Chapter 1: Messages

$ABEND Messages

$ABEND001-01

NO STORAGE FOR LICENCE TABLE.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend. This abend occurs during system initialization when the storage required for processing of the product license cannot be obtained.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

This indicates that the region size for the region in which SOLVE is executing is not large enough. Increase the region size and if the abend still occurs, contact your product support representative.

$ABEND001-02

LOAD OF FEATURE TABLE MODULE FAILED.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend. This abend occurs during system initialization when the load module NMFTAB cannot be loaded by the system.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Check the SOLVE load library to ensure that module NMFTAB is present. If it is, contact your product support representative for further assistance in determining the reason for the abend.

$ABEND001-03

MANDATORY SYSTEM MODULE NOT LOADED

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend. This abend occurs during initialization when a load module which is considered critical to the operation of the product cannot be loaded into storage.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Check the load library to ensure it has not been corrupted. Also check the installation process if the SOLVE system has recently been installed to ensure no errors occurred during the creation of the SOLVE load library. If the problem cannot be resolved, contact your product support representative.

$ABEND001-04

LOAD OF PATCH MODULE FAILED.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend. This abend occurs during system initialization when the load module NMPATCH cannot be loaded by the system.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Check the SOLVE load library to ensure that module NMPATCH is present. If it is, contact your product support representative for further assistance in determining the reason for the abend.

$ABEND001-22

VSAM SHOWCB FAILED

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND005-01

INSUFFICIENT STORAGE FOR INITIALIZATION

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend. This abend occurs if the initialization of features of the product, which are critical to the operation of the product, fails due to a lack of storage.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Increase the region size in which SOLVE is executing. If the problem is not resolved by a larger region size, contact your product support representative for further assistance in resolving the problem.

$ABEND005-05

MANDATORY FEAT-REL SYSTEM MODULE NOT LOADED

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend. This abend occurs if the load module for a SOLVE feature cannot be loaded into storage.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Check the SOLVE load library to ensure it has not been corrupted. Also check the installation process if the product has been recently installed to ensure that no errors occurred during the creation of the SOLVE load library. If the cause of the error is still unknown, contact your product support representative.

$ABEND006-00

CONID=0 OR CONNAM=CONSOLE ERROR.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND006-02

CORRUPTED POINTERS (1).

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND006-03

CORRUPTED POINTERS (2).

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND006-04

CORRUPTED POINTERS (3).

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND006-05

CORRUPTED POINTERS (4).

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND008-01

ENVIRONMENT MGR - TABLE SEARCH ERROR.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND008-02

ENVIRONMENT MGR - INVALID PARMS.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND008-03

ENVIRONMENT MGR - INVALID MCB TYPE.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND008-04

ENVIRONMENT MGR - INVALID BUILD FUNCTION.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND008-05

UNABLE TO ALLOCATE VOE OPER NUMBER.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND008-06

ENVIRONMENT MGR - INTERNAL ERROR.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND008-07

ENVIRONMENT MGR - DELETE-REGION INVALID.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND008-08

ENVIRONMENT MGR - DEAD LUB STILL HAS DDA.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND012-10

INTERNAL ERROR 10 - $NMXCTL WHEN NO XPB.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND012-11

INTERNAL ERROR 11 - $NMXCTL+PUSHR ACTIVE.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND012-12

INTERNAL ERROR 12 - $NMXCTL L=ALL TO ISL.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND012-13

INTERNAL ERROR 13 - $NMXCTL THDTOP TO ISL.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND012-20

INTERNAL ERROR 20 - UNSERVICED $NMXCTL.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND012-21

INTERNAL ERROR 21 - $NMPUSHR AREAS OWNED.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND012-30

INTERNAL ERROR 30 - HSA=0 + EXECPBAD=0.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND012-31

INTERNAL ERROR 31 - R13 NE XPBSACHN.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND012-32

INTERNAL ERROR 32 - ASYNCH $NMQ FOUND.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND013-01

INTERNAL ERROR

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND013-02

INVALID FUNCTION CODE

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND015-01

INTERNAL ERROR

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND015-02

BUFFER CORRUPTION

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND016-01

INSUFFICIENT STORAGE

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend. This abend indicates that the region size in which SOLVE is executing is too small.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Increase the region size. If the problem persists, contact your product support representative to obtain estimates of what region size would be required for your SOLVE configuration. If the SOLVE system contains many features, you may consider removing some of the features and enabling them on another SOLVE system.

$ABEND016-02

STORAGE NOT DWD ALIGNED

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND016-04

INVALID $NMGMAIN LENGTH SPECIFIED

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND016-05

ATTEMPT TO FREEMAIN ZERO LENGTH

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND016-10

UNABLE TO OBTAIN TRACKED TABLE STORAGE.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND016-20

GETMAIN TRACKING TABLE ERROR.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND017-00

UNRECOVERABLE LACK OF STORAGE

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend. This abend occurs when SOLVE is unable to obtain storage required to continue processing for a function which is considered critical to the operation of the system.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

This abend indicates the region size in which SOLVE is executing is not large enough. If you consider the region size to be sufficient, contact your product support representative for further assistance to determine the cause of the problem.

$ABEND018-01

DOS FREEVIS ERROR - 1

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND018-02

DOS FREEVIS ERROR - 2

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND020-01

INSUFFICIENT STORAGE

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND023-01

XPB NOT LOCATED ON DISPATCH Q

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND024-01

COUNT OF XPBS ON DISPATCH NOT IN SYNC

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND024-02

GMAIN FOR MUSTGET XSSR FAILED

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND024-03

INTERNAL ERROR 3

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND024-04

INTERNAL ERROR 4

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND025-00

SOLVE IS HUNG OR LOOPING.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND026-01

BUFFER GET FAILED.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND028-01

INVALID ECB ADDRESS

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND028-02

PROCESS-BLOCK ECB LIMIT EXCEEDED.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND028-03

INSUFFICIENT STORAGE FOR ECB TABLE EXPAND

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND029-01

INVALID INTERNAL POST OPTION

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND02B-01

ERRB QUEUE LOGIC ERROR

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND02D-03

NZ R15 FROM EXPAND-BITLIST EDIT CALL.

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND02E-01

INVALID EVENT NAME VECTOR DETECTED

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND02E-02

NO MCB SPECIFIED ON $NMEVENT SCOPE=REGION

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND02E-03

INVALID INTERNAL EVENT ID

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND02E-04

INVALID INTERNAL EVENT POINT DATA

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND02E-05

NO TYPE ON $NMEVENT CALL

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND02G-01

SYSTEM EVENT ALREADY REGISTERED

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND02G-02

SYSTEM EVENT REGISTRATION DOES NOT EXIST

Reason:

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND266-01

INVALID RETURN CODE FROM SECURITY EXIT

Reason:

The installation written security set a non-zero return code to the system initialization call.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Review your security exit, checking the return code from the system initialization call. Register 15 must be zero from this call.

$ABEND268-01

SECURITY EXIT ABNORMAL TERMINATION

Reason:

The installation written security exit has terminated abnormally. The subtask abend code is contained in Register 1, and Register 15 contains the function code with which the security exit was called.
An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Refer to Register 1 for the abend code and Register 15 for the function code from the call to the security exit.
Refer to the system log for messages relating to the security exit abnormal termination. This abend generally results in two system dumps being generated - one for the security exit abnormal termination and the other for this abend. The security exit system dump will contain all the necessary information for the abending TCB to resolve this problem.

$ABEND268-02

NM000269 ATTACH FAILED

Reason:

An N92049 message is written to the system log containing this abend code. Refer to this message for general information on the internal abend.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Contact your product support representative.

$ABEND276-01

INVALID EXIT ATTRIBUTE DEFINITION

Reason:

The region determines the type of security exit (partial or full) by examining the first fullword of the parameter list within the security exit. An Assembler ENTRY statement identifies this parameter list.

The only acceptable values for this fullword exit identifier are:

- F'0' - identifies the exit as a partial security exit.
- F'4' - identifies the exit as a full security exit.

The parameter list in the security exit contains a value that is not F'0' or F'4'. The value found by the region is pointed to by Register 15.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Correct your security exit by providing the correct exit identifier in the first fullword of the exits parameter list from the NMUEX01 entry.

$ABEND276-03

UAMS NOT LOADED

Reason:

The load modules required for the security sub-system cannot be found.

System Action:

A user abend (U4095) is issued. A formatted dump and a system dump are produced.

User Action:

Determine the reason for the load module not being found, correct the error and re-start SOLVE.

User Action:

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMAGTT03

UNEXPECTED DATA RECEIVED. VERB: *P1* WRI: *P2* STATE: *P3* DOMAIN: *P4*

Reason:

The alert monitor agent appc transaction ($AMAGTTZ) received some unexpected data whilst communicating with the remote domain *P4*. The APPC verb that encountered the error was *P1*, the what received indicator had a value of *P2*, the conversation state was *P3*.

System Action:

None.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

AMAGTT04

CANNOT QUEUE REQUEST FROM REMOTE DOMAIN: *P1* TO AGENT. RC: *P2*

Reason:

The Alert Monitor's agent appc transaction ($AMAGTTZ) (which is started by a remote SOLVE system) could not queue a request to an alert monitor agent process ($AMPAGTZ).

System Action:

Processing continues.

User Action:

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMALRCV01

P1*~receiver - *P2* - EPS request rejected (RETCODE=*P3* ERRORNO=*P4*) REASON: *P5

Reason:

The *P1* receiver failed when issuing an EPS request.

P1 is the EPS Receiver ID.

P2 is the type of EPS request (for example, CONNECT).

P3 is the return code.

P4 is the error number.

P5 is the reason (for example, EPS UNAVAILABLE).

If possible, recovery is attempted as indicated by the next message (see also AMALRCV04, AMALRCV05, or AMALRCV06).

System Action:

The *P1* receiver attempts recovery.

User Action:

If the message is not followed by a recovery message, the error is probably related to data corruption. The event is discarded, and processing continues.

If the problem cannot be resolved, contact CA Support.

AMALRCV02

MDO assign FAILED: RC= *P1* FDBK= *P2* MAP= *P3* COMPONENT= *P4* TAG= *P5* TYPE= *P6*

Reason:

The alert receiver failed due to an MDO error. The failure is identified by the following:

- The statement type, ASSIGN
- The MDO return code, *P1* (&ZMDORC)
- The MDO feedback code, *P2* (&ZDMOFDBK)
- The map name, *P3* (&ZMDOMAP)
- The full map component name, *P4* (&ZMDONAME)
- The map component tag value, *P5* (&ZMDOTAG)
- The ASN.1 type of the component, *P6* (&ZMDOTYPE)

This failure indicates one of the following causes:

- An invalid record has been received.
- There is a mismatch between the ASN.1 map and the record.

System Action:

The procedure terminates.

User Action:

Contact Technical Support.

AMALRCV03

***P1* receiver active.**

Reason:

The *P1* receiver procedure is now ready to receive events using EPS Services. *P1* is the EPS receiver ID.

System Action:

The region is ready to receive events from external applications.

User Action:

None.

AMALRCV04

***P1* receiver attempting EPS reconnection**

Reason:

This message follows message AMALRCV01. *P1* is the EPS receiver ID.

The recovery is attempted after an EPS request failure (see AMALRCV01).

System Action:

Reconnection to EPS is attempted.

User Action:

See message AMALRCV01 for the EPS return and error codes.

If the problem cannot be resolved, contact CA Support.

AMALRCV05

***P1* receiver waiting for EPS services availability**

Reason:

This message follows message AMALRCV01. The required EPS services are currently unavailable. *P1* events processing will resume as soon as EPS services are restored. *P1* is the EPS receiver ID.

System Action:

Wait for EPS to become available.

User Action:

Ensure that an SSI region is currently active with its event processor is enabled.

Enter the **/PARMS** shortcut, and check the SSI parameter group. Ensure that the Sub-System Interface ID field contains the correct ID.

AMALRCV06

***P1* receiver terminated - EPS services unusable**

Reason:

This message follows message AMALRCV01. *P1* is the EPS receiver ID.

An unrecoverable error occurred during an EPS request (see message AMALRCV01). *P1* event processing has stopped.

System Action:

The *P1* receiver is terminated.

User Action:

Contact CA Support.

AMALRCV07

***P1* request rejected - no SERIALNM specified**

Reason:

A *P1* request was received but rejected because the SERIALNM field of the incoming MDO was blank. The SERIALNM field is used to uniquely identify the ALERT that is to have action *P1* performed on it.

System Action:

Request rejected.

User Action:

Ensure the SERIALNM field in the MDO contains a unique alert identifier.

AMALRCV08

P1 request rejected - unable to match SERIALNM

Reason:

A *P1* request was received but rejected because the SERIALNM field of the incoming MDO contained a value that the Alert Receiver was unable to match to any value in the internal Alert Identifier table ($AMALRCV)

System Action:

Request rejected.

User Action:

Ensure the SERIALNM field in the MDO contains a value that had previously been used to CREATE an alert.

AMALRCV09

Registered application(*P1*) DESC(*P2*)

Reason:

The Alert Receiver has successfully registered application *P1* with a description of *P2* to the Alert Monitor. This application is now able to raise alerts.

System Action:

The application is registered with the Alert Monitor and is able to raise alerts using the Alert Receiver.

User Action:

None.

AMALRCV10

Registartion request rejected. Missing *P1*

Reason:

The Alert Receiver has received a request to register an application but the field identified by *P1* was missing. The value of *P1* may be APPLID or DESCRIPTION.

System Action:

The request is rejected.

User Action:

Ensure both APPLID and DESCRIPTION are specified for a registration request.

AMALRCV11

***P1* Receiver cannot run on *P2* operating system**

Reason:

The *P1* Receiver cannot run on an operating system identified by *P2*.

System Action:

The *P1* receiver is terminated.

User Action:

None.

AMALRP01

ERROR LOADING PROC: *P1* IN PACKAGE: *P2*. OML ERROR CODE: *P3*

Reason:

The Alert Monitor attempted to call back an application to process an automated action for an alert, but an error was encountered loading the application's OML call-back package. The procedure being loaded was *P1* which was in the package *P2*. The OML error code was *P3*.

System Action:

Processing of the automated action for the alert is terminated.

User Action:

Determine why the application package is not loading by referring to messages in the log.

AMALRP02

ERROR RETURNED FROM PROC: *P1* IN PACKAGE: *P2*. RETURN CODE: *P3*

Reason:

The Alert Monitor attempted to call back an application to process an automated action for an alert, but the application returned an error. The application procedure that was called was *P1* which was in the OML package *P2*. The return code set by the application was *P3*.

System Action:

None.

User Action:

Refer to the log for the message that was returned by the application.

AMALRP03

ACTION *P1* FOR CLASS *P2* NOT IMPLEMENTED IN PACKAGE *P3*

Reason:

The Alert Monitor attempted to call back an application to process an automated action for an alert, but the application's call-back package did not contain a procedure for processing the action. The action being performed was *P1* for the alert class *P2*. The application OML package that was called was *P3*.

System Action:

Processing of the automated action for the alert is terminated.

User Action:

Implement the procedure in the application's call-back package to process the action.

AMARED01

Action *P1* deleted from list of actions

Reason:

The automated action *P1* was removed from the list of defined actions.

System Action:

None.

User Action:

None.

AMARED02

Error deleting action *P1*. FDBK: *P2*

Reason:

An error occurred whilst attempting to remove the automated action *P1*. *P2* is the feedback code from &VARTABLE DELETE.

System Action:

None.

User Action:

FDBK value of 4 indicates that the action has already been deleted. For other FDBK values, ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

If you cannot resolve the problem, contact Technical Support at http://ca.com/support.

AMARED03

CALLTYPE *P1* NOT RECOGNIZED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The selection list service procedure $AMAREDL does not support the calltype *P1* from the selection list manager.

System Action:

Selection list terminates.

User Action:

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMARED04

NO ACTION SELECTED

Reason:

When asked to select an action you pressed F3=Exit instead of selecting an action. The add request is cancelled.

System Action:

None.

User Action:

Retry the add request, selecting an action from the list of available actions.

AMARED05

ERROR - COULD NOT ADD ACTION AS YOU HAVE TOO MANY OF THEM

Reason:

You attempted to add an automated action, but another action could not be added as there are too many actions already.

System Action:

None.

User Action:

None.

AMARED06

Request canceled

Reason:

A request to add or update a list of actions has been canceled.

System Action:

Current changes have been abandoned.

User Action:

None.

AMARPC02

Link to remote system *P1* is unavailable

Reason:

You have attempted to perform an operation which was to be routed to a remote system but the link to the remote system with a domain ID of *P1* was unavailable.

System Action:

Request rejected.

User Action:

Determine why the link to the remote system was not available. Issue a **SHOW LINKS** command to see the status of links. Issue a **SHOW DOMAINS** command to see the status of domains that are known to the local system. A LINK START command may be required.

AMARPC03

Userid *P1* is not defined on remote system *P2*

Reason:

You have attempted to perform an operation which was to be routed to a remote system, but the userid *P1* was not defined on the remote system that has a domain ID of *P2*.

System Action:

Request rejected.

User Action:

Contact the administrator for the remote system and arrange for your userid to be defined. To see a list of domain IDs and their details issue a SHOW DOMAINS command. The output from this command will help identify the remote system.

AMAVAC01

CALLTYPE *P1* NOT RECOGNIZED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The selection list service procedure $AMAVACL does not support the calltype *P1* from the selection list manager.

System Action:

Selection list terminates.

User Action:

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMCALL01

Alert not created - mandatory attributes not present in alert

Reason:

The creation of an Alert in the Alert Monitor was rejected because the passed alert did not have all the mandatory attributes set.

System Action:

Create of alert rejected.

User Action:

Make sure the Alert MDO has all the mandatory attributes set in it before you call $AMCALL:Alert_Create to create the alert.

AMCALL02

Error starting Alert Monitor Alert Receiver server. RC: *P1*

Reason:

Whilst processing an alert create request, the Alert Monitor attempted to start the Alert Monitor Alert Receiver (which is a long running server process). An error occurred when attempting to start the server. The return code set by the &APPC START verb is *P1*.

System Action:

Create of alert rejected.

User Action:

Refer to the log for any related error messages.

AMCALL03

Alert not created - alert server process at queue limit

Reason:

The creation of an Alert in the Alert Monitor was rejected because the the alert server process that the alert is queued to has reached its queue limit (32767).

System Action:

Creation of alert rejected.

User Action:

Investigate the reasons for excessive alert creation.

AMCALL04

Alert not created - alert MDO exceeds maximun size

Reason:

The creation of an Alert in the Alert Monitor was rejected because the passed alert MDO exceeded the maximum allowable size.

System Action:

Create of alert rejected.

User Action:

Make sure the Alert MDO does not exceed the maximum MDO size.

AMCALL05

Alert not created - alert server process not running

Reason:

The creation of an Alert in the Alert Monitor was rejected because the alert server process was not running (even after the alert create processing attempted to automatically start it).

System Action:

Create of alert rejected.

User Action:

Check the log for any related error messages. Contact your Systems Administrator.

AMCALL06

P1 request failed. Attribute P2 has an invaild value of ' P3'.

Reason:

The request of type *P1* to $AMCALL failed because the attribute *P2* had an invalid value of *P3* .

System Action:

None.

User Action:

Contact your Systems Administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMCALL07

Fatal VARTABLE error - ID: *P1* FUNC: *P2* FDBK: *P3*

Reason:

An error occurred while manipulating an NCL VARTABLE in the procedure $AMCALL. *P1* is the vartable Identifier, *P2* is the function being performed and *P3* is the feedback code set by the vartable verb.

System Action:

None.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

AMCALL08

Error - mandatory parameters not set in $AMALERTRULE MDO

Reason:

You have attempted to edit the automated actions in an alert rule but the procedure which invoked $AMCALL:AlertRule_Edit did not set all of the mandatory parameters in the &$AMALERTRULE MDO.

System Action:

Request fails.

User Action:

Contact your Systems Administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMCALL09

Error - mandatory parameters not set in $AMALERT MDO

Reason:

An application has attempted to create an alert, but the alert MDO that it shared with $AMCALL:AlertCreate did not have all the mandatory fields set in it.

System Action:

Request fails.

User Action:

Contact your Systems Administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMCALL10

Link to system *P1* unavailable

Reason:

You have attempted to access alert information from a remote system, but the link to the remote system is currently unavailable.

System Action:

Request rejected.

User Action:

Check that the remote system is running and that the link to the remote system is active. Use the SHOW LINKS command to see the status of the INMC links.

AMCBPKG01

REQUIRED ATTRIBUTE *P1* OMITTED FOR ACTION *P2*

Reason:

The action *P2* was not performed because the required attribute *P1* was not set.

System Action:

The action is not performed.

User Action:

Make sure the MDO has all the mandatory attributes set in it before you attempt to perform the action again.

AMCBPKG02

P1 REQUEST FAILED. ATTRIBUTE P2 HAS AN INVALID VALUE OF ' P3'

Reason:

The request of type P1 failed because the attribute P2 had an invalid value of P3 .

System Action:

The action is not performed.

User Action:

Ensure that all attributes are correctly set before retrying the action.

AMCBPKG03

HISTORY ONLY AVAILABLE FOR ALERTS THAT HAVE RESOURCE FIELD SET

Reason:

You requested resource history for an alert that does not have the resource field set. You can only get resource history for alerts that have the resource field set.

System Action:

None.

User Action:

None.

AMCBPKG04

FILE *P1* ERROR FILERC= *P2* KEY= *P3* ERROR= *P4*

Reason:

The file action *P1* failed, the file return code was *P2*. If applicable, *P3* is the key value and *P4* is the specific VSAM error code.

System Action:

The action is not performed.

User Action:

Determine the cause of the error and retry.

AMCBPKG05

FIELD VALUE MUST BE SPECIFIED

Reason:

The field highlighted in error is a required field but no value was entered.

System Action:

None.

User Action:

Enter a value for the field.

AMCBPKG06

ALERT MONITOR TROUBLE TICKET INTERFACE HAS NOT BEEN CONFIGURED

Reason:

You cannot use the alert monitor trouble ticket interface because it has not yet been configured.

System Action:

None.

User Action:

The system administrator should configure the trouble ticket interface. Enter the /ALTTI shortcut to start configuring the interface.

AMCBPKG07

UNSUPPORTED TROUBLE TICKET INTERFACE TYPE: *P1*

Reason:

The configured trouble ticket interface type is *P1* but it is not supported on this system.

System Action:

None.

User Action:

Contact your System Administrator.

AMCBPKG08

TROUBLE TICKET REQUEST STOPPED BY USER EXIT *P1*

Reason:

The trouble ticket user exit routine *P1* stopped the creation of a trouble ticket from the alert monitor by setting a non-zero return code.

System Action:

None.

User Action:

None.

AMCBPKG09

TROUBLE TICKET MAIL SENT TO P1

Reason:

The trouble ticket request was sent by e-mail to the address *P1* . This message indicates that the request was queued to the MVS based SMTP agent. It does not guarantee that the message was received by the address.

System Action:

None.

User Action:

None.

AMCBPKG10

ALERT BEING TRACKED BY USERID *P1*

Reason:

The alert is now being tracked by the userid *P1*. This is due to the user *P1* using the T=Track selection list option against the alert on the list of alerts.

System Action:

None.

User Action:

None.

AMCBPKG11

ALERT NO LONGER BEING TRACKED

Reason:

The alert is no longer being tracked. This is due to the user who was tracking the alert using the T=Track option against the alert on the list of alerts having turned tracking off.

System Action:

None.

User Action:

None.

AMCBPKG12

ALERT SEVERITY CHANGED FROM P1 TO P2 BY USERID P3

Reason:

The alert's severity has been changed from the level *P1* to the level *P3* by the userId *P3* .

System Action:

None.

User Action:

None.

AMCBPKG13

USERID *P1* IS INVALID

Reason:

The value entered for the user ID is invalid.

System Action:

None.

User Action:

Correct the value entered and retry the operation.

AMCBPKG14

INVALID PROCEDURE NAME

Reason:

The value entered for the procedure name is invalid.

System Action:

None.

User Action:

Correct the value entered and retry the operation.

AMCBPKG15

INVALID COMMAND

Reason:

The value entered for the command name is invalid.

System Action:

None.

User Action:

Correct the value entered and retry the operation.

AMCBPKG16

EMAIL TROUBLE TICKET USER EXIT PROCEDURE *P1* NOT FOUND

Reason:

The call to the user exit procedure *P1* for the email trouble ticket interface failed because the procedure could not be found in the procedure library.

System Action:

No further calls to the procedure will be made while creating the current trouble ticket but trouble ticket creation will continue.

User Action:

Ensure the correct name is specified for the exit procedure in the trouble ticket definition or remove the procedure name.

AMCBPKG17

ERROR LOADING EMAIL USER EXIT *P1*, OML ERROR CODE: *P2*. SEE *P3*

Reason:

The call to the user exit procedure *P1* for the email trouble ticket interface failed. *P2* is the error number associated with the cau*se* of the failure. *P3* contains the ID of an error message that may provide a more detailed explanation of the failure.

System Action:

Trouble Ticket processing continues.

User Action:

Correct the indicated error or remove the procedure name from the User Exit field.

AMCBPKG18

CUSTOM TROUBLE TICKET PROCEDURE *P1* NOT FOUND

Reason:

The call to the user specified procedure *P1* for the Custom Trouble Ticket interface failed because the procedure could not be found in the procedure library.

System Action:

The trouble ticket creation is terminated.

User Action:

Ensure the correct name is specified for the procedure in the trouble ticket interface definition.

AMCBPKG19

ERROR LOADING CUSTOM USER EXIT *P1*, OML ERROR CODE: *P2*. SEE *P3*

Reason:

The call to the user specified procedure *P1* for the Custom Trouble Ticket interface failed. *P2* is the error number associated with th*e* cause of the failure. *P3* contains the ID of an error message that may provide a more detailed explanation of the failure.

System Action:

Generation of the Trouble Ticket is terminated.

User Action:

Correct the indicated error in the procedure.

AMCBPKG20

Processing to create a CA Service Desk record has started

Reason:

A request has been made to create a Service Desk record that corresponds to this alert.

This message indicates that this region sent the request to the external Web services SOAP client CALSDI/soap. It does not guarantee that the request was received by the Service Desk server, or that a Service Desk record has been created.

System Action:

Internal processing of this request commences. This processing uses the CA Common Services for z/OS components CAICCI and CAISDI/soap to communicate using HTTP(S)/IP, and invoke a Web service provided by the Service Desk server.

User Action:

None.

When all processing and communication completes successfully, a Service Desk record corresponding to this alert should be created.

If the Service Desk server supports the ITIL user interface, an *Incident* record is created; otherwise, a *Request* record is created.

AMCBPKG21

Service Desk record *P1* created on *P2*

Reason:

CA Service Desk Request/Incident record *P1* has been created by one of the following:

- A user issuing a TT command
- An auto-trouble ticket action being triggered

This alert has a trouble ticket type of SERVICEDESK. *P2* is the Service Desk server that created this record.

If the Service Desk server supports the ITIL user interface, an *Incident* record is created; otherwise, a *Request* record is created.

System Action:

None.

User Action:

This record is now accessible to CA Service Desk users.

Authorized users can log in to the CA Service Desk client application on this server and administer this record.

By default, this record appears as an assigned Request or Incident record with an assignee and user of *System_NetMaster_User* (Your Service Desk Administrator can change these values.)

AMCBPKG22

ALERT SEVERITY ALREADY P1, SEVERITY NOT CHANGED

Reason:

The severity level of the alert has not changed because it is already set to level *P1* .

System Action:

None.

User Action:

None.

AMCBPKG23

Alert *p1* to CA Service Desk failed, server= *p2*

Reason:

An attempt was made to create a CA Service Desk record from a CA NetMaster alert, but the attempt failed due to an error condition in the CA NetMaster to CA Service Desk interface.

This interface involves multiple components, including the CA Common Services for z/OS 'CAICCI' and 'CAISDI/soap' SOAP Client components. These combine to communicate from the z/OS systems using HTTP/s to the CA Service Desk server.

Specific error details are written to the activity log.

Some likely causes of these failures include the following:

- CA Common Services for z/OS CAISDI/soap (SOAP client) started task is not active
- CA Service Desk server is not active
- Web server for CA Service Desk server is not active
- Network problems prevent IP access to CA Service Desk server
- Incorrect or incomplete implementation of the CA Common Services for z/OS component CAISDI/soap
- Incorrect or incomplete implementation of CA Service Desk
- Incorrect login user ID or password for CA Service Desk
- CA Service Desk hostname cannot be resolved
- Incorrect setup of the SERVICEDESK destination:
- The URL of the CA Service Desk server is incorrect.
- The CCI SYSID is incorrect.

System Action:

No CA Service Desk record is created.

User Action:

Examine the activity log for further error details in message BASOAP03.

Examine the output of the CA Common Services for z/OS CAISDI/soap SOAP Client started task.

To diagnose these conditions, you may need help from your Systems Programmer (who implemented CAISDI/soap) and your CA Service Desk Administrator.

For more information, see the *Service Desk Integration Guide*, and the *CA Common Services for z/OS Message Guide*.

AMCBPKG24

Trouble Ticket Email Address ' *P1* ' cannot be resolved.

Reason:

The *P1* email address cannot be resolved.

System Action:

The trouble ticket email is not sent.

User Action:

Ensure that the values specified in the following panels are correct:

- Alert Monitor : Email A Trouble Ticket
- Alert Monitor : Trouble Ticket Data Entry Definition

If you use an exit procedure, ensure that all values and code are correct.

Correct any errors.

AMDBMS01

ERROR ADDING ALERT TO ACTIVE ALERTS TABLE. FDBK: *P1*

Reason:

An error occurred whilst attempting to add an alert to the active alerts vartable. The feedback code set by the vartable add verb is *P1*.

System Action:

Alert creation rejected.

User Action:

Check the log for any related error messages. Contact your Systems Administrator.

AMDBMS02

ERROR SETTING ALERT - NOT ALLOWED TO SET ATTRIBUTE: *P1*

Reason:

A call was made to the Alert Monitor to set the attributes of an alert, but the alert object that was passed on the set request contained one or more attributes that cannot be set. The first attribute found in the request that cannot be set was *P1*.

System Action:

Set of alert rejected.

User Action:

Check the log for any related error messages. Contact your Systems Administrator.

AMDBMS03

P1

Reason:

An error occurred whilst starting the alert rule processor. *P1* is a description of the error.

System Action:

No rule processing performed for alert.

User Action:

Check the log for any related error messages. Contact your Systems Administrator.

AMDBMS04

APPLID: *P1* NOT REGISTERED WITH ALERT MONITOR

Reason:

The Alert Monitor attempted to process an Alert or a user request but could not proceed because it needed to call back the application id *P1* which currently is not registered with the alert monitor.

System Action:

None.

User Action:

Determine why the application has not registered with the Alert Monitor.

AMDBMS05

ERROR LOADING PROC: *P1* IN PACKAGE: *P2*. OML ERROR CODE: *P3*

Reason:

The Alert Monitor attempted to call back an application that has registered with the alert monitor, but an error was encountered loading the call-back package. The procedure being loaded was *P1* which was in the package *P2*. The OML error code was *P3*. This message is written to the log.

System Action:

None.

User Action:

Determine why the application package is not loading by referring to messages in the log.

AMDBMS06

ERROR RETURNED FROM PROC: *P1* IN PACKAGE: *P2*. RETURN CODE: *P3*

Reason:

The Alert Monitor attempted to call back an application that has registered with the alert monitor, but the application returned an error. The application procedure that was called was *P1* which in the package *P2*. The return code set by the application was *P3*.

System Action:

None.

User Action:

Refer to the log for the message that was returned by the application.

AMDBMS07

APPLID: P1 DID NOT SPECIFY A CALL-BACK PACKAGE WHEN IT REGISTERED

Reason:

The Alert Monitor attempted to call back an application that has registered with the alert monitor, but the application had not specified a call-back package when it registered with the alert monitor. The applId was P1 .

System Action:

None.

User Action:

Determine why the application did not specify a call-back package when it registered.

AMDBMS08

FATAL VARTABLE ERROR - ID: *P1* FUNC: *P2* FDBK: *P3* KEY: *P4*

Reason:

An error occurred while manipulating an NCL VARTABLE in the procedure $AMDBMS. *P1* is the vartable Identifier, *P2* is the function being performed, *P3* is the feedback code set by the vartable verb and *P4* is the vartable key being accessed.

System Action:

None.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

AMDBMS09

PROC: *P1* IN PKG: *P2* DID NOT RETURN A VALID OBJECT

Reason:

The Alert Monitor called back an application that has registered with the alert monitor, but the application's call-back procedure *P1* in the package *P2* returned an object that was the same as the object that was shared with it (the application call-back procedure did not set any data in the object mdo). The application call-back procedure also set a return code of 0.

System Action:

None.

User Action:

Determine why the application package is not setting data in the object that is returned to the alert monitor.

AMDBMS10

ALERT CLOSED SUCCESSFULLY

Reason:

The Alert Monitor successfully closed an active alert. The alert will now only be in the alert history file.

System Action:

None.

User Action:

None.

AMDBMS11

ALERT CLOSED BY USERID *P1*

Reason:

This message is placed in the alert annotation text and identifies that the user *P1* closed the alert.

System Action:

None.

User Action:

None.

AMDBMS12

ALERT CONDITION CLEARED

Reason:

This message is placed in the alert annotation text and identifies that the alert was cleared by another alert. To find the time that the alert was cleared, look at the alert closed time.

System Action:

None.

User Action:

None.

AMDBMS13

ALERT REPLACED

Reason:

This message is placed in the alert annotation text and identifies that the alert was replaced by another alert. To find the time that the alert was replaced, look at the alert closed time.

System Action:

None.

User Action:

None.

AMDBMS14

ALERT DOES NOT EXIST

Reason:

The selected alert does not exist.

System Action:

None.

User Action:

None.

AMDBMS15

ACTION P1 NOT IMPLEMENTED BY APPL P2 CLASS P3 OR ANY PARENT CLASSES

Reason:

The action **P1** is not supported by the application Id **P2** for the alert class **P3** or any of its parent alert classes.

System Action:

None.

User Action:

Check the log for other errors as this error may be due to an OML call-back package not being able to load (compile error) or it could be due to no call-back packages specifying they support the action.

AMDBMS16

P1

Reason:

An error occurred attempting to start the Alert Monitor history NDB.
P1 is the message returned from the NDB START command.

System Action:

None.

User Action:

Refer to the AMDBMS17 message(s) in the log which describe the NDB return code set in the message from the NDB start command.

AMDBMS17

P1

Reason:

This message contains text that is an interpretation of an NDB return code. This message follows a AMDBMS16 message.
P1 contains text from the NETINFO database for the NDB return code.

System Action:

None.

User Action:

Refer to the AMDBMS16 message in the log which contains the message returned from the NDB start command.

AMDBMS18

RESPONSE FROM COMMAND TIMED OUT. CMD: P1

Reason:

A response from the command *P1* was not received within an adequate amount of time by the procedure $AMDBMS.

System Action:

Could not complete requested function.

User Action:

Determine why there is no response to the *P1* command and correct problem. Check for the message AMDBMS19 in the log which will contain the last message received. If no messages were received, this message will not be in the log.

AMDBMS19

LAST RESPONSE: P1

Reason:

This message is written to the log as a result of a command not completing within an adequate amount of time. *P1* is the text of the last message that was received before the command timed-out.

System Action:

Command times out.

User Action:

Determine why the command is timing out. Also look for the message AMDBMS19 in the log which identifies the command that was issued.

AMDBMS20

NDB OPEN FAILED. ID= P1 NDBRC= P2

Reason:

The Alert Monitor procedure $AMDBMS was unable to open the Alert History NDB. The name of the NDB being accessed was *P1* and the NDB return code was *P2* .

System Action:

Processing is terminated.

User Action:

Interpret the NDB return codes using the appendix titled NDB Response Codes in the *Network Control Language Programmer Guide.*

AMDBMS21

NDB ADD FAILED. ID= P1 NDBRC= P2 NDBERRI= P3

Reason:

The Alert Monitor procedure $AMDBMS was unable to add an Alert to the Alert History NDB. The name of the NDB being accessed was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Processing is terminated.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMDBMS22

NDB CLOSE FAILED. ID= P1 NDBRC= P2

Reason:

The Alert Monitor procedure $AMDBMS was unable to close the Alert History NDB. The name of the NDB being accessed was *P1* and the NDB return code was *P2* .

System Action:

Processing is terminated.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMDBMS23

NDB FIELD ADD FAILED. ID= P1 NDBRC= P2 FIELD= P3

Reason:

The Alert Monitor procedure $AMDBMS was unable to add a field definition to the History NDB. The name of the NDB being accessed was *P1* , the NDB return code was *P2* and the field name was *P3* .

System Action:

Processing is terminated.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMDBMS24

NDB FORMAT DEFINE FAILED. ID= P1 NDBRC= P2 FORMAT= P3

Reason:

The Alert Monitor procedure $AMDBMS was unable to define a format to the History NDB. The name of the NDB being accessed was *P1* , the NDB return code was *P2* and the format name was *P3* .

System Action:

Processing is terminated.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMDBMS25

NDB UPDATE FAILED. ID= P1 NDBRC= P2 NDBERRI= P3

Reason:

The Alert Monitor procedure $AMDBMS was unable to update an Alert in the Alert History NDB. The name of the NDB being accessed was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Processing is terminated.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMDBMS26

ALERT ALREADY CLOSED

Reason:

The alert that you selected to close has already been closed.

System Action:

None.

User Action:

None.

AMDBMS27

NDB GET FAILED. ID= P1 NDBRC= P2 NDBERRI= P3

Reason:

The Alert Monitor procedure $AMDBMS was unable to get an Alert from the Alert History NDB. The name of the NDB being accessed was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Processing is terminated.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMDBMS28

NDB DELETE FAILED. ID= P1 NDBRC= P2 NDBERRI= P3

Reason:

The Alert Monitor procedure $AMDBMS was unable to delete an Alert from the Alert History NDB. The name of the NDB being accessed was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Processing is terminated.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMDBMS29

NDB SCAN FAILED - ID: P1 NDBRC: P2 NDBERRI: P3

Reason:

An error occurred whilst scanning the Alert History NDB for records. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

None.

User Action:

Interpret the NDB return codes using the appendix titled NDB Response Codes in the NCL Programmer Guide.

AMDBMS30

P1 ALERTS DELETED FROM HISTORY FILE

Reason:

The Alert Monitor history file cleanup processing has ended and deleted *P1* alerts from the history file.

System Action:

None.

User Action:

None.

AMDBMS31

UNABLE TO GET HISTORY PARMS DEFINITION - FDBK= P1

Reason:

The Alert History parameters defintion cannot be updated because of an unknown file error. *P1* is the VSAM feedback code.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your Systems Adminstrator.

AMDBMS32

INSTALLATION ERROR - VFS FILE IS OPEN WITH READ ONLY ACCESS

Reason:

The current function cannot complete because the VFS file is opened for read only access and cannot be written to.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your Systems Adminstrator.

AMDBMS33

ERROR - VFS FILE IS INACCESSIBLE

Reason:

The current function cannot complete because the VFS file cannot be accessed.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your Systems Adminstrator.

AMDBMS34

ERROR OPENING VFS FILE - FILE RC: *P1*

Reason:

The Alert History parameters definition cannot be updated because of an unknown file error on the VFS file. *P1* is the return code of the file open command.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your Systems Administrator.

AMDBMS35

ALERT HISTORY PARMS DEFINITION SUCCESSFULLY UPDATED

Reason:

The Alert History parameters definition has been successfully updated and saved.

System Action:

None.

User Action:

None.

AMDBMS36

UNABLE TO P1 ALERT HISTORY PARMS DEFINITION - FDBK= P2

Reason:

The Alert History parms definition cannot be updated because of an unknown file error on the VFS file. *P1* is file action that failed and
P2 is the VSAM feedback code.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your Systems Administrator.

AMDBMS37

APPLID: P1 CLASSID: P2 RULEID: P3

Reason:

This message follows a AMDBMS09 message and contains information that can aid the diagnosis of the problem.

P1 is the applId attribute that was returned from the AlertRule_Get call to the application call-back package.
P2 is the classId attribute that was returned from the AlertRule_Get call to the application call-back package.
P3 is the ruleId attribute that was returned from the AlertRule_Get call to the application call-back package.
This message is issued because one or more of the above attributes was not set in the &$AMAlertRule MDO by the application call-back package.

System Action:

Automated Action for an alert not processed.

User Action:

Determine why the application package is not setting data in the object that is returned to the alert monitor.

AMDBMS38

P1 OF ALERT FAILED. APPLID: P2 CLASSID: P3 RESOURCE: P4

Reason:

This message is issued when an attempt is made to create an alert that is greater than 30K in size.

P1 can be ADD or UPDATE
P2 is the Application Id that attempted to add the alert
P3 is the Class Id of the alert (optional)
P4 is the resource name in the alert (optional)
You could get this message if you attempt to add an excessive amount of notes to an alert.

System Action:

If creating a new alert, the alert is discarded (not created). If updating an alert, the update will be rejected.

User Action:

Determine what is issuing such large alerts and change it so that the alert does not contain so much information.

AMDBMS39

ALERT HISTORY FILE UNAVAILABLE

Reason:

This message is issued if the alert history NDB is not started. This could be due to the alert history DD ALERTH was not allocated in the RUNSYSIN member for the SOLVE system.

System Action:

History information unavailable.

User Action:

Allocate the history NDB with a DDNAME of ALERTH. Once allocated issue the following command to open and start the history database:
$CAPKCAL $AMDBMS HistoryNdb_Start

AMDBMS40

ALERT HISTORY DATABASE LOCKED - POSSIBLY DUE TO DATABASE BEING FULL

Reason:

The alert history NDB is locked due to an error (such as running out of space).

System Action:

History information is not available, and alerts are not logged in history NDB.

User Action:

See the region log for any other errors that indicate why the NDB is locked. For example, in a situation where the file is full, you should see a VSAM I/O error message in the log.

To recover from a full NDB

1. Issue a **UDBCTL CLOSE=ALERTH** command.

   The history NDB closes when no users are using it.

2. Unallocate the ALERTH DD by issing the command: **UNALLOC DD=ALERTH**.

   The closed NDB is unallocated from the region.

3. Use the IDCAMS REPRO command to back up the NDB.
4. Delete and redefine the existing history NDB (increase allocation if appropriate).
5. Use REPRO to restore the history information.

   The information is restored to the redefined NDB.

6. Reallocate the history file to the region by issuing the command: **ALLOC DD=ALERTH DSN=***data_set_name* **DISP=SHR**.
7. Start the Alert Monitor history processing by issuing the command: **$CAPKCAL $AMDBMS HistoryNdb_Start**.

Note: If you do not need to keep the records in the existing history NDB, you do not need to back up the NDB. Define a new NDB, and update the ALERTHIST parameter group with the new data set name and apply the change.

AMDISP01

ACTIVITY HAS OCCURRED OFFSCREEN (P1) FOR A SEVERITY P2 ALERT

Reason:

This is an information message issued by the Alert Monitor indicating that some change has occurred to an Alert with a severity of P2 , which is not in the current window. P1 is either ABOVE or BELOW and indicates the dire*ct*ion in which the change is to be found.

System Action:

None.

User Action:

If it is desired to see the change which has occurred, scroll the list in the indicated direction.

AMDISP02

The P1 action is not applicable to the selected alert

Reason:

You have requested an action to be performed on an alert appearing on the Alert Monitor display, but this action is not applicable to or not supported for the type of alert selected.

System Action:

The requested action is not performed. Alert Monitor processing continues as normal.

User Action:

Check that the action code that you specified is correct. Check that you have selected the correct alert, as the actions supported depend upon the class of the alert and the application it came from.
Not all alerts support all actions. Enter a *?* next to an alert to display the full list of actions available.

AMDISP03

NO ACTION SELECTED

Reason:

You placed a *?* next to an alert on the alert selection list to get a list of available actions. F3=Exit was pressed instead of selecting an action.

System Action:

You are returned to the Alert selection list.

User Action:

Redisplay the actions list by entering a *?* in front of the alert and then *S* next to the desired action.

AMDISP04

P1 IS AN INVALID SORT COLUMN

Reason:

You specified *P1* as a column name to sort on on the SORT command but the column name is not recognized.

System Action:

Sort command rejected.

User Action:

Specify a valid column name.

AMDISP05

P1 IS AN INVALID SORT ORDER

Reason:

You specified *P1* as a sort order for a column on the SORT command but the sort order is invalid.

System Action:

Sort command rejected.

User Action:

Specify a valid sort order. Valid values are A, ASCENDING, D and DESCENDING. For example, to sort on the severity column in decending order then issue the command SORT SEVERITY D.

AMDISP06

P1

Reason:

An unexpected message was received by the procedure $AMDISPL.
P1 is a message that was received.

System Action:

None.

User Action:

Check the log for any related error messages. Contact your Systems Administrator.

AMDISP07

CANNOT PERFORM '*' LOCATE AS THERE ARE NO RECORDS DISPLAYED

Reason:

You have requested to locate the first alert that has a date that is equal to the date of the record cyrrently displayed on the top of the list (by specifying '*' as the date), but since the list is empty this is not possible.

System Action:

None.

User Action:

Make sure the list has something displayed before you specify '*' as a date on the locate command.

AMDISP08

INVALID DATE SPECIFIED AS PART OF LOCATE COMMAND

Reason:

A request to access a specific date failed because the format of the data does not match one of the following: DD-MON-YYYY YY.DDD DD/MM/YY or MM/DD/YY (if US language code) YY/MM/DD YYMMDD YYYYMMDD = (todays date) * (the date of the record displayed on the top of the list)

System Action:

None.

User Action:

Correct the date entered to match one of the supported formats.

AMDISP09

CALLTYPE P1 NOT RECOGNIZED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The selection list service procedure $AMDISPL did not support the calltype P1 from the selection list manager.

System Action:

Selection List Terminates.

User Action:

Contact your System Administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMDISP10

END DATE SPECIFIED ON DATE COMMAND MUST BE > START DATE

Reason:

You have specified two dates on the DATE command indicating a start date and an end date, but the end date is not greater than the start date.

System Action:

None.

User Action:

Correct the end date entered so that it is greater than the start date. The end date is the second operand specified on the date command.

AMDISP11

P1 IS AN INVALID DATE FORMAT

Reason:

A request to access a specific date failed because the format of the data does not match one of the following: DD-MON-YYYY YY.DDD DD/MM/YY or MM/DD/YY (if US language code) YY/MM/DD YYMMDD YYYYMMDD = (todays date) * (the date of the record displayed on the top of the list)

System Action:

None.

User Action:

Correct the date entered to match one of the supported formats.

AMDISP12

ALERT DISPLAY HELD. NO UPDATES OR NEW ALERTS WILL BE DISPLAYED.

Reason:

You have pressed F6=Hold to stop the alert monitor display from being updated. This means that any new alerts or updates to alerts will not be reflected on the alert monitor display until you press F6=Resume. Be aware that if you change the attributes of an alert such as the severity for example, the display will not be updated to indicate the new alert severity.

System Action:

None.

User Action:

None.

AMDISP13

ALERT DISPLAY RESUMED. UPDATES AND NEW ALERTS WILL BE DISPLAYED.

Reason:

You have pressed F6=Resume to resume the display of updates and new alerts. The alert monitor display will be refreshed with the current alert information.

System Action:

None.

User Action:

None.

AMDISP14

FILTER DOES NOT EXIST

Reason:

The Filter that you specified is not defined.

System Action:

Command ignored.

User Action:

Specify an existing Filter. (Selection list available)

AMDISP15

FILTER NAME NOT SUPPLIED.

Reason:

You entered the 'FILTER' command with no name specified and when the list of available filters was displayed you pressed F3=Exit instead of selecting one.

System Action:

The Filter Command is ignored.

User Action:

Select a Filter from the available Filters list by entering an *S* next to the desired Filter.

AMDISP16

DEFINE COMMAND INCOMPLETE

Reason:

The DEFINE command format is DEFINE 'command type' 'name' where 'command type' can be either FILTER or FORMAT and where name is optional.

System Action:

The DEFINE command is ignored.

User Action:

Complete the DEFINE command as specified.

AMDISP17

P1 command is not valid within HISTORY

Reason:

Command *P1* was issued from within the Alert Monitor History Display. This command is not valid within the history display.

System Action:

None.

User Action:

Do not use this command here.

AMDISP18

P1 SET TO (P2)

Reason:

The Specified Profile element *P1* has been set to the displayed value *P2*

System Action:

None.

User Action:

The Alert Monitor will use the new Value for its Displays.

AMDISP19

THE NAMED LINK (P1) IS UNAVAILABLE OR INVALID.

Reason:

The link specified, *P1* is not currently known. The link may not be active or the name may be invalid.

System Action:

The History command is terminated.

User Action:

Check the Link named. The 'SHOW LINKS' command will display all Links and their status or use the 'HISTORY ?' command to get a selection list of all active Links.

AMDISP20

WARNING: The following links are uncontactable - P1.

Reason:

A request to monitor Alerts for a number of links was made but the links indicated are currently not contactable.

System Action:

Warning message only.

User Action:

Check the Links.

AMDISP21

P1 not supported, issue PROFILE command.

Reason:

You have requested action *P1* to be performed, but this action is not supported. To update the filter or format defined in your user profile, issue the *PROFILE* command.

System Action:

The requested action is not performed.

User Action:

Issue the *PROFILE* command to update your user profile.

AMDISP22

Value not selected from list

Reason:

No value selected from the selection list displayed.

System Action:

None.

User Action:

None.

AMDISP23

Filter P1 SYSTEM expression not valid; expression ignored

Reason:

The current filter has a SYSTEM field expression in its definition. SYSTEM field filter expressions are not valid in Alert Monitor History. This individual expression is ignored, and the remaining filter expressions are used.

System Action:

System filter expression ignored, remaining filter expressions used.

User Action:

Use another filter if required.

AMDISP24

Link to system P1 unavailable

Reason:

You have attempted to access alert information from a remote system, but the link to the remote system is currently unavailable.

System Action:

Request rejected.

User Action:

Check that the remote system is running and that the link to the remote system is active. Use the *SHOW LINKS* command to see the status of INMC links.

AMDISP25

No filters defined within specified range.

Reason:

A request to present a list of filters failed because there were no filters defined within the range specified.

System Action:

The request is rejected.

User Action:

New filters can be created via the *DEFINE FILTER* command.

AMDISP26

No alerts found matching supplied criteria

Reason:

You issued a CLOSE command; however, no alerts were found that match the criteria.

System Action:

CLOSE command is ignored.

User Action:

None.

AMDISP27

***P1* alert(s) closed successfully**

Reason:

The Alert Monitor CLOSE command successfully closed *P1* active alerts.

System Action:

None.

User Action:

None.

AMDISP28

Confirm close of *P1* alerts

Reason:

This is a confirmation message, which lets you confirm that you want to close the *P1* alerts identified by the CLOSE command.

System Action:

None.

User Action:

Press F6 (Action) to action the CLOSE command or press F12 (Cancel) to cancel the action.

AMDISP29

***P1* action cancelled**

Reason:

The *P1* action was cancelled at your request.

System Action:

None.

User Action:

None.

AMDISP30

***P1* alert(s) closed successfully with errors on *P2* close attempts**

Reason:

The Alert Monitor CLOSE command successfully closed *P1* active alerts but failed to close *P2* alerts because of errors.

System Action:

None.

User Action:

See log for error messages on the failed attempts.

AMDISP31

Note: Lines marked + came after a backwards time change

Reason:

This message appears when one or more alerts displayed on the alert monitor have a time that occurred after a backwards local time offset change on this LPAR.

Alerts are normally sorted by time. When a backward time change occurs, such as for Daylight Saving, the most recent alerts may be interleaved with earlier alerts.

To distinguish the alerts that occurred during the second time through the same local time interval, a + is displayed after the time.

System Action:

None.

User Action:

None.

AMEMAI01

EMAIL INTERFACE RECORD DUMP FOR RECORD P1 LENGTH= P2

Reason:

This message contains a dump of the data about to be written to the mail dataset. This message is followed by multiple AMEMAI02 messages that contain the dump data.

System Action:

None.

User Action:

Send the output to your local suport representative.

AMEMAI02

P1 P2 P3 P4 P5 * P6*

Reason:

This message follows a AMEMAI01 message in the activity log. This message contains a dump of the data about to be written to the mail dataset. The fields are:

P1 - the offset into the datastream
P2-P5 - the hexadecimal display of the ASCII characters
P6 - the EBCDIC character form of the data

System Action:

None.

User Action:

Refer to the earlier AMEMAI01 message.

AMEVFWD01

Destination type omitted or invalid

Reason:

The destination type, specified by the DESTTYPE parameter, either was omitted or had an invalid value specified. The DESTTYPE parameter must be specified as one of the following values:
NMVT - Indicates that the alert is to be forwarded to the NETVALRT PPI receiver as an NMVT. This allows the alert to be processed by the SOLVE:Netmaster NEWS component, or by IBM's NetView (TME10). The format of the NMVT can be controlled by using the NMVTTYPE parameter. SNMPTRAP - Indicates that the alert is to be forwarded to an IP Host as an SNMP Trap. The host is identified by the DESTADDR, DESTPORT, and COMMNAME parameters.

System Action:

The command is rejected.

User Action:

Correct the operand and retry.

AMEVFWD02

Destination address omitted

Reason:

The destination address, specified by the DESTADDR parameter, was omitted. The DESTADDR parameter must take one of the following formats:
* an IP address in dotted notation, for example 123.123.123.123 * an IP host name which can be resolved by the Domain Name Server to an IP address.

System Action:

The command is rejected.

User Action:

Correct the operand and retry.

AMEVFWD03

Destination address *P1* invalid. SOCKETS API is not IPv6 enabled.

Reason:

The destination address *P1* is an IPv6 address; however, the SOCKETS API for the region is not enabled for IPv6.

System Action:

The command is rejected.

User Action:

Correct the operand and retry, or change the SOCKETS parameter group to use type IBMV6.

AMEVFWD04

Socket P1 error, Retcode= P2 Zfdbk= P3 Errno= P4- P5 Verrin= P6

Reason:

A socket error occurred. The socket action was *P1* , the return code was *P2* , the feedback code was *P3* , the error number was *P4* - *P5* is the name of the error, and the TCPIP vendor specific error code is *P6* .

System Action:

The action fails, but recovery is attempted.

User Action:

If the problem persists determine the cause from the error codes and correct the problem.

AMEVFWD05

Destination port invalid

Reason:

The destination port number, specified by the DESTPORT parameter, was invalid. If specified, the DESTPORT parameter must be numeric in the range 1 to 65535. If omitted, port number 162 is used.

System Action:

The command is rejected.

User Action:

Correct the operand and retry.

AMEVFWD06

Destination address P1 cannot be resolved

Reason:

The destination address, specified by the DESTADDR parameter, was entered as a host name but the name cannot be resolved to an IP address.

System Action:

The command is rejected.

User Action:

Check the following:

- the name you have specified is correct.

- the IP Interface is active

- the Domain Name Server (DNS) is active and functioning normally.

Correct and retry.

