was invoked with an invalid value of P2 for the parameter identified by P1

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMPDFE03**PROCESS(~P1) STARTED. ID(~P2)****Reason:**

The PDF process identified by P1 has begin execution and its NCLID is identified by P2.

System Action:

None

User Action:

None

RMPDFE04**REQUIRED ~P1(~P2) NOT FOUND****Reason:**

The object type identified by P1, with a name of P2, was not found

System Action:

Request rejected

User Action:

Determine the correct name or the reason for the object's absence. Correct the error, and retry.

RMPDFE05

PROCESS(~P1) ENDED ABNORMALLY. STEP(~P2). RC(~P3)

Reason:

The process P1 ended with a bad return code of P3 from step P2

System Action:

None

User Action:

None

RMPDFE06

PROCESS(~P1) ENDED. RC(~P2)

Reason:

The PDF process identified by P1 has ended execution and its return code is P2.

System Action:

None

User Action:

None

RMPDFE07

NCL PROCEDURE ~P1 EXECUTED

Reason:

The NCL procedure identified by P1 was executed as a result of specifying process \$NCL.

System Action:

None

User Action:

None

RMPDFE08**EXECUTION OF PROCESS(~P1) CANCELLED****Reason:**

The user cancelled execution of the process identified by P1

System Action:

None

User Action:

None

RMPDFE09**INVALID COMMAND****Reason:**

The command entered on the command line was not recognized by the procedure.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RMPDFE10**PROCESS PARAMETERS ARE NOT IN KEYWORD FORMAT - P1****Reason:**

A process was invoked and the parameters passed did not conform to the keyword=value format (keyword format). *P1* is set to either ALLPARMS or SHRVARs to indicate the source of the parameters. Message RMPDFE18 is written to the Activity Log and lists the parameter string in error.

System Action:

Execution of the process is terminated.

User Action:

Correct the definition for the process invocation to specify all parameters in the keyword format.

RMPDFE11

PROCESS (P1) NOT EXECUTED AS RESOURCE DEFINITION DOES NOT EXIST

Reason:

The process identified by P1 was not run due to the associated resource definition not being found in the database/status table.

System Action:

The process is not executed.

User Action:

Contact your system administrator.

RMPDFE12

NCL PROCEDURE (P1) NOT EXECUTED AS RESOURCE DEFINITION DOES NOT EXIST

Reason:

The NCL procedure identified by **P1** was not run due to the associated resource definition not being found in the database/status table.

System Action:

The NCL procedure is not executed.

User Action:

Contact your system administrator.

RMPDFE13

INTERACTIVE MODE NOT SUPPORTED FOR \$NCL TYPE PROCESSES

Reason:

A request to interactively execute the \$NCL process cannot be actioned because these processes are not supported in interactive mode.

System Action:

The request is rejected.

User Action:

None.

RMPDFE14**UNDEFINED TARGET STEP " P1" RETURNED FROM STEP P2 BY MACRO P3****Reason:**

Step P2 which executed macro P3 returned an undefined step name as the next step to execute. The undefined step name is *P1*.

System Action:

The process is terminated in error.

User Action:

Correct the target step name returned from step *P2* by macro *P3*.

RMPDFE15**LOOP CONTROL LIMIT FOR STEP P1 REACHED, LIMIT IS P2****Reason:**

The step *P1* returned another step name that is to be the next step to execute, however, this step has already altered the flow of control in the process by the allowed limit of *P2* as specified in the macro or as defaulted. This limit can not be exceeded and is used to prevent the process from looping continuously.

System Action:

The process is terminated in error.

User Action:

Correct the specifications in the process to prevent step *P1* from being executed more than the specified limit, or increase the limit.

RMPDFE16**PROCESS(P1) IN USE BY P2****Reason:**

The process identified by *P1* has been selected for update or interactive mode but another user identified by *P2* is already using it.

System Action:

The request is rejected.

User Action:

Try later.

RMPDFE17

STEP RESTART FAILED, STEP NUMBER P1 NOT FOUND

Reason:

The step to be restarted was not found in the process. *P1* is the relative number of the step to be restarted. This occurs if the process on the database has been modified since it was last executing.

System Action:

The process is terminated in error.

User Action:

None.

RMPDFE18

P1

Reason:

This message is written to the log in conjunction with message RMPDFE10. It lists the parameters in error referred to in message RMPDFE10.

System Action:

None

User Action:

None

RMPDFL01

PROCESS DRIVER ENDED ABNORMALLY

Reason:

The process logger received an event which indicated that the process driver procedure ended abnormally. The logger will then dump the process logs to the activity log, clear them, and then end.

System Action:

None

User Action:

None

RMPDFL02**EXECUTION OF PROCESS(~P1) COMMENCED****Reason:**

The process identified by P1 has begun execution

System Action:

None

User Action:

None

RMPDFL03**PROCESS(~P1) CHAINING TO PROCESS(~P2)****Reason:**

The process identified by P1 has chained to the process identified by P2. The P2 process will then execute. Processing will not return to the P1 process.

System Action:

None

User Action:

None

RMPDFL04**EXECUTION OF PROCESS(~P1) ENDED. FINALRC(~P2)****Reason:**

The process identified by P1 has ended execution with a return code of P2.

System Action:

None

User Action:

None

RMPDFL05

EXECUTION OF PROCESS(P1) COMMENCED FOR RESOURCE (P2)

Reason:

The process identified by P1 has begun execution on behalf of resource P2.

System Action:

None.

User Action:

None.

RMPDFS01

REQUIRED MACRO(~P1) NOT FOUND

Reason:

The macro identified by P1 was not found

System Action:

Request rejected

User Action:

Determine the reason for the macro's absence. Correct the error, and retry.

RMPDFS02

PROCESS(~P1) STEP(~P2) NOT RUN DUE TO CONDITION FAILURE

Reason:

The step, P2, of process, P1, was not run because it failed to pass the pre-requisite condition for its execution

System Action:

Attempt to execute the next step in the process

User Action:

None

RMPDFS03**CONDITION(~P1) STEPRC(~P2)****Reason:**

This message issues after RMPDFS02 and outlines the condition which the step failed to satisfy (P1) and the return code of the step (P2)

System Action:

Attempt to execute the next step in the process

User Action:

None

RMPDFS04**PROCESS(~P1) STEP(~P2) COMMENCED****Reason:**

The step, P2, of process, P1, has begun execution

System Action:

None

User Action:

None

RMPDFS05**PROCESS(P1) STEP(P2) ENDED P3****Reason:**

Step, P2, of process P1 has ended either successfully or unsuccessfully as denoted by P3. If successfully completed the STEPRC, the value used in evaluating conditions on subsequent steps, will be displayed at the end of the message text.

System Action:

None.

User Action:

None.

RMPDFS06

MSG(~P1)

Reason:

This message issues after RMPDFS04 if the step ended and returned a value in *SYMSMSG*. *P1* is the value of *SYMSMSG*.

System Action:

None

User Action:

None

RMPDFU01

REQUIRED PARAMETER(~P1) NOT SPECIFIED

Reason:

The PDF process utility procedure was invoked without the required parameter identified by P1

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMPDFU02

INVALID VALUE FOR PARAMETER(~P1) VALUE(~P2)

Reason:

The PDF process utility procedure was invoked with an invalid value of P2 for the parameter identified by P1

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMPEDI01**SERVICE PROCEDURE ~P1 INVOKED WITH INVALID KEYWORD
~P2(~P3)****Reason:**

The service procedure identified by P1 was invoked with an invalid value for the keyword identified by P2 of P3.

System Action:

Request rejected

User Action:

Correct the keyword value and re-try

RMPEDI02**PANEL(~P1) IN USE BY ~P2****Reason:**

The panel identified by P1 has been selected for update or interactive mode but another user identified by P2 is already using it.

System Action:

Reject request

User Action:

None

RMPEDI03**INVALID SYNTAX****Reason:**

A command has been issued with invalid syntax

System Action:

Reject request

User Action:

Correct wrong syntax and re-try

RMPEDI04

INVALID SYNTAX - PANEL NAME MUST BE SPECIFIED

Reason:

A command has been issued which requires a panel name to be specified, but the panel name has been omitted.

System Action:

Reject request

User Action:

Specify a panel name and re-try

RMPEDI05

INVALID SYNTAX - PANEL NAME(~P1) IS INVALID

Reason:

A command has been issued which requires a panel name to be specified, but the panel name is invalid.

System Action:

Reject request

User Action:

Specify a valid panel name and re-try

RMPEDI06

PANEL(~P1) ALREADY EXISTS

Reason:

An attempt was made to CREATE a new panel, using the name of a panel which already exists in that library.

System Action:

Reject request

User Action:

Specify a panel name which does not already exist and re-try

RMPEDI07**PANEL(~P1) SUCCESSFULLY ~P2****Reason:**

The panel identified by P1 has had the action identified by P2 performed against it successfully.

System Action:

None

User Action:

None

RMPEDI08**LIBRARY(~P1) IS NOT DEFINED****Reason:**

The library identified by P1 has not been defined

System Action:

Request rejected

User Action:

None

RMPEDI09**PANEL(~P1) NOT SAVED, NO CHANGES WERE MADE****Reason:**

The panel identified by P1 was not saved because there were no changes detected.

System Action:

None

User Action:

None

RMPEX101

REGION IS NOT INITIALIZED

Reason:

The selected option was unavailable because the region has not yet completed its initialization process.

System Action:

None.

User Action:

Wait until the region has finished initializing, and retry.

RMPEM0001

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMPEM0101

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMPM0102**NO ENTRY FOUND FOR ~P1****Reason:**

No Field Prompt Entry found for the field.

System Action:

The request is rejected.

User Action:

To create an entry, use option P from Customisation menu.

RMPM0103**FIELD PROMPT(P1) NOT DEFINED****Reason:**

User has placed a ? in a field which supports field prompting, however a Field Prompt List corresponding to this particular field has not been defined. Some prompt lists are delivered with the product, but not in this case. The name of the required prompt list is *P1*.

System Action:

No prompt list is displayed and the field is highlighted in error.

User Action:

Use the Field Prompt Lists option of the Automation Services Administration Menu to define the required prompt list.

RMPM0104**MAXIMUM 97 ENTRIES ALLOWED****Reason:**

Entries defined already reached 97.

System Action:

The request is rejected.

User Action:

None.

RMPP0000

P1

Reason:

This is a diagnostic message.

System Action:

None.

User Action:

Collect all the details related to the message and any associated messages, and forward them on to your local support representative.

RMPP0001

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE=" P2"

Reason:

An invalid value was specified for the keyword P1. The value was P2.

System Action:

Processing terminates.

User Action:

Contact your support representative.

RMPP0002

UNABLE TO LOCK FUNCTION P1, QUEUE= P2 RC= P3 FDBK= P4

Reason:

The function *P1* could not obtain exclusive control for the required resource. The resource was the PPI receiver ID *P2*. *P3* was the return code from the lock, and *P4* was the feedback code.

System Action:

The request to activate the function is rejected.

User Action:

No actions are required. There is already a process performing the desired functions.

RMPP0003**PPI ERROR FOR QUEUE= P1 VERB= P2 RC= P3 FDBK= P4****Reason:**

An error occurred while processing a PPI queue. The PPI receiver ID for the queue was *P1*, and the verb issued was *P2*. The return code from the PPI was *P3*, and the feedback code was *P4*.

System Action:

Processing is retried or suspended.

User Action:

Determine the reason the PPI action failed, and correct the situation. The receiver process will resume processing if PPI is still active or when the PPI becomes active. The PPI return codes and feedback codes are documented in the Network Control Language Reference.

RMPP0004**P1 TERMINATED NORMALLY, QUEUE= P2****Reason:**

The function *P1* was terminated as requested. The PPI receiver ID being used for the function was *P2*.

System Action:

None.

User Action:

None.

RMPP0005**NOTIFICATION P1 RECEIVED FROM PPI****Reason:**

The notification from a PPI receive request was *P1*.

System Action:

Processing for the queue continues (if possible).

User Action:

No actions are required. If processing cannot continue, another message is issued to give further details of the problem.

RMPP0006

P1 PERFORMING P2 FUNCTION FOR QUEUE P3 HAS STATUS P4 P5

Reason:

The resource P1 performing the function P2 with PPI receiver ID P3 has status P4 for reason P5.

System Action:

None.

User Action:

None.

RMPP0007

RESPONSE QUEUE CLEARED FOR P1

Reason:

A client process requested that its response queue for *P1* be cleared and the request was successfully completed.

System Action:

All responses received for past requests will be discarded.

User Action:

None.

RMPP0008

REQUEST P1 FOR P2 REJECTED

Reason:

A client process sent an invalid request to *P2*. The invalid request was *P1*.

System Action:

None.

User Action:

Contact your support representative.

RMPP0009**REGISTRATION UPDATE FOR SERVER P1 FAILED, FDBK= P2 KEY= P3****Reason:**

A client process sent a request to server P1 but the server was unable to process the registration table. The feedback code was P2 and the key was P3.

System Action:

The request is rejected.

User Action:

Contact your support representative.

RMPP0010**REQUEST TO P1 ACCEPTED****Reason:**

A client process sent a request to P1 and it was accepted.

System Action:

The request is processed by the server, and responses are queued to the client process as they become available.

User Action:

None.

RMPP0011**COMMUNICATIONS ERROR FOR SERVER P1****Reason:**

A client process sent a request to server P1 and a communications error occurred.

System Action:

The request is rejected, and the server is set as INACTIVE.

User Action:

Check the status of the PPI link P1 and check the transient log for related error messages.

RMPP0012

P1 PPI AGENT FOR P2 P3

Reason:

A request to the *P1* PPI agent for job name *P2* failed because its status is not active. Its current status is *P3*.

System Action:

The request is rejected.

User Action:

Determine the reason why the *P1* PPI agent is not active by checking the messages in the transient log of the internal resource for the PPI agent.

RMPP0013

P1 P2

Reason:

This is a general response message for a client from the server *P1*. *P2* is the message from the server.

System Action:

None.

User Action:

None.

RMPP0014

COMMAND TO P1 P2 TIMED OUT

Reason:

A command was sent to the *P1* system with jobname *P2* . However, not all responses arrived within the time out interval (30 seconds).

System Action:

No more responses will be delivered for the command entered.

User Action:

Ensure that the agent system *P1* is responding, and check the internal resource managing the connection to the system. This may occur if the system response time is slow or the agent system is overloaded.

RMPP0015**END OF RESPONSES FROM P1****Reason:**

This is a general response message indicating that no more responses will be received from *P1* for the previously entered command.

System Action:

None.

User Action:

None.

RMPP0016**GET FILTER ERROR FOR P1 TABLE= P2 FDBK= P3 KEY= P4****Reason:**

An error occurred while trying to retrieve the message filter for the command server for job name *P1* . The table accessed was *P2* , the feedback code received was *P3* , and the key used was *P4* .

System Action:

No message filtering is done for unsolicited messages received from the linked region. That is, *all* messages are delivered to this region and processed.

User Action:

Contact Technical Support.

RMPP0017**INVALID P1 JOBNAME P2****Reason:**

A request to system type *P1* was invalid because the specified job name was either invalid or is not linked. *P2* is the jobname that was specified.

System Action:

The request is rejected.

User Action:

Specify the name of an active and linked *P1* job.

RMPP0018

INVALID COMMAND FOR P1 JOBNAME= P2 CMD= P3

Reason:

A request to system type *P1* was invalid. The job name specified was *P2* and the invalid command was *P3*.

System Action:

The request is rejected.

User Action:

Specify a valid command for the system type *P1*.

RMPP0019

NO CONNECTION TO P1 P2

Reason:

A request to send a command to the *P1* job *P2* failed either because the *P1* region is not active or because no connection has been established.

System Action:

The request is rejected.

User Action:

Determine the status of *P1 P2* and its connection to this region. The agent must be installed in the *P1* region, and either this region must have an explicit CICS connection definition in ICS or this region must have Dynamic Registration in ICS set to YES.

RMPP0020

INVALID DATA RECEIVED ON PPI QUEUE= P1 RC= P2 FDBK= P3 COMP= P4

Reason:

Invalid data was received on the PPI queue. The PPI ID for the queue was P1, P2 was the MDO return code, P3 was the MDO feedback code and P4 was the MDO component which was invalid.

System Action:

The data is logged to the log and discarded.

User Action:

Contact your software support representative.

RMPP0021

P1

Reason:

This is an informational message showing the data received on the PPI queue. It is associated with message RMPP0020.

System Action:

None.

User Action:

None.

RMPP0022

INVALID DATA RECEIVED ON QUEUE P1, EXPECTED P2 BUT RECEIVED P3

Reason:

The data received on the PPI queue P1 was invalid. The data received was P2 but the expected data is P3.

System Action:

The data is discarded.

User Action:

Contact your support representative.

RMPP0023

P1

Reason:

Internal message only.

System Action:

None.

User Action:

None.

RMPP0024

UNABLE TO CREATE INTERNAL RESOURCE P1 MSG= P2

Reason:

The PPI processing function identified by *P1* could not create the internal resource *P1*. This resource is needed to provide control of the function. The error returned from the create was *P2*.

System Action:

Another attempt to create the resource will be made in 5 minutes.

User Action:

Check the log for additional messages that may indicate the reason for not being able to create an internal resource.

RMPP0025**UNSOLICITED MESSAGE DELIVERY FROM P1 P2 INACTIVE, IN USE BY P3****Reason:**

The unsolicited message delivery facility from system P2 of type P1 is inactive because another PPI receiver has control of the interface currently. The PPI receiver ID of the other region is *P3* .

System Action:

No unsolicited messages are delivered to this region from the identified system.

User Action:

No actions are required. However, if you require this region to have control of the interface, deactivate the interface of the other region.

RMPP0026**LINE P1: INVALID STATEMENT TYPE " P2"****Reason:**

While validating and/or compiling free form statements, an invalid statement type was encountered. The statement type was *P2* and *P1* is the line number on which the statement started.

System Action:

The free form statements are rejected.

User Action:

Correct the statement type on line *P1*.

RMPP0027

LINE P1: P2

Reason:

While validating and/or compiling free form statements, invalid keyword syntax was encountered. The statement which caused the error starts on line number *P1* and the error message is *P2*.

System Action:

The free form statements are rejected.

User Action:

Change the syntax to use only keyword format parameters for the desired statement type. If a statement does not fit on a single line, use the plus (+) continuation character to continue the statement on the next line. If a keyword value contains blanks or special characters, enclose the value with single or double quotes. Comments can be included at the end of a line by specifying the comment characters "-*". All text after the comment characters and up to the end of the line is ignored.

RMPP0028

LINE P1: INVALID KEYWORD VALUE, KEYWORD= P2 VALUE=" P3"

Reason:

While validating and/or compiling free form statements, an invalid value was encountered for the keyword *P2*. The value was *P3* which is invalid. The statement started on line number *P1*.

System Action:

The free form statements are rejected.

User Action:

Enter a valid value for the keyword *P2*.

RMPP0029**LINE P1: DUPLICATE FILTER NAME= P2 SPECIFIED****Reason:**

The filter with name *P2* has already been specified. This is a duplicate specification and is not allowed. The duplicate filter statement starts on line *P1*.

System Action:

The free form statements are rejected.

User Action:

Delete one of the filter specifications with the name *P2*.

RMPP0030**LINE P1: DUPLICATE CICS P2= P3 SPECIFIED****Reason:**

The CICS connection with *P2* set to *P3* has already been specified. This is a duplicate specification and is not allowed. Each CICS specification must have a unique JOBNAME and SYSID. The duplicate specification starts on line *P1*.

System Action:

The free form statements are rejected.

User Action:

Delete one of the CICS specifications that have the *P2* keyword set to *P3*.

RMPP0031

LINE P1: DUPLICATE CICS P2 QUEUE P3, CONFLICTS WITH P4

Reason:

A CICS statement was specified with queue prefix and suffix combinations that conflict with another CICS definition or with the other queue for the current CICS definition. The duplicate specification starts on line *P1*. The duplicate queue was a *P2* type queue with name *P3* and the previously identified queue was a *P4* type queue.

System Action:

The free form statements are rejected.

User Action:

Delete one of the CICS specifications, or alter the prefix and suffix combination to form a unique queue name.

RMPP0032

LINE P1: FILTER P2 NOT DEFINED

Reason:

A CICS statement specified a filter that does not exist. The statement in error starts on line *P1*.

System Action:

The free form statements are rejected.

User Action:

Correct the FILTER= specification for the CICS definition in error or define the missing filter.

RMPP0033**VARIABLE ERROR ON P1 VERB= P2 FDBK= P3 KEY= P4****Reason:**

An unexpected vartable access error occurred. The vartable name was *P1*, the verb was *P2*, the feedback code was *P3* and the key was *P4*.

System Action:

Procedure terminates in error.

User Action:

Contact your system support representative.

RMPP0034**P1 FILTERS AND P2 CICS DEFINITIONS COMPILED, P3 SERVERS STARTED****Reason:**

The specified CICS filter and definition statements were compiled, and P3 command servers were started. There were P1 filters and P2 CICS definitions.

System Action:

None.

User Action:

None.

RMPP0035**START OF PPI MANAGER P1 FOR QUEUE P2 TIMED OUT****Reason:**

A PPI manager process was started and no notification was received of its status. The type of manager was *P1* and the PPI queue it was to manage was *P2*.

System Action:

Action fails.

User Action:

Contact your support representative.

RMPP0036

"DEFAULT" FILTER NOT DEFINED

Reason:

The filter with name *DEFAULT* has not been specified. The filter statements must always define a default filter.

System Action:

The free form statements are rejected.

User Action:

Define a filter with the name *DEFAULT*.

RMPP0037

P1 STARTED NCLID= P2 PPI QUEUE ID= P3

Reason:

The PPI server of type *P1* has successfully started and initialized. The NCL ID of the process is *P2* and the PPI queue being managed is *P3*.

System Action:

None.

User Action:

None.

RMPP0038

P1 FOR P2 TERMINATED IN ERROR, MSG= P3

Reason:

The PPI manager process *P1* for *P2* has encountered an unrecoverable error condition. The process will terminate and a new manager will be started. The associated error message is *P3* and a full list of diagnostic details will be written to the log.

System Action:

The process is terminated and a new copy will be started.

User Action:

Contact your support representative.

RMPP0039**FILE ACCESS ERROR FOR P1 ACTION= P2 RC= P3 ERROR= P4 KEY= P5****Reason:**

An unexpected file access error occurred. The file ID was P1, the file action was P2, the return code was P3, the error code was P4, and the key was P5.

System Action:

Processing continues, but the function being performed is aborted.

User Action:

Contact your system support representative.

RMPP0040**P1 DYNAMIC REGISTRATIONS OF TYPE P2 PROCESSED****Reason:**

The dynamic registration manager for P2 type agents processed P1 records from the VFS.

System Action:

None.

User Action:

None.

RMPP0041**INVALID INTERNAL CONTROL REQUEST " P1"****Reason:**

The internal control request P1 is invalid.

System Action:

The request is rejected.

User Action:

Enter a valid internal request.

RMPP0042

LINE P1: JOBNAME AND SYSID SAME AS FOR FILTER P2

Reason:

The filter, *P2*, has already specified a JOBNAME and SYSID combination that is the same as was encountered on line *P1*. The JOBNAME and SYSID combination must be unique for each filter. The incorrect filter specification starts on line *P1*.

System Action:

The free form statements are rejected.

User Action:

Change the JOBNAME and/or the SYSID on line *P1*, or change them for the filter *P2*.

RMPP0043

CANNOT MANAGE QUEUE P1 ANOTHER RECEIVER ALREADY CONTROLS IT

Reason:

A PPI manager was unable to manage the PPI queue, *P1*, because another program already had control of the queue. Only one receiver may control a given queue under PPI.

System Action:

The manager terminates in a FAILED state.

User Action:

Determine which program has control of the queue. If the PPI started task is the SSI, then use the SHOW PPIUSERS command to determine which task has control of the queue (note that the command must be issued from the region that is connected to the SSI). Either terminate that program or disable the function. If the queue is the SOLVxxxx queue, it indicates that more than one dynamic registration servers have been started on the same system. Disable one of them.

RMPP0044**CANNOT DEFINE QUEUE P1****Reason:**

A PPI manager was unable to manage the PPI queue *P1* because it could not define itself as the PPI receiver for the queue. A previous message indicates the error codes received.

System Action:

The manager terminates in a failed state.

User Action:

Determine the reason the queue could not be defined and then restart the manager.

RMPP0045**MESSAGE PROCESSING STATISTICS FOR PPIPROC QUEUE NAME= P1****Reason:**

This is a header message for a display of a PPIPROC processor for the PPI queue P1. Statistics for message processing will follow.

System Action:

None.

User Action:

None.

RMPP0046**JOBNAME TOTAL MESSAGES RECEIVED****Reason:**

This is a header message for a display of a PPIPROC processor. The JOBNAME column gives the name of the job which sent messages and the TOTAL MESSAGES RECEIVED column is the total number of messages received from that job.

System Action:

None.

User Action:

None.

RMPP0047

P1 P2

Reason:

This is a detail message for a display of a PPIPROC processor. *P1* is the JOBNAME of a job which sent messages to the PPIPROC and *P2* is the total number of messages received from that job.

System Action:

None.

User Action:

None.

RMPP0048

TOTAL NUMBER OF MESSAGES PROCESSED: P1

Reason:

This is a summary message for a display of a PPIPROC processor. *P1* is the total number of messages processed by the PPIPROC.

System Action:

None.

User Action:

None.

RMPP0049

ERROR MESSAGES RECEIVED P1

Reason:

This is a summary message for a display of a PPI manager process. *P1* is the total number of messages received that were error messages from a PPI agent. These error messages include those sent by the agent via the PPI queue being managed and those sent by the agent via WTO. The errors are logged to the transient log for the PPI Manager Resource.

System Action:

None.

User Action:

Check the messages in the transient log.

RMPP0050**INVALID MESSAGES RECEIVED P1****Reason:**

This is a summary message for a display of a PPI manager process. *P1* is the total number of messages received that could not be mapped to the \$RMXPPI map by Mapping Services and the total number of messages received that were not expected by the manager. For each invalid data buffer, a message is logged to the transient log of the PPI Manager Resource.

System Action:

None.

User Action:

Check the messages in the transient log.

RMPP0051**MESSAGES DISCARDED P1****Reason:**

This is a summary message for a display of a PPI manager process. *P1* is the total number of messages received that were discarded. Messages that are found on the managed queue at the time when the manager was initializing are discarded as well as messages remaining on the managed queue during deactivation (except for SOLVxxxx queue managers). Messages that are responses for solicited commands to an agent are discarded if the command issuer is no longer active (they are however still delivered to the unsolicited message filter for automation purposes).

System Action:

None.

User Action:

None.

RMPP0052

PPI RECORDS RECEIVED P1

Reason:

This is a summary message for a display of a PPI manager process. *P1* is the total number of records received off the PPI queue being managed.

System Action:

None.

User Action:

None.

RMPP0053

PPI RECORDS SENT P1

Reason:

This is a summary message for a display of a PPI manager process. *P1* is the total number of records queued to PPI receivers by the manager.

System Action:

None.

User Action:

None.

RMPP0054

PPI ERRORS ENCOUNTERED P1

Reason:

This is a summary message for a display of a PPI Manager Process. *P1* is the total number error return codes returned by PPI in response to various requests from the manager. Messages describing the errors are logged to the transient log of the PPI Manager Resource.

System Action:

None.

User Action:

Check the messages logged to the transient log.

RMPP0055

****END****

Reason:

This is a summary message for a display of a PPI Manager Process. This message indicates the end of the display and no more messages will be written.

System Action:

None.

User Action:

None.

RMPP0056

TOTAL MANAGERS STARTED: P1

Reason:

This is a summary message for a display of a PPI Dynamic Registration processor. *P1* is the total number of PPI manager processes started by this manager to manage other PPI queues.

System Action:

None.

User Action:

None.

RMPP0057

**COMMAND PROCESSING STATISTICS FOR PPICMDSVR QUEUE NAME=
P1**

Reason:

This is a header message for a display of a PPICMDSVR processor for the PPI queue P1. Statistics for commands and messages processed follow.

System Action:

None.

User Action:

None.

RMPP0058

COMMAND REQUESTS RECEIVED P1

Reason:

This is a summary message for a display of a PPI Command Server processor. *P1* is the total number of command requests received by the manager.

System Action:

None.

User Action:

None.

RMPP0059

COMMAND RESPONSES RECEIVED P1

Reason:

This is a summary message for a display of a PPI Command Server processor. *P1* is the total number of messages received that were responses from previously requested commands.

System Action:

None.

User Action:

None.

RMPP0060

COMMAND RESPONSES DELIVERED P1

Reason:

This is a summary message for a display of a PPI Command Server processor. *P1* is the total number of messages received that were responses from previously requested commands and that were successfully delivered to the command issuer.

System Action:

None.

User Action:

None.

RMPP0061**INVALID STARTUNSOL PPI RECEIVER ID " P1"****Reason:**

The internal control request to start the unsolicited message flow to PPI receiver ID *P1* was rejected because the receiver ID specified was an invalid name.

System Action:

The request is rejected.

User Action:

Specify a valid PPI receiver ID or leave blank to use the default.

RMPP0062**AOMALERT P1 ERROR FDBK= P2 JN= P3 JI= P4 TM= P5 MSG= P6****Reason:**

The attempt to send a message to the screening table failed with feedback code *P2* . The request was *P1* , and *P3* to *P6* identify the job name, job ID, time, and text of the message being sent.

System Action:

Processing continues.

User Action:

Contact your local support representative.

RMPP0P01

ERROR SENDING AOM ALERT, FDBK(P1)

Reason:

The PPO procedure encountered an error when trying to route a VTAM WTO message from the PPO interface to AOM.

System Action:

The message is not passed to AOM. The PPO procedure continues processing.

User Action:

The following table describes the feedback code and the corresponding action.

<i>Code</i>	<i>Description</i>	<i>Action</i>
32	Storage shortage	Increase the region size for the task, or try later.
44	The AOM SSI does not exist	Ensure that the AOM Sub-system Interface Identifier is defined and correctly specified in the OPSYSIDS parameter group of ICS.
56	No screening table loaded	Ensure that initialization has completed successfully and that the OPSYSIDS parameter group has not had errors.
60	Screening table not active as above.	
other	Internal error	Contact Technical Support.

RMPP0A01

PROCEDURE ~P1 INVOKED WITH INVALID KEYWORD ~P2(~P3)

Reason:

The service procedure identified by P1 was invoked with an invalid value for the keyword identified by P2 of P3.

System Action:

Request rejected

User Action:

Correct the keyword value and re-try

RMPRIN01**INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)****Reason:**

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMPWRI01**PROCEDURE ~P1 INVOKED WITH INVALID KEYWORD ~P2(~P3)****Reason:**

The procedure identified by P1 was invoked with an invalid value for the keyword identified by P2 of P3.

System Action:

Request rejected

User Action:

Correct the keyword value and re-try

RMPWRI02**CANNOT SAVE PANEL(~P1). LENGTH(~P2) EXCEEDS MAXIMUM OF ~P3****Reason:**

The maximum length for a panel record is P3, and while attempting to save panel P1 it was calculated that its length exceeded this maximum.

System Action:

Request rejected

User Action:

Reduce the size of the panel and try to save again

RMPWRI03

RMRS0001

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMRS0002**NO P1 RECORDS FOUND****Reason:**

No resources of the type identified by *P1* were found. The message can indicate that a manager resource is required for this resource class or the templates might have been set up incorrectly.

Note: Monitor class resources must be owned by a manager resource. If you are trying to define a monitor class resource, it must be associated with a manager resource of the same product type.

System Action:

The selection list is not displayed.

User Action:

If *P1* indicates that *managers* were not found, define a manager of the relevant class before redefining this resource. Proceed as follows:

1. Enter */RADMIN.AD* to display the Assisted Resource Definition menu.
2. Select the option appropriate for the file transfer product for which you want to define resources.
3. Select the system image in which you want to define resources.
4. Complete the General Description panel for the manager resource, and press F3 (File) to save the definition.
5. Enter *G* beside the newly created manager resource to define the corresponding monitor class resources.

If *P1* indicates that *templates* were not found, it might indicate that the *active template image* needs to be changed. To change the active template image, proceed as follows:

1. Enter */PARMS* to display the list of parameter groups.
2. Enter *U* beside the OPSYSIDS parameter group.
3. Change the image in the Template System Image Version field to an image that contains the required templates.
4. Press F6 (Action) to make the new template image active.

RMRS0003

NO P1 ADDED OR FOUND

Reason:

No resource of the type identified by *P1* added or found for the sysname and version specified.

System Action:

The request is rejected.

User Action:

None.

RMRS0004

RESOURCE CLASS NOT SELECTED FOR ADDING RESOURCE DEFINITION

Reason:

Process cancelled because resource class is not selected/specified.

System Action:

The request is rejected.

User Action:

Class must be selected to add resource definition.

RMRS0005

UPDATE IN PROGRESS BY ~P1

Reason:

Update is in progress on this definition by other user.

System Action:

The request is rejected.

User Action:

Try again later.

Request rejected.

User Action:

Use a different name.

RMRS0011

'~P1' IS NOT A VALID VALUE FOR '~P2'

Reason:

The value identified by P1 is not valid for the field identified by P2

System Action:

Field highlighted in error.

User Action:

Enter a valid value for the specified field

RMRS0012**CROSS CLASS COPY CANCELLED****Reason:**

The requested Cross Class Copy Function was cancelled at the user's request.

System Action:

None

User Action:

None

RMRS0013**NO RESOURCES IN P1 USE P2****Reason:**

A scan has revealed that no resources in the system image identified by *P1* were modelled using the template identified by *P2*.

System Action:

None.

User Action:

None.

RMRS0014**P1 APPLIED TO P2 RESOURCE(S) IN P3****Reason:**

The template identified by *P1* was applied to *P2* resources in the system image identified by *P3*.

System Action:

None.

User Action:

None.

RMRS0015

DELETE CANCELED

Reason:

Deletion of a resource which has owned resources was canceled by the user.

System Action:

None.

User Action:

None.

RMRS0016

REQUEST CANCELED BY USER

Reason:

A user canceled the request.

System Action:

None.

User Action:

None.

RMRS0017**P1 HOMESYS(P2) DOES NOT MATCH P3 HOMESYS(P4)****Reason:**

You tried to move the *P1* resource to the *P3* local system image. However, the resource and the image do not have the same home system. You can move a resource from a shared image to a local image only if the resource and the local image have the same home system.

System Action:

The request is rejected.

User Action:

Do one of the following:

- If you want to move the resource to the *P3* image, change the home system of the resource to match that of the image first.
- Move the resource to an image that has the same home system as the resource.

RMRS0018**P1 HOMESYS(P2) NOT IN AFFINITY LIST FOR P3****Reason:**

You tried to move the *P1* resource to the *P3* shared system image. However, the resource's home system does not appear in the shared image's system affinity list. You can move a resource from a local image to a shared image only if the resource's home system appears in the shared image's affinity list.

System Action:

The request is rejected.

User Action:

Do one of the following:

- If you want to move the resource to the *P3* image, change the home system of the resource to one in the image's system affinity list or include the resource's home system in the shared image's system affinity list.
- Move the resource to a different image, which has the home system of the resource in its system affinity list.

RMRS0019

P1 IS NOT A VALID OPTION FOR THIS CLASS OF RESOURCE

Reason:

You applied the *P1* action to a class of resource for which the action is not valid.

System Action:

The request is rejected.

User Action:

None.

RMRS0020

Cannot update File Transfer Schedule P1 whilst ACTIVE

Reason:

The File Transfer Schedule *P1* cannot be updated whilst ACTIVE.

System Action:

The request is rejected.

User Action:

You have the following options:

- 1) Wait for File Transfer Schedule termination and then update it.
- or
- 2) Issue an *"OFF"* command against the File Transfer Schedule to terminate the schedule and then update it.
- or (if applicable)
- 3) Use the *"EAS"* command against the File Transfer Schedule to temporarily extend the monitoring period.

RMRS0021**Default destination monitor group set to P1****Reason:**

The default destination monitor group has been successfully set. All subsequent *CG* actions will use this monitor group as the default destination.

System Action:

None.

User Action:

None.

RMRS0022**Monitor group P1 not found****Reason:**

The specified IP Node Monitor group does not exist in the database.

System Action:

None.

User Action:

Issue the primary command *SETGRP ?* to display a list of monitor groups.

RMRS0023**No monitor group selected****Reason:**

No selection was made from the IP Node Monitor Group selection list.

System Action:

None.

User Action:

None.

RMRS0024

Default destination monitor group P1 cleared

Reason:

The *SETGRP* command has been issued and the default destination monitor group has been successfully cleared.

System Action:

None.

User Action:

None.

RMRS0025

No default destination monitor group to clear

Reason:

The *SETGRP* command has been issued to clear the default destination monitor group but no destination monitor group was set.

System Action:

None.

User Action:

Issue the command *SETGRP groupname* or alternatively, *SETGRP ?* , to display a selection list of monitor groups.

RMRS0026

IP Node definition moved to monitor group P1

Reason:

The selected IP Node resource definition has been updated or moved to monitor group *P1* .

System Action:

None.

User Action:

None.

RMRS0027**No Template applied : Press F3 to FILE; F4 to SAVE; Enter to RESUME****Reason:**

You try to save a newly defined resource with no template applied. The following options are available:

- Press F3 (File) to save the definition with no template applied and exit the current panel.
- Press F4 (Save) to save the definition with no template applied and remain on the current panel.
- Press Enter to remain on the current panel without saving the definition.

System Action:

None.

User Action:

When a resource is defined with no template applied, it is likely that the resource will not be monitored correctly. Either manually specify all relevant values in the succeeding definition panels or use a template to predefine values for selected fields.

To apply a template

1. If you are not on the first panel, enter **1** at the Command prompt.
The first panel appears.
2. Enter **?** in the TemplateName field.
A selectable list of templates appears.
3. Enter the appropriate action code to apply the template.
The definition acquires the template values.

RMRS0101**INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)****Reason:**

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMRS0102

CLASS IS INVALID OR MISSING

Reason:

You tried to access a class that does not exist in the knowledge base.

System Action:

The request is rejected.

User Action:

Use a valid class name.

RMRS0201

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMRS0202

RESOURCE(~P1) ALREADY EXISTS

Reason:

Resource definition to be created already exists in the database.

System Action:

The request is rejected.

User Action:

None.

RMRS0203**INVALID SYSNAME(~P1) AND VERSION(~P2) SPECIFIED****Reason:**

Sysname and Version specified is unknown to the system.

System Action:

The request is rejected.

User Action:

Use '?' to list a selection list of Sysname and Version known to system.

RMRS0204**UPDATE IN PROGRESS BY P1****Reason:**

Update is in progress on this definition by other user.

System Action:

The request is rejected.

User Action:

Try again later.

RMRS0205**CLASS(P1) CAN ONLY HAVE ONE DEFINITION****Reason:**

Only one definition can be defined to the system for each of the following classes: SPOOL, JES, EE, and CSM.

System Action:

None.

User Action:

None.

RMRS0301

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMRS0302

UPDATE IN PROGRESS BY ~P1

Reason:

Update is in progress on this definition by other user.

System Action:

The request is rejected.

User Action:

Try again later.

RMRS0303

THE CDMON OWNER P1 (CDMGR) COULD NOT BE FOUND

Reason:

The specified record was not found.

System Action:

The request is rejected.

User Action:

Check that the owner CDMGR has not been deleted. Review the values in the System Name, Version, and CDMGR Name fields. Correct any values in error.

RMRS0304**REMOTE NODE NAME CANNOT BE THE SAME AS CDMON OWNER (CDMGR) NAME****Reason:**

The name of the remote node being monitored by this CDMON resource cannot be the same name as this monitor's owning CDMGR.

System Action:

The request is rejected.

User Action:

Input a different remote node name, or change the owner name.

RMRS0305**CHANGING HOME SYSTEM WILL UNLINK ALL RELATED LOCAL RESOURCES****Reason:**

You are changing the home system of a resource in a shared system image and if you proceed with it, relationships with other resources in local system images will be deleted. Only resources with the same home system can form relationships between local and shared system images.

System Action:

None.

User Action:

Either cancel the change, or save it and unlink all related local image resources.

RMRS0306

Cannot update File Transfer Schedule P1 whilst ACTIVE

Reason:

The File Transfer Schedule *P1* cannot be updated whilst ACTIVE.

System Action:

The request is rejected.

User Action:

You have the following options:

1) Wait File Transfer Schedule termination and then update it.

or

2) Issue an "OFF" command against the File Transfer Schedule to terminate the schedule and then update it.

or (if applicable)

3) Use the "EAS" command against the File Transfer Schedule to temporarily extend the monitoring period.

RMRS0401

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMRS0501

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(P1) VALUE(P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMRS0502**NO RESOURCES FOUND IN CLASS(P1) WHICH BEGIN WITH P2****Reason:**

No resources were found in class *P1* which began with supplied prefix *P2* which could be displayed in a list for selection.

System Action:

None.

User Action:

None.

RMRS0503**NO RESOURCES FOUND IN CLASS(P1) WITH NAME(P2)****Reason:**

No resources were found in class *P1* whose name matches the supplied name, identified by *P2*.

System Action:

None.

User Action:

None.

RMRSSU01**NO AVAILABILITY MAP SPECIFIED FOR THIS RESOURCE****Reason:**

No availability map name has been specified and therefore no timer details can be displayed.

System Action:

The request is rejected.

User Action:

Timer list can only be actioned if resource has an availability map name specified.

RMRSSU03

NO ATTACHED RESOURCES TO DISPLAY

Reason:

Request to display attached resources rejected because there is no attached resources to display.

System Action:

The request is rejected.

User Action:

None.

RMRSSU04

USE '?' TO DISPLAY A LIST OF ATTACHED RESOURCES

Reason:

Invalid character specified to display attached resources list.

System Action:

The request is rejected.

User Action:

Use '?' to display attached resources list.

RMRSSU06

INVALID OPTION SPECIFIED

Reason:

An invalid option specified

System Action:

The request is rejected.

User Action:

Specify Availability Map name or use '?' to select Availability Map which has already been defined to the system.

RMRSSU07**INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)****Reason:**

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMRSSU08**NO TEMPLATE SPECIFIED****Reason:**

There is no template found to be processed with the option specified.

System Action:

The request is rejected.

User Action:

None.

RMRSSU09**RESOURCE NAME NOT SPECIFIED****Reason:**

Template processing require resource name to replace resource name in the template, therefore resource name should exists before using template.

System Action:

The request is rejected.

User Action:

Specify resource name, retry process.

RMRSSU10

NO PROCESS SPECIFIED

Reason:

Process name to be processed with the option specified not found.

System Action:

The request is rejected.

User Action:

None.

RMRSSU11

NO MESSAGE TEXT SPECIFIED

Reason:

Message text to be processed with the option specified not found.

System Action:

The request is rejected.

User Action:

None.

RMRSSU12

SELECTED FIELD(~P1), UNKNOWN TO SYSTEM

Reason:

Field selected is unknown to the system, this is an error of the internal processing.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMRSSU13**INVALID OPTION****Reason:**

Invalid option specified.

System Action:

The request is rejected.

User Action:

Use '?' to display valid options, or check comment for valid options.

RMRSSU14**REQUIRED FIELD OMITTED****Reason:**

A required field has been omitted.

System Action:

Field in error is highlighted.

User Action:

Enter value.

RMRSSU15**SPECIFY 'M', 'O' OR 'R' TO ASSIGN TEMPLATE DEFINITION****Reason:**

Template specified has not been processed.

System Action:

The request is rejected.

User Action:

Specify *M* to merge, *O* to override, or *R* to reset, the resource definition with the template definition.

RMRSSU16

UNABLE TO DETERMINE OBJECT ID PARAMETER

Reason:

Object ID not found and can not be created because there is not enough information passed to the procedure.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMRSSU17

CONTAINMENT FILTER CAN ONLY BE ENTERED IF TYPE IS 'CONTAINMENT'

Reason:

A Containment Filter name was added to a resource definition but the resource is not a containment resource.

System Action:

The field is highlighted as in error.

User Action:

Either change the resource type to CONTAINMENT or erase the value in the Containment Filter field.

RMRSSU21

NO FILTER SPECIFIED

Reason:

The 'F' option was specified without a valid SNA Resource Group Filter name being present. 'F' is only valid if a valid Filter name has been entered.

System Action:

The field in error is highlighted.

User Action:

Specify a valid SNA Resource Group Filter name.

RMRSSU22**NO RESOURCES PASSED FILTER****Reason:**

An attempt was made to View the resources which passed a particular filter criterion but none were selected.

System Action:

None

User Action:

If this is not a desired result check the filter and modify it so that resources will be selected. View the filter again to check if the desired result is achieved.

RMRSSU23**MANUAL OPERATION MODE MUST BE SPECIFIED FOR REMOTE FTSMGR****Reason:**

Operation mode of MANUAL is the only valid option for a remote FTSMGR

System Action:

Field in error is highlighted.

User Action:

Enter MANUAL as the Operation Mode

RMRSSU24**' P1' CANNOT BE ENTERED IF TYPE IS ' P2'****Reason:**

The field, *P1* , is not applicable when the type is *P2* .

System Action:

The field in error is highlighted.

User Action:

Remove the value from field *P1* .

RMRSSU25

' P1' IS A REQUIRED FIELD

Reason:

The field identified by *P1* is a required field which has been omitted.

System Action:

Field in error is highlighted.

User Action:

Enter a valid value.

RMRSSU26

INVALID OPTION FOR SELECTED ENTRY

Reason:

The 'V' option was specified for a file filter type 'TGT','SRC','ID', or the 'E' option was specified for a file filter type 'CTL' .

System Action:

The request is rejected.

User Action:

Check the file filter type and select the appropriate action.

RMRSSU27

PRESS 'ENTER' TO CONFIRM DELETE OR CLEAR SELECTION TO CANCEL

Reason:

You are deleting one or more status monitor messages and are asked to confirm the operation.

System Action:

None.

User Action:

To delete all the selected messages, press ENTER.

If you change your mind about deleting a message, clear the D beside it before you press ENTER. When you press ENTER, only those message with a D beside them are deleted.

RMRSSU28**' P1' IS NOT A VALID TYPE FOR SHARED RESOURCES****Reason:**

You cannot define a resource of the *P1* type in a shared system image.

System Action:

The field in error is highlighted.

User Action:

Change the type to a valid value. If you have applied a template, delete the values in the Type and TemplateName fields, and then apply a template of the valid type by using the Reset action.

RMRSSU29**SNMP details updated successfully****Reason:**

You have successfully updated the SNMP host details record corresponding to this resource definition.

System Action:

None

User Action:

None

RMRSSU30**Update of SNMP details canceled****Reason:**

You have canceled the update of the SNMP host details record corresponding to this resource definition. The SNMP host details record remains unchanged.

System Action:

None

User Action:

None

RMRSSU31

SNMP support not available with type P1

Reason:

A value of YES has been specified for Use SNMP?. YES is invalid for this resource type. SNMP support was introduced for DIRECTEXPRESS in z/OS 1.4 and EXPRESS in z/OS 1.6.

System Action:

The Use SNMP? field is highlighted.

User Action:

Change the Use SNMP? value to NO, or change the OSA type.

RMRSSU32

Generic Address Space Monitor Name must be less than 8 characters

Reason:

When the Is Name Generic? field is set to YES, the Address Space Monitor Name must be no more than 7 characters long. The name is used as a mask, with a trailing '*' assumed.

System Action:

Address Space Monitor Name field is highlighted.

User Action:

Shorten the length of the name, or change Is Name Generic? to NO.

RMRSSU33

No monitoring attributes selected. Press F10 (EditLst).

Reason:

The resource definition has Monitoring Status set to ACTIVE on panel 1; however, no monitoring attributes are selected.

System Action:

None.

User Action:

Press F10 (EditLst), then F4 (Add), and select attributes for this resource.

RMRSSU34**No Type of Monitoring active****Reason:**

The resource definition has Monitoring Status set to ACTIVE on panel 1, but no type of monitoring has yet been specified.

System Action:

None.

User Action:

Select the monitoring you want to perform using an 'A' or 'S' against one or more types on this panel.

RMRSSU35**Update in progress by P1 for group P2****Reason:**

Another user is updating this definition.

System Action:

The request is rejected.

User Action:

Try again later.

RMRSSU36**Interface name must be specified when VIPA is IPv6****Reason:**

You did not specify the interface name. This field is required when the VIPA address is IPv6.

System Action:

The field is highlighted in error.

User Action:

Supply a value for interface name.

RMRSSU37

Is Name Generic? must be NO when Type is P1

Reason:

When the Is Name Generic? field is set to YES, the Address Space Monitor Type must be NONE. Generic monitoring is not supported for the indicated type of address space resource.

System Action:

Is Name Generic? field is highlighted.

User Action:

Change the value to NO, or set Address Space Monitor Type to NONE.

RMRSSU38

Required fields for address space port monitoring omitted

Reason:

You did not specify fields required for address space port monitoring. Address space port monitoring attributes contain the suffix ByPort in its attribute name. When these attributes are selected, a port number and/or an associated stack name is required.

System Action:

The required fields are highlighted.

User Action:

Update the resource definition, adding port numbers and stack details, or remove all address space port monitoring attributes if they are not needed.

RMRSSU39

P1 removed. Review attribute settings.

Reason:

As a result of your change to the TCP/IP Stack Type field, some previously active monitoring attributes are no longer applicable. P1 attributes have been removed.

System Action:

None.

User Action:

Press F8, and review the attributes.

RMRW0001

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMRW0002

NO LOG RECORDS FOUND

Reason:

No Log records exist.

System Action:

No further processing.

User Action:

None.

RMRW0003

LOG TABLE ERROR - FDBK(~P1)

Reason:

Vartable error.

System Action:

No further processing.

User Action:

None.

RMRW0004

P1 FAILED - RC(P2) FDBK(P3) SYMSG(P4)

Reason:

As this resource exists in a remote region, an APPC conversation is required to process this log request. APPC function *P1* has ended in error. *P2* contains the return code, *P3* the feedback code, and *P4* the message describing the failure.

System Action:

Processing terminated in error.

User Action:

Determine whether the remote system is still available. Contact your system administrator.

RMRW0101

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMRW0102**P1 FAILED - RC(P2) FDBK(P3) SYSMSG(P4)****Reason:**

As this resource exists in a remote region, an APPC conversation is required to process this log request. APPC function *P1* has ended in error. *P2* contains the return code, *P3* the feedback code, and *P4* the message describing the failure.

System Action:

Processing terminated in error.

User Action:

Determine whether the remote system is still available. Contact your system administrator.

RMRW0103**LOG TABLE ERROR - FDBK(~P1)****Reason:**

Vartable error.

System Action:

No further processing.

User Action:

None.

RMRW0108**NO LOG RECORDS FOUND****Reason:**

No Log records exist.

System Action:

No further processing.

User Action:

None.

RMRW0109

UNEXPECTED "WHAT RECEIVED" STATE - STATE(~P1)

Reason:

Procedure in unexpected APPC "What Received" State.

System Action:

None.

User Action:

Contact System Administrator.

RMRW0201

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(P1) VALUE(P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMRW0202

TEMPORARY STATISTICS TABLE NOT FOUND

Reason:

The \$RMAVTEMP table is not available.

System Action:

No further processing.

User Action:

None.

RMRW0203**STATISTICS TABLE ERROR - FDBK(~P1)****Reason:**

Variable error.

System Action:

No further processing.

User Action:

None.

RMSE0001**INVALID TRANSACTION TYPE - TYPE(P1)****Reason:**

The region cannot recognize the transaction request from a remote conversation partner.

System Action:

This transaction is not processed any further.

User Action:

Contact technical support.

RMSE0002**STATUS TABLE P1 FAILED - OBJID(P2) RC(P3) SYMSG(P4)****Reason:**

The status table function has ended in error.

System Action:

Processing continues.

User Action:

Contact technical support.

RMSE0003

P1 FAILED - RC(P2) FDBK(P3) SYSMSG(P4)

Reason:

An error has occurred in the APPC conversation used by the Shared Event Traffic Manager. This will cause loss of status table updates for remote resources in a shared system image.

System Action:

The region will retry the conversation.

User Action:

If the remote region is inactive, restart the remote region; otherwise, contact technical support.

RMSE0102

P1 FAILED - RC(P2) FDBK(P3) SYSMSG(P4)

Reason:

Processing of the *P1* APPC verb failed. The return code is *P2* , the feedback code is *P3* , and the associated error message is *P4* .

System Action:

Processing terminated in error.

User Action:

Determine whether the link to the remote system has failed. If the link has failed, the region will try to recover the link. Otherwise, contact Technical Support.

RMSEAC01

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

Procedure \$RMSEACX failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

None.

User Action:

Contact your systems administrator.

RMSEAC02**INVALID SEARCH LINE****Reason:**

Right and left parentheses were entered without any search information between them. This is an invalid situation.

System Action:

Field highlighted in error.

User Action:

Enter some search information between the parentheses.

RMSEAC03**' P1' IS A REQUIRED FIELD****Reason:**

While specifying a search the field identified by *P1* was not entered and is a required field.

System Action:

Field highlighted in error.

User Action:

Enter a value for the specified field.

RMSEAC04**' P1' IS THE ONLY VALID VALUE FOR THIS FIELD****Reason:**

While defining a search the field highlighted as being in error only accepts the value identified by *P1* as being valid.

System Action:

Field highlighted in error.

User Action:

Enter the valid value for the specified field.

RMSEAC05

UNBALANCED PARENTHESES - LEFT P1 RIGHT P2

Reason:

An unbalanced number of parentheses have been specified in the search expression. *P1* parentheses were specified on the left and *P2* parentheses were specified on the right. There must be an equal number of parentheses on the left and right.

System Action:

Field highlighted in error.

User Action:

Add or remove parentheses to balance them.

RMSEAC06

NDB ERROR ON P1 DBRC= P2 ERROR= P3

Reason:

There was an NDB error on the database *P1* . The &NDBRC return code is *P2* and the &NDBERRI error information is *P3* .

System Action:

None.

User Action:

Refer to the NCL Guides for information on the return code.

RMSEAC07

' P1' IS AN INVALID FIELD NAME

Reason:

The field name *P1* that you specified is not a valid field name.

System Action:

Field highlighted in error.

User Action:

Enter a valid field name or place a '?' in the field to get a list of valid field names.

RMSEAC08**' P1' IS AN INVALID LINE COMMAND****Reason:**

The line command *P1* is an invalid line command. Valid line commands are: I - Insert a line D - Delete a line R - Repeat a line

System Action:

Field highlighted in error.

User Action:

Enter a valid line command.

RMSF0001**KEYWORD ' P1' - INVALID VALUE P2****Reason:**

Procedure \$RFSF00S has been invoked with an invalid value of *P2* for keyword *P1*.

System Action:

Procedure is cancelled.

User Action:

As this procedure is only called internally, this message represents a serious error. Contact Technical Support immediately.

RMSF0002

RAMSTAGE &P1 ERROR - RC(&P2) SYSMSG(&P3)

Reason:

An error occurred while performing a VSAM function, *P1* , on the RAMSTAGE file. The value of &FILERC is returned in *P2* and any error message is returned in *P3* . If the error is an OPEN error and the file was being opened to write records to it, the region will be unlinked. This is done to maintain data integrity, as updates to the RAMDB cannot be propagated to linked regions.

System Action:

Procedure ends in error. Region may be unlinked.

User Action:

Try to determine the cause of the error and take any necessary steps to rectify it. Relink the region if required.

RMSF0003

NO RECORDS FOUND

Reason:

A GET request has found no records for the specified ACBNAME.

System Action:

Procedure ends with Retcode 4.

User Action:

None.

RMSF0004**INSUFFICIENT AUTHORITY FOR UPDATE****Reason:**

A write or delete request has failed due to the user's lack of authority. If the file was being opened to write records to it, the region will be unlinked. This is done to maintain data integrity, as updates to the RAMDB cannot be propagated to linked regions.

System Action:

Procedure ends with retcode 8. Region may be unlinked.

User Action:

As this procedure usually runs in background check the authority of the BSYS user, and update it if necessary. It may also be necessary to relink the region.

RMSF0005**RECORD NOT FOUND - KEY(P1)****Reason:**

A GET request did not find the record whose key is returned in *P1*.

System Action:

Procedure ends with Retcode 4.

User Action:

None.

RMSF0006**P1 FAILED - RC(P2) FDBK(P3) SYMSG(P4)****Reason:**

The request identified by *P1* on the RAMSTAGE file failed with FILERC *P2* FeedBack *P3* and, optionally Message *P4*. If the request was a PUT, the region will be unlinked. This is done to maintain data integrity, as updates cannot be propagated to linked systems.

System Action:

Procedure ends. Region may be unlinked.

User Action:

Rectify problems causing RAMSTAGE errors and relink the system.

RMSF0007

LOCK REQUEST FAILED - TYPE(P1) RC(P2) FDBK(P3) TEXT(P4) LOCK(P5)

Reason:

An internal LOCK request of type P1 has failed with a P2 return code, and P3 feedback code. P4 is the lock text from the held lock and P5 is the name of the lock in the form *Primary Name.Minor Name*.

System Action:

The lock request is retried every 30 seconds, until successful.

User Action:

If this message logs repeatedly for an extended period of time, it may indicate that a procedure has locked the record and is now hung and is not releasing the record, thereby preventing other procedures from accessing the record. If this happens, contact CA Technical Support.

RMSF0008

LOCK REQUEST FAILED - INVALID TYPE(P1)

Reason:

A LOCK request was made with the invalid P1 type.

System Action:

Processing terminates.

User Action:

Contact your support representative.

RMSF0009

P1 RECORD(S) DELETED

Reason:

One or more records have been deleted from the RAMSTAGE file for the key identified by P1.

System Action:

None

User Action:

None

RMSF0010**STAGING FILE ERROR OCCURRED ON P1 ON P2 P3****Reason:**

This is the first of a series of three messages issued in a broadcast to indicate that there has been an error on the staging file which will cause the system to be unlinked. The region will be unlinked to maintain data integrity, as updates to the RAMDB cannot be propagated to linked regions.

P1 is the NMID of the Region.

P2 is the Date.

P3 is the Time.

System Action:

The region is unlinked.

User Action:

Determine and correct any problems and relink the region.

RMSF0011**File request(P1) Key(P2) RC(P3) FDBK(P4). Retry attempt P5****Reason:**

The request identified by *P1* for file key *P2* on the RAMSTAGE file failed with FILERC *P3* FeedBack *P4* . The request is retried five times before a LOCK is taken to prevent multiple procedures retrying simultaneously. The first procedure to get the lock continues to retry while others wait. *P5* identifies current retry count.

System Action:

The first procedure continues to retry while subsequent procedures wait on a LOCK request.

User Action:

None.

RMSF0012

REGION P1 WILL BE UNLINKED FROM THE MULTISYSTEM NETWORK

Reason:

This is the third of a series of three messages issued in a broadcast to indicate that there has been an error on the staging file which will cause the system to be unlinked. The region will be unlinked to maintain data integrity, as updates to the RAMDB cannot be propagated to linked regions.

P1 is the NMID of the Region.

System Action:

The region is unlinked.

User Action:

Determine and correct any problems and relink the region.

RMSM0101

NO RESULTS FROM SIMULATION

Reason:

An event was simulated as specified but no results were generated. This is because the event has no hits/misses as per the event controls.

System Action:

None.

User Action:

None.

RMSM0102

SIMULATION COMPLETED, P1 RESULT LINES GENERATED

Reason:

An event was simulated as specified and *P1* result lines generated.

System Action:

None.

User Action:

None.

RMCM0103

SIMULATION FAILED, AOMALERT FAILED WITH FDBK=P1

Reason:

An attempt to simulate an event failed because the AOMALERT failed. The feedback code returned from the AOMALERT was *P1*.

System Action:

Event is not simulated. Processing terminates in error.

User Action:

The following table describes the feedback code and the corresponding action:

Code	Description	Action
32	Storage shortage	Increase the region size for the task or try later.
44	The AOM SSI does not exist	Ensure that the AOM Sub-system Interface Identifier is defined and correctly specified in the OPSYSIDS parameter group.
56	No screening table loaded	Ensure that initialization completed successfully and that the OPSYSIDS parameter group has not had errors.
60	Screening table not active	As above.
other	Internal error	Contact Technical Support.

RMSM0201

INVALID KEYWORD PARAMETER PASSED, KEYWORD= P1 VALUE=" P2"

Reason:

An invalid value for the keyword parameter P1 was passed. The invalid value was P2.

System Action:

Processing is terminated.

User Action:

Contact your systems administrator or Technical Support.

RMSM0202

THE SELECTED LINE IS NOT ASSOCIATED WITH A DEFINITION

Reason:

The selected result line was not generated as part of a hit of a database entity that can be displayed. Essentially there is nothing to display.

System Action:

Request is rejected.

User Action:

None.

RMSM0203

ACTION " P1" IS NOT VALID FOR THE ALL COMMAND

Reason:

The specified action *P1* is not valid for the ALL command.

System Action:

Request is rejected.

User Action:

Specify an action that is valid for the ALL command.

RMSM0301**INVALID KEYWORD PARAMETER PASSED, KEYWORD= P1 VALUE=" P2"****Reason:**

An invalid value for the keyword parameter P1 was passed. The invalid value was P2.

System Action:

Processing is terminated.

User Action:

Contact your systems administrator or Technical Support.

RMSM0302**INVALID COMMAND " P1"****Reason:**

An invalid command was entered. The invalid command was *P1*.

System Action:

The command is rejected.

User Action:

Specify a valid command.

RMSM0303**P1 INVALID, MUST BE P2****Reason:**

An invalid value was entered for the field *P1*. This field must contain *P2*.

System Action:

The field is set in error.

User Action:

Specify a valid value for *P1*.

RMSM0304

REQUIRED FIELD(S) OMITTED

Reason:

One or more required fields were not specified.

System Action:

The field(s) are set in error.

User Action:

Specify valid values for the fields set in error.

RMSM0305

SIMULATION EVENT NOT FOUND

Reason:

The selected simulation event was not found in the simulation table. This occurs if another user deletes the event after you displayed your list, and you then select the deleted event.

System Action:

Request is rejected.

User Action:

Create a new simulation event.

RMSM0306

SIMULATION EVENT ALREADY BEING UPDATED BY P1

Reason:

The selected simulation event is already being updated by user *P1*.

System Action:

Request is rejected.

User Action:

Try later.

RMSM0401**INVALID KEYWORD PARAMETER PASSED, KEYWORD= P1 VALUE=" P2"****Reason:**

An invalid value for the keyword parameter P1 was passed. The invalid value was P2.

System Action:

Processing is terminated.

User Action:

Contact your systems administrator or Technical Support.

RMSM0402**SIMULATION EVENT NOT FOUND****Reason:**

The selected simulation event was not found in the simulation table. This occurs if another user deletes the event after you displayed your list, and you then select the deleted event.

System Action:

Request is rejected.

User Action:

Create a new simulation event.

RMSM0403**SIMULATION EVENT ALREADY BEING UPDATED BY P1****Reason:**

The selected simulation event is already being updated by user *P1*.

System Action:

Request is rejected.

User Action:

Try later.

RMSM0404

ACTION " P1" IS NOT VALID FOR THE ALL COMMAND

Reason:

The specified action *P1* is not valid for the ALL command.

System Action:

Request is rejected.

User Action:

Specify an action that is valid for the ALL command.

RMSM0405

Event simulation is not active

Reason:

Event simulation is not active.

System Action:

Request is rejected.

User Action:

If you require event simulation, activate it as follows:

1. Enter **/PARMS** at the Select Option ==> prompt.
2. On the displayed Customizer : Parameter Groups panel, enter **U** beside the MSGAWARENESS parameter group to display it for update.
3. Change the value in the Event Simulation field to ACTIVE.
4. Press F6 to enable event simulation.
5. If you want event simulation to be available every time the region starts up, press F3 to save the changed value; otherwise, press F12.

If the event simulation is still not available, a possible cause is a memory problem. Such a problem is indicated by a message, RMINWI42, in the initialization log. Read the message help for corrective actions.

RMSMCD01**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE=" P2"****Reason:**

An invalid keyword value was passed. The keyword is P1 and the invalid value is P2.

System Action:

The request is rejected.

User Action:

Correct the invalid value and retry the request.

RMSMCD02**VARIABLE P1 ERROR, ID= P2, ZFDBK= P3, KEY= P4****Reason:**

A variable error occurred while performing function *P1* on variable with name *P2*. The feedback code was *P3* and the entry key was *P4*.

System Action:

Request rejected.

User Action:

Contact your local support representative.

RMSMCD03**NO CALENDAR MATRIX DEFINED FOR YEAR P1****Reason:**

The calendar matrix for year *P1* was not defined.

System Action:

None.

User Action:

None.

RMSMEV01

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE=" P2"

Reason:

An invalid keyword value was passed. The keyword is P1 and the invalid value is P2.

System Action:

The request is rejected.

User Action:

Correct the invalid value and retry the request.

RMSMEV02

P1 DATES SELECTED FOR CALENDAR CRITERIA P2

Reason:

There were *P1* dates that were satisfied by the Calendar Criteria *P2*.

System Action:

None.

User Action:

None.

RMSPX001

P1 OF P2 REFUSED - P3

Reason:

The *P1* command for the *P2* resource was rejected because of the reason, *P3*.

System Action:

The command was rejected.

User Action:

Use *P3* to determine your next action.

RMSPX002**NO RESOURCES WERE SELECTED FROM THE LIST****Reason:**

You did not make a selection in the previously displayed list.

System Action:

None.

User Action:

None.

RMSPX003**ALERT CREATED FOR MESSAGE <MSGID>****Reason:**

An alert was generated for the <MSGID> message.

System Action:

None.

User Action:

None.

RMSPX004**Issue P1 Line command for required LPAR****Reason:**

A command was entered for a SYSPLX class resource, and control has been passed to the LPAR Display Facility (LDF) for further processing.

System Action:

None.

User Action:

Enter the indicated line command beside the desired LPAR to continue your processing.

RMSPX005

INSUFFICIENT AUTHORITY TO PROCESS CDC COMMAND

Reason:

The selected resource does not authorize the CDC command.

System Action:

The command is not processed.

User Action:

If you are authorized to update resource definitions, proceed as follows:

Step 1. Enter *DB* beside the resource.

Step 2. Select the Couple Dataset Automation panel.

Step 3. Specify *YES* in the "Allow Operator to Reset to Defined Primary and Alternate Couple Datasets?" field.

Step 4. Press F3 (File) to save the change.

Step 5. Enter *CDC* beside the updated resource definition.

RMSPX006

XES DISPLAY UNAVAILABLE

Reason:

The cross-system extended services (XES) resource has no associated display command.

System Action:

None.

User Action:

None.

RMSPX007**PREPARING TO RESET SYSPLEX COUPLE DATASETS FOR P1 - PF06 TO CONFIRM****Reason:**

This message asks you to confirm the request to reset the usage of the couple datasets for the selected sysplex resource. The reset operation starts when you press F6 (Action).

System Action:

None.

User Action:

Press F6 (Action) to confirm the request to reset the couple dataset usage, or press F12 (Cancel) to cancel the request.

RMSPX008**SYSPLEX COUPLE DATASET RESET CANCELED BY USER****Reason:**

You canceled the request to reset the couple data set usage for the indicated sysplex resource.

System Action:

None.

User Action:

None.

RMSPX009**SYSPLEX COUPLE DATASET RESET TO DEFAULTS OK****Reason:**

The couple data sets were reset to the ones specified in the sysplex resource definition successfully.

System Action:

None.

User Action:

None.

RMSPX010

SYSPLEX COUPLE DATASET RESET FAILED

Reason:

Your request to reset the couple data set usage for the indicated sysplex resource failed.

System Action:

The reset failed.

User Action:

See the logs to determine why the reset did not proceed. Retry the operation, or try to reset the couple data set usage by issuing SETXCF commands.

RMSPX011

P1

Reason:

This message shows the progress of resetting the usage of couple data sets. *P1* is the text of the message.

System Action:

None.

User Action:

None.

RMSPX012

P1 COMMAND INVALID FOR P2 TYPE OF SYSPLEX RESOURCE

Reason:

The *P1* command is not valid for sysplex resources of the *P2* type.

System Action:

None.

User Action:

None.

RMSPX013**COUPLE DATASETS ALREADY ALIGNED. NO ACTION TAKEN****Reason:**

The currently allocated couple data sets for the indicated sysplex resource match the data sets assigned in the resource definition. No reset is required.

System Action:

None.

User Action:

None.

RMSPX014**CMD P2: P1****Reason:**

This message shows the command issued as part of the operation to reset couple data set usage.

P1 is the command.

P2 is the region in which the command was issued.

System Action:

The command is passed to the system for processing.

User Action:

None.

RMSPX015

SYSPLEX COUPLE DATASET RESET TIMED OUT

Reason:

You issued a CDC command against a sysplex resource and confirmed the request. The requested operation timed out and stopped because a response was not received within 90 seconds.

System Action:

Couple data set usage is not reset. The displayed panel shows the current allocation.

User Action:

See the logs to determine why the reset did not proceed. Retry the operation or try to reset the couple data set usage by issuing SETXCF commands.

RMSPX016

SYSPLEX CDS RESET REJECTED - ALREADY BEING RESET BY P1

Reason:

You issued a CDC command against a sysplex resource and confirmed the request. However, another user, P1 , is already resetting the couple data set usage for that resource.

System Action:

Your request to reset the couple data set usage for the resource is not processed.

User Action:

None.

RMSPX017**WTOR: P1****Reason:**

A WTOR has been auto-replied as part of sysplex couple data set reset. This message is issued as part of the CDC command used to reset sysplex couple data sets to their resource definition default settings. *P1* is the WTOR text.

System Action:

None.

Note: Auto-replies to sysplex WTORs has been enabled through setting the "Allow Operator to Reset to Defined Primary and Alternate Couple Datasets?" to "YES".

User Action:

None.

RMSPX018**COMMANDS NOT SUPPORTED FROM CDC FACILITY****Reason:**

You cannot enter commands on panels processing the CDC command. Sysplex couple data set control is deemed too critical to allow command entry.

System Action:

Your command is not processed.

User Action:

Use another window to issue your command.

RMSPX019

RESET SYSPLEX COUPLE DATASETS FOR P1 IN PROGRESS

Reason:

The operation to reset the usage of the *P1* couple data sets is in progress.

System Action:

The usage of the data sets is being reset to the settings in the resource definition.

User Action:

None.

RMSPX020

NO LOG INFORMATION AVAILABLE

Reason:

No log records have been recorded yet.

System Action:

None.

User Action:

None.

RMSPX021

INSUFFICIENT RESOURCE DATA TO PROCESS CDC COMMAND

Reason:

The definition for the selected resource does not contain full couple data set information to support the CDC command.

System Action:

The command is not processed.

User Action:

If you wish to use the CDC command, ensure that couple data set information is specified in the sysplex resource definition.

RMSPX022**P1 COMMAND INVALID FROM SUBORDINATE REGION****Reason:**

You can issue the *P1* command from focal point regions only because subordinate regions have limited cross-system visibility.

System Action:

None.

User Action:

Retry the command from a focal point region.

RMSPX023**FUNCTION KEY P1 IS NOT ACTIVE IN THIS WINDOW****Reason:**

The *P1* function key is not supported on this panel.

System Action:

None.

User Action:

None.

RMSPX024**P1 COMMAND INVALID FOR SYSPLEX RESOURCE****Reason:**

The *P1* command is not valid for a SYSPLEX-class resource.

System Action:

The command is rejected.

User Action:

None.

RMSPX025

SYSPLEX RESOURCE DEFINITION(P1) ALREADY EXISTS

Reason:

You tried to add a sysplex resource definition that already exists in the sysplex system image. You can add one definition only for each type of sysplex resource. For an ETR or GRS resource, you can add a definition for one of the variant types only.

System Action:

The request is rejected.

User Action:

None.

RMSPX026

System not licensed for S:SYSPLEX feature - Command rejected

Reason:

You entered the LDF command in a region that does not include the S:SYSPLEX feature.

System Action:

The command is not processed.

User Action:

Enter the command in a region that includes the S:SYSPLEX feature. To check whether a region includes the feature, enter *CMD STATUS* and then press Enter twice. The included features are returned in the N11414 messages.

RMSPX027**Issue P1 Line command for required LPAR using Call LPAR Display Facility****Reason:**

You have entered a command for a SYSPLX class resource; however, the command must be issued using the LDF display facility.

System Action:

None.

User Action:

Enter the indicated line command from the Call LPAR Display Facility for your processing.

RMST0001**INVALID PARAMETERS: P1****Reason:**

Invalid parameters were passed to procedure \$RMST00L.

System Action:

The procedure terminates.

User Action:

Contact your local support representative.

RMST0002**VARTABLE ALLOCATION FAILED. FDBK: P1 TYPE: P2 NAME: P3 SCOPE: P4****Reason:**

An attempt by the Status Monitor to allocate its internal tables has failed, probably due to insufficient storage.

System Action:

The Monitor terminates.

User Action:

Contact your local support representative.

RMST0003

ACTIVITY HAS OCCURRED OFF-SCREEN (P1) FOR P2

Reason:

This is an informational message issued by the Status Monitor indicating that some change has occurred to the resource identified by *P2*, which is not in the current window. *P1* is either ABOVE or BELOW and indicates the direction in which the change is to be found.

System Action:

None.

User Action:

If it is desired to see the change which has occurred, scroll the list in the indicated direction.

RMST0004

INVALID P1 PARAMETER(P2) P3

Reason:

An invalid parameter with value *P2* was supplied for the command *P1*. *P3* may optionally contain information about the correct values.

System Action:

None.

User Action:

Reenter the command with the correct parameter.

RMST0005

FILTER(P1) NOT DEFINED - RESET TO NULL

Reason:

The requested Filter was not found, so the Status Monitor Filter has been reset.

System Action:

None.

User Action:

Define a new Status Monitor Filter if you so desire.

RMST0006**VIEW(P1) NOT DEFINED - RESET TO NULL****Reason:**

The requested View was not found, so the Status Monitor View has been reset.

System Action:

None.

User Action:

Define a new Status Monitor View if you so desire.

RMST0007**P1 SET TO (P2)****Reason:**

The Specified Profile element *P1* has been set to the displayed value *P2*.

System Action:

None.

User Action:

The Status Monitor will use the new value for its displays.

RMST0008**P1 UNCHANGED FROM (P2)****Reason:**

The Specified Profile Element *P1* was not changed from its previous value *P2* and a redisplay was not done.

System Action:

None

User Action:

None

RMST0009

STATUS MONITOR BUILD IN PROGRESS

Reason:

The status monitor is building the list of resources to be monitored and sorting them into the order indicated in your user profile.

System Action:

None.

User Action:

None.

RMST0010

HEARTBEAT INTERVAL INCREASED TO GLOBAL MINIMUM (P1)

Reason:

The heartbeat value in the resource definition was less than the minimum global value. The heartbeat value is increased automatically to *P1*.

System Action:

The heartbeat value is increased automatically to the minimum value.

User Action:

None.

RMST0011

'LOCATE' COMMAND IS NOT SUPPORTED, USE 'FIND' INSTEAD

Reason:

The Status Monitor cannot support the LOCATE command due to the complex nature of its key structures and the ability to SORT the list on up to three of eleven possible fields. Hence the FIND command should be used to position the cursor on the required resource, state etc.

System Action:

Request is rejected.

User Action:

Use the FIND command as an alternative.

RMST0012**' P1' COMMAND ISSUED****Reason:**

The command identified by *P1* was issued for execution.

System Action:

None.

User Action:

None.

RMST0015**INVALID COMMAND****Reason:**

The command entered on the command line was not recognized by the procedure.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RMST0016

FORMAT(P1. P2) AND FILTER(&P3) NOT DEFINED

Reason:

FORMAT list definition not defined or the information in the list cache was incorrect. The information in the list cache can become incorrect due to list definitions being added to the MODS file by using the Definition Utility move or copy functions. The Definition Utility does not update the list cache when moving or copying list definitions. FILTER requested was not found, so the Resource Monitor filter has been reset.

System Action:

The request is rejected.

User Action:

If the list is defined on the MODS file reset the list cache (option R on the CAS : List Definition Menu) and retry the request. Otherwise specify a list previously defined and retry. FILTER - Define a new Resource Monitor Filter if you so desire.

RMST0017

P1 command is not supported by View(P2).

Reason:

The Status Monitor was in the P2 View, which does not support the P1 command.

System Action:

None.

User Action:

None.

RMST0051**LOAD OF SYSTEM(P1) VERSION(P2) INITIATED****Reason:**

This is an informational message indicating that a system load for the System Image identified by *P1* and *P2* has begun.

System Action:

The Status Table for the nominated system image will be allocated and the resources for that system image will be loaded into it.

User Action:

None.

RMST0052**LOAD OF SYSTEM(P1) VERSION(P2) SUCCESSFUL. P3 RESOURCES LOADED****Reason:**

The system load of the System/Version identified by *P1* and *P2* has been completed successfully, resulting in *P3* resources being loaded into a Status Table.

System Action:

None.

User Action:

None.

RMST0053

LOAD OF SYSTEM(P1) VERSION(P2) FAILED. RC(P3) - P4

Reason:

This is a warning message issued during a system load if an error occurs trying to retrieve the list of resources for a particular class. The system image identified by *P1* and *P2* failed to load, returning a return code from the database scan of *P3* while any error message returned will be contained in *P4*.

System Action:

None.

User Action:

None.

RMST0054

HEARTBEAT TIMER(P1) SET FOR P2 - INTERVAL(P3)

Reason:

This is an informational message issued during system load which indicates that a heartbeat timer with timer id *P1* has been set for the resource identified by *P2* with an interval of *P3*.

System Action:

None.

User Action:

None.

RMST0055**ERROR ATTEMPTING TO LOCK STATUS TABLE FOR CLASS(P1) RC(P2)****Reason:**

During system load an attempt was made to gain exclusive control of the Status Table for the class identified by P1 which resulted in a return code of P2.

System Action:

System load is abandoned.

User Action:

Check if another process has an exclusive lock on the required Status Table. If so, either wait until it has completed or flush it, and then retry the system load.

RMST0056**LOAD OF SYSTEM(P1) VERSION(P2) INITIATED****Reason:**

This is an informational message indicating that a system load for the System/Version identified by P1 and P2 has begun.

System Action:

The system load will proceed.

User Action:

None.

RMST0057**SYSTEM LOAD COMPLETED. P1 RESOURCES LOADED FROM P2 SYSTEM IMAGES****Reason:**

The system load has completed successfully, resulting in P1 resources being loaded from P2 system images.

System Action:

None.

User Action:

None.

RMST0058

DYNAMIC RESOURCE DELETION INITIATED

Reason:

This is an informational message issued during system startup, indicating that any dynamic resources defined in the system image being loaded will be deleted.

System Action:

Dynamic resources will be deleted.

User Action:

None.

RMST0059

DYNAMIC RESOURCE P1 DELETED

Reason:

The dynamic resource identified by *P1* was successfully deleted.

System Action:

None.

User Action:

None.

RMST0060

ERROR DELETING DYNAMIC RESOURCE P1. RC(P2) MSG(P3)

Reason:

An error occurred attempting to delete the dynamic resource identified by *P1*. The return code and error message received are contained in *P2* and *P3* respectively.

System Action:

None.

User Action:

None.

RMST0061**P1 DYNAMIC RESOURCES DELETED****Reason:**

Informational message indicating the deletion of *P1* dynamic resources.

System Action:

None.

User Action:

None.

RMST0062**CIRCULAR RELATIONSHIP FOUND INVOLVING RESOURCE(P1)****Reason:**

While loading the Status Tables during system startup a relationship was found in which the resource identified by *P1* appears more than once in a conflicting parent-child scenario. For example, A is a parent of B, B is a parent of C, C is a parent of D and D is a parent of A.

System Action:

System load is abandoned.

User Action:

Find the relationship which caused the error and correct it, then re-load the system image.

RMST0063**DUPLICATE RESOURCE P1(P2) IN SYSTEM IMAGE - SYSNAME(P3) VERSION(P4)****Reason:**

The P1(P2) resource in the P3 P4 system image was already loaded from another *system image*, identified in a following message, RMST0064.

System Action:

The resource is not loaded again.

User Action:

Review the system images and, if appropriate, remove the duplication.

RMST0064

RESOURCE P1(P2) LOADED FROM SYSTEM IMAGE - SYSNAME(P3) VERSION(P4)

Reason:

The **P1(P2)** resource was loaded from the **P3 P4** system image. This message follows the RMST0063 message.

System Action:

None.

User Action:

None.

RMST0065

RESOURCE P1(P2) UNLOADED - LOADED FROM SYSNAME(P3) VERSION(P4)

Reason:

The P1(P2) resource was unloaded from the local system image and reloaded in the P3 P4 *shared* system image.

System Action:

None.

User Action:

None.

RMST0201

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMST0202**UNABLE TO EVALUATE LOGICAL STATUS****Reason:**

Based on the information supplied we are unable to determine the logical status.

System Action:

Procedure terminates in error.

User Action:

Contact your system administrator.

RMST0203**LOCK REQUEST FAILED - TYPE(~P1) RC(~P2) SYMSG(~P3)****Reason:**

We have been unable to obtain the requested lock.

System Action:

Procedure terminates in error.

User Action:

Contact your system administrator.

RMSTMS01**Invalid parameters: P1****Reason:**

An invalid call was made to procedure \$RMSTMS.

System Action:

The request fails.

User Action:

Contact Technical Support.

RMSTMS02

Unable to obtain status table P1 LOCK, RC: P2 FDBK: P3

Reason:

Procedure \$RMSTMS received an unexpected return code from a lock request.

System Action:

The request fails.

User Action:

Contact Technical Support.

RMSTMS03

Lock request of type P1 invalid

Reason:

Procedure \$RMSTMS encountered an invalid lock request.

System Action:

The request fails.

User Action:

Contact Technical Support.

RMSTMS04

Status table P1 failed FDBK: P2 NAME:' P3' OBJID:' P4'

Reason:

Procedure \$RMSTMS encountered an unexpected feedback code when attempting to access the status table.

System Action:

The request fails.

User Action:

If the error occurred on the web interface from a bookmarked URL it most likely means that the resource in the URL is no longer defined. If this is NOT the case then contact Technical Support.

RMSTMS05**Normalized state processing failed RC: P1 ' P2'****Reason:**

Procedure \$RMSTMS encountered an unexpected feedback code when evaluating the normalized state of a resource.

System Action:

The request fails.

User Action:

If the error occurred on the web interface from a bookmarked URL it most likely means that the resource in the URL is no longer defined. If this is NOT the case then contact Technical Support.

RMSTMS07**Actual state change from < P1> TO < P2> bypassed - "FORCE=YES" not specified****Reason:**

The actual state of a resource was not changed because the transition from status P1 to status P2 is not permitted.

System Action:

The resource's actual status is not changed.

User Action:

None.

RMSTMS10

Internal status table get failed

Reason:

Procedure \$RMSTMS encountered an error when retrieving a record from the status table.

System Action:

The request fails.

User Action:

If the error occurred on the web interface from a bookmarked URL it most likely means that the resource in the URL is no longer defined. If this is NOT the case then contact Technical Support.

RMSTMS31

ASID field changed from < P1> to < P2> by < P3>

Reason:

A change to the ASID field value in a resource definition was noted in the status table.

System Action:

None.

User Action:

None.

RMSTMS32

Database mode changed from < P1> to < P2> by < P3>

Reason:

A change to the automation mode setting in a resource definition was noted in the status table.

System Action:

RMSTSET01

INVALID KEYWORD VALUE SPECIFIED - KEYWORD= P1 VALUE= P2

Reason:

An invalid keyword value was passed. The keyword was P1 and the invalid value was P2.

System Action:

The request is rejected.

User Action:

Correct the parameters and retry the request.

RMSTSET02

PARAMETERS NOT IN KEYWORD FORMAT - PARMS(~P1)

Reason:

Invalid keyword parameters were specified. The parameters must be in Keyword format (ie. keyword=value ...). P1 is the specified parameters.

System Action:

Request is rejected.

User Action:

Correct the parameters ensuring that they are in keyword format. Use quotes (either/both double and single) if values contain blanks or quotes.

RMSV0002

P1 FAILED - RC(P2) FDBK(P3) SYSMSG(P4)

Reason:

A Unsolicited Event Manager requires the establishment of an APPC conversation. An APPC function has ended in error.

System Action:

Processing terminated in error.

User Action:

Determine whether the remote system is still available. Contact your System Administrator.

RMSV0008**INVALID TRANSACTION TYPE - TYPE(P1)****Reason:**

The transaction request from remote conversation partner is not recognized.

System Action:

This transaction is not processed any further.

User Action:

Contact System Administrator.

RMSV0017**REC(P1) RECTYPE(P2)****Reason:**

A link manager received data from its remote partner.

System Action:

None.

User Action:

This message is written to a link manager's transient log when 'Log Internal Audit Trail' is set to YES in the resource definition and can be used to aid in link problem diagnosis.

RMSV0102**P1 FAILED - RC(P2) FDBK(P3) SYMSG(P4)****Reason:**

A Unsolicited Event Manager requires the establishment of an APPC conversation. An APPC function has ended in error.

System Action:

Processing terminated in error.

User Action:

Determine whether the remote system is still available. Contact your System Administrator.

RMSV0104

DATABASE P1 ERROR - DB(P2) OBJID(P3) RC(P4) SYMSG(P5)

Reason:

The database function identified by P1 on the database identified by P2 for the object identified by P3 failed with a return code of P4 and a SYMSG of P5.

System Action:

APPC conversation ends.

User Action:

Contact System Administrator.

RMSY0102

P1 FAILED - RC(P2) FDBK(P3) SYMSG(P4)

Reason:

Linking a region into a multi-system network requires the establishment of an APPC conversation. An APPC function has ended in error.

System Action:

Processing terminated in error. The regions are not linked. The RAMDB on the receiving system is in an indeterminate state.

User Action:

Determine whether the remote system is still available. If the system is available, retry the Synchronize function.

RMSY0103

UNEXPECTED "WHAT RECEIVED" STATE - STATE(P1)

Reason:

The procedure received an unexpected response from APPC.

System Action:

None.

User Action:

Contact your Systems Administrator.

RMSY0104**DATABASE P1 ERROR - DB(P2) OBJID(P3) RC(P4) SYMSG(P5)****Reason:**

The database function has ended in error.

System Action:

If the return code is 0 or 4, processing continues. If the return code is greater than 4, the database function terminates in error.

User Action:

Contact your Systems Administrator.

RMSY0105**MULTI-SYSTEM LINK FROM P1 STARTED - DATABASE(S) SELECTED (P2)****Reason:**

All the data from system P1, for the databases listed in P2, will be transmitted to the local region and replace any *existing* data, thereby synchronizing the databases on the two systems.

If the selected database is *RAMDBVO* , then only the link records from the remote system are synchronized.

System Action:

None.

User Action:

None.

RMSY0106

MULTI-SYSTEM LINK FROM P1 ENDED - RC(P2) SYMSMSG(P3)

Reason:

The multi-system link from the remote *P1* region has ended.
P2 contains the return code, and *P3* the message describing its success or failure.

System Action:

None.

User Action:

None.

RMSY0107

~P1

Reason:

Database Sync summary lines.

System Action:

None.

User Action:

None.

RMSY0108

APPC CONVERSATION TERMINATED BY REMOTE PROCESS

Reason:

The remote process of the transmission facility terminated abnormally and processing could not continue.

System Action:

Database synchronization terminates.

User Action:

Review the messages on the activity log in the system from which the database was being synchronized to determine the cause of the error. When the problem has been corrected, rerun the database synchronization utility.

RMSY0109**INVALID TRANSACTION ACCESS METHOD - ACCESS(P1)****Reason:**

A staging file record has been read which has an invalid access method specified.

System Action:

This transaction is not processed any further.

User Action:

Contact your Systems Administrator.

RMSY0110**REMOTE SYSTEM ERROR - SYSMSG(P1)****Reason:**

An error has been encountered by the remote APPC conversation partner.

System Action:

Processing continues.

User Action:

Contact your Systems Administrator.

RMSY0111**INVALID RECORD CHAINING FOR OBJID(P1)****Reason:**

An invalid sequence of chained record segments has been received.

System Action:

This synchronize fails.

User Action:

Contact your Systems Administrator.

RMSY0113

STAGING FILE CLEARED - RC(~P1) SYMSG(~P2)

Reason:

Attempt has been made to clear the Staging File for this system.

System Action:

Informational only.

User Action:

None.

RMSY0114

INTERNAL LOCK ERROR - TYPE(P1) NAME(P2) RC(P3) FDBK(P4)

Reason:

Multi-system link encountered an unexpected return or feedback code from an &LOCK verb.

System Action:

The multi-system link request fails.

User Action:

Contact your Systems Administrator.

RMSY0115

FILE P1 ERROR - FILE(P2) RC(P3) MSG(P4)

Reason:

An error was encountered when attempting to access a file. *P1* is the operation being performed, *P2* is the ID of the file, *P3* is the return code and *P4* is the message set by the file verb.

System Action:

Multi-system link terminates.

User Action:

Contact your Systems Administrator.

RMSY0116**ADMIN TASK ALREADY IN PROGRESS - TASKNO(P1) ACB(P2)****Reason:**

A multi-system link request was rejected because another database administration task was already in progress. *P1* is the task number and *P2* is the ACB from which the task was initiated.

System Action:

The request is rejected.

User Action:

View the administration task log for the progress of any other tasks and wait until they are completed before retrying.

RMSY0117**P1 RECORDS NOT PROCESSED SUCCESSFULLY****Reason:**

Multi-system link completed but one or more records were not processed successfully. The database has not been completely replicated.

System Action:

None.

User Action:

The database is treated as complete and is available for use but the errors must be rectified. Contact Technical Support.

RMSY0118

ACB name(P1) is invalid - P2

Reason:

The ACB name selected for a multi-system link operation was not valid or was not allowed. *P2* is the reason. Possible values are:

SAME NAME the selected ACB name is the same as this region's ACB name.

INCOMPATIBLE VERSION the version of procedure \$RMSY02S on the remote region appears to be incompatible with the version of \$RMSY01S on this region. This may be due to required maintenance not being applied.

System Action:

The multi-system link request is rejected.

User Action:

Select a valid ACB name and retry, or ensure that the version of code on the remote region is correct, and any maintenance required, has been applied.

RMSY0120

ACB(P1) IS NOT AN AUTOMATION SERVICES PRODUCT

Reason:

An attempt to perform a multi-system link with the specified ACB was rejected because the region associated with the ACB is not running an Automation Services product.

System Action:

The multi-system link request is rejected.

User Action:

None.

RMSY0121**FLUSHING NCL PROCEDURE P1****Reason:**

The multi-system link procedure is in progress and requires exclusive access to the database. The indicated NCL procedure was accessing the database and therefore will be terminated to allow the multi-system link procedure to continue.

System Action:

The indicated NCL procedures is terminated.

User Action:

None.

RMSY0122**ALREADY CONNECTED TO P1 - REQUEST REJECTED****Reason:**

A request was made to link the region with another automation region but the two regions are already linked.

System Action:

The request is rejected.

User Action:

None.

RMSY0123

P1 USERID NOT DEFINED

Reason:

A request to link two automation regions was rejected because the BSYS user ID of one or more of the regions that the target region is being connected to is not defined in the source region and the requesting user does not have UAMS Maintenance authority.

System Action:

The synchronization request is rejected.

User Action:

If the user requesting the multi-system link is authorized to perform UAMS maintenance functions on all the regions that will be connected, the required user IDs will be created automatically. Otherwise, you must define the BSYS user of the target region manually in each region that it will be connected to and define the BSYS user IDs of all regions that will be connected on the target region before linking the regions.

RMSY0126

APPC RECEIVE TIMED OUT

Reason:

The APPC conversation with a remote system timed out while waiting to receive data.

System Action:

The multi-system link request is rejected.

User Action:

If the reason for the timeout is not apparent, refer to the activity log on the remote region for more information.

RMSY0201

**REMOTE REGION LINK RECORD GET FAILED, ACBNAME= P1 RID= P2
NDBRC= P3 NDBE RRI= P4**

Reason:

A request was made to perform a multi-system link with another system but a required link record was not found in the RAMDB. The record is for ACBNAME **P1**. The NDB return code was **P3** and the error indicator was **P4**. The RID for the record expected was **P2**.

System Action:

The request fails.

User Action:

Contact Technical Support.

RMSY0202

P1 FAILED - RC(P2) FDBK(P3) SYMSG(P4)

Reason:

A multi-system link request requires the establishment of an APPC conversation. An APPC function has ended in error.

System Action:

Processing terminates in error.

User Action:

Determine whether the remote system is still available. Contact your Systems Administrator.

RMSY0203

STAGING FILE CLEARED - ACBNAME(~P1) RC(~P2) SYMSG(~P3)

Reason:

Attempt has been made to clear the Staging File for this system.

System Action:

Informational only.

User Action:

None.

RMSY0204

DATABASE P1 ERROR - DB(P2) RC(P3) SYMSG(P4)

Reason:

The database function has ended in error.

System Action:

Return code 0,4 processing continues. Return code greater than 4 processing terminates in error.

User Action:

Contact your Systems Administrator.

RMSY0208

APPC CONVERSATION TERMINATED BY REMOTE PROCESS

Reason:

The remote process of the transmission facility terminated abnormally and processing could not continue.

System Action:

Multi-system link request terminates.

User Action:

Review the messages on the activity log in the system to which this region was being linked to determine the cause of the error. When the problem has been corrected, rerun the multi-system link utility.

RMSY0209

MULTI-SYSTEM LINK TO P1 - P2

Reason:

This is an informational message about the status of a multi-system link request from a remote region. *P1* is the ACB name of the region and *P2* is either *STARTED* or *ENDED*.

System Action:

None.

User Action:

None.

RMSY0210**ADMIN TASK ALREADY IN PROGRESS - TASKNO(P1) ACB(P2)****Reason:**

A multi-system link request was rejected because another database administration task was already in progress. *P1* is the task number and *P2* is ACB from which the task was initiated.

System Action:

The request is rejected.

User Action:

View the administration task log for the progress of any other tasks and wait until they are completed before retrying.

RMSY0212**P1 USERID NOT DEFINED ON SOURCE REGION(P2)****Reason:**

A request to link two automation regions was rejected because the BSYS user ID of the target region was not registered in the UAMS file of the source region and the requesting user does not have UAMS Maintenance authority.

System Action:

The multi-system link request is rejected.

User Action:

If the user requesting the multi-system link is authorized to perform UAMS maintenance functions on all the regions that will be connected, the required user IDs will be created automatically. Otherwise, you must define the BSYS user of the target region manually in each region that it will be connected to and define the BSYS user IDs of all the regions that will be connected on the target region before performing the multi-system link.

RMSY0213

FAILED TO ADD USER P1 TO REGION P2, RC= P3 FDBK= P4

Reason:

A new region is being linked by the multi-system link process and its BSYS user ID must be added to the UAMS file in each linked region. A request to add the user ID to a linked region failed because the linked region was not running or because the link to this region was not active.

System Action:

Multi-system link continues.

User Action:

If the BSYS user for the newly linked region is not present on any of the existing linked regions, it must be added manually before the regions can communicate.

RMSY0214**MULTI-SYSTEM LINK ATTEMPT REJECTED - P1****Reason:**

A new region is being linked using the multi-system link process. The attempt has been rejected for the reason given in *P1* . Possible values of *P1* are:
PRODUCT SET MISMATCH When you are performing a linking operation, the remote region must be configured with an appropriate product set. If you are linking a region as a subordinate, the product set in the subordinate region must be a subset of the remote region's product set. If you are linking a region as a focal point, or in Migration Mode, then the product sets in the regions being linked must match exactly.

xxxxxxx IS A SUBORDINATE SYSTEM When you are performing a linking operation, the remote region must be a focal point.

SYSPLEX REGION ALREADY ON xxxxxxxx You cannot link OPSOS licensed regions on the same system. The OPSOS product name key is specified in the RUNSYSIN member for the region.

ALREADY LINKED IN MIGRATION MODE You cannot link a region in Migration Mode if it is already linked in Migration Mode to another region.

SAME SYSTEM IMAGE LOADED ON xxxxxxxx You cannot link in Migration Mode if the system image name currently loaded on this region is the same as the the system image name loaded on a region in the multi-system network you are linking to.

SYSTEM IMAGE NAME ALREADY IN USE The name chosen as the system image name for the subordinate region has already been chosen by another subordinate region, or it matches an image currently loaded on a linked focal point region.

DUPLICATE DOMAIN ID ON xxxxxxxx The domain ID of the region being linked is the same as that of the region (xxxxxxx) which is already linked into the multi-system network.

P2 REGION *P3* IS UNREACHABLE The network you were linking to has a region that cannot be communicated with using the specified connection medium. *P2* is the role of the remote region, and *P3* is its primary name or ACB name. In a multi-system environment, a region must be able to communicate with all focal point regions.

System Action:

The multi-system link operation is rejected.

User Action:

If appropriate, identify the regions preventing the multi-system link and unlink the regions.

For *P2* REGION *P3* IS UNREACHABLE, specify a communication access method that is used by all the linked focal point regions.

RMSY0217

LINK RECORD MISSING FROM RAMDB ACBNAME= P1

Reason:

A request was made to perform a multi-system link with another system but a required link record was not found in the RAMDB. The record is for ACBNAME *P1*.

System Action:

The request is rejected.

User Action:

Contact Technical Support.

RMSY0219

REGION &#RM\$WKP1 IS AN INCOMPATIBLE RELEASE LEVEL. MULTI-SYSTEM LINK NOT ALLOWED

Reason:

The *P1* region tried to perform a multi-system link, but it uses an earlier version of the product that has an incompatible database format.

System Action:

The multi-system link request is rejected.

User Action:

None.

RMSY0220

TRANSMIT FAILURE - OBJECT(P1) ZMDORC(P2) ZMDOFDBK(P3)

Reason:

The *P1* object could not be transmitted. The most likely cause is if a definition exceeds the maximum allowable size of 32 KB, as indicated by ZMDORC(8) and ZMDOFDBK(2).

System Action:

The multi-system link request fails.

User Action:

Update the *P1* definition on the remote system to reduce its size, then retry the multi- system link.

RMSY0301**INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)****Reason:**

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMSY0302**P1 FAILED - RC(P2) FDBK(P3) SYMSG(P4)****Reason:**

A Image Sync command requires the establishment of an APPC conversation.
An APPC function has ended in error.

System Action:

Processing terminated in error.

User Action:

Determine whether the remote system is still available. Contact your Systems Administrator.

RMSY0303**UNEXPECTED "WHAT RECEIVED" STATE - STATE(P1)****Reason:**

The procedure received an unexpected response from APPC.

System Action:

None.

User Action:

Contact your Systems Administrator.

RMSY0304

DATABASE P1 ERROR - DB(P2) RC(P3) SYSMSG(P4)

Reason:

The database function has ended in error.

System Action:

Return code 0,4 processing continues. Return code greater than 4 processing terminates in error.

User Action:

Contact your Systems Administrator.

RMSY0307

TRANSACTION NOT CONFIRMED - SYSMSG(P1)

Reason:

The remote conversation partner has indicated that the last transaction was processed in error.

System Action:

The transaction record is left on the staging file.

User Action:

Contact your Systems Administrator.

RMSY0308

Image transmit for P1 STARTED - System(P2) Version(P3) Class(P4)

Reason:

The Image Transmit for this system/version/class has commenced.

System Action:

None.

User Action:

None.

RMSY0309

**Image transmit for P1 ENDED - System(P2) Version(P3) Class(P4)
RC(P5) SYSMSG(P6)**

Reason:

Transmission of the indicated system image has completed. If the RC value is non-zero, the transmission completed unsuccessfully and SYSMSG contains the reason.

System Action:

None.

User Action:

If the transmission completed unsuccessfully, see the Help for the message in SYSMSG. When the problem has been corrected, retransmit the image.

RMSY0310**~P1****Reason:**

Image Sync summary lines.

System Action:

None.

User Action:

None.

RMSY0311**IMAGE TRANSMIT ~P1****Reason:**

Transmit informational message.

System Action:

None.

User Action:

None.

RMSY0312

INVALID COMMAND

Reason:

The command entered on the command line was not recognized by the procedure.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RMSY0313

Transmit not allowed between regions that are linked and synchronized

Reason:

A transmit image or component command cannot be performed between regions that are linked and have their knowledge bases synchronized.

System Action:

The command is rejected.

User Action:

None.

RMSY0314

TRANSMIT OF REMOTE ACTIVE SYSTEM IMAGE DISALLOWED

Reason:

You cannot transmit a system image to a remote region in which that image is active.

System Action:

The request is rejected.

User Action:

If you wish to transmit this image to the remote region, you must first load a different image in that remote region.

RMSY0315**INTERNAL LOCK ERROR - TYPE(P1) RC(P2) FDBK(P3)****Reason:**

An internal lock failed. *P1* is the lock action that was attempted, *P2* is the return code and *P3* feedback code.

System Action:

The database synchronisation request fails.

User Action:

Contact your Systems Administrator.

RMSY0316**APPC CONVERSATION TERMINATED BY REMOTE PROCESS****Reason:**

The remote process of the transmission facility terminated abnormally and processing could not continue.

System Action:

Database synchronization terminates.

User Action:

Review the messages on the activity log in the system from which the database was being synchronized to determine the cause of the error. When the problem has been corrected, rerun the database synchronization utility.

RMSY0317**FILE P1 ERROR - FILE(P2) RC(P3) MSG(P4)****Reason:**

An error was encountered when attempting to access file. *P1* is the operation being performed, *P2* is the ID of the file, *P3* is the return code and *P4* is the message set by the file verb.

System Action:

Database synchronisation terminates.

User Action:

Contact your Systems Administrator.

RMSY0318

ADMIN TASK ALREADY IN PROGRESS - TASKNO(P1) ACB(P2)

Reason:

An image transmission request was rejected because another database administration task was already in progress. *P1* is the task number and *P2* is ACB from which the task was initiated.

System Action:

The request is rejected.

User Action:

View the administration task log for the progress of any other tasks and wait until they are completed before retrying.

RMSY0319

P1 RECORDS NOT TRANSMITTED SUCCESSFULLY

Reason:

A system image was transmitted to a remote region but one or more records were not transmitted successfully.

System Action:

None.

User Action:

View the activity log to determine the cause of the errors, correct, and then re-transmit the system image.

RMSY0320

TRANSMIT OF REMOTE ACTIVE FILE TRANSFER RULESET DISALLOWED

Reason:

The File Transfer Ruleset you have selected has the same name as the active File Transfer Ruleset on the remote system. You cannot replace the active ruleset.

System Action:

The command is rejected.

User Action:

None.

RMSY0321**Missing Action record OBJID: P1 for Process: P2****Reason:**

An action for a GENALERT macro is not in the knowledge base. The macro is in a process with the object ID *P2* that is a concatenation of the following:

- Image name
- Image version
- 71 (class number for process definitions)
- Process name

System Action:

The process is transmitted without the action record.

User Action:

Note the process, and update it to recreate the missing action.

RMSY0322**TRANSMIT FAILURE - OBJECT(P1) ZMDORC(P2) ZMDOFDBK(P3)****Reason:**

The *P1* object could not be transmitted. The most likely cause is if a definition exceeds the maximum allowable size of 32 KB, as indicated by ZMDORC(8) and ZMDOFDBK(2).

System Action:

The object is not transmitted.

User Action:

Update the *P1* definition to reduce its size.

RMSY0401

GENERIC DELETE OF ICOPANL DATASET RECORDS FAILED - FILERC= P1 FDBK= P2

Reason:

An attempt was made (due to a transmission mode of REPLACE) to RESET the ICOPANL dataset by deleting all the records within it. This failed with the FILERC identified by **P1** and the VSAMFDBK identified by **P2**.

System Action:

Processing terminated in error.

User Action:

Attempt to determine why the RESET of the ICOPANL dataset failed. Contact your Systems Administrator.

RMSY0402

P1 FAILED - RC(P2) FDBK(P3) SYMSG(P4)

Reason:

A Image Sync command requires the establishment of an APPC conversation. An APPC function has ended in error.

System Action:

Processing terminated in error.

User Action:

Determine whether the remote system is still available. Contact your Systems Administrator.

RMSY0403

UNEXPECTED "WHAT RECEIVED" STATE - STATE(P1)

Reason:

Procedure in unexpected APPC "What Received" State.

System Action:

None.

User Action:

Contact your Systems Administrator.

RMSY0404**RMSY0404 DATABASE P1 ERROR. DB(P2) OBJID(P3) RC(P4)
SYSMSG(P5)****Reason:**

A database error has occurred attempting to perform function P1. The database is P2 , the record identifier is P3 , and the return code received was P4.

P5 is the error message, if one was returned.

System Action:

Processing continues. The record(s) in error are not written to the database.

User Action:

Attempt to ascertain why the record(s) were not written. Correct the problem and retry.

RMSY0409**INVALID TRANSACTION ACCESS METHOD - ACCESS(P1)****Reason:**

A staging file record has been read which has an invalid access method specified.

System Action:

This transaction is not processed any further.

User Action:

Contact your Systems Administrator.

RMSY0410**REMOTE SYSTEM ERROR - SYSMSG(P1)****Reason:**

An error has been encountered by the remote APPC conversation partner.

System Action:

Processing continues.

User Action:

Contact your Systems Administrator.

RMSY0411

Transmit not allowed between regions that are linked and synchronized

Reason:

A transmit image or component command cannot be performed between regions that are linked and have their knowledge bases synchronized.

System Action:

The command is rejected.

User Action:

None.

RMSY0412

IMAGE SYNC FROM ~P1 FAILED - INVALID FOR ACTIVE SYSTEM IMAGE

Reason:

The active system image cannot be overridden by a Transmit Image command. The system image you have selected is the active system image on system P1.

System Action:

The command is rejected.

User Action:

None.

RMSY0413

ADMIN TASK ALREADY IN PROGRESS - TASKNO(P1) ACB(P2)

Reason:

A database synchronisation request was rejected because another database administration task was already in progress. *P1* is the task number and *P2* is ACB from which the task was initiated.

System Action:

The request is rejected.

User Action:

View the administration task log for the progress of any other tasks and wait until they are completed before retrying.

RMSY0414**ACB NAME(P1) IS INVALID****Reason:**

The ACB name selected for transmitting a system image was not valid or was not allowed.

System Action:

The database synchronisation request is rejected.

User Action:

Select a valid ACB name and retry.

RMSY0415**REQUEST REJECTED - P1 ONLY ACCEPTS SYSTEM NAME P2****Reason:**

The Transmit Image option has been issued to transmit an image to system *P1*. The request has been rejected because *P1* is a subordinate system, and is restricted to system name *P2*.

System Action:

The request is rejected.

User Action:

None.

RMSY0416**REQUEST REJECTED - CANNOT TRANSMIT SERVICES TO A SUBORDINATE REGION****Reason:**

The Transmit Image option has been issued to transmit a service image. The request has been rejected because the selected destination is a subordinate region, and does not support services.

System Action:

The request is rejected.

User Action:

None.

RMSY0417

TRANSMIT FROM P1 FAILED - INVALID FOR ACTIVE FILE TRANSFER RULESET

Reason:

A Transmit File Transfer Ruleset from system P1 has been rejected. The File Transfer Ruleset being transmitted has the same name as the active File Transfer Ruleset on the target region.

System Action:

The command is rejected.

User Action:

None.

RMSY0418

TRANSMIT FROM P1 FAILED - INVALID FOR ACTIVE EVENTVIEW RULESET

Reason:

A Transmit Ruleset from system P1 has been rejected. The Ruleset being transmitted has the same name as an active/*loaded* Ruleset on the target region.

System Action:

The command is rejected.

User Action:

None.

RMSY0419

INVALID RECORD CHAINING FOR OBJID(P1)

Reason:

An invalid sequence of chained record segments has been received.

System Action:

This record is not transmitted.

User Action:

Contact your Systems Administrator.

RMSY0501**INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)****Reason:**

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMSY0502**NO P1 FOUND****Reason:**

No elements of the type described by *P1* were found in the database.

System Action:

None.

User Action:

None.

RMSY0503**P1 WAS NOT PREVIOUSLY SELECTED****Reason:**

An attempt was made to unselect the component described by *P1* which had not previously been selected.

System Action:

Request rejected.

User Action:

None.

RMSY0504

NO ELEMENTS SELECTED

Reason:

You have not selected any elements from the list presented.

System Action:

None.

User Action:

Select elements from the list and try again.

RMSY0505

P1 WAS PREVIOUSLY SELECTED

Reason:

An attempt was made to select the element described by *P1* which had previously been selected.

System Action:

Request rejected.

User Action:

None.

RMSY0506

Resource display limit exceeded. Not all records will be displayed.

Reason:

You try to display a list with more than 9999 entries, which is the limit of the selection list display process.

System Action:

The list displays 9999 entries.

User Action:

None.

RMSY0601**INVALID COMMAND****Reason:**

The command entered on the command line was not known.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RMSY0602**TASK (P1) NOT FOUND****Reason:**

No task definition was found that matched the specified task number. The task definition may have been deleted by another user.

System Action:

None.

User Action:

None.

RMSY0603**TASK FAILED FOR UNKNOWN REASON****Reason:**

The task ended abnormally, but no reason for the failure was recorded.

System Action:

None.

User Action:

Review the system log around the time at which the task should have ended. This message is displayed if the background task was manually canceled or the region was shut down while the task was executing.

RMSY0604

TASK (P1) ENDED

Reason:

The task identified by *P1* has completed processing.

System Action:

None.

User Action:

None.

RMSY0605

NO LOG RECORDS FOR TASK (P1)

Reason:

The task identified by *P1* has not generated any log records.

System Action:

None.

User Action:

None.

RMSY0606

TASK (P1) LOG NOT AVAILABLE DUE TO SYSTEM RESTART

Reason:

The log for the task identified by *P1* no longer exists because the log is not preserved across system restarts and the system has been restarted after the task was started.

System Action:

None.

User Action:

Check the messages in the activity log for the time when the task was running.

RMSY0701**RECORD ENCODING FAILED - OBJECT(P1) VARS(P2)****Reason:**

The record variables prefixed with *P2* from objid *P1* could not be encoded. The most likely cause is that the total length of these variables is longer than 32K.

System Action:

The record is not transmitted.

User Action:

Contact your Systems Administrator.

RMSY6901**P1 IS A REQUIRED FIELD****Reason:**

The field identified by *P1* was not entered and is a required field.

System Action:

Field set in error.

User Action:

Enter a value for the specified field.

RMSY6902**P1 IS NOT A VALID VALUE FOR P2****Reason:**

The value identified by *P1* is not valid for the field identified by *P2*.

System Action:

Field set in error.

User Action:

Enter a valid value for the specified field.

RMSY6903

P1 MUST BE SPECIFIED IF P2 IS P3

Reason:

The field *P1* must be specified when the value for field *P2* is *P3*.

System Action:

Field set in error.

User Action:

Enter a valid value for the specified field.

RMSY6904

P1 SHOULD BE NUMERIC AND BETWEEN P2 - P3

Reason:

The field identified by *P1* is either not numeric or within the range specified by *P2* and *P3*.

System Action:

Field set in error.

User Action:

Correct the identified field and retry the operation.

RMSY6905

P1 MUST BE SPECIFIED IF P2 SPECIFIED

Reason:

A value for field *P1* must be specified if a value for *P2* is specified.

System Action:

Field set in error.

User Action:

Enter a valid value for the specified field.

RMSY6906**AT LEAST ONE COMMUNICATION ACCESS METHOD MUST BE SPECIFIED****Reason:**

A Communication Access Method must be specified. Enter either YES to Use VTAM? or enter a valid TCP/IP Host Name/Addr and TCP/IP Port Number to use the TCPIP Access Method.

System Action:

Field highlighted in error.

User Action:

Enter a value for the specified field.

RMSY6907**INVALID VALUE. ACCESS METHOD P1 HAS BEEN EXCLUDED****Reason:**

This system has not been set up to permit the access method identified by *P1*. Refer to the Customizer parameter group MULTISYS under the TUNING category to check the current system configuration for access methods. To list the parameter groups, enter the /PARMS shortcut.

System Action:

Field highlighted in error.

User Action:

Enter a valid value consistent with the supported access methods in this system.

RMSY6908**INVALID System Name " P1" AND Version " P2" SPECIFIED****Reason:**

The specified system name and version combination does not exist.

System Action:

The request is rejected.

User Action:

Correct and retry. Use '?' to display a list of valid system images names.

RMSY6909

INVALID Transmission Mode " P1". MUST BE REPLACE, OVERLAY OR MERGE

Reason:

The specified transmission mode is not valid.

System Action:

The request is rejected.

User Action:

Correct and retry.

RMSY6910

VALUE NOT SELECTED FROM LIST

Reason:

A prompt list was presented, but you did not choose an item.

System Action:

No value is entered.

User Action:

None.

RMSY6911

UNKNOWN Ruleset Name " P1" SPECIFIED

Reason:

The Ruleset name specified is not defined.

System Action:

The request is rejected.

User Action:

Correct and retry. Enter a '?' in the Ruleset Name field to see a list of rulesets.

RMSY6913**PRIMARY NAME MUST IDENTIFY A REMOTE SYSTEM, IT CANNOT BE THIS SYSTEM!****Reason:**

You must specify the primary name of a remote region. Instead, you have specified the primary name of this region.

System Action:

The field that causes the error is highlighted.

User Action:

Enter a value that is the primary name of a remote region.

RMSY6914**P1 MUST BE BLANK IF P2 IS P3****Reason:**

The field *P1* must be blank when the value for field *P2* is *P3*.

System Action:

Field set in error.

User Action:

Blank out field *P1* or change the value for *P2*.

RMSY6915

UNABLE TO ESTABLISH COMMUNICATIONS. TCP/IP IS NOT ACTIVE

Reason:

An attempt to establish communication with the remote region failed because TCP/IP is not active and access method VTAM has not been specified.

System Action:

Communication to the remote region is not established.

User Action:

1. Check the status of the TCP/IP interface by using the SH TCPIP command.
2. Attempt the operation specifying VTAM as the access method.
3. Ensure that the Management Services used by the remote region is at Version 3.4 or later.
4. Check the MULTISYS parameter group in this region to ensure that VTAM is allowed as an access method for communication. To list the parameter groups, enter the /PARMS shortcut.

RMSY6916

TCP/IP Host Name/Addr is invalid. SOCKETS API is not IPv6 enabled.

Reason:

The TCP/IP Host Name/Addr is an IPv6 address; however, the region's SOCKETS API is not enabled for IPv6.

System Action:

The command is rejected.

User Action:

Correct the TCP/IP Host Name/Addr value and retry, or change the SOCKETS parameter group to use type IBMV6.

RMSYNC01**INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)****Reason:**

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMSYNC02**REQUEST DENIED - REQUIRES COMMAND AUTHORITY LEVEL P1****Reason:**

A request to perform a database maintenance option was refused because the requesting user did not have sufficient authority level in his/her UAMS profile.

System Action:

The request is rejected.

User Action:

Ask your Systems Administrator to increase the Authority level in the UAMS definition for your userid if this capability is required.

RMSYNC05**ALREADY PROCESSING ACB P1****Reason:**

A database administration request was rejected because the request was for transmitting data to or from an ACB which is currently involved in another database administration task.

System Action:

The request is rejected.

User Action:

Wait until the previous database administration task has completed and retry.

RMSYNC07

REQUEST CANCELLED BY USER

Reason:

You have canceled a database synchronization, image transmission, express set up request, or database export request.

System Action:

None.

User Action:

None.

RMSYNC09

NO COMMON COMPONENTS SELECTED FOR TRANSMISSION

Reason:

The user has elected to transmit common components to another system but has not selected any components from the list(s) presented.

System Action:

None.

User Action:

None.

RMSYNC10

FILE P1 ERROR - FILE(P2) RC(P3) MSG(P4)

Reason:

An error was encountered when attempting to access file. *P1* is the operation being performed, *P2* is the ID of the file, *P3* is the return code and *P4* is the message set by the file verb.

System Action:

The database synchronisation or express set up procedure terminates.

User Action:

Contact your Systems Administrator.

RMSYNC11**EXPRESS SET UP IS ALREADY IN PROGRESS****Reason:**

A request to start the Express Set Up facility was rejected because Express Set Up is already in progress.

System Action:

The request is rejected.

User Action:

None.

RMSYNC12**FUNCTION NOT AVAILABLE TO USER (P1) - INSUFFICIENT AUTHORITY****Reason:**

The user identified by P1 is being prevented from accessing the function selected due to insufficient access authority. A user requires AOM message receipt, All routcodes and console authority equal to or greater than 'C'.

System Action:

A message is displayed to the user.

User Action:

Contact your Systems Administrator.

RMSYNC13

FUNCTION UNAVAILABLE DUE TO THE REQUIRED APPC LINK NOT BEING DEFINED

Reason:

The requested multisystem function is not available because the default APPC link used by the region not being defined. This is defined during region initialization.

System Action:

The requested multisystem option is not performed.

User Action:

Verify that region initialization has completed successfully by viewing the initialization and customization logs from the Customization menu. If there are failed parameters, examine the failed parameter groups and correct or ignore the error. If the problem persists, contact your Systems Administrator.

RMSYNC14

REGION P1 UNLINKED

Reason:

The *P1* region has been unlinked.

System Action:

None.

User Action:

None.

RMSYNC15

REGION P1 UNLINKED FROM P2 REMOTE SYSTEM(S)

Reason:

The home region, *P1*, was unlinked from the multisystem environment. This resulted in *P2* remote regions being unlinked from this region.

System Action:

None.

User Action:

None.

RMSYNC17**OPERATION FAILED: TIMEOUT REACHED ON LINK START COMMAND****Reason:**

The requested operation failed because no response was received for the LINK START command in the timeout period.

System Action:

None.

User Action:

1. Check that the remote region is available. 2. Ensure that the Primary Name specified for the remote region is correct.

RMSYNC18**OPERATION FAILED: ACB NAME SPECIFIED SAME AS LOCAL ACB NAME****Reason:**

The requested operation failed as the user specified an ACB Name that is the same as the local ACB Name. The ACB Name must not be the local ACB Name.

System Action:

None.

User Action:

Correct the Source ACB Name field and retry the operation.

RMSYNC19

SYSTEM NAME MUST BE '\$SERVICE' TO TRANSMIT A SERVICE

Reason:

You specified the 'TS' Transmit Services option on the menu to transmit a service image, but you specified a system name which is not \$SERVICE. You must have a system name of \$SERVICE to transmit a service image. If you leave the 'System Name' and 'Version' fields blank, the 'TS' option processing will default to using a system name of \$SERVICE and a version of 0001.

System Action:

Request rejected.

User Action:

Specify the value '\$SERVICE' in the 'System Name' field and also check that the value in the Version field is correct.

RMSYNC21

UNABLE TO ESTABLISH COMMUNICATIONS. REMOTE SYSTEM IS UNCONTACTABLE

Reason:

An attempt to establish communication with the remote region failed. Possible causes are as follows:

- The remote region is uncontactable.
- The remote region does not support APPC over INMC.
- The option to use APPC over VTAM may have been explicitly disallowed, and hence no communication could be established.

System Action:

Communication to the remote region is not established.

User Action:

1. Check that the remote region is available.
2. Ensure that the primary name specified for the remote region is correct.
3. Ensure that the Management Services used by the remote region is at Version 3.4 or later.
4. Check the MULTISYS parameter group in this region to ensure that VTAM is allowed as an access method for communication. To list the parameter groups, enter */PARMS* from any panel.

RMSYNC22**UNABLE TO VERIFY RELEASE LEVEL OF REMOTE REGION (P1)****Reason:**

An attempt to check the release level of the remote region failed.

System Action:

The request is rejected.

User Action:

If the reason for the failure is not apparent, see the local and remote activity logs for more information.

RMSYNC23**REGION (P1) IS NOT LICENSED FOR P2 P3, OR LATER****Reason:**

The *P1* remote region is not licensed for the *P2* product. To synchronize this region with or transmit knowledge base definitions from this region to a remote region, the remote region must be running at least version *P3* of the *P2* product.

System Action:

The request is rejected.

User Action:

Upgrade the remote region, then retry.

RMSYNC24**UNLINK OF REGION P1 STILL IN PROGRESS****Reason:**

The remote region is being unlinked from this region by an earlier request, and the background tasks associated with the operation are still in progress. Your request to link and synchronize this region to a remote region cannot be processed.

System Action:

The request to link and synchronize this region to a remote region is rejected.

User Action:

Wait for a few seconds, then retry.

RMSYNC25

NO DATASET NAME FOR P1 - P2

Reason:

An error was encountered when attempting to find the name of the dataset allocated to the DD *P1*. The error message is contained in *P2*.

System Action:

The database synchronisation or express set up procedure terminates.

User Action:

The most likely scenario is that the required file is not allocated. Allocate the file and retry the function.

RMSYNC26

TRANSMIT TO A REGION WITH AN EARLIER VERSION DISALLOWED

Reason:

The transmit request has been disallowed because the remote region is running an earlier version of the product. A transmit is only allowed with a remote region that has the same or a higher version than the region from where the request was initiated.

System Action:

The request is rejected.

User Action:

None.

RMSYNC27**DB SYNCHRONIZATION TO A REGION WITH AN EARLIER VERSION
DISALLOWED****Reason:**

The DB synchronization request has been disallowed because the remote region is running an earlier version of the product. Synchronization is allowed only when the remote region has the same or a higher version than the region from where the request was initiated.

System Action:

The request is rejected.

User Action:

None.

RMSYNC28**MIGRATION MODE IS ONLY PERMITTED FOR BACK-LEVEL REGIONS****Reason:**

A Migration Mode synchronization request has been disallowed because the remote region is running an equal or later version of the product. Migration Mode is only allowed when the remote region has a lower version than the region where the request was initiated.

System Action:

The request is rejected.

User Action:

None.

RMTo to RMXx Messages

RMTEMP01

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(*P1*) VALUE(*P2*)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMTEMP02

PARAMETERS IN ERROR, PARMS(*P1*)

Reason:

An invalid parameter was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMTEMP03

TEMPLATE VALUES ASSIGNED TO RESOURCE VARS

Reason:

The values in the template are assigned to the resource variables with the resource name substituted.

System Action:

None.

User Action:

None.

RMTEMP04**NO VARIABLES GENERATED BY THIS PROCESS****Reason:**

This process does not generate any variables.

System Action:

None.

User Action:

None.

RMTEMP05**MAXIMUM NUMBER OF MONITOR MESSAGES DEFINED****Reason:**

No more monitor messages can be added.

System Action:

The remaining monitor messages from the template are not added to the resource.

User Action:

None.

RMTL0001**INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)****Reason:**

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMTL0002

TEMPLATE CLASS NOT SPECIFIED

Reason:

Missing template class for processing.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMTL0003

NO TEMPLATE FOUND WITH PREFIX(~P1)

Reason:

No template known to the system with prefix specified.

System Action:

The request is rejected.

User Action:

Try again with shorter prefix or specify with no prefix.

RMTL0004

NO RECORDS FOUND

Reason:

No records found to be displayed in the selection list.

System Action:

None.

User Action:

None.

RMTL0101**INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)****Reason:**

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMTL0102**NO RECORDS FOUND****Reason:**

No more records found to be displayed in the selection list.

System Action:

None.

User Action:

None.

RMTL0103**UNABLE TO ACCESS P1, FILERC(P2)****Reason:**

Process failed to open file for processing.

System Action:

Process stop.

User Action:

Check filerc code in the NCL Reference under &FILE OPEN.

RMTL0104

FAILED TO CLOSE P1, FILERC(P2)

Reason:

Process failed to close file.

System Action:

Process stop.

User Action:

Check filerc code in the NCL Reference under &FILE CLOSE.

RMTM0001

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMTM0002

NO SERVICE PROCEDURE SPECIFIED

Reason:

The required service proc not found.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMTM0003**ACTIVE TIMER TABLE DOES NOT EXIST****Reason:**

No active timer table found in the system.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMTM0004**TIMER TABLE(~P1) DOES NOT EXIST, FDBK(~P2)****Reason:**

Timer table required not found.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMTM0005**P2 STARTED FOR AVAILMAP(P1)****Reason:**

P2 processing for Availability Map P1 has started.

System Action:

None.

User Action:

None.

RMTM0006

P2 COMPLETED FOR AVAILMAP(P1)

Reason:

RMTM0007

AVAILMAP EVENT FOR ~P1 - DESIRED STATE ~P2

Reason:

Resource desired state is determined by availability map.

System Action:

None.

User Action:

None.

RMTM0008

TIMER TABLE(~P1) FATAL ERROR, FDBK(~P2)

Reason:

Error processing timer table.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMTM0009**AVAILMAP(~P1) ATTEMPTING TO SET DESIRED STATE FOR ~P2 TO ~P3****Reason:**

Availability Map desired state is set to change resource state but if override active, this desired state will not change resource desired state.

System Action:

None.

User Action:

None.

RMTM0010**UNABLE TO DETERMINE OBJECT ID PARAMETER****Reason:**

Object ID not found and can not be created because there is not enough information passed to the procedure.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMTM0011**LOAD ALL TIMERS COMPLETED AT P1, ACTIVE TABLE(P2)****Reason:**

The *P2* availability map timer table was loaded successfully at the time, *P1* .

System Action:

None.

User Action:

None.

RMTM0012

TIMER TABLE SWAPPED, ACTIVE TABLE (P1) at P2

Reason:

An availability map timer table was swapped at the time, *P2* . The name of the new timer table is *P1* .

System Action:

None.

User Action:

None.

RMTM0101

PARAMETERS IN ERROR - PARMs(~P1)

Reason:

An invalid parameter was passed to the procedure.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMTM0102

TABLE ~P1 NOT SPECIFIED

Reason:

Parameter value required for the table was not specified.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMTM0103**INVALID TABLE TYPE(~P1) SPECIFIED****Reason:**

A valid table type: "TODAY" and "NEXTDAY".

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMTM0104**NO OBJECT ID SPECIFIED****Reason:**

The procedure can not find object ID to be loaded to the timer table.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMTM0105**~P1 TABLE LOADED****Reason:**

The timer table loaded successfully.

System Action:

None.

User Action:

None.

RMTM0106

~P1 TABLE UNLOADED

Reason:

The timer table unloaded successfully.

System Action:

None.

User Action:

None.

RMTM0107

LOAD FAILED, OBJID(~P1) NOT FOUND

Reason:

Object ID specified unknown to the system, load failed.

System Action:

The request is failed.

User Action:

Check object ID through availability map menu option.

RMTM0108

AVAILABILITY MAP WITH OBJID(~P1) LOADED SUCCESSFULLY

Reason:

Object ID specified loaded to the timer table.