AMEVFWD07

NMVT format type invalid

Reason:

The NMVT format type, specified by the NMVTTYPE parameter, has an invalid value. The NMVTTYPE parameter must be specified as one of the following values:
GENALERT - Indicates that the alert is to be forwarded to the NETVALRT PPI receiver as an NMVT, formatted as a Generic Alert, major vector type x'0000'. This is the default value.
OPERMSG - Indicates that the alert is to be forwarded to the NETVALRT PPI receiver as an NMVT, formatted as a Send Message to Operator NMVT, major vector type x'006F', accompanied by a Text Data major vector, type x'1300'.

System Action:

The command is rejected.

User Action:

Correct the operand and retry.

AMEVFWD08

Alert Clear option is invalid

Reason:

The Alert Clear option, specified by the CLEAR parameter, has an invalid value. The CLEAR parameter must be specified as one of the following values:
YES - Indicates that Alert Clear events are to be forwarded. This is the default if the operand is omitted.
NO - Indicates that Alert Clear events are not to be forwarded.

System Action:

The command is rejected.

User Action:

Correct the operand and retry.

AMEVFWD09

NMVT receiver ID invalid

Reason:

The NMVT receiver ID, specified by the NETVALRT parameter, has an invalid value. If specified, the name must conform to PDS member name rules.

System Action:

The command is rejected.

User Action:

Correct the operand and retry.

AMEVFWD10

Alert forwarding enabled. Process ID is P1

Reason:

Alerts will be forwarded to specified destination. *P1* identifies the alert forwarding process. It is the NCL ID of the particular instance of the $AMEVFWD procedure. This message forms part of a group of messages: AMEVFWD10, AMEVFWD11, AMEVFWD12, AMEVFWD13, and AMEVFWD17.

System Action:

The group of messages is written to the activity log. Alerts that match the criteria outlined in AMEVFWD13 will be reformatted and sent to the specified destination.

User Action:

If the particular process needs to be stopped, enter the following command:

FLUSH ID=n
where n is *P1* .

AMEVFWD11

Alert forwarding as NMVTs

Reason:

Alerts will be forwarded as NMVT generic alerts to the NetView region by using the NETVALRT PPI receiver ID.
This message forms part of a group of messages: AMEVFWD10, AMEVFWD11, AMEVFWD12, AMEVFWD13, and AMEVFWD17.

System Action:

The group of messages is written to the activity log. Alerts that match the criteria outlined in AMEVFWD13 will be reformatted and sent to the specified destination.

User Action:

None.

AMEVFWD12

Alert forwarding as SNMP Traps. Destaddr= P1 Destport= P2 Commname= P3

Reason:

Alerts will be forwarded as SNMP traps to the following destination:

P1 is the address of the destination.
P2 is the port number.
P3 is the community name.
This message forms part of a group of messages: AMEVFWD10, AMEVFWD11, AMEVFWD12, AMEVFWD13, and AMEVFWD17.

System Action:

The group of messages is written to the activity log. Alerts that match the criteria outlined in AMEVFWD13 will be reformatted and sent to the specified destination.

User Action:

None.

AMEVFWD13

Alert forwarding criteria: P1

Reason:

P1 displays the criteria that determine whether an alert will be forwarded. The criteria consist of a string of parameters. For example, APPL=XYZ indicates that only alerts from the XYZ application are forwarded. If the value of a parameter is *all*, no filtering is applied to that parameter.
This message forms part of a group of messages: AMEVFWD10, AMEVFWD11, AMEVFWD12, AMEVFWD13, and AMEVFWD17.

System Action:

The group of messages is written to the activity log. Alerts that match the criteria outlined in AMEVFWD13 will be reformatted and sent to the specified destination.

User Action:

None.

AMEVFWD14

Send method invalid

Reason:

An invalid value was specified for the SEND parameter. Valid values are:
UDP - alerts will be forwarded to the specified host using the UDP protocol. This is the default.
WRITE - alerts will be written to the response queue of the parent process. If this method is used, $AMEVFWD must be invoked by using INTCMD.

System Action:

The command is rejected.

User Action:

Correct the operand and retry.

AMEVFWD15

Alerts option invalid

Reason:

An invalid value was specified for the ALERTS parameter. Valid values are:
NEW - Only new alerts are forwarded as they occur. This is the default if the operand is omitted.
ALL - All current alerts are forwarded, followed by any new alerts as they occur.

System Action:

The command is rejected.

User Action:

Correct the operand and retry.

AMEVFWD16

Inactive TCP/IP Interface option is invalid

Reason:

The Inactive TCP/IP Interface action option, specified by the IPINACT parameter, has an invalid value. The parameter must be specified as one of the following values:

WAIT - Indicates that alert forwarding is to be suspended until the TCP/IP interface becomes active. This is the default if the operand is omitted.

IGNORE - Indicates that alerts will not be forwarded while the TCP/IP interface is not active.

System Action:

The command is rejected.

User Action:

Correct the operand and retry.

AMEVFWD17

Alert forwarding to CA NSM. Destaddr= *P1*

Reason:

Alerts will be passed as messages to CA NSM. *P1* identifies the destination.

This message forms part of a group of messages: AMEVFWD10, AMEVFWD11, AMEVFWD12, AMEVFWD13, and AMEVFWD17.

System Action:

The group of messages is written to the activity log. Alerts that match the criteria outlined in AMEVFWD13 will be reformatted and sent to the specified destination.

User Action:

None.

AMEVFWD18

Alert forwarding to CA NSM failed RC= *P1*

Reason:

Alert forwarding using the CA NSM API received a non-zero return code.

Return code values are:

4 ENF not active.

8 Error in ENF processing.

16 Error in EMWTO parameter list.

System Action:

This message will be logged once on first failure. Message AMEVFWD19 will be logged if alert forwarding to CA NSM recovers.

User Action:

Check that CA NSM has been installed. If necessary, contact Technical Support.

AMEVFWD19

Alert forwarding to CA NSM resumed

Reason:

Alert forwarding using the CA NSM API received a zero return code following prior failures. The interface is now operational.

System Action:

None.

User Action:

None.

AMEVFWD20

Alert forwarding to CA Service Desk. SD URL= p1 CCI Sysid= P2 Format= p3

Reason:

A CA Service Desk Request will be created for every alert passing the associated filter criteria.

P1 is the URL of the Web Services definitions on the CA Service

Desk server.

P2 is the CCI SYSID of the CCI system that will locate and pass requests to the CAISDI/soap SOAP Client started task.

P3 is the request format: HTML (default) or TEXT

The Login, CreateRequest and Logout, Web Services are invoked. A Service Desk Request Number is returned and placed in the alert.

System Action:

Alerts that match the criteria outlined in AMEVFWD13 are reformatted and sent to the specified CA Service Desk server.

User Action:

Requests, after they are opened, are accessible to CA Service Desk users.

Authorized users can log in to the CA Service Desk application and administer the requests.

By default, these requests appear as 'assigned' requests, with an assignee and end user of System_NetMaster_User. (Your Service Desk Administrator may change these values.)

AMEVFWD21

PPI Alert failed. Fdbk= P1 Reason= P2

Reason:

Alert Forwarding as NMVTs has been requested (EXEC $AMEVFWD DESTTYPE=NMVT) but an attempt to send an alert failed with the indicated feedback code (*P1*). This is translated as a failure reason (*P2*).

System Action:

The alert is not forwarded but processing continues.

User Action:

Check the feedback/reason.
If the reason is shown as 'Internal Error', you should contact your product supplier, providing the exact text of the message.
Other reasons indicate a usage error as follows:
* *NETVALRT Receiver not defined* (FDBK=26) There is no (SOLVE, NetView, or other) NETVALRT PPI Receive process active in this LPAR.
For NetMaster you should ensure that procedure $NWPPIAR is running in a background region for the NetMaster system in this LPAR.
For TME 10 NetView you should ensure that the CNMCALRT task is defined and active.
* *NETVALRT Receiver queue full* (FDBK=35) The NETVALRT PPI Receive process is defined to the system, that is, was active since the last IPL. However, the current state of the process is one of the following:

- Inactive, and its receive queue limit has been reached. (See the explanation for NETVALRT Receiver not defined, above.)

- Active, but is not emptying the queue at a fast enough rate.

To display the receiver queues:

- For NetMaster, send the SHOW PPIUSERS command to the SOLVE SSI started task which owns the PPI. For example, from OCS: SYSCMD F SOLVESSI,SHOW PPIUSERS

- For TME 10 NetView, issue the DISPPI command. For example, from OCS: SYSCMD F TMESSI,DSIPPI BUFQ ALL from a NetView terminal: DSIPPI BUFQ ALL
* *PPI is not active* (FDBK=24) PPI has not been started. Ensure that the PPI started task is running.
* *Storage shortage* (FDBK=32) There is a storage shortage either in this domain or in the PPI domain. Other messages in the relevant domain will indicate which domain has the storage shortage.

AMEVFWD22

PPI Send failed. Fdbk= P1 Reason= P2 ID= P3

Reason:

Alert Forwarding as NMVTs has been requested (EXEC $AMEVFWD DESTTYPE=NMVT) but an attempt to send an alert failed with the indicated feedback code (*P1*). This is translated as a failure reason (*P2*). The PPI Receiver ID (*P3*) is also shown.

System Action:

The alert is not forwarded but processing continues.

User Action:

Check the feedback/reason.
If the reason is shown as 'Internal Error', you should contact your product supplier, providing the exact text of the message.
Other reasons indicate a usage error as follows:
* *NETVALRT Receiver not defined* (FDBK=26) There is no (SOLVE, NetView, or other) NETVALRT PPI Receive process active in this LPAR.
For NetMaster for SNA you should ensure that procedure $NWPPIAR is running in a background region for the NetMaster for SNA system in this LPAR.
For TME 10 NetView you should ensure that the CNMCALRT task is defined and active.
* *NETVALRT Receiver queue full* (FDBK=35) The NETVALRT PPI Receive process is defined to the system, that is, was active since the last IPL. However, the current state of the process is one of the following:

- Inactive, and its receive queue limit has been reached. (See the explanation for NETVALRT Receiver not defined, above.)

- Active, but is not emptying the queue at a fast enough rate.

To display the receiver queues:

- For NetMaster for SNA, send the SHOW PPIUSERS command to the SOLVE SSI started task which owns the PPI. For example, from OCS: SYSCMD F SOLVESSI,SHOW PPIUSERS

- For TME 10 NetView, issue the DISPPI command. For example, from OCS: SYSCMD F TMESSI,DSIPPI BUFQ ALL from a NetView terminal: DSIPPI BUFQ ALL
* *PPI is not active* (FDBK=24) PPI has not been started. Ensure that the PPI started task is running.
* *Storage shortage* (FDBK=32) There is a storage shortage either in this domain or in the PPI domain. Other messages in the relevant domain will indicate which domain has the storage shortage.

AMEVFWD23

Alert forwarding failed to destination *P1*, CA Service Desk, server= *P2*

Reason:

An attempt was made to create a CA Service Desk Request from a CA NetMaster alert, but the attempt failed due to an error condition in the CA NetMaster to CA Service Desk interface.

This interface involves multiple components, including the CA Common Services for z/OS 'CAICCI' and 'CAISDI/soap' SOAP Client components. These combine to communicate from the z/OS systems using HTTPs to the CA Service Desk server.

Specific error details are written to the activity log.

Some likely causes of these failures include the following:

- CA Common Services for z/OS CAISDI/soap (SOAP client) started task is not active
- CA Service Desk server is not active
- Web server for CA Service Desk server is not active
- Network problems prevent IP access to CA Service Desk server
- Incorrect or incomplete implementation of the CA Common Services for z/OS component CAISDI/soap
- Incorrect or incomplete implementation of CA Service Desk
- Incorrect login user ID or password for CA Service Desk
- Incorrect setup of the SERVICEDESK destination:
  - The URL of the CA Service Desk server is incorrect
  - The CCI SYSID is incorrect

System Action:

This message is logged once at the first failure. Message AMEVFWD24 is logged if alert forwarding to CA Service Desk recovers.

User Action:

Examine the activity log for further error details in message BASOAP03.

Examine the output of the CA Common Services for z/OS CAISDI/soap SOAP Client started task.

To diagnose these conditions, you may need help from your Systems Programmer (who implemented CAISDI/soap) and your CA Service Desk Administrator.

For more information, see the Service Desk Integration Guide, and the CA Common Services for z/OS Message Guide.

AMEVFWD24

Alert forwarding to CA Service Desk resumed

Reason:

Alert forwarding to CA Service Desk received a zero return code following prior failures. The interface is now operational.

System Action:

None.

User Action:

Use the CA Service Desk client interface to administer the Service Desk requests.

AMEVFWD25

CA Service Desk Request *P1* created by alert forwarding to *P2*

Reason:

The identified CA Service Desk request has been created by forwarding an alert to a destination type of SERVICEDESK.

P2 is the CA Service Desk server on which this request was created.

***S*ystem Action:**

None.

User Action:

This request is now accessible to CA Service Desk users.

Authorized users can log in to the CA Service Desk application on the indicated server and administer this request.

By default, this request appears as an assigned request, with an assignee and user of System_NetMaster_User. (Your Service Desk Administrator may change this default.)

AMEVFWD26

Duplicate alert forwarding request ignored, desttype= P1, destination details: P2

Reason:

An alert forwarding process is already active for the destination. The forwarding type is P1 and the destination details are described by P2 .

System Action:

This alert forwarding process terminates.

User Action:

Check the $NM ALERTS parameter group to ensure that duplicate details are not present.

AMEVFWD27

Invalid parameter to alert forwarding. PARAMETER=*p1* VALUE="*p2*"

Reason:

An alert forwarding process was started with an invalid parameter value.

p1 identifies the parameter.

p2 is the value of the parameter.

System Action:

This alert forwarding process terminates.

User Action:

For assistance, contact CA Support at http://ca.com/support.

AMEVFWD31

Alert forwarding for Process ID P1 suspended - TCP/IP interface is not active

Reason:

This message is issued when an alert has arrived which needs to be forwarded as an SNMP Trap using UDP, but the TCP/IP interface is not active.
The Process ID (P1) is the NCLID of the particular instance of procedure $AMEVFWD that has been sus*pe*nded. This relates to the group of messages, headed by AMEVFWD10, that were written to the log when the process was started.

System Action:

The process is suspended until the TCP/IP interface becomes active. When the process is resumed, message AMEVFWD32 is issued.

User Action:

If the particular process needs to be stopped, use the following SOLVE command:
FLUSH ID=nnnnnn
where *nnnnnn* is the process ID (*P1*) in this message.

AMEVFWD32

Alert forwarding for Process ID P1 resumed

Reason:

This message is issued when alert forwarding has been resumed after it was previously suspended.
The Process ID (*P1*) is the NCLID of the particular instance of procedure $AMEVFWD that had been suspended. This relates to message AMEVFWD31 that was written when the process was suspended.

System Action:

Alert forwarding for this process continues.

User Action:

None.

AMHISL01

Warning: History data lost - NMIQLIM limit exceeded

Reason:

The number of alert history records waiting to be processed by the alert history listener exceeded the NMIQLIM setting. All records exceeding the limit are discarded.

System Action:

The listener continues processing. Lost data cannot be accumulated and subsequent details may be inaccurate.

User Action:

Investigate why the message build up occurred.
If you are collecting history data in a very large network, you may have reached maximum NMIQLIM value. Consider redesigning your application or contact Technical Support.

AMHISL02

The Alert History Logging Listener is now active

Reason:

The alert history listener has started to receive and log history data.

System Action:

Alert history logging commences.

User Action:

None.

AMHIST01

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The call to the procedure failed because the Keyword identified by *P1* had an invalid value, identified by *P2* .

System Action:

The request is rejected.

User Action:

Contact your Systems Administrator.

AMHIST02

REQUIRED FIELD OMITTED

Reason:

The indicated field must be completed.

System Action:

The required field is highlighted.

User Action:

Specify a value in the indicated field.

AMINWI32

Alert forwarding request: P1

Reason:

P1 displays the criteria that determine whether an alert is forwarded. The criteria consist of a string of parameters. For example, APPL=XYZ indicates that alerts from the XYZ application only are forwarded. If the value of a parameter is *all*, no filtering is applied to that parameter.
See the alert forwarding messages that follow: AMEVFWD10, AMEVFWD11,

System Action:

The group of messages is written to the activity log. Alerts that match the displayed criteria are reformatted and sent to the specified

User Action:

AMINWI33

Destination address P1 cannot be resolved

Reason:

The destination address, specified in the Dest Address field, was entered as a host name, but the name cannot be resolved to an IP

System Action:

User Action:

Check the following:

- The name you have specified is correct

- The IP interface is active

- The Domain Name Server (DNS) is active and functioning normally

AMINWI34

Destination address cannot be IPv6, SOCKETS API is not IPv6 enabled

Reason:

The destination address specified in the Dest Address field is entered as an IPv6 address; however, the sockets API set by the SOCKETS parameter group is not enabled for IPv6 support.

System Action:

The field is set in error.

User Action:

Choose an IPv4 address or change the SOCKETS parameter group to use type IBMV6.

AMINWI40

No filters defined

Reason:

A request to present a list of filters failed because there are no filters defined.

System Action:

The request is rejected.

User Action:

New filters can be created using the Alert Monitor Filter Definition List (/ALFILT).

AMINWI41

Filter (P1) does not exist

Reason:

System Action:

User Action:

Specify an existing filter from the Filter List. To display the list,

AMINWI42

No filters found beginning with ' P1'

Reason:

A request was made to list filters beginning with the characters *P1* but

System Action:

User Action:

AMINWI43

No filter selected

Reason:

System Action:

User Action:

AMINWI44

Duplicate destination details

Reason:

The destination details are the same in this entry as an earlier alert

System Action:

User Action:

Change the destination details (address, port, PPI receiver) to avoid

AMINWI45

Invalid field separator character

Reason:

You specified an invalid field separator character. The 1-byte separator should be a non-blank and can be one of the following characters:

› * + | \ ^ ; < > ? / ,

The literal delimiter character TAB is allowed and internally represented as EBCDIC X'05'.

System Action:

The field in error is highlighted.

User Action:

Specify a valid character separator.

AMINWI46

IPv6 socket support not enabled

Reason:

An IPv6 address has been entered in the URL field, but the sockets API supports IPv4 addresses only.

System Action:

The field is highlighted in error.

User Action:

Specify a host name or IPv4 address in the URL field. Alternatively, check the SOCKETS parameter group (/PARMS). For IPv6 support, the TCP/IP Software Type must specify IBMV6.

AMLO8201

Extract of alert records in progress

Reason:

The extraction of alert records is in progress.

System Action:

None.

User Action:

None.

AMLO8202

Extract of alert records ended: *P1* OF *P2* records written

Reason:

The extraction of alert records ended. The number of records written (*P2*) of the total extracted *(P3*) is indicated.

System Action:

None.

User Action:

If the number of updated records is less than the total, review the activity log to determine the error reason.

AMLO8203

Extract DSN processing error: action= *P1* return-code= *P2 P3*

Reason:

An error occurred when a *P1* command is being performed on the extract data set. *P2* is the return code and, optionally, *P3* describes the error condition.

System Action:

Processing terminates.

User Action:

Review the activity log to determine the cause of the error.

Note: For information about abend error conditions, see the z/OS MVS System Codes manual.

AMMI0101

Alert Filter Definition File unavailable; DD= P1 RC= P2

Reason:

This message is issued if the alert monitor filter definition database is not available. The DD name (*P1*) and file open return code (*P2*) are shown. For return code 16, an additional message is written to the activity log before this message.

System Action:

The filter definition information is unavailable.

User Action:

Check that the filter definition database is allocated and opened.

AMMI0102

Alert Filter Definition File Get Error. DD= P1 RC= P2 FDBK= P3

Reason:

This message is issued if an attempt to read a record from the alert monitor filter definition database fails. The DD name (*P1*), file get return code (*P2*) and file error code (*P3*) are shown. For return code 16, an additional message is written to the activity log before this message.

System Action:

The filter definition is unavailable.

User Action:

Use the return code and feedback (error code) to determine the cause of the error.

AMMI0103

Alert Filter Definition P1 does not exist

Reason:

The specified alert monitor filter definition (*P1*) does not exist.

System Action:

None

User Action:

None

AMMI0104

Alert Filter Definition File Delete Error. DD= P1 RC= P2 FDBK= P3

Reason:

This message is issued if an attempt to deleta a record from the alert monitor filter definition database fails. The DD name (*P1*), file delete return code (*P2*) and file error code (*P3*) are shown. For return code 16, an additional message is written to the activity log before this message.

System Action:

The filter definition is not written.

User Action:

Use the return code and feedback (error code) to determine the cause of the error.

AMMI0105

Value must be Y(ES) or N(O)

Reason:

The only possible values are YES and NO.

System Action:

Request rejected.

User Action:

Input either YES or NO.

AMMX0101

Extract DSN not valid with selected option

Reason:

The Extract DSN is not valid with the selected option.

System Action:

The field in error is highlighted.

User Action:

Clear the Extract DSN field and retry the selected option.

AMMX0102

Filter (*P1)* does not exist

Reason:

The specified filter *P1* is not defined.

System Action:

The field in error is highlighted.

User Action:

Enter **?** to display a list of filters.

AMMX0103

No filters found beginning with ' *P1'*

Reason:

You requested a list of filters beginning with the characters *P1* but none were found.

System Action:

The field in error is highlighted.

User Action:

Enter **?** to display a list of filters.

AMMX0104

No filter selected

Reason:

No selection was made from the filter selection list.

System Action:

None.

User Action:

None.

AMMX0105

Invalid data set attributes for Extract DSN

Reason:

The data set name specified in the Extract DSN field does not have the required data set attributes.

System Action:

The field in error is highlighted.

User Action:

Ensure that the data set specified is allocated as a sequential data set with a variable length record format and a record length of at least 300 bytes.

AMMX0106

No filters defined

Reason:

A request to present a list of filters failed because there are no filters defined.

System Action:

The request is rejected.

User Action:

New filters can be created using the Alert Monitor Filter Definition List (/ALFILT).

AMNOTE01

ADD OF ALERT NOTES CANCELLED

Reason:

You pressed the F12=Cancel function key whilst in the Add Notes panel.

System Action:

None.

User Action:

None.

AMPAGT01

P1 P2 P3

Reason:

This is a message that is sent to another process by an alert monitor agent object. An MDO is usually carried with the message.

P1 is the message type and can be one of: *REQUEST CHAINEDREPLY FINALREPLY EVENT ERROR*

P2 is the object class and can be one of: *ALERT AGENT*

P3 is the operation and can be one of: *GETALERTS*

System Action:

None.

User Action:

None.

AMPAGT02

P1

Reason:

An error occurred whilst starting the peer system manager ($AMPSMGZ).
P1 is a description of the error. The peer system manager is required for obtaining alerts from remote SOLVE systems.

System Action:

None.

User Action:

Check the log for any related error messages. Contact your systems administrator.

AMPAGT03

FATAL VARTABLE ERROR - ID: P1 FUNC: P2 FDBK: P3 KEY: P4

Reason:

An error occurred while manipulating an NCL VARTABLE in the procedure $AMPAGTZ. *P1* is the vartable Identifier, *P2* is the function being performed, *P3* is the feedback code set by the vartable verb and *P4* is the key specified on the verb.

System Action:

None.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

AMPAGT04

NO ALERTS FOUND MATCHING SUPPLIED CRITERIA

Reason:

There were no alerts in the history file that matched the criteria that was supplied for building the selection list.

System Action:

List terminates.

User Action:

If you were asked to specify some form of criteria, check that it is correct and retry.

AMPAGT05

NDB SCAN FAILED - ID: P1 NDBRC: P2 NDBERRI: P3

Reason:

An error occurred whilst scanning the NDB for records to build the list with. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Selection List Terminates.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMPAGT06

NDB GET FAILED - ID: P1 NDBRC: P2 NDBERRI: P3

Reason:

An error occurred getting a record from the NDB whilst building the list. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Selection List Terminates.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMPAGT07

NDB OPEN FAILED - ID: P1 NDBRC: P2 NDBERRI: P3

Reason:

The NDB which the list was accessing could not be opened. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Request rejected.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMPAGT08

NDB FMT DEFINE FAILED. NDBRC: P1 NDBERRI: P2

Reason:

An error has occurred whilst defining an NDB format for the list. The NDB return code was *P1* and the NDB error information was *P2* .

System Action:

The selection list terminates.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMPAGT09

NDB CLOSE FAILED - ID: P1 NDBRC: P2 NDBERRI: P3

Reason:

The NDB which the list was accessing could not be closed. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Request rejected.

User Action:

Interpret the NDB return codes using the NCL Programmer Guide.

AMPAGT10

P1

Reason:

An unexpected message was received by the procedure $AMPAGTZ.
P1 is a message that was received.

System Action:

None.

User Action:

Check the log for any related error messages. Contact your systems administrator.

AMPAGT11

ERROR - ATTR P1 CANNOT BE SET

Reason:

A set request was queued to the alert monitor agent containing the *P1* attribute which is not settable.

System Action:

Message written to Log. Processing continues.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMPAGT12

Alert History file unavailable

Reason:

This message is issued if the alert history NDB is not started. This could be due to the alert history file ID not being set in ICS.

System Action:

History information unavailable.

User Action:

Set up Alert History File Specification in ICS parameter group ALERTHIST.

AMPAGT13

ALERT HISTORY DATABASE LOCKED - POSSIBLY DUE TO DATABASE BEING FULL

Reason:

This message is issued if the alert history NDB is locked due to an error (such as running out of space).

System Action:

History information unavailable and alerts will not be logged in history file.

User Action:

Refer to the log for any other errors that indicate why the database is locked. For example, in a situation where the file is full you should see a VSAM I/O error message in the log.
If the file is full, do the following:

1. Issue a *UDBCTL CLOSE=ALERTH* command.

2. Unallocate the ALERTH DD by issuing the following command: *UNALLOC DD=ALERTH*

3. Repro the NDB out.

4. Delete and redefine the existing history NDB (increase allocation if appropriate).

5. Repro the history information back in.

6. Reallocate the history file to solve by issuing the following command: *ALLOC DD=ALERTH DSN=????? DISP=SHR*

7. Issue the following commands to reset the locked status of the history NDB: *UDBCTL OPEN=ALERTH ID=$ALERTH LSR EXIT=NO NDB START $ALERTH UNLOCK NDB STOP $ALERTH*

8. Issue the following command to start the alert monitor history processing: *$CAPKCAL $AMDBMS HistoryNdb_Start*

AMPAGT14

FILTER DOES NOT EXIST

Reason:

The Filter that you specified is not defined.

System Action:

Command ignored.

User Action:

Specify an existing Filter. (Selection list available)

AMPAGT15

P1 P2 P3

Reason:

This message is sent to another process by a timer started by an Alert Monitor request agent object. An MDO is not included with the message.

P1 is the message type and can be one of: *REQUEST*

P2 is the object class and can be one of: *TIMER*

P3 is the operation and can be one of: *UPDATECLOCK*

System Action:

None.

User Action:

None.

AMPAGT16

No alerts found matching supplied criteria

Reason:

There were no active alerts that matched the criteria that was supplied.

System Action:

None.

User Action:

None. Alerts matching the resource criteria will appear automatically.

AMPARM02

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The procedure $AMPARMP failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure $AMPARMP terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMPARM03

INVALID COMMAND

Reason:

The command that was specified on the command line is not valid.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

AMPARM04

Action *P1* added to list

Reason:

The automated action *P1* was added to the list of actions.

System Action:

None.

User Action:

None.

AMPARM05

Action *P1* updated

Reason:

The automated action *P1* was updated.

System Action:

None

User Action:

None

AMPARM06

P1 OF ACTION P2 CANCELLED

Reason:

The operation *P1* (which can be add, update or copy) on the automated action *P2* was cancelled.

System Action:

None.

User Action:

None.

AMPD01P01

Invalid value for Service Desk Trouble Ticket *P1*

Reason:

One of the fields required for the CA Service Desk Trouble Ticket interface has an incorrect value.

The fields, their usage, and their valid values are described below.

CA Service Desk Server Web Services HTTP URL

This is the HTTP URL of the Web Services definitions on the CA Service Desk server. This server is where requests are created from alerts when you use the TT command.

In some cases, you can leave this value blank to let the CAISDI/soap component determine the default server.

This value must satisfy the following:

- Conform to valid HTTP URL syntax
- Include the correct Web Services subdirectory

This URL points to the Web Services definitions that CAISDI/soap invokes to create the requests. It is not the same as the URL that is used to log in to the CA Service Desk client application.

Example: http://hostname:8080/axis/services/USD_R11_WebService

CCI Sysid

This is the CCI system ID of the system (MVS LPAR) where the target CAISDI/soap task is active. This value is the SYSID name specified in the CAICCI startup JCL.

Typically, you should leave this value blank to use the CAICCI facilities on this system.

Request Description Format

This controls whether the Request Description field is produced in HTML (HTML) or in plain text (TEXT).

HTML formatting provides CA Service Desk operators with features such as hyperlinks back to this region's WebCenter interface.

Typically, you should set this value to HTML. If there are third party procedures that extract request descriptions and cannot render HTML, then set this value to TEXT.

Note: In many cases, the following values are sufficient:

- HTTP URL and CCI SYSID are both blank.
- Request Description Format is HTML.

If this does not work, review these values with your Systems Programmer who implemented the CAISDI/soap component and your CA Service Desk Administrator.

You may also need to refer to the Service Desk Integration Getting Started guide.

System Action:

None.

User Action:

Correct the field in error, and retry the operation.

AMPSLK01

APPC P1 FAILED. RC: P2 FDBK: P3 DOMAIN: P4 MSG: P5

Reason:

An APPC error occurred whilst communicating with the remote domain *P4* . The APPC verb that encountered the error was *P1* , the return code set by the verb was *P2* and the feedback code set by the verb was *P3* . If a sysmsg was set it will be displayed as *P5* .

System Action:

None.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

AMPSLK02

UNEXPECTED DATA RECEIVED. VERB: P1 WRI: P2 STATE: P3 DOMAIN: P4

Reason:

The alert monitor peer link process ($AMPSLKZ) received some unexpected data whilst communicating with the remote domain P4 . The APPC verb that encountered the error was P1 , the what received indicator *ha*d a value of *P2* , the conversation state was *P3* .

System Action:

None.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

AMPSLK03

UNEXPECTED MESSAGE ENCOUNTERED: P1

Reason:

The Alert Monitor's peer link process $AMPSLKZ encountered a message that it did not expect. The message is *P1* .

System Action:

Processing continues.

User Action:

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMPSLK04

INFORMATION MAY BE UNRELIABLE AS LINK TO P1 IS UNAVAILABLE

Reason:

The link to the system P1 which is where this alert originated from is currently unavailable. Because the link is una*va*ilable you will not be getting updates to this alert from the remote system.

System Action:

None.

User Action:

Check why the link to the remote system is unavailable.

AMPSMG01

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The procedure $AMPSMGZ failed because it received an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

Procedure $AMPSMGZ terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMPSMG02

P1

Reason:

The Alert Monitor's peer link manager procedure $AMPSMGZ encountered an error and terminated. The error message is *P1* .

System Action:

Peer System Manager will be restarted when a user goes into the SOLVE : Alert Monitor display.

User Action:

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMPSMG03

P1

Reason:

This is an internal message that is qyeued to a peer link process indicating an Alert Monitor Agent has ended. *P1* is the NCLID of the agent that ended.

System Action:

None.

User Action:

None.

AMPSMG04

UNEXPECTED MESSAGE ENCOUNTERED: P1

Reason:

The Alert Monitor's peer link manager procedure $AMPSMGZ encountered a message that it did not expect. The message is *P1* .

System Action:

Processing continues.

User Action:

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMPSMG05

STOP

Reason:

This is an internal message that is qyeued to a peer link process telling it to shut down the link to the remote system and end.

System Action:

None.

User Action:

None.

AMPSMG06

ERROR STARTING PEER LINK PROCESS. MSG: P1

Reason:

The Alert Monitor's peer link manager procedure $AMPSMGZ attempted to start a peer link process ($AMPSLKZ) to communicate with a remote SOLVE system, but encountered an error starting the process. The error message returned was *P1* .

System Action:

Processing continues.

User Action:

Contact your local Systems Administrator. Ensure that the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

AMST0100

Alert Monitor Self Test for *P1* run on *P2*

Reason:

The diagnostic test for the alert monitor is starting.

System Action:

None.

User Action:

None.

AMST0101

No active alerts have been found for the Alert Monitor

Reason:

This is a warning to inform you that the alert monitor currently has has no active alerts.

System Action:

None.

User Action:

None.

AMST0102

The Alert Monitor is currently active on this region.

Reason:

This is an informational message, which informs you that the alert monitor is currently active on this region.

System Action:

None.

User Action:

None.

AMST0103

The Alert Monitor has P1 active P2 from region P3

Reason:

This is an informational message, which displays the number of active alerts for each linked region running the alert monitor.

System Action:

None.

User Action:

None.

AMST0104

The Alert Monitor is running on the linked region P1

Reason:

This is an informational message, which displays the name of a linked region running the alert monitor.

System Action:

None.

User Action:

None.

AMST0105

An alert has been successfully created

Reason:

This informational message is displayed by the alert monitor selftest when an alert is created without errors.

System Action:

None.

User Action:

None.

AMST0106

An alert has been successfully closed

Reason:

This informational message is displayed by the alert monitor selftest when an alert is closed successfully.

System Action:

None.

User Action:

None.

AMST0107

Parm P1 Invalid issue ALTEST HELP for list of valid parms.

Reason:

This message is issued in response to an ALTEST command, which specifies an invalid parmameter.

System Action:

None.

User Action:

Reissue the ALTEST command with a valid parmameter.
The syntax of the ALTEST command is:
ALTEST <info=Y|N> <output=TERM|LOG>
All parameters are optional.
If <info=Y|N> is not specified, it defaults to INFO=Y INFO=N suppresses all information-only messages. If <output=TERM|LOG> is not specified, it defaults to OUTPUT=TERM OUTPUT=LOG writes all messages to the activity log.
Examples: ALTEST ALTEST INFO=N ALTEST INFO=N OUTPUT=LOG

AMST0108

The link is inactive to region P1

Reason:

This warning indicates that the link to region *P1* is no longer active.

System Action:

None.

User Action:

Investigate why the region is no longer available.

AMST0109

The Peer System Manager $AMPSMGZ has been initiated by P1

Reason:

This is an informational message, which indicates that the Peer System Manager procedure was initiated by the user ID specified in *P1.*

System Action:

None.

User Action:

None.

AMST0110

The Peer System Manager $AMPSMGZ was not active

Reason:

This is a warning message, which indicates that there is a problem with the handling of linked systems running the alert monitor.

System Action:

None.

User Action:

Stop and restart the alert monitor. To do this, exit the M.A option and then select M.A again.

AMST0111

Peer Link Process $AMPSLKZ or $AMAGTTZ was initiated by P1 NCLID P2

Reason:

This is an informational message, which indicates that the Peer Link Process procedure $AMPSLKZ, or the Agent APPC Transaction procedure $AMAGTTZ, were initiated by the user ID specified in P1 with NCLID P2. These processes ensure that the APPC communication is handled *co*rrectly.

System Action:

None.

User Action:

None.

AMST0112

Peer Link Processes $AMPSLKZ or $AMAGTTZ are not active

Reason:

This is a warning, which indicates that the Peer Link Processes are not active. The alert monitor is not connected to any remote regions.

System Action:

None.

User Action:

Investigate why the regions are not available.

AMST0113

The Alert Monitor Agent $AMPAGTZ has been initiated by P1 NCLID P2

Reason:

This is an informational message, which indicates that the Alert Monitor Agent procedure $AMPAGTZ was initiated by the user ID specified in P1 and is running under the NCLID specified in P2.

System Action:

None.

User Action:

None.

AMST0114

The Alert Monitor Agent $AMPAGTZ was not active

Reason:

This is a warning, which indicates that the Alert Monitor Agent procedure $AMPAGTZ is not active. If this procedure is not running, new alerts are not added to the alert monitor.

System Action:

None.

User Action:

Restart the alert monitor on this region. To do this, exit the M.A. option and then reselect it.

AMST0115

An error was found P1 P2

Reason:

The action described in *P1* found an error. This is described in *P2.*

System Action:

None.

User Action:

Investigate the error and take the appropriate action.

AMST0116

Application P1 P2 is registered

Reason:

The application ID described in *P1* and *P2* is registered with the Alert Monitor. Alerts are only displayed by the Alert Monitor if their application has been registered previously. If there is a discrepancy between the Alert Monitor count in the self test and the alerts displayed on your screen, it may be because the alert's application has not been registered.

System Action:

None.

User Action:

If the application is not user-defined, report the error to your Technical Support representative.

AMST0117

The External Alert Receiver $AMALRCV has been initiated by P1 NCLID P2

Reason:

This is an informational message that indicates that the External Alert Receiver procedure, $AMALRCV, was initiated by the user ID specified in P1 and is running under the NCLID specified in P2.

System Action:

None.

User Action:

None.

AMST0118

The External Alert Receiver $AMALRCV was not active

Reason:

This is a warning that indicates that the External Alert Receiver procedure, $AMALRCV, is not active. If this procedure is not running, external applications are unable to raise/modify alerts.

System Action:

None.

User Action:

If alerts from external applications are required, update the ALERTS parameter group (/PARMS) and set the field "Enable External Alerts?" to YES.

AMST0120

P1

Reason:

This message displays the destinations of the Alert Monitor Trouble Ticket Interface, and the Alert Forwarding Interfaces.
The Trouble Ticket Interface is specified by menu shortcut */ALTTI* .
The Alert Forwarding Destinations are specified by Customer Parameter Group $NM ALERTS 'Alert Monitor Interface'.

System Action:

None

User Action:

None

AMST0121

CA Service Desk Server was successfully contacted

Reason:

The CA Desk server was contacted by this region, and a successful test login was performed.

This indicates that it should be ready to create CA Service Desk Requests when required by Alert Monitor Trouble Ticket and/or Alert Forwarding processing.

System Action:

None.

User Action:

None.

AMST0122

Contact with the CA Service Desk server failed *P1 P2*

Reason:

An attempt was made to contact the CA Service Desk server, but this failed. Additional error details are written to the activity log.

System Action:

None.

Until this failure condition is rectified, no alerts can be sent as Trouble Tickets or through Alert Forwarding to CA Service Desk.

User Action:

Ensure that the CA Service Desk server is operational and is in a state where Service Desk Requests can be created.

Verify that the CA Common Services CAISDI/soap component has been completely and correctly installed and set up. The CAISDI/soap MVS started task must be running and be configured with the correct Service Desk server details.

For more information, see the CA Common Services publication: Service Desk Integration Guide.

AMST0133

Alert Monitor Exit *P1* in use

Reason:

The Alert Monitor exit specified in *P1* is in use.

System Action:

None.

User Action:

None.

AMST0180

P1

Reason:

This message displays the following help information, issued in response to an ALTTEST ? or ALTTEST HELP command.
ALTTEST can be run from OCS by using the following command:
ALTTEST <INFO=Y|N> <OUTPUT=TERM|LOG|ALL>
All parameters are optional.
Other optional parmameters: INFO=Y|N (default Y) OUTPUT=TERM|LOG|ALL (default TERM)
INFO=N suppresses information-only messages OUTPUT=LOG writes the output to the activity log only OUTPUT=ALL writes the output to the log and terminal

System Action:

None

User Action:

Enter the ALTTEST OCS command with the desired parameters.

AMST0199

Alert Monitor Self Test completed with P1

Reason:

Alert Monitor Self Test is complete. The total number of warnings and errors are indicated. In general, severities are allocated as follows:
Errors Affect all or a large number of alert monitor functions. Errors should never be disregarded.
Warnings Affect at least one function, but other functions may be unaffected. If you do not require the function, warnings can be disregarded.
Notes Informational only. May not affect any processing.

System Action:

None.

User Action:

None.

AMTTDED01

UNABLE TO UPDATE TROUBLE TICKET DEFINITION - FILE STATUS P1

Reason:

The Trouble Ticket data entry definition cannot be updated because of security restrictions on the VFS file. You need read-write access; the access allowed is P1 .

System Action:

The action is rejected.

User Action:

Contact your systems administrator.

AMTTDED02

A NEW FIELD MUST BEGIN WITH 'FIELD', EG FIELD NAME=PRIORITY

Reason:

The Trouble Ticket data entry definition lines consist of the word 'FIELD' followed by keyword=value pairs to set various characteristics of the field. Field definitions can span multiple lines, but new field defintions must begin with the word 'field'.

System Action:

None

User Action:

Insert the word 'field' before the field definition.

AMTTDED03

DATA ENTRY DEFINITION IS ALREADY BEING UPDATED BY P1

Reason:

The Trouble Ticket data entry definition is already being updated by the user *P1* and can be updated by only one user at a time.

System Action:

The action is rejected.

User Action:

Retry the operation later.

AMTTDED04

PUT STRING IN QUOTES

Reason:

The Trouble Ticket data entry definition is invalid - this could be caused by a string which needs to be quoted.

System Action:

None

User Action:

Correct the definition and retry.

AMTTDED05

KEYWORD PARAMETER P1 MUST BE ENTERED

Reason:

The Trouble Ticket data entry definition is invalid - A FIELD statement is missing a value for the keyword specified as *P1*

System Action:

None

User Action:

Correct the definition and retry.

AMTTDED07

UNABLE TO P1 TROUBLE TICKET DATA ENTRY DEFINITION - FILE ERROR= P2

Reason:

The Trouble Ticket data definition cannot be updated because of an unexpected file error. P1 is the file action that failed and P2 is the VSAM feedback code.

***S*ystem Action:**

The action is rejected.

User Action:

Contact your systems administrator.

AMTTDED08

TROUBLE TICKET DATA ENTRY DEFINITION SAVED

Reason:

The Trouble Ticket data entry definition has been stored.

System Action:

None.

User Action:

None.

AMTTDEF01

REQUIRED INTERFACE TYPE OMITTED

Reason:

No value was found for the required keyword IFACE.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your system administrator.

AMTTDEF02

INTERFACE TYPE P1 IS UNKNOWN

Reason:

The Trouble Ticket definition procedure does not recognize the interface type specified by the IFACE keyword parameter.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your system administrator.

AMTTDEF03

INTERFACE DEFINITION IS ALREADY BEING UPDATED BY P1

Reason:

The Trouble Ticket interface definition template is already being updated by the user *P1* and can only be updated by one user at a time.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Retry the operation later.

AMTTDEF04

UNABLE TO UPDATE TROUBLE TICKET DEFINITION - FILE OPEN READ ONLY

Reason:

The Trouble Ticket definition template cannot be updated because the file it is saved in cannot be written to.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your systems administrator.

AMTTDEF05

UNABLE TO UPDATE TROUBLE TICKET DEFINITION - FILE INACCESSIBLE

Reason:

The Trouble Ticket definition template cannot be updated because the file it is saved in cannot be accessed.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your systems administrator.

AMTTDEF06

UNABLE TO UPDATE TROUBLE TICKET DEFINITION - FILE RC= P1

Reason:

The Trouble Ticket definition template cannot be updated because of an unknown file error. *P1* is the return code of the file open command.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your systems administrator.

AMTTDEF07

UNABLE TO P1 TROUBLE TICKET DEFINITION - FDBK= P2

Reason:

The Trouble Ticket definition template cannot be updated because of an unknown file error. *P1* is the file action that failed and *P2* is the VSAM feedback code.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your systems administrator.

AMTTDEF08

TROUBLE TICKET P1 DEFINITION TEMPLATE SUCCESSFULLY UPDATED

Reason:

The Trouble Ticket interface definition template has been successfully updated and saved.

System Action:

None.

User Action:

None.

AMTTDEF09

UPDATE OF P1 TROUBLE TICKET DATA DETAILS CANCELLED

Reason:

The user has cancelled the update of the Trouble Ticket data details. No data has been modified.

System Action:

None.

User Action:

None.

AMTTDEF10

ENTER Host, Node and Jobname, OR Destination id.

Reason:

You must specify host name, node name and jobname, or, if you are using TCPaccess, you can specify destination ID. On IBM systems specify: * Host Name, which is the name of the local host * SMTP Node Name, which is the NJE node name of the local system * SMTP Jobname, which is the jobname of the SMTP task On TCPaccess systems specify: * DestId, which is the JES destination of the TCPaccess SPOOL#4 process.

System Action:

None

User Action:

Enter valid values and retry.

AMTTDEF11

Alert Monitor Trouble Ticket Interface Type has been reset to none.

Reason:

You specified NONE in the Interface Type field on the Alert Monitor Trouble Ticket Interface Definition panel. This clears any previous interface type.
The Alert Monitor TT command and auto-trouble-ticket action are not available until you define a specific trouble ticket interface type.

System Action:

None.

User Action:

None.

AMTTIFP01

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The call to the procedure failed because the keyword identified by *P1* had an invalid value, identified by *P2* .

System Action:

The request is rejected.

User Action:

Contact your local system administrator.

AMTTIFP02

REQUIRED FIELD OMITTED

Reason:

The indicated field must be completed.

System Action:

The required field is highlighted.

User Action:

Specify a value in the indicated field.

AMTTIFP03

INTERFACE DEFINITION IS ALREADY BEING UPDATED BY P1

Reason:

The Trouble Ticket interface definition template is already being updated by the user *P1* and can only be updated by one user at a time.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Retry the operation later.

AMTTIFP04

UNABLE TO UPDATE TROUBLE TICKET DEFINITION - FILE OPEN READ ONLY

Reason:

The Trouble Ticket definition template cannot be updated because the file it is saved in cannot be written to.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your systems administrator.

AMTTIFP05

UNABLE TO UPDATE TROUBLE TICKET DEFINITION - FILE INACCESSIBLE

Reason:

The Trouble Ticket definition template cannot be updated because the file it is saved in cannot be accessed.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your systems administrator.

AMTTIFP06

UNABLE TO UPDATE TROUBLE TICKET DEFINITION - FILE RC= P1

Reason:

The Trouble Ticket definition template cannot be updated because of an unknown file error. *P1* is the return code of the file open command.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your systems administrator.

AMTTIFP07

UNABLE TO GET TROUBLE TICKET DEFINITION - FDBK= P1

Reason:

The Trouble Ticket definition template cannot be updated because of an unknown file error. *P1* is the VSAM feedback code.

System Action:

The action is rejected and control is returned to the calling procedure.

User Action:

Contact your systems administrator.

AMTTIFP08

EMAIL INTERFACE NOT AVAILABLE ON THIS OPERATING SYSTEM

Reason:

The EMAIL interface not available on MSP or VOS3 operating systems.

System Action:

The action is rejected.

User Action:

Chose another interface type.

User Action:

None

BAx Messages

BA0001

Invalid shortcut or option. (For help:put cursor on this line, press F1)

Reason:

An invalid shortcut, menu option, panel path or command was entered from the Primary Menu.

Navigating to the function you want from the Primary Menu can be done in any of these ways:

- Entering a shortcut (/levels)
- Entering a combined shortcut and menu option (/bcast.s)
- Repeatedly entering a series of menu options (H then I then P)
- Entering a panel path (H.I.P)

System Action:

None.

User Action:

Enter a valid shortcut, menu option, panel path, or command.

SHORTCUTS

Enter a shortcut name, preceded by a slash, at the ===> prompt (for example, /levels or /parms or /ipmon). This will take you directly to the function.

To see a list of all shortcuts and their associated functions, enter a single slash (/) at the ===> prompt. Select the desired shortcut from the list by entering 'S' beside it.

If a shortcut exists for a menu option, it is displayed in turquoise, to the right of the option description.

Shortcuts may also be combined with menu options (for example, /bcast.s or =/bcast.s).

Shortcuts can be invoked in two ways:

1. A 'nested' shortcut
2. A shortcut skip

To retain and nest the current screen level, use a nested shortcut: /*shortcut_name*

Exit will bring you back to the last nested screen in this window. Screens may be nested to a maximum of 64 levels.

To close all currently nested screen levels, use a shortcut skip: =/*shortcut_name*

Exit will take you back to the Primary Menu. If you no longer need any nested screens, a shortcut skip saves storage and resources.

(If you are currently at the Primary Menu, a nested shortcut and a shortcut skip behave the same.)

MENU OPTION

Each menu option is identified by a 1 to 3 character option string, displayed in yellow. Enter the option you want at the ===> prompt.

PANEL PATH

Like shortcuts, panel paths move directly to a function without having to access each submenu between it and the current menu. A panel path consists of multiple menu options separated by periods (for example =U.M).

Also like shortcuts, the = sign functions as a skip character, closing all nested screens and effectively entering the path from the primary menu. (If you are currently at the Primary Menu, the skip character is not required.)

Frequently used panel paths have associated shortcuts. If you don't remember a shortcut, enter / at the ===> prompt for a list. Select one from the list, or enter it at the ===> prompt.

There is no difference between accessing a function using a panel path skip or a shortcut skip, although the shortcut should be easier to remember. Both close the current screen and go straight to the function.

Entering == at the ===> prompt from any panel closes all nested screens and returns you to the Primary Menu.

BA0002

MAI-FS SESSIONS EXIST - PRESS ENTER TO CONTINUE SESSION OR F3 TO LOGOFF

Reason:

An attempt was made to exit with Fullscreen MAI sessions still in existence.

System Action:

None.

User Action:

Press Enter to return to the menu. Press F3/F15 to resume the logoff and terminate all MAI sessions.

BA0003

MAI-FS SESSIONS EXIST - PRESS ENTER TO CONTINUE SESSION

Reason:

A user has attempted to exit the Primary Menu while current MAI sessions exist. The MAIESC system parameter is set to NO, preventing a user from exiting while there are current MAI sessions.

System Action:

The request is rejected.

User Action:

Terminate your MAI sessions before attempting to exit. If required the MAIESC system parameter may be set to YES or WARN to allow users to exit with active MAI sessions. In which case active MAI sessions will be force terminated.

BA0004

RECONNECT ENVIRONMENTS IGNORED

Reason:

The user's request to continue processing without reconnection to earlier processing regions has been honoured.

System Action:

None.

User Action:

The RECONN command may be used to perform reconnection.

BA0005

RECONNECT ENVIRONMENTS CANCELED - P1

Reason:

The user's request to continue processing without reconnection to earlier processing regions has been honoured. In addition cancel processing for the disconnected region(s) was initiated.

System Action:

None.

User Action:

None.

BA0006

PANEL ERROR ON ~P1

Reason:

The primary menu is unable to display the named panel. The following message indicates the nature of the problem. In most cases a Panel Services message stating that the panel is undefined or incorrectly coded is related.

System Action:

The primary menu procedure terminates and the window is closed. This may result in user logoff.

User Action:

Report the problem to your installation help desk. If necessary a panels LIBPATH DEFINE may need to be issued. Also ensure that the distribution panels library is available.

BA0007

INVALID FUNCTION KEY PRESSED

Reason:

A function key was pressed which has no defined action in the current window.

System Action:

None.

User Action:

None.

BA0008

Select an option, press a function key, or enter a shortcut to proceed.

Reason:

The ENTER key was pressed, but no option, command or shortcut was entered.

System Action:

None.

User Action:

Enter a valid shortcut, menu option, panel path, or command.

SHORTCUTS

Enter a shortcut name, preceded by a slash, at the ===> prompt (for example, /levels or /info or /ipmon) This will take you directly to the function.
To see a list of all shortcuts and their associated functions, enter a single slash (/) at the ===> prompt. Select the desired shortcut from the list by entering 'S' beside it.

If a shortcut exists for a menu option, it will be displayed in turquoise, to the right of the option description.
Shortcuts may also be combined with menu options (for example, /bcast.s or =/bcast.s).

Shortcuts can be invoked in two ways: 1. A 'nested' shortcut 2. A shortcut skip
To retain and nest the current screen level, use a nested shortcut:
/shortcut_name
Exit will bring you back to the last nested screen in this window. Screens may be nested to a maximum of 64 levels.
To close all currently nested screen levels, use a shortcut skip:
=/shortcut_name
Exit will take you back to the Primary Menu. If you no longer need any nested screens, a shortcut skip saves storage and resources.
(If you are currently at the Primary Menu, a nested shortcut and a shortcut skip behave the same.)

MENU OPTION

Each menu option is identified by a 1 to 3 character option string, displayed in yellow. Enter the option you want at the ===> prompt.

PANEL PATH

Like shortcuts, panel paths move directly to a function without having to access each submenu between it and the current menu. A panel path consists of multiple menu options separated by periods (for example =U.M).
Also like shortcuts, the = sign functions as a skip character, closing all nested screens and effectively entering the path from the primary menu. (If you are currently at the Primary Menu, the skip character is not required.)

Frequently used panel paths have associated shortcuts. If you don't remember a shortcut, enter / at the ===> prompt for a list. Select one from the list, or enter it at the ===> prompt.
There is no difference between accessing a function using a panel path skip or a shortcut skip, although the shortcut should be easier to remember. Both close the current screen and go straight to the function.

Entering == at the ===> prompt from any panel closes all nested screens and returns you to the Primary Menu.

BA0009

USER SERVICES PROCEDURE ~P1 UNDEFINED OR IN ERROR

Reason:

The User Services option was selected from the Primary Menu, but the User Services procedure defined for the user was either:
- not found in the COMMANDS library
- has attempted to execute another NCL procedure that was not found in the COMMANDS library at the next, or a nested level.

System Action:

The request is rejected.

User Action:

Correct the name of the User Services procedure in the user's UAMS definition, or place the procedure in the user's commands library.
This message can occur for an undefined NCL procedure at a nesting level below the procedure defined in the user's UAMS record. As a result, the procedure name in the message text (P1) is the name of the User Services procedure in the user's UAMS record and is not necessarily the procedure that is in error or undefined.

BA0010

COMMAND RETURNED NON-ZERO RETURN CODE AND NO ERROR MESSAGE WAS SET

Reason:

A command was invoked from the Primary Menu that ended with a non-zero return code. This non-zero return code was not accompanied with an error message and the success or otherwise of the command could not be determined.

System Action:

The command is highlighted.

User Action:

Check the success of the command from another source.

BA0011

USERID P1 IS NOT AUTHORIZED TO EXECUTE COMMANDS

Reason:

The userid *P1* is not authorized to access Operator Control Services and therefore the execution of commands is not allowed.

System Action:

The command is rejected.

User Action:

Contact the System Administrator if the function is required.

BA0012

PROCEDURE ~P1 WAS NOT FOUND

Reason:

The procedure P1 was not found when the selected option was made. This procedure is defined as the procedure to execute when the selection is made.

System Action:

The selection is rejected.

User Action:

Contact the System Administrator.

BA0013

ALL RECONNECT ENVIRONMENTS CANCELLED

Reason:

The user's request to continue processing without reconnection to earlier processing regions has been honoured. In addition cancel processing for the disconnected region(s) was initiated.

System Action:

None.

User Action:

None.

BA0014

Continue logon and ignore disconnected sessions

Reason:

This message appears as the option description for the CI option on the Reconnection menu.

System Action:

None.

User Action:

None.

BA0015

Continue logon and cancel disconnected sessions

Reason:

This message appears as the option description for the CC option on the Reconnection menu.

System Action:

None.

User Action:

None.

BA0016

Reconnect ~P1 ~P2 session

Reason:

This message appears as the option description for a reconnection on the Reconnection menu.

System Action:

None.

User Action:

None.

BA0017

The following messages were issued, press F3 to exit

Reason:

This message appears as the heading line of the line messages display. The line messages following the heading line were issued while the screen was in fullscreen mode.

System Action:

None.

User Action:

Review the line messages displayed. They may indicate an application or system error condition. If a problem is indicated, then notify your help desk.

BA0018

INVALID SCROLL AMOUNT

Reason:

The scroll amount entered is not a recognized scroll value.

System Action:

Scrolling is disabled.

User Action:

Reenter a valid scroll amount. Valid values are CSR, DATA, PAGE, HALF or a numeric value.

BA0040

CHARACTERS "~P1" FOUND

Reason:

The search character string P1 was found.

System Action:

None.

User Action:

None.

BA0041

INVALID COMMAND

Reason:

An invalid command was entered from the Environment Messages display.

System Action:

The command is rejected.

User Action:

Re-enter a valid command.

BA0042

TOP OF DATA REACHED

Reason:

The specified character string was not found from the point of the search start to the top of the data.

System Action:

None.

User Action:

Repeat the find to continue the search from the end of the data.

BA0043

NO ENVIRONMENT MESSAGES TO DISPLAY

Reason:

A request to display messages from the owning environments message queue could not be performed because there were no messages to display.

System Action:

None.

User Action:

None.

BA0044

INVALID FIND COMMAND OPTION. VALID OPTIONS ARE FIRST, LAST, NEXT OR PREV

Reason:

An invalid FIND command option was specified.

The valid options are FIRST or F, LAST or L, NEXT or N, PREV or P.

The general syntax of the FIND command is - **FIND xxx yyy**, where *xxx* and *yyy* are both positional parameters. *xxx* represents the character string to be searched (the default and '*' are equivalent to the last string searched). *yyy* is a directional option that can be *one* of FIRST, LAST, NEXT, or PREV (the default being NEXT).

The search string can contain any characters and must be quoted if it contains blanks, asterisks, single quotes, or double quotes. Quotes that are part of the search argument and are of the same type as the string that is quoted in must be doubled up. For example, to search for the string abc'xyz, specify **FIND "abc'xyz"**. To search for the string abc'xyz"lmn, specify **FIND 'abc''xyz"lnm'**.

The command name and the options can be abbreviated to their first character.

System Action:

The command is rejected.

User Action:

Correct the option, and retry the command.

BA0045

INVALID FIND COMMAND SYNTAX. FIND STRING MUST BE A VALID QUOTED STRING

Reason:

An invalid FIND command string was entered.

The search string can contain any characters and must be quoted if it contains blanks, asterisks, single quotes, or double quotes. Quotes that are part of the search argument and are of the same type as the string that is quoted in must be doubled up. For example, to search for the string abc'xyz, specify **FIND "abc'xyz"**. To search for the string abc'xyz"lmn, specify **FIND 'abc''xyz"lnm'**.

The general syntax of the FIND command is - **FIND** *xxx yyy*, where *xxx* and *yyy* are both positional parameters. *xxx* represents the character string to be searched (the default and '*' are equivalent to the last string searched). *yyy* is a directional option which can be *one* of FIRST, LAST, NEXT, or PREV (the default being NEXT).

The command name and the options can be abbreviated to their first character.

System Action:

The command is rejected.

User Action:

Correct the string, and retry the command.

BA0046

CHARACTERS "~P1" NOT FOUND

Reason:

The search character string P1 was not found.

System Action:

None.

User Action:

None.

BA0047

BOTTOM OF DATA REACHED

Reason:

The specified character string was not found from the point of the search start to the bottom of the data.

System Action:

None.

User Action:

Repeat the find to continue the search from the start of the data.

BA0048

TOP OF DATA REACHED

Reason:

The specified character string was not found from the point of the search start to the top of the data.

System Action:

None.

User Action:

Repeat the find to continue the search from the end of the data.

BA0049

CHARACTERS "~P1" FOUND

Reason:

The search character string P1 was found.

System Action:

None.

User Action:

None.

BA0050

ENVIRONMENT MESSAGES SAVED IN NOTEPAD

Reason:

The environment messages were successfully saved in the notepad.

System Action:

None.

User Action:

None.

BA0051

Default Profile in use. Enter the PROFile command to set the menu style

Reason:

Your menu profile does not exist and the default menu style is being used. This message will be presented when you display the primary menu and there is no menu profile on the database. The default menu style settings of Classic primary menu format and Collapsed IP Summary (only available on TCP/IP products) were taken.

System Action:

Defaults used for rendering primary menu display.

User Action:

Use the PROFILE or PROF command to view and/or update your profile settings.

BA0052

Option P1 (P2) completed.

Reason:

The menu option *P1* was invoked and the user returned back to the primary menu. *P2* is the menu option's description.

System Action:

None.

User Action:

None.

BA1001

VARIABLE NAME CONTENTS

Reason:

This is the title line issued by NCL procedure $NMSYVAR. This procedure is used to determine the current value of system variables on remote regions.

System Action:

Information lines follow for each variable requested.

User Action:

None.

BA1002

~P1 - ~P2

Reason:

This is the information line issued by NCL procedure $NMSYVAR. P1 is the full name of the system variable. P2 is the actual contents of this variable.

System Action:

None.

User Action:

None.

BA1003

***END* -- P1 SYSTEM VARIABLES DISPLAYED**

Reason:

This message indicates the end of the display generated by the NCL procedure $NMSYVAR. It summarizes the number of variables displayed

System Action:

None.

User Action:

None.

BA9900

ENTER PASSWORD TO RESUME PROCESSING

Reason:

The terminal has been locked by the LOCK command or the terminal inactivity facility. The processing is interrupted until your current password is entered and verified.

System Action:

Waits for entry of the password. If the password verification fails then the user is reprompted. If the number of retries is exceeded then the user is disconnected.

User Action:

Enter your password to be verified.

BA9901

LOCK FUNCTION FAILED - PANEL ~P1 UNAVAILABLE

Reason:

A LOCK request has been unable to perform panel processing. The panel P1 is not in the users panel path.

System Action:

The LOCK function terminates.

User Action:

Report the error to your system administrator.

BA9902

TERMINAL SUCCESSFULLY UNLOCKED

Reason:

A LOCK function has verified the password and is terminating.

System Action:

The LOCK function terminates and the interrupted processing resumes.

User Action:

Continue the interrupted work.

BA9903

USER VERIFY FAILED - ~P1 DISCONNECTED

Reason:

A LOCK function has reached the number of password retries allowed for the system.

System Action:

The user region is disconnected.

User Action:

Signon and reconnect to resume processing.

BA9904

USER VERIFY FAILED - P1 CANCELLED

Reason:

A LOCK function has reached the number of password retries allowed for the system and has attempted to disconnect the region. The disconnect has failed and the user has been cancelled.

System Action:

The user region is terminated.

User Action:

Refer to the SOLVE log for messages indicating why the disconnection failed. The system may be in shutdown.

BA9905

PASSWORD FAILED VERIFICATION

Reason:

The password entered to unlock the terminal is not valid for the user ID.

System Action:

The terminal is not unlocked. The retry counter is incremented. If the counter reaches the system password retry limit then the region is disconnected.

User Action:

Correct and re-enter.

BA9906

USERID P1 NOT KNOWN TO SECURITY SUBSYSTEM

Reason:

The password entered to unlock the terminal failed verification because the userid is not defined to the security subsystem.

System Action:

The terminal is not unlocked. The retry counter is incremented. If the counter reaches the system password retry limit then the region is disconnected.

User Action:

Notify your system administrator.

BACCI01

CCI RC= *P1* ERR= *P2* ERRX= *P3* DESC= *P4* FDBK= *P5*

Reason:

A CA CCI call has completed.

P1 is the return code.
P2 is the error code.
P3 is the extended error code.
P4 is the error description.
P5 is the feedback code that indicates the kind of CCI call.

System Action:

The CA CCI call has completed.

User Action:

If the return code is not zero, investigate and correct the cause of the error.

BACMD01

Command Entry function not valid in this environment

Reason:

The Command Entry function has been requested from a region which does not have a full-screen interface, for example:
- A background user
- A remote operator (using ROUTE from another system)

System Action:

The command is rejected.

User Action:

Execute Command Entry (or a function which requires Command Entry) from an environment which has a real window; that is:
- Avoid submitting the command to a background region.
- Execute the command locally.

BACMD02

Keyword=Variable format is not valid in this environment

Reason:

The Command Entry function has been requested and the first parameter specifies OPT=COMMAND which indicates *keyword=variable* format. This format is only valid when $CMDENT is executed from another NCL procedure.

System Action:

The command is rejected.

User Action:

Use positional parameter format when invoking Command Entry in this environment.

BACMD03

Unable to change profile, P1

Reason:

An attempt to change the internal command profile options has failed. -PROFILE ENV=CURRENT HOLD=9999 &&000CEPOP returned an unexpected message (*P1)* .

System Action:

The profile was not changed

User Action:

Contact your systems administrator to determine why your profile cannot be changed. Verify that GLBL CEPOP is blank or contains a profile option which is valid for this environment

BACMD04

Maximum capture limit reached

Reason:

The maximum number of messages to be captured has been reached.

System Action:

Additional messages are discarded and cannot be viewed.

User Action:

Either: * use the ERASE (K) command to clear the captured messages, or * increase the capture limit by entering a higher value in the LIMIT input field.

BACMD05

No lines captured - nothing to print

Reason:

The F4 key was pressed to request that the captured lines be printed but there are no lines captured.

System Action:

The function is ignored.

User Action:

Issue one or more commands, and so capture lines of data, before using this function.

BACMD06

Print request P1 starting, P2 lines to print

Reason:

A request to print the captured lines has started. The Print Services request number (*P1*) and number of lines to print (*P2*) are shown.

System Action:

Lines are spooled to Print Services. Additional progress messages are displayed.

User Action:

Wait for the completion message.

BACMD07

P1 of P2 lines printed

Reason:

This is a print spooling progress message showing the number of lines spooled so far (*P1*) and the total number of lines to print (*P2*).

System Action:

Print spooling continues.

User Action:

Wait for the completion message.

BACMD08

Print request P1 complete

Reason:

A request to print the captured lines has ended. The Print Services request number (*P1*) is shown.

System Action:

None.

User Action:

None.

BACMD09

Invalid maximum capture limit

Reason:

The value specified in the LIMIT field is invalid because it was either: * omitted, or * a non- numeric value.

System Action:

None.

User Action:

Specify a numeric value and retry.

BACMD10

Command Stack is empty

Reason:

The F6 key was pressed to retrieve a command from the Command Stack but there are no commands stacked.

System Action:

The function is ignored.

User Action:

Issue one or more commands before using this function.

BACMD12

Valid values are ON and OFF

Reason:

A value other than ON or OFF was specified in the highlighted field.

System Action:

None.

User Action:

Specify either ON or OFF and retry.

BACMD13

EDIT ON and SCROLL ON are mutually exclusive

Reason:

A value of ON has been specified for both the EDIT and SCROLL fields. These are mutually exclusive and cannot both be specified as ON.

System Action:

None.

User Action:

Change the EDIT and/or SCROLL fields so that at least one of these is OFF.

BACMD14

Invalid color specification

Reason:

When editing lines, an invalid color was specified.

System Action:

None.

User Action:

Either omit the color specification to use the default (Green), or specify a valid color using one of the following:

G for Green

B for Blue

R for Red

Y for Yellow

W for White

P for Pink

T for Turquoise

BACMD15

Invalid highlighting specification

Reason:

When editing lines, an invalid highlighting option was specified.

System Action:

None.

User Action:

Either omit the highlight specification to use the default (None), or specify a valid highlight option using one of the following:

N for None

U for Underline

B for Blink

R for Reverse

BACP0100

The Minute-Minder Listener is already running

Reason:

A Minute-Minder Listener ($NMCP01Z) was started; however, a Listener is already running.

System Action:

The second Minute-Minder Listener terminates.

User Action:

Do not start a second Minute-Minder Listener while one is already running.

BACP0101

***P1* must be a number between *P2* and *P3* inclusive.**

Reason:

An invalid value for *P1* was supplied to the Minute-Minder Listener.

System Action:

The Minute-Minder Listener terminates.

User Action:

Start the Listener with a valid value for *P1*.

BACP0102

LOCPU value must be less than HICPU value

Reason:

The Minute-Minder Listener was started with an incompatible LOCPU/HICPU combination. The LOCPU value must be less than the HICPU value.

System Action:

The Minute-Minder Listener terminates.

User Action:

Start the Listener with a valid LOCPU/HICPU combination.

BACP0103

***P1* is not a valid data set name**

Reason:

The Minute-Minder Listener was started with an invalid data set name for the PMON unload data set.

System Action:

The Minute-Minder Listener terminates.

User Action:

Start the Listener with a valid data set name. The data set must be a PDS.

BACP0110

Minute-Minder Listener started

Reason:

The Minute-Minder Listener started successfully.

System Action:

The Minute-Minder Listener waits for CPU monitoring events.

User Action:

None.

BACP0111

P1 = P2

Reason:

This message is issued when the Minute-Minder Listener starts successfully. It documents the parameters the Listener is using for its monitoring.

System Action:

The Minute-Minder Listener waits for CPU monitoring events.

User Action:

None.

BACP0197

Minute-Minder Listener is not active

Reason:

A command was issued to stop the Minute-Minder Listener; however, it is not active.

System Action:

None.

User Action:

None.

BACP0198

Minute-Minder Listener stop requested

Reason:

You requested the Minute-Minder Listener to stop.

System Action:

The Minute-Minder Listener terminates.

User Action:

None.

BACP0199

Minute-Minder Listener ended

Reason:

The Minute-Minder Listener terminated normally.

System Action:

The Minute-Minder Listener terminates.

User Action:

None.

BAEPRCV01

P1* receiver - *P2* - EPS request rejected (RETCODE=*P3* ERRORNO=*P4*) REASON: *P5

Reason:

The *P1* receiver failed when issuing an EPS request.

P1 is the EPS Receiver ID.

P2 is the type of EPS request (for example, CONNECT).

P3 is the return code.

P4 is the error number.

P5 is the reason (for example, EPS UNAVAILABLE).

If possible, recovery is attempted as indicated by the next message (see also BAEPRCV04, BAEPRCV05, or BAEPRCV06).

System Action:

The *P1* receiver attempts recovery.

User Action:

If the message is *not* followed by a recovery message, the error is probably related to data corruption. The event is discarded, and processing continues.

For assistance, contact CA Support at http://ca.com/support.

BAEPRCV02

MDO assign FAILED: RC=*P1* FDBK=*P2* MAP=*P3* COMPONENT=*P4* TAG=*P5* TYPE=*P6*

Reason:

The alert receiver failed due to an MDO error. The failure is identified by the following:

- The statement type, ASSIGN
- The MDO return code, *P1* (&ZMDORC)
- The MDO feedback code, *P2* (&ZDMOFDBK)
- The map name, *P3* (&ZMDOMAP)
- The full map component name, *P4* (&ZMDONAME)
- The map component tag value, *P5* (&ZMDOTAG)
- The ASN.1 type of the component, *P6* (&ZMDOTYPE)

This failure indicates one of the following causes:

- An invalid record has been received.
- There is a mismatch between the ASN.1 map and the record.

System Action:

The procedure terminates.

User Action:

For assistance, contact CA Support at http://ca.com/support.

BAEPRCV03

***P1* receiver active.**

Reason:

The *P1* receiver procedure is now ready to receive events using EPS Services. *P1* is the EPS receiver ID.

System Action:

The region is ready to receive events from external applications.

User Action:

None.

BAEPRCV04

***P1* receiver attempting EPS reconnection**

Reason:

This message follows message BAEPRCV01. *P1* is the EPS receiver ID.

The recovery is attempted after an EPS request failure (see BAEPRCV01).

System Action:

Reconnection to EPS is attempted.

User Action:

See message BAEPRCV01 for the EPS return and error codes.

If the problem cannot be resolved, contact CA Support.

BAEPRCV05

***P1* receiver waiting for EPS services availability**

Reason:

This message follows message BAEPRCV01. The required EPS services are currently unavailable. *P1* events processing will resume as soon as EPS services are restored. *P1* is the EPS receiver ID.

System Action:

Waiting on EPS to become available.

User Action:

Ensure that an SSI region is currently active with its event processor is enabled.

Enter the **/PARMS** shortcut, and check the SSI parameter group. Ensure that the Sub-System Interface ID field contains the correct ID.

BAEPRCV06

***P1* receiver terminated - EPS services unusable**

Reason:

This message follows message BAEPRCV01. *P1* is the EPS receiver ID.

An unrecoverable error occurred during an EPS request (see message BAEPRCV01). *P1* event processing has stopped.

System Action:

The *P1* receiver is terminated.

User Action:

For assistance, contact CA Support at http://ca.com/support.

BAEPRCV07

***P1* Receiver cannot run on *P2* operating system**

Reason:

The *P1* Receiver cannot run on an operating system identified by *P2*.

System Action:

The *P1* receiver is terminated.

User Action:

None.

BAIN0001

INMC link definition for P1 not found

Reason:

An attempt to read an INMC Link definition failed because the requested definition for link name (*P1*) no longer exists on the VFS dataset.

System Action:

The request is rejected.

User Action:

Choose a different link name. This error may occur during browse or update of a definition when the record is deleted by another user.

BAIN0002

Link definition P1 already exists

Reason:

An attempt to add a new INMC link definition failed because there is already a definition of the same name.

System Action:

The request is rejected.

User Action:

Use the reason explanation to rectify the situation. If the problem is not obvious contact your systems administrator.

BAIN0003

File error: Action= P1 reason= P2

Reason:

An attempt to access the VFS dataset to read or write an INMC link definition failed. The file action (*P1*) and failure reason (*P2*) are shown.

System Action:

The request is rejected.

User Action:

Use the reason explanation to rectify the situation. If the problem is not obvious contact your systems administrator.

BAIN0201

INVALID KEYWORD VALUE SPECIFIED, P1= P2

Reason:

The call to the procedure failed because the Keyword identified by *P1* had an invalid value, identified by *P2* .

System Action:

The request is rejected.

User Action:

Contact your systems administrator.

BAIN0202

INVALID ID= P1 FOR TYPE= P2

Reason:

The call to the procedure failed because the identifier *P1* is not of the correct type specified by *P2* . For example: * TYPE=DOMAIN but ID= was the wrong format for a domain name

System Action:

The request is rejected.

User Action:

Contact your systems administrator.

BAIN1101

No INMC link definitions

Reason:

There are no INMC link definitions on file.

System Action:

None.

User Action:

Use the F4=Add function to add link definitions.

BAIN1102

No INMC link definitions starting with P1

Reason:

There are no INMC link definitions on file whose link name starts with the specified prefix (*P1*).

System Action:

None.

User Action:

Use the F4=Add function to add link definitions, or return to the previous panel and specify a different prefix.

BAIN1201

No sessions to display

Reason:

The transmission mode is neither Preferential or Rotate. As a result there are no sessions to display.

System Action:

None.

User Action:

None.

BAIN1202

Link name and/or transmission mode required

Reason:

The F5=Sessions command was used but either the link name or the transmission mode was blank.

System Action:

The request is rejected.

User Action:

Specify the link name and transmission mode and retry.

BAIN1203

Mandatory field required: P1

Reason:

A required field (*P1*) was not specified.

System Action:

The request is rejected.

User Action:

Specify a value in the field and retry.

BAIN1204

Invalid value for P1

Reason:

An invalid value was specified for the field (*P1*).

System Action:

The request is rejected.

User Action:

Specify a value in the field and retry. Refer to the full-screen help for field validation details.

BAIN1205

Field only required for simple transmission mode: P1

Reason:

A field was specified (*P1*) that is only applicable to simple transmission mode.

System Action:

The request is rejected.

User Action:

Either clear the field, or change the transmission mode.

BAIN1206

Field only required when logmode specified: *P1*

Reason:

A field was specified (*P1*), but the logmode field for the same session detail line was *not* present. The presence of the logmode field indicates that a session is to be defined. The absence of the field means that the session is *not* defined.

System Action:

The request is rejected.

User Action:

Either clear the field, or specify the logmode for the session.

BAIN1207

At least one active session must be defined

Reason:

When defining a Rotate and Backup mode link, at least one session must be defined with a status of A (Active). No sessions were defined as active.

System Action:

The request is rejected.

User Action:

Ensure that at least one session is defined as active by specifying a status of A.

BAIN1208

Session details omitted

Reason:

Details were specified for a session, but the previous session details were omitted. Session details must be entered in consecutive rows and intermediate blank rows are not permitted.

System Action:

The request is rejected.

User Action:

Specify session details for the missing session(s).

BAIN1209

No session details specified

Reason:

The F3=File or F4=Save function for the link definition was requested. The transmission mode specifies either Preferential or Rotate but there are no session details (the F5=Sessions function was not used).

System Action:

The request is rejected.

User Action:

Use the F5=Sessions function to define at least two sessions.

BAIN1210

Session details incomplete or invalid

Reason:

The F3=File or F4=Save function for the link definition was requested. The transmission mode was changed to Preferential or Rotate mode from another transmission mode. The session details for new transmission mode are incomplete or invalid because the session details have not been displayed (the F5=Sessions function was not used).

System Action:

The request is rejected.

User Action:

Use the F5=Sessions function to update the session details.

BAIN1301

INMC link for P1 no longer exists

Reason:

An attempt to display the status of an INMC link (*P1*) failed because the link has been reset.

System Action:

The request is rejected.

User Action:

Use the F6=Refresh function to refresh the list.

BAIN7001

P1 initialization errors occurred

Reason:

Errors were detected during the initialization process. *P1* identifies the product name.

System Action:

None

User Action:

Examine the product activity log, determine the cause of the errors, and correct them.

BAIN7002

Map P1 not found on this system

Reason:

The initialization process has detected that a required map (*P1*) is not installed in this region.

System Action:

None.

User Action:

Ensure the setup steps described in the installation and setup instructions have been performed to load the OSCNTL file with the appropriate map definitions for SOLVE. Check that any maintenance has been applied.

BAIN7003

Loading of Persistent Variables disabled by XOPT

Reason:

Region started with JCL parameter XOPT=NOPVLOAD, which disables the automatic option of loading persistent variables.

System Action:

Persistent variables are not loaded in this run.

User Action:

If the parameter is specified to fix the problem, restart the region without specifying XOPT=NOPVLOAD after correcting the situation. Default action, equal to specifying XOPT=PVLOAD is taken on restart.

BAIN7006

Error *P1 P2*

Reason:

The initialization process has detected an internal error.

P1 is the error number.
P2 is the error message.

System Action:

Initialization continues; however, the region is probably unusable.

User Action:

If you are using $NMPARMS, fix the errors and start the region.

If you are not using $NMPARMS, contact your local Technical Support representative with a copy of the JCL log.

Ensure that maintenance is applied.

This message is followed by message BAIN7007 with more details.

BAIN7007

Proc= *P1* Statement= *P2* at position= *P3* in line= *P4*

Reason:

This message follows message BAIN7006 and provides more information about the error detected.

P1 is the NCL/OML procedure name.
P2 is the NCL/OML statement name.
P3 is the statement position in the line.
P4 is the source line number.

System Action:

Initialization continues; however, the region is probably unusable.

User Action:

If you are using $NMPARMS, fix the errors and start the region.

If you are not using $NMPARMS, contact your local Technical Support representative with a copy of the JCL log.

Ensure that maintenance is applied.

This message is followed by message BAIN7007 with more information.

BAIN7008

Initialization internal error

Reason:

This message, following messages BAIN7007 and BAIN7007 indicates that there is another error in the initialization process.

System Action:

Initialization continues; however, the region is probably unusable.

User Action:

If you are using $NMPARMS, fix the errors and start the region.

If you are not using $NMPARMS, contact your local Technical Support representative with a copy of the JCL log.

Ensure that maintenance is applied.

This message is followed by message BAIN7007 with more information.

BAIN7009

Initialization terminating

Reason:

This is the last message, issued when it is not possible to resume the program.

System Action:

Initialization continues; however, the region is probably unusable.

User Action:

If you are using $NMPARMS, fix the errors and start the region.

If you are not using $NMPARMS, contact your local Technical Support representative with a copy of the JCL log.

Ensure that maintenance is applied.

This message is followed by message BAIN7007 with more information.

BAIN7091

***P1* initialization phase *P2* started**

Reason:

The initialization process for the product has started. The product name (*P1*) and initialization phase (*P2*) are indicated.

This message is only issued if the initialization process is under diagnostic control.

System Action:

None.

User Action:

None, diagnostic information only.

BAIN7092

***P1* initialization phase *P2* ended**

Reason:

The initialization process for the product has started. The product name (*P1*) and initialization phase (*P2*) are indicated.

This message is only issued if the initialization process is under diagnostic control.

System Action:

None.

User Action:

None, diagnostic information only.

BAINWI01

Error from procedure p1 RC= p2

Reason:

The procedure *P1* which was nominated in a Parameter Group to be invoked to perform processing for that Parameter Group failed with return code
P2.

System Action:

Processing terminates.

User Action:

Correct the error in procedure *P1* and retry the request.

BAINWI02

Number of buffers for buffer size p1 is invalid

Reason:

The number of buffers specified in the pool with buffer size *P1* is invalid. The value must be numeric, greater than 2, less than 32,767 and less than 16,777,216 divided by *P1.*

System Action:

Field is set in error.

User Action:

Specify a valid number of buffers value.

BAINWI03

P1 must be a list of Path IDs, YES or NO or blank

Reason:

You specified an invalid value in the *P1* field. The field selects the paths by which the panels in the library are editable. The valid values are as follows:
- List of path IDs separated by blanks or commas indicates that the panels in the library are editable by using those paths only.
- Blank or NO indicates that the panels in the library are not editable.
- YES indicates that the panels in the library are editable by using any of the specified paths.

System Action:

The field in error is highlighted.

User Action:

Correct the value.

BAINWI04

p1 required if p2 specified

Reason:

The field *P1* is required if the field *P2* is specified.

System Action:

Field is set in error.

User Action:

Specify a value for *P1* or clear the value for *P2.*

BAINWI05

p1 invalid must be yes, no, 1-999 or 1k-9999k

Reason:

The field *P1* is invalid. If must contain either YES or NO, a number between 1 and 999 or a kilobyte value between 1K and 9999K.

System Action:

Field is set in error.

User Action:

Specify a valid value for *P1.*

BAINWI06

The value in p1 has already been specified

Reason:

The value *P1* has already been specified in this Parameter Group.

System Action:

Field is set in error.

User Action:

Specify a unique value.

BAINWI07

File ID p1 not defined

Reason:

The File ID *P1* is not defined; therefore, it cannot be used in the

System Action:

User Action:

BAINWI08

At least one MODS file must be specified

Reason:

The system cannot function correctly without at least the distributed MODS file being specified.

System Action:

Fields set in error.

User Action:

Specify at least one MODS file.

BAINWI09

At least one panel path ID must be specified

Reason:

The system cannot function correctly without at least one panel path specified.

System Action:

Fields set in error.

User Action:

Specify at least one panel path.

BAINWI10

Link start to P1 request complete

Reason:

A request to start an INMC link (*P1* is linkname) was successful.

System Action:

The link will only become active if/when the remote system starts a link back to this system (or one is defined dynamically).

User Action:

None

BAINWI11

p1 is required if p2 is p3

Reason:

The field *P1* is required when the value of field *P2* is *P3.*

System Action:

Field is set in error.

User Action:

Specify a value for *P1.*

BAINWI12

Log procedure p1 no longer active

Reason:

The log procedure *P1* was started. The system then waited a few seconds before checking if the procedure was still running and found that it was no longer active. This indicates that the log procedure has errors and either terminated abnormally or ended prematurely.

System Action:

Parameter Group action fails.

User Action:

Check the log for the reason the procedure failed. Correct the error and reset the Parameter Group.

BAINWI13

Invalid buffer size p1

Reason:

The LSR pool specification specified an invalid buffer size.

System Action:

Field set in error.

User Action:

Enter a valid buffer size.

BAINWI14

Log file p1 not allocated, key length p2 is invalid

Reason:

The log file with ID *P1* was not allocated because the key length for the file was invalid. The key length of the file was *P2* and it should be a length of 20.

System Action:

The log file is not available for use.

User Action:

Change the parameters to specify a valid log file dataset and Action the parameter group.

BAINWI15

At least one SYSDB file must be specified

Reason:

The system cannot function correctly without at least the distributed

System Action:

User Action:

BAINWI16

Unable to start link to P1

Reason:

A request to start a link to the indicated system has failed.

System Action:

The link is not started.

User Action:

Review the Initialization Log for additional messages that indicate why the link failed to start.

BAINWI17

p1 invalid, must be a valid 3 or 4 byte hex number

Reason:

The field *P1* is invalid. It must contain a valid hexadecimal number of three or four bytes.

System Action:

Field is set in error.

User Action:

Specify a valid value for *P1*.

BAINWI18

SSI status could not be set to p1, current status is p2

Reason:

An attempt to set the SSI into a particular state could not be achieved. The current status of the SSI is *P2* and this could not be changed to *P1* . This condition results in the SSI parameter group not completing its action of setting the required SSID and potentially attaching terminals. If the current status is RETRY-WAIT, then it indicates that the SSI started task has not started or that its SSID is incorrect.

System Action:

The attempt to set the SSI status is aborted. If the status of the SSI is RETRY-WAIT, then the system will retry connecting to the SSI every 30 seconds or as specified in the SSI Connection Retry Interval field.

User Action:

If the status of the SSI is RETRY-WAIT, then ensure that the SSI started task is started and that its SSID is correct. The SSI will be connected automatically when the SSI started task has initialized.
For other values of status, check the activity log for messages indicating the cause of the error.

BAINWI19

p1 must be null if p2 is p3

Reason:

The field *P1* must be null if the field *P2* has a value of *P3.*

System Action:

Field is set in error.

User Action:

Clear field *P1* or change the value of *P2.*

BAINWI20

Equate string contains invalid characters

Reason:

You specified an invalid string for an equate. The string must not have embedded blanks and must not contain ampersand (&) characters.

System Action:

The field in error is highlighted.

User Action:

Correct the string.

BAINWI21

p1 of single + is invalid

Reason:

The use of *+* indicates that a blank character is required at the end of the equated text or string, consequently a single *+* is equivalent to equating to a blank, which is invalid. The field in error is *P1* .

System Action:

Field set in error.

User Action:

Correct the field.

BAINWI22

The panel path must include libraries which contain distributed panels

Reason:

The panel path specifies a collection of one or more libraries. Each library was searched and none of them contained the required distributed panels. The path must contain the distributed panels for the system to function correctly.

System Action:

Field set in error.

User Action:

Ensure that at least one library contains the distributed panels. It is recommended that the distributed panel libraries be specified as the last libraries of the path.

BAINWI23

Invalid ID. p1 requires name in range p2 to p3

Reason:

The file ID specified is invalid for the log procedure *P1.* The log procedure *P1* requires log file IDs to be of a specific format. The format is a fixed prefix followed by a two-character number in the range 01 to 07. The file ID must fall in the range *P2* to *P3.*

System Action:

Field set in error.

User Action:

Ensure that the log file IDs are in the required format for the log procedure specified.

BAINWI24

No log files allocated, activity logging disabled

Reason:

No log files were allocated because of errors. Logging cannot be enabled until at least one log file is available for logging. The activity logging function is disabled until logs are allocated.

System Action:

Activity logging is disabled.

User Action:

1. From any panel, enter *=/PARMS* to list the parameter groups.
2. Review the LOGFILES parameter group. Change the parameters to specify valid log file datasets.
3. Press F6 (Action) to reactivate the logging function.
4. Press F3 (File) to save the changes.

BAINWI25

Log file errors occurred, some logs not allocated

Reason:

One or more log files were successfully allocated and logging was started. However some of the log files were *not* allocated. See any accompanying messages for further details of errors.

System Action:

Activity logging continues with those logs that were successfully allocated.

User Action:

Determine the reason why the logs were in error. Correct the situation, and action the parameter group.

BAINWI26

Invalid value, must be 3270 or 560/20

Reason:

The field contains an invalid value. The only valid values are 3270 or 560/20.

System Action:

Field is set in error.

User Action:

Specify either 3270 or 560/20.

BAINWI27

Pool ID must be 0 on this system

Reason:

The LSR POOL ID must be 0 on this operating system. The other values are valid on OS/390 and z/OS systems only.

System Action:

Field is set in error.

User Action:

Specify 0.

BAINWI28

Invalid characters encountered

Reason:

DBCS data was encountered during validation. DBCS data is not valid in this field.

System Action:

The panel is redisplayed with the field in error highlighted.

User Action:

Enter a non-DBCS value in the highlighted field.

BAINWI29

ISR request complete for P1 (P2) on link P3

Reason:

A request was made to enable a data flow, using ISR, from a remote system. This request was successful. *P1* indicates the data flow type (PPO, CNM, or SAW), *P2* the direction (IN or OUT), and *P3* is the linkname that identifies the remote system. However, the data flow is also dependent on being enabled locally on the remote system (in the opposite direction).

System Action:

The data flow becomes active only if/when the remote system enables the relevant interface (PPO, CNM or SAW) locally in the opposite direction.

User Action:

If the data flow is not happening, check whether it has been enabled locally on the remote system, and that the flows are in opposite directions, for example: - Local=IN and Remote=OUT
- Local=OUT and Remote=IN
That is, use the ISRIN parameter group on one system, and the ISROUT parameter group on the other system.

BAINWI30

Unable to enable ISR for P1 (P2) on link P3

Reason:

A request to enable ISR for a specific data flow type (*P1* is PPO, CNM, or SAW) for the direction (*P2* is IN or OUT) on the indicated link (*P3*) has failed.

System Action:

The ISR data flow is not enabled.

User Action:

Review the Initialization Log for additional messages that indicate why the ISR enable failed.

BAINWI31

NetView links not supported for p1

Reason:

Connections to NetView regions require the Netmaster Automation region to be configured with the NetView Connect option.

System Action:

The field in error is highlighted.

User Action:

Specify *NO* in the highlighted Is the ISR Link to NetView? field. If connections to NetView regions are required, contact your systems administrator and request that the region is reconfigured with the NetView Connect option (PROD=NVC).

BAINWI34

SSID has not been set in VTAM Generic Resource environment

Reason:

This region is configured to run in a VTAM Generic Resource Environment, but the Sub System Interface ID field is not set correctly.

System Action:

Initialization fails.

User Action:

Set the Sub System Interface ID field and action this parameter group.

BAINWI35

System SYSDB path dropped

Reason:

The system SYSDB path definition has been dropped.

System Action:

There is no system SYSDB path until one is redefined.

User Action:

None.

BAINWI36

SYSDB file ID p1 closed

Reason:

File ID *P1* has been removed from the system SYSDB path, closed, and unallocated.

System Action:

None.

User Action:

None.

BAINWI37

SYSDB file ID p1 opened, access= P2, share= P3, DSN= P4

Reason:

File ID *P1* has been allocated and opened for use as a SYSDB with the indicated access (*P2* = RW or RO) and share option (*P3* =NONE, LSR, or RLS). The data set name is P4.

System Action:

None.

User Action:

None.

BAINWI38

System SYSDB path defined, access= P1

Reason:

The system SYSDB path definition has been defined with the indicated access path (*P1*):
- INPUT: Entities can be retrieved.
- UPDATE: Entities can be retrieved and maintained (add, update, delete) in the first SYSDB file ID only.

Note: The access level is determined by the access defined for the first (or only) SYSDB file ID in the concatenation:
- UPDATE if the file access is RW (read-write)
- INPUT if the file access is RO (read-only)

System Action:

None.

User Action:

None.

BAINWI39

Pool prefix value already defined

Reason:

This prefix value is already defined as an MAI ACB pool prefix.

System Action:

The update is rejected.

User Action:

Ensure unique values are used for each MAI pool prefix specification.

BAINWI40

SYSDB file ID p1 open failed: P2

Reason:

An attempt to allocate and open a file for use as a SYSDB (file ID *P1*) has failed. The failure message (P2) indicates the reason.

System Action:

The system SYSDB concatenation is restored. The restoration is recorded by a set of messages starting with BAINWI41 and ending with BAINWI43.

User Action:

Use the failure reason to identify the cause, make the appropriate changes, and retry.

BAINWI41

System SYSDB definition error(s), System SYSDB path will be restored

Reason:

An error occurred while redefining the system SYSDB concatenation path. As a result, the current SYSDB path is restored.

System Action:

The current system SYSDB concatenation path is restored. Other messages indicate the files that are restored and the completion of the restoration.

User Action:

None.

BAINWI42

SYSDB file ID p1 restored

Reason:

This message occurs after BAINWI41, while the system SYSDB concatenation path is being restored. The message indicates that file ID *P1* has been reallocated and opened for use as a SYSDB.

System Action:

None.

User Action:

None.

BAINWI43

System SYSDB path restored

Reason:

This message occurs after BAINWI41, while the system SYSDB concatenation path is being restored. The message indicates that the SYSDB path has been restored.

System Action:

None.

User Action:

None.

BAINWI45

NO is invalid for Sub-System Interface ID. Field set to blank.

Reason:

The value specified for Sub-System Interface ID is invalid. The special value NO indicates that the region is not to be connected to an SSI. The value NO is equivalent to setting the field to blank and, for this reason, the field is blanked out.

System Action:

The field is set to blank.

User Action:

None.

BAINWI46

Buffer minimums set for pool *p1*: *p2*

Reason:

The number of buffers specified in pool *p1* for the *p2* buffer sizes was increased to the required system minimum. This pool and these buffer sizes are used by system data sets to maintain system performance and integrity.

System Action:

The number of buffers is altered to the minimum values for the *p2* buffer sizes in pool *p1*.

User Action:

None. You can specify more buffers for these sizes, but not less.

BAIPWI01

Enter a valid port number or "NONE".

Reason:

The highlighted field must be one of the following:

- A number between 257 and 65535

- The word "NONE" indicating that this system should not listen for inbound connections

- Omitted, to reinstate the previous value

System Action:

The field is highlighted as an error.

User Action:

Enter a correct value.

BAIPWI02

P1 cannot be the same as the P2

Reason:

The value entered for the port defined in *P1* (which is either the web interface port or the connections port) is already assigned to the port indicated by *P2* . These two ports must have different values.

System Action:

The port number is highlighted as an error.

User Action:

Enter a different value for the port number.

BAIPWI03

Enter a valid PPI queue name

Reason:

The highlighted field must have a valid 1 to 8 character name.

System Action:

The field is highlighted as an error.

User Action:

Enter a correct value.

BAIPWI04

WARNING: P1 Events are not generated by TCPaccess 3.1 or 4.1

Reason:

You have requested that events of type *p1* be received. However this type of event is not available from TCPaccess versions prior to 5.2

System Action:

The information based on these events is not available.

User Action:

None.

BAIPWI05

***WARNING* TCP/IP Interface not started.**

Reason:

The TCP/IP software type and the type's specific details have not been specified. The TCP/IP software type must be specified in the SOCKETS parameter group.

System Action:

The TCP/IP interface is not started. This may affect the functioning of other licensed components.

User Action:

Specify the TCP/IP software type and the type's specific details in the SOCKETS parameter group. You can access the list of parameter groups by entering the /PARMS shortcut.

BAIPWI06

Invalid TCP/IP software type " P1". Assuming IBM.

Reason:

The TCP/IP software type of *P1* was invalid. The system will assume that the software type is IBM.

System Action:

A software type of IBM is used and processing continues.

User Action:

Update the parameter with a valid value.

BAIPWI07

P1 cannot be less than 5 minutes

Reason:

The value for field *P1* cannot be less than 5 minutes (00.05).

System Action:

Field is set in error.

User Action:

You must set a value greater than or equal to 5 minutes.

BAIPWI08

Timeout waiting for TCP/IP to stop. TCP/IP interface in P1 state

Reason:

The TCPIP STOP command was issued and confirmation for its activation has not arrived. The current status of the interface is *P1.*

System Action:

The request fails.

User Action:

Check the log for additional messages and correct any parameter errors. If the error persists then contact your system administrator.

BAIPWI09

Port P1 already used as Inbound Connections Port

Reason:

The port number *P1* is already being used as the Inbound Connections Port. The Telnet port must be a different number or SHARED.

System Action:

Field is set in error.

User Action:

Specify a different port number or SHARED.
You can specify SHARED to share the Inbound Connections Port.

BAIPWI10

Port P1 already used as WebCenter Port

Reason:

The port number *P1* is already being used as the WebCenter Port. The Telnet port must be a different number, it cannot be shared with the Web Interface.

System Action:

Field is set in error.

User Action:

Specify a different port number or SHARED.
You can specify SHARED to share the Inbound Connections Port.

BAIPWI11

Port P1 already specified for P2

Reason:

The port number *P1* has already been specified for field *P2.* The Telnet port must be a different number or SHARED.

System Action:

Field is set in error.

User Action:

Specify a different port number or SHARED.

BAIPWI12

Cannot change TCP/IP Software Type: multisystem link(s) exists

Reason:

The TCP/IP Software Type cannot be changed because there are linked regions that use this information to communicate with this region.

System Action:

The field in error is highlighted.

User Action:

To change the TCP/IP Software Type, you must first *unlink* this region.

BAIPWI13

Cannot change port: multisystem link(s) exist using old port

Reason:

The IP Port for Inbound Connections cannot be changed because the old IP port is used by linked regions to communicate with this region.

System Action:

Field is set in error.

User Action:

To change the IP port number, you must first *unlink* this region.

BAIPWI14

TCP/IP START will be retried, interval is P1

Reason:

The TCP/IP interface failed to start. Another attempt to start the interface will be made after the interval *P1* has expired.

System Action:

The parameter group completes successfully and a timer is set to re-action it after the interval *P1* expires.

User Action:

None.

BAIPWI15

TCPIP P1 failed - see previous message(s)

Reason:

The TCPIP command was issued to either START or STOP the TCP/IP interface. *P1* is either START or STOP. The request failed and the previous message or messages will indicate the reason.

System Action:

The request fails.

User Action:

Contact your systems administrator.

BAIPWI16

Unable to find dataset for DD name P1

Reason:

The initialization for TCP/IP tried to allocate a dataset to the DD name *P1.* No suitable data sets could be found.

System Action:

The DD is not allocated.

User Action:

Specify a valid data set name that exists.

BAIPWI17

Unable to allocate DD P1 to data set P2

Reason:

Initialization failed to allocate a data set *P2* with the DD name *P1* .

System Action:

The DD is not allocated. Processing continues.

User Action:

Enter a valid data set name for the data set required.

BAIPWI18

Web menu registered for P1

Reason:

The web menu options for *P1* have been registered to the WebCenter interface *P1* is the name of the component for which the menu was registered.

System Action:

None.

User Action:

None.

BAIPWI19

P1 must be NONE. No web interface products configured.

Reason:

The web port cannot be set if there are no components configured that have a web interface implemented.

System Action:

Field set in error.

User Action:

You must set the field to NONE. Alternatively, you can restart the system with a product specified that has a web interface.

BAIPWI22

Value must be SAF or FILE.

Reason:

You have entered an incorrect value.

System Action:

The value is rejected.

User Action:

Enter SAF if your server certificates are stored by your security system (CA Top Secret, CA ACF2, or RACF) or FILE if your server certificates are stored in an HFS file.

BAIPWI23

SSL profile P1 created

Reason:

An SSL profile named *P1* has been created. SSL processing of WebCenter requests will use this profile.

System Action:

Processing continues.

User Action:

None.

BAIPWI24

Using SSL certificate handle P1, certificate name is: P2

Reason:

The server certificate named *P2* will be used for SSL processing. A handle named *P1* has been created to refer to this certificate.

System Action:

Processing continues.

User Action:

None.

BAIPWI25

SSL certificate is specified to be in P1, keyring name is: P2

Reason:

Server certificates will be retrieved from *P1. P2* identifies which certificate to use.

Note: No validation is performed for the existence of the server certificate.

System Action:

Processing continues.

User Action:

None.

BAIPWI26

Secure Socket Layer P1 used by WebCenter

Reason:

Specifies whether SSL is used by web browsers to access WebCenter.

System Action:

Processing continues.

User Action:

None.

BAIPWI27

Invalid value for *P1*

Reason:

The value provided is not a valid host name, IPv4, or IPv6 address. If a host name is specified, it must be a label or a sequence of labels separated by dots. Labels must start with a letter and can contain letters, numbers, and the hyphen character (-). Other special characters are not permitted.

Examples: 192.10.23.24, my.host.com, and los-angeles.ARN24

System Action:

The field is highlighted in error.

User Action:

Specify a valid IP host name or address.

BAIPWI28

Access URL Host Override P1 may not be valid

Reason:

Host override *P1* cannot be confirmed as valid. Either the overriding host name is not recognized by NSLOOKUP or the IP address is not associated with the stack used by this region, as specified in the SOCKETS Parameter Group (/PARMS).

System Action:

None.

User Action:

If the override value is invalid, correct it in the WEBCENTER parameter group (/PARMS). The value may be valid; this message can be caused by a domain name server problem.

BAIPWI29

NetMaster WebCenter status could not be determined

Reason:

WebCenter initialization has failed, and its status could not be determined.

System Action:

No recovery is possible, and initialization fails.

User Action:

Contact Technical Support.

BAIPWI30

P1* hostnames read from *P2

Reason:

The data set *P2* has been read in preparation for building the DNR static cache. *P1* host names were retrieved from the data set.

System Action:

None.

User Action:

None.

BAIPWI31

No entries loaded into DNR static cache

Reason:

The DNR static cache is not in use in this region. The DNR static cache is loaded from the hosts.local or the etc.ipnodes data set, or both, specified in the SOCKETS parameter group. If the data set is not specified, or the data sets are empty, DNR functions without a static cache, that is, all NSLOOKUP requests are resolved using the Domain Server only.

System Action:

None.

User Action:

None.

BAIPWI32

IPv6 socket support not enabled

Reason:

An IPv6 address has been entered in the Access URL Host Override field, but the sockets API supports IPv4 addresses only.

System Action:

The field is highlighted in error.

User Action:

Specify a host name or IPv4 address in the Access URL Host Override field. Alternatively, check the SOCKETS parameter group (/PARMS). For IPv6 support, the TCP/IP Software Type must specify IBMV6.

BAIPWI33

Invalid filter on line *p1*: *p2*

Reason:

The filter statement specified on line *p1* was invalid. *p2* provides the reason for the error.

System Action:

The filter is rejected, and the panel set in error.

User Action:

Correct the filter statement on line *p1* and retry.

BAIPWI34

Range not allowed in Server Port list

Reason:

A range has been detected in the server port list and is not allowed.

System Action:

The Server Port list is rejected, and the panel set in error.

User Action:

A range is usually indicated by the presence of the : or - characters. Remove these characters from your Server Port list.

BALK0001

P1 initialization completed. Connecting to remote host.

Reason:

Initialization has successfully completed. The process will now attempt to connect to the remote host. *P1* is the protocol used in the connection.

System Action:

None.

User Action:

None.

BALK0002

P1 processing terminated.

Reason:

The connection manager has terminated for protocol *P1.*

System Action:

None.

User Action:

See previous messages.

BALK0003

Invalid keyword value received, Keyword= P1 Value=" P2".

Reason:

A keyword parameter was either not specified or was specified with an invalid value. The keyword parameter was *P1* and the value was *P2.*

System Action:

The request is rejected and processing terminates.

User Action:

Specify the keyword parameter with a valid value.

BALK0004

Unable to obtain exclusive control to act as the P1 for P2.

Reason:

A request to act as the *P1* process for *P2* failed because another process was already performing the function. If KILLPREV=YES was specified then this process could not be flushed.

System Action:

The request is rejected and processing terminates.

User Action:

Try the action later or specify KILLPREV=YES to terminate the current process acting as the *P1* for *P2.*

BALK0005

Service package P1 does not exist or does not contain P2 procedure.

Reason:

The link manager could not continue processing because the service package P1 did not exist or the necessary procedure P2 did not exist in the package.

System Action:

Processing terminates.

User Action:

Ensure all required procedures are supported by the package or that the package name is correct.

BALK0006

TCP/IP Socket *P1* error, SOCID=*P2* RC=*P3* FDBK=*P4*. For protocol *P5*, port *P6* and host name/address=*P7*

Reason:

An error occurred executing a TCP/IP socket function. *P1* is the function being performed, *P2* is socket ID, *P3* is the return code from the function, *P4* is the feedback code from the function, *P5* is the protocol being used, *P6* is the port number at the remote host and *P7* is the remote host name or address (if applicable).

System Action:

The request fails and the connection will be retried.

User Action:

Ensure that the Host Name/Address and Port Number are correct. Check the error codes to determine the exact nature of the error. More information may follow in subsequent messages.

BALK0007

VCode=" P1", ErrNoDesc=" P2"

Reason:

This message described additional information associated with a previous error. *P1* is the vendor software specific error code and *P2* is a description of the socket error number received. The vendor specific code may not be present.

System Action:

None.

User Action:

See related messages. Check the error codes and description to determine the exact nature of the error.

BALK0008

P1 termination request received, P1 ending.

Reason:

A request to terminate the *P1* protocol client/server process *P2* was accepted. The process will terminate.

System Action:

Processing terminates as requested.

User Action:

None.

BALK0009

P1 connection established, socket ID is P2 port is P3 connected to P 4 on port P5

Reason:

A connection was successfully established with a remote system. The protocol being used is P1, the socket identifier is P2 and the port is
P3. *Th*e remote system is on address *P4* with port *P5.*

System Action:

None.

User Action:

None.

BALK0010

P1 connection will be automatically retried in P2 minutes.

Reason:

A connection failed and has been automatically scheduled to be retried in *P2* minutes. The connection is for protocol *P1.*

System Action:

None.

User Action:

None.

BALK0011

Unable to contact P1.

Reason:

A request to act as the Client process failed because the remote host name/address *P1* did not respond.

System Action:

Processing terminates.

User Action:

Ensure that the correct host name/address is specified and retry the request again.

BALK0012

P1 initialization completed. Registering on port P2.

Reason:

Initialization has completed successfully. The process is now attempting to register on a port. *P1* is the protocol used in the connection, and *P2* is the port number being registered for.

System Action:

None.

User Action:

None.

BALK0013

P1 registered for port P2 using socket ID P3.

Reason:

Registration was successful for protocol *P1* . The port that was registered is *P2* , and the socket identifier is *P3* .

System Action:

None.

User Action:

None.

BALK0014

P1 connection closed by client, server terminating.

Reason:

The remote client for a specific connection has terminated the connection to *P1* .

System Action:

Processing terminates as requested.

User Action:

None.

BALK0015

P1 initialization completed. Accepting client on port P2 socket P3.

Reason:

Initialization has completed successfully for a specific server. The protocol is *P1* and the port which the client connected to is *P2* . The socket being transferred is *P3* .

System Action:

None.

User Action:

None.

BAM01001

Link or Domain Name is not allowed from a subordinate system

Reason:

The Link or Domain Name field cannot be specified for certain options when the system is a subordinate in a multisystem complex.

System Action:

None.

User Action:

Blank out the Link or Domain Name field and work on the local system only.

BAM01002

Domain ID ' P1' is not a valid domain ID

Reason:

The Domain ID identified by *P1* does not conform to the specification for a valid Domain ID.

System Action:

None

User Action:

Correct the entry and retry the operation.

BAM01003

No domain id(S) selected from list

Reason:

No domains were selected from the displayed list.

System Action:

None

User Action:

None

BAM01004

Option invalid with multiple domains selected

Reason:

The selected option is invalid if multiple domains have been selected. The option is valid only for a single domain ID.

System Action:

None

User Action:

Correct the entry and retry the operation.

BAMC00001

Return code P1 from attempt to acquire lock

Reason:

An attempt to acquire the lock with primary name=Monitor and minor name=Record.Collector failed with return code *P1.*

System Action:

The Monitor Record Collector procedure terminates.

User Action:

This usually indicates that there is already an instance of $NMMC000 (the Monitor Record Collector) running.

BAMC00002

Attempt to load named segment P1 failed with return code P2

Reason:

A DIAG64 call to load the named segment *P1* failed with return code *P2.*

System Action:

The calling procedure terminates.

User Action:

For more information, see the supplied return code in Responses in the chapter "DIAGNOSE Code X'64' - Named Saved Segment Manipulation" in CP Programming Services.

BAMC00003

IUCV P1 failed with return code P2 and errno P3

Reason:

An Inter User Communication Vehicle (IUCV) *P1* operation has failed.

System Action:

The calling procedure terminates.

User Action:

Check that the other virtual machine in this IUCV connection is running. Check the OPTION IUCV statements in the directory entries for both virtual machines involved in this IUCV connection.

BAMC00004

***MONITOR data overwritten**

Reason:

An Inter User Communication Vehicle (IUCV) REPLY was issued to release a *MONITOR block of storage. The response indicates that the data was overwritten before it was copied.

System Action:

The current block of *MONITOR data is discarded. Processing continues.

User Action:

Ensure that the CA NetMaster virtual machine is assigned the necessary priority to ensure that it can process the data received from the *MONITOR system service in a timely manner.

BAMC00006

Return code P1 from CP command P2 - CP output follows

Reason:

The CP command *P2* failed with return code *P1.*

System Action:

Processing terminates.

User Action:

Dependent on CP command. Check subsequent NMMC00007 messages containing CP command output.

BAMC00007

P1

Reason:

This is output from a failed CP command.

System Action:

Processing terminates.

User Action:

Use this output to diagnose why the CP command from message NMMC00006 failed.

BAMC00008

End of CP command output.

Reason:

This message indicates the end of CP command output contained in the series of NMMC00007 messages preceding this.

System Action:

Processing terminates.

User Action:

Use output from preceding LMDS00006 and LMDS00007 messages to determine which CP command failed and why.

BAMX0102

OPTION P1 ONLY SUPPORTED ON FOCAL POINT SYSTEMS

Reason:

The menu option you selected is available only on focal point systems within your multi-system complex. This region is not a focal point system.

System Action:

The request is rejected.

User Action:

Logon to a focal point system to use this option.

BASEC000

FUNCTION COMPLETED

Reason:

SAF authorization check completed successfully.

System Action:

Access is authorized.

User Action:

None.

BASEC001

INVALID CALL TO SECURITY PROCEDURE

Reason:

An internal call to the $NMSEC security procedure was invalid.

System Action:

Access is denied.

User Action:

If the security procedure has been modified, check to see if the code is correct. If it is correct or if the procedure has not been modified, contact Technical Support.

BASEC002

INVALID CALL TYPE P1

Reason:

An internal call to the $NMSEC security procedure used an invalid call type.

System Action:

Access is denied.

User Action:

If the security procedure has been modified, check to see if the code is correct. If it is correct or if the procedure has not been modified, contact Technical Support.

BASEC003

USER P2 NOT AUTHORIZED TO P1

Reason:

The user, *P2* , was not authorized for the *P1* function.

System Action:

User access is denied, and the attempt is logged.

User Action:

Contact your system security personnel to gain access.

BASEC004

UAMS SECCALL GET FAILED FOR USERID(P1) REGION(P2)

Reason:

A call to the UAMS security subsystem failed. The call was made on behalf of the *P1* user ID from the *P2* region.

System Action:

User access is denied, and the attempt is logged.

User Action:

This is an internal error. Contact Technical Support.