System Action:

None.

User Action:

None.

RMTM0109**~P1 TABLE DOES NOT EXIST****Reason:**

Timer table to process not found in the system.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMTM0110**AVAILABILITY MAP WITH OBJID(~P1) UNLOADED SUCCESSFULLY****Reason:**

Object ID specified unloaded from the timer table.

System Action:

None.

User Action:

None.

RMTM0111**AVAILABILITY MAP SAVE FAILED WITH RETURN CODE(~P1)****Reason:**

Failed to save availability map definition to the database.

System Action:

Processing continue, the message written to logfile for further checking

User Action:

Check Availability Map definition through option menu.

RMTM0112

~P1 TABLE ~P2 FAILED, KEY(~P3) FDBK(~P4)

Reason:

Action on timer table failed.

System Action:

The request is failed.

User Action:

Contact System Administrator.

RMTN0001

Invalid keyword value specified - keyword(P1) value(P2)

Reason:

An invalid keyword was passed to the procedure.

System Action:

The procedure terminates.

User Action:

If the cause of this error is not apparent, contact your support representative.

RMTN0002

NSM agent P1 not active

Reason:

The NSM agent event handler failed to initialize because the agent instance for which the event handler was started was not active.

System Action:

The NSM agent event handler terminates.

User Action:

Check the activity log for other error messages that may explain why the NSM agent was not active. If the problem persists, contact Technical Support.

RMTN0003**Variable Put failed, Fdbk= P1 Table= P2 Instance= P3****Reason:**

An update to the vartable used by the NSM agent has failed. *P1* is the FDBK code received for the operation.

System Action:

The NSM agent event handler terminates.

User Action:

Lookup the FDBK code *P1* for the VARTABLE PUT verb in the NCL Reference. If necessary refer the error to Technical Support.

RMTN0004**NSM agent P1 event handler started****Reason:**

The NSM agent event handler has started successfully.

System Action:

None

User Action:

None

RMTNAG01**Invalid keyword value specified - keyword(P1) value(P2)****Reason:**

An invalid keyword was passed to the procedure.

System Action:

The procedure terminates.

User Action:

If the cause of this error is not apparent, contact your support representative.

RMTNAG02

NSM agent *P1* already active

Reason:

An attempt to activate the *P1* NSM agent has been rejected because the agent is already active.

System Action:

None.

User Action:

None.

RMTNAG04

NSM agent *P1* not active

Reason:

An attempt was made to terminate the *P1* NSM agent, but the agent is not active.

System Action:

None.

User Action:

None.

RMTNAG05

NSM agent resource build failed: *P1*

Reason:

During activation of the NSM Agent, the build of the internal resource (NMAAGT) has failed.

System Action:

The activation of the NSM Agent also fails

User Action:

P1 is the error message returned from the dynamic build. Refer to the message help for this message for more information. If the way to correct the problem is not apparent, contact Technical Support.

RMTNAG06**NSM agent *P1* is *P2*****Reason:**

This message shows the current state of the *P1* NSM agent.

System Action:

None.

User Action:

None.

RMTNAG07**NSM agent *P1* version *P2* starting****Reason:**

An NSM agent is being started for the system image *P1*.

System Action:

None.

User Action:

Use the \$RM UNICENTER customizer group to control agent activation.

RMTNAG08**NSM agent *P1* stopping****Reason:**

The *P1* NSM agent is being stopped.

System Action:

None.

User Action:

Use the \$RM UNICENTER customizer group to control agent activation.

RMTNAG09

Agent Technology process (P1) is in P2 status

Reason:

The Agent Technolgoy process (P1) is in P2 status.

System Action:

The agent fails to start.

User Action:

Check the startup logs located in \$AGENTWORKS_DIR/services/var/log to determine the cause of failure.

RMTNAG10

Service Control Manager ('awsservices') is not active

Reason:

awsservices is not active or has failed.

System Action:

The agent fails to start.

User Action:

Start awsservices using your installations startup procedure. In the case of a failure check the startup logs located in \$AGENTWORKS_DIR/services/var/log to determine the cause.

RMTNAG11**Invalid response: *P1*****Reason:**

An unexpected response was received for an *awservices status* command. *P1* shows the first 50 bytes of the last response line.

System Action:

The agent fails to start.

User Action:

Perform the following actions to check installation items and, if necessary, report the error to Technical Support.

- List this region's configuration details (/IPTEST), and investigate any errors.
- Verify the contents of the profile file for Agent Technologies, which is located in \$AGENTWORKS_DIR.
- Check that the profile is consistent with the contents of the ENVFILE data set.
- Verify that awservices is active and correctly configured using *one* of the following methods:
 - From an OMVS environment under TSO, issue the following commands:

```
. /$pathname/agentworks.profile
awservices status

awftest tcpip
```
 - From an OCS window, issue the following commands:

```
USS . /$pathname/agentworks.profile;;awservices status
USS . /$pathname/agentworks.profile;;awftest tcpip
```

\$pathname is the HFS path to Agent Technology.

RMTNAG12

Agent install failed, reason=P1

Reason:

A servicectrl command returned a non-zero return code for the definition of nmAgent to Agent Technologies.

System Action:

The agent fails to start.

User Action:

Use the reason to determine why the agent could not be defined.

If necessary, see the product documentation for details on how to update \$AGENTWORKS_DIR/services/config/awsservices/awsservices.cfg to include the nmAgent class.

RMTNAG13

The 'awsAdmin' MIB was not found in aws_sadmin store

Reason:

Agent Technologies installation is not complete. The 'awsAdmin' MIB has not been loaded to the aws_sadmin store.

System Action:

The agent fails to start.

User Action:

Check the Agent Technologies installation process. If necessary use the 'ldmib' command to load the appropriate MIB.

RMTNAG14**The 'nmAgent' MIB was not found in aws_sadmin store****Reason:**

The 'nmAgent' MIB has not been loaded.

System Action:

The agent fails to start.

User Action:

Use the `ldmib` command to load the NMAGENT MIB.

For more information, see your product documentation.

RMTNAG15**Agent Technology program library could not be accessed****Reason:**

The Agent Technology program library was not available during startup because it was not included in the STEPLIB or in the system LNKLIST.

System Action:

The agent fails to start.

User Action:

Check that the program library is accessible via the STEPLIB or the system LNKLIST.

RMTNAG16**NSM agent internal resource build failed: P1 FDBK= P2****Reason:**

During activation of the NSM agent, the build of the internal resource has failed.

System Action:

The activation of the NSM Agent also fails.

User Action:

None.

RMTNAG17

NSM agent in RETRY-WAIT status

Reason:

awsservices is not active and the \$RM UNICENTER parameter group is set to start the agent.

System Action:

The agent retries every 2 minutes to start.

User Action:

Start awsservices using your installations startup procedure. In the case of a failure check the startup logs located in \$AGENTWORKS_DIR/services/var/log to determine the cause. Use the \$RM UNICENTER parameter group to disable the agent if the agent is not required.

RMTNAG18

Service Control Manager ('awsservices') is now active

Reason:

Agent Technology is now active.

System Action:

The NSM agent start is retried.

User Action:

None.

RMTNAG19**NSM agent *P1* terminating for *P2*****Reason:**

The *P1* NSM agent is being stopped because of a system condition. *P2* is the cause and may have the following values: SYSTEM IMAGE RELOAD - A system image.

System Action:

The agent is stopped.

User Action:

Dependent on the system condition.

SYSTEM IMAGE RELOAD - No action required. Agents are restarted by the system image load processing.

RMTNPK01**Filter not specified for NSM agent****Reason:**

The NSM agent uses a filter to determine which resources are to be visible to CA NSM. No such filter was defined at the time of the agent startup.

System Action:

The agent terminates.

User Action:

Ensure that a filter is specified in the UNICENTER parameter group.

RMToNPK02

NSM agent filter (*P1*) not found

Reason:

The NSM agent uses a filter to determine which resources are to be visible to CA NSM. The filter *P1* nominated for the agent could not be found.

System Action:

The agent terminates.

User Action:

The filter is specified in the UNICENTER parameter group. Check that the filter name is correct.

RMToNPK03

Illegal characters in instance name (*P1*)

Reason:

The instance name specified for the NSM Agent is invalid. The instance name must not contain any '@' characters.

System Action:

The agent terminates.

User Action:

By default the NSM Agent uses the region's NMID for the instance name. This value may be overridden in the UNICENTER parameter group. Update the instance name field in the UNICENTER group with a valid name.

RMToNPK04

Variable allocation failed, Fdbk= *P1*

Reason:

A variable used by the NSM Agent has failed allocation.

System Action:

The agent terminates.

User Action:

The meaning of the FDBK code *P1* can be found in the explanation of the VARTABLE ALLOC verb in the NCL Reference. If the reason for this error is not apparent, contact Technical Support.

RMTNPK05**NSM agent *P1* active, *P2* resources loaded****Reason:**

The message indicates that an NSM agent has been activated successfully. *P1* identifies the agent instance in the format '*sysid(sysimg)*'. Where *sysid* is the local system identifier as specified in the \$RM Unicenter parameter group and *sysimg* is the system image name that this agent instance is representing.

System Action:

A cold start trap is issued indicating a new agent is active.

User Action:

None.

RMTNPK06**NSM agent *P1* failed****Reason:**

The message indicates that the *P1* NSM agent has failed.

System Action:

The agent terminates.

User Action:

Review accompanying error messages to see why the agent failed.
If the reason for the failure is not apparent, contact Technical Support.

RMTNPK07**NSM agent Event Handler failed to start****Reason:**

During initialization of the NSM agent, the event handler thread failed to start.

System Action:

The agent terminates.

User Action:

Check the log for any error messages related to the NSM agent event handler (message prefix RMTN00). If the cause of the failure is not apparent, contact Technical Support.

RMTNPK09

NSM agent *P1* ended

Reason:

The message indicates that the *P1* NSM agent has terminated.

System Action:

None.

User Action:

None.

RMTNPK10

AWF error *P1* errno= *P2* occurred for NSM agent *P3*

Reason:

Agent Works Factory interface returned an error for the named NSM agent.

System Action:

The agent terminates.

User Action:

Activate AWF tracing by setting the global \$RMAWTRC to YES (for example, GLBL \$RMAWTRC YES). Use the CHK line command on the resource status monitor to reactivate the agent. Supply the activity log containing the trace of the agent activity to Technical Support for problem determination.

RMTNPK11

NSM agent *P1* terminated by Agent Technologies

Reason:

NSM agent, *P1*, has been terminated by Agent Technologies. Either awservices has terminated or the AGENTCTRL command has been used to terminate the agent.

System Action:

None.

User Action:

Check that Agent Technologies (awservices) is active. If necessary restart awservices and issue a CHK command against the INTNL resource for the agent.

RMTNPK12**Agent internal error, undefined logical state *p1* for resource *p2*****Reason:**

The NSM agent has detected an internal logic error. The logical state *P1* is unknown.

System Action:

The NSM resource severity is set to the value defined for UNKNOWN.

User Action:

Report the error to your product support representative.

RMTNPK13**The NSM agent *P1* callback interval set to *P2*****Reason:**

The NSM agent call back interval has changed from the default of 30 seconds because the global variable \$RMTNIVL has been set to an interval of *P1* .

System Action:

CA NSM checks the agent for events every *P1* seconds.

User Action:

None.

You can change the call back interval by setting the global variable \$RMTNIVL to a value between 5 and 30 seconds. To set the global variable, issue the following command:

```
$GLBL $RMTNIVL n
```

where n is the interval, for example, \$GLBL \$RMTNIVL 5.

RMTP0001

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMTP0002

NO RECORDS FOUND

Reason:

No records found to be displayed in the selection list. This caused by user has not enough authority to issue syscmd.

System Action:

The request is rejected.

User Action:

Check userid authority level.

RMVIEW01

NCL LOG FILEID P1 IS NOT AVAILABLE. FILERC: P2

Reason:

The FILEID *P1* is not available for processing. An attempt to open the file failed with return code *P2*.

System Action:

The log viewing procedure, \$LOGVIEW, terminates.

User Action:

Determine why the file is unavailable (by using SH ALLOC and SH UDB commands). Correct the problem, and retry the operation.

RMVIEW02**TIME MUST BE SPECIFIED****Reason:**

The time must be specified as an operand of the time command.

System Action:

Command field placed in error.

User Action:

Specify a time as an operand of the time command. For example, TIME 13.12.10

RMVIEW03**AN INVALID TIME HAS BEEN SPECIFIED****Reason:**

The time that was specified was invalid.

System Action:

Command field placed in error.

User Action:

The time should be in the format HH.MM.SS.HS. For example 10.30.25.05
Only the first two digits (that represent the hours) are mandatory.

RMVIEW04**NO LOG DATA PRESENT FOR THE SPECIFIED DATE****Reason:**

No log data was found for the date that you specified on the DATE command.

System Action:

None.

User Action:

Specify a date that has log data for it. For a list of dates that contain log data, enter the DATE command without specifying a date.

RMVIEW05

COMMAND MUST BE SPECIFIED

Reason:

The '/' command was specified which indicates that any text following the '/' shall be issued as a command, but no text was specified after the '/'.

System Action:

None.

User Action:

Specify an ASM command after the '/'.

RMVIEW06

NOT AUTHORIZED TO ISSUE COMMANDS

Reason:

The '/' command was specified which indicates that any text following the '/' shall be issued as a command, but you are not authorized to issue commands.

System Action:

None.

User Action:

Contact your system administrator to raise your privileges.

RMVIEW07

COMMAND ISSUED

Reason:

A command was issued by the use of the '/' command.

System Action:

None.

User Action:

None.

RMVIEW08**NO LOG RECORDS FOR A PARTICULAR USERID WILL BE HIGHLIGHTED****Reason:**

You have specified the USERID command without specifying a userid, therefore \$LOGVIEW assumes that you do not want any log records for a particular userid to be highlighted.

System Action:

None.

User Action:

None.

RMVIEW09**USERID CANNOT BE GREATER THAN 8 CHARACTERS IN LENGTH****Reason:**

You have entered the REGION or HLREGION command specifying a userid that is too long.

System Action:

None.

User Action:

Specify a userid that is less than or equal to 8 characters in length.

RMVIEW10**LOG RECORDS FOR USERID '~P1' (~P2) WILL BE HIGHLIGHTED****Reason:**

Log records that are associated with the userid P1 (user name P2) will be highlighted on the \$LOGVIEW panel.

System Action:

None.

User Action:

None.

RMVIEW11

LOG RECORDS FOR USERID '~P1' WILL BE HIGHLIGHTED

Reason:

Log records that are associated with the userid P1 will be highlighted on the \$LOGVIEW panel.

System Action:

None.

User Action:

None.

RMVIEW12

NO LOG RECORDS FOR A PARTICULAR ORIGIN WILL BE HIGHLIGHTED

Reason:

You have specified the ORIGIN command without specifying an ORIGIN, therefore \$LOGVIEW assumes that you do not want any log records for a particular origin to be highlighted.

System Action:

None.

User Action:

None.

RMVIEW13

ORIGIN CANNOT BE GREATER THAN 8 CHARACTERS IN LENGTH

Reason:

You have specified the ORIGIN or HLORIGIN command specifying an origin that is greater than 8 characters long.

System Action:

None.

User Action:

Specify an ORIGIN that is less than or equal to 8 characters in length.

RMVIEW14**LOG RECORDS FOR ORIGIN '~P1' WILL BE HIGHLIGHTED****Reason:**

Log records that have an origin of P1 will be highlighted on the \$LOGVIEW panel.

System Action:

None.

User Action:

None.

RMVIEW15**NO LOG RECORDS CONTAINING PARTICULAR TEXT WILL BE HIGHLIGHTED****Reason:**

You have specified the TEXT command without specifying any text, therefore \$LOGVIEW assumes that you do not want any log records containing a particular text string to be highlighted,

System Action:

None.

User Action:

None.

RMVIEW16**LOG RECORDS CONTAINING '~P1' WILL BE HIGHLIGHTED****Reason:**

Log records that are contain the text string P1 will be highlighted on the \$LOGVIEW panel.

System Action:

None.

User Action:

None.

RMVIEW17

DISPLAY SWITCHED TO NORMAL FORMAT

Reason:

The display of log data will now only show the time and the log data.

System Action:

None.

User Action:

None.

RMVIEW18

DISPLAY SWITCHED TO SHORT FORMAT

Reason:

The display of log data will now only show the log data.

System Action:

None.

User Action:

None.

RMVIEW19

DISPLAY SWITCHED TO LONG FORMAT

Reason:

The display of log data will now show the time (in long format), the origin, the region and the log data.

System Action:

None.

User Action:

None.

RMVIEW20**LOG DATA FOR ALL REGIONS WILL NOW BE DISPLAYED****Reason:**

You have specified the REGION command without specifying a region, therefore \$LOGVIEW assumes that you do not want to only display log records for a particular region.

System Action:

None.

User Action:

None.

RMVIEW21**DISPLAY OF LOG DATA IS NOW LIMITED TO REGION '~P1'****Reason:**

You have specified the REGION command specifying a region that you wish to restrict the display to, therefore only log records with the region that you have specified will be displayed.

System Action:

None.

User Action:

None.

RMVIEW22**LOG DATA FOR ALL ORIGINS WILL NOW BE DISPLAYED****Reason:**

You have specified the ORIGIN command without specifying an origin, therefore \$LOGVIEW assumes that you do not want to only display log from a particular origin.

System Action:

None.

User Action:

None.

RMVIEW23

DISPLAY OF LOG DATA IS NOW LIMITED TO ORIGIN '~P1'

Reason:

You have specified the ORIGIN command specifying an origin that you wish to restrict the display to, therefore only log records with the origin that you have specified will be displayed.

System Action:

None.

User Action:

None.

RMVIEW24

ALL LOG DATA NOW DISPLAYED

Reason:

The TEXT command was entered without a text parameter indicating that no filtering of log records will be performed.

System Action:

None.

User Action:

None.

RMVIEW25

ONLY RECORDS CONTAINING ' P1' DISPLAYED

Reason:

Only log records containing the text string that you have specified in the TEXT command will be displayed.

System Action:

None.

User Action:

None.

RMVIEW26**ONLY PREDEFINED LABELS CAN BE LOCATED****Reason:**

The LOCATE command on this panel will only allow you to locate any labels that you have previously defined.

System Action:

None.

User Action:

The following is an example of how to define a label:

Command==> .TOP

The following is an example of how to locate a label:

Command==> LOCATE .TOP

The following is an example of how to get a pick list of defined labels:

Command==> LOCATE .?

If you wish to locate a time or date or the TIME or DATE commands.

RMVIEW27***** WARNING *** LOGPROC IS NOT ACTIVE****Reason:**

The ASM log proc is currently not running. This is just a warning message.

System Action:

None.

User Action:

To start the logproc use the SYSPARMS LOGPROC= command. Also check the size of the log file.

RMVIEW28

NUMBER OF RECORDS TO SEARCH MUST BE SPECIFIED

Reason:

The number of records to be searched must be entered as an operand of the FINDMAX command.

System Action:

Command field placed in error.

User Action:

Specify the number of records to be searched as an operand of the FINDMAX command.

RMVIEW29

AN INVALID NUMBER OF RECORDS TO SEARCH HAS BEEN SPECIFIED

Reason:

The number of lines specified to search was invalid.

System Action:

Command field placed in error.

User Action:

The number of lines to search should be specified and must be in the range 500 to 10000.

RMVIEW40

CURRENT PRINT RANGE CANCELLED

Reason:

A print range that has been previously defined has been cancelled.

System Action:

None.

User Action:

None.

RMVIEW41**POSITION CURSOR AND REISSUE PRINT START TO MARK START OF PRINT RANGE****Reason:**

You have attempted to mark the start of a print range without indicating which log record you wish the print range to start from.

System Action:

None

User Action:

Mark the start of the range by using one of the following methods:

- To mark by cursor:
- Type *PRINT START* at the Command ==> prompt. - Place your cursor on a log record within the scrollable window. - Press ENTER.
- To mark by time, use the DATE and TIME operands.

RMVIEW42**PRINT RANGE START MARKER SET****Reason:**

The start of the print range was successfully set.

System Action:

None.

User Action:

None.

RMVIEW43

ERROR - SPECIFIED START RANGE IS AFTER END OF PRINT RANGE

Reason:

You have attempted to mark the start of the print range after the end of print range marker that you have previously set.

System Action:

None.

User Action:

Mark the start range before the end range, or move the end range and remark the start of the print range.

RMVIEW44

PRINT RANGE START MARKER MODIFIED

Reason:

The start of the print range was successfully modified.

System Action:

None.

User Action:

None.

RMVIEW45**POSITION CURSOR AND REISSUE PRINT END TO MARK END OF PRINT RANGE****Reason:**

You have attempted to mark the end of a print range without indicating which log record you wish the print range to end at.

System Action:

None

User Action:

Mark the end of the range by using one of the following methods:

- To mark by cursor:
- Type PRINT END at the Command ==> prompt. - Place your cursor on a log record within *the scrollable* window. - Press ENTER.
- To mark by time, use the DATE and TIME operands.

RMVIEW46**PRINT RANGE END MARKER SET****Reason:**

The end of the print range was successfully set.

System Action:

None.

User Action:

None.

RMVIEW47

ERROR - SPECIFIED END RANGE IS BEFORE START OF PRINT RANGE

Reason:

You have attempted to mark the end of the print range before the start of print range marker that you have previously set.

System Action:

None.

User Action:

Mark the end range after the start range, or move the start range and remark the end of the print range.

RMVIEW48

PRINT RANGE END MARKER MODIFIED

Reason:

The end of the print range was successfully modified.

System Action:

None.

User Action:

None.

RMVIEW49

'~P1' IS AN INVALID PRINT OPERAND

Reason:

An invalid operand was specified on the print command.

System Action:

None.

User Action:

Valid operands are START, END and CANCEL. See help for further information on operands for the PRINT command.

RMVIEW50**AN INVALID PRINT OPERAND HAS BEEN SPECIFIED****Reason:**

One of the operands that you have specified on the PRINT START or PRINT END commands is invalid.

System Action:

None.

User Action:

Specify a valid print operand. Valid operands are DATE and TIME. The following are examples of valid PRINT commands:

PRINT START DATE=-1 TIME=13.30

PRINT END DATE=15/07/92 TIME=23.30.28

RMVIEW51**AN INVALID DATE HAS BEEN SPECIFIED****Reason:**

The date that was specified was invalid.

System Action:

Command field placed in error.

User Action:

The date should be in the format DD/MM/YY. For example 21/12/92
Refer to help for further information on date formats.

RMVIEW52**LOG IS IN THE PROCESS OF BEING SWAPPED****Reason:**

The log you have selected is being swapped by LOGPROC.

System Action:

The request is rejected.

User Action:

Wait a minute, before retrying.

RMVIEW53

NO AUTOMATION LOG ACTIVE

Reason:

The Log View procedure has been invoked without a specific FILEID. The default of the currently active automation log cannot be used as there is no current active automation log.

System Action:

Request rejected.

User Action:

Contact your System Administrator.

RMVIEW54

ERROR ON FILEGET, KEY(P1) FILERC(P2) VSAMFDBK(P3)

Reason:

Processing stopped because error encountered during fileget.

System Action:

\$RMVIEW terminates.

User Action:

Determine why the fileget is in error, check return code and vsamfdbk, correct and retry.

RMVIEW55

REMOTE ACTIVITY LOG DATE REQUIRED

Reason:

When issuing a date command for a remote log, the starting date must be specified.

System Action:

The command is rejected.

User Action:

The starting date must be specified with a date command. The date should be in the format DD/MM/YY, for example 21/12/92. Refer to help for further information on date formats.

RMVIEW56**PRINT REMOTE LOG CURRENTLY NOT AVAILABLE****Reason:**

Currently, there is no support available for printing the remote activity log records.

System Action:

The command is rejected.

User Action:

Log on to the remote system and print the activity log records.

RMVIEW57**CURSOR SENSITIVE HELP CURRENTLY NOT AVAILABLE ON REMOTE LOG****Reason:**

Currently, there is no support available on cursor sensitive help for the remote activity log.

System Action:

The command is rejected.

User Action:

Log onto the remote system and view the help definition.

RMVIEW58**APPC ERROR, TYPE(P1) RC(P2) FDBK(P3) MSG(P4)****Reason:**

An unexpected return code was received from an APPC verb.

System Action:

None.

User Action:

Contact your local support representative.

RMVIEW59

UNEXPECTED "WHAT RECEIVED" STATE - STATE(P1)

Reason:

Procedure in unexpected APPC "What Received" State.

System Action:

None.

User Action:

Contact system administrator.

RMVIEW60

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(P1) VALUE(P2)

Reason:

An invalid keyword was passed to the procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the procedure and rerun exec.

RMVIEW61

START AND/OR END MARKERS HAVE NOT BEEN DEFINED

Reason:

The PRINT command was entered but a section of the activity log was not selected for printing.

System Action:

The print request is rejected.

User Action:

Use the PRINT START and PRINT END commands to mark the section of the activity log that you wish to print and then re-issue the PRINT command.

RMVIEW62**SWAPPED TO NEW LOGFILE (P1) FROM (P2)****Reason:**

The User has scrolled past either the beginning or end of a logfile resulting in the logfile being swapped for the next logfile in sequence.

System Action:

None.

User Action:

The message is informational only.

RMVIEW63**CHANGED TO LOG FOR P1****Reason:**

The User has scrolled past either the beginning or end of a day's log, resulting in records for the next or previous day being displayed.

System Action:

None.

User Action:

The message is informational only.

RMVIEW64**SEARCH TERMINATED BY OPERATOR****Reason:**

A search for records satisfying a TEXT, REGION or ORIGIN command has been cancelled by the operator from the confirm search panel.

System Action:

The search is terminated.

User Action:

None.

RMVIEW65

LOG BROWSE CAN ONLY BE PERFORMED IN FULL SCREEN MODE

Reason:

You entered \$LOG in a processing environment that does not have an associated real terminal window (for example, the system background environment, LU 1 Telnet, or ROF session).

System Action:

The command cannot be serviced.

User Action:

Issue the \$LOG command in an environment with a terminal window.

RMVM0001

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the procedure.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMVM0002

NAME MUST BE 3 CHAR IN HEX (FOR TYPE=LOCAL PRINTER)

Reason:

If type specified is local printer then the printer name must be 3 chars hex.

System Action:

The request is rejected.

User Action:

Specify 3 char hex for printer name.

RMVM0003**DEFINITION(~P1) ALREADY EXISTS****Reason:**

Definition to be created already exists in the database.

System Action:

The request is rejected.

User Action:

Specify a different definition name.

RMVM0004**" P1" TEXT HAS BEEN CHANGED TO " P2" P3 TIMES - PLEASE CHECK****Reason:**

The name change has been propagated through the resource definition. You are advised to check all panels in the resource definition to make sure that the changes are correct and no other changes are required.

System Action:

None.

User Action:

Check the resource definition to ensure that it has been updated correctly.

RMVM0005**NO SYSTEM DEFINITION DEFINED****Reason:**

The procedure can not find the system name and version being processed.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMVM0006

REQUIRED FIELD(~P1) OMITTED

Reason:

The required field P1 used for processing omitted.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMVM0007

TEMPLATE NOT SELECTED

Reason:

No template definition selected.

System Action:

None.

User Action:

None.

RMVM0008

TEMPLATE(~P1) DOES NOT EXIST

Reason:

Template specified does not exist in the database.

System Action:

The request is rejected.

User Action:

Use ? to display template definition known to the system.

RMVM0009**PRIORITY(000) RESERVED FOR ACTIVATE, INACTIVATE AND FORCE TERMINATION****Reason:**

000 priority is only used for activation, inactivation and force termination.

System Action:

The request is rejected.

User Action:

Specify priority between 001 to 999.

RMVM0010**P1 COMMAND AND PROCESS MUTUALLY EXCLUSIVE****Reason:**

Only command or process may be specified, not both.

System Action:

The request is rejected.

User Action:

Specify only command or process.

RMVM0011**TIMEOUT ASSUME STATUS AND TRY FORCE INACTIVATION ARE MUTUALLY EXCLUSIVE****Reason:**

Only timeout assume status or try force inactivation specified not both.

System Action:

The request is rejected.

User Action:

Specify only timeout assume status or try force inactivation.

RMVM0012

TIME EXCEEDS MAXIMUM(24.00.00)

Reason:

Invalid time specified.

System Action:

The request is rejected.

User Action:

Specify time between 00.00.00 to 24.00.00

RMVM0013

~P1 TIMEOUT ACTION REQUIRES TIMEOUT AFTER VALUE

Reason:

None

System Action:

The request is rejected.

User Action:

None.

RMVM0014

EVENT DESCRIPTION MUST BE SET IF COLOR, HLIGHT OR INTENSITY SPECIFIED

Reason:

Color, highlight, and intensity are used for the event description. The description must be specified if one of these attributes is specified.

System Action:

The request is rejected.

User Action:

Specify event description.

RMVM0015**P1 FILTER(P2) IS INVALID P3****Reason:**

A filter of the type identified by *P1* with name identified by *P2* is not a valid selection. This may be because the filter does not exist on the database or it exists but does not support the current view. If the latter is the case then *P3* optionally identifies the VIEW for which the filter is required.

System Action:

The request is rejected.

User Action:

None.

RMVM0016**VALID VALUES '~P1' OR '~P2'****Reason:**

Only *P1* or *P2* accepted to be specified in the field.

System Action:

The request is rejected.

User Action:

Specify a valid value.

RMVM0017**VALUE MUST BE GREATER THAN THE MINIMUM VALUE P1.****Reason:**

The specified value must be greater than *P1* .

System Action:

None.

User Action:

Correct the value to meet or exceed the minimum value.

RMVM0018

~P1 IS NOT A VALID HEX VALUE

Reason:

The P1 must be a hex value.

System Action:

Error highlighted.

User Action:

Specify a valid value.

RMVM0019

VALID INITIATOR NAME: 0-9 OR A-Z

Reason:

An invalid initiator name has been specified.

System Action:

Error highlighted.

User Action:

Specify a valid value.

RMVM0020

VALID VALUES : ON OR OFF

Reason:

Only value values for this field are 'ON' or 'OFF'.

System Action:

Error highlighted.

User Action:

Specify a valid value.

RMVM0021**VALID VALUES : AUTOMATED OR MANUAL****Reason:**

Only value values for this field are 'AUTOMATED' or 'MANUAL'.

System Action:

Error highlighted.

User Action:

Specify a valid value.

RMVM0022**REQUIRED FIELD OMITTED****Reason:**

A required field has been omitted.

System Action:

Field in error is highlighted.

User Action:

Enter value.

RMVM0023**INVALID TIME FORMAT****Reason:**

Time must be in HH.MM.SS format.

System Action:

Field in error is highlighted.

User Action:

Respecify value.

RMVM0024

MUST BEGIN WITH 'START' OR 'EXEC'

Reason:

The field value must begin with START or EXEC.

System Action:

Field in error is highlighted.

User Action:

Respecify value.

RMVM0025

~P1 IS NOT KNOWN TO THE LOCAL VTAM

Reason:

The field value must be a VTAM resource name. It may be either a Local or Remote VTAM resource. This is only a warning message as it may be a Remote resource which is not currently active.

System Action:

Warning message.

User Action:

Verify value.

RMVM0026

NO ~P1 DEFINITIONS EXIST

Reason:

An attempt has been made to retrieve existing definitions, but none exist.

System Action:

Field in error is highlighted.

User Action:

Correct value.

RMVM0027

VALID VALUES : MON,TUE,WED,THU,FRI,SAT,SUN

Reason:

Enter only the first 3 char of day.

System Action:

The value is rejected.

User Action:

Specify a valid value.

RMVM0028

VALID VALUES : ACTIVE / INACTIVE

Reason:

Enter only ACTIVE or INACTIVE or A for ACTIVE and I for INACTIVE.

System Action:

The value is rejected.

User Action:

Specify a valid value.

RMVM0029

INVALID CHARACTERS ENCOUNTERED

Reason:

Invalid character encountered during validation.

System Action:

The value is rejected.

User Action:

Specify a valid value.

RMVM0030

INVALID USE OF '*' AND ':'

Reason:

Valid formats are A:B, A*:B, A:B* and A*:B* where A and B are the message prefix.

System Action:

The value is rejected.

User Action:

Specify a valid value.

RMVM0031

EMBEDDED '*' ENCOUNTERED

Reason:

Wild char '*' must be specified at the end of the word.

System Action:

The value is rejected.

User Action:

Specify a valid value.

RMVM0032

NOT ALLOWED TO USE ':' IN THE FIRST OR LAST CHARACTER

Reason:

Because ':' is a range character, it must be used in between characters.

System Action:

The value is rejected.

User Action:

Specify a valid value.

RMVM0033**MAXIMUM ~P1 CHARACTERS FOR A ~P2 ID****Reason:**

Only P1 characters maximum for a P2 .

System Action:

The value is rejected.

User Action:

Specify a valid value.

RMVM0034**VALID VALUES : Y OR N OR BLANK****Reason:**

Only value values for this field are 'Y' or 'N' or ' '.

System Action:

Error highlighted.

User Action:

Specify a valid value.

RMVM0035**EITHER INCLUDE (Y) OR EXCLUDE (N) BUT NOT BOTH****Reason:**

Can not mix values to include or exclude messages.

System Action:

The value is rejected.

User Action:

Specify a valid value.

RMVM0036

INVALID TIME SPECIFIED

Reason:

Maximum value for second: 60, minute: 60 and hour: 24.

System Action:

The value is rejected.

User Action:

Specify a valid value.

RMVM0037

PANEL(~P1) DOES NOT EXIST IN PANEL LIBRARY(ICOPANL)

Reason:

Panel required does not exist in library ICOPANL.

System Action:

The value is rejected.

User Action:

Specify a valid value.

RMVM0038

CLASS(~P1) DOES NOT EXIST

Reason:

Specified class name/number unknown to system.

System Action:

The value is rejected.

User Action:

Use '?' to select class name.

RMVM0039**NO CLASSNAME WITH PREFIX '~P1'****Reason:**

No class name defined to the system with prefix specified.

System Action:

The value is rejected.

User Action:

Use '?' to select class name.

RMVM0040**INVALID CHAR(~P1) ENCOUNTERED IN THE TEXT****Reason:**

Not allowed to use character P1 .

System Action:

The value is rejected.

User Action:

Try again.

RMVM0041**MISSING KEYWORD FOR VALUE SPECIFIED****Reason:**

Keyword must be specified if specifying a value.

System Action:

The value is rejected.

User Action:

Specify keyword for the value.

RMVM0042

CLASS FOR RESOURCE(~P1) NOT SPECIFIED

Reason:

Class must be specified if specifying a resource.

System Action:

The value is rejected.

User Action:

Specify class for the resource.

RMVM0045

VALUE NOT SELECTED FROM LIST

Reason:

No value selected from the selection list displayed.

System Action:

None

User Action:

None

RMVM0047

VALUE MUST BE NUMERIC BETWEEN ~P1 - ~P2

Reason:

The value specified must numeric and fall in the range specified.

System Action:

The value is rejected.

User Action:

Specify value within the range.

RMVM0048**VERSION MUST BE NUMERIC BETWEEN 1 - 9999****Reason:**

The value specified must be numeric and fall in the range specified.

System Action:

The value is rejected.

User Action:

Specify a value within the range.

RMVM0049**PROCESS(~P1) DOES NOT EXIST****Reason:**

Process specified does not exist.

System Action:

The value is rejected.

User Action:

Try again.

RMVM0050**~P1 FAILED TO RETURN DESCRIPTION****Reason:**

The MACRO identified by P1 did not return a description when invoked for this purpose. This would indicate that the NCL procedure associated with this MACRO has been written incorrectly.

System Action:

The request is rejected.

User Action:

Correct the macro NCL procedure and re-try.

RMVM0051

INVALID VALUE SPECIFIED (USE "?" TO SELECT VALID VALUE)

Reason:

The value specified for this field is not valid. Use "?" to display selection list of valid values.

System Action:

The request is rejected.

User Action:

Try use "?" to specify a valid value.

RMVM0052

NO PANEL(S) FOUND WHICH MATCH '~P1'

Reason:

No panels were found in the panels dataset which matched the generic value specified by P1

System Action:

The request is rejected.

User Action:

Try specifying a different value.

RMVM0053**INVALID SYSNAME(P1) AND VERSION(P2) SPECIFIED****Reason:**

The specified system image is not valid because of one of the following:

- The image is not known to the region.
- The image does not support the selected option.

System Action:

The request is rejected.

User Action:

Enter ? in the System Name field to list the system images known to the region, and select the one you want. If the System Name field is not modifiable, you may be able to enter ? in the Version field. This message can also be issued where both the System Name and Version fields are not modifiable. In this case, determine the status of the system image through the ResourceView : System Image Definition Menu (/RADMIN.I).

If the image is in the knowledge base but is shared, this message indicates that you selected a resource class that is not supported by shared images. Nominate a local image for the selected resource class.

RMVM0054**MENU DEFINITION(~P1) DOES NOT EXIST****Reason:**

Menu definition specified unknown to the system.

System Action:

The value is rejected.

User Action:

Use '?' to select menu definition.

RMVM0055

NO MENU(S) FOUND WHICH MATCH '~P1'

Reason:

No menu/s were found in the CAS database which matched the generic value specified by P1

System Action:

The request is rejected.

User Action:

Try specifying a different value.

RMVM0056

INVALID ~P1 SPECIFIED

Reason:

Invalid P1 value encountered during validation.

System Action:

The value is rejected.

User Action:

Specify a valid value.

RMVM0057

LEADING WILDCARD IS INVALID

Reason:

Illegal use of wildcard character in the text.

System Action:

The value is rejected.

User Action:

Specify a valid value.

RMVM0058**GROUP(P1) DOES NOT EXIST****Reason:**

The specified UAMS User Group definition does not exist.

System Action:

The field in error is highlighted.

User Action:

Use ? to display a list of valid UAMS Group IDs.

RMVM0059**'FROM' AND 'TO' VALUES MUST BE DIFFERENT****Reason:**

The 'From' and 'To' values specified for a State Change Exit procedure were the same.

System Action:

The field in error is highlighted.

User Action:

Change one of the values.

RMVM0060**NO MESSAGE(S) TO DISPLAY****Reason:**

No message/s were found to be displayed.

System Action:

The request is rejected.

User Action:

Try '??' or '???' to select a message.

RMVM0061

NO TEMPLATE(S) FOUND WITH TYPE=' P1'

Reason:

No template/s were found in the template system image with the resource class and the value specified by *P1*.

System Action:

The request is rejected.

User Action:

Try using 'L' option.

RMVM0062

P1 MUST BE NO LONGER THAN P2 CHARACTERS

Reason:

The resource name entered was too long for a resource of type *P1* and the resource type was neither a LOGICAL resource or a containment resource.

System Action:

The resource name is highlighted as in error.

User Action:

Change the resource name so that it is valid for the resource type or change the resource type to LOGICAL or make the resource a containment resource by entering a value in the Containment Resource Filter Name field.

RMVM0063

P1 IS NOT A VALID CONTAINMENT RESOURCE FILTER NAME

Reason:

A resource filter was selected as a containment filter for a resource definition but was not a valid containment filter.

System Action:

The Containment Filter field is highlighted as in error.

User Action:

Select a resource filter that only uses the NAME keyword.

RMVM0064**INVALID USE OF WILDCARD(*)****Reason:**

The use of the wildcard character '*' is invalid when: 1. It is used by itself (eg. *) or, 2. A range is specified and * is not the last character (eg. aaa*:bbb* is allowed, but a*a:bbb is not).

System Action:

The value is rejected.

User Action:

Specify a valid value.

RMVM0065**PROMPTING IS NOT SUPPORTED FOR LOGICAL/CONTAINMENT/TEMPLATE RESOURCE****Reason:**

A question mark (?) was placed in the unit address field of a DASD or TAPE resource definition indicating that a list of known resources was to be displayed, but one of the following conditions apply: * the resource is a logical resource (resource type is LOGICAL) * the resource is a containment resource (resource type is CONTAINMENT) * the resource is a template (system name is \$TEMPLAT) Prompting is not supported for these kinds of resource definition.

System Action:

The unit address field is highlighted as in error.

User Action:

Enter a valid resource name in the field.

RMVM0066

ACB NAME CANNOT BE MORE THAN 8 CHARACTERS LONG

Reason:

The value in the ACB name field was more than 8 characters in length and was not a variable name (did not contain an ampersand).

System Action:

The ACB name is highlighted as in error.

User Action:

Correct the ACB name.

RMVM0067

P1 IS NOT A VALID RESOURCE NAME

Reason:

An invalid name was entered for a resource that is one the following:

- in a user-defined subclass
 - a logical resource (resource type is set to LOGICAL)
 - a template resource (system name is \$TEMPLAT)
 - a containment resource (a value is present in the Containment Filter field)
- The name for this type of resource can only contain:
- alphabetic characters (A to Z) * numeric characters (0 to 9)
 - the special characers: @ # \$. - : () Additionally, the name cannot be wholly numeric (a number) and cannot contain embedded blanks.

System Action:

The resource name is highlighted as in error.

User Action:

Enter a valid resource name in the field.

RMVM0068**P1 CONTAINS INVALID CHARACTERS****Reason:**

The value in the indicated field contains characters that are not permitted. The value may only contain the following characters: - Alphanumeric (A to Z and 0 to 9) - National (@, # and \$) - Characters in the set: . - : ()

System Action:

The field is highlighted as in error.

User Action:

Correct the value or enter a question mark (?) in the field to display a list of valid values.

RMVM0069**OPERATION MODE MUST BE AUTOMATED, MANUAL, IGNORED OR OFF****Reason:**

The valid values for this field are 'AUTOMATED', 'MANUAL', 'IGNORED' and 'OFF'.

System Action:

The field is highlighted as in error.

User Action:

Correct the value or enter a question mark (?) in the field to display a list of valid values.

RMVM0070

CONTAINMENT FILTER CAN ONLY BE ENTERED IF TYPE IS 'CONTAINMENT'

Reason:

A Containment Filter name was added to a resource definition but the resource is not a containment resource.

System Action:

The field is highlighted as in error.

User Action:

Either change the resource type to CONTAINMENT or erase the value in the Containment Filter field.

RMVM0071

P1 ALREADY EXISTS

Reason:

P1 already exists in the database.

System Action:

The request is rejected.

User Action:

Specify a different *P1*.

RMVM0072

JOBTYPE STC IS NOT VALID IN A JES3 ENVIRONMENT

Reason:

Under a JES3 system, there are no STCs. All started tasks have a jobtype of JOB.

System Action:

The request is rejected.

User Action:

Do not specify a 'Y' for STC.

RMVM0073**ICON FLAG CANNOT BE ENTERED WITHOUT INTENSITY, COLOUR OR HIGHLIGHT****Reason:**

The ICON FLAG field may only contain a value when one of the other extended display attribute fields contains a value.

System Action:

Field highlighted in error.

User Action:

Either specify one of INTENSITY, COLOUR or HIGHLIGHT, or clear the ICON FLAG field.

RMVM0074**STRING LENGTHS DIFFER****Reason:**

Both strings must have the same length for a text range match. This includes leading and/or trailing wildcard *'s.

System Action:

The value is rejected.

User Action:

Specify the same length of strings.

RMVM0075**INVALID USE OF RANGE CHAR(:)****Reason:**

Range char(:) must be used to specify range of values. Only one range char(:) must be specified in the string.

System Action:

The value is rejected.

User Action:

Specify range char(:) in between two strings with the same lengths.

RMVM0076

SPOOL NAME MUST BE 'SPOOL'

Reason:

An invalid name was entered for the JES2 spool. Only one spool device is permitted and it must be named SPOOL.

System Action:

None.

User Action:

Change the resource name to SPOOL.

RMVM0077

PROFILE ID(2) IS RESERVED

Reason:

AOM uses ROUTCDE=2 for all messages which do not have a ROUTCDE.

System Action:

Field is highlighted in error.

User Action:

Use another profile id.

RMVM0078

'On Timeout Assume Status' NOT ALLOWED IF 'Timeout After' IS BLANK

Reason:

The field 'On Timeout Assume Status Of ...' may only contain a value if a valid time value has been entered in the 'Timeout After ...' field.

System Action:

The field in error is highlighted and the panel re-displayed.

User Action:

Either specify a valid value in the 'Timeout After ...' field or clear the value in the 'On Timeout Assume Status Of ...' field.

RMVM0079**'Retry P1 Limit' IS MANDATORY IF 'Retry P2 Limit' SPECIFIED****Reason:**

The 'Retry Time Limit' and 'Retry Attempt Limit' fields are mutually inclusive. If one is specified then the other is mandatory.

System Action:

The field in error is highlighted and the panel re-displayed.

User Action:

Either specify both fields or clear both fields.

RMVM0080**'Timeout Assume Status' AND 'Perform Recovery' ARE MUTUALLY EXCLUSIVE****Reason:**

Only timeout assume status or perform recovery may be specified, not both.

System Action:

The request is rejected.

User Action:

Specify only timeout assume status or perform recovery.

RMVM0081**'Perform Recovery' NOT ALLOWED IF 'Timeout After' IS BLANK****Reason:**

The field 'Perform Recovery' may only contain a value if a valid time value has been entered in the 'Timeout After' field.

System Action:

The field in error is highlighted and the panel re-displayed.

User Action:

Either specify a valid value in the 'Timeout After' field or clear the value in the 'Perform Recovery' field.

RMVM0082

P1 IS NOT ALLOWED UNLESS RETRY LIMITS ARE SPECIFIED

Reason:

The action field identified by &P1& may only be specified if valid retry limits have been specified.

System Action:

The field in error is highlighted and the panel re-displayed.

User Action:

Either specify valid values in the 'Retry Time Limit' and 'Retry Attempt Limit' fields or clear the invalid action field.

RMVM0083

INVALID KEYWORD, P1 IS A RESERVED SYSTEM KEYWORD

Reason:

The keyword name specified was invalid because it is a reserved system keyword.

System Action:

The field in error is highlighted and the panel re-displayed.

User Action:

Specify a unique and non-system keyword name.

RMVM0084

P1 CANNOT BE ENTERED WITHOUT EXTENDED DISPLAY TEXT

Reason:

The field identified by *P1* may only contain a value when Extended Display Text has been entered.

System Action:

Field highlighted in error.

User Action:

Either specify Extended Display Text or clear the field

RMVM0085**TIME TO P1 MUST BE P2 THAN TIME TO P3****Reason:**

The value, *P1* , must be either greater than or less than the value, *P3* .
P2 indicates if the value must be greater or less.

System Action:

Field in error is highlighted.

User Action:

Change the field values to satisfy the requirement stated in the message.

RMVM0086**VALID VALUES : NO, OTHER, NOTHR, YES, ALL****Reason:**

You have entered a value that is not in the list of valid values.

System Action:

The value is rejected.

User Action:

Specify a valid value.

RMVM0087**VALUE MUST BE 'START', 'END' OR 'FAILURE'****Reason:**

Valid values for the Transfer Status field are START, END, and FAILURE.

System Action:

The field in error, Transfer Status, is highlighted.

User Action:

Correct the value in the Transfer Status field.

RMVM0088

THIS IS NOT A VALID ' P1' P2

Reason:

The value highlighted is not a valid value for the field identified by *P1* . Perform the corrective action indicated by *P2* .

System Action:

The field in error is highlighted.

User Action:

Perform the corrective action indicated by *P2* .

RMVM0089

' P1' MUST BE NUMERIC AND BETWEEN P2 - P3

Reason:

The field identified by *P1* is either not numeric or not between the range identified by *P2* and *P3* .

System Action:

Field set in error.

User Action:

Specify a number in the range identified.

RMVM0090

THIS IS NOT A VALID VALUE FOR ' P1'

Reason:

The field identified by *P1* does not contain a valid value.

System Action:

Field highlighted in error.

User Action:

Enter a valid value for the specified field.

RMVM0091**DATE MUST BE IN FORMAT DD, DD-MMM, MMM OR DD-MMM- YYYY****Reason:**

Date must be in the format *dd-mmm-yyyy* , or part thereof, where *dd* , *mmm* , and *yyyy* must provide a *valid date* combination.

System Action:

The field in error is highlighted.

User Action:

Specify a valid date combination in the format of *dd* , *dd-mmm* , *mmm* , or *dd-mmm-yyyy* (for example, 31-JAN-1998).

RMVM0092**' P1' IS NOT A VALID DATE****Reason:**

Date must be a valid date in the format *dd-mmm-yyyy* , or part thereof, where *dd* , *mmm* , and *yyyy* must provide a valid date combination.

System Action:

The field in error is highlighted.

User Action:

Specify a valid date combination in the format of *dd* , *dd-mmm* , *mmm* , or *dd-mmm-yyyy* (for example, 31-JAN-1998).

RMVM0093

AUTOCLEAR FIELD MUST BE ONE OF YES, NO, OR A TIME PERIOD IN hh.mm

Reason:

Valid values for the Alert Autoclear field are YES , NO , or a time period in the format hh.mm .

YES , the default, specifies that, for a single file transfer instance, START and FAILURE file transfer alerts are closed automatically by subsequent END or FAILURE status events. END alerts cannot be closed in this manner.

NO specifies that no alerts are closed automatically.

hh.mm specifies that alerts are closed automatically only at the end of the specified period of time. *hh* is hours and can have values up to 99, and *mm* is minutes and can have values up to 59.

System Action:

The field in error is highlighted.

User Action:

Use the default, *YES* , or specify *NO* or a time period in the format hh.mm in the error field.

RMVM0094

DAY MUST BE BETWEEN 1 and 31

Reason:

The day value for the DATE criterion must be in the range 1 through 31.

System Action:

The field in error is highlighted.

User Action:

Correct the specified day value.

RMVM0095**DAY MUST BE BETWEEN 1 AND 31 FOR MONTH:' P1'****Reason:**

For the month specified, *P1* , the valid range of days is 1 through 31.

System Action:

The field in error is highlighted.

User Action:

Correct the specified DATE value.

RMVM0096**DAY MUST BE BETWEEN 1 AND 30 FOR MONTH:' P1'****Reason:**

For the month specified, *P1* , the valid range of days is 1 through 30.

System Action:

The field in error is highlighted.

User Action:

Correct the specified DATE value.

RMVM0097**DAY MUST BE BETWEEN 1 AND 29 FOR MONTH:' P1'****Reason:**

For the month specified, *P1* , the valid range of days is 1 through 29.

System Action:

The field in error is highlighted.

User Action:

Correct the specified DATE value.

RMVM0098

ISOLATED SYSNAME(P1) AND VERSION(P2) NOT ALLOWED

Reason:

The Sysname and Version specified identify an isolated system image. You cannot specify an isolated system image for remote systems. To use this system image you must issue from the target system.

System Action:

The request is rejected.

User Action:

Use '?' get a selection list of valid system images.

RMVM0099

SUBORDINATE SYSNAME(P1) AND VERSION(P2) NOT ALLOWED

Reason:

You tried to load the indicated subordinate system image in a focal point region. You cannot load a subordinate system image in a focal point region.

System Action:

The request is rejected.

User Action:

Specify a system image that is not associated with a subordinate region. To display a list of valid images, enter!?'` in the Sysname to be Loaded field.

RMVM0100

COUPLE DATASET NAMES MUST BE DIFFERENT

Reason:

The names of the primary, alternate, and spare couple data sets must be different.

System Action:

The request is rejected.

User Action:

Specify unique names for the couple data sets.

RMVM0101**COUPLE DATASET NAMES MUST BE ENTERED IN SEQUENCE****Reason:**

You must complete the Couple Datasets fields in sequence. For example, you cannot enter a value in the Spare Couple Dataset (1) field without completing the Alternate Couple Dataset field.

System Action:

The request is rejected.

User Action:

Specify values in the Couple Datasets fields in sequence, starting with the Primary Couple Dataset field.

RMVM0102**P1 MUST BE P2 TO P3****Reason:**

You specified an invalid *P1* value. *P2* is either GREATER THAN OR EQUAL or LESS THAN OR EQUAL. *P3* is the field being compared.

System Action:

The field in error is highlighted.

User Action:

Correct the value to satisfy the requirement stated in the message.

RMVM0103**Invalid LU Name Specified****Reason:**

You specified an invalid LU name in the Remote Node LU Name field.

System Action:

The field in error is highlighted.

User Action:

Correct the LU name.

RMVM0104

VALID VALUES : NONE, TREND, SUMMARY, DETAIL

Reason:

You have entered a value that is not in the list of valid values.

System Action:

The value is rejected.

User Action:

Specify a valid value.

RMVM0105

VALID VALUES : NONE, TREND, DETAIL

Reason:

You have entered a value that is not in the list of valid values.

System Action:

The value is rejected.

User Action:

Specify a valid value.

RMVM0106

VALID VALUES : ACTIVE, INACTIVE, OFF

Reason:

Enter only ACTIVE or INACTIVE or OFF.

System Action:

The value is rejected.

User Action:

Specify a valid value.

RMVM0107**Invalid Name Specified****Reason:**

The name specified contained invalid characters (blank,*,comma,?,quotes and non- displayable characters).

System Action:

The field in error is highlighted.

User Action:

Correct the name.

RMVM0108**THE NAME MAY NOT BE THE SAME AS THE LOCAL SYSTEM NAME****Reason:**

The name must be different to the local domain IDname as identified by: - the primary domain name (specified by the PRI= JCL parameter) - the system identifier (specified by the SYSPARM ID= command)

System Action:

Processing will not continue until a valid name is specified.

User Action:

Choose a different name and retry.

RMVM0109**THE VALUE MUST BE A NUMBER WITH NO SIGN OR DECIMAL POINT OR 'ANY'****Reason:**

The field must contain either zero or a positive integer or the string 'ANY'.

System Action:

None.

User Action:

Correct the field value and retry.

RMVM0110

Invalid OSA Name

Reason:

The name specified contains one or more of the following invalid characters: a space () - parenthesis * - asterisk ; - semi-colon , - comma _ - underscore ? - question mark ' - single quote " - double quote

System Action:

The field in error is highlighted.

User Action:

Correct the name.

RMVM0111

TIME EXCEEDS MAXIMUM(24.00.00)

Reason:

The specified time exceeded the 24-hour range.

System Action:

The field in error is highlighted.

User Action:

Specify a time in the range from 00.01.00 through 24.00.00.

RMVM0112

VALUE MUST BE BETWEEN 00.01.00 AND 24.00.00

Reason:

The specified value must be between 00.01.00 and 24.00.00.

System Action:

None.

User Action:

Correct the value.

RMVM0113**P1 IS NOT A VALID LINK NAME****Reason:**

The specified link name contains invalid characters. A link name can be up to 12 characters long, must start with an alphanumeric or national character, and may contain any graphic characters except for the asterisk (*).

System Action:

None.

User Action:

Correct the name, and retry.

RMVM0114**VALUE MUST BE BETWEEN 1 AND 9.****Reason:**

The highlighted value must be in the range 1 through 9.

System Action:

The field in error is highlighted.

User Action:

Correct the value.

RMVM0115

THIS IS NOT A VALID IP ADDRESS OR HOST NAME

Reason:

You entered an invalid TCP/IP address or host name. The value must be one of the following:

- A valid TCP/IP address such as 10.255.255.255
- A valid host name such as TCPACC1 (maximum of 35 characters)

Note: If you specify a host name, ensure the name resolution is enabled at your site.

System Action:

The field in error is highlighted.

User Action:

Correct the TCP/IP address or host name.

RMVM0116

INVALID RANGE OF NUMBERS SPECIFIED

Reason:

A invalid range of numbers has been specified. The low limit of the range should always be less than or equal to the high limit OR the range specified has more than 5 ports.

System Action:

The value is rejected.

User Action:

Specify the correct range.

RMVM0117**Dataset ' P1' must not contain a member name****Reason:**

The partitioned dataset *P1* was specified with a member name.

System Action:

The field containing the dataset name is highlighted as an error.

User Action:

Remove the member name.

RMVM0118**'Web Action' must start with P1****Reason:**

For a Web Action to be valid, it must be prefixed with one of the values shown in *P1* .

System Action:

The field containing the Web Action is highlighted as an error.

User Action:

Insert a valid Web Action prefix.

RMVM0119

The ReportCenter data feed is not yet activated on this region

Reason:

This region includes the capability to send data to ReportCenter, but this function is not yet activated.

This message occurs if the REPORTDATA or REPORTCENTER parameter group is present In this region but has never been updated.

The ReportCenter data feed will remain dormant until either of these groups is updated and actioned.

System Action:

Definition cannot be saved.

User Action:

If you want to enable this region to send data to ReportCenter, you must update and action the REPORTDATA or the REPORTCENTER parameter group, whichever is present In this region.

Implement the ReportCenter control region and the ReportCenter Java Task first to ensure that there is an application to receive the data feed.

Note: For more information about ReportCenter implementation, see the *ReportCenter Guide*.

If you have not or do not want to implement the ReportCenter feature, leave this field set to NO.

If you do not implement ReportCenter, you can see examples of reports at the following URL:

`http://?your-host-and-port/public/reports/reportexpo.esp`

?your-host-and-port is the IP address of this system and the port number of your WebCenter web interface port.

Example: `http://141.202.66.44:8744/public/reports/reportexpo.esp`

RMVM0120**SNMP support not available with type P1****Reason:**

A value of YES has been specified for Use SNMP?. YES is invalid for this Open System Adaptor type. SNMP support was introduced for DIRECTEXPRESS in z/OS 1.4 and EXPRESS in z/OS 1.6.

System Action:

The Use SNMP? field is highlighted.

User Action:

Change the Use SNMP? value to NO, or change the OSA type.

RMVM0121**IPv6 addresses are not supported here****Reason:**

You entered an IPv6 address or a host name, which resolved to an IPv6 address. IPv6 addresses are not supported by this resource class.

System Action:

The field in error is highlighted.

User Action:

Correct the IP address or host name.

RMVM0122**Valid values : 0-9999, DFLT****Reason:**

You specified an invalid value. This message displays the valid values.

System Action:

The value is rejected.

User Action:

Specify a valid value.

RMVM0123

***P1* cannot be an IPv6 address**

Reason:

The field *P1* contains a valid IPv6 address; however, an IPv6 address is not acceptable here. Either the hostname is IPv4 or the sockets API does not support IPv6.

System Action:

The field is highlighted in error.

User Action:

Correct the value and retry.

RMVM0124

Selection list of source addresses not available for this resource

Reason:

You set the Source Address field to ? to display a list of valid source addresses; however, a list cannot be displayed because of one of the following reasons:

- The resource does not belong to an active system image.
- An environmental failure may have occurred. If so, an error message is visible in the activity log.

System Action:

The field is highlighted in error.

User Action:

Supply a source address or clear the field.

RMVMAD01

P1 rejected. IP address cannot be determined, host name is P2.

Reason:

Connection *P1* is rejected because an attempt to get the IP address for host name *P2* failed or timed out.

System Action:

The connection is rejected, and processing terminates.

User Action:

See related messages to determine the reason for the error, or specify the IP address instead of the host name.

RMVMAD02

P1 could not determine host name for address P2.

Reason:

Connection *P1* could not determine the host name for address *P2* .

System Action:

Processing continues.

User Action:

Processing continues, and you do not need to take any action. However, if you want to determine why this problem occurred, see related messages.

RMVMAD03

P1 failed. Already connected via P2, host name/address P3.

Reason:

Connection *P1* failed because the remote host, whose name or address is *P3* , was already connected to this region as connection *P2* . A region can connect only once to the same remote host.

System Action:

Connection *P1* cannot be processed.

User Action:

If you want to connect to another host, specify its name or address, and retry.

RMVS0001

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(P1) VALUE(P2)

Reason:

An invalid keyword parameter was passed to procedure \$RMVSDSP.

System Action:

The request is rejected.

User Action:

Specify a correct value for the keyword, then retry the execution of \$RMVSDSP.

RMW30101

No active system image

Reason:

An attempt to retrieve a list of resources has failed because no active system image could be identified.

System Action:

None.

User Action:

This is generally a transient condition, which may occur during system image load. Retry later. If the error persists, contact your local support representative.

RMW3AG01

P1

Reason:

This is a trace message that is generated by the Status Monitor Web Agent procedure when the keyword parameter TRACE is set to YES.

System Action:

None

User Action:

None

RMW3AG02**Unexpected msg received: P1****Reason:**

This is a message that is generated by the Status Monitor Web Agent procedure when it receives a message that it was not expecting.

System Action:

None

User Action:

None

RMW3AG03**Unsupported request received: P1****Reason:**

This is a message that is generated by the Status Monitor Web Agent procedure when it receives a request from the Web client that it does not support.

System Action:

None

User Action:

None

RMW3AG04**Action failed, the map P1 does not exist****Reason:**

An MDO assignment failed with ZMDORC 16 and ZMDOFDBK 0. This indicates that the map *P1* does not exist in this system.

System Action:

The action terminates.

User Action:

Ensure that the OSCNTL file has been correctly updated for the installation of this product.

RMW3AG05

MDO action failed, MAP= P1, NAME= P2, MDORC= P3, MDOFDBK= P4

Reason:

An MDO assignment failed. The MAP was P1 , the MDORC was P3 , the MDOFDBK value was P4 , and the MDO component involved in the last operation was P2.

System Action:

The action terminates.

User Action:

Refer to the NCL Reference for details of the codes.

RMW3AG06

Invalid request data, element= P1 reason= P2

Reason:

A request passed to the Status Monitor Web Agent procedure contained invalid data. P1 contains the name of the element that was in error. P2 contains an explanation of the problem.

System Action:

The request is not processed.

User Action:

Contact your local support representative.

RMW3AG07

Internal error: P1

Reason:

An indeterminate error occurred in the Status Monitor Web Agent. P1 contains an explanation of the error.

System Action:

The request is not processed.

User Action:

Contact your local support representative.

RMWM0001

***P1* WLM command failed. See log for details.**

Reason:

An MVS system command to the workload manager failed. *P1* is VARY or MODIFY.

System Action:

The associated selection list line command is not effective.

User Action:

For more information, see the log.

Messages prefixed with RMWM0002 contain the error responses and the first contains the command that failed. Determine the cause of the command failure and correct it.

RMWM0002

P1

Reason:

An MVS system command to the workload manager failed. *P1* is a response to the command or the command itself.

System Action:

The associated line command is not effective.

User Action:

Determine the cause of the command failure and correct it.

RMWM0003

SYSCMD *P1* issued by *P2*

Reason:

A system command *P1* has been issued by user *P2*.

System Action:

None.

User Action:

None.

RMWM0004

No scheduling environments found

Reason:

A D WLM,SYSTEMS command found no systems running with an active workload manager policy.

System Action:

None.

User Action:

If scheduling environments should exist, check the WLM configuration.

RMWM0005

System command to *P1* timed out.

Reason:

An MVS system command, routed to the *P1* region, has not responded within the allowed time.

System Action:

The associated selection line command is not effective.

User Action:

Check connectivity to the nominated region and retry the command.

RMXCALL01

INVALID KEYWORD PARAMETER VALUE, KEYWORD= P1 VALUE= P2

Reason:

An invalid value was specified for the keyword P1 . The value specified was P2.

System Action:

The request is rejected and processing terminates.

User Action:

Specify a valid value for the keyword.

RMXCALL02**REQUIRED FEATURE P1 NOT LICENSED OR EXCLUDED****Reason:**

The external application interface requires the services of the named feature.

System Action:

The request is rejected and processing terminates.

User Action:

Ensure that the requesting system has not excluded the named feature.

RMXCALL03**SCRIPT P1 NOT AVAILABLE OR IS IN ERROR****Reason:**

An NCLCHECK command failed to validate the named script procedure.

System Action:

The request is rejected and processing terminates. An RSAPPL04 message is written to the log indicating the procedure error.

User Action:

Validate that the script name is correct and that the script is syntactically correct using the NCLCHECK command.

RMXCALL04**P1****Reason:**

This message is written to the log after an RMXCALL03 message indicating a script procedure is in error. The message text indicates the nature of the error in the first line of output from an NCLCHECK command.

System Action:

None.

User Action:

Use the message text to determine the reason for the script procedure being in error.

RMXCALL05

APPLICATION BUILD ERROR - P1

Reason:

An attempt to build the MAI session definition for an external application has failed.

System Action:

The request is rejected.

User Action:

Use the reason indicated to determine the cause of the error.

RMXCALL06

UNABLE TO START SESSION FOR P1

Reason:

An attempt to start the MAI session definition for an external application has failed.

System Action:

The request is rejected. The RMXCALL07 message containing the specific error details is written to the log.

User Action:

Review the RMXCALL07 message in the log to determine the cause of the error. Check that *P1* is active, and that the corresponding application ID is defined and active on this system.

RMXCALL07**P1****Reason:**

This message is written to the log after an RMXCALL06 message indicating that a session could not be started. The message text indicates the nature of the error in the first line of output from an MAISESS START command. The possible causes include the following:

INACT indicates that the application ID is known to VTAM but inactive.

VTAM UNKNOWN indicates that the application ID is not known to VTAM.

System Action:

None.

User Action:

Use the message text to determine the reason for the error.

RMXCALL08**APPLICATION ACCESS FOR P1 ENDED SUCCESSFULLY****Reason:**

An attempt to access an external application has ended.

System Action:

None.

User Action:

None.

RMXCALL09**APPLICATION ACCESS FOR P1 FAILED****Reason:**

An attempt to access an external application has ended abnormally.

System Action:

None.

User Action:

Refer to the messages on the session end panel for problem determination

RMXF0001

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(~P1) VALUE(~P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RMXF0002

NO EXTENDED FUNCTION DEFINED FOR ~P1

Reason:

The selected resource doesn't have Extended Functions defined.

System Action:

No further processing.

User Action:

None.

RMXF0003

NCL PROCEDURE ~P1 DOES NOT EXIST

Reason:

The NCL Procedure specified as the Exit to be executed does not exist in the Commands Library concatenation.

System Action:

Procedure terminates in error.

User Action:

Correct exit in resource definition.

RMXF0004**UNABLE TO DETERMINE OBJECT ID PARAMETER****Reason:**

Object ID not found and can not be created because there is not enough information passed to the procedure.

System Action:

The request is rejected.

User Action:

Contact System Administrator.

RMXGENSC01**RECORDING PROCEDURE NOT SUPPORTED FOR MODE P1****Reason:**

The script generation process does not support the specified mode.

System Action:

The script terminates.

User Action:

Use the recording script for session start only. SKIP and END processing are not supported.

RMXGENSC02**SCRIPT TERMINATED BY USER REQUEST****Reason:**

The END function was entered from a Logon Recording panel.

System Action:

The Logon Recording script terminates.

User Action:

None.

RMXGENSC03

SCRIPT RECORDING INITIATED FOR P1 APPLICATION P2

Reason:

Logon Recording has started for the named application.

System Action:

The Logon Recording script proceeds.

User Action:

None.

RMXGENSC04

VARIABLE ADD FAILED, FDBK= P1, KEY= P2

Reason:

A VARIABLE ADD failed during Logon Recording.

System Action:

Logon Recording terminates.

User Action:

Determine the reason for the VARIABLE error.

RMXGENSC05

P1 NOT NUMERIC IN THE RANGE 1 - 24

Reason:

P1 should be specified as a function key number.

System Action:

Field is set in error.

User Action:

Specify a valid function key number for *P1* .

RMXGENSC06**P1 IS REQUIRED****Reason:**

The field *P1* is a required field.

System Action:

Field is set in error.

User Action:

Specify a value for *P1* .

RMXGENSC07**LOGON RECORDING STOPPED - ENTER SAVE DETAILS****Reason:**

The Logon Recording script has detected the entry of the Stop Recording function key.

System Action:

The Save Logon Recording prompt is displayed.

User Action:

Verify the details and press the Action key to confirm. Press the Cancel key to terminate Logon Recording.

RMXGENSC08**GENERATING SCRIPT****Reason:**

The Logon Recording script is building the script.

System Action:

The Confirm Generated Procedure panel is displayed when the script has been built.

User Action:

Wait for the Confirm Generated Procedure panel to view the script.

RMXGENSC09

SCRIPT GENERATION ALREADY IN PROGRESS

Reason:

There is a script generation process already running.

System Action:

Request rejected.

User Action:

Wait until the other user completes their script generation.

RMXGENSC10

LOGON SCRIPT PROCEDURE SUCCESSFULLY GENERATED AND SAVED

Reason:

The script procedure was successfully generated and saved as requested.

System Action:

None.

User Action:

None.

RMXGENSC11

FILE P1 ERROR FOR P2, FILERC= P3 VSAMFDBK= P4

Reason:

The file request *P1* failed for the file allocated with DDNAME *P2* . The file return code was *P3* and the VSAM feedback code was *P4* .

System Action:

The requested is terminated.

User Action:

Determine the reason for the error and retry the request.

RMXGENSC12**ERROR FROM IDCAMS P1 RETURN CODE IS P2****Reason:**

The IDCAMS service *P1* failed and the return code received was *P2* .

System Action:

The request terminates.

User Action:

View the activity log for RMXGENSC13 messages which show the responses from IDCAMS.

RMXGENSC13**P1****Reason:**

This is a bracketing message for the IDCAMS messages returned from a previous call.

System Action:

None.

User Action:

Determine the error as indicated in the IDCAMS message and retry your request.

RMXGENSC14**COMMAND P1 NOT RECOGNIZED****Reason:**

The entered command is not supported by Logon Recording.

System Action:

The request is rejected.

User Action:

Correct the command entered and retry.

RMXGENSC15

LOGON RECORDING STOPPED - RESOURCE P1 NOT USED

Reason:

The Logon Recording script has detected the entry of the Stop Recording function key. The specified resource name was not used during the dialog. The generated script will therefore not be able to process for specific resources and may be incomplete.

System Action:

The Save Logon Recording prompt is displayed.

User Action:

Verify the details and press the Action key to confirm. Press the Cancel key to terminate Logon Recording. If necessary re-record the sequence making sure that the resource name is used in the dialog.

RMXHLS01

INVALID KEYWORD PARAMETER VALUE, KEYWORD= P1 VALUE= P2

Reason:

An invalid value was specified for the keyword P1 . The value specified was P2 .

System Action:

The request is rejected and processing terminates.

User Action:

Specify a valid value for the keyword.

RMXHLS02

P1 GAVE RC= P2

Reason:

A scripting function of keyword *P1* has completed. *P2 was the return code.*

System Action:

None.

User Action:

None.

RSx to RXx Messages

RS030001

SERVICE PROCEDURE *P1* INVOKED WITH INVALID KEYWORD *P2*(*P3*)

Reason:

The service procedure identified by *P1* was invoked with an invalid value for the keyword identified by *P2* of *P3*.

System Action:

Request rejected

User Action:

Correct the keyword value and re-try

RS030003

UPDATE OF SNA GROUP FILTERS LIST CANCELLED

Reason:

The update of the SNA Group Filters list was cancelled.

System Action:

None

User Action:

None

RS030004

MAXIMUM NUMBER OF SNA GROUP FILTER ENTRIES ALREADY EXIST

Reason:

A Repeat/Insert of an SNA Group Filter has been attempted which would cause the maximum number of entries to be exceeded.

System Action:

The action is disallowed.

User Action:

None

RS030101

NO RESOURCE NAME WAS SELECTED FROM THE LIST

Reason:

A list of valid resource names was displayed and no value was selected from it.

System Action:

Field highlighted in error.

User Action:

Enter a different name or select a valid name from the list displayed.

RS030102

WEIGHT TYPE MUST BE EITHER 'FIXED' OR 'PROPORTIONAL'

Reason:

The only valid values for 'weight type' are FIXED or PROPORTIONAL. Values of 'F' or 'P' are acceptable.

System Action:

Field highlighted in error.

User Action:

Enter one of the valid weight type values.

RS030103

WEIGHT TYPE MUST BE ' P1' FOR P2

Reason:

The only valid value for 'weight type' is FIXED when applied to a single resource or PROPORTIONAL when applied to an UPSTREAM/DOWNSTREAM filter.

System Action:

Field highlighted in error.

User Action:

Change the value to 'FIXED'.

RS030104**DUPLICATE ENTRY****Reason:**

A combination of NAME, TYPE and FILTER may only appear once within an SNA Resource Filter list.

System Action:

Fields highlighted in error.

User Action:

Change the NAME, TYPE or FILTER to make the entry unique.

RS030105**NAME CONSISTS EXCLUSIVELY OF WILDCARD CHARACTERS****Reason:**

A name has been entered which consists of wildcard characters only. This is an invalid situation as the same effect can be achieved by specifying a single % or * .

System Action:

Field highlighted in error.

User Action:

Use % or * to achieve the desired effect.

RS030106**GENERIC WILDCARD(*) NOT ALLOWED WITH PATTERN MATCHING WILDCARDS(% _)****Reason:**

The use of the Generic Character * is not supported when Pattern Matching Characters % and/or _ are present. % may be used to indicate generic matching if pattern matching is being performed on the same field.

System Action:

Field highlighted in error.

User Action:

Remove either the Generic Character * or the Pattern Matching Characters % and/or _. Alternatively % may be used to replace *.

RS030107

FIELD PROMPT(?) NOT ALLOWED WITH SPECIAL CHARACTERS(_ * % < >)

Reason:

The use of the Field Prompt ? is not supported when any of the WildCard Characters, % or _ or * or Upstream/Downstream Characters > or < are present.

System Action:

Field highlighted in error.

User Action:

Remove either the Field Prompt or the Wildcard/Upstream/Downstream Characters.

RS030108

'NAME' IS INVALID

Reason:

The value in the NAME field must be no more than eight characters in length. The only characters allowed in the resource name field are ALPHA, NUMERIC, NATIONAL, the three wildcards, % , _ or * or the upstream and downstream indicators > and < .

System Action:

Field highlighted in error.

User Action:

Enter a valid value.

RS030109**UPSTREAM/DOWNSTREAM NOT ALLOWED WITH PATTERN MATCHING WILDCARDS(% _)****Reason:**

The use of the Upstream/Downstream characters, > and < ,is not supported when Pattern Matching Characters % and/or _ are present.

System Action:

Field highlighted in error.

User Action:

Remove either the Upstream/Downstream characters, > or < ,or the Pattern Matching Characters % and/or _.

RS030110**UPSTREAM/DOWNSTREAM NOT ALLOWED WITH GENERIC MATCHING WILDCARD(*)****Reason:**

The use of the Upstream/Downstream characters, > and < ,is not supported when Generic Matching Wildcard * is present.

System Action:

Field highlighted in error.

User Action:

Remove either the Upstream/Downstream characters, > or < ,or the Generic Matching Wildcard *.

RS030111

UPSTREAM INDICATOR(S) MAY ONLY APPEAR AS FIRST TWO CHARACTERS OF NAME

Reason:

If present, the Upstream character(s), < , must appear as the first one or two characters of the name field.

System Action:

Field highlighted in error.

User Action:

Place the Upstream character(s), < , at the start of the name field.

RS030112

DOWNSTREAM INDICATOR(S) MAY ONLY APPEAR AS LAST TWO CHARACTERS OF NAME

Reason:

If present, the Downstream character(s), > , must appear at the end of the name field.

System Action:

Field highlighted in error.

User Action:

Place the Downstream character, > , at the end of the name field.

RS030113**TYPE CANNOT BE GENERIC IF NAME CONTAINS ONLY WILDCARD CHARACTER****Reason:**

The TYPE field in an SNA Resource Group Filter Line cannot be totally generic if the NAME field is already totally generic, as this implies ALL SNA resources of ANY type, which is effectively the entire network, which could lead to performance degradation.

System Action:

Field highlighted in error.

User Action:

Make either the NAME field more specific or specify a particular TYPE.

RS030114**TYPE MUST BE GENERIC IF UPSTREAM/DOWNSTREAM IN USE****Reason:**

The TYPE field in an SNA Group Filter Line must be generic if the NAME field is using the UPSTREAM or DOWNSTREAM characters. This will select resources of more than one type.

System Action:

Field highlighted in error.

User Action:

Enter '*' for TYPE or remove the UPSTREAM/DOWNSTREAM characters from the NAME field.

RS030115

FILTER IS REQUIRED IF NAME AND TYPE CONTAIN ONLY WILDCARD CHARACTERS

Reason:

If the NAME and TYPE fields for a Group Filter entry both contain only WILDCARD characters then the FILTER field is mandatory, otherwise this filter line would select the entire network and this is undesirable.

System Action:

Field highlighted in error.

User Action:

Specify a filter name or change the value of the NAME or TYPE fields so that they are not wildcard only.

RS030201

SERVICE PROCEDURE P1 INVOKED WITH INVALID KEYWORD P2(P3)

Reason:

The service procedure identified by P1 was invoked with an invalid value for the keyword identified by P2 or P3.

System Action:

Request rejected

User Action:

Correct the keyword value and re-try

RS030202

INVALID VALUE

Reason:

A value was entered into the highlighted field which is not a valid value for that field.

System Action:

Field highlighted in error.

User Action:

Correct the value and re-try.

RS030203**OPTION(P1) IS INVALID WITHOUT A PROCESS NAME****Reason:**

The option identified by *P1* is only valid when a process name is also supplied.

System Action:

Field highlighted in error.

User Action:

Provide the required process name and re-try.

RS030204**P1 REQUEST FOR P2 BEING ACTIONED****Reason:**

The request has been accepted.

System Action:

Processing continues.

User Action:

None.

RS030205**RESOURCE P1 DOES NOT BELONG TO ANY GROUPS****Reason:**

A group query was requested against the resource identified by *P1* but no entry was found in the Group Manager's internal Resource Control Table.

System Action:

None

User Action:

None

RS030206

P1* is not supported for resource type *P2

Reason:

P1 is not a supported action for the *P2* resource type.

System Action:

None.

User Action:

None.

RS030207

***P1* is not supported for a Route Setup RTP**

Reason:

Action *P1* is not supported for a Rapid Transit Protocol (RTP) resource with a type of RSTP (route setup).

System Action:

None.

User Action:

None.

RS030301

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(*P1*) VALUE(*P2*)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RS030302**NO P1 FOUND****Reason:**

No resource of the type identified by *P1* found to be displayed in the selection list.

System Action:

None.

User Action:

None.

RS030303**UPDATE IN PROGRESS BY P1****Reason:**

Update is in progress on this definition by other user.

System Action:

The request is rejected.

User Action:

Try again later.

RSAC0101**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The NetMaster Automation CNM/PPO ACB initialization procedure \$RSAC01C failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected, and the \$RSAC01C procedure terminates.

User Action:

Check the syntax of the call to procedure \$RSAC01C.

RSAC0102

P1 RESULTS UNDETERMINED, REFER TO LOG MESSAGE N10639

Reason:

The result of the attempt to perform the *P1* action on the ACB is not known because the USERID (BSYS) does not have monitor status as described by the message N10639 written to the log for the parameter group concerned.

System Action:

The process assumes the attempt was successful and continues processing accordingly.

User Action:

If correct processing is required, it is advised that the affected USERID (BSYS) be given monitor status.

RSAOMM01

WAITING FOR ISSUE WINDOW EXPIRY (DUE IN P1 SECONDS)

Reason:

The network discovery screening table code has executed the maximum number of commands allowed within the time specified in the ICS parameter group. No commands will be issued until *P1* seconds have passed.

System Action:

Discovery is paused for at least *P1* seconds.

User Action:

None.

RSAOMM02**P1 RESOURCES DISCOVERED, DB ALIGNMENT BEING INITIATED****Reason:**

Discovery has found *P1* resources that passed the filtering criteria specified in the ICS parameter group. The next phase of network discovery (database alignment) is being initiated.

System Action:

Database alignment is initiated.

User Action:

None.

RSAOMM03**TIMEOUT WAITING FOR RESPONSE (P1)****Reason:**

Network discovery timed out while waiting for a response to the *P1* VTAM command. Network discovery may be incomplete.

System Action:

Network discovery continues with the next resource.

User Action:

Check that the responses from the command is not exceeding the POAQLIM defined for the primary ACB. Ensure that VTAM and the region are allocated sufficient CPU resource to function normally.

RSAOMM04**POAQLIM EXCEEDED FOR COMMAND P1****Reason:**

Network discovery received an IST983E message in response to the *P1* VTAM command. Network discovery may be incomplete.

System Action:

Network discovery continues with the next resource.

User Action:

Increase the POAQLIM value defined for the primary ACB.

RSCALL01

INVALID KEYWORD PARAMETER VALUE, KEYWORD= P1 VALUE= P2

Reason:

An invalid value was specified for the keyword P1. The value specified was P2.

System Action:

The request is rejected and processing terminates.

User Action:

Specify a valid value for the keyword.

RSCALL02

ACTION P1 FOR CLASS P2 COMPLETED SUCCESSFULLY

Reason:

The action *P1* for the class *P2* was successfully performed.

System Action:

None.

User Action:

None.

RSCO0301

DISPLAY COMMAND/PROCESS NOT DEFINED FOR RESOURCE P1

Reason:

A display command was requested for resource *P1* but the resource definition does not define a display command nor a display process. The resource cannot be displayed.

System Action:

The request is rejected.

User Action:

Define a display command or display process for the resource.

RSCO0302**ERROR READING P1, RC= P2, MSG= P3****Reason:**

The Command Processor was unable to read the SNA Resource definition identified by *P1* from the database. Return Code *P2* and Message *P3* describe the error which occurred.

System Action:

Command processing is terminated.

User Action:

None.

RSCP0001**INVALID KEYWORD VALUE SPECIFIED - KEYWORD(P1) VALUE(P2)****Reason:**

An invalid keyword was passed to the SNA Command Processor. The invalid keyword is identified by *P1* and the invalid value is identified by *P2*.

System Action:

The request is rejected.

User Action:

Correct the calling procedure and rerun.

RSCP0002**COMMAND PROCESSOR INVOKED TO P1 SNA RESOURCE P2****Reason:**

This is an informational message issued when a command processor is invoked to perform function *P1* against resource *P2*.

System Action:

None

User Action:

None

RSCP0003

' P1' PROCESSING TERMINATING - ' P2' PROCESSING IN PROGRESS

Reason:

The processing for command type P1 has been abandoned because it was detected that processing for command type P2 was already in progress.

System Action:

Command processing terminated.

User Action:

None.

RSCP0004

ERROR READING P1. RC= P2. MSG= P3

Reason:

The Command Processor was unable to read the SNA Resource definition identified by *P1* from the database. Return Code *P2* and Message *P3* describe the error which occurred.

System Action:

Command processing is terminated.

User Action:

None.

RSCP0005

EXECUTING PROCESS(P1) FOR P2

Reason:

The Command Processor executed the process identified by *P1* for the resource identified by *P2*.

System Action:

Informational only.

User Action:

None.

RSCP0006**PROCESS(P1) COMPLETED FOR P2. RC(P3) MSG(P4)****Reason:**

The process identified by *P1* which was run for the resource identified by *P2* ended with return code *P3* and message *P4*.

System Action:

Informational only.

User Action:

None.

RSCP0007**PROCESS ERROR (~P1)****Reason:**

An error occurred executing a process. Error message is returned in *P1*.

System Action:

Informational only.

User Action:

None.

RSCP0008**PROCESS RETURN CODE INDICATES TAKE TIMEOUT PARAMETERS INTO ACCOUNT****Reason:**

A return code of 99 was received from a process. A return code of 99 indicates that the command processor is to wait for the desired state change event to arrive for the specified timeout period.

System Action:

Informational only.

User Action:

None.

RSCP0009

TIMEOUT REACHED WITHOUT SUCCESS FOR P1

Reason:

The Command Processor has been unsuccessful in processing the request, in that the timeout figure was exceeded without the receipt of the required state change event.

System Action:

Informational only.

User Action:

None.

RSCP0010

P1

Reason:

Solicited Message received by the Command Processor.

System Action:

Informational only.

User Action:

None.

RSCP0011

REQUEST SUCCESSFUL - P1 IN DESIRED STATE OF P2

Reason:

The request is successful. The resource, *P1*, has the desired state, *P2*. *P2* may be followed by the actual status in parentheses, which indicates that although the underlying status has been successfully set, the actual status is different.

System Action:

None.

User Action:

None.

RSCP0012**P1 TIMEOUT STATUS ASSUMED - STATUS(P2)****Reason:**

The request has timeout, the Command Processor has therefore set the status to the Timeout Status indicated in the Resource Model Definition.

System Action:

Informational only.

User Action:

None.

RSCP0013**INITIATING FORCE INACTIVATION REQUEST FOR P1****Reason:**

The Command Processor initiated force inactivation processing.

System Action:

Informational only.

User Action:

None.

RSCP0014**ACTIVATION RETRY TIME LIMIT ELAPSED FOR P1****Reason:**

The activation retry time limit has elapsed for the resource *P1*. If the resource has not become active by this then if a command or process was specified in the model definition it will executed at this time.

System Action:

Run command or process if specified.

User Action:

None.

RSCP0015

STATE CHECK FOR P1 RETURNED ACTUAL STATE OF P2

Reason:

A display of the resource identified by *P1* has returned a state of *P2*.

System Action:

Informational only.

User Action:

None.

RSCP0016

RECEIVED STATE CHANGE EVENT FOR P1 INDICATING STATUS OF P2

Reason:

The Command Processor has been notified of a resource status change.

System Action:

Informational only.

User Action:

None.

RSCP0017

ISSUING COMMAND " P1" FOR P2

Reason:

The Command Processor will issue the command identified by *P1* for the resource identified by *P2*.

System Action:

Informational only.

User Action:

None.

RSCP0018**ACTIVATION RETRY ATTEMPT LIMIT EXCEEDED FOR P1****Reason:**

The activation retry attempt limit has elapsed for the resource *P1*. If the resource has not become active by this then if a command or process was specified in the model definition it will executed at this time.

System Action:

Run command or process if specified.

User Action:

None.

RSCP0019**COMMAND PROCESSOR FOR P1 TERMINATED****Reason:**

The command processor for resource *P1* has ended.

System Action:

Informational only.

User Action:

None.

RSCP0020**P1 RECOVERY LIMIT EXCEEDED STATUS ASSUMED - STATUS(P2)****Reason:**

Recovery limits have been exceeded, the Command Processor has therefore set the status to the value indicated in the Resource Model Definition, as identified by P2.

System Action:

Informational only.

User Action:

None.

RSCP0021

REQUEST FAILED - P1 IN FAILED STATE, PROCESSING TERMINATED

Reason:

The region failed to activate the SNA resource, P1 . The resource is in the FAILED state, and further recovery attempts are aborted.

System Action:

Recovery is aborted, and the resource remains in the FAILED state.

User Action:

Determine the reason for the resource failure, and correct the situation. Retry the activation request.

RSDB0101

UPDATE IN PROGRESS BY P1

Reason:

Update is in progress on this definition by another user.

System Action:

The request is rejected.

User Action:

Try again later.

RSDB0102

AUTOMATIC REFRESH P1

Reason:

Automatic refresh of the list was turned on or off by use of the RefDelay command or function key. When automatic refresh is *OFF* the screen only refreshes when ENTER is pressed. When automatic refresh is *ON* the screen refreshes each time the RefDelay time period expires and a resource state change has occurred.

System Action:

None.

User Action:

None.

RSDB0103**INVALID REFRESH DELAY INTERVAL, MUST BE 1 TO 60, 'ON' OR 'OFF'****Reason:**

The RefDelay command was entered with an invalid parameter. The following values may be used:

integer - set the refresh delay interval to 'integer' seconds where integer is a number between 1 and 60

ON - turn refresh delay processing on - the list will be refreshed automatically when events are received

OFF - do not refresh the list unless the Enter key or a function key is pressed

blank - toggle refresh delay processing on and off

System Action:

The command is rejected.

User Action:

Correct the parameter and retry.

RSDB0104**REFRESH DELAY INTERVAL CHANGED TO P1 SECONDS****Reason:**

The refresh delay interval was successfully altered.

System Action:

The list will be refreshed automatically the indicated number of seconds after an event has occurred that indicates a change in the list.

User Action:

None.

RSDB0105

CURRENTLY VIEWING P1 DISPLAY FOR P2

Reason:

A request was made to view resources upstream/downstream from the resource identified by *P2* ,but this is the resource whose upstream/downstream resources are currently being displayed and so there is no sense in doing the same display again.

System Action:

Request denied.

User Action:

None.

RSDB0106

UNABLE TO ZOOM - NETWORK DISCOVERY HAS NOT COMPLETED

Reason:

A request to ZOOM on an SNA Group is unable to be honoured because Network Discovery is still in progress.

System Action:

Command is rejected.

User Action:

Wait until Network Discovery completes.

RSDB0107**NO RESOURCES SELECTED****Reason:**

A request to present a list of selected resources that is static (ie. resources will not appear or disappear from the list dynamically, but will be updated with status changes) could not be satisfied because there were no selected resources.

System Action:

None.

User Action:

Use the SS selection command to select resources before issuing the SS primary command.

RSDB0108**SORT FIELDS ARE: P1****Reason:**

This message is issued if the SORT command is entered without any sort fields or with a '?'. It lists the valid sort fields in *P1*.

System Action:

None.

User Action:

Enter the SORT command with upto four of the valid sort fields in the manner:
SORT field1,field2,field3,field4

RSDB0109

MAXIMUM OF FOUR SORT FIELDS ALLOWED

Reason:

This message is issued if the SORT command is entered with too many sort fields. Four is the maximum number supported.

System Action:

Command is rejected.

User Action:

Enter the SORT command with upto four of the valid sort fields in the manner: SORT field1,field2,field3,field4 Use SORT ? to view valid sort fields.

RSDB0110

' P1' IS NOT A VALID SORT FIELD

Reason:

This message is issued if the SORT command is entered with an invalid sort field. *P1* identifies the invalid field.

System Action:

Command is rejected.

User Action:

Enter the SORT command with upto four of the valid sort fields in the manner: SORT field1,field2,field3,field4 Use SORT ? to view valid sort fields.

RSDB0111

SNAGRP(P1) does not contain any resources

Reason:

This message is issued if the ZOOM command is entered against an SNAGRP that does not contain any resources.

System Action:

The command is rejected.

User Action:

None.

RSDB0112**Process terminated, Network Discovery in progress****Reason:**

The network resource list process terminated because the system is performing Network Discovery.

System Action:

The network resource list is replaced by the Network Discovery Status panel.

User Action:

Wait for the Network Discovery to complete or try later.

RSDB0200**ID=*P1* (*P2*) - *P3*****Reason:**

This message is a trace record from the CA NetMaster Network Automation APPC Transaction Server.

P1 is the trace ID.

P2 is the NCL process ID.

P3 is the trace text.

System Action:

None.

User Action:

Contact Technical Support.

RSDB0201

P1 FAILED, RC= P2 ZFDBK= P3 MSG= P4

Reason:

The APPC request *P1* failed with return code *P2* and feedback code *P3* , the message associated with the codes is *P4* .

System Action:

Processing terminates.

User Action:

Determine whether the remote system is still available. Contact your systems administrator.

RSDB0202

UNEXPECTED APPC WHAT RECEIVED INDICATOR P1 RECEIVED

Reason:

Procedure in unexpected APPC "What Received" State. The state code is *P1* .

System Action:

None.

User Action:

Contact System Administrator.

RSDB0203

REQUEST REJECTED, DISCOVERY IN PROGRESS

Reason:

The request for data could not be satisfied because the system is currently performing network discovery.

System Action:

Request rejected.

User Action:

Try later.

RSDBMS00**P1****Reason:**

This is a trace message produced by the database maintenance tracing facility. The information within these messages is for debugging purposes.

System Action:

None.

User Action:

Send the Activity Log with these messages to your local support representative.

RSDBMS01**INVALID KEYWORD PARAMETER VALUE, KEYWORD= P1 VALUE= P2****Reason:**

An invalid value was specified for the keyword P1. The value specified was P2.

System Action:

The request is rejected and processing terminates.

User Action:

Specify a valid value for the keyword.

RSDBMS02**NDB ERROR FOR P1 DB= P2 NDBRC= P3 ERRI= P4****Reason:**

An error occurred processing the NDB request *P1*. The database being accessed was *P2* and the NDB return code was *P3*. The error information associated with the return code (if relevant) is *P4*.

System Action:

The request is rejected and processing terminates.

User Action:

Contact the systems administrator.

RSDBMS03

NDBDEF P1 ERROR DB= P2 NDBRC= P3 ERRI= P4 FIELD= P5

Reason:

An error occurred defining the field *P5* to the NDB database *P2* . The action being performed was *P1* and the return code was *P3* . The error information associated with the return code (if relevant) is *P4* .

System Action:

The request is rejected and processing continues with the next field definition.

User Action:

Contact the systems administrator.

RSDBMS04

AOMGDB P1 FAILED, ZFDBK= P2 KEY= P3

Reason:

An error occurred accessing the AOM Global Database. The action being performed was *P1* , the feedback code was *P2* and the key was *P3* .

System Action:

The request is rejected and processing terminates.

User Action:

Contact the systems administrator.

RSDBMS05

NDB FORMAT CREATE FAILED, DB= P1 FORMAT= P2 NDBRC= P3

Reason:

An error occurred creating the NDB format *P2* for the database *P1* . The return code was *P3* .

System Action:

The request is rejected and processing terminates.

User Action:

Contact the systems administrator.

RSDBMS06**P1 NOT FOUND****Reason:**

The object *P1* was not found in the database.

System Action:

None.

User Action:

None.

RSDBMS07**P1 ALREADY EXISTS****Reason:**

The object *P1* was already in the database.

System Action:

None.

User Action:

None.

RSDBMS08**AOMALERT REQUEST TO SCREENING TABLE FAILED, ZFDBK=*P1*****Reason:**

A request to pass a message to the AOM Screening Table failed. The AOMALERT feedback code was *P1*.

System Action:

The requested action is not performed.

User Action:

The following table describes the feedback code and the corresponding action:

Co de	Description	Action
32	Storage	Increase the region size for the task, or try later.

Code	Description	Action
	shortage	
44	The AOM SSI does not exist	Ensure that the AOM Sub-system Interface Identifier is defined and correctly specified in the OPSYSIDS parameter group.
56	No screening table loaded	Ensure that initialization has completed successfully and that the OPSYSIDS parameter group has not had errors.
60	Screening table not active	As above.
ot he r	Internal error	Contact Technical Support.

RSDBMS09

INVALID ACTION P1 FOR CLASS P2

Reason:

An invalid action was requested for the class *P2* . The class does not support the action *P1* .

System Action:

The request is rejected and processing terminates.

User Action:

Specify a valid action for the class or ensure that the class is correct.

RSDBMS10

NETWORK DISCOVERY REQUEST ACCEPTED (P1 P2 P3)

Reason:

A request to perform network discovery was accepted. *P1* is the SSCP name for the requesting domain and *P2* is the host PU name, *P3* specifies the level from where discovery is to begin.

System Action:

Network discovery is initiated.

User Action:

None.

RSDBMS11**INVALID NETWORK FILTER STMT P1 ON LINE P2****Reason:**

The network model filter criteria contained an invalid statement on line *P2* of the criteria text. The invalid statement was *P1* .

System Action:

The remainder of the resource filter is ignored.

User Action:

Correct the filter specifications and retry the request.

RSDBMS12**INVALID P1 STMT ON LINE P2 ERROR: P3****Reason:**

The network model filter criteria contained an invalid keyword specification. The statement is *P1* and is on line *P2* and the error is *P3* .

System Action:

The remainder of the resource filter is ignored.

User Action:

Correct the filter specifications and retry the request.

RSDBMS13

**DB ALIGNMENT COMPLETED, DUR= P1 RES= P2 GET= P3 UPD= P4
ADD= P5 UNK= P6 DEL= P7**

Reason:

Network Model database alignment has successfully completed. The statistics on the processing that occurred is as follows:

DUR= **P1** - Duration/Elapsed time (dddd.hhmmss).

RES= **P2** - Total number of network resources processed.

GET= **P3** - Total number of resources retrieved from the database.

UPD= **P4** - Total number of resources updated.

ADD= **P5** - Total number of resources added to the database.

UNK= **P6** - Total number of resources which existed on the database before network discovery but which were not discovered.

DEL= **P7** - Total number of resources excluded/deleted by the installation user exit.

System Action:

None.

User Action:

None.

RSDBMS14

IDCAMS REQUEST P1 FAILED RETURN CODE WAS P2

Reason:

A request to IDCAMS failed with return code *P2* . The request was *P1* . See the accompanying RSDBMS15 messages for more details.

System Action:

Processing continues but performance may be impacted.

User Action:

See the accompanying RSDBMS15 messages for more information.

RSDBMS15**P1****Reason:**

This message is a header for the messages returned from IDCAMS. *P1* is the IDCAMS message returned from an IDCAMS request.

System Action:

None.

User Action:

Determine the meaning of all the messages as a whole and correct the problem.

RSDBMS16**RESOURCE FILTER CRITERIA P1 COMPILED SUCCESSFULLY****Reason:**

The criteria *P1* was successfully compiled into a resource filter.

System Action:

None.

User Action:

None.

RSDBMS17**SERIALIZATION FAILED FOR P1****Reason:**

Serialization for access to resource *P1* failed.

System Action:

Request is rejected.

User Action:

Retry the request.

RSDBMS18

LOAD OF P1 FAILED, MSG= P2

Reason:

The model template *P1* could not be loaded for use. The reason is described by message *P2* .

System Action:

None.

User Action:

Determine the reason for the failure and correct the error before trying again.

RSDBMS19

P1 FAILED, RC= P2 ZFDBK= P3 MSG= P4

Reason:

The APPC request *P1* failed with return code *P2* and feedback code *P3* , the message associated with the codes is *P4* .

System Action:

Processing terminates.

User Action:

Determine whether the remote system is still available. Contact your systems administrator.

RSDBMS20

DYNAMIC DISCOVERY OF P1 COMPLETED. TOT= P2, ADD= P3, UPD= P4, CFG= P5

Reason:

Dynamic discovery was initiated for resource **P1** and it completed successfully. The total number of resources processed was **P2**. Of those, **P3** were new resources and **P4** were existing resources. Of the existing resources, **P5** of them involved a configuration change rather than just a state change.

System Action:

None.

User Action:

None.

RSDBMS21**P1 PROFILED DOMAINS EXCLUDED (P2 HAD ERRORS, P3 PERFORMING DISCOVERY)****Reason:**

An attempt to return data for all profiled domains could not be satisfied because one or more domains were not available or could not be contacted or an error occurred obtaining the data or the domain was performing network discovery. If an error occurred getting the data then a message will be in the log indicating the error (one message for each failed access).

P1 is the total number of domains that could have their totals added to to the summary. **P2** is the total number that had errors. **P3** is the total number that were doing network discovery.

System Action:

Only the accessible domains have contributed to the totals.

User Action:

None.

RSDBMS22**CANNOT DO DYNAMIC DISCOVERY/PARENT ACT. FOR P1, RESOURCE INVALID****Reason:**

An attempt to perform dynamic resource discovery or parent activation failed because the resource was not a network resource known to VTAM.

System Action:

None.

User Action:

None.

RSDBMS23

CANNOT DO DYNAMIC DISC./PARENT ACT. FOR P1, MAJNODE TYPE EXCEPTION

Reason:

An attempt to perform dynamic resource discovery or parent activation failed because the resource was a major node and its type is not supported.

System Action:

None.

User Action:

Contact your local support representative.

RSDBMS24

DB ALIGNMENT STARTED ON P1 AT P2

Reason:

This message indicates that database alignment is starting. This phase of network discovery aligns the database with the latest data discovered. Once aligned the data will be maintained as events arrive.

System Action:

None.

User Action:

None.

RSDBMS25

GDB LOADED WITH P1 RECORDS

Reason:

P1 records were added to the GDB for use by network discovery.

System Action:

None.

User Action:

None.

RSDBMS26**MODEL P1 LOADED****Reason:**

The SNA model *P1* was loaded.

System Action:

None.

User Action:

None.

RSDBMS27**P1 MODELS LOADED****Reason:**

P1 SNA models were loaded.

System Action:

None.

User Action:

None.

RSDBMS28**INVALID WORK VOLUME/DATASET, VOL= P1 DSN= P2****Reason:**

The work volume and/or dataset used as a work file was invalid.

System Action:

Alignment of the database with the network discovery is terminated.

User Action:

Verify the dataset name and volume serial specified in the ICS parameter group \$RM AUTOSNAFILE. Once corrected, action the parameter group and retry network discovery.

RSDBMS29

DB ALIGNMENT CANCELLED AT P1 ON P2

Reason:

The database alignment phase of network discovery was cancelled.

System Action:

Alignment of the database with the network discovery is terminated.

User Action:

None.

RSDBMS30

USER EXIT P1 DISABLED, RC= P2 MSG= P3

Reason:

The user exit procedure *P1* was disabled and will not be called again for the duration of network discovery. The exit was disabled because it returned an erroneous return code. The return code returned was *P1* and message was *P3*.

System Action:

Network discovery continues but will not invoke the user exit.

User Action:

Contact your systems administrator.

RSDBMS31

DB ALIGNMENT ALREADY IN PROGRESS

Reason:

Database alignment is already in progress.

System Action:

Alignment is terminated.

User Action:

None.

RSDBMS32**INVALID FILTER, CANNOT EXCLUDE ALL RESOURCES****Reason:**

The filter specified logically excludes all resources from being discovered. This is an invalid filter.

System Action:

Request is rejected.

User Action:

Ensure that at least one resource will be included by the filter.

RSDBMS33**ALL PROFILED DOMAINS COULD NOT BE CONTACTED OR ERRORS OCCURRED****Reason:**

An attempt to return data for all profiled domains could not be satisfied because of one of the following conditions:

- One or more domains were not available.
- One or more domains could not be contacted.
- An error occurred while obtaining the data from one or more domains.
- One or more domains was performing network discovery.

If an error occurred while getting the data, a message is logged indicating the error (one message for each failed access).

System Action:

The request is rejected.

User Action:

Determine the reason for the errors, and retry at a later time.

RSDBMS34

RESOURCE P1 AND ALL ITS CHILDREN DELETED BECAUSE IT WAS UNKNOWN

Reason:

A resource that was dynamically deleted from VTAM was deleted together with all its children.

System Action:

None.

User Action:

None.

RSDBMS35

DATABASE MAINTENANCE TRACING IS NOW P1

Reason:

The debugging tool for tracing database maintenance has been turned on or off. *P1* is the value it has been turned to.

System Action:

Database maintenance tracing is turned on or off.

User Action:

If you have turned tracing ON then turn it OFF when the error has been recreated and send the Activity Log output with the trace messages in it to your local support representative. If you have turned it OFF then send the Activity Log output with the trace messages in it to your local support representative.

RSDBMS36**TERMINATION DUE TO UNDESIREED STATUS FOR P1 BYPASSED****Reason:**

An event arrived indicating that a *P1* was changing status to ACTIVE or STARTING, however the resource's desired status is INACTIVE. Because undesired resource termination is not in effect the action to terminate the resource has been bypassed.

System Action:

No action is taken to change the resources status.

User Action:

None. This behaviour is controlled by the AUTOSNACNTL parameter group and can be changed by updating the "Bypass Term. if Undesired Active" field.

RSGM0001**ALLOCATION OF P1 VARTABLE FAILED. NAME: P2 SCOPE: P3 FDBK: P4****Reason:**

The ALLOCATION of the VARTABLE described by P1, with a NAME and SCOPE of P2 and P3 failed with &ZFDBK of P4.

System Action:

The SNA GROUP MANAGER will fail to initialize.

User Action:

Try to ascertain the reason for the inability to allocate a vartable, correct it and re-start the SNA Service Manager.

RSKM0002

SNA GROUP MANAGER TERMINATING. COPY ALREADY RUNNING, NCLID= P1

Reason:

Only one SNA Group Manager may be active. This message indicates that a second copy of the SNA Group Manager procedure attempted to start but detected that a previous copy was active and so terminated.

System Action:

The second SNA GROUP MANAGER will fail to initialize.

User Action:

None.

RSKM0003

GET OF SNA GROUP(P1) FAILED. RC= P2. MSG= P3

Reason:

An attempt to read the SNA Group Definition, identified by P1, was unsuccessful. The Return Code P2 was returned along with error message P3.

System Action:

Processing continues.

User Action:

None

RSKM0099

P1 PROCESSING COMPLETE

Reason:

The requested processing has completed. *P1* is the type of processing that was requested.

System Action:

None.

User Action:

None.

RSIA0101**RECYCLE OF RESOURCE P1 COMPLETED SUCCESSFULLY****Reason:**

The recycle (inactivate and activate) of the SNA resource *P1* completed successfully.

System Action:

None.

User Action:

None.

RSINWI31**Template System Image version (P1) invalid for SNA models****Reason:**

The Template System Image version specified is not valid as the Active SNA Model Image.

System Action:

The field is highlighted and a message is displayed.

User Action:

Enter a valid Template System Image version.

RSINWI34**PPO procedure failed to initialize****Reason:**

The PPOPROC was started and did not return an indication that it had successfully initialized within the time allowed.

System Action:

The parameter group fails.

User Action:

Determine the reason the PPOPROC failed. Use the \$LOG command to access the activity log. Look for any messages that indicate that the procedure has ended, either normally or as a result of an abend.

RSM01001

You are not allowed to access SYSNAME(\$TEMPLAT) from this option.

Reason:

Template definition is a special definition which must be accessed only via the Administration menus.

System Action:

The request is rejected.

User Action:

Access Template definition from the Administration (Resource Definition) menu.

RSMD0201

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The NetMaster Automation Model command validation procedure \$RSMD02V failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected, and the \$RSMD02V procedure terminates.

User Action:

Check the syntax of the call to procedure \$RSMD02V.

RSMD0202

INVALID COMMAND

Reason:

The command entered on the command line was not recognized by the procedure.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RSMD0204**UNKNOWN COMMAND****Reason:**

The supplied command is not recognized.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RSMM0001**INVALID KEYWORD PARAMETER VALUE, KEYWORD= P1 VALUE= P2****Reason:**

An invalid value was specified for the keyword P1 . The value specified was P2 .

System Action:

The request is rejected and processing terminates.

User Action:

Specify a valid value for the keyword.

RSMM0002**MONITOR PROCESS FOR P1 ALREADY ACTIVE****Reason:**

A duplicate monitor process for events from *P1* was started. This duplicate process has detected the duplication and has terminated itself.

System Action:

None.

User Action:

None.

RSMM0003

SCREENING TABLE EVENT ISSUED TO PROMPT DISCOVERY

Reason:

An event was issued to prompt the screening table process of discovery.

System Action:

None.

User Action:

None.

RSMM0004

UNKNOWN EVENT RECEIVED ID= P1 CLASS= P2 TEXT= P3

Reason:

An event from the screening table was received and the event class was not known by the monitor. The event ID was *P1* the class was *P2* and the event text was *P3*.

System Action:

None.

User Action:

Contact your local support office.

RSMM0005

UNKNOWN VTAM STATE P1 FOR RESOURCE P2 TRANSLATED TO UNKNOWN

Reason:

The resource P2 entered the VTAM state P1 and the state is not known to automation. Automation will assume a status of UNKNOWN.

System Action:

The resource's status is assumed as UNKNOWN.

User Action:

Contact your local support office.

RSMM0006**NETWORK DISCOVERY STARTED ON P1 AT P2****Reason:**

Network discovery processing was triggered on *P1* (date) at *P2* (time).

System Action:

Network discovery starts.

User Action:

None.

RSMM0007**RESOURCE P1 IN RESET STATE BECAUSE OF DUPLICATE RESOURCE****Reason:**

The resource P1 was a duplicate resource ie actually a different resource but with the same name as *another*. It's VTAM state is RESET and it cannot be activated.

System Action:

None.

User Action:

Check the definitions in your VTAMLST dataset.

RSMM0008**GET ACTION= P1 FOR P2 FAILED, ZFDBK= P3, ACTIONS TRIGGERED BY P4****Reason:**

An attempt to execute the actions associated with a message failed. The reason is that the get for the actions from the varable failed with feedback code P3 . The resource that triggered the action was P2 and the action key is P1 . The message ID that triggered the action is *P4* .

System Action:

Message actions are not executed.

User Action:

Contact the systems administrator.

RSMM0009

MESSAGE ACTIONS FOR P1 FAILED

Reason:

The message actions to be executed on behalf of resource *P2* failed. The reason is in the previous message.

System Action:

None.

User Action:

Check the previous message.

RSMM0010

P1 BUFFERED EVENTS PROCESSED

Reason:

During discovery *P1* state change/action events arrived which were buffered until after database alignment. All buffered events were processed.

System Action:

None.

User Action:

None.

RSMM0011**WARNING: P1 RESPONSE TRUNCATED, SOME RESOURCES MAY NOT BE DISCOVERED****Reason:**

During the processing of a VTAM display response the IST1315I message was received. This message indicates that the display was truncated by the display MAX= parameter setting. This indicates that the VTAMOPTS parameter DSLPYMAX was set too low. Network discovery may not discover all the resources covered by the display command of type **P1**.

System Action:

Discovery continues, but some resources may not be discovered.

User Action:

Ensure that the VTAM option DSPLYMAX is sufficiently high to allow all displays to complete. Note that a D NET,TERMS is NOT done and need not be catered for.

RSMM0012**COMMAND ISSUED VIA SPO. CMD= P1****Reason:**

A Network Discovery command was issued via the SPO interface as requested by the screening table. The command issued was *P1*.

System Action:

The command responses are passed to the screening table for processing.

User Action:

None.

RSMM0013

PPO HAS BEEN ENABLED! SCHEDULING DISCOVERY OF SNA RESOURCES

Reason:

The region detects that the PPO message flow has been enabled. This indicates that the flow was disabled for an unknown period of time, during which resources may have changed status without being detected. A discovery of the network is scheduled to ensure that all states are correct.

System Action:

Network discovery is scheduled.

User Action:

You do not need to take any action. However, if you do not want the region to perform discovery automatically when this condition is detected again, change the value of the Schedule Discovery on PPO Start field in the AUTOSNACNTL parameter group to NO and action the group. (To display the list of parameter groups, enter the /PARMS path.)

RSMM0014

HEARTBEAT MONITOR FAILED START, RESOURCE NOT MONITORED, RES= P1 MODEL= P 2

Reason:

The heartbeat monitor could not be started for the **P1** resource, and the resource cannot be monitored. The resource is using the **P2** model. For additional information, see the previous message in the log.

System Action:

Heartbeating for the resource is not performed.

User Action:

Contact your local support representative.

RSMN0101**INVALID KEYWORD VALUE SPECIFIED - KEYWORD(P1) VALUE(P2)****Reason:**

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RSMN0102**VERSION MUST BE NUMERIC****Reason:**

Version specified was not a numeric value.

System Action:

The request is rejected.

User Action:

Enter a valid number.

RSMN0103**NOT ALLOWED TO ACCESS SYSNAME(\$TEMPLAT) FROM THIS OPTION****Reason:**

Template definition is a special definition which must be accessed only from Customisation Menu option "T".

System Action:

The request is rejected.

User Action:

Access Template definition from Customisation menu option "T".

RSNDMO01

INVALID COMMAND P1

Reason:

Command *P1* is invalid.

System Action:

Command is rejected.

User Action:

Correct the command and retry the request.

RSNDMO02

NETWORK DISCOVERY COMPLETE

Reason:

Network discovery has completed.

System Action:

None.

User Action:

None.

RSNDMO03

NETWORK DISCOVERY CANCELLED

Reason:

Network discovery was already in progress and another discovery was initiated. The current discovery has been cancelled and a new discovery is in progress.

System Action:

Network discovery is cancelled and another discovery started.

User Action:

None.

RSNDMO04**NETWORK DISCOVERY REQUEST ACCEPTED****Reason:**

A request to perform Network Discovery was accepted.

System Action:

Network discovery is started.

User Action:

None.

RSNDMO05**COLD START WAS REQUESTED****Reason:**

The current Network Discovery will be a Cold Start.

System Action:

None.

User Action:

None.

RSNDMO06**SCREENING TABLE DISCOVERY TIMEOUT AT P1 ON P2****Reason:**

The screening table processing phase of network discovery has not responded within the defined processing window. Network discovery has failed. *P1* is the time and *P2* is the date at which the time was detected.

System Action:

Network discovery terminates.

User Action:

Note the messages that follow and restart network discovery. Also note any messages that appear in the SYSLOG and that were issued between when network discovery started and when the timeout was detected. Contact Technical Support.

RSNDMO07

DISCOVERY CONTROLS FOLLOW:

Reason:

The screening table processing phase of network discovery has not responded within the defined processing window. Network discovery has failed. This message preceeds diagnostic messages and is a header only.

System Action:

None.

User Action:

None.

RSNDMO08

P1

Reason:

This message provides various diagnostic information.

System Action:

None.

User Action:

Note down the data in this message.

RSNDMO09

NO ACTIVITY IN NETWORK DISCOVERY FOR P1 SECONDS

Reason:

This message indicates that the screening table processing phase of network discovery has not performed any actions for network discovery for *P1* seconds.

System Action:

None.

User Action:

None.

RSNDMO10**MAJOR NETWORK CHANGES DETECTED, COLD START BEING FORCED****Reason:**

The system detected that the Network ID or Domain Name was different to that currently stored on the file or that the file was empty. Any of these conditions indicate that a COLD start is required.

System Action:

A COLD start is forced.

User Action:

None.

RSNDMO11**PRE DISCOVERY EXIT CALL FAILED P1 P2****Reason:**

The call to the prediscovery exit failed. *P1* contains the value of &RETCODE, and *P2* contains the value of &SYSMSG.

System Action:

Network discovery terminates.

User Action:

Note the values of &RETCODE and &SYSMSG. Contact your systems programmer.

RSNDMO12**DISCOVERY ABORTED BY PRE DISCOVERY EXIT P1****Reason:**

The call to the prediscovery exit returned a code indicating that discovery should be aborted. *P1* contains the value of the return code from the exit.

System Action:

Network discovery terminates.

User Action:

Note the return code. Contact your systems programmer.

RSNDMO13

PRE DISCOVERY EXIT PROCESSING FINISHED P1

Reason:

The call to the prediscovery exit returned a code indicating that processing has finished. *P1* contains the value of the return code from the exit.

System Action:

Network discovery continues. The return code set by the exit may affect the parameters for the current discovery.

User Action:

None.

RSNDMO14

POST DISCOVERY EXIT PROCESSING FINISHED P1 P2

Reason:

The call to the postdiscovery exit finished. *P1* contains the value of &RETCODE, and *P2* contains the value of the return code from the exit.

System Action:

None.

User Action:

None.

RSNDPR01

VTAM STATE NOT IN AOMGDB. KEY(*P1*) RSC(*P2*)

Reason:

During Network Discovery an attempt to read a VSAM state from the AOMGDB was unsuccessful. *P1* is the key that was accessed and *P2* is the resource being processed at the time of the error.

System Action:

The Normalised State for the resource is set to UNKNOWN and processing continues.

User Action:

Contact Technical Support.

RSNI0101**ACTION P1 IS NOT SUPPORTED BY PROCEDURE P2****Reason:**

The action indicated by *P1* is not supported by procedure *P2* which was invoked to perform it.

System Action:

The action is not performed.

User Action:

Amend the procedure *P2* to support this action type.

RSNI0102**UNKNOWN SELECTION****Reason:**

A selection made from the menu is not supported by the menu service procedure and cannot be processed.

System Action:

The selection is rejected.

User Action:

Contact the local support representative.

RSNI0103**ACCESS TO FILE P1 DENIED****Reason:**

Access to the file identified by *P1* has been denied by the validation exit NCLEX01.

System Action:

The request is rejected.

User Action:

Contact the systems administrator if access to this file is required.

RSNI0104

READ ERROR ON P1 FILE, RC= P2, FDBK= P3

Reason:

A read error occurred during processing of the *P1* file. The return and VSAM feedback codes are identified by *P2* and *P3* respectively.

System Action:

File processing is terminated.

User Action:

Contact the systems administrator and report the error.

RSNR0101

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The NetMaster Automation Network Resource Problem Determination interface procedure \$RSNR01C failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2*.

System Action:

The request is rejected, and the \$RSNR01C procedure terminates.

User Action:

Check the syntax of the call to procedure \$RSNR01C.

RSNR0102

EXCESSIVE PARAMETERS SPECIFIED FOR ACTION P1

Reason:

The NetMaster Automation Network Resource Problem Determination interface procedure \$RSNR01C failed during request processing because it was passed too many parameters. *P1* is the action to which the parameters are supposed to be related.

System Action:

The request is rejected, and the \$RSNR01C procedure terminates.

User Action:

Check the syntax of the call to procedure \$RSNR01C.

RSNR0103**SESSION TYPE MUST BE "PRIMARY" OR "SECONDARY"****Reason:**

The NetMaster Automation Network Resource Problem Determination interface procedure \$RSNR01C failed during request processing because an invalid or null value was supplied on the SESSTYPE keyword. This keyword is mandatory when the request is for an NTS Session List and must be either "Primary" or "Secondary".

System Action:

The request is rejected, and the \$RSNR01C procedure terminates.

User Action:

Check the syntax of the call to procedure \$RSNR01C.

RSNR0104**PROCEDURE P1 TO P2 P3 P4 NOT FOUND****Reason:**

The procedure *P1* which is required to perform the action *P2* for class *P3* for *P4* was not found in the COMMANDS DD concatenation.

System Action:

The request is rejected and procedure \$RSNR01C terminates.

User Action:

Check that the library containing the required procedure is included in the COMMANDS DD concatenation.

RSNR0201

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The NetMaster Automation Network Resource Problem Determination command validation procedure \$RSNR02V failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected, and the \$RSNR02V procedure terminates.

User Action:

Check the syntax of the call to procedure \$RSNR02V.

RSNR0202

INVALID COMMAND

Reason:

The command entered on the command line was not recognized by the procedure.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RSNR0203

P1 VALUE OMITTED

Reason:

The value for *P1* must be supplied.

System Action:

The command is rejected.

User Action:

Enter the value and retry.

RSNR0204**UNKNOWN COMMAND****Reason:**

The supplied command is not recognized.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RSNR0205**P1 IS NOT A VALID LINK NAME****Reason:**

The supplied value must be a valid link name. A Link Name may be 1 to 12 characters in length, must start with an alphanumeric character and may contain any graphic character except for asterisk (*).

System Action:

None.

User Action:

Correct the entry and retry.

RSNR0206***P1* is not a valid action for resource type *P2*****Reason:**

P1 is not a supported action for the *P2* resource type.

System Action:

None.

User Action:

None.

RSNR0207

P1 is not supported for a Route Setup RTP

Reason:

Action *P1* is not supported for a Rapid Transit Protocol (RTP) resource with a type of RSTP (route setup).

System Action:

None.

User Action:

None.

RSNS0009

Error: required data not found: P1

Reason:

A NetSpy synchronous request returned data in multiple, repeated units, but none of those matches the specific request. For example, DV returned information on multiple TPs but there is no data for the required one.

System Action:

The NetSpy API interface returns an error message to the caller. The request was probably not satisfied, as specific data was not found.

User Action:

Check the logic of the request, pattern, and scope. Change and resubmit the request if errors found. If the situation is repeated, report the problem to the developers.

RSNS00W0**The Network Summary display procedure has failed - reason: *P1*****Reason:**

This message is the second of two messages that are issued when an internal error occurs in the SNA network summary display procedure. *P1* is the ID of the message associated with the error. The *P1* message is the first message of the group. Both messages are written to the activity log.

System Action:

The procedure terminates.

User Action:

Contact Technical Support.

RSNS00W1**Sort sequence set to *P1*****Reason:**

The SORT command has set the sort sequence according to the value in *P1*. Resource lists displayed from this point will be sorted according to this sort sequence.

System Action:

None.

User Action:

None.

RSNS00W2**Network Summary display procedure internal error - reason: *P1*****Reason:**

This message is the first of two messages that are issued when an internal error occurs in the SNA network summary display procedure. *P1* is the reason for the failure.

System Action:

The procedure terminates.

User Action:

Contact Technical Support.

RSNS00W9

ID=*P1* (*P2*) - *P3*

Reason:

This message is a trace of the Network Summary display procedure.

P1 is the trace ID.

P2 is the NCL process ID.

P3 is the trace text.

System Action:

None.

User Action:

Contact Technical Support.

RSNSEVM00

ID= *P1* - *P2*

Reason:

The message displays a NetSpy Alert Manager trace record. *P1* is the trace ID, and *P2* is the trace text.

System Action:

None.

User Action:

Contact Technical Support.

RSNSEVM01

Another copy of \$RSNSEVM is currently running - NCL ID: P1

Reason:

A request to start a copy of the \$RSNSEVM procedure was ignored because another copy is currently running.

System Action:

A new copy of the procedure is not started.

User Action:

None.

RSNSEVM02**NetSpy Alert Manager procedure has failed - Reason: P1****Reason:**

NetMaster Automation for SNA NetSpy Alert Manager procedure has failed because of an internal system error. *P1* is the reason for the failure.

System Action:

The procedure terminates.

User Action:

Contact Technical Support.

RSNSEVM03**NetSpy Alert Manager is now active****Reason:**

The NetMaster Automation for SNA NetSpy Alert Manager is ready to process NetSpy alerts.

System Action:

The region is ready for NetSpy alerts.

User Action:

None.

RSNSEVM04

Incomplete NetSpy Alert Event received. Event type: P1 - Event text: P2

Reason:

The NetMaster Automation for SNA NetSpy Alert Manager received an incomplete NetSpy alert.

P1 is NSPALERT for a new or duplicate alert, or NSPCLEAR for a Clear Alert event.

P2 is the NetSpy alert text.

System Action:

The NetSpy alert event is ignored.

User Action:

Contact Technical Support.

RSNSEVM05

NetSpy Alert Manager procedure has encountered a recoverable error

Reason:

The NetMaster Automation for SNA NetSpy Alert Manager procedure encountered a recoverable error.

System Action:

NetSpy alert processing continues. However, some alerts might have been lost.

User Action:

Contact Technical Support, making available the following diagnostic information:

- Full text of this message
- Relevant messages in the activity log

RSPN0001**INVALID KEYWORD VALUE SPECIFIED - KEYWORD(P1) VALUE(P2)****Reason:**

An invalid keyword was passed to the procedure.

System Action:

The request is rejected.

User Action:

Contact the systems administrator.

RSPN0002**SORT SEQUENCE SET TO P1****Reason:**

The SORT command has been issued and has successfully set the sort sequence to the value displayed in *P1*. Resource lists displayed from this point will be sorted according to this sort sequence.

System Action:

None

User Action:

None

RSPN0101**VTAM DOMAINS CONSOLIDATION CHANGED****Reason:**

VTAM Domains consolidation has been modified.

System Action:

None.

User Action:

None.

RSPN0201

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(P1) VALUE(P2)

Reason:

An invalid keyword was passed to the service procedure.

System Action:

The request is rejected.

User Action:

Correct the calling procedure to the service procedure and rerun exec.

RSPN0202

CANNOT EXCLUDE ALL DOMAINS

Reason:

At least one domain must be included for the Network Summary display.

System Action:

The request is rejected.

User Action:

Do not exclude all domains.

RSPN0301

INVALID KEYWORD VALUE SPECIFIED - KEYWORD(P1) VALUE(P2)

Reason:

An invalid keyword was passed to the procedure.

System Action:

The request is rejected.

User Action:

Contact the systems administrator.

RSPN0302**REQUIRED FIELD/S NOT ENTERED****Reason:**

Validation found no entry specified on mandatory field/s.

System Action:

The request is rejected.

User Action:

Specify entry on field/s in error.

RSPN0303**UPDATE IN PROGRESS BY P1****Reason:**

Update is in progress on this definition by another user.

System Action:

The request is rejected.

User Action:

Try again later.

RSPN0304**VALUE NOT SELECTED FROM LIST****Reason:**

No value selected from the selection list displayed.

System Action:

None.

User Action:

None.

RSW30101

Invalid keyword value specified - keyword(P1) value(P2)

Reason:

An invalid keyword value was passed to the procedure.

System Action:

The procedure terminates.

User Action:

If the cause of this error is not apparent, contact Technical Support.

RSW30102

Unable to identify owning region: P1

Reason:

An error occurred during a 'zoom' of an SNA group from the web interface. The region responsible for the group could not be identified. *P1* may contain further information.

System Action:

The 'zoom' fails.

User Action:

This problem may occur if the Automation Services region is loading a system image. If this is the case, wait until the operation completes and try again. If the problem persists, contact Technical Support.

RV610001

SERVICE PROCEDURE P1 INVOKED WITH INVALID KEYWORD P2(P3)

Reason:

The service procedure identified by P1 was invoked with an invalid value for the keyword identified by P2 of P3.

System Action:

Request rejected

User Action:

Correct the keyword value and re-try

RV610002**' P1' IS ONLY VALID FOR SERVICE FILTERS****Reason:**

The command identified by P1 has been issued against a resource which is not a service filter.

System Action:

Field highlighted in error.

User Action:

Change the CLASS of the resource to 'FILTER' and retry the command.

RV610003**UPDATE OF SERVICE MEMBERS LIST CANCELLED****Reason:**

The update of the service members list was cancelled.

System Action:

None

User Action:

None

RV610004**MAXIMUM NUMBER OF SERVICE MEMBER ENTRIES ALREADY EXIST****Reason:**

A Repeat/Insert of a service member entry has been attempted which would cause the maximum number of entries to be exceeded.

System Action:

Action disallowed

User Action:

None

RV610101

' P1' IS NOT A VALID RESOURCE CLASS

Reason:

The value P1 is not a valid resource class

System Action:

Field highlighted in error.

User Action:

Enter a valid resource class or '?' for a list of classes.

RV610102

WEIGHT TYPE MUST BE EITHER 'FIXED' OR 'PROPORTIONAL'

Reason:

The only valid values for 'weight type' are FIXED or PROPORTIONAL. Values of 'F' or 'P' are acceptable.

System Action:

Field highlighted in error.

User Action:

Enter one of the valid weight type values.

RV610103

WEIGHT TYPE MUST BE 'FIXED' FOR A SINGLE RESOURCE

Reason:

The only valid value for 'weight type' is FIXED when applied to a single resource.

System Action:

Field highlighted in error.

User Action:

Change the value to 'FIXED'

RV610104**DUPLICATE RELATIONSHIP****Reason:**

A combination of SMFId, CLASS and NAME may only appear once within a relationships list.

System Action:

Fields highlighted in error.

User Action:

Change the SMFId, CLASS or NAME to make the relationship unique.

RV610105**SERVICE FILTER(P1) DOES NOT EXIST****Reason:**

A service filter which does not currently exist has been specified in a service's relationships list.

System Action:

Field highlighted in error.

User Action:

The 'L' option may be used to present a list of Service Filters from which the required filter may be added, or enter '?' in the 'Name' field to select an existing Service Filter from a list.