BASEC011

SECURITY CHECK FAILED RC= P1 SFRC= P2 SFREAS= P3 ENV= P4 P5

Reason:

A SAF call to verify access to a resource failed.
RC is the return code from the SAF interface (UTIL0039) SFRC is the sub-function return code SFREAS is the sub-function reason code ENV is environmental information
The most common RC/SFRC combinations are:
04 PROGRAM ACTIVATION FAILURE 04 Program not APF-authorized 08 Invalid parameter 0C Missing parameter 10 Parameters inconsistent
08 SAF INTERFACE FAILURE SAF/RACROUTE return codes: 04 Requested function was not processed 08 Requested function was processed, but failed
12 ACCESS VERIFICATION FAILURE RACROUTE REQUEST=VERIFY return codes: 04 No security profile defined 08 Password invalid 0C Password expired 10 New password invalid 14 Group definition is missing 18 Security exit denied access 1C User temporarily revoked 20 Security system not active 24 Access to group is revoked ?? Others as per specific security subsystem
16 ACCESS AUTHORIZATION FAILURE RACROUTE REQUEST=AUTH return codes: 04 Resource is not security protected 08 Resource access not allowed
99 NO ENTRY PARAMETERS

System Action:

User access is denied.

User Action:

Contact your system administrator. Use the error codes and messages provided above to investigate the cause of the error.
You also need:
- The SAF RACROUTE macro documentation
- The messages and codes documentation for your external security system (RACF, ACF2, or Top Secret)

Ensure that the region is running out of an authorized load library. Ensure that your external SAF security system is active.
Ensure that your security administrator has set up SAF security for use with this region correctly.

BASEC012

AUTHORIZATION FAILURE - RESOURCE IS NOT SECURITY PROTECTED

Reason:

A user tried to access a resource. A SAF call was done to check the user's authority level, but failed because the resource was not SAF protected. This message was written to the activity log, followed by the NMSEC019 message that lists the user ID, resource, and requested access.

System Action:

User access is denied.

User Action:

Ensure that your security administrator has set up SAF security for use with the region correctly.

BASEC013

AUTHORIZATION FAILURE - ACCESS DENIED

Reason:

A user did not have the level of access required to perform the requested function. This message was written to the activity log, followed by the NMSEC019 message that lists the user ID and requested access.

System Action:

User access is denied.

User Action:

Contact your security administrator to gain access.

BASEC019

P1

Reason:

This message was logged following any SAF check failure messages. It contains the parameters used by the failing SAF RACROUTE macro call. These parameters may include:
USRID - the ID of the user requesting access
GRPID - the user ID's SAF default group
CHKENV - the SAF checking environment (APPL|USER|FULL)
ACCTYP - the access type requested (READ|UPDATE|ALTER)
RSNAME - the SAF resource name
RSCLSS - the SAF class

System Action:

None.

User Action:

Use this information, and the information in the previous error message, to determine the cause of the error. The previous error message's User Action contains more specific suggestions.

BASOAP00

Service Desk record *P1 P2* created from alert *P3 P4*

Reason:

A CA Service Desk record was created from the alert identified by the resource and description of *P3*.

The record is identified by *P1*. *P2* is its internal reference number. *P4* indicates whether the record was created by automatic alert forwarding or by a trouble ticket request.

If the Service Desk server supports the ITIL user interface, an *Incident* record is created. Otherwise, a *Request* record is created.

System Action:

None.

User Action:

This record is now accessible to CA Service Desk users.

BASOAP01

Service Desk record not created, insufficient details for alert serial *P1*

Reason:

A request was received to create a CA Service Desk record from the CA NetMaster alert with the serial number shown; however, the alert description field was not provided.

System Action:

None.

User Action:

None.

BASOAP02

Service Desk record could not be created due to interface error.

Reason:

An attempt was made to create a CA Service Desk record from a CA NetMaster alert, but the attempt failed because of a communications error between CA NetMaster and the CA Service Desk server.

Specific error details are written to the activity log. The following are some likely causes of these failures:

- CA Common Services CAISDI/soap started task is not active
- Service Desk server is not active - Web server for Service Desk server is not active
- Network problems prevent IP access to Service Desk server
- Incorrect or incomplete implementation of the CA Common Services for z/OS SOAP Client component CAISDI/soap
- Incorrect or incomplete implementation of CA Service Desk
- Incorrect login user ID or password for CA Service Desk
- Service Desk server hostname cannot be resolved
- Incorrect authority to access Service Desk through SSL
- Incorrect setup of the SERVICEDESK destination:
  - The URL of the Service Desk server is incorrect
  - The CCI SYSID is incorrect

System Action:

None.

User Action:

Perform the following steps:

1. Examine the activity log for further error details in message BASOAP03.
2. Examine the output of the CA Common Services for z/OS CAISDI/soap SOAP Client started task. You may need to turn the DEBUG flag on for this started task (F *?taskname*,APPL=DEBUG).

You may need help from your Systems Programmer who implemented CAISDI/soap or your Service Desk Administrator to diagnose these conditions.

BASOAP03

P1 P2 P3 P4 P5 P6 P7 P8 P9

Reason:

This message provides diagnostic information for communication failures between CA NetMaster and CA Service Desk.

This communication uses the Web services SOAP protocol with the CA Common Services for z/OS CAISDI SOAP Client component named CAISDI/soap.

(CA NetMaster does not use CAISDI components CAISDI/med or CAISDI/els.)

Return Code	Feedback Code	
4	0	RC 4 Feedback 0 can have a variety of causes, including, but not limited to: ■ The SD Server URL is incorrectly specified in the Trouble Ticket interface or in the Alerts Parameter Group. If using the defaults, the URL may be incorrect in the CAISDI/soap startup parameters. ■ The CCI SYSID is incorrectly specified in the Trouble Ticket interface or in the Alerts Parameter Group. ■ If using SSL, there may be initialization errors in the gsk environment in the CAISDI/soap started task. If CASD169E gsk_environment_init error appears in the CAISDI/soap log, it can indicate setup and/or security errors in the certificate or keyring tasks of the SSL setup.
4	4	CA Common Services component CAISDI/soap returned a non-zero return code; sets the values for: ■ CAISDI/soap Return Code ■ CAISDI/soap Error Code ■ CAISDI/soap Error Message
8	0	Storage failure
8	4	Shutdown request in progress
8	8	NM SOAP subtask abend on this request
8	12	NM SOAP interface disabled, excessive abends

Return Code	Feedback Code	
8	16	■ Load failed for CAISDI/soap API modules; sets CAISDI/soap Error Message

For more information, see the following:

- Service Desk Integration Guide
- CA Common Services for z/OS Message Guide

System Action:

None.

User Action:

Perform the following steps:

1. Ensure that the following are correctly and completely implemented:
   - The CA Common Services for z/OS SOAP Client CAISDI/soap component
   - The CA Service Desk product
2. Ensure that the SERVICEDESK Trouble Ticket or Alert Forwarding destination is correctly set up on this region, that is, that the CCI SYSID and CA Service Desk URL values are correct.

The following are some likely causes of these failures:

- CA Common Services for z/OS CAISDI/soap SOAP client started task is not active.
- CA Service Desk server is not active.
- Web server for CA Service Desk server is not active.
- Network problems prevent IP access to Service Desk server.
- Service Desk server host name cannot be resolved.
- Incorrect setup of the SERVICEDESK destination:
  - The URL of the CA Service Desk server is incorrect.
  - The CCI SYSID is incorrect.
- Incorrect or incomplete implementation of the CA Common Services for z/OS SOAP Client component CAISDI/soap.

You may need help from the systems programmer who implemented CAISDI/soap and/or your CA Service Desk Administrator to diagnose these conditions.

BASOAP04

P1

Reason:

This message is the detail line for the response to a SD* command help subcommand. A subcommand of '?' or 'HELP' lists the available SD commands and their parameters.

System Action:

None.

User Action:

None.

BASOAP98

CA Service Desk Integration is not yet fully implemented

Reason:

You specified the SERVICEDESK type for the alert monitor trouble ticket interface or the alert forwarding destination.

Currently, Service Desk integration in this region is not fully implemented and you cannot specify the SERVICEDESK type.

Service Desk integration requires the following products:

- CA Service Desk r11 or later
- CA Common Services for z/OS r11 or later

System Action:

None.

User Action:

Discuss the implementation of CA Service Desk integration with your Systems Programmer and your CA Service Desk Administrator.

Before you can integrate with CA Service Desk from your region, you must complete the following tasks:

1. Install and set up CA Service Desk.

   Ensure that Web Services access is also set up for this product. See the CA Service Desk documentation.

   Note the URL/name of the server where this product is installed.

2. Install and set up the following:

   - CA Common Services for z/OS r11 or later, CAISDI/soap component
   - CA Common Services for z/OS r11 or later, CAICCI component

   See the CA Common Services documentation and the Service Desk Integration Guide.

3. Contact Technical Support and request the CA NetMaster APARs to enable integration. Apply these APARs and read any accompanying documentation.

After you complete the tasks, you should be able to specify the SERVICEDESK type for the alert monitor trouble ticket interface or an alert forwarding destination.

BASOAP99

P1

Reason:

This is a CAISDI/soap interface trace message. It contains details of OML SOAP verb invocations and results. OML global variable glbl$SOAPTRC=YES controls the production of these messages.

System Action:

None.

User Action:

None.

BASY9101

P1 not updateable - last set by parameter group P2

Reason:

The SYSPARM (*P1*) cannot be updated because it was previously updated by a Customizer parameter group (*P2*).

System Action:

None.

User Action:

System parameters that are set by Customizer parameter groups can only be changed by updating and actioning the parameter group.

BAUAIN01

UAMS Add error, User(P1) Msg(P2)

Reason:

An attempt to add a user or group definition to the UAMS database failed. *P1* is the ID of the user, and *P2* is the message set by the &SECCALL verb.

System Action:

The UAMS record is not added, and processing continues.

User Action:

Determine the cause of the error from the &SECCALL message. Correct the error, and rerun the $NMUAINI procedure to generate the default UAMS records.

BAUAIN02

Add failed for P1 UAMS records, refer to log

Reason:

The default UAMS record generator encountered one or more errors when attempting to add user and group definition records to the UAMS database. *P1* is the number of UAMS records which were not successfully created.

System Action:

None.

User Action:

Review the messages (with a prefix of 'BAUAIN') on the activity log to determine the cause of the errors.

BAUAIN03

SIGNON command failed for background user P1, refer to log

Reason:

A SIGNON command was issued for the background user identified by *P1* . This command failed. The reasons may be found in the activity log.

System Action:

Processing continues.

User Action:

Review the messages associated with the SIGNON command to determine the problem.

BAUAIN04

UAMS Get error, User(P1) Msg(P2)

Reason:

An attempt to get a user from the UAMS database failed.
P1 is the ID of the user and *P2* is the message set by the &SECCALL verb.

System Action:

Processing continues.

User Action:

Determine the cause of the error from the &SECCALL message, correct the background user name or rerun $NMUAINI with no parameters to define the background users for the region.

BAUAIN05

Check failed to find P1 UAMS records, refer to log

Reason:

A number of UAMS records were not found in the UAMS database. *P1* is the number of UAMS records which were not found.

System Action:

None.

User Action:

Review the messages (with a prefix of 'BAUAIN') on the activity log to determine the cause of the errors.

BAUAIN06

Full security exit in effect, UAMS definitions for background users not added.

Reason:

On this region, the UAMS dataset has been replaced by a full security exit.

System Action:

UAMS definitions will not be added for the background user IDs. Processing continues.

User Action:

None required. Default definitions are used if the security exit does not contain definitions for background user IDs.

BAUAIN07

User ~P1 does not have UAMS authority

Reason:

The user ID executing $NMUAINI does not have UAMS update authority.

System Action:

Background UAMS definitions are not added, and processing continues.

User Action:

To define the background users, log on to a user ID with UAMS update authority and run $NMUAINI again, with no parameters.

BAVL01

VSAM levels are not available

Reason:

The system maintenance level indicates a service pack has not been applied to the region. The VSAM file levels are not checked.

System Action:

None.

User Action:

If the region is created from a generally available (GA) product, apply service pack maintenance.

BAVL02

System VSAM base is: MODS *P1* PANELS *P2* OSCNTL *P3 P4 P5*

Reason:

The system maintenance level for distributed VSAM data is shown as follows:

P1 is the MODS level - menus, messages, web records, and so on.

P2 is the panels level.

P3 is the OSCNTL level - ASN1 maps.

P4 is RAMDB if Automation Services is licensed.

P5 is the RAMDB level.

Maintenance levels are in *yymm*, the year and month of service pack creation.

The level can also be one of the following values:

N/A indicates that the maintenance level cannot be found for the file.

user_id identifies the user that last changed the file record used to check maintenance levels. It is displayed if the maintenance level field does not start with "GL", indicating that the file may be corrupted or incorrect.

System Action:

None.

User Action:

If the levels match the LEVEL field in message N11416, the VSAM files are correct. If they do not match, check that the VSAM data installation performed at product installation is correct.

BAVSAM00

The VSAM Monitor is monitoring File Full, Errors, *P1*, *P2*

Reason:

The VSAM Monitor is active. *P1* and *P2* are optional monitoring conditions.

System Action:

The VSAM Monitor waits for VSAM EDS events.

User Action:

None.

BAVSAM01

The VSAM Monitor is waiting for NCLID *P1* to terminate

Reason:

The VSAM Monitor is initializing and a procedure with NCLID *P1* holds the lock required to complete initialization.

System Action:

The VSAM Monitor waits for the lock to be released.

User Action:

If this message persists, contact Technical Support.

BAVSAM02

Message queue overflow for the VSAM Monitor

Reason:

The VSAM Monitor has experienced message queue overflow. Some events may not be processed.

System Action:

The VSAM monitor continues to wait for events.

User Action:

Contact Technical Support.

BAVSAM03

Response queue error for the VSAM Monitor, FDBK= *P1*

Reason:

The VSAM Monitor has experienced message queue errors when profiling for events. *P1* is the feedback code - 4 indicates a timeout and 8 is message queue overflow.

System Action:

VSAM monitoring terminates.

User Action:

Contact Technical Support.

BAVSAM04

VSAM file full or extent count threshold exceeded

Reason:

The VSAM Monitor has detected a file full or exceeding a threshold extent count defined in the Customizer Parameter Group, VSAMMONITOR. The Alert Text shows the extent count and High Allocated Relative Byte Address (HARBA) for data and index components. If extent count monitoring is active, data for any extent increase above the threshold is shown for up to the last 20 extensions. If a contiguous extent is obtained, the extent count does not increase; however, the HARBA for data or index is increased.

System Action:

If the file is full, no records can be added and attempts to add records fail; otherwise, file use continues.

User Action:

If the file is full, it must be increased in size. In some cases, for example, the VFS, USERIDS, OSCNTL, or RAMDB files, the region must be stopped to free the datasets that are crucial to system operation. In other cases, the file can be freed and another file allocated through a Customizer Parameter Group.

To recover from a file full:

1. Define a new and larger VSAM cluster.
2. Use REPRO to save the old file records in the new file.
3. Do one of the following:
   - Change the name of the file in the region, for example, in the RUNSYSIN member.
   - Rename the new and old files.

If the extent count threshold is reached, a file full condition can probably be avoided by increasing the file size as described.

BAVSAM05

VSAM monitor internal error *P1 P2*

Reason:

The VSAM Monitor has received an event *P2* but cannot process it. *P1* is the error as follows:

No DD name

Indicates that the DD name cannot be found in the event message.

No UDB info for ddname

Indicates that the UDB INFO request has failed with return code 8 or greater.

No UDB usage for ddname

Indicates that the UDB INFO request failed to retrieve usage data.

ON ERROR count

Indicates that the Monitor procedure encountered processing errors and has stopped monitoring. The errors are logged in messages GP1015 and GP1016 and can be seen by issuing the ILog command for the Customizer Parameter Group VSAMMONITOR.

MDO RC: *rc* FDBK: *fdbk* for ddname

Indicates that the UDB INFO request failed with an MDO error. The MDO return code and feedback code are shown.

System Action:

The event is ignored and monitoring continues, except for ON ERROR count where monitoring terminates.

User Action:

For ON ERROR count or if the DD name is missing, contact Technical Support; otherwise, issue a SHOW UDB=*ddname* command from OCS or command entry. If the UDB does not display, the error has occurred because the UDB was closed before the VSAM event monitor could retrieve data. If the UDB is displayed, contact Technical Support.

BAVSAM06

VSAM Monitor unexpected response *P1*

Reason:

The VSAM Monitor has received an unexpected message when profiling for events. *P1* is the message.

System Action:

VSAM monitoring terminates.

User Action:

Contact Technical Support.

BAVSAM07

File resize failed for *p1 p2*

Reason:

The VSAM Monitor was attempting to resize the file with DD name *p1* but was unable to complete the request for the reason *p2*. The following reasons can be given:

NDB files not supported

The file is an NDB, and the resize function does not support NDB files.

Unsupported dataset type *x*

The data set allocated to file *p1* is not supported. It must be a VSAM cluster with data and index components (KSDS). The file is of type *x*.

Cannot rename existing dataset

The existing data set cannot be renamed because an automatically generated new data set name that was not already defined could not be determined.

UDB get info error rc=*n* MDO rc=*m* fdbk=*p*

This error is returned from the VSAM file information retrieval utility. The return code was *n,* and the MDO return code and feedback code were *m* and *p* respectively.

IDCAMS error call-rc=*n* utility-rc=*m*

This error is returned from the IDCAMS utility. The return code from the utility invocation interface was *n* and the utility return code was *m*. Contact Technical Support, providing all the related messages from the log.

phase *x* error, MSG=*y*

The resize utility could not proceed because of an error that was encountered during one of the processing phases of the operation. The message *y* describes the error. The possible processing phases are:

GETATTR indicates that the resize utility was attempting to get information about the file (including data set name, open options, and current size allocation). This action failed, and the file was not resized; however the existing file is still allocated, open, and in use.

CL-UNALL indicates that the resize utility tried to close and unallocate the file so that it could be resized, but the action was unsuccessful. The message was returned from the close/unallocate utility. The file may be in an inaccessible state if it was closed.

RENAME indicates that the resize utility tried to rename the existing file to a new name, but the action failed. The output from the IDCAMS utility that performed the operation is written to the log. The file may be in an inaccessible state if it was partially renamed. Check the log for the IDCAMS output to determine what the problem was and manually resize the data set (see User Action).

DEFINE indicates that the resize utility tried to define a new VSAM file with more available space, but the action failed. The output from the IDCAMS utility that performed the operation is written to the log. The original file has been renamed to a temporary name and is used to REPRO into the new file when you manually resize the file (see User Action).

ALL-OP indicates that the resize utility successfully completed the resize operation on the file, but was unable to re-allocate and re-open the file to the region. The message was returned from the allocate/open utility. The file may be in an inaccessible state and will need to be manually allocated and opened.

Unsupported DD name

The data set allocated to file *p1* is not supported. Only specially identified files are eligible for the automatic resizing option.

System Action:

File resizing terminates.

User Action:

Check the reason for the error, and check the log for any additional messages describing the situation.

When you know what the problem is, you can resize the data set manually. The following steps guide you in resolving the problem and resizing the file:

1. Depending on where in the resize process the failure occurred, you may need to unallocate the file from the region. Issue the following commands in this order to free the file from the region:

   `UDBCTL CLOSE=`*`ddname`*

   `UNALLOC DD=`*`ddname`*

   Note: *ddname* is the file identified in the message.

2. After the file has been freed from the region, create an IDCAMS batch job to delete and define a new file, and then REPRO the contents of the old file into the new one.

   Note: If the resize process failed and left the original file renamed, then use this file as the INDATASET for the REPRO command of you IDCAMS job.

   Important! Do not delete the original file until you have verified that the REPRO was successful, the file is allocated to the region, and no errors are issued in the log regarding this file.

3. After the file has been resized, you can reallocate the file to the region by actioning the parameter group that allocates the file. The following list relates the possible files to the parameter groups:

   MSDB is allocated by the MSDB - MSDB File Specification parameter group.

   Alternatively, you can issue the following commands to reallocate the file to the region, but be sure that you use the correct file disposition and UDBCTL OPEN parameters for that particular file:

   `ALLOC DD=`*`ddname`* `DSN=`*`datasetname`* `DISP=SHR`

   `UDBCTL OPEN=`*`ddname`*

   Note: *ddname* is the file identified in the message and *datasetname* is the data set to be allocated to the DD (check the parameter group for the correct dataset name)

BAVSAM08

p1

Reason:

This message is a wrapper message issued by the VSAM resizing utility. It encapsulates errors and informational messages encountered during the resizing process for a VSAM data set.

p1 is either another message or text output from the IDCAMS utility.

System Action:

None.

User Action:

Check other messages that indicate the overall success or failure of the resize process. Check the message in *p1* for details of the condition being reported.

BAVSAM09

Resizing of file *p1* initiated due to file full or excessive extents

Reason:

The file *p1* has exceeded the allowable number of VSAM extents or the file is full. The file will be extended to ensure that new data can be saved into the file. This message indicated that the file resizing process has begun for the file *p1*.

System Action:

The file resizing process begins.

User Action:

No action is required. Subsequent messages are issued to indicated the success of the operation.

BAVSAM10

Resizing of file *p1* completed successfully

Reason:

The file *p1* had exceeded the allowable number of VSAM extents, or the file was full. The file was successfully extended, and new data can be saved into the file.

System Action:

None.

User Action:

No action is required. The file was resized, and operations continue normally.

BAVSAM88

P1 : P2

Reason:

This message displays a VSAM monitor trace message. *P1* is the trace ID and *P2* is the trace text.

System Action:

None.

User Action:

None.

CAx Messages

CA0001

INVALID KEYWORD VALUE SPECIFIED, KEYWORD=*P1* VALUE=*P2*

Reason:

The CAS external interface procedure $CACALL failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2*.

System Action:

The request is rejected and procedure $CACALL terminates.

User Action:

Check the syntax of the call to procedure $CACALL.

CA0002

LOCK ERROR : PNAME=*P1* MNAME=*P2* TEXT=*P3*

Reason:

The CAS API procedure $CACALL failed during processing because it was unable to obtain an NCL procedure lock. *P1* is the primary name of the lock, *P2* is the minor name of the lock and *P3* is the text message set by the current holder of the lock.

System Action:

Procedure $CACALL ends.

User Action:

Wait and then retry the request. If the request still fails then contact the System Administrator.

CA0003

VARTABLE ERROR : TABLE=*P1* ACTION=*P2* FEEDBACK=*P3*

Reason:

An error occurred performing an action on a VARTABLE. *P1* is the name of the VARTABLE, *P2* is the action that was being performed and *P3* is the feedback code returned from the VARTABLE action.

System Action:

The request is rejected.

User Action:

Contact the systems administrator.

CA0004

INVALID RETURN CODE, PROCEDURE=*P1*, RETURN CODE=*P2*

Reason:

A procedure invoked by $CACALL return an invalid return code. *P1* is the name of the procedure in error and *P2* is the invalid return code that was returned by it.

System Action:

$CACALL ends with return code 8

User Action:

Contact the systems administrator.

CA0005

INVALID FEEDBACK CODE, PROCEDURE=*P1*, FEEDBACK CODE=*P2*

Reason:

A procedure invoked by $CACALL returned an invalid feedback code. *P1* is the name of the procedure in error and *P2* is the invalid feedback code that was returned by it.

System Action:

$CACALL ends with return code 8 and feedback 8

User Action:

Contact the systems administrator.

CA0006

VARIABLE $LHCRIT1 AND KEYWORD CRITERIA ARE MUTUALLY EXCLUSIVE

Reason:

The CAS external interface procedure $CACALL failed during request processing because it was invoked with a value set in variable $LHCRIT1 and a value set in keyword CRITERIA. Variable $LHCRIT1 and keyword CRITERIA are *mutuall*y exclusive.

System Action:

The request is rejected and procedure $CACALL terminates.

User Action:

Correct the execution of $CACALL and retry.

CA0007

MAXIMUM NESTING LEVEL REACHED

Reason:

The CAS external interface procedure $CACALL failed during request processing because the current nesting level exceeds the maximum allowed for actions processed via $CACALL.

System Action:

The request is rejected and procedure $CACALL terminates.

User Action:

None.

CA0008

VARIABLE $LHCRIT1 AND MDO $LHCRIT1 ARE MUTUALLY EXCLUSIVE

Reason:

The CAS external interface procedure $CACALL failed during request processing because it was invoked with a value set in variable $LHCRIT1 and a value set in MDO $LHCRIT1. Variable $LHCRIT1 and MDO $LHCRIT1 are mut*ually ex*clusive.

System Action:

The request is rejected and procedure $CACALL terminates.

User Action:

Correct the execution of $CACALL and retry.

CA0009

MDO $LHCRIT1 AND KEYWORD CRITERIA ARE MUTUALLY EXCLUSIVE

Reason:

The CAS external interface procedure $CACALL failed during request processing because it was invoked with a value set in MDO $LHCRIT1 and a value set in keyword CRITERIA. MDO $LHCRIT1 and keyword CRITERIA are mutually exclusive.

System Action:

The request is rejected and procedure $CACALL terminates.

User Action:

Correct the execution of $CACALL and retry.

CACS0100

P1 ID= P2 - P3

Reason:

Context Services External Interface Package trace is active. This message displays a Context Services trace record.

P1 ID= P2 - P3

Reason:

Context Services Server Initiator (front-runner) trace is active. This message displays a Context Services trace record.

P1 is the NCL ID.

P2 is the trace ID.

P3 is the trace text.

System Action:

None.

User Action:

Contact Technical Support.

CACS1001

Context Services Server Initiator has terminated - Server Name: P1 - Ha ndle: P2

Reason:

The Context Services Server Initiator has terminated in error.
This message is the first of a group of messages that traps the related error.
P1 is the Context Services Server procedure name.
P2 is the Context Services Server handl*e.*
This message is followed by a set of *CACS1002* messages that describe the error.

System Action:

The request terminates.

User Action:

Contact Technical Support.

CACS1002

P1

Reason:

The Context Services Server Initiator has terminated in error.
This message is part of group of messages that describe the error condition. *P1* is the error text.

System Action:

The request terminates.

User Action:

Contact Technical Support.

CACS1010

Context Services Server Initiator failure - Server Name: P1, Handle: P2 - Reason: P3

Reason:

The Context Services Server Initiator has failed.
P1 is the Context Services Server procedure name.
P2 is the Context Services Server handle.
P3 is the error text.

System Action:

The request terminates.

User Action:

Contact Technical Support.

CACS11001

Sort length for the P1 field is invalid-must be in the of Range 1 to 40

Reason:

The data type specified in *P1* requires a length to be specified. This length must be greater than 1 and less than 41.

System Action:

$CACS11S terminates in error.

User Action:

Correct the initiating procedure calling $CACS12I to specify a length field for all CHAR and REMSTR data types. The length must be in the range of 1 to 40.

CACS11002

The list processing environment has timed-out. Click the P1 tab to refresh the list

Reason:

If this list is inactive for more than two hours, the environment is cleared from the host. This ensures unused storage is cleared.

P1 specifies the name of the list displayed.

***S*ystem Action:**

The list processing environment is cleared.

User Action:

Click the tab that displays the name of the list (near the top of the page) to refresh the page, then click Execute to display the list.
If this does not correct the problem, review the Activity Log and look for any other error conditions that may have caused this problem. If the problem persists, contact Technical Support.

CACS11003

No data available.

Reason:

A request has been made to context services to retrieve data; however, there is no data available.

System Action:

None.

User Action:

Ensure the application using $CACS11S has returned data.

CACS11004

The list processing environment has timed-out. Click Execute to refresh the list

Reason:

If this list is inactive for more than two hours, the environment is cleared from the host. This ensures unused storage is cleared.

System Action:

The list processing environment is cleared.

User Action:

Click the Execute button to refresh the page.
If this does not correct the problem, review the Activity Log and look for any other error conditions that may have caused this problem. If the problem persists, contact Technical Support.

CACS11005

Data amount too large to display

Reason:

The amount of data returned in response to your request is too large for this environment to display.

System Action:

None.

User Action:

Click the Preferences button and reduce the number of items per page, then click Execute.
If the problem persists, contact Technical Support.

CACS1101

Trace P1 Phase(P2) P3 on P4

Reason:

This message displays an CSVM trace record. It includes the following information:
P1 -Procedure Name
P2 -Processing Phase
P3 -Time
P4 -Date

System Action:

None.

User Action:

Review messages as requested by Technical Support to determine if any delays are occuring during CSVM processing.

CACS1102

Trace P1 Phase(P2) P3

Reason:

This message displays an CSVM trace record. It includes the following information:

P1 - Procedure Name
P2 - Processing Phase
P3 - Function

System Action:

None.

User Action:

Review messages as requested by Technical Support to determine if any delays are occuring in CSVM processing.

CACS12001

P1 is invalid

Reason:

P1 is an invalid call type. Review procedure $CACS12I for more information about the following valid call types:
STARTSERVER
REFRESH
GETDATA
GETSORT
STOPSERVER
MESSAGEGET
MESSAGECLEAR

System Action:

The request terminates.

User Action:

Correct the call type and rerun the procedure.

CACS12002

The P1 call did not include SPROC parameter

Reason:

P1 requires a SPROC parameter that specifies the service procedure name for this context environment.

System Action:

The request terminates.

User Action:

Specify the SPROC procedure name and rerun the procedure.

CACS12003

MAXREC value P1 is invalid or out of range

Reason:

The MAXREC value specified in *P1* is out of range; it must be a number in the range of *500* to *10000* .

System Action:

The request terminates.

User Action:

Specify a valid MAXREC value.

CACS12004

P1 requires a valid handle specified on the HANDLE parameter

Reason:

The call type specified in *P1* does not have a handle specified.

System Action:

The request terminates.

User Action:

Specify a valid HANDLE value.

CACS12005

P1 is an invalid RECSTART value

Reason:

P1 is invalid; it must be a number greater than *1* .

System Action:

The request terminates.

User Action:

Specify a valid RECSTART value.

CACS12006

P1 is an invalid RECLIMIT value

Reason:

P1 is invalid; it must be a number greater than *1* and less than *100* .

System Action:

The request terminates.

User Action:

Specify a valid RECLIMIT value.

CACS12007

P1 does not include all mapping parameters

Reason:

P1 has been used with one of the following mapping paremeters specified:
MAPNAME
MAPSEG
MAPFIELD

System Action:

The request terminates.

User Action:

Specify a valid mapping parameter.

CACS12008

P1 is an invalid MAPDATA type

Reason:

P1 must be either NUM or CHAR.

System Action:

The request terminates.

User Action:

Specify a valid MAPDATA parameter.

CACS12009

P1 is invalid for $CACS12I or $CACS11S

Reason:

The Trace parameter *P1* is invalid; it must be set to one of the following:
0 -Trace messages are logged, detailing time, date, and parameters passed to $CACS12I and $CACS11S.
1 -Trace messages are logged, detailing time, date, passed parameters, and subroutine name.

System Action:

The request terminates.

User Action:

Specify a valid Trace parameter when invoking either $CACS12I or $CACS11S.

CACS1201

Trace P1 Phase(P2) P3 on P4

Reason:

This message displays an CSVM trace record. It includes the following information:
P1 -Procedure Name
P2 -Processing Phase
P3 -Time
P4 -Date

System Action:

None.

User Action:

Review messages as requested by Technical Support to determine if any delays are occuring during CSVM processing.

CACS1202

Trace P1 Phase(P2) P3

Reason:

This message displays an CSVM trace record. It includes the following information:

P1 - Procedure Name
P2 - Processing Phase
P3 - Function

System Action:

None.

User Action:

Review messages as requested by Technical Support to determine if any delays are occuring in CSVM processing.

CADB0011

VSAM error on file open: FileID *P1*, FileRC= *P2*

Reason:

An error occurred attempting to read a PSM definition. In the message:

P1 is the file ID
P2 is the file return code (&FILERC)

System Action:

The procedure terminates.

User Action:

For return code values, see the &FILE GET verb description in the NCL Reference.

CADB0021

User Action:

None.

CADB1201

No P1 definitions to display within selected criteria

Reason:

No CAS definitions exist for the type indicated (*P1*) after applying selection criteria.

System Action:

None.

User Action:

None.

CADB1202

No P1 selected from list

Reason:

No CAS entity was selected from the prompt list.

System Action:

The request is ignored.

User Action:

Enter a unique entity name or select an item from the list.

CAGLBL01

P1 P2* with value: *P3

Reason:

This message is issued for operations performed between Global Variables in memory and their persistent copies.

P1 is the Global Variable name.

P2 is the operation performed:

- Loaded
- Saved

P3 is the value of the Global Variable.

System Action:

None.

User Action:

None.

CAGLBL02

***P1 P2* Persistent Global Variables**

Reason:

An operation is performed on persistent global variables.

P1 is the operation performed:

- Loaded
- Listed
- Purged
- Saved (issued only when more than one variable is saved in a single call)

P2 is the number of persistent global variables affected.

System Action:

The indicated operation was performed on a number of persistent global variables.

User Action:

None.

CAGLBL03

P1* Global: *P2* Saved: *P3

Reason:

This message displays the values of the Persistent Global Variable.

P1 is the name of the Persistent Global Variable
P2 is the current (in storage) value of the Global Variable.
P3 is the external (persistent) value of the Global Variable.

Note: The values may be different if the Global Variable value is changed after it is loaded from the external storage and not saved.

System Action:

None.

User Action:

None.

CAGLBL09

Error: ***P1 P2 P3 P4 P5***

Reason:

This message is issued when an error occurs while processing Persistent Variables. It can be issued during object verification or the manipulation phase.

P1 describes the object that is the subject of verification or operation failure. It can be one of the following:

- Variable name or value.
- Operation performed on the variable, for example, like, load.

P2 describes the error. The following may be reported:

- Syntax or value errors, variable name too long (over 8 characters), value too long (over 256 bytes), name does not conform to the global variable name rules, and so on.
- Missing or mismatched specifications, for example, when the number of variables listed in Name is different to the list in Vars.
- Failed input or output operations. The message contains the additional, optional, information provided by the underlaying interfaces.
- Exceeds the limit of Persistent Variables that can be defined, which is set to 999.
- Internal error, which indicates run time problems with the code.

The following additional information is provided for failed input and output operations:

P3 is the Return Code (RC).

P4 is the Feedback (FDBK), when provided.

P5 is the additional message, when provided.

System Action:

None.

User Action:

Perform corrective action depending on the type of error and the additional information provided.

Contact your local Technical Support if the error is internal.

CAGLBL10

Name Len Text

Reason:

This is a copy of message N15110.

System Action:

None.

User Action:

None.

CAGLBL11

variablename variablename variablename variablename

Reason:

This is a copy of message N15111; however, persistent global variables are marked with # at the beginning.

None.

User Action:

None.

CAGLBL12

variablename leng text....

Reason:

This is a copy of message N15112 with the following applied:

- Names of persistent global variables are marked with *#* at the beginning.
- The text displays as many characters as fit the screen width; truncation is indicated by ... at the end of the line.
- The text value appears in blue if the first 230 characters are different to the corresponding persistent value.

System Action:

None.

User Action:

None.

CAGLBL13

END* -- *P1* GLBLs, *P2* PGVs, Maximum chain *P3

Reason:

This is a copy of message N15113; however, *P2* specifies the number of persistent global variables in the selection.

System Action:

None.

User Action:

None.

CAGLBL14

variablename leng text....

Reason:

This is an exact copy of message N15112; however, the text that appears is the value of the persistent global variable.

The text displays as many characters as fit the screen width; truncation is indicated by ... at the end of the line.

System Action:

None.

User Action:

None.

CAGLBL19

***P1* list of global variables follows (# indicates persistent):**

Reason:

This is the heading line issued in response to a SHOWGLBL (full) or SHOWGLBL *Name=varname* (selective) command (equated). Subsequent information lines follow.

Persistent global variables are indicated by # preceding their name.

Note: The SHOWGLBL command is defined by the EQUATE command. Another name can be selected by your installation.

System Action:

None.

User Action:

None.

CAGLBL20

The proper use of SHOWGLBL is:

Reason:

This is the first message issued when improper usage of the SHOWGLBL command is detected. It is followed by more messages giving usage details.

System Action:

None.

User Action:

Change the call syntax, using the guidelines provided in the messages that follow.

CAGLBL21

SHOWGLBL - Display all variables names

Reason:

This is one of the messages issued when improper usage of the SHOWGLBL command is detected.

SHOWGLBL without operands lists the names of all global variables used by the region. Names of global variables having persistence are prefixed with #. Four variables are listed per line.

System Action:

None.

User Action:

Change the call syntax to follow the guidelines provided by the messages.

CAGLBL22

SHOWGLBL Name= - Display names and values of selected variables

Reason:

This is one of the messages issued when improper usage of the SHOWGLBL command is detected.

SHOWGLBL NAME= lists the global variables with names starting with the given prefix and their values. Variables are listed one per line. If the variable has persistence, the persistent value is displayed in a separate line. If the persistent value is different from the current value, it is displayed in a different color.

System Action:

None.

User Action:

Change the call syntax to follow the guidelines provided by the messages.

CAGLBL23

SHOWGLBL Name=* - Display names and values of all variables

Reason:

This is one of the messages issued when improper usage of the SHOWGLBL command is detected.

SHOWGLBL Name=* lists all global variables with their values. Variables are listed one per line. If the variable has persistence, the persistent value is displayed in a separate line. If the persistent value is different from the current value, it is displayed in a different color.

System Action:

None.

User Action:

Change the call syntax to follow the guidelines provided by the messages.

CAPKG009

DNR SET ERROR ENCOUNTERED. SEE LOG

Reason:

An error occurred issuing the DNR SET command. The command and its reposnses are logged following this message.

System Action:

None.

User Action:

Refer to the following messages and deterine the cause of the error.

CAPKG010

Action failed, the map P1 does not exist

Reason:

An MDO assignment failed with Return Code 16 and Feedback Code 0. This indicates that the map *P1* does not exist in this system.

System Action:

The action terminates.

User Action:

Ensure that the OSCNTL file has been correctly updated during the installation and/or maintenance of this product.

CAPKG011

MDO action failed with RC= P1 FDBK= P2 for P3

Reason:

An MDO assignment failed. The Return Code was *P1* and the Feedback Code was *P2.* The map and component for which the error occurred was *P3.*

System Action:

The action terminates.

User Action:

See the NCL Reference for details of the codes.

CAPKG012

Function not supported for this operating system

Reason:

Some system functions are not supported for all operating systems. This includes writing output members to a PDS - not supported for VM.

System Action:

The action is not performed.

User Action:

None. This function is not supported for this operating system.

CAPKG013

P1 already exists

Reason:

The target member specified already exists and the Replace Member? option was set to NO.

System Action:

The member is not written.

User Action:

Specify a unique member name or change the Replace Member? field to YES.

CAPKG014

Output file is not a partitioned dataset

Reason:

The target file must specify a partitioned dataset.

System Action:

Field is set in error.

User Action:

Specify a partitioned dataset name.

CAPKG015

Timer ID

Reason:

This is the first line of a multi-line heading for the simple timer function.

System Action:

None.

User Action:

See the detailed line messages for an explanation of the timer details.

CAPKG016

Type Interval Trigger Limit Count Next Hit Time

Reason:

This is the second line of a multi-line heading for the simple timer function.

System Action:

None.

User Action:

See the detailed line messages for an explanation of the timer details.

CAPKG017

P1

Reason:

This is the first detail line for a simple timer. *P1* is the name of the Timer ID that is being displayed. Subsequent lines describe the timer in detail.

System Action:

None.

User Action:

None.

CAPKG018

P1 P2 P3 P4 P5

Reason:

This is the second detail line for a simple timer.

P1 indicates the type of the timer, it can be:
AT - The timer is scheduled to run at a specific time of the day on the date(s) that match the timer specification.
EVERY - The timer is scheduled to run after a specific time interval has passed.

P2 is the interval trigger. For an AT timer this is the time of day at which the timer will run on the dates that match the date pattern. For an EVERY timer this is the time interval between successive runs of the timer.

P3 is the limit of the timer, that is, the maximum number of executions that the timer is allowed to run.

P4 is hit cont or the number of times that the timer has actually run.

P5 is the next time the timer is due to run.

System Action:

None.

User Action:

None.

CAPKG019

P1

Reason:

This is the third detail line for a simple timer.

P1 shows the command that runs when the timer is triggered. Only the first 100 bytes of the command are shown.

System Action:

None.

User Action:

None.

CAPKG020

Timer set failed for timer P1 at time P2, MSG= P3

Reason:

The timer *P1* failed because the system could not schedule the timer at *P2.* The error message received is *P3.*

System Action:

The timer is deleted and processing continues with the next timer.

User Action:

Contact your local support representative and supply the timer details and when the timer failure occurred.

CAPKG021

P1

Reason:

This is a debugging message issued by the simple timer function.

System Action:

None.

User Action:

Collect these messages and send them to the support represenative that requested them.

CAPKG022

No timers match the specified pattern or there are no defined timers.

Reason:

The request to display timers could not be satisified because no timers matched the specified pattern, or if no pattern was specified, then no timers are currently defined.

System Action:

None.

User Action:

None.

CAPKG023

Timer dump: ID= P1 AT?= P2 HC= P3 HT= P4 LM= P5 NH= P6 OD= P7 SPEC= P8 T R= P9 HI= P10

Reason:

This is a timer dump display for timer **P1.** This message is only issued when errors are encountered during timer setting. This message is used by support for debugging purposes.

System Action:

None.

User Action:

Contact your local support representative and supply this timer message and when the timer failure occurred.

CAPKG024

Timer P1 not defined.

Reason:

The request to delete timer *P1* failed because the timer does not exist.

System Action:

None.

User Action:

None.

CAPKG025

P1 timers deleted.

Reason:

The request to delete a timer(s) was successful and *P1* timers were deleted.

System Action:

None.

User Action:

None.

CAPKG026

P1 is not a valid SYSDB dataset

Reason:

The SYSDB ID specified (*P1*) is not allocated or is not a SYSDB data set because one of the following reasons apply:
- The file is not allocated and open.
- The SYSDB ID is not a KSDS.
- The keylength is incorrect. The keylength for a SYSDB is 120.

System Action:

The request is rejected.

User Action:

Specify a valid SYSDB data set ID.

CAPKG027

P1 is not open with read-write access

Reason:

The SYSDB ID specified (*P1*) is open with read-only access. Read-write access is required.

System Action:

The request is rejected.

User Action:

Specify a valid SYSDB data set ID.

CAPKG028

P1 is not open with correct share option

Reason:

The SYSDB ID specified (*P1*) is open but does not have the correct share option. A share option of LSR or RLS was requested, but the file was not opened with either option.

System Action:

The request is rejected.

User Action:

Specify a valid SYSDB data set ID.

CAPKG029

P1 is not a valid SYSDB dataset

Reason:

The SYSDB data set name specified (*P1*) does not exist or is not a SYSDB data set.

System Action:

The request is rejected.

User Action:

Specify a valid SYSDB data set name and retry.

CAPKG030

P1

Reason:

This is a disgnostic message; it contains variable information to use for support issues.

System Action:

None.

User Action:

Collect all of these messages and send them to the support representative that requested the disgnostic process.

CAPKG030W

Server token set failed! *p1="p2"* rc=*p3* fdbk=*p4*

Reason:

The region cannot set a z/OS name/token to the indicated value.

p1 identifies the name/token.

p2 is the required value.

p3 is the return code.

p4 is the feedback code.

System Action:

The name/token is not set and is inaccessible to other address spaces on the z/OS system (LPAR).

User Action:

For assistance, contact CA Support.

CAPKG031W

Server *p1* socket registration failed! *p2* rc=*p3* fdbk=*p4* errno/verrin=*p5 p6*

Reason:

A server could not register for a TCP socket.

p1 identifies the server.

p2 is either a number (requesting a static port on the socket registration) or a z/OS name/token (requesting a random ephemeral port on the socket registration).

p3 is the return code.

p4 is the feedback code.

p5 is the socket error number and vendor-specific error code.

p6 (optional) is a brief description of the error number.

System Action:

The server is temporarily disabled, and another registration attempt is made in 30 seconds.

User Action:

If a port is indicated, then the problem may be that another application is using that TCP port number. Change either the port number used by that application, or the port number configured for the region and the client.

If a token is indicated, then a general problem with the TCP sockets interface exists on the stack, preventing ports from being allocated to new TCP servers. Check the error codes. For assistance, contact CA Support.

CAPKG032I

Server *p1* socket registered on port *p2 p3* servlet=*p4*

Reason:

A server has successfully registered a TCP socket on a port.

p1 identifies the server.

p2 is the port number.

p3 (optional) is the name/token that stores the port number.

p4 is the name of the procedure that handles the incoming connections on the port.

System Action:

None.

User Action:

None.

CAPKG033W

Server *p1* TCP connection accept failed for port *p2 p3* rc=*p4* fdbk=*p5* errno/verrin=*p6 p7*

Reason:

A server failed to accept a TCP connection on a port.

p1 identifies the server.

p2 is a port number.

p3 (optional)is the name/token that stores the port number.

p4 is the return code.

p5 is the feedback code.

p6 is the socket error number and vendor-specific error code.

p7 (optional) is a brief description of the error number.

System Action:

The server is disabled temporarily, and another registration attempt is made in 30 seconds.

User Action:

Check the error codes. For assistance, contact CA Support.

CAPKG034W

Server *p1* APPC start failed for servlet *p2* rc=*p3* msg=*p4*

Reason:

A server attempted to APPC-start a servlet procedure but encountered an error.

p1 identifies the server.

p2 identifies the servlet procedure.

p3 is the return code.

p4 (optional) is a message that further describes the error.

System Action:

The specific connection is closed.

User Action:

Check the error codes. For assistance, contact CA Support.

CAPKG035W

Server *p1* TCP connection socket transfer failed! Socket=*p2* NCLID=*p3* rc=*p4* fdbk=*p5* errno/verrin=*p6 p7*

Reason:

A server failed to transfer a TCP connection to a servlet.

p1 identifies the server.

p2 is the TCP socket ID.

p3 is the NCL ID of the servlet process.

p4 is the return code.

p5 is the feedback code.

p6 is the socket error number and vendor-specific error code.

p7 (optional) is a brief description of the error number.

System Action:

The specific connection is closed.

User Action:

Check the error codes. For assistance, contact CA Support.

CAPKG036I

Server *p1* has had *p2* TCP connections since *p3*

Reason:

This message displays the following information about a server:

p1 identifies the server.

p2 is the number of connections accepted by the server since starting.

p3 is the time when the server started.

System Action:

None.

User Action:

None.

CAPKG037I

Server *p1* stats: *p2* conns, *p3* in error, *p4* bytes received, *p5* bytes sent

Reason:

This message displays the total statistics for all connections on a server:

p1 identifies the server.

P2 is the total connections to the server.

p3 is the number of those connections that failed with an error.

p4 is the total number of bytes received for all connections.

p5 is the total number of bytes sent for all connections.

System Action:

None.

User Action:

None.

CAPKG038I

p1

Reason:

This message contains connection information.

System Action:

None.

User Action:

None.

CAPKG039E

Socket call failed in *p1* : rc="*p2*" fdbk=*p3* errno=*p4* line=*p5*

Reason:

This error message is issued from a server procedure when a socket call fails.

p1 identifies the procedure.

p2 is the return code from the operation.

p3 is the feedback code.

p4 is the socket error number.

p5 identifies the line in the procedure where the call was made.

If further explanation of the error number is available, a second message follows.

System Action:

The servlet procedure is terminated. Most servers restart automatically.

User Action:

Check that the server has restarted.

CAPKG039I

P1

Reason:

This information message is issued after CAPKG039E and contains a further explanation of the error number if available.

System Action:

The servlet procedure is terminated. Most servers restart automatically.

User Action:

Check that the server has restarted.

CAPKG040W

***p1* servlet socket transfer notification timed out.**

Reason:

A socket servlet was started to handle a TCP connection to a server. The connection socket was not transferred to the servlet within a reasonable time limit.

p1 identifies the server.

System Action:

The specific connection is closed.

User Action:

Check the log for other errors. For assistance, contact CA Support.

CAPKG041W

p1* servlet received an unexpected socket transfer msg: *p2

Reason:

A socket servlet received an unexpected notification message for a socket transfer.

p1 is the name of the server.

p2 is the message received.

System Action:

The specific connection is closed.

User Action:

Check the log for other errors. For assistance, contact CA Support.

CAPKG042W

p1* servlet socket transfer accept failed. rc=*p2* fdbk=*p3* errno/verrin=*p4 p5

Reason:

A servlet failed to accept a socket transfer of a TCP connection from a server.

p1 identifies the server.

p2 is the return code.

p3 is the feedback code.

p4 is the socket error number and vendor-specific error code.

p5 (optional) is a brief description of the error number.

System Action:

The specific connection is closed.

User Action:

Check the error codes. For assistance, contact CA Support.

CAPKG043W

Server *p1* has not yet registered.

Reason:

A server is yet to successfully register a TCP socket on a port.

p1 identifies the server.

System Action:

Registration is retried every 30 seconds.

User Action:

Check the job log for error messages.

CAPLOG01

User Action:

Coordinate your update with the user listed by the message.

CAVS009

Persistent Variables API failed, *P1*

Reason:

Procedure providing persistent variables services failed with RC=8. *P1* is the accompanying message.

System Action:

None.

User Action:

Investigate possible I/O problems, and check the activity log for more details. If Internal Error reported, contact local Technical Support with log details.

CAWV0001

Invalid shortcut/command (for help:put cursor on this line, press F1)

Reason:

An unrecognized shortcut or command was entered.

System Action:

None.

User Action:

Enter a valid shortcut, menu option, panel path, or command.

Note: The following documentation assumes that shortcuts are enabled and preceded with a /, which is the default shortcut character. The shortcut character is defined in the PMENUCONTROL parameter group, and can be set to something other than a / or disabled. When enabled, the Primary Menu displays the shortcut character on the right of the title line (for example, SCHAR=/).

Shortcuts

Enter a shortcut name, preceded by a slash, at the ===> prompt (for example, /levels, /parms, or /ipmon).

This takes you directly to the function.

To see a list of all shortcuts and their associated functions, enter a single slash (/) at the ===> prompt. Select the desired shortcut from the list by entering **S** next to it.

If a shortcut exists for a menu option, it is displayed in turquoise to the right of the option description.

You can also combine shortcuts with menu options (for example, /bcast.s or =/bcast.s).

You can invoke shortcuts in two ways:

1. A 'nested' shortcut
2. A shortcut skip

To retain and nest the current screen level, use a nested shortcut:

/shortcut_name

Exiting brings you back to the last nested screen in this window. You can next screens to a maximum of 64 levels.

To close all currently nested screen levels, use a shortcut skip:

=/shortcut_name

Exiting takes you back to the Primary Menu.

If you no longer need any nested screens, a shortcut skip saves storage and resources.

(If you are currently at the Primary Menu, a nested shortcut and a shortcut skip behave the same.)

Menu Option

Each menu option is identified by a one- to three-character option string, displayed in yellow.

Enter the option you want at the ===> prompt.

Panel Path

Like shortcuts, panel paths move directly to a function without having to access each submenu between it and the current menu. A panel path consists of multiple menu options separated by periods (for example =U.M).

Also, like shortcuts, the = sign functions as a skip character, closing all nested screens and effectively entering the path from the Primary Menu. (If you are currently at the Primary Menu, the skip character is not required.)

Frequently used panel paths have associated shortcuts. If you do not remember a shortcut, enter / at the ===> prompt for a list. Select one from the list, or enter it at the ===> prompt.

There is no difference between accessing a function using a panel path skip or a shortcut skip, although the shortcut should be easier to remember. Both methods close the current screen and go straight to the function.

Entering == at the ===> prompt from any panel closes all nested screens and returns you to the Primary Menu.

CAWV0002

Invalid scroll amount. Must be CSR, DATA, HALF, PAGE, MAX or 1 to 9999

Reason:

An invalid scroll amount was specified. Valid scroll amounts are CSR, DATA, HALF, MAX, PAGE or a number between 1 and 9999.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Enter a valid value in the scroll field.

CAWV0003

Press ENTER to confirm selection or press CANCEL

Reason:

This is a prompt message which is displayed to allow the user to verify that the selected actions are correct before they are carried out.

System Action:

None.

User Action:

Press the ENTER key to execute the highlighted selections, or press the CANCEL function key to cancel the requested actions.

CAWV0004

***p1* is not a valid action on this line. Select from the following list**

Reason:

Action *P1* was entered but could not be processed because of one of the following reasons:

- The action does not exist. It may have been mistyped.
- The action is recognized, but it does not work on this line.

The action may be valid on other lines. This display may contain lines at different levels of hierarchy, such as headings, subheadings, and data. Lines may also present data from very different functions. Because of this, actions that work on one line may not make sense on another.

The *HLP* (Help) action is available on every line. Alternatively, use F1=Help with the cursor on the required line.

Pressing *Enter* , with the cursor anywhere on a line, invokes the default action for that line. This is particularly useful with expandable and collapsable lines.

System Action:

The valid list of supported actions is presented. You should choose an action from this list.

User Action:

Check that you have not mistyped the action or entered it on an incorrect line.

Select an action from the list of valid actions presented.

Use the online help for more information about available actions.

CAWV0005

Timeout processing request! No response received from requested action

Reason:

A user request failed and the process did not return to the caller. The viewer waited up to 5 seconds but no response was received.

System Action:

Action is terminated and processing continues.

User Action:

Check the log for any error messages and retry the request.

CAWV0006

Invalid FIND command. Syntax is Find 'string' {NEXT|PREV|FIRST|LAST}

Reason:

A user requested the FIND command but specified invalid parameters. The valid syntax for the find command is:
FIND string {NEXT|PREV|FIRST|LAST} ----
The string can be specified as a single string with no imbedded blanks or a quoted string with imbedded blanks or other special characters. The default find option is NEXT. The valid abbreviations for FIND are: F, FI and FIN.

System Action:

Command is rejected.

User Action:

Correct the syntax and re-issue the command.

CAWV0007

No previous locate command has been entered. Specify key to locate

Reason:

A user requested the Locate command but specified invalid parameters. The valid syntax for the locate command is:

LOCATE key [NEXT|PREV|FIRST|LAST]

The key can be specified as a single string with no imbedded blanks or a quoted string with imbedded blanks or other special characters. The default locate option is NEXT. The valid abbreviations for LOCATE are L, LO, LOC, LOCA and LOCAT.

Once a locate command has been specified, then specifying locate without parameters will do the same locate from the next key position.

System Action:

Command is rejected.

User Action:

Specify a complete locate command.

CAWV0008

Invalid LOCATE command. Syntax is LOCATE key ?NEXT|PREV|FIRST|LASTÙ

Reason:

A user requested the Locate command but specified invalid parameters. The valid syntax for the locate command is:
LOCATE key ?NEXT|PREV|FIRST|LASTÙ ----
The key can be specified as a single string with no imbedded blanks or a quoted string with imbedded blanks or other special characters. If you do NOT want the key to be automatically uppercased then specify it as:
c'key'
The default locate option is NEXT. The valid abbreviation for LOCATE is L.

System Action:

Command is rejected.

User Action:

Correct the syntax and re-issue the command.

CAWV0009

Key ' P1' located

Reason:

A user request to locate the key *P1* in the display completed successfully.

System Action:

The display is positioned with the located record as the first line on the display.

User Action:

None.

CAWV0010

Bottom of key ranges reached

Reason:

The repeat locate command was entered and the locate position is already at the last set of key ranges in the display.

System Action:

None.

User Action:

You can repeat locate to have the locate begin at the first key range.

CAWV0011

Top of key ranges reached

Reason:

The repeat locate command was entered and the locate position is already at the top set of key ranges in the display.

System Action:

None.

User Action:

You can repeat locate to have the locate begin at the last key range.

CAWV0012

No previous find command has been entered. Specify string to find

Reason:

A user requested the FIND command but specified invalid parameters. The valid syntax for the command is:

```
FIND string [NEXT|PREV|FIRST|LAST]
```

The string can be specified as a single string with no imbedded blanks or a quoted string with imbedded blanks or other special characters. The default find option is NEXT. The valid abbreviations for FIND are: F, FI and FIN.

Once a find command has been specified, then specifying find without parameters will do the same find from the next cursor position.

System Action:

Command is rejected.

User Action:

Specify a complete find command.

CAWV0013

Invalid FIND command. Syntax is FIND string ?NEXT|PREV|FIRST|LASTÙ

Reason:

A user requested the Locate command but specified invalid parameters. The valid syntax for the locate command is:
FIND string ?NEXT|PREV|FIRST|LASTÙ ----
The string can be specified as a single word with no imbedded blanks or a quoted string with imbedded blanks or other special characters. If you do NOT want the string to be automatically uppercased then specify it as:
c'string'
The default find option is NEXT. The valid abreviation for FIND is F.

System Action:

Command is rejected.

User Action:

Correct the syntax and re-issue the command.

CAWV0014

Characters ' P1' found

Reason:

A user request to find the string *P1* in the display completed successfully.

System Action:

The display is positioned with the found string visible on the display and the cursor on the first character of the string.

User Action:

None.

CAWV0015

Invalid widget share prefix " P1" specified!

Reason:

An invalid widget share prefix was defined for a widget. Valid shares must be at least 3 characters long and cannot start with @ or #. *P1* is the share specified.

System Action:

Widget viewer terminates.

User Action:

Contact Technical Support.

CAWV0016

No default option defined for this line

Reason:

The default selection option '/' is not valid on this line because the line has no default option.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the selection option and retry.

CAWV0017

The zoom option is not relevant on this line

Reason:

The zoom selection option is not valid on this line because the line does not define a zoomable presentation component.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the selection option and retry.

CAWV0018

The expand/collapse option is not relevant on this line

Reason:

The expand/collapse selection option is not valid on this line because the line does not define an expandable/collapsable presentation component.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the selection option and retry.

CAWV0019

Remote system *P1* is not active. Cannot display presentation component

Reason:

A presentation component could not be displayed because it is a remote component and the system on which it is located is not active or the link to that system is not active. The remote system is *P1*.

System Action:

None.

User Action:

Ensure that the remote system and the links to that system are active.

CAWV0020

Bottom of data reached

Reason:

The bottom of data was reached when trying to find a string specified with the Find command.

System Action:

None.

User Action:

To continue the search press the Find function key. The search will continue from the top.

CAWV0021

Top of data reached

Reason:

The top of data was reached when trying to find a string specified with the Find command.

System Action:

None.

User Action:

To continue the search press the Find function key. The search will continue from the bottom.

CAWV0022

***p1* lines searched**

Reason:

A request to find characters stopped because the search limit was reached. *P1* is the number of lines searched since the search was initiated.

System Action:

Searching stops.

User Action:

Repeat the find command without any parameters or press the Find function key to continue the search. The search continues from where it finished last.

You can use the FPROMPT command to change the number of lines searched before this message is re-issued. The FPROMPT command has the following syntax:

```
FPROMPT [ 0 | NO | OFF | DFLT | DEFAULT | number ]
```

You can turn off the find prompt message by using the 0 or NO or OFF parameters with the command. Specifying DFLT or DEFAULT resets the current setting to the system default. Specify a number to set the maximum number of records to search before the prompt message is issued. If no parameters are passed, a message is issued indicating the current setting.

CAWV0023

p1 records searched and didn't find text: p2

Reason:

The text *P2* was not found. The total number of records searched was *P1.*

System Action:

The find command terminates.

User Action:

None.

CAWV0024

APPC error for p1: p2

Reason:

An APPC error occurred attempting to remotely execute a procedure on system *P1.* The error may be link-related or the target procedure failed during execution. *P2* provides more information about the error; however, you should check the log for all related error messages that fully describe the error.

System Action:

Processing terminates.

User Action:

Check the log for more details about the cause of the problem. The following are the most common problems:
- The link specified in *P1* is not defined or does not support APPC.
- The target procedure does not exist on the remote system. This may be due to incompatible versions or the function attempted is not available on the remote system
- The target procedure terminated in error on the remote system.
The log messages assist in determining what the actual cause is and what further action may be required.

CAWV0025

Find prompt is set to *p1*

Reason:

The maximum number of lines searched for a find command before a prompt is issued is set to *P1.*

System Action:

None.

User Action:

None.

CAWV0026

Find prompt turned off

Reason:

The maximum number of lines searched for a find command before a prompt is issued has been turned off. Prompting will not occur for the find command.

System Action:

None.

User Action:

None.

CAWV0027

Find prompt value invalid, must be a number between 100 and 9999999999

Reason:

The parameter to the FPROMPT command is invalid. It must be a number between 100 and 9999999999.

System Action:

Command rejected.

User Action:

Correct the paramter and retry the command.

CAWV0028

The maximum number that can be selected has been exceeded, maximum=*p1*

Reason:

The maximum number of entries that could be selected on this list was exceeded. The maximum is *P1*.

System Action:

The list is redisplayed with fields set in error.

User Action:

Reduce the number of selected entries to be less than or equal to the maximum, and retry.

CAWV0029

Request canceled

Reason:

The user pressed the CANCEL key or entered the CANCEL command, and the function was canceled.

System Action:

The function is terminated.

User Action:

None.

CAWV0030

Expanded section empty

Reason:

You tried to expand an expandable/collapsable presentation component. However, there were no lines to display.

System Action:

None.

User Action:

None.

CAWV0031

Widglets exceeded system maximum of *p1.* ID= *p2.p3.p4*

Reason:

The number of widglets contained within a widget has exceeded the system maximum of *P1.* The ID identifies the current widget being processed and consists of package *P2,* class *P3* and name *P4.*

System Action:

Processing is terminated.

User Action:

Please contact your local support representative.

CAWV0050

Invalid action. Use S,Q,/ or cursor to select item

Reason:

An invalid action was used to select an item from a list of valid values.

System Action:

Field is set in error.

User Action:

Use the S, Q or / action to select the required value from the list.

Alternatively you can place the cursor beside the required value on the list and press the enter key; this automatically selects the item from the list.

DBx Messages

DB0001

INVALID PARAMETERS FOR *P1* ACTION

Reason:

The parameters passed to the Database Manager are not compatible with the action requested.

System Action:

The call is rejected.

User Action:

Correct the Database Manager call and retry.

DB0002

SEQUENCE *P1* NOT FOUND

Reason:

The specified sequence name does not exist.

System Action:

The Database Manager call is rejected.

User Action:

Correct the Database Manager call and retry.

DB0003

INVALID PARAMETERS FOR *P1* SEQUENCE

Reason:

The Database Manager call parameters conflict with those used when the sequence was created.

System Action:

The Database Manager call is rejected.

User Action:

Correct the Database Manager call and retry.

DB0004

FATAL DATABASE ERROR - FILE= *P2* FUNC= *P1* FILERC= *P3* VSAMFDBK= *P4*

Reason:

An error occurred when trying to access the database file.

System Action:

The Database Manager call is rejected.

User Action:

Determine the cause of the error from the return code and feedback code indicated and retry.

DB0005

FILE *P1* NOT AVAILABLE

Reason:

The file in which the requested category resides has not been opened.

System Action:

The Database Manager call is rejected.

User Action:

Open the file in which the requested category resides and retry.

DB0006

FILE ACCESS DENIED

Reason:

The requesting user is not authorized to access the requested file.

System Action:

The Database Manager call is rejected.

User Action:

Contact your systems administrator to obtain appropriate file access authorization and retry.

DB0007

P1* ALREADY IN USE BY *P2

Reason:

The user or job name has exclusive use of the requested application, category or record.

System Action:

The Database Manager call is rejected.

User Action:

Wait until the application, category or record becomes available and retry.

DB0008

FATAL LOCK ERROR - RETCODE= *P1* ZFDBK= *P2*

Reason:

A fatal error occurred when attempting to access an NCL LOCK.

System Action:

The Database Manager call is rejected.

User Action:

Determine the cause of the error and retry.

DB0009

INVALID ACTION - ~P1

Reason:

The requested action is not a valid Database Manager action.

System Action:

The Database Manager call is rejected.

User Action:

Correct the Database Manager call and retry.

DB0010

KEY NOT SUPPLIED

Reason:

No key was supplied for the requested record.

System Action:

The Database Manager call is rejected.

User Action:

Correct the Database Manager call and retry.

DB0011

VARTABLE ERROR - FUNC= *P1* ID= *P2* ZFDBK= *P3*

Reason:

An error occurred whilst processing an NCL VARTABLE.

System Action:

The Database Manager call is rejected.

User Action:

Determine the cause of the error and retry.

DB0014

APPLICATION OR CATEGORY INVALID

Reason:

Either the application ID or the category ID is not defined to the Database Manager.

System Action:

The Database Manager call is rejected.

User Action:

Correct the Database Manager call or register the application/category in the Database Manager and retry.

DB0015

RECORD ALREADY EXISTS

Reason:

The record could not be added because it already exists.

System Action:

The Database Manager call is rejected.

User Action:

Change the key of the record being added, or change the function to PUT and retry.

DB0016

INVALID PARAMETER FOR CATEGORY - *P1= P2*

Reason:

A parameter specified on the call to the Database Manager was inconsistent with the category definition. For instance, a generic delete request may not be made on records with alternate keys or records which are cached.

System Action:

The Database Manager call is rejected.

User Action:

Correct the Database Manager call and retry.

DB0017

FATAL DATABASE ERROR - PRIMARY KEY RECORD NOT FOUND

Reason:

A fatal error occured because the requested alternate key was found, but the primary key record was not found.

System Action:

The Database Manager call is rejected.

User Action:

Delete the alternate key from the database and recreate the record if necessary.

DB0018

VSAM FDBK=14 OCCURRED, RETRYING - FILE= *P1* FUNC= *P2* KEY= *P3*

Reason:

A VSAM feedback code of 14 was returned from an add, delete or put request. This means that the VSAM control interval in which the record resides was locked by another job or user. The Database Manager automatically retries the operation until successful.

System Action:

The requested action is retried automatically until successful.

User Action:

None.

DB0019

INVALID MAINTENANCE OPTION - *P1*

Reason:

The requested maintenance option is invalid.

System Action:

The Database Manager call is rejected.

User Action:

Correct the Database Manager call and retry.

DB0020

FILE STATUS IS INVALID FOR P1 REQUEST

Reason:

The file processing action *P1* was not consistent with the options specified when the file was opened. The most likely cause of this error is when an add, update, or delete request is made for a file which is open for read only.

System Action:

The Database Manager call is rejected.

User Action:

If the file is shared by more than one SOLVE region and therefore is only opened for update on one of those regions then perform the required action on the SOLVE region that has update capability. If the file is only accessed by one SOLVE region then close and re-open the file with the appropriate operands for the requested action and then retry.

DB0021

***P1* RECORD NOT FOUND**

Reason:

The record type identified by *P1* could not be found on the file. This message usually indicates that database corruption has occurred due to a system failure.

System Action:

The Database Manager call is rejected with a return code of 4.

User Action:

This message is usually only issued when a record *should* be on file but is not. Contact your systems administrator who may be able to run a database clean up to rectify the problem.

DB0022

DELETE REJECTED - ENTITY NOT AT PRIMARY CONCATENATION LEVEL (*P1*)

Reason:

A delete was attempted on an NCL/CAS entity that is present at a level lower than the primary level in the NCL/CAS concatenation path. *P1* is the primary level. Only the primary level in an NCL/CAS concatenation path may be modified.

System Action:

The delete request is rejected and the target entity remains intact.

User Action:

Use the NCL/CAS Copy/Delete/Compare/Apply/Browse facility to delete the entity.

DB0037

P1* ERROR RETRIEVING MODS PATH. FDBK= *P2

Reason:

This message indicates that the MODS library path environment was not initialized. The MODS Database Manager failed to find a defined concatenation path. *P1* is set to the name of the NCL procedure that issued the message and *P2* is set to the feedback code set by the &VARTABLE GET verb.

System Action:

The database operation is unsuccessful.

User Action:

The MODS path is defined in the MODSFILES Customizer parameter group. Additional messages that relate to file allocation failures might also be present in the activity log prior to this message.

Review the data set names in your INI procedure for this group. The group is preceded by a label .MODSFILES.

Correct the data set names in the INI procedure and restart the region.

DB0038

ERROR RETRIEVING MODS PATH DATA DURING PATH INQUIRY PROCESSING

Reason:

This message indicates that the MODS library path environment was not initialized properly. A call to the MODS Database Manager failed to find specific data associated with the current path.

System Action:

The path inquiry fails

User Action:

Ensure that path initialization is properly executed.

DB0039

ERROR - SUBSIDIARY RECORD ACCESS ATTEMPTED WITHOUT PRIOR PRIMARY ACCESS

Reason:

This indicates an internal logic failure. An attempt was made to access a subsidiary record without previously having accessed the related primary record.

System Action:

The database request is rejected.

User Action:

Contact your product support representative.

DB0040

PARAMETER ID=DBID IS NO LONGER SUPPORTED

Reason:

The parameter ID=dbid passed to the Database Manager is no longer supported since files concatenation.

System Action:

The call is rejected.

User Action:

Correct the Database Manager call and retry.

DB0041

ERROR RETRIEVING MSG " *P1*". MODS PATH NOT ESTABLISHED

Reason:

This message indicates that a message could not be retrieved from the message database because the MODS library path environment was not initialized. The MODS Database Manager failed to find a defined concatenation path. *P1* is the ID of the message being retrieved.

System Action:

The database operation is unsuccessful.

User Action:

The MODS path is defined in the MODSFILES Customizer parameter group. Additional messages that relate to file allocation failures might also be present in the activity log prior to this message.

Review the data set names in your INI procedure for this group. The group is preceded by the .MODSFILES label.

Correct the data set names in the INI procedure, and restart the region.

DB0050

USER NOT AUTHORIZED

Reason:

The user is not authorized to access the function requested.

System Action:

The Database Manager call is rejected.

User Action:

Contact your systems administrator for appropriate authorization if the function is required and retry.

DB0051

INVALID COMMAND

Reason:

An invalid command was entered.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

DB0052

INPUT/OUTPUT RECORDS MUST HAVE A DIFFERENT LANGUAGE CODE OR FILE ID.

Reason:

Records can only be moved or copied within the same file if the language code is changed. This is to reduce the possibility of accidental corruption of the original records.

System Action:

The move/copy request is rejected.

User Action:

Specify a different input file id, output file id, or language code and retry.

DB0201

INVALID COMMAND

Reason:

An invalid command was entered.

System Action:

The command is rejected.

User Action:

Correct and retry.

DB0202

SYSTEM PARAMETERS SET SUCCESSFULLY

Reason:

The NDB system parameters were set successfully.

System Action:

None.

User Action:

None.

DB0203

SYSPARMS P1= P2 FAILED - REFER TO LOG

Reason:

The NDB system parameter indicated was unable to be set. Refer to the activity log for details.

System Action:

The system parameter is not changed.

User Action:

Determine the cause, correct and retry.

DB0301

ANALYSING DATA ON FILE: ~P1

Reason:

The copy/conversion procedure is analysing the data on the file P1

System Action:

Informational Message.

User Action:

None.

DB0302

CAS CONTROL FILE FILEID: *P1* IS VERSION *P2*

Reason:

The copy/conversion procedure has determined that the *P1* CAS control file is for NetMaster or SOLVE Version *P2*.

System Action:

None.

User Action:

None.

DB0303

OBJECT COPIED : ~P1

Reason:

The object P1 was successfully copied from the OLD CAS file to the NEW CAS file. P1 is a description of the object that was copied.

System Action:

Informational Message.

User Action:

None.

DB0304

OBJECT NOT COPIED: P1

Reason:

The object *P1* was not copied from the OLD MODS control file to the NEW MODS control file. *P1* is a description of the object that was not copied. This could be because the object modified was a SOLVE object and not a user application object. Only objects with a non SOLVE application prefix will be copied to the new MODS control file.

System Action:

Informational Message.

User Action:

Note the object and check why the object was added/modified to the old CAS file. If you wish these changes to be made to the new file, they must be done manually.

DB0305

ERROR. COPY OBJECT SUBROUTINE: ~P1 NOT FOUND IN PROCEDURE ~P2

Reason:

The subroutine P1 was not found in the procedure P2 . This subroutine is required so that a records for a particular application and category can be copied.

System Action:

Procedure Terminates.

User Action:

Note the subroutine and procedure names and contact your support representative.

DB0306

FILEID LANGUAGE CASAPPL APPL

Reason:

This message is the column headings for message DB0307. See the message DB0307 for further information.

System Action:

None.

User Action:

None.

DB0307

------ -------- ------- ----

Reason:

This message is the column headings for message DB0308. See the message DB0308 for further information.

System Action:

None.

User Action:

None.

DB0308

~P1

Reason:

This message notifies you of data that is present on your CAS file. P1 will contain the following sections (from left to right) : * The fileid of the file. * The Language Code * CAS application Id. * Application Id.

System Action:

None.

User Action:

None.

DB0309

**** COPY ENDED ****

Reason:

The copy of CAS records has completed.

System Action:

None.

User Action:

None.

DB0310

FATAL DATABASE ERROR - FILE=~P2 FUNC=~P1 FILERC=~P3 VSAMFDBK=~P4

Reason:

A error occurred when trying to access the database file.

System Action:

The copy utility terminates.

User Action:

Determine the cause of the error from the return code and feedback code indicated and retry.

DB0311

ERROR COPYING OBJECT IN SUBROUTINE ~P1 RC: ~P2 KEY: ~P3

Reason:

A error occurred when copying an object in the subroutine P1 . The subroutine had a return code of P2 . P3 is the key of the object being copied.

System Action:

The copy utility terminates.

User Action:

Determine the cause of the error from the return code indicated and retry.

DB0312

FATAL VARTABLE ERROR - ID=~P1 FUNC=~P2 OPT=~P3 ZFDBK=~P4

Reason:

A error occurred when trying to access a vartable.

System Action:

The copy utility terminates.

User Action:

Determine the cause of the error from the return code and feedback code indicated and retry.

DB0313

CANNOT RETRIEVE CAS FILE VERSION. FILEID: ~P1

Reason:

The copy utility was not able to determine the version of the CAS file with a fileid of P1 .

System Action:

The copy utility terminates.

User Action:

Check that you have the correct CAS file allocated.

DB0314

ERROR RETRIEVING OBJECT DBMS: ~P1 RC: ~P2 KEY: ~P3

Reason:

A error occurred when retrieving an object. The DBMS procedure P1 ended with a return code of P2 . The key of the object is P3 .

System Action:

The copy utility terminates.

User Action:

Determine the cause of the error from the return code indicated and retry.

DB0326

OBJECT DELETED : ~P1

Reason:

The object P1 has been deleted from the installation's cas file by the CAS put file apply procedure because it was marked for deletion in the CAS put file. This is probably because the object is now obsolete.

System Action:

Informational Message.

User Action:

None.

DB0328

CAS PUT FILE NOT APPLIED DUE TO MODIFIED OBJECTS ON CAS FILE

Reason:

The CAS put file was not applied to the installation's CAS file because one or more of the objects that are being replaced on the installation's CAS file have been modified by a user. These modified objects would have been identified by the message DB0327.

System Action:

Informational Message.

User Action:

Check why the objects were modified on the CAS file. The CAS put file will not be applied unless you set the OVERRIDE option to YES in the procedure $CADB05U.

DQx to DSx Messages

DQ0101

NDB OPEN FAILED - ID=~P1 NDBRC=~P2

Reason:

The NDB for which the report was requested could not be opened.

System Action:

The report request is cancelled.

User Action:

Correct the NDB name or open the requested NDB and retry.

DQ0102

NDBINFO FAILED - ID=~P1 NDBRC=~P2

Reason:

An attempt to get database information about the requested NDB failed.

System Action:

The report request is cancelled.

User Action:

Contact the systems administrator.

DQ0103

VARTABLE ~P1 ERROR - FDBK=~P2 ID=~P3

Reason:

An error occurred in the specified vartable P1.

System Action:

The report request is terminated. An incomplete report may have been produced.

User Action:

Contact the systems administrator.

DQ0104

NDB ~P1 NOT FOUND

Reason:

The requested NDB was not found.

System Action:

The report request is cancelled.

User Action:

Correct the NDB name or open the NDB and retry.

DQ0105

~P1 NOT SPECIFIED

Reason:

The required parameter was not specified.

System Action:

The report request is cancelled.

User Action:

Correct the call parameters and retry.

DQ0201

INVALID COMMAND

Reason:

An invalid command was entered.

System Action:

The command is rejected.

User Action:

Correct and retry.

DQ0202

SYSTEM PARAMETERS SET SUCCESSFULLY

Reason:

The NDB system parameters were set successfully.

System Action:

None.

User Action:

None.

DQ0203

SYSPARMS P1= P2 FAILED - REFER TO LOG

Reason:

The NDB system parameter indicated was unable to be set. Refer to the activity log for details.

System Action:

The system parameter is not changed.

User Action:

Determine the cause. Correct and retry.

DQ0301

SORT COMMAND REJECTED, NO ENTRIES TO SORT

Reason:

The SORT command was entered in the Command field, however, there were no entries displayed on the list.

System Action:

The command is rejected.

User Action:

None.

DQ0302

SORT EXPRESSION NOT SPECIFIED

Reason:

The SORT command was entered in the Command field, however, a sort expression was not specified.

System Action:

The command is rejected.

User Action:

Specify a sort expression and retry.

DQ0303

NDB FMT DEFINE FAILED. NDBRC: P1 NDBERRI: P2

Reason:

An error has occurred whilst defining an NDB format for the list. The NDB return code was *P1* and the NDB error information was *P2* .

System Action:

The selection list terminates.

User Action:

Check that the list exit is setting valid values in the &$NDNDBFF* variables.

DQ0304

NDB FMT DEFINE FAILED. NDBRC: P1 NDBERRI: P2

Reason:

An error has occurred whilst defining a default NDB format for the list. A default NDB format is created when the list exit does not set &$NDNDBFF* variables. The NDB return code was *P1* and the NDB error information was *P2* .

System Action:

The selection list terminates.

User Action:

Look up the NDB return codes in the appropriate manual.

DQ0305

NDB OPEN FAILED - ID: P1 NDBRC: P2 NDBERRI: P3

Reason:

The NDB which the list was accessing could not be opened. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Request rejected.

User Action:

Correct the NDB name or open the requested NDB and retry.

DQ0306

NDB CLOSE FAILED - ID: P1 NDBRC: P2 NDBERRI: P3

Reason:

The NDB which the list was accessing could not be closed. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Request rejected.

User Action:

Check that a procedure that has been called from the list has not closed the NDB during list processing.

DQ0307

NDB GET FAILED - ID: P1 NDBRC: P2 NDBERRI: P3

Reason:

An error occurred getting a record from the NDB whilst building the list. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Selection List Terminates.

User Action:

Check that a procedure that has been called from the list has not closed the NDB during list processing.

DQ0308

LIST MUST BE SORTED BEFORE YOU CAN USE THE LOCATE COMMAND

Reason:

You have entered a locate command when the list has not been sorted.

System Action:

Locate command rejected.

User Action:

Sort the list using the sort command or change the list handler definition for the list to specify a sort expression for the list.

DQ0309

NDB SEQ RESET FAILED - ID: P1 NDBRC: P2 NDBERRI: P3

Reason:

An error occurred whilst resetting the position in the list. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Selection List Terminates.

User Action:

Contact your systems administrator.

DQ0310

NDB SCAN FAILED ID= P1 RC= P2 ERRI= P3

Reason:

An error occurred whilst scanning the NDB for records to build the selection list.

P1 is the name of the NDB.
P2 is the NDB response code.
P3 is the NDB error information. If no NDB error information is available, then it displays the error description from the NETINFO database.

System Action:

The selection list terminates.

User Action:

The /NDBERR shortcut lets you find out more about the NDB response codes. For response codes 5 through 8, check the limits in the NDBLIMITS - NDB Processing Limits parameter group. You can change the following parameters:

- Maximum Logical I/O Limit for Response Code 5.

- Maximum Record Limit for Response Code 8.

- Maximum Storage Limit for Response Code 7.

- Maximum Elapsed Time Limit for Response Code 6.

If a value is already at the maximum, consider changing the selection criteria for the list to reduce the number of records read. If this is not practical, contact Technical Support.

DQ0311

NO RECORDS FOUND MATCHING SUPPLIED CRITERIA

Reason:

There were no records in the NDB that matched the criteria that was supplied for building the selection list.

System Action:

List terminates.

User Action:

If you were asked to specify some form of criteria, check that it is correct and retry.

DQ0312

Invalid LOCATE operand: *P1*

Reason:

The LOCATE command has failed because of an invalid operand. The format of the operand depends on the NDB data format of the current sorting field that is in effect. The reason for the failure is described in *P1*:

Value not numeric or exceeds allowable range

Indicates that the operand contains nonnumeric characters or exceeds the allowable range (-2,147,483,648 to +2,147,483,647).

Value not a valid hexadecimal string

Indicates that the operand contains characters other than hexadecimal characters (0 to 9, A to F, or a to f) or contains an odd number of characters. For example, specify 02 instead of 2.

Value not a valid date format

Indicates that the operand does not conform with any of the supported NCL date formats.

For more information about the supported date formats, see *NCL Reference Guide*.

Value not a valid time format

Indicates that the operand is not in a valid time format (*hh*:*mm*:*ss*, *hh*.*mm*.*ss*, or *hhmmss*) with a value that ranges from 00.00.00 to 23.59.59.

Value not a valid timestamp format

Indicates that the operand is not in a valid timestamp format (NCL system variable &DATE11).

Value not a valid floating point number

Indicates that the operand is not in valid floating point number notation or exceeds the limit of 0.1e+71.

System Action:

The LOCATE command is rejected.

User Action:

Specify the operand in a correct data format, and retry the command.

DQ0313

Bottom of data reached

Reason:

The bottom of data was reached when trying to locate a record with a string specified with the LOCATE command.

System Action:

None.

User Action:

None.

DQ0401

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

Procedure $NDCR04Z failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

None.

User Action:

Contact the system administrator.

DQ0402

INVALID SEARCH LINE

Reason:

Right and left parentheses were entered without any search information between them. This is an invalid situation.

System Action:

Field highlighted in error.

User Action:

Enter some search information between the parentheses.

DQ0403

' P1' IS A REQUIRED FIELD

Reason:

While specifying a search the field identified by P1 was not entered and is a required field.

System Action:

Field highlighted in error.

User Action:

Enter a value for the specified field

DQ0404

' P1' IS THE ONLY VALID VALUE FOR THIS FIELD

Reason:

While defining a search the field highlighted as being in error will only accept the value identified by P1 as being valid.

System Action:

Field highlighted in error.

User Action:

Enter the valid value for the specified field

DQ0405

UNBALANCED PARENTHESES - LEFT P1 RIGHT P2

Reason:

An unbalanced number of parentheses have been specified in the search expression. *P1* parentheses were specified on the left and *P2* parentheses were specified on the right. There must be an equal number of parentheses on the left and right.

System Action:

Field highlighted in error.

User Action:

Add or remove parentheses to balance them.

DQ0406

NDB ERROR ON p1 NDBRC: p2 NDBERRI: p3

Reason:

There was an NDB error on the database *P1* . - The &NDBRC return code is *P2* and the &NDBERRI error information is *P3* .

System Action:

None

User Action:

Refer to the NCL Programmer Guide for information on the return code.

DQ0407

' P1' IS AN INVALID FIELD NAME

Reason:

The field name *P1* that you specified is not a valid field name.

System Action:

Field highlighted in error.

User Action:

Enter a valid field name or place a '?' in the field to get a list of valid field names. You can also enter a field prefix followed by a ? for a list of field with that prefix.

DQ0408

' P1' IS AN INVALID LINE COMMAND

Reason:

The line command *P1* is an invalid line command. Valid line commands are:
I - Insert a line
D - Delete a line
R - Repeat a line

System Action:

Field highlighted in error.

User Action:

Enter a valid line command.

DQ0410

ONLY THE CHARACTER P1 ALLOWED IN FIELD

Reason:

The field in error contains characters other that the character *P1* .

System Action:

None.

User Action:

Correct the field value and retry.

DQ0411

INVALID VALUE SPECIFIED FOR ' P1'

Reason:

The field in error contains characters which are invalid.

System Action:

None.

User Action:

Correct the field value and retry.

DQ0412

VFS OPEN FAILED - FILERC= P1 - INSUFFICIENT ACCESS

Reason:

An attempt to open the VFS database failed with the FILERC identified by *P1* which may be 0 or 12. IF it is 0 then the file has been opened but may not be written to, it the FILERC is 12 it that the user does not have the authority to access the database.

System Action:

None.

User Action:

Contact your Security Administrator for assistance.

DQ0413

SEARCH CRITERIA WITH KEY ' P1' ALREADY EXISTS

Reason:

An attempt to ADD a search criteria with a key of *P1* failed because a record with this key already exists.

System Action:

ADD fails.

User Action:

Choose a different name for the search criteria or set the 'Replace?' field to YES.

DQ0414

VFS ' P1' FAILED. FILERC= P2 ERROR= P3

Reason:

An attempt to perform the function identified by *P1* on the VFS file failed with the Return Code identified by *P2* and the Error identified by *P3*

System Action:

Request is rejected.

User Action:

Contact your System Administrator for assistance.

DQ0415

SEARCH CRITERIA P1 SUCCESSFULLY SAVED

Reason:

The search criteria *P1* was successfully saved to the VFS file.

System Action:

None

User Action:

None

DQ0416

NO PRE-DEFINED SEARCH CRITERIA FOUND

Reason:

No search criteria have previously been saved for this search.

System Action:

None

User Action:

None

DQ0501

NDB OPEN FAILED - ID: P1 NDBRC: P2 NDBERRI: P3

Reason:

The NDB which the fields list was accessing could not be opened. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Request rejected.

User Action:

Correct the NDB name or open the requested NDB and retry.

DQ0502

VARTABLE P1 ERROR, FDBK: P2 ID: P3

Reason:

A request to present a field List failed because an error was encountered allocating a variable table. The request was *P1* , the identifier of the vartable was *P3* and the feedback code was *P2* .

System Action:

The request is rejected.

User Action:

Interpret the feedback code using the NCL Reference.

DQ0503

VARTABLE P1 ERROR, FDBK: P2 ID: P3 KEY: P4

Reason:

A request to present a fields List failed because an error was encountered accessing a vartable. The request was *P1* , the identifier of the vartable was *P3* , the feedback code was *P2* and the key value used was *P4* .

System Action:

The request is rejected.

User Action:

Interpret the feedback code using the NCL Reference.

DQ0601

NDB OPEN FAILED. ID= P1 NDBRC= P2

Reason:

The NCL/EF Report Writer service procedure $NDRW06Z was unable to open the Database File (NDB). The name of the NDB to be opened was *P1* and the NDB return code was *P2* .

System Action:

Processing is terminated.

User Action:

Interpret the NDB return codes using NCL Programmer Guide.

DQ0603

&NDBFMT DELETE FAILED. NDBRC: P1 NDBERRI: P2

Reason:

An error has occurred whilst deleting an NDB format for the report. The NDB return code was *P1* and the NDB error information was *P2* .

System Action:

The report terminates.

User Action:

Look up the NDB return codes in the appropriate manual.

DQ0604

&NDBFMT DEFINE FAILED. NDBRC: P1 NDBERRI: P2

Reason:

An error has occurred whilst defining an NDB format for the report. The NDB return code was *P1* and the NDB error information was *P2* .

System Action:

The report terminates.

User Action:

Look up the NDB return codes in the appropriate manual.

DQ0605

NO RECORDS FOUND MATCHING REPORT CRITERIA

Reason:

There were no records found in the NDB that passed the report's criteria.

System Action:

None.

User Action:

None.

DQ0606

NDB scan of P1 failed with NDBRC P2 NDBERRI P3

Reason:

An error occurred while scanning the NDB for records that pass the report's criteria. The NDB return code set by the &NDBSCAN verb was
P2 and the NDB error information was *P3* .

System Action:

None.

User Action:

For information about diagnosing the error, see the Network Control Reference Guide. Some common NDBRC values are:

5 - I/O limit exceeded

6 - Time limit exceeded

7 - Storage limit exceeded

8 - Record limit exceeded

For these values, modify the criteria to be more specific or review the NDBLIMITS parameter group.

DQ0607

FIELD VARTABLE GET FAILED. ID: P1 ZFDBK: P2

Reason:

An error occurred whilst attempting to retrieve field information from the vartable *P1* . The feedback code set by the &VARTABLE verb was *P2* .

System Action:

Request rejected.

User Action:

Contact your systems administrator.

DQ0608

NDB GET FAILED - ID: P1 NDBRC: P2 NDBERRI: P3

Reason:

An error occurred getting a record from the NDB whilst building the report. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Report Terminates.

User Action:

Contact your systems administrator.

DQ0701

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

Procedure $NDUT07P failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

None.

User Action:

Contact the system administrator.

DQ0702

NDB RECORD ID: P1 DOES NOT EXIST

Reason:

The NDB record ID *P1* that was to be displayed does not exist.

System Action:

Request Rejected.

User Action:

None.

DQ0705

NDB OPEN FAILED - ID: P1 NDBRC: P2 NDBERRI: P3

Reason:

The NDB which the display was accessing could not be opened. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Request rejected.

User Action:

Correct the NDB name or open the requested NDB and retry.

DQ0707

NDB GET FAILED - ID: P1 NDBRC: P2 NDBERRI: P3

Reason:

An error occurred getting a record from the NDB whilst building the display. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Dump of NDB Record Terminates.

User Action:

Contact you Systems Administrator.

DQ0708

NDB DEL FAILED - ID: P1 NDBRC: P2 NDBERRI: P3

Reason:

An error occurred deleting a record from the NDB. The name of the NDB was *P1* , the NDB return code was *P2* and the NDB error information was *P3* .

System Action:

Delete of NDB record fails.

User Action:

Contact your Systems Administrator.

DQ0709

FORCE DELETE OF RECORD CANCELLED

Reason:

You pressed the Cancel function key on the Confirm Force Delete panel so the delete request was cancelled.

System Action:

None.

User Action:

None.

DQ0710

NDB RECORD ID: P1 FORCE DELETED

Reason:

The NDB record *P1* was successfully force deleted.

System Action:

None.

User Action:

None.

DQ1001

VSAM DATASET OPEN FAILED, DD=ddname - reason

Reason:

An attempt by the NDB forward recovery utility (UTIL0010) to open a VSAM journal dataset or NDB failed for the reason given in the message.

System Action:

If it is the JOURNAL dataset that failed, processing is discontinued, otherwise processing continues with the next NDB.

User Action:

Check the JCL for the job and other job output. Correct and re-run.

DQ1002

NDB FORWARD RECOVERY COMMENCED FOR ndbname

Reason:

This message is issued by the NDB forward recovery utility when forward recovery is about to comence for an NDB.

System Action:

N/A

User Action:

N/A

DQ1003

JOURNAL GET FAILED, R15=rc, R0=fdbk

Reason:

This message shows the VSAM retcode and feedback that occured for a journal record GET during NDB forward recovery processing.

System Action:

Forward recovery processing is terminated.

User Action:

Correct the job and re-run. If neccessary restore the journal dataset.

DQ1004

NDB UPDATE FAILED FOR ndbname R15=rc, R0=fdbk

Reason:

The NDB forward recovery utility (UTIL0010) detected an unexpected VSAM return code while updating the NDB copy dataset.
VSAM retcode and feedback are displayed in the message.

System Action:

Forward recovery for the NDB is terminated and processing continues with the next NDB.

User Action:

Use the VSAM retcode information to diagnose the dataset error. If forward recovery can not be re-run, stop the primary NDB and copy it to the backup copy.

DQ1005

Z999999 UPDATES APPLIED, Z999999 TRANSACTIONS IN Z999999 JOURNAL RECORDS

Reason:

This is an information message issued by the NDB forward recovery utility. no. UPDATES APPLIED shows the number of NDB records modified, no. TRANSACTIONS shows the number of NDB transactions found, no. JOURNAL RECORDS shows the number of journal records read.

System Action:

none.

User Action:

This message provides an indication of the activity against an NDB.

DQ1006

JOURNAL DATASET IS INVALID. FORWARD RECOVERY TERMINATED.

Reason:

The journal dataset specified to the NDB forward recovery utility was not a valid NDB journal.

System Action:

NDB forward recovery is terminated.

User Action:

Correct the forward recovery JCL.

DQ1007

INVALID SYSIN CONTROL CARD, FORWARD RECOVERY TERMINATED.

Reason:

A SYSIN control card provided to the forward recovery utility was invalid.

System Action:

The control card is echoed with this message. Processing is terminated.

User Action:

Correct the SYSIN control card and re-submit job.

DQ1008

SOLVE NDB FORWARD RECOVERY FOR DOMAIN xxxx hh.mm.ss yy.ddd

Reason:

This message is issued by the NDB forward recovery utility once the journal dataset has been successfully opened.

System Action:

Forward Recovery processing proceeds.

User Action:

N/A

DQ1009

NDB CONTROL RECORD VALIDATION FAILED - reason

Reason:

A journal validation error was detected by the NDB forward recovery utility (UTIL0010). This was either because the journal being applied to the NDB is out of sequence, or the NDB domain id does not match the domain id of the journal.

System Action:

Processing for this NDB is terminated and continues for the NDB.

User Action:

Check the NDB with the reported error. It may be necessary to stop the primary NDB and restore the duplicate copy from it.

DQ1010

FORWARD RECOVERY TERMINATED FOR NDB ndbname.

Reason:

This message follows a previous error message issued by the NDB Forward Recovery Utility, to warn of abnormal recovery termination for an NDB.

System Action:

N/A

User Action:

See related message.

DQ1011

JOURNAL SEQUENCE ERROR DETECTED - SKIPPING REMAINING RECORDS.

Reason:

This message is issued if an error is detected in the time stamp sequence of records on the NDB journal. This may indicate that the journal was not correctly closed.

System Action:

Out of sequence journal records are not processed.

User Action:

This message usually may be taken as a warning only. Only records in the correct time sequence wil be applied to the NDB copies.

DS0001

INVALID KEYWORD VALUE SPECIFIED, KEYWORD= P1 VALUE= P2

Reason:

The Dataset Services Manager external interface procedure $DSCALL failed during request processing because it was passed an invalid keyword value. The keyword was *P1* and the invalid value was *P2* .

System Action:

The request is rejected and procedure $DSCALL terminates. Control is returned to the NCL procedure which executed $DSCALL. If $DSCALL was executed from OCS, control is returned to OCS.

User Action:

Correct the NCL procedure which executed $DSCALL. If executed from OCS, check the command entered on the command line and retry.

DS0002

EITHER KEYWORD DD OR KEYWORD DSN MUST BE SPECIFIED ON THE REQUEST

Reason:

Processing requires that one of these keyword parameters be provided on the request. Keyword DD is the DDNAME. Keyword DSN is the dataset name. Since neither of these were provided the request is terminated.

System Action:

None.

User Action:

Provide either the DDNAME or the dataset name on the request.

DS0003

MEMBER NAME MUST BE SPECIFIED IN PDS NAME P1

Reason:

The data function being performed for a partitioned data set(PDS) requires a member name. *P1* is the name of the PDS provided as input.

System Action:

None.

User Action:

Run the data function again providing a member name in the PDS name.

DS0004

P1 IS NOT A PARTITIONED DATASET

Reason:

A data function was requested which required a partitioned data set. The dataset *P1* is not a partitioned dataset. The data function is cancelled.

System Action:

None.

User Action:

Check the dataset name supplied on the request. If it is correct think about what you are trying to do.

DS0005

P1 IS NOT A PHYSICAL SEQUENTIAL DATASET

Reason:

A data function was requested which required a physical sequential dataset. The dataset *P1* is not a physical sequential dataset. The data function is cancelled.

System Action:

None.

User Action:

Check the dataset name supplied on the request. If it is correct think about what you are trying to do.

DS0006

FILE P1 AND FILE P2 MUST HAVE SAME LOGICAL RECORD LENGTH

Reason:

A data operation was requested using two files. P1 is the keyword parameter for the first file. P2 is the keyword parameter for the second *f*ile. The data operation requires the files to have the same logical record length. This is not the case so the data operation is cancelled.

System Action:

None.

User Action:

Examine the input parameters for the operation. Verify that the file names were entered correctly.

DS0007

FILE P1 AND FILE P2 MUST HAVE SAME RECORD FORMAT

Reason:

A data operation was requested using two files. *P1* is the keyword parameter for the first file. *P2* is the keyword parameter for the second file. The data operation requires the files to have the same record format. This is not the case so the data operation is cancelled.

System Action:

None.

User Action:

Examine the input parameters for the operation. Verify that the file names were entered correctly.

DS0008

PATH P1 DOES NOT EXIST

Reason:

A data operation tried to use a path to access a file. The path did not exist. *P1* is the name of the non-existent path. The data operation is terminated.

System Action:

None.

User Action:

Examine the input parameters for the operation. Verify that the parameters were entered correctly.

DS0009

FILE P1 HAS UNSUPPORTED RECORD FORMAT U

Reason:

An operation was requested for a file with record format U. This record format is not supported for the $DSCALL operation. *P1* is the file name. The request is terminated.

System Action:

None.

User Action:

Perform the operation using a system utility instead of $DSCALL.

DS0010

P1 CANCELLED

Reason:

A request to process an object was cancelled at the users request. *P1* is the action that was cancelled.

System Action:

None.

User Action:

None.

DS0011

Dataset Services not supported on this operating system

Reason:

Dataset Services is supported on the following operating systems only:

- z/OS

- MSP

System Action:

User Action:

DS0012

PRESS CONFIRM TO CONTINUE PROCESSING OR PRESS CANCEL

Reason:

A user confirmation is required before processing a requested action.

System Action:

None.

User Action:

Press either the Confirm or Cancel key (or enter the corresponding command) to continue.

DS0013

UTILITY P1 NOT SUPPORTED

Reason:

A request to call an operating system utility program was cancelled because the utility program is not supported by Dataset Services. *P1* is the name of the utility program which is not supported.

System Action:

None.

User Action:

Use a supported utility or do the desired processing another way.

DS0014

NO RECORDS IN FILE FOR P1

Reason:

A data operation was requested against a file. The operation is cancelled because the file has no records. *P1* is the data operation.

System Action:

None.

User Action:

None.

DS0015

FILE TO BE EDITED CAN NOT HAVE MORE THAN 32767 RECORDS

Reason:

A request to edit a file was rejected because the file contains more than 32767 records. This is the maximum number of records that the CAS text editor can process.

System Action:

None.

User Action:

None.

DS0016

FILE TO BE BROWSED HAS MORE THAN 32767 RECORDS, REMAINDER NOT DISPLAYED

Reason:

A request to browse a file that has more than 32767 records cannot be completed sucessfully. Only the first 32767 records are displayed. This is the maximum number of records that the CAS text editor can process.

System Action:

Browse of the first 32767 records.

User Action:

None.

DS0017

MEMBER NAME MUST NOT BE USED IN REQUEST - P1

Reason:

A data set services request was terminated because a member name was specified on a request for a partitioned dataset. The request does not allow a member name to be specified. *P1* is the fully qualified dataset name used on the request.

System Action:

None.

User Action:

Either do not specify a member name on the request or request a different dataset service which allows the specification of a member name.

DS0018

PDS MEMBER CAN ONLY BE RENAMED TO PDS MEMBER OF SAME DATASET

Reason:

An attempt was made to rename a PDS member to a sequential data set or to a PDS member of a different dataset. The request is terminated since a PDS member can only be renamed to a PDS member of the same dataset.

System Action:

None.

User Action:

Use the ALLOC, COPY, and DELMEM options to perform the rejected request.

DS0019

DATASET NAME MUST NOT INCLUDE MEMBER NAME - P1

Reason:

A request was made where a dataset name contained a member name. The use of the member name as part of the dataset set name was invalid in this request. *P1* is the dataset name used in the request. The request is terminated.

System Action:

None.

User Action:

Examine what you were trying to do. Perhaps the use of a member name is inappropriate. Also, the problem may be that the member name should be specified using the MEMBER keyword in the request.

DS0020

READ IBM UTILITY SYSPRINT OUTPUT TO DETERMINE FAILURE REASON

Reason:

The DSS_CALL verb was used to execute an IBM utility. The IBM utility did not execute succesfully. The error messages from the utility have been written to the SYSPRINT output.

System Action:

None.

User Action:

Read the SYSPRINT output if it is available.

DS0021

A MAXIMUM OF 50 DDNAMES CAN BE CONCATENATED

Reason:

A maximum of 50 DDNAMEs can be concatenated using the $DSCALL utility. This limit has been surpassed in the request. The request is termiated with no concatenation done.

System Action:

None.

User Action:

Reduce the number of DDNAMEs in the concatenation request.

DS0022

TEXT CONTAINS NON-DISPLAYABLE CHARACTERS

Reason:

The text being edited or browsed contains characters which can not be displayed. This message is informational only.

System Action:

None.

User Action:

None.

DS0023

BROWSE OF SYSOUT FILE NOT PERMITTED

Reason:

A request was made to browse an IBM utility SYSPRINT file which was a SYSOUT file. The request was terminated. The SYSPRINT file must be a dataset to be browsed.

System Action:

None.

User Action:

Request that the SYSPRINT file be a dataset. Then the SYSPRINT file can be browsed. On a $DSCALL request, add parameter SYSPRINT=DSN to direct SYSPRINT to a dataset.

DS0024

ONE OF THE KEYWORD PARAMETERS DD OR RELNUM MUST BE PROVIDED

Reason:

The OPT=ALLOCINFO request requires one of the keyword parameters DD or RELNUM. Neither was provided. The request is terminated.

System Action:

None.

User Action:

Provide one of the two parameters on the request.

DS0025

DATASET ORGANIZATION P1 IS INVALID OR NOT SUPPORTED

Reason:

An attempt was made to allocate (create) a dataset with an invalid or non-supported dataset organization. *P1* is the dataset organization supplied on the request. The request is terminated.

System Action:

None.

User Action:

Examine the dataset organization parameter to see if it is correct. If the dataset organization is correct, then create the dataset using some means other than $DSCALL.

DS0026

DIRECTORY BLOCK ALLOCATION IS REQUIRED FOR DATASET ORGANIZATION P1

Reason:

An attempt was made to allocate (create) a dataset. The dataset organization required that directory blocks be allocated at creation time but no directory blocks were requested. P1 is the dataset organization. The request is terminated.

System Action:

None.

User Action:

Provide the number of directory blocks on the request. This is done by using the keyword parm DIR on the $DSCALL call.

DS0027

DIRECTORY BLOCK ALLOCATION INVALID FOR DATASET ORGANIZATION P1

Reason:

A dataset is being created with an allocation of directory blocks. However, directory blocks are not required for that dataset organization. P1 is the dataset organization. The request is terminated.

System Action:

None.

User Action:

Remove the directory block allocation from the request.

DS0028

SPACE COMPONENT P1 HAS INVALID VALUE P2

Reason:

The space parameter on a new dataset creation(allocation) request is incorrect. *P1* is the component of the space parameter which is wrong.
P2 is the invalid value provided in the request.

System Action:

The request is terminated.

User Action:

Correct the space parameter and try again.

DS0029

MEMBER P1 NOT REPLACED

Reason:

A copy was requested and the target dataset was a PDS member. The REPLACE=NO option was specified on the request as well. However, the target PDS member *P1* exists.

System Action:

The copy is terminated without writing over the target PDS member.

User Action:

Either specify REPLACE=YES on the copy or specify a non-existing target member name.

DS0030

ONLY PROVIDE ONE OF KEYWORD PARAMETERS DD OR DSN ON ENQ/DEQ REQUEST

Reason:

A request to ENQ or DEQ a dataset was received with both the DD keyword parm and the DSN keyword parm specified. Only one of these parameters should be specified on the request.

System Action:

The request is terminated.

User Action:

Try the request again only specifying one of the keyword parameters.

DS0031

NO NON-BLANK VARIABLES FOUND FOR VARS= P1

Reason:

A data operation was terminated because no non-blank variables were found starting with the string provided with the VARS keyword parm.

System Action:

None.

User Action:

Check that the value of the keyword parm VARS is correct and that the variables starting with this keyword parm are shared on the call.

DS0032

NO MEMBERS MATCH MASK P1

Reason:

An attempt was made to copy all PDS member matching a mask. *P1* is the mask used on the request. No member names matched the mask.

System Action:

None.

User Action:

None.

DS0033

NO PATH ID PROVIDED ON OPEN AND DDNAME P1 IS IN USE AS PATH ID

Reason:

No path ID was provided on an open request. The DDname P1 was checked for use as a path ID. The DDname was already in use as a path ID.

System Action:

The open request is terminated.

User Action:

Examine the logic in your program. It may be that an attempt was made to open a file which was already open.

DS0034

MEMBER NAME MUST NOT BE SPECIFIED IN $DSCALL OPT=DELETE REQUEST

Reason:

A $DSCALL OPT=DELETE request was made and the keyword MEMBER was given a value. The member name is not a valid parameter on this request.

System Action:

The request is terminated.

User Action:

Use $DSCALL OPT=DELMEM to delete a PDS member.

DS0035

MEMBER NAME MUST NOT BE SPECIFIED IN $DSCALL OPT=RENAME REQUEST

Reason:

A $DSCALL OPT=RENAME request was made and the keyword MEMBER was given a value. The member name is not a valid parameter on this request.

System Action:

The request is terminated.

User Action:

Use $DSCALL OPT=RENMEM to rename a PDS member.

DS0036

MUTUALLY EXCLUSIVE MEMBER NAME INFORMATION PROVIDED ON COPY REQUEST

Reason:

The copy request specified member information in the MEMBER parameter and in the dataset name(s). These two methods are mutually exclusive.

System Action:

The COPY request is terminated.

User Action:

Provide member information on COPY request in just one place.

DS0037

MEMBER PARAMETER ALLOWED ONLY IF BOTH DATASETS ARE PARTITIONED

Reason:

A $DSCALL OPT=COPY request had the MEMBER parm specified and at least one of the FROMDSN and TODSN was not a partitioned dataset. The member parameter is valid only if both of these datasets are partitioned.

System Action:

The COPY request is terminated.

User Action:

Resubmit the request including the member information in the dataset name.

DS0038

IEHLIST UTILITY OUTPUT HAS FEWER LINES THAN EXPECTED

Reason:

The OPT=VOLSPACE call uses the IEHLIST utility to compute the number of free tracks on the volume. The IEHLIST utility output had fewer than the minimum expected number of lines. The OPT=VOLSPACE call terminates with this message.

System Action:

None.

User Action:

Contact Technical Support.

DS0039

DATASET SPACE CALCULATION NOT SUPPORTED FOR DSORG P1

Reason:

The dataset space calculation is not supported for the this particular dataset organization. The unsupported dataset organization is P1.

System Action:

None.

User Action:

None.

DS0040

EXPECTED STRING "CYLINDERS" NOT FOUND IN IEHLIST UTILITY OUTPUT

Reason:

The string "CYLINDERS" was expected to be found in the IEHLIST utility output. The line with the string contains the number of free cylinders on the volume. The free space on the volume could not be calculated because this line could not be located.

System Action:

None.

User Action:

Contact Technical Support.

DS0041

IDCAMS UTILITY OUTPUT HAS NO LINES

Reason:

The OPT=DSNSPACE call uses the IDCAMS utility to determine the data and index component names of a VSAM dataset. There was no output from the IDCAMS call. The OPT=DSNSPACE call terminates with this message.

System Action:

None.

User Action:

Contact Technical Support.

DS0042

VARTABLE ERROR - FUNC= P1 NAME= P2 KEY= P3 FDBK= P4

Reason:

An error occurred while processing a VARTABLE. *P1* is the function that was being performed when the error occurred. *P2* is the name of the VARTABLE. *P3* is the VARTABLE key. *P4* is the &ZFDBK code.

System Action:

None.

User Action:

Determine the cause of the error from the feedback code.

DS0043

DATASET MOVE REQUIRES A VOLUME WITH P1 FREE TRACKS

Reason:

A request to move a dataset to volume was terminated because the target volume did not have enough free space. *P1* is the number of free tracks required on the target volume.

System Action:

None.

User Action:

Select a different target volume with the required number of free tracks or make the required space available on the original target volume.

DS0044

TRUNCATE NOT SPECIFIED AND LOGICAL RECORD LENGTH > 250

Reason:

A read/write operation was requested to a file which had logical record length greater than 250 bytes. No truncate option was specified on the request. The request is terminated.

System Action:

None.

User Action:

Specify a valid truncate length or read the record into multiple variables.

DS0045

MEMBER NAME CANNOT BE SPECIFIED, DATASET IS NOT A PDS

Reason:

A request has been received by Dataset Services to perform an action on a member of a Partitioned Dataset (PDS), but the dataset specified is not a PDS.

System Action:

The request is rejected.

User Action:

Remove the MEMBER= operand or specify the name of a dataset which is a PDS.

DS0046

MEMBER NAME MUST BE SPECIFIED, DATASET IS A PDS

Reason:

A request has been received by Dataset Services to perform an action on a specified DD or dataset, and the DD or dataset is a Partitioned Dataset (PDS). The name of the member to be actioned has not been specified, and is required for this request.

System Action:

The request is rejected.

User Action:

Specify a member name using the MEMBER= operand.

DS0047

DATA LENGTH EXCEEDS UTILITY MAXIMUM

Reason:

The requested function uses a utility which supports a maximum data length of 256. The data in the selected dataset exceeds this maximum.

System Action:

The request is rejected.

User Action:

None.

DS0048

RECORD LENGTH > 250, DATA TRUNCATED. PRESS CANCEL KEY TO ABORT EDITING

Reason:

The requested function uses $DSCALL OPT=READ and OPT=WRITE which support records length up to 250. The data in the selected dataset excesses this limit and is truncated. You can press Cancel key to abort the editing.

System Action:

The request is rejected.

User Action:

None.

DS0049

INVALID RELATIVE GENERATION NUMBER

Reason:

The requested function supplied a relative GDG number on a dataset name. The number is invalid for this function. For example, a positive number (greater than 0) for the OPT=INFO function.

System Action:

The request is rejected.

User Action:

Correct the number.

DS0050

IDCAMS PROCESSING FAILED RC= P1 FDBK= P2 MSG= P3

Reason:

A call to the IDCAMS program failed whilst attempting to derive the full dataset name for a relative generation number.
The actual $DSCALL return information is displayed

System Action:

The request is rejected.

User Action:

Examine the embedded error information to determine the cause of the problem.

DS0051

IDCAMS UTILITY OUTPUT HAS NO LINES

Reason:

The OPT=INFO call uses the IDCAMS utility to determine the full dataset name of a relative GDG reference. There was no output from the IDCAMS call. The OPT=INFO call terminates with this message.

System Action:

None.

User Action:

Contact Technical Support.

DS0052

P1 IS NOT A GDG BASE NAME

Reason:

The OPT=INFO call was passed a relative GDG reference (For example, A.B(-1)). However, the passed dataset name was not a GDG base name.

System Action:

The OPT=INFO request is terminated.