RV610106

GENERIC WILDCARD(*) NOT ALLOWED WITH PATTERN MATCHING WILDCARDS(% _)

Reason:

The use of the Generic Character * is not supported when Pattern Matching Characters % and/or _ are present. % may be used to indicate generic matching if pattern matching is being performed on the same field.

System Action:

Field highlighted in error.

User Action:

Remove either the Generic Character * or the Pattern Matching Characters % and/or _. Alternatively % may be used to replace *.

RV610107

FIELD PROMPT CHARACTER(?) NOT ALLOWED WITH WILDCARD CHARACTERS(* _ %)

Reason:

The use of the Field Prompt ? is not supported when any of the WildCard Characters, % or _ or * are present.

System Action:

Field highlighted in error.

User Action:

Remove either the Field Prompt or the Wildcard Characters.

RV610108

'NAME' CONTAINS INVALID CHARACTERS

Reason:

The only characters allowed in the resource name field are ALPHANUMERIC or the three wildcards,%&,&_&or&*&.

System Action:

Field highlighted in error.

User Action:

Remove the invalid characters.

RV610109**NO RESOURCE NAME WAS SELECTED FROM THE LIST****Reason:**

A list of valid resource names was displayed and no value was selected from it.

System Action:

Field highlighted in error.

User Action:

Enter a different name or select a valid name from the list displayed.

RV610110**NAME CONSISTS EXCLUSIVELY OF WILDCARD CHARACTERS****Reason:**

A name has been entered which consists of wildcard characters only. This is an invalid situation as the same effect can be achieved by specifying a single % or * .

System Action:

Field highlighted in error.

User Action:

Use % or * to achieve the desired effect.

RVAPPC01**APPC P1 ERROR - SYSMMSG(P2)****Reason:**

The APPC function was not successfully completed. SYSMMSG contains the unexpected message that resulted.

System Action:

Processing is continued.

User Action:

Contact your System Administrator.

RVCALL01

\$RVCALL INVOKED WITH INVALID PARAMETER. KEYWORD(P1) VALUE(P2)

Reason:

Procedure \$RVCALL was invoked with an invalid parameter. The parameter in question is the KEYWORD identified by P1 whose value is P2.

System Action:

Call is rejected.

User Action:

Correct the parameters and retry.

RVCALL02

'ZOOM' NOT ALLOWED. SERVICE(P1) HAS NOT BEEN MODELLED

Reason:

A ZOOM command was attempted on a service which has not yet been modelled by the Service Manager.

System Action:

Call is rejected.

User Action:

None

RVCALL03

INVALID COMMAND

Reason:

The command entered on the command line was not recognized by the procedure.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RVLK0001**STARTING SERVICE EVENT TRAFFIC MANAGER FOR SERVICEVIEW REGION P1****Reason:**

The Link Manager is attempting to start a ServiceView Component for a remote system.

System Action:

None.

User Action:

None.

RVLK0002**SERVICE EVENT TRAFFIC MANAGER FOR P1 ENDED - RC(P2) SYSMMSG(P3)****Reason:**

ServiceView Component has ended.

System Action:

None.

User Action:

None.

RVSM0001**ALLOCATION OF P1 VARTABLE FAILED. NAME: P2 SCOPE: P3 FDBK: P4****Reason:**

The ALLOCATION of the VARTABLE described by P1, with a NAME and SCOPE of P2 and P3 failed with &ZFDBK of P4.

System Action:

The SERVICE MANAGER will fail to initialize.

User Action:

Try to ascertain the reason for the inability to allocate a vartable, correct it and re-start the Service Manager.

RVSM0002

SERVICE MANAGER TERMINATING. COPY ALREADY RUNNING, NCLID= P1

Reason:

Only one Service Manager may be active. This message indicates that a second copy of the Service Manager procedure attempted to start but detected that a previous copy was active and so terminates.

System Action:

The SERVICE MANAGER will fail to initialize.

User Action:

None

RVSM0003

GET OF SERVICE(P1) FAILED. RC= P2. MSG= P3

Reason:

AN attempt to read the Service Definition, identified by P1, was unsuccessful. The Return Code P2 was returned along with error message P3.

System Action:

Processing continues.

User Action:

None

RVWARN01

SERVICE PROCEDURE P1 INVOKED WITH INVALID KEYWORD P2(P3)

Reason:

The service procedure identified by P1 was invoked with an invalid value for the keyword identified by P2 of P3.

System Action:

Request rejected

User Action:

Correct the keyword value and re-try

RVWARN02**NO SERVICES WILL BE AFFECTED BY THIS " P1" COMMAND****Reason:**

This message is displayed to indicate that the command identified by P1 will not impact any currently active services if confirmed.

System Action:

None

User Action:

Choose to ACTION or CANCEL the nominated command.

RVWARN03**P1 IS NOT CURRENTLY A MEMBER OF ANY SERVICE****Reason:**

The resource identified by *P1* is not a member of any currently defined service.

System Action:

None.

User Action:

None.

RW0001**INVALID KEYWORD VALUE SPECIFIED, KEYWORD=~P1 VALUE=~P2****Reason:**

The Report Writer external interface procedure \$RWCALL failed during request processing because it was passed an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

The request is rejected and procedure \$RWCALL terminates. Control is returned to the NCL procedure which executed \$RWCALL. If \$RWCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed \$RWCALL. If executed from OCS, check the command entered on the command line and retry.

RW0002

UNSUPPORTED RETURN CODE RECEIVED FROM PROCEDURE P1, RC=P2

Reason:

The Report Writer external interface procedure \$RWCALL failed during request processing because it received an unknown return code from a procedure. The name of the procedure was P1 and the unknown return code was P2 .

System Action:

The request is rejected and procedure \$RWCALL terminates. Control is returned to the NCL procedure which executed \$RWCALL.

User Action:

Contact the system administrator.

RW0003

PUBLIC REPORT ~P1 NOT DEFINED

Reason:

A request to access or generate a public report failed because the report was not defined. The name of the report was P1 .

System Action:

The request is rejected.

User Action:

Correct the report name and retry.

RW0004

PRIVATE REPORT ~P1 FOR USERID ~P2 NOT DEFINED

Reason:

A request to access or generate a private report failed because the report was not defined. The name of the report was P1 and the userid of the owner was P2 .

System Action:

The request is rejected.

User Action:

Correct the name of the report and retry.

RW0005**~P1 NOT DEFINED****Reason:**

A request to delete a control break header or trailer or data format failed because it was not defined. The resource not defined was P1 .

System Action:

The request is rejected.

User Action:

Correct the sort field number or data format number and retry.

RW0006**DELETE CANCELLED****Reason:**

A request to delete a control break header or trailer or data format was cancelled.

System Action:

None.

User Action:

None.

RW0007**~P1 DELETED****Reason:**

A control break header or trailer or data format was successfully deleted. The resource deleted was P1 .

System Action:

None.

User Action:

None.

RW0008

VARIABLE P1 ERROR, FDBK= P2 ID= P3 KEY= P4

Reason:

The Report Writer external interface procedure \$RWCALL failed during request processing because it encountered an error accessing a variable table. The request was *P1* , the identifier of the variable table was *P3* , the feedback code was *P2* and the value of the key was *P4* .

System Action:

The request is rejected and procedure \$RWCALL terminates.

User Action:

Interpret the feedback code using the NCL Reference.

RW0009

REPORT SUBMITTED

Reason:

A report was requested to be generated in background mode.

System Action:

The report is being generated under the background logger environment.

User Action:

None.

RW0010

REQUEST DENIED, PUBLIC REPORT ~P1 INACTIVE

Reason:

A request to generate a report was denied because the report definition was inactive. The name of the report was *P1* and it was a public report.

System Action:

The request is rejected.

User Action:

Change the status defined in the report definition to ACTIVE and retry.

RW0011**REQUEST DENIED, PRIVATE REPORT ~P1 FOR USERID ~P2 INACTIVE****Reason:**

A request to generate a report was denied because the report definition was inactive. The name of the report was P1 and it was a private report owned by userid P2 .

System Action:

The request is rejected.

User Action:

Change the status defined in the report definition to ACTIVE and retry.

RW0012**VARIABLE \$RWCRIT1 AND MDO \$RWCRIT1 ARE MUTUALLY EXCLUSIVE****Reason:**

The Report Writer external interface procedure \$RWCALL failed during request processing because it was invoked with a value set in variable \$RWCRIT1 and a value set in MDO \$RWCRIT1. Variable \$LHCRIT1 and MDO \$RWCRIT1 are mutually exclusive.

System Action:

The request is rejected and procedure \$RWCALL terminates.

User Action:

Correct the execution of \$RWCALL and retry.

RW0013**REPORT CACHE RESET****Reason:**

Report definitions are saved in a cache when used, the request to reset (clear) the cache was successful.

System Action:

The cache is cleared.

User Action:

None.

RW0014

P1 LENGTH MUST BE GREATER THAN OR EQUAL TO 3

Reason:

A value was entered in the *P1* field that was less than three in length.

System Action:

The *P1* field is set in error.

User Action:

Correct the value in the *P1* field and retry.

RW0101

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The service procedure \$RWPM01M for the Report Writer Primary Menu failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure \$RWPM01M terminates.

User Action:

Contact the system administrator.

RW0102

USER P1 NOT AUTHORIZED TO ACCESS THE REPORT WRITER PRIMARY MENU

Reason:

A request to access the Report Writer Primary Menu failed because the user was not authorized for the request. The userid of the user was *P1* .

System Action:

The request is rejected.

User Action:

None.

RW0103**UNSUPPORTED RETURN CODE RECEIVED FROM PROCEDURE
\$CAUA000, RC= P1****Reason:**

A request to access the Report Writer Primary Menu failed because the service procedure \$RWPM01M for the menu received an unknown return code from procedure \$CAUA000. The unknown return code was **P1** .

System Action:

The request is rejected and procedure \$RWPM01M terminates.

User Action:

Contact the system administrator.

RW0104**UNSUPPORTED RETURN CODE RECEIVED FROM MENU ACTION, RC= P1****Reason:**

The service procedure \$RWPM01M for the Report Writer Primary Menu received an unknown return code from a procedure that was executed as the action for an option on the menu. The unknown return code was P1 .

System Action:

Procedure \$RWPM01M terminates and the Report Writer Primary Menu is presented.

User Action:

Contact the system administrator.

RW0105

USER P1 NOT AUTHORIZED TO ACCESS REPORT WRITER ADMIN FUNCTIONS

Reason:

A request to access the Report Writer Table Maintenance facility failed because the user was not authorized for the request. The userid of the user was P1 .

System Action:

The request is rejected.

User Action:

None.

RW0106

~P1 MUST BE ALPHANUMERIC AND/OR NATIONAL CHARACTERS

Reason:

The P option was selected from the Report Writer Primary Menu and an invalid value was entered in the Userid field. The value entered was not alphanumeric and/or national characters.

System Action:

The selection of the P option is rejected and the Userid field is set in error.

User Action:

Correct the value in the Userid field and retry.

RW1001

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The service procedure \$RWRD10M for the Report Definition Menu failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure \$RWRD10M terminates.

User Action:

Contact the system administrator.

RW1002**USER P1 NOT AUTHORIZED TO ACCESS REPORT DEFINITIONS****Reason:**

A request to access the Report Definition Menu failed because the user was not authorized for the request. The userid of the user was *P1* .

System Action:

The request is rejected.

User Action:

None.

RW1003**UNSUPPORTED RETURN CODE RECEIVED FROM PROCEDURE \$CAUA000, RC= P1****Reason:**

A request to access the Report Definition Menu failed because the service procedure \$RWRD10M for the menu received an unknown return code from procedure \$CAUA000. The unknown return code was **P1** .

System Action:

The request is rejected and procedure \$RWRD10M terminates.

User Action:

Contact the system administrator.

RW1004**UNSUPPORTED RETURN CODE RECEIVED FROM MENU ACTION, RC= P1****Reason:**

The service procedure \$RWRD10M for the Report Definition Menu received an unknown return code from a procedure that was executed as the action for an option on the menu. The unknown return code was *P1* .

System Action:

Procedure \$RWRD10M terminates and the Report Definition Menu is presented.

User Action:

Contact the system administrator.

RW1005

~P1 MUST BE ALPHANUMERIC AND/OR NATIONAL CHARACTERS

Reason:

An option was selected from the Report Definition Menu and an invalid value was entered in the P1 field. The value entered was not alphanumeric and/or national characters.

System Action:

The selection of the option is rejected and the P1 field is set in error.

User Action:

Correct the value in the P1 field and retry.

RW1006

~P1 MUST BE ENTERED WHEN OPTION ~P2 IS SELECTED

Reason:

An option was selected from the Report Definition Menu and a value was not entered in the P1 field. The option selected was P2 .

System Action:

The selection of the option is rejected and the P1 field is set in error.

User Action:

Enter a value in the P1 field and retry.

RW1007

~P1 MUST BE PU(BLIC) OR PR(IVATE)

Reason:

An option was selected from the Report Definition Menu and an invalid value was entered in the P1 field.

System Action:

The selection of the option is rejected and the P1 field is set in error.

User Action:

Enter 'PUBLIC' or 'PRIVATE' in the P1 field and retry. Only the first two character need to be entered.

RW1008**Report Appl MUST BE ENTERED TO DISPLAY A LIST OF GROUPS****Reason:**

The L option was selected from the Report Definition Menu and a list of groups was requested to be displayed via a question mark (?) being entered in the Group field but the Report Appl field was omitted. To present a list of groups a report application must be specified as groups belong to specific applications. The first three characters of a report application must be a valid application ID.

System Action:

The selection of the L option is rejected and the Report Appl field is set in error.

User Action:

Enter a report application in the Report Appl field and retry. A question mark (?) can be entered in the Report Appl field to present a list from which a selection can be made.

RW1009**Report Appl LENGTH MUST BE GREATER THAN OR EQUAL TO 3****Reason:**

An option was selected from the Report Definition Menu and a value was entered in the Report Appl field that was less than three characters in length.

System Action:

The selection of the option is rejected and the Report Appl field is set in error.

User Action:

Correct the value in the Report Appl field and retry.

RW1101

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

A request to add, delete or copy a report definition, or browse or update the report description failed because procedure \$RWRD11P received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$RWRD11P terminates.

User Action:

Contact the system administrator.

RW1102

USER P1 NOT AUTHORIZED TO P2 P3 REPORTS

Reason:

A request to add, delete or copy a report definition, or browse or update the report description failed because the user was not authorized for the request. The function requested was *P2* and the userid of the user was *P1* . *P3* is set to 'YOUR OWN PRIVATE' if the report to be accessed was their own or set to 'OTHER USERS PRIVATE' if another user's report was to be accessed.

System Action:

The request is rejected.

User Action:

None.

RW1103**UNSUPPORTED RETURN CODE RECEIVED FROM PROCEDURE
\$CAUA000, RC= P1****Reason:**

A request to add, delete or copy a report definition, or browse or update the report description failed because procedure \$RWRD11P received an unknown return code from procedure \$CAUA000. The unknown return code was **P1** .

System Action:

The request is rejected and procedure \$RWRD11P terminates.

User Action:

Contact the system administrator.

RW1104**INVALID COMMAND****Reason:**

An invalid command was entered in the Command field on the Report Description panel.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RW1105**PUBLIC REPORT ~P1 NOT DEFINED****Reason:**

A request to delete or copy a report definition, or browse or update the report description failed because the report definition was not defined. The name of the report was P1 and it was a public report.

System Action:

The request is rejected.

User Action:

Specify a report name previously defined and retry.

RW1106

PRIVATE REPORT ~P1 FOR USERID ~P2 NOT DEFINED

Reason:

A request to delete or copy a report definition, or browse or update the report description failed because the report definition was not defined. The name of the report was P1 and it was a private report owned by userid P2 .

System Action:

The request is rejected.

User Action:

Specify a report name previously defined and retry.

RW1107

~P1 CANCELLED

Reason:

An add, delete or copy report definition or update report description request was cancelled. The request cancelled was P1 .

System Action:

None.

User Action:

None.

RW1108

PUBLIC REPORT ~P1 ~P2

Reason:

A report definition was successfully added or deleted, or the report description was successfully updated. The name of the report definition was P1 and it was a public report. The action successfully performed was P2 .

System Action:

None.

User Action:

None.

RW1109**PRIVATE REPORT ~P1 FOR USERID ~P2 ~P3****Reason:**

A report definition was successfully added or deleted, or the report description was successfully updated. The name of the report definition was P1 and it was a private report owned by userid P2 . The action successfully performed was P3 .

System Action:

None.

User Action:

None.

RW1110**PUBLIC REPORT ~P1 ALREADY DEFINED****Reason:**

A request to add a report definition failed because the report definition was already defined. The name of the report was P1 and it was a public report.

System Action:

The request is rejected.

User Action:

Specify a report name not previously defined and retry.

RW1111**PRIVATE REPORT ~P1 FOR USERID ~P2 ALREADY DEFINED****Reason:**

A request to add a report definition failed because the report definition was already defined. The name of the report was P1 and it was a private report owned by userid P2 .

System Action:

The request is rejected.

User Action:

Specify a report name not previously defined and retry.

RW1112

DESCRIPTION FOR PUBLIC REPORT ~P1 UPDATED

Reason:

The description for a report definition was successfully updated. The name of the report definition was P1 and it was a public report.

System Action:

None.

User Action:

None.

RW1113

DESCRIPTION FOR PRIVATE REPORT ~P1 FOR USERID ~P2 UPDATED

Reason:

The description for a report definition was successfully updated. The name of the report definition was P1 and it was a private report owned by userid P2 .

System Action:

None.

User Action:

None.

RW1114

PRESS ENTER KEY TO CONFIRM DELETE OR CANCEL KEY TO CANCEL REQUEST

Reason:

The Report Description panel was displayed requesting the user to confirm the deletion of the report definition presented.

System Action:

None.

User Action:

Press the ENTER key to allow the report definition to be deleted, or press the CANCEL key to cancel the delete request.

RW1115**COMMAND ASSIGNED TO FUNCTION KEY ~P1 IS INVALID****Reason:**

Function key P1 was pressed on the Report Description panel and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

RW1201**UNSUPPORTED FIELD NAME RECEIVED FROM \$CAGP000, FIELD= P1****Reason:**

The validation exit \$RWRD12X for the Report Definition panel received an unknown field name from procedure \$CAGP000. The name of the field was P1 .

System Action:

Procedure \$RWRD12X terminates.

User Action:

Contact the system administrator.

RW1202**~P1 MUST BE PU(BLIC) OR PR(IVATE)****Reason:**

An invalid value was entered in the P1 field on the Report Definition panel.

System Action:

The Report Definition panel is displayed with the P1 field set in error.

User Action:

Enter 'PUBLIC' or 'PRIVATE' in the P1 field and retry. Only the first two characters need to be entered.

RW1203

PUBLIC REPORT ~P1 ALREADY DEFINED

Reason:

A report name was entered in the Report Name field on the Report Description panel that was previously defined. The report name entered was P1 and it was a public report.

System Action:

The Report Description panel is displayed with the Report Name field set in error.

User Action:

Enter a report name not previously defined and retry.

RW1204

PRIVATE REPORT ~P1 FOR USERID ~P2 ALREADY DEFINED

Reason:

A report name was entered in the Report Name field on the Report Description panel that was previously defined. The report name entered was P1 and it was a private report owned by userid P2 .

System Action:

The Report Description panel is displayed with the Report Name field set in error.

User Action:

Enter a report name not previously defined and retry.

RW1205

~P1 MUST NOT BE ENTERED WHEN ~P2 IS SET TO ~P3

Reason:

P3 was entered in the P2 field on the Report Definition panel and a value was entered in the P1 field.

System Action:

The Report Definition panel is displayed with the P1 field set in error.

User Action:

Clear the P1 field or change the value of the P2 field and retry.

RW1206**~P1 MUST BE ENTERED WHEN ~P2 IS SET TO ~P3****Reason:**

P3 was entered in the P2 field on the Report Description panel and a value was not entered in the P1 field.

System Action:

The Report Description panel is displayed with the P1 field set in error.

User Action:

Enter a value in the P1 field or change the value of the P2 field and retry.

RW1207**~P1 MUST NOT BE ENTERED WHEN ~P2 NOT ENTERED****Reason:**

A value was not entered in the P2 field on the Report Description panel and a value was entered in the P1 field.

System Action:

The Report Description panel is displayed with the P1 field set in error.

User Action:

Clear the P1 field or enter a value in the P2 field and retry.

RW1208**~P1 MUST BE PU(BLIC) OR PR(IVATE) OR F(REEFORM)****Reason:**

An invalid value was entered in the P1 field on the Report Description panel.

System Action:

The Report Description panel is displayed with the P1 field set in error.

User Action:

Enter 'PUBLIC', 'PRIVATE' or 'FREEFORM' in the P1 field and retry. Only the first character needs to be entered if the required value is 'FREEFORM', else the first two characters need to be entered.

RW1209

~P1 MUST BE A(CTIVE) OR I(NACTIVE)

Reason:

An invalid value was entered in the P1 field on the Report Description panel.

System Action:

The Report Description panel is displayed with the P1 field set in error.

User Action:

Enter 'ACTIVE' or 'INACTIVE' in the P1 field and retry. Only the first character needs to be entered.

RW1210

~P1 MUST NOT BE SET TO FREEFORM WHEN ~P2 IS ENTERED

Reason:

'FREEFORM' was entered in the P1 field on the Report Description panel and a value was also entered in the P2 field.

System Action:

The Report Description panel is displayed with the P1 field set in error.

User Action:

Change the value of the P1 field or clear the P2 field and retry.

RW1211

Report Appl LENGTH MUST BE GREATER THAN OR EQUAL TO 3

Reason:

A value was entered in the Report Appl field on the Report Description panel that was less than three in length.

System Action:

The Report Description panel is displayed with the Report Appl field set in error.

User Action:

Correct the value in the Report Appl field and retry.

RW1301**UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE= P1****Reason:**

The service procedure \$RWRD13L for the Report Definition List failed because it received an unknown call type in variable &\$SLCALLTYPE from procedure \$CASL000. The unknown call type was P1 .

System Action:

Procedure \$RWRD13L terminates.

User Action:

Contact the system administrator.

RW1302**USER P1 NOT AUTHORIZED TO ACCESS PUBLIC REPORTS****Reason:**

A request to present a Report Definition List with public reports listed failed because the user was not authorized for the request. The userid of the user was *P1* .

System Action:

The request is rejected.

User Action:

None.

RW1303

UNSUPPORTED RETURN CODE RECEIVED FROM PROCEDURE \$CAUA000, RC= P1

Reason:

A request to present a Report Definition List or delete a report definition failed because the service procedure \$RWRD13L for the Report Definition List received an unknown return code from procedure \$CAUA000. The unknown return code was **P1** .

System Action:

The request is rejected and procedure \$RWRD13L terminates.

User Action:

Contact the system administrator.

RW1304

NO REPORTS DEFINED

Reason:

A request to present a Report Definition List failed because there were no reports defined.

System Action:

The request is rejected.

User Action:

None.

RW1305

NO REPORTS DEFINED WITHIN SPECIFIED RANGE

Reason:

A request to present a Report Definition List failed because there were no reports defined within the range specified.

System Action:

The request is rejected.

User Action:

None.

RW1306**REPORT ~P1 DELETED BY ANOTHER USER****Reason:**

The selection of a report definition from the Report Definition List failed because the report was deleted by another user since the list was presented. The name of the report definition selected was P1 .

System Action:

The selection of the report definition is rejected.

User Action:

None.

RW1307**USER P1 NOT AUTHORIZED TO ACCESS P2 REPORTS****Reason:**

A request to present a Report Definition List with private reports listed failed because the user was not authorized for the request. The userid of the user was P1 . P2 is set to 'YOUR OWN PRIVATE' if the reports to be listed were their own or set to 'OTHER USERS PRIVATE' if other user's reports were to be listed.

System Action:

The request is rejected.

User Action:

None.

RW1401**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The service procedure \$RWRM14M for the Report Definition Component Menu failed because it received an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

Procedure \$RWRM14M terminates.

User Action:

Contact the system administrator.

RW1402

USER P1 NOT AUTHORIZED TO P2 P3 REPORTS

Reason:

A request to browse or update a report definition failed because the user was not authorized for the request. The function requested was *P2* and the userid of the user was *P1* . *P3* is set to 'YOUR OWN PRIVATE' if the report to be accessed was their own or set to 'OTHER USERS PRIVATE' if another user's report was to be accessed.

System Action:

The request is rejected.

User Action:

None.

RW1403

UNSUPPORTED RETURN CODE RECEIVED FROM PROCEDURE \$CAUA000, RC= P1

Reason:

A request to browse or update a report definition failed because procedure \$RWRM14M received an unknown return code from procedure \$CAUA000. The unknown return code was **P1** .

System Action:

The request is rejected and procedure \$RWRM14M terminates.

User Action:

Contact the system administrator.

RW1404**UNSUPPORTED RETURN CODE RECEIVED FROM MENU ACTION, RC= P1****Reason:**

The service procedure \$RWRM14M for the Report Definition Component Menu received an unknown return code from a procedure that was executed as the action for an option on the menu. The unknown return code was P1 .

System Action:

Procedure \$RWRM14M terminates and the Report Definition Component Menu is presented.

User Action:

Contact the system administrator.

RW1501**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

A request to browse or edit a report header, page header, control break header, data format, control break trailer, page trailer or report trailer failed because procedure \$RWF15P received an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

The request is rejected and procedure \$RWF15P terminates.

User Action:

Contact the system administrator.

RW1502

UNSUPPORTED RETURN CODE RECEIVED FROM PROCEDURE \$CAUA000, RC= P1

Reason:

Procedure \$RWFI15P encountered an error authorizing an edit request or getting or saving a user's scroll amount. It received an unknown return code from procedure \$CAUA000. The unknown return code was **P1** .

System Action:

This error message is displayed on the last panel displayed or procedure \$RWFI15P terminates.

User Action:

Contact the system administrator.

RW1503

VARTABLE P1 ERROR, FDBK= P2 ID= P3

Reason:

Procedure \$RWFI15P encountered an error allocating or resetting a variable table. The request was *P1* , the identifier of the variable table was *P3* and the feedback code was *P2* .

System Action:

This error message is displayed on the last panel displayed or procedure \$RWFI15P terminates.

User Action:

Interpret the feedback code using the NCL Reference.

RW1504**VARIABLE P1 ERROR, FDBK= P2 ID= P3 KEY= P4****Reason:**

Procedure \$RWFI15P encountered an error accessing a variable table. The request was *P1* , the identifier of the variable table was *P3* , the feedback code was *P2* and the key value used was *P4* .

System Action:

This error message is displayed on the last panel displayed or procedure \$RWFI15P terminates.

User Action:

Interpret the feedback code using the NCL Reference.

RW1505**~P1 ~P2 ALREADY DEFINED****Reason:**

A request to add a control break header or trailer or data format failed because it was already defined. The component was *P1* and the sort field number or data format number was *P2* .

System Action:

The request is rejected.

User Action:

Specify a sort field number or data format number not previously defined and retry.

RW1506

~P1 ~P2 NOT DEFINED

Reason:

A request to browse, update or copy a control break header or trailer or data format failed because it was not defined. The component was P1 and the sort field number or data format number was P2 .

System Action:

The request is rejected.

User Action:

Specify a sort field number or data format number previously defined and retry.

RW1507

~P1 ~P2

Reason:

A report header, page header, page trailer or report trailer was successfully updated. The component was P1 and the action successfully performed was P2 .

System Action:

None.

User Action:

None.

RW1508

~P1 ~P2 ~P3

Reason:

A control break header or trailer or data format was successfully added or updated. The component was P1 and the sort field number or data format number was P2 . The action successfully performed was P3 .

System Action:

None.

User Action:

None.

RW1509**INVALID COMMAND****Reason:**

An invalid command was entered in the Command field.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RW1510**~P1 CANCELLED****Reason:**

An edit report header, page header, page trailer, or report trailer request, or add or update control break header, data format or control break trailer request was cancelled. The request cancelled was P1 .

System Action:

None.

User Action:

None.

RW1511**~P1 COMMAND IS NOT ACTIVE ON THIS PANEL****Reason:**

A command was entered in the Command field that was a valid command, however, it was not allowed to be specified on that panel.

System Action:

The command is rejected.

User Action:

Clear the Command field.

RW1512

~P1 MUST BE ENTERED

Reason:

A value was not entered in the P1 field.

System Action:

The panel is displayed with the P1 field set in error.

User Action:

Enter a value in the P1 field and retry.

RW1513

Layout Line MUST BE BLANK WHEN Fmt IS P

Reason:

P was entered in a Fmt field and text was entered in the corresponding Layout Line.

System Action:

The panel is displayed with the Layout Line set in error.

User Action:

Clear the Layout Line or change the value of the Fmt field and retry.

RW1514

Fmt ~P1 AND ~P2 ARE MUTUALLY EXCLUSIVE

Reason:

P1 and P2 were entered in a Fmt field.

System Action:

The panel is displayed with the Fmt field set in error.

User Action:

Change the value of the Fmt field by deleting P1 or P2 and retry.

RW1515

Fmt MUST BE P, Pn OR COMBINATION OF B, O, X AND L, R OR C

Reason:

An invalid value was entered in a Fmt field.

System Action:

The panel is displayed with the Fmt field set in error.

User Action:

Enter 'P', 'Pn' or a combination of 'B', 'O', 'X' and 'L', 'R' or 'C' in the Fmt field and retry. 'n' must be in the range 0 to 9999.

RW1516

Fmt MUST BE P, Pn OR COMBINATION OF H, B, O, X AND L, R OR C

Reason:

An invalid value was entered in a Fmt field.

System Action:

The panel is displayed with the Fmt field set in error.

User Action:

Enter 'P', 'Pn' or a combination of 'H', 'B', 'O', 'X' and 'L', 'R' or 'C' in the Fmt field and retry. 'n' must be in the range 0 to 9999.

RW1517

Fmt O MUST NOT BE SPECIFIED FOR LAYOUT LINE 1

Reason:

O was entered in the Fmt field that corresponds to layout line 1.

System Action:

The panel is displayed with the layout line set in error.

User Action:

Delete O from the Fmt field that corresponds to layout line 1 and retry.

RW1518

Fmt H MUST NOT BE SPECIFIED IN A ~P1

Reason:

H was entered in a Fmt field for a Report Header, Page Header, Control Break Header or Trailer, Page Trailer or Report Trailer. The component being edited was P1 .

System Action:

The panel is displayed with the Fmt field set in error.

User Action:

Delete H from the Fmt field and retry.

RW1519

Data Field IN COLUMN ~P1 MUST BE 1 TO 12 CHARACTERS

Reason:

An invalid Data Field name was entered in a Layout Line starting at column P1 . The Data Field name entered was not 1 to 12 alphanumeric and/or national characters.

System Action:

The panel is displayed with the layout line set in error.

User Action:

Change the name of the Data Field to be 1 to 12 alphanumeric and/or national characters and retry. An ampersand (&) *followed by a question* mark (?) can be entered in the layout line to present a list of Data Fields from which a selection can be made.

RW1520**Data Field '~P1' IN COLUMN ~P2 IS A RESERVED NCL KEYWORD****Reason:**

An invalid Data Field name was entered in a layout line starting at column P2 . The Data Field name entered was a reserved NCL keyword. The name of the Data Field was P1 .

System Action:

The panel is displayed with the layout line set in error.

User Action:

Change the name of the Data Field to a name that is not a reserved NCL keyword and retry. An ampersand (&) *followed by a question mark (?)* can be entered in the layout line to present a list of Data Fields from which a selection can be made.

RW1521**System Field IN COLUMN ~P1 IS INVALID****Reason:**

An invalid System Field name was entered in a layout line starting at column P1 . The System Field name entered was not defined in the System Field table.

System Action:

The panel is displayed with the layout line set in error.

User Action:

Change the name of the System Field to the name of a field defined in the System Field table and retry. An exclamation mark (!) followed by a question mark (?) can be entered in the layout line to present a list of System Fields from which a selection can be made.

RW1522

SYSTEM FIELD ENTERED IN Real Field IS INVALID

Reason:

An invalid System Field name was entered in a Real Field field. The field name entered was not defined in the System Field table.

System Action:

The panel is displayed with the Real Field field set in error.

User Action:

Change the name of the System Field in the Real Field field to the name of a field defined in the System Field table and retry. An exclamation mark (!) followed by a question mark (?) can be entered in the Real Field to present a list of System Fields from which a selection can be made.

RW1523

Real Field MUST BE A SYSTEM OR DATA FIELD

Reason:

An invalid value was entered in a Real Field field. The value entered was not a Data Field or System Field.

System Action:

The panel is displayed with the Real Field field set in error.

User Action:

Change the value in the Real Field field to the name of a Data Field or System Field and retry. A question mark (?) can be entered in the Real Field to present a list of Data Fields from which a selection can be made. An exclamation mark (!) followed by a question mark (?) can be entered in the Real Field to present a list of System Fields from which a selection can be made.

RW1524**Real Field '~P1' IS A RESERVED NCL KEYWORD****Reason:**

An invalid Data Field name was entered in a Real Field field. The Data Field name entered was a reserved NCL keyword. The name of the Data Field was P1 .

System Action:

The panel is displayed with the Real Field field set in error.

User Action:

Change the name of the Data Field in the Real Field field to a name that is not a reserved NCL keyword and retry. A question mark (?) can be entered in the Real Field to present a list of Data Fields from which a selection can be made.

RW1525**INVALID VALUE FOR Format****Reason:**

An invalid value was entered in a Format field.

System Action:

The panel is displayed with the Format field set in error.

User Action:

Correct the value in the Format field and retry. Refer to the help information by issuing the help command for the valid values that may be entered in the Format field.

RW1526**INVALID LINE COMMAND****Reason:**

An invalid line command was entered in a sequence number field.

System Action:

The command is rejected.

User Action:

Correct the line command and retry.

RW1527

COMMAND CONFLICT

Reason:

A number of mutually exclusive line commands were entered in sequence number fields.

System Action:

The line commands are not processed.

User Action:

Correct the line commands and retry.

RW1528

COMMAND NUMBERS CONFLICT

Reason:

A number of line commands were entered in sequence number fields and some or all were followed by a number which caused them to be mutually exclusive.

System Action:

The line commands are not processed.

User Action:

Correct the line commands and retry.

RW1529

BLOCK COMMAND INCOMPLETE

Reason:

A block line command was partially specified. That is, either the start line or end line was specified but not both.

System Action:

The block command remains pending.

User Action:

Specify the start line and end line.

RW1530**~P1 PENDING****Reason:**

A move or copy line command was specified but the position the lines were to be moved/copied before/after was not specified. The line command specified was P1 .

System Action:

The move/copy command remains pending.

User Action:

Specify the position the lines are to be moved/copied to by entering an 'A' or 'B' line command in a sequence number field.

RW1531**LINE COMMAND INVALID ON THIS LINE****Reason:**

A line command was entered in a Sequence Number field that was a valid line command, however, it was not allowed to be specified for that line.

System Action:

The line command is rejected.

User Action:

Correct the line command and retry.

RW1532**COMMAND PARAMETER INVALID****Reason:**

A command was entered in the Command field that was a valid command, however, the command parameter was invalid.

System Action:

The command is rejected.

User Action:

Correct the command parameter and retry.

RW1533

REPEATING FIELD MUST NOT BE SPECIFIED IN A ~P1

Reason:

A repeating field was entered in a layout line or a Real Field field for a Page Trailer. The component being edited was P1 . A repeating field is a Data Field that is terminated by an asterisk (*).

System Action:

The panel is displayed with the layout line or Real Field field set in error.

User Action:

Change the Data Field so that it is not a repeating field and retry.

RW1534

ERROR ENCOUNTERED VALIDATING Real Field, REFER TO MESSAGE P1 ON LOG

Reason:

Validation of the Real Field field failed because Table Services encountered an error during the validation of the field. The number of the message returned by Table Services was P1 .

System Action:

Message *P1* is written to the activity log.

User Action:

Refer to message *P1* on the activity log for more information.

RW1535**GENERATION OF DATA FIELD LIST FAILED, REFER TO MESSAGE P1 ON THE LOG****Reason:**

A request to present a Data Field List failed because Table Services encountered an error during the generation of the List. The number of the message returned by Table Services was P1 .

System Action:

Message *P1* is written to the activity log.

User Action:

Refer to message *P1* on the activity log for more information.

RW1536**USER P1 NOT AUTHORIZED TO P2 P3 REPORTS****Reason:**

A request to browse or edit a report header, page header, control break header, data format, control break trailer, page trailer or report trailer failed because the user was not authorized for the request. The function requested was *P2* and the userid of the user was *P1* . *P3* is set to 'YOUR OWN PRIVATE' if the report to be accessed was their own or set to 'OTHER USERS PRIVATE' if another user's report was to be accessed.

System Action:

The request is rejected.

User Action:

None.

RW1537

COMMAND ASSIGNED TO FUNCTION KEY ~P1 IS INVALID

Reason:

Function key P1 was pressed and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

RW1538

SYSTEM FIELD 'P' IS ONLY ALLOWED IN PAGE HEADERS AND TRAILERS

Reason:

The Page Number system field (!P) was entered in an item which is not a Page Header or Page Trailer.

System Action:

The layout line containing the Page Header system variable is highlighted.

User Action:

Delete the Page Header system variable from the item.

RW1601

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

A request to browse or edit the sort fields for a report definition failed because procedure \$RWSF16P received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$RWSF16P terminates.

User Action:

Contact the system administrator.

RW1603**COMMAND ASSIGNED TO FUNCTION KEY ~P1 IS INVALID****Reason:**

Function key P1 was pressed on the Sort Fields panel and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

RW1604**INVALID COMMAND****Reason:**

An invalid command was entered in the Command field on the Sort Fields panel.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RW1605**SORT FIELDS NOT DEFINED FOR PUBLIC REPORT ~P1****Reason:**

A request to browse the sort fields for a public report failed because there were no sort fields defined. The name of the report was P1 .

System Action:

The request is rejected.

User Action:

None.

RW1606

SORT FIELDS NOT DEFINED FOR PRIVATE REPORT ~P1 FOR USERID ~P2

Reason:

A request to browse the sort fields for a private report failed because there were no sort fields defined. The name of the report was P1 and it was owned by userid P2 .

System Action:

The request is rejected.

User Action:

None.

RW1607

~P1 CANCELLED

Reason:

An edit sort fields request was cancelled. The request cancelled was P1 .

System Action:

None.

User Action:

None.

RW1608

SORT FIELDS FOR PUBLIC REPORT ~P1 ~P2

Reason:

The sort fields for a report definition were successfully updated. The name of the report definition was P1 and it was a public report. The action successfully performed was P2 .

System Action:

None.

User Action:

None.

RW1609**SORT FIELDS FOR PRIVATE REPORT ~P1 FOR USERID ~P2 ~P3****Reason:**

The sort fields for a report definition were successfully updated. The name of the report definition was P1 and it was a private report owned by userid P2 . The action successfully performed was P3 .

System Action:

None.

User Action:

None.

RW1610**SORT FIELDS CANNOT BE DEFINED FOR REPORT APPL ~P1****Reason:**

A request to edit the sort fields for a report definition failed because the report appl in which the report was defined did not support record sorting. The report appl was P1 .

System Action:

The request is rejected.

User Action:

None.

RW1701**UNSUPPORTED FIELD NAME RECEIVED FROM \$CAGP000, FIELD= P1****Reason:**

The validation exit \$RWSF17X for the Sort Fields panel received an unknown field name from procedure \$CAGP000. The name of the field was P1 .

System Action:

Procedure \$RWSF17X terminates.

User Action:

Contact the system administrator.

RW1702

~P1 INVALID WHEN ~P2 NOT ENTERED

Reason:

A value was entered in the Start Offset field on the Sort Fields panel and a value was not entered in the Field Name field. P1 was set to Start Offset and P2 was set to Field Name.

System Action:

The Sort Fields panel is displayed with the Start Offset field set in error.

User Action:

Clear the Start Offset field or enter a field name in the Field Name field and retry.

RW1703

~P1 INVALID WHEN ~P2 NOT ENTERED

Reason:

A value was entered in the End Offset field on the Sort Fields panel and a value was not entered in the Field Name field. P1 was set to End Offset and P2 was set to Field Name.

System Action:

The Sort Fields panel is displayed with the End Offset field set in error.

User Action:

Clear the End Offset field or enter a field name in the Field Name field and retry.

RW1704**~P1 MUST BE GREATER THAN OR EQUAL TO ~P2****Reason:**

A value was entered in the End Offset field on the Sort Fields panel that was less than the value entered in the Start Offset field. P1 was set to End Offset and P2 was set to Start Offset.

System Action:

The Sort Fields panel is displayed with the End Offset field set in error.

User Action:

Change the value of the Start Offset or End Offset field so that the End Offset is greater than or equal to the Start Offset and retry.

RW1705**~P1 INVALID WHEN ~P2 NOT ENTERED****Reason:**

A value was entered in the Order field on the Sort Fields panel and a value was not entered in the Field Name field. P1 was set to Order and P2 was set to Field Name.

System Action:

The Sort Fields panel is displayed with the Order field set in error.

User Action:

Clear the Order field or enter a field name in the Field Name field and retry.

RW1706**~P1 MUST BE 'A' (ASCENDING) OR 'D' (DESCENDING)****Reason:**

An invalid value was entered in the Order field on the Sort Fields panel. P1 was set to Order.

System Action:

The Sort Fields panel is displayed with the Order field set in error.

User Action:

Enter 'A' for ascending or 'D' for descending in the Order field and retry.

RW1707

~P1 NOT SUPPORTED FOR APPLICATION ~P2

Reason:

A value was entered in the Start Offset or End Offset field on the Sort Fields panel, however, the application in which the report was defined did not support sort field offsets. The field in which the offset was entered was P1 and the application ID was P2 .

System Action:

The Sort Fields panel is displayed with the P1 field set in error.

User Action:

Clear the P1 field and retry.

RW1708

~P1 MUST BE '~P2' FOR APPLICATION ~P3

Reason:

A value was entered in the Order field on the Sort Fields panel that was not equal to P2 . The application in which the report was defined only supported the Order field being set to P2 . The application ID was P2 and P1 was set to Order.

System Action:

The Sort Fields panel is displayed with the Order field set in error.

User Action:

Enter P2 in the Order field and retry.

RW1709**MIXED ~P1 VALUES NOT SUPPORTED FOR APPLICATION ~P2****Reason:**

A combination of A's (ascending) and D's (descending) were entered in the Order fields on the Sort Fields panel, however, the application in which the report was defined did not support mixed sort orders. The application ID was P2 and P1 was set to Order.

System Action:

The Sort Fields panel is displayed with the Order field set in error.

User Action:

Change the value of the Order fields so they are all set to A or D and retry.

RW1710**SORT FIELD LIMIT FOR APPLICATION ~P1 IS ~P2****Reason:**

The number of sort fields that were entered on the Sort Fields panel exceeded the maximum supported by the application in which the report was defined. The application ID was P1 and the maximum number of sort fields supported by the application was P2 .

System Action:

The Sort Fields panel is displayed with the Field Name field set in error.

User Action:

Specify fewer sort fields.

RW1801

UNSUPPORTED CALL TYPE RECEIVED FROM \$CABU000, CALLTYPE= P1

Reason:

The service procedure \$RWVL18L for the View Report Layout failed because it received an unknown call type in variable &\$SLCALLTYPE from procedure \$CABU000. The unknown call type was P1 .

System Action:

Procedure \$RWVL18L terminates.

User Action:

Contact the system administrator.

RW1802

VARIABLE P1 ERROR, FDBK= P2 ID= P3

Reason:

Procedure \$RWVL18L encountered an error accessing a variable table. The request was P1 , the identifier of the variable table was P3 and the feedback code was P2 .

System Action:

Procedure \$RWVL18L terminates.

User Action:

Interpret the feedback code using the NCL Reference.

RW1803

USER P1 NOT AUTHORIZED TO ACCESS P2 REPORTS

Reason:

A request to view the layout for a report definition failed because the user was not authorized for the request. The userid of the user was P1 and the report type was P2 .

System Action:

The request is rejected.

User Action:

None.

RW1804**~P1 REPORT DEFINITION ~P2 NOT FOUND****Reason:**

A request to view the layout for a report definition failed because the report definition was not defined. The report type was P1 and the name of the report was P2 .

System Action:

The request is rejected.

User Action:

Specify a report name previously defined and retry.

RW1805**LOCATE COMMAND IS NOT AVAILABLE FOR VIEW REPORT LAYOUT****Reason:**

The LOCATE command was entered in the Command field on the View Report Layout panel, however, it was not allowed to be entered on that panel.

System Action:

The command is rejected.

User Action:

Clear the Command field.

RW1806**NO FORMAT ITEMS DEFINED FOR REPORT****Reason:**

A request to view the layout for a report definition failed because there were no format items defined for the specified report.

System Action:

The request is rejected.

User Action:

None.

RW1901

UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE=~P1

Reason:

The service procedure \$RWRD19L for the Report List failed because it received an unknown call type in variable \$SLCALLTYPE from procedure \$CASL000. The unknown call type was P1 .

System Action:

Procedure \$RWRD19L terminates.

User Action:

Contact the system administrator.

RW1902

VARTABLE P1 ERROR, FDBK= P2 ID= P3

Reason:

A request to present a Report List failed because an error was encountered allocating a variable table. The request was *P1* , the identifier of the variable table was *P3* and the feedback code was *P2* .

System Action:

The request is rejected.

User Action:

Interpret the feedback code using the NCL Reference.

RW1903

VARTABLE P1 ERROR, FDBK= P2 ID= P3 KEY= P4

Reason:

A request to present a Report List failed because an error was encountered accessing a variable table. The request was *P1* , the identifier of the variable table was *P3* , the feedback code was *P2* and the key value used was *P4* .

System Action:

The request is rejected.

User Action:

Interpret the feedback code using the NCL Reference.

RW1904**NO REPORTS DEFINED WITHIN SPECIFIED RANGE****Reason:**

A request to present a Report List failed because there were no reports defined within the range specified.

System Action:

The request is rejected.

User Action:

None.

RW1905**REPORT ~P1 DELETED BY ANOTHER USER****Reason:**

The selection of a report from the Report List failed because the report was deleted by another user since the Report List was displayed. The name of the report selected was P1 .

System Action:

The selection of the report is rejected.

User Action:

None.

RW2001**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The service procedure \$RWFI20M for the Control Break Header Menu, Data Format Menu or Control Break Trailer Menu failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure \$RWFI20M terminates.

User Action:

Contact the system administrator.

RW2002

USER P1 NOT AUTHORIZED TO P2 P3 REPORTS

Reason:

A request to access the Control Break Header Menu, Data Format Menu or Control Break Trailer Menu failed because the user was not authorized for the request. The userid of the user was *P1* and the requested request was *P2* . *P3* is set to 'YOUR OWN PRIVATE' if the report to be accessed was their own or set to 'OTHER USERS PRIVATE' if another user's report was to be accessed.

System Action:

The request is rejected.

User Action:

None.

RW2003

UNSUPPORTED RETURN CODE RECEIVED FROM PROCEDURE \$CAUA000, RC= P1

Reason:

A request to access the Control Break Header Menu, Data Format Menu or Control Break Trailer Menu failed because the service procedure \$RWF120M for the menu received an unknown return code from procedure \$CAUA000. The unknown return code was **P1** .

System Action:

The request is rejected and procedure \$RWF120M terminates.

User Action:

Contact the system administrator.

RW2004**UNSUPPORTED RETURN CODE RECEIVED FROM MENU ACTION, RC= P1****Reason:**

The service procedure \$RWFI20M for the Control Break Header Menu, Data Format Menu or Control Break Trailer Menu received an unknown return code from a procedure that was executed as the action for an option on the menu. The unknown return code was P1 .

System Action:

Procedure \$RWFI20M terminates and the Control Break Header Menu, Data Format Menu or Control Break Trailer Menu is presented.

User Action:

Contact the system administrator.

RW2005**~P1 MUST BE ENTERED WHEN OPTION ~P2 IS SELECTED****Reason:**

An option was selected from the Control Break Header Menu, Data Format Menu or Control Break Trailer Menu and a value was not entered in the P1 field. The option selected was P2 .

System Action:

The selection of the option is rejected and the P1 field is set in error.

User Action:

Enter a value in the P1 field and retry.

RW2006

INVALID ~P1 MUST BE NUMERIC

Reason:

An option was selected from the Control Break Header Menu, Data Format Menu or Control Break Trailer Menu and an invalid value was entered in the P1 field. The value entered was not numeric.

System Action:

The selection of the option is rejected and the P1 field is set in error.

User Action:

Correct the value in the P1 field and retry.

RW2101

UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE= P1

Reason:

The service procedure \$RWFD21L for the Control Break Header List, Data Format List, Control Break Trailer List or Report Definition Component List failed because it received an unknown call type in variable &\$SLCALLTYPE from procedure \$CASL000. The unknown call type was P1 .

System Action:

Procedure \$RWFD21L terminates.

User Action:

Contact the system administrator.

RW2102

NO ~P1 DEFINED

Reason:

A request to present a Control Break Header List, Data Format List or Control Break Trailer List failed because there were no P1 defined.

System Action:

The request is rejected.

User Action:

None.

RW2103**~P1 ~P2 DELETED BY ANOTHER USER****Reason:**

The selection of a P1 from the Control Break Header List, Data Format List, Control Break Trailer List or Report Definition Component List failed because it was deleted by another user since the list was presented. The component selected was P1 and if the component was a control break header or trailer or data format P2 was the sort field number or data format number.

System Action:

The selection of the P1 is rejected.

User Action:

None.

RW2104**~P1 FUNCTION INVALID FOR ~P2****Reason:**

A P2 was selected from the Report Definition Component List, however, the function request was not valid for the record selected. The function requested was P1 .

System Action:

The selection of the P2 is rejected.

User Action:

None.

RW2105

USER P1 NOT AUTHORIZED TO ACCESS P2 REPORTS

Reason:

A request to present a Control Break Header List, Data Format List, Control Break Trailer List or Report Definition Component List failed because the user was not authorized for the request. The userid of the user was *P1* . *P2* is set to 'YOUR OWN PRIVATE' if the report to be accessed was their own or set to 'OTHER USERS PRIVATE' if another user's report was to be accessed.

System Action:

The request is rejected.

User Action:

None.

RW2106

PUBLIC REPORT ~P1 NOT DEFINED

Reason:

A request to present a Control Break Header List, Data Format List, Control Break Trailer List or Report Definition Component List for a public report failed because the report was not defined. The name of the report was *P1* .

System Action:

The request is rejected.

User Action:

Correct the name of the report and retry.

RW2107**PRIVATE REPORT ~P1 FOR USERID ~P2 NOT DEFINED****Reason:**

A request to present a Control Break Header List, Data Format List, Control Break Trailer List or Report Definition Component List for a private report failed because the report was not defined. The name of the report was P1 .

System Action:

The request is rejected.

User Action:

Correct the name of the report and retry.

RW2201**INVALID KEYWORD VALUE SPECIFIED, KEYWORD=~P1 VALUE=~P2****Reason:**

A request display report information failed because procedure \$RWRI22P received an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

The request is rejected and procedure \$RWRI22P terminates.

User Action:

Contact the system administrator.

RW2202**INVALID COMMAND****Reason:**

An invalid command was entered in the Command field on the Report Information panel.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RW2203

PUBLIC REPORT ~P1 NOT DEFINED

Reason:

A request to display report information failed because the report definition was not defined. The name of the report was P1 and it was a public report.

System Action:

The request is rejected.

User Action:

Specify a report name previously defined and retry.

RW2204

PRIVATE REPORT ~P1 FOR USERID ~P2 NOT DEFINED

Reason:

A request to display report information failed because the report definition was not defined. The name of the report was P1 and it was a private report owned by userid P2 .

System Action:

The request is rejected.

User Action:

Specify a report name previously defined and retry.

RW2205

PUBLIC CRITERIA ~P1 NOT DEFINED

Reason:

A request to display report information failed because the criteria defined in the report definition was not defined. The name of the criteria was P1 and it was a public criteria.

System Action:

The request is rejected.

User Action:

Update the report definition to contain a criteria previously defined and retry.

RW2206**PRIVATE CRITERIA ~P1 FOR USERID ~P2 NOT DEFINED****Reason:**

A request to display report information failed because the criteria defined in the report definition was not defined. The name of the criteria was P1 and it was a private criteria owned by userid P2 .

System Action:

The request is rejected.

User Action:

Update the report definition to contain a criteria previously defined and retry.

RW2207**COMMAND ASSIGNED TO FUNCTION KEY ~P1 IS INVALID****Reason:**

Function key P1 was pressed on the Report Information panel and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

RW3001**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The service procedure \$RWSD30M for the Schedule Definition Menu failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure \$RWSD30M terminates.

User Action:

Contact the system administrator.

RW3002

USER P1 NOT AUTHORIZED TO ACCESS P2 SCHEDULES

Reason:

A request to access the Schedule Definition Menu or start or stop schedule processing failed because the user was not authorized for the request. The userid of the user was *P1* and if the menu was to be accessed *P2* was set to 'MAINTAIN' or if schedule processing was to be started or stopped *P2* was set to 'START/STOP'.

System Action:

The request is rejected.

User Action:

None.

RW3003

UNSUPPORTED RETURN CODE FROM \$CAUA000, RC= P1

Reason:

A request to access the Schedule Definition Menu failed because the service procedure \$RWSD30M for the menu received an unknown return code from procedure \$CAUA000. The unknown return code was *P1* .

System Action:

The request is rejected and procedure \$RWSD30M terminates.

User Action:

Contact the system administrator.

RW3004**~P1 MUST BE ALPHANUMERICS AND/OR NATIONALS****Reason:**

An option was selected from the Schedule Definition Menu and an invalid value was entered in the P1 field. The value entered was not alphanumeric and/or national characters.

System Action:

The selection of the option is rejected and the P1 field is set in error.

User Action:

Correct the value in the P1 field and retry.

RW3101**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

A request to add, browse, update, delete or copy a schedule definition failed because procedure \$RWSD31P received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$RWSD31P terminates.

User Action:

Contact the system administrator.

RW3102**INVALID COMMAND****Reason:**

An invalid command was entered in the Command field on the Schedule Definition panel.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RW3103

SCHEDULE ~P1 NOT DEFINED

Reason:

A request to browse, update, delete or copy a schedule definition failed because the schedule definition was not defined. The name of the schedule was P1 .

System Action:

The request is rejected.

User Action:

Specify a schedule name previously defined and retry.

RW3104

~P1 CANCELLED

Reason:

An add, browse, update or delete schedule definition request was cancelled. The request cancelled was P1 .

System Action:

None.

User Action:

None.

RW3105

SCHEDULE ~P1 ~P2

Reason:

A schedule definition was successfully added, updated or deleted. The name of the schedule definition was P1 and the action successfully performed was P2 .

System Action:

None.

User Action:

None.

RW3106**SCHEDULE ~P1 ALREADY DEFINED****Reason:**

A request to add a schedule definition failed because the schedule definition was already defined. The name of the schedule was P1 .

System Action:

The request is rejected.

User Action:

Specify a schedule name not previously defined and retry.

RW3107**~P1 COMMAND IS NOT ACTIVE ON THIS PANEL****Reason:**

A command was entered in the Command field on the Schedule Definition panel that was a valid command, however, it was not allowed to be specified on that panel.

System Action:

The command is rejected.

User Action:

Clear the Command field.

RW3108**SCHEDULE ~P1 IS ALREADY BEING UPDATED BY ANOTHER USER****Reason:**

A request to update or delete a schedule definition failed because the schedule definition was being updated or deleted by another user. The name of the schedule was P1 .

System Action:

The request is rejected.

User Action:

Update or delete the schedule when it is not being updated or deleted by another user.

RW3109

USER P1 NOT AUTHORIZED TO P2 SCHEDULES

Reason:

A request to add, browse, update, delete or copy a schedule definition failed because the user was not authorized for the request. The function requested was *P2* and the userid of the user was *P1* .

System Action:

The request is rejected.

User Action:

None.

RW3110

UNSUPPORTED RETURN CODE FROM PROCEDURE \$CAUA000, RC= P1

Reason:

A request to add, browse, update, delete or copy a schedule definition failed because procedure \$RWSD31P received an unknown return code from procedure \$CAUA000. The unknown return code was P1 .

System Action:

The request is rejected and procedure \$RWSD31P terminates.

User Action:

Contact the system administrator.

RW3111

PRESS ENTER KEY TO CONFIRM DELETE OR CANCEL KEY TO CANCEL REQUEST

Reason:

The Schedule Definition panel was displayed requesting the user to confirm the deletion of the schedule definition presented.

System Action:

None.

User Action:

Press the ENTER key to allow the schedule definition to be deleted, or press the CANCEL key to cancel the delete request.

RW3201**UNSUPPORTED FIELD NAME RECEIVED FROM \$CAGP000, FIELD= P1****Reason:**

The validation exit \$RWSD32X for the Schedule Definition panel received an unknown field name from procedure \$CAGP000. The name of the field was P1 .

System Action:

Procedure \$RWSD32X terminates.

User Action:

Contact the system administrator.

RW3202**SCHEDULE ~P1 ALREADY DEFINED****Reason:**

A schedule name was entered in the Schedule Name field on the Schedule Definition panel that was previously defined. The schedule name entered was P1 .

System Action:

The Setup Definition panel is displayed with the Schedule Name field set in error.

User Action:

Enter a schedule name not previously defined and retry.

RW3203**~P1 MUST BE T(IME), D(AYS) OR M(ONTHS)****Reason:**

An invalid value was entered in the P1 field on the Schedule Definition panel.

System Action:

The Schedule Definition panel is displayed with the P1 field set in error.

User Action:

Enter 'TIME', 'DAYS' or 'MONTHS' in the P1 field and retry. Only the first character needs to be entered.

RW3204

~P1 MUST BE AFTER Start Date

Reason:

A date was entered in the Expiry Date field on the Schedule Definition panel that was less than or equal to the date entered in the Start Date field. P1 was set to Expiry Date.

System Action:

The Schedule Definition panel is displayed with the Expiry Date field set in error.

User Action:

Change the date in the Start Date or Expiry Date field so that the Expiry Date is greater than the Start Date and retry.

RW3205

~P1 CONTAINS AN INVALID DAY

Reason:

An invalid day was entered in the P1 field on the Schedule Definition panel.

System Action:

The Schedule Definition panel is displayed with the P1 field set in error.

User Action:

Enter a list of valid days separated by commas in the P1 field or clear the field and retry.

RW3206

~P1 MUST BE A(CTIVE) OR I(NACTIVE)

Reason:

An invalid value was entered in the P1 field on the Schedule Definition panel.

System Action:

The Schedule Definition panel is displayed with the P1 field set in error.

User Action:

Enter 'ACTIVE' or 'INACTIVE' in the P1 field and retry. Only the first character needs to be entered.

RW3207**~P1 MUST BE MON, LOG, SYS OR *****Reason:**

An invalid value was entered in the P1 field on the Schedule Definition panel.

System Action:

The Schedule Definition panel is displayed with the P1 field set in error.

User Action:

Enter 'MON', 'LOG', 'SYS' or '*' in the P1 field and retry.

RW3208**~P1 MUST BE M(ON), L(OG) OR S(YS)****Reason:**

An invalid value was entered in the P1 field on the Schedule Definition panel.

System Action:

The Schedule Definition panel is displayed with the P1 field set in error.

User Action:

Enter 'MON', 'LOG' or 'SYS' in the P1 field and retry. Only the first character needs to be entered.

RW3209**P1 MUST BE AFTER Start Time****Reason:**

A time was entered in the End Time field on the Schedule Definition panel that was less than or equal to the time entered in the Start Time field. *P1* was set to End Time.

System Action:

The Schedule Definition panel is displayed with the End Time field set in error.

User Action:

Change the time in the Start Time or End Time field so that the End Time is greater than the Start Time and retry.

RW3210

P1 MUST CONTAIN P2 FOR COMPATIBILITY WITH Start Date/Frequency

Reason:

If specified, the Valid Days list must contain the day, P2 for compatibility with a Start Date which falls on that day when the Frequency Type is DAYS *and* the Frequency is a multiple of 7.

System Action:

The Schedule Definition panel is displayed with the Valid Days field set in error.

User Action:

Change the Valid Days field to P2 or clear it and retry. Changing the value of the Start Date and/or Frequency fields will also correct the incompatibility error.

RW3301

UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE= P1

Reason:

The service procedure \$RWSD33L for the Schedule Definition List failed because it received an unknown call type in variable &\$SLCALLTYPE from procedure \$CASL000. The unknown call type was P1 .

System Action:

Procedure \$RWSD33L terminates.

User Action:

Contact the system administrator.

RW3302**NO SCHEDULES DEFINED****Reason:**

A request to present a Schedule Definition List failed because there were no schedules defined.

System Action:

The request is rejected.

User Action:

None.

RW3303**NO SCHEDULES DEFINED WITH A PREFIX OF '~P1'****Reason:**

A request to present a Schedule Definition List failed because there were no schedules defined with names starting with the characters ' P1 '.

System Action:

The request is rejected.

User Action:

None.

RW3304**SCHEDULE ~P1 DELETED****Reason:**

A schedule definition was successfully deleted. The name of the schedule definition successfully deleted was P1 .

System Action:

None.

User Action:

None.

RW3305

SCHEDULE ~P1 DELETED BY ANOTHER USER

Reason:

The selection of a schedule definition from the Schedule Definition List failed because the schedule was deleted by another user since the list was presented. The name of the schedule definition selected was P1 .

System Action:

The selection of the schedule definition is rejected.

User Action:

None.

RW3306

SCHEDULE ~P1 ALREADY IN USE BY ANOTHER USER

Reason:

A request to delete a schedule definition failed because the schedule definition was being updated or deleted by another user. The name of the schedule was P1 .

System Action:

The request is rejected.

User Action:

Delete the schedule when it is not being updated or deleted by another user.

RW3307

USER P1 NOT AUTHORIZED TO DELETE SCHEDULES

Reason:

A request to delete a schedule definition failed because the user was not authorized for the request. The userid of the user was *P1* .

System Action:

The request is rejected.

User Action:

None.

RW3308**UNSUPPORTED RETURN CODE FROM PROCEDURE \$CAUA000, RC= P1****Reason:**

A request to delete a schedule definition failed because the service procedure \$RWSD33L for the Schedule Definition List received an unknown return code from procedure \$CAUA000. The unknown return code was P1 .

System Action:

The request is rejected and procedure \$RWSD33L terminates.

User Action:

Contact the system administrator.

RW4001**USER P1 NOT AUTHORIZED TO GENERATE REPORTS****Reason:**

A request to generate a report failed because the user was not authorized for the request. The userid of the user was P1 .

System Action:

The request is rejected.

User Action:

None.

RW4002**REPORT GENERATION IN PROGRESS****Reason:**

A report was requested to be generated in foreground mode. This message is displayed on the Generate a Report panel while the report is being generated by the system.

System Action:

The report specified on the Generate a Report panel is being generated.

User Action:

None.

RW4003

REPORT SUBMITTED

Reason:

A report was requested to be generated in background mode.

System Action:

The report specified on the Generate a Report panel is being generated under the background logger environment.

User Action:

None.

RW4004

INVALID COMMAND

Reason:

An invalid command was entered in the Command field on the Generate a Report panel.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

RW4005

COMMAND ASSIGNED TO FUNCTION KEY ~P1 IS INVALID

Reason:

Function key P1 was pressed on the Generate a Report panel and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

RW4103**~P1 PROCEDURE NOT FOUND, PROC=~P2****Reason:**

A request to generate a report failed because the report exit or service procedure for the report was not found on the procedure library. The type of procedure not found was P1 and the name of the procedure was P2 .

System Action:

The request is rejected.

User Action:

Correct the report exit or service procedure name, or create the procedure and retry.

RW4104**UNKNOWN ERROR IN ~P1 PROCEDURE, PROC=~P2 RC=~P3****Reason:**

A request to generate a report failed because the report exit or service procedure set an unknown return code in variable *RETCODE*. The type of procedure which set the unknown return code was P1 , the name of the procedure was P2 and the unknown return code was P3 .

System Action:

The report generator terminates.

User Action:

Correct the setting of the return code by the P1 procedure and retry.

RW4105

NO DEFINITION FOUND FOR SORT FIELD ~P1

Reason:

A request to generate a report failed because a control break header or trailer was defined for a sort field number that was not defined. The sort field number was P1 .

System Action:

The report generator terminates.

User Action:

Correct the report definition by defining a sort field for sort field number P1 and retry.

RW4107

~P1 REPORT DEFINITION ~P2 NOT FOUND

Reason:

A request to generate a report failed because the report was not defined. The type of report was P1 and the name of the report was P2 .

System Action:

The request is rejected.

User Action:

Specify a report name previously defined and retry.

RW4108

REPORT GENERATED SUCCESSFULLY

Reason:

A report was successfully generated.

System Action:

None.

User Action:

None.

RW4109**NO DATA FOUND FOR REPORT****Reason:**

A request to generate a report completed successfully, however, no data was received from the service procedure to be used to produce the report.

System Action:

None.

User Action:

None.

RW4110**LOCK ERROR, PNAME= P1 RC= P2 FDBK= P3****Reason:**

A request to generate a report failed because procedure \$RWGR41Z was unable to obtain a lock. The primary name of the lock was *P1* , the return code was *P2* and the feedback code was *P3* .

System Action:

The request is rejected and procedure \$PSGR41Z terminates.

User Action:

Interpret the feedback code using the NCL Reference. The SHOW LOCKS command can be issued from an OCS window to determine the procedure and userid that is holding the lock.

RW4111**USER P1 NOT AUTHORIZED TO ACCESS P2 REPORTS****Reason:**

A request to generate a report failed because the user was not authorized for the request. The userid of the user was *P1* and the type of report was *P2* .

System Action:

The request is rejected.

User Action:

None.

RW4112

REPORT NOT COMPATIBLE WITH FORM SIZE

Reason:

A request to generate a report failed because the number of lines in the report format was greater than the Lines per Page field in the form definition that was defined for the printer on which the report was to be printed.

System Action:

The request is rejected.

User Action:

Change the name of the printer or form on which the report is to be printed or reduce the number of lines in the page header or trailer in the report definition and retry.

RW4113

REPORT GENERATION FAILED

Reason:

The generation of a report failed or was incomplete because the report generator procedure encountered an error.

System Action:

This message and other messages indicating the report name and reason for the error are printed.

User Action:

Refer to the other messages printed for more information.

RW4114**APPL=~P1 TYPE=~P2 USERID=~P3 NAME=~P4 OWNER=~P5****Reason:**

The generation of a report failed or was incomplete because the report generator procedure encountered an error. This message is issued after message RW4113 to indicate the name of the report in error. The application ID in which the report was defined was P1 , the report type was P2 , the userid of the owner if the type was private was P3 and the name of the report was P4 . The owner of the report output was P5 .

System Action:

This message is printed.

User Action:

Refer to the other messages printed for more information.

RW4115**REPORT GENERATION CANCELLED BY ~P1****Reason:**

The generation of a report was cancelled by request from a user. The userid of the user was P1 .

System Action:

None.

User Action:

None.

RW4116

**REPORT GENERATION START: APPL=~P1 TYPE=~P2 USERID=~P3
NAME=~P4 OWNER=~P5**

Reason:

The generation of a report has commenced. The application ID in which the report was defined was P1 , the report type was P2 , the userid of the owner if the type was private was P3 and the name of the report was P4 . The owner of the report output was P5 .

System Action:

None.

User Action:

None.

RW4117

**REPORT GENERATION END: APPL=~P1 TYPE=~P2 USERID=~P3
NAME=~P4 OWNER=~P5**

Reason:

The generation of a report has completed. The application ID in which the report was defined was P1 , the report type was P2 , the userid of the owner if the type was private was P3 and the name of the report was P4 . The owner of the report output was P5 .

System Action:

None.

User Action:

None.

RW4118**Report definition has no format items****Reason:**

Report generation was unable to proceed because the report definition is incomplete. It contains no format items.

System Action:

Report generation fails.

User Action:

Update the report definition to include data fields and other components as required to define the report layout.

RW4201**UNSUPPORTED FIELD NAME RECEIVED FROM \$CAGP000, FIELD= P1****Reason:**

The validation exit \$RWGR42X for the Generate a Report panel received an unknown field name from procedure \$CAGP000. The name of the field was P1 .

System Action:

Procedure \$RWGR42X terminates.

User Action:

Contact the system administrator.

RW4202**INVALID ~P1****Reason:**

An invalid value was entered in the P1 field on the Generate a Report panel.

System Action:

The Generate a Report panel is displayed with the P1 field set in error.

User Action:

Correct the value in the P1 field and retry.

RW4203

~P1 MUST BE PU(BLIC) OR PR(IVATE)

Reason:

An invalid value was entered in the P1 field on the Generate a Report panel.

System Action:

The Generate a Report panel is displayed with the P1 field set in error.

User Action:

Enter 'PUBLIC' or 'PRIVATE' in the P1 field and retry. Only the first two characters need to be entered.

RW4204

~P1 MUST NOT BE ENTERED WHEN ~P2 IS SET TO ~P3

Reason:

P3 was entered in the P2 field on the Generate a Report panel and a value was entered in the P1 field.

System Action:

The Generate a Report panel is displayed with the P1 field set in error.

User Action:

Clear the P1 field or change the value of the P2 field and retry.

RW4205

Report Appl LENGTH MUST BE GREATER THAN OR EQUAL TO 3

Reason:

A value was entered in the Report Appl field on the Generate a Report panel that was less than three in length.

System Action:

The Generate a Report panel is displayed with the Report Appl field set in error.

User Action:

Correct the value in the Report Appl field and retry.

RW4206**NO REPORTS DEFINED FOR REQUESTED APPLICATION****Reason:**

A request to present a Report List failed because there were no reports defined for the application specified.

System Action:

The request is rejected.

User Action:

None.

RW4301**UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE= P1****Reason:**

The service procedure \$RWRP43L for the Report in Progress failed because it received an unknown call type in variable &\$SLCALLTYPE from procedure \$CASL000. The unknown call type was P1 .

System Action:

Procedure \$RWRP13L terminates.

User Action:

Contact the system administrator.

RW4302**USER P1 NOT AUTHORIZED TO ACCESS THE REPORTS IN PROGRESS****Reason:**

A request to present the Reports in Progress failed because the user was not authorized for the request. The userid of the user was P1 . A user must be authorized to access the Report Writer Primary Menu to be able to present the Reports in Progress

System Action:

The request is rejected.

User Action:

None.

RW4303

P1 REQUEST ISSUED

Reason:

A cancel or purge command was requested from the Reports in Progress panel. The command requested was *P1* .

System Action:

The report is flagged for purging or cancellation and the request will be processed when the status table is next updated.

User Action:

None.

RW4304

USER P1 NOT AUTHORIZED TO ACCESS P2 REPORTS

Reason:

A request to cancel or purge a report failed because the user was not authorized for the request. The userid of the user was *P1* . *P2* is set to 'YOUR OWN PRIVATE' if the report to be cancelled or purged was their own or set to 'OTHER USERS PRIVATE' if another user's report was to be cancelled or purged.

System Action:

The request is rejected.

User Action:

None.

RW6001**UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE= P1****Reason:**

The service procedure \$RWRL60L for the Report List failed because it received an unknown call type in variable &\$SLCALLTYPE from procedure \$CASL000. The unknown call type was P1 .

System Action:

Procedure \$RWRL60L terminates.

User Action:

Contact the system administrator.

RW6002**NO REPORTS DEFINED****Reason:**

A request to present a Report List failed because there were no reports defined.

System Action:

The request is rejected.

User Action:

None.

RW6003**NO REPORTS DEFINED WITHIN SPECIFIED RANGE****Reason:**

A request to present a Report List failed because there were no reports defined within the range specified.

System Action:

The request is rejected.

User Action:

None.

RW6004

REPORT NOT SELECTED FROM REPORT LIST

Reason:

A Report List was presented and a report was not selected.

System Action:

None.

User Action:

None.

RW6101

UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE=~P1

Reason:

The service procedure \$RWRL61L for the Report List failed because it received an unknown call type in variable \$SLCALLTYPE from procedure \$CASL000. The unknown call type was P1 .

System Action:

Procedure \$RWRL61L terminates.

User Action:

Contact the system administrator.

RW6102

VARTABLE P1 ERROR, FDBK= P2 ID= P3

Reason:

A request to present a Report List failed because an error was encountered allocating a variable table. The request was *P1* , the identifier of the variable table was *P3* and the feedback code was *P2* .

System Action:

The request is rejected.

User Action:

Interpret the feedback code using the NCL Reference.

RW6103**VARIABLE P1 ERROR, FDBK= P2 ID= P3 KEY= P4****Reason:**

A request to present a Report List failed because an error was encountered accessing a variable table. The request was *P1* , the identifier of the variable table was *P3* , the feedback code was *P2* and the key value used was *P4* .

System Action:

The request is rejected.

User Action:

Interpret the feedback code using the NCL Reference.

RW6104**NO REPORTS DEFINED****Reason:**

A request to present a Report List failed because there were no reports defined.

System Action:

The request is rejected.

User Action:

None.

RW6105**NO REPORTS DEFINED WITHIN SPECIFIED RANGE****Reason:**

A request to present a Report List failed because there were no reports defined within the range specified.

System Action:

The request is rejected.

User Action:

None.

RW6106

REPORT NOT SELECTED FROM REPORT LIST

Reason:

A Report List was presented and a report was not selected.

System Action:

None.

User Action:

None.

RW7001

P1 MUST BE ENTERED

Reason:

A value was not entered in the *P1* field on the CAS Table Entry Definition panel.

System Action:

The Table Entry panel is displayed with the *P1* field set in error.

User Action:

Enter a value in the *P1* field and retry.

RW7002

P1 MUST BE A (ASCENDING), D (DESCENDING), BOTH OR MIXED

Reason:

An invalid value was entered in the Sort Order Support field on the CAS Table Entry Definition panel. *P1* was set to Sort Order Support.

System Action:

The Table Entry panel is displayed with the Sort Order Support field set in error.

User Action:

Enter one of the following values in the Sort Order Support field and retry. A - Only ascending order is supported. D - Only descending order is supported. BOTH - Ascending and descending both supported, but all fields must be sorted in the same order. MIXED - Ascending and descending both supported and fields may be sorted in either order.

RW7003**FULL VALUE (P1) MUST START WITH APPLICATION ID (P2)****Reason:**

An invalid value (*P1*) was entered in the Full Value field on the CAS Table Entry Definition panel. All entries in the \$RWAPPL table for application ID (*P2*) must begin with that application ID.

System Action:

The Table Entry panel is displayed with the Full Value field set in error.

User Action:

Correct the entry and retry.

RW7201**\$RW.APPL TABLE NOT DEFINED OR IS EMPTY****Reason:**

The Report Writer Report Application Table (Application \$RW, Table Name APPL) either does not exist, or has no entries. There are no Report Applications to be converted.

System Action:

The Report Writer Report Application Conversion Utility terminates normally.

User Action:

None.

RW7202

APPLICATION P1 NOT DEFINED, REPORT APPLICATION P2 NOT ADDED

Reason:

Application ID P1 is not defined in the Application Register. Therefore no \$RWAPPL table is defined for that application and hence, there is no table to add the report application P2 to.

System Action:

The Report Writer Report Application Conversion Utility ignores this report application and continues.

User Action:

Add the Application ID using MODS. Then add the \$RWAPPL table definition using CAS Table Services using the following attributes:

Edit type = *TABLE* Validation exit = *\$RWVM70X*

Sequence numbers = *NO*

Load Table = *YES*

Max abbreviation length = *blank*

Max full value = *8*

Max description length = *38*

Note: It may be easier to copy an existing \$RWAPPL table definition for another application, for example application \$RW.

RW7203

\$RWAPPL TABLE CREATED FOR APPLICATION P1

Reason:

The Report Writer Report Application Conversion Utility has created a \$RWAPPL table for application P1. This message will be followed by one or more RW7204 messages showing the Report Application entries that have been copied to this new table.

System Action:

The Report Writer Report Application Conversion Utility continues processing the \$RW.APPL table.

User Action:

None.

RW7204**REPORT APPLICATION P1 COPIED TO \$RWAPPL TABLE FOR APPLICATION P2****Reason:**

The P1 Report Application entry has been copied from the \$RW.APPL table to the \$RWAPPL table for application *P2*.

System Action:

The Report Writer Report Application Conversion Utility continues processing the \$RW.APPL table.

User Action:

None.

RW7205**REPORT APPLICATION P1 NOT COPIED****Reason:**

The *P1* Report Application entry has not been copied to the application's \$RWAPPL table because it already exists.

System Action:

The Report Writer Report Application Conversion Utility continues processing the \$RW.APPL table.

User Action:

None.

RW7206

DB ERROR. ACTION= P1 KEY= P2 RC= P3 FDBK= P4

Reason:

An unexpected error has occurred accessing the CAS Tables Database.
Diagnostic information is provided as follows:

P1 is an action code

P2 is key information

P3 is the Database Manager return code

P4 is the Database Manager feedback code

Note: This message is normally preceded by another message (DBnnnn) which contains additional information.

System Action:

The Report Writer Report Application Conversion Utility ends.

User Action:

Note the diagnostic information and contact your product supplier with this information.

RW7207

***END* RC= P1 : P2 TABLES CREATED, P3 ENTRIES COPIED**

Reason:

The Report Writer Report Application Conversion Utility has ended. In the message, *P1* is the completion code, *P2* the number of new \$RWAPPL tables added (and messages RW7203 issued), and *P3* the total number of report application entries copied (and messages RW7204 issued).

If the completion code (*P1*) is non zero, the results are incomplete and previous messages will indicate why.

System Action:

The Report Writer Report Application Conversion Utility ends.

User Action:

If the completion code is non-zero establish the cause of error from prior messages, correct, and rerun.

RW7301**NO REPORT WRITER "DATA" OR "SORT" TABLES FOUND****Reason:**

There are no Report Writer tables whose names are at least 7 characters, the last 4 being DATA or SORT, and the first 3 are not \$RW. Thus there are no tables to be converted.

System Action:

The Report Writer Report Table Conversion Utility terminates normally.

User Action:

None.

RW7302**APPLICATION P1 NOT DEFINED, REPORT TABLE P2 NOT COPIED****Reason:**

Application ID *P1* is not defined in the Application Register. Therefore no tables may be defined for that application and hence it is not possible to copy report table *P2* under that application ID.

System Action:

The Report Writer Table Conversion Utility ignores this table and continues.

User Action:

Add the Application ID using MODS and rerun the utility.

RW7303**TABLE P1 COPIED TO APPLICATION P2****Reason:**

The *P1* Report Table has been copied from application ID \$RW to application ID *P2*.

System Action:

The Report Writer Table Conversion Utility continues with the next table.

User Action:

None.

RW7304

TABLE P1 NOT COPIED

Reason:

The *P1* Report Table has not been copied because it already exists in the new application ID (the first three characters of the table name).

System Action:

The Report Writer Table Conversion Utility continues with the next table.

User Action:

None.

RW7305

***END* RC= P1 : P2 TABLES COPIED**

Reason:

The Report Writer Tables Conversion Utility has ended. In the message, *P1* is the completion code and *P2* the number of tables copied (and messages RW7303 issued).

If the completion code (*P1*) is non zero, the results are incomplete and previous messages will indicate why.

System Action:

The Report Writer Tables Conversion Utility ends.

User Action:

If the completion code is non-zero establish the cause of error from prior messages, correct, and rerun.

RW7306**DB ERROR. ACTION= P1 KEY= P2 RC= P3 FDBK= P4****Reason:**

An unexpected error has occurred accessing the CAS Tables Database.
Diagnostic information is provided as follows:

P1 is an action code

P2 is key information

P3 is the Database Manager return code

P4 is the Database Manager feedback code

Note: This message is normally preceded by another message (DBnnnn) which contains additional information.

System Action:

The Report Writer Table Conversion Utility ends.

User Action:

Note the diagnostic information and contact your product supplier with this information.

RWDB1012**VSAM error on file get: FileID *P1*, FileRC= *P2* FDBK= *P3* KEY= *P4*****Reason:**

An error occurred attempting to read a Report Writer definition. In the message:

P1 is the file ID.

P3 is the file return code (&FILERC).

P4 is the file feedback code (&VSAMFDBK).

P4 is the file key.

System Action:

The procedure terminates.

User Action:

For return code and feedback values, see the &FILE GET verb description in the NCL Reference.

RWDB1013

VSAM error on file put: FileID *P1*, FileRC= *P2* FDBK= *P3* KEY= *P4*

Reason:

An error occurred attempting to write a Report Writer definition. In the message:

P1 is the file ID.

P3 is the file return code (&FILERC).

P4 is the file feedback code (&VSAMFDBK).

P4 is the file key.

System Action:

The procedure terminates.

User Action:

For return code and feedback values, see the &FILE GET verb description in the NCL Reference.

RWDB1014

VSAM error on file delete: FileID *P1*, FileRC= *P2* FDBK= *P3* KEY= *P4*

Reason:

An error occurred attempting to delete a Report Writer definition. In the message:

P1 is the file ID.

P3 is the file return code (&FILERC).

P4 is the file feedback code (&VSAMFDBK).

P4 is the file key.

System Action:

The procedure terminates.

User Action:

For return code and feedback values, see the &FILE GET verb description in the NCL Reference.

RXEM0001**P1****Reason:**

A REXX emulation error has occurred. *P1* is a message of a group of messages that traps the related error details.

System Action:

The current REXX request is terminated.

User Action:

Contact Technical Support.

RXEM0101**Invalid command: P1, from P2(P3)****Reason:**

REXX NetMaster emulation detected a command which is invalid or not supported at the moment.

P1 is the command name.

P2 is the REXX procedure name.

P3 is the NetMaster process number (NCLID) executing the REXX proc.

System Action:

None.

User Action:

Verify and correct the command specification.

RXEM0102

Invalid function: P1, from P2(P3)

Reason:

REXX NetMaster emulation detected a function which is invalid or not supported at the moment.

P1 is the function name.

P2 is the REXX procedure name.

P3 is the NetMaster process number (NCLID) executing the REXX proc.

System Action:

None.

User Action:

Verify and correct the function specification.

RXEM0103

Errors decoding keyword arguments: P1, P2, from P3(P4)

Reason:

REXX NetMaster emulation detected that the keyword argument was incorrectly specified.

P1 is the command name.

P2 is the original error message.

P3 is the REXX procedure name.

P4 is the NetMaster process number (NCLID) executing the REXX proc.

System Action:

None.

User Action:

Verify the syntax and correct the arguments.

RXEM0109**Error executing: P1, Error Code: P2, from P3(P4)****Reason:**

NetMaster REXX command failed while using an OML function or verb.

P1 is the NetMaster REXX command/function name.

P2 is the error code indicated by the OML language executor.

P3 is the REXX procedure name.

P4 is the NetMaster process number (NCLID) executing the REXX proc.

System Action:

None.

User Action:

Verify the specification of the arguments for the emulated command or function and fix them according to the specification. If you cannot fix the arguments, Contact Technical Support and provide them with diagnostic data.

RXEM0210**Function: P1 From P2(P3)****Reason:**

This message logs the fact that the function was called in either a NETVIEW or NETVASIS environment.

P1 is the function name.

P2 is the calling pocedure name.

P3 is the REXXHELP process identifier.

System Action:

None.

User Action:

None.

RXEM0292

Invalid Function: P1 From P2(P3)

Reason:

This message indicates that the external NetView/NetVASIS Rexx function although defined in function table is not defined in the emulation functions table. It indicates mismatch between both definitions.

P1 is the function name.

P2 is the calling pocedure name.

P3 is the REXXHELP process identifier.

System Action:

None.

User Action:

Contact Technical Support.

RXEMXI0000

P: P1 ID= P2 DDNAME= P3 - P4

Reason:

The message displays a REXX EXECIO trace record.

P1 is the NCLID, *P2* is the trace ID, *P3* is the DDNAME and *P4* is the trace text.

System Action:

None.

User Action:

Contact Technical Support.

RXEMXI0001

**The REXX EXECIO emulator procedure has encountered an error.
Reason P1**

Reason:

The REXX EXECIO emulator procedure has encountered an internal system error. P1 is the reason for the failure.

System Action:

Processing terminates,

User Action:

Contact Technical Support.

RXEMXI0002

REXX procedure waiting for input. Reply: GO ID= p1 --data-- to resume.

Reason:

The REXX EXECIO emulator procedure requires input from the data stack. The data stack is empty, the procedure now reads from the terminal. P1 is the NCLID.

System Action:

Waits for terminal input.

User Action:

Reply "GO ID= P1 --data--" to resume.

RXEMXI0003

The REXX EXECIO emulator does not currently support DISKRU

Reason:

The REXX EXECIO emulator procedure does not currently support *DISKRU* (open data set for update).

System Action:

EXECIO terminates.

User Action:

You may want to write the updated data to a work file and copy it back to the source file.

RXEMXI0004

Insufficient virtual storage for processing the EXECIO request

Reason:

The REXX EXECIO emulator procedure has exceeded the maximum amount of virtual storage available for a REXX process.

System Action:

EXECIO terminates.

User Action:

Review the SYSPARMS *RXMSTG* setting by issuing the following command:
SHOW SYSPARMS=RXMSTG . *RXMSTG* sets the maximum amount of storage that a given REXX process can use at any time. Its value ranges from 10 KB to 4096 KB (default is 1024 KB).

Alternatively, you can override this value for a given procedure at execution time by including the following REXX *OPTIONS* statement:

OPTIONS "MAXSTOR=nK"

where the value of *nK* ranges from 32 KB to 100000 KB.

RXEMXI0101

An attempt was made to WRITE to file: P1 which is opened, but not for output. WRITE is not allowed.

Reason:

The exec tried to write to the specified file, but the function is not allowed. The indicated file is not open for output. *P1* is the file DDNAME.

System Action:

The WRITE function is not performed.

User Action:

If the indicated file is currently opened for READ, close it and reopen for output or update.

RXEMXI0102

An attempt was made to READ from file: P1 which is opened, but not for input. READ is not allowed.

Reason:

The exec tried to read from the specified file, but the function is not allowed. The indicated file is not open for input. *P1* is the file DDNAME.

System Action:

The READ function is not performed.

User Action:

If the indicated file is currently opened for WRITE, close it and reopen for input or update.

RXEMXI0201

No EXECIO positional parameters were found, three are required.

Reason:

No positional parameters were found for the EXECIO command. However, you must specify at least three positional parameters.

System Action:

EXECIO terminates.

User Action:

Specify a *number* or *** as the first positional parameter to indicate the the number of lines to process. Specify *DISKR*, or *DISKW* (the operation) as the second positional parameter. Specify the *ddname* (to which or from which I/O is to be performed) as the third positional parameter.

RXEMXI0202

EXECIO "OPERATION" positional parameter is missing

Reason:

The second positional parameter on the EXECIO command is missing. It must be a valid *operation* identifier (DISKR or DISKW).

System Action:

EXECIO terminates.

User Action:

Specify *DISKR* (input) to read a file or *DISKW* (output) to write a file.

RXEMXI0203

EXECIO "ddname" positional parameter is missing

Reason:

The third positional parameter on the EXECIO command is missing. This parameter is required.

System Action:

EXECIO terminates.

User Action:

Specify a 1 to 8 character *ddname* to which or from which I/O is to be performed. The ddname should be allocated to a sequential data set, or to a single member of a partitioned data set.

RXEMXI0204

Too many EXECIO positional parameters were found. A maximum of four may be specified.

Reason:

An unknown positional parameter was specified.

System Action:

EXECIO terminates.

User Action:

You may specify a maximum of four positional parameters. Remove any extra parameters. If you wish to specify EXECIO options, they should follow the positional parameters, and should be delimited from the positional parameters by a left parenthesis ' ('.

RXEMXI0205

EXECIO "lines" positional parameter is not valid. Specify * or a number.

Reason:

The first EXECIO positional parameter must specify the number of lines to be processed by EXECIO.

System Action:

EXECIO terminates.

User Action:

Specify * or a number : An * means that end-of-file terminates the EXECIO DISKR operation and a null line or an uninitialized STEM variable terminates an EXECIO DISKW operation. A *number* indicates an exact number of lines to process before EXECIO terminates.

RXEMXI0206

EXECIO P1 positional parameter is not valid. Specify DISKR or DISKW

Reason:

The second positional parameter on the EXECIO command is not valid.

System Action:

EXECIO terminates.

User Action:

Specify *DISKR* or *DISKW* .

RXEMXI0207

EXECIO "ddname" positional parameter is not valid

Reason:

The third positional parameter on the EXECIO command is not a valid ddname.

System Action:

EXECIO terminates.

User Action:

Specify a 1 to 8 character *ddname* to which or from which I/O is to be performed. The ddname should be allocated to a sequential data set, or to a single member of a partitioned data set.

RXEMXI0208

EXECIO "linenum" parameter is not allowed with DISKW

Reason:

The EXECIO *linenum* parameter was specified with the *DISKW* operation. However, "linenum" cannot be specified with DISKW.

System Action:

EXECIO terminates.

User Action:

Remove the *linenum* parameter.

RXEMXI0209

EXECIO "linenum" positional parameter is not valid. Specify a number or nothing.

Reason:

The fourth positional parameter on the EXECIO command is optional. However, if specified it must be a valid number. This parameter represents the record number at which reading is to begin for a DISKR operation. This parameter is not valid when DISKW is specified.

System Action:

EXECIO terminates.

User Action:

Specify a valid number, or specify nothing.

RXEMXI0301

EXECIO error. Unrecognized or ambiguous keyword option found.

Reason:

An unknown or ambiguous EXECIO keyword option was found on the EXECIO command. The valid options are: - *FIFO*, *LIFO*, *STEM*, *SKIP*, *FINIS* and *OPEN*.

System Action:

EXECIO terminates.

User Action:

Specify a valid option.

RXEMXI0302

EXECIO STEM option was specified more than once

Reason:

The EXECIO *STEM* option can only be specified once on the EXECIO command.

System Action:

EXECIO terminates.

User Action:

Remove one of the STEM option.

RXEMXI0303

No STEM name was found after the EXECIO STEM option

Reason:

No STEM variable name was specified after the EXECIO *STEM* option.

System Action:

EXECIO terminates.

User Action:

Specify the name of the STEM variable after the *STEM* option of the EXECIO command. A STEM variable name may be from 1 to 240 characters in length.

RXEMXI0304

EXECIO STEM name is too long

Reason:

The specified EXECIO STEM name is too long.

System Action:

EXECIO terminates.

User Action:

Specify a valid REXX variable name after the EXECIO *STEM* option. Valid names are 1 to 240 characters in length, and must be valid REXX variable names.

RXEMXI0305

EXECIO error. STEM variable name is not valid.

Reason:

The specified EXECIO STEM name is not a valid REXX variable name.

System Action:

EXECIO terminates.

User Action:

Specify a valid REXX variable name after the EXECIO *STEM* option. Valid names are 1 to 240 characters in length, and must be valid REXX variable names.

RXEMXI0306**EXECIO FIFO or LIFO options are not allowed with DISKW****Reason:**

The EXECIO *FIFO* or *LIFO* option was specified with the *DISKW* operation. However, FIFO and LIFO cannot be specified with DISKW.

System Action:

EXECIO terminates.

User Action:

Remove the *FIFO* or *LIFO* option.

RXEMXI0307**EXECIO SKIP option is not allowed with DISKW****Reason:**

The EXECIO *SKIP* option was specified with the *DISKW* operation. However, SKIP cannot be specified with DISKW.

System Action:

EXECIO terminates.

User Action:

Remove the *SKIP* option.

RXEMXI0308**EXECIO FIFO or LIFO options are not allowed with STEM****Reason:**

The EXECIO *FIFO* or *LIFO* option was specified with the *STEM* option. However, FIFO and LIFO cannot be specified with the STEM option.

System Action:

EXECIO terminates.

User Action:

Remove the *FIFO* or *LIFO* option.

RXEMXI0501

EXECIO is unable to open file: P1 for P2. Error message: P3

Reason:

The EXECIO procedure failed to open the file specified by DDNAME *P1* as *P2*. *P3* is the associated error message.

System Action:

EXECIO terminates.

User Action:

Review message *P3* for additional information.

RXEMXI0502

EXECIO error while trying to READ a record from file: P1. Error message : P2

Reason:

The EXECIO procedure failed to read a record from the file specified by DDNAME *P1*. *P2* is the associated error message.

System Action:

EXECIO terminates.

User Action:

Review message *P3* for additional information.

RXEMXI0503

EXECIO error while trying to WRITE a record to file: P1. Error message : P2

Reason:

The EXECIO procedure failed to write a record to the file specified by DDNAME *P1*. *P2* is the associated error message.

System Action:

EXECIO terminates.

User Action:

Review message *P3* for additional information.

RXEMXI0504**EXECIO is unable to close file: P1. Error message: P2****Reason:**

The EXECIO procedure failed to close the file specified by DDNAME *P1*. *P3* is the associated error message.

System Action:

EXECIO terminates.

User Action:

Review message *P3* for additional information.

RXEMXI0505**Record cannot be updated. No record from file: p1 has been read for update.****Reason:**

A request to UPDATE a record on file: *P1* has been rejected because no record has been read for UPDATE. Update only allows the re-writing (in-place) of the last record read.
P1 is the file DDNAME.

System Action:

The WRITE function is terminated.

User Action:

Ensure that at least one record has been read for update.

RXEMXI0506**Unable to obtain exclusive use on member P1. ENQUEUE failed with RC: P2, DDNAME is P3.****Reason:**

Member **P1** in PDS allocated for output via DDNAME **P3** is in use by another user. The ENQUEUE return code is **P2**.

System Action:

EXECIO terminates.

User Action:

Try later.

RXEMXI0601

Invalid record format for data set allocated to file: P1. RECFM must be fixed or variable. Spanned records or records with track overflow are not supported.

Reason:

A REXX data set has a non-valid record format. I/O is supported only to non-spanned fixed or variable record format. Spanned, track overflow, and undefined record formats are not supported.
P1 is the file DDNAME.

System Action:

EXECIO terminates.

User Action:

Check the record format of the data set specified by DDNAME *P1* .

RXEMXI0602

EXECIO DISKRU specified but the file is larger than the allowed maximum of P1

Reason:

A REXX data set was opened for UPDATE (DISKRU). However, its size (in records) is larger than the supported *maximum*.
P1 is the file size limit (in records).

System Action:

EXECIO terminates.

User Action:

You may want to write the updated data to a work file and copy it back to the source file.

RXEMXI0701

EXECIO error while trying to store a REXX variable. The variable name is P1, the emulation verb is P2 (RC: P3 FDBK: P4)

Reason:

An error occurred in storing a REXX variable from the EXECIO procedure. The variable value was not set successfully.

P1 is the variable name.

P2 is the EXECIO procedure emulation verb that failed.

P3 is the emulation verb return code.

P4 is the emulation verb feed back code.

System Action:

EXECIO terminates.

User Action:

Contact Technical Support.

RXEMXI0702

EXECIO error while trying to fetch a REXX variable. The variable name is P1, the emulation verb is P2 (RC: P3 FDBK: P4)

Reason:

An error occurred in the EXECIO procedure when fetching a REXX variable. The variable value was not obtained successfully.

P1 is the variable name.

P2 is the EXECIO procedure emulation verb that failed.

P3 is the emulation verb return code.

P4 is the emulation verb feed back code.

System Action:

EXECIO terminates.

User Action:

Contact Technical Support.

RXEMXI0703

EXECIO error while trying to put an element on the data stack. The emulation verb is P1 (RC: P2 FDBK: P3)

Reason:

The stack error has occurred while trying to add an element to the data stack.

P1 is the EXECIO procedure emulation verb that failed.

P2 is the emulation verb return code.

P3 is the emulation verb feed back code.

System Action:

EXECIO terminates.

User Action:

Try to correct the error condition, or contact Technical Support.

RXEMXI0704

EXECIO error while trying to get an element on the data stack. The emulation verb is P1 (RC: P2 FDBK: P3)

Reason:

The stack error has occurred while trying to get an element to the data stack.

P1 is the EXECIO procedure emulation verb that failed.

P2 is the emulation verb return code.

P3 is the emulation verb feed back code.

System Action:

EXECIO terminates.

User Action:

Try to correct the error condition, or contact Technical Support.

RXNM000**Unsupported language: P2, proc: P1****Reason:**

REXX NetMaster emulation detected that the command specified is written in unsupported language.

P1 is the command/procedure name

P2 is the language detected

System Action:

None.

User Action:

Verify the the spelling of the call and the language of called command, if source available.

RXNM001**Invalid positional argument: P1, P2****Reason:**

REXX NetMaster emulation detected that the positional argument *P1* is invalid.

P2 describes the reason:

Action - action specified is invalid to the command emulated.

GLBL - text variable(name) does not start with 'GLBL'.

Length - text variable(name) is longer than allowed for its type:

- max 8 characters for NCL/OML procedure name.

- max 12 characters for global variable name.

- max 12 characters for vartable name.

- max 256 characters for NCL variable name.

Text - invalid text variable.

Txtype - text variable(name) contains characters invalid for its type.

List - list variable invalid, missing ending bracket.

System Action:

None.

User Action:

Verify the syntax and add correct arguments.

RXNM002

Errors decoding keyword arguments: P1

Reason:

REXX NetMaster emulation detected that the key argument specified is invalid.
P1 is the detailed message.

System Action:

None.

User Action:

Verify the syntax and correct arguments.

RXNM003

Invalid keyword argument value, P1, P2

Reason:

REXX NetMaster emulation detected that the value of the key argument specified is invalid.

P1 - keyword value in error

P2 - describes the reason (see RXNM001 for explanations).

System Action:

None.

User Action:

Verify the syntax and correct arguments.

RXNM004

Unmatched quotes in P1: P2

Reason:

REXX NetMaster emulation detected that the text specified starts with one type of the quote but does not end with it.

P1 - Name of the keyword in error

P2 - Text in error

System Action:

None.

User Action:

Verify the syntax and correct the arguments.

RXNM010**Less than required number of arguments specified****Reason:**

REXX NetMaster emulation detected that the number of arguments specified is less than required.

System Action:

None.

User Action:

Verify the syntax and add required arguments.

RXNM011**Required positional argument missing: P1****Reason:**

REXX NetMaster emulation detected that the required positional argument was not specified
P1 is the name of missing keyword argument.

System Action:

None.

User Action:

Verify the syntax and add required arguments.

RXNM012**Required keyword argument missing: P1****Reason:**

REXX NetMaster emulation detected that the required keyword argument was not specified.
P1 is the name of missing keyword argument.

System Action:

None.

User Action:

Verify the syntax and add required arguments.

RXNM013

Co-requisite positional argument missing: P1

Reason:

REXX NetMaster emulation detected that the c-requisite positional argument was not specified.

P1 is the name of missing argument

System Action:

None.

User Action:

Verify the syntax and add required arguments.

RXNM014

Co-requisite keyword argument missing: P1

Reason:

REXX NetMaster emulation detected that the c-requisite keyword argument was not specified. *P1* is the name of missing argument.

System Action:

None.

User Action:

Verify the syntax and add required arguments.

RXNM015

Co-requisite keyword argument value missing: P1

Reason:

REXX NetMaster emulation detected that the co-requisite keyword argument value was not specified or the specification is shorter than expected.

P1 is the keyword list name.

System Action:

None.

User Action:

Verify the syntax and specify required values.

RXNM020**Invalid REXX variable name: P1****Reason:**

REXX NetMaster emulation detected that the text provided as REXX variable name is not a valid REXX variable name.

P1 is the variable name.

System Action:

None.

User Action:

Verify the syntax and correct the arguments specification.

RXNM021**Mutually exclusive positional arguments: P1 , P2****Reason:**

REXX NetMaster emulation detected that the conflict in positional arguments.

P1 is the first argument.

P2 is the second argument.

System Action:

None.

User Action:

Verify the syntax and correct the arguments specification.

RXNM022**Mutually exclusive key arguments: P1 , P2****Reason:**

REXX NetMaster emulation detected that the conflict in key arguments.

P1 is the first argument.

P2 is the second argument.

System Action:

None.

User Action:

Verify the syntax and correct the arguments specification.

RXNM023

Excessive keyword argument: P1

Reason:

REXX NetMaster emulation detected that the keyword argument was specified which is excessive for the action selected.
P1 is the name of the argument.

System Action:

None.

User Action:

Verify the syntax and correct the arguments specification.

RXNM024

Incompatible argument value(s): P1, P2

Reason:

REXX NetMaster emulation detected that the specified argument value(s) is incompatible with its meaning or two arguments specified are not compatible.
P1 is the first or only argument.
P2 is the second argument.

System Action:

None.

User Action:

Verify the syntax and correct the arguments specification.

RXNM200**ID= P1 - P2****Reason:**

REXX NetMaster emulation VARTABLE trace is active. This message displays a REXX NM VARTABLE trace record.

P1 is the trace ID.

P2 is the trace text.

System Action:

None.

User Action:

Contact Technical Support.

RXNM201**NetMaster internal services error. Service: P1, function: P2, (RC: P3 FDBK: P4)****Reason:**

An error occurred in the NetMaster Command emulation while calling Internal NetMaster Service.

P1 is the Service name.

P2 is the Service function name.

P3 is the Service Return Code.

P4 is the Service Feedback Code.

P5 is the Service SYSMSG.

System Action:

NetMaster command execution terminates.

User Action:

Verify your syntax for errors, correct and rerun, if necessary. If the situation persists, contact Technical Support.

RXNM202

P1

Reason:

This is a continuation of msg RXNM201 providing further details:
P1 - Error text

System Action:

None.

User Action:

As per msg RXEM110401.

RXNM301

NetMaster procedure: P1 completed, RC: P2

Reason:

NetMaster procedure *P1* called by REXX program ended with Return Code *P2*.

System Action:

None.

User Action:

None.

RXNM302

Retcode: P1, FDBK: P2, SYMSG: P3

Reason:

This is a continuation of RXNM301 providing additional information on the completion results of called procedure.

P1 - RETCODE

P2 - FDBK

P3 - SYMSG

System Action:

None.

User Action:

If the information returned by the called NetMaster procedure indicates error or abnormal situation, resolve the situation and execute the REXX program again.

RXNM401

NetMaster procedure: *P1* failed compilation, Lang: *P2*, Error Code: *P3*

Reason:

Procedure *P1* called by REXX program failed compilation stage.

P2 identifies the language the procedure is written in, NCL or OML.

P3 displays the error code indicated by the language compiler.

System Action:

None.

User Action:

If the procedure is in-house, run a direct compile, analyse errors, and fix the code.

If the procedure is a part of product distribution, contact Technical Support with the diagnostic data provided.

RXNM402

P1

Reason:

This is a continuation of msg RXNM401 providing further details:

P1 - Error text

System Action:

None.

User Action:

As per msg RXNM401.

RXNM403

P1, P2, P3, P4

Reason:

This is a continuation of message RXNM401, providing more details:

P1 - File/member name containing the failed procedure.

P2 - Source line number in the file.

P3 - Failed statement name.

P4 - If present, failed keyword name.

System Action:

None.

User Action:

See message RXNM401.

RXSA0001

REXX Analysis completed successfully

Reason:

REXX Analysis Complete.

System Action:

None.

User Action:

None.

RXSA0002

Parm: P1 value P2 is invalid

Reason:

\$RXSA000 has been invoked with an invalid value.

System Action:

Analysis processing terminates in error.

User Action:

Refer to the comments in \$RXSA000 for detail of valid values.

RXSA0003**P1****Reason:**

P1 provides error condition detail.

System Action:

Analysis processing terminates in error.

User Action:

Try to resolve the issue. If the issue persists, contact Technical Support.

RXSA0004**Input Data Set DSORG P1 is invalid****Reason:**

Analysis Input Data Set DSORG is not Partitioned.

P1 specifies the invalid DSORG.

System Action:

Analysis processing terminates in error.

User Action:

Ensure your input data set has the following allocation details:

- RECFM = PO
- DSORG = FB or VB
- LRECL = Greater than or equal to 80 and less than or equal to 255

RXSA0005

Input Data Set RECFM P1 is invalid

Reason:

Analysis Input Data Set RECFM is not Fixed or Variable Block.

P1 specifies the invalid RECFM.

System Action:

Analysis processing terminates in error.

User Action:

Ensure your input data set has the following allocation details:

- RECFM = PO
- DSORG = FB or VB
- LRECL = Greater than or equal to 80 and less than or equal to 255

RXSA0006

Input Data Set usable RECLLEN P1 is invalid

Reason:

Analysis Input Data Set RECLLEN is less than 80 or greater than 255.

P1 specifies the invalid RECLLEN.

System Action:

Analysis processing terminates in error.

User Action:

Ensure your input data set has the following allocation details:

- RECFM = PO
- DSORG = FB or VB
- LRECL = Greater than or equal to 80 and less than or equal to 255

RXSA0007**Output Data Set DSORG P1 is invalid****Reason:**

Analysis Output Data Set DSORG is not Partitioned.

P1 specifies the invalid DSORG.

System Action:

Analysis processing terminates in error.

User Action:

Use the pre-allocated data set or allocate a valid data set.

If you allocate your own data set, ensure the allocation details are as follows:

- DSORG = PO
- RECFM = VB
- LRECL = 1028
- BLKSIZE = 6240
- SPACE = CYL(30,2,50)

RXSA0008**Output Data Set RECFM P1 is invalid****Reason:**

Analysis Output Data Set RECFM is not Variable Block.

P1 specifies the invalid RECFM.

System Action:

Analysis processing terminates in error.

User Action:

Use the pre-allocated data set or allocate a valid data set.

If you allocate your own data set, ensure the allocation details are as follows:

- DSORG = PO
- RECFM = VB
- LRECL = 1028
- BLKSIZE = 6240
- SPACE = CYL(30,2,50)

RXSA0009

Output Data Set usable RECLEN P1 is invalid

Reason:

Analysis Input Data Set RECLEN is less than 1024.

P1 specifies the invalid RECLEN.

System Action:

Analysis processing terminates in error.

User Action:

Use the pre-allocated data set or allocate a valid data set.

If you allocate your own data set, ensure the allocation details are as follows:

- DSORG = PO
- RECFM = VB
- LRECL = 1028
- BLKSIZE = 6240
- SPACE = CYL(30,2,50)

RXSA0010

Output Data Set member name P1 is invalid

Reason:

Analysis Output Data Set has an invalid member name.

P1 specifies the invalid member name.

System Action:

Analysis processing terminates in error.

User Action:

Delete the invalid member from the data set.

RXSA0011**Output Data Set has no usable members available****Reason:**

Analysis Output Data Set has used all possible member names.

System Action:

Analysis processing terminates in error.

User Action:

Allocate a new Analysis Output Data Set or delete some members starting at A0000000.

RXSA0012**Output member for this analysis run is: P1****Reason:**

The output member being generated in the output analysis data set for this run is specified in *P1* .

System Action:

Analysis processing continues.

User Action:

None.

RXSA0013**Total number of members within input data set: P1****Reason:**

Specifies the number of members in Analysis input data set.

P1 specifies the number of members.

System Action:

Analysis processing continues.

User Action:

None.

RXSA0014

Members selected by INC: P1

Reason:

P1 specifies the number of members selected for inclusion.

System Action:

Analysis processing continues.

User Action:

None.

RXSA0015

Members rejected by EXC: P1

Reason:

P1 specifies the number of members rejected by exclusion.

System Action:

Analysis processing continues.

User Action:

None.

RXSA0016

Members passing INC/EXC: P1

Reason:

P1 specifies the number of members passing inclusion and exclusion processing.

System Action:

Analysis processing continues.

User Action:

None.

RXSA0017

Total number of members examined by scan: P1

Reason:

P1 specifies the number of members examined by scan.

System Action:

Analysis processing continues.

User Action:

None.

RXSA0018

Total number of members rejected by scan: P1

Reason:

P1 specifies the number of members rejected by scan.

System Action:

Analysis processing continues.

User Action:

None.

RXSA0019

Total number of members selected by scan: P1

Reason:

P1 specifies the number of members selected by scan.

System Action:

Analysis processing continues.

User Action:

None.

RXSA0020

Records scanned and record to scan do not match

Reason:

There was a mismatch between the number of records to be scanned and the number of records that were scanned.

P1 specifies the number of records that were scanned.

P2 specifies the number of records that were to be scanned.

System Action:

Analysis processing terminates.

User Action:

Run REXX Analysis processing again. If the problem persists, contact Technical Support.

RXSA0021

Analysis starting. Members: P1

Reason:

Analysis processing is starting and *P1* specifies the total number of members to be analyzed.

System Action:

Analysis processing continues.

User Action:

None.

RXSA0022

Analysis completed

Reason:

Analysis processing is complete.

System Action:

Analysis processing ends.

User Action:

None.

RXSA0023**Starting Analysis of member: P1****Reason:**

A member specified in *P1* has passed scan processing and is starting to be analyzed.

System Action:

Analysis processing continues.

User Action:

None.

RXSA0024**Finished Analysis of member: P1****Reason:**

Analysis processing for the member specified in *P1* is complete.

System Action:

Analysis processing continues until all members have been analyzed.

User Action:

None.

RXSA0025**Unknown character: P1 Line: P2 Column: P3****Reason:**

Analysis processing found an invalid character within the member:

P1 - Character within the member.

P2 - Line number within the member.

P3 - Column number within the member.

System Action:

Analysis processing continues until all members have been analyzed.

User Action:

Ensure the member is not corrupted and try running the Analyzer again. If the problem persists, contact Technical Support.

RXSA0026

Internal Error - a read was attempted after End of File

Reason:

Analysis processing failed because an attempt was made to read a new line after End Of File was processed.

System Action:

Analysis processing continues until all members have been analyzed.

User Action:

Ensure the member is not corrupted and try running the Analyzer again. If the problem persists, contact Technical Support.

RXSA0027

Trailer Record Write Error

Reason:

An error was experienced when attempting to write the trailer record to the Analysis output member.

System Action:

Analysis processing terminates.

User Action:

Review the Activity Log for additional information regarding this error. If the problem persists, contact Technical Support.

RXSA0028

P1 members processed

Reason:

P1 specifies the number of members that have been processed.

System Action:

Processing continues.

User Action:

None.

RXSA0029**P1 Retcode: P2 Fdbk: P3 (see Activity Log)****Reason:**

P1 specifies the action being performed at the time of the data set processing failure.

P2 specifies the Return Code of the data set processing failure.

P3 specifies the Feedback Code of the data set processing failure.

System Action:

Analysis processing terminates.

User Action:

Review the displayed message and the Activity Log (/LOG) to determine the cause of the error. Ensure the data set is allocated correctly and this region has the required read or write access to this data set. See the chapter on Dataset Services Interface in the Network Control Language Reference for additional information about Return and Feedback codes.

If the problem persists, contact Technical Support.

RXSA0030**Analysis of P1 failed analyzing P2****Reason:**

P1 specifies the REXX procedure name.

P2 specifies the type of record being processed at the time of failure.

System Action:

Analysis processing terminates.

User Action:

Review the message RXSA0029 for return code and feedback information.

Ensure the dataset is allocated correctly and this region has the required read or write access to this dataset. See the chapter on Dataset Services in the NCL Control Language Reference for additional information about Return and Feedback codes.

If the problem persists contact Technical Support.

RXSA0031

Analysis of P1 failed analyzing P2 with: P3

Reason:

P1 specifies the REXX procedure name.

P2 specifies the type of record being processed at the time of failure.

P3 specifies the failure reason.

System Action:

Analysis processing terminates.

User Action:

This condition can occur if the number of entities being processed within the REXX procedure exceeds the maximum record length of 1024. Detail of each record type is written to one line in the output member.

Check to see whether this member requires additional changes that have not been reported by the REXX analyzer.

RXSA0032

P1 records have Analysis Output truncated (see Activity Log)

Reason:

P1 specifies the number of records that were truncated during analysis. Details of each record type are written to one line in the output member.

This condition occurs if the number of entities being processed in the REXX procedure exceeds the maximum record length of 1024. This usually occurs when there are large single pipe stages, for example, LOCATE or PICK.

System Action:

None.

User Action:

Review the displayed messages in the Activity Log (/LOG) to determine which members were affected by the record truncation. Check to see whether this member requires additional changes that have not been reported by the REXX analyzer.

RXSR0001**P1****Reason:**

P1 provides error condition detail.

System Action:

Report Generation processing terminates in error.

User Action:

Try to resolve the issue. If the issue persists, contact Technical Support.

RXSR0002**REXX Analyzer Version P1****Reason:**

P1 specifies the version of the REXX Analyzer that is running.

System Action:

Report Generation processing continues.

User Action:

None.

RXSR0003**Parm: P1 value P2 is invalid****Reason:**

\$RXSR000 has been invoked with an invalid value.

System Action:

Report generation processing terminates in error.

User Action:

Refer to the comments in \$RXSR000 for detailed information about valid values.

RXSR0004

Input Data Set DSORG P1 is invalid

Reason:

Report Input Data Set DSORG is not Partitioned.

P1 specifies the invalid DSORG.

System Action:

Report generation processing terminates in error.

User Action:

Ensure that the input data set is an output data set from the analysis run and has the following allocation details: - DSORG = PO - RECFM = VB - LRECL = 1028 - BLKSIZE = 6240 - SPACE = CYL(30,2,50)

RXSR0005

Input Data Set RECFM P1 is invalid

Reason:

Report Input Data Set RECFM is not Variable Block.

P1 specifies the invalid RECFM.

System Action:

Report generation processing terminates in error.

User Action:

Ensure that the input data set is an output data set from the analysis run and has the following allocation details:

- DSORG = PO
- RECFM = VB
- LRECL = 1028
- BLKSIZE = 6240
- SPACE = CYL(30,2,50)

RXSR0006**Input Data Set usable RECLEN P1 is invalid****Reason:**

Report Input Data Set RECLEN is less than 1024.

P1 specifies the invalid RECLEN.

System Action:

Report generation processing terminates in error.

User Action:

Ensure that the input data set is an output data set from the analysis run and has the following allocation details: - DSORG = PO - RECFM = VB - LRECL = 1028 - BLKSIZE = 6240 - SPACE = CYL(30,2,50)

RXSR0007**Output mode is invalid: P1****Reason:**

Output mode is invalid:

P1 specifies the output mode.

Internal Valid Values are:

- ONLINE
- SYSOUT
- DD
- TERM

Externally valid values are:

- ONLINE
- DSN

System Action:

Report generation processing terminates in error.

User Action:

Ensure that a valid output mode is specified. If calling \$RXSR000 from a procedure, use the valid internal values above. If generating a report from the REXX Analyzer user interface, then specify either DSN or ONLINE.

RXSR0008

Output Data Set DSORG P1 is invalid

Reason:

Report Output Data Set DSORG is not Physical Sequential.

P1 specifies the invalid DSORG.

System Action:

Report generation processing terminates in error.

User Action:

Ensure your output data set has the following allocation details: - RECFM = PS
- BLKSIZE = 0 - LRECL = 137 - DSORG = VBA - SPACE = CYL(10,5)

RXSR0009

Output Data Set RECLEN P1 is invalid

Reason:

Report Output Data Set RECLEN is less than 137.

P1 specifies the invalid RECLEN.

System Action:

Report generation processing terminates in error.

User Action:

Ensure your output data set has the following allocation details:

- RECFM = PS
- BLKSIZE = 0
- LRECL = 137
- DSORG = VBA
- SPACE = CYL(10,5)

RXSR0010**No analysis members found: P1****Reason:**

The Report input data set does not contain any analysis members required for report generation.

P1 specified the Member Selection value specified during report generation.

System Action:

Report generation processing terminates in error.

User Action:

Ensure the input data set used for report generation is the output data set of an analysis run.

RXSR0011**Internal Error - a read was attempted after End of File.****Reason:**

Report generation processing failed because an attempt was made to read the PDS after EOF.

System Action:

Report generation terminates.

User Action:

Ensure the input data set used for report generation is the output data set of an analysis run. If the problem persists, contact Technical Support.

RXSR0012

Invalid member name found : P1

Reason:

Report generation processing failed because an invalid member name was found in the input data set.

P1 specifies the name of the erroneous member.

System Action:

Report generation terminates.

User Action:

Ensure the input data set used for report generation is the output data set of an analysis run. A member name must start with 'A' and the remainder of the member name must be numeric.

RXSR0013

The first member record was invalid for member : P1 , record | P2

Reason:

Report generation processing failed because an invalid member record was found.

P1 specifies the name of the erroneous member.

P2 specifies the erroneous data.

System Action:

Report generation terminates.

User Action:

Ensure the input data set used for report generation is the output data set of an analysis run. If the problem persists, contact Technical Support.

RXSR0014**Variable update failed Fdbk: P1 Id: P2 Key: P3****Reason:**

Report generation processing failed because of a Variable update failure.

P1 specifies the feedback code.

P2 specifies the Variable ID.

P3 specifies the Key.

System Action:

Report generation terminates.

User Action:

Report the error to Technical Support providing the ID, Fdbk code, and key.

RXSR0015**Variable add failed Fdbk: P1 Id: P2 Key: P3****Reason:**

Report generation processing failed because of a Variable add failure.

P1 specifies the feedback code.

P2 specifies the Variable ID.

P3 specifies the Key.

System Action:

Report generation terminates.

User Action:

Report the error to Technical Support providing the ID, Fdbk code, and key.

RXSR0016

Processing input Member: P1 Date: P2 Dsn: P3

Reason:

Report Generation is processing an input member.

P1 specifies the member name.

P2 specifies the data the member was updated.

P3 specifies the owning data set.

System Action:

Report generation continues.

User Action:

None.

RXSR0017

Input Member failure: P1

Reason:

The input member is invalid.

P1 specifies the error.

System Action:

Report terminates.

User Action:

Ensure the input data set used for report generation is the output data set of an analysis run. Review the Activity Log for additional information. If the problem persists, contact Technical Support.

RXSR0018**Input Member: P1 Error: P2****Reason:**

The input member is invalid.

P1 specifies the member name.

P2 specifies the error.

System Action:

Report terminates.

User Action:

Ensure the input data set used for report generation is the output data set of an analysis run. If the problem persists, contact Technical Support.

RXSR0019**Processing complete for input Member: P1****Reason:**

Report Generation member processing for the member specified in *P1* is complete.

System Action:

Report generation continues.

User Action:

None.

RXSR0020**\$RXSR20W invoked with invalid argument : P1****Reason:**

\$RXSR20W was invoked with an invalid argument and the procedure failed.

P1 specifies the invalid argument.

System Action:

Processing terminates.

User Action:

Review the comments and initialization of \$RXSR20W, specify valid arguments, and re- run the procedure.

RXSR0021

Report Generation completed successfully

Reason:

Report generation has completed successfully.

System Action:

None.

User Action:

None.

RXSR0022

Vartable allocation failed Fdbk: P1 Id: P2 Key: P3

Reason:

Report generation processing failed because of a Vartable allocation failure.

P1 specifies the feedback code.

P2 specifies the Vartable ID.

P3 specifies the Key.

System Action:

Report generation terminates.

User Action:

Report the error to Technical Support providing the ID, Fdbk code, and key.

RXSR0023**P1 Retcode: P2 Fdbk: P3 (see Activity Log)****Reason:**

P1 specifies the action being performed at the time of the dataset processing failure.

P2 specifies the Return Code of the dataset processing failure.

P3 specifies the Feedback Code of the dataset processing failure.

System Action:

Report generation processing terminates.

User Action:

Review the displayed message and the Activity Log (/LOG) to determine the cause of the error. Ensure the dataset is allocated correctly and this region has the required read or write access to this dataset. See the chapter on Dataset Services in the NCL Control Language Reference for additional information about Return and Feedback codes. If the problem persists contact Technical Support.

RXSU001**RXSU05E has been invoked with invalid line count P1****Reason:**

\$RXSR000 has invoked \$RXSU05E with an invalid stem count.

System Action:

Summary report processing ends.

User Action:

Contact Technical Support.

RXSU002

P1 RC= P2 FDBK= P3

Reason:

The allocation of the Report output data set failed.

P1 is the dynamic allocation error information.

P2 is the dynamic allocation failure return code.

P3 is the dynamic allocation failure feedback code.

System Action:

Report Generation process stops.

User Action:

Review the allocation return and feedback code to help resolve the issue.

RXSU003

Report currently being generated by P1 try again later

Reason:

A report is currently being generated by the user specified in *P1* . Data set contention may occur when two users try to update the report output data set at the same time.

System Action:

Report Generation process stops.

User Action:

Try running the report at a later time.

RXSU004

Report ID P1 is invalid

Reason:

The specified ID in *P1* is invalid.

System Action:

Report Generation process stops.

User Action:

Specify a syntactically valid PDS member name as in the ID field and re-run the report.

RXSU005**Member P1 invalid****Reason:**

The specified Member value in *P1* is invalid.

System Action:

Report Generation process stops.

User Action:

Do *one* of the following and then re-run the report: - Specify a valid value in the Member Selection field. Member name must be in the format: *Annnnnnn* where *nnnnnn* is the number assigned to the member during analysis. - Enter *S* in the Member Selection field to display a list of valid members. - Specify *LAST* to generate the report from the last written analysis member in the input data set.

RXSU006**List Analysis Members P1 is invalid****Reason:**

The specified List Analysis Members Value *P1* is invalid. Valid values are:

SHORT

Data set summary information as well as procedure name are included in the report.

NO

Data set summary information is included in the report.

FULL

Data set summary information, as well as procedure names and all members in the input data set, are included in the report.

System Action:

Report Generation process stops.

User Action:

Specify a valid value and re-run the report.

RXSU007

Print Control P1 is invalid

Reason:

The specified Print Control Value *P1* is invalid. Valid values are:

ASA

(ANSI) standard where each record is prefixed with a blank and the new page is set by writing number 1.

FF

Form Feed, this option should be used if the output data set is to be transmitted to a PC and sent to a printing device. The new page value written is EBCDIC 'FF'.

NONE

If displaying the report online, then specify NONE.

System Action:

Report Generation process stops.

User Action:

Specify a valid value and re-run the report.

RXSU008

Line Count P1 is invalid

Reason:

The specified Line Count value *P1* is invalid. The Line Count value must be numeric and greater than 39 and less than 10000.

System Action:

Report Generation process stops.

User Action:

Specify a valid value and re-run the report.

RXSU009**Output Type P1 is invalid****Reason:**

The specified Output Type value *P1* is invalid. Valid values are:

ONLINE - displays the report online.

DSN - writes the report to an output data set.

System Action:

Report Generation process stops.

User Action:

Specify a valid value and re-run the report.

RXSU010**Print Control should be NONE if Output Type is ONLINE****Reason:**

A Print Control value other than NONE has been specified with an Output Type of ONLINE.

No Print Control value other than NONE should be specified with the Output Type set to ONLINE.

Print Control of ASA or FF should only be specified with an Output Type of DSN.

System Action:

Report Generation process stops.

User Action:

Specify a valid value and re-run the report.

RXSU011

Output Data Set should be blank if Output Type is ONLINE

Reason:

An Output Data Set value has been specified with an Output Type of ONLINE.
No Output Data Set value should be specified with the Output Type set to ONLINE.

The output Data Set should only be specified with an Output Type of DSN.

System Action:

Report Generation process stops.

User Action:

Specify a valid value and re-run the report.

RXSU012

Output Data Set must be specified if Output Type is DSN

Reason:

An Output Data Set value has not been specified with an Output Type of DSN.
An Output Data Set value should be specified with the Output Type set to DSN.

System Action:

Report Generation process stops.

User Action:

Specify a valid value and re-run the report.

RXSU013**Environment Type P1 is invalid****Reason:**

The specified Environment Type value *P1* is invalid.
Valid values are:
NETVIEW aids in NETVIEW REXX specific analysis.
ISPF aids in ISPF REXX specified analysis.

System Action:

Analysis processing stops.

User Action:

Specify a valid value and re-run analysis.

RXSU014**Scan Type P1 is invalid****Reason:**

The specified Scan Type value *P1* is invalid.
Valid values are:
REXXONLY analyze members where line 1 includes */* REXX */* .
REXXCMT analyze members where line 1 starts with */** .
YES preanalysis is performed to attempt to ignore any non-REXX.
NO no preanalysis scan is performed and all members are processed.

System Action:

Analysis processing stops.

User Action:

Specify a valid value and re-run the analysis.

RXSU015

Value P1 is invalid for field P2

Reason:

The specified value *P2* in field *P1* is invalid.

You must specify a member name or a list of comma delimited member names.

You can also use a search pattern of * for many characters and ? for one character.

System Action:

Analysis processing stops.

User Action:

Specify a valid value and re-run analysis.

RXSU016

P1 is invalid

Reason:

The specified value in *P1* is invalid.

Valid values are:

YES - If specified, then the \$\$\$SPACE member will be ignored during analysis processing and will not be displayed in the output.

NO - If NO is specified, then it is assumed that if a member called \$\$\$SPACE exists, it is not a CA-PDSMAN member and will be included in the report.

System Action:

Analysis processing stops.

User Action:

Enter YES or NO in this field and re-run Analysis.

RXSU017**System Name P1 is invalid****Reason:**

The specified System Name in *P1* is invalid.

System Action:

Analysis processing stops.

User Action:

Specify a syntactically valid PDS member name as in the System Name field and re-run analysis.

RXSU018**STC Name P1 is invalid****Reason:**

The specified STC Name in *P1* is invalid.

System Action:

Report Generation process stops.

User Action:

Specify a syntactically valid PDS member name as in the STC Name field and re-run analysis.

RXSU019**P1 is a required field****Reason:**

P1 is a required field but was not specified.

System Action:

Analysis processing stops.

User Action:

Specify a valid value in *P1* and re-run analysis.

RXSU020

\$RXSU06R has been invoked with an invalid shared stem value: P1

Reason:

The REXX Analyzer Print Services procedure was invoked with variable \$RXLine0 set to an invalid value.
Variable \$RXLine* variables must be shared and \$RXLine0 must be set to 0.

P1 specifies the passed value. If a null value was passed, then *P1* specifies "NONE".

System Action:

Print processing terminates.

User Action:

Ensure this stem is set with a count greater than 0.

RXSU021

Print processing completed successfully

Reason:

Print processing has completed successfully.

System Action:

None.

User Action:

None.

RXSU022

Criteria definition P1 not found

Reason:

A request to recall the specified criteria definition (*P1*) has failed because it was not found.

System Action:

None.

User Action:

None.

RXSU023**No analysis members found****Reason:**

A request to list analysis members has failed. There are no analysis members in the Analysis output data set.

System Action:

None.

User Action:

None.

RXSU024**Analysis currently being performed by P1 try again later****Reason:**

Analysis is being performed by the user specified in *P1* .
Data set contention may occur when two users try to update the same analysis output data set at the same time.

System Action:

Analysis processing terminates.

User Action:

Try running the analysis process at a later time.