User Action:

Correct the GDG base name.

DS0053

P1 HAS NO DATASETS

Reason:

The OPT=INFO call was passed a relative GDG reference (For example, A.B(-1)). However, the GDG currently has no entries.

System Action:

The OPT=INFO request is terminated.

User Action:

None.

DS0054

P1(P2) IS NOT A VALID GDG REFERENCE

Reason:

The OPT=INFO call was passed a relative GDG reference (For example, A.B(-1)). However, the reference is outside the range of current GDG entries. (For example, -5 when only 5 datasets (-4 up to 0).

System Action:

The OPT=INFO request is terminated.

User Action:

None.

DS0055

Invalid request - dataset is a SYSOUT file

Reason:

The requested action is not valid because the dataset is a SYSOUT file.

System Action:

The request is rejected.

User Action:

None.

DS0101

INVALID VALUE FOR SHARED VARIABLE, VAR= P1 VALUE=" P2"

Reason:

The selection list service procedure for the $DSCALL PDS member list displays failed because it received an invalid value for a shared variable. The variable name was *P1* and it value was *P2* .

System Action:

The selection list service procedure terminates.

User Action:

Contact your Systems Administrator.

DS0102

INVALID COMMAND

Reason:

An invalid command was entered in the Command field on the panel.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

DS0103

COMMAND ASSIGNED TO FUNCTION KEY P1 IS INVALID

Reason:

Function key *P1* was pressed on the new member name data entry panel and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

DS0104

RENAME OF P1 CANCELLED

Reason:

A request was received to rename a dataset or a member of a Partitioned dataset (PDS). When the new name was requested, the user cancelled the function.

System Action:

None.

User Action:

None.

DS0201

INVALID VALUE FOR SHARED VARIABLE, VAR= P1 VALUE=" P2"

Reason:

The selection list service procedure for the $DSCALL allocated files list display failed because it received an invalid value for a shared variable. The variable name was *P1* and it value was *P2* .

System Action:

The selection list service procedure terminates.

User Action:

Contact your Systems Administrator.

DS0202

NO RESPONSE RECEIVED FOR AN INTREAD COMMAND

Reason:

No response was received for a command issued in the INTCMD environment in the alloted time. The procedure waiting for the response terminates.

System Action:

None.

User Action:

The system is extremely sluggish. That is why the response was not received in a reasonable time. Try what you were doing again when your system's performance is better.

DS0203

UNEXPECTED RESPONSE - P1

Reason:

An unexpected response was received from a command issued in the INTCMD environment. *P1* is the unexpected response. This response is not normally received from the command which was issued and could indicate a problem with your system. The procedure processing the response terminates after issuing this message.

System Action:

None.

User Action:

Contact your Systems Administrator.

DS0204

VARTABLE ERROR - FUNC= P1 NAME= P2 KEY= P3 FDBK= P4

Reason:

An error occurred while processing an NCL VARTABLE. *P1* is the function that was being performed when the error occurred. *P2* is the name of the VARTABLE. *P3* is the VARTABLE key. *P4* is the &SYS.FDBK code.

System Action:

None.

User Action:

Determine the cause of the error from the feedback code.

DS0205

CAN NOT DEALLOCATE CONCATENATED DATASET

Reason:

A dataset which is not the first in a concatenation can not be deallocated. The request is terminated.

System Action:

None.

User Action:

Perform a deconcatenation, then the deallocation, and then do the concatenation again if you like.

DS0301

INVALID VALUE FOR SHARED VARIABLE, VAR= P1 VALUE=" P2"

Reason:

The selection list service procedure for the $DSCALL CATLIST list display failed because it received an invalid value for a shared variable. The variable name was *P1* and it value was *P2* .

System Action:

The selection list service procedure terminates.

User Action:

Contact your Systems Administrator.

DS0302

INVALID COMMAND

Reason:

An invalid command was entered in the Command field on the panel.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

DS0303

COMMAND ASSIGNED TO FUNCTION KEY P1 IS INVALID

Reason:

Function key *P1* was pressed on the new name data entry panel and the command assigned to it was invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

DS0304

UNEXPECTED SYSOUT RECORD - P1

Reason:

The expected sysout output from a LISTCAT command has the dataset name followed by the catalog that the dataset is in on the next line. The catalog name did not follow the dataset name. *P1* is the line which followed the dataset name. The procedure terminates when the unexpected line is found.

System Action:

None.

User Action:

Contact your Systems Administrator.

DS0305

NO CATALOG ENTRIES FOR QUALIFIER P1

Reason:

A display of catalog entries for a qualifier was requested. *P1* is the qualifier. However, there were no entries for the qualifier.

System Action:

The procedure terminates without a display.

User Action:

None.

DS0306

FOR ERROR INFO - $DSCALL OPT=LISTC SYSPRINT=DSN DISPLAY=YES QUAL= P1 PARM=VOLUME

Reason:

There was a problem in obtaining the display of cataloged datasets for a qualifier. *P1* is the qualifier used in the display request.

System Action:

None.

User Action:

To see the error information for the request run: $DSCALL OPT=LISTC SYSPRINT=DSN DISPLAY=YES QUAL=P1 PARM=VOLUME where *P1* is the qualifier used in the original display request.

DS0401

Invalid option: dataset organization is P1

Reason:

The selected option is invalid because the the dataset organization (*P1*) does not support the type of request:
* to Browse, Edit, or Print a dataset the dataset organization must be either PO (Partitioned Organization - a PDS) or PS (Partitioned Sequential).
* to display a Member List the dataset must be a PDS; the dataset organization must be PO (Partitioned Organization)

System Action:

The request fails.

User Action:

Specify a different dataset or DD name.

DS0402

Dataset Name and DD Name are mutually exclusive

Reason:

A request to browse a dataset or provide a member list cannot be actioned because both the Dataset Name and the DD Name are specified. Only one of these may be specified.

System Action:

The request fails.

User Action:

Remove either the Dataset Name or DD name and retry.

DS0403

P1 contains embedded blank/s

Reason:

The field contains embedded blank/s which is invalid.

System Action:

The request fails.

User Action:

Specify a correct name.

DS0404

MENU/FUNCTION NOT SUPPORTED, MENU= P1 OPT= P2

Reason:

The DSS menu service procedure $DS0004M failed because it received a menu number ($MHMENUNUM= *P1*) and/or function ($MHOPT= *P2*) that it does not support.

System Action:

Procedure $DS0004M terminates.

User Action:

Contact your Systems Administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

DS0405

Invalid request - dataset is a SYSOUT file

Reason:

The requested action is not valid because the dataset is a SYSOUT file.

System Action:

The request is rejected.

User Action:

None.

DS0501

MEMBER P1 NOT FOUND IN THIS DATASET

Reason:

An attempt has been made to browse, delete, print, or rename a member of a dataset that does not exist.

System Action:

None.

User Action:

None.

EDx Messages

ED0001

Unable to retrieve user information

Reason:

The &SECCALL statement was used to check user authorization for the requested operation. This request was unsuccessful.

System Action:

The request is rejected.

User Action:

Determine the cause of the failure in the security system and retry.

ED0002

User not authorized to maintain panels

Reason:

You attempted to access Panel Maintenance, but you are not authorized.

System Action:

The request is rejected.

User Action:

Request authorization for panel maintenance from your installation and retry the request.

ED0003

Path P1 is not defined

Reason:

The path name entered on the Edit Services Primary Menu is not defined to the system.

System Action:

The requested selection list is not displayed.

User Action:

The path name is derived from your user definition. Contact you security system administrator.

ED0004

Library *P1* is not defined

Reason:

The specified library name is not defined to the system.

System Action:

The requested selection list is not displayed.

User Action:

Enter a valid library name.

ED0008

Library is not in path

Reason:

The library name entered is not part of your panel services path.

System Action:

The request is rejected.

User Action:

Enter a correct library name. Enter *?* next to the Library Name field to display a list of valid library names.

ED0009

Edit not allowed on library P1

Reason:

You attempted to update the contents of a panel library (*P1*), but the library is not authorized for editing.

System Action:

The request is rejected.

User Action:

Correct the library name and retry. Panel library specifications are controlled by the PANELLIBS Customizer parameter group.

ED0010

Invalid panel name

Reason:

You entered an invalid panel name.

System Action:

None.

User Action:

Correct the panel name and retry.

ED0011

Not authorized for supplied path

Reason:

You specified a path name that you are not authorized to access.

System Action:

The request is rejected.

User Action:

Enter your authorized path name and retry.

ED0012

Panel already exists

Reason:

The panel being added already exists in the library.

System Action:

The request is rejected.

User Action:

Use a different panel name.

ED0101

UNABLE TO RETRIEVE USER INFORMATION

Reason:

The &SECCALL statement was used to check user authorization for the requested operation. This request was unsuccessful.

System Action:

The request is rejected.

User Action:

Determine the cause of the failure in the security system and retry.

ED0102

User not authorized for Edit Services

Reason:

You attempted to access Edit Services facilities, but you are not authorized.

System Action:

The request is rejected.

User Action:

Contact your security administrator.

ED0103

PATH ~P1 IS NOT DEFINED

Reason:

The path name entered on the Edit Services Primary Menu is not defined to the system.

System Action:

The requested selection list is not displayed.

User Action:

Enter a correct path name and retry.

ED0105

SELECT AN OPTION OR PRESS A FUNCTION KEY TO PROCEED

Reason:

An option must be entered in the Select Option field, or a function key pressed in order to perform the desired action.

System Action:

None.

User Action:

Enter a valid selection on the menu.

ED0106

INVALID OPTION

Reason:

An invalid selection was entered in the Select Option field.

System Action:

None.

User Action:

Enter a valid selection on the panel.

ED0107

REQUIRED FIELD OMITTED

Reason:

A field which is required for the option selected was omitted.

System Action:

The cursor is placed in the field which must be entered and the field is highlighted.

User Action:

Enter a value for the required field.

ED0108

LIBRARY IS NOT IN PATH

Reason:

The library name entered on the Edit Services selection menu is not part of your panel services path.

System Action:

The request is rejected.

User Action:

Enter a correct library name. A selection list of valid library names is presented if a ? is entered next to the library field on the Edit Services Panel Move/Copy Menu.

ED0109

EDIT NOT ALLOWED ON LIBRARY

Reason:

You attempted to update the contents of a panel library, but the library may not be edited.

System Action:

The request is rejected.

User Action:

The EDITablity of a library is controlled by the LIBRARY and LIBPATH commands. Correct the library name, or alter its attributes to allow EDIT.

ED0110

PANEL NAME INVALID

Reason:

An invalid name was entered where a panel name was required.

System Action:

None.

User Action:

Correct the panel name and retry.

ED0111

NOT AUTHORIZED FOR SUPPLIED PATH

Reason:

A path name was supplied which you are not authorized to access.

System Action:

The request is rejected.

User Action:

Enter your authorized path name, and retry.

ED0112

EDIT SERVICES RESTRICTED FROM THIS SYSTEM

Reason:

You attempted to access Edit Services facilities, but they are not available on this system. Panel move and copy is therefore not available.

System Action:

The request is rejected.

User Action:

Edit Services is restricted by the SYSPARMS EDITMAXK=NONE command. Either make Edit Services available by resetting this operand, or work on another system.

ED0113

FIELD MUST BE YES OR NO

Reason:

The field containing the cursor must be either YES or NO.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the field value and retry.

ED0114

'FROM' AND 'TO' LIBRARIES MUST NOT BE THE SAME

Reason:

Panels may be moved or copied from one library to another, but not into the same library.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Correct the library names and retry.

ED0115

ONLY ONE LIBRARY IN PATH - CANNOT COPY

Reason:

Panels may be moved and copied from one library to another, but not to the same library. There is only one library in the path, therefore the Panel Move/Copy utility is disabled for this path.

System Action:

The request is rejected.

User Action:

None.

ED1001

Tab to the required panel and enter S beside it to select it

Reason:

You have pressed F1 while in the Icon Panel selection list. To select an icon panel from the list, tab to the required panel and enter S beside it. The list is cursor-sensitive, so tabbing to the required panel and pressing Enter also selects that panel.

System Action:

None.

User Action:

None.

ED1002

Unable to open ICOPANL library, FILERC= P1

Reason:

An attempt to open the ICOPANL library to present a selection list of panels has failed with return code *P.*

System Action:

The list does not appear.

User Action:

Correct the file error and retry.

ED1101

LIBRARY NOT SELECTED FROM PANEL LIBRARY LIST

Reason:

A Panel Library List was presented and a library was not selected.

System Action:

None.

User Action:

None.

ED1201

PATH ~P1 IS NOT DEFINED

Reason:

The path name entered on the Edit Services Primary Menu is not defined to the system.

System Action:

The requested selection list is not displayed.

User Action:

Enter a correct path name and retry.

ED1301

LIBRARY IS NOT DEFINED

Reason:

The library name entered on the Edit Services Panel Move/Copy Menu is not defined to the system.

System Action:

The requested selection list is not displayed.

User Action:

Enter a correct library name. A selection list of valid library names is presented if a ? is entered next to the library field on the Edit Services Panel Move/Copy Menu.

ED1302

UNABLE TO OPEN LIBRARY - FILERC=~P1

Reason:

The library name entered on the Edit Services Move/Copy Menu cannot be opened. The return code from the *FILE ID statement is shown.*

System Action:

The request is rejected.

User Action:

Check that the library is open and accessible using the SH LIB and SH UDB commands.

ED1303

TOO MANY SORT FIELDS

Reason:

The SORT command on the Edit Services Panel Copy List has been issued. The command supports two sort fields but more than two were entered.

System Action:

None.

User Action:

Enter a valid SORT command and retry.

ED1304

INVALID SORT FIELD

Reason:

The SORT command on the Edit Services Panel Copy List has been issued. An unsupported sort field was entered.

System Action:

None.

User Action:

Enter a valid SORT command. The valid sort fields are NAME, CREATED, MODIFIED, SIZE, MLEV and ID, corresponding to the column headings on the selection list.

ED1305

~P1 RECORDS SORTED

Reason:

The SORT command on the Edit Services Panel Copy List has been issued and the displayed number of records was sorted.

System Action:

None.

User Action:

None.

ED1306

UNABLE TO RETRIEVE USER INFORMATION

Reason:

The &SECCALL statement was used to check user authorization for the requested operation. This request was unsuccessful.

System Action:

The request is rejected.

User Action:

Determine the cause of the failure in the security system and retry.

ED1307

USER NOT AUTHORIZED FOR EDIT SERVICES

Reason:

You attempted to access Edit Services facilities but you are not authorized.

System Action:

The request is rejected.

User Action:

Request authorization for Edit Services from your installation and retry the request.

ED1308

EDIT SERVICES RESTRICTED FROM THIS SYSTEM

Reason:

You attempted to access Edit Services facilities but they are not available on this system. Panel Move/Copy is therefore not available.

System Action:

The request is rejected.

User Action:

Edit Services is restricted by the SYSPARMS EDITMAXK=NONE command. Either make Edit Services available by resetting this operand, or work on another system.

ED1309

LIBRARY IS NOT IN PATH

Reason:

The library name entered on the Panel Services Primary Menu is not part of your panel services path.

System Action:

The request is rejected.

User Action:

Enter a valid library name. A selection list of valid library names is presented if a '?' is entered next to the library field on the Panel Services Primary Menu.

ED1310

EDIT NOT ALLOWED ON LIBRARY

Reason:

You attempted to update the contents of a panel library but the library may not be edited.

System Action:

The request is rejected.

User Action:

The EDITablity of a library is controlled by the LIBRARY and LIBPATH commands. Correct the library name, or alter its attributes to allow EDIT.

ED1311

NOT AUTHORIZED FOR SUPPLIED PATH

Reason:

An incorrect path name was supplied to the selection list. You are not authorized to access that path.

System Action:

The request is rejected.

User Action:

Enter the your authorized path name and retry.

ED2001

MEMBER IN USE BY ~P1

Reason:

The panel you wish to edit or delete is being edited or deleted by you (in another window) or another user. The userid is shown.

System Action:

The request is rejected.

User Action:

Wait until the panel is no longer in use, then retry the action.

ED2002

UNABLE TO ACCESS FILE - FILERC=~P1

Reason:

The panel library could not be opened. The return code from the *FILE ID* statement is shown.

System Action:

The request is rejected.

User Action:

Check that the library is open and accessible using the SHOW LIB and SHOW UDB commands, then retry.

ED2003

LIBRARY P1 IS NOT DEFINED

Reason:

The library name entered on the Edit Services Primary Menu is not defined to the system.

System Action:

The requested selection list is not displayed.

User Action:

Enter a correct library name. A selection list of valid library names is presented if a '?' is entered next to the library field on the Edit Services Primary Menu.

ED2004

PANEL ~P1 DOES NOT EXIST IN LIBRARY

Reason:

The library name entered on the Edit Services Primary Menu does not contain the specified panel.

System Action:

The request is rejected.

User Action:

Correct the library or panel name and retry.

ED2005

UNABLE TO OPEN '~P1' LIBRARY - FILERC=~P2

Reason:

The library name entered on the Edit Services Primary Menu cannot be opened. The return code from the *FILE ID statement is shown.*

System Action:

The requested selection list is not displayed.

User Action:

Check that the library is open and accessible using the SHOW LIB and SHOW UDB commands.

ED2006

PANEL ALREADY EXISTS IN 'TO' LIBRARY

Reason:

The panel being copied (with replace set to NO) already exists in the target library.

System Action:

The request is rejected.

User Action:

Correct the panel name or libraries, or use the REPLACE option to over-write the existing panel in the target library.

ED2007

~P1 PANELS ~P2 BEFORE ERROR ON THE 'TO' LIBRARY - VSAMFDBK=~P3

Reason:

Some panels were moved or copied to the 'TO' library before an error on the destination library occurred. The VSAMFDBK code explaining the error is shown.

System Action:

The move or copy operation is terminated.

User Action:

Check the reason for the error, correct and retry.

ED2008

PANEL ~P1 SUCCESSFULLY

Reason:

The panel has been moved or copied successfully.

System Action:

None.

User Action:

None.

ED2009

~P1 PANELS ~P2

Reason:

The number of panels displayed was moved or copied to the 'TO' library.

System Action:

None.

User Action:

None.

ED2010

~P1 PANELS ~P2, ~P3 NOT ~P2 BECAUSE REPLACE=NO

Reason:

The number of panels displayed was moved or copied to the 'TO' library. Some panel were not moved or copied, because the replace option was set to 'NO'.

System Action:

The panels which could be moved or copied without replacing an existing panel were moved or copied.

User Action:

If existing panels in the target library are to be replaced, then reissue the command with the replace option set to 'YES'.

ED2011

PANEL DEFINITION PRINTED

Reason:

The print command was used to print a panel definition. The print has been accepted by the print spooler (PSM).

System Action:

None.

User Action:

None.

ED2012

ERROR DURING PANEL ~P1 - VSAMFDBK=~P2

Reason:

Error occurred during panel rename or copy within library. The VSAMFDBK code explaining the error is shown.

System Action:

The rename or copy operation is terminated.

User Action:

Check the reason for the error, correct and retry.

ED9001

NO DATA TO BROWSE

Reason:

No data was found to be browsed.

System Action:

None.

User Action:

None.

ED9002

BLOCK COMMAND INCOMPLETE

Reason:

A block line command has been partially specified. That is, either the start line or end line has been specified but not both.

System Action:

The block command remains pending.

User Action:

Specify the start line and end line for the block command.

ED9003

MOVE/COPY PENDING

Reason:

A move or copy line command has been specified, but the position the lines are to be moved or copied to has not been specified.

System Action:

The move/copy command remains pending.

User Action:

Use the 'A' line command to indicate that the blocked data is to be moved or copied after that line, or use the 'B' line command to indicate that the blocked data is to be moved or copied before that line.

ED9004

'~P1' KEYWORD NOT SPECIFIED

Reason:

The mandatory keyword parameter identified by P1 was not specified when the editor was invoked.

System Action:

Processing is terminated.

User Action:

Correct and retry.

ED9005

'~P1' PARAMETER SPECIFIED WITH INVALID VALUE '~P2'

Reason:

The parameter identified by P1 was specified with an invalid value identified by P2 .

System Action:

Processing is terminated.

User Action:

Correct and retry.

ED9006

EDIT CANCELLED

Reason:

The user has cancelled the edit. No data has been modified.

System Action:

None.

User Action:

None.

ED9007

INVALID COMMAND

Reason:

An invalid command has been entered.

System Action:

The command is rejected.

User Action:

Correct and retry.

ED9008

'FLOW' NOT ALLOWED WITH OUTSTANDING LINE COMMAND

Reason:

The flow command cannot be entered when line commands are pending.

System Action:

The command is rejected.

User Action:

Complete or remove the line commands and retry.

ED9009

CURRENT MARGINS ARE: LEFT=~P1 RIGHT=~P2

Reason:

The margins are currently set to the displayed values.

System Action:

None.

User Action:

None.

ED9010

MARGINS SET: LEFT=~P1 RIGHT=~P2

Reason:

The margins have been set to the indicated column positions.

System Action:

None.

User Action:

None.

ED9011

INVALID VALUE FOR LEFT MARGIN - ~P1

Reason:

An invalid left margin value has been specified.

System Action:

The command is rejected.

User Action:

Correct and retry.

ED9012

INVALID VALUE FOR RIGHT MARGIN - ~P1

Reason:

An invalid right margin value has been specified.

System Action:

The command is rejected.

User Action:

Correct and retry.

ED9013

MARGINS MUST BE BETWEEN 1 AND ~P1

Reason:

An invalid right or left margin value has been specified.

System Action:

The command is rejected.

User Action:

Correct and retry.

ED9014

RECOVERY NOT SUPPORTED

Reason:

The recovery function is not supported by the application.

System Action:

The command is rejected.

User Action:

None.

ED9015

FIND STRING NOT SPECIFIED

Reason:

A character string was not specified on the find command.

System Action:

The command is rejected.

User Action:

Enter the character string to be found with the find command and retry.

ED9016

CHANGE STRING NOT SPECIFIED

Reason:

A character string was not specified for the change command.

System Action:

The command is rejected.

User Action:

Reenter the change command, specifying the character string to be changed and the new value of the character string.

ED9017

COPY NOT SUPPORTED

Reason:

The copy function is not supported in this application.

System Action:

The command is rejected.

User Action:

None.

ED9018

BEFORE OR AFTER MUST BE INDICATED

Reason:

A move or copy command has been entered but the position that the lines are to be copied or moved to has not been specified.

System Action:

The move or copy command remains pending.

User Action:

Specify where the lines are to be copied or moved by entering an 'A' or 'B' line command.

ED9019

COMMAND CONFLICT

Reason:

A number of mutually exclusive commands have been entered.

System Action:

The commands are not processed.

User Action:

Correct and retry.

ED9020

COPY SUCCESSFULLY COMPLETED

Reason:

A copy function has completed successfully.

System Action:

None.

User Action:

None.

ED9021

CREATE NOT SUPPORTED

Reason:

The create command is not supported in this application.

System Action:

The command is rejected.

User Action:

None.

ED9022

CREATE SUCCESSFULLY COMPLETED

Reason:

A create function has completed successfully.

System Action:

None.

User Action:

None.

ED9023

~P1 COMMAND NOT SUPPORTED IN ~P2 MODE

Reason:

A command has been entered that is invalid in the mode indicated.

System Action:

The command is rejected.

User Action:

None.

ED9024

SERVICE PROCEDURE ~P1 NOT FOUND

Reason:

The service NCL procedure was not found in the NCL procedure library.

System Action:

The function is terminated.

User Action:

Correct the service procedure name and retry.

ED9025

INVALID SCROLL AMOUNT

Reason:

An invalid scroll amount has been specified. Valid scroll amounts are (P)AGE, (H)ALF, (C)SR, (D)ATA, (M)AX or a number.

System Action:

None.

User Action:

Correct and retry.

ED9026

INVALID PARAMETER

Reason:

An invalid command parameter has been specified.

System Action:

The command is rejected.

User Action:

Correct and retry.

ED9027

CHARACTERS '~P1' CHANGED ~P2

Reason:

A change command has successfully completed.

System Action:

None.

User Action:

None.

ED9028

LINE TOO LONG TO APPLY CHANGE

Reason:

A line containing the character string to be changed would be longer than the maximum line length if the change was applied.

System Action:

The change is not applied.

User Action:

None.

ED9029

CHARACTERS '~P1' FOUND ~P2

Reason:

The character string specified on a find command has been found. If P2 is present it indicates that ALL was specified on the FIND command and the string was found the number of times indicated.

System Action:

The cursor is positioned at the beginning of the character string.

User Action:

None.

ED9030

~P1 OF DATA REACHED

Reason:

The end of the data, either in a forward (bottom) or backward (top), was reached before finding the specified character string.

System Action:

None.

User Action:

Press the Find key to continue the search from the top/bottom of the data.

ED9031

CHARACTERS '~P1' NOT FOUND

Reason:

The specified character string was not found in the data.

System Action:

None.

User Action:

None.

ED9032

COMMAND INVALID ON THIS LINE

Reason:

A line command was entered that is not valid on the line indicated.

System Action:

The command is rejected.

User Action:

Correct and retry.

ED9033

INVALID LINE COMMAND

Reason:

An invalid line command was specified.

System Action:

The command is rejected.

User Action:

Correct and retry.

ED9034

SCROLL MUST BE CSR, PAGE, HALF, DATA OR A NUMBER

Reason:

An invalid scroll amount was specified.

System Action:

None.

User Action:

Correct the scroll amount.

ED9035

FIELD MUST BE SPECIFIED

Reason:

The indicated field must be specified.

System Action:

None.

User Action:

Enter a valid value in the field.

ED9036

~P1 MUST BE A VALID ~P2

Reason:

An invalid value was entered in the field indicated.

System Action:

None.

User Action:

Enter a valid value in the field.

ED9037

RIGHT MARGIN MUST EXCEED LEFT MARGIN BY AT LEAST 20 CHARACTERS

Reason:

An attempt was made to set margins where the value of the right margin was less than the value of the left margin. The right margin value must be greater than the left margin and allow a minimum of 20 characters to be entered between the margins.

System Action:

The request is rejected.

User Action:

Change the values of the margins so that the value of the right margin is greater than the left margin and allows a minimum of 20 characters to be entered between them.

ED9038

CREATE ONLY VALID WHEN TEXT IS ENTERED

Reason:

User has attempted to issue a CREATE command without any text being present

System Action:

Request is rejected. CREATE fails.

User Action:

Enter text and retry.

ED9039

LINE CONTAINS CHARACTERS NOT SUPPORTED BY THIS DEVICE

Reason:

This message overlays a line of data if the line contains DBCS characters and the terminal is not DBCS capable.

System Action:

The line of data may be deleted, moved, copied but may not be editted.

User Action:

None.

ED9040

FUNCTION ONLY AVAILABLE IN 3270 ENVIRONMENT

Reason:

An edit screen can only be displayed in a fullscreen 3270 environment.

System Action:

The command is not processed.

User Action:

None.

ED9101

COMMAND CONFLICT

Reason:

A number of mutually exclusive commands have been entered.

System Action:

The commands are not processed.

User Action:

Correct and retry.

ED9102

UNABLE TO PROCESS COMMANDS. TEXT LINE LIMIT WILL BE EXCEEDED

Reason:

The editor has a physical restriction of 9999 text lines. The current set of commands will cause this limit to be exceeded.

System Action:

Restore the editor environment to the state prior to attempting to process this set of commands, and highlight all commands as being in error.

User Action:

Modify the line commands to a combination which will not cause the line limit to be exceeded. If the functions being performed are being done to facilitate further editing which will eventually lead to fewer than 9999 lines, it is possible to 'export' a subset of lines to the NOTEPAD where they may be freely edited and then 'imported' back to the editor.

ED9103

INCOMPLETE STRING SPECIFIED

Reason:

A change command was issued where either the "from" string or the "to"string were not completely specified. This error usually occurs when quotes are being used to delimit the string(s).

System Action:

Highlight the command in error.

User Action:

Re-enter the change strings taking care to ensure that quotes are balanced.

ED9104

REQUIRED STRING OMITTED

Reason:

A change command was issued where the "change to" string was not specified.

System Action:

Highlight the command in error.

User Action:

Enter the "change to" string and retry.

ED9105

~P1 NOT ALLOWED. ONE OR MORE TEXT LINES MUST BE SPECIFIED

Reason:

The P1 action is not allowed because no text lines were specified.

System Action:

Highlight the command in error.

User Action:

Specify one or more text lines and retry the command.

ED9106

LINE(S) NOT DELETED. NOT ALL DATA COULD BE MOVED

Reason:

This message is issued when a MOVE and OVERLAY command resulted in not all the text being moved. This could be caused by non-blank characters being positioned in the target line(s) in the same positions as non-blank characters in the source lines. It will also occur if more source lines are specified than target lines e.g. entering M6 on one line and O3 on another.

System Action:

Issue warning message, and don't delete source lines.

User Action:

Delete the source lines using D or DD, or specify a larger target area.

ED9107

MAXIMUM TEXT LINE LIMIT (~P1) EXCEEDED. TEXT CANNOT BE SAVED

Reason:

This message is issued when the application-supplied maximum text line limit (P1) has been exceeded. It is a warning message only, and normal processing will continue. However, you will not be permitted to exit from the editor, other than by cancelling, until the total number of lines is below the limit.

System Action:

Issue warning message, only allow exit via CANCEL.

User Action:

Reduce the number of text lines or CANCEL the edit session.

ED9108

TEXT LINE LIMIT EXCEEDED. ~P1 LINES LOST

Reason:

This message is issued when the physical maximum text line limit of 9999 has been exceeded as a result of Text Entry. The number of excess lines lost is contained in P1.

System Action:

Delete excess lines.

User Action:

None.

ED9109

AUTOMATIC RECOVERY IS ~P1

Reason:

This message is issued when the RECOVERY command is issued with no operands. It indicates the current state of RECOVERY processing.

System Action:

None

User Action:

None

ED9110

PRINT REQUEST ~P1 SENT TO PRINTER ~P2

Reason:

This is an informational message indicating that a print request has successfully been sent to the requested printer.

System Action:

None

User Action:

None

ED9111

'~P1' VALUE ~P2 INVALID WHEN '~P3' VALUE IS ~P4

Reason:

The value P2 that has been assigned to parameter P1 is invalid when parameter P3 has a value of P4.

System Action:

The procedure is terminated and an error message is returned.

User Action:

Correct the invalid parameter and retry the operation.

ED9112

AMBIGUOUS FIND STRING SPECIFIED

Reason:

A find command has been specified which the CAS Editor has been unable to satisfactorily parse. This message is issued when it is unclear what the string to be searched for is. An example of a FIND command which could cause this message to issue is "F FIRST LAST" in this case it is unclear whether the first occurrence of the word 'last' is being searched for, or the last occurrence of the word 'first'. Another example would be "F 'dog' cat" as it is again unclear what the actual text to be searched for is.

System Action:

The command is rejected and highlighted in error.

User Action:

Use single (') or double (") quotes to make the command unambiguous.

ED9113

LINE COMMAND DOES NOT SUPPORT DBCS DATA

Reason:

A line command has been entered on a line containing DBCS data. The command is not supported on this line.

System Action:

The command is rejected and highlighted in error.

User Action:

Correct and retry.

ED9114

CHARACTER NOT ELIGIBLE

Reason:

You have selected the 'HEX ATTR' option with the cursor positioned on a special character, for example, a DBCS shift character. This character is not eligible for display or alteration.

System Action:

None.

User Action:

Position the cursor elsewhere and retry.

ED9115

CURSOR MUST BE WITHIN TEXT

Reason:

You have selected the 'HEX ATTR' edit option, but the cursor is not positioned in the body of the text.

System Action:

None.

User Action:

Position the cursor in the body of the text and retry.

EDDB0001

Panel P1 saved in library P2

Reason:

Panel (*P1*) was saved in library (*P2*).

System Action:

None.

User Action:

None.

EDDB0002

Panel P1 does not exist in library P2

Reason:

The requested panel name (*P1*) was not found in the specified library (*P2*).

System Action:

The procedure is terminated.

User Action:

Correct the panel name or library name and retry.

EDDB0003

Cannot save panel P1, length P2 exceeds maximum of P3

Reason:

Panel *P1* exceeds the maximum length for a panel record. The maximum length for a panel record is *P3* .

System Action:

Request rejected.

User Action:

Reduce the size of the panel.

EDDB0004

Panel P1 deleted from library P2

Reason:

Panel (*P1*) was deleted from library (*P2*).

System Action:

None.

User Action:

None.

EDDB0005

Panel P1 renamed to P2 in library P3

Reason:

Panel (*P1*) was renamed (to *P2*) in library (*P3*).

System Action:

None.

User Action:

None.

EDDB0006

Panel P1 copied as P2 in library P3

Reason:

Panel (*P1*) was copied (as *P2*) in library (*P3*).

System Action:

None.

User Action:

None.

EDDB0007

Panel P1 P2 to library P3

Reason:

Panel (*P1*) was copied or moved (*P2*) to library (*P3*).

System Action:

None.

User Action:

None.

EDDB0008

P1 panels P2 to library P3 P4

Reason:

A request to copy or move panels from one library to another was sucessful. In the message:
P1 is the number of panels copied or moved
P2 is the action performed (copied or moved)
P3 is the target library
P4 indicates the number of panels not replaced This message is suppressed if all panels are copied or moved because:
- The replace action is specified, or
- None of the selected panels exist in the target library.

System Action:

None.

User Action:

None.

EDDB0011

File ID P1 unavailable - FILERC P2

Reason:

The file from which you attempted to read a panel from is unavailable.

System Action:

Procedure terminated.

User Action:

See the NCL Reference for return codes from the &FILE OPEN verb.

EDDB0012

VSAM error on file get: Panel= P1, FileID P2, FileRC= P3 FDBK= P4

Reason:

An error occurred attempting to read a panel from a library. In the message:
P1 is the name of the panel
P2 is the library name (file ID)
P3 is the file return code (&FILERC)
P4 is the file feedback code (&VSAMFDBK)

System Action:

The procedure is terminated.

User Action:

See the &FILE GET verb description in the NCL Reference for return code and feedback values.

EDDB0013

VSAM error on file put: Panel= P1, FileID P2, FileRC= P3 FDBK= P4

Reason:

An error occurred attempting to write a panel to a library. In the message:
P1 is the name of the panel
P2 is the library name (file ID)
P3 is the file return code (&FILERC)
P4 is the file feedback code (&VSAMFDBK)

System Action:

The procedure is terminated.

User Action:

See the &FILE PUT verb description in the NCL Reference for return code and feedback values.

EDDB0014

VSAM error on file delete: Panel= P1, FileID P2, FileRC= P3 FDBK= P4

Reason:

An error occurred attempting to delete a panel from a library. In the message:
P1 is the name of the panel
P2 is the library name (file ID)
P3 is the file return code (&FILERC)
P4 is the file feedback code (&VSAMFDBK)

System Action:

The procedure is terminated.

User Action:

See the &FILE DEL verb description in the NCL Reference for return code and feedback values.

EDDB0021

Panel P1 already exists in P2 library

Reason:

You attempted to copy or move a panel (*P1*) to another library (*P2*) but the panel already exists in that library.

System Action:

Request rejected.

User Action:

If you want to replace the panel, use the replace action.

EDDB0101

Panel P1 successfully P2

Reason:

The panel identified by *P1* performed the action by *P2* successfully.

System Action:

None.

User Action:

None.

EDDB0102

Panel P1 not saved, no changes were made

Reason:

The panel identified by *P1* was not saved because no changes were detected.

System Action:

None.

User Action:

None.

EDDB0103

Panel P1 already exists

Reason:

You attempted to create a new panel; however, the name specified already exists in that library.

System Action:

Request rejected.

User Action:

Specifiy a unique panel name and retry.

EDDB0104

Library P1 is not defined

Reason:

The library identified by *P1* is not defined.

System Action:

Request rejected.

User Action:

None.

EDDB0105

Path P1 is not defined

Reason:

The path name entered on the Edit Services Primary Menu is not defined to the system.

System Action:

The requested selection list is not displayed.

User Action:

The path name is derived from your user definition. Contact your security system administrator.

EDDB0109

Edit not allowed on library P1

Reason:

You attempted to update the contents of a panel library (*P1*), but the library is not authorized for editing.

System Action:

The request is rejected.

User Action:

Correct the library name and retry. Panel library specifications are controlled by the PANELLIBS Customizer parameter group.

EDDB0111

Invalid syntax - panel name must be specified

Reason:

You issued a command that requires a panel name to be specified; however, you omitted the panel name.

System Action:

Request rejected.

User Action:

Specifiy a panel name and retry.

EDDB0112

Invalid syntax - panel name P1 is invalid

Reason:

You entered an invalid panel name in the command.

System Action:

Request rejected.

User Action:

Specifiy a valid panel name and retry.

EDDB0113

Invalid syntax

Reason:

You issued a command with invalid syntax.

System Action:

Request rejected.

User Action:

See the online help. Correct syntax and retry.

EDDB0201

Panel P1 already exists

Reason:

The panel being renamed or copied already exists in the library.

System Action:

The request is rejected.

User Action:

Use a different new panel name or delete the existing panel name before doing rename or copy in the library.

EDDB0204

Invalid sort field

Reason:

You specified an invalid sort field name as part of the SORT command.

System Action:

None.

User Action:

Enter a valid SORT command. The valid sort fields are NAME, CREated MODified, SIZE, MLEV, and ID, corresponding to the column headings on the selection list.

EDDB0205

P1 records sorted

Reason:

The SORT command on the Edit Services Panel Selection List has been issued, and the displayed number of records was sorted.

System Action:

None.

User Action:

None.

Gx to Hx Messages

GP0001

Invalid keyword parameter specified - parameter=*P1*

Reason:

The keyword parameter *P1* was either omitted or specified incorrectly.

System Action:

The request is rejected.

User Action:

Correct and retry.

GP0002

Product(s) *P1* not configured in this region

Reason:

An attempt was made to invoke a function which requires a product that has not been configured in this region.

P1 identifies either:

- a single product name that is required
- multiple product names, one of which is required.

System Action:

The function is terminated.

User Action:

Contact your systems administrator.

Product name(s) are configured using the PROD= JCL parameter, normally specified in the RUNSYSIN member.

GP0003

NCL procedure P1 not found

Reason:

An attempt was made to execute an NCL procedure which does not exist in the NCL procedure library allocated to the requesting user.

System Action:

The function is terminated.

User Action:

Correct the procedure name or move the procedure into a dataset in the requesting user's NCL procedure library or change the user's NCL procedure library allocation and then retry.

GP0004

P1 must be entered

Reason:

Data must be entered into the field identified by the field label *P1* before proceeding.

System Action:

The user cannot proceed until the field is filled in.

User Action:

Fill in the field before proceeding.

GP0005

' P1' is not a valid value for P2

Reason:

The value *P1* is not a valid value for the field identified by the field label *P2.*

System Action:

None.

User Action:

Enter a valid value before proceeding.

GP0006

Function key P1 is not active in this window

Reason:

Function key *P1* was pressed and it has no action assigned to it.

System Action:

None.

User Action:

Choose another function key.

GP0007

Processing terminated - keyword parameter format invalid

Reason:

This message is the first in a group of 3 messages issued when an NCL procedure is terminated because of invalid keyword parameters being specified.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

GP0008

Base procedure=*P1*, Nesting level=*P2*, Invalid parameter=*P3*

Reason:

An NCL procedure is terminated because of invalid keyword parameters being specified. *P1* is the base NCL procedure, *P2* is the current nesting level, and *P3* is the parameter that is incorrectly specified. This message is the second in a group of three messages issued.

System Action:

The NCL procedure is terminated.

User Action:

Correct, and retry.

GP0009

Parameters passed: P1

Reason:

This message is the third in a group of 3 messages issued when an NCL procedure is terminated because of invalid keyword parameters being specified. *P1* is the full list of parameters specified.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

GP0010

APPL parameter must be supplied

Reason:

The APPL (application id) parameter must be supplied to $CAGP001.

System Action:

The NCL procedure is terminated.

User Action:

Correct the call to $CAGP001 so that it specifies the application id in the APPL keyword and retry.

GP0011

FUNC parameter must be supplied

Reason:

The FUNC (function name) parameter must be supplied to $CAGP001.

System Action:

The NCL procedure is terminated.

User Action:

Correct the call to $CAGP001 so that it specifies the function name in the FUNC keyword.

GP0012

Invalid command

Reason:

The command that was specified on the command line was invalid.

System Action:

The command is rejected.

User Action:

Enter a valid command and retry.

GP0013

Userid P1 is not authorized to execute commands

Reason:

The userid *P1* is not authorized to enter EXEC or CMD in the COMMAND and SELECT OPTION input fields on panels and therefore the execution of commands is not allowed.

System Action:

The command is rejected.

User Action:

Contact your systems administrator if the function is required.

GP0014

PANEL parameter must be supplied

Reason:

The PANEL (panel name) parameter must be supplied to $CAGP001.

System Action:

The NCL procedure is terminated.

User Action:

Correct the call to $CAGP001 so that it specifies the panel name in the PANEL keyword.

GP0015

Vartable ADD failed - table=$GPQDATA, FDBK= P1

Reason:

An error occurred while adding data to the queued data region vartable.

System Action:

The function is terminated.

User Action:

Determine the cause of the error from the feedback code and retry.

GP0016

No queued data found

Reason:

No previously queued data was found in the queued data region vartable.

System Action:

None.

User Action:

None.

GP0017

Userid P1 is not authorized to execute SPLIT/SWAP commands

Reason:

The userid *P1* is not authorized to execute the SPLIT or SWAP command. This could be due to your userid not having the authority to issue SPIT or SWAP commands or due to you attempting to issue a SPLIT or SWAP command whilst nested from the Broadcast Services Broadcast Display Panel.

System Action:

The command is rejected.

User Action:

You cannot issue SPLIT or SWAP commands whilst nested from the Broadcast Services Broadcast Display Panel.
If you are not nested from the Broadcast Display panel, contact your systems administrator if the function is required.

GP0018

Vartable ADD failed - table=$GPNOTEPAD, FDBK= P1

Reason:

An error occurred while adding data to the notepad region vartable.

System Action:

The function is terminated.

User Action:

Determine the cause of the error from the feedback code and retry.

GP0019

No notepad data found

Reason:

No previously noted data was found in the notepad region vartable.

System Action:

None.

User Action:

None.

GP0020

There is no command to retrieve - the command stack is empty

Reason:

A RETRIEVE command was entered, however there are no commands in the command stack to retrieve.

System Action:

No command is retrieved.

User Action:

None.

GP0021

Notepad already being edited in other window or at a lower level process

Reason:

A request to modify the contents of the Notepad failed because you were already editing or accessing the notepad in the another window or at a lower process level.

System Action:

The request is rejected.

User Action:

Retry the request at a later time.

GP0022

Invalid NCL procedure name P1

Reason:

An attempt was made to execute NCL procedure with name *P1* . However the name is invalid for an NCL procedure.

System Action:

The function is terminated.

User Action:

Correct the procedure name and then retry the request.

GP0023

There are no commands with the specified prefix

Reason:

A RETRIEVE command was entered, however there are no commands in the command stack with the specified prefix.

System Action:

No command is retrieved.

User Action:

None.

GP0024

PANELID parameter must be specified as ON or OFF

Reason:

The parameter specified for the PANELID command is invalid. This value must be specified as either ON or OFF. If left blank then the current setting will toggle.

System Action:

No command is rejected.

User Action:

Enter a valid command and retry.

GP0025

' P1' duplicated for P2

Reason:

The value *P1* has been specified more than once for the field identified by the field label *P2.*

System Action:

None.

User Action:

Remove the duplicate value and retry.

GP0026

' P1' conflicts with ' P2' for P3

Reason:

The value *P1* is mutually exclusive with the value *P2* for the field identified by the field label *P3.*

System Action:

None.

User Action:

Remove the duplicate value and retry.

GP0027

P1* requires System Base version of *P2

Reason:

The identified product release or component, *P1*, has a prerequisite System Base release of *P2*.

System Action:

The region is shut down.

User Action:

Verify that the STEPLIB and COMMANDS data sets are correct for the product release level.

A common cause of this problem is updating the RUNSYSIN member to include new procedure libraries but not updating the started task to include new load libraries.

Note: Products from different load library levels cannot be combined in the same region.

For product availability information, contact CA Support.

GP0028

Action is not valid on this line

Reason:

You have entered a line command, or hit enter with the cursor on a line that does not support this action.

System Action:

The action is rejected.

User Action:

Choose a different action, or a different line.

GP0029

' P1' conflicts with ' P2'

Reason:

The field *P1* is mutually exclusive when *P2* is specified.

System Action:

None.

User Action:

Erase the field (*P1*) or amend the conflicting field (*P2*) and retry.

GP0030

Unknown link name P1

Reason:

An APPC request to the remote system, identified by *P1* , failed; the INMC link name (*P1*) does not exist.

System Action:

The request is ignored.

User Action:

Use the SHOW LINKS command to verify INMC link names and status.

GP0031

Link name P1 is not active : status = P2

Reason:

An APPC request to the remote system, identified by *P1* , failed; the INMC link name (*P1*) is not active - the current status is *P2*

System Action:

The request is ignored.

User Action:

Use the SHOW LINKS command to verify INMC link names and status.

GP0032

Function not available on back-level system P1: requires P2

Reason:

An APPC request to the remote system, identified by *P1* , failed. The remote system is running a back-level version that does not support the type of request. The minimum requirement is shown (*P2*).

System Action:

The request is ignored.

User Action:

None.

GP0033

APPC call to system P1 failed with RC= P2 FDBK= P3

Reason:

An APPC request to the remote system, identified by *P1* , failed with return code *P2* and feedback code *P3* .

System Action:

An additional error message may be written to the activity log if RC=16.

User Action:

Contact your System Administrator.

GP0034

P1 canceled

Reason:

Requested action (*P1*) has been canceled.

System Action:

None.

User Action:

None.

GP0035

Either ' P1' or ' P2' must be specified

Reason:

Field *P1* or field *P2* must be specified.

System Action:

None.

User Action:

Enter either field (*P1* or *P2*) and retry.

GP0201

INVALID KEYWORD VALUE SPECIFIED, KEYWORD=~P1 VALUE=~P2

Reason:

The function key handler maintenance procedure $CAGP02P failed because it received an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

Procedure $CAGP02P terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

GP0202

FUNCTION KEY PROFILE ALREADY BEING EDITED BY ~P1, TRY LATER

Reason:

A request to edit the function keys failed because another user or this user was already editing the Keys. The userid of the user who is editing the keys is P1 . If this is your userid then it is because you are editing the keys from another terminal or in another window.

System Action:

The request is rejected.

User Action:

Retry the request at a later time.

GP0203

FUNCTION KEY PROFILE SAVED

Reason:

A request to File or Save the Function Key profile was successfully performed.

System Action:

None.

User Action:

None.

GP0204

FUNCTION KEY PROFILE UPDATE CANCELLED

Reason:

A request to update the Function Key profile was cancelled.

System Action:

None.

User Action:

None.

GP0205

INVALID COMMAND

Reason:

An invalid command was entered in the Command field.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

GP0206

INVALID FIELD NAME RECEIVED, FIELD=~P1 DESC=~P2

Reason:

The Function Key Handler maintenance procedure $CAGP02P failed because it received an invalid field name. The field name was P1 and its description was P2 .

System Action:

Procedure $CAGP02P terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

GP0207

INVALID FUNCTION KEY ACTION, FIRST WORD MUST BE A VALID NAME

Reason:

A function key action was specified that was invalid. The function key actions must consist of a valid command name (1 to 8 characters long) followed by any parameters expected by the command.

System Action:

The panel is redisplayed and the function keys action field is set in error.

User Action:

Enter a valid command name as the first word of the action and then retry.

GP0208

LABEL IS INVALID IF AN ACTION HAS NOT BEEN SPECIFIED FOR THE KEY

Reason:

A function key label was specified for a function key that didn't have an action specified. This is invalid. The label can only be specified if the action is also specified.

System Action:

The panel is redisplayed and the function keys label field is set in error.

User Action:

Enter an action for the function key or blank out the label field.

GP0209

LABEL IS REQUIRED IF AN ACTION HAS BEEN SPECIFIED FOR THE KEY

Reason:

A function key label was not specified for a function key that had an action specified. This is invalid. The label is required if the action is specified.

System Action:

The panel is redisplayed and the function keys label field is set in error.

User Action:

Enter a label for the function key or blank out the action field.

GP0210

NOT AUTHORIZED

Reason:

You are not allowed to use the KEYS SET command to change another user's key profile. Systems Support Services access is needed for this function.

System Action:

The command is rejected.

User Action:

Obtain Systems Support Services authorization.

GP0301

INVALID KEYWORD VALUE SPECIFIED, KEYWORD=~P1 VALUE=~P2

Reason:

The notepad handler procedure $CAGP03Z failed because it received an invalid keyword value. The keyword was P1 and the invalid value was P2 .

System Action:

Procedure $CAGP03Z terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

GP0302

NOTEPAD ALREADY BEING EDITED IN OTHER WINDOW OR AT A LOWER LEVEL PROCESS

Reason:

A request to edit the Notepad failed because you were already editing or accessing the notepad in the another window or at a lower process level.

System Action:

The request is rejected.

User Action:

Retry the request at a later time.

GP0303

INVALID USE OF PROCEDURE $CAGP03Z, NOTEPAD NOT LOCKED

Reason:

The notepad editor service procedure $CAGP03Z failed because the notepad facility was incorrectly invoked.

System Action:

Procedure $CAGP03Z terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

GP0304

NOTEPAD SAVED

Reason:

A request to File or Save the Notepad was successfully performed.

System Action:

None.

User Action:

None.

GP0305

NOTEPAD UPDATE CANCELLED

Reason:

A request to update the Notepad was cancelled.

System Action:

None.

User Action:

None.

GP0306

NOTEPAD CLEARED

Reason:

All the lines of the Notepad were deleted.

System Action:

None.

User Action:

None.

GP0401

INVALID VALUE FOR SHARED VARIABLE, VAR=~P1 VALUE="~P2"

Reason:

The list service procedure $CAGP04L for CAS failed because it received an invalid value for a shared variable. The variable name was P1 and its value was P2 .

System Action:

Procedure $CAGP04L terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

GP0502

CALLTYPE P1 NOT RECOGNIZED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The selection list service procedure $CAGP05L did not support the calltype P1 from the selection list manager.

System Action:

Selection List Terminates.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

GP0503

OPTION P1 NOT RECOGNIZED BY SELECTION LIST SERVICE PROCEDURE

Reason:

The selection list service procedure $CAGP05L did not support the selection option P1 that was specified on the selection list.

System Action:

Selection rejected.

User Action:

Contact the system administrator. Ensure the installation has been performed as stated in the installation instructions, as the cause of the error may be due to incorrect installation.

GP0505

TIMED OUT WAITING FOR RESPONSE FROM CANCEL COMMAND

Reason:

A response to the cancel command was not received within 20 seconds.

System Action:

Could not complete requested function.

User Action:

Determine why the response is not being returned within 20 seconds. Check the log for any error messages.

GP1000

Invalid keyword parm for P1 Keyword= P2 Value=" P3"

Reason:

Procedure *P1* was invoked with an invalid keyword parameter value for keyword *P2* . The value (*P3*) was either omitted or incorrectly specified.

System Action:

The request is rejected and procedure *P1* terminates.

User Action:

Correct the keyword parameter value and retry the request.

GP1001

Internal error in P1. P2, RC/FB= P3/ P4 Map= P5 Comp= P6

Reason:

An internal mapping error occurred. *P1* is the procedure that encountered the error. *P2* is the MDO name. *P3* is the return code. *P4* is the feedback code. *P5* is the map name. *P6* is the map component.

System Action:

Processing of the current action fails.

User Action:

Contact your system administrator.

GP1002

User P1 is not authorized to use P2

Reason:

Userid *P1* has not been defined with the necessary authority level to access *P2* .

System Action:

Access to the requested menu function is prevented.

User Action:

Contact your local security administrator. Your NetMaster UAMS file and/or your SAF security system (RACF, ACF2, or Top Secret) must be updated to allow the correct level of access to the required feature.

GP1003

P1 field contains embedded blanks

Reason:

The data entered into the specified field contains one or more embedded blanks.

System Action:

Option not processed.

User Action:

Correct the field and retry the operation.

GP1004

P1 is not a valid dataset name

Reason:

The value entered into the Dataset Name field is not a valid MVS dataset name.

System Action:

Option not processed.

User Action:

Enter a valid dataset name and retry the operation.

GP1005

P1 is not configured in this region

Reason:

The selected option or action requires an optional product or component that has not been configured in this region. *P1* indicates the product(s) or component(s) that are required.

System Action:

Access to the requested menu function is prevented.

User Action:

Contact your local systems administrator. Your region must be changed to include (at least one of) the indicated product(s) or component(s) as part of the initialization parameters.

GP1006

Option P1 is only supported on Focal Point systems.

Reason:

The menu option you selected is available only on focal point systems within your multi-system complex. This region is not a focal point system.

System Action:

The selected option is not invoked.

User Action:

Log on to a focal point system to use this option.

GP1007

VFS P1 failed, FILERC: P2 VSAM FDBK: P3 VFS KEY: P4

Reason:

The VFS operation, *P1* , failed with file return code *P2* and VSAM feedback code *P3* for the VFS key, *P4* .

System Action:

None

User Action:

Contact your system administrator.

GP1008

Cannot update VFS file - user is not authorized

Reason:

An attempt to update the VFS database failed because the user does not have update authority.

System Action:

None

User Action:

Contact your security administrator for assistance.

GP1009

VFS OPEN failed - user is not authorized

Reason:

An attempt to open the VFS database failed because the user does not have authority to access the database.

System Action:

None

User Action:

Contact your security administrator for assistance.

GP1010

P1 must be entered

Reason:

No value was supplied for a required field.

System Action:

The field in error is highlighted.

User Action:

Enter a value in the field and retry the option.

GP1011

Vartable error in P1 Table= P2 Action= P3 FDBK= P4 Key=" P5"

Reason:

A vartable action failed:
P1 is the procedure name
P2 is the vartable name
P3 is the vartable action
P4 is the feedback value
P5 is the vartable key(where relevant)

System Action:

The requested action or display is incomplete.

User Action:

This is an internal error. Contact Technical Support.

GP1012

Automation Services is not configured in this region

Reason:

The selected option or action requires the Automation Services component that has not been configured in this region. The component is automatically included by products that require Automation Services and the region does not include any of those products.

System Action:

Access to the requested menu function is prevented.

User Action:

Contact your local systems administrator. Your region must be changed to include (at least one of) the products that require Automation Services, as part of the initialization parameters.

GP1013

Function not valid in this environment

Reason:

The requested function requires a full-screen interface but the request has been issued from a region that does not have a full-screen interface, for example:
- A background user
- A remote operator (using ROUTE from another system)

System Action:

The request is rejected.

User Action:

Execute the request (or a function that initiated the request) from an environment which has a real window; that is:
- Avoid submitting the command to a background region.
- Execute the command locally.

GP1014

Invalid argument to function P1 Arg= P2 Value=" P3"

Reason:

Function *P1* was invoked with an invalid argument value for argument number *P2.* The value *P3* was either omitted or incorrectly specified.

System Action:

The request is rejected.

User Action:

Correct the argument value and retry the request.

GP1015

Procedure abend in P1 line P2. P3

Reason:

The procedure *P1* terminated abnormally at line *P2. P3* is a summary of the error condition.

System Action:

Processing terminates.

User Action:

Contact your local support representative, providing this messages and associated error messages.

GP1016

P1 abend details: LINE= P2 COND= P3 STMT_NAME= P4 KEYWORD= P5 NAME= P6 SUBNAME= P7 VALUE= P8 VALUEOK= P9 VALUE2= P10 VALUE2OK= P11

Reason:

This message follows GP1015 and is issued as a result of a procedure abending. This message supplies the specific error details as follows:

P1 - the procedure that abended

LINE= P1 - the line number in the source code

COND= *P2* - the error condition

STMT_NAME= *P3* - the statement name (verb name)

KEYWORD= *P4* - the keyword name (operand name)

NAME= *P5* - the name specification

SUBNAME= *P6* - the variable name causing the error

VALUE= *P7* - the value that caused the error

VALUEOK= *P8* - 1 if VALUE= caused the error

VALUE2= *P9* - the second value that caused the error

VALUE2OK= *P10* - 1 if VALUE2= caused the error

System Action:

Refer to message GP1015.

User Action:

Refer to message GP1015.

GP1017

Invalid sort option. Use SORT ? to display valid options

Reason:

You entered an invalid SORT command.

System Action:

SORT command is rejected.

User Action:

Enter **SORT ?** and select an option from the list.

GP1018

No sort value selected

Reason:

You used the SORT ? command to present a prompt list of sort values, but did not select a value.

System Action:

None.

User Action:

Specify a sort value or select a value from the prompt list.

GP1019

***P1* is not an IP address or partial IP address**

Reason:

You issued the LOCATE command with an invalid operand. *P1* must be an IP address or part thereof.

System Action:

None.

User Action:

Do one of the following:

- Change the locate command to specify a valid or partial IP address.
- Use the **SORT ?** command to sort the list by a different field.

GP1020

Locate only supported after list is sorted

Reason:

You used the LOCATE command on an unsorted list. LOCATE is only supported if the list is sorted.

System Action:

None.

User Action:

Use the **SORT ?** command to display options for sorting this list. After the list is sorted, reenter the locate command.

GP1021

Invalid locate value specified

Reason:

You specified an invalid value for the LOCATE command. LOCATE applies to the column the list is sorted by. For a numeric column, you have tried to locate a non-numeric value. For a column with a specific range of values (for example, port), you have tried to locate a value outside the range.

The LOCATE command is used to position the list based on the current sort column. If you want to find a value anywhere in the list, then use the FIND command.

System Action:

None.

User Action:

Reenter the LOCATE command, specifying a valid value for the current sort column.

HM0002

APPL keyword not specified - call rejected

Reason:

The APPL keyword was not specified on the procedure call.

System Action:

The procedure call was rejected.

User Action:

Correct the call parameters and retry.

HM0003

Unsupported help type: P1

Reason:

The type of help (*P1*) is no longer supported.

System Action:

None.

User Action:

Use the CALLINFO command to determine the help function details. Contact you product supplier.

HM0007

Help does not exist

Reason:

The help that you attempted to process does not exist on the help database. You may have specified an incorrect record or the help record may have been deleted by another user.

System Action:

None.

User Action:

If the name of the help record was specified incorrectly, correct it and retry.

HM0013

Invalid command

Reason:

An invalid command was entered.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

HM0041

Invalid scroll amount

Reason:

An invalid scroll amount has been specified. Valid scroll amounts are (P)AGE, (H)ALF, (C)SR, (D)ATA, (M)AX or a number.

System Action:

None.

User Action:

Correct the scroll amount.

HM0042

No more help text available in a backwards direction

Reason:

You attempted to scroll backward in the help text and the top of the text is already displayed.

System Action:

None.

User Action:

None.

HM0043

No more help text available in a forwards direction

Reason:

You attempted to scroll forward in the help text and the bottom of the help text is already displayed.

System Action:

None.

User Action:

None.

HM0044

No more help available

Reason:

There is no more help available to view.

System Action:

None.

User Action:

None.

HM0048

Macro error in help text, line P1 - help not found

Reason:

A .CP (copy), or .MU (menu item) macro, embedded in the help text, refers to a help file that does not exist.

System Action:

The macro is ignored.

User Action:

Do one of the following:

- Edit the help text and correct the .CP or .MU macro reference

- Add new help text with the name referenced in the .CP or .MU macro

HM0049

Vartable error, action= P1 FDBK= P2

Reason:

An internal error occurred while processing a Vartable. *P1* is the action that was being performed *P2* is the feedback code

System Action:

Help text generation fails.

User Action:

Contact your system administrator.

HM0050

No help available, APPL= P1 FUNC= P2 FIELD= P3

Reason:

The requested help text does not exist.

System Action:

None.

User Action:

None.

HM0052

.AT macro error in help text, line P1 - attribute table full

Reason:

A .AT (Define attribute) macro embedded in the help text cannot be added to the attribute table because it is already full.

System Action:

The .AT macro is ignored.

User Action:

Do one of the following:

- Edit the help text and remove the .AT macro command

- Change the attribute character to a character that was previously defined by another .AT macro

HM0061

.CP macro error in help text, line P1 - invalid keyword or data

Reason:

A .CP (copy and include) macro embedded in the help text has an invalid keyword or the data to the right of the .CP macro is invalid.

System Action:

The .CP macro is ignored.

User Action:

Edit the help text and correct the .CP macro instruction.

HM0062

.MU macro error in help text, line P1 - invalid keyword or data

Reason:

A .MU (menu) macro embedded in the help text has an invalid keyword or the data to the right of the .CP macro is invalid.

System Action:

The .MU macro is ignored.

User Action:

Edit the help text and correct the .MU macro instruction.

HM0063

.CP macro error in help text, line P1 - cannot copy current help file

Reason:

A .CP (copy and include) macro embedded in the help text references the current help file. This is not permitted, because an infinite loop would occur.

System Action:

The .CP macro is ignored.

User Action:

Edit the help text and correct the .CP macro instruction.

HM0064

.MU macro error in help text, line P1 - cannot reference current help

Reason:

A .MU (menu) macro embedded in the help text references the current help file. This is not permitted, because an infinite loop would occur.

System Action:

The .MU macro is ignored.

User Action:

Edit the help text and correct the .MU macro instruction.

HM0065

.LI macro error in help text, line P1 - ANY or ALL not first value

Reason:

A .LI (licence) macro embedded in the help text contains a sublist of feature names that includes ANY or ALL in a position beyond the first position in the list.

System Action:

The .LI macro is ignored.

User Action:

Edit the help text and correct the .LI macro instruction.

HM0066

Invalid select option

Reason:

The value entered to select a help file for viewing was not an S.

System Action:

The request is rejected.

User Action:

Correct the selection option to view the help file or erase it.

HM0067

.MU macro error in help text, line P1 - exceeded limit

Reason:

A .MU (menu) macro embedded in the help text created an input field, but 999 input fields were already defined. This is the maximum.

System Action:

The .MU macro is ignored.

User Action:

Edit the help text and remove a .MU or .SL macro instruction to reduce the number of input fields.

HM0069

.CP macro error in help text, line P1 - cannot copy previous help file

Reason:

A .CP (copy and include) macro embedded in the help text references the previous help file (the file that invoked this help file). This is not permitted, because an infinite loop would occur.

System Action:

The .CP macro is ignored.

User Action:

Edit the help text and correct the .CP macro instruction.

HM0070

CROW keyword is not numeric

Reason:

The call was made to the Help Manager with a CROW keyword (Cursor row) value that was not numeric.

System Action:

The Help Manager call terminates.

User Action:

Correct the CROW keyword parameter on the call to the Help Manager and retry.

HM0071

CCOL keyword is not numeric

Reason:

The call was made to the Help Manager with a CCOL keyword (Cursor column) value that was not numeric.

System Action:

The Help Manager call terminates.

User Action:

Correct the CCOL keyword parameter on the call to the Help Manager and retry.

HM0072

FUNC keyword not specified

Reason:

The FUNC keyword must be provided on the call to the Help Manager when a field name or cursor coordinates are supplied.

System Action:

The Help Manager call terminates.

User Action:

Correct the FUNC keyword parameter on the call to the Help Manager and retry.

HM0074

.CT macro error in help text, line P1

Reason:

A .CT DEFAULT= macro in the help text cannot be processed for one of the following reasons:

- The .RA or .AT macros have been used to change the default attributes

- The DEFAULT= operand did not specify exactly three characters

System Action:

The .CT macro is ignored.

User Action:

Edit the help text and correct the error.

HM0095

.MU macro error in help text, command *P1* not defined

Reason:

A .MU (menu) macro embedded in the help text refers to a command that is not defined.

System Action:

The command is not executed.

User Action:

Perform one of the following steps:

- Edit the help text and correct the help file reference in the .MU instruction
- Add the command that the .MU macro is attempting to reference

IAx Messages

IA0001

***P1 P2* ACTION COMPLETE**

Reason:

An initialization action has completed successfully. The specific action was started by the EXEC $IACALL *P1 P2* command.

System Action:

Initialization continues.

User Action:

None.

IA0002

***P1 P2* ACTION INCOMPLETE. REFER TO PREVIOUS MESSAGE(S)**

Reason:

An initialization action has failed. The specific action was started by the EXEC $IACALL *P1 P2* command. Other messages have been logged that indicate the cause of the failure.

System Action:

Initialization continues.

User Action:

Refer to the SOLVE log. The failure messages should immediately precede this message. Refer to those messages to resolve the problem.

IA0003

DD=*P1* ALLOCATED, DSN=*P2*

Reason:

An initialization action has resulted in a dataset being implicitly allocated. The message indicates which DD name was allocated (*P1*) and the dataset name (*P2*). The action to which this relates can be identified in the SOLVE log by either:

- the preceding EXEC $IACALL command echoed to the log
- the subsequent IA0001 or IA0002 message

SOLVE datasets are normally allocated by either:

- inclusion in the run JCL (including the UTIL0028 input member). In this case the EXEC $IACALL command will open the requested dataset.
- inclusion of the dataset name using the DSN= operand on the associated EXEC $IACALL command. In this case the command will cause the dataset to be specifically allocated before the file is opened.

This message indicates that neither action has occurred. As the dataset must be allocated before it can be opened, SOLVE has assumed a dataset name based on the relevant shared or local dataset qualifier (as specified in the DSNQSHR and DSNQLCL JCL parms), plus the DD name.

If the assumed dataset name is incorrect, the initialization action will be incomplete.

System Action:

Initialization continues.

User Action:

It is recommended that SOLVE datasets are specifically allocated in the run JCL. Alternatively, the EXEC $IACALL command should include the DSN= operand specifying the full dataset name.

IA0011

FIRST PARAMETER IS OMITTED OR IS AN INVALID PRIMITIVE: *P1*

Reason:

An initialization action has failed. The specific action was started by the EXEC $IACALL command where the first parameter is called a primitive. The primitive is either missing or is invalid.

System Action:

Initialization continues but may be incomplete.

User Action:

Correct the command in the initialization procedure. For this to take effect either restart the region or execute the command manually using OCS or Command Entry.

IA0012

SECOND PARAMETER IS OMITTED OR IS AN INVALID QUALIFIER: *P1*

Reason:

An initialization action has failed. The specific action was started by the EXEC $IACALL command where the second parameter is called a qualifier. The qualifier is either missing or is invalid.

System Action:

Initialization continues but may be incomplete.

User Action:

Correct the command in the initialization procedure. For this to take effect either restart the region or execute the command manually using OCS or Command Entry.

IA0013

INVALID COMBINATION: QUALIFIER *P1* IS INVALID WITH PRIMITIVE *P2*

Reason:

An initialization action has failed. The specific action was started by the EXEC $IACALL *P1 P2* command where the first parameter (*P1*) is called the primitive and the second parameter (*P2*) is called the qualifier. The qualifier is a valid qualifier but does not apply to the specific primitive.

System Action:

Initialization continues but may be incomplete.

User Action:

Correct the command in the initialization procedure. For this to take effect either restart the region or execute the command manually using OCS or Command Entry.

IA0014

P1* PARAMETER REQUIRED FOR *P2 P3

Reason:

An initialization action has failed. The specific action was started by the EXEC $IACALL *P2 P3* command which requires parameter (*P1*) but this was not specified.

System Action:

Initialization continues but may be incomplete.

User Action:

Correct the command in the initialization procedure. For this to take effect either restart the region or execute the command manually using OCS or Command Entry.

IAICALL01

Invalid keyword value specified, keyword= *P1* value= *P2*

Reason:

An invalid keyword parameter value was specified for procedure $IAICALL. The keyword is *P1* and the invalid value is *P2.*

System Action:

Procedure terminates.

User Action:

Correct the invalid keyword value and retry the request.

IAICALL02

Initialization phase *P1* already in progress, request denied

Reason:

An attempt to start an initialization phase failed because the phase was already being processed. The phase was *P1.*

System Action:

Procedure terminates.

User Action:

If the phase specified was incorrect then retry the request, specifying the correct phase.

IAICALL03

Initialization phase P1 cannot be performed, current phase is P2

Reason:

An attempt to start initialization phase *P1* failed because that phase can only be started after its defined predecessor. The current phase is *P2.* The INIT phase must always be the first phase, then the READY phase can started.

System Action:

Procedure terminates.

User Action:

Specify the correct successor phase for phase *P2.*

IAICALL04

Initialization start request denied, initialization already in progress or completed, status is *P1*

Reason:

An attempt to start initialization failed because it either has already completed or is already in progress. The current initialization status is *P1*.

System Action:

Procedure terminates.

User Action:

None

IAICALL05

Initialization phase *P1* started

Reason:

The *P1* initialization phase was successfully started.

System Action:

Initialization processing continues.

User Action:

None.

IAICALL06

System initialization completed

Reason:

Initialization for the system was completed.

System Action:

None.

User Action:

None.

IAICALL07

Initialization phase *P1* now entering debug mode

Reason:

The initialization *P1* is entering debug mode. This mode was specified when the start service was requested.

System Action:

None

User Action:

None

IAICALL08

Invalid object $IAINDO, RC= *P1* FDBK= *P2* type= *P3* name= *P4*

Reason:

A set service was requested, but an invalid initialization object was passed to the API. The object must be named $IAINDO and it must be shared to the API. The error occurred assigning component *P4,* which is of type *P3.* The MDO return code received was *P1* and the feedback code was *P2.*

System Action:

The request is rejected.

User Action:

Correct the object passed to the API and retry the request.

IAICALL09

Initialization wizard P1 not found or in error. Component(s) may not initialize

Reason:

The initialization objects were successfully defined for the initialization wizard P1.

System Action:

None.

User Action:

None.

IAICALL10

The following system symbols will be available to INI file *P1*

Reason:

The System Symbols will be made available to the INI file *P1*. This is a header message and the following messages will show the Symbols used and their values.

System Action:

None.

User Action:

None.

IAICALL11

***P1* = "*P2*"**

Reason:

This message shows the name and value of a System Symbol.

System Action:

None.

User Action:

None.

IAICALL12

****END****

Reason:

This message indicates that there are no more system symbols to display.

System Action:

None

User Action:

None

IAIN0101

Invalid keyword value specified, keyword= *P1* value= *P2*

Reason:

An invalid keyword parameter value was specified for procedure $IAIN01U. The keyword is *P1* and the invalid value is *P2*.

System Action:

Procedure terminates.

User Action:

Contact your Systems Administrator.

IAIN0102

Initialization wizard *P1* not found or in error. Component(s) may not initialize'

Reason:

An attempt to invoke the initialization wizard procedure *P1* failed. The procedure was not found in the commands library or was in error.

System Action:

Initialization load fails.

User Action:

Contact your Systems Administrator.

IAIN0103

Initialization wizard P1 processing completed.

Reason:

The initialization wizard *P1* has successfully completed its processing to define the system parameters.

System Action:

None

User Action:

None

IAIN0104

Set parameter group *P1* rejected

Reason:

The parameter group *P1* is a non-dynamic parameter group. This means that the parameters can be updated at any time but they will only become effective at the NEXT system startup.

System Action:

None

User Action:

None

IAIN0105

Start for parameter group failed, group in use by *P1*

Reason:

The parameter group could not be started because the lock issued to obtain exclusive control failed, indicating that user *P1* was already actioning the parameter group or was updating the parameter group.

System Action:

The request is rejected.

User Action:

Wait until user *P1* completes their update and then action the parameter group again, or if the parameter group was already being actioned then wait for this request to complete.

IAIN0106

Invalid global variable suffix " P1". Parameter not set

Reason:

The GLBL type parameter of a parameter group was incorrectly named. The parameter cannot be set.

System Action:

Processing for the parameter group fails.

User Action:

Contact your Systems Administrator.

IAIN0107

Parameter group *P1* bypassed, missing prereq *P2*

Reason:

The parameter group *P1* was not defined to the system because it specified a prerequisite parameter group *P2* that did not exist. This may be because your system is not licensed for a feature which defines the parameter group *P2*.

Parameter group *P1* cannot be defined without this prerequisite.

System Action:

Parameter group *P1* is bypassed.

User Action:

None

IAIN0108

Prereq *P1* ignored for parameter group *P2*

Reason:

The parameter group *P2* specified the parameter group *P1* as an optional prerequisite and parameter group *P1* did not exist. This may be because your system is not licensed for a feature which defines parameter group *P1* OR because the prerequisite parameter group was made obsolete by a licensed feature that is currently licensed on this system. The prerequisite is an optional prerequisite and so has been ignored.

System Action:

Prerequisite parameter group *P1* is ignored.

User Action:

None

IAIN0109

Invalid init variable suffix "*P1*". Parameter not set

Reason:

The INIT type parameter of a parameter group was incorrectly named. The parameter cannot be set.

System Action:

Processing for the parameter group fails.

User Action:

Contact your Systems Administrator.

IAIN0110

Parameter group *P1* updated

Reason:

The parameter group *P1* was successfully updated. The parameter settings will be effective for the next system startup.

System Action:

None

User Action:

None

IAIN0111

Parameter group already being updated by user P1

Reason:

The request to update a parameter group was denied because the user *P1* is already updating that parameter group.

System Action:

Request denied.

User Action:

Wait until no other user is updating the parameter group.

IAIN0112

Set parameter group *P1 P2*

Reason:

The parameter group *P1* was set as requested and the status of the action was *P2*. If the status was COMPLETED then the values specified for the parameter group will be effective immediately. If the status was FAILED then view the Initialization Log for this parameter group and correct the errors indicated.

System Action:

None

User Action:

If the status was FAILED then view the Initialization Log to determine the cause of the failure. Correct the errors or update the parameter group to correct any parameter values.

IAIN0113

Processing for phase *P1* completed, *P2* failures

Reason:

The initialization monitor process completed all possible processing for initialization phase *P1*. There are *P2* failures outstanding.

System Action:

Processing continues.

User Action:

Correct the errors encountered by any failed parameter groups from the Initialization Monitor list.

IAIN0114

Value specification invalid for option *P1*

Reason:

The keyword *P1* was specified with a value. This keyword does not support the specification of a value.

System Action:

Field is set in error.

User Action:

Remove the value specification for the keyword.

IAIN0115

Invalid DBCS keyword value *P1*

Reason:

The DBCS= keyword was specified with an invalid value *P1*. The only valid values for the UDB command operand keyword DBCS are IBM or FUJITSU.

System Action:

Field is set in error.

User Action:

Correct the value of the DBCS keyword.

IAIN0116

Open error for VFS file, filerc= P1

Reason:

An error occurred when opening the VFS file for processing by the initialization utilities. The file return code received was *P1* .

System Action:

Processing terminates.

User Action:

Contact your Systems Administrator.

IAIN0117

File *P1* error for VFS, filerc= *P2* VSAMFDBK= *P3* key= *P4*

Reason:

An error occurred processing the VFS file. The file request was *P1*, the file return code was *P2*, the VSAM feedback code was *P3*, and the key of the record being processed was *P4*.

System Action:

Processing terminates.

User Action:

Contact your Systems Administrator.

IAIN0118

VFS cleared of parameter groups, *P1* records deleted

Reason:

A request to clear the VFS file of all parameter groups was successful. There were *P1* records deleted.

System Action:

None

User Action:

None

IAIN0119

Invalid command

Reason:

The command specified was not recognized as a valid command.

System Action:

Request denied.

User Action:

Enter a valid command for press a valid function key.

IAIN0120

Request canceled

Reason:

The request to cancel the previous function was successful.

System Action:

None

User Action:

None

IAIN0121

System is being initialized via the Customizer for the first time.

Reason:

During system initialization it was determined that the Customizer had not been used to initialize this system before. This may be because the system has just been installed or it may be because a different VFS file has been used for this system startup.

If a different VFS file has been used, then restart the system with the correct VFS file. Otherwise, you will need to recustomize the system, because the customization parameter settings are stored on the VFS file).

System Action:

None

User Action:

You may wish to restart the system using a different VFS file if this system has been customized.

IAIN0122

Parameter *P1* not set, can only be set during phase *P2*

Reason:

The parameter could not be set because it is only possible to set the parameter during a specific initialization phase. The current initialization phase does not match the parameter's requirement. The parameter name is *P1* and the required phase is *P2*.

System Action:

Parameter is not set.

User Action:

None. The parameter will be set during the next system initialization.

IAIN0123

Initialization monitor already running, request denied

Reason:

An attempt to start the initialization monitor process failed because another process is already running and monitoring initialization.

System Action:

Request denied.

User Action:

None

IAIN0124

Global variable P1 set to " P2"

Reason:

The global variable *P1* was set to the value *P2* .

System Action:

None

User Action:

None

IAIN0125

All initialization parameter groups have completed processing

Reason:

The initialization monitor process has completed its processing because all initialization parameter groups have completed their processing.

System Action:

None

User Action:

None

IAIN0126

Processing for parameter group *P1* started

Reason:

The parameter group *P1* has been started by the Customizer and it will begin to process its parameters.

System Action:

None

User Action:

None

IAIN0127

Initialization wizard P1 loading parameter groups

Reason:

The system has begun the process of loading parameter groups for the wizard procedure *P1* .

System Action:

None

User Action:

None

IAIN0128

Parameter group *P1* not found

Reason:

The parameter group *P1* was not found in the VFS file.

System Action:

None

User Action:

None

IAIN0129

Parameter group prereqs resolved and *P1* parameter groups were bypassed

Reason:

The system has completed the process of verifying and resolving parameter group prerequisites and because of required prerequisites not being present, *P1* parameter groups were bypassed. This may occur when parameter groups of licensed *f*eatures are not defined because the feature is not licensed for this system.

System Action:

None

User Action:

Ensure that your system has the correct license.

IAIN0130

Parameter group resolution complete. Total of P1 groups

Reason:

The system has completed the process of loading all of its parameter groups. There were *P1* groups loaded.

System Action:

None

User Action:

None

IAIN0131

Initialization monitor process started

Reason:

The initialization monitor process has been started. This process will start the processing of parameter groups in a controlled fashion until all parameter groups have been set.

System Action:

None

User Action:

None

IAIN0132

Control table updated, set parameter group *P1* is pending

Reason:

The parameter group *P1* was successfully updated. The setting of these parameters for the current execution is either pending the completion of other parameter groups' processing or waiting for the system to schedule it. This occurs because the system has not completed its normal system initialization, when parameter groups are set in an ordered and controlled fashion.

System Action:

None

User Action:

None

IAIN0133

Parameter group *P3* action failed, proc= *P1* RC= *P2*

Reason:

The parameter group service procedure *P1* was invoked to perform a task associated with the parameter group *P3*. The service procedure returned a failure return code of *P2*.

System Action:

Processing for the parameter group failed.

User Action:

Check preceding messages to determine the cause of the error.

IAIN0134

Initialization phase *P1* forced to completion by start of phase *P2*

Reason:

The initialization phase *P1* was forced to completion by the initiation of phase *P2*. All parameter groups from phase *P1* will be processed in phase *P2*.

System Action:

None

User Action:

None

IAIN0135

Set request by P1 accepted for parameter group P2

Reason:

A request to set the parameters of parameter group *P2* was received from user *P1* . The initialization monitor process has accepted this request and will begin the processing of this parameter group.

System Action:

Processing for the parameter group is started.

User Action:

None

IAIN0136

Set request by *P1* for *P2* denied, status is *P3*

Reason:

A request to set the parameters of parameter group *P2* was received from user *P1*. The initialization monitor process has rejected this request because the parameter group's status indicates that it is not eligible to be set.

During system initialization, parameters can be updated and set only if they are in FAILED or COMPLETED status. If the parameter group is in QUEUED or WAITING status, then it will be set when all prerequisite parameter groups have been completed. If the parameter group is in RUNNING status, then it is currently in the process of setting the parameters and cannot be changed until after it has completed or failed.

System Action:

None

User Action:

None

IAIN0137

Ignore request by *P1* for *P2* denied, status is not failed

Reason:

A request to ignore the failed status of parameter group *P2* was received from user *P1*. The initialization monitor process has rejected this request because the parameter group's status indicates that it is not eligible to be ignored. Only parameter groups in FAILED status can be ignored.

System Action:

None

User Action:

None

IAIN0138

Ignore request by *P1* accepted for parameter group *P2*

Reason:

A request to ignore the failed status of parameter group *P2* was received from user *P1*. The initialization monitor process has accepted this request and will ignore the failed status.

System Action:

None

User Action:

None

IAIN0139

Initiation of phase *P1* by *P2* denied, phase invalid

Reason:

A request by user *P2* to initiate processing for phase *P1* was denied because the phase is invalid.

System Action:

Request is rejected.

User Action:

Specify a valid phase and retry the request.

IAIN0140

Initiation of phase P1 by P2 ignored, phase already initiated

Reason:

A request by user *P2* to initiate processing for phase *P1* was ignored because the phase has already been initiated.

System Action:

Request is rejected.

User Action:

None

IAIN0141

Parameter *P1* set failed, proc= *P2* RC= *P3*

Reason:

The parameter group service procedure *P2* failed. The procedure was invoked to set the parameter *P1* and returned a failure return code. The return code was *P3*.

System Action:

Processing for the parameter group fails.

User Action:

Check related messages for the reason the set failed.

IAIN0142

Initialization has already completed

Reason:

The initialization monitor was invoked to display the current status of initialization. However, initialization has already completed and there is nothing to display.

System Action:

None

User Action:

None

IAIN0143

(P1) Initialization failures have occurred

Reason:

The initialization monitor process has detected parameter group failures. *P1* is the jobname of the system for which the message was issued.

System Action:

None

User Action:

Invoke the initialization monitor and check the reason for the failures.

IAIN0144

Procedure *P1* does not exist in DDname *P2* for userid *P3*

Reason:

The specified procedure *P1* was not found in the target user ID's commands DDNAME. The target user ID is *P3* and their commands DDNAME is
P2.

System Action:

Field set in error.

User Action:

Specify a procedure that is valid and exists.

IAIN0145

User *P1* not authorized

Reason:

The user whose user ID is *P1* is not authorized to perform the action requested.

System Action:

Request rejected.

User Action:

None

IAIN0146

Parameter groups being updated by *P1*

Reason:

There are one or more parameter groups being updated by one or more other users. INI procedures can be generated only if there are no other users updating parameters.

System Action:

Request rejected.

User Action:

Wait until no other user is updating the parameter groups.

IAIN0147

Parameter groups not defined

Reason:

There are no parameter groups defined for this system. This condition occurs if the system is never started using the PARMS specifications in the INIT and READY initialization procedures and/or the DEFINE service has never been invoked to define the parameter groups.

System Action:

Request rejected.

User Action:

Start the system using the PARMS specification in the INIT and READY initialization procedures or use the \PARMS DEFINE service.

IAIN0148

***P1* is required**

Reason:

The field *P1* is a required field.

System Action:

Field is set in error.

User Action:

Specify a value for *P1*.

IAIN0149

Error from IDCAMS *P1* return code is *P2*

Reason:

The IDCAMS service *P1* failed and the return code received was *P2*.

System Action:

The request terminates.

User Action:

View the activity log for IIIN0150 messages which show the responses from IDCAMS.

IAIN0150

P1

Reason:

This is a bracketing message for the IDCAMS messages returned from a previous call.

System Action:

None

User Action:

Determine the error as indicated in the IDCAMS message and retry your request.

IAIN0151

File P1 error for P2, filerc= P3 VSAMFDBK= P4

Reason:

The file request *P1* failed for the file allocated with DDNAME *P2* . The file return code was *P3* and the VSAM feedback code was *P4* .

System Action:

The requested is terminated.

User Action:

Determine the reason for the error and retry the request.

IAIN0152

P1 is invalid

Reason:

An invalid value was specified for field *P1* .

System Action:

Field is set in error.

User Action:

Correct the field and retry the request.

IAIN0153

***P1* must specify a partitioned dataset**

Reason:

The target INI file dataset name MUST specify a partitioned dataset.

System Action:

Field is set in error.

User Action:

Specify a partitioned dataset name.

IAIN0154

INI procedure successfully generated and saved

Reason:

The INI procedure was successfully generated and saved as requested.

System Action:

None

User Action:

None

IAIN0155

Initialization wizard procedure not defined or invalid. Proc= P1

Reason:

The Customizer initialization wizard procedure *P1* either was not defined or is invalid.

System Action:

The requested action is terminated.

User Action:

Check that the system was started using the \PARMS invocations in the INIT and READY initialization procedures or that the \PARMS define service has been invoked.

IAIN0156

Defaults set for parameter group *P1*

Reason:

The parameter group *P1* was updated with the system defaults.

System Action:

None

User Action:

None

IAIN0157

***P1* already exists**

Reason:

The target INI file member specified already exists and Replace Member was set to NO.

System Action:

Field is set in error.

User Action:

Either specify a member name that doesn't exist or change the Replace Member field to YES.

IAIN0158

No settings applied by INI *P1*. VFS customization used for *P2 P3*

Reason:

The supplied INI procedure returned a non-zero return code. This means that there was an error in setting the customized parameter values or that the INI does not support this parameter group. *P2 P3* is the Appl ID and Name of the parameter group being defined.

This condition can also occur if a new parameter group has been defined by distributed code that had not be used by this system previously, perhaps because the system was running on a different operating system environment or product maintenance has added a new parameter group.

System Action:

The parameter group is customized using the values set in the VFS file. If this is a new parameter group, then its default values will be used.

User Action:

Check your INI procedure to ensure that it sets customized values for all parameter groups. If the parameter group is new, then regenerate your INI procedure after the system has initialized. If your INI procedure specifically ignores certain parameter groups so that the customization for these parameter groups is taken from the VFS file, then ignore this message.

IAIN0159

Dataset type or key length invalid, must be KSDS with KL= *P1*

Reason:

A dataset was specified that is not a key sequenced dataset or that has an invalid key length. The dataset must be a key sequenced dataset (that is, a KSDS/BASE type dataset) and its key length must be *P1* .

System Action:

Field is set in error.

User Action:

Specify a dataset with the correct attributes.

IAIN0160

Function is not supported for Operating System *P1*

Reason:

A requested function is not supported for the Operating System environment *P1*.

System Action:

Request is rejected.

User Action:

None

IAIN0161

Single level dataset names are not accepted

Reason:

The specification of a single level dataset name for a parameter is not accepted.

System Action:

Field is set in error.

User Action:

Specify a fully qualified dataset name without quotes and with more than one level.

IAIN0162

P1 not authorized for APPC access to userid P2 (ref: P3)

Reason:

A request to action a parameter group by user P1 failed because the user was not authorized for APPC access to the system user P2 . The specific problem is defined by the error reference P3 , which is either N47J06 or N47J08.

If the reference is N47J06, then it indicates that the APPC access key for user P1 did not match the APPC lock for the system user ID P2 .

If the reference is N47J08, then it indicates that the user could not be signed on to the system user. This could be caused by the system user ID not having a specific user ID definition.

Check the activity log for related APPC messages that will further explain the error condition.

System Action:

The request to action the parameter group is rejected.

User Action:

Contact your systems administrator.

If you are using UAMS, the definition for user P1 must specify a matching key for the lock specified in the system user's definition. The system user must have a user ID definition specifying a lock accessible by other users.

For full SAF security, the user P1 must be defined to the security system.

IAIN0163

NDB file is not valid for this version of *P1*

Reason:

Specification of an NDB was invalid because the NDB was not defined for the current version of *P1* system.

System Action:

Field is set in error.

User Action:

Specify a valid NDB for system *P1*.

IAIN0164

No response from Customizer monitor for *P1* seconds.Forcing queued tasks

Reason:

The START service for Customizer did not detect any activity for initialization for *P1* seconds. This occurs if an initialization parameter group's associated actions have *no*t notified the Customizer monitor of their success or failure, but are either still running or waiting for some event to occur.

System Action:

All parameter groups that are QUEUED are reviewed by the Customizer monitor. If any of these parameter groups is waiting for a currently RUNNING parameter group to complete and that dependency is only for the purpose of ordering the execution of the parameter group, then that dependency is removed.

As a result of removing all such soft dependencies on parameter groups, any that become eligible for actioning are started.

If no parameter group can be actioned, then the current initialization phase is terminated and the next phase is initiated. If the current phase is GO, then Customizer will wait until all parameter groups have completed processing. Operator intervention may be required.

User Action:

This condition may occur if external resources are not available to the region and it has been forced, by the operating system, to wait until the resource is available.

The most common such resource is a dataset that is required for allocation to the region and the request is waiting for some external event to occur. If so, then ensure that all required resources are available when the region is started.

This condition may also occur in a system with poor response. In this case the Customizer timeout must be increased to compensate. Within the RMINIT procedure, specify the following NCL statement BEFORE the execution of the $IICALL procedure:

```
&&000$IIINMXW = 600 -* ICS TIMEOUT IS 10 MINUTES
```

The default value for this timeout is 300 seconds (5 minutes) and it can be increased to prevent Customizer from assuming that there are problems.

If the system's response is not poor and the default of 300 seconds is considered to be reasonable, then there could be errors in the currently RUNNING parameter group's actions and you may need to contact your Technical Support representative.

IAIN0165

Phase *P1* prematurely ending due to timeout

Reason:

The phase *P1* will be terminated because no activity is occurring in ICS and all parameter groups which should have completed have not done so. This message is accompanied by message IIIN0164 (see the explanation for this message).

System Action:

The phase *P1* will be terminated and the next phase will be initiated.

User Action:

See message IIIN0164.

IAIN0166

***P1* tasks forced to continue**

Reason:

Because of a previous ICS timeout, *P1* parameter groups were evaluated as eligible for starting. All these parameter groups are started.

System Action:

P1 parameter groups will be actioned.

User Action:

See message IIIN0164.

IAIN0167

(P1) parameter group P2 failed. Error message follows

Reason:

The processing for parameter group *P2* failed. The error message for the parameter group follows this message. *P1* is the jobname of the system for which the message was issued.

System Action:

Dependent parameter groups will be queued until this parameter group is rerun and completes successfully or is ignored. Parameter groups whose dependency is only for ordering will be started.

User Action:

See following message for more details of the actual error for the parameter group. Correct the error indicated by this message and any other error messages in the failed parameter group's log. If the failed parameter group is PANELLIBS or MODSFILES, then problems may be experienced when logging on to the system.

IAIN0168

Validation errors detected on other page(s)

Reason:

The action requested could not be performed because validation errors were detected for fields that are not present on the current page of the parameter group's display.

System Action:

Request is rejected.

User Action:

Scroll to the other pages for the parameter group and correct the fields in error. Retry the request.

IAIN0169

View the Initialization log and correct the errors detected

Reason:

Initialization detected one or more errors in processing, but the errors were not severe enough to halt initialization. The errors detected can be found in the initialization log, accessed from the Customization Menu. The errors detected are those colored pink.

System Action:

Processing continues. Problems may be experienced with some components because of the error(s).

User Action:

View the Initialization Log, which can be accessed from the Customization Menu. Review and correct all the errors in pink.

IAIN0170

The following non-fatal error has been detected:

Reason:

This message is related to message IIIN0169 (see the explanation for that message). The message following this one represents the detected error.

System Action:

None

User Action:

See the explanation for message IIIN0169 and for the message following this one. See the Initialization Log, which can be accessed from the Customization Menu.

IAIN0171

Invalid page number P1

Reason:

The page number *P1* is not a valid number.

System Action:

Page command is rejected.

User Action:

Specify a valid page number.

IAIN0172

Page number P1 out of range, must be between P2 and P3

Reason:

The page number *P1* is out of range. It must be a valid number between the values *P2* and *P3* .

System Action:

Page command is rejected.

User Action:

Specify a valid page number within the indicated range.

IAIN0173

Invalid NDB, RC= P1 - P2

Reason:

The dataset specified was not a valid NDB database. The NDB return code received from an NDBOPEN was *P1* and the description of that return code is *P2* . The description is from the NETINFO database and can be viewed in full by using the $INFO command, under the NDB error codes category.

System Action:

The field is set in error.

User Action:

Specify a valid NDB database dataset name.

IAIN0174

Error information - NETINFO category= P1 code= P2 msg= P3

Reason:

This message is a header message for the display of the description of an error code contained in another error message. The information shown in subsequent messages is contained within the NETINFO database (this can be accessed by using the $INFO primary command). The information displayed was from the category *P1* with error code *P2* and the error message that contained the code was *P3* .

System Action:

None

User Action:

See message *P3* and the description messages that follow this message.

IAIN0175

P1

Reason:

This message contains the descriptive text from the NETINFO database. See message IIIN0174 for more details.

System Action:

None

User Action:

For more information view the NETINFO database by using the $INFO primary command.

IAIN0176

Invalid dataset, reason= P1 - P2

Reason:

The dataset specified was not a valid, existing dataset. The dynamic allocation reason code (from message N19503) is *P1* and the description is *P2* . The description is from the NETINFO database and can be viewed in full by using the $INFO command, under the Dynamic Allocation error codes category.

System Action:

The field is set in error.

User Action:

Specify a valid dataset.

IAIN0177

SYSPARM P1 already set to P2

Reason:

The system parameter (SYSPARM) with name *P1* was already set to the value *P2* and was not set again.

System Action:

None

User Action:

None

IAIN0178

Processing for parameter group P1 ended, status is P2

Reason:

The parameter group *P1* has completed all its processing. The status of its processing is *P2* .

System Action:

Any dependent parameter groups will have their dependency on this parameter group removed. These successor parameter groups may be started if this is the last dependency.

User Action:

If the parameter group is in a FAILED status, view the Initialization Log for that parameter group and correct the error.

IAIN0179

Parameter group P1 still running. running. No responses received

Reason:

The parameter group *P1* was detected as still running and no response has been received for the timeout period. The parameter group may be legitimately waiting for a response from the operating system or there may be errors in the system.

System Action:

None

User Action:

None

IAIN0180

Parameter group P1 P2 by P3 at P4 on P5

Reason:

This message provides an audit trail when a parameter group (*P1*) is updated or action (*P2*) and shows the user ID (*P3*), date (*P4*) and time (*P5*) that the activity occurred.

System Action:

None

User Action:

None

IAIN0181

P1 set to P2

Reason:

This message is issued when a parameter group is actioned that resulted in a variable being set. The variable description (*P1*) and its new value (*P2*) are shown.

System Action:

None

User Action:

None

IAIN0182

P1 changed from P2 to P3

Reason:

This message is issued when a parameter group is actioned that resulted in a variable being changed. The variable description (*P1*) and its old and new values (*P2* and *P3*) are shown.

System Action:

None

User Action:

None

IAIN0183

Set Default not allowed during initialization.

Reason:

A request to set an entire parameter group to its default was rejected. You cannot use the Set Default action for a parameter group during system initialization. Update the group and set the specific parameters required for this system.

System Action:

The request is rejected.

User Action:

Set the individual parameters as required.

IAIN0184

Processing for parameter group P1 ended, Background User Id / Password updated

Reason:

The parameter group P1 has completed all its processing. The background user id / password has been up*da*ted.

System Action:

The update of parameter groups for Scheduler Interface is completed.

User Action:

None

IAIN0201

PARAMETER GROUP HAS INVALID STATUS, MUST BE IN FAILED STATUS

Reason:

A request to ignore a failed status for a parameter group failed because the parameter group was not already in a failed status. The ignore action can only be issued for failed parameter groups.

System Action:

Request rejected.

User Action:

None

IAIN0202

ACTION REQUEST ACCEPTED FOR P1

Reason:

A request to Action a failed parameter group was accepted. The request was passed to the monitor process. The parameter group for which the action was accepted is *P1* . The status of the parameter group will be set by the monitor process dynamically when processing for the group has completed.

System Action:

None

User Action:

None

IAIN0203

INVALID PARAMETER GROUP STATUS P1

Reason:

A request to display parameter groups of a particular status(es) was rejected because one or more of the statuses specified was invalid. Valid statuses for the STATUS command are FAILED, RUNNING, COMPLETED, QUEUED, and WAITING.

System Action:

Request rejected.

User Action:

Specify a set of valid statuses separated by commas.

IAIN0204

PARAMETER GROUP HAS INVALID STATUS, MUST BE FAILED OR COMPLETED

Reason:

A request to action a parameter group was denied because the parameter group was not in FAILED or COMPLETED status. The action request can only be issued for failed or completed parameter groups. This is because the Initialization Monitor process is still actively managing the order of parameter group execution.

System Action:

Request rejected.

User Action:

None

IAIN0301

INVALID INITIALIZATION PHASE P1

Reason:

A request to restrict the initialization log's view to all messages from a particular initialization phase failed. The initialization phase specified was invalid. Valid initialization phases are:

INITS - Start of initialization (this is an internal phase only)

INIT - The INIT initialization phase that is initiated from the INIT procedure nominated by the startup parameters for the region

READY - The READY initialization phase that is initiated from the READY procedure nominated by the startup parameters for the region

GO - This is an internal phase that represents all initialization that was not scheduled to be performed during the INIT or READY phases. It also includes any initialization that failed during the INIT or READY phases and that was manually actioned during the GO phase.

System Action:

Request is rejected.

User Action:

Specify a valid initialization phase.

IAIN0302

INVALID APPL ID P1

Reason:

A request to restrict the Initialization Log's view to all messages for a particular parameter group failed. The application ID specified for the parameter group was invalid. The application ID was *P1* .

System Action:

Request rejected.

User Action:

Specify a valid application ID.

IAIN0303

INVALID PARAMETER GROUP NAME P1

Reason:

A request to restrict the Initialization Log's view to all messages for a particular parameter group failed. The parameter group name specified was invalid. The parameter group name was *P1* .

System Action:

Request rejected.

User Action:

Specify a valid parameter group name.

IAIN0501

USER P1 DOES NOT HAVE UAMS AUTHORITY AND CANNOT DO CUSTOMIZATION

Reason:

The user P1 attempted to log on to the region before customization had been performed. The user *wa*s the first user to log on; however, they do not have UAMS authority and are thus not eligible to do initial system customization.

System Action:

The request is rejected.

User Action:

Wait until another user performs system customization before logging on.

IAIN0502

USER P1 IS A MEMBER OF GROUP(P2), THE GROUP CANNOT BE MODIFIED

Reason:

The user P1 attempted to log on to the region before customization had been performed. The user *was* the first user to log on; however, they are a member of the group *P2* that does not have UAMS authority. The group cannot be modified to have UAMS authority. The user is not eligible to do initial system customization.

System Action:

The request is rejected.

User Action:

Wait until another user performs system customization before logging on.

IAIN0503

UNABLE TO DISPLAY INITIALIZATION STATUS, MSG= P1

Reason:

The system detected that initialization did not complete and attempted to display a help dialog to that effect; however, there is an error in the help presentation service. The error message returned from the help service is *P1.*

System Action:

Processing continues.

User Action:

Check the initialization log for initialization errors.

IAIN0601

NO TRACE MESSAGES FOR PROCESSES P1

Reason:

An initialization trace could not be selected because the trace table was empty.

System Action:

Request ignored.

User Action:

None

IAIN0602

INVALID NUMBER P1

Reason:

The NEXT or PREV command was specified with the parameter *P1* and this parameter was not numeric.

System Action:

Request ignored.

User Action:

Specify a valid number.

IAIN0701

THE MNEMONIC P1 IS NOT SUPPORTED BY THE ALL COMMAND

Reason:

The ALL command was specified with the mnemonic *P1* as the parameter. For this particular list, the ALL command does not support this mnemonic.

System Action:

Request ignored.

User Action:

Specify another mnemonic that is supported by the ALL command.

IAIN0702

P1 INITIALIZATION TRACES DELETED

Reason:

The ALL command was requested to delete all the Initialization Traces. There were *P1* traces and all were deleted.

System Action:

None

User Action:

None

IAIN0703

NO TRACES TO DISPLAY

Reason:

No ICS Debug Traces to display.

System Action:

None

User Action:

None

IAPKG001

P1 is required

Reason:

The field *P1* is required and must not be blank.

System Action:

Field is set in error.

User Action:

Specify a value for *P1.*

IAPKG002

P1 is required if P2 is specified

Reason:

The field *P1* is required when the field *P2* is specified.

System Action:

Field is set in error.

User Action:

Specify a value for *P1.*

IAPKG003

P1 is required if P2 is " P3"

Reason:

The field *P1* is required when the value of field *P2* is *P3.*

System Action:

Field is set in error.

User Action:

Specify a value for *P1.*

IAPKG004

P1 must be blank if P2 is specified

Reason:

The value for field *P1* must be blank if field *P2* is specified.

System Action:

Field set in error.

User Action:

Blank out the value for *P1* or the value for *P2.*

IAPKG005

P1 must be blank if P2 is " P3"

Reason:

The value for field *P1* must be blank if the value for field *P2* is *P3.*

System Action:

Field set in error.

User Action:

Blank out the value for *P1* or specify a different value for *P2.*

IAPKG006

Field must be one of: P1

Reason:

The value for the hi-lighted field must be one of the values in *P1.*

System Action:

Field set in error.

User Action:

Specify one of the possible values listed in *P1.*

IAPKG007

Enter a valid dataset name

Reason:

The highlighted field must have a valid dataset name specified.

System Action:

The field is highlighted as an error.

User Action:

Enter a correct value.

IAPKG008

Map error: map P1 not found

Reason:

An internal error occurred because the map *P1* was not found in the map dataset.

System Action:

The request is rejected.

User Action:

Contact your system administrator.

IAPKG009

Map error: map P1 MDORC= P2 MDOFDBK= P3

Reason:

An internal error occurred. The map *P1* experienced the error described by MDORC= *P2* and MDOFDBK= *P3* .

System Action:

The request is rejected.

User Action:

Contact your system administrator.

IAPKG010

' P1' is not a sequential dataset

Reason:

The dataset specified by *P1* was not a sequential dataset.

System Action:

The field containing the dataset name is highlighted as an error.

User Action:

Specify a sequential dataset.

IAPKG011

' P1' is a PDS but a member name is not specified

Reason:

A partitioned dataset is specified by *P1* but a member name is not specified.

System Action:

The field containing the dataset name is highlighted as an error.

User Action:

Specify the correct dataset or member name.

IAPKG012

' P1' is not a PDS

Reason:

The dataset specified by *P1* is not a partitioned dataset.

System Action:

The field containing the dataset name is highlighted as an error.

User Action:

Specify the correct dataset.

IAPKG013

Member P1 does not exist in ' P2'

Reason:

The dataset specified by *P2* does not contain the member *P1* .

System Action:

The field containing the dataset name is highlighted as an error.

User Action:

Specify the correct member or dataset name.

IAPKG014

Insufficient access authority to ' P1'

Reason:

The dataset specified by *P1* cannot be opened for read access.

System Action:

The field containing the dataset name is highlighted as an error.

User Action:

Obtain authority for the SOLVE system to access the dataset.

IAPKG015

' P1' Unsupported UNIX system services file type

Reason:

The type of file specified by *P1* is not supported. For example it may be a directory name rather than a text file name.

System Action:

The field containing the file name is highlighted as an error.

User Action:

Specify the correct file name.

IAPKG016

Enter a valid dataset or file name

Reason:

The highlighted field must contain a valid dataset name or a Unix system services file name.

System Action:

The field is highlighted as an error.

User Action:

Enter a correct value.

IAPKG017

P1 must different to P2

Reason:

The value for field *P1* must be different to the value of field *P2.*

System Action:

Field set in error.

User Action:

Specify a different value for *P1* or *P2.*

IAPKG018

' P1' is not a VSAM dataset

Reason:

A non-VSAM dataset was specified where a VSAM dataset was needed.

System Action:

The field containing the dataset name is highlighted as an error.

User Action:

Specify the correct dataset name.

IAPKG019

P1 must not be a zero time interval.

Reason:

The value for field *P1* must be a valid time interval greater than zero.

System Action:

Field set in error.

User Action:

Specify a non-zero time interval for *P1.*

IAPKG020

P1 must be blank if P2 is blank

Reason:

The value for field *P1* must be blank if field *P2* is also blank.

System Action:

Field set in error.

User Action:

Blank out the value for *P1* or specify a value for *P2.*

IAPKG021

Not a valid JCL statement

Reason:

Columns 1 and 2 of the JCL statement do not contain '//'.

System Action:

Field set in error.

User Action:

Specify '//' in columns 1 and 2.

IAPKG022

No additional JCL statements allowed

Reason:

Only a JCL comment or JES3 control statement ('//*' in columns 1 to 3) or a JES2 control statement ('/*' in columns 1 and 2) is allowed.

System Action:

Field set in error.

User Action:

Review the line in error and make any necessary corrections.

IAPKG023

Not a valid JCL statement

Reason:

Only a JCL comment or JES3 control statement ('//*' in columns 1 to 3) or a JES2 control statement ('/*' in columns 1 and 2) is allowed.

System Action:

Field set in error.

User Action:

Review the line in error and make any necessary corrections.

IAPKG024

Expected continuation not received

Reason:

A comma was found at the end of the previous line but the next line was not a continuation.

System Action:

Field is set in error.

User Action:

Review the continuation statement and ensure that it begins between columns 4 and 16, or remove the comma from the previous JCL statement.

IAPKG025

JCL JOB statement not found

Reason:

The JCL JOB statement could not be found in the current line.

System Action:

Field is set in error.

User Action:

Review the line in error and ensure that the string 'JOB' appears after the jobname, separated by at least one blank.

IAPKG026

Invalid jobname: P1

Reason:

A jobname must be 1-8 characters in length and can contain only alphanumeric characters or national ($, #, @) characters. The first character must be alphabetic or national.

System Action:

Field is set in error.

User Action:

Correct the line in error.

IAPKG027

Duplicate keyword : P1

Reason:

The keyword *P1* has been specified more than once.

System Action:

Field is set in error.

User Action:

Correct the line in error.

IAPKG028

Keyword ' P1' contains an invalid value

Reason:

The keyword *P1* must contain a single character (A to Z or 0 to 9).

System Action:

Field is set in error.

User Action:

Correct the line in error.

IAPKG029

Keyword ' P1' is not allowed

Reason:

The keyword *P1* is not allowed.

System Action:

Field is set in error.

User Action:

Correct the line in error.

IAPKG030

IIAPARMS file P1 error, IIA parameters not available. P2

Reason:

Customizer attempted to process the IIA parameter file for input but the action *P1* failed. *P2* is additional information about the error.

System Action:

IIA parameters will not be used for this initialization.

User Action:

Correct the error for the next system restart.

IAPKG031

Error in IIAPARMS file. Invalid syntax for record: " P1"

Reason:

While processing, the IIA parameter file encountered a record with invalid syntax. The records must specify parm=value, with one parameter per record. The parm must be a valid variable syntax.

System Action:

The record is ignored and processing continues.

User Action:

Correct the error in the parameter file for the next restart of the system.

IAPKG032

IIA parameter P1 set to P2

Reason:

The customizer successfully set the IIA parameter *P1* to the value *P2.*

System Action:

None.

User Action:

None.

IAPKG033

P1 must be P2 if P3 is P4

Reason:

The value for field *P1* must be *P2* if field *P3* is also *P4.*

System Action:

Field set in error.

User Action:

Set the value for *P1* to *P2* or change the value for *P3.*

IAPKG034

Enter HFS path name

Reason:

The value for the field is not a valid HFS path and file name.

System Action:

The value is rejected.

User Action:

Enter a valid fully-qualified Hierarchical File System path and file name.

IAPKG035

IIAPARMS data set *P1*

Reason:

The ddname IIAPARMS is being allocated to the *P1* data set.

System Action:

None.

User Action:

None.

IUx Messages

IUV001

Start of request validation phase

Reason:

Indicates that the VIP is starting to read control statements from the system input file.

System Action:

None.

User Action:

None.

IUV002

End of request validation phase

Reason:

Indicates that the VIP is finished reading control statements from the system input file. Valid requests will now be actioned.

System Action:

None.

User Action:

None.

IUV003

Processing request number P1

Reason:

During validation of the control statements, VIP assigns a request number to each separate request. Following a copy of the command *P1.* statement images, message IUVC01 is issued showning the request number, At the end of the validation phase, valid requests are processed in turn and this message (IUV003) indicates the start of processing for this request.

System Action:

None.

User Action:

None.

IUV004

**** End ****

Reason:

Indicates normal end of VIP processing. All requests were valid and were actioned.

System Action:

VIP terminates with JCL return code of zero.

User Action:

None.

IUV005

**** End ** - Warning: Some functions incomplete due to previous errors**

Reason:

Indicates end of VIP processing. However one or more requests were not actioned due to validation or processing errors which are detailed in previous messages.

System Action:

Program completes with JCL return code 4.

User Action:

Review the system output for other messages. Correct the invalid requests and rerun.

IUV006

VIP terminated due to previous errors

Reason:

Indicates that VIP has abnormally terminated because of unrecoverable errors in one or more requests. These processing errors are detailed in previous messages.

System Action:

Program completes with JCL return code greater than 4.

User Action:

Review the system output for other messages. Correct the invalid requests and rerun.

IUV007

Warning: One or more specified applications have no records

Reason:

This message is issued at the completion of a VIP request that specified a sublist of applications. For example APPL=(AAA,BBB,CCC) and no records existed for one or more applications:
- for the LIST and COPY functions on the file(s) identified by the INDD= parameter
- for the DELETE functions on the file(s) identified by the OUTDD= parameter

System Action:

Program completes with JCL return code 4.

User Action:

Review the system output for other messages. Determine if the application(s) should exist on the relevant file(s) and rerun if required.

IUV204

System error: INDD= P1 OUTDD= P2 FUNCTION= P3 RC= P4 VSAM CC= P5 VSAM FDBK= P6

Reason:

An error occurred when trying to access a data set. **P1** is the last processed input DD name and **P2** the last processed output DD name. The function **P3** indicates the type of file function that was being performed.
The internal return code **P4,** VSAM completion code **P5** and VSAM feedback code **P6** are also shown.

System Action:

The VIP processing terminates.

User Action:

Contact Technical Support.

IUV205

Insufficient storage

Reason:

The VIP has requested system storage during the processing of a request. No storage is available.

System Action:

The program terminates.

User Action:

Increase the region size and rerun, or simplify the VIP requests to process less requests in a single execution step.

IUVC01

Request valid, request number P1 assigned

Reason:

During validation of the control statements, VIP assigns a request number to each separate request. The number that has been assigned to a request *P1* is shown in this message, issued following a copy of the control cards. At the end of the validation phase, valid requests are processed in turn and message IUV003 is issued at the start of processing for this request.

System Action:

None.

User Action:

None.