RXSU025**P1 must be a valid dataset name****Reason:**

The field must conform to the dataset name rules. The full dataset name must be entered without quotes. Member name specification is not allowed.

System Action:

None.

User Action:

Correct the field value and retry.

RXSU026

P1 Retcode: P2 Fdbk: P3 (see Activity Log)

Reason:

P1 specifies the action being performed at the time of the dataset processing failure.

P2 specifies the Return Code of the dataset processing failure.

P3 specifies the Feedback Code of the dataset processing failure.

System Action:

Report Generation processing terminates.

User Action:

Review the displayed message and the Activity Log (/LOG) to determine the cause of the error. Ensure the dataset is allocated correctly and this region has the required read or write access to this dataset. See the chapter on Dataset Services in the NCL Control Language Reference for additional information about Return and Feedback codes.

If the problem persists contact Technical Support.

RXSU027

P1 exceeds maximum line count threshold of 32000

Reason:

P1 specifies the number of lines built for the report. Online reporting cannot process lines in excess of 32000.

System Action:

Report Generation processing terminates.

User Action:

Use the *Run Report and Save to File* reporting option, or change the reporting and/or analysis criteria and re-run analysis and/or report generation.

RXSU028**Report Type P1 is invalid****Reason:**

The Report Type specified in *P1* is invalid.

System Action:

The Report Generation process stops.

User Action:

Specify Summary or Detailed. For more information about these options, see the online help.

Sx to Vx Messages

SD0000**INVALID KEYWORD VALUE PASSED, KEYWORD= P1 VALUE= P2****Reason:**

The NCL Debug API procedure \$SDCALL failed because it was invoked with an invalid keyword value specified. The keyword was *P1* and the value was *P2*.

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

SD1401

UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE= P1

Reason:

The NCL Debug selection list service procedure \$SDDDB14L failed because it received a call type that is not supported by the service procedure. The call type was *P1*.

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

SD1402

SPECIFY A LIST OF PROCEDURE MASKS SEPERATED BY BLANKS

Reason:

The INCLUDE or EXCLUDE command was entered but no procedure masks were specified.

System Action:

The command is rejected.

User Action:

Specify a list of procedure masks seperated by blanks. The mask character is *,

SD1601

AOMGDB P1 ERROR, FDBK= P2 INFO=" P3" OPT=" P5" KEY="P4"

Reason:

An error occurred accessing the AOM Global Database. The action being attempted was *P1* and the feed back code returned was *P2* . The feed back code means *P3* . The option (if relevant) was *P5* and the key being used was *P4* .

System Action:

The action is aborted and processing continues.

User Action:

For user correlator mismatches retry the request. The not found condition may be because of other system components having deleted the entry, similarly for the already exists condition. For other errors see the System Administrator.

SD1602

GLOBAL VARIABLES WITH INDEX GREATER THAN P1 DO NOT EXIST, CANNOT UPDATE

Reason:

The maximum number of global variables is **P1**. The **browse and update** actions are only supported for indexes less than **P1** .

System Action:

Request is rejected.

User Action:

If you wish to change the value of global flags then use the ON and OFF actions.

SD1901

INVALID KEYWORD VALUE PASSED, KEYWORD= P1 VALUE= P2

Reason:

The NCL Debug Static Call Analysis procedure \$SDDB19Z failed because it was invoked with an invalid keyword value specified. The keyword was *P1* and the value was *P2* .

System Action:

The procedure terminates.

User Action:

Contact your Systems Administrator.

SD1902

ERROR ACCESSING VARIABLE, TABLE= P1 ACTION= P2 ZFDBK= P3

Reason:

The NCL Static Call Analysis procedure \$SDDB19Z failed because it receive an invalid feedback code from a varlable operation. The table was *P1* , the operation or action perfomed was *P2* and the returned feedback code was *P3* .

System Action:

The procedure terminates.

User Action:

Contact your Systems Administrator.

SD1903

REQUEST CANCELLED

Reason:

The NCL Static Call Analysis request to print the report was cancelled.

System Action:

The report is not printed and the procedure completes.

User Action:

None.

SD1904**Message queue overflow for dependent response queue****Reason:**

The NCL Static Call Analysis request failed to analyse a procedure because the procedure's listing caused an overflow in the internal dependent response queue for the analysis procedure.

System Action:

The procedure terminates.

User Action:

Consider dividing the procedure into smaller procedures.

SD1905**ANALYSIS COMPLETED****Reason:**

The NCL Static Call Analysis request was successfully completed.

System Action:

None.

User Action:

None.

SD1906**ANALYSIS REQUEST SENT TO BACKGROUND REGION****Reason:**

The NCL Static Call Analysis request was submitted to the background system region for execution. A notification will be sent when it has completed.

System Action:

None.

User Action:

None.

SD1907

ANALYSIS REPORT PRINTED, PSM REQUEST NUMBER IS P1

Reason:

The NCL Static Call Analysis request was printed using PSM. The PSM request number for the print is *P1*.

System Action:

None.

User Action:

None.

SD2000

INVALID KEYWORD VALUE PASSED, KEYWORD=~P1 VALUE=~P2

Reason:

The NCL Debug Session Server procedure \$SDDB20Z failed because it was invoked with an invalid keyword value specified. The keyword was P1 and the value was P2 .

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

SD2001

BACKGROUND DEBUGGING FOR SERVER ID= P1 ALREADY RUNNING

Reason:

The NCL Debug Session Server was attempting to start a background debug session, but another process is already using that server ID.

System Action:

Procedure \$SDDB20Z terminates.

User Action:

Use a different server ID or wait for the existing process to complete.

SD2002**OWNER=~P1 NOT ACTIVE, DEBUG SERVER TERMINATING****Reason:**

The NCL Debug Session Server was started and was unable to establish contact with the server owner. The owner's NCL ID was P1 .

System Action:

Procedure \$SDDB20Z terminates.

User Action:

Check why the owner terminated.

SD2003**UNABLE TO CONTACT DEBUG SERVER OWNER, ID=~P1 RC=~P2****Reason:**

The NCL Debug Session Server was attempting to write a message to the servers owner process and the write failed with a return code P2 . The owner's NCL ID was P1 .

System Action:

Procedure \$SDDB20Z terminates.

User Action:

Check why the owner terminated.

SD2004**UNABLE TO CONTACT DEBUG SERVER, ID=~P1 RC=~P2****Reason:**

The NCL Debug server's owner was attempting to write a message to the server process and the write failed with a return code P2 . The server's server ID was P1 .

System Action:

Procedure \$SDDB20Z terminates.

User Action:

Check why the NCL Debug Session Server terminated.

SD2006

VARIABLE ERROR, ACTION=~P1 ZFDBK=~P2 TABLE=~P3

Reason:

The NCL Debug Server procedure \$SDDB20Z received an unexpected feedback code from a variable action. The action was P1 , the feedback code was P2 and the table name was P3 .

System Action:

Processing continues.

User Action:

Contact the system administrator.

SD2011

RESPONSE QUEUE READ TIME-OUT WHEN PROCESSING REQUEST P1

Reason:

The request P1 was attempting to read the response messages from an internal server but the read timed out.

System Action:

The command terminates in error.

User Action:

The cause may be slow system response, if not then contact the systems administrator.

SD2012

RESPONSE QUEUE OVERFLOW WHILE PROCESSING REQUEST P1

Reason:

The request *P1* was attempting to read the response messages from an internal server and the internal queue overflowed.

System Action:

The request terminates in error.

User Action:

Contact the Systems Administrator.

SD2101**UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE=~P1****Reason:**

The NCL Debug selection list service procedure \$SDDB21L failed because it received a call type that is not supported by the service procedure. The call type was P1 .

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

SD2103**NO PROCESSES CURRENTLY UNDER DEBUG CONTROL****Reason:**

The NCL Debug selection list of debug processes could not display a list because there are no precesses under debug control.

System Action:

None.

User Action:

None.

SD2104**MESSAGE QUEUE OVERFLOW, ACTION ABORTED****Reason:**

The NCL Debug selection list of debug processes could not complete its processing because the dependent environment's message queue overflowed and the list would be inaccurate.

System Action:

None.

User Action:

Retry the list.

SD2105

SELECTION NOT VALID ON THIS LINE

Reason:

The action selected cannot be performed against the item selected.

System Action:

The action is rejected.

User Action:

None.

SD2201

UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE=~P1

Reason:

The NCL Debug selection list service procedure \$SDDB22L failed because it received a call type that is not supported by the service procedure. The call type was P1 .

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

SD2202

SELECTION NOT VALID ON THIS LINE

Reason:

The action selected cannot be performed against the item selected.

System Action:

The action is rejected.

User Action:

None.

SD2203**NO USER REGIONS TO DISPLAY****Reason:**

The NCL Debug selection list of user regions could not display a list because there were no regions that satisfied the criteria.

System Action:

None.

User Action:

None.

SD2204**CANNOT DEBUG A DISCONNECTED REGION, SELECT THE USER****Reason:**

The NCL Debug start selection was made for a disconnected region, which is invalid.

System Action:

Selection is rejected.

User Action:

Select the user ID as the target for debug.

SD2205**CANNOT CANCEL A SYSTEM REGION OR USER****Reason:**

A request to cancel a system User ID or Region was ignored. You cannot cancel system users and/or regions from the Active Users list.

System Action:

Selection is rejected.

User Action:

None.

SD2301

UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE=~P1

Reason:

The NCL Debug selection list service procedure \$SDDB23L failed because it received a call type that is not supported by the service procedure. The call type was P1 .

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

SD2302

SELECTION NOT VALID ON THIS LINE

Reason:

The action selected cannot be performed against the item selected.

System Action:

The action is rejected.

User Action:

None.

SD2303

NO NCL PROCESSES TO DISPLAY

Reason:

The NCL Debug selection list of NCL processes could not display a list because there were no precesses that matched the criteria.

System Action:

None.

User Action:

None.

SD2400**INVALID KEYWORD VALUE PASSED, KEYWORD=~P1 VALUE=~P2****Reason:**

The NCL Debug Command processor procedure \$SDDB24Z failed because it was invoked with an invalid keyword value specified. The keyword was P1 and the value was P2 .

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

SD2401**INVALID COMMAND "~P1"****Reason:**

The command P1 is not a valid command for the NCL Debug Command processor.

System Action:

The command is rejected.

User Action:

Enter a valid command.

SD2402**PARAMETER ~P1=~P2" INVALID FOR COMMAND ~P3****Reason:**

An invalid command parameter value was specified. The command was P3 . the parameter was P1 and the invalid value was P2 .

System Action:

The command is rejected.

User Action:

Reenter the command with a valid value for parameter P1 .

SD2403

RESPONSE QUEUE READ TIME-OUT WHEN PROCESSING COMMAND ~P1

Reason:

The command P1 was attempting to read the response messages from an internal command but the read timed out.

System Action:

The command terminates in error.

User Action:

Contact the Systems Administrator.

SD2404

RESPONSE QUEUE OVERFLOW WHILE PROCESSING COMMAND ~P1

Reason:

The command P1 was attempting to read the response messages from an internal command and the internal queue overflowed.

System Action:

The command terminates in error.

User Action:

Contact the Systems Administrator.

SD2405

TRACE LOG CLEARED FOR ID=~P1

Reason:

The trace log was cleared for the process with NCL ID P1 .

System Action:

None.

User Action:

None.

SD2407**P1 TRACING OPTION SET TO P2****Reason:**

The *P1* tracing option was set to *P2* .

System Action:

None.

User Action:

None.

SD2408**NCL TRACING OPTION SET ~P1 FOR ID=~P2****Reason:**

The NCL tracing option was set to P1 for the process whose NCL ID is P2

System Action:

None.

User Action:

None.

SD2409**INVALID NUMERIC VALUE****Reason:**

The field set in error did not contain a valid numeric value.

System Action:

Field is set in error.

User Action:

Specify a valid procedure name.

SD2410

INVALID PROCEDURE NAME

Reason:

The field set in error did not contain a valid procedure name.

System Action:

Field is set in error.

User Action:

Specify a numeric value.

SD2411

CONFLICTING BREAKPOINT TYPES, ONLY ONE BREAKPOINT TYPE CAN BE SPECIFIED

Reason:

The fields set in error conflict with previous breakpoint operands.

System Action:

Fields are set in error.

User Action:

Specify a only one operand.

SD2412

AT LEAST ONE TYPE OF BREAKPOINTS OPERANDS MUST BE ENTERED

Reason:

No breakpoint operands were specified. One breakpoint operand must be entered.

System Action:

Fields are set in error.

User Action:

Specify a breakpoint operand.

SD2413**INVALID VALUE, SPECIFY "ENTRY", "EXIT" OR "BOTH"****Reason:**

For an execution breakpoint you can only specify ENTRY, EXIT or BOTH.

System Action:

Field is set in error.

User Action:

Specify a valid execution breakpoint value.

SD2414**INVALID STATEMENT NUMBER****Reason:**

Valid statement numbers are of the form nnnnnnnn or LNEnnnnn, where n is a decimal digit.

System Action:

Field is set in error.

User Action:

Specify a valid statement number.

SD2415**INVALID VERB****Reason:**

The specified verb is invalid.

System Action:

Field is set in error.

User Action:

Specify a valid NCL verb.

SD2416

INVALID VARIABLE SPECIFICATION

Reason:

Valid variable specifications are either prefix*, varname, or a list of variable names separated by commas and enclosed in parenthesis with no imbedded blanks.

System Action:

Field is set in error.

User Action:

Specify valid variables.

SD2417

INVALID ARGS, SPECIFY EITHER "Y" OR LEAVE THE FIELD NULL

Reason:

A "Y" indicates that the variable breakpoint is to be set on the ARGS.

System Action:

Field is set in error.

User Action:

Specify either "Y" or blank out the field.

SD2418

BOTH RANGE OPERANDS ARE REQUIRED

Reason:

Specify both the range operands or leave both blank.

System Action:

Field is set in error.

User Action:

Specify a both or none of the range operands.

SD2419**TO RANGE VALUE MUST BE GREATER THAN OR EQUAL TO THE FROM RANGE VALUE****Reason:**

The range values must specify an ascending numeric range.

System Action:

Fields are set in error.

User Action:

Specify a larger to range or smaller from range.

SD2420**NCL ID IS A REQUIRED****Reason:**

The NCL ID field was omitted. The NCL ID field is a required field and must be set to a valid NCL ID.

System Action:

Field is set in error.

User Action:

Specify a valid NCL ID.

SD2421**INVALID VALUE, SPECIFY "RESP" OR "REQ"****Reason:**

An invalid queue type was specified, valid types are RESP and REQ.

System Action:

Field is set in error.

User Action:

Specify a valid queue type.

SD2422

EITHER THE DATA FIELD OR THE MESSAGE ID FIELD MUST BE SPECIFIED

Reason:

Either the Data field must be specified or the Message ID field.

System Action:

Fields are set in error.

User Action:

Specify a either the Data field or a Message ID.

SD2423

MESSAGE QUEUED TO ID=~P1

Reason:

The message was queued to the process with NCL ID P1 .

System Action:

None.

User Action:

None.

SD2427

ERROR ADDING TO VARTABLE=~P1, ZFDBK=~P2 PROCEDURE NOT LOADED

Reason:

The server process that was loading a vartable for the procedure display could not add a record to the vartable. P1 is the name of the vartable and P2 is the feed back code received.

System Action:

The procedure display is terminated.

User Action:

Contact the Systems Administrator.

SD2428**KEYWORD ~P1 MUTUALLY EXCLUSIVE WITH ~P2 FOR COMMAND ~P3****Reason:**

Two keyword parameters were specified for a command and only one or the other (but not both) of the parameters are valid at one time. The command was P3 the first operand was P1 and the second operand was P2 .

System Action:

The command is rejected.

User Action:

Specify either P1 or P2 but not both.

SD2429**INVALID POSITIONAL PARAMETER "~P1" FOR COMMAND ~P2****Reason:**

An invalid command parameter was specified. The command was P2 and the invalid value was P1 .

System Action:

The command is rejected.

User Action:

Reenter the command with a valid value for the positional parameter.

SD2430**ADDITIONAL PARAMETERS "~P1" ARE INVALID FOR COMMAND ~P2****Reason:**

Parameters P1 are invalid for command P2 .

System Action:

The command is rejected.

User Action:

Reenter the command omitting the parameters P1 .

SD2431

ERROR ADDING BREAKPOINT ACTION, TABLE=~P1 ZFDBK=~P2

Reason:

The NCL Debug Command processor procedure \$SDDB24Z failed because it was attempting to add a breakpoint to the breakpoint action table and received an error. The table name is P1 and the feed back code is P2 .

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

SD2432

PROCEDURE NAME REQUIRED IF STATEMENT BREAKPOINT BEING SET

Reason:

A statement breakpoint was specified however the procedure name was blank. A statement breakpoint must also specify a procedure name.

System Action:

Field is set in error.

User Action:

Specify a procedure name.

SD2433

REQUEST CANCELLED

Reason:

The request was cancelled as requested by the user.

System Action:

None.

User Action:

None.

SD2434**BREAKPOINT ACTION UPDATED****Reason:**

The breakpoint action was altered as specified in the Action field.

System Action:

None.

User Action:

None.

SD2435**NO TRACE FOUND FOR NCL ID P1****Reason:**

The trace print could not continue because the NCL ID specified did not have any trace records to print. The NCL ID is *P1* .

System Action:

Print request is terminated.

User Action:

None.

SD2436**TRACE LOG FOR NCL ID P1 PRINTED, PRINT REQUEST ID IS P2****Reason:**

The trace log was printed for the NCL ID *P1* and the print request ID is *P2* .

System Action:

None.

User Action:

None.

SD2437

VARIABLE P1 DOES NOT EXIST IN YOUR REGION

Reason:

An attempt to free a region level vartable failed because the table existed in another region. The table name was *P1* .

System Action:

None.

User Action:

None.

SD2438

VARIABLE p1 DOES NOT EXIST IN SCOPE p2

Reason:

An action against a vartable failed because the table did not exist in the indicated scope.

p1 is the name of the table.

p2 is the scope.

System Action:

None.

User Action:

None.

SD2439

P1 VARIABLE P1 IN SCOPE P2 COMPLETED SUCCESSFULLY

Reason:

The vartable *P2* in scope *P3* was successfully processed by *P1* .

System Action:

None.

User Action:

None.

SD2440**TRACE FILTER RESET TO DEFAULT****Reason:**

The current trace filter has been reset to the default.

System Action:

None.

User Action:

None.

SD2441**TRACE FILTER UPDATED****Reason:**

The current trace filter has been updated with the changes requested.

System Action:

None.

User Action:

None.

SD2442**P1 IS A REQUIRED IF P2 IS P3****Reason:**

The keyword *P1* is required if the keyword *P2* has the value *P3*.

System Action:

Field is set in error.

User Action:

Specify a value for *P1*.

SD2443

MAP/MDO ERROR MAP= P1 RC/FDBK= P2

Reason:

An error occurred mapping an MDO to the map *P1* . The MDORC and MDOFDBK are *P2*.

System Action:

The action is rejected.

User Action:

Specify a valid map for the selected MDO component.

SD2444

Data set name and member name must be valid, and both specified

Reason:

An invalid name has been specified for a data set, a member, or both. The names must be valid data set and member names.

System Action:

The action is rejected.

User Action:

Correct the invalid data set and member names.

SD2445

Invalid dataset characteristics. Must have DSORG=PO and LRECL=80+

Reason:

An invalid data set was specified. The data set must be a partitioned data set with a logical record length of 80 or more bytes.

System Action:

The action is rejected.

User Action:

Specify a valid data set.

SD2446

p1 level variable p2 exported. p3< /EM>

Reason:

A variable was exported successfully.

p1 is scope of the table.

p2 is the name of the table.

p3 (if the table is exported to a data set) is the name of the data set member.

System Action:

None.

User Action:

None.

SD2501

**UNSUPPORTED CALL TYPE RECEIVED FROM \$CABU000,
CALLTYPE=~P1**

Reason:

The NCL Debug browse service procedure \$SDDB26L failed because it received a call type that is not supported by the service procedure. The call type was P1 .

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

SD2502

NO TRACE RECORDS TO DISPLAY FOR ID=~P1

Reason:

There are no trace records for process with NCL ID P1 .

System Action:

None.

User Action:

None.

SD2503

INVALID NUMBER "~P1" SPECIFIED

Reason:

A NEXT or PREV command was entered and an invalid number of trace procedures was specified. P1 is the invalid value specified.

System Action:

Action is rejected.

User Action:

Specify a valid number of trace procedures to skip.

SD2504

INVALID VALUE FOR OMLEXPR COMMAND, MUST BE ON OR OFF

Reason:

An invalid value was specified as a parameter for the OMLEXPR command. The only valid values are ON or YES to view OML expression trace records or OFF or NO to exclude OML expression trace records.

System Action:

Action is rejected.

User Action:

Specify ON or YES to view the expression trace records or specify OFF or NO to exclude the records.

SD2505**INVALID VALUE FOR VIEWFLTR COMMAND, MUST BE ON OR OFF****Reason:**

An invalid value was specified as a parameter for the VIEWFLTR command. The only valid values are ON or YES to apply the current view filter or OFF or NO to ignore the current view filter.

System Action:

Action is rejected.

User Action:

Specify ON or YES to have the current view filter applied to trace records or specify OFF or NO to ignore the current view filter. The current view filter can be maintained using the TRACE VIEWFLTR LIST command or TVFL for short.

SD2506**CURRENT SETTING FOR P1 IS P2****Reason:**

The current setting for the *P1* option is *P2*.

System Action:

None.

User Action:

None.

SD2601**UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE=~P1****Reason:**

The NCL Debug selection list service procedure \$SDDB26L failed because it received a call type that is not supported by the service procedure. The call type was P1 .

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

SD2602

NO CALL TRACE RECORDS TO DISPLAY FOR ID=~P1

Reason:

There are no call trace records for process with NCL ID P1 .

System Action:

None.

User Action:

None.

SD2701

UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE=~P1

Reason:

The NCL Debug selection list service procedure \$SDDB27L failed because it received a call type that is not supported by the service procedure. The call type was P1 .

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

SD2702

NO NCL TRACE LOGS EXIST FOR THIS DEBUG SESSION

Reason:

There are no NCL trace logs for this debug session.

System Action:

None.

User Action:

None.

SD2703

SELECTION NOT VALID ON THIS LINE

Reason:

The action selected cannot be performed against the item selected.

System Action:

The action is rejected.

User Action:

None.

SD2801

UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE=~P1

Reason:

The NCL Debug selection list service procedure \$SDDB28L failed because it received a call type that is not supported by the service procedure. The call type was P1 .

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

SD2802

WARNING: STATEMENT BREAKPOINT ~P1 SET BUT NOT APPLIED TO ~P2

Reason:

A statement breakpoint was set as requested but was not applied to the currently executing copies of the procedure. This occurs because the procedure is not privately loaded. The breakpoint will be applied when the procedure is next invoked, since the debugger will automatically load the procedure privately and apply the breakpoint. The Breakpoint ID is P1 and the procedure for which the breakpoint was not applied is P2 .

System Action:

The breakpoint is set but not applied to currently executing copies of the procedure P2 .

User Action:

Re-invoke the procedure to ensure that it is privately loaded and that the breakpoint is applied.

SD2901

UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE=~P1

Reason:

The NCL Debug selection list service procedure \$SDDB29L failed because it received a call type that is not supported by the service procedure. The call type was P1 .

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

SD2902**MDO ~P1 NOT FOUND****Reason:**

The MDO selected has been deleted by the debugged process.

System Action:

The action is rejected.

User Action:

None.

SD2903**NO MDOS TO DISPLAY****Reason:**

There are no MDO's for the selected NCL process and procedure.

System Action:

None.

User Action:

None.

SD2904**MAP/MDO ERROR MAP= P1 RC/FDBK= P2 (IE P3)****Reason:**

An error occurred mapping an MDO to the map *P1* . The MDORC and MDOFDBK are *P2* which mean *P3* .

System Action:

The action is rejected.

User Action:

Specify a valid map for the selected MDO.

SD3001

UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE=~P1

Reason:

The NCL Debug selection list service procedure \$SDDB30L failed because it received a call type that is not supported by the service procedure. The call type was P1 .

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

SD3002

NO VARIABLES TO DISPLAY FOR ID=~P1 PROCEDURE=~P2

Reason:

There are no NCL variables to display for the process with NCL ID P1 and procedure P2 .

System Action:

None.

User Action:

None.

SD3003

INVALID HEX DATA ON LINE ~P1

Reason:

The variable was being edited in hex mode, however invalid hex data was found on line P1 .

System Action:

The editor is reinvoked.

User Action:

Correct the error.

SD3004**VARIABLE NOT FOUND****Reason:**

The variable no longer exists in the debugged procedure.

System Action:

None.

User Action:

None.

SD3005**VARIABLE ~P1 UPDATED****Reason:**

The variable P1 was updated.

System Action:

None.

User Action:

None.

SD3006**SELECTION NOT VALID FOR A SYSTEM VARIABLE****Reason:**

The action selected cannot be performed against system variables.

System Action:

The action is rejected.

User Action:

None.

SD3007

ATTRIBUTE FOR VARIABLE ~P1 ALTERED

Reason:

The attribute for variable P1 was altered.

System Action:

None.

User Action:

None.

SD3008

VARIABLE ~P1 DELETED

Reason:

The variable P1 was deleted.

System Action:

None.

User Action:

None.

SD3009

TOTAL NUMBER OF VARIABLES EXCEEDS DISPLAY LIMIT

Reason:

The total number of list lines for the variable list display exceeded the maximum allowable.

System Action:

The list is terminated.

User Action:

Specify a prefix or fewer variable types to reduce the size of the list.

SD3010**INVALID HEX DATA ON LINE P1, LENGTH IS NOT EVEN****Reason:**

The variable was being edited in hex mode, however invalid hex data was found on line *P1* . The length of the line was found to be an odd number and for hex data the length must be even. Each line must be of even length even though the lines are concatenated together.

System Action:

The editor is reinvoked.

User Action:

Correct the error.

SD3011**VARIABLE DISPLAY INCOMPLETE, TIMEOUT OR QUEUE OVERFLOW
(FDBK= P1)****Reason:**

A variable list was being generated but the terminating message was not received or the wait time was exceeded. This may be caused by the queue overflowing in the presentation process or in the debug server process. If the server's queue overflowed then the terminating message was probably not delivered to the presentation process and hence a timeout would occur, thus is indicated by a FDBK of 4. If the presentations queue overflowed then the FDBK would be 8. P1 is the feed *back* code.

System Action:

The section of the variables list being processes is incomplete and the system continues listing other variable types.

User Action:

Increase system queue limits or narrow the scope of the variable display by using the PREFIX or TYPE parameters on the VARS command.

SD3101

UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE=~P1

Reason:

The NCL Debug selection list service procedure \$SDDB31L failed because it received a call type that is not supported by the service procedure. The call type was P1 .

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

SD3102

NO VARIABLES TO DISPLAY

Reason:

There are no NCL global variables with the specified prefix, or there are no global variables at all (if no prefix was specified).

System Action:

None.

User Action:

None.

SD3103

INVALID HEX DATA ON LINE ~P1

Reason:

The variable was being edited in hex mode, however invalid hex data was found on line P1 .

System Action:

The editor is reinvoked.

User Action:

Correct the error.

SD3104**VARIABLE ~P1 UPDATED****Reason:**

The global variable with suffix P1 was updated.

System Action:

None.

User Action:

None.

SD3105**VARIABLE ~P1 DELETED****Reason:**

The global variable with suffix P1 was deleted.

System Action:

None.

User Action:

None.

SD3106**INVALID HEX DATA ON LINE P1, LENGTH IS NOT EVEN****Reason:**

The variable was being edited in hex mode, however invalid hex data was found on line *P1* . The length of the line was found to be an odd number and for hex data the length must be even. Each line must be of even length even though the lines are concatenated together.

System Action:

The editor is reinvoked.

User Action:

Correct the error.

SD3201

VALUE NOT SELECTED FROM LIST

Reason:

No value was selected from the displayed selection list.

System Action:

None.

User Action:

None.

SD3202

NO SUSPENDED DEBUG SESSIONS

Reason:

No suspended debug session to select from.

System Action:

None.

User Action:

None.

SD3301

UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE=~P1

Reason:

The NCL Debug selection list service procedure \$SDDB33L failed because it received a call type that is not supported by the service procedure. The call type was P1 .

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

SD3401**UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE=~P1****Reason:**

The NCL Debug selection list service procedure \$SDDB34L failed because it received a call type that is not supported by the service procedure. The call type was P1 .

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

SD3402**WARNING: STATEMENT BREAKPOINT ~P1 SET BUT NOT APPLIED TO ~P2****Reason:**

A statement breakpoint was set as requested but was not applied to the currently executing copy of the procedure. This occurs because the procedure is not privately loaded. The breakpoint will be applied when the procedure is next invoked, since the debugger will automatically load the procedure privately and apply the breakpoint. The Breakpoint ID is P1 and the procedure for which the breakpoint was not applied is P2 .

System Action:

The breakpoint is set but not applied to currently executing copies of the procedure P2 .

User Action:

Re-invoke the procedure to ensure that it is privately loaded and that the breakpoint is applied.

SD3501

UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE= P1

Reason:

The NCL Debug selection list service procedure \$SDDB35L failed because it received a call type that is not supported by the service procedure. The call type was P1 .

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

SD3502

NO VARIABLES IN SPECIFIED SCOPE

Reason:

The NCL Debug selection list of variables could not display a list because there were no variables that satisfied the criteria.

System Action:

None.

User Action:

None.

SD3503

NO PROCESS LEVEL VARIABLES FOR NCL ID P1

Reason:

The NCL Debug selection list of variables could not display a list because there were no variables of scope PROCESS for the NCL process ID *P1*.

System Action:

None.

User Action:

None.

SD3601**UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE= P1****Reason:**

The NCL Debug selection list service procedure \$SDDB36L failed because it received a call type that is not supported by the service procedure. The call type was P1 .

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

SD3602**INVALID KEYWORD VALUE, KEYWORD= P1 VALUE= P2****Reason:**

The vartable display utility was invoked with an invalid keyword value passed. *P1* is the keyword name and *P2* is the invalid value.

System Action:

Request is rejected.

User Action:

Specify a valid value for keyword *P1*.

SD3603**TABLE DOESN'T EXIST OR WAS FREED, NAME= P1 SCOPE= P2****Reason:**

The vartable specified to be displayed did not exist in the specified scope. The table could have been freed by another user. *P1* is the name of the table and *P2* is the scope.

System Action:

None.

User Action:

None.

SD3604

ENTRY DOESN'T EXIST OR WAS DELETED, KEY=" P1"

Reason:

The vartable entry did not exist or was deleted by another user. *P1* is the key of the entry that didn't exist.

System Action:

None.

User Action:

None.

SD3605

CANNOT UPDATE MAPPED ENTRY IF MAP IS NOT \$NCL

Reason:

The vartable entry could not be updated because the mapped entry was not mapped by the \$NCL map.

System Action:

None.

User Action:

None.

SD3606

ENTRY UPDATE BY ANOTHER USER, CORRELATOR MISSMATCH

Reason:

The vartable entry could not be updated because the correlator used to retrieve the entry changed when the entry was saved. This condition indicates that at least one other update was made to the entry by another user.

System Action:

None.

User Action:

None.

SD3607**ENTRY UPDATED SUCCESSFULLY****Reason:**

The vartable entry was successfully updated.

System Action:

None.

User Action:

None.

SD3608**ENTRY ADDED SUCCESSFULLY. OLDEST ENTRY WAS DELETED****Reason:**

The vartable entry was successfully added and because the limit was exceeded for the table, the most eligible entry of the table was deleted.

System Action:

None.

User Action:

None.

SD3609**ENTRY ADDED SUCCESSFULLY****Reason:**

The vartable entry was successfully added.

System Action:

None.

User Action:

None.

SD3610

INVALID KEY VALUE " P1"

Reason:

The vartable add could not be performed because the key specified was invalid for the vartable's requirements.

System Action:

The action is rejected.

User Action:

Specify a valid key value.

SD3611

VARIABLE AT LIMIT AND ENTRY COULD NOT BE ADDED

Reason:

The vartable add could not be performed because the table already has the maximum number of entries allowed as specified on the vartable ALLOC used to define the table.

System Action:

The action is rejected.

User Action:

None.

SD3612

ENTRY DELETED SUCCESSFULLY

Reason:

The vartable entry was successfully deleted.

System Action:

None.

User Action:

None.

SD3613**DUPLICATE ENTRY, SPECIFY A UNIQUE KEY****Reason:**

A variable entry was being added and the key for the new entry was a duplicate. The key must be unique within the table.

System Action:

None.

User Action:

Enter a unique key value.

SD3614**DATA AT LINE P1 IS NOT A VALID HEX VALUE****Reason:**

A variable entry was being edited in hex mode and the data entered on line *P1* was not valid hex. All lines must be valid hex characters and have an even length.

System Action:

None.

User Action:

Specify valid hex data.

SD3615**DATA AT LINE P1 IS NOT A VALID HEX VALUE, LENGTH MUST BE EVEN****Reason:**

A variable entry was being edited in hex mode and the data entered on line *P1* was not valid hex. All lines must be valid hex characters and have an even length.

System Action:

None.

User Action:

Specify valid hex data.

SD3616

INVALID HEX DATA FOR KEY IN KEY FIELD PART P1

Reason:

A variable entry was being edited in hex mode and the data entered for the key (part *P1*) was not valid hex. All parts of the key must be valid hex characters and have an even length.

System Action:

None.

User Action:

Specify valid hex data.

SD3617

INVALID HEX DATA FOR KEY IN KEY FIELD PART P1, LENGTH NOT EVEN

Reason:

A variable entry was being edited in hex mode and the data entered for the key (part *P1*) was not valid hex. All parts of the key must be valid hex characters and have an even length.

System Action:

None.

User Action:

Specify valid hex data.

SD3618

INVALID AOM ATTRIBUTE VALUE AT POSITION P1

Reason:

A variable entry was being modified and the value specified for the AOM attribute was invalid. The invalid value starts at position *P1* within the value specified.

System Action:

Save or file request is rejected.

User Action:

Specify valid AOM attribute data.

SD3619**FEEDBACK P1 RETURNED FROM VARTABLE P2 ACTION****Reason:**

The vartable action *P2* was performed and the feedback returned was *P1* .

System Action:

None.

User Action:

Check the NCL reference for an explanation of the feedback.

SD3701**UNSUPPORTED CALL TYPE RECEIVED FROM \$CASL000, CALLTYPE= P1****Reason:**

The NCL Debug selection list service procedure \$SDDB37L failed because it received a call type that is not supported by the service procedure. The call type was *P1* .

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

SD3702**OPTIONAL COMPONENT P1 SET TO NULL****Reason:**

The MDO component *P1* was successfully set to a null value.

System Action:

None.

User Action:

None.

SD3703

OPTIONAL COMPONENT P1 SET TO NOT PRESENT

Reason:

The MDO component *P1* was successfully deleted from the object.

System Action:

None.

User Action:

None.

SD3704

MANDATORY COMPONENT P1 SET TO NULL

Reason:

The MDO component *P1* was successfully set a null value.

System Action:

None.

User Action:

None.

SD3705

MANDATORY COMPONENT P1 SET TO NOT PRESENT

Reason:

The MDO component *P* was successfully deleted from the object.

System Action:

None.

User Action:

None.

SD3706**P1 STRING WAS TRUNCATED****Reason:**

The MDO component *P1* was successfully updated, however the data value was truncated.

System Action:

None.

User Action:

None.

SD3707**P1 INVALID TYPE, BASIC TYPE IS P2****Reason:**

The MDO component *P1* was not updated because of a type error. The basic type of the component is *P2* .

System Action:

None.

User Action:

None.

SD3708**P1 INVALID DATA STRUCTURE****Reason:**

The MDO component *P1* was not updated because of a data error. The data is structurally invalid. Acommon cause could be data size.

System Action:

None.

User Action:

None.

SD3709

INVALID COMPONENT NAME P1 FOR MAP P2

Reason:

The MDO component *P1* does not exist in the map *P2* .

System Action:

None.

User Action:

None.

SD3710

P1 INDEX POSITION INVALID OR OUT OF RANGE

Reason:

The MDO component *P1* had an invalid index position.

System Action:

None.

User Action:

None.

SD3711

MAP P1 NOT FOUND

Reason:

The MDO component could not be updated because the map associated with the object did not exist. The map associated with the object is *P1* .

System Action:

None.

User Action:

None.

SD3712**MAP P1 CONTAINS ERROR, LOAD FAILED****Reason:**

The MDO component could not be updated because the map associated with the object contained errors and it could not be loaded. The map was *P1* .

System Action:

None.

User Action:

None.

SD3713**MAP P1 ERROR, MAP/DATA MISMATCH****Reason:**

The MDO component could not be updated because the map associated with the object contained errors. The map was *P1* .

System Action:

None.

User Action:

None.

SD3714**P1 UPDATED****Reason:**

The MDO component *P1* was successfully updated.

System Action:

None.

User Action:

None.

SD3715

INVALID HEX DATA ON LINE P1

Reason:

The MDO component was being updated in hex mode and invalid hex data was specified on line *P1* .

System Action:

None.

User Action:

None.

SD3716

MDO SUCCESSFULLY MODIFIED

Reason:

The MDO was successfully modified.

System Action:

None.

User Action:

None.

SD3717

INVALID HEX DATA ON LINE P1 LENGTH IS ODD

Reason:

The MDO component was being updated in hex mode and invalid hex data was specified on line *P1* . The error was an odd data length, hex data must be of an even length.

System Action:

None.

User Action:

None.

SD3718**CHANGES TO MDO CANCELLED****Reason:**

The MDO component was being updated and the cancel request was issued. The changes to the mdo will not be saved.

System Action:

None.

User Action:

None.

SD3901**Invalid show key length, must be numeric between 10 and p1****Reason:**

The value specified for the SHOWKEY command is invalid. It must be a number between 1 and the length of the key, *P1*.

System Action:

Command rejected.

User Action:

Specify a valid number in the correct range.

SD3902**No files to view.****Reason:**

There are no eligible UDB files to view. Files to view must already be allocated and opened using the UDBCTL OPEN command. NDB files cannot be viewed using this utility.

System Action:

Request rejected.

User Action:

Allocate and open a UDB file and then invoke the viewer.

SD3903

File not selected for viewing.

Reason:

No file was selected for viewing.

System Action:

Request rejected.

User Action:

Select a file from the prompt list or specify a file DD name and retry.

SD3904

DD name P1 not allocated and opened as a VSAM file.

Reason:

The specified DD name *P1* is not allocated or is not a VSAM file.

System Action:

Request rejected.

User Action:

Ensure that the DD name specified is allocated to a VSAM file and that the file is opened using the UDBCTL OPEN command.

SD3905

Record not found.

Reason:

The specified action cannot be performed because the record does not exist.

System Action:

Request rejected.

User Action:

None.

SD3906

Record deleted.

Reason:

The selected record was deleted.

System Action:

None.

User Action:

None.

SD3907

Record has no data.

Reason:

The selected record has a key only and there is no data present.

System Action:

None.

User Action:

None.

SD3908

Table p1 with scope p2 doesn't exist or was freed

Reason:

The variable specified does not exist in the specified scope. The table may have been freed by another user. *P1* is the name of the table and *P2* is the scope.

System Action:

None.

User Action:

None.

SD3909

Data saved.

Reason:

The data was saved in the repository.

System Action:

None.

User Action:

SD3910

Data contains hexadecimal characters.

Reason:

The data to edit contains non-displayable hexadecimal characters. The editor automatically switches into hexadecimal editing mode.

System Action:

None.

User Action:

None.

SD3911

Invalid hexadecimal characters entered.

Reason:

The hexadecimal editing area contains invalid characters. The area must contain characters 0-9 or A-F.

System Action:

The cursor is placed on the first invalid hexadecimal character.

User Action:

Change the invalid character to a valid hexadecimal character 0-9 or A-F.

SD3912

Entry no longer exists.

Reason:

The vartable entry no longer exists. The entry was deleted by another user or by a system process.

System Action:

Command is rejected.

User Action:

Refresh the list to view the latest vartable entries.

SD3913

Table has been freed!

Reason:

The vartable no longer exists. The table has been freed by another user or by a system process.

System Action:

Processing terminates.

User Action:

None.

SD3914

Action failed! Action= p1 FDBK= p1

Reason:

The vartable action *P1* failed with feedback code *P2*.

System Action:

Processing continues.

User Action:

None.

SD3915

Invalid \$NCL component. Must specify "DATALIST{n}", n being a number

Reason:

The \$NCL MDO component specified is invalid. It must be of the form: DATALIST{n} where n is a number from 1 to 32767.

System Action:

Field is set in error.

User Action:

Correct the Component field.

SD3916

Command not valid on this line.

Reason:

The command is not valid on the line on which it was placed. Some line commands apply to certain lines only.

System Action:

Field is set in error.

User Action:

Change the line command or blank out the field.

SD3917

Command conflict.

Reason:

The command conflicts with a previous line command.

System Action:

The field is set in error.

User Action:

Change the line command or blank out the field.

SD3918**Block command incomplete.****Reason:**

A previous block command does not have a matching command on another line.

System Action:

The field is set in error.

User Action:

Enter a matching command on another line or blank out the pending line command.

SD3919**Command not recognized.****Reason:**

The line command entered is not recognized as a valid line command.

System Action:

The field is set in error.

User Action:

Enter a valid line command or blank out the field.

SD3920**Entry deleted.****Reason:**

The variable entry was successfully deleted from the table.

System Action:

None.

User Action:

None.

SD3921

Entry updated.

Reason:

The vartable entry was successfully updated.

System Action:

None.

User Action:

None.

SD3922

MDO component already exists.

Reason:

The MDO component specified already exists. A unique component name must be specified.

System Action:

The field is set in error.

User Action:

Correct the Component field.

SD3923

Entry already exists.

Reason:

The vartable entry already exists in the table.

System Action:

The field is set in error.

User Action:

You must specify a unique key for the vartable entry.

SD3924**Entry added.****Reason:**

The variable entry was successfully added.

System Action:

None.

User Action:

None.

SD3925**Data for MDO component is of an invalid type****Reason:**

The data being set for the MDO component is of an invalid data type. For example, if the component is an enumerated type, the value must be one of the valid enumerations. If the type is declared as INTEGER, the data must be a valid integer, and so on.

System Action:

The data is not saved in the MDO.

User Action:

Correct the data and retry the request.

SD3926**Data for MDO component is structurally invalid****Reason:**

The data being set for the MDO component is structurally invalid. For example, the data may be too long or too short.

System Action:

The data is not saved in the MDO.

User Action:

Correct the data and retry the request.

SD3927

Data for MDO component is too long, MDO maximum size will be exceeded

Reason:

The data being set for the MDO component will cause the MDO to exceed its maximum length.

System Action:

The data is not saved in the MDO.

User Action:

Correct the data and retry the request.

SD3928

Invalid Map Name. Must be \$NCL.DATALIST, \$NCL.VARSLIST or a name

Reason:

The Map Name field is incorrectly specified. The map name must be \$NCL.DATALIST for a standard list of value, \$NCL.VARSLIST for a standard list of variable suffixes and values, or a name (that is only using alphanumeric and national characters, with the first character not a number).

System Action:

The field is set in error.

User Action:

Enter a valid map name or one of the standard \$NCL forms.

SD3929**Invalid Map Name: P1****Reason:**

The Map Name field was invalid. *P1* indicates the reason that the map is invalid.

System Action:

The field is set in error.

User Action:

Enter a valid map name that exists or one of the standard \$NCL forms (that is \$NCL.DATALIST or \$NCL.VARSLIST).

SD3930**Data exceeds maximum of p1****Reason:**

The data entered exceeds the maximum length of *P1*.

System Action:

The field is set in error.

User Action:

Reduce the size of the field value to *P1* or less.

SD3931**Invalid \$NCL component. Must be VARSLIST.TOKEN{n}.NAME or .DATA****Reason:**

The \$NCL MDO component specified is invalid. It must be of the form: VARSLIST.TOKEN{n}.NAME or VARSLIST.TOKEN{n}.DATA where n is a number from 1 to 32767.

System Action:

The field is set in error.

User Action:

Correct the Component field.

SD3932

Invalid hexadecimal data on line *p1 p2*

Reason:

The data on line *P1* is invalid hexadecimal data. The characters allowed are 0 to 9, A to F, and blanks. There must be an even number of non-blank characters. *P2* provides more information about the error.

System Action:

The data is rejected and the editor invoked.

User Action:

Correct the data.

SD3933

Record not added or updated because a duplicate alternate key exists.

Reason:

Record not added or updated because a duplicate alternate key exists.

System Action:

Request rejected.

User Action:

None.

SD3934

Record updated.

Reason:

The record was successfully updated.

System Action:

None.

User Action:

None.

SD3935**Record added.****Reason:**

The record was successfully added.

System Action:

None.

User Action:

None.

SD3936**No NDBs to view.****Reason:**

There are no eligible NDB files to view. To view NDBs, they must be allocated, opened, and started.

System Action:

Request rejected.

User Action:

Allocate, open, and start an NDB, and then invoke the viewer.

SD3937**NDB not selected for viewing.****Reason:**

No NDB was selected for viewing.

System Action:

Request rejected.

User Action:

Select an NDB from the prompt list or specify an NDB name and retry.

SD3938

NDB name *P1* does not exist.

Reason:

The specified NDB name *P1* is not started as an NDB.

System Action:

Request rejected.

User Action:

Ensure that the NDB name specified is allocated, opened, and started as an NDB.

SD3939

P1* invalid - *P2

Reason:

The field *P1* is invalid. *P2* provides the reason.

System Action:

Field set in error.

User Action:

Correct the error and retry.

SD3940

Scan returned *P1* records

Reason:

The NDB scan returned *P1* records.

System Action:

Records are presented starting with the first in the sequence.

User Action:

None.

SD3941

Invalid LENGTH parameter. Specify an +num, -num, =num or *

Reason:

The parameter to the LENGTH command is invalid. You must specify + or - followed by a number to increment or decrement the total length of the data. You can specify an absolute length by entering = followed by the data length required. If you specify * , the length of the data is variable and when saved, trailing blanks are stripped.

System Action:

Command rejected.

User Action:

Enter a valid parameter to the LENGTH command.

SD3942

Variable deleted.

Reason:

The global variable was successfully deleted.

System Action:

None.

User Action:

None.

SD3943

Invalid global variable name.

Reason:

The Var Name field is invalid. The name must begin with GLBL and follow the OML rule for variable names.

System Action:

The field is set in error.

User Action:

Enter a valid variable name.

SD3944

No locks to view for ID= p1

Reason:

NCL process P1 is not holding any NCL locks, so there is nothing to display.

System Action:

Request rejected.

User Action:

None.

SD3945

Invalid sort parameter, specify NCLID, NAME, PROC, USER or TEXT

Reason:

An invalid sort options was specified. Valid sort options are:

NCLID - sort based on the NCL process ID

NAME - sort on the lock resource name

PROC - sort on the NCL procedure name that issued the lock

USER - sort on user ID

TEXT - sort on the lock text

You can only specify ONE sort option.

System Action:

Request rejected.

User Action:

Specify a valid sort option.

SD3946**Invalid filter expression: p1****Reason:**

An invalid boolean expression filter was specified. The expression must be of the BOOLEXP format and can use the following variables:

&NCLID - NCL ID of process holding lock

&PROC - Procedure name that issued lock

&USER - User ID

&TYPE - Type of lock (EXCL or SHR)

&ID - Unique lock ID

&LEVEL - Level of resource specification, PRIMARY name only or MINOR and primary name specified.

&TEXT - Lock text

&NAME - Resource name of lock. This is the primary and minor names joined together (with a period as the separator)

The following examples illustrate the use of the filter command:

1) To show only locks for procedure PROC1 specify:

`FILTER &proc = 'proc1'`

2) To show only locks for procedure PROC1 with resource name starting with RES:

`FILTER &proc = 'proc1' and &name like 'res%'`

System Action:

Request rejected.

User Action:

Specify a valid filter expression.

SD4001

No P1 records exist

Reason:

You have requested a display record type *P1*, but no records of this type exist. The record count is 0.

System Action:

None.

User Action:

None.

SD4101

List terminated after 9999 records

Reason:

The packet analyzer record display facility supports a maximum of 9999 records. More than 9999 records were found. Only the first 9999 records have been listed.

System Action:

None.

User Action:

If multiple stacks run on this system and you are viewing records from all stacks, you can reduce the size of the list by viewing records from a single stack. Use PKTANAL STACK=name.

SD4102

Reassign successful

Reason:

The TDF record has been successfully reassigned to this region.

System Action:

None.

User Action:

None.

SD4103**Record already owned by this region****Reason:**

A reassign request was issued, but failed because the record is already owned by this region.

System Action:

None.

User Action:

None.

SD4201**Error processing p1 msg= p2****Reason:**

The web page unload action failed attempting to do *p1*. The error message received was *P2*.

System Action:

Web page is not unloaded.

User Action:

If a UDB OPEN was in error, you must manually re-open the UDB file with the correct options for that file.

SD4202**Successfully unloaded web page p1****Reason:**

The web page unload *p1* was successfully unloaded.

System Action:

None.

User Action:

None.

SDDG001

PARAMETER P1= P2 INVALID ON CALL TO \$SDDIAGN.

Reason:

An invalid value (*P2*) has been specified for the *P1* parameter. (The parameter name is valid, the operand value is invalid).

System Action:

No diagnostics are performed.

User Action:

Check the operand value and retry.

SDDG002

COULD NOT OBTAIN DIAGNOSTIC INFORMATION FOR NCLID P1

Reason:

\$SDDIAGN attempted to obtain diagnostic information for the NCL process *P1* but was unsuccessful.

System Action:

None.

User Action:

Check log for errors. Also check the authority of the user that \$SDDIAGN is running under that they are authorized for the DEBUG command. Also check that someone isn't already using the DEBUG command to debug this NCL process.

SDDG003**ATTEMPTING TO OBTAIN DIAGNOSTIC INFORMATION FOR NCLID P1****Reason:**

The \$SDDIAGN diagnostic facility was called by an application that has encountered an error or an unexpected condition to log some diagnostic information for the NCL process P1 .

This message indicates the start of diagnostic information. The end of of the diagnostic information is indicated by the message SDDG004.

System Action:

None.

User Action:

Send the diagnostic information to your local support representative with a detailed description on how the problem can be repeated.

If you are getting too much diagnostic information written to the log the diagnostic facility can be disabled by issuing the following command:

\$SDDIAGN OPT=DISABLE

The diagnostic facility can be later enabled by the command:

\$SDDIAGN OPT=ENABLE

SDDG004**END OF DIAGNOSTIC INFORMATION FOR NCLID P1****Reason:**

The \$SDDIAGN diagnostic facility was called by an application that has encountered an error or an unexpected condition to log some diagnostic information for the NCL process P1 .

This message indicates the end of diagnostic information. The start of the diagnostic information is indicated by the message SDDG003.

System Action:

None.

User Action:

Send the diagnostic information to your local support representative with a detailed description on how the problem can be repeated.

If you are getting too much diagnostic information written to the log the diagnostic facility can be disabled by issuing the following command:

\$SDDIAGN OPT=DISABLE

The diagnostic facility can be later enabled by the command:

\$SDDIAGN OPT=ENABLE

SDDG005

\$SDDIAGN DIAGNOSTIC FACILITY P1

Reason:

The \$SDDIAGN diagnostic facility has been enabled or disabled (*P1*).

System Action:

None.

User Action:

Only disable the diagnostic facility if it is interfering with normal system operation. The purpose of this facility is to aid problem diagnosis.

SDDG006

COULD NOT OBTAIN DIAGNOSTIC INFORMATION AS NCL/DEBUG IS NOT LICENSED

Reason:

The \$SDDIAGN diagnostic facility was called by an application that has encountered an error or an unexpected condition to log some diagnostic information. The \$SDDIAGN diagnostic procedure was unable to obtain diagnostic information because the NCL/DEBUG component is not included in this system.

System Action:

None.

User Action:

Refer to your system administrator. The NCL/DEBUG component may not be included for the following reasons:

- The NCL/DEBUG component is not licensed. The NCL/DEBUG component is licensable and must be included in the configuration licence member that is issued by your product supplier. Check that the licence member includes NCL/DEBUG and contact your product supplier if it is not present.
- The NCL/DEBUG component has been specifically excluded. The SOLVE run JCL allows licensable components to be excluded. Check the run JCL to see if the EXC= parameter has been specified and NCL/DEBUG is amongst the components to be excluded.
- The NCL/DEBUG component has not been specifically included. The SOLVE run JCL allows licensable components to be specifically included. Check the run JCL to see if the INC= parameter has been specified but the NCL/DEBUG was omitted from the components to be included.

SKCALL01**No signon details available for background processing.****Reason:**

A request to execute a Socket Management command was rejected because the background signon details have not been specified.

System Action:

Request rejected.

User Action:

Specify the background user ID and password to use in the ICS parameter group SOCKETMGMT and retry the request.

SKCALL07**Specify a SocketMgmt Server****Reason:**

A request to execute a Socket Management command was rejected because there was no target server specified.

System Action:

Request rejected.

User Action:

Specify a valid Socket Management Server.

SKCALL08**Unknown system name P1****Reason:**

An APPC request to the remote system identified by *P1* failed; the INMC link name *P1* does not exist.

System Action:

The request is ignored.

User Action:

Use the SHOW LINKS command to verify INMC link names and status.

SKCALL09

Link name P1 is not active : status = P2

Reason:

An APPC request to the remote system identified by *P1* failed; the INMC link name *P1* is not active - the current status is *P2*.

System Action:

The request is ignored.

User Action:

Use the SHOW LINKS command to verify INMC link names and status.

SKCALL10

Function not available on back-level system P1: requires P2

Reason:

An APPC request to the remote system identified by *P1* failed. The remote system is running a back-level version which does not support this type of request. The minimum requirement is *P2*.

System Action:

The request is ignored.

User Action:

None.

SKCALL11

APPC call to system P1 failed with RC= P2 FDBK= P3

Reason:

An APPC request to the remote system identified by *P1* failed with return code *P2* and feedback code *P3*.

System Action:

An additional error message may be written to the activity log if RC=16.

User Action:

Contact your System Administrator.

SKCALL12**Dynamic discovery error for P1, MSG= P2****Reason:**

An attempt by Socket Management services to dynamically discover a resource failed. The resource name was *P1* and the error message returned from the create was *P2*.

System Action:

Processing continues.

User Action:

Check the error message in *P2*.

SKCALL13**User information for user P1 and server P2 reset****Reason:**

The user information needed by user *P1* to signon to the SocketMgmt server *P2* was reset/deleted.

System Action:

None

User Action:

None

SKCD0401**Command P1 canceled****Reason:**

The requested command has been canceled.

System Action:

None

User Action:

None

SKCD0402

P1 must be in the range P2 to P3

Reason:

The field *P1* must contain a value in the range *P2* to *P3* .

System Action:

None

User Action:

Correct the field value and retry.

SKCD0403

P1 must be one of: P2

Reason:

The field *P1* must contain a value listed in *P2* .

System Action:

None

User Action:

Correct the field value and retry.

SKCO0101

Logic error for Socket Management server P1, code P2

Reason:

A serious logic error was encountered in a Socket Management server. The name of the server is *P1* and the error code is *P2*.

System Action:

The connection is terminated.

User Action:

Contact your local support representative.

SKCO0102**P1****Reason:**

This is a trace message from NetMaster Socket Management Services.

System Action:

None.

User Action:

If tracing was requested by support, then gather all the related trace messages and send them to your support representative.

SKCO0103**Logon rejected by Socket Management server P1, reason is P2****Reason:**

An attempt to logon to a Socket Management command server failed. The name of the server is *P1* and the reason for the error is *P2*.

System Action:

The connection is terminated.

User Action:

Check the reason and correct the authorization and/or configuration of the Socket Management server.

SKCO0104**Invalid command syntax for P1, P2, P3****Reason:**

An attempt to issue a Socket Management command was rejected because the command syntax was invalid. *P1* is the server name, *P2* is the command name and optionally the parameter in error, and *P3* is the error condition.

System Action:

The command is rejected.

User Action:

Correct the syntax of the command and retry the request.

SKCO0110

On P1 data was not found for P2

Reason:

A command request to Socket Management server *P1* failed because the requested data for command *P2* was not found.

System Action:

None.

User Action:

None.

SKCO0111

Error on P1 processing command P2, reason is P3

Reason:

A command request for the Socket Management server *P1* failed. The command requested was *P2* and the reason code is *P3*.

System Action:

Processing for the specified command terminates.

User Action:

Correct the command and retry the request.

SKCO0112

Vector error in SocketMgmt server, Error= P1 Key= P2 Value= P3

Reason:

An attempt to issue a Socket Management command was rejected because the SocketMgmt command server detected an error in the data sent to it. The error condition is *P1* and the field in error is *P2*. *P3* is the value of the field.

System Action:

The connection is terminated.

User Action:

Contact your local support representative.

SKCO0113**Command syntax:****Reason:**

This message provides information about CICS SocketMgmt Command Entry. Command syntax information is presented in the Command Entry screen. Information includes commands available and relevant syntax.

System Action:

None.

User Action:

None.

SKCO0114**Requested port not available for P1 command P2****Reason:**

A command request to Socket Management server *P1* failed because the requested port for command *P2* is already in use.

System Action:

Processing for the specified command terminates.

User Action:

Correct the command and retry the request.

SKCO0115**Requested port not found for P1 command P2****Reason:**

A command request to Socket Management server *P1* failed because the requested port for command *P2* is not configured in T09CONFIG member.

System Action:

Processing for the specified command terminates.

User Action:

Correct the command and retry the request.

SKCO0116

User not authorized for command P1 on P2

Reason:

Command request *P1* to Socket Management server *P2* failed because of insufficient access authority.

System Action:

Processing for the specified command terminates.

User Action:

Notify your systems administrator.

SKCO0117

Drop listener attempt without TYPE=LISTENER option

Reason:

A Drop command was attempted on a Listener type connection without specifying TYPE=LISTENER.

System Action:

Processing for the specified command terminates.

User Action:

Correct the command and retry the request.

SKCO0118

Drop attempt on SocketMgmt Command server not permitted.

Reason:

A drop command was attempted on the Socket Management Command server. This action is not permitted.

System Action:

Processing for the specified command terminates.

User Action:

Correct the command and retry the request.

SKEV2501**Invalid parameter value specified, keyword= P1 value= P2****Reason:**

An invalid call was made to the procedure. The keyword in error is identified by *P1* and the value by *P2* .

System Action:

None.

User Action:

Contact your System Administrator.

SKEV2502**Event receiver= P1 start failed - already active****Reason:**

An event receiver for the receiver ID identified by *P1* has failed to start because there is an event receiver process active for the same receiver ID on this system.

System Action:

The event receiver stops.

User Action:

Check the activity log to search for previous SKEV25* messages which would indicate when the receiver was started.

SKEV2505**Define retry for event receiver= P1 cancelled****Reason:**

The define process for the event receiver whose receiver ID is *P1* failed to start and the system entered a retry process. A request to stop the event receiver, and so cancel the retry process, has completed successfully.

System Action:

The event receiver is not defined and events will not be received.

User Action:

If the events are to be received, the event receiver must be restarted.

SKEV2506

Event receiver= P1 for type= P2 started

Reason:

The event receiver for the receiver ID (*P1*) and event type (*P2*) has started.

System Action:

The event receiver processes events of the specified type.

User Action:

None.

SKEV2507

EPS connection for ID= P1 refused:

Reason:

The event receiver for the (EPS) receiver ID (*P1*) did not connect to the Subsystem Interface (SSI). The reason that the connection was refused follows in message SKEV2508.

System Action:

The event receiver will not receive events using EPS.

User Action:

Refer to the refusal reason in message SKEV2508 which accompanies this message on the log. The most likely causes are:

- The Subsystem Interface (SSI) is inactive or does not support EPS. Refer to the NetMaster Installation and Implementation Instructions for information on how to set up the SSI. Ensure that EPS is correctly configured by including the following parameters:

XMEM=YES XAPI=YES XEVNT=YES

- The region has not connected to the correct SSI or it is not active. Issue the STATUS command and check the output for message N98601, which indicates the current status and subsystem ID. If there is no SSID, use the SYSPARM SSID command to connect to the SSI.

SKEV2508**P1****Reason:**

This message accompanies message SKEV2507 when an EPS connection is refused. The refusal reason (*P1*) is shown and will be either:

- Another message number - REFUSAL REASON UNAVAILABLE

System Action:

The event receiver will not receive events using EPS.

User Action:

Check the refusal reason:

- Refer to the description of the message in the reason. Also refer to the user actions described for message SKEV2507.
- *REFUSAL REASON UNAVAILABLE* indicates an internal error. (1) Check your maintenance tape to ensure that any APARs that relate to EPS are installed. (2) Perform the user actions described for message SKEV2507. (3) If the problem is not resolved, contact Technical Support.

SKEV2509

Event receiver=*P1* failed - see Log

Reason:

An event receiver for the *P1* receiver ID has failed. The failure reason is detailed in message SKEV2510, which is written to the activity log along with this message.

System Action:

Message SKEV2510 includes one of the following types of EPS operation that failed:

CONNECT

The event receiver is not defined, and events are not received. The system is suspended for a time, and then the definition of the receiver will be tried again.

RECEIVE

The EPS connection is closed and the process is suspended for 15 seconds, during which time events are not received. After this interval, the event receiver will attempt to connect to the SSI and any further errors are shown as for CONNECT.

CLOSE

The event receiver is terminated.

User Action:

Review the messages in the activity log. Message SKEV2510 includes the failure reason and the type of EPS operation that failed.

Use the feedback reason to determine why the event receiver failed:

39 EPS event support unavailable

70 EPS event support unavailable

These reasons indicate that the SSI (that this region is connected to) does not provide EPS event support because of one of the following reasons:

- The directly connected SSI does not provide this function.
- The SSI is connected to other SSIs in the same LPAR, and none of them provide the support.

This usually indicates that you have not connected this region to the correct SSI.

EPS event support is provided by the XEVNT=YES SSI parameter.

81 SSI connection lost

This indicates that the connection to the SSI has been lost. This may occur if the SOLVESSI started task is terminated or the region is disconnected from the SOLVESSI because the SSID parameter has been reset.

Use the SHOW SYSPARM=SSID command to determine the SSID value. Ensure that the correct SSID is specified and that the SOLVESSI started task is active. Use the SSI STATUS command to verify the status of the SSI started task.

For a particular type of EPS operation, you can perform certain actions:

CONNECT or RECEIVE

The event receiver, suspended in retry mode, may be canceled by stopping the receiver.

CLOSE

The event receiver may be restarted if required.

Note: Stopping or restarting the receiver should only be done under guidance from your system administrator or Technical Support.

List this region's configuration details (/IPTEST), and investigate any errors.

SKEV2510

EPS type= P1 FDBK= P2 reason= P3

Reason:

This message follows message SKEV2509 and provides the EPS operation type (*P1*), failure code (*P2*), and reason (*P3*).

System Action:

Refer to message SKEV2509.

User Action:

Refer to message SKEV2509.

SKPKG01

P1 not defined

Reason:

The object *P1* was not found.

System Action:

None.

User Action:

None.

SKPKG02

P1 already exists

Reason:

Object *P1* already exists.

System Action:

User Action:

None.

SKPKG03

Fatal vartable error - ID: P1 func: P2 fdbk: P3

Reason:

An error occurred while manipulating a VARTABLE in the procedure \$SKCALL. *P1* is the vartable identifier, *P2* is the function being performed, and *P3* is the feedback code set by the vartable verb.

System Action:

None.

User Action:

Notify your systems administrator.

SKPKG04**P1 call error: P2 P3 P4 P5 P6 P7 P8****Reason:**

A logic error has been detected in NetMaster Socket Management processing. This is the OML code that runs in the NetMaster region and establishes and maintains IP socket connections with the socket application server. The specific connection call was *P1*.

System Action:

The request is terminated.

User Action:

Ensure that the socket application being contacted is still active.

SKPKG05**Timeout trying to reach server P1****Reason:**

An attempt to logon to Socket Management server *P1* failed. The request timed out.

System Action:

The request is terminated.

User Action:

Check the log for additional messages.

SKPKG06**Error trying to logon to server P1, MSG= P2****Reason:**

An error occurred trying to logon to a Socket Management server. The server name was *P1* and the error message returned was *P2*.

System Action:

The request is terminated.

User Action:

Check the reason for the error and check the log for additional error messages.

SKPKG07

Cannot contact Server P1, IP address and port not discovered.

Reason:

An error occurred trying to logon to a Socket Management server *P1*. The server IP address and port have not been discovered.

System Action:

The request is rejected.

User Action:

Take the appropriate action for the cause:

- 1) *The CICS region is not running* Start the CICS region and the IP address and port of the server will be dynamically discovered.
- 2) *The SocketMgmt CICS Exit is not installed* See the installation instructions on how to install the SocketMgmt Exit. Without this exit SocketMgmt cannot function correctly.
- 3) *The SocketMgmt CICS Exit has abended* Contact your local support representative.

SL0001

Service procedure not specified on call to Selection List Manager

Reason:

The SPROC keyword parameter was not specified on the call to the Selection List Manager.

System Action:

The call is rejected.

User Action:

Correct the call parameters and retry.

SL0002**Service procedure P1 not found in library****Reason:**

The service procedure specified on the call to the Selection List Manager was not found in the NCL procedure library.

System Action:

The call is rejected.

User Action:

Correct the service procedure name or create the procedure in the NCL procedure library and retry.

SL0003**No data to display****Reason:**

No data was found for display on the selection list.

System Action:

The Selection List call is terminated.

User Action:

None.

SL0004**Press ENTER to confirm selection or press CANCEL****Reason:**

This is a prompt message which is displayed to allow the user to verify that the selected actions are correct before they are carried out.

System Action:

None.

User Action:

Press the ENTER key to execute the highlighted selections, or press the CANCEL function key to cancel the requested actions.

SL0007

Invalid scroll amount. Must be CSR, DATA, HALF, PAGE, or 1 to 9999.

Reason:

You specified an invalid scroll amount. Valid scroll amounts are CSR, PAGE, MAX, HALF, DATA, or a number. You only need to enter the first character, for example, P for PAGE. MAX is valid only when entered at the command prompt.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Enter a valid value in the scroll field.

SL0008

P1 is an invalid FIND operand

Reason:

The operand specified with the find command was invalid. Some valid operands are FIRST, NEXT, PREV and LAST.

System Action:

The Find command is rejected.

User Action:

Correct the parameters on the Find command and retry.

SL0009

Function only available in 3270 environment

Reason:

A selection list can only be displayed in a fullscreen 3270 environment.

System Action:

The command is not processed.

User Action:

None.

SL0012**Entry number must be between 1 and P1****Reason:**

The selected entry number does not exist.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Specify a valid entry number or press the *Exit* function key to cancel the selection.

SL0013**Invalid scroll value for left/right scrolling****Reason:**

An invalid scroll value was specified. When scrolling to the left or right, the only values allowed are 'M', 'MAX' or a number.

System Action:

The scroll request is rejected.

User Action:

Correct the scroll value and retry.

SL0015**Invalid RC= P1 from P2 call of Service Procedure P3****Reason:**

An unsupported return code was set by a selection list service procedure. The calltype was *P2* , and the name of the service procedure was *P3* .

System Action:

None.

User Action:

Correct the return code set by the Selection List Service Procedure.

SL0016

Invalid shortcut/command (for help:put cursor on this line, press F1)

Reason:

An unrecognized shortcut or selection list command was entered.

System Action:

None.

User Action:

Enter a valid shortcut, menu option, panel path, or command.

SHORTCUTS

Enter a shortcut name, preceded by a slash, at the ==> prompt (for example, /levels or /info or /ipmon).

This will take you directly to the function.

To see a list of all shortcuts and their associated functions, enter a single slash (/) at the ==> prompt.

Select the desired shortcut from the list by entering 'S' beside it.

If a shortcut exists for a menu option, it is displayed in turquoise, to the right of the option description.

Shortcuts may also be combined with menu options (for example, /bcast.s or =/bcast.s).

Shortcuts can be invoked in two ways:

1. A 'nested' shortcut
2. A shortcut skip

To retain and nest the current screen level, use a nested shortcut:

/shortcut_name

Exit will bring you back to the last nested screen in this window. Screens may be nested to a maximum of 64 levels.

To close all currently nested screen levels, use a shortcut skip:

=/shortcut_name

Exit will take you back to the Primary Menu.

If you no longer need any nested screens, a shortcut skip saves storage and resources.

(If you are currently at the Primary Menu, a nested shortcut and a shortcut skip behave the same.)

MENU OPTION

Each menu option is identified by a 1 to 3 character option string, displayed in yellow. Enter the option you want at the ==> prompt.

PANEL PATH

Like shortcuts, panel paths move directly to a function without having to access each submenu between it and the current menu.

A panel path consists of multiple menu options separated by periods (for example =U.M).

Also like shortcuts, the = sign functions as a skip character, closing all nested screens and effectively entering the path from the primary menu. (If you are currently at the Primary Menu, the skip character is not required.)

Frequently used panel paths have associated shortcuts.

If you don't remember a shortcut, enter / at the ==> prompt for a list.

Select one from the list, or enter it at the ==> prompt.

There is no difference between accessing a function using a panel path skip or a shortcut skip, although the shortcut should be easier to remember. Both close the current screen and go straight to the function.

Entering == at the ==> prompt from any panel closes all nested screens and returns you to the Primary Menu.

SL0017

P1 records searched - press 'FIND' to continue search

Reason:

P1 records were searched for the specified string but the string was not found. Press the FIND key to continue the search.

System Action:

None.

User Action:

Press the FIND function key if you wish to continue the search.

SL0019

Characters ' P1' found

Reason:

The text string specified in the FIND command was found. The cursor is positioned at the beginning of the text string.

System Action:

None.

User Action:

None.

SL0020

Record ID not specified for LOCATE command

Reason:

The locate command was entered, but no record id was specified.

System Action:

The command is rejected.

User Action:

Re-enter the Locate command specifying the partial or full record id which is to be located.

SL0021

Scroll amount must be between 1 and 99999

Reason:

The scroll amount that was specified was too large. The scroll amount must be in the range 1 to 99999.

System Action:

The scroll request is rejected.

User Action:

Re-enter the scroll command specifying a valid scroll amount.

SL0022**Invalid option****Reason:**

The select option specified was invalid.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the selection option and retry. Valid options are usually displayed above the first list entry.

SL0023**Bottom of data reached****Reason:**

The bottom of data was reached when trying to find a string specified with the Find command.

System Action:

None.

User Action:

To continue the search press the Find function key. The search will continue from the top of the list.

SL0024**Top of data reached****Reason:**

The top of the data was reached when trying to find a string specified with the Find command.

System Action:

None.

User Action:

To continue the search press the *FIND* function key. The search will continue from the bottom of the selection list.

SL0025

Character string not specified

Reason:

An asterisk (*) was entered as a parameter for the find command, but no previous find command has been entered. When an asterisk is entered as the character string for a find command, the character string from the last find command issued is used. If a literal asterisk is to be found, it should be entered in quotes (ie: '*').

System Action:

The *Find* command is rejected.

User Action:

Re-enter the *Find* command specifying a valid character string.

SL0026

Press ENTER key to confirm delete or CANCEL key to cancel request

Reason:

This is a prompt message which is displayed to allow the user to verify that the selected records are to be deleted before the delete request is actioned.

System Action:

None.

User Action:

Press the ENTER key to action the delete request, or press the CANCEL function key to cancel the delete request.

SL0027

Vartable error ID= P1 OPT= P2 ZFDBK= P3

Reason:

An error occurred when processing a VARTABLE.

System Action:

None.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

SL0028**Invalid \$SOPTIONS value set by service procedure P1****Reason:**

The selection list service procedure *P1* has set an invalid value in the variable &\$SOPTIONS.

System Action:

The selection list is terminated.

User Action:

Correct the service procedure and retry.

SL0029**Entry number must be '1'****Reason:**

There is only one entry that can be selected from the list. The entry number that you specified is invalid.

System Action:

The selection request is rejected.

User Action:

Specify a valid entry number.

SL0030**Calltype P1 not supported by procedure P2****Reason:**

The selection list service procedure was called with call type *P1* from the Selection List Manager but it does not support that call type.

System Action:

The selection list is terminated.

User Action:

Fix the service procedure so that it supports the calltype.

SL0031

Select option P1 not supported by service procedure P2

Reason:

The selection list service procedure was called with an option which it does not support.

System Action:

None.

User Action:

Fix the service procedure so that it supports the selection or remove the select value from \$SLOPTIONS.

SL0036

Invalid command (for help:put cursor on this line, press F1)

Reason:

An unrecognized command was entered.

System Action:

None.

User Action:

Enter a valid menu option, panel path, or command.

Menu Option is identified by a one- to three-character string, displayed in yellow. Enter the option you want at the ==> prompt.

Panel Path enables you to move directly to a function without having to access each submenu between it and the current menu. A panel path consists of multiple menu options separated by periods (for example, A.C.P).

The = sign functions as a skip character, closing all nested screens and effectively entering the path from the primary menu. (If you are currently at the primary menu, the skip character is not required.)

Entering == at the ==> prompt from any panel closes all nested screens and returns you to the primary menu.

SL0038**FIND string must be specified****Reason:**

The *Find* command could not be actioned because no character string was entered.

System Action:

The *Find* command is rejected.

User Action:

Re-enter the *Find* command specifying the character string to be found.

SL0039**LOCATE command is not supported****Reason:**

The *Locate* command is not supported on this selection list.

System Action:

The *Locate* command is rejected.

User Action:

You must scroll up/down to find the desired record(s).

SL0040**Invalid keyword value specified, keyword= P1 value= P2****Reason:**

Selection List Manager failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and Selection List Manager terminates.

User Action:

Correct the NCL procedure which executed List Handler.

SL0041

The maximum number that can be selected has been exceeded, maximum= P1

Reason:

The maximum number of entries that could be selected on a select type list was exceeded. The maximum was P1 .

System Action:

The List is redisplayed.

User Action:

Correct the number of entries selected to be less than or equal to the maximum and retry.

SL0042

Default option P1 is not in options list

Reason:

A *Default option* was set by the list service procedure, but the default option is not a valid select option for the list. *P1* is the default option set by the service procedure.

System Action:

The list is not displayed.

User Action:

Correct the services procedure by erasing the default option or changing it to a valid option.

SL0043

Invalid \$SLFNDDMODE set by service procedure P1, value= P2

Reason:

The selection list service procedure *P1* has set an invalid value *P2* in the variable &\$SLFNDDMODE. The only valid value is *ALL* or null. The default is null.

System Action:

The selection list is terminated.

User Action:

Correct the service procedure, and retry.

SL0044**Invalid \$SLFNDPROMPT set by service procedure P1, value= P2****Reason:**

The selection list service procedure *P1* has set an invalid value *P2* in the variable &\$SLFNDPROMPT. The valid values are *NO* , any unsigned integer between 100 and 2147483647, and null. The default is null.

System Action:

The selection list is terminated.

User Action:

Correct the service procedure, and retry.

SL0045**P1 restored to default values****Reason:**

The *P1* has been restored to its default setting, which is set by the service procedure.

System Action:

None.

User Action:

None.

SL0046

P1 is an invalid RESET operand

Reason:

The operand *P1* specified with the RESET command was invalid. Valid operands are:

ALL restores the default FMODE and FPROPT settings. This is the default.

FMODE restores the default FMODE setting.

FPROPT restores the default FPROPT setting.

System Action:

The RESET command is rejected.

User Action:

Correct the operand on the RESET command, and retry.

SL0047

P1 is an invalid FMODE operand

Reason:

The operand *P1* specified with the FMODE command was invalid. Valid operands are:

ALL enables the FIND command to search beyond the currently displayed columns.

DEFAULT or *DFLT* restores the default FMODE setting.

NORMAL or *NORM* restricts the FIND command to search the displayed columns only.

null displays the current FMODE setting.

System Action:

The FMODE command is rejected.

User Action:

Correct the operand on the FMODE command, and retry.

SL0048

Current P1 setting is P2

Reason:

The current selection list setting for *P1* is *P2* .

System Action:

None.

User Action:

None.

SL0049

P1 set to P2

Reason:

The selection list setting *P1* has been set to *P2* .

System Action:

None.

User Action:

None.

SL0050

P1 is an invalid FEPROMPT operand

Reason:

The operand *P1* specified with the FEPROMPT command was invalid. Valid operands are:

100 to *2147483647* specifies the number of records to search for before a progress message is displayed.

DEFAULT or *DFLT* restores the default FEPROMPT setting.

NO specifies that no progress messages be displayed until the bottom or top of the searched data has been reached.

NORMAL or *NORM* sets the number of records to search for to *50* .

null displays the current FEPROMPT setting.

System Action:

The FEPROMPT command is rejected.

User Action:

Correct the operand on the FEPROMPT command, and retry.

SL0051

Characters P1 not found

Reason:

The text string specified in the FIND command was not found.

System Action:

None.

User Action:

For a multi-panel list, issue FMODE ALL to scan all panels for the text string.

SL0052**P1****Reason:**

The value *P1* is invalid and cannot be processed.

System Action:

None

User Action:

Either enter a new value or ignore.

SNAM0101**Detail display unavailable - alert was not filed as an event****Reason:**

A request for a detail display of a CNM alert has failed. When the alert was generated, the CNM record was not saved as an event in the NEWS database (NEWSFILE).

System Action:

None.

User Action:

Event recording options are specified, by event category, in the CNMFILTERS ICS parameter group. If detailed displays are required, the event recording option must be E (Event) or higher.

SNIN0801

P1 P2 failed for P3: P4

Reason:

An SNA interface or exit action has failed:

P1 is the resource type (CNM, CNMEXIT, SAW, SAWEXIT).

P2 is the action (START or STOP).

P3 is the resource name (exit or interface ACB name).

P4 is the reason.

System Action:

The action is not performed.

User Action:

This situation should not occur and should be reported to your product supplier.

SNINW01

Alert monitor registration complete

Reason:

The alert monitor initialization action has completed successfully.

System Action:

None.

User Action:

None. For information only.

SNINW02

NCP monitor registration complete

Reason:

The NCP monitor initialization action has completed successfully.

System Action:

None.

User Action:

None. For information only.

SNINW03**NSCNTL cache opened; maximum size= P1****Reason:**

The NSCNTL cache has been opened successfully. The maximum cache size is *P1* .

System Action:

The cache will be used to enhance access to the NSCNTL file.

User Action:

None

SNINW04**NEWS database logging - p1****Reason:**

A request to resume or suspend NEWS database logging through the CNMLOGGING parameter group was successful. *p1* identifies the request type.

System Action:

For resumed, logging of CNM records to the NEWS database is started.
For suspended, logging of CNM records to the NEWS database are stopped until one of the following occurs:

- The CNMPROC is restarted (or the region restarted).
- A request to resume logging is successful.

User Action:

None.

SNINW05

P1 exit P2 stopped

Reason:

An exit (*P1* is the exit type, CNM or SAW, and *P2* is the exit name) has been stopped as a result of one of the following:

- An explicit request to suspend the exit
- The name of the exit being changed; the old exit must be stopped before the new exit can be started.

System Action:

If the exit name is being changed, another message will indicate this.

User Action:

None

SNINW06

P1 exit P2 started

Reason:

An exit (*P1* is the exit type, CNM or SAW, and *P2* is the exit name) has been started as a result of one of the following:

- An explicit request to activate the exit
- The name of the exit being changed

System Action:

If the exit name is being changed, a previous message will indicate this.

User Action:

None

SNINW07**P1 interface stopped****Reason:**

An interface (*P1* is the interface type, CNM, SAW, or SAW logging) has been stopped as a result of one of the following:

- An explicit request to suspend the interface
- The ACB name of the interface being changed; the old interface must be stopped before the new interface can be started.

System Action:

If the interface ACB name is being changed, another message will indicate this.

User Action:

None

SNINW08**P1 interface started****Reason:**

An interface (*P1* is the interface type, CNM, SAW, or SAW logging) has been started as a result of one of the following:

- An explicit request to activate the interface
- The ACB name for the interface being changed

System Action:

If the interface ACB name is being changed, a previous message will indicate this.

User Action:

None

SNINW09

P1 interface Initially Active? option is NO

Reason:

An interface (*P1* is the interface type, CNM, SAW) has been defined with the initially active option set to NO.

System Action:

The interface is not started during system startup.

User Action:

None.

SNINW10

P1 interface Currently Active? option is NO

Reason:

An interface (*P1* is the interface type, CNM, SAW) has been defined with the currently active option set to NO.

System Action:

The interface is not started as a result of actioning the parameter group.

User Action:

None.

SNINW11

Alert monitor registration failed; message follows

Reason:

The alert monitor initialization action failed; the reason is given in a message (AMCALLnn) which follows.

System Action:

Alert monitor initialization for NetMaster for SNA alerts is incomplete. Alert monitoring functions for NetMaster for SNA alerts will not function correctly.

User Action:

Review the help for the appropriate AMCALLnn message.

SNINW12**NCP monitor registration failed; message follows****Reason:**

The NCP monitor initialization action failed; the reason is given in a message (DFCALLnn) which follows.

System Action:

NCP monitor initialization is incomplete. NCP monitoring functions will not function correctly.

User Action:

Review the help for the appropriate DFCALLnn message.

SNINW13**NSCNTL cache open error, FDBK= P1****Reason:**

An attempt to open the NSCNTL cache (varable \$NWCACHE) failed. *P1* is the FDBK code returned from the &VARIABLE ALLOC statement.

System Action:

The cache is not referenced.

User Action:

Determine the reason for the error and correct the problem as necessary. The meaning of the FDBK code can be found in the NCL Reference under the &VARIABLE ALLOC statement.

SNINW14

NEWS database logging cannot be resumed; the CNMPROC is not active

Reason:

A request to resume NEWS database logging is invalid because the CNM procedure is not active.

System Action:

NEWS database logging remains suspended.

User Action:

Start the CNM interface using the CNM parameter group and then return to the CNMLOGGING parameter group to review the NEWS database logging status.

SNINW15

P1 required to activate P2

Reason:

The field indicated (*P1*) must be specified for a request to activate it (by field *P2*).

System Action:

None

User Action:

Either specify the indicated exit or ACB name, or do not request either initial or current activation.

SNINW16**Procedure P1 failed, msg: P2****Reason:**

The user supplied procedure *P1* failed during processing; the message returned was *P2* .

System Action:

Processing continues. The result of the user supplied procedure may be partially in effect.

User Action:

Investigate and correct the cause of the failure in the user supplied procedure, and then action the parameter group.

SNINW17**SAW interface (ISTPDCLU) in use by job P1, ACB P2****Reason:**

An attempt to start the Session Awareness (SAW) interface has failed because another application is already in session with the VTAM ISTPDCLU application. *P1* identifies the job with the ACB name *P2* that is currently in session with ISTPDCLU.

System Action:

SAW Start fails, and session awareness is not available.

User Action:

Use the NOVTAM SAW Start option in the SAW parameter group if you do not need to collect local active session data. Alternatively, retry the request when the other application has released the interface.

SNINW18

NEWS PPI alert receiver p1

Reason:

A request to resume or suspend the NEWS PPI alert receiver was successful. *p1* is the request type - resumed or suspended.

System Action:

For resumed, the NETVALRT PPI receiver is active and CNM records are received through PPI.

For suspended, the NETVALRT PPI receiver is inactive.

User Action:

None.

SNNP5001

No resources match the requested criteria

Reason:

A request to display NNP resources (such as Ports, Stations, Sessions, or HPR connections) has failed because no resources match the specified criteria.

System Action:

None.

User Action:

Retry using other criteria.

SNNP5002**Over P1 resources match the requested criteria - list truncated****Reason:**

A request to display NNP resources (such as Ports, Stations, Sessions, or HPR connections) has resulted in a large number of resources. The list has been truncated to the first *P1* resources.

The truncation value (*P1*) varies, based on the resource type and available data (for example, length of DLC types or partner node names) because the restriction is based on the number of characters present in the response, rather than the number of resources.

System Action:

None.

User Action:

Refine the selection criteria and retry. For example, rather than selecting all stations, include a status value such as "Not Active."

SNNP5011**Resource name (NAME= P1) required****Reason:**

A request to display a specific NNP resource has failed because the name of the resource was not provided. The type of resource (*P1*) will be one of the following:

portname - The port name for a port

linkname - The link name for a station

sessionid - The 16 (hexadecimal-digit) session ID for a session

System Action:

None.

User Action:

Correct the procedure that invoked \$SNNPAPI ACTION=GET to specify the NAME= parameter for the resource class. For example: &CALL PROC=\$SNNPAPI + PARMS=(ACTION=GET,+ CLASS=PORT,+ NAME=&portname,+ other parameters ...

SNNP5101

No host partner

Reason:

A request to display the partner for a Link Station or a Session has failed due to one of the following:

- A link station does not have a host partner
- The link name for the Link Station or Session is SPMOSSE

System Action:

None.

User Action:

None.

SNNS2001

Action not available for SNAMS FP/EP records

Reason:

The required action is not available for SNAMS Focal Point (FP) or Entry Point (EP) records. This is because there are no SNAMS records distributed on the NSCNTL file as all records contain SNA network resource names that are site specific.

System Action:

None

User Action:

None

SNNS2002

File error: DD= P1 Req= P2, FileRc= P3, VSAMFdbk= P4, Key= P5, Msg= P6

Reason:

A file operation has failed:

P1 is the DD name for the file. This is either: SNNSCNTL - the "old" NSCNTL file as *identified* by the DSN= parameter *NSCNTL* - the NSCNTL file for the current release

P2 is the file operation, for example Open, Close, Get, Put

P3 is the file return code (&FILERC)

P4 is the VSAM feedback code (&VSAMFDBK) where relevant

P5 is the record key where relevant

P6 is the system message (&SYSMSG) where relevant

System Action:

The utility terminates.

User Action:

Determine the cause of the error and retry.

SNNS2003

Record not found: Key= P1

Reason:

The record selected for copy (Key= *P1*) was not found on the "old" NSCNTL file. The record may have been deleted by another user.

System Action:

The record is not copied.

User Action:

None

SNNS2101

NSCNTL File record category P1 not supported, categories listed

Reason:

Procedure was called with the CAT parameter specifying a category not defined in the NSCNTL file.

System Action:

Categories list displayed.

User Action:

Proceed by selecting from the displayed list or change parameters when calling the procedure.

SNNS2102

NSCNTL File unavailable

Reason:

An attempt to obtain the NSCNTL file DSN failed, indicating that it was not available.

System Action:

Processing terminates.

User Action:

Ensure that the file is present and allocated.

SNNS2103

NSCNTL File open/close error P1

Reason:

An attempt to open or close the NSCNTL file resulted in an error, with a return code provided.

System Action:

Operation terminates.

User Action:

Ensure that the NSCNTL file is available and not corrupted or locked.

SNNS2104**NSCNTL File read/write error P1****Reason:**

A Read/Write error was detected while processing the NSCNTL file.

System Action:

Operation terminates.

User Action:

Act according to the error message provided.

SNNS2105**NSCNTL File opened without write authority****Reason:**

Modify/Add action was requested but the NSCNTL file was opened in read only mode.

System Action:

Action rejected.

User Action:

Ensure that the NSCNTL file is not corrupted or used in exclusive mode.

SNNS2106**NSCNTL File opened without delete authority****Reason:**

Delete action was requested while NSCNTL file was not opened for delete access.

System Action:

Delete action is rejected.

User Action:

Ensure that the NSCNTL file is not corrupted or used in exclusive mode.

SNNS2107

Functional procedure error P1

Reason:

The functional procedure supporting the currently selected category returned an error code and/or message.

System Action:

Operation continues.

User Action:

Check relevant error code/message and perform correcting action.

SNNS2108

P1 not authorized to use NEWS

Reason:

User whose user ID is provided is not authorized to use NEWS services.

System Action:

Procedure terminates.

User Action:

Ensure that the proper level of authorization is obtained.

SNNS2109

Record not found: String= P1

Reason:

The locate function failed to locate record with the key containing specified string *P1* .

System Action:

The record list is not repositioned.

User Action:

Check the string looked for.

SNNSCNV01**DSN parameter omitted****Reason:**

The DSN parameter, which specifies the dataset name of the "old"NSCNTL file, was omitted. This is a mandatory parameter.

System Action:

The utility terminates.

User Action:

Specify the dataset name (parameter) and retry. Format: \$SNNSCNV
DSN=datasetname

SNNSCNV02**File error: DD= P1 Req= P2, FileRc= P3, VSAMFdbk= P4, Key= P5, Msg= P6****Reason:**

A file operation has failed:

P1 is the DD name for the file. This is either: SNNSCNTL - the "old" NSCNTL file as identified by the DSN= parameter *NSCNTL* - the NSCNTL file for the current release

P2 is the file operation, for example Open, Close, Get, Put

P3 is the file return code (&FILERC)

P4 is the VSAM feedback code (&VSAMFDBK) where relevant

P5 is the record key where relevant

P6 is the system message (&SYSMSG) where relevant

System Action:

The utility terminates.

User Action:

Determine the cause of the error and retry.

SS0301

INVALID KEYWORD VALUE SPECIFIED, KEYWORD=~P1 VALUE=~P2

Reason:

The System Support Services procedure \$SSPM03M failed because it received an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

Procedure \$SSPM03M terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

SS0302

USERID P1 NOT AUTHORIZED TO SYSTEM SUPPORT SERVICES

Reason:

A request to access the System Support Services menu was denied because the userid *P1* was not authorized.

System Action:

The request is rejected.

User Action:

None.

SSGP1001

USER P1 IS NOT AUTHORISED FOR TCP/IP FUNCTIONS

Reason:

The user identified by *P1* is not authorised to use the System Support menu option.

System Action:

None

User Action:

Contact your local security administrator.

SSGP1002**DOMAIN ID ' P1' IS NOT A VALID DOMAIN ID****Reason:**

The Domain ID identified by *P1* does not conform to the specification for a valid Domain ID.

System Action:

None

User Action:

Correct the entry and retry the operation.

SSGP1003**NO DOMAIN ID(S) SELECTED FROM LIST****Reason:**

No domains were selected from the displayed list.

System Action:

None

User Action:

None

SSGP1004**OPTION INVALID WITH MULTIPLE DOMAINS SELECTED****Reason:**

The selected option is invalid if multiple domains have been selected. The option is valid only for a single domain ID.

System Action:

None

User Action:

Correct the entry and retry the operation.

SSGP1005

P1 FIELD CONTAINS EMBEDDED BLANKS

Reason:

The data entered into the field specified in the message contains one or more embedded blanks.

System Action:

Option not processed.

User Action:

Correct the field and retry the operation.

SSGP1101

INVALID PARAMETER VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

An invalid call was made to the procedure. The keyword in error is identified by P1 and the value by P2 .

System Action:

None

User Action:

Contact your local Systems Administrator.

SSGP1102

VARTABLE ERROR, TABLE= P1, REQ= P2, KEY= P3, FDBK= P4

Reason:

Procedure \$SSGP11H failed because an &VARTABLE verb gave an unexpected return code. In the message:

P1 is the VARTABLE name

P2 is the &VARTABLE request type

P3 is the key for the entry

P4 is the return code

System Action:

The request is rejected and the procedure terminates. Control is returned to the procedure which executed \$SSGP11H.

User Action:

Contact your systems administrator.

SSM01002

DOMAIN ID ' P1' IS NOT A VALID DOMAIN ID

Reason:

The Domain ID identified by *P1* does not conform to the specification for a valid Domain ID.

System Action:

None

User Action:

Correct the entry and retry the operation.

SSM01003

NO DOMAIN ID(S) SELECTED FROM LIST

Reason:

No domains were selected from the displayed list.

System Action:

None

User Action:

None

SSM01004

OPTION INVALID WITH MULTIPLE DOMAINS SELECTED

Reason:

The selected option is invalid if multiple domains have been selected. The option is valid only for a single domain ID.

System Action:

None

User Action:

Correct the entry and retry the operation.

SSUA1201

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The System Support : User List service procedure failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and the procedure terminates. Control is returned to the procedure which executed \$SSUA12L. If the procedure was executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed \$SSUA12L. If the procedure was executed from OCS, check the command entered on the command line and retry.

SSUA1202**INVALID SELECT VALUE SPECIFIED - KEYWORD= P1 VALUE= P2****Reason:**

The System Support : User List service procedure failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$SSUA12L terminates.

User Action:

Contact your local Systems Administrator.

SSUA1203**ACTION NOT SUPPORTED FOR THIS ENTRY****Reason:**

The attempted action is not valid for one of the following reasons:

- The line is a message line
- ForceCancel and Disconnect are invalid for a disconnected user

System Action:

None

User Action:

None

SSUA1204

VARIABLE ERROR, TABLE= P1, REQ= P2, KEY= P3, FDBK= P4

Reason:

The System Support : User List service procedure failed because an &VARIABLE verb gave an unexpected return code. In the message:

P1 is the VARIABLE name

P2 is the &VARIABLE request type

P3 is the key for the entry

P4 is the return code

System Action:

The request is rejected and the list terminates. Control is returned to the procedure which executed \$SSUA12L.

User Action:

Contact your systems administrator.

SSUA1205

NO MATCHING USER(S) ON THIS DOMAIN

Reason:

No user IDs on this domain match the selection criteria.

System Action:

None

User Action:

None

SV0001**USERID P1 NOT AUTHORIZED FOR NETWORK MANAGEMENT FEATURE****Reason:**

User P1 has attempted to invoke a function of the Network Management feature but is not authorized to do so.

System Action:

The process is terminated.

User Action:

Contact your systems administrator if you feel you should have access to the Network Management feature.

SV0002**P1 IS INVALID****Reason:**

An invalid selection option has been placed in the "Select Option" field of the Netmaster Primary Menu. *P1* is the invalid option.

System Action:

The process waits for input from the terminal.

User Action:

Enter a valid selection and retry.

SV0003**P1 IS INVALID****Reason:**

An invalid selection has been placed alongside an option of the Netmaster Primary Menu. *P1* is the invalid option.

System Action:

The process waits for input from the terminal.

User Action:

Enter a valid option and retry.

SV0004

P1 IS INVALID - NCL PROCEDURE NOT RUNNING

Reason:

A valid selection option has been placed alongside a menu item of the Netmaster Primary Menu but cannot be acted upon because that option is not currently active. *P1* is the option selected.

System Action:

The process waits for input from the terminal.

User Action:

Ensure that the option is typed against the correct entry and retry.

SV0005

INVALID KEYWORD ~P1

Reason:

P1 is not a valid keyword.

System Action:

The process is terminated.

User Action:

Correct the error and retry.

SV0006

INVALID SYNTAX - DUPLICATE KEYWORD ~P1

Reason:

The keyword P1 has been specified more than once.

System Action:

The process is terminated.

User Action:

Correct the parameters and retry.

SV0011**ACCESS TO RESOURCE ~P1 DENIED FOR USER ~P2****Reason:**

User P2 has no access privilege to the resource P1.

System Action:

Access to the resource is denied.

User Action:

Contact your security administrator if you require access to this resource.

SV0012**REQUEST TIMEOUT - NO RESPONSE WITHIN ~P1 SECONDS****Reason:**

A request has timed out whilst waiting for a response from a device. P1 is the amount of time waited for before the request was abandoned.

System Action:

The process is terminated.

User Action:

Retry the function.

SV0013**PARAMETER ~P1 IS INVALID FOR ~P2****Reason:**

P1 is not valid for P2 .

System Action:

The process is terminated.

User Action:

Correct the error and retry.

SV0101

NODE *P1* REPORTED EVENT TYPE: *P2* DESC: *P3*

Reason:

The node *P1* has reported an event through the CNM interface.

System Action:

This message is passed to CA NSM.

User Action:

See the NEWS Dynamic Attentions display for details of the error condition.

SV0102

NEWS alert forwarding to CA NSM resumed

Reason:

Alert forwarding using the CA NSM API received a zero return code following prior failures. The interface is now operational.

System Action:

None.

User Action:

None.

SV0103

NEWS alert forwarding to CA NSM failed RC= *P1*

Reason:

Alert forwarding using the CA NSM API received a non-zero return code.

Return code values are:

4 ENF not active.

8 Error in ENF processing.

16 Error in EMWTO parameter list.

System Action:

This message will be logged once on first failure. Message SV0102 will be logged if alert forwarding to CA NSM recovers.

User Action:

Check that CA NSM has been installed. If necessary contact Technical Support.

SV0201**INVALID VALUE FOR PASSED VARIABLE, KEYWORD= P1 VALUE=" P2"****Reason:**

The NetMaster for SNA API \$NSCALL failed because it received an invalid value for a passed parameter. The parameter name was P1 and its value was P2.

System Action:

Procedure \$NSCALL terminates.

User Action:

Correct the NCL procedure or command that invokes \$NSCALL and retry.

SV0202**UNKNOWN OPT/NAME COMBINATION, OPT= P1 NAME= P2****Reason:**

The NetMaster for SNA API \$NSCALL failed because it received an unknown option and name combination. The option (OPT=) was *P1* and name (NAME=) was *P2*.

System Action:

Procedure \$NSCALL terminates.

User Action:

Correct the NCL procedure or command that invokes \$NSCALL and retry.

SV0203

REQUEST OPT= P1 NAME= P2 FAILED, PROCEDURE P3 NOT FOUND

Reason:

The NetMaster for SNA API \$NSCALL failed because the NCL Procedure that handles the function does not exist in the user's NCL Procedure Library. The request, identified by option (P1) and name (P2), requires procedure P3 which does not exist.

System Action:

Procedure \$NSCALL terminates.

User Action:

Review the user's COMMANDS definition. Ensure that the relevant NCL procedure libraries are in the COMMANDS concatenation and/or move the NCL procedure to a library that is included in the COMMANDS library concatenation.

SV0204

REQUEST OPT= P1 NAME= P2 FAILED, PARMS OMITTED

Reason:

The NetMaster for SNA API \$NSCALL failed because the function requires additional parameters via the PARMS= operand but this was omitted. The request is identified by option (P1) and name (P2).

System Action:

Procedure \$NSCALL terminates.

User Action:

Correct the NCL Procedure that invokes \$NSCALL and retry.

SV0205**USERID P1 NOT AUTHORIZED FOR NETWORK MANAGEMENT FEATURE****Reason:**

User P1 has attempted to invoke a function of the Network Management feature but is not authorized to do so.

System Action:

The process is terminated.

User Action:

Contact your systems administrator if you feel you should have access to the Network Management feature.

SV0206**USER NOT AUTHORIZED****Reason:**

Access to the requested function has been denied.

System Action:

Access to the function is denied.

User Action:

Contact the system administrator if the function is required.

SV0207**Dynamic attentions forwarding enabled****Reason:**

A request to pass NEWS dynamic attention messages to an external source has been successfully processed.

System Action:

Message SV0208 is issued to identify the receiver.

User Action:

None.

SV0208

Dynamic attentions forwarding to CA NSM. Destaddr= P1

Reason:

A request to pass NEWS dynamic attention messages to CA NSM at the IP host *P1* has been successfully processed.

System Action:

The CA NSM gateway procedure is started.

User Action:

None.

SV0209

Dynamic attention forwarding is already active

Reason:

A request to pass NEWS dynamic attention messages to an external source has failed as the process is already active.

System Action:

None.

User Action:

Use SHOW NCL=ALL PROC=\$NSTN01Z to determine the process forwarding NEWS dynamic attentions.

SV0210

Socket P1 error, Retcode= P2 Zfdbk= P3 Errno= P4- P5 Verrin= P6

Reason:

A socket error occurred forwarding NEWS dynamic attentions as SNMP traps. The socket action was *P1*, the return code was *P2*, the feedback code was *P3*, the error number was *P4* - *P5* is the name of the error, and the TCPIP vendor specific error code is *P6*.

System Action:

The action fails, but recovery is attempted.

User Action:

If the problem persists determine the cause from the error codes and correct the problem.

SV0211

Action= P1 Type= P2 is an obsolete function.

Reason:

The NetMaster for SNA API (\$NSCALL) has been called with a function that is obsolete in the current release. The particular call is identified by the ACTION (P1) and TYPE (P2) parameters.

System Action:

The function is not actioned.

User Action:

Amend the calling procedure to remove the call to \$NSCALL. Refer to the Migration Guide.

SYAD4010

No audit log exists

Reason:

A request to display the audit log failed because an audit log does not exist.

System Action:

The request is rejected.

User Action:

None.

SYAD4101

Entity does not exist in DBID P1

Reason:

The requested entity does not exist in the indicated MODS data set (P1). This may arise because another user has moved or deleted the entity.

System Action:

The request is rejected.

User Action:

Refresh the entity list and retry.

SYAD4102

Entity already exists in DBID P1

Reason:

The requested entity exists in the indicated MODS data set (*P1*), but no-replace was specified.

System Action:

The request is rejected.

User Action:

If you want to replace the entity, use the replace action.

SYAD4110

P1 P2 P3

Reason:

This message provides details for a specific data set action as part of a MODS administration action. The message shows:

P1 The file action (added or deleted)

P2 The MODS DBID on which the action was performed

P3 An identification of the specific record actioned

System Action:

This message is written to the audit log for the administration process. There may be several actions (and messages) for a single record and for an entire MODS entity.

User Action:

None.

SYAD4111**Entity copied from DBID P1 to DBID P2****Reason:**

The requested entity has been copied from the MODS data set (*P1*) to MODS data set (*P2*).

System Action:

None.

User Action:

None.

SYAD4112**Entity moved from DBID P1 to DBID P2****Reason:**

The requested entity has been moved from the MODS data set (*P1*) to MODS data set (*P2*).

System Action:

None.

User Action:

None.

SYAD4113**Entity deleted from DBID P1****Reason:**

The requested entity has been deleted from the MODS data set (*P1*).

System Action:

None.

User Action:

None.

SYAD4201

No MODS IDs to display within selected criteria

Reason:

No MODS IDs exist after applying selection criteria (DBID prefix and/or access mode).

System Action:

None.

User Action:

None.

SYAD4202

No MODS ID selected from list

Reason:

No MODS ID was selected from the prompt list.

System Action:

The request is ignored.

User Action:

Enter a unique SYSDB ID or select an item from the list.

SYAR1103

Application P1 not defined

Reason:

A request to browse, update, delete, or copy an application definition failed because the application definition is not defined. The identifier of the application was *P1* .

System Action:

The request is rejected.

User Action:

Specify an application identifier previously defined and retry.

SYAR1105**Application P1 P2****Reason:**

An application definition was successfully added, updated, or deleted. The identifier of the application definition was *P1* and the action successfully performed was *P2* .

System Action:

None.

User Action:

None.

SYAR1106**Application P1 already defined****Reason:**

A request to add an application definition failed because the application definition is already defined. The identifier of the application is *P1* .

System Action:

The request is rejected.

User Action:

Specify an application identifier not previously defined and retry.

SYAR1202**Application P1 already defined****Reason:**

An application identifier was entered in the Application ID field on the Application Definition panel that was previously defined. The application identifier entered was *P1* .

System Action:

The Application Definition panel is displayed with the Application ID field set in error.

User Action:

Enter an application identifier not previously defined and retry.

SYAR1203

P1 conflicts with another APPL, APPL= P2 Prefix= P3

Reason:

A message prefix was entered in the *P1* field on the Application Definition panel that was generically equal to a message prefix defined in another application definition, or a message prefix defined in another application definition was generically equal to the entered prefix. The ID of the application found that contained the matching prefix was *P2* and that message prefix was *P3* .

System Action:

The Application Definition panel is displayed with the *P1* field set in error.

User Action:

Enter a message prefix that does not generically equal a message prefix defined in another application definition, and then retry.

SYAR1204

P1 must start with the character 'Y'

Reason:

An application ID was entered in the *P1* field on the Application Definition panel that did not start with Y.

System Action:

The Application Definition panel is displayed with the *P1* field set in error.

User Action:

Enter an application ID starting with Y in the *P1* field, and then retry.

SYAR1205**P1 must be the same as the P2****Reason:**

A value was entered in the *P1* field on the Application Definition panel that was not the same as the value in the *P2* field.

System Action:

The Application Definition panel is displayed with the *P1* field set in error.

User Action:

Enter the value of the *P2* field in the *P1* field and retry.

SYCM1101**Command P1 P2****Reason:**

Command *P1* was successfully added, updated, or deleted.

System Action:

None.

User Action:

None.

SYCM1102**Command P1 already defined****Reason:**

A request to add a Command entry failed because the new command to add is already in the database.

System Action:

The request is rejected.

User Action:

Specify a Command entry that is not defined to the database.

SYCM1103

Command P1 not found

Reason:

A request to modify, browse, or retrieve Command entry *P1* failed because the entry cannot be found in the database.

System Action:

The request is rejected.

User Action:

Specify a Command entry that is already added to the database.

SYCM1202

Command P1 already defined

Reason:

The Command ID *P1* cannot be added because a definition with that ID already exists.

System Action:

The panel is redisplayed and the Command ID field is set in error.

User Action:

Correct the field by entering a unique Command ID.

SYCM1204

Invalid command id specified, P1 is a reserved command id

Reason:

The command ID specified is a system reserved name and cannot be used in the command table.

System Action:

The panel is redisplayed and the Command ID field is set in error.

User Action:

Specify a unique command ID and retry the request.

SYCR1103**P1 command is not active on this panel****Reason:**

A command was entered in the Command field on the Criteria Description panel that was a valid command; however, it is not allowed to be specified on that panel.

System Action:

The command is rejected.

User Action:

Clear the Command field.

SYCR1202**P1 must be PU(blic) OR PR(ivate)****Reason:**

An invalid value was entered in the *P1* field on the Criteria Description panel.

System Action:

The Criteria Description panel is displayed with the *P1* field set in error.

User Action:

Enter PUBLIC or PRIVATE in the *P1* field and retry. The first two characters need to be entered only.

SYCR1203**P1 must not be entered when P2 set to P3****Reason:**

P3 was entered in the *P2* field on the Criteria Description panel and a value was entered in the *P1* field.

System Action:

The Criteria Description panel is displayed with the *P1* field set in error.

User Action:

Clear the *P1* field or change the value of the *P2* field and retry.

SYCR1204

Public criteria P1 already defined

Reason:

A criteria name was entered in the Criteria Name field on the Criteria Description panel that is already defined. The criteria name entered was *P1* and it was a public criteria.

System Action:

The Criteria Description panel is displayed with the Criteria Name field set in error.

User Action:

Enter a criteria name not previously defined and retry.

SYCR1205

Private criteria P1 for userid P2 already defined

Reason:

A criteria name was entered in the Criteria Name field on the Criteria Description panel that is already defined. The criteria name entered was *P1* and it was a private criteria owned by user ID *P2* .

System Action:

The Criteria Description panel is displayed with the Criteria Name field set in error.

User Action:

Enter a criteria name not previously defined and retry.

SYCR1501**Public criteria P1 P2****Reason:**

A criteria definition was successfully added, updated, or deleted. The name of the criteria definition was *P1* and it was a public criteria. The action successfully performed was *P2* .

System Action:

None.

User Action:

None.

SYCR1502**Private criteria P1 for userid P2 P3****Reason:**

A criteria definition was successfully added, updated, or deleted. The name of the criteria definition was *P1* and it was a private criteria owned by user ID *P2*. The action successfully performed was *P3* .

System Action:

None.

User Action:

None.

SYCR1503**Public criteria P1 already defined****Reason:**

A request to add a criteria definition failed because the criteria definition is already defined. The name of the criteria was *P1* and it was a public criteria.

System Action:

The request is rejected.

User Action:

Specify a criteria name not previously defined and retry.

SYCR1504

Private criteria P1 for userid P2 already defined

Reason:

A request to add a criteria definition failed because the criteria definition is already defined. The name of the criteria was *P1* and it was a private criteria owned by user ID *P2* .

System Action:

The request is rejected.

User Action:

Specify a criteria name not previously defined and retry.

SYCR1505

Public criteria P1 not defined

Reason:

A request to browse, update, delete, or copy a criteria definition failed because the criteria definition is not defined. The name of the criteria was *P1* and it was a public criteria.

System Action:

The request is rejected.

User Action:

Specify a criteria name previously defined and retry.

SYCR1506

Private criteria P1 for userid P2 not defined

Reason:

A request to browse, update, delete, or copy a criteria definition failed because the criteria definition is not defined. The name of the criteria was *P1* and it was a private criteria owned by user ID *P2* .

System Action:

The request is rejected.

User Action:

Specify a criteria name previously defined and retry.

SYDB1001**Entity Type P1 does not require an Application ID****Reason:**

The type of entity that was selected (*P1*) is a common service and is not part of an application ID.

System Action:

None.

User Action:

Clear the Application ID field and retry.

SYDB1002**P1 is not a valid entity type****Reason:**

The specified entity type (*P1*) is not a valid MODS entity type.

System Action:

The request is rejected.

User Action:

Specify a valid entity type or use the prompt list.

SYDB1003**Source and target data sets cannot be the same data set****Reason:**

The source data set (identified by From ID or DSN) and target data set (identified by From ID or DSN) are the same data set. This is not valid.

System Action:

The request is rejected.

User Action:

Correct the source or target details and retry.

SYDB1101

No P1 definitions to display within selected criteria

Reason:

No definitions exist for the type indicated (*P1*) after applying selection criteria.

System Action:

None.

User Action:

None.

SYDB1102

Action P1 not supported for this entry.

Reason:

The requested action (*P1*) is not supported for this entry. For example, the List Entries (LE) action is applicable for a table with a table edit type of TABLE only.

System Action:

None.

User Action:

None.

SYDB2101

No P1 definitions to display within selected criteria

Reason:

No definitions exist for the type indicated (*P1*) after applying selection criteria.

System Action:

None.

User Action:

None.

SYDB2102**Locate command not supported****Reason:**

The Locate command is not available when a list of all resource types is displayed.

System Action:

None.

User Action:

None.

SYDB2111**Administration action started: Action= P1 User ID= P2 Date= P3 Time= P4****Reason:**

A MODS administration action has started. The type of action (P1), user ID (P2), date (P3), and time commenced (P4) are shown.

System Action:

This message is written to the audit log for the administration process. Additional messages showing data set details and specific record action are also written to the audit log.

User Action:

None.

SYDB2112**From ID= P1 P2****Reason:**

A MODS administration action has started. The DBID (P1) and data set name (P2) for the From MODS file are shown.

System Action:

This message is written to the audit log for the administration process.

User Action:

None.

SYDB2113

To ID= P1 P2

Reason:

A MODS administration action has started. The DBID (P1) and data set name (P2) for the To MODS file are shown.

System Action:

This message is written to the audit log for the administration process.

User Action:

None.

SYDB2114

Administration action ended: Action= P1 User ID= P2 Date= P3 Time= P4

Reason:

A MODS administration action has ended. The type of action (P1), user ID (P2), date (P3), and time commenced (P4) are shown.

System Action:

This message is written to the audit log for the administration process.

User Action:

None.

SYHM0103

che specified help already exists

Reason:

System Action:

User Action:

Use the update option to alter existing help text, or change the name

SYHM0106**Help P1****Reason:**

Help was successfully added, updated, or deleted.

System Action:

None.

User Action:

None.

SYHM0107**Help does not exist****Reason:**

The help that you have attempted to process does not exist on the help database. You may have specified an incorrect record or the help record could have been deleted by another user.

System Action:

None.

User Action:

If the name of the help record was specified incorrectly, correct it and retry.

SYHM0112**Help being updated by P1 - please try later****Reason:**

The help record that you attempted to update or delete is currently being updated or deleted by user *P1*.

System Action:

The action is rejected.

User Action:

Wait until the record is no longer in use and retry.

SYHM0191

P1 rejected, function= P2 level help does not exist

Reason:

Function level help should exist to create window or field level help successfully.

System Action:

Request rejected.

User Action:

Create function level help before creating a window or field help.

SYHM0192

Cannot delete - window or field level help exists for this function

Reason:

The Delete Function Level Help request failed because the help function has window or field level help in the highest CAS concatenation level.

System Action:

The action is rejected.

User Action:

Delete all window and field level help for this function in the highest CAS concatenation level, and then retry.

SYHM0201

P1 rejected, function= P2 level help does not exist

Reason:

Function level help should exist to create window or field level help

System Action:

User Action:

SYHM0203

The specified help already exists

Reason:

System Action:

User Action:

Use the update option to alter existing help text, or change the name

SYHM1607

Help does not exist

Reason:

The help that you attempted to process does not exist on the help database. You may have specified an incorrect record or the help record may have been deleted by another user.

System Action:

None.

User Action:

If the name of the help record was specified incorrectly, correct it and retry.

SYHM1616

Application ID must be 3 characters long

Reason:

The application ID that you specified is not three characters in length.

System Action:

The cursor is placed on the field in error and the field is highlighted.

User Action:

Correct the application ID.

SYHM1646

Invalid copy operand(s)

Reason:

The copy command was entered with an invalid operand.

System Action:

The copy command is rejected.

User Action:

Correct the copy command operands and retry. Press Help for information about COPY command.

SYHM1647

Panel definition P1 not found in library P2

Reason:

The panel name specified in the copy command does not exist in the specified (or default) panels library.

System Action:

The copy command is rejected.

User Action:

Correct the panel or library name and retry.

SYHM1654**Function name must be no more than 12 characters long****Reason:**

The function name specified is invalid because it is more than 12 characters long.

System Action:

The copy command is rejected.

User Action:

Correct the function name on the copy command and retry.

SYHM1655**Field name must be no more than 12 characters long****Reason:**

The field name specified is invalid because it is more than 12 characters long.

System Action:

The copy command is rejected.

User Action:

Correct the field name on the copy command and retry.

SYHM1656**Invalid cursor coordinates specified on COPY command****Reason:**

One or more of the cursor coordinates specified on the copy command was not a positive integer less than or equal to 999.

System Action:

The copy command is rejected.

User Action:

Correct the cursor coordinates on the copy command and retry.

SYHM1657

Panel definition P1 copied from library P2

Reason:

The specified panel was copied into the help text successfully.

System Action:

None.

User Action:

None.

SYHM1658

Panel definition P1 not found - P2 libraries searched

Reason:

The panel specified in the copy command was not found in the current panel path. P2 is the number of libraries that were searched.

System Action:

The copy command is rejected.

User Action:

Correct the panel name in the copy command and retry.

SYHM1659

Invalid panel name specified on COPY command.

Reason:

An invalid panel name was specified on the copy command.

System Action:

The copy command is rejected.

User Action:

Correct the panel name on the copy command and retry.

SYHM1660**Library name cannot be more than 8 characters long****Reason:**

The library name specified in the LIB operand on the copy command is too long. A library name can be up to eight characters in length.

System Action:

The copy command is rejected.

User Action:

Correct the library name on the copy command and retry.

SYHM1694**Cannot save - no text lines entered****Reason:**

The help definition cannot be saved because no help text lines have been entered in the editor.

System Action:

None.

User Action:

Enter at least one line of help text in the editor and retry.

SYMH0101**Menu P1 does not exist****Reason:**

The requested menu does not exist.

System Action:

The request is rejected.

User Action:

Correct the name of the menu and retry.

SYMH0102

Duplicate of a shortcut on P1

Reason:

The shortcut value entered is already in use on this menu or another menu (*P1*).

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the field value and retry.

SYMHO103

Invalid shortcut or option (For help: put cursor on this line, press F1)**Reason:**

The entered shortcut, menu option, panel path, or command was invalid (for example, the syntax might be incorrect or the required function is not licensed in this region).

If you want to access a function, use one of the following methods (examples are given in parentheses):

- Enter a shortcut (/LEVELS or =/LEVELS)
- Enter a combined shortcut and menu option (/BCAST.S or =/BCAST.S) - Enter a menu option
- Enter a panel path (=H.I.P)

Note: Some shortcuts and options might be displayed but their operation suppressed for *the* following reasons:

- The shortcut or option requires a product or component that is not configured in this region.
- Access to the shortcut or option is denied because you do not have sufficient authority.

System Action:

None.

User Action:

If the syntax is incorrect, correct the shortcut, option, panel path or command, and retry.

SHORTCUTS

Enter a shortcut name, preceded by a slash, at the ==> prompt (for example, /LEVELS, /INFO, or /IPMON). This will take you directly to the function.

To see a list of all shortcuts and their associated functions, enter a single slash (/) at the ==> prompt. Select the desired shortcut from the list by entering S beside it.

If a shortcut exists for a menu option, it is displayed in turquoise to the right of the option description. If the value is -, it indicates that the option has no shortcut.

Shortcuts may also be combined with menu options (for example, /BCAST.S or =/BCAST.S).

You can invoke shortcuts in two ways:

- A nested shortcut - A shortcut skip

To retain and nest the current panel level, use a nested shortcut:

/shortcut_name

Exiting brings you back to the last nested panel. Panels may be nested to a maximum of 64 levels.

To close all currently nested panel levels, use a shortcut skip:

=/shortcut_name

Exiting takes you back to the Primary Menu. If you no longer need any nested panels, a shortcut skips saves storage and resources.

(If you are currently at the Primary Menu, a nested shortcut and a shortcut skip behave the same way.)

MENU OPTION

Each menu option is identified by a 1 to 3 character option string, displayed in yellow. Enter the option you want at the ==> prompt. Like shortcuts, panel paths move directly to a function without having to access each submenu between it and the current menu. A panel path consists of multiple menu options separated by periods (for example, =U.M).

Also like shortcuts, the = sign functions as a skip character, closing all nested panels and effectively entering the path from the Primary Menu. (If you are currently at the Primary Menu, the skip character is not required.)

PANEL PATH

Frequently used panel paths have associated shortcuts. If you do not remember a shortcut, enter / at the ==> prompt for a list. Select one from the list, or enter it at the ==> prompt.

There is no difference between accessing a function using a panel path skip or a shortcut skip, although the shortcut should be easier to remember. Both close the current panels and go straight to the function.

Entering == at the ==> prompt closes all nested panels and returns you to the Primary Menu.

SYMHO111

Invalid page value - P1

Reason:

The value entered for a PAGE command was not numeric or was not within the range of pages for this record.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the command and retry.

SYMH0112

Top of data

Reason:

A scroll backward command was entered, but the top of the data has already been reached.

System Action:

None.

User Action:

None.

SYMH0113

Bottom of data

Reason:

A scroll forward request was made, but the bottom of the data has already been reached.

System Action:

None.

User Action:

None.

SYMH0114

Menu P1 already exists

Reason:

A request was made to add a new menu or menu map, but a menu or menu map of that name already exists on the database.

System Action:

The add request is rejected.

User Action:

Either change the name of the menu or menu map which is to be added or use the update option to alter the existing menu or menu map.

SYMH0115

Menu P1 saved

Reason:

The entry being created or updated has been written to the database successfully.

System Action:

None.

User Action:

None.

SYMH0117

Menu(s) deleted

Reason:

The specified entry was successfully deleted from the database.

System Action:

None.

User Action:

None.

SYMH0119

Required field omitted

Reason:

No data was entered in a mandatory field.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Enter a valid value in the field.

SYMH0120**Invalid value****Reason:**

An invalid value was entered in an input field.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the field value and retry.

SYMH0121**Invalid value - P1****Reason:**

An invalid value was entered in an input field. *P1* provides more details.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the field value and retry.

SYMH0123**Field cannot be entered without an option being specified****Reason:**

A Description, Shrvars or Action value was entered, but no value has been entered in the Option field.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Either enter a value in the option field or erase the field in error.

SYMH0124

#MH variables cannot be shared

Reason:

#MH was entered as a value on a Shrvars list. This variable name prefix is reserved for use by the Menu Handler.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Erase the #MH prefix from the Shrvars list.

SYMH0126

Field cannot contain imbedded spaces

Reason:

One or more spaces were entered in a field value. Imbedded spaces are invalid in this field.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the field value.

SYMH0127

Only P1 prefixes allowed

Reason:

Too many prefixes were specified in the Shrvars field.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Reduce the number of prefixes in the Shrvars field.

SYMHO128**Brackets not allowed****Reason:**

Brackets may not be specified in the Shrvars field.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Erase the brackets from the Shrvars field.

SYMHO129**Action must begin with 'EXEC' or 'START'****Reason:**

An ACTION was specified which did not begin with 'EXEC' or 'START'.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the value in the action field.

SYMHO130**Incomplete action****Reason:**

An action was specified which did not contain an NCL procedure name to be executed.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the Action field value.

SYMH0131

Duplicate option

Reason:

An option has been specified twice on the one menu.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Change or erase one of the duplicate options.

SYMH0133

Option(s) to which this field relates must be entered

Reason:

Each input field specified must have the options to which it relates entered.

System Action:

The cursor is placed in the field in error and the field is highlighted. All possible options are placed in the 'Optional for' field so that the user does not have to refer back to the previous page for the valid options.

User Action:

Enter the related options in either the 'Required for' or 'Optional for' field.

SYMH0135

' P1' is not a valid option

Reason:

An option entered in either the 'Required for' or 'Optional for' field which was not defined on the Options Maintenance page.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Delete the invalid option from the 'Required for' or 'Optional for' field.

SYMH0136**Duplicate field name****Reason:**

A field name was specified more than once on a menu.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Change or erase one of the duplicate field names.

SYMH0142**Maximum number of entries already exist****Reason:**

A request was made to create an additional option or input field entry, but the maximum number have already been created.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Erase the line command or delete another entry to create the necessary space.

SYMH0143**Move/Copy pending****Reason:**

A Move or Copy line command was entered without the corresponding Before or After line command.

System Action:

None.

User Action:

Either specify the corresponding Before or After line command or erase the Move or Copy command.

SYMH0149

Menu number must be numeric

Reason:

A menu number must be an positive integer.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the field value.

SYMH0150

Menu number must be between 1 and 225

Reason:

The menu number must be an integer between 1 and 225.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the field value.

SYMH0154

Invalid line definition

Reason:

An input field was specified incorrectly in the menu definition.

System Action:

If the invalid line is visible on the window, the cursor is placed on it and the field is highlighted.

User Action:

Correct the line definition.

SYMH0157**Command conflict****Reason:**

Only one option/input field may be moved or copied at a time. The current request is attempting to move/copy more than one entry, or has possibly specified more than one target for the entry.

System Action:

The request is rejected.

User Action:

Only specify one entry to be moved/copied to one destination at a time.

SYMH0158**Duplicate option - 'X' will automatically be generated****Reason:**

A user cannot specify an 'X' option as this is the automatically generated, standard option for 'EXIT'.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Change or erase the 'X' option.

SYMH0159**P1 not allowed, no options defined for menu P2****Reason:**

The menu definition can not be filed/saved because there are no options defined in this new menu.

System Action:

The request is rejected.

User Action:

Specify option/s for this menu before filing/saving.

SYMH0161

Duplicate menu input field attributes are not allowed

Reason:

The same value was assigned to two or more menu input field attributes. These characters will be used when displaying the menu and as such it is invalid for the same character to represent different display modes.

System Action:

The fields are highlighted in error.

User Action:

Use a different character for each menu input field attribute.

SYMH0162

Menu input field attributes must be a single character

Reason:

A value was assigned to a menu input field attribute which was longer than one character. This is invalid. All menu input field attributes must be single characters.

System Action:

The field is highlighted in error.

User Action:

Use a single character for each menu input field attribute.

SYMS1102

Msgid keyword must be supplied to P1 - call rejected

Reason:

A call was made to the Message Handler without the MSGID keyword parameter.

System Action:

The call to the Message Handler is rejected.

User Action:

Correct the procedure call and retry.

SYMS1105**Message definition P1 already exists****Reason:**

A request was made to add a message that already exists in the database.

System Action:

The add request is rejected.

User Action:

Change the message ID of the message being added or use the update option to change the existing message definition.

SYMS1106**Message definition P1 does not exist****Reason:**

The requested message definition does not exist on the database.

System Action:

The action is rejected.

User Action:

None.

SYMS1109**Message definition P1 P2****Reason:**

The message definition *P1* was successfully added, deleted, or updated.

System Action:

None.

User Action:

None.

SYMS1124

Cannot Browse/Edit message text fields

Reason:

The Message Text field cannot be browsed and edited with the full screen text editor. It has a maximum of three lines.

System Action:

The action is rejected.

User Action:

None.

SYMS1125

Place cursor in a text area before pressing the Browse/Edit key

Reason:

You did not place the cursor over a text field before you pressed Browse or Edit.

System Action:

None.

User Action:

To invoke the full screen editor for a text field, place the cursor over the field you want to update and press Browse or Edit.

SYMS1126

Edit of P1 canceled

Reason:

The full screen edit of the text field was canceled. The text remains in the state that it was in before the full screen editor was invoked.

System Action:

None.

User Action:

None.

SYMS1205**Message definition P1 already exists****Reason:**

A request was made to add a message that already exists on the database.

System Action:

The add request is rejected.

User Action:

Change the message ID of the message you want to add or use the update option to change the existing message definition.

SYMS1251**Message prefix not defined in application register****Reason:**

You have attempted to add a message that does not have its message prefix defined in the application register.

System Action:

Issue error message. Prevent the message from being saved.

User Action:

Add the application you are defining a message for to the application register. Each application in the application register has a unique message prefix specified in the application definition. When the application is defined, add the message.

SYMS1270**Message ID must contain at least one digit****Reason:**

A Message Handler Message ID must have at least one numeric digit in it. For example, the Message ID MSGONE is invalid because it does not contain a digit. The Message ID MSG1 is valid because it does contain a digit.

System Action:

Message ID field placed in error.

User Action:

Enter a Message ID that contains at least one numeric digit.

SYPKG01

You are not authorized to maintain MODS entities

Reason:

You are not authorized to perform the requested function.

System Action:

The request is rejected.

User Action:

Contact your Systems Administrator if the function is required.

SYPKG11

P1 is not a valid MODS data set

Reason:

The MODS ID specified (*P1*) is not allocated or is not a MODS data set.

System Action:

The request is rejected.

User Action:

Specify a valid MODS data set ID or use the prompt list.

SYPKG12

P1 is not open with read-write access

Reason:

The MODS ID specified (*P1*) is open with read-only access. Read-write access is required.

System Action:

The request is rejected.

User Action:

Specify a valid MODS data set ID or use the prompt list.

SYPKG13**P1 is not a valid MODS data set****Reason:**

The MODS data set name specified (*P1*) does not exist or is not a MODS data set.

System Action:

The request is rejected.

User Action:

Specify a valid SYSDB data set name and retry.

SYVM1101**Table definition P1 P2****Reason:**

The table definition was successfully added, deleted, or updated.

System Action:

None.

User Action:

None.

SYVM1102**Table P1 P2****Reason:**

The table definition and table entries were successfully added to or deleted from the database.

System Action:

None.

User Action:

None.

SYVM1103

Table definition P1 already exists

Reason:

The table definition to be added already exists on the database.

System Action:

None.

User Action:

Change the name of the record required or use the update option to modify the existing record.

SYVM1104

Table definition P1 does not exist

Reason:

The requested table definition does not exist in the database.

System Action:

None.

User Action:

Correct the name of the requested record and retry, or use the ADD option to create a new record.

SYVM1105

Table definition P1 cannot be deleted - table entries present

Reason:

The table definition cannot be deleted because table entries for the definition are present in the database.

System Action:

None.

User Action:

Delete all table entries for the definition before you delete the table definition.

SYVM1106**Page 2 not used for edit type of P1****Reason:**

Page 2 of the Table Definition is not relevant unless EDIT type is TABLE.

System Action:

None.

User Action:

None.

SYVM1107**Invalid option for edit type of P1****Reason:**

The requested command is permitted for table definitions that have an edit type of TABLE only.

System Action:

The request is rejected.

User Action:

None.

SYVM1145**Page number P1 does not exist****Reason:**

The requested page number is not present in the current series of panels.

System Action:

The request is rejected.

User Action:

Correct the page number entered in the command line and retry.

SYVM1149

Validation tables loaded, Appl= P1 Field= P2

Reason:

The validation tables were loaded into memory successfully.

System Action:

None.

User Action:

None.

SYVM1201

P1 is invalid

Reason:

The field value entered is invalid.

System Action:

None.

User Action:

Correct the field value and retry.

SYVM1202

P1 is invalid for P2

Reason:

The two fields are mutually exclusive and one or the other may be entered only.

System Action:

None.

User Action:

Erase one of the conflicting fields.

SYVM1203**P1 must be entered for P2****Reason:**

A value must be entered for Field *P1* if field *P2* is present.

System Action:

None.

User Action:

Enter a value for the field in error or erase field *P2*.

SYVM1204**P1 cannot be entered without P2****Reason:**

A value must not be entered in *P1* unless a value is entered in field *P1*.

System Action:

None.

User Action:

Clear the field that is in error or enter a value in the second field.

SYVM1205**P1 contains an invalid character at position P2****Reason:**

A Text Description field contains an invalid character. Certain characters are used internally by Validation Manager; therefore, cannot be used in the Text Description fields.

System Action:

None.

User Action:

Remove any invalid characters from the field value and retry.

SYVM1206

Field name P1 already exists

Reason:

A request was made to add a Table Definition that already exists.

System Action:

The request is rejected.

User Action:

Correct the name of the field to be added and retry.

SYVM1209

Field name P1 is a reserved NCL keyword

Reason:

A request was made to add a Table Definition with a name that is an NCL keyword.

System Action:

The request is rejected.

User Action:

Change the name of the field to be added and retry.

SYVM1302

Error detected by validation exit

Reason:

The input data or requested action was rejected by the validation exit, but an error message was not returned.

System Action:

None.

User Action:

Correct the input data or action and retry.

SYVM1303**Table entry P1 P2****Reason:**

The table entry was successfully added, deleted, or updated.

System Action:

None.

User Action:

None.

SYVM1304**Table entry P1 already exists****Reason:**

The table entry to be added already exists on the database.

System Action:

None.

User Action:

Change the name of the record required or use the update option to modify the existing record.

SYVM1305**Table entry P1 does not exist****Reason:**

The requested table entry does not exist on the database.

System Action:

None.

User Action:

Correct the name of the requested record and retry, or use the ADD option to create a new record.

SYVM1306

Table definition P1 does not exist

Reason:

The table definition for the requested record does not exist in the database.

System Action:

None.

User Action:

Correct the name of the table definition required, or use the ADD option option in the Table Definition Menu to create a new definition.

SYVM1307

Table definition P1 does not have edit type of 'TABLE'

Reason:

Entry records cannot be added to the requested table because the table definition does not have an edit type of TABLE.

System Action:

None.

User Action:

None.

SYVM1309

P1 is not available

Reason:

The requested command cannot be used in the current window.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

None.

SYVM1310**Table definition P1 is not compatible with current table****Reason:**

An attempt was made to copy a table entry from one table to another, but there were conflicts between the original and target table definitions.

System Action:

The request is rejected.

User Action:

None.

SYVM1340**P1 command is not active in this window****Reason:**

The requested command is not allowed on the currently displayed window.

System Action:

None.

User Action:

Erase the command from the command line.

SYVM1345**Page number P1 does not exist****Reason:**

The requested page number is not present in the current series of panels.

System Action:

The request is rejected.

User Action:

Correct the page number entered in the command line and retry.

SYVM1401

Full value P1 already exists

Reason:

A request was made to add a Table Entry that already exists.

System Action:

The request is rejected.

User Action:

Correct the value of the entry that you want to add and then retry.

SYVM1402

Abbreviated value P1 already exists

Reason:

A request was made to save or file a Table Entry with an abbreviated value that has already been used for another entry in the same table.

System Action:

The request is rejected.

User Action:

Change the abbreviated value of the entry and retry.

TI0001

REQUIRED KEYWORD OMITTED: ~P1

Reason:

\$TICALL was invoked, but a required keyword parameter was omitted.

System Action:

The request is rejected.

User Action:

Correct and retry.

TI0002**INVALID FUNCTION SPECIFIED: FUNC=~P1****Reason:**

\$TICALL was invoked with an invalid value in the FUNC keyword parameter.

System Action:

The request is rejected.

User Action:

Specify a correct value for the FUNC keyword parameter.

TI0004**~P1 INVALID: EXCESSIVE DATA SUPPLIED****Reason:**

\$TICALL was invoked, but too much data was provided on the specified operand.

System Action:

The request is rejected.

User Action:

Specify a valid value for the parameter.

TI0005**~P1 INVALID: DATE MUST BE IN THE FORM YYYYMMDD****Reason:**

An invalid date was specified for the parameter named.

System Action:

The request is rejected.

User Action:

Specify a date in the format yyyyymmdd, where yyyy is a valid four digit year, mm is a valid 2 digit month and dd is a valid (2 digit) day of the month. eg 19911225 is the 25th of December 1991.

TI0006

EXPIRY DATE MAY NOT BE BEFORE THE START DATE

Reason:

An expiry date was specified, but it was before the starting date.

System Action:

The request is rejected.

User Action:

Specify an expiry date which is the same as or later than the start date.

TI0007

~P1 INVALID, MUST BE IN THE FORMAT HH.MM.SS

Reason:

A time was specified, but it was not in the correct format for a time.

System Action:

The request is rejected.

User Action:

Specify a correct time in the format hh.mm.ss where hh is the hour (a number from 0 to 24), mm is the minutes past the hour (a number from 0 to 59), ss is the second within the minute (0 to 59). hh.mm.ss must be in the range 00.00.01 to 24.00.00

TI0008

END TIME MUST NOT BE BEFORE START TIME

Reason:

An end time was specified, but it was before the starting time.

System Action:

The request is rejected.

User Action:

Specify an end time which is the same as or later than the start time.

TI0009**~P1 INVALID: MUST BE NUMERIC****Reason:**

An invalid number was specified for the specified parameter.

System Action:

The request is rejected.

User Action:

Enter a valid number (integer).

TI0010**FTYPE MUST BE 'MONTHS', 'DAYS' OR 'TIME'****Reason:**

An invalid value was specified for the FTYPE parameter.

System Action:

The request is rejected.

User Action:

Specify a valid value for FTYPE. Valid values are MONTHS, DAYS and TIME.

TI0011**~P1 INVALID VALUE****Reason:**

An invalid day was specified for the specified parameter.

System Action:

The request is rejected.

User Action:

Specify a valid value. The DAYLIST parameter may be blank, or a list of days of the week in the form (MON,TUE,WED,THU,FRI,SAT,SUN). The parentheses may be omitted.

TI0012

~P1 MUST BE YES OR NO

Reason:

An invalid value was specified for the parameter.

System Action:

The request is rejected.

User Action:

Specify either YES or NO for the parameter.

TI0013

~P1 MUST BE 'ACTIVE' OR 'INACTIVE'

Reason:

An invalid value was specified for the parameter.

System Action:

The request is rejected.

User Action:

Specify either ACTIVE or INACTIVE for the parameter.

TI0014

~P1 MUST BE A NON-ZERO NUMBER

Reason:

An invalid value was specified for the parameter.

System Action:

The request is rejected.

User Action:

Specify a non-zero number for the parameter.

TI0015

~P1 MUST BE 'MON', 'LOG' OR 'SYS'

Reason:

An invalid value was specified for the parameter.

System Action:

The request is rejected.

User Action:

Specify MON, LOG or SYS for the parameter.

TI0016

~P1 INVALID USERID

Reason:

An invalid value was specified for the parameter.

System Action:

The request is rejected.

User Action:

Specify a valid userid for the parameter.

TI0017

~P1 MINIMUM FREQUENCY IS ~P2 SECONDS

Reason:

An invalid value was specified for the parameter.

System Action:

The request is rejected.

User Action:

Specify a frequency which is more than the stated minimum. The minimum value allowed is set by the SYSPARMS EVCMDMIN command.

TI0018

~P1 MUST BE A VALID NAME (UP TO ~P2 CHARACTERS)

Reason:

An invalid value was specified for the parameter.

System Action:

The request is rejected.

User Action:

Specify a valid name (PDS name rules). The name may be up to the length specified in the message text.

TI0019

P1 MUST CONTAIN P2 FOR COMPATIBILITY WITH SDATE AND FREQ

Reason:

If specified, the DAYLIST value must contain the day, P2 for compatibility with the SDATE (start date) which falls on that day when the FTYPE (*frequency type*) is DAYS and the FREQ (*frequency*) is a multiple of 7.

System Action:

The add or update timer request is rejected.

User Action:

Change the DAYLIST value to P2 or leave it unspecified and retry. Changing the value of SDATE and/or FREQ will also correct the incompatibility error.

TI0101

TIMER PROCESSING INACTIVE, TIMER DEFINITION SAVED

Reason:

The timer was saved, but timer processing is not active.

System Action:

The timer definition is stored in the saved timers file.

User Action:

None.

TI0102**TIMER PROCESSING INACTIVE, TIMER DEFINITION ALREADY ON FILE****Reason:**

The timer already exists in the saved timer file. Saved timer processing is not active.

System Action:

The existing definition is not changed.

User Action:

Update the timer definition by using PUT rather than ADD, or alter the name to add a new definition.

TI0103**TIMER PROCESSING INACTIVE, TIMER DEFINITION NOT SAVED, VSAMFDBK=&P1****Reason:**

The timer was not saved due to an error on the saved timer file. Saved timer processing is not active.

System Action:

The request is not processed.

User Action:

Check the VSAMFDBK code to determine the cause of the error. Correct and retry.

TI0104**TIMER PROCESSING IS INACTIVE, NO ACTION PERFORMED****Reason:**

An attempt was made to ADD, PUT or DELeTe a timer with SAVE=NO specified but timer processing was not active.

System Action:

The request is not processed.

User Action:

Correct the error and retry.

TI0105

TIMER ALREADY DEFINED IN TIMER TABLE

Reason:

An attempt was made to ADD a timer but it was already defined.

System Action:

The request is not processed.

User Action:

Correct the error and retry.

TI0106

TIMER EXECUTION FOR ~P1.~P2.~P3: COMMAND WAS ~P4

Reason:

Timer processing has issued the command for the timer definition of the named 'class.subclass.name'. Only the first 80 characters of the command are displayed.

System Action:

The command is issued.

User Action:

None.

TI0107

TIMER ADDED TO TIMER TABLE BUT NOT SAVED, VSAMFDBK= P1

Reason:

The timer was not saved due to an error on the saved timer file. It was added to the table of active timers.

System Action:

The timer is defined in the timer table but could not be saved. It will remain only until SOLVE is stopped.

User Action:

Check the VSAMFDBK code to determine the cause of the error. Correct and retry.

TI0108**TIMER UPDATED SUCCESSFULLY STATUS= P1****Reason:**

The timer was ADDED or PUT successfully. The current status (ACTIVE or INACTIVE) is displayed.

System Action:

The timer is defined. If it is ACTIVE the command will be executed at the correct intervals.

User Action:

None.

TI0109**TIMER DEFINITION DELETED (TIMER PROCESSING IS INACTIVE)****Reason:**

The timer was deleted from the file. Timers are not being processed at this time.

System Action:

The timer is deleted.

User Action:

None.

TI0110**TIMER NOT DEFINED****Reason:**

An attempt was made to GET or DELETE a timer, but it is not defined.

System Action:

The request is not processed.

User Action:

Correct the error and retry.

TI0111

TIMER NOT DELETED FROM FILE, FILE ERROR OCCURRED

Reason:

The timer was not deleted due to an error on the saved timer file.

System Action:

The request is not processed.

User Action:

Check the VFS file to determine the cause of the error. Correct and retry.

TI0112

TIMER NOT ACTIVE, BUT DELETED FROM FILE

Reason:

The timer was not in the table of active timers, but has been deleted from the saved timer file.

System Action:

The saved timer definition is deleted.

User Action:

None.

TI0113

TIMER DELETED SUCCESSFULLY

Reason:

The timer has been deleted from the table of active timers. Unless SAVE=NO was specified, the timer was also deleted from the stored timer file.

System Action:

The timer definition is deleted.

User Action:

None.

TI0114**TIMER CATCH UP FOR ~P1.~P2.~P3 DUE DATE WAS ~P4 AT ~P5****Reason:**

Timer processing is starting. The timer named is subject to catch up processing and the command should have been issued at the given date and time. The command is now issued.

System Action:

The command is issued. The command will only be issued once, regardless of the number of times it would have executed if the system had been operative the whole time.

User Action:

None.

TI0115**TIMER NOT UPDATED ON FILE, FILE ERROR OCCURRED****Reason:**

The timer was not updated due to an error on the saved timer file. Timer processing is not active.

System Action:

The request is not processed.

User Action:

Check the VFS file to determine the cause of the error. Correct and retry.

TI0117**TIMER UPDATED BUT FILE ERROR OCCURRED****Reason:**

The timer was updated in the active timer table, but the update was not saved due to an error on the saved timer file (VFS).

System Action:

The timer is updated in the timer table only. The changes will be effective until SOLVE is stopped.

User Action:

Check the VFS file to determine the cause of the error. Correct and retry.

TI0118

TIMER INFORMATION RETRIEVED

Reason:

The timer definition was retrieved from the timer table and the saved definition.

System Action:

The timer information is displayed.

User Action:

None.

TI0119

TIMER INFORMATION RETRIEVED FROM TABLE ONLY

Reason:

The timer definition was retrieved from the timer table. The timer was not stored so some information (creation and modification statistics) is not available.

System Action:

The timer information is displayed.

User Action:

None

TI0120

TIMER INFORMATION RETRIEVED FROM TABLE ONLY, FILE ERROR OCCURRED

Reason:

The timer definition was retrieved from the timer table. Some information (creation and modification statistics) is not available due to an error on the saved timer file.

System Action:

The timer information is displayed.

User Action:

Determine the cause of the file error on the VFS file, correct and retry if necessary.

TI0121**TIMER INFORMATION RETRIEVED FROM FILE ONLY****Reason:**

The timer definition was retrieved from the saved timer file. The timer is not in the active timer table or timer processing is not active.

System Action:

The timer information is displayed.

User Action:

None.

TI0123**TIMER PROCESSING IS ALREADY ACTIVE****Reason:**

An attempt was made to start timer processing but it was already active.

System Action:

None.

User Action:

None.

TI0124**TIMER PROCESSING STARTED BUT NO TIMERS RESTORED****Reason:**

An attempt was made to start timer processing, but no timers can be restored because the VFS file is not authorised for this user.

System Action:

Timer processing is ready, but no timers are defined.

User Action:

Contact the System Administrator to obtain authorisation to access the VFS file.

TI0125

TIMER PROCESSING STARTED ~P1 TIMERS RESTORED, ~P2 DELETED DUE TO EXPIRY

Reason:

Timer processing was started successfully and the displayed number of saved timers were restored. Some timers may have been deleted because they were past their expiry date.

System Action:

Timer processing is now active.

User Action:

None.

TI0126

ERROR SETTING NEXT TIMER:

Reason:

An unexpected message was received when attempting to set the wakeup timer for timer processing. The message indicating the problem is in the activity log.

System Action:

Timer processing will not be able to proceed.

User Action:

Refer to the activity log to determine the cause of the error, correct and retry.

TI0127

TIMER PROCESSING IS NOT ACTIVE

Reason:

An attempt was made to stop or list timer processing, but it was not active.

System Action:

None.

User Action:

None.

TI0128**NOT AUTHORIZED TO ALTER TIMER PROCESSING****Reason:**

An attempt was made to alter timer processing, but you are not authorized to perform the action.

System Action:

The request is rejected.

User Action:

Obtain authorization from the System Administrator to issue the purge command. Normally USERAUTH of 2 is required.

TI0129**UNEXPECTED MESSAGE PURGING TIMER****Reason:**

An unexpected message was received when attempting to purge the wakeup timer for timer processing. The message indicating the problem is in the activity log.

System Action:

Timer processing is not affected.

User Action:

Refer to the log to determine the cause of the error, correct and retry.

TI0130**TIMER PROCESSING STOPPED****Reason:**

Timer processing was stopped successfully. All managed timers have been stopped, and will not be 'caught-up' when timer processing is restarted.

System Action:

Timer processing is stopped.

User Action:

None.

TI0131

UNEXPECTED MESSAGE SETTING TIMER FOR CLASS=~P1 SUBCLASS=~P2 NAME=~P3

Reason:

Managed timer commands are executed (when they are due) using an AT command. An unexpected message was received when attempting to issue the command for the named timer.

System Action:

The command is not performed.

User Action:

Refer to the activity log for the message indicating the problem.

TI0132

TIMERS IN CLASS=~P1 SUBCLASS=~P2

Reason:

This is a heading message for the \$TICALL FUNC=LIST output. The timers which are listed following this message belong to the named class and subclass.

System Action:

None.

User Action:

None.

TI0133**NAME NEXT ACTIVATION FTYPE FREQ DESCRIPTION****Reason:**

This is the heading message for the \$TICALL FUNC=LIST output.

NAME: The name of the timer within the CLASS and SUBCLASS

NEXT ACTIVATION: The date and time the timer will next be executed, or if the timer is inactive, *INACTIVE* will be displayed.

FTYPE: the frequency type of the timer, MONTHS, DAYS or TIME.

FREQ: the frequency of the timer in the above units.

DESCRIPTION: the user defined description associated with the timer.

System Action:

None.

User Action:

None.

TI0134**~P1****Reason:**

This is the detail message for the \$TICALL FUNC=LIST output. Refer to the TI0133 message explanation for a description of the data.

System Action:

None.

User Action:

None.

TI0135

NO TIMERS MATCH LIST SPECIFICATION

Reason:

This message is displayed when a \$TICALL FUNC=LIST command is issued and no timers match the CLASS, SUBCLASS and NAME supplied.

System Action:

None.

User Action:

None.

TI0136

END

Reason:

This is the end of the \$TICALL FUNC=LIST command output.

System Action:

None.

User Action:

None.

TNCALL01

TELNET command " P1" not supported

Reason:

The value, *P1* , specified for the CMD operand of TNCMD is not supported.

System Action:

The command is ignored

User Action:

Correct the CMD operand to specify one of the following values:

AYT - Are You There

AO - Abort Output

BRK - Break

IP - Interrupt Process

TNCALL02**Command not supported, " P1"****Reason:**

The value, *P1* , specified for the COMMAND operand of \$TNCALL is not supported.

System Action:

The command is ignored

User Action:

Correct the COMMAND operand to specify one of the following values:

TELNET - Start a TELNET session
TNSEND - Send data on a session
TNCMD - Send a TELNET command
TNDISC - Terminate a session

TNCALL03**Operand not supported, " P1"****Reason:**

The value, *P1* , specified for an operand of \$TNCALL is not supported.

System Action:

The command is ignored

User Action:

Correct the operand to specify one of the following values:

COMMAND=TELNET - Start a TELNET session
COMMAND=TNSEND - Send data on a session
COMMAND=TNCMD - Send a TELNET command
COMMAND=TNDISC - Terminate a session

TNCALL04

Required operand omitted, P1

Reason:

A null value has been specified for the operand.

System Action:

The command is ignored

User Action:

Specify a value for the named keyword.

TNCALL05

Invalid port number " P1", defaulted to 23

Reason:

The port number is not an integer in the range 1 to 65535.

System Action:

The port number is set to 23 (TELNET).

User Action:

If a port other the TELNET standard port number of 23 is to be used then the PORT keyword value must be an integer in the range 1 to 65535.

TNCALL06

Invalid control character " P1", defaulted to >

Reason:

The control character cannot be an alphabetic or numeric character.

System Action:

The control character is set to > (cent sign).

User Action:

Restart the session using a special character that will not be required to be sent to the remote host.

TNCALL07**No TELNET connection to ID p1****Reason:**

A TELNET command has specified a session ID that is not active.

System Action:

The command is ignored

User Action:

Correct the ID to specify an active session.

TNCALL08**Could not contact session service for ID p1****Reason:**

A send to the TELNET process has failed. This is most likely due to a short on storage condition.

System Action:

The command is ignored

User Action:

Retry the command.

TNCALL09**Command syntax error****Reason:**

The command keywords contain a syntax error. The following message (prefix N23I) indicates the reason.

System Action:

The command is rejected

User Action:

Correct the operands to specify a keyword=value syntax. Use 'command ?' to display the command syntax.

TNCALL10

TRTAB operand " P1" is not a valid member name

Reason:

The command keyword does not specify a valid partitioned dataset member name.

System Action:

The operand is ignored. The default TRTAB will be used. If the call is ACTION=INIT then the value is set to 'US'.

User Action:

Correct the operand to specify a valid member name.

TNCALL11

Action not supported, " P1"

Reason:

The value, *P1* , specified for the ACTION operand of \$TNCALL is not supported.

System Action:

The command is ignored

User Action:

Correct the ACTION operand to specify one of the following values:

TELNET - Start a fullscreen Telnet session

COMMAND - Perform a Telnet command

TNCALL12**Invalid keyword value specified, keyword= P1 value= P2****Reason:**

A TELNET request has specified an operand with a value that is not supported. *P1* is the keyword and *P2* is the unrecognized value.

Valid values for the COLOUR or COLOR keyword are: RED WHITE BLUE GREEN YELLOW PINK TURQUOISE

Valid values for the HLIGHT or HLITE keyword are: NONE USCORE BLINK REVERSE

Valid values for the MODAL, TRACE keywords are: YES NO

The valid value for the ENTER keyword is: CRLF CR

System Action:

The parameter is ignored.

User Action:

Reissue the command with a valid value for keyword *P1* .

TNCALL13**No TELNET sessions found****Reason:**

A TNSHOW command has been issued and there are no active Telnet sessions or there are no sessions that match the selection criteria.

System Action:

None

User Action:

None

TNCALL14

User Address Duration Bytes-In Bytes-Out ID

Reason:

A TNSHOW command has been issued. This is the first heading line.

System Action:

None

User Action:

None

TNCALL15

Host

Reason:

A TNSHOW command has been issued. This is the second heading line.

System Action:

None

User Action:

None

TNCALL16

P1 P2 P3 P4 P5 P6

Reason:

A TNSHOW command has been issued. The Telnet session details are:

P1 UserID

P2 IP address

P3 session duration

P4 bytes received from host

P5 bytes sent from user to host

P6 The session ID

System Action:

None

User Action:

None

TNCALL17**P1****Reason:**

A TNSHOW command has been issued. This line displays the full host name of the host.

System Action:

None

User Action:

None

TNCALL18**User P1 is not authorized for TELNET****Reason:**

The user identified by *P1* is not authorized to use the NetMaster TELNET component.

System Action:

The TELNET request is rejected.

User Action:

Contact your security administrator.

TNCALL19**TRTAB operand ignored, no translate library in use****Reason:**

The TRTAB keyword has been specified and no partitioned dataset has been defined for the location of translate table members.

System Action:

The operand is ignored. Default ASCII/EBCDIC translation will occur.

User Action:

You can use the Miscellaneous Parameters option of the NetMaster for TCP/IP Administration menu to define a dataset that contains translation table members.

TNCALL20

IPv6 socket support not enabled on *P1*

Reason:

A Telnet request cannot proceed. The target address is IPv6, but the sockets API on region *P1* supports IPv4 addresses only.

System Action:

The action terminates.

User Action:

Check the SOCKETS parameter group (/PARMS) on region *P1*. For IPv6 support, the TCP/IP Software Type must specify IBMV6.

TNCALL99

END

Reason:

This the end of output message for a Telnet show command.

System Action:

None

User Action:

None

TNLT0201

LOADING TRANSLATE TABLE *p1* FROM *p2*

Reason:

A TELNET process has been started using translate table *P1*. The member has been read from the translate table dataset *P2* and is being processed.

System Action:

The ASCII to EBCDIC table and EBCDIC to ASCII table are built.

User Action:

Use the TRTAB operand on the TELNET command to select the translation table to use for each session. TCP/IP stack contains translate tables for common languages and code pages.

TNLT0202**ERROR PROCESSING p1 FROM p2****Reason:**

A TELNET process has been started using translate table *P1*. The member read from the translate table dataset *P2* does not contain sufficient data to build the necessary tables. The member should contain the source form of tables used for TCP/IP.

System Action:

The ASCII to EBCDIC table and EBCDIC to ASCII table are built using default values.

User Action:

1. Check that the TRTAB on the TELNET command is correct.
2. Verify the translation dataset specified during initialization is correct.
3. Check the log for messages indicating that the dataset could not be processed.

TNLT0203**p1 ALLOCATED AS DD= p2****Reason:**

The TELNET translation table dataset, *p1* , has been allocated using the specified DDname, *p2* .

System Action:

The dataset is opened and the TRTAB member read.

User Action:

None

TNLT0204

UNALLOC FAILED, p1

Reason:

The TELNET translation table dataset has not been unallocated. *P1* indicates the reason.

System Action:

None

User Action:

Use the reason to determine why the dataset failed to unallocate.

TNLT0205

DSS_PDS ERROR, FDBK= p1, p2

Reason:

An error occurred reading the translation dataset. The dataset services feedback code is indicated by *P1*. *P2* is the dataset services error message.

System Action:

The member is not processed and default ASCII to EBCDIC and EBCDIC to ASCII translation tables are built.

User Action:

Use the error information to determine why the dataset read failed.

1. Check that the TRTAB on the TELNET command is correct.
2. Verify the translation dataset specified during initialization is correct.

TNLT0206**Dataset Services Map Error, MAP= P1 RC= P2 FDBK= P3****Reason:**

An MDO error occurred using map *P1* . *P2* is the MDO return code and *P3* is the feedback.

System Action:

Dataset Services actions are not performed.

User Action:

1. Report the failure to your system administrator.
- 2 Use the error information to determine why the MDO usage failed. Check that Dataset Services maps are available - Use option D.M and list \$DS maps. \$DSCBD1Z, \$DSCBD2Z and \$DSCBD3Z should appear in the list. If not, Management Services maintenance should be applied.
3. If necessary contact your product support representative.

TNVT0101**ID p1 ALREADY IN USE BY p2****Reason:**

An attempt has been made to start a TELNET session with an ID that is already in use.

System Action:

The session is not started

User Action:

Use the ID operand of the TELNET command to specify a unique session identifier. Use this identifier on the TNSSEND, TNCMD and TNDISC commands

TNVT0102

TELNET PROCESS p1 STARTED FOR HOST p2

Reason:

A TELNET process has been started for host *P2* using session ID *P1*.

System Action:

TCPIP services are allocated and the host is contacted.

User Action:

Use TNSEND, TNCMD and TNDISC commands with the session identifier to manage the session.

TNVT0103

TRACE OF OUTBOUND DATA, LENGTH= P1 TRACE OF INBOUND DATA, LENGTH= P1 P1 P2 P3 P4 P5 * P6*

Reason:

A TELNET process has been started using TRACE=YES. The message text is one of the three indicated formats. The first two formats are heading lines that display the direction relative to the terminal of the data flow and *P1* its length. The third format is a dump of the datastream that is repeated until the entire datastream is displayed. The fields are:

P1 - the offset into the datastream

P2-P5 - the hexadecimal display of the ASCII characters

P6 - the EBCDIC character form of the data

Note: Where data has been entered using the Hide function of the fullscreen interface or using TRACESUP=YES then the datastream is replaced by the characters '***SUPPRESSED***'.

System Action:

None

User Action:

Use the trace output to verify session operation is as desired.

TNVT0104**DEALLOCATE RC= p1 FDBK= p2****Reason:**

A TELNET process has received an error indication while freeing TCPIP resources. *P1* and *P2* are the return values from SOCKET DEALLOCATE.

System Action:

Processing continues

User Action:

Report the error to your product support representative

TNVT0105**TELNET SESSION ID= p1 ENDED, CONNECT TIME P2****Reason:**

A TELNET process has ended.

System Action:

None

User Action:

None

TNVT0106**CONNECTING TO p1 ON PORT p2****Reason:**

A TELNET process is about to connect to host *P1* using port *P1*.

System Action:

SOCKET CONNECT is issued

User Action:

None

TNVT0107

CONNECTED TO p1

Reason:

A Telnet process has connected to host *P1*.

System Action:

SOCKET RECEIVE is issued to receive data from the host.

User Action:

Wait for the host to prompt for input.

TNVT0108

HOST ADDRESS p1 FULL NAME p2

Reason:

A TELNET process has connected to a host. *P1* is the IP address of the remote host and *P2* is the full name.

System Action:

None

User Action:

None

TNVT0109

SESSION DISCONNECTED BY USER REQUEST

Reason:

A TNDISC command has been processed by TELNET.

System Action:

The session is terminated.

User Action:

None

TNVT0110**TELNET COMMAND " P1" NOT SUPPORTED****Reason:**

The value, *P1* , received by the TELNET process for CMD is not supported.

System Action:

The command is ignored

User Action:

Contact your product support representative.

TNVT0111**TELNET DATA NOT RECOGNIZED " P1"****Reason:**

The data received by the TELNET process is not recognized.

System Action:

The data is ignored

User Action:

Contact your product support representative.

TNVT0112**INVALID ASCII GENERATED, OFFSET p1****Reason:**

The TELNET translate table in use has produced a character of 'FF'X. This is treated as an error indication.

System Action:

A dump of the original datastream is written to the log with message ID TNVT0113. The invalid characters are translated to blanks. (ASCII '20'X)

User Action:

Use the trace output to verify session operation is as desired.

TNVT0113

TRACE OF OUTPUT ERROR DATA, LENGTH= P1 P1 P2 P3 P4 P5 * P6*

Reason:

This message follows a TNVT012 message in the activity log. An invalid ASCII character has been detected. This message contains a dump of the datastream before translation. The second form of the message is repeated until the entire datastream is displayed. The fields are:

P1 - the offset into the datastream

P2-P5 - the hexadecimal display of the ASCII characters

P6 - the EBCDIC character form of the data

System Action:

The invalid characters are replaced by spaces.

User Action:

Refer to the earlier TNVT0112 message which indicates the offset into the datastream of the character in error. If necessary specify a different translate table on the Telnet invocation.

TNVT0114

p1 FAILED, RC= p2 FDBK= p3 ERRNO= p4, VERRIN= p5, p6, p7

Reason:

A TELNET SOCKET verb has indicated an error condition. *P1* is the verb which failed. *P2*, *P3* and *P4* indicate the error received. *P5* is the vendor-specific error information which further qualifies ERRNO (*p4*).

P6 and *P7* are interpretations of the error codes indicating the reason for the failure.

System Action:

The TELNET process is terminated.

User Action:

Use the error information to determine the cause of the error. If necessary restart the session.

TNVT0115**TCP/IP NOT ACTIVE****Reason:**

A TELNET process could not be started because TCP/IP services are not active.

System Action:

None.

User Action:

Use SHOW TCPIP STATUS to determine the interfaces state. If necessary issue TCPIP START to activate the interface.

TNVT0116**TELNET CONNECTION TO P1 TIMED OUT****Reason:**

The TELNET connection request was not responded to by the peer host within one minute.

System Action:

The TELNET process terminates.

User Action:

Use the PING command to determine if the peer host is reachable.

TNVT0117**TELNET CONNECTION TO P1 CLOSED BY PEER****Reason:**

The Telnet connection was closed by the peer host. This is a normal message if you have logged off from a host.

System Action:

The Telnet process terminates.

User Action:

Check that SYSPARMS TELNET=YES is set on the remote SOLVE region.

TSAR01

INVALID COMMAND

Reason:

An invalid command has been entered.

System Action:

The process waits for input from the terminal.

User Action:

Correct the command and retry or clear the command field.

TSAR02

TOP OF DATA

Reason:

A backward scroll was requested but the display is already positioned at the top of the data.

System Action:

None.

User Action:

None.

TSAR03

BOTTOM OF DATA

Reason:

A forward scroll was requested but the display is already positioned at the bottom of the data.

System Action:

None.

User Action:

None.

TSAR04**INVALID SCROLL AMOUNT****Reason:**

An invalid value has been entered in a field capable of accepting a valid scroll amount value.

System Action:

None.

User Action:

Correct the error and retry. Valid scroll values are P(age), H(alf), C(ursor), D(ata) and any positive numeric value up to 100000.

TSAR05**NTSVIEW FOR SESSION APPN ROUTE DATA FAILED****Reason:**

An &NTSVIEW verb has been used to obtain APPN session route data for a specified session. The &NTSVIEW verb has failed due to the view being invalid.

System Action:

None.

User Action:

Return to a higher level view and retry.

TSAR06**SESSION HAS ENDED****Reason:**

A request to display information about an active session has been rejected because the session is no longer active. All information about the session has been removed from storage.

System Action:

None.

User Action:

View the session using a History display which shows information stored in the NTSLOG file.

TSAR07

NTSREAD FOR SESSION APPN ROUTE DATA FAILED

Reason:

An &NTSREAD verb has been used to obtain APPN session route data for a specified session. The &NTSREAD verb has failed due to the view being invalid.

System Action:

None.

User Action:

Return to a higher level view and retry.

TSAR08

NO APPN ROUTE INFORMATION EXISTS

Reason:

A request to display APPN session route information for a session has failed because there is no such information available. This indicates that the information provided by VTAM indicates that the session does not involve any APPN networks.

System Action:

None.

User Action:

None.

TSAR09**NO RSCV INFORMATION AVAILABLE - DISPLAY INCOMPLETE****Reason:**

A request to display APPN session route information for a session has resulted in an incomplete display because no RSCV information has been provided by VTAM. The session awareness information indicates that the session does involve APPN, and a Route Selection Control Vector was expected because the session involves more than one Control Point. This can occur if the session was active before NTS was started - VTAM does not actually remember the RSCV for any session so if NTS is started after the session VTAM cannot supply this information.

System Action:

The APPN session route display shows as much information as it can without the additional data from the RSCV.

User Action:

None.

TSAR10**NTS RSCV DUMP FOR USER P1 AT TERMINAL P2****Reason:**

This line precedes a hex/character dump of a Route Selection Control Vector which was used to build an NTS APPN Session Route Display. The display is terminated by message TSAR11. This display is sent to the SOLVE activity log when the RSCVDUMP command is entered in the command line of the APPN Session Route display. It may be used to obtain the RSCV for problem determination purposes at the request of your product supplier.

System Action:

None.

User Action:

None.

TSAR11

NTS RSCV DUMP COMPLETE

Reason:

This line terminates a hex/character dump of a Route Selection Control Vector which was used to build an NTS APPN Session Route Display. The display is headed by message TSAR10.

System Action:

None.

User Action:

None.

TVE001

TCP/IP IBM IUCV INTERFACE NOT SUPPORTED ON THIS OPERATING SYSTEM

Reason:

This message is issued in response to the TCPIP START command if an attempt to use the IUCV interface is made in an environment that does not support it.

System Action:

The TCPIP START command fails.

User Action:

Determine the correct interface type for the current operating system and environment. Issue another TCPIP START command using the TYPE=tttt operand with the correct type specified.

TVE101

IBMIUCV INTERFACE INITIALIZATION FAILURE nn - information**Reason:**

This message is issued in response to a TCPIP START command when the IUCV interface to TCP/IP is unable to initialize. A reason number and description are provided. The reasons are listed below:

1 - NO STORAGE FOR GLOBAL CONTROL BLOCKS

The interface was unable to obtain required storage.

2 - NO STORAGE FOR LOCAL CONTROL BLOCKS

The interface was unable to obtain required storage.

3 - LOAD FAILED FOR INTERFACE MODULE nnnnnnn

The interface was unable to load a required module. If the module name is EZASOK03, it probably indicates that IBM TCP/IP V3.1 is not installed on this system. Other names generally indicate that the required IBM C runtime libraries are not installed.

4 - UNABLE TO OBTAIN IUCV PC NUMBERS

The interface was unable to locate required control blocks etcetera to obtain required information.

5 - UNRECOGNISED OPTION: 00000000

The TCPIP START commands OPTIONS operand had keywords specified that are not recognized by the IUCV interface.

6 - DUPLICATE OPTION: 00000000

The named TCPIP START OPTIONS operand was duplicated.

7 - PREFIX OPTION INVALID: 00000000

The 'PREFIX' TCPIP START option is not valid.

8 - NODE OPTION INVALID: 00000000

The 'NODE' TCPIP START option is not valid.

10 - LOAD FAILED FOR modname

The interface was unable to load a required module.

21 - IUCVMINI FAILED, R15=rrr return code is displayed. The most likely reason is that the IUCV address space is not active.

22 - IUCVMCOM CONNECT FAILED, R15=rrr TARGET JOBNAME: jjjjj

An attempt to connect to the TCP/IP region using IUCV failed. The most likely reason is that the target jobname is not active.

23 - IUCV CONNECT REQUEST WAS SEVERED, REASON rrrrr

The IUCV CONNECT request was refused for the displayed reason.

24 - IUCV INITIAL SEND ERROR, R15=rrr

The IUCV initial send failed. The return code is displayed.

30 - IUCV GETHOSTADDR FAILED (1), r15=rrr

An attempt to obtain the local host IP address failed. The return code is displayed.

31 - IUCV GETHOSTADDR FAILED (2), r15=rrr

An attempt to obtain the local host IP address failed. The return code is displayed.

35 - IUCV GETHOSTNAME FAILED (1), r15=rrr

An attempt to obtain the local host domain name failed. The return code is displayed.

36 - IUCV GETHOSTNAME FAILED (2), r15=rrr

An attempt to obtain the local host domain name failed. The return code is displayed.

37 - IUCV GETHOSTNAME FAILED (3), NAME BLANK

An attempt to obtain the local host domain name failed. The returned name is blank.

100 - DDNAME dddddd IS ALLOCATED DUMMY

The SYSTCPD ddname is allocated as DD DUMMY, preventing the interface from obtaining necessary information from the TCPIP.DATA dataset.

101 - DATASET dsname ALLOC SHR FAILED, IN USE as it is in exclusive use by another user or job.

102 - DATASET dsname ALLOC SHR FAILED, CODE aaaa-bbbb

The named TCPIP.DATA dataset could not be allocated DISP=SHR, as a SYNALLOC failure occurred. The DYNALLOC error and info codes are displayed.

110 - RDJFCB FAILED for dddddd R15=rrr

A RDJFCB macro failed for the indicated (TCPIP.DATA) ddname.

111 - OPEN FAILED FOR dsname

The indicated (TCPIP.DATA) dataset could not be opened.

112 - OPEN ABENDED FOR dsname CODE: abcode

The indicated (TCPIP.DATA) dataset could not be opened, as an ABEND occurred.

113 - dsname INVALID RECFM OR LRECL

The indicated (TCPIP.DATA) dataset could not be used, as it had an invalid record format (not F, FB, V, VB) or record length (F up to 255, V from 4 to 259).

119 - I/O ERROR READOING dsname INFO: synmsg

The indicated (TCPIP.DATA) dataset had an I/O error during processing. The MVS SYNAD error message text is displayed.

120 - TCP DATA FILE STMT ERROR: text

The indicated source line in the TCPIP.DATA file had an error, related to the TCPIPUSERID statement.

121 - TCP DATA FILE STMT ERROR: text

The indicated source line in the TCPIP.DATA file had an error, related to the DOMAINORIGIN statement.

122 - TCP DATA FILE STMT ERROR: text

The indicated source line in the TCPIP.DATA file had an error, related to the DATASETPREFIX statement.

123 - TCP DATA FILE STMT ERROR: text related to the HOSTNAME statement.

System Action:

TCP/IP initialization fails. Depending on the error, it may be automatically retried in 30 seconds.

User Action:

If the error is permanent (no retry), then correct the problem and issue another TCPIP START command.

If the error is temporary (retry will occur), then attempt to correct the problem so that the retry will succeed.

TVE110

CONNECTED TO jjjjj USING IUCV, NODE: nnnn DSN: dddd

Reason:

This message is issued in response to a SHOW TCPIP command when the IUCV interface is in use in MVS. It shows the TCP/IP region jobname, TCP/IP node name, and TCPIP.DATA dataset name.

System Action:

None.

User Action:

None.

TVE111

System Action:

None.

User Action:

Refer any message to the product support engineer.

TVE790

IBMIUCV SYNCH SUBTASK INIT FAILURE *nn* - *information*

Reason:

This message is issued when the IUCV interface subtask has an initialization failure. The reasons are listed below and descriptions are provided.

1 - GETMAIN FAILURE

The interface was unable to obtain required storage.

2 - INITAPI FAILURE - TGT JOB: *jjj* TASKID:*tttt* RETCODE: *rr* ERRNO: *ee*

An attempt to initialize the macro interface failed. The target TCP/IP job is shown, with the return code and error number.

System Action:

If this error occurs during TCPIP START processing, initialization fails. If it occurs later, an individual SOCKET verb fails.

User Action:

Examine the error information and determine whether the correct jobname is used.

You may need to contact Technical Support.

TVEB01**IUCV SEVER RECEIVED, REASON: rrrrrrrr****Reason:**

This message is issued to the SOLVE log when the TCP/IP IUCV interface receives an IUCV SEVER. The sever reason is displayed. SEVER reasons are documented in the IBM TCP/IP application programming reference (SC31-7187) chapter 8, section 8.7.1.2. The most common reason is 'KILL -38' which indicates that TCP/IP is being shut down.

System Action:

The TCP/IP interface will automatically stop.

User Action:

Determine the reason that the IUCV SEVER was issued and take appropriate corrective action.

TVF001**TCP/IP IBM HPNS INTERFACE NOT SUPPORTED ON THIS OPERATING SYSTEM****Reason:**

This message is issued in response to the TCPIP START command if an attempt to use the HPNS interface is made in an environment that does not support it.

System Action:

The TCPIP START command fails.

User Action:

Determine the correct interface type for the current operating system and environment. Issue another TCPIP START command using the TYPE=tttt operand with the correct type specified.

TVF101

IBMHPNS INTERFACE INITIALIZATION FAILURE *nn* - information

Reason:

This message is issued in response to a TCPIP START command when the HPNS interface to TCP/IP is unable to initialize because of one of the following reasons:

1 - NO STORAGE FOR GLOBAL CONTROL BLOCKS

The interface was unable to obtain required storage.

2 - NO STORAGE FOR LOCAL CONTROL BLOCKS

The interface was unable to obtain required storage.

3 - LOAD FAILED FOR INTERFACE MODULE *nnnnnnnn*

The interface was unable to load a required module. If the module name is EZASOH03, it probably indicates that IBM TCP/IP V3.2 is not installed on this system. Other names generally indicate that the required IBM C runtime libraries are not installed.

4 - UNABLE TO OBTAIN NODE ID

The interface was unable to locate the control blocks to obtain the required information.

5 - UNRECOGNISED OPTION: *oooooooo*

The OPTIONS operand of the TCPIP START command specified keywords that are not recognized by the IUCV interface.

6 - DUPLICATE OPTION: *oooooooo*

The named OPTIONS operand of the TCPIP START command was duplicated.

7 - PREFIX OPTION INVALID: *oooooooo*

The PREFIX option of the TCPIP START command is not valid.

8 - NODE OPTION INVALID: *oooooooo*

The NODE option of the TCPIP START command is not valid.

9 - PATH OPTION INVALID: *oooooooo*

The PATH option of the TCPIP START command is not valid.

10 - LOAD FAILED FOR *modname*

The interface was unable to load a required module.

11 - JOB OPTION INVALID: *oooooooo*

The JOB option of the TCPIP START command is not valid.

12 - HOST OPTION INVALID: *oooooooo*

The HOST option of the TCPIP START command is not valid.

13 - DOMAIN OPTION INVALID: 000000

The DOMAIN option of the TCPIP START command is not valid.

14 - DATADD OPTION INVALID: 000000

The DATADD option of the TCPIP START command is not valid.

15 - DATADSN OPTION INVALID: 000000

The DATADSN option of the TCPIP START command is not valid.

20 - INITAPI FAILED, R15=rrr ERRNO=eee JOBNAME=jjjj

An attempt to establish a connection to TCP/IP failed. The return code is displayed. The most likely reason is that the target TCP/IP address space is not active.

21 - SOCKET REQUEST FAILED (1), R15=rrr

An attempt to create a socket failed. The return code is displayed.

22 - SOCKET REQUEST FAILED (2), ERRNO=eee

An attempt to create a socket failed. The return code is displayed.

23 - IPV6 SUPPORT IS NOT ENABLED

An attempt to create an AF_INET6 socket failed. The system has not been configured for AF_INET6 sockets to be created.

24 - CLOSE REQUEST FAILED (1), R15=rrr

An attempt to destroy a socket failed. The return code is displayed.

25 - CLOSE REQUEST FAILED (2), ERRNO=eee

An attempt to destroy a socket failed. The return code is displayed.

30 - GETHOSTADDR FAILED (1), r15=rrr

An attempt to obtain the local host IP address failed. The return code is displayed.

31 - GETHOSTADDR FAILED (2), r15=rrr

An attempt to obtain the local host IP address failed. The return code is displayed.

35 - GETHOSTNAME FAILED (1), r15=rrr

An attempt to obtain the local host domain name failed. The return code is displayed.

36 - GETHOSTNAME FAILED (2), ERRNO=eee

An attempt to obtain the local host domain name failed. The return code is displayed.

37 - GETHOSTNAME FAILED (3), NAME BLANK

An attempt to obtain the local host domain name failed. The returned name is blank.

100 - DDNAME *dddddd* IS ALLOCATED DUMMY

The SYSTCPD ddname is allocated as DD DUMMY, preventing the interface from obtaining necessary information from the TCPIP.DATA data set.

101 - DATASET *dsname* ALLOC SHR FAILED, IN USE

The indicated TCPIP.DATA data set could not be allocated DISP=SHR because it is in exclusive use by another user or job.

102 - DATASET *dsname* ALLOC SHR FAILED, CODE: *aaaa-bbbb*

The indicated TCPIP.DATA data set could not be allocated DISP=SHR because a DYNALLOC failure occurred. The DYNALLOC error and information reason codes are displayed.

103 - DATASET *dsname* ALLOC SHR FAILED, DATASET NOT FOUND

The indicated TCPIP.DATA data set could not be allocated DISP=SHR because the name is invalid or the data set could not be located.

110 - RDJFCB FAILED for *dddddd* R15=*rrr*

A RDJFCB macro failed for the indicated TCPIP.DATA ddname.

111 - OPEN FAILED FOR *dsname*

The indicated TCPIP.DATA data set could not be opened.

112 - OPEN ABENDED FOR *dsname* CODE: *abcode*

The indicated TCPIP.DATA data set could not be opened because an ABEND occurred.

113 - *dsname* INVALID RECFM OR LRECL

The indicated TCPIP.DATA data set could not be used because it had an invalid record format (not F, FB, V, or VB) or record length (F up to 255 and V from 4 to 259).

119 - I/O ERROR READING *dsname* INFO: *synmsg*

The indicated TCPIP.DATA data set had an I/O error during processing. The MVS SYNAD error message text is displayed.

120 - TCP DATA FILE STMT ERROR: *text*

The indicated source line in the TCPIP.DATA file had an error related to the TCPIPUSERID or TCPIPJOBNAME statement.

121 - TCP DATA FILE STMT ERROR: *text*

The indicated source line in the TCPIP.DATA file had an error related to the DOMAINORIGIN statement.

122 - TCP DATA FILE STMT ERROR: *text*

The indicated source line in the TCPIP.DATA file had an error related to the DATASETPREFIX statement.

123 - TCP DATA FILE STMT ERROR: *text*

The indicated source line in the TCPIP.DATA file had an error related to the HOSTNAME statement.

131 - PATH: *pathname* ALLOC FAILED, PATH NOT FOUND

The indicated TCPIP.DATA file could not be allocated because the path name is invalid or the file could not be located.

139 - PATH: *pathname* ALLOC FAILED, CODE: *aaaa-bbbb*

The indicated TCPIP.DATA file could not be allocated because a DYNALLOC failure occurred. The DYNALLOC error and information reason codes are displayed.

140 - DYNALLOC QUERY FOR PATHNAME FAILED. DD: *ddname* CODE: *aaaa-bbbb*

The path name of an allocated TCPIP.DATA file could not be obtained because a DYNALLOC failure occurred. The DYNALLOC error and information reason codes are displayed.

System Action:

Initialization of TCP/IP fails. Depending on the error, it may be automatically retried in 30 seconds.

User Action:

If the error is permanent (no retry), then correct the problem and issue another TCPIP START command.

If the error is temporary (retry will occur), then correct the problem so that the retry will succeed.

TVF110

CONNECTED TO jjjjj USING HPNS, NODE: nnnn DSN: dddd VERSION: vvvv

Reason:

This message is issued in response to a SHOW TCPIP command when the HPNS interface is in use. It shows the TCP/IP region jobname, TCP/IP node name, and TCPIP.DATA dataset name.

The TCP/IP version is shown in vvvv (For example, 3.2). If the version cannot be determined, 'UNKNOWN' is displayed.

System Action:

None.

User Action:

None.

TVF790

IBMHPNS SYNCH SUBTASK INIT FAILURE nn - information

Reason:

This message is issued when the HPNS interface subtask has an initialization failure. The reasons are listed below and description are provided.

1 - GETMAIN FAILURE

The interface was unable to obtain required storage.

2 - INITAPI FAILURE - TGT JOB: jjj TASKID:tttt RETCODE: rr ERRNO: ee

An attempt to initialize the macro interface failed. The target TCP/IP job is shown, with the return code and error number.

System Action:

If this error occurs during TCPIP START processing, initialization fails. If it occurs later, an individual SOCKET verb will fail.

User Action:

Examine the error information and determine whether the correct jobname is being used.

You may need to contact your software support office.

TVFB01**TCP/IP STACK TERMINATE NOTIFICATION RECEIVED, CODE: cc****Reason:**

This message is issued to the SOLVE log when the TCP/IP HPNS interface receives a TCP/IP termination notification, The reason is displayed.

Termination reasons are:

- 1: The TCP/IP address space has terminated
- 2: TCP/IP has terminated the connection to SOLVE
- 4: Other reason (Manual says CALL IBM).

System Action:

The TCP/IP interface will automatically stop.

User Action:

Determine the reason that the termination has occurred and take appropriate corrective action.

TVG001**TCP/IP TCPAXS interface is not supported by this operating system****Reason:**

This message is issued in response to the TCPIP START command if an attempt to use the TCPAXS interface is made in an environment that does not support it.

System Action:

The TCPIP START command fails.

User Action:

Determine the correct interface type for the current operating system and environment. Issue another TCPIP START command using the TYPE=tttt operand with the correct type specified.

TVG101

TCPAXS interface initialization failure nn - information

Reason:

This message is issued in response to a TCPIP START command when the interface to TCPaccess is unable to initialize. A reason number and description are provided. The reasons are listed below...

1 - NO STORAGE FOR GLOBAL CONTROL BLOCKS

The interface was unable to obtain required storage.

5 - UNRECOGNIZED OPTION: 00000000

The TCPIP START commands OPTIONS operand had keywords specified that are not recognized by the TCPAXS interface.

6 - DUPLICATE OPTION: 00000000

The named TCPIP START OPTIONS operand was duplicated.

8 - SSID OPTION INVALID: 00000000

The 'SSID' TCPIP START option is not valid.

9 - GTF OPTION INVALID: 00000000

The 'GTF' TCPIP START option is not valid.

10 - APPL OPTION INVALID: 00000000

The 'APPL' TCPIP START option is not valid.

11 - PW OPTION INVALID: 00000000

The 'PW' TCPIP START option is not valid.

12 - DNS OPTION INVALID: 00000000

The 'DNS' TCPIP START option is not valid.

20 - AOPEN FAILED RC=rr R0=oo DIAG=dddd

The TCPaccess AOPEN call failed. Refer to the TCPaccess messages and codes reference for detailed explanation. This is not considered to be a retryable error.

21 - AOPEN FAILED RC=rr R0=oo DIAG=dddd

The TCPaccess AOPEN call failed. Refer to the TCPaccess messages and codes reference for detailed explanation. **31 - BAD RET HOSTNAME LEN: IIII**

A TCPaccess GET HOST,BYNAME returned a name with an unacceptable length.

System Action:

TCP/IP initialization fails. Depending on the error, it may be automatically retried in 30 seconds.

User Action:

If the error is permanent (no retry), then correct the problem and issue another TCPIP START command.

If the error is temporary (retry will occur), attempt to correct the problem so that the retry will succeed.

TVG110**CONNECTED TO TCPAXS SSID: ssss VERSION: vvvv****Reason:**

This message is issued in response to a SHOW TCPIP command when the TCPAXS interface is in use. It shows the TCPAXS SSID in use. If the version can be determined, it will be displayed. Otherwise, 'UNKNOWN' will be displayed.

System Action:

None.

User Action:

None.

TVG190**TCPAXS DIRSRV REQUEST FAILED, R15=rc ACTCD=aa ERRCD=ee
DIAG=dddd****Reason:**

This message is issued in response to a TCPIP START command when the interface to Interlink TCPAXS encounters an error whilst obtaining the local IP address and domain name. The DIRSRV macro encountered the displayed error.

The return code and diagnostic information can be analyzed using the TCPAXS unprefixed messages and codes manual.

System Action:

TCP/IP initialization fails. Depending on the error, it may be automatically retried in 30 seconds.

User Action:

If the error is permanent (no retry), then correct the problem and issue another TCPIP START command.

If the error is temporary (retry will occur), attempt to correct the problem so that the retry will succeed.

TVGB01

TCPAXS TERMINATE RECEIVED, REASON: cc

Reason:

This message is issued to the SOLVE log when the TCP/IP TCPAXS interface receives a TCP/IP termination notification, The reason is displayed.

Termination reasons are:

0: Operator has drained TCPAXS subsystem.

4: Operator has stopped TCPAXS subsystem.

8: TCPAXS subsystem has abended.

System Action:

The TCP/IP interface will automatically stop.

User Action:

Determine the reason that the termination has occurred and take appropriate corrective action.

TVH001

HITACHI XNF/TCP INTERFACE NOT SUPPORTED ON THIS OPERATING SYSTEM

Reason:

You issued the TCPIP START command in an environment that does not support the Hitachi XNF/TCP interface.

System Action:

The TCPIP START command fails.

User Action:

Determine the correct interface type for the current operating system and environment. Issue another TCPIP START command using the TYPE=tttt operand with the correct type specified.

TVH101

XNF/TCP INTERFACE INITIALIZATION FAILURE nn - information**Reason:**

You issued the TCPIP START command when the XNF/TCP interface to TCP/IP was unable to initialize. A reason number and description are provided.

The reasons are listed below:

1 - NO STORAGE FOR GLOBAL CONTROL BLOCKS

The interface was unable to obtain the required storage.

2 - NO STORAGE FOR LOCAL CONTROL BLOCKS

The interface was unable to obtain the required storage.

3 - LOAD FAILED FOR INTERFACE MODULE nnnnnnn

The interface was unable to load a required module. If the module name is JJTXAPI, it probably indicates that XNF/TCP is not installed on this system, or that the XNF/TCP modules are not in the Linklist.

4 - JJTXAPI EP FORMAT INVALID FOR: aaaaaaaa

The XNF/TCP interface module (JJTXAPI) entry point table was not formatted correctly, for the named entry point.

5 - UNRECOGNIZED OPTION: oooooooooo

The TCPIP START command's OPTIONS operand had keywords specified that are not recognized by the XNF/TCP interface.

6 - DUPLICATE OPTION: oooooooo

The named TCPIP START OPTIONS operand was duplicated.

7 - UCE OPTION INVALID: ooooooo

The 'UCE' TCPIP START option is not valid. The UCE option value must be a 1-8 character name, with the first character alphabetic or national (@#\$), and the remaining characters alphanumeric or national.

Normally the UCE option is not required, as the XNF/TCP interface locates the correct UCE automatically. If specified, the UCE name must be the primary UCE name in the XTCPDF table.

Specifying UCE=NONE sets the UCE name to null. An XAPI XQUERY call to XNF/TCP to obtain the UCE name failed. The return code is shown.

11 - XQUERY (1) FAILED TO RETURN UCE NAME

An XAPI XQUERY call to XNF/TCP to obtain the UCE name worked, but the returned UCE name was blank.

20 - XOPEN FAILURE, RC: nn

An XAPI XOPEN call to open a UDP port to listen for XNF/TCP termination failed. The XOPEN return code is displayed.

This return code indicates a fatal error.

21 - XOPEN FAILURE, RC: nn

An XAPI XOPEN call to open a UDP port to listen for XNF/TCP termination failed. The XOPEN return code is displayed.

This return code indicates that the call can be retried.

30 - XQUERY (2) FAILURE, RC: nn

An XAPI XQUERY call to XNF/TCP to obtain the host name and IP address failed. The return code is shown.

31 - XQUERY (2) DID NOT RETURN HOST NAME

An XAPI XQUERY call to XNF/TCP to obtain the host name and IP address worked, but the returned host name was blank.

System Action:

TCP/IP initialization fails. Depending on the error, it may be automatically retried in 30 seconds.

User Action:

If the error is permanent (no retry), then correct the problem and issue another TCPIP START command.

If the error is temporary (retry will occur), attempt to correct the problem so that the retry will succeed.

TVH110

CONNECTED TO XNF/TCP, UCE NAME: P1

Reason:

This message is issued when the region establishes a connection to the Hitachi XNF/TCP interface. *P1* shows the UCE name for the connection.

System Action:

None.

User Action:

Connections to the NetMaster Telnet server may now be established. If XNF/TCP is the region's primary access method, XNF CONNECT *P1* commands may be issued to create a terminal session to the region.

TVH490

TVH790

VOS3 XNF/TCP SYNCH SUBTASK INIT FAILURE *nn* - information

Reason:

This message is issued when the XNF/TCP interface subtask has an initialization failure. A reason number and description are provided.

The reasons are listed below:

1 - GETMAIN FAILURE

The interface was unable to obtain required storage.

2 - XQUERY FAILURE, RC=*nn*

An XAPI XQUERY call to obtain the host IP address and name failed, and the return code is displayed.

System Action:

If this error occurs during TCPIP START processing, initialization fails. If it occurs later, an individual SOCKET verb fail.

User Action:

Examine the error information and determine whether the problem can be corrected.

You may need to contact Technical Support.

TVHB01**XNF/TCP INTERFACE TERMINATED, XRECV RC=nn****Reason:**

This message is issued to the SOLVE log when the TCP/IP XNF/TCP interface is posted to terminate.

The XRECV call return codes are documented in the Hitachi XNF/TCP Description and Reference (6190-3-581).

The most common return code is 32 which indicates that XNF/TCP is being shut down.

System Action:

The TCP/IP interface will automatically stop.

User Action:

Determine the reason that the SHUTDOWN was issued and take appropriate corrective action.

TVI001**FUJITSU TISP INTERFACE NOT SUPPORTED ON THIS OPERATING SYSTEM****Reason:**

A TCPIP START TYPE=TISP command has been entered in an operating system environment which does not support the Fujitsu TISP interface.

System Action:

The TCPIP START command fails.

User Action:

Determine the correct interface type for the current operating system and environment. Issue another TCPIP START command using the TYPE=tttt operand with the correct type specified.

TVI101

FUJITSU TISP INTERFACE INITIALIZATION FAILURE nn - description

Reason:

A TCPIP START TYPE=TISP command was entered to start the TISP interface to TCP/IP but the interface was unable to initialize. A reason code and description are provided.

The reasons are listed below:

1 - NO STORAGE FOR GLOBAL CONTROL BLOCKS

The interface was unable to obtain the required storage.

2 - NO STORAGE FOR LOCAL CONTROL BLOCKS

The interface was unable to obtain the required storage.

3 - UNRECOGNIZED OPTION: 00000000

The TCPIP START command's OPTIONS operand had keywords specified that are not recognized by the TISP interface.

4 - DUPLICATE OPTION: 00000000

The named TCPIP START OPTIONS operand was duplicated.

5 - OPTION VALUE IS INVALID: 000000

The TCPIP START option shown is not valid.

6 - TCP/UDP APPL NAME RANGES OVERLAP

The values specified on the OPTIONS TCP= and OPTIONS UDP= operands could result in the same APPL name being generated for both a TCP APPL and a UDP APPL.

If the same APPL name prefix is used, the ranges specified should not overlap.

7 - INTERNAL ERROR - 315 RETURN CODE WAS nnnn

An internal error has occurred.

8 - TIOOPEN FOR applname FAILED, CODE nnnn

An attempt to OPEN the APPL specified on OPTIONS APPL= failed. The APPL name and return code are shown.

9 - TISP IS STOPPING OR IS INACTIVE

TISP is stopping, is inactive, has abended or has been In this case the TCPIP START request will retry automatically.

10 - APPL applname IS ALREADY IN USE

An attempt to OPEN the APPL specified on OPTIONS APPL= failed because the APPL is already in use.

11 - APPL applname IS NOT DEFINED TO TISP

An attempt to OPEN the APPL specified on OPTIONS APPL= failed because the APPL is not defined to TISP.

12 - APPL applname IS NOT DEFINED WITH PROTOCOL=TCP

The APPL specified on OPTIONS APPL= is not defined with PROTOCOL=TCP.

13 - APPL applname IS NOT DEFINED WITH PORT=0

The APPL specified on OPTIONS APPL= is not defined with PORT=0.

14 - TIINF FOR applname FAILED, CODE nnnn

After opening the APPL specified on OPTIONS APPL=, SOLVE issues a TIINF macro to obtain information about the APPL definition. The TIINF macro has failed with the code nnnn.

System Action:

TCP/IP initialization fails. Depending on the error, it may be automatically retried in 30 seconds.

User Action:

If the error is permanent (no retry), then correct the problem and issue another TCPIP START command.

If the error is temporary (retry will occur), attempt to correct the problem so that the retry will succeed.

TVI110

User Action:

Contact your local support representative.

UA1001

INVALID KEYWORD PARAMETER SPECIFIED - PARAMETER=~P1

Reason:

The keyword parameter P1 was either omitted or specified incorrectly.

System Action:

The request is rejected.

User Action:

Correct and retry.

UA1002

INVALID PARAMETER PASSED TO USER AUTHORIZATION PROCESS - P1= P2

Reason:

A parameter was specified incorrectly when calling the User Authorization Manager.

System Action:

None.

User Action:

Correct the call parameters and retry.

UA1008**INVALID COMMAND****Reason:**

An invalid command was passed to the User Authorisation Manager.

System Action:

None.

User Action:

Correct the command and retry.

UA1040**~P1 COMMAND IS NOT ACTIVE IN THIS WINDOW****Reason:**

The requested command is not allowed on the currently displayed panel.

System Action:

The command is rejected.

User Action:

Erase the command from the command line.

UA1041**USERID P1 IS NOT AUTHORIZED TO MAINTAIN USER DEFINITIONS****Reason:**

Userid *P1* is not authorized to perform maintenance functions in UAMS.

System Action:

The function is terminated.

User Action:

Contact the System Administrator if the function is required.

UA1044

~P1 CANCELLED

Reason:

The requested action was cancelled by use of the CANCEL command or CANCEL function key.

System Action:

None.

User Action:

None.

UA1045

PAGE NUMBER ~P1 DOES NOT EXIST

Reason:

The requested page number is not present in the current series of panels.

System Action:

None.

User Action:

None.

UA1047

USER ~P1 DOES NOT EXIST

Reason:

The requested userid was not found on the UAMS Database.

System Action:

None.

User Action:

None.

UADT01**USER DEFINITION ~P1 UPDATED****Reason:**

The user definition was successfully updated on the database.

System Action:

None.

User Action:

None.

UADT02**USER DEFINITION ~P1 ADDED****Reason:**

The user definition was successfully added to the database.

System Action:

None.

User Action:

None.

UADT03**USER DEFINITION ~P1 DELETED****Reason:**

The user definition was successfully deleted from the database.

System Action:

None.

User Action:

None.

UADT04

USER PASSWORD FOR ~P1 UPDATED

Reason:

The user password was successfully updated on the database.

System Action:

None.

User Action:

None.

UADT05

PASSWORD VERIFICATION COMPLETE

Reason:

The password was verified successfully.

System Action:

None.

User Action:

FILE the password change by pressing F3 or by using the SAVE command.

UADT10

USER DEFINITION ~P1 ALREADY EXISTS

Reason:

The user definition to be added already exists on the database.

System Action:

None.

User Action:

Correct the name of the record to be added, or use the update option to modify the existing record.

UADT11**USER DEFINITION ~P1 DOES NOT EXIST****Reason:**

The requested user definition does not exist on the database.

System Action:

None.

User Action:

Correct the name of the requested record and retry, or use the ADD option to create a new record.

UADT20**~P1 MUST BE BLANK IF NPF RESOURCE LIST IS PROVIDED****Reason:**

The NPF Command Member and the NPF Message Member must be blank if an NPF Resource List is provided.

System Action:

None.

User Action:

Erase one of the conflicting values.

UADT21**~P1 INVALID - RECEIVE PPO MESSAGES MUST BE Y(ES)****Reason:**

This field must not be entered unless the PPO message receipt indicator is set to YES .

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Erase the field in error, or change the PPO message indicator to YES .

UADT22

~P1 INVALID - RECEIVE UNDELIVERED MESSAGES MUST BE (N)O

Reason:

The field must not be entered unless the NPF Undeliverable Message Receipt field is set to 'NO'.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Erase the field in error, or set the NPF Undeliverable Message Receipt field to 'NO'.

UADT23

~P2 IS AN INVALID GROUP DEFINITION

Reason:

The supplied group definition is invalid.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the definition.

UADT25

USER IS NOT AUTHORIZED FOR FEATURE P1

Reason:

The user is not authorized for the requested feature. The user's parameters for this feature cannot be altered.

System Action:

None.

User Action:

If authorization is required, alter the Access Authority table.

UADT27**~P1 ~P2 DOES NOT EXIST****Reason:**

The requested group definition does not exist on the database.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the name of the requested group definition and retry.

UADT28**~P1 INVALID - MUST BE A VALID ROUTE CODE****Reason:**

The route code field value is invalid - it must be ALL or NONE or a list of route codes from 1 to 128 (eg 3,6-10).

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the route code value and retry.

UADT29**~P1 INVALID - MUST BE A VALID MESSAGE LEVEL****Reason:**

The message level is invalid - it must be ALL or NONE or a list of message levels from the values WTOR, I, CE, E, IN, BC.

System Action:

None.

User Action:

Correct the message level value and retry.

UADT30

FORCE PASSWORD CHANGE FOR GROUP DEFINITION ~P1 INVALID

Reason:

A force password change for the requested user is invalid as this is a group user definition and cannot be used for logon.

System Action:

The request is rejected.

User Action:

None.

UADT31

~P1 MUST BE SUPPLIED WITH MAI PRIVILEGE CLASS 'B', 'C' OR 'D'

Reason:

A MAI session model has not been supplied when the the MAI privilege class is 'B', 'C' or 'D'.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the MAI privilege class or provide an MAI session model.

UADT32

~P1 ACCESS MASK MUST BE SUPPLIED WITH PRIVATE FTS REQUEST/CONTROL

Reason:

A PRIVATE Access Mask must be provided if the user is authorised for private transmission requests or private transmission control.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Enter the FTS Access Mask or disallow private transmission requests and control.

UADT33**~P1 ACCESS MASK MUST BE SUPPLIED WITH SYSTEM FTS REQUEST/CONTROL****Reason:**

A SYSTEM Access Mask must be provided if the user is authorised for system transmission requests or system transmission control.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the FTS Access Mask or disallow system transmission requests and control.

UADT34**~P1 MUST BE SUPPLIED****Reason:**

P1 is a required field and must be provided.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Enter a value in the required field.

UADT35**~P1 INVALID - NPF MESSAGE MEMBER MUST BE SUPPLIED****Reason:**

The field requires an NPF Message member to be supplied as this field determines if, in spite of any restrictions on the message delivered to the user, the user is able to receive messages about resources for which no other user is authorised.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Erase the field in error, or set the NPF Undeliverable Message Receipt field to 'NO'.

UADT36

USER ~P1 CONTAINS INVALID CHARACTERS

Reason:

An ADD user request has been issued. The user id specified contains characters that are invalid. Valid characters are A-Z, 0-9 and national characters @, # and \$.

System Action:

The ADD operation is rejected.

User Action:

Correct the user id value and retry the ADD operation.

UADT37

~P1 MUST CONTAIN ONLY THE CHARACTERS Y AND N

Reason:

The indicated field must contain only Y or N to indicate Yes or No for the days sunday to saturday (SMTWTFS).

System Action:

The cursor is placed on the field in error and the field(s) highlighted.

User Action:

Correct the field and retry the operation.

UADT38

~P1 REQUIRES THE 'Notify By' FIELD TO BE SUPPLIED

Reason:

The indicated field can only be specified if the 'Notify By' field is supplied.

System Action:

The cursor is placed on the field in error and the field(s) highlighted.

User Action:

Correct the field by either supplying a notification mode or remove the field and retry the operation.

UADT39**~P1 TIME SPECIFIED IS INCORRECT****Reason:**

The indicated field specifies a time that is incorrect. The time must be between 0000 and 2359.

System Action:

The cursor is placed on the field in error and the field(s) highlighted.

User Action:

Correct the field by supplying a correct time.

UADT40**~P1 IS ONLY VALID FOR "EXIT" NOTIFICATION MODE****Reason:**

The field P1 is only permitted to be specified if the Notify by field specifies a Notification Mode of EXIT.

System Action:

The cursor is placed on the field in error and the field is highlighted.

User Action:

Correct the field by blanking it out or change the Notify by field to EXIT.

UADT41**~P1 MUST BE SUPPLIED IF "EXIT" NOTIFICATION MODE SPECIFIED****Reason:**

The field P1 is required if the Notify by field specifies a Notification Mode of EXIT.

System Action:

The cursor is placed on the field in error and the field is highlighted.

User Action:

Correct the field by specifying an NCL exit procedure name.

UADT42

Primary Menu Id IN ERROR, THE MENU ID MUST BE BETWEEN 1 AND 255

Reason:

The Primary Menu entered in the field indicated contains an invalid specification. The required format is 3 character application id defined in the application register followed by a 3 character menu identifier from 001 to 255.

System Action:

The cursor is placed on the field in error and the field is highlighted.

User Action:

Correct the field by specifying a valid primary menu id.

UADT43

USERID PREVIOUSLY DEFINED

Reason:

The USERID being added with the UAMS copy function is already defined to the security subsystem.

System Action:

The cursor is placed on the field in error and the field is highlighted.

User Action:

Correct the field by specifying a user id that is not already defined or CANCEL the ADD function.

UADT44**~P1 MUST BE BETWEEN ~P2 AND ~P3 CHARACTERS LONG****Reason:**

The password field must have a length between the defined password minimum and maximum lengths set by the system parameters PWMIN and PWMAX (SYSPARMS PWMIN= and SYSPARMS PWMAX=).

System Action:

The cursor is placed on the field in error and the field is highlighted.

User Action:

Correct the password field length by specifying the required number of characters between the minimum and maximum password lengths allowed by your installation.

UADT45**~P1 CONTAINS INVALID CHARACTERS****Reason:**

A password change or user add request has specified invalid characters for the password. The password must not contain embedded blanks.

System Action:

The cursor is placed on the field in error and the field is highlighted.

User Action:

Correct the password by removing any blanks and retry the operation.

UADT46**~P1 MUST BE 'N' IF OBJECT SERVICES ACCESS IS 'N'****Reason:**

Access to the Object Services Security procedures is not permitted if Object Services Access is not allowed.

System Action:

The cursor is placed on the field in error and the field is highlighted.

User Action:

Correct the Object Services Security Access authorisation.

UADT47

Primary Menu Id IN ERROR, THE FORMAT MUST BE APPLICATION ID AND MENU ID

Reason:

The Primary Menu entered in the field indicated contains an invalid specification. The required format is 3 character application id defined in the application register followed by a 3 character menu identifier from 001 to 255.

System Action:

The cursor is placed on the field in error and the field is highlighted.

User Action:

Correct the field by specifying a valid primary menu id.

UADT48

EXIT NAME MUST BE PRESENT FOR NOTIFICATION MODE OF EXIT

Reason:

The user indicated that the notification mode is EXIT, however the exit procedure name has not been specified.

System Action:

The cursor is placed on the field in error and the field is highlighted.

User Action:

Correct the field by specifying a valid exit procedure name or change the notification mode.

UADT49**USERID ~P1 CURRENTLY BEING UPDATED/DELETED BY ~P2****Reason:**

When a user updates or deletes a UAMS userid a LOCK is obtained for the duration - all updates and deletes for the same userid are denied until such time as the LOCK is freed (ie. when the user holding the lock has completed processing for the indicated userid).

System Action:

The request to update or delete a user definition is rejected.

User Action:

Try the request again at a later time.

UADT50**USER ~P1 IS STILL DEFINED TO GROUP ~P2, DELETE REJECTED****Reason:**

An attempt to delete a group user failed because there are still users defined to the group.

P1 indicates the first user encountered that is defined to the group, however, this may not be the only user.

System Action:

The request to delete the definition is rejected.

User Action:

Either delete the user definitions that reference the group or update them to remove the reference.

UADT51

~P1 INVALID - MUST BE A VALID ~P1 CODE IN RANGE 1-16

Reason:

The APPC access key/lock field specified an invalid value. Valid values are any number, range or combination of numbers from 1 to 16.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the value and retry.

UADT52

PRESS ENTER KEY TO CONFIRM DELETE, OR CANCEL KEY TO CANCEL DELETE

Reason:

A request to delete a user has been entered. This delete requires confirmation.

System Action:

None.

User Action:

Press the ENTER key to confirm the delete of the user, or the CANCEL key to cancel the delete request.

UADT53

SOLVE:CONNECT FOR NETWARE AUTHORITY LEVEL 1 IS NOT SUPPORTED

Reason:

An authority level of 1 has been specified for SOLVE:Connect for Netware user authority. Authority level 1 is not yet supported.

System Action:

The field in error is highlighted.

User Action:

An authority level of 0 or 2 must be specified. Correct the field in error and continue the operation.

UADT54**P1 INVALID TIMEOUT VALUE, Use 'MMM.SS','MMM','SS'****Reason:**

The value for timeout *P1* is invalid. Correct formats are:

MMM.SS MMM .SS

Where MMM are minutes, SS are seconds. The range for MMM is 0 to 999. The range for SS is 0 to 59.

System Action:

The cursor is placed on the field in error and the field is highlighted.

User Action:

Correct the timeout field and retry the operation.

UADT55**There are no more panels required for this user setup****Reason:**

Of the panels available for user setup, there are no more required for this user ID. This may be because the features are not available or authorized for this user ID.

System Action:

None.

User Action:

None. Information only.

UADT56**MSDM Access > 0 is only valid with Privilege Class 'A'****Reason:**

The MSDM Access setting conflicts with the Privilege Class.

System Action:

The update request is rejected.

User Action:

Change the Privilege Class to A or set the MSDM Access to 0.

UALS01

P1 definition P2 deleted

Reason:

The user or group definition was successfully deleted from the database.

System Action:

None.

User Action:

None.

UALS02

Invalid parameter passed to selection list service proc - P1= P2

Reason:

You specified an incorrect parameter when calling the Selection List Manager.

System Action:

The request is rejected.

User Action:

Correct the call parameters and retry.

UALS03

No users defined in the UAMS directory

Reason:

There are no users defined in the UAMS database.

System Action:

None.

User Action:

Define users using the Add option. You must define at least one user with UAMS authority.

UALS04**No users are defined with P1****Reason:**

You requested a generic selection from the Selection List Manager. No users match the supplied criteria. The criteria (*P1*) is shown as *User Prefix=xxxx* and/or *Group=yyyy* depending on the parameters that you provided.

System Action:

None.

User Action:

None.

UAPW01**PASSWORD AND/OR USER DETAILS FOR USER ~P1 UPDATED****Reason:**

The password and/or the user details for user P1 were updated successfully.

System Action:

None.

User Action:

None.

UAPW02**VERIFY PASSWORD FOR USER ~P1 WAS SUCCESSFUL****Reason:**

The password for user P1 was verified successfully. User P1 is able to perform the logon process.

System Action:

None.

User Action:

None.

UAPW03

RE-ENTER PASSWORD TO VERIFY CHANGE

Reason:

A new password was entered. It must be entered a second time for verification.

System Action:

None.

User Action:

Re-enter the new password, or press the Cancel key to cancel the change of password.

UAPW04

NEW PASSWORD FAILED VERIFICATION - PLEASE RE-ENTER

Reason:

The two entries of the new password did not match. They must both be re-entered.

System Action:

None.

User Action:

Re-enter the new password or press the Cancel key to cancel the change of password.

UAPW05

NEW PASSWORD VERIFICATION COMPLETE, PRESS 'FILE' KEY TO FILE

Reason:

The password was verified successfully. To save your changes press the 'file' key.

System Action:

None.

User Action:

None.

UAPW06

YOUR USER PASSWORD HAS EXPIRED AND MUST NOW BE CHANGED

Reason:

Your user password has expired and a new password must be entered before continuing.

System Action:

None.

User Action:

Enter a new password.

UAPW07

NEW USER DEFINITION - PASSWORD MUST BE CHANGED

Reason:

A Userid is being used for the first time. The password must be changed before continuing.

System Action:

None.

User Action:

Enter a new password.

UAPW08

VERIFY PASSWORD FOR USER ~P1 NOT SUCCESSFUL

Reason:

The password for user P1 was verified unsuccessfully and user P1 is unable to perform the logon process.

System Action:

None.

User Action:

None.

UAPW09

~P1 MUST BE ENTERED

Reason:

A required field has not been entered. Enter either your current password and new password, or change your user details.

System Action:

Processing of the password change request does not proceed until the required fields are entered.

User Action:

Enter the required data; either current password and new password, or update your user details.

UAPW10

CURRENT PASSWORD FAILED VERIFICATION

Reason:

A user request to change their own password requires verification of their current password. The verification of their current password failed.

System Action:

The change password request will not proceed until the user has entered their current password correctly.

User Action:

Correct the current password and retry the password change operation.

UAPW11

PASSWORD CHANGE FUNCTION CANCELLED

Reason:

A user has requested the password update function from an LU1 device and has cancelled the password change request.

System Action:

The password change function is cancelled. The users current password remains unchanged.

User Action:

None.

UAPW12**PASSWORD NOT UPDATED - SESSION TERMINATED****Reason:**

During logon processing the password of a new user or a user whose password has been force changed must be changed. The user has cancelled out of the password change function so the session has been terminated.

System Action:

The user is logged off the system.

User Action:

A new password must be supplied if the user is to log on.

UAPW13**INVALID INPUT, PLEASE RE-ENTER****Reason:**

A user on an LU1 device who is attempting a password change has been requested to enter their current or new password and has entered an invalid password string.

System Action:

The password must be re-entered.

User Action:

The password must be a single word of not more than 8 characters. Re-enter a valid password.

UAPW14**NEW PASSWORD CONTAINS AN INVALID LEADING CHARACTER****Reason:**

The password entered as a new password failed verification because the first byte contained an illegal character.

System Action:

Password verification fails and you are asked to re-enter a valid password.

User Action:

Re-enter a valid password.

UAPW15

P1 COMMAND IS NOT ACTIVE IN THIS WINDOW

Reason:

The requested command is not allowed on the currently displayed panel.

System Action:

The command is rejected.

User Action:

Erase the command from the command line.

UAPW16

INVALID COMMAND

Reason:

An invalid command was passed to the User Authorisation Manager.

System Action:

None.

User Action:

Correct the command and retry.

UAPW17

PASSWORD CHANGE CANCELLED

Reason:

The requested action was cancelled by use of the CANCEL command or function key.

System Action:

None.

User Action:

None.

UAPW18**PAGE NUMBER P1 DOES NOT EXIST****Reason:**

The requested page number is not present in the current series of panels.

System Action:

None.

User Action:

None.

UAPW19**USER P1 DOES NOT EXIST****Reason:**

The requested userid was not found on the UAMS Database.

System Action:

None.

User Action:

None.

UAPW20**NEW USER DEFINITION - USER DETAILS MUST BE ENTERED****Reason:**

A Userid is being used for the first time. The User NAME must be entered. LOCATION and PHONE NUMBER are optional.

System Action:

None.

User Action:

Enter User Details.

UAUT01

UPDATE FAILED FOR USERID ~P1, REASON : ~P2

Reason:

This message is displayed when a UAMS update by one of the UAMS utility procedures \$UAUTILx fails. The message indicates the userid for which the error occurred and the reason for that error as returned by the *SECCALL UPDATE* call.

System Action:

The indicated user is not updated, processing continues.

User Action:

Examine the cause of the failure to determine the best action to correct the error.

UAUT02

USERIDS PROCESSED ~P1, ERRORS ~P2

Reason:

This message indicates the number of userids processed and the number of errors encountered when using the utility procedures \$UAUTIL1/2. It is displayed when all userid processing is complete.

System Action:

NONE

User Action:

If the message indicates there were errors then message UAUT01 would have appeared for each error encountered. The reason for the failure is indicated in that message, thus, take the action appropriate to the error.

UAVL01**TIMEZONE NAME P1 IS INVALID****Reason:**

The timezone name entered is invalid. A timezone name must contain only the characters A - Z , 0 - 9, and the national characters @, # and \$. Additionally, the name must not be SYSTEM or USER.

System Action:

The field in error is highlighted and the entry cannot be filed until the error is corrected.

User Action:

Correct the timezone name in error.

URCALL01**Error loading proc: P1 in package: P2. OML error code: P3****Reason:**

Data Warehouse Services attempted to call back an application, but an error was encountered loading the call-back package. The procedure being loaded was *P1* which was in the package *P2* . The OML error code was *P3* . This message is written to the log.

System Action:

The associated application function is not performed.

User Action:

To determine why the application package is not loading, refer to the messages in the log. Notify the systems administrator.

URCALL02

Fatal variable error - ID: P1 func: P2 fdbk: P3

Reason:

An error occurred while manipulating an NCL VARTABLE in the procedure \$URCALL. *P1* is the vartable identifier, *P2* is the function being performed, and *P3* is the feedback code set by the vartable verb.

System Action:

None

User Action:

Notify your systems administrator.

URCALL03

Corrupted data discarded for server P1, record ID is " P2"

Reason:

While forwarding data to warehouse server *P1* incomplete or incorrect data was encountered. This data cannot be sent to the server and was discarded. The data's record ID is *P2*.

System Action:

The data is discarded and processing continues.

User Action:

This condition may occur if the system is terminated suddenly via an FSTOP,abend or cancel. Data may have been partially saved in the store for the server when the system terminated.
To avoid this condition use the shutdown command.

URCALL04**Server P1 is not defined and host name not specified****Reason:**

An attempt to relate an application to a data warehouse server failed because the server specified was not defined and not enough information was supplied to define the sever. At least a host name must be specified. The server specified was *P1*.

System Action:

Request rejected.

User Action:

Define the server or supply the server details on the store request.

URCALL05**Server P1 is not defined****Reason:**

An attempt to start a data warehouse server failed because the server was not defined. The server specified was *P1*.

System Action:

Request rejected.

User Action:

Define the server to Data Warehouse Services.

URCALL06**Server P1 failed to start****Reason:**

An attempt to start a data warehouse server failed. Additional messages are written in the log. The server name was *P1*.

System Action:

Request failed.

User Action:

Check the log and contact your support representative.

URCALL07

P1 P2 not defined

Reason:

Details for data warehouse object could not be retrieved because the definition does not exist. *P1* is the object class and *P2* is the name.

System Action:

None.

User Action:

None.

URCALL08

Invalid data class mask " P1". Mask cannot exceed 20 bytes

Reason:

A data warehouse store definition failed because the data class mask specified exceeded 20 characters. The mask is *P1*.

System Action:

Request rejected.

User Action:

Ensure that all data class masks are less than or equal to 20 bytes in length.

URCALL09

P1 file error. Action= P2 FileRC= P3 MSG= P4

Reason:

A request to access the data warehouse queue file failed. The file ID is *P1* and the action being performed is *P2*. *P3* is the file return code and the VSAM feedback code in the form nn/ff. *P4* is an optional system message.

System Action:

Processing terminates.

User Action:

Interpret the return code using the NCL Reference and the VSAM feedback code using the VSAM Guide.

URCALL10**Server P1 queue initialization error. Queue already in use by P2****Reason:**

A request to initialize a data warehouse queue failed because another process is already accessing the queue. The server was *P1* and the that currently has the queue is *P2*.

System Action:

Processing terminates.

User Action:

None.

URCALL11**P1 P2 already exists.****Reason:**

Details for data warehouse object could not added because the definition already exists. *P1* is the object class and *P2* is the name.

System Action:

None.

User Action:

None.

URCALL12**Request rejected, definition already being updated bu user P1****Reason:**

The server cannot be updated because the user *P1* is already updating it.

System Action:

Request rejected.

User Action:

None.

URCALL13

Queue overflow for P1 recent data lost.

Reason:

The server *P1* could not queue data for transmission to the data warehouse because the queue was full and data was in the process of being sent, thus old data could not be discarded and the newly arrived data was instead discarded.

System Action:

The data to be queued is discarded and processing continues.

User Action:

Ensure that the performance of the server and network can cope with the load of data transmission or enlarge the maximum queue depth to cater for the largest peaks of data.

URCALL14

Queue overflow for P1 old data lost.

Reason:

The server *P1* could not queue data for transmission to the data warehouse because the queue was full. The latest data was queued and oldest data was discarded.

System Action:

The data to be queued was successfully queued however older data was discarded.

User Action:

Ensure that the performance of the server and network can cope with the load of data transmission or enlarge the maximum queue depth to cater for the largest peaks of data.

URCALL15**P1****Reason:**

This is a trace message issued when diagnostics are requested. *P1* can be any variable information.

System Action:

None.

User Action:

Collect ALL of these messages and send them to your local support representative.

URCALL16**Java CS P1 call error: P2 P3 P4 P5 P6 P7 P8****Reason:**

An error has been detected in NetMaster Java Framework OML command processing. This is the OML code that runs in the NetMaster region and establishes and maintains IP socket connections with the NetMaster Java Framework started task in the USS environment. The specific connection call was *P1*

System Action:

None.

User Action:

Retry the operation. If necessary, stop and re-start the NetMaster Java Framework started task. Ensure this NetMaster region is not experiencing environmental problems such as storage shortages or userid/ security definition problems.

If the problem recurs, contact support, providing the NetMaster Activity log around the time of the errors.

URCALL18

Null data translated to blanks in P1

Reason:

A data collection agent has supplied invalid data (x'00') to the NetMaster data warehouse client. The invalid data is changed to blanks.

P1 shows the XML tag that was built using the data.

System Action:

Processing continues.

User Action:

Investigate why the invalid data is being supplied to the NetMaster data warehouse.

URCO0101

Logic error for data warehouse client P1. Error code P2

Reason:

An serious logic error was encountered in a data warehouse connection manager client process. The name of the data warehouse server definition is *P1* and the error code is *P2*.

System Action:

The connection is terminated.

User Action:

Contact your local support representative.

URCO0102

**Invalid remote adaptor identify data received. Server= P1 RC= P2
FDBK= P 3 Comp= P4**

Reason:

An invalid identity record was received from the remote adaptor. The server name for the remote adaptor is **P1**, **P2** is the MDO return code, **P3** is the feedback code and **P4** is the component in error.

System Action:

The connection is terminated.

User Action:

Ensure that the correct server details are defined and that the adaptor on the server is the correct version.

URCO0103

**Unauthorized key supplied by NetMaster Java Framework using server
P1**

Reason:

The NetMaster Java Framework using Data Warehouse Server P1 sent an unauthorized access key with its identity credentials.

System Action:

The connection is terminated.

User Action:

Ensure that the correct Data Warehouse Server details are defined on this NetMaster region. Ensure that the NetMaster Java Framework initialization file contains the correct identity key for this NetMaster region.

URCO0104

Invalid XML response document received from remote adaptor on server P1

Reason:

The remote adaptor on server P1 sent an invalid XML document as a response from a warehouse update request. The server name is *P1*.

System Action:

The connection is terminated.

User Action:

There is an associated message written to the log. Collect all the message details and contact your local support representative.

URCO0105

Server P1 got an appl. package error: Pkg= P2 Proc= P3 ErrCode= P4

Reason:

Data Warehouse Services attempted to call back an application for the server P1, but an error was encountered in the call-back package. The package being called is P2 and the procedure in error was P3. P4 is the OML error code received. Additional diagnostic messages are written to the log.

System Action:

The application is de-registered and no more data for that application will be sent to the data warehouse server *P1*.

User Action:

Contact your local support representative.

URCO0106**DB error for server P1, RC= P2 MSG= P3****Reason:**

The remote adaptor on server *P1* sent a response indicating that the database update failed. The server name is *P1* and the return code from the server is *P2* and the error message from the server is *P3*.

System Action:

Processing continues and the data is discarded.

User Action:

There may be associated messages written to the log. Collect all the message details and contact your local support representative.

URCO0107**DB error for server P1, Record ID= P2 Count= P3****Reason:**

An update of the data warehouse database failed for record with ID *P2* for a count of *P3* records. The warehouse is located on server *P1*.

System Action:

Processing continues and the data is discarded.

User Action:

Check the log for additional messages that may indicate the cause of the error.

URCO0108**P1****Reason:**

This is a continuation of message URCO0106. *P1* is the remainder of the error message from the server.

System Action:

None.

User Action:

None.

URCO0109

Server P1 failed to respond within reasonable time (P2 to P3)

Reason:

The target warehouse server has not responded to a send document within the allotted time frame. The server name is *P1*. The document was sent to the server at time *P2* and no response was received by time *P3*.

System Action:

The client is recycled and the connection is reestablished.

User Action:

If this error occurs frequently then it may indicate a problem with the server's or network's performance. Another possibility is that an error occurred at the server, check the log for the server.

URCO0111**Global variable \$URBOMIN has an incorrect format****Reason:**

The format of the global variable is incorrect; therefore, no blackout period is set.

A blackout period enables the processing load to be spread over the hour. Data sampling continues, but all records are placed in the Data Warehouse Server's queue. At the conclusion of the blackout period, data records are sent to the ReportCenter Java Task.

The global variable \$URBOMin must be in the format *aa bb*.

aa specifies the start time of the blackout period in minutes. *bb* specifies the stop time in minutes.

They must also be in the range of 0 to 59.

System Action:

None.

User Action:

We recommend that you set this global variable in the NMINIT or NMREADY procedure by inserting the following line:

```
000$URBOMIN = aa bb
```

You can also set it dynamically by issuing the following command from OCS or the Command Entry panel:

```
$GLBL $URBOMIN aa bb
```

If you do this, you must also issue the RCY command against your Data Warehouse Server. To do this, enter the menu shortcut **/DWS** to list the servers.

URCO0201

Logic error for data warehouse client P1. Error code P2

Reason:

An serious logic error was encountered in a data warehouse connection manager client process. The name of the data warehouse server definition is *P1* and the error code is *P2*.

System Action:

The connection is terminated.

User Action:

Contact your local support representative.

URCO0202

Invalid Java Task identify data received. Server= P1 RC= P2 FDBK= P3 Comp= P4

Reason:

An invalid identity record was received from the Java Task.

The DWS server name is *P1*, *P2* is the MDO return code, *P3* is the feedback code and *P4* is the component in *error*.

System Action:

The connection is terminated.

User Action:

Ensure that the correct Java Task details are defined on this NetMaster region.
Ensure that the Java Task code has been correctly installed and is using a correct initialization parameter file.

URCO0203**Unauthorized key supplied by Java Task using server P1****Reason:**

The Java Task Data Warehouse Server *P1* sent an unauthorized access key with its identity credentials.

System Action:

The connection is terminated.

User Action:

Ensure that the correct Java Task details are defined on this NetMaster region. Ensure that the Java Task initialization file contains the correct identity key for this NetMaster region.

URSL0001**Destination P1 deleted****Reason:**

The ReportCenter Data Feed destination *P1* has been deleted.

System Action:

An APPLICATION type event with name \$URSTOREDELETE specifying the server name as the resource is issued.

User Action:

None

URSL0002

P1 can only be updated by a Customizer parameter group

Reason:

The Data Feed Destination *P1* is defined by a Customizer parameter group, and can only be updated by actioning that parameter group. This is to avoid discrepancies in the destination definitions. This destination is defined by one of the following parameter groups: REPORTCENTER, on a ReportCenter control region REPORTDATA, on a region that feeds data to ReportCenter

System Action:

None

User Action:

If you want to change the IP or Port Address of this destination, update the REPORTDATA or REPORTCENTER parameter group, which can be found using the /PARMS shortcut. In normal operation, you will only do this if the IP address or port number of your primary ReportCenter Java Task changes after implementation.

URSL0003

CHK command issued for P1

Reason:

The message indicates that the CHK command was issued for the Data Feed Destination *P1*.

System Action:

The system checks that this NetMaster region still has an active IP connection with the ReportCenter Java Task pointed to by the Data Feed destination.

User Action:

None.

URST0001**Invalid mask specification for P1****Reason:**

The value specified for field *P1* is not a valid mask. The mask **MUST** be composed of alphanumeric, national characters and the asterisk (*). The first character must not be numeric and no imbedded blanks are allowed.

System Action:

The field is set in error.

User Action:

Specify a valid mask for the field.

URST0002**P1 required if P2 specified.****Reason:**

The field *P1* must be specified if the field *P2* is specified.

System Action:

The field is set in error.

User Action:

Specify a value for *P1* or blank out *P2*.

URST0003**P1 is required and must be specified.****Reason:**

A value for field *P1* must be specified.

System Action:

The field is set in error.

User Action:

Specify a valid value for *P1*.

URST0004

P1 is already being updated by user P2.

Reason:

The server *P1* cannot be updated because the user *P2* is already updating it.

System Action:

Request rejected.

User Action:

None.

URST0005

P1 saved.

Reason:

The record was successfully saved. *P1* is the name of the record.

System Action:

None.

User Action:

None.

URST0006

request cancelled.

Reason:

The action was cancelled as requested by the user.

System Action:

None.

User Action:

None.

UT0001**INVALID KEYWORD VALUE SPECIFIED, KEYWORD=~P1 VALUE=~P2****Reason:**

The Utilities external interface procedure \$UTCALL failed during request processing because it was passed an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

The request is rejected and procedure \$UTCALL terminates.

User Action:

Check the syntax of the call to procedure \$UTCALL.

UT0002**REQUIRED KEYWORD=~P1 OMITTED FOR OPT=~P2****Reason:**

The Utilities external interface procedure \$UTCALL failed during request processing because a mandatory parameter was omitted. The keyword was P1 and the \$UTCALL option was P2 .

System Action:

The request is rejected and procedure \$UTCALL terminates.

User Action:

Check the syntax of the call to procedure \$UTCALL.

UT0003**DATASET WAS SUCCESSFULLY ALLOCATED****Reason:**

A request to allocate a dataset was successful.

System Action:

None.

User Action:

None.

UT0004

DATASET WAS SUCCESSFULLY OPENED

Reason:

A request to open a dataset was successful.

System Action:

None.

User Action:

None.

UT0005

DATASET WAS SUCCESSFULLY ALLOCATED AND OPENED

Reason:

A request to allocate and open a dataset was successful.

System Action:

None.

User Action:

None.

UT0006

DATASET WAS SUCCESSFULLY CLOSED

Reason:

A request to close a dataset was successful.

System Action:

None.

User Action:

None.

UT0007

DATASET WAS SUCCESSFULLY UNALLOCATED

Reason:

A request to unallocate a dataset was successful.

System Action:

None.

User Action:

None.

UT0008

DATASET WAS SUCCESSFULLY CLOSED AND UNALLOCATED

Reason:

A request to close and unallocate a dataset was successful.

System Action:

None.

User Action:

None.

UT0011

ALLOCATION FAILED - P1

Reason:

A request to allocate a dataset failed for the reason (*P1*) stated which may be one of:

- DATASET IS NOT CATALOGED The dataset has not been cataloged (DAIR code 1708)
- EXCLUSIVE REQUEST FAILED The dataset cannot be shared exclusively (DAIR code 020C). You have requested DISP=OLD but the dataset is already allocated.
- DAIR CODE nnnn Dynamic Allocation has failed, failure code is nnnn.

System Action:

The dataset is not allocated.

User Action:

Refer to the failure reason. If the message is a DAIR code, detailed explanations of these are available in the NETINFO database.

UT0012

OPEN FAILED - ~P1

Reason:

A request to open a dataset failed for the reason (*P1*) stated which may be one of:

DATASET IS NOT ALLOCATED

The dataset has not been allocated (ACB CODE 80)

RESTRICTED BY SHAREOPTIONS

The SHAREOPTIONS value for the cluster prevent the dataset from being opened in the manner requested (ACB CODE A8). For example, you are attempting to open a SHAREOPTIONS(2) file for output but it is already open for output, perhaps in another region.

ACB CODE xx

The VSAM OPEN macro with the error code X'xx'.

System Action:

The dataset is not opened.

User Action:

Refer to the failure reason. If the message is an ACB code, detailed explanations of these are available in the NETINFO database.

UT0014**UNALLOCATION FAILED - ~P1****Reason:**

A request to unallocate a dataset failed for the reason (P1) stated which may be one of:

DATASET IS OPEN

The dataset has not been closed (DAIR code 0420)

SPECIFIED DD NAME NOT FOUND

This dataset has not been allocated (DAIR code 0438)

DAIR CODE nnnn

Dynamic Allocation has failed, failure code is nnnn.

System Action:

The dataset is not unallocated.

User Action:

Refer to the failure reason. If the message is a DAIR code, detailed explanations of these are available in the NETINFO database.

UT0601**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The Memo NCL Interface procedure \$UTMO06Z failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and the procedure terminates.

User Action:

Correct the keyword value and retry the request.

UT0602

MEMO API SERVER STATUS= P1

Reason:

The current status of the Memo API Server is described by *P1* . If the status is *ACTIVE* then the Memo Interface is available for use.

System Action:

None.

User Action:

None.

UT0603

START OPTION IGNORED, MEMO API SERVER STATUS= P1

Reason:

The Memo NCL Interface has been called to start the Memo API Server but the Memo API Server has already been started. The current status of the Memo API Server is *P1* .

System Action:

The procedure terminates without further action.

User Action:

None.

UT0604

START PROCESSING SUBMITTED

Reason:

The Memo NCL Interface has started the Memo API Server in a background region.

System Action:

The procedure terminates without further action. The Memo API Server continues to process in a background region.

User Action:

None.

UT0605**MEMO I/F UNAVAILABLE, P1 FUNCTION FAILED****Reason:**

The Memo NCL Interface was called to access the Memo email system but the Memo Interface was not available. *P1* describes the access function requested.

System Action:

The procedure terminates without further action.

User Action:

Start the Memo Interface and retry the operation.

UT0606**MEMO MAIL POSTED, TO= P1 FROM= P2****Reason:**

The Memo NCL Interface was called to perform a *POST* function and has successfully passed the mail item to the Memo API Server. *P1* is the Memo ID to which the mail item will be delivered while *P2* is the local User ID of the sender.

System Action:

The procedure terminates. The Memo API Server attempts to deliver the mail item to the Memo email system.

User Action:

None.

UT0607**MEMO TIMEOUT DETECTED, P1****Reason:**

The Memo NCL Interface was called to access the Memo email system but the Memo API Server failed to respond within the timeout period. *P1* describes the likely result of the timeout event.

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

UT0608

INVALID RESPONSE RECEIVED FROM MEMO API SERVER

Reason:

The Memo NCL Interface has received an invalid response from the Memo API Server.

System Action:

The procedure terminates.

User Action:

Contact the system administrator.

UT0609

DATA LENGTH EXCEEDS MAXIMUM ALLOWABLE

Reason:

The Memo NCL Interface was called to send a mail item to the Memo email system but the amount of data passed exceeds the maximum allowed.

System Action:

The request is rejected.

User Action:

Reduce the amount of data in the mail item and retry the request.

UT0701

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The Memo API Server procedure \$UTMO07Z failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2*.

System Action:

The procedure terminates.

User Action:

Correct the indicated keyword value specified when invoking the Memo NCL Interface procedure \$UTMO06Z with OPT=START.

UT0702**INVALID REQUEST PARAMETER VALUE SPECIFIED, PARAMETER= P1
VALUE= P2****Reason:**

An invalid request parameter value was passed to the Memo API Server procedure. The parameter was **P1** and the value was **P2** .

System Action:

The Memo API Server ignores the request.

User Action:

Contact the system administrator.

UT0703**SUBSYS DEFINE FAILURE, SUBSYS= P1 PROGRAM= P2****Reason:**

The Memo API Server has been unable to define the subsystem required to enable the Memo Interface. *P1* is the name of the subsystem and *P2* is the program name.

System Action:

The Memo API Server terminates.

User Action:

Review the activity log for other messages relating to the SUBSYS command to determine the cause of the error.

UT0704

MEMO API ERROR FOR OPT= P1, REFER TO MESSAGE P2 IN THE LOG

Reason:

The Memo API Interface has returned an error indication to the Memo API Server procedure. P1 was the function requested. P2 indicates the message number of an associated *message* in the log which further describes the nature of the error.

System Action:

The requested function fails.

User Action:

Review the activity log for the message indicated by P2 .

UT0705

OPERATION CANCELLED, OPT= P1, P2

Reason:

The Memo API Server has rejected a request to access the Memo email system. P1 was the requested function and P2 is the reason for the rejection.

System Action:

The requested function fails.

User Action:

Review the reason given in P2 .

UT0706

MEMO API SERVER P1

Reason:

The Memo API Server has has been either successfully initialised or terminated. P1 indicates the completed state.

System Action:

None.

User Action:

None.

UT4301I

SYSTEM NAME: P1

Reason:

This message displays the MVS system name of the system that UTIL0043 is executing on.

System Action:

None.

User Action:

UT4302I

CNMNETV LOADED...

Reason:

This message indicates that UTIL0043 was able to load CNMNETV.

System Action:

None.

User Action:

None.

UT4303I

TYPE: p1 id: p2

Reason:

This message follows the UT4302I message and displays information about the loaded copy of CNMNETV.

p1 is:

SOLVE if the loaded CNMNETV appears to be the SOLVE version. NETVIEW if the loaded CNMNETV appears to be the IBM NETVIEW version. UNKNOWN if the loaded CNMNETV version could not be determined.

p2 is:

VERS=Vnnn PTF=nnnnnn if p1 is SOLVE, displaying the SOLVE module version and PTF number.

DATE=dd/mm/yy CRT=xxxxxxx if p1 is NETVIEW, displaying the internal date and copyright information of the module.

<arbitrary data> if p1 is UNKNOWN, displaying the first 40 bytes of the module, in character form.

System Action:

None.

User Action:

None.

UT4304W

CNMNETV NOT FOUND (LOAD FAILED), ERROR aaa-bb

Reason:

This message indicates that UTIL0043 was unable to load CNMNETV. The return code (aaa) and reason code (bb) from the LOAD macro are displayed. If the return code is 806, the module was not found in any accessible library (including LINKLST and LPA).

System Action:

None.

User Action:

None.

UT4310I**SCANNING DDNAME: p1 FOR: CNMNETV****Reason:**

This message indicates that UTIL0043 is commencing a scan of the active step or job library for CNMNETV.

p1 is the DDNAME of the library being scanned (normally STEPLIB or JOBLIB).

System Action:

None.

User Action:

None.

UT4311I**FOUND p1 OCCURRENCES OF CNMNETV IN DDNAME: p2****Reason:**

This message indicates that UTIL0043 has finished a scan of the active step or job library datasets for CNMNETV.

The ddname scanned is shown as p2. The number of occurrences is shown as p1.

System Action:

None.

User Action:

None.

UT4312I**SCANNING LINKLIST FOR: CNMNETV****Reason:**

This message indicates that UTIL0043 is commencing a scan of the active system LINKLIST library datasets for CNMNETV.

System Action:

None.

User Action:

None.

UT4313I

FOUND p1 OCCURRENCES OF CNMNETV IN LINKLIST

Reason:

This message indicates that UTIL0043 has finished a scan of the system LINKLIST library datasets for CNMNETV.
The number of occurrences is shown as p1

System Action:

None.

User Action:

None.

UT4314I

SCANNING LPALIST FOR: CNMNETV

Reason:

This message indicates that UTIL0043 is commencing a scan of the active system LPALIST library datasets for CNMNETV.

System Action:

None.

User Action:

None.

UT4315I

FOUND p1 OCCURRENCES OF CNMNETV IN LPALIST

Reason:

This message indicates that UTIL0043 has finished a scan of the system LPALIST library datasets for CNMNETV.
The number of occurrences is shown as p1.

System Action:

None.

User Action:

None.

UT4320I**CNMNETV FOUND IN DATASET: p1****Reason:**

This message indicates that a copy of CNMNETV was found in the indicated dataset (part of the concatenation being scanned as indicated by the preceding UT4310I, UT4312I, or UT4314I message).
The following UT4321I message provides additional information.

System Action:

None.

User Action:

None.

UT4321I**TYPE: p1 id: p2****Reason:**

This message follows the UT4320I message and displays information about the located copy of CNMNETV.

p1 is:

SOLVE if the loaded CNMNETV appears to be the SOLVE version. NETVIEW if the loaded CNMNETV appears to be the IBM NETVIEW version. UNKNOWN if the loaded CNMNETV version could not be determined.

p2 is:

VERS=Vnnn PTF=nnnnnn if p1 is SOLVE, displaying the SOLVE module version and PTF number.

DATE=dd/mm/yy CRT=xxxxxxx if p1 is NETVIEW, displaying the internal date and copyright information of the module.

<arbitrary data> if p1 is UNKNOWN, the first 40 bytes of the module, in character form.

System Action:

None.

User Action:

None.

UT4380E

ALLOC ERROR p2- p3 ON DATASET p1

Reason:

This message indicates that an attempt to allocate the nominated dataset p1 (part of a step/joblib, linklist, or LPAlist concatenation) failed. The DYNALLOC error (p2) and info (p3) codes are indicated.

System Action:

Processing will continue with the next dataset.

User Action:

Examine the error codes and determine why the allocation failed.

UT4381E

OPEN ERROR ON DATASET p1

Reason:

This message indicates that an error occurred when opening the nominated dataset p1 (part of a step/joblib, linklist, or LPAlist concatenation) failed.

System Action:

Processing will continue with the next dataset.

User Action:

This error should not occur. Contact your support office.

UT4382E

OPEN ABEND aaa-rr ON DATASET p1

Reason:

This message indicates that an error occurred when opening the nominated dataset p1 (part of a step/joblib, linklist, or LPAlist concatenation) failed. The OPEN abended with the indicated abend/reason code. The most likely abend code is 913-38, indicating a security violation.

System Action:

Processing will continue with the next dataset.

User Action:

RACF protected datasets cannot be opened by UTIL0043. Contact the security administrator to permit READ access to the dataset(s).

UT4383E**LOAD ERROR aaa-rr ON DATASET p1****Reason:**

This message indicates that an error occurred when attempting to load CNMNETV from the indicated dataset p1 (part of a step/joblib, linklist, or LPAlist concatenation) failed. The LOAD failed with the indicated abend/reason code.

System Action:

Processing will continue with the next dataset.

User Action:

This error should not occur, as the dataset was opened and a BLDL indicated that CNMNETV was present. However, a corrupt dataset could cause this. If the dataset does not appear to be corrupted, contact your SOLVE support office for advice.

UT4389E**SWAREQ ERROR, RC= p1 PROCESSING p2 ENTRIES****Reason:**

This message indicates that the SWAREQ macro returned the indicated error while attempting to process entries in the step/joblib concatenation.

System Action:

Processing will continue with the next dataset.

User Action:

Contact your SOLVE support office.

UT4399I

END

Reason:

This message indicates that all UTIL0043 output is completed.

System Action:

UTIL0043 will terminate if executing in batch.

The return code will be based on the type of CNMNETV module detected on the initial load (that is, the UT4302 or UT4304 message), as follows:

- 0 - if a SOLVE CNMNETV was found
- 4 - if a NETVIEW CNMNETV was found
- 8 - if an UNKNOWN CNMNETV was found
- 12 - if the load for CNMNETV failed

User Action:

none.

UTAPI001

Packet Analyzer scan exceeded time limit

Reason:

A Packet Analyzer scan must complete within 60 seconds so that the recorded data is consistent. The current scan exceeded 60 seconds and has been terminated.

This message can indicate that the system is very busy, and that the requesting region or SSI region is not running with a sufficiently high priority to process requests in a timely manner.

System Action:

The scan is terminated prior to completion.

User Action:

Retry the action when the system is less busy. For assistance, contact Technical Support.

UTHTTP01**ERROR IN HTTP RESPONSE FORMAT, DATA= P1****Reason:**

The web server has received an incorrectly formatted HTTP response.

P1 is the data received.

System Action:

Processing continues.

User Action:

Report the error to your system administrator.

Check that the recipient of the HTTP request is using the HTTP protocol.

UTUSS001**UNIX STDERR output received****Reason:**

A OML UNIX environment has been opened, and USS SHELL commands have been successfully processed. The interface between this region and the NM SSI region which communicates with OS/390 UNIX System Services is fully functional, however, 'STDERR' output has been received in response to a UNIX shell command.

System Action:

None.

User Action:

Examine the STDERR output, and accompanying log error messages, if any. STDERR output is sometimes the result of USS/OMVS setup problems and may not necessarily indicate a problem with the command or NM region. Review the syntax and correctness of the USS command that was requested: refer to the Z/OS or OS/390 UNIX System Services Command Reference. Investigate any specific UNIX Shell error messages that appear on your Activity log.

UTUSS002

OML UNIX P1 operation failed, rc= P2 fdbk= P3 P4

Reason:

An OML UNIX verb has failed.

P1 is the failing UNIX verb operand, *P2* and *P3* are the return code and feedback, and *P4* is the reason text.

System Action:

None.

User Action:

Look at the NetMaster SSILOG and Activity Log and see if they contain any messages indicating more specific error conditions.

Confirm that you have set up the USS SSI interface correctly, including:

- Upgrading the NetMaster SSI software to the correct level
- Adding parameter UNIX=YES to the NetMaster SSI region
- Adding a RACF/ACF2/Top Secret OMVS segment, defined with a valid user ID, to the user ID associated with the SSI started task.

If you are unable to determine the nature of the error by using this information, contact your Technical Support Representative.

UTUSS003

UNIX internal call failure: operation= P1, Call#= P2, UNIX RETCODE= P3, UNIX REASCODE= P4

Reason:

A UNIX assembler call or subtask initialization call has failed.

P2 indicates the specific macro call which failed. The value shown corresponds to the call offset listed in the 'System Control Offsets to Callable Services' chapter in the OS/390 or Z/OS UNIX System Services Assembler Callable Services manual.

P3 and **P4** are the return code and reason code from the failing macro call. These are listed in the OS/390 or Z/OS UNIX System Services Messages and Codes manual.

System Action:

None.

User Action:

Confirm that you have set up the USS SSI interface correctly, including:

- Upgrading the NetMaster SSI software to the correct level
- Adding parameter UNIX=YES to the NetMaster SSI region
- Adding a RACF/ACF2/Top Secret OMVS segment, defined with a valid user ID, to the user ID associated with the SSI started task

UTUSS010

HFS "*P1*" error on *P2* of file *P3*

Reason:

An attempted *P2* operation on HFS file *P3* failed with error condition *P1*.

HFS file errors may have a variety of environmental causes. A common one is when the HFS file system is not mounted. Other possibilities include:

EPERM

File permission error.

The NetMaster started task UID does not have the required authority to access the file

ENOENT

File does not exist

The path name may be wrong, or the file may have been deleted

ENODEV

No such device exists.

ENOMEM

Not enough space is available.

ENOSPC

No space is left on the device, or no space is available to create the IPC member ID.

ENOTDIR

Not a directory.

EMVSPFSPERM

HFS encountered a system error.

System Action:

None. The requested operation cannot be performed.

User Action:

Contact your Systems Programmer or UNIX Administrator.

Provide them with the full error details from this message and any related messages. In some cases, there may be additional error details on the NetMaster Activity Log, in messages UTUSS011 or N1AM99.

Ensure that the HFS file system has been defined with sufficient space and is correctly and permanently mounted. Ensure that NetMaster features such as ReportCenter have been installed with the name of a correct and available file system.

File permissions are a frequent cause of HFS file errors.

Verify that the OMVS UID attempting the file operation has sufficient authority to do so. In general, all distributed HFS product files should allow at least read access to all users. Refer to the specific product installation and user manuals for additional file permission requirements for their specific working data.

A complete list of USS HFS return codes is provided in the IBM manual *z/OS Unix System Services Messages and Codes*, in a chapter titled 'Return Codes (Errnos) Listed by Value'

Additional information about z/OS HFS implementation is available from the IBM Redbook publication *Hierarchical File System Usage Guide*.

UTUSS011

HFS P1 P2 P3 P4 P5 P6 P7 P8 P9 P10

Reason:

This message follows message UTUSS010 and provides details of the return code, reason codes, and messages returned from NetMaster's HFS file interface.

System Action:

The requested HFS file operation cannot be performed.

User Action:

Ensure that the HFS file system has been defined with sufficient space and is correctly and permanently mounted. Ensure that NetMaster features such as ReportCenter have been installed with the name of a correct and available file system.

File permissions are a frequent cause of HFS file errors.

Verify that the OMVS UID attempting the file operation has sufficient authority to do so. In general, all distributed HFS product files should allow at least read access to all users. Refer to the specific product installation and user manuals for additional file permission requirements for their specific working data.

A complete list of HFS reason codes is available in the IBM publication *UNIX System Services Messages and Codes* for your operating system level.

Additional information about OS/390 and z/OS HFS implementation is available from the IBM Redbook publication *Hierarchical File System Usage Guide*.

UTUSS099

Trace information

Reason:

This message contains trace information for UTUSS calls

System Action:

None.

User Action:

Provide this information to support staff, if requested.

VM0001**P1 not supplied****Reason:**

A parameter was not supplied when calling the Validation Manager.

System Action:

None.

User Action:

Correct the command and retry.

VM0002**Invalid parameter passed to Validation Manager - P1= P2****Reason:**

A parameter was specified incorrectly when calling the Validation Manager.

System Action:

None.

User Action:

Correct the call parameters and retry.

VM0003**Validation tables loaded successfully for application P1****Reason:**

The validation tables were successfully loaded into NCL VARTABLES.

System Action:

None.

User Action:

None.

VM0004

Validation tables have already been loaded

Reason:

A load of the validation tables was requested but the tables have already been loaded.

System Action:

None.

User Action:

If the tables must be refreshed, re-enter the command using the 'RELOAD=YES' parameter.

VM0005

P1 must not contain any special characters

Reason:

The field must contain only alphabetic or national characters (A - Z, #, @, \$) or numbers (0 - 9).

System Action:

None.

User Action:

Correct the field value and retry.

VM0006

Invalid value for P1

Reason:

The value supplied for the field does not match any of the valid values defined in the Validation Manager.

System Action:

None.

User Action:

Either correct the entry and retry, or enter a question mark (?) in the field to obtain a list of valid values.

VM0007

No records found

Reason:

No records are defined on the database for the requested record type.

System Action:

None.

User Action:

Add the required records to the Validation Manager database.

VM0008

Invalid command

Reason:

An invalid command was passed to the Validation Manager.

System Action:

None.

User Action:

Correct the command and retry.

VM0009

P1 is not available

Reason:

The requested command cannot be used in the current window.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

None.

VM0010

Value not selected from list

Reason:

No value was selected from the displayed selection list.

System Action:

None.

User Action:

None.

VM0011

P1 length must be greater than or equal to P2

Reason:

The field length must be greater than or equal to the value specified.

System Action:

None.

User Action:

Correct the field value and retry.

VM0012

Maintenance being applied to validation tables by P1 - try later

Reason:

The validation tables are being reloaded from the database and cannot be used.

System Action:

None.

User Action:

Wait for a short period of time and then retry.

VM0013**P1 must be Y(es) or N(o)****Reason:**

The field value entered was not 'YES' or 'NO'. These values may be entered in abbreviated form by overtyping the first character of the field with 'Y' or 'N'. The field value will be automatically be changed to 'YES' or 'NO'.

System Action:

None.

User Action:

Correct the field value and retry.

VM0014**P1 must be a number with no sign or decimal point****Reason:**

The field must contain either zero or a positive integer.

System Action:

None.

User Action:

Correct the field value and retry.

VM0015**P1 is not a valid date****Reason:**

The field value is not in standard date format or is outside the range of dates supported. Dates must be entered in standard DD-MMM-YYYY format or in any of the allowed shorthand formats.

System Action:

None.

User Action:

Correct the field value and retry.

VM0016

P1 is not a valid time

Reason:

The field value is not in the standard time format. Times must be entered in the format HH.MM.SS or in any of the allowed shorthand formats.

System Action:

None.

User Action:

Correct the field value and retry.

VM0017

P1 must be a number

Reason:

The field value is not in one of the allowable number formats. Numbers may be integers, real numbers, or in scientific notation.

System Action:

None.

User Action:

Correct the field value and retry.

VM0018

P1 is not a valid name

Reason:

The field value must be in valid name format. Names may only consist of alphabetic characters (A - Z), numbers (0 - 9), and the national characters '@', '#' and '\$'. Additionally, they cannot start with a number.

System Action:

None.

User Action:

Correct the entry and retry.

VM0019**P1 must be greater than or equal to P2****Reason:**

The field must contain a value greater than or equal to the value specified.

System Action:

None.

User Action:

Correct the field value and retry.

VM0020**P1 must be less than or equal to P2****Reason:**

The field must contain a value less than or equal to the value specified.

System Action:

None.

User Action:

Correct the field value and retry.

VM0021**P1 must not contain any special characters****Reason:**

The field must contain only alphabetic characters (A - Z) and numbers (0 - 9).

System Action:

None.

User Action:

Correct the field value and retry.

VM0022

P1 must not contain special characters or numbers

Reason:

The field must contain alphabetic characters (A - Z) only.

System Action:

None.

User Action:

Correct the field value and retry.

VM0023

Invalid edit number supplied - P1

Reason:

An invalid validation edit number was passed to the Validation Manager on the EDITS keyword parameter.

System Action:

None.

User Action:

Correct the edit number and retry.

VM0024

P1 must contain alphanumeric and national characters only

Reason:

The field may only contain alphabetic characters (A - Z), numbers (0 - 9), and the special characters '@', '#' and '\$'.

System Action:

None.

User Action:

Correct the field value and retry.

VM0025**P1 must be a number with no decimal point****Reason:**

The field must contain either zero or a signed integer in the range - 2147483648 to 2147483647.

System Action:

None.

User Action:

Correct the field value and retry.

VM0026**P1 must be a hexadecimal value****Reason:**

The field may only contain a value in expanded hexadecimal format.

System Action:

None.

User Action:

Correct the field value and retry.

VM0027**P1 must be a valid dataset name****Reason:**

The field must conform to the dataset name rules. The full dataset name must be entered without quotes. If the dataset is partitioned (PDS) then a member name, enclosed in parentheses, can be appended to the dataset name.

System Action:

None.

User Action:

Correct the field value and retry.

VM0028

P1 must not contain embedded blanks

Reason:

Blanks are only permitted at the beginning and end of the field value, they cannot be placed within the field value.

System Action:

None.

User Action:

Correct the field value and retry.

VM0029

P1 length must be less than or equal to P2

Reason:

The field length must be less than or equal to the value specified.

System Action:

None.

User Action:

Correct the field value and retry.

VM0030

Fatal variable error - Proc= P1 Table= P2 Func= P3 FDBK= P4

Reason:

An error occurred while manipulating an NCL VARTABLE.

System Action:

None.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

VM0031**Validation tables have not been loaded for application P1****Reason:**

A field could not be validated because the validation tables have not been loaded.

System Action:

None.

User Action:

Load the validation tables for the specified application and retry.

VM0032**Validation table does not exist for Field= P1, Appl= P2****Reason:**

The validation table specified for validating the field does not exist.

System Action:

None.

User Action:

Add the validation table definition to the Validation Manager database, or change the name of the requested table definition.

VM0034**Fatal NDB error - Proc= P1 Sys= P2 NDBRC= P3 NDBERRI= P4 Msg= P5****Reason:**

An error occurred while manipulating an NDB.

System Action:

None.

User Action:

Determine the cause of the error from the return code and retry.

VM0035

P1 length must be equal to P2

Reason:

The field length must be equal to the value specified.

System Action:

None.

User Action:

Correct the field value and retry.

VM0036

P1 must be in the range P2 to P3

Reason:

The field must contain a value in the range specified.

System Action:

None.

User Action:

Correct the field value and retry.

VM0037

P1 length must be in the range P2 to P3

Reason:

The field length must be in the range specified.

System Action:

None.

User Action:

Correct the field value and retry.

VM0038**P1 must be equal to P2****Reason:**

The field must contain the specified value.

System Action:

None.

User Action:

Correct the field value and retry.

VM0039**Invalid scroll amount - P1****Reason:**

An invalid scroll amount has been entered. The valid scroll amounts are PAGE, HALF, CSR, DATA, MAX or a number. Scroll amounts can be abbreviated to the first character (ie. P, H, C, D or M).

System Action:

None.

User Action:

Enter a valid scroll amount and retry.

VM0040**P1 command is not active in this window****Reason:**

The requested command is not allowed on the currently displayed window.

System Action:

None.

User Action:

Erase the command from the command line.

VM0041

Userid P1 is not authorized to maintain validation tables

Reason:

Userid *P1* is not authorized to create new tables or modify existing tables. System Support Services access is required.

System Action:

The function is terminated.

User Action:

Contact the System Administrator if the function is required.

VM0042

Userid P1 is not authorized to maintain validation table entries

Reason:

Userid *P1* is not authorized to create new tables entries or modify existing table entries. System Support Services access is required.

System Action:

The function is terminated.

User Action:

Contact the System Administrator if the function is required.

VM0044

P1 Cancelled

Reason:

The requested action was cancelled by the user.

System Action:

None.

User Action:

None.

VM0045**Page number P1 does not exist****Reason:**

The requested page number is not present in the current series of panels.

System Action:

The request is rejected.

User Action:

Correct the page number entered in the command line and retry.

VM0046**P1 must not be an NCL keyword****Reason:**

The field must not contain an ncl keyword.

System Action:

None.

User Action:

Correct the field value and retry.

VM0047**Table entry P1 does not exist****Reason:**

The requested table entry was not found.

System Action:

None.

User Action:

None.

VM0048

Invalid table type for GET request, Appl= P1 Field= P2

Reason:

A request was made to retrieve one or all entries from a table but the table did not have a type of 'TABLE'. The GET operation is not supported for other types of table.

System Action:

The request is rejected.

User Action:

None.

VM0049

Validation tables loaded, Appl= P1 Field= P2

Reason:

The validation tables were successfully loaded into memory.

System Action:

None.

User Action:

None.

VM0050

More than 840 records found

Reason:

More than 840 records were found as the result of a search for an INFO/MASTER field. The records were not displayed.

System Action:

None.

User Action:

Enter a partial field value for the search request which will reduce the number of matching records, and retry.

VM0051**P1 is not a valid IP address****Reason:**

The field value must be an IP Address. IPv4 addresses use a dotted decimal notation *nnn.nnn.nnn.nnn* where *nnn* can be a number from 0–255. IPv6 addresses use the form *x:x:x:x:x:x:x* where the x's are one to four hexadecimal digits. The alternative compressed format, for example, *::1* is also valid. Mixed IPv4 and IPv6 address notations are not allowed.

System Action:

None.

User Action:

Correct the entry and retry.

VM0052**P1 is not a valid identifier****Reason:**

The field value must conform to SQL rules which is a-z@#\$ for the first character and a- z@#\$_0-9 for the subsequent characters.

System Action:

None.

User Action:

Correct the entry and retry.

VM0060**P1 is invalid****Reason:**

The field value entered is invalid.

System Action:

None.

User Action:

Correct the field value and retry.

VM0061

P1 is invalid for P2

Reason:

The two fields are mutually exclusive, and only one or the other may be entered.

System Action:

None.

User Action:

Erase one of the conflicting fields.

VM0062

P1 must be entered for P2

Reason:

A value must be entered for Field *P1* if field *P2* is present.

System Action:

None.

User Action:

Enter a value for the field in error, or erase field *P2*.

VM0063

P1 cannot be entered without P2

Reason:

A value must not be entered in *P1* unless a value has been entered in field *P1*.

System Action:

None.

User Action:

Clear the field which is in error, or enter a value in the second field.

VM0064**Press ENTER key to confirm delete or CANCEL key to cancel request****Reason:**

This is a prompt message which is displayed to allow the user to verify that the selected record is to be deleted before the delete request is actioned.

System Action:

None.

User Action:

Press the ENTER key to allow the record to be deleted, or press the CANCEL key to cancel the delete request.

VM0065**P1 feature not configured****Reason:**

A request was made to perform a function for a feature which is not configured in this region.

System Action:

The request is rejected.

User Action:

Contact the System Administrator if the feature is required.

VM0066**Field name P1 already exists****Reason:**

A request was made to add a Table Definition which already exists.

System Action:

The request is rejected.

User Action:

Correct the name of the field to be added and retry.

VM0067

Full value P1 already exists

Reason:

A request was made to add a Table Entry which already exists.

System Action:

The request is rejected.

User Action:

Correct the value of the entry to be added and retry.

VM0068

Abbreviated value P1 already exists

Reason:

A request was made to save or file a Table Entry with an abbreviated value has already been used for another entry in the same table.

System Action:

The request is rejected.

User Action:

Change the abbreviated value of the entry and retry.

VM0069

Field name P1 is a reserved NCL keyword

Reason:

A request was made to add a Table Definition with a name which is an NCL keyword.

System Action:

The request is rejected.

User Action:

Change the name of the field to be added and retry.

VM0070**Command assigned to function key P1 is invalid****Reason:**

Function key *P1* was pressed and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

VM0071**P1 contains an invalid character at position P2****Reason:**

A Text Description field contains an invalid character. Certain characters are used internally by Validation Manager and therefore cannot be used in the Text Description fields.

System Action:

None.

User Action:

Remove any invalid characters from the field value and retry.

VM0072**Value is not a valid HTTP URL****Reason:**

The field value must be a valid HTTP URL commencing with http:// ...

System Action:

None.

User Action:

Correct the entry and retry.

VM0073

Value is not a valid CA Service Desk Web Services URL

Reason:

This field value must be a valid CA Service Desk Web Services URL.

This is the HTTP URL of the Web Services definitions on the CA Service Desk server. This server is where requests are created from alerts when you forward alerts to a SERVICEDESK destination.

In some cases, you can leave this value blank to let the CAISDI/soap component determine the default server.

This value must satisfy the following:

- Conform to valid HTTP URL syntax.
- Include the correct Web Services subdirectory.

This URL points to the Web Services definitions that CAISDI/soap invokes to create requests. It is not the same as the URL that is used to log in to the CA Service Desk client application.

Example: http://hostname:8080/axis/services/USD_R11_WebService

System Action:

None.

User Action:

Correct the entry, and retry.

VM1033

Table entry P1 has been deleted from the database

Reason:

The requested table entry has been deleted from the database by you or another user.

System Action:

None.

User Action:

The Refresh command can be used to remove deleted records from the list.

VM1101**Validation table already in use by P1****Reason:**

The validation tables for the requested application are in use by another user.

System Action:

None.

User Action:

Retry the operation later.

VM1102**No tables defined for application P1****Reason:**

A request was made to load validation tables, but no table definitions were found on the database for the selected application.

System Action:

None.

User Action:

None.

VM1302**No attributes defined for class P1****Reason:**

A request to present a field list failed because there were no attributes defined for the class. The ID of the class is *P1* .

System Action:

The request is rejected.

User Action:

None.

VM1303

No attributes defined starting with ' P1' for class P2

Reason:

A request to present a field list failed because there were no attributes defined with IDs starting with the characters *P1* . The ID of the class is *P2* .

System Action:

The request is rejected.

User Action:

None.

VM1304

Value ' P1' not found

Reason:

The select (S) command was entered on a valid value list, but the selected value did not match any of the full or (if present) abbreviated values in the list.

System Action:

None.

User Action:

Change the parameter on the select command so that it matches an existing value in the list.

VM1305

Value not specified

Reason:

The select (S) command was entered on a valid value list, but the value to be selected was not entered.

System Action:

None.

User Action:

Enter the value of the entry to be selected.

VWA0001**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

An invalid keyword parameter was specified when procedure \$VWCALL was invoked. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure \$VWCALL terminates.

User Action:

If the procedure was invoked by your procedure or directly by you then correct the invalid keyword and retry the request otherwise contact the System Administrator.

VWA0002**OMITTED KEYWORD/VALUE SPECIFIED, KEYWORD= P1****Reason:**

Procedure \$VWCALL was invoked but a required keyword was omitted or it was null, for example OPT= with no value. The keyword was *P1* .

System Action:

Procedure \$VWCALL terminates.

User Action:

If the procedure was invoked by your procedure or directly by you then correct the invalid keyword and retry the request otherwise contact the System Administrator.

VWA0003**P1 REQUEST COMPLETED****Reason:**

The requested option *P1* has completed.

System Action:

None.

User Action:

None.

VWA0004

P1 REQUEST COMPLETED WITH POSSIBLE ERRORS, MESSAGES WRITTEN TO LOG

Reason:

The requested option **P1** has completed and messages were written to the log to give further details of success or failure of the action.

System Action:

Additional messages written to the log.

User Action:

Check the system log for further details.

VWA0005

\$VW.EQUATES TABLE NOT DEFINED OR IS EMPTY

Reason:

The NetView Conversion Equates Table (Application \$VW, Table Name EQUATES) either does not exist, or has no entries. There are no NetView commands to be emulated.

System Action:

Procedure \$VWCALL terminates.

User Action:

If NetView Command emulation is no longer required you should remove the following statement from your NMINIT or NMREADY member: EXEC \$VWCALL OPT=INIT If emulation is required determine why the table is missing or empty. Note that this situation can occur if all entries in the table have been marked as inactive.

VWA0006**NO EQUATE PROCEDURE FOR COMMAND P1****Reason:**

The NetView Conversion Equates Table (Application \$VW, Table Name EQUATES) contains an entry for a command (*P1*) but the entry does not have an NCL Procedure Name specified.

System Action:

Procedure \$VWCALL terminates.

User Action:

If NetView Command emulation is no longer required for the entry you should mark it inactive. All active entries must have an emulation procedure name specified.

VWA0101**INVALID PARAMETER - P1****Reason:**

An invalid parameter (*P1*) was specified for the (NetView) ACT command.

System Action:

The command is rejected.

User Action:

Refer to the help for the ACT command for correct parameters. This can be obtained by entering: *ACT ?*

VWA0102

PARAMETER P1 CONFLICTS WITH PARAMETER P2

Reason:

The (NetView) ACT command was entered with multiple parameters but two of these conflict. Either: 1. The parameters are mutually exclusive, for example YES and NO 2. The parameter is duplicated, for example YES and YES

System Action:

The command is rejected.

User Action:

Correct the command and retry. If necessary view the help for the command which can be obtained by entering: *ACT ?*

VWA0103

NAME PARAMETER OMITTED

Reason:

The NetView ACT command emulation procedure, \$VWEQ001, failed because it was called without parameters. The first parameter must be the node name.

System Action:

Procedure \$VWEQ001 terminates.

User Action:

This error should not occur. Review the entry in the command equates table, application \$VW, table name EQUATES. The ACT entry should indicate that if no parameters are specified then the help for this command should be presented, that is, as if *ACT ?* had been specified.

VWA0104**P1 PARAMETER INVALID WITHOUT P2 PARAMETER****Reason:**

The (NetView) ACT command was entered with a parameter specified (*P1*) that also requires another parameter to be specified (*P2*). For example the LOGON parameter may not be specified without the LOGMODE parameter, or vice versa.

System Action:

The command is rejected.

User Action:

Correct the command and retry. If necessary view the help for the command which can be obtained by entering: *ACT ?*

VWA0201**INVALID PARAMETER - P1****Reason:**

An invalid parameter (*P1*) was specified for the (NetView) APPLS command.

System Action:

The command is rejected.

User Action:

Refer to the help for the APPLS command for correct parameters. This can be obtained by entering: *APPLS ?*

VWA0202

MULTIPLE SCOPE PARAMETERS

Reason:

The (NetView) APPLS command was entered with multiple parameters to specify the command scope. For example: *APPLS ACT SUMM* Only one scope parameter is allowed.

System Action:

The command is rejected.

User Action:

Correct the command and retry. If necessary view the help for the command which can be obtained by entering: *APPLS ?*

VWA0401

INVALID PARAMETER - P1

Reason:

An invalid parameter (*P1*) was specified for the (NetView) CDRMS command.

System Action:

The command is rejected.

User Action:

Refer to the help for the CDRMS command for correct parameters. This can be obtained by entering: *CDRMS ?*

VWA0402

MULTIPLE SCOPE PARAMETERS

Reason:

The (NetView) CDRMS command was entered with multiple parameters to specify the command scope. For example: *CDRMS ACT SUMM* Only one scope parameter is allowed.

System Action:

The command is rejected.

User Action:

Correct the command and retry. If necessary view the help for the command which can be obtained by entering: *CDRMS ?*

VWA0501**INVALID PARAMETER - P1****Reason:**

An invalid paramater (*P1*) was specified for the (NetView) CDRSCS command.

System Action:

The command is rejected.

User Action:

Refer to the help for the CDRSCS command for correct parameters. This can be obtained by entering: *CDRSCS ?*

VWA0502**MULTIPLE SCOPE PARAMETERS****Reason:**

The (NetView) CDRSCS command was entered with multiple parameters to specify the command scope. For example: *CDRSCS ACT SUMM* Only one scope parameter is allowed.

System Action:

The command is rejected.

User Action:

Correct the command and retry. If necessary view the help for the command which can be obtained by entering: *CDRSCS ?*

VWA0601**INVALID PARAMETER - P1****Reason:**

An invalid paramater (*P1*) was specified for the (NetView) CLSTRS command.

System Action:

The command is rejected.

User Action:

Refer to the help for the CLSTRS command for correct parameters. This can be obtained by entering: *CLSTRS ?*

VWA0602

MULTIPLE SCOPE PARAMETERS

Reason:

The (NetView) CLSTRS command was entered with multiple parameters to specify the command scope. For example: *CLSTRS ACT SUMM* Only one scope parameter is allowed.

System Action:

The command is rejected.

User Action:

Correct the command and retry. If necessary view the help for the command which can be obtained by entering: *CLSTRS ?*

VWA0701

INVALID PARAMETER - P1

Reason:

An invalid parameter (*P1*) was specified for the (NetView) INACT command.

System Action:

The command is rejected.

User Action:

Refer to the help for the INACT command for correct parameters. This can be obtained by entering: *INACT ?*

VWA0702**PARAMETER P1 CONFLICTS WITH PARAMETER P2****Reason:**

The (NetView) INACT command was entered with multiple parameters but two of these conflict. Either:

1. The parameters are mutually exclusive, for example ACT and INACT
2. The parameter is duplicated, for example ACT and ACT

System Action:

The command is rejected.

User Action:

Correct the command and retry. If necessary view the help for the command which can be obtained by entering: *INACT ?*

VWA0703**NAME PARAMETER OMITTED****Reason:**

The NetView INACT command emulation procedure, \$VWEQ007, failed because it was called without parameters. The first parameter must be the node name.

System Action:

Procedure \$VWEQ007 terminates.

User Action:

This error should not occur. Review the entry in the command equates table, application \$VW, table name EQUATES. The INACT entry should indicate that if no parameters are specified then the help for this command should be presented, that is, as if *INACT ?* had been specified.

VWA0801

INVALID PARAMETER - P1

Reason:

An invalid parameter (*P1*) was specified for the (NetView) INACTF command.

System Action:

The command is rejected.

User Action:

Refer to the help for the INACTF command for correct parameters. This can be obtained by entering: *INACTF ?*

VWA0802

PARAMETER P1 CONFLICTS WITH PARAMETER P2

Reason:

The (NetView) INACTF command was entered with multiple parameters but two of these conflict. Either:

1. The parameters are mutually exclusive, for example ACT and INACT
2. The parameter is duplicated, for example ACT and ACT

System Action:

The command is rejected.

User Action:

Correct the command and retry. If necessary view the help for the command which can be obtained by entering: *INACTF ?*

VWA0803**NAME PARAMETER OMITTED****Reason:**

The NetView INACTF command emulation procedure, \$VWEQ008, failed because it was called without parameters. The first parameter must be the node name.

System Action:

Procedure \$VWEQ008 terminates.

User Action:

This error should not occur. Review the entry in the command equates table, application \$VW, table name EQUATES. The INACTF entry should indicate that if no parameters are specified then the help for this command should be presented, that is, as if INACTF ? had been specified.

VWA0901**INVALID PARAMETER - P1****Reason:**

An invalid parameter (*P1*) was specified for the (NetView) LINES command.

System Action:

The command is rejected.

User Action:

Refer to the help for the LINES command for correct parameters. This can be obtained by entering: *LINES ?*

VWA0902

MULTIPLE SCOPE PARAMETERS

Reason:

The (NetView) LINES command was entered with multiple parameters to specify the command scope. For example: *LINES ACT SUMM* Only one scope parameter is allowed.

System Action:

The command is rejected.

User Action:

Correct the command and retry. If necessary view the help for the command which can be obtained by entering: *LINES ?*

VWA1001

INVALID PARAMETER - P1

Reason:

An invalid parameter (*P1*) was specified for the (NetView) MAJNODES command.

System Action:

The command is rejected.

User Action:

Refer to the help for the MAJNODES command for correct parameters. This can be obtained by entering: *MAJNODES ?*

VWA1002**MULTIPLE SCOPE PARAMETERS****Reason:**

The (NetView) MAJNODES command was entered with multiple parameters to specify the command scope. For example: *MAJNODES LIST SUMM* Only one scope parameter is allowed.

System Action:

The command is rejected.

User Action:

Correct the command and retry. If necessary view the help for the command which can be obtained by entering: *MAJNODES ?*

VWA1101**P1 PARAMETER OMITTED****Reason:**

The (NetView) NCPSTOR command was specified but a mandatory parameter (*P1*) was omitted. This parameter is required unless the *S* operand is specified.

System Action:

The command is rejected.

User Action:

Refer to the help for the NCPSTOR command for correct parameters. This can be obtained by entering: *NCPSTOR ?*

VWA1103

NAME PARAMETER OMITTED

Reason:

The NetView NCPSTOR command emulation procedure, \$VWEQ011, failed because it was called without parameters. The first parameter must be the node name.

System Action:

Procedure \$VWEQ011 terminates.

User Action:

This error should not occur. Review the entry in the command equates table, application \$VW, table name EQUATES. The NCPSTOR entry should indicate that if no parameters are specified then the help for this command should be presented, that is, as if NCPSTOR ? had been specified.

VWA1201

INVALID PARAMETER - P1

Reason:

An invalid parameter (*P1*) was specified for the (NetView) PENDING command.

System Action:

The command is rejected.

User Action:

Refer to the help for the PENDING command for correct parameters. This can be obtained by entering: *PENDING ?*

VWA1202**MULTIPLE SCOPE PARAMETERS****Reason:**

The (NetView) PENDING command was entered with multiple parameters to specify the command scope. For example: *PENDING LIST SUMM* Only one scope parameter is allowed.

System Action:

The command is rejected.

User Action:

Correct the command and retry. If necessary view the help for the command which can be obtained by entering: *PENDING ?*

VWA2301**INVALID PARAMETER - P1****Reason:**

An invalid parameter (*P1*) was specified for the (NetView) PURGEDB command.

System Action:

The command is rejected.

User Action:

Refer to the help for the PURGEDB command for correct parameters. This can be obtained by entering: *PURGEDB ?*

VWA2302

MULTIPLE PROCESS PARAMETERS

Reason:

The (NetView) PURGEDB command was entered with multiple parameters to specify the command process. For example: *PURGEDB STAT EVENT* Only one process parameter is allowed.

System Action:

The command is rejected.

User Action:

Correct the command and retry. If necessary view the help for the command which can be obtained by entering: *PURGEDB ?*

VWA2303

PROCESS PARAMETER OMITTED

Reason:

The NetView PURGEDB command emulation procedure, \$VWEQ023, failed because it was called without parameters. The first parameter must be the process required.

System Action:

Procedure \$VWEQ023 terminates.

User Action:

This error should not occur. Review the entry in the command equates table, application \$VW, table name EQUATES. The PURGEDB entry should indicate that if no parameters are specified then the help for this command should be presented, that is, as if *PURGEDB ?* had been specified.

VWA2402**UNEXPECTED MESSAGE ID= P1 FULL MESSAGE ON LOG.****Reason:**

The NetView RMTSESS command procedure \$VWEQ024 failed because an unexpected message was returned from a SHOW LINKS, SHOW DOMAINS or SHOW USERS command. The message ID was *P1* and it has been written to the log.

System Action:

Procedure \$VWEQ024 terminates.

User Action:

Contact the system administrator. Browse the activity log for the message ID and review the description of that message. If necessary contact your product supplier.

VWA2403**VARIABLE ERROR, ID= P1 FUNC= P2 FDBK= P3 KEY= P4****Reason:**

The NetView RMTSESS command emulation procedure, \$VWEQ004, failed because an unexpected feedback from vartable processing has occurred. The vartable name is *P1* and the feedback code is *P3* . The specific function that was being performed is *P2* and the table key (where relevant) was *P4* .

System Action:

Procedure \$VWEQ024 terminates.

User Action:

Contact your product supplier.

VWA2601

FILE P1 ERROR - P2

Reason:

Whilst processing a NetView SENSE command an error occurred accessing the NETINFO database. The access type (*P1*) will be either OPEN or GET and the failure reason (*P2*) will be one of the following:

FILE ACCESS PROHIBITED Access to the file has been prohibited by the NCLEX01 exit.

VSAM FEEDBACK - xx A VSAM GET failed with the indicated VSAM feedback returned.

FILE UNAVAILABLE - REFER TO LOG The file is unavailable. A message has been written to the log with the reason.

System Action:

The command is rejected.

User Action:

Refer to the failure reason and process as follows:

FILE ACCESS PROHIBITED Contact your systems administrator to request access.

VSAM FEEDBACK - xx Use the VSAM Feedback information to determine the error cause and action accordingly.

FILE UNAVAILABLE - REFER TO LOG Refer to the SOLVE log and follow the suggested action for the related message.

VWA2602**NO SENSE INFORMATION FOR P1 P2****Reason:**

A NetView SENSE command has been entered with the category (*P1*) and optional modifier (*P2*) but there is no information on the NETINFO database for that combination.

System Action:

The command is rejected.

User Action:

Check that the correct category and/or modifier have been specified. The category should be 4 characters in length. The modifier, if specified should also be 4 characters.

If a qualifier was specified retry omitting the qualifier.

Sense Codes that are available in the NETINFO database may be viewed via the SOLVE:Netmaster menu by selecting option I - Information Database.

Some older or newer sense codes may not be included on the NETINFO database depending upon your level of VTAM. If the code is not on file refer to the following IBM publications:

SNA Formats VTAM Messages and Codes (for your level of VTAM)

VWA2701**INVALID RESOURCE NAME - P1****Reason:**

An invalid resource name (*P1*) was specified for the (NetView) SESS command. Resource names must be 1 to 8 alphanumeric characters. A generic name is indicated by the last character being an asterisk (*).

System Action:

The command is rejected.

User Action:

Refer to the help for the SESS command for correct parameters. This can be obtained by entering: *SESS ?*

VWA2702

SECOND RESOURCE NAME INVALID WHEN FIRST RESOURCE IS GENERIC

Reason:

The (NetView) SESS command was entered with two resource names but the first of these was a generic name. The second resource name is only allowed if the first is a specific resource name.

System Action:

The command is rejected.

User Action:

Correct the command and retry. If necessary view the help for the command which can be obtained by entering: *SESS ?*

VWA2703

NODE NAME PARAMETER OMITTED

Reason:

The NetView SESS command emulation procedure, \$VWEQ027, failed because it was called without parameters. The first parameter must be a resource name to display.

System Action:

Procedure \$VWEQ027 terminates.

User Action:

This error should not occur. Review the entry in the command equates table, application \$VW, table name EQUATES. The SESS entry should indicate that if no parameters are specified then the help for this command should be presented, that is, as if *SESS ?* had been specified.

VWA2704**NO SESSIONS EXIST FOR RESOURCE P1****Reason:**

This message is issued in response to a (NetView) SESS command if there is no active or history sessions for the specified resource name (*P1*).

System Action:

None.

User Action:

None.

VWA2705**P1 ERROR - P2****Reason:**

An error has occurred when building a resource list of a session list in response to a (NetView) SESS command. The type of error (*P1*) and error reason (*P2*) are shown. Possible values are:

Type Reason

NTSVIEW RESOURCE LIST FAILED An &NTSVIEW TYPE=RESCLIST has failed

NTSREAD RESOURCE LIST FAILED An &NTSREAD TYPE=RESCLIST has failed

NTSREAD RESOURCE LIST HAS MULTIPLE RESOURCES An &NTSREAD TYPE=RESCLIST has completed but returned data for more than one node.

System Action:

The command is rejected.

User Action:

These errors should not occur. Contact your product supplier.

VWA2706

INVALID PARAMETER - P1

Reason:

An invalid parameter (*P1*) was specified for the (NetView) SESS command.

System Action:

The command is rejected.

User Action:

Refer to the help for the SESS command for correct parameters. This can be obtained by entering: *SESS ?*

VWA3001

INVALID PARAMETER - P1

Reason:

An invalid parameter (*P1*) was specified for the (NetView) BROWSE command.

System Action:

The command is rejected.

User Action:

Refer to the help for the BROWSE command for correct parameters. This can be obtained by entering: *BROWSE ?*

VWA3002

INVALID COMMAND - TOO MANY PARAMETERS

Reason:

The (NetView) BROWSE command was entered with more than two parameters which is invalid. A maximum of two parameters are allowed.

System Action:

The command is rejected.

User Action:

Correct the command and retry. If necessary view the help for the command which can be obtained by entering: *BROWSE ?*

VWA3003**INVALID MANAGEMENT SERVICES LEVEL****Reason:**

The (NetView) BROWSE command was entered to display a sequential file using Dataset Services or to display the Dataset Services Menu. This is invalid because the Management Services level does not include Dataset Services. You require Management Services V3.2 PUT 3201 or higher.

System Action:

The command is rejected.

User Action:

Contact your systems administrator.

VWA3004**INVALID COMMAND - UNRECOGNISABLE FORMAT****Reason:**

The (NetView) BROWSE command was entered with parameters but the type of browse that is requested cannot be determined.

System Action:

The command is rejected.

User Action:

Correct the command and retry. If necessary view the help for the command which can be obtained by entering: *BROWSE ?*

Wx to Zx Messages

W3CALL01

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= *P1* VALUE= *P2*

Reason:

The Web Server interface procedure \$W3CALL failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2*.

System Action:

The request is rejected and procedure \$W3CALL terminates.

User Action:

Report the error to your System Administrator.

W3CALL02

SERVER ALREADY REGISTERED FOR *P1* ON PORT *P2*

Reason:

The Web Server interface procedure \$W3CALL failed during register processing because a server was already registered.

System Action:

The request is rejected and procedure \$W3CALL terminates.

User Action:

Report the error to your System Administrator.

W3CALL03

SERVER NOT REGISTERED FOR *P1* ON PORT *P2*

Reason:

The Web Server interface procedure \$W3CALL failed during deregister processing because no server was registered.

System Action:

The request is rejected and procedure \$W3CALL terminates.

User Action:

Report the error to your System Administrator.

W3CALL04**SERVER START FAILED RC= P1 MSG= P2****Reason:**

The Web Server interface procedure \$W3CALL failed during processing because the web server process could not be started.

System Action:

The request is rejected and procedure \$W3CALL terminates.

User Action:

Report the error to your System Administrator.

W3CALL05**SERVER START FAILED. CHECK LOG****Reason:**

The Web Server interface procedure \$W3CALL timed out waiting for a response from the web server process.

System Action:

The request is rejected and procedure \$W3CALL terminates.

User Action:

Report the error to your System Administrator. Check the log for error messages relating to the web server process, \$W3SV10S.

W3CALL06

SERVER START REQUESTED FOR P1 ON PORT P2

Reason:

The Web Server interface has accepted a request to process on port *P2*.

System Action:

The web server registers on the named port.

User Action:

You can access the web server using a Uniform Resource Locator (URL) of the form 'http://IPAddress:P2/P1', where:

P2 is the port number (required if not using port 80)

P1 is the name of the web server component

IPAddress is the IP Host name or address of the local system Use the SHOW TCPIP command to display the local host name and IP address.

W3CALL07

SERVER STOP REQUESTED FOR P1 ON PORT P2

Reason:

The Web Server interface has accepted a request to stop processing on port *P2*.

System Action:

The web server removes the web component from the active list and if no longer required deregisters the associated port.

User Action:

None.

W3CALL08**Invalid parameter for P1 command, parm= P2****Reason:**

A Web command was issued that specified an invalid positional parameter. The command requested was *P1* and the invalid parameter was *P2*.

System Action:

The command is rejected.

User Action:

Correctly specify the parameter *P2*.

W3CALL09**Invalid keyword value for P1 command, keyword= P2 value= P3 P4****Reason:**

A Web command was issued that specified an invalid keyword parameter. The command requested was *P1*, the keyword in error was *P2* and the invalid value was *P3*.

System Action:

The command is rejected.

User Action:

Specify a valid value for the keyword parameter *P2*.

W3CALL10**Invalid Web command P1****Reason:**

An invalid Web command was specified.

System Action:

The command is rejected.

User Action:

Specify a valid Web command.

W3CALL11

Userid IP Address Session NCLID

Reason:

This message is the heading line for the SHWEB USERS command.

System Action:

None.

User Action:

See the explanation for message W3CALL12 for details of the individual columns.

W3CALL12

P1 P2 P3

Reason:

This message is the detail line for the SHWEB USERS command. *P1* Is the userid of a user currently logged onto the system via the Web interface. *P2* Is the IP address from which the user is access the system. *P3* Is the NCL ID of the Web server process for the user session.

System Action:

None.

User Action:

None.

W3CALL13

P1 Web users, P2 Web sessions

Reason:

This message is the end message for the SHWEB USERS command. *P1* is the number of users listed and logged onto the system via the Web interface. *P2* is the total number of Web sessions listed.

System Action:

None.

User Action:

None.

W3CMDEN01

Wait limit reached or exceeded. Output may be incomplete.

Reason:

The WebCenter Command Entry page reached or exceeded the Maximum Wait For Response limit before a valid end message was received. The output may be incomplete.

System Action:

The Command Entry page is displayed with all output gathered before the wait limit was reached.

User Action:

Examine the displayed output. If you consider it to be incomplete, increase the Maximum Wait For Response value and execute the command again.

W3CMDEN02

Line limit reached or exceeded. Output may be incomplete.

Reason:

The WebCenter Command Entry page reached or exceeded the Maximum Lines Returned limit before a valid end message was received. The output may be incomplete.

System Action:

The Command Entry page is displayed with all output gathered before the line limit was reached.

User Action:

Examine the displayed output. If you consider it to be incomplete, increase the Maximum Lines Returned value and execute the command again.

W3DB0001

INVALID FILE MANAGER ACTION REQUESTED, ACTION= P1

Reason:

The File Manager \$W3DB000 was called with an invalid action request. The unsupported action was *P1* .

System Action:

The request is rejected and procedure \$W3DB000 terminates.

User Action:

Report the error to your System Administrator.

W3DB0002

Unrecoverable error during File Manager processing, action terminated.

Reason:

An unrecoverable run time error was encountered by File Manager procedure \$W3DB000. This heads a message group consisting of the File Manager request parameters and error details in message W3DB0003.

System Action:

The request is abandoned.

User Action:

Contact your local System Administrator.

W3DB0003

P1

Reason:

This is part of a message group issued for unrecoverable File Manager errors. It contains the File Manager request parameters and the run-time error details.

System Action:

The request is abandoned.

User Action:

Contact your local System Administrator.

W3DB0004**P1 of file P2 with appl. P3 not permitted: file already exists with the appl. P4****Reason:**

A file could not be added with the appl. specified, because the file already exists in the repository with a different appl.

P1 is the File Manager action that was requested.

P2 is the file name.

P3 is the specified application.

P4 is the application that the file already exists with.

System Action:

The File Manager \$W3DB000 rejects the request.

User Action:

Review the request parameters: either replace the existing file by changing the requested appl, or create a new file by changing the requested file name.

W3DB0005**PDS member P1 / P2 stored in file P3 by P4****Reason:**

The contents of a PDS member have been successfully copied to a file in the repository.

P1 and *P2* are the DD and member names.

P3 is the file name.

P4 is the userid.

System Action:

None.

User Action:

None. The file is now available for GET requests.

W3DB0006

P1 P2 parameter error: P3

Reason:

The parameters passed on the *P1* command for file *P2* were in error:
P3 contains the error details.

System Action:

The request is rejected.

User Action:

Correct the parameters and retry the request.

W3DB0007

Update access to P1 requested by P2 for P3 of file P4

Reason:

A 'privileged' user has been permitted update access to a MODS file other than the top level MODSUSR file.

System Action:

The File Manager \$W3DB000 continues processing the request.

User Action:

None.

W3DB0008

User P1 is not permitted to update MODS DD P2 P3 - P4 of P5 rejected.

Reason:

The user has requested an update of a MODS DD other than MODSUSR, this is not permitted.

System Action:

The File Manager \$W3DB000 rejects the request.

User Action:

None.

W3DB0009**Invalid MODS DD P1 specified on P2 of P3****Reason:**

The user has requested an update of an invalid MODS DD number. Valid DD numbers range from 1 to the total number of files in the MODS concatenation. *P2* is the failing request, and *P3* is the filename.

System Action:

The request is rejected.

User Action:

None.

W3DB0010**File P1 P2 in DD P4 by P3****Reason:**

A file has been successfully updated in the repository.

P1 is the file name.

P2 is the operation (STORED/UPDATED) that was completed.

P4 is the MODS DD that the update was performed in.

System Action:

Any cached copy of the file will be deleted. The next GET of the file will return the updated copy.

User Action:

None. The file that was just updated/added/replaced is now available for GET processing.

W3DB0011

Error during P1 request for file P2 by P3 in DD P4.

Reason:

The File Manager \$W3DB000 encountered an error trying to perform the requested action. *P1* is the action that failed, *P2* is the file name.

System Action:

The request is abandoned.

User Action:

Contact your Systems Administrator. Previous messages on the SOLVE log should indicate the exact error.

W3DB0012

Delete requested for file P1 from DD P2, but file located in DD P3 : not deleted.

Reason:

A request was received to delete file P1 from DD P2 , however the file is located in DD P3 Files in P3 are visible to directories and available for GET requests but may only be updated/deleted by authorized users.

System Action:

The file is not deleted.

User Action:

None.

W3DB0013

File P1 deleted from P2 by P3

Reason:

A file has been successfully deleted from the indicated MODS DD.

System Action:

The file is deleted. Any cached copy will also be deleted.

User Action:

None. Note that if another copy of the file exists in another MODS DD, that copy will still be visible and available for GET processing.

W3DB0014**File P1 not found in DD P2****Reason:**

The indicated file was not found in the indicated MODS DD. (The file may exist in other MODS DD levels).

System Action:

The file is not deleted.

User Action:

None.

W3DB0015**Line mode GET of file P1 rejected: Only applicable to text files.****Reason:**

A line by line GET was requested, but the specified file does not contain text.

System Action:

The request is ignored.

User Action:

None.

W3DB0016**Trace info: P1****Reason:**

This message is produced when Web Data Services tracing is active.

System Action:

None.

User Action:

None.

W3DB0017

Possible internal data discrepancy: P1 of file P2, details: P3

Reason:

A possible discrepancy was detected during a *P1* operation on file *P2*. *P3* contains further details. This does not necessarily mean that there is a problem with the actual data. It can occur, for example, as a result of incorrect character translations.

System Action:

Processing continues.

User Action:

None.

W3DB0018

GET of file P1 - conversion from P2 to P3 is not supported.

Reason:

A GET request was received, but the specified file conversion is not supported by the File Manager.

P1 is the file name.

P2 is the format that the file is physically stored in. *P3* is the format that the requester wanted the file returned as.

System Action:

The GET request is abandoned.

User Action:

None.

W3DB0019

P1 of file P2 : duplicate "to" and "from" file names.

Reason:

Duplicate TO and FROM file names were specified for a *P1* request.

System Action:

The request is ignored.

User Action:

None.

W3DB0020**P4 is only allowed for files in DD P1 : file P2 exists in DD P3****Reason:**

Rename and update requests are restricted to files in the top level MODS DD (usually MODSUSR).

System Action:

The RENAME or UPDATE request is ignored.

User Action:

None.

W3DB0021**File P1 P2 to P3 by P4****Reason:**

A file has been successfully copied or renamed.

P1 is the "from" file

P2 is the operation (copy or rename)

P3 is the "to" file

System Action:

None.

User Action:

None.

W3DB0022

Error on OML FILE P1: OPT= P2, RC= P3, P4 P5 Key= P6 FILEID= P7

Reason:

The File Manager \$W3DB000 received an error on an OML File verb.
P1 is the file operation that was attempted.
P6 is the full or partial key used, P7 is the FILEID. The remaining fields contain error information returned by the File verb

System Action:

The request is abandoned and the File Manager terminates.

User Action:

If the errors indicate unrecoverable file damage, contact your Systems Administrator.

W3DB0023

File P1 not found.

Reason:

The indicated file was not found in any of the concatenated MODS DDs.

System Action:

None.

User Action:

None.

W3DB0024

Lock failed for update of file P1 : RC= P2 FDBK= P3 held by P4

Reason:

A user has requested an update operation on the specified file, but the file could not be 'locked'. Usually this means that another user is already updating the same file (eg. with CAS Edit).

System Action:

The update operation is not allowed.

User Action:

Retry the operation later.

W3DB0025**PDS Read: error on P1 of P2 P3 RC/FDBK= P4 / P5 P6****Reason:**

A user has requested a PDS member to be stored as a file on the repository, but the member could not be read.

System Action:

The STOREMEM operation is abandoned.

User Action:

Contact your Systems Administrator.

W3DB0026**Invalid Repository File Name P1, P2****Reason:**

An attempt was made to store a file named *P1* on the Repository, but the requested file name is invalid. *P2* describes the error.

System Action:

The request is abandoned - the new file is not stored.

User Action:

None.

W3DB0027**File name P1 exceeds maximum supported file name length.****Reason:**

The indicated file name is too long - files stored in the Repository are restricted to file names of 60 characters or less.

System Action:

The GET request returns a 'file not found' condition.

User Action:

None.

W3DB0028

The File Manager will start Web Data Services initialization. (Request: P1)

Reason:

The File Manager \$W3DB000 has received request P1 but found that the required initialization has not yet been attempted.

System Action:

The File Manager will call the initialization procedure, then continue processing.

User Action:

None. This is an informational message only.

W3DB0029

The File Manager will wait for Web Data Services initialization to complete. Request was P1, Initialization was requested by P2

Reason:

The File Manager \$W3DB000 has received request *P1* but found that the required initialization is still in progress and has not yet completed. *P2* is the user who requested the initialization.

System Action:

The File Manager will wait for the initialization lock to expire, then will continue processing the request.

User Action:

None. This is an informational message only.

W3DB0030

Unrecoverable File Manager condition - Web Data Services initialization has not completed successfully. Request abandoned: P1 Reason code: P2

Reason:

The File Manager \$W3DB000 has received request P1 but has been unable to process it because the required initialization has not completed. RC 1: INIT was found to have been already attempted, and failed. RC 2: INIT was found to be in progress, but the WAIT for it failed. RC 3: INIT was started by this procedure, but failed to complete.

System Action:

The request is abandoned. If the error condition is permanent, all subsequent File Manager requests will also fail.

User Action:

Contact your Systems Administrator.
Check the SOLVE Activity log for any error messages issued during the \$W3DB12W:INIT initialization process.

W3DB0031**Send of p1 byte file p2 p3****Reason:**

The File Manager \$W3DB000 received a GET request with the SEND parameter for a file greater than *p4* bytes. This message is issued at the start of and at the completion of the send operation, and includes the highest individual socket send return code. This message is only issued for large files, typically software update downloads.

System Action:

SEND processing proceeds as normal.

User Action:

Usually, none. If the operation completes with a return code greater than 0, contact your Systems Administrator: other SOLVE log messages should indicate the error. If the SEND operation completes with a return code of zero but the download fails, contact your PC Support staff.

W3DB0032

The file is identical in p1 and p2

Reason:

The copy of the web file in question found in *p1* was compared with the copy at the next level of the MODS concatenation and they were found to be identical.

System Action:

Compare processing ends normally.

User Action:

If you are comparing the copies of this file with a view to deleting the copy in *p1* then it should be safe to delete it.

W3DB0033

File P1 not found in DD P2

Reason:

The indicated file was not found in the indicated MODS DD. (The file may exist in other MODS DD levels).

System Action:

Compare processing terminates as it is only valid for a file that exists in the highest MODS concatenation.

User Action:

None.

W3DB0034

File size varies: p1= p2 p3= p4

Reason:

The copy of the web file in question found in *p1* was compared with the copy found in *p3* and they were found to be of different sizes.

System Action:

Compare processing terminates.

User Action:

None.

W3DB0035**File data record count varies: p1= p2 p3= p4****Reason:**

The copy of the web file in question found in *p1* was compared with the copy found in *p3* and they were found to contain a different number of data records.

System Action:

Compare processing terminates.

User Action:

None.

W3DB0036**File p1 found only once****Reason:**

File *p1* was found to occur only once in the MODS concatenation.

System Action:

Compare processing terminates.

User Action:

None.

W3DB0037**File content varies: p1=" p2" p3=" p4"****Reason:**

The copy of the web file in question found in *p1* was compared with the copy found in *p3* and they were found to contain different content. The first character in the example shown highlights the difference.

System Action:

Compare processing terminates.

User Action:

None.

W3DB0101

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The Web Server Include Processor \$W3DB01U failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$W3DB01U terminates.

User Action:

Report the error to your System Administrator.

W3DB0102

\$W3DB01U ENDED: RC= P1 MSG= P2

Reason:

Informational message that displays the return code and any message produced by the Web Server Include Processor.

System Action:

Procedure \$W3DB01U terminates.

User Action:

None.

W3DB0103

INVALID VALUE FOR FILE KEYWORD: P1

Reason:

The Web Server Include Processor \$W3DB01U tried to process an include directive with the FILE keyword but the value passed either began with a '/' or included '../' within the string.

System Action:

The request is rejected and procedure \$W3DB01U terminates.

User Action:

Change the Include directive to specify VIRTUAL= instead of FILE=.

W3DB0104**INVALID INCLUDE PARAMETERS: P1****Reason:**

The Web Server Include Processor \$W3DB01U failed during the processing of the Include parameters. The parameters did not contain a valid FILE or VIRTUAL keyword.

System Action:

The include is rejected and procedure \$W3DB01U terminates.

User Action:

Change the include directive to specify FILE= or VIRTUAL=.

W3DB0105**RECURSIVELY INCLUDED FILE: P1****Reason:**

The Web Server Include Processor \$W3DB01U received a directive to include the file *P1* and discovered this file is already included at a higher level. Further inclusion would lead to a recursive loop.

System Action:

The include request is rejected and procedure \$W3DB01U terminates.

User Action:

Change the include structure so that an included file does not include itself at a lower level. That is, file A cannot include file B which has an include for file A. This would lead to an include loop.

W3DB1201

File Manager Initialization P1 P2

Reason:

Procedure \$W3DB12W has finished File Manager initialization processing. *P1* is the completion status. *P2* is the error text, if any. A status of 'complete' indicates the initialization was successful. A status of 'in error' indicates the initialization terminated abnormally, because of error condition *P2*.

System Action:

If the initialization completed successfully, the Web Server and other procedures may now retrieve data from the File Manager. If the initialization ended in error, processing continues, but file retrieval requests, and general Web access, will not function correctly.

User Action:

If the initialization has ended in error, contact your System Administrator.

W3DB1202

File Manager Search Path (*P1* files) follows:

Reason:

This message heads a group that lists the order and file names in the File Manager Search path. This is the MODS DD concatenation. Web Files are searched for in the listed files beginning from file 1. The first occurrence of the file is returned to the Web Server.

System Action:

None.

User Action:

None.

W3DB1203**P1 ID= P2 DD= P3 DSN= P4****Reason:**

This message is part of a message group headed by W3DB1202 See that message for details.

W3DB1204**Unrecoverable error, Web Data Request processing abandoned.****Reason:**

Web Data Request processing is not possible since previous File Manager initialization attempts failed.

System Action:

The request is abandoned and the Web Data Request Manager \$W3DB12W terminates. No Web access to SOLVE products is available.

User Action:

Contact your Systems Administrator. Log messages will describe the specific failure of File Manager Initialization. This is an extremely serious error - no Web access will be available until the problem is rectified and the initialization successfully run.

Search the SOLVE Activity log for previous W3DB12* error messages describing the initialization error. These may have occurred at some time previous to this failing request - look around the time of region startup and SOLVE product initialization.

W3DB1205

**File Manager Initialization detected lock condition: RC= P1, FDBK= P2
TEXT= P3**

Reason:

A call was made to procedure \$W3DB12W for File Manager initialization processing, but the initialization lock was already held. Usually, this is a result of another copy of this procedure running at the same time.

System Action:

This request is abandoned. Normally, the original copy of this procedure, ie. the one that already has the lock, will continue processing and complete the initialization.

User Action:

This is usually a 'normal' condition. If any subsequent Web File error messages occur, contact your Systems Administrator.

W3DB1206

Unrecoverable error during Web Data Request Processing, action terminated.

Reason:

An unrecoverable run time error was encountered by the Web Data Request processing procedure \$W3DB12W. This heads a message group consisting of the Web Data GET/POST request parameters and error details in message W3DB1207

System Action:

Server processing of the HTTP GET or POST request is abandoned. Processing continues with the next request.

User Action:

Contact your local System Administrator.

W3DB1207**P1****Reason:**

This is part of a message group issued for unrecoverable Web Data request errors. It contains the HTTP GET/POST request parameters and run-time error details.

System Action:

The HTTP GET/POST request is abandoned. Processing continues with the next request.

User Action:

Contact your local System Administrator.

W3DB1208**File Manager Initialization requested by procedure P1 NCLID P2 at P3****Reason:**

The Web Data Request Manager \$W3DB12W has received a request for File Manager initialization processing from procedure P1 .

System Action:

If initialization has not already been done, it commences. If initialization has already been successfully completed, as a result of a previous call, then this request is ignored and processing continues.

User Action:

None.

W3DB1301

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The Web File Server \$W3DB13S failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$W3DB13S terminates.

User Action:

Report the error to your System Administrator.

W3DB1302

Unrecoverable error during File Server processing, action terminated.

Reason:

An unrecoverable run time error was encountered by File Server procedure \$W3DB13S. This heads a message group consisting of the File Server request parameters and error details in message W3DB1303.

System Action:

The request is abandoned.

User Action:

Contact your local System Administrator.

W3DB1303

P1

Reason:

This is part of a message group issued for unrecoverable File Server errors. It contains the File Server request parameters and the run-time error details.

System Action:

The request is abandoned.

User Action:

Contact your local System Administrator.

W3DB1304**File Manager returned RC= P1 P2 for file P3****Reason:**

An error was encountered while retrieving the data for file *P3*

System Action:

The request is abandoned - the file data cannot be retrieved.

User Action:

Contact your local System Administrator.

W3DB1305**P1****Reason:**

This message is the detail line for the response to a WEB command. "WEB ?" lists the available WEB commands and their parameters.

System Action:

None.

User Action:

None.

W3DB2001**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The SHTML File Type Handler \$W3DB20H failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$W3DB20H terminates.

User Action:

Report the error to your System Administrator.

W3DB2002

Include processor call failed for path P1 RC= P2 P3

Reason:

The SHTML File Type Handler \$W3DB20H could not expand the SHTML file *P1* . The Include Processor \$W3DB01U returned code *P2 P3*

System Action:

The request is rejected and procedure \$W3DB20H terminates.

User Action:

Report the error to your System Administrator.

W3DB3001

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The ESP File Type Handler \$W3DB30H failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$W3DB30H terminates.

User Action:

Report the error to your System Administrator.

W3DB3002

Include processor call failed for path P1 RC= P2 P3

Reason:

The ESP File Type Handler \$W3DB30H could not expand the ESP file *P1* . The Include Processor \$W3DB01U returned code *P2 P3*

System Action:

The request is rejected and procedure \$W3DB30H terminates.

User Action:

Report the error to your System Administrator.

W3DB4001**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The Web File Cache Manager \$W3DB40C failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure \$W3DB40C terminates.

User Action:

Report the error to your System Administrator.

W3DB4002**Web File Cache P1 request entered by P2****Reason:**

The Web File Cache Manager has processed request *P1*
ENABLE - Web File Caching is now enabled.
DISABLE - Web File Caching is now disabled.
EMPTY - all entries in the Web File Cache have been deleted.

System Action:

As above

User Action:

None

W3DB4003**P1****Reason:**

This message number refers to a message group issued in response to a 'Query' request to the Web File Cache Manager \$W3DB40C These messages contain information about the current status of Web File Caching.

System Action:

None

User Action:

None

W3DB4004

Web File Cache Global Vartable P1 request failed, FDBK= P2 key= P3

Reason:

The Web File Cache Manager \$W3DB40C received an error while attempting operation P1 on the Global Cache Vartable. The FDBK code was P2 The key was P3

System Action:

The Web File Cache Manager abandons the current action.

User Action:

Contact your Systems Administrator.

W3DB4101

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The Web File Negative Cache Manager \$W3DB41C failed during request processing because it was passed an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

The request is ignored.

User Action:

Report the error to your System Administrator.

W3DB4102

Web File Negative Cache P1 request entered by P2

Reason:

The Web File Negative Cache Manager has processed request P1
ENABLE - Web File Negative Caching is now enabled.

User Action:

None

W3ED1501**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

An invalid parameter value was passed to the XML Encode/Decode utility. *P1* is the parameter *P2* is the value that was supplied

System Action:

The XML document is not processed.

User Action:

Report the error to your System Administrator.

W3ED1502

XML SYNTAX ERROR (P1) DATA= P2

Reason:

An XML document could not be parsed because it contained syntax that is either invalid or not supported. *P1* is a description of the problem *P2* is the fragment of the XML document containing the error

System Action:

The XML document is not parsed.

User Action:

Report the error to your System Administrator.

W3ED1503

DATA VARIABLE P1 IS EMPTY

Reason:

The DATA keyword parameter was specified in a call to the XML Encode/Decode utility, but the variable did not contain any data. *P1* is the variable name that was supplied

System Action:

The XML document is not processed.

User Action:

Report the error to your System Administrator.

W3ED1504

P1 IS NOT A VALID OML STEM NAME

Reason:

An invalid OML stem name was specified in the VAR keyword parameter that was passed to the XML Encode/Decode utility. The variable name must conform to OML naming rules, be no longer than 8 characters, and end in a period (.). *P1* is the VAR parameter that was supplied.

System Action:

The XML document is not processed.

User Action:

Report the error to your System Administrator.

W3ED1505**P1****Reason:**

This is a trace message generated by the XML Encode/Decode facility when the TRACE keyword parameter is set to YES.

System Action:

None.

User Action:

None.

W3ED1506**COULD NOT PARSE XML ELEMENT P1****Reason:**

The XML Decode utility could not parse an XML document because it contained an invalid element name, attribute name or value. *P1* contains the name of the element that could not be parsed

System Action:

An error message is returned to the calling procedure.

User Action:

Report the problem to your system administrator.

W3ESP0000**P1****Reason:**

This is an Executable Server Page interpreter trace message.

System Action:

None.

User Action:

None.

W3ESP0001

Invalid directive syntax, no end delimiter found. DIREC= P1

Reason:

The Executable Server Page interpreter encountered an error in the source file. The directive end delimiter was not found. Start of the directive being processed is *P1*.

System Action:

Processing for the file terminates.

User Action:

Ensure that the directive end delimiter %> is present in the source at the end of the directive specification.

W3ESP0002

Invalid directive syntax, indicator " P1" is not recognized. DIREC= P2

Reason:

The Executable Server Page interpreter encountered an error in the source file. The directive indicator character specified is not recognized. P1 is the character found and P2 is the directive being processed.

System Action:

Processing for the file terminates.

User Action:

Specify one of the following directive indicators:

- '=' - Equals character for output directives '@'
- At character for processing directives ' '
- blank character for scripting directives

W3ESP0003**Invalid processing directive keyword syntax. MSG= P1 DIREC= P2****Reason:**

The Executable Server Page interpreter encountered an error in the source file. The processing directive keywords specified were invalid. The message *P1* details the error and *P2* is the directive being processed.

System Action:

Processing for the file terminates.

User Action:

Ensure that the processing directive statement has a valid keyword syntax.

W3ESP0004**Invalid SUBCHAR " P1" specified, must be one of " P2". DIREC= P3****Reason:**

The Executable Server Page interpreter encountered an error in the source file. The substitution character specified is not allowed. *P1* is the character specified and *P2* is the permissible set of characters. The directive being processed is *P3*.

System Action:

Processing for the file terminates.

User Action:

You can only specify one of the characters in *P2*.

W3ESP0005**Invalid variable reference " P1" for output directive. DIREC= P2****Reason:**

The Executable Server Page interpreter encountered an error in the source file. The variable reference specified in the output directive is invalid. The variable is *P1* and the directive being processed is *P2*.

System Action:

Processing for the file terminates.

User Action:

You must specify a valid variable name after the ampersand character.

W3ESP0006

Invalid function " P1" specified for output directive. DIREC= P2

Reason:

The Executable Server Page interpreter encountered an error in the source file. The package and/or the function name specified in the output directive is invalid. The name is *P1* and the directive being processed is *P2*.

System Action:

Processing for the file terminates.

User Action:

You must specify a valid member name as the package name and a function name that is in the package specified.

W3ESP0007

Invalid output directive keyword syntax. MSG= P1 DIREC= P2

Reason:

The Executable Server Page interpreter encountered an error in the source file. The output directive keywords specified were invalid. The message *P1* details the error and *P2* is the directive being processed.

System Action:

Processing for the file terminates.

User Action:

Ensure that the PARMnn keywords are correctly specified.

W3ESP0008

Invalid scripting directive verb " P1". DIREC= P2

Reason:

The Executable Server Page interpreter encountered an error in the source file. The scripting directive verb specified was invalid. The verb is *P1* and the directive being processed is *P2*.

System Action:

Processing for the file terminates.

User Action:

You must specify a valid scripting verb.

W3ESP0009**Invalid scripting directive keyword syntax. MSG= P1 DIREC= P2****Reason:**

The Executable Server Page interpreter encountered an error in the source file. The scripting directive keywords specified were invalid. The message *P1* details the error and *P2* is the directive being processed.

System Action:

Processing for the file terminates.

User Action:

Ensure that the keywords are correctly specified.

W3ESP0010**Invalid procedure " P1" specified for CALL verb. DIREC= P2****Reason:**

The Executable Server Page interpreter encountered an error in the source file. The package and/or the procedure name specified in the CALL scripting directive is invalid. *P1* is the procedure specified and the directive being processed is *P2*.

System Action:

Processing for the file terminates.

User Action:

You must specify a valid member name for the package, followed by a : (i.e. the colon character), followed by the name of a procedure in the specified package, or specify only the procedure name as a valid member name.

W3ESP0011

Variable substitution error. DIREC= P1

Reason:

The Executable Server Page interpreter encountered an error in the source file. Variable substitution encountered an error while processing the specifications of directive *P1*.

System Action:

Processing for the file terminates.

User Action:

Ensure that you specify valid variable names.

W3ESP0012

Proc/Function call error. Called= P1 Stmt= P2 MSG= P3 DIREC= P4

Reason:

The Executable Server Page interpreter encountered an error in the source file. A directive failed a procedure or function call. The procedure or function is *P1*, the statement line number in error is *P2*, the error message is *P3* and the directive being processed is *P4*. Depending on the nature of the error it may or may not be possible to display the directive being processed.

System Action:

Processing for the file terminates.

User Action:

Check the error message and correct the problem in the called procedure or function.

W3ESP0013**Variable substitution error for variable P1 P2****Reason:**

The Executable Server Page interpreter encountered an error in the source file. While performing variable substitution an invalid variable was encountered. The variable name is *P1* and *P2* is additional information about the error.

System Action:

Processing for the file continues, however the data being substituted will remain as is.

User Action:

Ensure that you specify valid variable names.

W3ESP0014**Invalid keyword value. Keyword= P1 value=" P2" DIREC= P3****Reason:**

The Executable Server Page interpreter encountered an error in the source file. An invalid keyword value was specified for a scripting directive. The keyword is *P1*, the value in error is *P2* and the directive being processed is *P3*.

System Action:

Processing for the file terminates.

User Action:

Specify a valid value for the keyword identified.

W3ESP0015

Required mutually exclusive keywords incorrectly specified. KWDS= P1 NUM = P2 DIREC= P3

Reason:

The Executable Server Page interpreter encountered an error in the source file. A directive that has mutually exclusive keywords, of which one is required, did not have the correct keyword specification. The mutually exclusive set of keywords are **P1** and the number of these keywords that was specified is **P2** and the directive being processed is **P3**.

System Action:

Processing for the file terminates.

User Action:

You MUST specify ONLY one of the keywords listed.

W3ESP0016

Keyword P1 is mutually exclusive with keyword(s) P2. DIREC= P3

Reason:

The Executable Server Page interpreter encountered an error in the source file. The keyword *P1* was specified and it cannot be specified together with any one of the keywords *P2*. The directive being processed is *P3*.

System Action:

Processing for the file terminates.

User Action:

Either remove keyword *P1* or do not specify one of the keywords in *P2*.

W3ESP0017**Setting variable/MDO P1 failed. DIREC= P2****Reason:**

The Executable Server Page interpreter encountered an error in the source file. The set scripting directive failed to set variable/MDO *P1*. The directive being processed is *P2*.

System Action:

Processing for the file terminates.

User Action:

Ensure that the variable/MDO names are valid.

W3ESP0018**Variable creation for model failed. DIREC= P1****Reason:**

The Executable Server Page interpreter encountered an error in the source file. The model scripting directive failed to set the variables needed for the next iteration of the loop. The directive being processed is *P1*.

System Action:

Processing for the file terminates.

User Action:

Ensure that valid variable names are specified and that the prefix is valid.

W3ESP0019**MDO access error. RC= P1 FDBK= P2 MDO= P3 DIREC= P4****Reason:**

The Executable Server Page interpreter encountered an error in the source file. The model scripting directive failed to access an MDO needed for the next iteration of the loop. The return code is *P1*, the feedback code is *P2*, the MDO component is *P3* and the directive being processed is *P4*.

System Action:

Processing for the file terminates.

User Action:

Ensure that MDO has been correctly mapped, created and referenced.

W3ESP0020

Invalid stem structure for model. STEM= P1 DIREC= P2

Reason:

The Executable Server Page interpreter encountered an error in the source file. The stem variable used in a model scripting statement is invalid. The stem must have the .0 variable set to the number of items in the stem. The stem in error is *P1* and the directive being processed is *P2*.

System Action:

Processing for the file terminates.

User Action:

Ensure that the stem is correctly specified and that it has the correct structure for use in a model statement.

W3ESP0022

Invalid MDO queued for model. Q= P1 DIREC= P2

Reason:

The Executable Server Page interpreter encountered an error in the source file. The MDO queued to a model scripting statement is invalid. The MDO must be mapped by \$NCL. The queue in error is *P1* and the directive being processed is *P2*.

System Action:

Processing for the file terminates.

User Action:

Ensure that the procedure queueing the data for the model statement is sending an MDO mapped by \$NCL.

W3ESP0023**No parameters accepted for P1 statement. DIREC= P2****Reason:**

The Executable Server Page interpreter encountered an error in the source file. Parameters were specified for the *P1* scripting statement however this statement does not allow any. The directive being processed is *P2*.

System Action:

Processing for the file terminates.

User Action:

Remove the parameters for the statement.

W3ESP0024**Block verb mismatch, expected P1 found P2. DIREC= P3****Reason:**

The Executable Server Page interpreter encountered an error in the source file. A block scripting directive encountered a block end statement that does not match the currently started block verb. Block style verbs must have their corresponding end statement at the same level as the start statement. The end statement expected is *P1* and the end statement encountered is *P2*. The block scripting directive being processed is *P3*.

System Action:

Processing for the file terminates.

User Action:

Ensure that start and end statements of block style scripting directives are at the same block nesting level.

W3ESP0025

Invalid condition syntax COND= P1 MSG= P2 DIREC= P3

Reason:

The Executable Server Page interpreter encountered an error in the source file. An invalid boolean expression was specified for a conditional verb of a scripting directive. The expression specified is *P1* and the error message describing the problem with the condition is *P2* and the directive being processed is *P3*.

System Action:

Processing for the file terminates.

User Action:

Specify a valid boolean expression.

W3ESP0026

Cannot compile ESP page. Reason is P1

Reason:

The Executable Server Page compiler encountered a fatal error when trying to compile an ESP page.
The reason for the error is *P1*.

System Action:

Compiling of ESP pages terminates.

User Action:

Determine the reason why the compiler failed, correct the condition, and then action the WEBCENTER parameter group in Customizer.

W3ESP0027

Abend in compiled ESP procedure, page processing terminated.

Reason:

The compiled ESP procedure abended.

System Action:

The page will be delivered as is. Some information may not be displayed.

User Action:

Contact your local support representative.

W3ESP0028**Abend text: P1****Reason:**

This message follows W3ESP0027, issued as a result of a procedure abending, supplying the error text in *P1*. The message is followed by other messages adding further details.

System Action:

Refer to message W3ESP0027.

User Action:

Refer to message W3ESP0027.

W3ESP0029

**Abend details: LINE= P1 COND= P2 STMT_NAME= P3 KEYWORD= P4
NAME= P5 SUBN AME= P6 VALUE= P7 VALUEOK= P8 VALUE2= P9
VALUE2OK= P10**

Reason:

This message follows W3ESP0027 and W3ESP0028 and is issued as a result of a procedure abending, supplying the following specific error details:

LINE= P1 - the line number in the source code

COND= P2 - the error condition

STMT_NAME= P3 - the statement name (verb name)

KEYWORD= P4 - the keyword name (operand name)

NAME= P5 - the name specification

SUBNAME= P6 - the variable name causing the error

VALUE= P7 - the value that caused the error

VALUEOK= P8 - 1 if VALUE= caused the error

VALUE2= P9 - the second value that caused the error

VALUE2OK= P10 - 1 if VALUE2= caused the error

System Action:

Refer to message W3ESP0027.

User Action:

Refer to message W3ESP0027.

W3ESP0030

Reason:

This message is a performance statistics report message and contains variable information.

System Action:

None.

User Action:

Collect all these messages and send them to the Technical Support representative that requested the report.

W3ESP0031

ESP option P1 actioned. P2

Reason:

This message indicates the results of an ESP option request. The option requested is *P1* and additional details are *P2*.

System Action:

None.

User Action:

None.

W3ESP0032

P1

Reason:

This message presents the lines of help that document the ESPCNTL command syntax used to control ESP options.

System Action:

None.

User Action:

None.

W3ESP0200**P1****Reason:**

This is an Executable Server Page compiler trace message.

System Action:

None.

User Action:

None.

W3ESP0201**Invalid directive syntax, no end delimiter found for directive on line P1****Reason:**

The Executable Server Page compiler encountered an error in the source ESP file.

The directive end delimiter was not found. The start of the directive ending process was on line P1 of the ESP source.

System Action:

Processing for the file terminates.

User Action:

Ensure that the directive end delimiter %> is present in the source at the end of the directive specification.

W3ESP0202

Invalid directive syntax on line P1, indicator " P2" is not recognized.

Reason:

The Executable Server Page compiler encountered an error in the source file. The directive indicator character specified is not recognized. P1 is the line number in the ESP source where the directive started and P2 is the character found.

System Action:

Processing for the file terminates.

User Action:

Specify one of the following directive indicators:

'=' - Equals character for output directives

'@' - At character for processing directives

' ' - blank character for scripting directives

W3ESP0203

Invalid output directive syntax for function call on line P1

Reason:

The Executable Server Page compiler encountered an error in the source file. The output directive indicates a function call was requested; however, keyword parameters specified for the function call were in error. P1 is the line number on which the statement was encountered.

System Action:

Processing for the file terminates.

User Action:

Ensure that you have all the correct keyword spelling and quotes are correctly balanced.

W3ESP0204**Invalid processing directive syntax on line P1****Reason:**

The Executable Server Page compiler encountered an error in the source file. The syntax for the processing directive specified was in error. *P1* is the line number on which the error was encountered.

System Action:

Processing for the file terminates.

User Action:

Ensure that you have all the correct keyword spelling and quotes are correctly balanced.

W3ESP0205**Invalid keyword value for P1 statement on line P2. Keyword= P3
Value=" P4"****Reason:**

The Executable Server Page compiler encountered an error in the source file. An invalid keyword value was specified for the scripting directive P1 that is located on line number P2. The keyword is P3 and the value in error is P4.

System Action:

Processing for the file terminates.

User Action:

Specify a valid value for the keyword identified.

W3ESP0206

Required mutually exclusive keywords incorrectly specified for statement P1 on line P2. Keywords are " P3"

Reason:

The Executable Server Page compiler encountered an error in the source file. A directive that has mutually exclusive keywords, of which one is required, did not have the correct keyword specification. The statement was *P1* and the statement was on line *P2*. The mutually exclusive set of keywords are *P3*.

System Action:

Processing for the file terminates.

User Action:

You must specify *one* of the keywords listed.

W3ESP0207

Keyword P1 is mutually exclusive with keyword(s) P2 for statement P3 on line P4

Reason:

The Executable Server Page compiler encountered an error in the source file. The keyword P1 was specified and it cannot be specified together with any one of the keywords P2. The statement being processed was *P3* and it is located on line *P4*.

System Action:

Processing for the file terminates.

User Action:

Do *one* of the following:

- Remove keyword *P1*.
- Do not specify one of the keywords in *P2*.

W3ESP0208**Invalid condition syntax for P1 statement on line P2, message: P3****Reason:**

The Executable Server Page compiler encountered an error in the source file. An invalid boolean expression was specified for the conditional scripting directive *P1* that is located on line *P2*. The error message for the condition syntax is *P3*.

System Action:

Processing for the file terminates.

User Action:

Specify a valid boolean expression.

W3ESP0209**P1 statement found on line P2 with no matching P3 statement****Reason:**

The Executable Server Page compiler encountered an error in the source file. The end of a block style scripting directive was found on line *P2* of the source but there is no matching start for the block. The end statement was *P1* and the missing start statement is *P3*.

System Action:

Processing for the file terminates.

User Action:

Specify a matching start statement for the end statement.

W3ESP0210

Invalid scripting directive syntax on line P1, statement " P2" is not recognized

Reason:

The Executable Server Page compiler encountered an error in the source file. The scripting directive statement P2 is not recognized. P1 is the line number in the ESP source where the directive started.

System Action:

Processing for the file terminates.

User Action:

You must specify a valid scripting directive statement.

W3ESP0211

Invalid scripting directive syntax for verb P1 on line P2

Reason:

The Executable Server Page compiler encountered an error in the source file. The scripting directive verb *P1* was requested however the keyword parameters specified for the verb were in error. *P1* is the verb name and *P2* is the line number on which the statement was encountered.

System Action:

Processing for the file terminates.

User Action:

Ensure that you have all the correct keyword spelling and quotes are correctly balanced.

W3ESP0212

Invalid syntax for verb P1 on line P2. Required mutually exclusive keywords incorrectly specified. Keywords: P3

Reason:

The Executable Server Page compiler encountered an error in the source file. A directive that has mutually exclusive keywords, of which one is required, did not have the correct keyword specification. The verb specified is *P1* and it is located on line *P2*. The mutually exclusive set of keywords are *P3*.

System Action:

Processing for the file terminates.

User Action:

You MUST specify ONLY one of the keywords listed.

W3ESP0213

Invalid syntax for verb P1 on line P2. Keyword P3 is mutually exclusive with keyword(s) P4

Reason:

The Executable Server Page compiler encountered an error in the source file. The syntax for verb *P1* on line *P2* was in error. The keyword *P3* was specified and it cannot be specified together with any one of the keywords *P4*.

System Action:

Processing for the file terminates.

User Action:

Either remove keyword *P3* or do not specify one of the keywords in *P4*.

W3FN1201

HTML CONTROL TYPE P1 NOT SUPPORTED

Reason:

The HTML loader has detected unsupported control statement of type *P1* .

System Action:

The statement is ignored.

User Action:

Report the error to your product support representative.

W3FT0001

PORT=nnnn MUST BE SPECIFIED

Reason:

The SOLVE WEB FTP Server procedure \$W3FTP00 was started but no port number was supplied.

System Action:

The FTP server terminates.

User Action:

Start \$W3FTP00 specifying the PORT= parameter with the port number you wish the server to use.

W3FT0002

PORT NUMBER P1 IS INVALID

Reason:

The SOLVE WEB FTP Server procedure \$W3FTP00 was started but the port number supplied is invalid or out of range.

System Action:

The FTP server terminates.

User Action:

Start \$W3FTP00 specifying the PORT= parameter with the port number you wish the server to use. The port number must be an integer from 0 to 65535 inclusive. If PORT=0 is specified, TCP/IP will select a port number and it will be displayed in message W3FT0007 after the server has registered with TCP/IP.

W3FT0003

FTP SERVER IS ALREADY ACTIVE

Reason:

The SOLVE WEB FTP Server procedure \$W3FTP00 was started but has detected that it is already active.

System Action:

The FTP server terminates.

User Action:

Locate the other instance of the FTP server and use it for your file transfers.

W3FT0004

SOCKET *P1* FAILED, RC=*P2* FDBK=*P3* RSN=*P4* VERRIN=*P5*

Reason:

The SOLVE FTP Server has issued a SOCKET request but the request has failed. *P1* shows the type of request which was issued, and *P2* to *P5* show the error information.

System Action:

The FTP server terminates.

User Action:

Use the supplied error information to work out why the request failed. This may be indicative of a problem with TCP/IP.

W3FT0005

START OF \$W3FTP01 FAILED, REFER TO FOLLOWING MESSAGE

Reason:

The SOLVE FTP Server has received a client connection and has tried to start procedure \$W3FTP01 to process the client requests. The attempt to start \$W3FTP01 has failed.

System Action:

The client connection is terminated.

User Action:

A message explaining why the procedure didn't start will be in the SOLVE activity log following this message. Use it to determine why the procedure could not be started.

W3FT0006

SOCKET TRANSFER REQUEST FAILED, RC= P1 FDBK= P2

Reason:

The SOLVE FTP Server has received a client connection and has started procedure \$W3FTP01 to process the client requests. The attempt to transfer the client connection to \$W3FTP01 has failed. The return code and feedback from the SOCKET TRANSFER_REQUEST are shown.

System Action:

The client connection is terminated.

User Action:

Use the return code and feedback to determine why the socket transfer failed.

W3FT0007

FTP SERVER ACTIVE ON PORT P1

Reason:

The SOLVE FTP Server has successfully registered with TCP/IP and is now ready to receive client requests on port *P1*.

System Action:

The FTP server waits for client connections.

User Action:

You may now begin to use FTP.

W3FT0101**SOCKET TRANSFER NOTIFY NOT RECEIVED - TIMED OUT****Reason:**

The SOLVE FTP Server has tried to transfer a client connection from the main server process to a subordinate process, but the notification of transfer has not been received.

System Action:

The FTP client connection is terminated.

User Action:

The server allows 30 seconds between the start of the server process and delivery of socket transfer notification - the notification is normally delivered immediately. This problem would indicate a system performance problem which should be investigated.

W3FT0102**SOCKET TRANSFER NOTIFY MSG INVALID - P1****Reason:**

The SOLVE FTP Server has tried to transfer a client connection from the main server process to a subordinate process, but the notification of transfer resulted in an unexpected message being received. The text of the message is shown in *P1*.

System Action:

The FTP client connection is terminated.

User Action:

The unexpected message should be an error indication - use this message to determine why the transfer failed.

W3FT0103

SOCKET TRANSFER ACCEPT FAILED, RC= P1 FDBK= P2

Reason:

The SOLVE FTP Server has received a client connection and has started procedure \$W3FTP01 to process the client requests. The attempt to transfer the client connection to \$W3FTP01 has failed. The return code and feedback from the SOCKET TRANSFER_ACCEPT are shown.

System Action:

The client connection is terminated.

User Action:

Use the return code and feedback to determine why the socket transfer failed.

W3FT0104

SOCKET P1 FAILED, RC=P2 FDBK=P3 RSN=P4 VERRIN=P5

Reason:

The SOLVE FTP Server has issued a SOCKET request but the request has failed. P1 shows the type of request which was issued, and P2 to P5 show the error information.

System Action:

The FTP client connection is terminated.

User Action:

Use the supplied error information to work out why the request failed. This may be indicative of a problem with TCP/IP.

W3IN1301

p1 FAILED, RC= p2 FDBK= p3 ERRNO= p4, VERRIN= p5, p6, p7

Reason:

A WWW SOCKET verb has indicated an error condition. *P1* is the verb which failed. *P2* , *P3* , and *P4* indicate the error received. *P5* is the vendor-specific error information which further qualifies ERRNO (*p4*).

P6 and *P7* are interpretations of the error codes, indicating the reason for the failure.

System Action:

The WWW Server process is terminated.

User Action:

Use the error information to determine the cause of the error.

W3JS0001**Popup window failed to open****Reason:**

The Javascript within this web page tried to open a new window but the window failed to open. This is most likely due to security settings within the web browser. The NetMaster web interface requires permission to open unsolicited popup windows in order to function fully.

System Action:

None.

User Action:

Check your web browser's security settings as follows:

For Mozilla:

From the "Edit" menu select "Preferences", and then select "Popup Windows" in the "Privacy & Security" category. Make sure the "Block unrequested popup windows" option is unchecked or click on the "Allowed Sites" button and add this web page's IP address or site name.

W3LG2001

Processing error, P1

Reason:

The web server has detected an internal processing failure. *P1* is the error condition detected:
\$W3LG20H START FAILED RC=retcode MSG=msg \$W3LG20H WRITE FAILED RC=retcode

System Action:

The web server continues processing; however, some applications will not be accessible.

User Action:

Report the error to your product support representative.

W3LG2101

Processing error, P1

Reason:

The web server has detected an internal processing failure. *P1* is the error condition detected:
UNABLE TO OBTAIN LOCK, RC=retcode
TRANSFER FAILED: MSG=sysmsg
TRANSFER ACCEPT FAILED: RC=Retcode
MDO ERROR: MDO FDBK=mdofdbk
TIMEOUT ON TRANSFER UNEXPECTED TRANSFER MESSAGE: MSG=sysmsg
MDO PACKING ERROR: MDO FDBK=mdofdbk
MDO SIZE ERROR START FAILED: RC=retcode MSG=sysmsg
WRITE FAILED: RC=retcode SETVARS ERROR MSG=sysmsg
LOGIN FAILURE (APPC START) U=userid RC=retcode MSG=sysmsg

System Action:

The web server continues processing.

User Action:

Report the error to your product support representative.

W3LG2110**Invalid or missing User Name, please re-enter****Reason:**

The User Name field on the WebCenter login panel was not completed or is invalid. Enter a valid user ID.

System Action:

The login panel appears.

User Action:

Enter a valid user ID and password, and submit the login request again.

W3LG2111**Invalid or missing password, please re-enter****Reason:**

The Password field on the WebCenter login panel was not completed or is invalid. Enter a valid password.

System Action:

The login panel appears.

User Action:

Enter the correct password for the user ID.

W3LG2121**Security exit failed signon****Reason:**

The request to log in from WebCenter was rejected by the security exit.

System Action:

The login is rejected and the login panel appears. For more information, see the log.

User Action:

Enter a valid user ID and password, and submit the login request again.

W3LG2122

Security exit rejected signon

Reason:

The request to log in from WebCenter was rejected by the security exit.

System Action:

The login is rejected and the login panel appears. For more information, see the log.

User Action:

Enter a valid user ID and password, and submit the login request again. Ensure that the SXPARMs member in your hlq.rname.PARMLIB has CHANGEPWD set to YES.

W3LG2123

Password is invalid

Reason:

The request to log in from WebCenter was rejected because the password is invalid or incorrect.

System Action:

The login is rejected and the login panel appears.

User Action:

Enter the correct password for the user ID and submit the login request again.

W3LG2124

User Name is invalid

Reason:

The request to log in from WebCenter was rejected because the user ID is invalid or unknown.

System Action:

The login is rejected. The login panel appears.

User Action:

Enter a valid user ID and password, and submit the login request again.

W3LG2201**Processing error, P1****Reason:**

The web server has detected an internal processing failure. *P1* is the error condition detected:
UNABLE TO OBTAIN LOCK, RC=retcode

System Action:

The web server continues processing.

User Action:

Report the error to your product support representative.

W3LG2301**Invalid or missing old password, please re-enter****Reason:**

The OLD PASSWORD field on the Password Change Panel is invalid or was not entered.

System Action:

The Password Change panel appears.

User Action:

Enter the correct old password and the new password.

W3LG2302**Invalid or missing new password, please re-enter****Reason:**

The NEW PASSWORD field on the Password Change Panel is invalid or was not entered.

System Action:

The Password Change panel appears.

User Action:

Enter the correct old password and the new password, and verify passwords.

W3LG2303

Invalid or missing verify password, please re-enter

Reason:

The VERIFY PASSWORD field on the Password Change Panel is invalid or was not entered.

System Action:

The Password Change panel appears.

User Action:

Enter the correct old password and the new password, and verify passwords.

W3LG2304

Old and new passwords are the same, please re-enter

Reason:

The OLD PASSWORD and NEW PASSWORD fields on the Password Change panel have the same value. The new password must be different from the existing (old) password.

System Action:

The Password Change panel appears.

User Action:

Enter the correct old password and the new password, and verify passwords. The New and Verify Password values must be the same.

W3LG2305

New and verify passwords are different, please re-enter

Reason:

The NEW PASSWORD and VERIFY PASSWORD fields on the Password Change panel are not the same.

System Action:

The Password Change panel appears.

User Action:

Enter the correct old password and the new password, and verify passwords. The New and Verify Password values must be the same.

W3LG2306**Password change failed, RC: P1****Reason:**

The Password Change function failed. The return code is shown.

System Action:

The Password Change panel appears.

User Action:

Contact your product support organization.

W3LG2314**New and verify passwords are different, please re-enter****Reason:**

The NEW PASSWORD and VERIFY PASSWORD fields on the Password Change panel are not the same.

System Action:

The Password Change panel appears.

User Action:

Enter the correct old password and the new password, and verify passwords. The New and Verify Password values must be the same.

W3LG2315**Password change failed, RC: P1****Reason:**

The Password Change function failed. The return code is shown.

System Action:

The Password Change panel appears.

User Action:

Contact your product support organization.

W3MH0001

REGISTERING WEB MENUS FROM FILE P1 FOR APP P2

Reason:

The procedure \$W3MH000:Application_Register has been called to register the Web menus that are in the file *P1* for the application *P2* .

System Action:

None.

User Action:

None.

W3MH0002

READ P1 LINES OF XML FROM FILE P2

Reason:

The procedure \$W3MH000:Application_Register has been called to register the Web menus that are in the file *P2* . There was *P1* lines of XML in the file.

System Action:

None.

User Action:

None.

W3MH0003

ERROR READING WEB MENU REGISTRATION FILE P1 SYMSG: P2

Reason:

The procedure \$W3MH000:Application_Register has been called to register the Web menus that are in the file *P1* but an error occurred reading the file. *P2* is the sysmsg returned from \$W3DB01U.

System Action:

None.

User Action:

None.

W3MH0006**P1 REQUEST FAILED. KEYWORD P2 HAS AN INVALID VALUE OF ' P3'****Reason:**

The request of type P1 to \$W3MH000 failed because the keyword P2 had an invalid value of P3 .

System Action:

None.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

W3MH0007**FATAL VARIABLE ERROR - ID: P1 FUNC: P2 FDBK: P3****Reason:**

An error occurred while manipulating an NCL VARIABLE in the procedure \$W3MH000. *P1* is the vartable Identifier, *P2* is the function being performed and *P3* is the feedback code set by the vartable verb.

System Action:

None.

User Action:

Determine the cause of the error from the return and feedback codes and retry or Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

W3MH0008

FATAL VARIABLE ERROR - ID: P1 FUNC: P2 FDBK: P3 KEY: P4

Reason:

An error occurred while manipulating an NCL VARIABLE in the procedure \$W3MH000. *P1* is the varable Identifier, *P2* is the function being performed, *P3* is the feedback code set by the vartable verb and *P4* is the vartable key being accessed.

System Action:

None.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

W3MH0009

UNEXPECTED RC: P1 FROM LOCK TYPE: P2 PNAME: P3 MNAME: P4

Reason:

An unexpected return code of *P1* was returned whilst issuing a Lock with a type of *P2* . The Lock's Primary Name was *P3* and the minor name was *P4* .

System Action:

None.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

W3MH0010**ERROR RETURNED FROM PROC: P1 IN PACKAGE: P2. RETURN CODE: P3****Reason:**

The Web Menu Manager attempted to call back an application that has registered with the menu manager, but the application returned an error. The application procedure that was called was P1 which in the package P2 . The return code set by the application was P3 .

System Action:

None.

User Action:

Refer to the log for the message that was returned by the application.

W3MH0011**ERROR LOADING PROC: P1 IN PACKAGE: P2. OML ERROR CODE: P3****Reason:**

The Web Menu Manager attempted to call back an application that has registered with the menu manger, but an error was encountered loading the call-back package. The procedure being loaded was P1 which was in the package P2 . The OML error code was P3 . This message is written to the log.

System Action:

None.

User Action:

Determine why the application package is not loading by refering to messages in the log.

W3MH0012

WEB MENU NOT FOUND. APP: P1 ID: P2

Reason:

Whilst the web menu manager was constructing the menu hierarchy it encountered a menu item with the ID *P2* in the application *P1* that was not found in the list of registered menu items.

System Action:

None.

User Action:

Determine which menu registration file specifies the ID and APP for the menu item that is not found and check that the ID and APP are correct.

W3NLS0001

P1 Javascript files generated successfully

Reason:

The Web Server National Language Support javascript generate utility has created/updated *P1* javascript files.

System Action:

Generate processing ends normally.

User Action:

None.

W3NLS0002

NLS path P1 added successfully

Reason:

The Web Server National Language Support path registration utility has added the path *P1*.

System Action:

Path registration processing ends normally.

User Action:

None.

W3NLS0003**NLS paths deregistered****Reason:**

The Web Server National Language Support path deregistration utility has deregistered all previously registered paths.

System Action:

Path deregistration processing ends normally.

User Action:

None.

W3NLS0004**P1 NLS files updated successfully****Reason:**

The Web Server National Language Support update utility has updated *P1* NLS files.

System Action:

Update processing ends normally.

User Action:

None.

W3NLS0005**P1 NLS files restored from backups****Reason:**

The Web Server National Language Support restore utility has restored *P1* NLS files from their respective backups.

System Action:

Restore processing ends normally.

User Action:

None.

W3NLS0006

P1 NLS backup files deleted

Reason:

The Web Server National Language Support delete utility has deleted *P1* BAK backup files.

System Action:

Delete processing ends normally.

User Action:

None.

W3RB1402

SOCKET P1 ERROR: PORT= P2 REASON= P3 ERR= P4 VERR= P5

Reason:

The Request Broker procedure encountered an error when attempting an operation on a TCP/IP socket. *P1* is the action that was attempted *P2* is the port number *P3* is the failure reason *P4* is the error name *P5* is the TCP/IP stack error code

System Action:

The Request Broker terminates.

User Action:

Report the error to your system administrator.

W3RB1403

P1

Reason:

This is a trace message generated by the Request Broker procedure when the TRACE keyword parameter is set to YES.

System Action:

None.

User Action:

None.

W3RB1404**INVALID PARAMETER VALUE IN REQUEST DOCUMENT, P1= P2****Reason:**

The Request Broker procedure received an invalid request from a remote client. *P1* is the name of parameter *P2* is the supplied value

System Action:

The Request Broker sends an error message to the client and continues processing.

User Action:

Report the error to your system administrator.

W3RB1405**SERVICE P1 COULD NOT BE STARTED: P2****Reason:**

The Request Broker procedure could not start the requested service procedure. *P1* is the name of the service *P2* is the message generated when the service was started

System Action:

The Request Broker sends an error message to the client and continues processing.

User Action:

Report the error to your system administrator.

W3RB1406

COULD NOT CONTACT SERVICE PROCEDURE P1

Reason:

The Request Broker started the service procedure indicated in a request from a client, but could not then contact the service procedure. *P1* is the name of the service procedure

System Action:

The Request Broker sends an error message to the client and continues processing.

User Action:

Review the Activity Log for more detailed error information and report the error to your system administrator.

W3RB1407

PROTOCOL/ENCODING P1 IS NOT SUPPORTED

Reason:

A remote application requested a persistent connection to a Web application, but the requested protocol or character set is not supported on this server. *P1* is the protocol or character set that was requested.

System Action:

The request is rejected.

User Action:

Use a version of the remote application that is compatible with the server.

W3RSS001

Required keyword parameter P1 not specified.

Reason:

A procedure call did not include the required keyword parameter *P1*.

System Action:

Process terminates.

User Action:

This is an internal error. Contact Technical Support.

W3RSS002**Invalid parameter combination, Class=*P1* Action=*P2*****Reason:**

A procedure call had an invalid Class-Action combination.

System Action:

Process terminates.

User Action:

This is an internal error. Contact Technical Support.

W3RSS003**Channel *P1* is not registered****Reason:**

A procedure call was made requesting RSS Channel *P1* but the channel is not currently registered.

System Action:

Process terminates.

User Action:

This is an internal error. Contact Technical Support.

W3RSS004**RSS Get Request Channel=*P1* User=*P2* Agent=*P3*****Reason:**

An RSS client issued a get request for RSS channel *P1*.

These messages are informational and only appear if the &gbl\$W3RSLOG global variable is set to Y.

System Action:

Processing continues.

User Action:

None.

W3SM1001

Processing error, P1

Reason:

The web server has detected an internal processing failure. *P1* is the error condition detected:

UNABLE TO OBTAIN LOCK, RC=retcode

TRANSFER FAILED: MSG=sysmsg

MDO ERROR: MDO FDBK=mdofdbk

TIMEOUT ON TRANSFER UNEXPECTED TRANSFER MESSAGE: MSG=sysmsg

START FAILED: RC=retcode MSG=sysmsg

TRANSFER FAILED: RC=retcode MSG=sysmsg

WRITE FAILED: RC=retcode

SETVARS ERROR MSG=sysmsg

System Action:

The web server continues processing.

User Action:

Report the error to your product support representative.

W3SM1010

Invalid or missing old password, please re-enter

Reason:

The OLD PASSWORD field on the Password Change Panel is invalid or was not entered.

System Action:

The Password Change panel appears.

User Action:

Enter the correct old password and the new password.

W3SM1011**Invalid or missing new password, please re-enter****Reason:**

The NEW PASSWORD field on the Password Change Panel is invalid or was not entered.

System Action:

The Password Change panel appears.

User Action:

Enter the correct old password and the new password, and verify passwords.

W3SM1012**Invalid or missing verify password, please re-enter****Reason:**

The VERIFY PASSWORD field on the Password Change Panel is invalid or was not entered.

System Action:

The Password Change panel appears.

User Action:

Enter the correct old password and the new password, and verify passwords.

W3SM1013**Old and new passwords are the same, please re-enter****Reason:**

The OLD PASSWORD and NEW PASSWORD fields on the Password Change panel have the same value. The new password must be different from the existing (old) password.

System Action:

The Password Change panel appears.

User Action:

Enter the correct old password and the new password, and verify passwords. The New and Verify Password values must be the same.

W3SM1014

New and verify passwords are different, please re-enter

Reason:

The NEW PASSWORD and VERIFY PASSWORD fields on the Password Change panel have different values. These must be the same to ensure that the correct new password is stored.

System Action:

The Password Change panel appears.

User Action:

Enter the correct old password and the new password, and verify passwords. The New and Verify Password values must be the same.

W3SM1015

Password update error, return code is P1

Reason:

The password update failed. The return code from the SECCALL CHANGE operation appears.

System Action:

The Password Change panel appears.

User Action:

Enter the correct old password and the new password, and verify passwords. The New and Verify Password values must be the same.
If this problem persists, contact your product support office.

W3SM1101**PROCESSING ERROR, P1****Reason:**

The web server has detected an internal processing failure. *P1* is the error condition detected:

TRANSFER FAILED: MSG=sysmsg

MDO ERROR: MDO FDBK=mdofdbk

TIMEOUT ON TRANSFER UNEXPECTED TRANSFER MESSAGE: MSG=sysmsg

System Action:

The web server will continue processing.

User Action:

Report the error to your product support representative.

W3SM1104**URL NOT FOUND, P1****Reason:**

The web server is not configured to process the URL (Uniform Request Locator) as indicated by *P1* .

System Action:

HTTP response 404 indicating 'Not Found' is returned to the client.

User Action:

Report the error to your system administrator. Check that the requested URL is correctly formatted and that the requested application has registered for web access.

W3SP1101

URL NOT FOUND, *P1*

Reason:

The web server is not configured to process SOAP requests to the URL indicated by *P1*.

System Action:

HTTP response 404 indicating 'Not Found' is returned to the client.

User Action:

Report the error to your system administrator.

Check that the requested URL is correctly formatted and whether a SOAP request was intended.

W3SP1102

HTTP METHOD *P1* not supported for Soap requests

Reason:

The web server SOAP handler only supports the HTTP GET and POST methods. The inbound HTTP request specified an invalid method, *P1*.

System Action:

HTTP response 405 indicating 'Method Not Allowed' is returned to the client.

User Action:

Report the error to your system administrator.

Ensure that the application specifies either the POST or GET HTTP methods.

W3SP1103**Missing Service request for HTTP Soap request****Reason:**

The web server SOAP handler received a SOAP request, which failed to specify the service name. SOAP requests received using HTTP GET must specify the service name in the URL. SOAP requests received using HTTP POST must specify the service name in the inbound SOAP XML based on the service schema.

System Action:

HTTP response 400 indicating 'Bad Request' is returned to the client.

User Action:

Report the error to your system administrator.

Correct the URL for the HTTP GET requests or the inbound SOAP XML.

W3SP1104**Invalid Metric name *P1* passed on GetMetric Soap request****Reason:**

The web server SOAP handler received a SOAP request for the GetMetric service. However, the metric name, *P1* , was either invalid or unknown.

System Action:

HTTP response 400 indicating 'Bad Request' is returned to the client.

User Action:

Report the error to your system administrator.

Correct the metric name as specified by the client.

W3SP1105

Unknown Soap Service name *P1* passed on HTTP Soap request

Reason:

The web server SOAP handler received a SOAP request for an unknown service.

System Action:

HTTP response 400 indicating 'Bad Request' is returned to the client.

User Action:

Report the error to your system administrator.

Correct the client to specify a valid service name supported by the SOAP handler.

W3SV1001

WEB SERVER ALREADY ACTIVE, ID *P1*

Reason:

A web server has been started when one is already active. *P1* is the process ID of the active server.

System Action:

None.

User Action:

None.

W3SV1002**PROCESSING ERROR, P1****Reason:**

The web server has detected an internal processing failure. *P1* is the error condition detected:

VARIABLE ERROR ACCESSING KEY *key-value*

SERVICE PROCEDURE UNDEFINED *port application*

START FAILED: RC=*retcode* MSG=*sysmsg*

TRANSFER FAILED: RC=*retcode* MSG=*sysmsg*

PROFILE EDS FAILED: MSG=*sysmsg*

System Action:

The web server will continue processing. However, some applications will not be accessible.

User Action:

Report the error to your product support representative.

W3SV1003**REQUEST FAILED FOR PORT= P1, P2, ERROR= P3, VERRIN= P4****Reason:**

A web server request for the named port, *P1*, has failed. *P2* is the request failure reason. *P3* is the error name. *P4* is the TCP/IP stack error code.

System Action:

SOCKET ACCEPT is retried. If it fails again the port is closed and reopened. SOCKET REGISTER is not retried.

User Action:

Report the error to your system administrator. Use the error information to determine the cause of the failure. If necessary use TCPIP STOP followed by TCPIP START to restart TCP/IP communications.

W3SV1009

Server terminated by operator

Reason:

The web server has been terminated by a command.

System Action:

The web server terminates.

User Action:

None.

W3SV1010

Server cache reset

Reason:

The web server caches have been reset.

System Action:

The web server cache has been cleared.

User Action:

None.

W3SV1011

Trace option set to opt

Reason:

The web server trace option is set to YES or NO.

System Action:

The web server starts or stops tracing activity to the SOLVE log.

User Action:

None.

W3SV1012**Server request not recognised: aaaaa****Reason:**

The web server received an unrecognised control command.

System Action:

The command is ignored.

User Action:

Correct the command and resubmit it.

W3SV1013**Invalid data: aaaaa****Reason:**

The web server received an invalid command string.

System Action:

The command is ignored.

User Action:

Correct the command and resubmit it.

W3SV1014**WebCenter is active (NCLID= P1)****Reason:**

WebCenter, procedure \$W3SV10Z, has completed initialization and is active.

System Action:

None.

User Action:

You can now access a web-enabled product by entering its URL in your web browser.

W3SV1015

WebCenter is not active: P1

Reason:

WebCenter is not active because of P1 , which can indicate one of the following reasons:

The TCP/IP interface has become inactive.

A socket error occurred for the WebCenter interface port.

System Action:

WebCenter waits until the TCP/IP interface becomes active. For a socket error, WebCenter automatically retries to open the interface port.

User Action:

Review the activity log to determine the cause.

To display the log, enter \$LOG .

W3SV1101

CLIENT CONNECTED USING SOCKET P1, ADDRESS= P2 PORT= P3

Reason:

The web server has accepted a client connection.

System Action:

The web server waits for the client request.

User Action:

None.

W3SV1102**PROCESSING ERROR, P1****Reason:**

The web server has detected an internal processing failure. *P1* is the error condition detected:

TRANSFER FAILED: MSG=sysmsg

MDO ERROR: MDO FDBK=mdofdbk

TIMEOUT ON TRANSFER UNEXPECTED TRANSFER MESSAGE: MSG=sysmsg

PROFILE EDS FAILED: MSG=sysmsg

SOCKET NOT CLOSED: url

UNDEFINED RETCODE: rc

RECURSION ERROR: URL=url

MDO PACKING ERROR: MDO FDBK=mdofdbk

MDO SIZE ERROR START FAILED: RC=retcode MSG=sysmsg

WRITE FAILED: RC=retcode

System Action:

The web server will continue processing. However, some applications will not be accessible.

User Action:

Report the error to your product support representative.

W3SV1103**ERROR IN REQUEST FORMAT, DATA= P1****Reason:**

The web server has received an incorrectly formatted HTTP request. *P1* is the data received.

System Action:

Processing continues.

User Action:

Report the error to your system administrator. Check that the web browser client is using the HTTP protocol.

W3SV1104

URL NOT FOUND, P1

Reason:

The web server is not configured to process the URL (Uniform Request Locator) as indicated by *P1* .

System Action:

HTTP response 404 indicating 'Not Found' is returned to the client.

User Action:

Report the error to your system administrator. Check that the requested URL is correctly formatted and that the requested application has registered for web access.

W3SV1105

URL INCORRECTLY FORMATTED, P1

Reason:

The web server is not configured to process the URL (Uniform Request Locator) as indicated by *P1* .

System Action:

HTTP response 400 indicating 'Invalid Request' is returned to the client.

User Action:

Report the error to your system administrator. Check that the requested URL is correctly formatted. If necessary, contact your product support representative.

W3SV1106

ACCESS TO URL DENIED, P1

Reason:

Access to the URL as indicated by *P1* has been denied.

System Action:

HTTP response 403 indicating 'Forbidden' is returned to the client.

User Action:

If access is required, contact your system administrator.

W3SV1107**AUTHORIZATION FAILED: P1****Reason:**

The web server has detected an error in processing an authorized HTTP request. The conditions detected:
NO AUTHORIZATION HEADER PRESENT NON-BASIC AUTHORIZATION
ATTEMPTED PASSWORD OMITTED

System Action:

HTTP response 401 indicating 'Authorization Required' is returned to the client.

User Action:

Retry your signon using a valid SOLVE userID and password.

W3SV1108**MODS PROCESS TYPE P1 NOT SUPPORTED****Reason:**

The web server has received a MODS request that specifies an unsupported type of *P1* .

System Action:

HTTP response 404 indicating 'Not Found' is returned to the client.

User Action:

Report the error to your system administrator. Check that the URL is correctly formatted and specifies a supported MODS type of 'HM' or 'MS'.

WRCALL01**Report output for P1 P2 deleted by P3 P4****Reason:**

Report output has been deleted for the indicated report run. All report output files and the run subdirectory have been deleted from HFS.

System Action:

None.

User Action:

None.

WRCALL02

Report P1 schedule P2 deleted by P3 P4

Reason:

The *P2* schedule for the *P1* report has been deleted.
Note that this does not delete any report output produced by this schedule.
Such report output will expire naturally or may be deleted by a separate request.

System Action:

None.

User Action:

None.

WRCALL03

No report names could be retrieved - Report functions are not available

Reason:

A request was made for a list of report names. The ReportCenter application interface has attempted to list all report definitions from their HFS directory, but this has failed because of the reason, P1 . This is caused most frequently by incorrect or incomplete product installation, region initialization failure, or incorrect HFS file permissions.

System Action:

No NetMaster Reports or Sample Reports functions are available.

User Action:

Contact your system administrator. Additional problem information may appear in the activity log. Use standard OMVS functions to list the attributes of the report definition directory.

This message can be caused by a variety of conditions as follows:

HFS directory error The report definition directory path may not exist or its file system may not be mounted.

Ensure that the OMVS UID of the NetMaster region has at least *read* access to the report definition directory.

No directory entries The ReportCenter files, including the distributed report definition files, must be correctly installed in HFS.

The exact path name prefixes of the distributed Reporter files must be entered into the REPORTCENTER parameter group in the ReportCenter control region.

If necessary, update and reapply the parameter group.

WRCALL04**P1 function failed: P2 P3 P4 P5****Reason:**

The *P1* function was attempted but encountered an HFS error.

System Action:

The operation requiring this function cannot be completed.

User Action:

Contact your system administrator. Additional problem information may appear in the activity log. Run the ReportCenter function test for additional information.

In general, these problems are caused by environmental HFS conditions, or incorrect installation or initialization.

Ensure that the HFS file or directory permissions are adequate for the function being attempted.

Ensure that ReportCenter files have been installed correctly in HFS.

Ensure that the distributed and working directory names have been entered correctly into the REPORTCENTER parameter group in the ReportCenter control region. If necessary, update and reapply the group.

WRCALL05**No completed runs found for P1 P2 P3 P4****Reason:**

A request was made for a list of all report runs, but no runs have been completed yet.

System Action:

None.

User Action:

For information about how to schedule a report to be run regularly or how to run a report on demand, see the online help and the *ReportCenter Guide*.

WRCALL06

Information not available. An error occurred processing command P1, error: P2

Reason:

The ReportCenter control region attempted to issue a command to the ReportCenter Java Task, but an unexpected condition or response was encountered.

System Action:

The command is not processed.

User Action:

Retry the operation. If the problem recurs, contact your system administrator. Additional error detail may be available from:

- NetMaster activity log - ReportCenter Java Task log - ReportCenter function test output

Specific error conditions include:

Unknown Server The name of the data warehouse server is unknown. This indicates an error in region initialization. Ensure that the data warehouse server details in the REPORTCENTER parameter group are correct. If necessary, update and reapply this group.

Connection Error The region could not establish a socket connection with the NetMaster ReportCenter Java Task. This could indicate network or socket errors.

Timeout The ReportCenter Java Task took an excessive amount of time to respond to the command. This could indicate network congestion, or network or socket errors. The Java Task may also have been just started, and has not finished its own initialization.

Unexpected response ID No SHOWHEADER keywords SHOWELEMENT SETVARS error Unknown response keyword These are internal errors. Contact Technical Support.

WRCALL07**Prompt retrieval failed for report P1, P2 P3 P4****Reason:**

An attempt to retrieve the prompt values for report *P1* failed with error *P2* . The prompt criteria file names cannot be extracted from the report definition file.

System Action:

No criteria values can be retrieved. This report cannot be scheduled or run on demand.

User Action:

The ReportCenter application interface could access the report definition file but could not extract any prompt names from it. This may indicate a problem with the report definition file.

Report definition files are distributed as text files named ?reportname.xml, and are installed into the .../nm/reporter/?version/reports/definitions HFS directory.

In general, these files should not be altered after installation. New report definition files must conform to the standard specified in the DTD file, also present in the same directory.

Error conditions include:

Empty XML file This could result from a product installation problem, or manual interference with the file

XML prompt extract problem This could result from incorrect contents of the file

Use standard OMVS functions to examine the file. It should be in text format, and complete according to the DTD. Ensure that the SMP installation of the report definition files completed without error.

Use OCS tracing command REPCALLS and repeat the operation. Contact Technical Support, providibg them the activity log.

WRCALL08

Database access failed P1: P2

Reason:

The ReportCenter control region attempted to issue a command to the Report Service, but an unexpected condition or response was encountered.

System Action:

The command is not processed.

User Action:

Retry the operation. If the problem recurs, contact your database administrator.

Common error conditions are:

Possible database connection error A command to display database or report generator details failed. These commands require a successful JDBC database connection. A common cause of this situation is when the ReportCenter Java Task started task cannot establish a connection with the database, or when there has been a database connection but it has been interrupted.

Do the following:

- Ensure that the DBMS is active
- Restart the ReportCenter Java Task

Database connection failures can be caused by many environmental factors such as security, RRS, JDBC issues, and so on.

Java SQL Exception This indicates that a database connection is active, but a specific database-related command failed with an SQL Exception.

Further details of the exception should be available from the Java Task Log. Full STDERR text is logged to the .../nm/reporter/usr/adaptor/stderr.txt file and may be accessed with standard IBM OMVS facilities such as OBROWSE. Additional error detail may be available from:

- ReportCenter Java Task log
- ReportCenter function test output, particularly the Java Framework (JAVAFW) and database (DB) tests
- ReportCenter Java Task STDERR output - Your database log files

WRCALL09**The definition file for this report could not be accessed****Reason:**

An attempt to retrieve the definition file for this report failed. Detailed file errors have been written to the NetMaster Activity Log.

System Action:

This report cannot be scheduled or run on demand.

User Action:

The ReportCenter application interface could not access the report definition file for this report.

Report definition files are distributed as text files named ?reportfilename.xml, and are installed into the .../nm/reporter/?version/reports/definitions HFS directory.

Causes of this error include:

File Permissions of the HFS file or directory do not allow this NetMaster region to read the report definition file. This is the most common and likely cause.

Directory is empty. ReportCenter SMP installation did not complete. This directory is an SMP Target Library.

Incorrect directory name. The directory pathname of the ReportCenter distributed code is not correct. Could be caused by region setup errors, SMP maintenance errors, or incorrect manual intervention.

For further information:

- See related messages on the NetMaster Activity Log
- Use standard OMVS functions to list the HFS directory contents
- Use OCS commands REPTTEST CODE and REPTTEST HFS

Verify that the RACF/ACF2 user id associated with this NetMaster region has READ access to the directory and all files.

Ensure that the SMP installation of the ReportCenter feature completed without error. Ensure that this NetMaster region has been correctly set up by the installation and setup utility.

Ensure that the directory pathnames in the REPORTCENTER parameter group have been correctly entered, and that this group has been successfully actioned.

WRCALL10

Prompt values for criteria P1 are not available

Reason:

The ReportCenter application interface attempted to read the prompt value file for the specified criteria, but the operation failed. A frequent cause of this problem is insufficient HFS file permissions for the ReportCenter control region.

System Action:

Functions requiring lists of prompt values, such as Run Report on Demand or Add to Schedule, will not work for this report.

User Action:

Review the NetMaster activity log for additional detail of the HFS file errors. Ensure that the file exists at the specified path - file names are case sensitive. If the file does not exist, the Prompt Generator Service may not have run successfully. Check the ReportCenter Java Task log for any error messages at the time of the last scheduled Prompt Generator timer.

Ensure that UNIX file permissions allow at least *read* access to the UID associated with the OMVS segment of the NetMaster started task's RACF or ACF2 user ID.

If the file has been deleted, wait until the ReportCenter Java Task Prompt Generator Service runs again and it should be recreated.

WRCALL11

Schedule could not be added, could not add new HFS directory

Reason:

A mkdir UNIX command was issued to add the directory for a new schedule, but the command failed. A frequent cause of this error is insufficient UNIX file or directory permissions.

System Action:

The report schedule is not added.

User Action:

See the NetMater activity log for details of the HFS error. Ensure that the Report Center region's OMVS UID has *write* access to the schedules directory.

WRCALL12**Error accessing parameter file P2 P1 RC/fdbk= P4 P5 sysmsg= P6****Reason:**

The ReportCenter application interface attempted to read the ReportCenter installation parameters but encountered an error.

The ReportCenter parameter data set member is not accessible. This indicates either a failure in the region setup or subsequent manual interference with the data set. It could also mean that ACF2 or RACF *read* permissions are set incorrectly for the data set.

One of the following errors was found:

- The PARMLIB data set for this region does not exist.
- The data set exists but does not contain the WRPARMS member.
- The WRPARMS member exists but does not contain the correct parameters.
- Data set security prevented the data set from being read.

The WRPARMS member is used to communicate common Reportcenter parameters that are entered during installation and the subsequent setup of regions that include ReportCenter.

System Action:

The ReportCenter parameters are not available. ReportCenter region initialization may fail.

User Action:

Contact your system administrator. Ensure that:

- The parameter data set exists. It is named dsnpref.rname.PARMLIB, where: dsnpref is the data set prefix used during installation rname is the name of the region
- The WRPARMS member exists.
- Your security system allows NetMaster to read this data set.
- The member contains the following lines:

STC=java-task-name HFS1=hfs-path-prefix

where: java-task-name is the name of the ReportCenter Java Task started task. hfs-path- prefix is the prefix of the directory path that contains the distributed code for ReportCenter.

These values were entered during installation and region setup. Additional error information may appear in the NetMaster activity log.

WRCALL13

This report could not be run, as there seems to be no current active database connection.

Reason:

A REPORTRUN command was sent to the ReportCenter Java Task Control Service. The Java Task responded, but the response indicated that the Report service is not available. This occurs when there is no active database connection between the Java Task and the DBMS.

System Action:

The on demand report request was not processed.

User Action:

Ensure that your ReportCenter mainframe SQL database is running, and that a connection has been established between the database and the ReportCenter Java Task.

Database connections will fail under the following conditions:

- The database is not active when the ReportCenter Java Task starts
- The database is stopped after the ReportCenter Java Task has started

Due to environmental factors, database connections may not be reestablished immediately. In general, we recommend that you stop and restart the ReportCenter Java Task after every restart of your database system.

(If you are using CA Datacom/AD, be aware that the CA Datacom Server JDBC job must always be active, in addition to the MUF job.)

If the database is active, the Java Task has been restarted, and the problem persists, contact Technical Support. You must have the following documentation available:

- NetMaster activity log at the time of the failure
- Java Task log at the time of the failure
- ReportCenter Function Test output from the time of the failure (Type REPTTEST from OCS)

WRCALL14

This report could not be run. A timeout condition occurred communicating with the Report Generator.

Reason:

A REPORTRUN command was sent to the ReportCenter Java Task Control Service, but no response was received.

System Action:

The on demand report request was not processed.

User Action:

Retry the operation. If the problem recurs, contact your system administrator. Timeout conditions usually indicate network congestion, or errors with the IP stack or socket communications. They can also occur in excessively busy NetMaster regions.

Timeouts may occur if the ReportCenter Java Task is started and has not yet finished its own initialization. In this case, retry the request when the initialization has completed.

See the NetMaster activity log and the ReportCenter Java Task log at the time of the error for any abnormal network conditions.

WRCALL15

This report could not be run. An unrecognized response was received from the ReportCenter Java Task: P1 P2 P3 P4 P5 P6

Reason:

A REPORTRUN command was sent to the ReportCenter Java Task Control Service by using the OML to Java Task interface. This interface returned a response that is not for the calling process.

System Action:

The on demand report request was not processed.

User Action:

Retry the request. Stop and restart the ReportCenter Java Task started task. If the problem recurs, contact Technical Support.

You must have the following documentation available:

- NetMaster Activity log at the time of the failure
- Java Task log at the time of the failure
- ReportCenter Function Test output from the time of the failure (Type REPTTEST in OCS)

WRCALL16

Shutdown of ReportCenter Java Task task P3 on P1 requested by P2

Reason:

The user, P2 , has confirmed a request to stop the P3 ReportCenter Java Task on the P1 system.

System Action:

The ReportCenter Java Task will terminate.

Termination may be delayed while report scheduler cleanup processing is done and all Java threads are allowed to stop in an orderly way.

Under normal operation, the Java task should run continuously. It should only be restarted when the database has been restarted.

ReportCenter functions will be unavailable until the started task is restarted.

No reports can be run, and no data will be added to the database. Subsequent function tests will not be performed or will fail.

User Action:

Ensure that your system operator restarts the NetMaster Java Task as soon as possible.

WRCALL17

There appears to be no data yet in the database for this report. No reported "P1" values were found. This report cannot be generated at this time.

Reason:

A request to run or schedule this report could not be accepted. There is currently no record of any *P1* resources that have had data collected for any of the attributes needed for this report.

System Action:

The requested report will not be run or scheduled.

User Action:

Contact your report administrator.

Ensure that the required resources and attributes are being correctly monitored, and that the data collected by the ReportCenter data regions is being forwarded to the ReportCenter Java Task Data Warehouse Service.

Ensure that you are selecting a time frame for which there is data. Data for a specific report may be available for some time frames but not others, depending on how long you have been collecting data and what your data retention periods are.

Run the DataWarehouseStatus report to get a general idea of the data in your database.

Ensure that the ReportCenter Java Task Prompt Generator Service is running regularly and terminating normally.

Ensure that you are licensed for the product that collects the data.

WRCALL18

Mandatory parameter values missing from P1 P2

Reason:

The ReportCenter PARMLIB(WRPARMS) parameter data set member does not contain one or both of the following ReportCenter parameters: - STC - HFS1
You are prompted for these during the ReportCenter installation and region setup processes. This indicates an error in product installation or region setup.

System Action:

ReportCenter functions may work incorrectly or incompletely with unpredictable results.

User Action:

Contact your system administrator.
Verify that the member contains the following lines:
STC=reportcenter-java-task HFS1=hfs-path-prefix
where: reportcenter- is the name of the ReportCenter Java Task java-task started task. hfs-path-prefix is the prefix of the directory path that contains the distributed code for ReportCenter.

WRCALL19

ReportCenter Java Task P1 P2 P3 P4 P5 P6 P7 P8

Reason:

This message reports the results of a request to start the ReportCenter Java Task. Possible results are:

- The started task is already active. No action was taken.
If you have made initialization parameter changes, the started task must be explicitly stopped and then restarted to pick up these changes. Beware that stopping the task will disrupt any data feeds and report generation.
- The task is not already active - an MVS Start command was issued
- The task is not active and an attempted start command failed. Additional information may be available on the Activity Log.

System Action:

If it is not already active, an attempt will be made to start the Java Framework started task.

User Action:

If a START system command was attempted and failed, contact your systems programmer. Additional details may be available on the Activity Log.

WRCALL20

ReportCenter Java Task P2 is not active on P3 - P1 information could not be obtained.

Reason:

A request was made for p1 status information but the ReportCenter Java Task, which provides this information, is not currently active.

The ReportCenter Java Task is set up at NetMaster product installation time. It runs as an MVS started task named *P2* on the *P3* system.

Under normal operation, the ReportCenter Java Task should run continuously. It should only be restarted when the database has been restarted or database connections have been otherwise interrupted.

System Action:

The command cannot be processed. ReportCenter functions will be unavailable until the started task is started. No reports will be run, no data will be added to the database, and no commands will be processed.

User Action:

Contact your system operator to investigate why the task is not active. Start the ReportCenter Java Task started task on the system where the ReportCenter control region is running.

WRCALL21

ReportCenter control region P2 cannot be contacted, P1 request failed

Reason:

An attempt was made to perform a ReportCenter function remotely, by sending a request over the APPC link to the ReportCenter control region.

An APPC failure has occurred between this local ReportCenter data region and the remote ReportCenter control region. This indicates that the APPC link between the two regions is not defined correctly, not active, or in a status that does not support communications.

System Action:

The requested function cannot be performed.

User Action:

Check that the ReportCenter control region is active. Activate the APPC link between this region and the ReportCenter control region, and retry the operation. Issue the OCS command, **SHOW LINKS TYPE=APPC**, to see the status of the link. Additional APPC error messages may appear in the activity log.

WRCALL22

**Report P1 could not be run as the Report Generator is not available.
The ReportCenter Java Task P2 is not active on P3.**

Reason:

A request was made to run an on-demand report, but the ReportCenter Java Task is not active. The ReportCenter Java Task consists of Java code that runs in the OS/390 (z/OS) UNIX system services environment. It runs as an MVS started task named *P2* on the *P3* system.

Under normal operation, this task should run continuously.

System Action:

The on demand report cannot be run. ReportCenter functions will be unavailable until the started task is started. No reports will be run, no data will be added to the database, and no commands will be processed.

User Action:

Contact your system operator to investigate why the task is not active. Start the ReportCenter Java Task on the system indicated. Your DBMS that supports the ReportCenter mainframe database must also be running and accepting connections.

After the ReportCenter Java Task is active and has finished its initialization, retry the on- demand report request.

If the report request fails, contact your systems programmer.

WRCALL23

ReportCenter Java Task P1**Reason:**

This message is produced as a result of checking the status of the ReportCenter Java Task (z/OS Started Task name *P1*).

The message indicates one of the following:

- ReportCenter started task *P1* active, connected to *?database-name*

The started task is active, is communicating with this region, and has an active connection to the specified database.

- ReportCenter started task *P1* is inactive on *?sysid (reason)*

Under normal operation, this started task should run continually. While it is inactive, most ReportCenter functions are unavailable.

- ReportCenter started task *P1* not responding on *?sysid*

The started task did not respond to commands from this region. This can result from a variety of conditions, such as the task may be busy doing database work, or there may be socket problems with the connection.

- *P1* JVM Memory In Use *nnnn* Total *nnnnn* Free *nnnn*

This message displays memory statistics obtained directly from the z/OS Java Virtual Machine.

Total Memory: The total amount of memory currently available for current and future objects, measured in bytes.

Free memory: An approximation to the total amount of memory currently available for future allocated objects, measure in bytes.

System Action:

If the started task is not active, ReportCenter functions are unavailable until it is started. No reports are run and no data is be added to the database.

User Action:

- ReportCenter started task *P1* active, connected to *?database-name*

No action is required. This should be the normal state.

- ReportCenter started task *P1* is not active on *?sysid (reason)*

When possible, a reason is provided. Reasons include:

- The task deliberately shut down due to external errors
- The task stopped and shut down in response to an OCS JFSTOP command
- The task was unexpectedly cancelled, or abended

If there is no reason provided, investigate why this started task is not active. Before restarting *P1*, ensure the requisite database tasks are active. For DB2, this means the DB2 subsystem, and RRS. For CA Datacom, this means the Datacom MUF and Datacom Server.

If this task stops immediately when started, examine the ReportCenter Java Task log file. Under some circumstances, most commonly the unavailability of the database, the ReportCenter Java task terminates.

For other failures, examine the JCL output of the started task.

The started task runs the IBM BPXBATCH facility, which writes output to the stdout and stderr files in the `.../nm/reporter/usr/adaptor` directory. Examine these files for any error messages.

Common causes of job failure during initial implementation include the following:

- Incorrect installation of the JDK software
- Incorrect setup of the USS environment
- Incorrect specification of the JDBC class directory

If required, update the parameters in the REPORTCENTER Customizer parameter group and if necessary, regenerate the initialization file by actioning this group. Stop and start the task to read the updated initialization file.

■ ReportCenter started task *P1* not responding on *?sysid*

Check the activity log and the ReportCenter Java Task log. Use the OCS command REPTST STC to list extracts from the STDOUT and STDERR files.

Other causes can be region space/workload/timeout problems, IP network problems preventing a socket connection to *P1*, delays in database processing, or the task may be in the process of shutting down.

■ *P1* JVM Memory In Use *nnnn* Total *nnnnn* Free *nnnn*

This is an informational message only. These figures may be useful to your USS Administration, and tuning and performance groups.

The JVM heap size plays an important role in overall Java application performance. Implementation of Java garbage collection is JVM-specific: see the appropriate IBM mainframe Java documentation for details.

WRCALL24**ReportCenter Public Live Reports Web Page could not be displayed****Reason:**

You attempted to display the public ReportCenter page, but the report run list for this page could not be retrieved.

System Action:

None. The web page is displayed with an error message.

User Action:

Additional error information will appear before or after this message on the activity log. Rectify the condition and retry the ReportCenter page.

Some common causes of this condition include:

- The ReportCenter web page has been disabled. This is a web page that requires no NetMaster logon. Some sites disable all access to this page, for security reasons. This is set in the REPORTCENTER parameter group.
- The link between this NetMaster region and the ReportCenter control region is not active.
- The ReportCenter control region is not running.
- HFS file or directory errors prevented retrieval of the report run list. These could include file permission errors, or file system mounting errors.

WRCALL25

ReportCenter HFS1 directory was not set from P1 P2

Reason:

The pathname of the HFS directory that contains the ReportCenter distributed HFS code could not be determined.

This HFS directory pathname is normally set as follows:

- When the ReportCenter feature is selected for installation, the installation utility prompts you to enter the pathname of an HFS directory. This directory is the SMP/E Target Library for ReportCenter's distributed HFS files.
- JCL generated by the installation utility creates this HFS directory, and does an SMP/E APPLY of the ReportCenter code into this directory.
- When the ReportCenter feature is selected for setup in a region, the installation utility writes this directory pathname to the ...PARMLIB(IIAPARMS) parameter dataset that it creates for that region.
- When the region is started, initialization processing reads the parameter dataset, retrieves the HFS pathname value, and makes it available to ReportCenter.

This error condition indicates a failure in ReportCenter installation, region setup, or region initialization.

System Action:

ReportCenter functions will work incorrectly or incompletely with unpredictable results.

User Action:

Do not proceed with any ReportCenter functions until this error is rectified. Ensure that both ReportCenter feature installation and NetMaster region setup were completed correctly and without errors. Review the region initialization log for any related error details.

Verify that the PDS member contains the following line:

WRHFS1=hfs-path-prefix

where: hfs-path-prefix is the directory pathname that contains the distributed code for the ReportCenter feature.

WRCALL26

This report could not be run. A socket error occurred communicating with the Report Generator.

Reason:

An attempt was made to send a REPORTRUN command to the ReportCenter Java Task Control Service, but a response was received from the link manager on this NetMaster region indicating that there was a problem with the IP connection that the command was sent over.

The most common problems are Socket Send and Socket Receive errors. More detailed error messages should be written to the NetMaster log.

System Action:

The on-demand report request was not processed.

User Action:

The causes of some socket failure conditions can be transitory. Retry the operation. If the problem recurs, contact your system administrator.

If no socket connections can be established between this region and the Java Task, ensure that the REPORTCENTER parameter group initialized successfully. Go to option /DWS and verify that the correct IP address and port are being used to communicate with the Java Task.

See the NetMaster activity log and the ReportCenter Java Task log at the time of the error for any abnormal network conditions. Display the current connections and socket allocations.

WRCALL99

This message contains trace information produced by the ReportCenter Application Interface.

Reason:

Trace information produced by the ReportCenter application interface is written to the NetMaster activity log as message WRCALL99; HFS file access trace data is written as message UTUSS099. Under normal circumstances, call tracing is not enabled.

To activate ReportCenter application interface call tracing when requested by your support staff, enter the following OCS command:

REPCALLS

This will produce a large number of trace messages to the activity log, and should be left enabled only as long as necessary.

The same REPCALLS command must then be used to turn the tracing off.

System Action:

None.

User Action:

Provide this information to your product support staff, when requested.

WRDFWI01**The Data Feed Destination RC\$JAVATASK1 has been added successfully with IP Host *P1* and Port Number *P2*****Reason:**

A data feed destination has been added with the displayed IP address and port number.

A data feed destination refers to a ReportCenter Java Task. This is the Java component of ReportCenter, which runs as an MVS started task under the z/OS Unix System Services environment.

Data that you select to be sent to ReportCenter is sent from this region to the Java task. The Java task will add the data to your mainframe SQL database.

System Action:

None.

Data can be sent to ReportCenter. This is controlled at a specific resource level by the 'Send to ReportCenter' flag.

In order for a data feed to work correctly, there must be IP connectivity between this region, and the IP address and port specified for the data feed. Any related IP socket or network errors are in the activity log.

User Action:

None.

WRDFWI02

An IP Host name or address must be specified

Reason:

No IP host details are specified.

In order for a data feed to work correctly, there must be IP connectivity between this region, and the IP host and port specified for the data feed. Any related IP socket or network errors are in the activity log.

System Action:

None.

User Action:

To enable the ReportCenter data feed from this region, specify the following values:

- In the IP Host field, specify the IP host name or address of the system where the ReportCenter Java task is running.
- In the Port Number field, specify the port number used when the Java task was implemented. That port number is specified in the REPORTCENTER parameter group for the ReportCenter control region.

To disable the ReportCenter data feed from this region, enter blanks in both the IP Host and Port Number fields.

WRDFWI03

Link Blackout Start Time must be in the range of 0 to 59

Reason:

You specified a value for the link blackout start time; however, the value must be numeric and in the range 0 to 59.

The link blackout start time specifies the beginning of a period where data is not sent to the ReportCenter Java Task from the region. Data samples are collected during this period, but remain in the Data Warehouse Server queue.

System Action:

None.

User Action:

Enter a numeric value in the range 0 to 59.

WRDFWI04**Link Blackout Stop Time must be in the range of 0 to 59****Reason:**

You specified a value for the link blackout stop time; however, the value must be numeric and in the range 0 to 59.

The link blackout stop time specifies the end of a period where data is not sent to the ReportCenter Java Task from the region. Data samples collected during the blackout period are sent to the ReportCenter Java Task.

System Action:

None.

User Action:

Enter a numeric value in the range 0 to 59.

WRDFWI05**Data Warehouse Server blackout period is active from P1 to P2 minutes****Reason:**

A blackout period is specified during each hour for the period defined by P1 and P2.

System Action:

During a blackout period, data sampling continues, but all records are stored in the Data Warehouse Server queue. At the end of the blackout period, the queued records are automatically sent to the ReportCenter Java Task. Use the shortcut */DWS* to view the Data Warehouse server and scroll right to view the queue.

User Action:

None.

WRDFWI06

No action required: ReportCenter data feed not activated on this region

Reason:

This region includes the capability to send data to ReportCenter, but this capability is not activated. All initialization related to ReportCenter is bypassed.

This message appears if the REPORTDATA parameter group is never updated. It is normal in regions that do not produce report data.

System Action:

None. This region is not yet able to send data to ReportCenter.

User Action:

If you want to enable this region to send data to ReportCenter, you must update and action the REPORTDATA parameter group. Ensure that the ReportCenter control region implementation is completed first.

For more information, see the *ReportCenter Guide*.

If you do not want to enable this region to send data to ReportCenter, no action is required.

WRDFWI07

Invalid blackout period specified

Reason:

You have specified a blackout start minute and end minute of equal value. This is not a valid blackout period. The Link Blackout Start Time is the beginning of the blackout during the hour and should be specified as a minute value. The Link Blackout Stop Time is the end of the blackout period and should also be specified as a minute value.

A blackout period allows for the processing load to be spread over the hour. Data sampling continues, but all records are placed in the Data Warehouse Server's queue. At the end of the blackout period, data records are sent to the ReportCenter Java Task.

System Action:

None.

User Action:

Enter a correct value and try again.

WRDFWI08**A Port Number must be specified****Reason:**

The port number used by the ReportCenter Java task is not specified.

In order for a data feed to work correctly, there must be IP connectivity between this region, and the IP host and port specified for the data feed. Any related IP socket or network errors are in the activity log.

System Action:

None.

User Action:

To enable the ReportCenter data feed from this region, specify the following values:

- In the IP Host field, specify the IP host name or address of the system where the ReportCenter Java task is running.
- In the Port Number field, specify the port number used when the Java task was implemented. That port number is specified in the REPORTCENTER parameter group for the ReportCenter control region.

To disable the ReportCenter data feed from this region, specify blanks in both the IP Host and Port Number fields.

WRDFWI09

This IP host name cannot be resolved to an IP address

Reason:

The specified IP host name could not be resolved to an IP address.

The IP host name identifies the LPAR where the ReportCenter Java task is running. You can specify either an IP address for this host or its host name as known by your DNS environment.

If you specify a host name, a socket GetHostByName operation is done to map the host name to its IP address. This operation has failed.

System Action:

None.

User Action:

Specify the correct IP host name of the ReportCenter Java task LPAR:

- Check for typographical errors.
- Use the NSLOOKUP OCS and to check the host name.
- Check your DNS setup for this host name.

Alternatively, specify an equivalent IP address.

To identify the host information, you can, in the ReportCenter control region (which runs on the same LPAR as the ReportCenter Java task), use /IPTTEST to display region IP configuration details.

Note: There may be different IP addresses that you can use to access the same LPAR, depending on its multiple stack, VIPA, or interface setup.)

WRDFWI10

Both Start and Stop Time must be specified if either is specified.

Reason:

If either the Start Time or the Stop Time for the Data Feed Link Blackout is specified, then both values must be specified in order to ensure proper validation and correct blackout times.

System Action:

None. The null value is not accepted.

User Action:

Correct the null value by entering a correct value between 0 - 59. Alternately, null values are accepted for both fields, indicating that no link blackout time is declared.

WRINWI01

Data Feed Destination RC\$JAVATASK1 has been added successfully with IP Address P1 and Port Number P2

Reason:

A data feed destination has been added successfully with the IP Address and Port Number specified.

A data feed destination refers to a ReportCenter Java Task. This is the Java component of ReportCenter, which runs as an MVS started task under the z/OS Unix System Services environment.

Data that you select to be sent to ReportCenter will be sent directly from this NetMaster region to the Java task. The Java Task will add the data to your mainframe SQL database.

A ReportCenter control region such as this region can also function as a data feed region. Data feeds to ReportCenter from a control region work exactly as they do from a data region - data is sent over an IP socket connection between this region and the Java Task.

The control region uses the data feed destination IP address and port to set up additional socket connections to the Java Task when it needs to issue commands to the Java Task. Such commands include status queries, requests to run on demand reports, and so on.

In normal operation, there will be these IP connections between this region and the Java task:

- A permanent connection, to send the collected report data over. In between sending data, this connection waits for data.
- Temporary connections are set up for every command issued. After the command response is received, these connections are closed.
- Permanent connections are also set up between the Java Task and all other data feed regions. These do not involve this region.

System Action:

None. Data can now be sent to ReportCenter if required. This is controlled at a specific resource level by the 'Send to ReportCenter' flag.

In order for a data feed to work correctly, there must be IP connectivity between this NetMaster region and the IP address/port specified for the data feed. Any related IP socket or network errors will appear in the NetMaster activity log.

User Action:

None.

WRINWI02**The ReportCenter Java Task P1 is currently inactive on P2****Reason:**

This is an informational message only.

System Action:

None.

User Action:

If your ReportCenter implementation is in production, ensure that the requisite database and related tasks are active, then start the started task for the ReportCenter Java task.

If you are still in the middle of implementing ReportCenter, leave the started task inactive.

When all external requisite ReportCenter implementation steps are completed, including all JVM installation tasks, database-related tasks and security tasks, and this parameter group has actioned successfully, then start the Java task.

Note: For more implementation information, see the *ReportCenter Guide*.

WRINWI03**Adaptor.ini updated with HFS directory pathnames****Reason:**

The ReportCenter Java Task Adaptor.ini file has been updated with the HFS directory pathnames for the Distributed Code, Schedules and Prompts, Log Files and Report HTML Output.

System Action:

HFS File Adaptor.ini has been updated.

User Action:

None.

WRINWI04

This HFS pathname does not exist or cannot be accessed

Reason:

The HFS pathname either does not exist, or can not be accessed by this NetMaster region.

System Action:

None.

User Action:

Correct the pathname.

Ensure that all HFS filesystems required by ReportCenter are allocated and correctly and permanently mounted.

The RACF/ACF2 userid that owns this NetMaster region's started task must have update access to the ReportCenter user directories.

WRINWI05

The HFS Path for the DB2 JDBC Classes zip file does not exist

Reason:

The specified zip file cannot be found.

System Action:

None.

User Action:

Correct HFS Path for the DB2 JDBC Classes zip file.

WRINWI06**The Database Type must be DB2 or Datacom****Reason:**

ReportCenter supports the following z/OS mainframe SQL Databases:

- DB2 for z/OS Version 7 and above
- CA Datacom r11 and above

System Action:

None.

User Action:

Correct the database type.

WRINWI07**Adaptor.ini updated with Daily Housekeeping start time P1****Reason:**

The ReportCenter Java Task Adaptor.ini file has been updated with a start time for housekeeping services, such as the AGGREGATE, SCHEDULER, PROMPTGENERATOR and REPORTEXPIRY services.

System Action:

HFS File Adaptor.ini has been updated.

User Action:

None.

WRINWI08

P1

Reason:

This message contains information about the JCL generated to run the ReportCenter Java Task.

The ReportCenter Java Task is the Java component of ReportCenter. It runs as an MVS started task, under the control of z/OS Unix System Services. It communicates with NetMaster regions over IP socket connections.

The RACF/ACF2 user ID associated with this started task must be set up to access OMVS (ie. have an OMVS segment) and must have at least read access to the distributed code directory, and write access to the user directories.

System Action:

None.

User Action:

If required, copy the generated JCL to your MVS proclib dataset. Under normal operation this only needs to be done once when the group is first updated and actioned. This JCL only changes if you change your user directory pathnames.

WRINWI09

A Started Task name must be specified

Reason:

The ReportCenter Java Task Started Task Name field is required. The ReportCenter Java Task is the Java component of ReportCenter. It runs as an MVS started task, under the control of z/OS Unix System Services. It communicates with NetMaster regions over IP socket connections.

System Action:

None.

User Action:

Enter a valid MVS started task name.

When you action this group, the JCL for this started task will be generated and written to the NetMaster activity log, and also placed in an HFS file. Copy this file to your MVS JCL PROCLIB.

WRINWI10**Unable to update Adaptor.ini with the Java Task Name****Reason:**

When ReportCenter is installed, a PARMLIB library for your product region is created with a WRPARMS member. This member must contain a value for STC. This STC value was not found.

System Action:

The Adaptor.ini file is not updated with the ReportCenter Java Task name.

User Action:

Ensure that ReportCenter has been installed correctly.

WRINWI11**Adaptor.ini updated with Java Task IP Port No. P1****Reason:**

The ReportCenter Java Task Adaptor.ini file has been updated with the Port Number that listens for connections from the NetMaster regions.

System Action:

HFS File Adaptor.ini has been updated.

User Action:

None.

WRINWI12

Adaptor.ini updated with *P1 P2*

Reason:

The ReportCenter Java task Adaptor.ini file is updated with the JDBC URL, which is used to establish JDBC connectivity.

The DB2 LEGACY driver always uses a constant URL of jdbc:db2os390:

With the DB2 UNIVERSAL driver, the URL format determines whether the Universal driver operates with Type 2 Connectivity or Type 4 Connectivity.

Type 2 Connectivity has a URL similar to the following:

- jdbc:db2os390: (constant)
- jdbc:db2:?LOCATION (for example, jdbc:db2:D91APTIB)

Type 4 Connectivity has a URL similar to the following:

jdbc:db2://?ipaddr:port/?LOCATION (for example,
.jdbc:db2://171.202.65.31:5056/D91APTIB)

?LOCATION is the DB2 subsystem location name

?ipaddr:port is the DB2 subsystem IP host address and port

In addition, Type 4 Connectivity requires the DB2 user ID and password to be provided with the connection string.

System Action:

Generated HFS file .../usr.adaptor/Adaptor.ini is updated.

User Action:

None.

For more information about the z/OS DB2 JDBC drivers and their URL requirements, and the differences between Universal Driver Type 2 and Type 4 connectivity, see the IBM DB2 and Java programming documentation.

WRINWI13**Adaptor.bat file created successfully in P1****Reason:**

The shell script file Adaptor.bat, which controls initiation of the ReportCenter Java Task has been created successfully.
Use the OMVS facilities OBROWSE or ISHELL to browse this file.

System Action:

The shell script file Adaptor.bat has been created.

User Action:

None.

WRINWI14**Adaptor.ini updated with ReportCenter Java Task name P1****Reason:**

The Adaptor.ini file is updated with the name of the started task that runs the ReportCenter Java task.

System Action:

The Adaptor.ini HFS file is updated.

User Action:

None.

WRINWI15**P1 is an invalid started task name****Reason:**

The ReportCenter Java Task started task name is not a valid MVS started task name.

System Action:

None. The REPORTCENTER parameter group fails.

User Action:

Enter a valid MVS started task name.
Note that when this started task is started, OMVS processing may result in multiple active tasks with the same or suffixed task names.

WRINWI16

ReportCenter Java Task P1 is active on P3, may require restart

Reason:

You have updated the parameters for the ReportCenter Java Task; however, you must restart the STC to activate the changes.

System Action:

None.

User Action:

Stop and restart the ReportCenter Java Task started task.

WRINWI17

P1

Reason:

This message contains details of the USS environmental variable values that will be used by the ReportCenter Java Task.

These variables are explicitly set in the generated batch file Adaptor.bat

They override any values inherited from .profile files and so on.

Note that the USS environment of the ReportCenter Java Task may therefore differ from that of the NetMaster region, or any other user.

System Action:

None.

User Action:

None.

WRINWI18**No action taken, ReportCenter parameters have not yet been specified****Reason:**

This region includes ReportCenter, but the required parameters have not been specified. Initialization of ReportCenter is bypassed.

This occurs when this region starts for the first time and the REPORTCENTER parameter group has not been updated.

System Action:

ReportCenter functions are not available from this region.

User Action:

To enable ReportCenter functions in this region, you must update and successfully action the REPORTCENTER parameter group.

In addition to setting up this region as a ReportCenter control region, complete ReportCenter implementation requires additional external tasks such as database setup. Complete all of these tasks before updating and actioning this parameter group.

Note: For detailed information about ReportCenter implementation, see the *ReportCenter Guide*.

WRINWI19**This HFS pathname contains invalid characters****Reason:**

The HFS pathname contains an invalid character. Valid characters are: A-Z, a-z, 0-9, and period(.) underscore(_) and dash(-)

System Action:

None.

User Action:

Correct the pathname and retry the operation.

Valid characters for HFS pathnames are:

A-Z, a-z, 0-9, and period(.) underscore(_) and dash(-)

Also, note that before this group can be actioned, the specified directories must have been defined, correctly mounted if required, and be given appropriate UNIX file permissions.

WRINWI20

HFS "*P1*" error on *P2* of pathname *P3*

Reason:

An attempted *P2* operation on HFS file *P3* failed with error condition *P1*.

HFS file errors may have a variety of environmental causes. A common one is when the HFS file system is not mounted. Other possibilities include:

EPERM

File permission error.

The NetMaster started task UID does not have the required authority to access the file

ENOENT

File does not exist

The path name may be wrong, or the file may have been deleted

ENODEV

No such device exists.

ENOMEM

Not enough space is available.

ENOSPC

No space is left on the device, or no space is available to create the IPC member ID.

ENOTDIR

Not a directory.

EMVSPFSPERM

HFS encountered a system error.

System Action:

None. The requested operation cannot be performed.

User Action:

Contact your Systems Programmer or UNIX Administrator.

Provide them with the full error details from this message and any related messages. In some cases, there may be additional error details on the NetMaster Activity Log, in messages WRINWI20 or N1AM99.

Ensure that the HFS file system has been defined with sufficient space and is correctly and permanently mounted. Ensure that NetMaster features such as ReportCenter have been installed with the name of a correct and available file system.

File permissions are a frequent cause of HFS file errors.

Verify that the OMVS UID attempting the file operation has sufficient authority to do so. In general, all distributed HFS product files should allow at least read access to all users. Refer to the specific product installation and user manuals for additional file permission requirements for their specific working data.

A complete list of USS HFS return codes is provided in the IBM manual *z/OS Unix System Services Messages and Codes*, in a chapter titled 'Return Codes (Errnos) Listed by Value'

Additional information about z/OS HFS implementation is available from the IBM Redbook publication *Hierarchical File System Usage Guide*.

WRINWI21

HFS P1 P2 P3 P4 P5 P6 P7 P8 P9 P10

Reason:

This message follows message WRINWI20 and provides details of the return code, reason codes, and messages returned from NetMaster's HFS file interface.

System Action:

The requested HFS file operation cannot be performed.

User Action:

Ensure that the HFS file system has been defined with sufficient space and is correctly and permanently mounted. Ensure that NetMaster features such as ReportCenter have been installed with the name of a correct and available file system.

File permissions are a frequent cause of HFS file errors.

Verify that the OMVS UID attempting the file operation has sufficient authority to do so. In general, all distributed HFS product files should allow at least read access to all users. Refer to the specific product installation and user manuals for additional file permission requirements for their specific working data.

A complete list of HFS reason codes is available in the IBM publication *UNIX System Services Messages and Codes* for your operating system level.

Additional information about OS/390 and z/OS HFS implementation is available from the IBM Redbook publication *Hierarchical File System Usage Guide*.

WRINWI22**HFS directory P1 P2 P3****Reason:**

This message displays the status of an HFS 'user' directory required by ReportCenter.

If the directory already exists it is reused and the contents retained.

If it does not exist, it is created.

In normal operation, the user directories are created the very first time this parameter group is updated and actioned, and are reused thereafter.

System Action:

None.

User Action:

None.

WRINWI23**ReportCenter Home Page URL: P1****Reason:**

The ReportCenter Home Page provides a quick and easy way for users to look at report output. It links to the report output from all successfully completed report runs.

No user ID, password or logon is required to view reports from the home page.

For convenient access, the ReportCenter Home Page URL can be bookmarked, or linked to from intranet web pages.

System Action:

None.

User Action:

None.

WRINWI24

Public report home page access is disabled

Reason:

The field Public Home Page Access in the REPORTCENTER parameter group is set to NO.

System Action:

Users will not be able to view report output without logging on to the NetMaster region.

User Action:

None.

WRINWI25

At least one DB2 load library name must be specified

Reason:

No DB2 load library dataset names were entered. DB2 JDBC requires these names for the STEPLIB environmental variable.

System Action:

None.

User Action:

Enter the dataset names of your DB2 load libraries. For the DB2 Version 7 JDBC Driver Version 2.0, JDBC requires the SDSNEXIT, SDSNLOAD and SDSNLOAD2 load libraries.

Refer to the IBM publication, 'DB2 Application Programming Guide and Reference for Java' for your version of DB2 and JDBC driver.

WRINWI26

Adaptor.ini updated with JDBC *P1* Driver Name of *P2*

Reason:

The ReportCenter Java task Adaptor.ini file is updated with the name of the JDBC driver, which is used to establish JDBC connectivity.

System Action:

Generated HFS file .../usr/adaptor/Adaptor.ini is updated.

User Action:

None.

WRINWI27

This Java command directory pathname P1

Reason:

The pathname entered of the z/OS mainframe Java command directory is not correct.

This directory contains the Java commands. It is created as part of the installation of your z/OS mainframe Java product. Mainframe Java must be installed before you can proceed with ReportCenter implementation.

One of the follow errors was detected:

- The pathname could not be found on this LPAR.

Ensure the pathname is typed correctly. Names are case-sensitive. Ensure the associated HFS filesystem is correctly allocated and mounted, and there are no underlying HFS space or other problems. Ensure that all user IDs have READ access to this directory.

- The pathname refers to a file, not a directory.

The pathname exists on this LPAR but it refers to a file, not a directory.

Correct the pathname to refer to the .../bin directory.

You may need to contact your MVS systems programmer and/or USS Unix administrator for help with locating the correct Java directory.

This directory pathname is used in the value of the PATH USS environment variable set for the ReportCenter Java Task.

System Action:

Actioning of the parameter group fails

User Action:

Correct the pathname of the IBM z/OS Java Command Directory. Contact your systems programmer for the correct directory pathname. This directory was created as part of the installation of your z/OS mainframe Java product.

WRINWI28

The HFS Path for the CA Datacom JDBC Classes zip file does not exist

Reason:

The zip file cadcjava.zip cannot be found.

System Action:

None.

User Action:

Correct HFS Path for the DB2 JDBC Classes zip file.

WRINWI29

Weekly Database Expiry Run Day is not a valid day

Reason:

The day specified must be either MON,TUE,WED,THU,FRI,SAT or SUN.

System Action:

None.

User Action:

Ensure that a correct day is specified.

WRINWI30

Adaptor.ini updated with Weekly Database Expiry run time

Reason:

The ReportCenter Java Task Adaptor.ini file has been updated with a start day, and time to initiate the Database Expiry Service. This service deletes expired records from the database.

System Action:

HFS File Adaptor.ini has been updated.

User Action:

None.

WRINWI31

Generating the Prompts.ini file

Reason:

Customization of the Prompts.ini file is in progress. This file is input to the Java Task PROMPTGENERATOR service, which generates the prompt value files. These are displayed in the Criteria section when using the ReportCenter 'Run Report On Demand' or 'Schedule Report' functions.

The file is customized with your database table qualifier name, in the following situations:

- a customized file does not exist
- the database table qualifier name is changed
- a customized file exists, but the skeleton prompt file has been updated since then (usually by an APAR) (The skeleton file is in directory .../nm/reporter/wrNN/cntl

System Action:

A new Prompts.ini file is being generated into directory ?pathname2/nm/reporter/usr/prompts Your database table qualifier is prefixed to all table names in all SQL statements.

User Action:

None.

WRINWI32**This HFS pathname P1****Reason:**

The HFS path name entered for one of the ReportCenter user HFS directories cannot be accessed for the reason stated.

ReportCenter uses the following user HFS directories:

- Runtime control files including generated scripts and JCL, generated prompt files, and user-specified report schedules
- Log files produced by the ReportCenter Java Task
- Report output files including HTML and graphics files

ReportCenter user HFS directories, if they do not already exist, are created when the REPORTCENTER Customizer parameter group is actioned for the first time.

In addition, ReportCenter uses various system HFS directories provided by IBM for Java and JDBC components. ReportCenter Distributed code is created and populated by SMP/E when the product is installed. The directory name is passed to this NetMaster region, which cannot change it.

System Action:

None.

User Action:

Review and correct the HFS directory name.

Most common causes of this error include:

- A non-existent HFS path name has been entered.
- A relative HFS path name has been entered. ReportCenter uses only absolute path names (starting with a /).
- The entered HFS path name exists, but is not a directory name. (A file name is not valid here - it must be a directory name).
- This NetMaster region does not have permission to open the directory. Write access is required for ReportCenter administration.

Ensure that all HFS file systems required by ReportCenter are allocated and correctly and permanently mounted.

Check the HFS file permission settings. The RACF/ACF2 user ID that owns this NetMaster region's started task must have write access to this HFS directory.

For more specific details about HFS directory access errors, see the NetMaster Activity Log.

WRINWI33

Java command directory pathname does not end in /bin

Reason:

Correct installation of any of IBM's z/OS mainframe Java products creates a number of standard product subdirectories including .../lib .../bin .../include and so on.

These directories are often confused, particularly by users unfamiliar with these products.

Java commands are distributed in Java's .../bin directory. This directory pathname is used in the value of the PATH USS environment variable for the ReportCenter Java Task.

System Action:

None.

User Action:

Correct the IBM z/OS Java JDK Command Directory pathname. If you cannot locate the correct directory, contact your MVS Systems Programmer and/or your USS Administrator.

WRINWI34

DB2 JDBC DLL directory pathname does not end in /lib

Reason:

Correct installation of the z/OS DB2 JDBC/SQLJ component creates a number of standard product subdirectories such as .../lib, .../bin, .../classes, and so on.

These directories are often confused, particularly by users unfamiliar with z/OS DB2 JDBC implementation.

DLLs and shared objects are distributed in the DB2 JDBC/SQLJ .../lib directory. This directory pathname is used in the value of the LIBPATH and LD_LIBRARY_PATH USS environment variables for the ReportCenter Java Task.

System Action:

None.

User Action:

Correct the DB2 JDBC DLL directory pathname.

If you cannot locate the correct directory, contact your DB2 Systems Programmer or Database Administrator.

WRINWI35**This DB2 JDBC DLL directory pathname P1****Reason:**

The pathname entered of the z/OS DB2 JDBC DLL directory is not correct. This directory contains the DB2 JDBC DLLs and shared objects. It is created as part of the installation of the z/OS DB2 JDBC/SQLJ component. This component must be installed before you can proceed with ReportCenter implementation.

One of the follow errors was detected:

- The pathname could not be found on this LPAR.

Ensure the pathname is typed correctly. Names are case-sensitive. Ensure the associated HFS filesystem is correctly allocated and mounted, and there are no underlying HFS space or other problems. Ensure that all user IDs have READ access to this directory.

- The pathname refers to a file, not a directory.

The pathname exists on this LPAR but it refers to a file, not a directory.

Correct the pathname to refer to the .../lib directory.

You may need to contact your DB2 systems programmer for help with locating the correct DB2 JDBC DLL directory.

This directory pathname is used in the value of the LIBPATH and LD_LIBRARY_PATH USS environment variables set for the ReportCenter Java Task.

System Action:

Actioning of the parameter group fails.

User Action:

Correct the pathname of the DB2 JDBC DLL Directory.

WRINWI36**DB2 JDBC Legacy Driver class file P1****Reason:**

A DB2 JDBC driver type of Legacy was specified; however, the path name of the JDBC class file is not correct.

This file contains the DB2 JDBC Legacy Driver Java classes. It is created as part of the installation of the z/OS DB2 JDBC/SQLJ component. This component must be installed before you can proceed with ReportCenter implementation.

One of the following errors was detected:

- The file name was unrecognized. The following file names, as distributed by IBM, are supported:

db2j2classes.zip (JDBC 2.0, DB2 V7 onwards)

db2sqljclasses.zip (JDBC 1.2)

db2sqljruntime.zip (JDBC 1.2)

db2jdbcclasses.zip (JDBC 1.2)

- The path name could not be found on this LPAR.
 - Ensure that the path name is typed correctly. Names are case sensitive.
 - Ensure that the associated HFS file system is correctly allocated and mounted, and there are no underlying HFS space or other problems.
 - Ensure that all user IDs have read access to this file.
- The path name refers to a directory, not a file.

The path name exists on this LPAR, but it refers to a directory. For the JDBC Legacy Driver, the classes are distributed in a single zip file. You must specify the full path including the file name (for example, /usr/lpp/db2/v7/classes/db2j2classes.zip).
- The path name is not absolute.

Path name must be absolute (that is, start with /), not relative.

You may need to contact your DB2 systems programmer for help with locating the correct DB2 JDBC Legacy Driver class file.

Note: The DB2 JDBC Legacy Driver is supported only for compatibility with older versions of DB2 for z/OS and z/OS Java.

IBM has the following restrictions on the Legacy Driver:

- It is not compatible with DB2 Version 9.

DB2 Version 9 only works with the Universal JDBC Driver. DB2 Version 7 and 8 work with both the Legacy Driver and the Universal Driver.

- It is not compatible with z/OS Java SDK 1.5 or later.
- It is not compatible with any z/OS Java 64-bit SDK.

For details, see IBM's DB2 for z/OS JDBC documentation.

This file path name is included in the value of the CLASSPATH -cp specification generated for the ReportCenter Java task.

System Action:

Actioning of the REPORTCENTER parameter group fails.

User Action:

Correct the path and file name of the DB2 JDBC Legacy Driver class file.

WRINWI37

Note: This DB2 JDBC class file is for the older JDBC 1.2 driver

Reason:

The DB2 JDBC class file name you have entered is for the JDBC 1.2 driver. If you are using DB2 Version 6, this is the only driver available, and you should disregard this message.

If you are using DB2 Version 7 or greater, a JDBC 2.0 driver was also distributed with the DB2 JDBC/SQLJ component. The JDBC 2.0 driver has superior performance characteristics over the older JDBC 1.2 driver, and it is recommended that you use this newer driver where possible.

For the class file names of the JDBC drivers provided with your version of DB2, see IBM's 'Application Programming Guide and Reference for Java' manual.

System Action:

None.

User Action:

Disregard this message if you are running DB2 for z/OS Version 6. If you are running DB2 for z/OS Version 7 or 8, use the JDBC 2.0 driver.

WRINWI38

This DB2 JDBC properties file P1

Reason:

The pathname entered of the z/OS DB2 JDBC properties file is incorrect. This file contains the DB2 JDBC run-time properties to be used by the ReportCenter Java application.

It is created as part of the setup of the z/OS DB2 JDBC/SQLJ component. This component must be implemented before you can proceed with ReportCenter implementation.

Your site may have multiple DB2 JDBC properties files, for different DB2 JDBC applications. The default file is called db2sqljjdbc.properties but this can be changed.

Refer to IBM manual 'DB2 Application Programming Guide and Reference for Java' for information on implementing z/OS DB2 JDBC.

One of the follow errors was detected:

- The pathname could not be found on this LPAR.

Ensure the pathname is typed correctly. Names are case-sensitive. Ensure the associated HFS filesystem is correctly allocated and mounted, and there are no underlying HFS space or other problems. Ensure that all user IDs have READ access to this file.

- The pathname refers to a directory, not a file.

The pathname exists on this LPAR but it refers to a directory.

You may need to contact your DB2 systems programmer for help with locating the correct DB2 JDBC properties file.

This file pathname is used as the value of the DB2SQLJPROPERTIES USS environment variables used by the ReportCenter Java Task.

System Action:

None.

User Action:

Correct the file pathname of the DB2 JDBC properties file.

WRINWI39**This Datacom JDBC DLL directory pathname P1****Reason:**

The pathname entered of the CA Datacom JDBC DLL directory is not correct.

This HFS directory contains the CA Datacom Server JDBC DLLs and shared objects. It is created and populated by SMP/E as part of the installation of the NetMaster ReportCenter additional feature.

Note: It is not created by the CA Datacom/AD installation.

The NetMaster ReportCenter feature must be installed before you can proceed with ReportCenter implementation on any NetMaster regions. This feature contains all of ReportCenter's HFS elements.

One of the follow errors was detected:

- The pathname could not be found on this LPAR.
Ensure the pathname is typed correctly. Names are case-sensitive. Ensure the associated HFS filesystem is correctly allocated and mounted, and there are no underlying HFS space or other problems. Ensure that all user IDs have READ access to this directory.
- The pathname refers to a file, not a directory.
The pathname exists on this LPAR but it refers to a file, not a directory. Correct the pathname to refer to the .../wr63/datacom directory.

You may need to contact the systems programmer who installed your NetMaster software for help in locating the correct Datacom JDBC DLL directory.

This directory pathname is used in the value of the LIBPATH USS environment variable set for the ReportCenter Java Task.

System Action:

Actioning of the parameter group fails.

User Action:

Correct the pathname of the Datacom JDBC DLL Directory.

WRINWI40

This Datacom JDBC class file pathname *P1*

Reason:

The pathname entered of the CA Datacom JDBC class file is not correct.

This file contains the CA Datacom Server Java classes. It is created by SMP/E as part of the installation of the NetMaster ReportCenter additional feature.

Note: It is not created by the CA Datacom/AD installation.

The NetMaster ReportCenter feature must be installed before you can proceed with ReportCenter implementation on any NetMaster regions.

One of the follow errors was detected:

- The file name was unrecognized.

Supported file names are:

cadcjava.zip (CA Datacom Server Version 5.0)

- The pathname could not be found on this LPAR.

Ensure the pathname is typed correctly. Names are case-sensitive. Ensure the associated HFS filesystem is correctly allocated and mounted, and there are no underlying HFS space or other problems. Ensure that all user IDs have READ access to this directory.

- The pathname refers to a directory, not a file.

The pathname exists on this LPAR but it refers to a directory.

While directories can contain Java classes, in this case the Datacom JDBC classes are distributed as a zip file.

You may need to contact the systems programmer who installed your NetMaster software for help in locating the correct Datacom JDBC class file.

This file pathname is included in the value of the CLASSPATH specification used by the ReportCenter Java Task.

System Action:

None.

User Action:

Correct the pathname of the Datacom JDBC class file.

WRINWI41**The Distributed Code HFS Directory *P1*****Reason:**

The HFS pathname provided for the ReportCenter distributed code HFS directory cannot be accessed by this NetMaster region. The specific reason is given in *P1*.

The ReportCenter distributed code HFS directory is an SMP/E Target Library. It is created and populated by SMP/E, when the ReportCenter feature is installed.

The directory pathname is passed to this NetMaster region by the installation utility.

(In addition, ReportCenter uses various system HFS directories provided by IBM for Java and JDBC components.)

System Action:

None.

User Action:

The ReportCenter distributed code HFS pathname cannot be changed from this parameter group. It is passed to this NetMaster region in the PARMLIB dataset created by the install utility.

Contact the systems programmer who installed the product and ask them to review the installation of the ReportCenter feature.

Some causes of this error include:

- Installation of the ReportCenter feature did not complete correctly. The HFS 'MKDIR' operation or the SMP/E APPLY may have failed.
- The directory created by installation is not mounted on this LPAR. The directory may not be permanently mounted after IPLs, or installation may have been performed on a different LPAR.
- This NetMaster region does not have permission to open the directory. Read access is required for ReportCenter administration.

Ensure that all HFS filesystems required by ReportCenter are correctly and permanently mounted on this LPAR.

Check the HFS file permission settings. The RACF/ACF2 userid that owns this NetMaster region's started task must have Read/Execute access to this HFS directory.

See the NetMaster Activity Log for more specific HFS directory access error details.

WRINWI42

Link Blackout Start Time must be in the range of 0 to 59

Reason:

You specified a value for the link blackout; however, the value must be numeric and in the range 0 to 59.

The blackout start time specifies the beginning of a period where data is not sent to the ReportCenter Java Task from the region. Data samples are collected during this period, but remain in the Data Warehouse Server queue.

System Action:

None.

User Action:

Enter a numeric value in the range 0 to 59.

WRINWI43

Link Blackout Stop Time must be in the range of 0 to 59

Reason:

You specified a value for the link blackout stop time; however, it must be numeric and in the range 0 to 59.

The link blackout stop time specifies the end of a period where data is not sent to the ReportCenter Java Task from the region. Data samples collected during the blackout period are sent to the Java Task.

System Action:

None.

User Action:

Enter a numeric value in the range 0 to 59.

WRINWI44**Data Warehouse Server blackout period is active from P1 to P2 minutes****Reason:**

A blackout period is specified during each hour for the period defined by P1 and P2.

System Action:

During this period, data sampling continues, but all records are stored in the Data Warehouse Server queue. At the end of the blackout period, the queued records are sent automatically to the ReportCenter Java Task. Use the shortcut */DWS* to view the Data Warehouse server and scroll right to view the queue.

User Action:

None.

WRINWI45**Invalid blackout period specified****Reason:**

You have specified a blackout start minute and end minute of equal value. This is not a valid blackout period. The Link Blackout Start Time is the beginning of the blackout during the hour and should be specified as a minute value. The Link Blackout Stop Time is the end of the blackout period and should also be specified as a minute value.

A blackout period allows for the processing load to be spread over the hour. Data sampling continues but all records are placed in the Data Warehouse Server's queue. At the conclusion of the blackout period, data records are sent to the ReportCenter Java Task.

System Action:

None.

User Action:

Enter a valid blackout period and try again.

WRINWI46

The DB2 JDBC Driver Type must be either Universal or Legacy

Reason:

IBM provides a Universal JDBC Driver for access to DB2 for z/OS, and in some cases also continues to support the older Legacy JDBC Driver.

Universal JDBC Driver for DB2 for z/OS

If you are using DB2 for z/OS Version 9, you must use the Universal Driver. The Legacy Driver is not supported by DB2 Version 9.

The internal name of the Universal Driver is com.ibm.db2.jcc.DB2Driver

It supports two modes:

- Universal Driver Type 2 connectivity
- Universal Driver Type 4 connectivity

IBM recommends Universal Driver Type 2 connectivity for greater efficiency when the application is on the same LPAR as the DB2 subsystem. Therefore, ReportCenter uses Type 2 connectivity.

The Legacy JDBC Driver for DB2 for z/OS

If you are using DB2 for z/OS Version 8 or Version 7, you can choose the Universal Driver or the Legacy Driver. Contact your DB2 database administrator to find out which driver is installed.

The internal name of the Legacy Driver is ibm.sql.DB2Driver

The Legacy JDBC Driver has the following IBM compatibility restrictions:

- It does not work with DB2 Version 9.
- It does not work with IBM Java SDK 1.5 or later.
- It does not work with any 64-bit SDK (including 1.4).

System Action:

Actioning of the parameter group fails.

User Action:

Correct the type of the DB2 JDBC Driver.

Get this value from your DB2 database administrator. They need to ensure that the appropriate type of driver is installed and implemented.

WRINWI47

DB2 JDBC Universal Driver Class directory name doesn't end in /classes**Reason:**

A DB2 JDBC driver type of Universal was specified; however, the path name of the JDBC class directory does not end with /classes.

Correct installation of the z/OS DB2 JDBC/SQLJ component creates a number of standard product subdirectories such as ../lib, ../bin, ../classes, and so on. The JDBC driver Java class files are distributed in the DB2 JDBC/SQLJ ../classes directory.

This directory path name is used to generate the -cp (*classpath*) specification used by the ReportCenter Java task.

Note: The DB2 Universal Driver, unlike earlier drivers, uses more than one class file. All its class files are distributed in the same ../classes directory.

All you need to specify here is the name of the directory; the individual class file names will be automatically generated.

For example, if you specify /usr/lpp/db2/v8/classes, the Adaptor.bat file is generated to include the following files in the -cp specification:

/usr/lpp/db2/v8/classes/db2jcc.jar

/usr/lpp/db2/v8/classes/db2jcc_javax.jar

/usr/lpp/db2/v8/classes/db2jcc_license_cisuz.jar

/usr/lpp/db2/v8/classes/sqlj.zip

System Action:

Actioning of the REPORTCENTER parameter group fails.

User Action:

Specify the path name to the directory that contains the class files for the DB2 JDBC Universal Driver (for example, /usr/lpp/db2/v8/classes).

If you cannot locate the correct directory, contact your DB2 systems programmer or database administrator.

WRINWI48**DB2 JDBC Universal Driver class directory P1****Reason:**

A DB2 JDBC Driver type of Universal was specified; however, the path name of the JDBC class directory is not correct.

This directory contains the DB2 JDBC Universal Driver Java class files. It is created as part of the installation of the z/OS DB2 JDBC/SQLJ component, and typically has a minor directory level name of ../classes. This component must be installed before you can proceed with ReportCenter implementation.

One of the following errors was detected:

- The directory could not be found on this LPAR.
 - Ensure that the path name is typed correctly. Names are case sensitive.
 - Ensure that the associated HFS file system is correctly allocated and mounted, and there are no underlying HFS space or other problems.
 - Ensure that all user IDs have read access to this directory.

- The path name refers to a file, not a directory.

The path name exists on this LPAR, but it refers to a file. This JDBC driver needs more than one class file. You must specify the directory name only to include all files.

- The path name is not absolute.

Path name must be absolute (that is, start with /), not relative.

This directory path name is used to generate the -cp (*classpath*) specification used by the ReportCenter Java task.

Note: The DB2 Universal Driver, unlike earlier drivers, uses more than one class file. All its class files are distributed in the same ../classes directory.

All you need to specify here is the name of the directory; the individual class file names will be automatically generated.

For example, if you specify /usr/lpp/db2/v8/classes, the Adaptor.bat file is generated to include the following files in the -cp specification:

/usr/lpp/db2/v8/classes/db2jcc.jar

/usr/lpp/db2/v8/classes/db2jcc_javax.jar

/usr/lpp/db2/v8/classes/db2jcc_license_cisuz.jar

/usr/lpp/db2/v8/classes/sqlj.zip

System Action:

Actioning of the REPORTCENTER parameter group fails.

User Action:

Specify the path name to the directory that contains the class files for the DB2 JDBC Universal Driver (for example, /usr/lpp/db2/v8/classes). Do not specify an individual file name.

If you cannot locate the correct directory, contact your DB2 systems programmer or database administrator.

WRINWI49**JDBC Universal Driver class directory doesn't contain required files****Reason:**

A DB2 JDBC driver type of Universal was specified; however, the specified JDBC class directory, while it exists, does not contain all of the following required class files:

db2jcc.jar

db2jcc_javax.jar

db2jcc_license_cisuz.jar

sqlj.zip

The JDBC class file directory is created as part of the installation of the z/OS DB2 JDBC/SQLJ component and typically has a minor directory level name of ../classes. This component must be implemented before you can proceed with ReportCenter implementation.

This directory name is used to generate the -cp (*classpath*) specification used by the ReportCenter Java task.

Note: The DB2 Universal Driver, unlike earlier drivers, uses more than one class file. All its class files are distributed in the same ../classes directory.

All you need to specify here is the name of the directory; the individual class file names will be automatically generated.

For example, if you specify /usr/lpp/db2/v8/classes, the Adaptor.bat file is generated to include the following files in the -cp specification:

/usr/lpp/db2/v8/classes/db2jcc.jar

/usr/lpp/db2/v8/classes/db2jcc_javax.jar

/usr/lpp/db2/v8/classes/db2jcc_license_cisuz.jar

/usr/lpp/db2/v8/classes/sqlj.zip

System Action:

Actioning of the REPORTCENTER parameter group fails.

User Action:

To correct the problem, perform one or more of the following actions:

- Make sure you have not specified Universal when you really intended to use the Legacy Driver.
- Specify the path name to the directory that contains the class files for the DB2 JDBC Universal Driver (for example, /usr/lpp/db2/v8/classes). Do not specify an individual file name.

Check that all four required class files exist in this directory, and grant general read access.

If you cannot locate the correct directory, contact your DB2 systems programmer or database administrator.

- Verify that the DB2 JDBC Universal Driver was correctly installed and implemented. This is a different and separate process to installing the Legacy Driver.

For more information, see IBM's DB2 JDBC documentation.

WRINWI50

JVM Heap Size Specifications are incorrect

Reason:

One of the following problems was detected:

- The initial heap size was not between 4 and 1024, inclusive.
- The maximum heap size was not between 4 and 1024, inclusive.
- The maximum heap size was smaller than the initial heap size.

The default values of Initial=4 and Maximum=256 are adequate for the majority of typical ReportCenter implementations.

z/OS Java storage usage and garbage collection are complex areas, and are very environment-specific. Do not change the default values unless you are clearly experiencing related storage problems, and you have advice from the systems programmers and tuning experts who understand your environment.

System Action:

Actioning of the REPORTCENTER parameter group fails.

User Action:

Correct your heap size specification.

To ensure that you specify correctly, you may want to take further actions:

1. Consult with your systems programmer and UNIX System Services administrator to determine what heap size specification the ReportCenter Java task should run with.
2. Ensure that the region size of the ReportCenter Java task started task is adequate for the heap size specification.

WRINWI51

Weekly Database Expiry Run Day is not a valid day

Reason:

The day specified must be MON, TUE, WED, THU, FRI, SAT, or SUN.

System Action:

Actioning or saving of the ReportCenter parameter group fails.

User Action:

Correct the value in the Weekly Database Expiry Run Day field.

WRINWI52

Both Start and Stop Time must be specified if either is specified.

Reason:

If either the Start Time or the Stop Time for the Data Feed Link Blackout is specified, then both values must be specified in order to ensure proper validation and correct blackout times.

System Action:

None. The null value is not accepted.

User Action:

Correct the null value by entering a correct value between 0 - 59. Alternately, null values are accepted for both fields, indicating that no link blackout time is declared.

WRPKGS01***P1 shut down at P2 deliberately, due to an external error*****Reason:**

The ReportCenter Java Started Task *P1 P3* deliberately shut down at *P2* because it encountered an unrecoverable external error condition during processing.

System Action:

ReportCenter functions are unavailable until the error condition that caused the automatic shut down is fixed and the Java Task is restarted.

User Action:

Examine the latest log file messages in the HFS file
../nm/reporter/usr/logs/AdaptorNNN.log for information about the problem.
This may include associated SQL error codes or feedback codes from other components.

Many conditions that prevent ReportCenter startup are not serious. They may refer to components other than ReportCenter. Frequent conditions causing deliberate termination include the following:

DB2

- The DB2 subsystem is not active
- Database or table access, authority, and permission problems
- DB2 internal resources not available
- RRS is not active
- RRSAF is not available
- The z/OS DB2 JDBC DBRMs are incorrectly bound (this is common after JDBC maintenance, which requires these to be regenerated and rebound)
- Other z/OS DB2 JDBC setup problems

CA Datacom/AD

- The CA Datacom/AD MUF is not active
- The CA Datacom Server task is not active

Common

- Database connection lost, locked, cannot be established
- HFS problems with file permissions, space, sharing/mounting, and so on. All required file systems must be correctly allocated and mounted.
- UNIX System Services environmental or security problems
- IP Stack or IP socket connection problems

- DNS or host name setup incorrect
- ReportCenter's port is in use by another application

You may need to contact your DB2 DBA or MVS systems programmer for help. When the error condition is fixed, restart the ReportCenter Java Task.

WRPKGS02

P1* inactive due to JFSTOP command at *P2

Reason:

The ReportCenter Java Started Task *P1* stopped with an orderly shut down. This was in response to an operator JFSTOP OCS command issued at *P2*.

System Action:

None. Most ReportCenter functions do not work until the task restarts.

User Action:

Restart the task as soon as possible.

WRPKGS03**ReportCenter Aggregation failed at P1****Reason:**

The ReportCenter Java Task Aggregation service started at *P1* with the scheduled daily housekeeping, but did not finish successfully.

Reason: *P2*

The Aggregation service aggregates all hourly data into daily data. The first run in a calendar month also aggregates daily data into monthly data.

The Aggregation service should run once a day, after the scheduled daily housekeeping time. You can set this time in the REPORTCENTER parameter group (/PARMS).

System Action:

The latest daily and monthly data is not available for reporting.

Repeated failures of this service can lead to hourly data expiring and being deleted before it gets aggregated into daily data.

User Action:

Examine the Java Task log at the time of the failure for additional error details. Database problems are often the cause of Aggregation Service failures, for example:

- Database access, authorization, and permission problems
- Database resource or space shortages
- Database connection problems (including JDBC errors)

The Aggregation Service runs automatically after the next daily housekeeping time.

WRPKGS04

ReportCenter Report Scheduler failed at P1

Reason:

The ReportCenter Java Task Scheduler service started at *P1* with the scheduled daily housekeeping, but did not finish successfully.

Reason: *P2*

The Scheduler service examines all schedules, for every report. If a report is due to be run now, the Scheduler service queues a run request to the Report Generator service.

The Scheduler service should run once a day, after the scheduled daily housekeeping time. You can set this time in the REPORTCENTER parameter group (/PARMS).

System Action:

Reports scheduled for this day are not run.

User Action:

Examine the Java Task log at the time of the failure for additional error details. The Scheduler service does not access the ReportCenter database. HFS problems can cause Scheduler Service failures. The user ID associated with the ReportCenter Java Task must have write access to the ?prefix/usr/schedules directory and contents. The Scheduler service runs automatically after the next daily housekeeping time. If a report is urgent, run it on demand.

Note: If an individual report scheduled by this service fails to generate, this is not considered a failure of the Scheduler service.

WRPKGS05**ReportCenter Prompt Generator failed at P1****Reason:**

The ReportCenter Java Task Prompt Generator service started at *P1* with the scheduled daily housekeeping, but did not finish successfully.

Reason: *P2*

The Prompt Generator service should run once a day, after the scheduled daily housekeeping time. You can set this time in the REPORTCENTER parameter group (/PARMS). It also runs immediately after Java Task initialization. The Prompt Generator service issues a series of SQL Select queries to retrieve the lists of resource names that are used as criteria when you run or schedule a report.

System Action:

Resources that have been added to the database since the last successful Prompt Generator run do not appear in the criteria lists and cannot be selected to be reported on.

User Action:

Examine the Java Task log at the time of the failure for additional error details. Database problems are often the cause of Prompt Generator failures, for example:

- Database access, authorization, and permission problems
- Database resource or space shortages
- Database connection problems (including JDBC errors) Ensure that the REPORTCENTER parameter group initialized successfully when this control region was last started. This creates the Prompts.ini file, which contains the SQL statements run by this service. The Prompt Generator service runs automatically after the next daily housekeeping time. It also runs when the Java Task starts.

WRPKGS06

ReportCenter Timeframe update failed at P1

Reason:

The ReportCenter Java Task Timeframe service started at *P1* with the scheduled daily housekeeping, but did not finish successfully.

Reason: *P2*

The Timeframe service should run at midnight every day. It also runs immediately after Java Task initialization. The Timeframe service updates the relative day values in the database timeframe table with today's correct values.

System Action:

Reports are run against incorrect relative days. While the absolute date of a reported fact is always correct, the timeframe is not accurate.

User Action:

Examine the Java Task log at the time of the failure for more information. Database problems are often the cause of Timeframe service failures, for example:

- Database access, authorization, and permission problems
- Database resource or space shortages
- Database connection problems (including JDBC errors) The Timeframe service runs automatically at midnight and when the Java Task starts.

WRPKGS07**ReportCenter Report Expiry failed at P1****Reason:**

The ReportCenter Java Task Report Expiry service started at *P1* with the scheduled weekly housekeeping, but did not finish successfully.

Reason: *P2*

The Report Expiry service should run once a day, after the scheduled daily housekeeping time. You can set this time in the REPORTCENTER parameter group (/PARMS). The Report Expiry service deletes report output that has expired. Report output is stored as HFS files in the ?prefix/nm/reporter/usr/output HFS directory and this service deletes subdirectories and files from this directory. You control how long report output is kept using the Output Expires After n Days field when you schedule a report.

System Action:

Expired report output is not deleted.

Repeated failures of this service can lead to increased HFS file space usage.

User Action:

Examine the Java Task log at the time of the failure for additional error details. The Report Expiry service does not access the ReportCenter database. HFS problems can cause Report Expiry Service failures, for example, the user ID associated with the ReportCenter Java Task must have write access to the ?prefix/usr/output directory and contents. The Report Expiry service runs automatically after the next daily housekeeping time.

WRPKGS08

ReportCenter Database Expiry failed at P1

Reason:

The ReportCenter Java task Expiry Service started at *P1* with the scheduled daily housekeeping but did not finish successfully.

Reason: *P2*

The Expiry Service should run once a week at the scheduled weekly database expiry run day and time. You can set this in the REPORTCENTER parameter group (/PARMS).

The Expiry Service runs a series of SQL DELETE statements to delete expired data from your ReportCenter database.

You control how long you want data to be retained by modifying the Expiry Service data retention rules.

System Action:

Expired database data is not deleted.

Repeated failure of this service can lead to increased database storage usage.

User Action:

Examine the Java task log at the time of the failure for additional error details.

Database problems are often the cause of Expiry Service failures, for example:

- Database access, authorization, and permission problems
- Database resource or space shortages
- Database connection problems (including JDBC errors)
- Database contention or locking problems

The SQL DELETE statements run by this service can delete many rows each, and require supporting DB2 buffer pools and other resources. This is the only service that deletes database data.

The Expiry Service runs automatically after the next weekly database expiry time.

Unwanted database data can be deleted using other methods. For more information, see the *ReportCenter Guide*.

WRPKGS09**P1 P2 P3 P4 P5 P6****Reason:**

These error messages are produced by a ReportCenter service failure or ReportCenter Java Task deliberate shut down.

System Action:

None.

User Action:

Additional error messages may be available from the Java Task log.

Examine the latest log file messages in the HFS file
../nm/reporter/usr/logs/AdaptorNNN.log. Details may include associated SQL error codes or feedback codes from other components.

Frequent failure conditions include the following:

DB2

- The DB2 subsystem is not active
- Database or table access, authority, permission problems
- DB2 internal resources not available
- RRS is not active
- RRSAF is not available
- The z/OS DB2 JDBC DBRMs are incorrectly bound (this is common after JDBC maintenance, which requires these to be regenerated and rebound)
- Other z/OS DB2 JDBC setup problems

CA Datacom/AD

- The CA Datacom/AD MUF is not active
- The CA Datacom Server task is not active

Common

- Database connection lost, locked, cannot be established
- HFS problems with file permissions, space, sharing/mounting, and so on.
All required file systems must be correctly allocated and mounted.

You may need to contact your DB2 DBA or MVS systems programmer for help.

WRPKGS10

~P1 inactive due to unexpected cancel,abend or exception

Reason:

The ReportCenter Java Started Task P1 unexpectedly terminated and was unable to record a reason. Possible causes include:

- A CANCEL, PURGE, or FORCE command was issued against the started task from the MVS system console.
- An MVS abend or USS error occurred in a component used by the task.
- An unrecoverable Java exception occurred. Environmental problems such as LE or Java storage shortages can cause this situation.

System Action:

None. Most ReportCenter functions do not work until the task restarts.

User Action:

Restart the task as soon as possible.

If the task was not deliberately cancelled by an operator, investigate why it failed.

Look at the following for diagnostic information:

- The JOBLOG of the started task
- The MVS SYSLOG at the time the task ended
- The latest log file messages in the Java Task Log (HFS file .../nm/reporter/usr/logs/AdaptorNNN.log)

WRPKGS11**P1 is inactive on P2****Reason:**

The ReportCenter Java Started Task *P1* is not active on *P2*.

The task may have:

- Stopped in response to an operator JFSTOP command
- Deliberately shut down after encountering an unrecoverable external error
- Been canceled by the operator
- Terminated after an unexpected abend or Java exception
- Never have started, if implementation is incomplete

System Action:

None. Most ReportCenter functions do not work until the task restarts.

User Action:

Restart the task as soon as possible.

Investigate why this started task was not active.

Before restarting *P1*, ensure the requisite database tasks are active. For DB2, this means the DB2 subsystem, and RRS. For CA Datacom, this means the Datacom MUF and Datacom Server.

If this task stops immediately upon starting, examine the

ReportCenter Java Task log file. Under some circumstances, most commonly the unavailability of the database, the ReportCenter Java task terminates.

For other failures, examine the JCL output of the started task.

The started task runs the IBM BPXBATCH facility, which writes output to the stdout and stderr files in the `.../nm/reporter/usr/adaptor` directory. Examine these files for any error messages.

Use the REPTTEST SERV or REPTTEST STC commands from OCS.

Common causes of job failure during initial implementation include the following:

- Incorrect installation of the JDK software
- Incorrect setup of the USS environment
- Incorrect specification of the JDBC class directory

If required, update the parameters in the REPORTCENTER Customizer parameter group and if necessary, regenerate the initialization file by actioning this group.

WRPKGS12

ReportCenter task ~P1 on ~P2 unresponsive

Reason:

A status command was sent to ReportCenter started task P1 on system P2 , but although the task is active, no response was received.

System Action:

If the started task is shutting down, ReportCenter functions are unavailable until it is restarted.

User Action:

Check the activity log and the ReportCenter Java Task log.

Some possible causes of this condition include the following:

- Region space, workload, or timeout problems
- IP network problems interfering with socket connections between this region and the Java Task
- Task performing intensive database processing, causing database delays
- Task is shutting down

WRST0000**ReportCenter Function Test on P1 P2****Reason:**

The diagnostic test for ReportCenter is starting. P2 indicates the ReportCenter status of this region:

Blank value indicates that no ReportCenter activity is currently enabled in this region.

Data Feed Region indicates this region is capable of sending data to ReportCenter.

Dormant Control Region indicates that this region has been set up to function as a ReportCenter control region, but this implementation is not yet completed.

Active Control Region indicates that this region is capable of actively functioning as a ReportCenter control region.

System Action:

Testing of ReportCenter functions commences.

User Action:

None.

WRST0002**No action taken. No ReportCenter activity is enabled on P1****Reason:**

This region is not currently configured to send data to ReportCenter.

This message is normal in regions where the ReportCenter feature is not implemented.

System Action:

None.

User Action:

None.

If you want this region to be able to send data to ReportCenter if requested, you need to update the REPORTDATA parameter group.

Note: For information about how to implement the ReportCenter feature, see the *ReportCenter Guide*.

WRST0003

P1

Reason:

This region has been set up to function as a ReportCenter control region, but the ReportCenter implementation is not yet complete.

System Action:

None.

User Action:

None.

WRST0098

ReportCenter Function Test completed with P1

Reason:

The ReportCenter Function Test has completed with the total number of warnings and errors indicated. Generally, the following severities are allocated:

Errors affect all or a large number of ReportCenter functions. Do not attempt to use any ReportCenter functions until all error conditions are fixed.

Warnings affect at least one function, but other functions may be unaffected. Warnings should always be investigated.

Notes are informational only, and may not affect any processing.

System Action:

None.

User Action:

If errors or warnings occur, review the detailed messages produced for the specific errors. In some cases, additional information may be written to the NetMaster Activity Log.

WRST0099**Problem areas: P1****Reason:**

This message summarizes the locations of any errors detected. Detailed error information is produced for each test category. Notes are informational only, and may not affect any processing.

System Action:

None.

User Action:

None.

WRSTCN00**Checking for ReportCenter-enabled products****Reason:**

The region configuration testing is started.

System Action:

The following things are tested:

- What products in this region can collect data for ReportCenter?
Note that this does not mean that data is actually being collected, only that it is possible to collect it. ReportCenter data collection is controlled at an individual resource level, and must be explicitly started for each required resource.
- Is the IP socket interface active?
- Is there an active HTTP port for WebCenter?

User Action:

None.

WRSTCO00

Checking HFS SMP/E Target Library, and generated control files

Reason:

Testing of the ReportCenter HFS SMP/E Target Library directory has started.

System Action:

The following is checked:

- Whether the HFS directories containing the SMP/E code exist. These directories are SMP/E Target Libraries and are populated by the SMP/E APPLY when you install ReportCenter.
 - The classes directory contains the Java code.
 - The reports directory contains the report definitions and components.
 - The cntl directory contains ReportCenter Java Task control files.
- Whether the ReportCenter Java Task Initialization file has generated.
- Whether the ReportCenter Java Task batch file has generated.

These two files are created when the REPORTCENTER parameter group is updated and actioned.

User Action:

None.

WRSTCO01**P1****Reason:**

This is an informational messages about code.

Information about an individual file may include a PTF/APAR number. This is the number of the latest SMP/E APAR applied to the file. PTF=base means that no SMP/E maintenance is applied.

All code supplied with ReportCenter is maintained with SMP/E. SMP/E code includes the following:

- HFS files (Java classes, report definitions, control files, and so on)
- MVS PDS data set members (OML procedures, example JCL, and so on)

System Action:

None.

User Action:

None.

WRSTCO02

HFS P2 error accessing directory P1

Reason:

An error occurred while attempting to list an SMP/E Target Library HFS directory.

This directory and its subdirectories are defined during installation, using the HFS direct pathname that you specify.

The most probable causes of this condition include the following:

- UNIX file permission settings preventing the region from reading the directories
- Errors during feature installation
- Manual changes to the directories after installation
- File system not correctly shared or mounted

System Action:

ReportCenter features do not function correctly.

User Action:

Further error information may appear in the activity log. Verify that the named directory exists and that the region user ID and the ReportCenter Java Task user ID have at least read access to it.

Ensure that the ReportCenter feature installation allocation and SMP/E jobs completed correctly, and that all HFS file systems used by ReportCenter are correctly defined and mounted.

WRSTCO03**Directory *P1* contains no files****Reason:**

The HFS SMP/E Target Library directory, *P1* has been defined, but contains no files.

The most probable cause of this is failure of SMP/E processing during the installation of ReportCenter.

System Action:

Many ReportCenter functions do not work correctly.

User Action:

Verify that the specified directory contains SMP/E-installed files.

This directory should be defined and populated by SMP/E APPLY processing during the installation of ReportCenter. Contact your systems programmer if installation appears incomplete.

WRSTCO04**P1****Reason:**

This message contains information about one of the Java Task files.

The Adaptor.bat file is generated by the REPORTCENTER parameter group.

This file issues the OMVS java command to run the ReportCenter Java Task code. This file is run by the ReportCenter Java Task MVS started task. It sets all USS environmental variables required by JDBC, from the values that you enter in the parameter group.

The Adaptor.ini file is generated by the REPORTCENTER parameter group. This file contains control options and initialization parameters for the ReportCenter Java Task, customized with the values that you enter in the parameter group. It can be browsed using the TSO ISHELL or OBROWSE commands.

System Action:

None.

User Action:

None.

WRSTCO05

Generated P1 file information not available

Reason:

File information about the generated *P1* file could not be accessed. This file is generated by the REPORTCENTER parameter group in the ReportCenter control region. The file exists but cannot be accessed.

Probable causes of this condition include:

- UNIX file permissions do not give the NetMaster region *read* access to the file. Since this NetMaster region creates this file, this situation can only result if the file permissions have been manually modified since then.
- The file system is full or not mounted, or other HFS error conditions occurred.

System Action:

If this file is not accessible by the ReportCenter Java Task, then this task will fail. No ReportCenter functions will be available.

User Action:

See the NetMaster activity log for further error messages. Update and action the REPORTCENTER parameter group, and retry the command.

WRSTCO06

Generated P1 file does not exist

Reason:

The *P1* file was not found in the `.../nm/reporter/usr/adaptor` directory. This file is generated by the REPORTCENTER parameter group.

This message is normal if this region is a dormant control region, i.e., the REPORTCENTER group has never been updated and actioned.

System Action:

The ReportCenter Java Task will fail if started. No ReportCenter functions will be available.

User Action:

Update and action the REPORTCENTER parameter group, and ensure the action is successful, examining the Initialization Log for any error messages. Retry the command.

WRSTDB00**Checking JDBC database connection between p1 and p2****Reason:**

Testing of the JDBC connection between the ReportCenter Java Task and the ReportCenter database has started.

Note that no NetMaster region connects directly to the database. The ReportCenter Java Task started task connects to the database on behalf of the ReportCenter control region and all data regions.

System Action:

The test is started. The following items are checked:

- * A database connection must have been established.
- * Information is requested from the database. The information available depends on the specific DBMS.

User Action:

None.

WRSTDB01**P1****Reason:**

This is a database test informational message.

The data retrieved depends on the database management system (DBMS).

Consult the JDBC programming guide for your specific DBMS for details.

System Action:

None.

User Action:

None.

WRSTDB02

Unable to get P1 information from the ReportCenter Java Task

Reason:

A command was sent to the Java Task to display the current database status, but the Report Service did not respond as expected.

The most probable causes of this condition are:

- No current active database connection. The Report Service may have failed to initialize due to database connection failures. This occurs if your DBMS is down, or your JDBC interface is not available. The database connection may have been interrupted due to database or environmental conditions.
- The ReportCenter Java Task is not active.
- The ReportCenter Java Task is still active, but is initializing and cannot accept commands.
- Network conditions are preventing a socket connection from being established between the ReportCenter region and the Java Task.
- The IP port defined for the data warehouse server does not match the port used by the Java Task.
- The data feed destination definition in the NetMaster region is in a hung status.
- The Report Service is busy.

System Action:

None.

User Action:

Do the following:

- For database-related errors, verify that your DBMS is running and can support connections from the ReportCenter Java Task. If your DBMS is not active or not supporting connections, the Report Service will not initialize and database information will not be available.
This condition also occurs if your DBMS has been restarted or the database connection otherwise interrupted. If this has happened, restart the ReportCenter Java Task.
- Ensure that the ReportCenter Java Task is active and has initialized completely.
- Look for error details in the NetMaster activity log.
- Look for error details in the Java Task log.
- Verify that the data feed destination definition in the ReportCenter region is active.

- Verify that the Report Generator Service is active.

WRSTDB03**Probable database connection failure****Reason:**

A command was sent to the Java Task to display the current database status, but the Java Task Report Service did not respond as expected. Previous commands to the Java Task control service have succeeded.

This indicates that the Java Task itself is functioning normally, but the Report Service may have failed during processing or initialization.

System Action:

None.

User Action:

Check the ReportCenter Java Task log for errors that may have led to the failure.

This condition is most commonly caused by database connection failures. Connection failures can happen because:

- The DBMS is not active or not supporting JDBC connections currently.
- The ReportCenter database has not been defined correctly to the DBMS.
- The ReportCenter Java Task does not have the required authority to connect to the database.

Contact your database administrator for further assistance. When all DBMS and database problems are rectified, restart the ReportCenter Java Task.

WRSTDB04

JDBC database connection is currently inactive

Reason:

A command was sent to the ReportCenter Java Task to display the current database status. The Report Service responded with DBMS details, but indicated that there is no current active connection.

This indicates that the Report Service initialized normally and connected to the database at initialization, but the connection has subsequently been interrupted. This is commonly caused by the database system itself being stopped.

System Action:

None.

User Action:

This condition is most commonly caused by an active database connection being interrupted. This will happen if the DBMS is stopped while the ReportCenter Java Task is still active.

Contact your database administrator for further assistance. When all DBMS and database problems are rectified, restart the ReportCenter Java Task to re-establish the database connection.

Note: If you are using CA Datacom/AD, this requires the Datacom Server job to be active as well as the Datacom MUF job. If the Datacom Server job is stopped, this condition will result. In this case, restart both the Datacom Server job and the ReportCenter Java Task.

WRSTDW00**Checking Data Feed Destination for data collected by P1****Reason:**

The Data Feed Destination testing is started.

A Data Feed Destination controls where report data collected by this region will be sent. The destination is the IP address and port of a ReportCenter Java Task. Report data is sent over a socket connection between this NetMaster regions, and the ReportCenter Java Task.

In normal operation, data feed destinations are defined at region startup, when the REPORTDATA or REPORTCENTER parameter groups are actioned. Data feed destinations can be browsed using option /DWS.

System Action:

The following things are tested:

- Is the data feed destination defined?
- Is the data feed destination (i.e., IP socket connection) active?

User Action:

None.

WRSTDW01**P1****Reason:**

This is a data feed destination informational message.

System Action:

None.

User Action:

None.

WRSTDW02

Data feed destination P1 error on P2

Reason:

An error occurred while attempting to retrieve details of the data feed destination in a NetMaster region. This indicates a probable error in region initialization.

P1 is the name of the data feed destination.

P2 is the name of the region.

The data feed destination resides within the ReportCenter Java Task (the Data Warehouse Service). It communicates with NetMaster regions by using TCP/IP socket connections and must be defined to the regions.

System Action:

Several ReportCenter functions will not work:

- No data from this region can be sent to ReportCenter.
- On-demand reports may not be available.
- Status commands to the ReportCenter Java Task may not be available

User Action:

Examine the NetMaster activity log for additional error details.

Verify the IP address and port details in the REPORTCENTER or REPORTDATA parameter group.

Action this parameter group to redefine the data feed, and retry the command.

Use the /DWS option to examine the data feed definitions.

WRSTDW03**Data feed destination P1 is P2****Reason:**

The *P1* data feed destination is in the *P2* status.

Possible causes include:

- The ReportCenter Java Task may not be running.
- A socket or network error has occurred. IP connectivity is required between the NetMaster region, and the ReportCenter Java Task pointed to by the data feed IP address and port.
- The data feed destination definition in this region may have been inactivated manually.

System Action:

No data can be sent to the ReportCenter.

Data will accumulate in the queue until this destination is activated. This is an undesirable situation, as data will be discarded if the maximum queue size is exceeded.

User Action:

Enter the /DWS panel shortcut and activate the data feed definition.

WRSTHF00

Checking region's HFS file and directory access permissions

Reason:

Testing has started of this region's access to the ReportCenter distributed and user directories. This step is to ensure that there is sufficient access to perform all ReportCenter administration tasks from this region.

System Action:

The following things are checked:

- Can this region read the distributed report definitions?
- Can this region read the generated report output directory?
- Can this region read the schedule directory?
- Can this region update the schedule directory?

If HFS user security is not requested (HFSSECURITY parameter group), then this region performs these accesses on behalf of all requesting users.

If HFS user security is requested, then the fact that this region is permitted all of these accesses does not imply that they will also work for any specific requesting user. In this case, HFS accesses are done through the ID of each individual user, not through the NetMaster region's user ID.

If you are using HFS user security, you must set the file permissions for the above directories by taking into account the security requirements of each individual user. You should not attempt this unless you have UNIX staff familiar with the concepts and practice of UNIX file security.

User Action:

None.

WRSTHF01

P1

Reason:

This is an HFS access test informational message.

System Action:

None.

User Action:

None.

WRSTHF02**HFS region-level access security is enabled.****Reason:**

HFS user security has not been specified. This is the default.

System Action:

All HFS access done by this region will be done under the RACF/ACF2 user ID associated with this NetMaster region.

This region requires access to ReportCenter HFS directories and files in order to perform ReportCenter administration tasks such as scheduling, running, and deleting reports.

User Action:

None.

WRSTHF03**HFS user-level access security is enabled.****Reason:**

The ReportCenter control region is running with HFS user security enabled. All HFS accesses for ReportCenter files will be done by the user ID of the requesting user and not by the user ID of the NetMaster region.

WARNING! This means that although the subsequent HFS access tests may succeed, this only means that this individual user has the required authorities and will be able to use the ReportCenter web interface. Other users may have different OMVS or file permission setup, and may not be able to do the same functions.

System Action:

All HFS file access requests are issued on behalf of the requesting user. If a specific user does not have correct OMVS segment setup or insufficient file permission levels, their HFS file requests will fail.

User Action:

HFS User Security requires significant analysis of the security requirements of individual users, definition of appropriate OMVS segments for all users, and setting of appropriate permissions for all ReportCenter HFS files and directories.

Do not attempt to use this option without systems programming and UNIX administration support. If you are unfamiliar with the z/OS Unix Systems Services environment and with Unix administration generally, it is recommended to use the default option of region-level security.

WRSTHF04

P1

Reason:

This message contains information about the ReportCenter report definition directory. It indicates that this user has the required level of access to this directory.

Report definitions are stored in this directory as XML files. They can be browsed with TSO commands ISHELL or OBROWSE.

This NetMaster region reads these file definitions when you use the WebCenter ReportCenter options to run or schedule reports, and also to build the ReportCenter menu bar.

System Action:

None.

User Action:

None.

WRSTHF05

Cannot access report definition directory P1

Reason:

No definitions could be retrieved from the report definition directory. This directory is defined and populated during installation.

Probable causes of this condition include:

- Installation problems: Directory or files may not exist.
- File permission problem when reading directory: If HFS user security is in force, each individual user must have *read* access to this directory.
- Directory or files have been interfered with manually.
- HFS general storage or mount problems occurred.

System Action:

If HFS user security is disabled (the default), all users will be unable to use the ReportCenter option of WebCenter to run and schedule reports.

If HFS user security is enabled, then depending on the exact error, only this user or all users will be unable to use the ReportCenter functions.

User Action:

See the NetMaster activity log for more error messages. Confirm that the report definition directory exists and contains the distributed report definitions. Change the directory file permissions if required.

WRSTHF06**Output from P1 completed report runs is available****Reason:**

This message shows the number of reports runs that have output available for viewing.

The number may be zero if no reports have been run, or if all generated reports have expired and been deleted.

To view report output from within WebCenter, click the *List Report Runs* tab or the *List Runs for All Report Names* button. Click the date and time hyperlink of a report in the list. The report opens in a new browser window.

You can also view reports from the public *ReportCenter Home Page*. This does not require any user ID or logon to NetMaster. Simply bookmark the home page URL, or hyperlink to it from your intranet pages. Use the REPTTEST CON command from OCS to list this URL.

System Action:

None.

User Action:

Go to the ReportCenter Home Page URL, and look at the report output.

WRSTHF07

Read failed of report output directory P1

Reason:

No report runs could be retrieved from the report output directory. This directory is defined by the REPORTCENTER parameter group. Report run details and report output are placed in this directory by the ReportCenter Java Task Report Generator.

Report run details are accessed from WebCenter. Report output is accessed by the NetMaster web server in response to HTTP requests when a user views a report.

Probable causes of this condition include:

- REPORTCENTER parameter group initialization problems: The directory may not have been created correctly.
- File permission problem when reading directory: If HFS user security is in force, individual users must have *read* access to this directory.
- Manual interference with directory or files.
- HFS general storage or mount problems.

System Action:

Users will be unable to list report runs or browse reports.

User Action:

See the NetMaster activity log for more error messages. Confirm that the *P1* report output directory exists. Change the directory file permissions if required.

WRSTHF08**P1****Reason:**

This message contains information about the report schedules directory. It indicates that the user has the required read access to the directory. Report schedule details are stored in this directory. They are added when users schedule reports by using the web interface. They are read by the ReportCenter Java Task Scheduler Service.

The number of schedules may validly be 0 if no reports have been scheduled yet.

System Action:

None.

User Action:

None.

WRSTHF09**Read failed of report schedules directory P1****Reason:**

No schedules could be retrieved from the report schedules directory. This directory is defined by the REPORTCENTER parameter group. Schedule request details are placed in this directory when a user adds a schedule. Schedule run details are placed in this directory by the ReportCenter Java Task Scheduler Service.

Probable causes of this condition include:

- REPORTCENTER parameter group initialization problems: The directory may not have been created correctly.
- File permission problem when reading directory: If HFS user security is in force, individual users must have *read* access to this directory.
- Manual interference with directory or files.
- HFS general storage or mount problems.

System Action:

Users will be unable to list report schedules.

User Action:

See the NetMaster activity log for more error messages. Confirm that the *P1* report schedule directory exists. Change the directory file permissions if required.

WRSTHF10

Test add successful to report schedules directory

Reason:

A test to add to the report schedules directory was successful.

If HFS Report Center security is in force, all users have the necessary file permissions to schedule reports.

If HFS user security is in force, the requesting user has the necessary file permissions to schedule reports.

Note that this implies the users can also delete schedules.

System Action:

A dummy test schedule is added.

User Action:

None.

WRSTHF11

Test add failed to schedules directory P1

Reason:

An attempt to add to the report schedules directory failed.

Probable causes of this condition include:

- File permission problem when updating the directory: If HFS user security is in force, individual users need to have *write* access to this directory. Otherwise, this region's user ID needs this access.
- REPORTCENTER parameter group initialization problems: The directory may not have been created correctly.
- HFS general storage or mount problems.

System Action:

Users will be unable to schedule reports.

User Action:

See the NetMaster activity log for more error messages. Confirm that the *P1* report schedules directory exists. Change the directory file permissions if required.

WRSTHF12**Test delete successful from report schedules directory****Reason:**

A test to delete a schedule from the report schedules directory was successful. If HFS Report Center security is in force, all users have the necessary file permissions to delete report schedules.

If HFS user security is in force, the requesting user has the necessary file permissions to delete report schedules.

Note that adding and deleting schedules are both controlled by the *write* permission.

System Action:

The dummy schedule is deleted.

User Action:

None.

WRSTHF13**Test delete failed from schedules directory P1****Reason:**

An attempt to delete a schedule from the report schedules directory failed. Probable causes of this condition include:

- File permission problem when updating the directory: If HFS user security is in force, individual users need to have *write* access to this directory.
- HFS general storage or mount problems

System Action:

Users will be unable to delete report schedules. Schedules that have reached the specified run limit are deleted by the ReportCenter Java Task Scheduler Service.

User Action:

See the NetMaster activity log for more error messages. Confirm that the *P1* schedules directory exists. Change the directory file permissions if required - be aware of the different permission requirement if HFS user security is in force.

WRSTIN00

Checking HFS directory pathnames for SMP/E and user files

Reason:

HFS directory pathname testing starts.

System Action:

The following is checked:

- Whether the parameter data set was set up correctly at feature installation. This data set is used to pass information entered during installation and setup to subsequent ReportCenter regions.
- Whether the ReportCenter SMP/E Target Library HFS directory was defined at feature installation.
- Whether all user HFS directories required by ReportCenter are defined. This is done the first time the REPORTCENTER parameter group is actioned.

User Action:

None.

WRSTIN01

P1**Reason:**

This is a data set and HFS directory informational message.

System Action:

None.

User Action:

None.

WRSTIN03**ReportCenter PARMLIB member missing or incorrect****Reason:**

This message indicates a failure in the region setup or subsequent manual alteration of the parameter data set.

One of the following errors was found:

- The PARMLIB data set for this region does not exist.
- The data set exists but does not contain the IIAPARMS member.
- The IIAPARMS member exists but does not contain the correct parameters.

The IIAPARMS member is used to pass parameters entered during region setup.

System Action:

ReportCenter functions may work incorrectly or incompletely, with unpredictable results.

User Action:

Ensure that the following apply:

- The parameter data set exists. It is named *dsnpref.rname.PARMLIB*, where:
dsnpref is the data set prefix used during installation.
rname is the name of the region.
- The IIAPARMS member exists.
- Your security system allows CA NetMaster to read this data set.
- The member contains *WRHFS1=hfs-pathname*, where *hfs-pathname* is the HFS directory path name of the directory that contains the SMP/E Target Library for ReportCenter.

This path name is entered when CA NetMaster is installed.

Additional error information may appear in the activity log.

WRSTIN04

HFS directory pathname not specified for *P1*

Reason:

A mandatory HFS directory name is unknown to the ReportCenter region. This occurs if you have not actioned the REPORTCENTER parameter group in a ReportCenter region.

This may also indicate a failure in product installation, region setup, or region initialization.

ReportCenter requires four directories. According to your requirements, they can all share the same prefix, but all four must be specified.

The following directories are required:

- SMP/E target library

This directory is specified and populated by SMP/E when ReportCenter is installed. After installation, this directory must not be changed.

- Working data

- Java Task logs

- HTML report output

The working data, Java task logs, and HTML report output directories are specified when you activate ReportCenter functions in the ReportCenter region. To do this, update and activate the REPORTCENTER parameter group (shortcut /PARMS). After these directories are specified, they are written to and read from the ReportCenter region and the ReportCenter Java task.

System Action:

None. ReportCenter functions will work incorrectly or incompletely.

User Action:

Update the REPORTCENTER parameter group (shortcut /PARMS) in the ReportCenter region.

Complete the three HFS Pathname fields.

Action the parameter group changes. Ensure that the action completes with no errors. This updates the ReportCenter Java task initialization file with the updated directory names. You must then stop and start the started task for the ReportCenter Java task.

Before updating the parameter group, all HFS directories specified must be defined, mounted, and have UNIX file permissions that grant write access to the following:

- The user ID associated with the ReportCenter region

- The user ID associated with the started task for the ReportCenter Java task

If you are using HFS user-level security, individual OMVS users must be granted permissions to the various directories according to your security requirements.

WRSTJFO0

Checking ReportCenter Java Task status and environment

Reason:

Testing of the ReportCenter Java Task has started.

This is an MVS started task, that invokes the ReportCenter Java code. It executes under the control of the USS environment.

This started task communicates with NetMaster regions through IP socket connections.

JCL for this started task is generated when the REPORTCENTER parameter group is actioned. It is written to the NetMaster Activity Log and also an HFS file. It should be copied to your MVS PROCLIB data set.

If the Java Task is not active, no ReportCenter functions will work. Under normal operation, a regular timer will check the task status and raise a NetMaster alert if it is not active or appears hung.

System Action:

The test does the following:

- Checks that the started task is active on this system.
- Checks for any abnormal STDOUT or STDERR output.
- Checks that all required ReportCenter Java Task services are active
- Checks that all defined timers are active
- Lists connection and start time details
- Displays current JVM heap storage statistics

User Action:

None.

WRSTJF01

P1

Reason:

This is a ReportCenter Java Task informational message.

System Action:

None.

User Action:

None.

WRSTJF02**ReportCenter Java started task P1 is not active on P2****Reason:**

The ReportCenter Java Task named *P1* does not appear to be currently running on system *P2*. Under normal operation, this task should run continually. It is started with an MVS START command from the MVS system console.

System Action:

ReportCenter functions will be unavailable until the started task is started. No reports can be run, and no data will be added to the database. Subsequent feature tests will not be performed, or will fail.

User Action:

Contact your system operator to start the ReportCenter Java Task immediately. Investigate whether the task may have been running but failed. Examine the JCL output for the started task.

The started task runs the IBM BPXBATCH facility, which writes output to the stdout and stderr files in the `.../nm/reporter/usr/adaptor` directory. Examine these files for any error messages.

Also examine the latest log file messages, in `.../nm/reporter/usr/logs`.

Common causes of job failure include:

- Incorrect installation of the mainframe Java product.
- Incorrect setup of the Java Task user ID's RACF/ACF2 OMVS segment.
- Incorrect specification of REPORTCENTER parameters.
- HFS problems with file permissions, space, sharing/mounting, etc. All required file systems must be correctly allocated & mounted.
- System USS/OMVS problems.

Carefully review all parameters in the REPORTCENTER parameter group. In particular, the following parameter values are used to set USS Environment variables, and can cause Java Task failures if incorrect:

- IBM z/OS Java JDK Command Directory (PATH)
- DB2/DATACOM JDBC Class File (CLASSPATH)
- DB2/DATACOM JDBC DLL Directory (LIBPATH)

Regenerate the initialization and batch files by actioning the REPORTCENTER parameter group.

Stop and start the task to read the updated files.

WRSTJF03

P1

Reason:

This message displays a line of UNIX STDOUT output produced by the ReportCenter Java Task.
STDOUT output is influenced by UNIX environmental factors and may vary between installations. In general, it has no effect on product functions. The complete STDOUT file is in directory `.../nm/reporter/usr/adaptor` and can be accessed with TSO OBROWSE, ISHELL, or OMVS commands.

System Action:

None.

User Action:

Usually none, depending on STDOUT content.
If the ReportCenter Java Task is functioning normally, these STDOUT messages can be ignored.

WRSTJF04

Unable to read P1 file

Reason:

The *P1* output file produced by the ReportCenter Java Task could not be read. Additional details of the read failure may appear on the activity log.

System Action:

None.

User Action:

If the ReportCenter Java Task is active and working correctly, then this warning can be disregarded.
If the ReportCenter Java Task has never started, then this file will not yet exist. This is normal.
If the ReportCenter Java Task is failing to start or is not performing correctly, then this file may contain details of the error condition which may be essential to problem determination.
Common causes of the NetMaster region being unable to access this file include HFS file permission settings.
You should examine the contents of both the STDERR and STDOUT files using other OMVS facilities such as OBROWSE or the CAT command. For more information, see the IBM UNIX System Services publications.
Provide the file output to Technical Support, if requested.

WRSTJF05**Unable to get P1 information from ReportCenter Java Task****Reason:**

A command was sent to the Java Task to display the current *P1* status, but the Java Task did not respond as expected.

The most probable causes of this condition are:

- The ReportCenterJava Task started task is not active.
- The ReportCenter Java Task started task is active, but is still initializing and cannot yet accept commands.
- The ReportCenter Java Task started task is active, but may be in the middle of a lengthy database query.
- Network conditions may be preventing a socket connection from being established between the ReportCenter region and the Java Task.
- The IP port defined for the Data Warehouse Server may not match the port used by the ReportCenter Java Task.
- The Data Feed Destination definition on the NetMaster region may be in a hung status.
- The NetMaster region is processing slowly and the command attempt has timed out.

System Action:

None.

User Action:

Ensure that the ReportCenter Java Task is active and has completely initialized.

Look for further error details in the NetMaster activity log and the Java Task log.

Verify that the Data Feed Destination definition on the ReportCenter region is active.

WRSTJF06

No services are defined to the ReportCenter Java Task

Reason:

A command was sent to the ReportCenter Java Task to retrieve service details. The task responded that there are no services registered.

System Action:

None.

No ReportCenter features will be available until the problem is rectified and the ReportCenter Java Task is restarted with all services.

User Action:

This indicates either problems with the actual Java Task code or, more likely, a problem with the Java Task initialization file.

The initialization file is generated when the REPORTCENTER /PARMS parameter group is actioned on the ReportCenter region. In general, the file should not need manual modification. The initialization file name is .../reporter/usr/adaptor/Adaptor.ini. You can look at this file using OMVS features such as OBROWSE.

Look at the initialization file and ensure that it contains definitions for all ReportCenter services. A sample template of a complete initialization file is distributed in path .../nm/reporter/wr22/cntl/Adaptor.ini

Regenerate the file by actioning the REPORTCENTER parameter group. Check the NetMaster initialization and activity logs to ensure that the file has been successfully created. Environmental conditions such as file system space problems may contribute to an incomplete file.

Stop and restart the ReportCenter Java Task. If the problem recurs, contact product support and supply the following:

- NetMaster activity log at \$WR REPORTCENTER group processing time
- ReportCenter Java Task initialization file - ReportCenter Java Task log file

WRSTJF07**No timers are defined to the ReportCenter Java Task****Reason:**

A command was sent to the Java Task to retrieve timer details. The Java Task responded, but no timers were defined. (Timers that fail should still be listed as defined.)

Timers are defined in the ReportCenter Java Task Initialization file. They are placed there by actioning the REPORTCENTER parameter group in the ReportCenter control region, based on the specified 'daily housekeeping time'. The most probable cause of this condition is an incorrect initialization file.

System Action:

Timer-based services will not be run.

User Action:

Verify that the Adaptor.ini file contains the correct timer definitions. If necessary, regenerate this file by actioning the REPORTCENTER parameter group in the ReportCenter control region, then stop and restart the ReportCenter Java Task.

WRSTJF08**No connections are currently established with the ReportCenter Java Task****Reason:**

A command was sent to the Java Task to retrieve connection details. The Java Task responded that there are no current connections.

System Action:

None.

User Action:

Use the /DWS menu shortcut to check and if necessary activate the data feed connection between this region and the Java Task.

Data feed connections from other NetMaster regions will, under normal processing conditions, re-establish themselves over time. You can also check these by using the /DWS shortcut on these remote regions.

WRSTJF09

ReportCenter Java Task Service *P1* is inactive

Reason:

Java Task Service *P1* is not active. The service may have failed to initialize, or may have failed during processing.

System Action:

The functions of the specified service are not available.

User Action:

Stop and restart the ReportCenter Java Task. If the service repeatedly fails to initialize or fails during processing, examine the Java Task log for additional error information.

The most likely cause of service failure is database connection problems.

If the DBMS was not active when the ReportCenter Java Task was started, or if the DBMS is stopped while the ReportCenter Java Task is running, the database connection between the two will not be established. Whenever the DBMS is started or restarted, you must also restart the ReportCenter Java Task.

Connection problems can also result from incorrect database security access setup. Ensure that the Java Task started task user ID is granted appropriate authority to the correct database schema.

Note: For more information, see the *ReportCenter Guide*.

WRSTJF10**ReportCenter Java Task services are missing****Reason:**

The ReportCenter Java Task requires the following services to be defined:

- WAREHOUSE
- TIMEFRAME
- EXPIRE
- AGGREGATE
- SCHEDULER
- PROMPTGENERATOR
- REPORTS
- REPORTEXPYRY

The services must also be active. An inactive service must still appear in the list of services.

Services are defined in the Adaptor.ini initialization file, which is generated by actioning the REPORTCENTER parameter group. Probable causes of this condition are problems with this initialization file. It may be incomplete, incorrectly generated, or have been manually modified.

System Action:

The functions of the missing service(s) are not available.

User Action:

Stop and restart the ReportCenter Java Task. If any services are still missing, ensure that they are present in the Adaptor.ini file. If they are not, regenerate the file.

Examine the ReportCenter Java Task log for further error messages about the missing services.

Ensure that service definitions in the initialization file have not been manually modified.

WRSTJF11

P1

Reason:

This message displays an error message issued by the ReportCenter Java Task resulting from a failed service, timer pop, or connection.

System Action:

The functions provided by a failed service are not available.

User Action:

Determine why the service, timer, or connection failed. The Java Task log may contain additional error details.

For services that fail as a result of database connection failures, ensure that the DBMS is running and can accept connections. Consult your DBA if database problems persist.

WRSTJF12**Java Task timer P1 for services P2 is inactive****Reason:**

A timer was defined in the ReportCenter Java Task initialization file, but a check of all timers shows it to be inactive. This most commonly happens as a consequence of database unavailability or failures.

Timers are added to the initialization file when the REPORTCENTER parameter group is actioned in the ReportCenter control region.

System Action:

The functions of the services started by this timer are not available.

User Action:

See the ReportCenter Java Task log for more error information.

Check the timer manager messages at Java Task initialization time, and see if the timer was ever successfully created. If so, check the service messages at timer pop time to see why the service failed when it ran. A failing service will deactivate its controlling timer.

If the timer was never created, this is probably because the initialization of one or more of its controlled services did not complete.

Services that use the database will not complete initialization if they cannot get a connection to the database. This is the most common cause of timer failures.

After the database is restarted, or whatever was preventing the database connections is fixed, you should stop and restart the ReportCenter Java Task to re-establish the connections.

Note that the Java Task web interface will, for performance reasons, only display the most recent Java Task log records. To access the records from the last initialization, you may need to look at your log files directly. They are written to directory `.../nm/reporter/usr/logs` and may be accessed using any OMVS features, such as OBROWSE.

WRSTJF13

P1

Reason:

This message displays a line of the UNIX STDERR output produced by the ReportCenter Java Task. This started task runs the BPXBATCH utility, which executes a batch file that invokes the ReportCenter Java application by using the OMVS Java command. STDERR output results from a failure in executing the batch file.

Some STDERR information, such as the java version, is produced deliberately by ReportCenter for informational purposes.

Unexpected STDERR output usually indicates that the Java Task has failed to start, and displays reasons for the failure. An exception is when the STDERR file is used to report JDK version information.

Probable causes of this condition include the following:

- Batch file not generated or incorrectly generated
- ReportCenter Java Task initialization file not generated or incorrectly generated
- Problems with the HFS distributed code directory
- Problems with IBM JDK or DB2 JDBC software installation
- UNIX file permission incorrect settings
- Started task user ID OMVS setup incorrect
- Abends in supporting MVS modules such as DB2, RRS, LE, and so on

System Action:

The ReportCenter Java Task may have failed - no ReportCenter functions will be available.

User Action:

Review the error messages. Consult the IBM UNIX System Services publications, if required.

Ensure that the Adaptor.bat and Adaptor.ini files have been correctly generated into the .../nm/reporter/usr/adaptor directory and that they reflect the values entered into the REPORTCENTER parameter group in the ReportCenter control region.

If necessary, correct and action this group, then stop and restart the task.

Ensure that the .../nm/reporter/wr22/classes directory contains the distributed .jar files. These should have been placed there by the SMP installation job generated by the Install Utility. The started task user ID must have READ access to these.

Verify that the JDK and the DB2 JDBC software have been installed correctly. Verify that the environment variables, particularly PATH, which control the task's USS environment have been properly set up.

WRSTJF14**Started task name P1 is active on P2, ASID= P3****Reason:**

The ReportCenter Java Task is currently active.
The ReportCenter Java Task is an application that provides a common infrastructure for application-specific services.
ReportCenter includes a number of services that are dedicated to tasks such as generating reports and adding report data to the database.

System Action:

None.

User Action:

Under normal operation, the ReportCenter Java Task should run continuously. It does not need to be stopped just because the NetMaster region is stopped - they will re-establish connection when the region restarts. Only stop the ReportCenter Java Task if you need to close all database connections, or if the database is unavailable.

WRSTJF15

P1

Reason:

This message displays details about a current connection to the ReportCenter Java Task.

Only the ReportCenter control region connects to send commands.

ReportCenter data regions connect to send performance data to the Data Warehouse server, which adds it to the database. The ReportCenter control region can also be a data region, although it need not be.

Regions that can connect to the Java Task are defined as valid clients in the initialization file, and can be displayed using the WebCenter Java Task Status Authorized Clients tab.

System Action:

None.

User Action:

If a region is connected to send data, then you can define resources and attributes to be monitored for reporting.

Note: For information about how to collect report data, see the *ReportCenter Guide*.

WRSTJF16

JVM Total Memory: P1 bytes, Free Memory P2 bytes

Reason:

This message displays memory statistics from the Java Virtual Machine.

Total Memory: the total amount of memory currently available for current and future objects, measured in bytes.

Free memory: an approximation to the total amount of memory currently available for future allocated objects, measured in bytes.

System Action:

None.

User Action:

This information may be of interest to your USS administration and/or tuning and performance groups.

The JVM heap size plays an important role in overall Java application performance. Implementation of Java garbage collection is JVM-specific: see the appropriate IBM mainframe Java documentation for details.

WRSTLI01**P1****Reason:**

This message indicates the products present in this NetMaster region which are capable of sending their collected performance data to ReportCenter. Note: Just the presence of such a ReportCenter-enabled product does not, on its own, mean that any data is actually being sent to ReportCenter. Sending data is controlled on an individual resource basis, using the *Send to ReportCenter?* field. This is set by updating performance monitoring using the *UM* command against a resource in the IP Resource Monitor (/IPMON). You should only send to ReportCenter data for the resources you explicitly want to report on. Sending unnecessary data will cause extra network traffic, waste database space, and possibly impact database response times.

System Action:

None.

User Action:

None.

WRSTLI02**This region does not contain at least one product that supports ReportCenter****Reason:**

CA NetMaster File Transfer Management and CA NetMaster Network Management for TCP/IP provide data and support for ReportCenter. To use ReportCenter, you must have at least one of these products enabled in this region.

System Action:

None.

User Action:

For information about installing and implementing ReportCenter, see the following publications:

- *Installation Guide* for your product
- *ReportCenter Guide*

WRSTOM00

Checking OMVS setup of p1's RACF/ACF2 user ID

Reason:

Testing is commencing of this NetMaster region's OMVS access.
This test verifies that the user ID associated with this region is correctly set up to access OMVS.
This requires an OMVS segment to be set up for the region's RACF/ACF2 user ID. This is done by your RACF/ACF2 Security Administrator.

System Action:

The test is started.

User Action:

None.

WRSTOM01

P1**Reason:**

This is an OMVS informational message.

System Action:

None.

User Action:

None.

WRSTOM02**OMVS P1 error****Reason:**

An error occurred attempting to retrieve UNIX System Services environmental information for the NetMaster region. *P1* is the error condition returned from the HFS interface.

System Action:

None. ReportCenter functions may work incorrectly or incompletely. This region may be unable to access ReportCenter HFS pathnames.

User Action:

Examine the NetMaster activity log for additional messages associated with this error. Message UTUSS011 provides more detail.

Some likely causes of this error include:

- The user ID associated with this NetMaster region does not have an OMVS segment defined in its RACF/ACF2/Top Secret security profile.
- One of the objects in this user ID's OMVS segment is incorrect. For example, the specified home directory may not exist or may be defined with inappropriate file permissions.
- General problems with the UNIX System Services environment on this system. Use the TSO OMVS command to see if OMVS is available.

WRSTSS00**Checking 'Last Run' Status of P1's scheduled services****Reason:**

Testing commences of the last known status logged by each ReportCenter scheduled service.

At startup and completion, each service writes the time and date to an HFS file in the ?prefix/nm/reporter/usr/logs directory, called ?SERVICENAME.log This file contains the most recent status logged by the service.

System Action:

The test starts.

User Action:

None.

WRSTSS01

P1 OK P2 P3 P4

Reason:

The *P1* service started by a timer completed successfully at the date and time shown.

If available, the length of time that the service took to complete its processing is also shown.

Example:

PROMPTGENERATOR OK 2006-09-02 03:00:00-03:06:49 (duration 00.06.49)

Indicates that the PROMPTGENERATOR service was started by its timer at 2006-09-02 03:00:00, completed successfully at 03:06:49, actively processed for a total of 6 minutes and 49 seconds.

System Action:

None. The service is waiting to run when its timer expires.

User Action:

None.

WRSTSS02

P1 last run status P2 at P3

Reason:

The most recent status in the service status log for service *P1* is *P2* .

System Action:

None.

User Action:

None.

WRSTSS03**P1 last run status is currently unknown****Reason:**

The last run status for this service cannot be obtained. This is always the case when the ReportCenter Java Task is newly-installed and the service has not run for the first time.

In other cases, problems reading the service status log HFS files can cause this error. The region must have at least read access to this directory and all required file systems must be mounted.

System Action:

None.

User Action:

Run REPTTEST HFS to check HFS availability and file permissions.

WRSTWI01**P1****Reason:**

This message contains informations about what URLs can be used to access ReportCenter live and example report output.

Copy a URL and paste it into your browser address bar.

You may want to bookmark these URLs, or link to them from intranet pages

System Action:

None.

User Action:

None.

XNB086I

DEFINING P1

Reason:

NetView Emulation is defining command verb *P1* to the command characteristics definition table (CCDEF).

System Action:

Processing continues.

User Action:

None.

XNB119E

NO MEMBER SPECIFIED

Reason:

A member name must be specified.

System Action:

The command is not processed.

User Action:

Specify a member name.

XNB136E

NULL STRING NOT SUPPORTED.

Reason:

Command was entered with an invalid operand - null string.

System Action:

The command is not processed.

User Action:

Correct the operand and try the command again.

XNB151E**TOO MANY P1 STREAMS WERE DEFINED****Reason:**

The maximum number of data streams defined exceeded the Pipe stage limit. *P1* specifies the stream direction, which can be input or output.

System Action:

The command is not processed.

User Action:

Define the correct amount of streams for the Pipe stage.

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNB152E**INSUFFICIENT INPUT DATA STREAMS PROVIDED****Reason:**

The number of input data streams defined was less than required by the Pipe stage command.

System Action:

The command is not processed.

User Action:

Specify a valid number of input data streams to the Pipe stage command.

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNB153E

' P1' IS AN UNDEFINED LABEL

Reason:

A label has been used in a Pipe stage that is not defined. *P1* specifies the label name.

System Action:

The command is not processed.

User Action:

Define the label and retry the Pipe command.

XNB154E

' P1' IS A DUPLICATE LABEL

Reason:

A label has been defined that has already been defined within the Pipe command.

System Action:

The command is not processed.

User Action:

Correct the label usage within the Pipe stage command.

XNB155E

PIPELINE ' P1' IS CLOGGED - P2

Reason:

A deadlock condition has occurred between two or more stages.
P1 is the pipeline name.
P2 is the reason.

System Action:

The command is not processed.

User Action:

Correct the label usage in the pipe stage command.

XNB156E**KEYWORD *P1* CAN ONLY BE USED WITHIN A PHRASE****Reason:**

The keyword specified in *P1* is a conversion order or output order. You must specify an input order before using a conversion order or output order.

System Action:

The command is not processed.

User Action:

Correct the Pipe Stage Edit script by specifying an input edit order earlier in the script.

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNB157E**KEYWORD *P1* CANNOT BE USED WITHIN A PHRASE****Reason:**

An input order has been used to start an edit phrase. The keyword was specified after an input order and is a global or input order. An output order must be used to end the phrase after a global or input order is specified. *P1* specifies the keyword in error.

System Action:

The command is not processed.

User Action:

Specify an output order to end the edit phrase or a global order prior to the input order to correct the phrase.

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNCCF000

NCCF-like facility active, press P1 to exit

Reason:

Netview NCCF-like console was activated.
P1 is the PFKey terminating the session.

System Action:

None.

User Action:

None.

XNCCF001

NCCF-like facility terminated

Reason:

Netview NCCF-like console was terminated.

System Action:

None.

User Action:

None.

XNCCF009**Unable to start NCCF-like facility, Reason: P1, TEXT= P2****Reason:**

NetView NCCF-like console was not started. *P1* is the reason:

NEST An attempt to start NCCF was made from a nested OCS session.

FEATURE An attempt to start NCCF in a region without either REXX or REXX NetView support.

LOCK An attempt to start NCCF in the OCS window while a lock for it is already held (other session may be disconnected).

P2 provides the lock identifier consisting of the following information:

NCCFL2 text User ID Terminal name Window number

NTRM An attempt to start NCCF in the region whilst a previous copy of NCCF has not completed termination.

P2 provides process identifier (NCLID) and the time the lock was obtained.

System Action:

None.

User Action:

For NTRM, use NCLID to purge stalled NCCF session or try later. If the NTRM problem persists, contact Technical Support.

XNCCF109**Unable to execute emulated NetView command, Reason: P1****Reason:**

Emulated NetView command was not executed. *P1* is the reason:

FEATURE - an attempt to execute an emulated NetView command on the region without either REXX or REXX NetView support.

System Action:

None.

User Action:

None.

XNCM00701

The requested procedure name P1 is invalid

Reason:

NetMaster NetView emulation NM command specifies an invalid procedure name.

The requested procedure name *P1* name is longer than eight characters or it contains invalid characters.

System Action:

The command is not processed.

User Action:

Specify a valid procedure name.

XNCM00702

Procedure P1 does not exist in library commands

Reason:

NetMaster NetView emulation NM command specifies a procedure name that does not exist in the procedure library.

System Action:

The command is not processed.

User Action:

Correct the procedure name. If the procedure name is correct, ensure that it exists in the procedure library specified for use by this user ID. To do this, use the SHOW EXEC command or the LIST command to display the procedure without execution.

XNCM00703**The NV prefix is not supported in an NM command.****Reason:**

NetMaster NetView emulation NM command operand is prefixed by NV. The NM command is already in the NetView emulation environment.

System Action:

The command is not processed.

User Action:

Remove the NV prefix to execute a CA NetMaster command or procedure.

If you are executing a NetView REXX procedure from:

- OCS or command entry, specify: **NV** *procname*
- The NCCF emulation facility, specify: *procname*
- Pipe stage, use the NETVIEW (NETV) Pipe Stage command, for example, pipe NETV *procname*|con

XNCM01001**No datasets allocated with DDname of DSIPARM****Reason:**

The *SUBMIT* command attempted to submit a DSIPARM member when no DSIPARM DD exists with allocated data sets.

System Action:

Submit command is not processed.

User Action:

Allocate a partitioned data set with DDname DSIPARM, and populate this with members that must be submitted. Alternatively, the SUBMIT command can be executed passing a data set from which to submit the required batch job. *SUBMIT dataset_name* where dataset_name can be sequential or a partitioned data set specified with a member.

XNCM02001

NCCF AFTER Command does not support the days(ddd) operand.

Reason:

Days (ddd) was specified with the AFTER command. This is not currently supported. Please use the interval as the first command argument: - 11 (two digit value = minutes) - :11 (two digits preceded by a colon - seconds) - 1 (one digit value = hours - 1:1:1 (h:m:s) - 11:11:11 (hh:mm:ss)

System Action:

NCCF AFTER command is not processed.

User Action:

Retry the NCCF AFTER command without using (ddd) days.

XNCM02002

NCCF AFTER Command does not currently support the SAVE operand

Reason:

SAVE was specified with the AFTER command. This is not currently supported.

System Action:

AFTER command is not processed.

User Action:

Retry the NCCF AFTER command without using SAVE.

XNCM02003

NCCF AFTER Command emulation sets TIMEFMSG=NO

Reason:

TIMEFMSG was specified with the AFTER command. This is not currently fully supported. TIMEFMSG is always set to NO.

System Action:

The AFTER command is processed with TIMEFMSG=NO.

User Action:

None.

XNCM02004**NCCF AFTER Command does not currently support the GMT operand****Reason:**

GMT was specified with the AFTER command. This is not currently supported.

System Action:

The AFTER command is not processed.

User Action:

Retry the NCCF AFTER command without using GMT.

XNCM02005**NCCF AT Command supports time (hh:mm:ss) not day(ddd) or date****Reason:**

Days (ddd) and/or date were specified in the AT command. This is not currently supported. Please use the time as the first parameter: - 11:11:11 (hh:mm:ss)

System Action:

AT command is not processed.

User Action:

Retry the NCCF AT command using time(hh.mm.ss).

XNCM02006**NCCF AT Command does not currently support the SAVE operand****Reason:**

SAVE was specified with the AT command. This is not currently supported.

System Action:

AT command is not processed.

User Action:

Retry the NCCF AT command without using SAVE.

XNCM02007

NCCF AT Command emulation sets TIMEFMSG=NO

Reason:

TIMEFMSG was specified with the AT command. This is not currently fully supported. TIMEFMSG is always set to NO.

System Action:

AT command is processed with TIMEFMSG=NO.

User Action:

None.

XNCM02008

NCCF AT Command does not currently support the GMT operand

Reason:

GMT was specified with the AT command. This is not currently supported.

System Action:

AT command is not processed.

User Action:

Retry the NCCF AT command without using GMT.

XNCM02009**NCCF EVERY Command does not support the days(ddd) operand****Reason:**

Days (ddd) was specified with the EVERY command. This is not currently supported. Please use the interval as the first command argument:

- 11 (two digit value = minutes)
- :11 (two digits preceded by a colon - seconds)
- 1 (one digit value = hours)
- 1:1:1 (h:m:s)
- 11:11:11 (hh:mm:ss)

System Action:

EVERY command is not processed.

User Action:

Retry the NCCF EVERY command without using (ddd) days.

XNCM02010**NCCF EVERY Command does not currently support the SAVE operand****Reason:**

SAVE was specified with the EVERY command. This is not currently supported.

System Action:

EVERY command is not processed.

User Action:

Retry the NCCF EVERY command without using SAVE.

XNCM02011

NCCF EVERY Command emulation sets TIMEFMSG=NO

Reason:

TIMEFMSG was specified with the EVERY command. This is not currently fully supported. TIMEFMSG is always set to NO.

System Action:

EVERY command is processed with TIMEFMSG=NO.

User Action:

None.

XNCM02012

NCCF EVERY Command does not currently support the GMT operand

Reason:

GMT was specified with the EVERY command. This is not currently supported.

System Action:

EVERY command is not processed.

User Action:

Retry the NCCF EVERY command without using GMT.

XNCM04001

No response to VTAM ' P1' command

Reason:

A VTAM *P1* command was submitted but no response was received. Check the activity log for messages relating to the VTAM command and the VTAM Node being actioned.

System Action:

None.

User Action:

This condition may occur when attempting to perform a VARY command against a Node that does not exist. Check that you specified the correct Node in your command.

XNCM08001**Argument(s) P1 not supported for existing data set - ignored****Reason:**

NetMaster NetView emulation does not support keyword argument(s) *P1* for allocation of an existing data set. The arguments have been ignored.

System Action:

The command continues processing.

User Action:

None.

XNCM09001**NCCF CALC Command failed to obtain lock for P1****Reason:**

NCCF CALC emulation failed to obtain an exclusive lock identified by *P1*.

System Action:

CALC command is not processed.

User Action:

From an OCS window, issue a "SH LOCK PNAME=NCCFP*" command and capture the output. Contact Technical Support with the diagnostic data provided.

XNCM09002**NCCF CALC Command failed to free lock P1****Reason:**

NCCF CALC emulation failed to free an exclusive lock identified by *P1*.

System Action:

CALC command processing fails.

User Action:

From an OCS window, issue a "SH LOCK PNAME=NCCFP*" command and capture the output. Contact Technical Support with the diagnostic data provided.

XNCM10001

NCCF Go Command ID= must be numeric

Reason:

The ID parameter was specified with an invalid value. The ID parameter must be a numeric value that is the NCLID of an NCL process.

System Action:

GO command terminates.

User Action:

Correct the parameter and run the command.

XNCM12001

NCCF LIST Command only supports TIMER/OP/STATUS/CLIST/DSILOG operands

Reason:

Invalid operands were used with the NetMaster emulation of the NCCF LIST command. Valid operands are:

- `TIMER=ALL OP=ALL` (display all timers).
- `TIMER=ALL` (display all of this users timers).
- `TIMER=tid` (display a specified timer).
- `STATUS=OPS` (display all logged on users).
- `CLIST=member` (display a specified member).
- `DSILOG` (display log information).

System Action:

LIST command is not processed.

User Action:

Retry the NCCF LIST command with supported operand(s).

XNCM12002**NCCF LIST Command only supports OP=ALL****Reason:**

Invalid value specified with OP= operand. NetMaster emulation of the NCCF OP operand only supports the value ALL.

System Action:

LIST command is not processed.

User Action:

Retry the NCCF LIST command with OP=ALL.

XNCM15001**NCCF PURGE Command only supports TIMER=ALL or TIMER=tid****Reason:**

Invalid operands were used with the NetMaster emulation of the NCCF PURGE command. Valid operand is: - TIMER

System Action:

PURGE command is not processed.

User Action:

Retry the NCCF PURGE command with supported operand(s).

XNCM17001

NCCF RMTCMD Command supports LU=*linkname* and SEND only

Reason:

Invalid operands were used with the emulation of the NCCF RMTCMD command.

Supported operands are:

- LU= *linkname*
- SEND

System Action:

RMTCMD command is not processed.

User Action:

Retry the NCCF RMTCMD command with supported operands.

XNCM18001

Do you really want to stop this P1 System (P2)? (Enter 'Go YES|NO')

Reason:

An emulated NCCF Close command has been entered. Enter either of the following: - Go YES to continue with Close command processing. - Go NO to terminate Close command processing.

System Action:

If *Go YES* is specified Close command processing continues and the region indicated by *P2* is shut down. If *Go NO* is specified Close command processing terminates.

User Action:

Specify either *Go YES* or *Go NO* .

XNCM18002

Close command processing cancelled

Reason:

Go YES was not entered to a Close command confirmation request.

System Action:

Close command processing terminates.

User Action:

None.

XNCMPK100

Usage statistics file written: P1

Reason:

NetView command/pipe stages usage statistics file was saved.
P1 is the Data Set name of the file.

System Action:

None.

User Action:

None.

XNCMPK101

Unsupported argument specified: P1

Reason:

NetView command/pipe usage statistics program was called with an invalid argument.

P1 is the argument detected. Supported arguments are: - Command table names, see XNCMPK101. - SORT= sort argument specification.

System Action:

None.

User Action:

Correct the argument specification.

XNCMPK102

Unsupported Commands/Stages table specified: P1

Reason:

NetView command/pipe usage statistics program was called with an unsupported table name.

P1 is the table name symbolic name. Supported tables specification (minimum 3 characters) are:

CMD - NetView Emulation commands.

PIP - NetView Emulation Pipe Stages.

STA - NetView Emulation Pipe Stages.

System Action:

None.

User Action:

Correct the table name specification.

XNCMPK103**Unsupported sort key specified: P1****Reason:**

NetView command/pipe usage statistics program was called with an unsupported/invalid sort key.

P1 is the sort key value specified. Supported sort keys (4-6 characters as shown suffice) are:

- ALIAS - Show Commands/Stages aliases first.
- FAIL - Command/Stage failure count.
- FAILED - Command/Stage failure count.
- FLCNT - Command/Stage failure count.
- NAME - Command/Stage name (default).
- PROC - Command/Stage supporting procedure name.
- SUPP - Show supported Commands/Stages first.
- USAGE - Command/Stage usage count.
- USCNT - Command/Stage usage count.

System Action:

None.

User Action:

Correct the sort key specification.

XNCMPK104**Variable P1 not found****Reason:**

NetView command/pipe usage statistics program failed to access the Commands/Stages variable.

P1 is the variable name. Normally, it indicates that NetView emulation has not yet started.

System Action:

None.

User Action:

Correct the sort key specification.

XNCMPK105

Internal error, Function: P1, Error: P2

Reason:

NetView command/pipe usage statistics program failed executing internal function.

P1 is the internal function failing.

P2 is the error/feedback.

System Action:

None.

User Action:

None.

XNCMPK110

Unable to allocate output: P1

Reason:

NetView command/pipe usage statistics program failed to allocate the output data set.

P1 is the message received on allocation.

System Action:

None.

User Action:

None.

XNCMPK111

Unable to open output, RC: P1, FB: P2

Reason:

NetView command/pipe usage statistics program failed to open the output data set.

P1 is RC received.

P2 is the feedback received.

System Action:

None.

User Action:

None.

XNCMPK112

Unable to write output, RC: P1, FB: P2

Reason:

NetView command/pipe usage statistics program failed to write to the output data set.

P1 is RC received.

P2 is the feedback received.

System Action:

None.

User Action:

None.

XNCMPK113

Unable to close output, RC: P1, FB: P2

Reason:

NetView command/pipe usage statistics program failed to close the output data set.

P1 is RC received.

P2 is the feedback received.

System Action:

None.

User Action:

None.

XNCMPK114

Unable to free output, RC: P1, FB: P2

Reason:

NetView command/pipe usage statistics program failed to free the output data set.

P1 is RC received.

P2 is the feedback received.

System Action:

None.

User Action:

None.

XNCT0100

NetView Command Emulation Table Rebuilt

Reason:

In-storage NetView command emulation table has been rebuilt. All the counters were reset to 0 and flags to defaults.

System Action:

None.

User Action:

None.

XNCT0101**Invalid parm: P1****Reason:**

In-storage NetView emulation table builder was called with invalid parameter.
P1 is the parameter.

System Action:

None.

User Action:

None.

XNCT0108**Error adding Cmd table alias entry, FDBK: P1, Key: P2****Reason:**

NetView emulation command table builder failed to add the command table alias command entry.

P1 - Feedback

P2 - Key

System Action:

None.

User Action:

None.

XNCT0109**Error adding Cmd table primary entry, FDBK: P1, Key: P2****Reason:**

NetView emulation command table builder failed to add the command table primary command entry.

P1 - Feedback

P2 - Key

System Action:

None.

User Action:

None.

XND271I

P1 DD STATEMENT MISSING

Reason:

The DD name is incorrect. *P1* specifies the DD name in error.

System Action:

The command is not processed.

User Action:

Use a previously defined DD name. See the ALLOCATE command online help for information about defining a DD name.

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XND272I

P1 IS NOW P2

Reason:

An ALLOCATE or FREE command has completed successfully.

P1 specifies the DD Name.

P2 specifies whether the file has been allocated or unallocated.

System Action:

None.

User Action:

None.

XND274I**FIND FAILED FOR MEMBER P1****Reason:**

The member specified in *P1* was not found.

System Action:

The command is not processed.

User Action:

Ensure the member specified was correct or review the member to help determine the cause of the problem.

XND275I**INVALID JOB STATEMENT****Reason:**

The data set containing the JCL for submission contains an invalid statement.

System Action:

The command is not processed.

User Action:

Correct the JCL statement.

XND277I**DATA SET P1 NOT FOUND****Reason:**

The data set specified in *P1* could not be found.

System Action:

The command is not processed.

User Action:

Specify a valid data set name.

XND278I

DATA SET P1 UNAVAILABLE

Reason:

The data set specified in *P1* could not be allocated because it is already allocated to another job.

System Action:

The command is not processed.

User Action:

Determine why the data set is allocated and either wait for the data set to become available or use another data set.

XND279I

P1 (P2) SUBMITTED

Reason:

The *SUBMIT* command ended successfully.

P1 specifies the job name.

P2 specifies the job ID.

System Action:

The SUBMIT command ends.

User Action:

None.

XND282I**DUPLICATE KEY VALUES FOUND****Reason:**

A value has been specified twice where only one is expected.

System Action:

The command is not processed.

User Action:

Correct the command syntax.

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XND299I

P1

Reason:

This multi line message lists information about the allocated data set, including:

- Message ID
- Message header information
- The DD Name of the file
- The name of the data set
- The member name
- The status of the file:

NEW

OLD

MOD

SHR

- The disposition of the file:

SYSOUT

KEEP

DELETE

System Action:

None.

User Action:

None.

XND325E**PIPE : ' P1' IS LONGER THAN P2 CHARACTERS****Reason:**

The Pipe stage command has been passed values larger than can be processed:

P1 specifies the value.

P2 specifies the limit.

System Action:

The command is not processed.

User Action:

Ensure the data length does not exceed the limit specified in *P2* .

XND326E**NUMVERFY : P1 MUST BE BETWEEN P2 AND P3****Reason:**

The numeric value of *P1* is outside of the range specified by *P2* and *P3* .

System Action:

The command is not processed.

User Action:

Ensure the numeric value is in the specified values.

XND334I**DELAY: WHEN A SECOND PARAMETER IS NOT GIVEN, THE TIME MUST BE IN SECONDS AND CANNOT CONTAIN A ':'****Reason:**

The DELAY command can specify seconds only when the second argument (command text) is omitted.

System Action:

The command is not processed.

User Action:

Specify the time delay period in seconds only.

XND335I

P1 was not found

Reason:

The VIEW command was issued to display panel *P1* but it is not in the allocated NVPANELS dataset.

System Action:

The command is not processed.

User Action:

Ensure that the panel *P1* exists in one of the datasets allocated to the NVPANELS DD.

XND336I

Panel ' p1' has a definition error. The panel definition contains commen t lines only

Reason:

The panel definition is invalid. It does not contain valid panel lines.

System Action:

The panel is not displayed.

User Action:

Correct the panel and retry.

XND338I**View command processor invoked with invalid parameters.****Reason:**

The syntax for the VIEW command is:

VIEW name1 name2 INPUT|NOINPUT MSG|NOMSG

where: name1 Specifies the internal name used by NetView. It is specified here for compatability.

name2 Specifies the name of the panel to display.

INPUT Specifies that input values and AID information may be returned to the procedure that invokes the VIEW command. INPUT also specifies that cursor location may be received from and returned to the procedure that invokes the VIEW command.

NOINPUT Specifies that the VIEW command does not return any information to the procedure that invoked it. If the panel defines a command line, all input is treated as a command. This is the default.

MSG|NOMSG This option has no effect and is supported for compatability only.

System Action:

The command is not processed.

User Action:

Correct the syntax and retry.

XND349I**CALC : P1****Reason:**

Specifies that the calculator is active and also provides an ID. The ID displays the NCL ID of the process that is providing the CALC command function. If there is more than one NCCF CALC environment running, you will need to specify ID= with the GO command. For example, you may need to issue GO ID=1234 1 * 2

System Action:

Processing continues.

User Action:

None.

XND350I

CALC : P1

Reason:

Specifies that the calculator is running in decimal mode.

System Action:

Processing continues.

User Action:

Enter *GO* followed by a decimal calculation.

XND356I

CALC : P1

Reason:

Specifies the calculator is running in hexadecimal mode.

System Action:

Processing continues.

User Action:

Enter *GO* followed by a hexadecimal calculation.

XND359I

DATE : TIME = P1 DATE = P2

Reason:

Specifies the system time and date.

P1 specifies the time.

P2 specifies the date.

System Action:

The actual date and time is displayed.

User Action:

None.

XND388I

Panel ' P1' has a definition error. There is no text indicator line (*) , or more than 49 option definitions were found.**

Reason:

The panel definition is invalid. It contains too many options or the required text indicator line cannot be found.

System Action:

The panel is not displayed.

User Action:

Correct the panel and retry.

XND398E

P1 : P2 COMMAND FAILED P3 - WAIT TIME EXPIRED | P4

Reason:

The command could not be processed because an error occurred or a time out expired.

P1 specifies the name of the REXX procedure.

P2 specifies the name of the command.

P3 specifies the timeout value in seconds.

P4 specifies the associated message text.

System Action:

The command is not processed.

User Action:

Review the REXX procedure to determine the cause of the error.

XND456I

INVALID DATA "P1" SPECIFIED FOR KEYWORD "P2" IN P3 COMMAND

Reason:

An invalid value was specified in a command keyword.

P1 specifies the invalid value.

P2 specifies the keyword.

P3 specifies the command.

System Action:

The command is not processed.

User Action:

Correct the value specified in *P1*.

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XND564I

P1 COMMAND SYNTAX ERROR OR OPERAND IS MISSING

Reason:

An invalid MVS command was specified. *P1* specifies the command.

System Action:

The command is not processed.

User Action:

Specify a valid MVS command.

XND712I**CALC : P1****Reason:**

Specifies that the calculator is ending.

System Action:

Calculator processing ends.

User Action:

None.

XND714I**CALC : P1****Reason:**

Displays the result of a decimal calculation.

System Action:

Calculator results are displayed.

User Action:

None.

XND715E**CALC : P1****Reason:**

The specified calculation is invalid.

System Action:

The command is not processed.

User Action:

Specify a valid calculation.

XND716E

CALC : P1

Reason:

The values specified in the calculation are too large to be processed by the calculator.

System Action:

Calculation is not processed.

User Action:

Specify smaller values in the calculation.

XND717I

CALC : P1

Reason:

Displays a hexadecimal calculation.

System Action:

Calculator results are displayed.

User Action:

None.

XND722E

NUMVERFY : INVALID PARAMETER(S) P1

Reason:

The argument is not numeric.

System Action:

The command is not processed.

User Action:

Specify the numeric value.

XND905I**P1 was not found****Reason:**

The panel named *P1* is not in the NVPANELS dataset concatenation.

System Action:

None.

User Action:

Ensure that you have entered the correct panel name and that the panel exists in a dataset allocated to the NVPANELS DD.

XND911I**Input is not recognized as a valid option or as a valid command****Reason:**

Data entered on the command line is not recognized as a valid command or the name of a REXX procedure.

System Action:

The command is not processed.

User Action:

Correct the command and retry.

XND912I**P1 cannot be displayed: It has a definition error****Reason:**

The VIEW command attempted to display a panel named *P1* ;however, the panel contained a definition error and cannot be displayed.

System Action:

The panel is not displayed.

User Action:

Check the log for the specific message text that relates to the error.

XND914I

There is no continuation panel

Reason:

You pressed F8 on a panel that does not have a continuation panel.

System Action:

None.

User Action:

None.

XND918I

The current panel is the first panel in selection

Reason:

You pressed F7 (Backward) on the first panel of a sequence.

System Action:

None.

User Action:

None.

XNEM000

NetView Command not supported: P1

Reason:

NetMaster Netview Command emulation procedure was called to perform command *P1* which is not supported yet.

System Action:

None.

User Action:

None.

XNEM001**Invalid positional argument: P1, P2****Reason:**

REXX NetView emulation detected that the positional argument *P1* is invalid. *P2* may indicate one of the reasons listed above or provide another explanation.

Action - action specified is invalid to the command emulated.

List - list variable invalid, missing ending bracket.

Label - command labels are not supported yet.

Length - text variable(name) is longer than allowed for its type:

- max 8 characters for procedure name.
- max 12 characters for global variable name.
- max 12 characters for vartable name.
- max 256 characters for variable name.
- other argument-specific length limitations.

Text - invalid text variable.

Txtype - text variable(name) contains characters invalid for its type.

System Action:

None.

User Action:

Verify the syntax and correct arguments.

XNEM002**Errors decoding keyword arguments: P1****Reason:**

NetMaster NetView emulation detected errors while decoding argument.

P1 is the message detailing errors encountered.

System Action:

None.

User Action:

Verify the syntax and correct the arguments.

XNEM003

Invalid keyword argument value, P1, P2

Reason:

NetMaster NetView emulation detected that the value of the keyword argument specified is invalid.

P1 - keyword value in error.

P2 - describes the reason (see XNEM001 for explanations).

System Action:

None.

User Action:

Verify the syntax and correct the arguments.

XNEM004

Unsupported positional argument: P1

Reason:

NetMaster NetView emulation detected that the positional argument *P1* is not supported at the current emulation level.

System Action:

None.

User Action:

None.

XNEM005

Unsupported keyword argument: P1

Reason:

NetMaster NetView emulation detected that the keyword argument *P1* is not supported at the current emulation level.

System Action:

None.

User Action:

None.

XNEM010**Less than required number of arguments specified****Reason:**

NetMaster NetView emulation detected that the number of arguments specified is less than required.

System Action:

None.

User Action:

Verify the syntax and add required arguments.

XNEM011**Required positional argument missing: P1****Reason:**

NetMaster NetView emulation detected that the required positional argument was not specified.

P1 is the name of the missing keyword argument.

System Action:

None.

User Action:

Verify the syntax and add required arguments.

XNEM012**Required keyword argument missing: P1****Reason:**

NetMaster NetView emulation detected that the required keyword argument was not specified.

P1 is the name of the missing keyword argument.

System Action:

None.

User Action:

Verify the syntax and add the required arguments.

XNEM013

Co-requisite positional argument missing: P1

Reason:

NetMaster NetView emulation detected that the co-requisite positional argument was not specified.

P1 is the name of the missing argument.

System Action:

None.

User Action:

Verify the syntax and add the required arguments.

XNEM014

Co-requisite keyword argument missing: P1

Reason:

NetMaster NetView emulation detected that the co-requisite keyword argument was not specified. *P1* is the name of the missing argument.

System Action:

None.

User Action:

Verify the syntax and add the required arguments.

XNEM015

Co-requisite keyword argument value missing: P1

Reason:

NetMaster NetView emulation detected that the co-requisite keyword argument value is not specified or the specification is shorter than expected.

P1 is the keyword name.

System Action:

None.

User Action:

Verify the syntax and specify the required values.

XNEM020**Invalid REXX variable name: P1****Reason:**

NetMaster NetView emulation detected that the text provided as REXX variable name is not a valid REXX variable name.

P1 is the variable name.

System Action:

None.

User Action:

Verify the syntax and correct the arguments specification.

XNEM021**Mutually exclusive positional arguments: P1 , P2****Reason:**

NetMaster NetView emulation detected the conflict in positional arguments.

P1 is the first argument.

P2 is the second argument.

System Action:

None.

User Action:

Verify the syntax and correct the arguments specification.

XNEM022**Mutually exclusive keyword arguments: P1 , P2****Reason:**

REXX NetMaster emulation detected the conflict in keyword arguments.

P1 is the first argument.

P2 is the second argument.

System Action:

None.

User Action:

Verify the syntax and correct the arguments specification.

XNEM023

Excessive keyword argument: P1

Reason:

NetMaster NetView emulation detected that the keyword argument specified was excessive for the action selected.

P1 is the name of the argument.

System Action:

None.

User Action:

Verify the syntax and correct the arguments specification.

XNEM024

Incompatible argument value(s): P1, P2

Reason:

NetMaster NetView emulation detected that the specified argument values are incompatible with their meaning, or two arguments specified are not compatible with each other.

P1 is the first or only argument.

P2 is the second argument.

System Action:

None.

User Action:

Verify the syntax and correct the arguments specification.

XNEM041**NetView emulation procedure: P1 failed, Error Code: P2****Reason:**

NetMaster procedure *P1* called by REXX program failed compilation stage.
P2 - Error code indicated by the language compiler.

System Action:

None.

User Action:

If the procedure is in-house, run a direct compile, analyze errors, and fix the code. If the procedure is a part of NetMaster distribution, contact Technical Support with diagnostic data provided.

XNEM042**P1****Reason:**

This is a continuation of message XNEM041 providing further details:
P1 - Error text.

System Action:

None.

User Action:

See message XNEM041.

XNEM043

P1, P2, P3, P4

Reason:

This is a continuation of the XNEM041 message, providing further details:

P1 Name of the file or member that contains the failing procedure

P2 Source line number in the file

P3 Failing statement name

P4 If present, failing keyword name

System Action:

None.

User Action:

See the XNEM041 message.

XNEM090

Command not specified

Reason:

NetMaster NetView Command helper procedure detected that it was called with the empty command line specified.

System Action:

None.

User Action:

Contact Technical Support.

XNEM091**Command environment not valid or not specified: P1****Reason:**

NetMaster NetView Command helper was called to process the command but the originating environment is either not specified or not supported.
P1 is the environment name, if specified.

System Action:

None.

User Action:

Ensure that the command is issued in the correct environment. Supported environments are: NCCF, REXX, PIPE and RCMD.

XNEM092**Command P1 (P2) Not Supported****Reason:**

NetMaster Netview Command helper procedure detected that command *P1* was marked as 'Not Supported'.

System Action:

None.

User Action:

None,

XNEM093**Command not valid: P1****Reason:**

NetMaster Netview Command helper did not find emulation definition or REXX procedure for *P1* command.

System Action:

None.

User Action:

None.

XNEM095

Command P1 failed. Procedure P2 loading failed, error: P3

Reason:

NetMaster Netview Command helper failed to load handler procedure *P2* supporting command *P1* .
P3 is the OML compiler error code.

System Action:

None.

User Action:

None.

XNEM098

Full screen command entry environment cancelled by the user

Reason:

NetMaster NetView nccf-like full screen command entry facility was cancelled by the user. If the command buffer was already created/updated in the previous command editing session, it is preserved without changes.

System Action:

None.

User Action:

None.

XNEM099**Command P1 failed. Internal error, Function: P2, Error: P3****Reason:**

NetMaster NetView Command helper encountered internal error processing command *P1* .

P2 is the internal function failing.

P3 is the error/feedback. This situation indicates problems encountered calling internal functions of the Product.

System Action:

None.

User Action:

Try again, contact Technical Support if the problem persists.

XNEM100**P1 Command Complete. RC: P2 XNRC: P3****Reason:**

NetMaster Netview Command helper reports that the emulated command executed. The message is intended to be only sent while in intcmd environment.

P1 is the executed command.

P2 is the &SYS.RETCODE value.

P3 is the internal return code.

System Action:

None.

User Action:

None.

XNEM101

Command ' *P1*' rerouted through link: *P2* - Wait is *P3*

Reason:

This trace record is written to the activity log when the NetView emulation #DEBUG option is activated.

Command *P1* is rerouted to a remote region through the INMC link *P2*. The response timeout is *P3*.

System Action:

None.

User Action:

None.

XNEM102

Command response from link: *P1* - Data:' *P2*'

Reason:

This trace record is written to the activity log when the NetView emulation #DEBUG option is activated.

P2 is the first message in the response to a rerouted NetView emulation command.

System Action:

None.

User Action:

None.

XNEM103**Remote Command through link: P1 has terminated P2****Reason:**

This trace record is written to the activity log when the NetView emulation #DEBUG option is activated.

This trace message is issued when the remote command terminates. *P2* is the reason for the termination.

System Action:

None.

User Action:

None.

XNEM104**Command ' P1' is not suitable for remote processing****Reason:**

The specified NetView emulation command *P1* can execute in the local environment only and cannot be rerouted to a remote region.

System Action:

None.

User Action:

Verify the syntax and correct the command specification.

XNEM105**The command P1 has an invalid label value: ' P2'****Reason:**

The label *P2* on the NetView emulation command *P1* has an invalid value.

System Action:

None.

User Action:

Verify the syntax and correct the command specification.

XNEM106

A NetView Emulation command rerouted to a remote region contains an escape character *P1* at position *P2* in the command string

Reason:

A NetView Emulation command is being rerouted to a remote region. The NetView Emulation command string contains character *P1* in position *P2* in the command string. This character is used as a control character when rerouting a NetView Emulation command and cannot be used in the command string.

System Action:

The NetView Emulation command is not sent to the remote system.

User Action:

Remove (or replace) the escape characters from the command string.

XNEM107

A NetView Emulation command string rerouted to a remote region has a length of *P1* bytes, which is larger than the supported maximum of *P2* bytes

Reason:

A NetView Emulation command is being rerouted to a remote region. The NetView Emulation command string has a length of *P1* bytes. The NetView Emulation supports a maximum of *P2* bytes.

System Action:

The NetView Emulation command is not sent to the remote system.

User Action:

Review the command string and shorten it if possible. Alternatively, copy the NetView Emulation command to a REXX procedure on the remote system and then request its execution from the local system.

XNF001I**MESSAGE SENT TO P1****Reason:**

A message was sent to the user specified in *P1* .

System Action:

None.

User Action:

None.

XNF002I**INVALID COMMAND: 'P1'****Reason:**

An invalid command was entered.

System Action:

The command is not processed.

User Action:

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNF003I**DESTINATION OPERAND MISSING OR INVALID****Reason:**

The destination was not specified in the MSG command.

System Action:

The command is not processed.

User Action:

Specify a destination in the MSG command.

XNF004I

TEXT OPERAND MISSING OR INVALID

Reason:

Command text was invalid or omitted from a command.

System Action:

The command is not processed.

User Action:

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNF008I

P1 NOT ACTIVE

Reason:

The destination specified in *P1* is not active or not available.

System Action:

The command is not processed.

User Action:

Specify a valid destination.

XNF011I**EXTRANEOUS INFORMATION IN OPERAND FIELD****Reason:**

Invalid operand data was specified.

System Action:

The command is not processed.

User Action:

Correct the operand data specified with the command.

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNF014I**INVALID OPERAND****Reason:**

An invalid operand was specified.

System Action:

The command is not processed.

User Action:

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNF016I

NOT IN PAUSE OR WAIT STATUS

Reason:

The GO command was issued, however, no processes were in a PAUSE or WAIT status.

System Action:

The command is not processed.

User Action:

When you issue the GO command, ensure that you correctly identify the NCL process, which must have a status of PAUSE or WAIT.

XNF017I

CLOSE COMMAND ACCEPTED

Reason:

A CLOSE command has been issued and accepted.

System Action:

Shutdown of the NetMaster region is initiated.

User Action:

None.

XNF028I

EXPECTED OPERAND MISSING

Reason:

You entered a command without an expected operand.

System Action:

The command is not processed.

User Action:

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNF031I**SPECIFIED NAME 'P1' INVALID****Reason:**

You specified an invalid name in *P1*.

System Action:

The command is not processed.

User Action:

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1.

XNF034I**COMMAND SCHEDULED BY AT/EVERY/AFTER COMMAND - ' P1'****Reason:**

An AT/EVERY or AFTER command has been entered. *P1* specifies the command to be issued when the timer triggers.

System Action:

The command is scheduled for execution.

User Action:

None.

XNF039I**MSG FROM P1 : P2****Reason:**

A message has been received.

P1 specifies the sender of the message.

P2 specifies the message text.

System Action:

None.

User Action:

None.

XNF069I

SYNTAX ERROR P1

Reason:

You entered a command incorrectly.

Note: For some error conditions, Tivoli NetView emulation may supplement this message with additional explanation text (*P1*).

System Action:

The command is not processed.

User Action:

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNF071I

INVALID VTAM COMMAND

Reason:

An invalid VTAM command has been entered.

System Action:

The command is not processed.

User Action:

Enter a valid VTAM command.

XNF074A**MESSAGE NOT SENT TO P1, REASON: P2****Reason:**

Message failed to reach active user, identified by *P1*.
Receipt of broadcast type messages may be controlled by the PROFILE of the target environment. An environment set with PROFILE MSG=N or PROFILE UNSOL=N cannot receive messages unless directed to the individual user. Depending on the type of message, *P2* either quotes the NetMaster message number received by the emulation or gives a reason for the message failure:
OCS WINDOW CLOSED - recipient's OCS session was closed
NOT IN OCS MODE - recipient's terminal is not in OCS mode

System Action:

None.

User Action:

Use the reason provided by *P2* to determine the cause of the error.
Consider changing MSG and UNSOL parameters in your profile to allow the messages to be received.

XNF077A**P1 STATION NAME UNKNOWN****Reason:**

The identifier specified in *P1* is not known to NetMaster.

System Action:

The command is not processed.

User Action:

Specify a valid identifier.

XNF085I

READ ERROR OCCURRED ON NCCF DATA SET P1

Reason:

The data set specified in *P1* cannot be read.

System Action:

The command is not processed.

User Action:

Specify a valid data set name.

XNF122I

NCCF IN SHUTDOWN MODE - P1 REQUESTED BY P2

Reason:

A CLOSE Normal command has been entered. No other logons are permitted and NetMaster will shutdown when all users have logged off.

P1 specifies the shutdown mode.

P2 specifies the user who issued the command.

System Action:

NetMaster stops any further users logging on and once all users are logged off NetMaster shuts down.

User Action:

None.

XNF167E

ERROR OCCURRED SCANNING AT POSITION P1, PREVIOUS TEXT: P2

Reason:

An error occurred while processing a Pipe command.

P1 specifies the position the error occurred within the command.

P2 specifies some of the preceding Pipe command text.

System Action:

The command is not processed.

User Action:

Correct the Pipe command syntax.

XNF201I**TIMER REQUEST SCHEDULED FOR EXECUTION ' P1'****Reason:**

An AT/EVERY or AFTER command has been issued and *P1* specifies the NetMaster generated identifier.

System Action:

The command is scheduled for execution.

User Action:

None.

XNF202I**TIMER REQUEST FAILED TO BE SCHEDULED FOR EXECUTION ' P1'****Reason:**

A timer request cannot be scheduled.

System Action:

The command is not processed.

User Action:

Check the activity log for related messages to determine the reason for the error.

XNF203I**TIME VALUE SPECIFIED INVALID OR OMITTED****Reason:**

The time parameter is invalid.

System Action:

The command is not processed.

User Action:

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNF205I

P1 TIMER ELEMENTS PURGED OP=' P2'

Reason:

The number of timer elements specified in *P1* have been purged by the user specified in *P2* .

System Action:

None.

User Action:

None.

XNF238I

P1 COMMAND FAILED, INVALID PARAMETER: P2

Reason:

The command specified in *P1* failed because the invalid parameter specified in *P2* was entered.

System Action:

The command is not processed.

User Action:

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNF268I

EXCMD COMPLETE

Reason:

Specifies that the command has been issued.

System Action:

None.

User Action:

None.

XNF290I**INVALID INVOCATION OF COMMAND P1 BY OPERATOR/TASK P2****Reason:**

A command specified in *P1* has been issued in an invalid environment by the user specified in *P2* . For example, the command might be intended to be:

- Issued only from a REXX procedure
- Issued only as a native command

System Action:

The command is not processed.

User Action:

Check the command usage, correct and resubmit.

XNF370I**ALLOCATE COMMAND FAILED, ' P1' IS ALREADY IN USE****Reason:**

An attempt has been made to allocate a file that is already in use.

System Action:

The command is not processed.

User Action:

Determine why the data set is allocated and either wait for the data set to become available or use another data set.

XNF372I**FREE COMMAND FAILED, ' P1' IS NOT ALLOCATED****Reason:**

A FREE command failed because the data set specified in *P1* is not allocated.

System Action:

The command is not processed.

User Action:

Specify the name of an allocated data set or determine why the specified data set is not currently allocated.

XNF486I

INVALID OPERAND OR KEYWORD 'P1'

Reason:

You entered an invalid operand or keyword in *P1*.

System Action:

The command is not processed.

User Action:

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNF633I

P1 COMMAND SUCCESSFULLY COMPLETED

Reason:

The command *P1* has completed successfully.

System Action:

None.

User Action:

None.

XNF646I

KEYWORD 'P1' IS INVALID

Reason:

The keyword specified in *P1* is invalid.

System Action:

The command is not processed.

User Action:

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNF647I**DUPLICATE KEYWORD P1****Reason:**

The keyword specified in *P1* has been entered more than once.

System Action:

The command is not processed.

User Action:

Specify the keyword once in the command.

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNF648I**KEYWORD CONFLICT BETWEEN P1 AND P2****Reason:**

There is a conflict between the keyword specified in *P1* and the keyword specified in *P2*.

System Action:

The command is not processed.

User Action:

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNF649I

KEYWORD *P1* HAS INVALID VALUE: '*P2*'

Reason:

The keyword specified in *P1* has been assigned an invalid value specified in *P2*.

System Action:

The command is not processed.

User Action:

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNF650I

INVALID SYNTAX: '*P1*'

Reason:

A command specified in *P1* has been entered incorrectly.

System Action:

The command is not processed.

User Action:

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNF651I**KEYWORD MISSING - P1****Reason:**

An expected keyword specified in *P1* is missing.

System Action:

The command is not processed.

User Action:

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNF653I**VALUE MISSING FOR KEYWORD 'P1'****Reason:**

A keyword specified in *P1* has been specified without a value.

System Action:

The command is not processed.

User Action:

Specify a value for the keyword.

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNF724I

NCCF MEMBER P1 NOT FOUND ON P2

Reason:

The member name specified in *P1* on dataset *P2* was not found or was empty.

System Action:

The command is not processed.

User Action:

Review the member specified in *P1* or specify a valid member name.

XNH206I

STEM VARIABLE ' P1' RECORD COUNT MUST BE ZERO OR POSITIVE AND NOT LARGER THAN 10000000

Reason:

The stem variable record count specified in *P1* must be zero or a positive number that does not exceed 10000000. If the REXX environment has a limit of less than 10000000 then that is the maximum stem count that can be passed to the Stem Pipe stage command.

System Action:

The command is not processed.

User Action:

Ensure the stem variable count does not exceed a count of 10000000 or the maximum supported in the REXX environment in which it is running.

XNH342I

' P1' ' P2' DROPPED

Reason:

Command *P1* was deleted from the *P2* definitions.

System Action:

The command is removed.

User Action:

None.

XNH349E**' P1' ' P2' HAS NO DEFINITION STATEMENTS****Reason:**

Command *P1* failed. *P2* is empty or has comment statements only.

System Action:

The command is not processed.

User Action:

Check the source definitions. Correct any syntax error and add the missing definition statements.

XNH360E**IMPROPER OPTION *P1* SPECIFIED. *P2* REJECTED.****Reason:**

An invalid option was specified in a Pipe stage command.

P1 specifies the invalid option.

P2 specifies the command that rejected the option.

System Action:

The command is not processed.

User Action:

Specify a valid option.

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNH362E

PIPELINE TERMINATED. ERROR IN STAGE *P1* IN PIPELINE '*P2*': *P3*

Reason:

Specifies that a Pipe command has failed.

P1 specifies the number of the pipe stage that failed.

P2 specifies the name of the pipe.

P3 specifies the stage text.

System Action:

The command is not processed.

User Action:

Correct the Pipe command syntax.

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNH363E

PIPELINE TERMINATED. NULL SPECIFICATION.

Reason:

A Pipe command was entered without any Pipe stage commands.

System Action:

The command is not processed.

User Action:

Specify Pipe stage commands with the Pipe command.

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNH364E**PIPELINE TERMINATED. NO STAGE P1 EXISTS.****Reason:**

Unrecognized Pipe stage name *P1* was found in the Pipe command.

System Action:

The command is not processed.

User Action:

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNH365E**KEYWORD 'P1' IS POSITIONAL AND NOT IN ITS EXPECTED POSITION.****Reason:**

A positional keyword specified in *P1* has been specified but is in the wrong position.

System Action:

The command is not processed.

User Action:

Place the keyword in the correct position.

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNH366E

NUMERIC VALUE *P1* IS NOT VALID. IT IS NOT WITHIN THE RANGE REQUIRED BY THE COMMAND OR KEYWORD ON WHICH IT IS SPECIFIED.

Reason:

An out of range numeric value *P1* was specified.

System Action:

The command is not processed.

User Action:

Correct the specified value.

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNH367E

UNSUPPORTED DELIMITER FOUND

Reason:

An invalid delimiter character or an invalid option value has been specified.

System Action:

The command is not processed.

User Action:

Specify a valid delimiter character or option value.

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNH369I**P1 STAGE (P2) HAD RETURN CODE P3****Reason:**

(MOE) option was specified on *P1* stage command. The stage command encountered an error.

P2 is the number of the stage command that reported the error.

P3 is the return code for the error.

System Action:

The Pipe stage command terminates.

User Action:

For more information about the return code, see the online help for the stage command.

To view online help, enter **NCCF** at the Console (OCS) and press F1.

XNH372E**ENDING DELIMITER NOT FOUND FOR DELIMITED STRING: ' P1'****Reason:**

No matching end delimiter was found for the string specified in *P1* .

System Action:

The command is not processed.

User Action:

Specify a matching end delimiter.

XNH376E

ERROR: STAGE P1 CANNOT BE FIRST IN A PIPELINE.

Reason:

The Pipe stage command specified in *P1* cannot not be the first stage command in a Pipe command.

System Action:

The command is not processed.

User Action:

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNH377E

ERROR: STAGE P1 CAN ONLY BE FIRST IN A PIPELINE

Reason:

A Pipe stage command that can only be the first stage of a Pipe command has been specified in a later stage.

System Action:

The command is not processed.

User Action:

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNH378E

**P1 STRING IS TOO LONG, GREATER THAN P2 CHARACTERS IN LENGTH:
' P3'**

Reason:

A string specified in P1 is greater in length than the maximum length specified in P2 . The length of the erroneous string is *P3* .

System Action:

The command is not processed.

User Action:

Limit the specified string to the value specified in *P2* .

XNH381E

**POS.LEN STRING CONTAINS ZERO AS EITHER THE POSITION OR THE
LENGTH:' P1**

Reason:

A position.length string has been specified with either a position or length value equal to zero. **P1** specifies the POS.LEN string.

System Action:

The command is not processed.

User Action:

Correct the POS.LEN string.

XNH570I

UNABLE TO ESTABLISH REMOTE SESSION ON *. P1 WITH SENSE: UNKNOWN

Reason:

A remote session could not be established with a remote NetMaster luname specified in P1 .

System Action:

The command is not processed.

User Action:

Ensure that there is an INMC link between this NetMaster region and the remote. See NetMaster's online help for the Link command.

To view online help, enter "Help Link" at the NetMaster Console (OCS).

XNH576E

COMMAND TEXT NOT PRESENT IN 'P1' COMMAND

Reason:

Command text was not present in the command specified in P1.

System Action:

The command is not processed.

User Action:

Specify command text.

For more information about supported commands and operands, see the online help and the *NetMaster REXX Guide*.

To view online help, enter NCCF at the NetMaster Console (OCS) and then press F1 (Help).

XNINWI01**Duplicate Data Set Name****Reason:**

The highlighted data set name is already specified.

System Action:

The name is not accepted, and the field is set in error.

User Action:

Remove the duplicate name.

XNINWI02**Dataset must be Partitioned****Reason:**

The DSIPARM or NVPANELS dataset must be specified as a partitioned Dataset (PDS). Individual PDS member specification is also invalid.

System Action:

Field is set in error.

User Action:

Specify a PDS name without member specification.

XNINWI10**P1 deconcatenated****Reason:**

A previously-concatenated set of partitioned datasets assigned to the DDname given by *P1* was deconcatenated. This process is normal when the new definitions for DSIPARM or Netview panels are activated.

System Action:

The Netview emulation initialization wizard continues.

User Action:

None.

XNINWI11

P1 deconcatenation failed, P2, P3

Reason:

Deconcatenation of the set of partitioned datasets assigned to the DDname given by *P1* failed.

P2 is the return code.

P3 is the reason message.

System Action:

The Netview emulation initialization wizard attempts to continue.

User Action:

Press PF5 to view the wizard log and look for possible reasons and actions.

XNINWI12

P1 deallocated

Reason:

The previously-allocated partitioned dataset *P1* assigned to the DSIPARM or NVPANELS DDname was deallocated. This is a normal process when the new definitions for DSIPARM or Netview panels are activated.

System Action:

The Netview emulation initialization wizard continues.

User Action:

None.

XNINWI13**P1 deallocation failed, P2, P3****Reason:**

Deallocation of the partitioned dataset *P1* allocated to the DSIPARM or NVPANELS failed.

P2 is the return code.

P3 is the reason message.

System Action:

The Netview emulation initialization wizard attempts to continue.

User Action:

Press PF5 to view the wizard log and look for possible reasons and actions.

XNINWI14**P1 allocated to P2****Reason:**

The partitioned dataset *P1* was allocated to DSIPARM or NVPANELS.

P2 is the DDname.

System Action:

The Netview emulation initialization wizard continues.

User Action:

None.

XNINWI15**P1 allocation failed, P2, P3****Reason:**

Allocation of the partitioned dataset *P1* to the DSIPARM or NVPANELS DD failed.

P2 is the return code.

P3 is the reason message.

System Action:

The Netview emulation initialization wizard attempts to continue.

User Action:

Press PF5 to view the wizard log and look for possible reasons and actions.

XNINWI16

P1 concatenated

Reason:

A defined collection of up to five partitioned datasets were allocated to *P1* DDname.

System Action:

The Netview emulation initialization wizard continues.

User Action:

None.

XNINWI17

P1 concatenation failed, P2, P3

Reason:

Concatenation of the set of partitioned datasets assigned to the DDname given by *P1* failed.

P2 is the return code.

P3 is the reason message.

System Action:

The Netview emulation initialization wizard attempts to continue.

User Action:

Press PF5 to view the wizard log and look for possible reasons and actions.

XNINWI20

Init parms read from statement P1 of P2

Reason:

The Netview emulation initialization parameters were obtained from DSIPARM Datasets.

P1 is the DSIPARM PDS statement name.

P2 is the DSIPARM PDS member name.

System Action:

The Netview emulation initialization wizard continues.

User Action:

None.

XNINWI21**P1 member not found in P2****Reason:**

An attempt to access the Netview emulation initialization member *P1* in any of the partitioned datasets allocated to *P2* DDname failed.

System Action:

The Netview emulation initialization wizard assigns default values to the parameters expected in the specified member.

User Action:

Ensure that the PDS that contains the *P1* member is allocated to the *P2* DDname. Correct the situation and reactivate the parameter group.

XNINWI22**P1 access failed, member = P2****Reason:**

An attempt to access one of the partitioned datasets allocated to Netview emulation *P1* DDname or reading member *P2* failed.

System Action:

The Netview emulation initialization wizard assigns default values to the parameters expected in the specified member.

User Action:

Press PF5 to view the log and look for messages that indicate the reason for the error. Correct the situation and reactivate the parameter group. Verify that *P2* member exists in PDS *P1* .

XNINWI23

P1 internal error

Reason:

A call to internal routines returned an unexpected return code.
P1 describes the source of the error.

System Action:

The Netview emulation initialization wizard assigns default values to the parameters expected in the specified member.

User Action:

Contact Technical Support.

XNINWI25

Reading CCDEF finished, RC= P1

Reason:

The Command Characteristic Definition (CCDEF) member of DSIPARM finished.
P1 is the Return Code. If the Return Code reported is greater than 0, see the activity log for more information.

System Action:

The Netview emulation initialization wizard continues.

User Action:

View the activity log for messages that report errors. Correct the situation and reactivate the parameter group.

XNLOAD01

Unable to open library DD(P1) RC(P2) FB(P3) Msg(P4)

Reason:

An attempt to open the library with a DD of *P1* failed with return code *P2* feedback code *P3* and an error message *P4*

System Action:

Request to load a panel fails.

User Action:

Investigate why the panels library cannot be opened. Correct the problem and retry.

XNLOAD02**Unable to open panel(P1) RC(P2) FB(P3) Msg(P4)****Reason:**

An attempt to open the panel *P1* failed with return code *P2* feedback code *P3* and an error message *P4*

System Action:

Request to load a panel fails.

User Action:

Attempt to correct the problem and retry.

XNLOAD03**Error reading panel(P1) RC(P2) FB(P3) Msg(P4)****Reason:**

An attempt to read the panel *P1* failed with return code *P2* feedback code *P3* and an error message *P4*

System Action:

Request to load a panel fails.

User Action:

Attempt to correct the problem and retry.

XNLOAD04**Panel(P1) read successfully. P2 lines read.****Reason:**

Panel *P1* was successfully read and found to contain *P2* lines. It is followed by one or more XNLOAD05 messages that contain the panel definition as read from the file.

System Action:

None.

User Action:

None.

XNLOAD05

P1

Reason:

This message is generated only if the GLOBAL variable \$XNLOAD is set to YES.

System Action:

None.

User Action:

None.

XNLOAD06

Panel ' P1 ' supports Katakana. It cannot be displayed.

Reason:

Panel *P1* is defined with the KK option. This is not supported in the CA NetMaster REXX VIEW implementation.

System Action:

Panel is not displayed.

User Action:

None.

XNPI0000

Pipe Option: P1 set to: P2

Reason:

NetView Pipe emulation Extended Trace (*XDB*) was specified. There is one *XNPI0000* message for each Pipe option (*P1*) and its value (*P2*).

System Action:

None.

User Action:

None.

XNPI0001**P1****Reason:**

NetView Pipe emulation Extended Trace (*XDB*) was specified. These messages list the Pipe Stage Groups.

System Action:

None.

User Action:

Contact Technical Support.

XNPI0002**Pipe Message Segment Size is: P1****Reason:**

NetView Pipe emulation Extended Trace (*XDB*) was specified. *P1* is the Maximum Message Segment Size.

System Action:

None.

User Action:

Contact Technical Support.

XNPI0010**Duplicated P1 prefix****Reason:**

NetView Pipe emulation - More than one *P1* prefix was found on a stage specification.

System Action:

The command is not processed.

User Action:

Check the syntax of the command.

XNPI0011

Orphan NetView Pipe stage found (stage # P1)

Reason:

NetView Pipe emulation - Pipe stage *P1* has no connections to any other stage.

System Action:

The command is not processed.

User Action:

Check the syntax of the command.

XNPI0012

NetView Pipe stage connector found by itself

Reason:

NetView Pipe emulation - Found a Pipe stage connector with no related stage specification.

System Action:

The command is not processed.

User Action:

Check the syntax of the command.

XNPI0013

Misplaced NetView Pipe stage connector found

Reason:

NetView Pipe emulation - Found a misplaced stage connector.

System Action:

The command is not processed.

User Action:

Check the syntax of the command.

XNPI0020**Unsupported Pipe stage name <' P1'>****Reason:**

Stage name *P1* is not supported by NetView Pipe emulation.

System Action:

The command is not processed.

User Action:

None.

XNPI0021**Pipe stage name <' P1'> not supported from REXX****Reason:**

NetView Pipe emulation does not support stage name *P1* from a REXX environment.

System Action:

The command is not processed.

User Action:

None.

XNPI0022**Pipe stage name <' P1'> not supported from a native environment****Reason:**

Stage name *P1* is not directly supported from a native environment.

System Action:

The command is not processed.

User Action:

None.

XNPI0023

Error updating the NetView Pipe stage table, FB: P1, KEY: P2

Reason:

Error in updating the In-storage NetView Pipe emulation stage table.
P1 is the feedback code.
P2 is the entry key (stage name).

System Action:

None.

User Action:

Contact Technical Support.

XNPI0024

Error accessing the NetView Pipe stage table, FB: P1, KEY: P2

Reason:

Error in accessing a stage alias full name entry from the In-storage NetView Pipe emulation stage table.

P1 is the feedback code.
P2 is the entry key (stage full name).

System Action:

None.

User Action:

Contact Technical Support.

XNPI0025

The Pipe Environment Table could not be found, ID: P1

Reason:

A NetView Pipe was called from another NetView Pipe. The required NetView Pipe emulation Environment Table *P1* could not be located.

System Action:

The request is terminated.

User Action:

Contact Technical Support.

XNPI0026**Error adding the NetView Pipe Default SAFE entry: P1 to P2, FDBK: P3****Reason:**

Error in adding the NetView Pipe Default SAFE entry to the NetView Pipe emulation environment table.

P1 is the entry key.

P2 is the table name.

P3 is the feed back code.

System Action:

The request is terminated.

User Action:

Contact Technical Support.

XNPI0027**NetView PIPE emulation command handler internal error P1 - P2****Reason:**

An internal error has occurred in the NetView PIPE emulation command handler.

P1 is the internal error number.

P2 is the error reason text.

System Action:

The request terminates.

User Action:

Contact Technical Support.

XNPI0028

**Error accessing the NetView Pipe emulation CCDEF table, name: P1,
Key: P 2, FDBK: P3**

Reason:

Error accessing a CCDEF entry in the in-storage NetView PIPE emulation Command Characteristic Definition Table.

P1 is the table name.

P2 is the key (command name).

P3 is the feedback code.

System Action:

None.

User Action:

Contact Technical Support.

XNPI0100

NetView Emulation Pipe stage Tables Rebuilt

Reason:

In-storage NetView Pipe emulation tables have been rebuilt.

System Action:

None.

User Action:

None.

XNPI0101

Invalid parm: P1

Reason:

In-storage NetView Pipe emulation stage tables builder was called with an invalid parameter.

P1 is the parameter.

System Action:

None.

User Action:

Contact Technical Support.

XNPI0102

Error adding an NetView Pipe stage table prime entry, FB: P1, KEY: P2

Reason:

Error in adding a prime entry to the In-storage NetView Pipe emulation stage table.

P1 is the feedback code.

P2 is the entry key.

System Action:

None.

User Action:

Contact Technical Support.

XNPI0103

Error adding a NetView Pipe stage table alias entry, FB: P1, KEY: P2

Reason:

Error in adding an alias entry to the In-storage NetView Pipe emulation stage table.

P1 is the feedback code.

P2 is the entry key.

System Action:

None.

User Action:

Contact Technical Support.

XNPI0104

Error adding an NetView Pipe EDIT order table prime entry, FB: P1, KEY: P2

Reason:

Error in adding a prime entry to the In-storage NetView Pipe emulation EDIT order table.

P1 is the feedback code.

P2 is the entry key.

System Action:

None.

User Action:

Contact Technical Support.

XNPI0105

Error adding a NetView Pipe EDIT order table alias entry, FB: P1, KEY: P 2

Reason:

Error in adding an alias entry to the In-storage NetView Pipe emulation EDIT order table.

P1 is the feedback code.

P2 is the entry key.

System Action:

None.

User Action:

Contact Technical Support.

XNPI0201

The NetView PIPE emulation Command Characteristic Definition Table allocation has failed - Name: P1, FDBK: P2

Reason:

Error allocating the in-storage NetView Pipe emulation CCDEF table.

P1 is the table name.

P2 is the feedback code.

System Action:

None.

User Action:

Contact Technical Support.

XNPI0202

Error P1 a CCDEF entry in the NetView Pipe emulation CCDEF table, name: P2, command: P3, FDBK: P4

Reason:

Error accessing a command entry in the in-storage NetView PIPE emulation Command Characteristic Definition Table.

P1 is the failing action.

P2 is the table name.

P3 is the key (command name).

P4 is the feedback code.

System Action:

None.

User Action:

Contact Technical Support.

XNPI0203

A default NetView PIPE emulation Command Characteristic Definition Table has been allocated, name: P1

Reason:

The in-storage NetView PIPE emulation Command Characteristic Definition Table (CCDEF) does not exist. A default table is built.

P1 is the table name.

System Action:

A default CCDEF table is built; command processing continues.

User Action:

Check the activity log for related error messages. Contact Support.

XNPI0500**P1 P2****Reason:**

NetView Pipe emulation Extended Trace (*TRACE*) was specified.
P1 is the NCL ID.
P2 is the trace data.

System Action:

None.

User Action:

Contact Technical Support.

XNPI0505**NetView Pipe emulation executor has received an unexpected PIPEHELP NOTI FY: P1****Reason:**

NetView pipe emulation executor failed. An unexpected PIPEHELP NOTIFY message was received. *P1* is the NOTIFY text.

System Action:

The PIPE command terminates.

User Action:

Contact Technical Support with the diagnostic data provided.

XNPI0506**NetView Pipe emulation executor stage handshake error - Unexpected data: P1 - received from Stage P2****Reason:**

NetView Pipe emulation executor failed during the stage handshake procedure.
P1 is the handshake data.
P2 is the stage number.

System Action:

The PIPE command is terminated.

User Action:

Contact Technical Support with the diagnostic data provided.

XNPI0507

NetView Pipe emulation executor has received an unexpected message: P1

Reason:

NetView Pipe emulation executor failed. An unexpected message was received. P1 is the message text.

System Action:

The PIPE command is terminated.

User Action:

Contact Technical Support with the diagnostic data provided.

XNPI0512

NetView Pipe emulation executor has received an unknown REXXHELP request ' P1' from stage P2

Reason:

NetView Pipe emulation executor failed. An unsupported REXXHELP request was received.

P1 is the REXXHELP Request.

P2 is the stage number.

System Action:

The PIPE command is terminated.

User Action:

Contact Technical Support with the diagnostic data provided.

XNPI0513**Connecting output stream P1 of stage P2, " P3"****Reason:**

NetView Pipe emulation *DEBUG 1* option was specified and/or the Pipe stage (*DEBUG*) option was specified. This message and its companion message *XNPI0514* list the Pipe stages input and output streams connections.

P1 is the stage output stream number.

P2 is the stage number.

P3 is the stage specification.

System Action:

None.

User Action:

None.

XNPI0514**- to input stream P1 of stage P2, " P3"****Reason:**

NetView Pipe emulation *DEBUG 1* option was specified and/or the Pipe stage (*DEBUG*) option was specified.

This message and its companion message *XNPI0513* list the Pipe stages input and output streams connections.

P1 is the stage input stream number.

P2 is the stage number.

P3 is the stage specification.

System Action:

None.

User Action:

None.

XNPI0516

NetView Pipe emulation executor has received an out of sequence message segment. Expected: P1, received: P2, segment type: P3, context: P4. P5

Reason:

NetView Pipe emulation executor failed. A message segment has an incorrect segment sequence number.

P1 was the expected segment sequence number.

P2 is the message segment sequence number.

P3 is the message segment type (*NOTLAST* / *LAST*).

P4 is the message context (issuing NCLID).

P5 is any additional information.

System Action:

The Pipe command is terminated.

User Action:

Contact Technical Support with the diagnostic data provided.

XNPI0521

Internal error in NetView Pipe emulation executor, P1, error: P2

Reason:

NetView Emulation Pipe Command Executor failed.

P1 is the function/procedure executing at the time of the error.

P2 is the error text.

System Action:

The request is terminated.

User Action:

Contact Technical Support with the diagnostic data provided.

XNPIO600**P1 P2****Reason:**

NetView Pipe emulation Extended Trace (*TRACE*) was specified.
P1 is the NCL ID.
P2 is the trace data.

System Action:

None.

User Action:

Contact Technical Support.

XNPIO601**P1****Reason:**

NetView Pipe emulation error has occurred.
P1 is a message of a group of messages that traps the related error details.

System Action:

The Pipe command terminates.

User Action:

Contact Technical Support.

XNPIO602**Internal error in NetView Pipe emulation stage P1 driver, P2, error: P3****Reason:**

NetView pipe emulation stage driver has failed.
P1 is the Stage number.
P2 is the function or procedure executing at the time of the error.
P3 is the error text.

System Action:

The PIPE command terminates.

User Action:

Contact Technical Support with the diagnostic data provided.

XNPIO610

Terminating stage number P1, P2 (P3)

Reason:

NetView Pipe emulation *DEBUG 1* option was specified and/or the Pipe stage (*DEBUG*) option was specified.

P1 is the stage number.

P2 is the stage command.

P3 is the stage command execution time. (in seconds and microseconds)

System Action:

None.

User Action:

None.

XNPIO900

P1 P2

Reason:

NetView Pipe emulation Extended Trace (*TRACE*) was specified.

P1 is the NCL ID.

P2 is the Trace data.

System Action:

None.

User Action:

Contact Technical Support.

XNPI0901**Internal error in NetView Pipe emulation stage processing, P1, error: P2****Reason:**

NetView Emulation Pipe Command Support Package failed. o P1 is the function/procedure executing at the time of the error. o P2 is the error text.

System Action:

The request is terminated.

User Action:

Contact Technical Support with the diagnostic data provided.

XNPI0902**Pipe stage P1, P2 stream P3 has an invalid status of P4 for ' P5' request****Reason:**

NetView Emulation Pipe Command Support Package has encountered a stream status error.

P1 is the Pipe stage number.

P2 is the Pipe stream type (input/output).

P3 is the Pipe stream number.

P4 is the Pipe stream status.

P5 is the current request type.

System Action:

The request is terminated.

User Action:

Contact Technical Support with the diagnostic data provided.

XNPI0903

NetView Emulation Pipe Command has failed, stage P1, procedure: 'P2', reason: P3

Reason:

NetView Emulation Pipe Command Support Package has encountered an unrecoverable error.

P1 is the Pipe stage number.

P2 is the internal procedure name.

P3 is the error text.

System Action:

The request is terminated.

User Action:

Contact Technical Support with the diagnostic data provided.

XNPI1501

Internal error in NetView Pipe emulation stage CONSOLE, P1 failed, RC: P2

Reason:

NetView Pipe emulation stage CONSOLE has failed with an internal error.

P1 is the failing operation.

P2 is the return code.

System Action:

The Pipe command terminates.

User Action:

Contact Technical Support with the diagnostic data provided.

XNPI1702**NetView Pipe emulation CORRWAIT stage failed to start the Command Service Procedure P1 - RC: P2 FDBK: P3****Reason:**

NetView Pipe emulation failed during the execution of a CORRWAIT stage. The CORRWAIT stage could not start the procedure *P1* . The return code is *P2* and the feedback code is *P3* .

System Action:

The Pipe command is terminated.

User Action:

Contact Technical Support with the diagnostic data provided.

XNPI1703**NetView Pipe emulation CORRWAIT stage failed in Command Service Procedure P1 - Reason: P2****Reason:**

NetView Pipe emulation failed during the execution of a CORRWAIT stage. The Command Service Procedure is *P1* . The reason is *P2* .

System Action:

The Pipe command terminates.

User Action:

Review the Activity Log for related error messages and correct, if applicable. If the error is not a usage error, contact Technical Support with the diagnostic data provided.

XNPI1704

NetView Pipe emulation CORRWAIT stage has received an out of sequence response message segment. Expected: P1, received: P2, segment type: P3, context: P4. P5

Reason:

NetView Pipe emulation failed during the execution of a CORRWAIT stage. The CORRWAIT stage received a command response message segment with an incorrect segment sequence number.

P1 was the expected segment sequence number.

P2 is the message segment sequence number.

P3 is the message segment type (*NOTLAST* / *LAST*).

P4 is the message context (issuing NCLID).

P5 is any additional information.

System Action:

The Pipe command is terminated.

User Action:

Contact Technical Support with the diagnostic data provided.

XNPI1705

NetView Pipe emulation CORRWAIT stage failed - Unexpected response from the Command Procedure P1 - Stage P2 - Response text: P3

Reason:

NetView Pipe emulation failed during the execution of a CORRWAIT stage. The CORRWAIT stage received an unexpected response text from the Command Procedure.

P1 is the Command Procedure name.

P2 is the Pipe Stage number.

P3 is the *Command Procedure* response.

System Action:

The Pipe command is terminated.

User Action:

Contact Technical Support with the diagnostic data provided.

XNPI1706**NetView Pipe emulation CORRWAIT stage failed - The Command Service Procedure P1 did not complete - Reason: P2****Reason:**

NetView Pipe emulation failed during the execution of a CORRWAIT stage. The command service procedure terminated in error.

P1 is the Command Service Procedure name.

P2 is the reason for the error.

System Action:

The Pipe command terminates.

User Action:

Contact Technical Support with the diagnostic data provided.

XNPI2101**Internal error in NetView Pipe emulation stage DROP - P1 failed, FB: P2****Reason:**

NetView Pipe emulation stage DROP has failed.

P1 is the failing operation.

P2 is the feedback code.

System Action:

The Pipe command terminates.

User Action:

Contact Technical Support with the diagnostic data provided.

XNPI2102

Internal error in NetView Pipe emulation stage DROP - Message Segmentation error, reason: P1

Reason:

NetView Pipe emulation stage DROP has failed with a message segmentation error, **P1** is the error details.

System Action:

The Pipe command terminates.

User Action:

Contact Technical Support with the diagnostic data provided.

XNPI2301

Unsupported Pipe EDIT P1 Order <' P2'>

Reason:

EDIT *P1* order *P2* is not supported by NetView Pipe emulation.

System Action:

The command is not processed.

User Action:

None.

XNPI2302

Error accessing the NetView Pipe EDIT order table, FB: P1, KEY: P2

Reason:

Error in accessing a EDIT order alias full name entry from the in-storage NetView Pipe emulation EDIT order table.

P1 is the feedback code.

P2 is the entry key (order full name).

System Action:

The Pipe command is terminated.

User Action:

Contact Technical Support.

XNPI2303**Incorrect hexadecimal string specified ' P1'****Reason:**

The specified NetView Pipe emulation EDIT HEXSTRING order is not a valid hexadecimal string. *P1* is the specified string.

System Action:

The Pipe command is terminated.

User Action:

Check specification.

XNPI2304**Unknown EDIT ORDER command code P1, parameter P2****Reason:**

A NetView Pipe emulation EDIT order has been mapped to an unsupported order code. The associated order parameter was *P2*. The in-storage NetView Pipe emulation EDIT order table *\$XNPI01B* may be corrupted or could have been updated incorrectly.

System Action:

The Pipe command is terminated.

User Action:

Contact Technical Support.

XNPI3601**Closing delimiter ' P1' not last character****Reason:**

NetView Pipe emulation - Parsing error. The closing delimiter *P1* is not the last character of the LITERAL string.

System Action:

The command is not processed.

User Action:

Check the syntax of the command.

XNPI3901

Variable update failed, MDO entity count: P1

Reason:

Variable processing encountered an MDO that had more than 9999 MDO segments. *P1* specified the segment count.

System Action:

Pipe processing is aborted.

User Action:

Re-run the pipe stage. If the problem persists, contact Technical Support and provide a copy of this message and a copy of the Pipe Stage command being executed when this failure occurred.

XNPI3902

Reference processing failed, Variable P1 failed with Feedback Code= P2

Reason:

During reference record processing a Variable action specified in P1 failed with a feedback code specified in P2 .

System Action:

Pipe processing is aborted.

User Action:

Re-run the pipe stage. If the problem persists, contact Technical Support and provide a copy of this message and a copy of the Pipe Stage command being executed when this failure occurred.

XNPI4201**Invalid parm: P1 in NETVIEW Pipe Stage****Reason:**

NetMaster's implementation of the NetView PIPE stage does not support parameter *P1* .

System Action:

Pipe processing is aborted.

User Action:

Remove the parameter *P1* and rerun the Pipe stage.

XNPI4202**Safe default update failed, MDO entity count: P1****Reason:**

Safe default processing encountered an MDO that had more than 9999 MDO segments. *P1* specified the segment count.

System Action:

Pipe processing is aborted.

User Action:

Re-run the pipe stage. If the problem persists, contact Technical Support and provide them with a copy of this message and a copy of the Pipe Stage command being executed when this failure occurred.

XNPI4203

Safe default processing failed, Varatable Add failed with Feedback Code= P1

Reason:

During safe default processing a Varatable Add failed.
P1 specified the feedback code at the time of the failure.

System Action:

Pipe processing is aborted.

User Action:

Re-run the pipe stage. If the problem persists, contact Technical Support and provide them with a copy of this message and a copy of the Pipe Stage command being executed when this failure occurred.

XNPI4204

NetView Pipe emulation NETVIEW stage has received an out of sequence response message segment. Expected: P1, received: P2, segment type: P3, context: P4. P5

Reason:

NetView Pipe emulation failed during the execution of a NETVIEW stage. The NETVIEW stage received a command response message segment with an incorrect segment sequence number.

P1 was the expected segment sequence number.

P2 is the message segment sequence number.

P3 is the message segment type (*NOTLAST* / *LAST*).

P4 is the message context (issuing NCLID).

P5 is any additional information.

System Action:

The Pipe command is terminated.

User Action:

Contact Technical Support with diagnostic data provided.

XNPI4205**NetView Pipe emulation NETVIEW stage failed. Reason: P1****Reason:**

NetView Pipe emulation failed during the execution of a NETVIEW stage. The reason is *P1* .

System Action:

The Pipe command terminates.

User Action:

Review the Activity Log for related error messages and correct if applicable. If the error is not a usage error, contact Technical Support with the diagnostic data provided.

XNPI5301**Invalid parm: P1 in SORT Pipe Stage****Reason:**

NetMaster's implementation of the SORT Pipe Stage does not support position or length values greater than 256. *P1* specifies the value in error.

System Action:

Pipe processing is aborted.

User Action:

Specify a value between 1 and 256 and rerun the Pipe Stage.

XNPI5302**Invalid parm: P1 in SORT Pipe Stage****Reason:**

NetMaster's implementation of the SORT Pipe Stage does not support the total length value greater than 256. *P1* specifies the value in error.

System Action:

Pipe processing is aborted.

User Action:

Ensure that the total length of the specified position length pair does not exceed 256 and rerun the Pipe Stage.

XNPI5701

Invalid parm: P1 in STEM Pipe Stage

Reason:

NetMaster's implementation of the NetView Pipe Stage does not support parameter *P1* .

System Action:

Pipe processing is aborted.

User Action:

Remove the parameter *P1* and rerun the Pipe Stage.

XNPI6001

Message greater than 256 characters in length

Reason:

NetMaster's implementation of the SUBSYM Pipe Stage does not support message text that is greater than 256 characters in length.

System Action:

Pipe processing is aborted.

User Action:

Ensure messages passed to the SUBSYM Pipe Stage are not longer than 256 characters.

XNPI6101

Internal error in Pipe Stage TAKE - P1 failed, FB: P2

Reason:

Pipe Stage TAKE has failed.
P1 is the failing operation.
P2 is the feedback code.

System Action:

The Pipe command terminates.

User Action:

Contact Technical Services with any diagnostic data provided.

XNPI6102

Internal error in Pipe Stage TAKE - Message Segmentation error, reason: P1

Reason:

Pipe Stage TAKE has failed with a message segmentation error, P1 is the error details.

System Action:

The Pipe command terminates.

User Action:

Contact Technical Support with any diagnostic data provided.

XNPI6601

Invalid parm: P1 in VAR Pipe Stage

Reason:

NetMaster's implementation of the Netview PIPE Stage does not support parameter *P1* .

System Action:

Pipe processing is aborted.

User Action:

Remove the parameter *P1* and rerun the Pipe Stage.

XNPI6602

NetView Pipe emulation P1 stage has been invoked in a nested environment.

Reason:

The stage identified in P1 has been invoked in a nested environment. This is not currently supported in the NetMaster emulation of this stage.

System Action:

The Pipe command is terminated.

User Action:

Do not invoke this stage in a nested environment.

XNPI7001

Invalid parm: P1 in VTAM Pipe Stage

Reason:

NetMaster's implementation of the VTAM Pipe Stage does not support parameter *P1* .

System Action:

Pipe processing is aborted.

User Action:

Remove the parameter *P1* and rerun the Pipe Stage.

XNPI9990

NetView Emulation Pipe command has failed, stage P1, stream P2, PIPEHE LP: P3, reason: P4

Reason:

NetView Emulation Pipe Command Package procedure has encountered an unrecoverable PIPEHELP error.

P1 is the pipe stage number.

P2 is the pipe stream number.

P3 is the PIPEHELP verb that failed.

P4 is the error text.

System Action:

The request terminates.

User Action:

Contact Technical Support with the diagnostic data provided.

XNVIEW01**Cache request(P1) failed. Reason(P2)****Reason:**

The CACHE request *P1* failed because of reason *P2*.

System Action:

The VIEW command terminates in error.

User Action:

Global variable &GLBL\$XNVIEW can be set to YES to output details of CACHE requests to the activity log.

XNVIEW02**Panels can be displayed in full-screen mode only.****Reason:**

A REXX procedure has issued the VIEW command, but the REXX procedure is not running in full-screen mode. The most likely cause is a REXX procedure running as part of a remote PIPE stage.

System Action:

The VIEW command terminates in error.

User Action:

Do not use REXX procedures that use the VIEW command unless in full-screen mode.

XNVIEW03**P1****Reason:**

This message is generated only if the GLOBAL variable \$XNVIEW is set to YES.

System Action:

None.

User Action:

None.

XNVIEW04

Panel(P1) contains more than P2 unique panel attribute combinations

Reason:

A REXX procedure issued the VIEW command and specified more than P2 unique panel attribute combinations.

System Action:

The VIEW command terminates in error.

User Action:

Review the use of panel attribute variables to reduce the number of unique combinations.

ZNC0001

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

An invalid keyword parameter was specified when procedure ZNCCALL was invoked. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure ZNCCALL terminates.

User Action:

If the procedure was invoked by your procedure or directly by you then correct the invalid keyword and retry the request otherwise contact the System Administrator.

ZNC0002**NCPView initialization suspended, waiting for BSYS (P1) definition****Reason:**

NCPView initialization requires the BSYS user ID (*P1*) to be defined. The definition does not exist and, as a result, NCPView initialization is suspended until that definition occurs.

The BSYS user is usually automatically defined during product initialization as part of the first user to use Customizer to complete product customization. If this message occurs while that initial customization is in progress, you can ignore this message, because NCPView initialization will resume soon after completion of the customization task. The resumption of NCPView initialization is identified by message ZNC0005 in the activity log.

If this message occurs at other times, investigate why the BSYS user has not been defined.

System Action:

NCPView initialization is suspended.

User Action:

To check background user definitions, execute the following command from OCS or command entry and refer to the messages produced:

```
$NMUAINI ACTION=CHECK
```

To define background users, execute the following command:

```
$NMUAINI ACTION=DEFINE
```

ZNC0003**P1 REQUEST COMPLETED****Reason:**

The requested option *P1* has completed.

System Action:

None.

User Action:

None.

ZNC0004

P1 REQUEST COMPLETED WITH POSSIBLE ERRORS, MESSAGES WRITTEN TO LOG

Reason:

The requested option **P1** has completed and messages were written to the log to give further details of success or failure of the action.

System Action:

Message ZNC0006 is written to the log.

User Action:

Check the ZNC0006 messages written to the log for further details.

ZNC0005

NCPView initialization resumed

Reason:

NCPView initialization has resumed following suspension. Refer to message ZNC0002 for more information.

System Action:

NCPView initialization is resumed.

User Action:

None

ZNC0006

P1

Reason:

This message was issued during NCPView initialisation and indicates a possible error condition. *P1* is the error message returned to the initialisation procedure from another procedure.

System Action:

Initialisation continues.

User Action:

Check the action for the message *P1* .

ZNC0007**INITIALISE REQUEST REJECTED. NCPVIEW IS ALREADY ACTIVE****Reason:**

An attempt was made to initialise NCPView when it is already running.

System Action:

Initialise request rejected.

User Action:

None.

ZNC0008**TERMINATE REQUEST REJECTED. NCPVIEW IS NOT ACTIVE****Reason:**

An attempt was made to terminate NCPView, but it was not running.

System Action:

Terminate request rejected.

User Action:

None.

ZNC0012**TERMINATE REQUEST CANCELLED****Reason:**

A request to terminate NCPView was cancelled.

System Action:

None.

User Action:

None.

ZNC0013

ERROR. A P1 REQUEST IS ALREADY BEING PROCESSED FOR USERID P2

Reason:

A INIT or TERM request for NCPView (indicated by P1)has already been issued by the user ID P2 .

System Action:

INIT or TERM request rejected.

User Action:

See if the INIT or TERM request that is running for another user is processing or whether it is waiting on a system resource to become available, e.g. waiting for Object Services to be initialised.

ZNC0014

USER P1 IS NOT AUTHORISED TO INITIALISE OR TERMINATE NCPVIEW

Reason:

The user is not authorised to perform the requested action.

System Action:

The request is rejected.

User Action:

Contact the System Administrator to obtain authorisation if required. Object Services Support Authority is required.

ZNC0015**NCPVIEW ASN.1 MAP COMPILATION PROCESS STARTED****Reason:**

NCPView has been instructed to recompile the ASN.1 maps. It uses these for mapping NCP control blocks and for communication between NCPView systems. This may have been manually invoked using the ZNCCALL OPT=COMPILE call or could have been invoked automatically by NCPView if it detects that the ASN.1 maps require recompiling.

System Action:

None

User Action:

None

ZNC0016**COMPILING NCPVIEW ASN.1 MAP P1****Reason:**

NCPView has been instructed to recompile the ASN.1 maps. It uses these for mapping NCP control blocks and for communication between NCPView systems. This message identifies the map that NCPView is currently attempting to compile, Where *P1* is the name of the ASN.1 map.

System Action:

None

User Action:

None

ZNC0017

P1

Reason:

NCPView encountered an error compiling the ASN.1 maps. The error message returned from the compiler is *P1* .

System Action:

Compilation of NCPView's ASN.1 maps terminates.

User Action:

Refer to the message *P1* .

ZNC0018

NCPVIEW ASN.1 MAP COMPILATION PROCESS TERMINATED DUE TO ERROR

Reason:

NCPView has been instructed to recompile the ASN.1 maps it uses for mapping NCP control blocks and for communication between NCPView systems. While NCPView was compiling the ASN.1 maps it encountered an error.

System Action:

None

User Action:

Refer to previous ZNC0017 messages issued.

ZNC0019

NCPVIEW ASN.1 MAP COMPILATION PROCESS SUCCESSFUL

Reason:

NCPView has successfully recompiled the ASN.1 maps it uses for mapping NCP control blocks and for communication between NCPView systems.

System Action:

None.

User Action:

None.

ZNC0101**NCP VERSION P1 NOT SUPPORTED BY CONTROL BLOCK INFO TABLE LOADER****Reason:**

The control block information table loader procedure ZNCEX01Z does not support the NCP version that was passed to it.

System Action:

Request rejected.

User Action:

Contact your local support representative.

ZNC0102**ERROR ADDING CONTROL BLOCK: P1 TO TABLE FOR NCP: P2 FDBK: P3****Reason:**

The control block information table loader procedure ZNCEX01Z could not load information for the control block P1 for NCP P2 into the control block information variable. The &VARIABLE ADD verb returned a *feedback code of P3* .

System Action:

Request rejected.

User Action:

Contact your local support representative.

ZNC0201**PARAMETER P1= P2 INVALID ON CALL TO ZNCEX02Z.****Reason:**

An invalid value (*P2*) has been specified for the *P1* parameter. (The parameter name is valid, the operand value is invalid).

System Action:

Procedure terminates.

User Action:

Check the operand value and retry.

ZNC0203

CB: P1 IS INVALID OR NOT SUPPORTED FOR NCP: P2 NCPVERS: P3

Reason:

The NCP control block access module could not obtain information about how to access the control block P1 for the NCP P2 which is running NCP version P3 . The variable feedback code was P4 .

System Action:

Procedure terminates.

User Action:

Retry operation. If problem persists contact your local support representative.

ZNC0204

ERROR MAPPING CB: P1 NCP: P2 RC: P3 FB: P4 MDONAME: P5

Reason:

The NCP control block access module was not able to map the NCP control block P1 with an ASN.1 map. Mapping services set ZMDORC to P3 ,ZMDOFDBK to P4 and the fully qualified name of the MDO component that had the mapping error was P5 .

System Action:

Procedure terminates.

User Action:

Contact your local support representative.

ZNC0205

ERROR UPDATING CB INFO. CB: P1 NCP: P2 NCPVERS: P3 ZFDBK: P4

Reason:

The NCP control block access module could not update information about how to access the control block P1 for the NCP P2 which is running NCP version P3 . The variable feedback code was P4 .

System Action:

Procedure terminates.

User Action:

Retry operation. If problem persists contact your local support representative.

ZNC0206**ERROR - MAP P1 NOT ACCESSABLE. MDORC: P2 MDOFDBK: P3****Reason:**

The NCP control block access module could not access the ASN.1 map *P1* to map a control block. *P2* and *P3* are the Mapping Services return code and feedback codes respectively.

System Action:

Procedure terminates.

User Action:

Retry operation. Check that you have the correct OSCNTL file allocated to your system (the file that contains the maps).

If the map does exist in the OSCNTL file then try to load the map manually to see if there is a problem with the map definition (it could be corrupted).

For example, if the map in error is ZNCCBPMFBFRS then issue the following command:

```
SYSPARMS MAPLOAD=ZNCCBPMFBFRS
```

An example of error messages that may be returned if the map has a problem are:

```
N24W01 MAP LOAD REQUEST ACCEPTED.
```

```
N24Z01 MAP LOAD ERROR, REASON 21. FIXED COMPONENT EXCEEDS  
PARENTS BOUND
```

```
N24Z02 MAP COMPONENT/TYPE IN ERROR: ZNCCBPMFBFRS
```

```
N24W07 LOAD FOR MAP ZNCCBPMFBFRS FAILED. MAP DATA IN ERROR
```

This error information should be given to your local support representative if the problem persists.

ZNC0207

**GET OF NCP STORAGE FAILED. NCP: P1 ADDR: P2 LENGTH: P3 CB: P4
USERID : P5**

Reason:

The NCP control block access module could access NCP storage at a specified address.

P1 is the name of the NCP that was being accessed

P2 is the storage address that was used

P3 is the length of storage that NCPVIEW requires

P4 is the name of the control block that was being retrieved (this may not always be set)

P5 is the userid of the user that the storage was being retrieved for

This message is written to the SOLVE log.

System Action:

Procedure terminates.

User Action:

Retry operation.

ZNC0208

P1

Reason:

This error message is returned by VTAM when access to NCP storage failed. It is associated with the message ZNC0207.

System Action:

Procedure terminates.

User Action:

Retry operation.

ZNC0209**ERROR - NCP P1 NOT KNOWN TO NCPView****Reason:**

NCPView does not have any knowledge of the NCP *P1* .

System Action:

Procedure terminates.

User Action:

Check that the NCP name is correct. If it is then you may need to terminate and initialise NCPView to refresh its knowledge of NCPs.

ZNC0210**AN ADDRESS MUST BE SPECIFIED TO ACCESS THE P1 CONTROL BLOCK****Reason:**

You must specify an address (in hexadecimal format) to be able to access this control block.

System Action:

Procedure terminates.

User Action:

Specify an address for the control block or check that you have specified the correct control block name.

ZNC0211**NCPView DOES NOT SUPPORT THE VERSION OF NCP THAT P1 IS RUNNING****Reason:**

NCPView does not support the version of NCP that the NCP P1 is running.

System Action:

NCP excluded from NCPView's management scope.

User Action:

Contact your support representative. Note that NCPView does not support all back levels of NCP.

ZNC0212

RESPONSE FROM NCP P1 TIMED OUT

Reason:

NCPView did not receive a response within 20 seconds from NCP *P1* .

System Action:

Could not complete requested function.

User Action:

Determine why the NCP is not responding to a D,NET,NCPSTOR command and correct problem. Also check that the address being specified on the D,NET,NCPSTOR command is within the NCP's storage limits.

ZNC0213

ERROR - NCPVIEW IS NOT INITIALIZED

Reason:

NCPView could not find the control block information vartable which indicates that NCPView has not been initialized.

System Action:

Could not complete requested function.

User Action:

If system initialization is still in progress then wait until this completes. If the problem persists contact your product support representative.

ZNC0214

ERROR TRAVERSING CONTROL BLOCKS. FIELD P1 IN CB P2 IS NULL

Reason:

NCPView was traversing control blocks and it encountered the field P1 which should have a storage location of another control block, but instead it had a *null* value.

System Action:

Could not complete requested function.

User Action:

Contact your product support representative.

ZNC0215**TIMED-OUT WAITING FOR RESPONSE FROM DUMP SERVER FOR DD P1****Reason:**

NCPView did not receive a response within 2 minutes from dump server for the NCP dump DD P1 .

System Action:

Could not complete requested function.

User Action:

Determine why the dump server is not responding. To show dump servers issue a SH SERVER=ZNC.NCPDUMP.* command.

ZNC0216**LAST RESPONSE: P1****Reason:**

NCPView did not receive a response within 20 seconds from the NCP. The last response that was read was *P1* . This message follows the message ZNC0212 (which identifies the NCP name).

System Action:

Could not complete requested function.

User Action:

Determine why the NCP is not responding to a D,NET,NCPSTOR command and correct the problem. Also check that the address being specified on the D,NET,NCPSTOR command is within the NCP's storage limits.

If the last response message is not a VTAM message refer to the message help for that message. Enter the Message ID above and press F6 (NewMsg)..

ZNC0217

A LENGTH MUST BE SPECIFIED TO ACCESS THE P1 CONTROL BLOCK

Reason:

You must specify a length (in hexadecimal format) to be able to access this control block (since it has a variable length).

System Action:

Procedure terminates.

User Action:

Specify a length for the control block or check that you have specified the correct control block name.

ZNC0218

STORAGE ADDRESS P1 SPECIFIED FOR NCP: P2 IS OUT OF RANGE

Reason:

The NCP rejected a D NET,NCPSTOR command which attempted to display NCP storage at the address P1 . The command was rejected because the storage address was out of range (probably too large).

System Action:

Procedure terminates.

User Action:

Retry operation with a correct address. If you get this message when using a panel where you do not have to enter an address then NCPView may have a problem, contact your support representative.

ZNC0219**NCPVIEW DOES NOT HAVE ACCESS TO NCP: P1****Reason:**

The NCP rejected a D NET,NCPSTOR command which attempted to display NCP storage. This is probably because the NCP *P1* is not owned by the same VTAM that NCPView is running in. This message is issued because NCPView received sense code 080E when issuing the D NET,NCPSTOR command. This is an information message, not an error.

System Action:

NCP is excluded from NCPView's monitoring scope.

User Action:

None.

ZNC0220**ERROR OPENING DEBUGGING LOG FILE. FILEID: P1 FILERC: P2****Reason:**

An error occurred when NCPView attempted to open a VSAM file used for logging NCP Storage that is accessed for debugging purposes. The file ID being used was *P1* and the filerc was *P2* .

System Action:

Logging of access to NCP storage stops.

User Action:

Refer to the filerc *P2* to determine the cause of the error.

ZNC0221

ERROR WRITING TO DEBUGGING LOG FILE. FILEID: P1 FILERC: P2

Reason:

An error occurred when NCPView was writing to the VSAM file used for logging NCP Storage which is used for debugging purposes. The file ID being used was P1 and the filerc was P2 .

System Action:

Logging of access to NCP storage stops.

User Action:

Refer to the filerc *P2* to determine the cause of the error.

ZNC0222

NCP P1 NOT KNOWN TO VTAM

Reason:

A D NET,NCPSTOR command which attempted to display NCP storage failed with sense code 0806. NCP *P1* is not known to this system.

System Action:

None.

User Action:

None.

ZNC0301

MDO: P1 NCLID: P2 USERID: P3

Reason:

This message is a part of some diagnostic information that NCPView has produced after an error was detected.

System Action:

None.

User Action:

Pass this diagnostic information to your local support representative and include any other error messages that may be in the log at the time of the error.

ZNC0302**P1****Reason:**

This message is part of some diagnostic information that NCPView has produced after an error was detected.

System Action:

None.

User Action:

Pass this diagnostic information onto your local support representative and include any other error messages that may be in the log at the time of the error.

ZNC0303***END*****Reason:**

This message is part of some diagnostic information that NCPView has produced after an error was detected.

System Action:

None.

User Action:

Pass this diagnostic information onto your local support representative and include any other error messages that may be in the log at the time of the error.

ZNC0401

TIMED-OUT WAITING FOR RESPONSE FROM DUMP SERVER FOR DD P1

Reason:

NCPView did not receive a response within 2 minutes from dump server for the NCP dump DD P1 .

System Action:

Could not complete requested function.

User Action:

Determine why the dump server is not responding. To show dump servers issue a SH SERVER=ZNC.NCPDUMP.* command.

ZNC0601

PARAMETER P1= P2 INVALID ON CALL TO ZNCX06Z.

Reason:

An invalid value *P2* has been specified for the *P1* parameter. (The parameter name is valid, the operand value is invalid).

System Action:

The procedure terminates.

User Action:

Check the operand value and retry.

ZNC0602

COULD NOT OBTAIN DIAGNOSTIC INFORMATION FOR NCLID P1

Reason:

NCPView attempted to obtain diagnostic information for the NCL process *P1* but was unsuccessful.

System Action:

None.

User Action:

None.

ZNC0603**ATTEMPTING TO OBTAIN DIAGNOSTIC INFORMATION FOR NCLID P1****Reason:**

NCPView is attempting to obtain diagnostic information for the NCL process P1 to aid problem diagnosis. This diagnostic information will be sent to the log.

System Action:

None.

User Action:

Pass the diagnostic information onto your local support representative with a detailed description on how the problem can be repeated.

ZNC0604**END OF DIAGNOSTIC INFORMATION FOR NCLID P1****Reason:**

NCPView has completed logging diagnostic information for the NCL process *P1*.

System Action:

None.

User Action:

Pass the diagnostic information onto your local support representative with a detailed description on how the problem can be repeated.

ZNC0701**INVALID PARAMETER PASSED TO ZNCEX07Z - P1= P2****Reason:**

A parameter was specified incorrectly when calling ZNCEX07Z. *P1* is the parameter in error and *P2* is the value of the parameter.

System Action:

The request is rejected.

User Action:

Correct the call parameter and retry.

ZNC0702

FUNCTION COMPLETED SUCCESSFULLY

Reason:

The requested action was processed successfully.

System Action:

None.

User Action:

None.

ZNC0704

REPLY FAILED - CONVERSATION ID NOT FOUND

Reason:

A class method procedure attempted to reply to an NCPView processing request but failed because the APPC conversation identifier (indicating the APPC link to the requestor of the service) was not found.

System Action:

The reply is rejected.

User Action:

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNC0705**INVALID PARAMETER IN P1 SDU - P2= P3****Reason:**

An SDU parameter contained an invalid value. *P1* is the SDU type (REQUEST or RESPONSE), *P2* is the parameter in error, and *P3* is the value of the parameter in error.

System Action:

The call is rejected.

User Action:

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNC0709**INVALID P1 PARAMETER PASSED TO ZNCEX07Z - P2= P3****Reason:**

A sub-parameter of either the NAME or PARMS parameter was specified incorrectly on a call to ZNCEX07Z. *P1* is either *NAME* , *PARMS* or *ATTR* . *P2* is the sub-parameter in error, and *P3* is the value specified for the sub- parameter.

System Action:

None.

User Action:

Correct the call parameters and retry.

ZNC0710

APPC TRANSACTION NOT DEFINED - TRANSID= P1

Reason:

An NCPView request failed because the APPC transaction has not been defined.

System Action:

None

User Action:

Contact your system administrator. The APPC transaction IDs should be defined as part of the initialization procedure at region start-up time.

ZNC0711

APPC ERROR - ID= P1 FUNC= P2 RC= P3 FDBK= P4 STATE= P5

Reason:

An NCPView request failed because of an APPC error.

System Action:

None.

User Action:

Determine the cause of the error from the return codes and retry.

ZNC0712

APPC ERROR - TRANSID= P1 FUNC= P2 RC= P3 FDBK= P4 STATE= P5

Reason:

An NCPView request failed because of an APPC error.

System Action:

None.

User Action:

Determine the cause of the error from the return codes and retry.

ZNC0713**UNEXPECTED REPLY FROM METHOD PROCEDURE****Reason:**

A reply was received from a method procedure after an SDU had been returned which had a TYPE of FINALREPLY.

System Action:

None.

User Action:

Correct the method procedure so that only the last reply returned has the SDU TYPE field set to FINALREPLY.

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNC0720**NO REPLY RECEIVED FROM DRIVER OR METHOD - CHECK LOG MESSAGES****Reason:**

No replies were received from an NCPView request. Either the driver procedure (ZNCTR08Z) or method procedure terminated abnormally, or the method procedure did not send any replies.

System Action:

None.

User Action:

If the driver or method procedure terminated abnormally, the cause of the error will be written to the activity log. If the method procedure did not return any replies then modify the driver procedure to return replies.

If the request was sent to a remote system then check the log on the remote system.

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNC0721

APPC ERROR - ID= P1 FUNC= P2 EXPECTED= P3 RECEIVED= P4

Reason:

An NCPView request failed because of an APPC error. *P3* is the type of data expected from the NCPView driver (ZNCTR08Z) via APPC and *P4* is the type of data which was received.

System Action:

None.

User Action:

Determine the cause of the error from the return codes and retry.

ZNC0726

CLASS P1 NOT KNOWN TO NCPVIEW

Reason:

A NCPView request failed because the specified class ID *P1* was not recognised.

System Action:

The request is rejected.

User Action:

If the class ID is wrong, correct it and retry.
Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNC0728**INVALID SDU RECEIVED BY NCPVIEW - OPT= P1 REQID= P2****Reason:**

An SDU could not be mapped by the ZNCSDU map definition. *P1* is either *SEND* or *RECEIVE* and *P2* is the request ID if one was supplied on the Object Services call.

System Action:

The NCPView request is rejected.

User Action:

If *OPT=SEND*, correct the calling procedure to supply a valid SDU to Object Services. If *OPT=RECEIVE*, correct the method procedure for the requested service or action so that it returns a valid SDU to NCPView. Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNC0729**INVALID REQUEST - REQID P1 NOT FOUND - OPT= P2****Reason:**

An NCPView *SEND* or *SERVICE* request was issued to a request ID which did not exist.

System Action:

The request is rejected.

User Action:

The following errors may have occurred:

- The request ID number was incorrect.
- The request ID was not generated by a previously issued *SEND* or *SERVICE* request from the processing region which issued the erroneous request.

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNC0808

METHOD PROCEDURE NOT FOUND - CLASS= P1 PROC= P2

Reason:

The procedure defined in the MIB to be executed for an NCPView request does not exist in the NCL command library. *P1* is object class in the request and *P2* is the procedure that was not found.

System Action:

The request is rejected.

User Action:

Correct the name of the procedure in the NCPView MIB definition, or alter the NCL command library concatenation to include the library in which the procedure resides.

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNC0811

APPC ERROR - ID= P1 FUNC= P2 RC= P3 FDBK= P4 STATE= P5

Reason:

An NCPView request failed because of an APPC error.

System Action:

None.

User Action:

Determine the cause of the error from the return codes and retry.

ZNC0813**P1 P2 IS NOT KNOWN TO NCPVIEW. REQUEST REJECTED.****Reason:**

The request that NCPView received is not supported by NCPView.
P1 is the one of CLASS or ACTION and *P2* is the class/action name.

System Action:

The request is rejected.

User Action:

If this message came from a back-level system (an older release of NCPView) check that the request that you sent it is supported in that release.
Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNC1001**MENU/FUNCTION NOT SUPPORTED, MENU= P1 OPT= P2****Reason:**

The NCPView menu service procedure ZNCEX10M failed because it received a menu number (\$MHMENUNUM= *P1*) and/or function (\$MHOPT= *P2*) that it does not support.

System Action:

Procedure ZNCEX10M terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNC1002

NCP NOT SELECTED FROM SELECTION LIST

Reason:

A list of NCPs was presented and an NCP was not selected.

System Action:

None.

User Action:

Select an NCP on the list or specify an NCP name.

ZNC1003

CONTROL BLOCK NOT SELECTED FROM SELECTION LIST

Reason:

A list of NCP Control Blocks was presented and a control block was not selected.

System Action:

None.

User Action:

Select a control block on the list or specify a control block name.

ZNC1004

DOMAIN NOT SELECTED FROM SELECTION LIST

Reason:

A list of connected domains was presented and a domain was not selected.

System Action:

None.

User Action:

Select a domain on the list or specify a domain name.

ZNC1005**DOMAIN p1 DOES NOT EXIST****Reason:**

The specified domain *P1* does not exist.

System Action:

None.

User Action:

Check that the domain name that you have specified is correct, or place a '?' in the Domain field to get a list of available domains.

ZNC1006**LINK TO DOMAIN P1 NOT ACTIVE. CURRENT STATE IS P2****Reason:**

The specified link to the specified domain *P1* is not active. Its current status is *P2* . The request cannot be processed.

System Action:

None.

User Action:

Make sure that the link has been activated at both ends using the 'LINK START=linkname TYPE=APPC' command. Check the status of the links using the 'SH LINKS TYPE=APPC' command. If the links appear to be active try inactivating then activating the link using the 'LINK STOP=linkname TYPE=APPC' and 'LINK START=linkname TYPE=APPC' commands. Check any error/sense codes returned from the link start command and diagnose accordingly.

ZNC1007

NCPVIEW IS NOT CURRENTLY INITIALIZED

Reason:

NCPView has not been initialized therefore NCPView functions will be unavailable.

System Action:

None.

User Action:

If system initialization is in progress wait until this processing is complete. You can retry NCPView initialization by issuing ZNCCALL OPT=INIT in command entry or OCS. If necessary report errors to your product support representative.

ZNC1008

INVALID ADAPTER ID SPECIFIED. MUST BE IN THE FORMAT LAnn or CSnn

Reason:

You have specified an Adapter ID that is not in an allowable format. The allowable formats are:

LAnn Where nn is a number from 01 to 32.

CSnn Where nn is a number from 02 to 12 or 30 to 31.

System Action:

Request rejected.

User Action:

Change the Adapter ID so that it is in the correct format.

ZNC1009**INVALID ADAPTER ID SPECIFIED. MUST BE IN THE FORMAT CSnn****Reason:**

You have specified an Adapter ID that is not in an allowable format. The allowable formats are:

CSnn Where nn is a number from 02 to 12 or 30 to 31.

System Action:

Request rejected.

User Action:

Change the Adapter ID so that it is in the correct format.

ZNCA001**INITIALISE REQUEST REJECTED. NCPVIEW IS ALREADY ACTIVE****Reason:**

An attempt was made to initialise NCPView when it is already running.

System Action:

Initialise request rejected.

User Action:

None.

ZNCA002**REGISTRATION OF NCP *P1* FAILED. RC: *P2* FB: *P3* SYMSG: *P4*****Reason:**

NCPView cannot register an NCP as part of its management scope. This may be due to an unsupported NCP version or an error.

System Action:

Initialization continues.

User Action:

Contact Technical Support.

ZNCA003

NCP P1 HAS BEEN EXCLUDED FROM MONITORING

Reason:

The NCPView user exit ZNCUX000 set a return code of 4 indicating that the NCP *P1* should be excluded from NCPView's monitoring scope.

System Action:

None.

User Action:

None.

ZNCA004

ERROR CALLING INSTALLATION EXIT ZNCUX000 FOR NCP P1 APPC RPC FDBK P2

Reason:

A call to the NCPView installation exit ZNCUX000 failed while attempting to add NCP *P1* to NCPView's monitoring scope. The &APPC RPC verb set a feedback code of *P2*.

System Action:

NCPView initialization continues.

User Action:

Check that you have not deleted the installation exit ZNCUX000. You should be using the distributed exit or a modified copy of the distributed exit. NCPView expects an exit procedure to be present. Also check the exit for coding errors if it is present.

ZNCA005**ERROR CALLING INSTALLATION EXIT ZNCUX000 APPC RPC FDBK P1****Reason:**

A call to the NCPView installation exit ZNCUX000 failed. The call to the exit was CALLTYPE=NCPVINIT. The &APPC RPC verb set a feedback code of *P1*.

System Action:

NCPView initialization continues.

User Action:

Check that you have not deleted the installation exit ZNCUX000. You should be using the distributed exit or a modified copy of the distributed exit. NCPView expects an exit procedure to be present. Also check the exit for coding errors if it is present.

ZNCA006**NCPVIEW NCP DISCOVERY MAY BE INCOMPLETE****Reason:**

NCPView may not have found all defined NCPs because the results of the "D RSCLIST,IDTYPE=PUT45,ID=*,MAX=*" command was truncated. This message is followed by a ZNCA007 message indicating the cause of possible truncation.

System Action:

Discovery of NCPs is terminated.

User Action:

If the cause of the truncation is determined to be an abnormally low DSPLYMAX value, consider increasing the value.

ZNCA007

P1

Reason:

This message follows ZNCA006 and shows the possible cause for the truncation of NCP discovery.

System Action:

None.

User Action:

None.

ZNCA008

NCPVIEW NCP DISCOVERY NOT PERFORMED

Reason:

There is no active system image. An active system image is required for NCP autodiscovery.

System Action:

Discovery of NCPs is terminated.

User Action:

Complete system setup and ensure that a system image is defined and loaded. Refer to Automation Services documentation for details of system image definition.

ZNCA101

TERMINATE REJECTED. NCPVIEW IS NOT ACTIVE

Reason:

An attempt was made to terminate NCPView, but it was not running.

System Action:

Terminate request rejected.

User Action:

None.

ZNCA102**RETRIEVAL OF NCPS FAILED. RC: P1 FDBK: P2 SYMSG: P3****Reason:**

The NCPView termination processing procedure ZNCOMA1Z could not retrieve NCP objects. The retcode *P1* and feedback code *P2* are those set by the &OSCALL SEND verb.

System Action:

NCPView termination fails.

User Action:

Contact your local support representative.

ZNCA103**RETRIEVAL OF DOMAINS FAILED. RC: P1 FDBK: P2 SYMSG: P3****Reason:**

The NCPView termination processing procedure ZNCOMA1Z could not retrieve connected domain objects. The retcode *P1* and feedback code *P2* are those set by the &OSCALL SEND verb.

System Action:

NCPView termination fails.

User Action:

Contact your local support representative.

ZNCA401

CANNOT SERVICE P1 REQUEST. NCPVIEW HAS NOT BEEN INITIALISED

Reason:

A P1 request was issued but could not be performed because NCPView has not been *initialised*.

System Action:

Request rejected.

User Action:

Initialise NCPView then retry the request. NCPView may be initialised from the NCPView Control Functions menu, option UT.CF from the NCPView Primary Menu.

Refer to the on-line help for the NCPView Control Functions menu for additional information.

ZNCAD02

REGISTRATION OF NCP P1 FAILED. RC: P2 FB: P3 SYMSG: P4

Reason:

NCPView could not register an NCP as part of its management scope. This could be due to an unsupported NCP version or an error. NCPView detected that this NCP was recently activated.

System Action:

None.

User Action:

Contact your support representative.

ZNCAD03**NCP P1 HAS BEEN EXCLUDED FROM MONITORING****Reason:**

The NCPView user exit ZNCUX000 set a return code of 4 indicating that the NCP *P1* should be excluded from NCPView's monitoring scope. NCPView detected that this NCP was recently activated.

System Action:

None.

User Action:

None.

ZNCAD04**DEREGISTRATION OF NCP P1 FAILED. RC: P2 FB: P3 SYMSG: P4****Reason:**

NCPView could not deregister an NCP from its management scope. This is due to an NCPView internal error. NCPView has detected that this NCP was recently deactivated.

System Action:

None.

User Action:

Contact your support representative.

ZNCAD05

ERROR CALLING INSTALLATION EXIT ZNCUX000 FOR NCP P1 APPC RPC FDBK P2

Reason:

A call to the NCPView installation exit ZNCUX000 failed whilst attempting to add NCP **P1** to NCPView's monitoring scope. The &APPC RPC verb set a feedback code of **P2** .

System Action:

None.

User Action:

Check that you have not deleted the installation exit ZNCUX000. You should either be using the distributed exit or a modified copy of the distributed exit. NCPView expects an exit procedure to be present. Also check the exit for coding errors if it is present.

ZNCB001

CREATE REJECTED. NCP P1 ALREADY EXISTS

Reason:

An attempt was made to create the NCP object *P1* which has already been created.

System Action:

Create request rejected.

User Action:

Check that you are specifying the correct NCP name.

ZNCB002**CREATE OF NCP P1 REJECTED. NCPVIEW NOT INITIALISED.****Reason:**

An attempt was made to create the NCP object *P1* but the request could not be serviced because the NCPView was not initialised.

System Action:

Create request rejected.

User Action:

Initialise NCPView.

ZNCB003**ERROR ADDING NCP OBJECT P1 TO VARTABLE. FDBK: P2****Reason:**

An error occurred whilst adding an NCP object to a vartable. The vartable ADD feedback code was *P2* .

System Action:

Create request failed.

User Action:

Contact your local support representative.

ZNCB004**TIMED-OUT WAITING FOR RESPONSE FROM DUMP SERVER FOR DD: P1****Reason:**

Whilst defining an NCP Dump to NCPView, ZNCOMB0Z timed-out waiting for a response from the NCP Dump server process. The server process has a server name of ZNC.NCPDUMP. P1 where P1 is the DD name specified for the dump dataset.

System Action:

Definition of NCP Dump failed.

User Action:

Issue a SH SERVER command to see if the DUMP server exists and to find its NCLID. Issue a SH NCL ID=nclid for the server process and report this information to your local support representative.

ZNCB005

NCP DUMP SUPPORT UNAVAILABLE. DD: P1

Reason:

Whilst defining an NCP Dump to NCPView, ZNCOMB0Z detected that NCPView is running on a Management Services version that does not support Dataset Services, a requirement for NCP Dump Support. This could also be due to running on an operating system other than MVS.

SOLVE management services V3.2 PUT 3201 or higher running on MVS is required for the Dataset Services and NCPView Dump Support functionality.

System Action:

Definition of NCP Dump failed.

User Action:

Install the latest version of Management Services when it is available.

ZNCB006

DUMP DD IS ALREADY ALLOCATED.

Reason:

The NCPView DUMP Browse facility has detected that the DD name for the dump dataset has already been allocated.

System Action:

The NCPView Dump Browse facility terminates.

User Action:

Specify another DD name or use the dataset that is already allocated.

ZNCB007

Create rejected. NCP P1 create method already in progress

Reason:

An attempt was made to create the NCP object *P1* ; however, it is being created by another process.

System Action:

The system rejects the create request.

User Action:

None. Wait for the current instance of the create method to complete.

ZNCB101**DELETE REJECTED. NCP DEFINITION P1 DOES NOT EXIST****Reason:**

An attempt was made to delete the NCP definition *P1* which does not exist (has not been previously created).

System Action:

Delete request rejected.

User Action:

Check that you are specifying the correct NCP name.

ZNCB102**ERROR DELETING NCP DEFINITION P1. FDBK: P2****Reason:**

An error occurred whilst deleting an NCP definition from the ZNCNCPTAB global variable. The variable DELETE feedback code was *P2* .

System Action:

Delete request failed.

User Action:

Contact your local support representative.

ZNCB201**ERROR - NCP P1 NOT KNOWN TO NCPView****Reason:**

NCPView does not have any knowledge of the NCP *P1* .

System Action:

Request rejected.

User Action:

Check that the NCP name is correct. If it is then you may need to terminate and initialise NCPView to refresh its knowledge of NCPs.

ZNCB202

ERROR GETTING NCP OBJECT P1 FROM TRANSIENT REPOSITORY. FDBK: P2

Reason:

An error occurred whilst getting an NCP object from the transient repository.
The variable GET fieldback code was P2 .

System Action:

Get request failed.

User Action:

Contact your local support representative.

ZNCB401

INVALID FILTER - CLASS MUST BE SPECIFIED

Reason:

The selection procedure must have a class name specified in the filter of an
object services multiple object selection request.

System Action:

Get request fails.

User Action:

Contact your local support representative.

ZNCB402**NO TOKEN-RING SUPPORT DEFINED FOR THIS 3745 COMMS CONTROLLER.****Reason:**

You cannot access Token-Ring information for this 3745 communications controller because it does not have any Token-Ring devices defined to it. The Token-Ring support for this version of NCPView only covers Token-Ring resources directly connected to the 3745. It does not cover 3746-900 Token-Ring resources.

System Action:

Request rejected.

User Action:

None.

ZNCB403**MUST HAVE NCP V5R3 OR GREATER TO ACCESS TG INFORMATION****Reason:**

You cannot access transmission group information for the specified NCP because it is not running at version 5 release 3 or later.

System Action:

Request rejected.

User Action:

None.

ZNCB404

CANNOT SERVICE P1 REQUEST. NCPVIEW HAS NOT BEEN INITIALISED

Reason:

A P1 request was issued but could not be performed because NCPView has not been initialised.

System Action:

Request rejected.

User Action:

Initialise NCPView then retry the request. NCPView may be initialised from the NCPView Control Functions menu, option UT.CF from the NCPView Primary Menu.

Refer to the on-line help for the NCPView Control Functions menu for additional information.

ZNCB405

MUST HAVE NCP V5R3 OR GREATER TO ACCESS TR INFORMATION

Reason:

You cannot access Token-ring information for the specified NCP because it is not running at Version 5 Release 3 or later.

System Action:

Request rejected.

User Action:

None.

ZNCB406**NCP V6R2 OR GREATER REQUIRED TO ACCESS FRAME RELAY INFORMATION****Reason:**

You cannot access Frame Relay information for the specified NCP because it is not running at Version 6 Release 2 or later.

System Action:

The request is rejected.

User Action:

None.

ZNCB407**NCP V5R3 OR GREATER REQUIRED TO ACCESS ADAPTER INFORMATION****Reason:**

You cannot access Adapter information for the specified NCP because it is not running at Version 5 Release 3 or later.

System Action:

The request is rejected.

User Action:

None.

ZNCB408**ADAPTER INFORMATION ONLY AVAILABLE FOR 3745 COMMUNICATIONS CONTROLLERS****Reason:**

You attempted to obtain adapter information from a communications controller that is not a 3745. NCPView can only provide adapter information for 3745 communications controllers and the 3746-900 expansion box.

System Action:

The request is rejected.

User Action:

None.

ZNCBA01

RETRIEVAL OF NCPs FAILED. RC: P1 FDBK: P2 SYSMSG: P3

Reason:

The NCP selection list service procedure ZNCXBAL could not retrieve NCP objects to build the selection list. The retcode *P1* and feedback code *P2* are those set by the &OSCALL SEND verb.

System Action:

None.

User Action:

Check that NCPView is initialised. Look up the return codes and feedback codes in the NCL Reference.

ZNCBA02

CALLTYPE P1 NOT RECOGNISED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The NCP selection list service procedure ZNCXBAL did not support the calltype P1 from the selection list manager.

System Action:

Selection List Terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCBA03**OPTION P1 NOT RECOGNISED BY SELECTION LIST SERVICE
PROCEDURE****Reason:**

The NCP selection list service procedure ZNCXBAL did not support the selection option P1 that was specified on the selection list

System Action:

Selection rejected.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCBB01**NCP P1 DOES NOT EXIST****Reason:**

An attempt was made to browse an NCP's details but the NCP does not exist.

System Action:

None.

User Action:

Check that you have specified the correct NCP name.

ZNCBB02**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The NCPView NCP details procedure ZNCXBBP failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure ZNCXBBP terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCBB03

INVALID COMMAND

Reason:

The command that was specified on the command line is not valid.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

ZNCBB04

NCP P1 DELETED FROM NCPVIEW'S MONITORING SCOPE

Reason:

The NCP *P1* will no longer be monitored by NCPView. The status of the NCP itself is not changed.

System Action:

None.

User Action:

None.

ZNCBB05

PRESS ENTER KEY TO CONFIRM DELETE OR CANCEL KEY TO CANCEL REQUEST

Reason:

The NCP Details panel was displayed requesting the user to confirm the deletion of the NCP from NCPView's monitoring scope.

System Action:

None.

User Action:

Press the ENTER key to allow the deletion, or press the CANCEL key to cancel the delete request.

ZNCBB06**P1 CANCELLED****Reason:**

The *P1* action was cancelled by the user.

System Action:

None.

User Action:

None.

ZNCBB07**NCP P1 ALREADY EXISTS****Reason:**

An attempt was made to add an NCP to NCPView's Monitoring Scope but the NCP already exists.

System Action:

None.

User Action:

Check that you have specified the correct NCP name.

ZNCBB08**NCP P1 ADDED TO NCPVIEW'S MONITORING SCOPE****Reason:**

The NCP *P1* will now be monitored by NCPView. The status of the NCP itself is not changed.

System Action:

None.

User Action:

None.

ZNCBC02

CALLTYPE P1 NOT RECOGNISED BY BROWSE UTILITY SERVICE PROCEDURE

Reason:

The NCP browse utility service procedure ZNCEXBCP did not support the calltype P1 from the browse utility.

System Action:

NCP Storage Display Terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCBC03

INVALID ADDRESS SPECIFIED

Reason:

An invalid address was specified in the address field on the NCP storage display panel.

System Action:

Address field placed in error and request is rejected.

User Action:

Specify a valid NCP storage address. This is a six character hexadecimal address.

ZNCBC04

NCP NOT SELECTED FROM SELECTION LIST

Reason:

A list of NCPs was presented and an NCP was not selected.

System Action:

None.

User Action:

Select an NCP on the list or specify an NCP name.

ZNCBC05**AN NCP NAME MUST BE SPECIFIED****Reason:**

An NCP name must be specified on the NCP storage display panel.

System Action:

None.

User Action:

Specify a valid NCP name or enter a '?' in the NCP name field for a selection list of NCPs.

ZNCBC06**SPECIFIED NCP NAME IS INVALID****Reason:**

An invalid NCP name was specified on the NCP storage display panel.

System Action:

None.

User Action:

Specify a valid NCP name or enter a '?' in the NCP name field for a selection list of NCPs.

ZNCBC07**CONTROL BLOCK NOT SELECTED FROM SELECTION LIST****Reason:**

A list of NCP control blocks was presented and a control block was not selected.

System Action:

None.

User Action:

Select a control block on the list or specify a storage address on the storage display panel.

ZNCBC08

MAXIMUM SCROLL FORWARD NOT SUPPORTED ON STORAGE DISPLAY PANEL

Reason:

The max scroll forward operation is not allowed on the NCPView Storage Display Panel.

System Action:

None.

User Action:

You can enter an address to scroll to in the Address field or you can enter a numeric scroll amount (number of display lines) in the command field then press F8 to scroll forward that amount.

ZNCBC09

DOMAIN NOT SELECTED FROM SELECTION LIST

Reason:

A list of domains was presented and a domain was not selected.

System Action:

None.

User Action:

Select a domain on the list or specify a domain name.

ZNCBC10

A DOMAIN NAME MUST BE SPECIFIED

Reason:

A domain name must be specified on the NCP storage display panel.

System Action:

None.

User Action:

Specify a valid domain name or enter a '?' in the domain name field for a selection list of domains.

ZNCBC11**SPECIFIED Domain NAME IS INVALID****Reason:**

An invalid Domain name was specified on the NCP storage display panel.

System Action:

None.

User Action:

Specify a valid Domain name or enter a '?' in the Domain name field for a selection list of Domains.

ZNCBC12**DOMAIN p1 DOES NOT EXIST****Reason:**

The specified domain *P1* does not exist.

System Action:

None.

User Action:

Check that the domain name that you have specified is correct, or place a '?' in the Domain field to get a list of available domains.

ZNCBC13

LINK TO DOMAIN P1 NOT ACTIVE. CURRENT STATE IS P2

Reason:

The specified link to the specified domain *P1* is not active. Its current status is *P2* . The request cannot be processed.

System Action:

None.

User Action:

Make sure that the link has been activated at both ends using the 'LINK START=linkname TYPE=APPC' command. Check the status of the links using the 'SH LINKS TYPE=APPC' command. If the links appear to be active try inactivating then activating the link using the 'LINK STOP=linkname TYPE=APPC' and 'LINK START=linkname TYPE=APPC' commands. Check any error/sense codes returned from the link start command and diagnose accordingly.

ZNCBC14

CURRENT PRINT RANGE CANCELLED

Reason:

A print range that was previously defined has been cancelled.

System Action:

None.

User Action:

None.

ZNCBC15**ENTER 'PRINT START' CMD AND POSITION CURSOR TO MARK START OF PRINT RANGE****Reason:**

You have attempted to mark the start of a print range without indicating where you wish the print range to start from.

System Action:

None.

User Action:

Enter PRINT START in the Command field, place your cursor on a line within the scrollable window, and press ENTER.

ZNCBC16**PRINT RANGE START MARKER SET****Reason:**

The start of the print range was successfully set.

System Action:

None.

User Action:

None.

ZNCBC17**ERROR - SPECIFIED START RANGE IS AFTER END OF PRINT RANGE****Reason:**

You have attempted to mark the start of the print range at a point after the end of print range marker that you have previously set.

System Action:

None.

User Action:

Mark the start range at a point before the end range, or move the end range and remark the start of the print range.

ZNCBC18

PRINT RANGE START MARKER MODIFIED

Reason:

The start of the print range was successfully modified.

System Action:

None.

User Action:

None.

ZNCBC19

ENTER 'PRINT END' CMD AND POSITION CURSOR TO MARK END OF PRINT RANGE

Reason:

You have attempted to mark the end of a print range without indicating the point where you wish the print range to end.

System Action:

None.

User Action:

Enter PRINT END in the Command field, place your cursor on a line within the scrollable window, and press ENTER.

ZNCBC20

PRINT RANGE END MARKER SET

Reason:

The end of the print range was successfully set.

System Action:

None.

User Action:

None.

ZNCBC21**ERROR - SPECIFIED END RANGE IS BEFORE START OF PRINT RANGE****Reason:**

You have attempted to mark the end of the print range at a point before the start of print range marker that you have previously set.

System Action:

None.

User Action:

Mark the end range after the start range, or move the start range and remark the end of the print range.

ZNCBC22**PRINT RANGE END MARKER MODIFIED****Reason:**

The end of the print range was successfully modified.

System Action:

None.

User Action:

None.

ZNCBC23**CANNOT PRINT - START AND/OR END MARKERS HAVE NOT BEEN DEFINED****Reason:**

You cannot print until you have marked the start and end of the text that you wish to print.

System Action:

None.

User Action:

You must mark both the start and end of the print range by using the PRINT START and PRINT END commands in conjunction with the position of your cursor on the appropriate scrollable line of text.

ZNCBD01

RETRIEVAL OF NCP CONTROL BLOCK INFORMATION FAILED. RC: P1 FDBK: P2

Reason:

The NCP control block selection list service procedure ZNCXBDL could not retrieve NCP objects to build the selection list. The retcode P1 , and feedback code P2 are those set by the &OSCALL SEND verb.

System Action:

None.

User Action:

Check that NCPView is initialised. Look up the return codes and feedback codes in the NCL Reference.

ZNCBD02

CALLTYPE P1 NOT RECOGNISED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The NCP control block selection list service procedure ZNCXBDL did not support the calltype P1 from the selection list manager.

System Action:

Selection List Terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCBD03**OPTION P1 NOT RECOGNISED BY SELECTION LIST SERVICE
PROCEDURE****Reason:**

The NCP control block selection list service procedure ZNCXBDL did not support the selection option P1 that was specified on the selection list

System Action:

Selection rejected.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCBF00**P1 PARAMETER HAS BEEN OMITTED****Reason:**

The NCPView DUMP Browse facility has been invoked but a mandatory startup parameter has not been supplied.

System Action:

The NCPView Dump Browse facility terminates.

User Action:

Restart the dump browse facility, specifying all mandatory parameters.

ZNCBF01**P1 PARAMETER HAS INVALID VALUE - P2****Reason:**

The NCPView DUMP Browse facility has been invoked but the value of an parameter is invalid.

System Action:

The NCPView Dump Browse facility terminates.

User Action:

Restart the dump browse facility, specifying a valid value for all parameters.

ZNCBF02

DUMP DATASET HAS BEEN MIGRATED. DSN: P1

Reason:

The NCPView DUMP Browse facility has been invoked but the dump dataset nominated has been migrated by DFHSM or equivalent, and the MIGRATE=YES startup parameter has not been specified. The dataset name was *P1* .

System Action:

The NCPView Dump Browse facility terminates.

User Action:

Restart the dump browse facility, specifying MIGRATE=YES, or ensure that the dataset is recalled before starting the browse facility.

ZNCBF03

DUMP DATASET ALLOCATION FAILED, REFER TO LOG

Reason:

The NCPView DUMP Browse facility has been invoked but allocation of the dump dataset has failed. This message and message ZNCBF99 are written to the activity log to supply additional information about the allocation failure.

System Action:

The NCPView Dump Browse facility terminates.

User Action:

Refer to the SOLVE activity log for further information related to the failure.

ZNCBF04

DUMP DATASET OPEN FAILED, REFER TO LOG

Reason:

The NCPView DUMP Browse facility has been invoked but the OPEN of the dump dataset has failed. This message and message ZNCBF99 are written to the activity log to supply additional information about the OPEN failure.

System Action:

The NCPView Dump Browse facility terminates.

User Action:

Refer to the SOLVE activity log for further information related to the failure.

ZNCBF05**DUMP DATASET INFORMATION OBTAIN FAILED, REFER TO LOG****Reason:**

The NCPView DUMP Browse facility has been invoked but an attempt to obtain information about the dataset has failed. This message and message ZNCBF99 are written to the SOLVE activity log to supply further information about the failure.

System Action:

The NCPView Dump Browse facility terminates.

User Action:

Refer to the SOLVE activity log for further information related to the failure.

ZNCBF06**DUMP DATASET HAS INVALID LRECL - P1****Reason:**

The NCPView DUMP Browse facility has encountered a dump dataset which is not deemed to be valid because the Logical Record Length is not 512 or 2048.

System Action:

The dump dataset cannot be processed.

User Action:

Ensure that the correct dataset is being processed. If so, and the dataset is actually a valid NCP dump, contact your SOLVE support centre.

ZNCBF07

DUMP DATASET HAS INVALID DSORG - P1

Reason:

The NCPView DUMP Browse facility has encountered a dump dataset which is not deemed to be valid because the Dataset Organisation is not Physical Sequential (PS).

System Action:

The dump dataset cannot be processed.

User Action:

Ensure that the correct dataset is being processed. If so, and the dataset is actually a valid NCP dump, contact your SOLVE support centre.

ZNCBF08

DUMP DATASET HAS INVALID FIRST RECORD - P1

Reason:

The NCPView DUMP Browse facility has encountered a dump dataset which is not deemed to be valid because the first record in the dataset seems to be invalid.

System Action:

The dump dataset cannot be processed.

User Action:

Ensure that the correct dataset is being processed. If so, and the dataset is actually a valid NCP dump, contact your SOLVE support centre.

ZNCBF09**DUMP DATASET HAS INVALID SECOND RECORD - P1****Reason:**

The NCPView DUMP Browse facility has encountered a dump dataset which is not deemed to be valid because the second record in the dataset seems to be invalid.

System Action:

The dump dataset cannot be processed.

User Action:

Ensure that the correct dataset is being processed. If so, and the dataset is actually a valid NCP dump, contact your SOLVE support centre.

ZNCBF10**DUMP DATASET CLOSE FAILED, REFER TO LOG****Reason:**

The NCPView DUMP Browse facility has attempted to CLOSE a dump dataset but the CLOSE was unsuccessful. This message and message ZNCBF99 are written to the SOLVE activity log to supply further information about the failure.

System Action:

The NCPView Dump Browse facility terminates.

User Action:

Refer to the SOLVE activity log for further information related to the failure.

ZNCBF11

DUMP DATASET UNALLOCATION FAILED, REFER TO LOG

Reason:

The NCPView DUMP Browse facility has attempted to UNALLOCATE a dump dataset but the UNALLOCATE was unsuccessful. This message and message ZNCBF99 are written to the SOLVE activity log to supply further information about the failure.

System Action:

The NCPView Dump Browse facility terminates.

User Action:

Refer to the SOLVE activity log for further information related to the failure.

ZNCBF12

DUMP DATASET INITIALIZATION COMPLETE

Reason:

The NCPView DUMP Browse facility has completed initialization for a dump dataset. The dataset can now be accessed to retrieve information.

System Action:

None.

User Action:

None.

ZNCBF13

SPECIFIED ADDRESS IS OUT OF RANGE - P1

Reason:

The NCPView DUMP Browse facility has been asked to return data from an NCP dump but the address supplied is greater than the highest address supported by the NCP.

System Action:

The request is rejected.

User Action:

Retry the request, specifying a valid address.

ZNCBF15**DUMP DATASET DATA RETRIEVAL SUCCESSFUL****Reason:**

The NCPView DUMP Browse facility has received a request to return some data from a dump dataset and has returned the storage in an MDO which accompanies this message.

System Action:

None.

User Action:

Extract the MDO from \$INT.USERMDO and process it.

ZNCBF16**OPERATIONAL PARAMETERS SET SUCCESSFULLY****Reason:**

The NCPView DUMP Browse facility has received a request to change the value of one or more operational parameters. The request has been processed successfully.

System Action:

None.

User Action:

None.

ZNCBF17**DUMP FUNCTION IS INVALID - P1****Reason:**

The NCPView DUMP Browse facility has received a request for a function which is not recognised.

System Action:

The request is rejected.

User Action:

Correct the request name and retry.

ZNCBF18

DUMP DATASET READ FAILED, REFER TO LOG

Reason:

The NCPView DUMP Browse facility has attempted to READ a dump dataset but the READ was unsuccessful. This message and message ZNCBF99 are written to the SOLVE activity log to supply further information about the failure.

System Action:

The NCPView Dump Browse facility terminates.

User Action:

Refer to the SOLVE activity log for further information related to the failure.

ZNCBF19

DUMP PROCESSING TERMINATED

Reason:

The NCPView DUMP Browse facility has received a request to terminate. Termination processing has begun.

System Action:

The NCPView Dump Browse facility terminates.

User Action:

None.

ZNCBF20

DUMP STORAGE FREED FOR DUMP P1

Reason:

The NCPView DUMP Browse facility has received a request to free the storage which it has read from a specified NCP dump file. The request has been processed successfully.

System Action:

The NCPView Dump Browse facility frees storage which has been read from the specified file.

User Action:

None. If any requests are received for storage display from the file, the storage will be read from the file again.

ZNCBF21**DUMP BROWSE FACILITY STATISTICS FOR DUMP P1****Reason:**

The NCPView DUMP Browse facility has received a request to display statistics related to the processing of a specified dump. This message is the heading line of the resulting display. Other messages containing the display follow.

System Action:

None.

User Action:

None.

ZNCBF22**CPU TIME USED : P1 SECONDS****Reason:**

The NCPView DUMP Browse facility has received a request to display statistics related to the processing of a specified dump. This message shows the amount of CPU time used by dump processing for this dump file.

System Action:

None.

User Action:

None.

ZNCBF23**DUMP RECORDS RETAINED : P1****Reason:**

The NCPView DUMP Browse facility has received a request to display statistics related to the processing of a specified dump. This message shows the number of records from the file which have been retained by the dump browse facility.

System Action:

None.

User Action:

None.

ZNCBF24

DUMP STORAGE RETAINED : P1

Reason:

The NCPView DUMP Browse facility has received a request to display statistics related to the processing of a specified dump. This message shows the amount of storage from the file which has been retained by the dump browse facility.

System Action:

None.

User Action:

None.

ZNCBF25

STORAGE DISPLAY REQUESTS : P1

Reason:

The NCPView DUMP Browse facility has received a request to display statistics related to the processing of a specified dump. This message shows the number of requests received for display of storage from this dump file.

System Action:

None.

User Action:

None.

ZNCBF29

END OF DUMP STATISTICS DISPLAY

Reason:

The NCPView DUMP Browse facility has received a request to display statistics related to the processing of a specified dump. This message is the last message in the display.

System Action:

None.

User Action:

None.

ZNCBF99**P1****Reason:**

The NCPView DUMP Browse facility has encountered an error which has been reported, and the message received by the user indicates that further information about the error is available on the SOLVE activity log. This message appears in the log and contains the information about the error.

System Action:

None.

User Action:

Investigate the information contained in this message and use it to figure out the cause of the failure.

ZNCC201**MUST HAVE NCP V5R3 OR GREATER TO ACCESS ADAPTER INFORMATION****Reason:**

You cannot obtain adapter information for the specified NCP because it is not running at version 5 release 3 or later.

System Action:

Request rejected.

User Action:

None.

ZNCC202

MUST HAVE NCP V6R2 OR GREATER TO ACCESS CSS ADAPTER INFORMATION

Reason:

You cannot obtain CSS adapter information for the specified NCP because it is not running at Version 6 Release 2 or later.

System Action:

Request rejected.

User Action:

None.

ZNCC203

P1 IS AN INVALID ADAPTER ID

Reason:

The value P1 is not a valid Adapter Id.

System Action:

Request rejected.

User Action:

Specify a valid Adapter Id. Valid Adapter Ids have the format :

CA01 to CA16 - Channel Adapters

LA01 to LA32 - Line Adapters

CS01 to CS31 - CSS (Connectivity SubSystem) (3746-900) Adapters

ZNCCA01**RETRIEVAL OF ADAPTERS FAILED. RC: P1 FDBK: P2****Reason:**

The adapter selection list service procedure ZNCEXCAL could not retrieve adapter objects to build the selection list. The retcode *P1* and feedback code *P2* are those set by the &OSCALL SEND verb.

System Action:

None.

User Action:

Check that NCPView is initialised. Look up the return codes and feedback codes in the NCL Reference.

ZNCCA02**CALLTYPE P1 NOT RECOGNISED BY SELECTION LIST SERVICE PROCEDURE****Reason:**

The Adapters selection list service procedure ZNCEXCAL did not support the calltype P1 from the selection list manager.

System Action:

Selection List Terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCCA03

OPTION P1 NOT RECOGNISED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The Adapters selection list service procedure ZNCEXCAL did not support the selected option P1 that was specified on the selection list.

System Action:

Selection rejected.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCCB01

ADAPTER P1 ON NCP P2 DOES NOT EXIST

Reason:

An attempt was made to browse an adapter's details but the adapter does not exist.

System Action:

None.

User Action:

Check that you have specified the correct NCP name and adapter name.

ZNCCB02**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The NCPView Adapter details procedure ZNCEXCBP failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure ZNCEXCBP terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCCB03**INVALID COMMAND****Reason:**

The command that was specified on the command line is not valid.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

ZNCDA01**RETRIEVAL OF CHANNEL ADAPTERS FAILED. RC: P1 FDBK: P2****Reason:**

The channel adapter selection list service procedure ZNCEXDAL could not retrieve channel adapter objects to build the selection list. The retcode *P1* , and feedback code *P2* are those set by the &OSCALL SEND verb.

System Action:

None.

User Action:

Check that NCPView is initialised. Look up the return codes and feedback codes in the NCL Reference.

ZNCDA02

CALLTYPE P1 NOT RECOGNISED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The channel adapters selection list service procedure ZNCEXDAL did not support the calltype P1 from the selection list manager.

System Action:

Selection List Terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCDA03

OPTION P1 NOT RECOGNISED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The channel adapters selection list service procedure ZNCEXDAL did not support the selected option P1 that was specified on the selection list.

System Action:

Selection rejected.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCDB01**CHANNEL ADAPTER P1 ON NCP P2 DOES NOT EXIST****Reason:**

An attempt was made to browse an adapter's details but the adapter does not exist.

System Action:

None.

User Action:

Check that you have specified the correct NCP name and adapter name.

ZNCDB02**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The Channel Adapter details procedure ZNCEXDBP failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure ZNCEXDBP terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCDB03**INVALID COMMAND****Reason:**

The command that was specified on the command line is not valid.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

ZNCDF0102

Resource update failed for P1 ; Reason: P2

Reason:

The resource status update for *P1* failed. *P2* indicates the failure reason.

System Action:

None

User Action:

Refer to the failure reason message to determine the problem.

ZNCDF0103

NCP P1 attributes unknown

Reason:

NCP monitoring was unable to set the details of the NCP *P1* because the NCP is not accessible by NCPView.

System Action:

The NCP details are set to a dash and the resource status is set as unknown.

User Action:

Review the NCP definition to ensure it refers to an active NCP for the current system.

ZNCDF0104**NCPMON: P1= P2, P3% above P4 baseline of P5****Reason:**

An Above Baseline condition has been detected for the *P1* attribute. The value for *P1* is *P2*. This is *P3%* greater than the *P4* baseline, which has a current value of *P5*.

A baseline is a relative, moving average calculated over time from previous samples of this attribute and resource.

An alert is triggered when the value of a sample for the *P1* attribute exceeds a baseline value by more than the specified percentage. This indicates atypical performance by this resource.

System Action:

An alert is created.

User Action:

Use the NCP Monitor to examine the performance history of the attributes monitored for this resource.

ZNCDF0105**NCPMON: P1= P2, P3% below P4 baseline of P5****Reason:**

A Below Baseline condition has been detected for the *P1* attribute. The value for *P1* is *P2*. This is *P3%* less than the *P4* baseline, which has a current value of *P5*.

A baseline is a relative, moving average calculated over time from previous samples of this attribute and resource.

An alert is triggered when the value of a sample for the *P1* attribute is less than a baseline value by more than a specified percentage. This indicates atypical performance by this resource.

System Action:

An alert is created.

User Action:

Use the NCP Monitor to examine the performance history of the attributes monitored for this resource.

ZNCDF0106

NCPMON: P1 High, P2

Reason:

A High Value/High Rate condition has been detected for the *P1* attribute. The value of *P1* is *P2*. This is greater than the specified High Value/ High Rate threshold. This threshold is an absolute value.

An alert is triggered when the value of a sample for the *P1* attribute exceeds the specified threshold.

System Action:

An alert is created.

User Action:

Use the NCP Monitor to examine the performance history of the attributes monitored for this resource.

ZNCDF0107

NCPMON: P1 Low, P2

Reason:

A Low Value/Low Rate condition has been detected for the *P1* attribute. The value of *P1* is *P2*. This is less than the specified Low Value/Low Rate threshold. This threshold is an absolute value.

An alert is triggered when the value of a sample for the *P1* attribute is less than the specified threshold.

System Action:

An alert is created.

User Action:

Use the NCP Monitor to examine the performance history of the attributes monitored for this resource.

ZNCDF0108**NCPMON: P1 is P2****Reason:**

The value of the *P1* attribute is *P2*.

An alert is triggered for this condition. It indicates that this resource may be in a problem state.

System Action:

An alert is created.

User Action:

Use the NCP Monitor to examine the performance history of the attributes monitored for this resource.

ZNCDF0109**P1****Reason:**

The performance monitoring setup for this resource specifies that an alert should be triggered if the error condition specified in *P1* is detected.

System Action:

An alert is created.

User Action:

Use the NCP Monitor to examine the performance history of the attributes monitored for this resource.

ZNCE202**MUST HAVE NCP V6R2 OR GREATER TO ACCESS CSS ADAPTER INFORMATION****Reason:**

You cannot obtain CSS adapter information for the specified NCP because it is not running at Version 6 Release 2 or later.

System Action:

Request rejected.

User Action:

None.

ZNCE203

P1 IS AN INVALID LINE ADAPTER ID

Reason:

The value P1 is not a valid Adapter Id.

System Action:

Request rejected.

User Action:

Specify a valid Line Adapter Id, which should be in the range LA01 to LA32 for Line adapters on the 3745 or CS01 to CS31 for line adapters on the 3746-900 Connectivity SubSystem (CSS).

ZNCEA01

RETRIEVAL OF LINE ADAPTERS FAILED. RC: P1 FDBK: P2

Reason:

The line adapter selection list service procedure ZNCXEAL could not retrieve line adapter objects to build the selection list. The retcode *P1* , and feedback code *P2* are those set by the &OSCALL SEND verb.

System Action:

None.

User Action:

Check that NCPView is initialised. Look up the return codes and feedback codes in the NCL Reference.

ZNCEA02

CALLTYPE P1 NOT RECOGNISED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The line adapters selection list service procedure ZNCEXEAL did not support the calltype P1 from the selection list manager.

System Action:

Selection List Terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCEA03

OPTION P1 NOT RECOGNISED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The line adapters selection list service procedure ZNCEXEAL did not support the selected option P1 that was specified on the selection list.

System Action:

Selection List Terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCEB01

LINE ADAPTER P1 ON NCP P2 DOES NOT EXIST

Reason:

An attempt was made to browse an adapter's details but the adapter does not exist.

System Action:

None.

User Action:

Check that you have specified the correct NCP name and adapter name.

ZNCEB02

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The Line Adapter details procedure ZNCXEBP failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2*.

System Action:

Procedure ZNCXEBP terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCEB03

INVALID COMMAND

Reason:

The command that was specified on the command line is not valid.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

ZNCF201**ADAPTER P1 IS NOT A TOKEN-RING ADAPTER****Reason:**

An attempt was made to get Token-Ring adapter information for an adapter that is not a Token-Ring adapter.

System Action:

Request rejected.

User Action:

Check that you have specified the correct adapter.

ZNCFA01**RETRIEVAL OF TOKEN-RING ADAPTERS FAILED. RC: P1 FDBK: P2****Reason:**

The token-ring adapter selection list service procedure ZNCXFAL could not retrieve Token-Ring adapter objects to build the selection list. The retcode *P1* , and feedback code *P2* are those set by the &OSCALL SEND verb.

System Action:

None.

User Action:

Check that NCPView is initialised. Look up the return codes and feedback codes in the NCL Reference.

ZNCFA02

CALLTYPE P1 NOT RECOGNISED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The Token-Ring adapters selection list service procedure ZNCEXFAL did not support the calltype P1 from the selection list manager.

System Action:

Selection List Terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCFA03

OPTION P1 NOT RECOGNISED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The Token-Ring adapters selection list service procedure ZNCEXFAL did not support the selected option P1 that was specified on the selection list.

System Action:

Selection rejected.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCFB01**TOKEN-RING ADAPTER P1 ON NCP P2 DOES NOT EXIST****Reason:**

An attempt was made to browse an adapter's details but the adapter does not exist.

System Action:

None.

User Action:

Check that you have specified the correct NCP name and adapter name.

ZNCFB02**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The Token-Ring Adapter details procedure ZNCEXFBP failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure ZNCEXFBP terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCFB03**INVALID COMMAND****Reason:**

The command that was specified on the command line is not valid.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

ZNCG201

MUST HAVE NCP V5R3 OR GREATER TO ACCESS TR INFORMATION

Reason:

You cannot access Token-ring information for the specified NCP because it is not running at Version 5 Release 3 or later.

System Action:

Request rejected.

User Action:

None.

ZNCGA01

RETRIEVAL OF TOKEN-RING PHYSICAL LINKS FAILED. RC: P1 FDBK: P2

Reason:

The token-ring physical link (Token-Ring Interface Card - TIC) selection list service procedure ZNCEXGAL could not retrieve token-ring physical link objects to build the selection list. The retcode P1 , and feedback code P2 are those set by the &OSCALL SEND verb.

System Action:

None.

User Action:

Check that NCPView is initialised. Look up the return codes and feedback codes in the NCL Reference.

ZNCGA02**CALLTYPE P1 NOT RECOGNISED BY SELECTION LIST SERVICE
PROCEDURE****Reason:**

The Token-Ring physical links selection list service procedure ZNCEXGAL did not support the calltype P1 from the selection list manager.

System Action:

Selection List Terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCGA03**OPTION P1 NOT RECOGNISED BY SELECTION LIST SERVICE
PROCEDURE****Reason:**

The Token-Ring physical links selection list service procedure ZNCEXGAL did not support the selected option P1 that was specified on the selection list.

System Action:

Selection rejected.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCGA04

CANNOT DISPLAY PLB CONTROL BLOCK AS THIS IS NOT A NTRI LINK

Reason:

You requested to display the PLB control block for a token-ring link that was not an NTRI link. The PLB control block is only associated with NTRI links.

System Action:

Selection rejected.

User Action:

Select an NTRI link (these are identified by a type of TIC1 or TIC2).

ZNCGB01

TOKEN-RING PHYSICAL LINE P1 ON NCP P2 DOES NOT EXIST

Reason:

An attempt was made to browse a Token-Ring Physical Line's details but the physical line does not exist.

System Action:

None.

User Action:

Check that you have specified the correct NCP name, and line name.

ZNCGB02

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The Token-Ring Physical Line details procedure ZNCEXGBP failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2*.

System Action:

Procedure ZNCEXGBP terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCGB03**INVALID COMMAND****Reason:**

The command that was specified on the command line is not valid.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

ZNCH201**WARNING - ATTR P1 NOT RECOGNISED BY TOKEN-RING LOGICAL LINK GET METHOD****Reason:**

The Token-Ring logical link get method did not support the attribute **P1** .

System Action:

Message written to Log. Processing continues.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCH202**MUST HAVE NCP V5R3 OR GREATER TO ACCESS TR INFORMATION****Reason:**

You cannot access Token-ring information for the specified NCP because it is not running at Version 5 Release 3 or later.

System Action:

Request rejected.

User Action:

None.

ZNCHA01

RETRIEVAL OF TOKEN-RING LOGICAL LINKS FAILED. RC: P1 FDBK: P2

Reason:

The token-ring logical link selection list service procedure ZNCEXHAL could not retrieve token-ring logical link objects to build the selection list. The retcode P1 , and feedback code P2 are those set by the &OSCALL SEND verb.

System Action:

None.

User Action:

Check that NCPView is initialised. Look up the return codes and feedback codes in the NCL Reference.

ZNCHA02

CALLTYPE P1 NOT RECOGNISED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The Token-Ring logical links selection list service procedure ZNCEXHAL did not support the calltype P1 from the selection list manager.

System Action:

Selection List Terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCHA03

OPTION P1 NOT RECOGNISED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The Token-Ring logical links selection list service procedure ZNCEXHAL did not support the selected option P1 that was specified on the selection list.

System Action:

Selection rejected.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCHB01

TOKEN-RING LOGICAL LINE P1 ON NCP P2 DOES NOT EXIST

Reason:

An attempt was made to browse a Token-Ring Logical Line's details but the logical line does not exist.

System Action:

None.

User Action:

Check that you have specified the correct NCP name and logical line name

ZNCHB02

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The Token-Ring Logical Line details procedure ZNCEXHBP failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure ZNCEXHBP terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCHB03

INVALID COMMAND

Reason:

The command that was specified on the command line is not valid.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

ZNCI201

MUST HAVE NCP V6R1 OR GREATER FOR IP ROUTER INFORMATION

Reason:

An attempt was made to obtain IP router information on an NCP version less than V6R1.

System Action:

Request is rejected.

User Action:

Check that you have specified the correct NCP name.

ZNCI202**NCP P1 IS NOT CONFIGURED FOR IP ROUTING****Reason:**

An attempt was made to obtain IP router information on NCP *P1* which has not been configured for IP routing.

System Action:

Request is rejected.

User Action:

Check that you have specified the correct NCP name.

ZNCIB01**NCP P1 DOES NOT EXIST****Reason:**

An attempt was made to browse an NCP's IP Router Statistics but the specified NCP does not exist.

System Action:

None.

User Action:

Check that you have specified the correct NCP name.

ZNCIB02**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The NCPView NCP IP Router Statistics details procedure ZNCEXIBP failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure ZNCEXIBP terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCIB03

INVALID COMMAND

Reason:

The command that was specified on the command line is not valid.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

ZNCJB01

NCP P1 DOES NOT EXIST

Reason:

An attempt was made to browse an NCP's buffer and CCU utilisation but the specified NCP does not exist.

System Action:

None.

User Action:

Check that you have specified the correct NCP name.

ZNCJB02

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The NCPView NCP buffer and CCU utilisation details procedure ZNCEXJBP failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2*.

System Action:

Procedure ZNCEXJBP terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCJB03**INVALID COMMAND****Reason:**

The command that was specified on the command line is not valid.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

ZNCK201**NCP: P1 pool: P2 P3 : P4 is out of range****Reason:**

The NCP has a counter out of range.

System Action:

The counter, totals and percentages are displayed as '-'.

User Action:

Report to the NCP manufacturer about the pool and block names and the counter value.

ZNCKA01**Retrieval of POOL/TABLE information failed. RC: P1 FDBK: P2****Reason:**

The NCP pool/table selection list service procedure ZNCEXKAL could not retrieve the NCP pool object to build the selection list. The retcode *P1* , and feedback code *P2* are those set by the &OSCALL CONVERSE verb.

System Action:

None.

User Action:

Check that NCPView is initialised. Look up the return codes and feedback codes in the NCL Reference.

ZNCKA02

Calltype P1 not recognized by Selection List Service procedure

Reason:

The NCP Pools Selection List Service procedure ZNCEXKAL did not support the calltype *P1* from the Selection List Manager.

System Action:

Selection List Terminates.

User Action:

Contact your System Administrator. Ensure the installation has been performed as stated in the installation instructions. The cause of the error may be due to incorrect installation.

ZNCKA03

Option P1 not recognized by Selection List Service procedure

Reason:

The NCP Pools Selection List Service procedure ZNCEXKAL did not support the selected option *P1* from the Selection List Manager.

System Action:

Selection rejected.

User Action:

Contact your System Administrator. Ensure the installation has been performed as stated in the installation instructions. The cause of the error may be due to incorrect installation.

ZNCKA04

Invalid counter, see message ZNCK201 on log for detail

Reason:

The NCP has a counter out of range.

System Action:

The counter, totals and percentages are displayed as '-'.

User Action:

Report to the NCP manufacturer about the pool and block names and the counter value.

ZNCKB01**NCP P1 does not exist****Reason:**

An attempt was made to browse an NCP's buffer counts but the specified NCP does not exist.

System Action:

None.

User Action:

Check that you have specified the correct NCP name.

ZNCKB02**Invalid keyword value specified, KEYWORD= P1 VALUE= P2****Reason:**

The NCPView NCP buffer counts details procedure ZNCEXKBP failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure ZNCEXKBP terminates.

User Action:

Contact your System Administrator. Ensure the installation has been performed as stated in the installation instructions. The cause of the error may be due to incorrect installation.

ZNCKB03**Invalid command****Reason:**

The command that was specified on the command line is not valid.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

ZNCL201

TG: P1 ON NETWORK: P2 SA: P3 NCP: P4 DOES NOT EXIST

Reason:

An attempt was made to get a transmission group's details but the transmission group does not exist.

System Action:

None.

User Action:

Check that you have specified the correct NCP name and transmission group identifiers.

ZNCLA01

RETRIEVAL OF TRANSMISSION GROUPS FAILED. RC: P1 FDBK: P2

Reason:

The transmission group selection list service procedure ZNCEXLAL could not retrieve transmission group objects to build the selection list. The retcode P1 , and feedback code P2 are those set by the &OSCALL SEND verb.

User Action:

Correct the command and retry.

ZNCQ001

CREATE REJECTED. CONNECTED DOMAIN DEFINITION P1 ALREADY EXISTS

Reason:

An attempt was made to create the connected domain definition P1 which has already been created.

System Action:

Create request rejected.

User Action:

Check that you are specifying the correct domain name.

ZNCQ002

ERROR - NCPView IS NOT INITIALISED.

Reason:

An attempt was made to create a connected domain definition but the request could not be serviced because the NCPView has not been initialised.

System Action:

Create request rejected.

User Action:

Initialised NCPView and retry.

ZNCQ003

ERROR ADDING CONNECTED DOMAIN P1 TO VARTABLE. FDBK: P2

Reason:

An error occurred whilst adding a connected domain definition to a vartable. The vartable ADD feedback code was P2 .

System Action:

Create request failed.

User Action:

Contact your local support representative.

ZNCQ004**NCPView CONNECTED DOMAIN P1 SUCCESSFULLY DEFINED****Reason:**

The NCPView connected domain *P1* was successfully defined.

System Action:

None.

User Action:

Make sure the APPC link used by the connected domain definition is active.

ZNCQ005**P1****Reason:**

This is a message that was received by the connected domain create method.

System Action:

None.

User Action:

Take appropriate action based upon the message. The message may just be informational.

ZNCQ006**CREATE OF CONNECTED DOMAIN P1 FAILED. Description MUST BE SPECIFIED.****Reason:**

An attempt to create the connected domain definition P1 failed because the description (ZNCCONDESC attribute) was not specified.

System Action:

Create request rejected.

User Action:

Specify the description. The following is an example:
\$OSCALL SERVICE=CREATE CLASS=ZNCCONDOMN +
NAME=(ZNCMGNAME=&ZNMDID,ZNCCONDOMN=domn) +
ATTRS=(ZNCCONDESC="Production Domain", ZNCCONLINK=appclink)
where *Production Domain* is the description.

ZNCQ007

CREATE OF CONNECTED DOMAIN P1 FAILED. APPC Link MUST BE SPECIFIED.

Reason:

An attempt to create the connected domain definition P1 failed because the APPC link name (ZNCCONLINK attribute) was not specified.

System Action:

Create request rejected.

User Action:

Specify the APPC Link Name. The following is an example:
\$OSCALL SERVICE=CREATE CLASS=ZNCCONDOMN +
NAME=(ZNCMGNAME=&ZNMDID,ZNCCONDOMN=domn) +
ATTRS=(ZNCCONLINK=appclink,ZNCCONDESC=desc)
where *appclink* is the APPC link name.

ZNCQ008

CREATE OF CONNECTED DOMAIN P1 FAILED. Connected Domain IS MANDATORY

Reason:

An attempt to create the connected domain definition P1 failed because the Connected Domain name (ZNCCONDOMN attribute) was not specified.

System Action:

Create request rejected.

User Action:

Specify the Connected Domain name. The following is an example:
\$OSCALL SERVICE=CREATE CLASS=ZNCCONDOMN +
NAME=(ZNCMGNAME=&ZNMDID,ZNCCONDOMN=domn) +
ATTRS=(ZNCCONLINK=appclink,ZNCCONDESC=desc)
where *domn* is the connected domain name.

ZNCQ009**THE SPECIFIED Remote LU Name IS SPECIFIED ON ANOTHER DOMAIN.****Reason:**

The Remote LU Name that you specified is already specified on the definition of another *connected domain*.

System Action:

None.

User Action:

Specify a valid *Remote LU Name* or delete the connected domain definition that is already using this LU name.

ZNCQ010**THE SPECIFIED APPC Link Name IS SPECIFIED ON ANOTHER DOMAIN.****Reason:**

The APPC Link Name that you specified is already specified on the definition of another *connected domain*.

System Action:

None.

User Action:

Specify a valid *APPC Link Name* or delete the connected domain definition that is already using this link name.

ZNCQ101**DELETE REJECTED. CONNECTED DOMAIN DEFINITION P1 DOES NOT EXIST****Reason:**

An attempt was made to delete the connected domain definition P1 which does not exist (has not been previously created).

System Action:

Delete request rejected.

User Action:

Check that you are specifying the correct domain name.

ZNCQ102

ERROR DELETING CONNECTED DOMAIN DEFINITION P1. FDBK: P2

Reason:

An error occurred whilst deleting the connected domain definition from the ZNCCONDOMNS global variable. The variable DELETE feedback code was P2 .

System Action:

Delete request failed.

User Action:

Contact your local support representative.

ZNCQ201

ERROR - CONNECTED DOMAIN P1 NOT KNOWN TO NCPView

Reason:

NCPView does not have any knowledge of the connected domain P1 .

System Action:

Request rejected.

User Action:

Check that the domain name is correct. If it is then you may need to define the domain to NCPView.

ZNCQ202

ERROR GETTING CONNECTED DOMAIN DEFINITION P1. FDBK: P2

Reason:

An error occurred whilst getting a connected domain definition from the ZNCCONDOMNS global variable. The variable GET feedback code was P2 .

System Action:

Get request failed.

User Action:

Contact your local support representative.

ZNCQA01**RETRIEVAL OF CONNECTED DOMAINS FAILED. RC: P1 FDBK: P2
SYMSG: P3****Reason:**

The connected domain selection list service procedure ZNCEXQAL could not retrieve connected domain objects to build the selection list. The retcode P1 and feedback code P2 are those set by the &OSCALL SEND verb.

System Action:

None.

User Action:

Check that NCPView is initialised. Look up the return codes and feedback codes in the NCL Reference.

ZNCQA02**CALLTYPE P1 NOT RECOGNISED BY SELECTION LIST SERVICE
PROCEDURE****Reason:**

The connected domain selection list service procedure ZNCEXQAL did not support the calltype P1 from the selection list manager.

System Action:

Selection List terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCQA03

OPTION P1 NOT RECOGNISED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The connected domain selection list service procedure ZNCEXQAL did not support the selection option P1 that was specified on the selection list

System Action:

Selection rejected.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCQB01

CONNECTED DOMAIN DEFINITION P1 DOES NOT EXIST

Reason:

An attempt was made to browse a connected domain definition but the definition does not exist.

System Action:

None.

User Action:

Check that you have specified the correct connected domain id.

ZNCQB02**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2****Reason:**

The connected domain details procedure ZNCEXQBP failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure ZNCEXQBP terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

ZNCQB03**INVALID COMMAND****Reason:**

The command that was specified on the command line is not valid.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

ZNCQB11**PRESS ENTER KEY TO CONFIRM DELETE OR CANCEL KEY TO CANCEL REQUEST****Reason:**

The connected domain maintenance panel was displayed requesting the user to confirm the deletion of the connected domain definition presented.

System Action:

None.

User Action:

Press the ENTER key to allow the deletion, or press the CANCEL key to cancel the delete request.

ZNCQB12

CONNECTED DOMAIN DEFINITION P1 DELETED

Reason:

The connected domain definition was successfully deleted.

System Action:

None.

User Action:

None.

ZNCQB13

CONNECTED DOMAIN DEFINITION P1 ALREADY EXISTS

Reason:

A request was made to add a connected domain which already exists.

System Action:

The add request is rejected.

User Action:

Change the connected domain ID of the domain you wish to add.

ZNCQB14

CONNECTED DOMAIN DEFINITION P1 ADDED

Reason:

The connected domain definition was successfully added.

System Action:

None.

User Action:

None.

ZNCQB15

CONNECTED DOMAIN DEFINITION P1 UPDATED

Reason:

The connected domain definition was successfully updated.

System Action:

None.

User Action:

None.

ZNCQB16

ADD CANCELLED

Reason:

The add of a connected domain definition was cancelled by the user.

System Action:

None.

User Action:

None.

ZNCQB17

UPDATE CANCELLED

Reason:

The update of a connected domain definition was cancelled by the user.

System Action:

None.

User Action:

None.

ZNCQB18

DELETE CANCELLED

Reason:

The deletion of a connected domain definition was cancelled by the user.

System Action:

None.

User Action:

None.

ZNCR201

NCP V6R2 OR GREATER REQUIRED TO ACCESS FRAME RELAY INFORMATION

Reason:

You cannot access Frame Relay information for the specified NCP because it is not running at Version 6 Release 2 or later.

System Action:

The request is rejected.

User Action:

None.

ZNCR202

AN ERROR OCCURED WHILST PROCESSING ATTRIBUTE P1

Reason:

An error occurred when NCPView attempted to obtain the data for the attribute *P1* for a frame relay physical link. This message accompanies ZNCR203 in the log.

System Action:

The request was rejected.

User Action:

Check that the NCP is still active. If so, retry the request. If the problem persists, note down any messages in the log at the time of the error and call your local support representative.

ZNCR203**NCP NAME: P1 PHYSICAL LINK: P2****Reason:**

This message accompanies the ZNCR202 message and identifies the frame relay physical link that was being processed by NCPView at the time of the error.

P1 is the name of the NCP that was being accessed. *P2* is the name of the frame relay physical link that was being processed at the time of the error.

System Action:

The request is rejected.

User Action:

Check that the NCP is still active. If so, retry the request. If the problem persists, note down any messages in the log at the time of the error and call your local support representative.

ZNCR401**INVALID FILTER - CLASS MUST BE SPECIFIED****Reason:**

The selection procedure must have a class name specified in the filter of an Object Services request to multiple object selection.

System Action:

The get request fails.

User Action:

Contact your local support representative.

ZNCR404

CANNOT SERVICE P1 REQUEST. NCPVIEW HAS NOT BEEN INITIALISED

Reason:

A P1 request was issued but could not be performed because NCPView has not been initialised.

System Action:

The request was rejected.

User Action:

Initialise NCPView, then retry the request. You can initialise NCPView from the NCPView Control Functions menu, by selecting option UT.CF from the NCPView Primary Menu.

For additional information, refer to the online help for the NCPView Control Functions menu.

ZNCR405

NCP V6R2 OR GREATER REQUIRED TO ACCESS FRAME RELAY INFORMATION

Reason:

You cannot access Frame Relay information for the specified NCP because it is not running at Version 6 Release 2 or later.

System Action:

The request is rejected.

User Action:

None.

ZNCRA01**RETRIEVAL OF FRAME RELAY PHYSICAL LINES FAILED, RC= P1,
FDBK= P2****Reason:**

The service procedure ZNCEXRAL, for the frame relay physical line selection list, could not retrieve frame relay physical line objects to build the selection list. The retcode P1 and feedback code P2 are those set by the &OSCALL SEND verb.

System Action:

None.

User Action:

Check that NCPView is initialised. Look up the return codes and the feedback codes in the NCL Reference.

ZNCRA04**CANNOT DISPLAY PLB CONTROL BLOCK AS THIS IS AN ODLK LINE****Reason:**

Your request to display the PLB control block was for a frame relay line that was not an NTRI link. The PLB control block is only associated with NTRI links.

System Action:

The selection is rejected.

User Action:

Select an NTRI link. These are identified by a type of TIC1 or TIC2.

ZNCRB01**FRAME RELAY PHYSICAL LINE P1 ON NCP P2 DOES NOT EXIST****Reason:**

An attempt was made to browse the details of a Frame Relay Physical Line but the physical line does not exist.

System Action:

None.

User Action:

Check that the NCP name, and the line name you have specified are correct.

ZNCRB02

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1, VALUE= P2

Reason:

The NCPView procedure ZNCEXRBP for Frame Relay physical line details failed because it received an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

Procedure ZNCEXRBP terminates.

User Action:

Contact your system administrator. Ensure that the installation has been performed according to installation instructions, as the cause of the error may be due to incorrect installation.

ZNCRB03

INVALID COMMAND

Reason:

The command that was specified on the command line is not valid.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

ZNCS201

NCP V6R2 OR GREATER REQUIRED TO ACCESS FRAME RELAY INFORMATION

Reason:

You cannot access Frame Relay information for the specified NCP because it is not running at Version 6 Release 2 or later.

System Action:

The request is rejected.

User Action:

None.

ZNCS202**AN ERROR OCCURED WHILST PROCESSING ATTRIBUTE P1****Reason:**

An error occurred when NCPView attempted to obtain the data for the attribute *P1* for a frame relay subport. This message accompanies ZNCS203 in the log.

System Action:

Request rejected.

User Action:

Check that the NCP is still active and if so retry the request. If the problem persists note down any messages in the log at the time of the error and call your local support representative.

ZNCS203**NCP NAME: P1 PHYSICAL LINK: P2 SUBPORT: P3****Reason:**

This message accompanies the ZNCS202 message and identifies the frame relay subport that was being processed by NCPView at the time of the error. *P1* is the name of the NCP that was being accessed. *P2* is the name of the frame relay physical link that the subport belongs to. *P3* is the decimal subport number that was being accessed by NCPView at the time of the error.

System Action:

The request is rejected.

User Action:

Check that the NCP is still active. If so, retry the request. If the problem persists, note down any messages in the log at the time of the error and call your local support representative.

ZNCSA01

RETRIEVAL OF DLCIS FOR PHYSICAL LINE P1 FAILED, RC= P2, FDBK= P3

Reason:

The service procedure ZNCEXSAL, that displays the DLCIs for a physical line selection list, could not retrieve the Data Link Connection Identifier (DLCI) objects to build the selection list. P1 is the name of the physical line. The retcode P2 and feedback code P3 are those set by the &OSCALL SEND verb.

System Action:

None.

User Action:

Check that NCPView is initialised. Look up the return codes and the feedback codes in the NCL Reference.

ZNCSA02

UNKNOWN DLCI TYPE= P1 FOR DLCI P2 ON PHYSICAL LINE P3

Reason:

The details for DLCI type *P1* cannot be displayed because the type is not known. *P2* is the DLCI number and *P3* the name of the physical line.

System Action:

None.

User Action:

If you have not already done so, report the problem to your local product representative.

ZNCSA03**FRAME RELAY PHYSICAL LINE P1 ON NCP P2 DOES NOT EXIST****Reason:**

An attempt was made to display the Frame Relay subports for physical line *P1* on NCP *P2* but the physical line does not exist.

System Action:

None.

User Action:

Check that the NCP name, and line name you specified are correct.

ZNCSA04**CUB COMMAND IS INVALID FOR SUBPORT TYPE P1 ON LINE ADAPTER P2****Reason:**

The CUB control block can only be displayed for a frame handler subport (FHSP) on a 3745.

System Action:

None.

User Action:

If a control block display is required, choose one of the other two control block displays available.

ZNCSA05**LLB COMMAND IS INVALID FOR SUBPORT TYPE P1 ON LINE ADAPTER P2****Reason:**

The LLB control block can only be displayed for a terminating equipment subport (TESP) on a 3745.

System Action:

None.

User Action:

If a control block display is required, choose one of the other two control block displays available.

ZNCSA06

SCE COMMAND IS INVALID FOR P1 LINE ADAPTERS

Reason:

The SCE control block can only be displayed for an ODLN line adapter.

System Action:

None.

User Action:

If a control block display is required, choose one of the other two control block displays available.

ZNCSA07

UNABLE TO DISPLAY P1 CONTROL BLOCK - ADDRESS NOT KNOWN

Reason:

The P1 control block could not be displayed because it has no known address.

System Action:

None.

User Action:

Contact your local support representative.

ZNCSB01

DLCI P1 DOES NOT EXIST ON FRAME RELAY PHYSICAL LINE P2 ON NCP P3

Reason:

An attempt was made to browse the details of a DLCI on a Frame Relay Physical Line but the DLCI does not exist.

System Action:

None.

User Action:

Check that the NCP name, and the line name you have specified are correct.

ZNCB02**INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1, VALUE= P2****Reason:**

The procedure ZNCEXSBP, to display details of the NCPView Frame Relay terminating equipment subport, failed because it received an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

The procedure ZNCEXSBP terminates.

User Action:

Contact your system administrator. Ensure that the installation has been performed according to installation instructions, as the cause of the error may be due to incorrect installation.

ZNCB03**INVALID COMMAND****Reason:**

The command that was specified on the command line is not valid.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

ZNCSC01**FRAME RELAY PHYSICAL LINE P1 ON NCP P2 DOES NOT EXIST****Reason:**

An attempt was made to retrieve the details for a Frame Relay line but the physical line does not exist.

System Action:

None.

User Action:

Check that the NCP name, and line name you have specified are correct.

ZNCSC02

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1, VALUE= P2

Reason:

The procedure ZNCEXSCP, to display details of the NCPView Frame Relay switching equipment subport, failed because it received an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

The procedure ZNCEXSCP terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed according to installation instructions, as the cause of the error may be due to incorrect installation.

ZNCSC03

INVALID COMMAND

Reason:

The command that was specified on the command line is not valid.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

ZNCSC04**TABLE UPDATE FOR *P1* OF DLCI *P2* ON LINE *P3* FAILED, FDBK= *P4*****Reason:**

An attempt to correlate all subport connections for a line has failed because of an error in the varable used to hold the data. *P4* is the FDBK code of the variable access error. *P1* is the subport type of the DLCI that *is* in error in the table.

System Action:

Processing terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed according to installation instructions, as the cause of the error may be due to incorrect installation.

ZNCSC05**UNKNOWN SUBPORT TYPE - *P1*****Reason:**

The subport type *P1* is not known to NCPView and cannot be processed.

System Action:

Processing terminates.

User Action:

If you have not already done so, report the problem to your local product representative.