IUVC02

Expecting command name, found P1

Reason:

An error has been found during the validation of the VIP control statements. The start of the first command cannot be identified because the first keyword *P1* on the first statement is not a valid command name.

System Action:

Control statements are skipped until a command can be recognized.

User Action:

The first word on the first statement (except for blank or comment statements) must be a valid command name (LIST, COPY, DELETE). Correct the control statement and rerun.

IUVC03

File type required

Reason:

An error has been found during the validation of the VIP control statements. The word following the command name (LIST, COPY, DELETE) is omitted, that is, the next word is either a new command name or is end of file.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC04

Unknown file type, P1

Reason:

An error has been found during the validation of the VIP control statements. The word *P1* following the command name (LIST, COPY, DELETE) is not a valid file type. Valid types are PANELS, MODS and OSCNTL.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC05

Unknown keyword at P1

Reason:

An error has been found during the validation of the VIP control statements. The data starting at *P1* is not a valid keyword. Valid keywords are INDD=, OUTDD=, APPL=, LANG= and OPT=.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC06

P1 keyword invalid on P2 command

Reason:

An error has been found during the validation of the VIP control statements. The combination of keyword *P1* and command *P2* is invalid. For example, the OUTDD= keyword is invalid for the LIST command.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC07

Incomplete P1 keyword operand

Reason:

An error has been found during the validation of the VIP control statements. The operand value for the keyword identified by *P1* has been omitted making the keyword operand incomplete. For example, APPL= was specified but without any data.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC08

P1 invalid in sublist format for P2 command

Reason:

An error has been found during the validation of the VIP control statements. The operand value for the keyword identified by *P1* has been specified as a sublist but the particular command *P2* does not support multiple values, making a sublist format invalid. For example, the OUTDD= keyword must specify a single DD name for all commands.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC09

P1 keyword duplicated

Reason:

An error has been found during the validation of the VIP control statements. The keyword identified by *P1* has been specified more than once.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Keywords may only be specified once per command. Use sublist format if multiple values are required, for example: invalid: INDD=IN1 INDD=IN2 valid: INDD=(IN1,IN2) Correct the control statement and rerun.

IUVC10

P1 keyword operand has invalid sublist format

Reason:

An error has been found during the validation of the VIP control statements. The keyword identified by *P1* has an invalid sublist because of one of the following reasons:
- The character immediately following the keyword is an opening (left) parenthesis but the last character is not a closing (right) parenthesis. For example: INDD=(AAA,BBB
- The closing (right) parenthesis is followed by a non-blank character. For example: INDD=(IN1,IN2)IN3)
- There are no suboperands in the sublist. For example: INDD=() or INDD=(,,)

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Complete the sublist specification. Correct the control statement and rerun.

IUVC11

Invalid P1 keyword operand value at P2

Reason:

An error has been found during the validation of the VIP control statements. The keyword identified by *P1* has an invalid value within the operand list. The value *P2* is not valid for the type of keyword. For example, the DD name for INDD= or OUTDD= is not a valid DD name.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC12

P1 keyword invalid with P2 file type

Reason:

An error has been found during the validation of the VIP control statements. The keyword identified by *P1* is not valid for the file type that is identified by *P2.* For example, the LANG= keyword is invalid when used for an OSCNTL file.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC13

P1 command requires the P2 keyword to be specified

Reason:

An error has been found during the validation of the VIP control statements. The keyword identified by *P2* is mandatory for the command identified by *P1.* For example, the LIST command requires the INDD= keyword.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC14

Duplicated value in P1 sublist, value is P2

Reason:

An error has been found during the validation of the VIP control statements. The sublist for the *P1* keyword contains a duplicated value,
P2. For example INDD=(IN1,IN2,IN1). Duplicated values are not permitted.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC15

P1 is a reserved DD name

Reason:

An error has been found during the validation of the VIP control statements. A DD name specified within the INDD= or OUTDD= operands is invalid because it is reserved for use as a VIP system file. For example SYSIN or SYSPRINT.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC16

P1 invalid with P2 file type

Reason:

An error has been found during the validation of the VIP control statements. The parameter and value identified by *P1* is not valid for the file type that is identified by *P2.* For example, OPT=MAINT is invalid when used for an OSCNTL file.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC18

Insufficient storage

Reason:

The VIP has requested system storage during the validation of a request. No storage is available.

System Action:

The program terminates.

User Action:

Increase the region size and rerun, or simplify the VIP requests to process less requests in a single execution step.

IUVC19

P1 keyword format invalid on P2 command

Reason:

An error has been found during the validation of the VIP control statements. The format of keyword *P1* is invalid when used with command
P2. For example:
- the APPL=* keyword value was specified on a DELETE command
- a COPY command specifying OPT=INSTALL and with a sublist of input files (INDD=(DD1,DD2,....) also has applications (APPL=) specified (other than APPL=*).

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC20

P1 command invalid with P2 file type

Reason:

An error has been found during the validation of the VIP control statements. The command identified by *P1* is not valid for the file type that is identified by *P2.* For example, the BUILD command is invalid when used for a PANELS file.

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVC21

DD name P1 specified as both INDD and OUTDD

Reason:

An error has been found during the validation of the VIP control statements. The output file DD name *P1* is the same as one of the input file DD names specified for the same request. For example: INDD=(FILE1,FILE2,FILE3) OUTDD=FILE2

System Action:

Control statements are skipped until a new command can be recognized.

User Action:

Correct the control statement and rerun.

IUVE48

SYSPRINT not open - no formatted dump available

Reason:

This message is written to the system log when the VIP abends and is unable to write a VIP formatted dump to the system print file because is has failed to open.

System Action:

The VIP ends abnormally.

User Action:

Contact Technical Support.

IUVE49

VIP internal abend module P1 reason P2

Reason:

This message is written to the system log when the VIP abends due to an internal error ($NMDUMP). The VIP module *P1* and reason code *P2* are shown.

System Action:

A VIP formatted dump is written to the system output data set and a system dump requested.

User Action:

Contact Technical Support.

IUVG01

Unidentified record: INDD= P1

Reason:

The VIP has read an unrecognized record from the input file *P1.* This message is followed by the record contents in dump format.

System Action:

The VIP terminates.

User Action:

Check the following:

1. Ensure that the input file matches the VIP operation type. For example, when using the COPY PANELS operation, ensure that the dataset indicated by the INDD parameter is a PANELS dataset.

2. Ensure that you are running the correct version of the VIP and that all maintenance has been supplied, as the VIP may have been updated to support new record types.

3. Check the validity of the indicated file and record. Many files used by the VIP have keys that include hex characters which may have become corrupted if they have been transmitted using FTP etc.

If the problem persists, contact Technical Support and provide the following information:

1. The VIP parameter cards (SYSIN)

2. The VIP output (SYSPRINT)

3. A copy of the input file containing the error

IUVG04

System error: INDD= P1 OUTDD= P2 FUNCTION= P3 RC= P4 VSAM CC= P5 VSAM FDBK= P6

Reason:

An error occurred when trying to access a dataset. **P1** is the last processed input DD name and **P2** the last processed output DD name. The function **P3** indicates the type of file function that was being performed.
The internal return code **P4,** VSAM completion code **P5** and VSAM feedback code **P6** are also shown.

System Action:

The VIP processing terminates.

User Action:

Contact Technical Support.

IUVG05

Insufficient storage

Reason:

The VIP has requested system storage during the processing of a request. No storage is available.

System Action:

The program terminates.

User Action:

Increase the region size and rerun, or simplify the VIP requests to process less requests in a single execution step.

IUVM01

Application register built

Reason:

A BUILD MODS request has completed successfully.

System Action:

None.

User Action:

None.

IUVM02

Invalid maint record tag

Reason:

The VIP is processing a COPY MODS request with OPT=MAINT specified but a record on the current input file contains an invalid maintenance tag. Valid tags are A|, U|, and D|. Message IUVM03 follows showing the key of the invalid record and the previous occurrence of message IUVR10 details the DD name of the current input file.

OPT=MAINT must only be used with files that have been created using the MODS Compare Definition Utility (*D.AD.U.CM*). It may not be used on files that are designed for OPT=INSTALL.

System Action:

The VIP terminates.

User Action:

Check that the correct input file has been specified. Correct and rerun.

IUVM03

Key= P1

Reason:

This message follows IUVM02 and shows the key of the current record. Refer to message IUVM02 for more details.

System Action:

Refer to IUVM02.

User Action:

Refer to IUVM02.

IUVM04

System error: INDD= P1 OUTDD= P2 Function= P3 RC= P4 VSAM CC= P5 VSAM FDBK= P6

Reason:

An error occurred when trying to access a MODS dataset.
P1 is the last processed input DD name
P2 is the last processed output DD name
P3 indicates the type of file function that was being performed
P4 is the internal return code
P5 is the VSAM completion code
P6 is the VSAM feedback code

System Action:

The VIP processing terminates.

User Action:

Contact Technical Support.

IUVM05

Insufficient storage

Reason:

The VIP has requested system storage during the processing of a request. No storage is available.

System Action:

The program terminates.

User Action:

Increase the region size and rerun, or simplify the VIP requests to process less requests in a single execution step.

IUVM10

Unknown MODS component - P1, P2; KEY= P3

Reason:

The VIP has read an unrecognized record. *P1/P2* indicate the data values obtained from the key that are not supported. *P3* is the full key value of the record.

System Action:

The record is ignored and the VIP reads the next record. At the end of processing all requests, the VIP will complete with a return code of at least 4.

User Action:

Check that you are using the correct version of the VIP program. If the latest VIP is installed correctly then report the error to Technical Support.

IUVM11

Unknown message - P1; KEY= P2

Reason:

The VIP has read an unrecognized MODS message ($MS) record. *P1* indicates the message identifier obtained from the key that is not recognized as being owned by an application. *P2* is the full key value of the record.

System Action:

The record is ignored and processing continues. However the process may be incomplete. A minimum return code value of 4 is set.

User Action:

Check that you are using the correct files. This error indicates that there is a mismatch between the applications defined in the application register records and the message records.

IUVM12

No application register entry for Appl= P1 Key= P2

Reason:

The VIP has read an MODS record for which an application register entry does not currently exist and the record read is not itself an application register definition. *P1* is the required aplication ID and
P2 is the full key of the record.

System Action:

The record is processed as normal. An internal application register entry is built without message identifier details.

User Action:

Check that you are using the correct files. This error indicates that there is a mismatch between the applications defined in the application register records and the input records being processed.

IUVP02

Non-Panel Services record found

Reason:

During processing of a VIP COPY PANELS command where OPT=MAINT has been specified, a record other than a Panel Services record has been found on the current input file. Only panel services may be copied using OPT=MAINT.

System Action:

The current request is terminated and totals (so far) are printed. The VIP continues with the next request.

User Action:

The output file will be partially updated and should be restored before correcting the input file and re-running.

IUVP03

Request terminated - incomplete

Reason:

An error has occured as indicated by a previous message.

System Action:

The current request is incomplete. The VIP continues with the next request.

User Action:

Refer to the user action(s) specified for any prior messages.

IUVP04

System error: INDD= P1 OUTDD= P2 Function= P3 RC= P4 VSAM CC= P5 VSAM FDBK= P6

Reason:

An error occured trying to access a PANELS data set.
P1 is the last processed input DD name
P2 is the last processed output DD name
P3 indicates the type of file function that was being performed
P4 is the internal return code
P5 is the VSAM completion code
P6 is the VSAM feedback code

System Action:

The VIP processing terminates.

User Action:

Contact Technical Support.

IUVP05

Insufficient storage

Reason:

The VIP has requested system storage during the processing of a request. No storage is available.

System Action:

The program terminates.

User Action:

Increase the region size and rerun, or simplify the VIP requests to process less requests in a single execution step.

IUVQ01

Warning: Obsolete record type(s) found

Reason:

During processing of a VIP LIST or COPY OSCNTL command, some obsolete record types were found on the input file. These records are not appropriate for the current version of the VIP and indicate that the input file was prepared for use with a previous version of the VIP.

System Action:

For the COPY function, the obsolete records are copied to the output file. The VIP continues processing all requests but will terminate with return code 4 (and message IUV005 issued).

User Action:

Contact Technical Support.

IUVQ03

Request terminated - incomplete

Reason:

An error has occured as indicated by a previous message.

System Action:

The current request is incomplete. The VIP continues with the next request.

User Action:

Refer to the user action(s) specified for any prior messages.

IUVQ04

System error: INDD= P1 OUTDD= P2 Function= P3 RC= P4 VSAM CC= P5 VSAM FDBK= P6

Reason:

An error occured trying to access an OSCNTL data set.
P1 is the last processed input DD name
P2 is the last processed output DD name
P3 indicates the type of file function that was being performed
P4 is the internal return code
P5 is the VSAM completion code
P6 is the VSAM feedback code

System Action:

The VIP processing terminates.

User Action:

Contact Technical Support.

IUVQ05

Insufficient storage

Reason:

The VIP has requested system storage during the processing of a request. No storage is available.

System Action:

The program terminates.

User Action:

Increase the region size and rerun, or simplify the VIP requests to process less requests in a single execution step.

IUVR01

Appl P1 P2 Record category and type

Reason:

This message, together with subsequent IUVR02 and IUVR03 messages show record count statistics that are issued for a VIP LIST/COPY/DELETE command for an OSCNTL or PANELS file. This message, IUVR01 is a heading line, and is followed by groups of messages IUVR02 and IUVR03 as follows:

OSCNTL file: Message IUVR02 shows the number of records for a specific record type and message IUVR03 is the total of these for the application or final indicated.

PANELS file: Message IUVR02 is the only message issued. IUVR03 is unused.

The Appl column shows the specific application ID that relates, or "Total" for all application IDs listed. The Record category and type column details the specific record type (IUVR02), or the total type (IUVR03). Depending upon function, one or two record counts and associated headings *P1* and *P2* will be printed as follows:

LIST Command: In the heading *P1* is Records and *P2* is blank. The *P1* column gives the count of records on the current input file. The *P2* column is blank.

DELETE Command: In the heading *P1* is Deleted and *P2* is blank. The *P1* column gives the count of records deleted from the output file. The *P2* column is blank.

COPY Command: In the heading *P1* is Copied and *P2* is Deleted. The *P2* column gives the count of records deleted from the output file before copying. The *P1* column shows the number of records copied from the current file to the output file.

System Action:

None.

User Action:

None.

IUVR02

P1 P2 P3 P4

Reason:

This message, together with messages IUVR01 and IUVR03 show record count statistics that are issued for a VIP LIST/COPY/DELETE command for an OSCNTL or PANELS file. In the message:
P1 is the application ID
P2 and *P3* are record count fields
P4 the specific record type or category Refer to message IUVR01 for further details.

System Action:

None.

User Action:

None.

IUVR03

P1 P2 P3 P4

Reason:

This message, together with messages IUVR01 and IUVR02 show record count statistics that are issued for a VIP LIST/COPY/DELETE OSCNTL file command. In the message:
P1 is the application ID
P2 and *P3* are record count fields
P4 is the specific total type Refer to message IUVR01 for further details.

System Action:

None.

User Action:

None.

IUVR04

Appl ID Cat Updates Adds Deletes Record category and type

Reason:

This message, together with subsequent IUVR05 and IUVR06 messages show record count statistics that are issued for a VIP LIST/COPY/DELETE command for a MODS file. This message, IUVR04 is a heading line and is followed by groups of messages IUVR05 and IUVR06 in which:
- The Appl column shows the specific application ID that relates, or "Total" for all application IDs listed.
- Message IUVR06 provides the totals for the preceeding group of IUVR05 messages. IUVR05 shows the total for a specific record type identified in the column headed Record category and type.

System Action:

None.

User Action:

None.

IUVR05

P1 P2 P3 P4 P5 P6 P7

Reason:

This message, together with messages IUVR04 and IUVR06 show record count statistics that are issued for a VIP LIST/COPY/DELETE command for a MODS file. The fields in this message correspond to the columns in message IUVR04 as follows:

P1 is the application ID
P2 and *P3* are the MODS component and sub-component codes respectively
P4, P5 and *P6* are the UPDATE, ADD and DELETE record counts respectively
P7 is the record category and type
Refer to the descripion of message IUVR04 for additional information.

System Action:

None.

User Action:

None.

IUVR06

P1 P2 P3 P4 P5 P6 P7

Reason:

This message, together with messages IUVR04 and IUVR05 show record count statistics that are issued for a VIP LIST/COPY/DELETE command for a MODS file. The fields in this message correspond to the columns in message IUVR04 as follows:

P1 is the application ID
P2 and *P3* are the MODS component and sub-component codes respectively
P4, P5 and *P6* are the UPDATE, ADD and DELETE record counts respectively
P7 is the specific total type
Refer to the descripion of message IUVR04 for additional information.

System Action:

None.

User Action:

None.

IUVR10

P1 DDNAME= P2 DSN= P3

Reason:

This message is produced for each DD name opened by the VIP. *P1* may be either Input or Output and relates to the INDD= or OUTDD= operand accordingly. The specific DD name is identified by *P2* and the Dataset Name *P3* is obtained from the run JCL.

System Action:

None.

User Action:

None.

IUVR12

Total records on DD= P1 P2

Reason:

This message relates to the VIP LIST/COPY command. It shows the total number of records *P2* that have been read from the current input file. *P1* is a current input DD name from the INDD= operand.

System Action:

None.

User Action:

None.

IUVR13

No JCL statement for DD= P1

Reason:

An attempt to process the file identified by DD= *P1* has failed because there is no JCL statement for the DD name.

System Action:

The request is terminated.

User Action:

Check that the DD name specified is correct. Either correct the VIP request or amend the run JCL to specify the DD name.

IUVR14

Open error: DD= P1 RC= P2 VSAM CC= P3 VSAM FDBK= P4

Reason:

An error occurred during a VIP LIST/COPY/DELETE command when trying to open a data set where:

P1 is the DD name
P2 is the VIP return code, values below
P3 is the VSAM completion code
P4 is VSAM feedback code
VSAM completion codes and feedback codes are listed in the appropriate VSAM manual.
VIP return codes are as follows:
14 - VSAM error - refer to completion and feedback codes
18 - Invalid file type: Input File is neither a VSAM file nor a sequential file Output File is not a VSAM file
1C - Dummy file, unsupported

System Action:

The VIP processing terminates.

User Action:

Use the return code information described above to determine the exact error cause. If the problem persists contact Technical Support.

IUVS05

Keylength incompatible with file type: DDNAME= P1 DSN= P2

Reason:

On opening a VSAM file, the keylength for the KSDS did not match the requirements for the file type that was specified in the request. The value for each file type is as follows:

File Type	PANELS	MODS	OSCNTL
Key Length	36	75	80

The most likely cause of this error is that the DD card for the specific file has the DSN of the wrong data set. For example:
//INDD1 DD DSN=.....PANLDIS LIST MODS INDD=INDD1

System Action:

The VIP terminates.

User Action:

Check the DD names specified in the INDD= and OUTDD= parameters. Check the JCL to ensure that the DSN= is for the correct dataset. If necessary use IDCAMS LISTCAT to check the file's attributes. Correct the job and rerun.

LHx Messages

LH0002

Unsupported return code received from procedure P1, RC= P2

Reason:

List Handler failed during request processing because it received an unknown return code from a procedure. The name of the procedure was *P1* and the unknown return code was *P2* .

System Action:

The request is rejected and List Handler terminates.

User Action:

Contact your System Administrator.

LH0003

List P1. P2. P3. P4 not defined

Reason:

A request to get or display a list failed because the list definition was not defined or the information in the list cache was incorrect. The information in the list cache can become incorrect when list definitions are added to the MODS file using the Definition Utility move or copy functions. The Definition Utility does not update the list cache when it moves or copies list definitions. The list to access belongs to application ID *P1* , its type is *P2* , its owner's user ID if private is
P3 ,and its name is *P4* .

System Action:

The request is rejected.

User Action:

If the list is defined on the MODS file, reset the list cache (option R on the CAS : List Definition Menu) and retry the request; otherwise, specify a list previously defined and retry.

LH0005

? in P1 can only be preceded by alphanumerics and nationals

Reason:

A question mark (?) was entered in the *P1* field and was preceded by an invalid value. The value preceding the ? contained characters other than alphabetics (A - Z), numerics (0-9) and nationals (@, # and $).

System Action:

The panel is displayed with the *P1* field set in error.

User Action:

Correct the value in the *P1* field and retry.

LH0007

Request denied, list P1. P2. P3. P4 inactive

Reason:

A request to display a list was denied because the list definition was inactive. The list to display belongs to appl ID *P1* , with type
P2 , and owner's user ID (if private) of *P3* ,and named *P4* .

System Action:

The request is rejected.

User Action:

Change the status defined in the list definition to ACTIVE and retry.

LH0009

No lists defined within specified range

Reason:

A request to get lists failed because there are no lists defined in the range specified.

System Action:

The request is rejected.

User Action:

None.

LH0010

List cache reset

Reason:

List definitions are saved in a cache when used. The request to reset (clear) the cache was successful.

System Action:

The cache is cleared.

User Action:

None.

LH0011

Format list P1 in P2. P3. P4. P5 refers format list

Reason:

A request to display a list failed because the format list specified in the list definition refers to a format list. A format list must contain the list formatting information - it cannot refer to another format list. The name of the list referring to another format list is *P1* . The list to display belongs to appl ID *P2* , its type is *P3* , its owner's user ID if private is *P4* ,and its name was *P5* .

System Action:

The request is rejected.

User Action:

Change the format list to contain the formatting information and retry.

LH0012

Format list P1 in P2. P3. P4. P5 not defined

Reason:

A request to display a list failed because the format list specified in the list definition is not defined. The name of the list not defined is *P1* . The list to display belongs to application ID *P2* , its type is *P3* , its owner's user ID if private is *P4* ,and its name is *P5* .

System Action:

The request is rejected.

User Action:

Change the format list in the list definition to a previously defined list and retry.

LH1103

P1 command is not active on this panel

Reason:

A command was entered in the Command field on the List Description or List Criteria panel that was a valid command; however, it was not allowed to be specified on that panel.

System Action:

The command is rejected.

User Action:

Clear the Command field.

LH1114

Command assigned to function key P1 is invalid

Reason:

Function key *P1* was pressed on the List Description or List Criteria panel and the command assigned to it is invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

LH1115

A format must be specified or the Format List fields must be entered

Reason:

A request to file or save a list definition was rejected because a format was not entered on the List Format panel or the name of a list definition was not entered in the Format List fields on the List Criteria panel.

System Action:

The file or save request is rejected.

User Action:

Enter a format on the List Format panel or the name of a list definition in the Format List fields on the List Criteria panel, and then retry.

LH1116

List Format and Format List fields are mutually exclusive

Reason:

A request to file or save a list definition was rejected because a format was entered on the List Format panel and the name of a list definition was entered in the Format List fields on the List Criteria panel.

System Action:

The file or save request is rejected.

User Action:

Clear the format on the List Format panel or the Format List fields on the List Criteria panel, and then retry.

LH1117

Format list P1. P2. P3. P4 not defined

Reason:

A request to file or save a list definition was rejected because the list definition entered in the Format List fields on the List Criteria panel is not defined. The list not defined belongs to application ID *P1* , its type is *P2* , its owner's user ID (if private) is *P3* , and its name is *P4* .

System Action:

The file or save request is rejected.

User Action:

Specify a list previously defined in the Format List fields on the List Criteria panel and retry.

LH1118

Presentation Attributes and Format List fields are mutually exclusive

Reason:

A request to file or save a list definition was rejected because data was entered on the List Entry Line Presentation Attributes panel and the name of a list definition was entered in the Format List fields on the List Criteria panel.

System Action:

The file or save request is rejected.

User Action:

Clear the fields on the List Entry Line Presentation Attributes panel or the Format List fields on the List Criteria panel and retry.

LH1201

Unsupported field name received from $CAGP000, field= P1

Reason:

The validation exit $CALH12X for the List Description and List Criteria panel received an unknown field name from procedure $CAGP000. The name of the field is *P1* .

System Action:

Procedure $CALH12X terminates.

User Action:

Contact your System Administrator.

LH1202

P1 must be PU(blic) or PR(ivate)

Reason:

An invalid value was entered in the *P1* field on the List Description or List Criteria panel.

System Action:

The panel is displayed with the *P1* field set in error.

User Action:

Enter PUBLIC or PRIVATE in the *P1* field and retry. The first two characters need to be entered only.

LH1203

P1 must not be entered when P2 set to P3

Reason:

P3 was entered in the *P2* field on the List Description or List Criteria panel and a value was entered in the *P1* field.

System Action:

The panel is displayed with the *P1* field set in error.

User Action:

Clear the *P1* field or change the value of the *P2* field and retry.

LH1204

Public list P1 already defined

Reason:

A list name was entered in the List Name field on the List Description or List Criteria panel that was previously defined. The list name entered is *P1* and it is a public list.

System Action:

The panel is displayed with the List Name field set in error.

User Action:

Enter a list name not previously defined and retry.

LH1205

Private list P1 for userid P2 already defined

Reason:

A list name was entered in the List Name field on the List Description List Criteria panel that was previously defined. The list name entered is *P1* and it is a private list owned by user ID *P2* .

System Action:

The panel is displayed with the List Name field set in error.

User Action:

Enter a list name not previously defined and retry.

LH1206

P1 must be in the range 1 to P2

Reason:

An invalid value was entered in the *P1* field on the List Description panel.

System Action:

The List Description panel is displayed with the *P1* field set in error.

User Action:

Enter a value in the range 1 to *P2* in the *P1* field and retry.

LH1207

P1 must be entered when P2 is set to P3

Reason:

P3 was entered in the *P2* field on the List Criteria panel and a value was not entered in the *P1* field.

System Action:

The List Criteria panel is displayed with the *P1* field set in error.

User Action:

Enter a value in the *P1* field or change the value of the *P2* field and retry.

LH1208

P1 must not be entered when P2 not entered

Reason:

A value was not entered in the *P2* field on the List Criteria panel and a value was entered in the *P1* field.

System Action:

The List Criteria panel is displayed with the *P1* field set in error.

User Action:

Clear the *P1* field or enter a value in the *P2* field and retry.

LH1210

P1 must be A(ctive) or I(nactive)

Reason:

An invalid value was entered in the *P1* field on the List Description panel.

System Action:

The List Description panel is displayed with the *P1* field set in error.

User Action:

Enter ACTIVE or INACTIVE in the *P1* field and retry. The first character needs to be entered only.

LH1211

P1 must not be set to FREEFORM when P2 is entered

Reason:

FREEFORM was entered in the *P1* field on the List Criteria panel and a value was also entered in the *P2* field.

System Action:

The List Criteria panel is displayed with the *P1* field set in error.

User Action:

Change the value of the *P1* field or clear the *P2* field and retry.

LH1212

P1 must not be entered when P2 is not entered

Reason:

A value was not entered in the *P2* field on the List Entry Line Presentation Attributes panel and a value was entered in the *P1* field.

System Action:

The List Entry Line Presentation Attributes panel is displayed with the *P1* field set in error.

User Action:

Enter a value in the *P2* field or clear the *P1* field and retry.

LH1213

P1 must be entered when P2 is set to P3

Reason:

P3 was entered in the *P2* field on the List Entry Line Presentation Attributes panel and a value was not entered in the *P1* field.

System Action:

The List Entry Line Presentation Attributes panel is displayed with the *P1* field set in error.

User Action:

Enter a value in the *P1* field or clear the *P2* field and retry.

LH1501

Public list P1 P2

Reason:

A list definition was successfully added, updated, or deleted. The name of the list definition is *P1* and it is a public list. The action successfully performed was *P2* .

System Action:

None.

User Action:

None.

LH1502

Private list P1 for userid P2 P3

Reason:

A list definition was successfully added, updated, or deleted. The name of the list definition is *P1* and it is a private list owned by user ID
P2 . The action successfully performed was *P3* .

System Action:

None.

User Action:

None.

LH1503

Public list P1 already defined

Reason:

A request to add a list definition failed because the list definition is already defined. The name of the list is *P1* and it is a public list.

System Action:

The request is rejected.

User Action:

Specify a list name not previously defined and retry.

LH1504

Private list P1 for userid P2 already defined

Reason:

A request to add a list definition failed because the list definition is already defined. The name of the list is *P1* and it is a private list owned by user ID *P2* .

System Action:

The request is rejected.

User Action:

Specify a list name not previously defined and retry.

LH1505

Public list P1 not defined

Reason:

A request to browse, update, delete, or copy a list definition failed because the list definition is not defined. The name of the list is *P1* and it is a public list.

System Action:

The request is rejected.

User Action:

Specify a list name previously defined and retry.

LH1506

Private list P1 for userid P2 not defined

Reason:

A request to browse, update, delete, or copy a list definition failed because the list definition is not defined. The name of the list is
P1 and it is a private list owned by user ID *P2* .

System Action:

The request is rejected.

User Action:

Specify a list name previously defined and retry.

LH1605

Line P1 invalid, P2 list comment line already entered

Reason:

A comment line was entered in format line *P1* that was already specified. The invalid comment line was for a *P2* list.

System Action:

The List Format panel is redisplayed.

User Action:

Change line *P1* so that it is not a comment line for a *P2* list and retry.

LH1606

Heading starting at line P1 exceeds maximum of 10 lines

Reason:

A heading was entered that consisted of more than 10 lines. The first line of the heading is line *P1* of the format.

System Action:

The List Format panel is redisplayed.

User Action:

Change the heading to be from 1- to 10-lines and retry.

LH1607

Entry Line Field in column P1 on line P2 must be 1 to 12 characters

Reason:

An invalid Entry Line Field name was entered in format line *P2* starting at column *P1* . The Entry Line Field name entered was not 1- to 12- alphabetic (A - Z), numeric (0-9) and/or national (@, # and $) characters starting with an alphabetic or national character.

System Action:

The List Format panel is redisplayed.

User Action:

Change the name of the Entry Line Field to be 1- to 12- alphanumeric and/or national characters starting with an alphabetic or national character and retry.

LH1608

Entry Line Field ' P1' in column P2 on line P3 is a reserved ncl keywo rd

Reason:

An invalid Entry Line Field name was entered in format line P3 starting at column P2 . The Entry Line Field name entered is a reserved NCL keyword. The *n*ame of the Entry Line Field is *P1* .

System Action:

The List Format panel is redisplayed.

User Action:

Change the name of the Entry Line Field to a name that is not a reserved NCL keyword and retry.

LH1609

Maximum of 10 screen formats exceeded

Reason:

The format for a list definition was entered that consists of more than 10 screen formats.

System Action:

The List Format panel is redisplayed.

User Action:

Change the format to consist of 1- to 10- screen formats and retry.

LH1614

A format must be specified or the Format List fields must be entered

Reason:

A request to save a list definition was rejected because a format was entered on the List Format panel or the name of a list definition was entered in the Format List fields on the List Criteria panel.

System Action:

The save request is rejected.

User Action:

Enter a format on the List Format panel or the name of a list definition in the Format List fields on the List Criteria panel, and then retry.

LH1615

List Format and Format List fields are mutually exclusive

Reason:

A request to save a list definition was rejected because a format was entered on the List Format panel and the name of a list definition was entered in the Format List fields on the List Criteria panel.

System Action:

The save request is rejected.

User Action:

Clear the format on the List Format panel or the Format List fields on the List Criteria panel, and then retry.

LH1616

Heading must be entered for screen format P1 before line P2

Reason:

A screen format was entered that did not contain at least one heading line. The number of the screen format is *P1* and the format line before which the the heading must be inserted is *P2* .

System Action:

The List Format panel is redisplayed.

User Action:

Change screen format *P1* to include at least one heading line by inserting a heading before format line *P2* and retry.

LH1617

Entry line must be entered for screen format P1 on line P2

Reason:

A screen format was entered that did not contain an entry line. The number of the screen format is *P1* and the format line that did not contain an entry line is *P2* .

System Action:

The List Format panel is redisplayed.

User Action:

Change screen format *P1* to include an entry line at format line *P2* and retry.

LH1618

Screen format must be entered when a comment line is entered

Reason:

The format for a list definition was entered that consisted of a comment line and no screen format. At least one screen format must be entered when a comment line is entered.

System Action:

The List Format panel is redisplayed.

User Action:

Change the format to include at least one screen format and retry.

LH1619

Presentation Attributes and Format List fields are mutually exclusive

Reason:

A request to file or save a list definition was rejected because data was entered on the List Entry Line Presentation Attributes panel and the name of a list definition was entered in the Format List fields on the List Criteria panel.

System Action:

The file or save request is rejected.

User Action:

Clear the fields on the List Entry Line Presentation Attributes panel or the Format List fields on the List Criteria panel, and then retry.

LH1703

P1 command is not active on this panel

Reason:

A command was entered in the Command field on the List Entry Line Fields panel that was a valid command; however, it was not allowed to be specified on that panel.

System Action:

The command is rejected.

User Action:

Clear the Command field.

LH1705

Attribute ID ' P1' is a reserved ncl keyword

Reason:

An invalid attribute ID was entered in an Attribute ID field on the List Entry Line Fields panel. The attribute ID entered was a reserved NCL keyword. The ID of the attribute is *P1* .

System Action:

The List Entry Line Fields panel is displayed with the Attribute ID field set in error.

User Action:

Change the ID of the attribute to an ID that is not a reserved NCL keyword and retry.

LH1706

Attribute ID must contain alphanumeric and national characters only

Reason:

An invalid attribute ID was entered in an Attribute ID field on the List Entry Line Fields panel. The attribute ID entered was not 1- to 12- alphabetic (A - Z), numeric (0-9) and/or national (@, # and $) characters starting with an alphabetic or national character.

System Action:

The List Entry Line Fields panel is displayed with the Attribute ID field set in error.

User Action:

Change the ID of the attribute to be 1 to 12 alphanumeric and/or national characters starting with an alphabetic or national character and retry.

LH1713

Command assigned to function key P1 is invalid

Reason:

Function key *P1* was pressed on the List Entry Line Fields panel and the command assigned to it is invalid.

System Action:

The command is rejected.

User Action:

Correct the setting of the function key and retry.

LH1714

A format must be specified or the Format List fields must be entered

Reason:

A request to save a list definition was rejected because a format was entered on the List Format panel or the name of a list definition was entered in the Format List fields on the List Criteria panel.

System Action:

The save request is rejected.

User Action:

Enter a format on the List Format panel or the name of a list definition in the Format List fields on the List Criteria panel, and then retry.

LH1715

List Format and Format List fields are mutually exclusive

Reason:

A request to save a list definition was rejected because a format was entered on the List Format panel and the name of a list definition was entered in the Format List fields on the List Criteria panel.

System Action:

The save request is rejected.

User Action:

Clear the format on the List Format panel or the Format List fields on the List Criteria panel, and then retry.

LH1716

Presentation Attributes and Format List fields are mutually exclusive

Reason:

A request to file or save a list definition was rejected because data was entered on the List Entry Line Presentation Attributes panel and the name of a list definition was entered in the Format List fields on the List Criteria panel.

System Action:

The file or save request is rejected.

User Action:

Clear the fields on the List Entry Line Presentation Attributes panel or the Format List fields on the List Criteria panel, and then retry.

LH1904

No lists defined within specified range

Reason:

A request to present a List list failed because there are no lists defined in the range specified.

System Action:

The request is rejected.

User Action:

None.

LH1905

List P1 deleted by another user

Reason:

The selection of a list from the List list failed because the list was deleted by another user since the List list was displayed. The name of the list selected is *P1* .

System Action:

The selection of the list is rejected.

User Action:

None.

LH2001

Unsupported call type received from $CASL000, calltype= P1

Reason:

A request to display a list failed because procedure $CALH20L received an unknown call type in variable &$SLCALLTYPE from procedure $CASL000. The unknown call type is *P1* .

System Action:

Procedure $CALH20L terminates and the request is rejected

User Action:

Contact your System Administrator.

LH2004

P1 procedure not found, proc= P2

Reason:

A request to display a list failed because the list exit or service procedure for the list was not found in the procedure library. The type of procedure not found is *P1* and the name of the procedure is *P2* .

System Action:

The request is rejected.

User Action:

Correct the list exit or service procedure name in the list definition or create the procedure, and then retry.

LH2005

Invalid return code received from P1, proc= P2 RC= P3

Reason:

A request to display a list failed because the list exit or service procedure returned an invalid return code. The type of procedure is
P1 , the name of the procedure is *P2* , and the invalid return code is
P3 .

System Action:

The request is rejected.

User Action:

Correct the setting of the return code by the list exit or service procedure and retry.

LH2006

RC 4 from P1 invalid when &$LHOPT set to P2, proc= P3

Reason:

A request to display a list failed because the list exit or service procedure returned a return code that was not valid for the option set in variable &$LHOPT. The type of procedure is *P1* , the value of variable &$LHOPT is *P2* , and the name of the procedure is *P3* .

System Action:

The request is rejected.

User Action:

Correct the setting of the return code by the list exit or service procedure and retry.

LH2007

No entries to display

Reason:

A request to display a list failed because there were no entries to display.

System Action:

None.

User Action:

None.

LH2008

Entry not selected from list

Reason:

A list was displayed and an entry was not selected.

System Action:

None.

User Action:

None.

LH2011

Command parameter invalid

Reason:

A command was entered in the Command field that is a valid command; however, the command parameter is invalid.

System Action:

The command is rejected.

User Action:

Correct the command parameter and retry.

LH2012

' P1' option not supported by service procedure

Reason:

List Handler called the service procedure for list to process an option; however, the option is not supported by the service procedure. The option to process is *P1* .

System Action:

The request is rejected.

User Action:

None.

LH2013

&$LHACTIONS not set to available actions by service proc, proc= P1

Reason:

A request to display a list failed because the service procedure did not set variable &$LHACTIONS to the available actions. The name of the service procedure is P1 .

System Action:

The request is rejected.

User Action:

If the list is to be presented as an action list, modify the service procedure to set variable &$LHACTIONS and retry.

LH2014

RC 8 from P1 and &SYSMSG null, proc= P2

Reason:

During a request to display a list, the service procedure or list exit set returned code 8 and did not set variable &SYSMSG to an error message. The type of procedure is *P1* and the name of the procedure is *P2* .

System Action:

None.

User Action:

Correct the list exit or service procedure to set &SYSMSG to an error message and retry.

LOx Messages

LOBR0001

LOG FILE P1 IS UNAVAILABLE

Reason:

An attempt by the Log Browse utility to access the file *P1* failed.

System Action:

Log Browse terminates.

User Action:

Ensure the file id is correctly specified. If necessary issue a SHOW UDB command to determine the file id's that are available.

LOBR0002

LOG FILE P1 NOT INITIALIZED - ENSURE LOGGING IS ACTIVE

Reason:

The Log Browse utility attempted to access a log file. The data was not in the expected format. *P1* is the identifier of the file being accessed.

System Action:

Log Browse terminates.

User Action:

Check that the file accessed has been used as a log file.

LOBR0003

COMMAND ' P1' NOT SUPPORTED

Reason:

A command entered on the Log Browse panel is not recognized.

System Action:

None.

User Action:

Check the spelling of the command. If necessary use the Help command, or press F1, to view the application help.

LOBR0004

NO COMMAND ENTERED

Reason:

A / command was entered without any operands.

System Action:

None.

User Action:

Reenter the / command with a SOLVE command as the operand.

LOBR0005

COMMAND ISSUED

Reason:

A SOLVE command has been processed.

System Action:

None.

User Action:

None.

LOBR0006

INVALID DATE

Reason:

A request to access a specific date failed because the format of the data does not match one of the following: YY.DDD DD/MM/YY or MM/DD/YY (if US language code) YY/MM/DD YYMMDD

System Action:

None.

User Action:

Correct the date entered to match one of the supported formats.

LOBR0007

INVALID LABEL NAME ' P1'

Reason:

A label command has specified an invalid label name. A label must be 1 to 8 characters.

System Action:

None.

User Action:

Correct the label entered to be 1 to 8 characters.

LOBR0008

INVALID SCAN LIMIT ' P1'

Reason:

A SCANMAX command has specified an invalid value. The limit must be a number in the range 1 to 5000.

System Action:

None.

User Action:

Correct the limit entered to be a number in the range 1 to 5000.

LOBR0009

SCAN LIMIT SET TO P1

Reason:

A SCANMAX command has been accepted. *P1* is now the limit on the number of log records that will be searched for a Find request.

System Action:

None.

User Action:

None.

LOBR0010

MESSAGE ATTRIBUTES WILL BE DISPLAYED

Reason:

An ATTR command has been used to activate message level coloring and highlighting.

System Action:

Log messages with color and highlighting will be displayed with those attributes.

User Action:

Use the ATTR command again to reset message level attributes.

LOBR0011

MESSAGE ATTRIBUTE DISPLAY RESET

Reason:

An ATTR command has been used to deactivate message level coloring and highlighting.

System Action:

Log messages are displayed without color and highlighting.

User Action:

Use the ATTR command again to set message level attributes.

LOBR0012

INVALID SCROLL AMOUNT ' P1'

Reason:

A scroll value entered is not supported.

System Action:

None.

User Action:

Correct the scroll amount entered.

LOBR0013

INVALID TIME

Reason:

A request to access a specific time failed because the format of the data does not match one of the following: HH HH.MM HH.MM.SS

System Action:

None.

User Action:

Correct the time entered to match one of the supported formats.

LOBR0014

LABEL NAME OMITTED

Reason:

A LABEL command has not specified a label name.

System Action:

None.

User Action:

Correct the label command to specify a label name. For example '.HERE' or 'LABEL HERE'.

LOBR0015

FORMAT ' P1' NOT SUPPORTED

Reason:

A FORMAT command has specified an unknown format name.

System Action:

The format is unchanged.

User Action:

Correct the Format command to specify one of NORMAL, SHORT, LONG, or SOURCE.

LOBR0016

FIND STRING OMITTED

Reason:

A FIND command has not specified a search argument.

System Action:

None.

User Action:

Correct the Find command to specify a search argument.

LOBR0017

LABEL NAME OMITTED

Reason:

A LOCATE command has not specified a label name.

System Action:

None.

User Action:

Correct the LOCATE command to specify a label name. For example, 'LOCATE THERE'.

LOBR0018

UNKNOWN LABEL ' P1'

Reason:

A Locate command has specified a label name that is not defined.

System Action:

None.

User Action:

Check that the label name is spelt correctly and matches a defined label.

LOBR0019

LABEL ' P1' DEFINED

Reason:

A Label has been defined for the line indicated by the cursor or the line displayed at the top of the screen.

System Action:

None.

User Action:

Use the *Locate P1* command to reposition to this line.

LOBR0020

LABEL ' P1' REPLACED

Reason:

A Label has been defined for the line indicated by the cursor or the line displayed at the top of the screen. This definition replaces an earlier position for the label.

System Action:

None.

User Action:

Use the *Locate P1* command to reposition to this line.

LOBR0021

DOMAIN NAME P1 IS UNKNOWN

Reason:

A request to display a remote Activity Log has failed because the domain ID specified (*P1*) is unknown. The value must represent either a SOLVE Domain ID or an INMC Link Name that is known to this SOLVE region.

System Action:

Log Browse terminates.

User Action:

Ensure the domain ID is correctly specified. If necessary issue a SHOW DOMAINS or SHOW LINKS command to verify IDs that are available.

LOBR0022

DOMAIN NAME P1 DOES NOT SUPPORT REMOTE LOG BROWSE

Reason:

A request to display a remote Activity Log has failed because the domain ID specified (*P1*) does not support remote log browse. Only SOLVE systems running Management Services V3.3 and above provide this facility.

System Action:

Log Browse terminates.

User Action:

None.

LOBR0023

DOMAIN NAME P1 IS NOT CONTACTABLE

Reason:

A request to display a remote Activity Log has failed because the domain ID specified (*P1*) is not contactable due to one of the following reasons:
- the INMC link is not active
- the APPC link is not defined

System Action:

Log Browse terminates.

User Action:

Check the status of the INMC link by using the SHOW LINKS TYPE=INMC command. If the requested domain is not active, activate it. If it is active, check that APPC links have been defined on the remote system. Log on to the remote system and issue the SHOW LINKS TYPE=APPC command and verify that there is a link name defined, perhaps using a generic LUMASK, that supports a link from the local SOLVE System.

LOBR0024

NO DOMAIN SELECTED

Reason:

No domain name was selected from the list of domains presented.

System Action:

Log Browse terminates.

User Action:

If a display was required, ensure that you select one of the domains in the list. To select the local log select the first item.

LOBR0025

LOGPROC IS NOT RUNNING - TERMINATION REASON IS P1

Reason:

The Logging procedure is not running. The reason why it is not running is given in *P1* .
The following reasons are possible:
FILE_OPEN_ERROR - Logproc experienced an error while trying to open the log file.
FILE_ADD_ERROR - Logproc experienced an error while trying to add a record to the log file. The log file may be full.
WRONG_FILE_FORMAT - Logproc determined that the contents of the log file are not in the correct format for log records.
NONE_GIVEN - No reason is available for why Logproc is not running. It may never have been started or it may have been deliberately flushed.

System Action:

Log Browse continues if possible but no new log records will be written.

User Action:

If you require Logproc to be running. Ensure that the logging file is is of the correct format and available for use. Then start Logproc by issuing the 'SYSPARM LOGPROC=your_logproc_name' command.

LOBR0026

SIGNUM P1 will produce a date that is out of range.

Reason:

You entered a number to increment/decrement the current date. The resulting date is out of the date processor's range.

System Action:

Date request is ignored.

User Action:

Use a smaller number to increment/decrement the current date.

LOBR0027

LOG BROWSE CAN ONLY BE PERFORMED IN FULL SCREEN MODE

Reason:

You entered $LOG in a processing environment that does not have an associated real terminal window (for example, the system background environment, LU 1 Telnet, or ROF session).

System Action:

The command cannot be serviced.

User Action:

Issue the $LOG command in an environment with a terminal window.

LOBR0028

INVALID SEARCH LIMIT

Reason:

An invalid search limit was specified. The value must be a numeric value in the range of 500 to 9999.

System Action:

Log search processing terminates.

User Action:

Correct the limit entered to be a number in the range 500 to 9999.

LOBR0029

INVALID SCROLL AMOUNT

Reason:

An invalid scroll amount was specified. The value must be a numeric value in the range of 1 to 999.

System Action:

Log search processing terminates.

User Action:

Correct the amount entered to be a number in the range 1 to 999.

LOBROW01

Activity Log Browsing can only be performed in full screen mode.

Reason:

You attempted to browse the Activity Log from an environment that does not have an associated real terminal window (for example, the system background environment, LU 1 Telnet, or ROF session).

System Action:

The request cannot be processed.

User Action:

Issue the $LOG command in an environment with a terminal window.

LOBROW02

' P1' is not a valid log browse or NetMaster command.

Reason:

A command entered on the Log Browse panel is not recognized. Valid commands from the Activity Log display include: Specific log browse commands such as find. date, time, print and so on CAS commands and menu shortcuts Any NetMaster command

System Action:

None.

User Action:

Check the spelling of the command. See the log browse online help for a description of log browse commands.

LOBROW03

No log data available for P1 P2

Reason:

The data requested by a log browse DATE or TIME command is outside the range of data stored in all activity log files.

System Action:

None.

User Action:

The command 'DATE ?' or 'D ?' will display the range of dates/times contained in the allocated activity log files.

LOBROW04

' P1' is an invalid DATE command parameter.

Reason:

The parameter entered for the Log Browse DATE command was not recognized. Valid DATE command parameters are as follows:
D D ? D absolute date D +N D -N

System Action:

None.

User Action:

Correct the parameter and retry the command.

LOBROW05

Omitted or invalid TIME command parameter

Reason:

The parameter entered for the Log Browse TIME command was either omitted or invalid. A parameter is mandatory for the TIME command. Valid TIME command parameters are as follows:
T HH T HH.MM T HH.MM.SS T HH.MM.SS.hh
T +HH T +HH.MM or T+.MM T +HH.MM.SS or T+.MM.SS or T+..SS T +HH.MM.SS.hh or T+.MM.SS.hh or T+...hh
T -HH T -HH.MM or T-.MM T -HH.MM.SS or T-.MM.SS or T-..SS T -HH.MM.SS.hh or T-.MM.SS.hh or T-...hh

System Action:

None.

User Action:

Correct the parameter and retry the command.

LOBROW06

Note: Lines marked + came after a backwards time change *P1* at *P2*

Reason:

This message appears when the Activity Log lines displayed on this panel include lines that occurred after a backwards local time offset change on this LPAR.

Activity Log lines always appear with their local system time. When a backward time change occurs, such as for Daylight Saving, the local system time moves back; however, log records are already written for this time interval.

To distinguish the log records that occurred during the second time through the same local time interval, a + is displayed after the local system time.

Example

- Browse the Activity Log just before 3:00 a.m. All records between 2:00 a.m. and 3:00 a.m. display as normal.
- At 3:00 a.m. the local system time is set back to 2:00 a.m. Log records have already been written between local time 2:00 a.m. and 3:00 a.m. Now, new log records are written, again between local time 2:00 a.m. and 3:00 a.m. These records are written after the second 2:00 a.m. is flagged.
- Browse Activity Log records from between 2:00 a.m. and 3:00 a.m. Records written during the first 2:00 a.m. to 3:00 a.m. period display as normal, for example,

  02.50.06 Message ...

  Records written during the second 2:00 a.m. to 3:00 a.m. period after the backwards time change display with a + character, for example,

  02.50.06+Message ...

System Action:

None.

User Action:

None.

To see when local time offset changes were detected on this LPAR, look for log messages N02H10 to N02H13.

LOBROW07

Label name P1 P2 P3 P4 P5 P6 P7 P8

Reason:

This message reports the status of a Label-related Log Browse command.
Labels must have a valid name, from 1 through 12 characters long. The first character of the name must be alphabetic, or one of the characters @, #, or $.
Label names are not case sensitive. If a Label Name already exists, it is replaced,
Label names are valid only for the current Log Browse instance - they are not retained once you exit Log Browse.

System Action:

None.

User Action:

If necessary, correct the invalid label name and retry the operation.

LOBROW08

No data for this date P1 P2 P3 P4 P5 P6 P7 P8

Reason:

A scroll attempt was made, but there is either no or no more applicable log data for the displayed date.
If a Region, Origin or Text filter is active, this message indicates that no (more) log data matching the filter exists for this date. There may be more non-matching lines of log data beyond the times shown.

System Action:

None.

User Action:

None.

LOBROW09

Invalid *P1* filter or highlight criteria " *P2*"

Reason:

A Region/Origin/Text/Color command has an invalid filter criteria, or an hlRegion/hlOrigin/hlText command has an invalid highlight criteria.

The correct command format is:

`REGION <region name>`

region name is a valid user ID

`ORIGIN <origin name>`

origin name is a valid terminal ID

`TEXT <text string>`

text string contains no blank characters

`COLOR <color initial>`

1st letter of color name: r p y g b t w
r(ed) p(ink) y(ellow) g(reen) b(lue) t(urquoise) w(hite) For example, color r displays all red lines.

`HLREGION <region name>`

region name is a valid user ID

`HLORIGIN <origin name>`

origin name is a valid terminal ID

`HLTEXT <text string>`

text string contains no blank characters

You can enter the commands without parameters to remove all filtering or highlighting on that Criteria. Any two or all three attributes can be filtered or highlighted at once - this is cumulative (that is, matches region AND origin AND text).

System Action:

None.

User Action:

None.

LOBROW10

Log message color and highlight attributes are P1

Reason:

An ATTR command has been used to enable or disable message level coloring and highlighting.

System Action:

When enabled, log messages with special display attributes are shown as colored and/or highlighted. When disabled, all log messages are shown in low intensity monocolour.

User Action:

Use the ATTR command again to reverse the message level attributes.

LOBROW11

Command issued P1

Reason:

A NetMaster command has been issued on domain *P1*

System Action:

None.

User Action:

None.

LOBROW12

Find parameters P1

Reason:

A log browse 'Find' command has been attempted but the parameters were omitted or invalid. Valid command formats are:
Find repeats any last Find command Find * repeats any last Find command
Find xxx yyy zzz find next occurrence of xxx yyy zzz
Find a a º b b º c c find next line containing aaa or bbb or ccc Find a a + b b + c c find next line containing aaa and bbb and ccc
º and + cannot be mixed in the same operation.
arguments are case-insensitive & space-sensitive
By default, scanning starts forward from the current cursor position. The keywords Prev, First or Last may be added to the command.
Prev causes search to be performed backwards First finds first occurrence of the string for the displayed date Last finds last occurrence of the string for the displayed date
All find operations are performed only within the displayed date. To search another day for the same thing, use the D command then the repeat Find command.
The Findmax limit controls the number of lines that are searched. Find terminates when the Findmax limit is reached, or the day changes. Use the Findmax or Scanmax commands to change the search line limit.
If Text, Region or Origin filters are active, only lines that pass the filter condition(s) will go on to be searched for the search string(s).

System Action:

None.

User Action:

None.

LOBROW13

Find error, P1

Reason:

A log browse 'Find' command was requested but could not be performed because of the error condition indicated. These are usually file errors on the activity log VSAM files.

System Action:

None.

User Action:

Check the log for any additional messages describing the error. For file errors, correct the condition and retry the find request.

LOBROW14

P1 P2 P3 P4 P5 P6 P7 P8 P9 P10

Reason:

This message indicates the results of a completed FIND command.

System Action:

None.

User Action:

None.

LOBROW15

P1 P2 P3 P4 P5 P6 P7 P8 P9 P10

Reason:

This message indicates the results of a SCANMAX or FINDMAX command.
SCANMAX (or FINDMAX or MAX) sets the number of lines to be searched by a Find command. The limit can be between 500 and 10,000 inclusive. The default value is set at startup by your System Administrator.
Note: If text, region or origin filtering is active, SCANMAX continues to control the number of lines read from the log file(s), filtered, and searched. In other words, SCANMAX 600 does not mean that 600 lines matching the filters are searched - it means that 600 lines are filtered and searched.

System Action:

None.

User Action:

None.

LOBROW16

Default format/filter/highlight/find/label settings restored.

Reason:

A Reset command has been completed.
The following Log Browse settings are restored to their default values:
Format/Mode = NORMAL, column offset 1
Repeat Find parameters reset to none
All Label definitions reset
PF12 Command Stack reset
Text/Region/Origin filters reset to none and data refreshed
Highlight Text/Region/Origin reset to HLREGION=&USERID
Message Attribute Display = ON
Scanmax/Findmax reset to default

System Action:

None.

User Action:

None.

LOBROW17

Invalid scroll amount "*P1*"

Reason:

An invalid horizontal or vertical scroll amount was entered on the command line or in the scroll field.

Valid vertical scroll values are:

MAX or M—to the start or end of the displayed day

PAGE—one page

HALF—half a page

CSR—at cursor line position

D—to next or previous day (D is valid only on the command line, not the scroll field)

nnn—*nnn* lines, 1–*xxxx* (*xxxx* being a number between 1 and the number specified in /PARMS, $NM LOGFILES for "Log View FIND Line Limit")

Valid horizontal scroll values are:

MAX or M—left to column 1 or right to column 256

PAGE—one page

HALF—half a page

CSR—at cursor column position

nnn—*nnn* columns, 1–256

System Action:

None.

User Action:

None.

LOBROW18

Print parameter error: *P1 P2 P3 P4 P5 P6 P7 P8 P9 P10*

Reason:

A Log Browse Print command was attempted with invalid parameters. Valid command format is:

Print Screen (or Print Page)

Prints all lines on the display.

Print *nnnn* lines

Prints next *nnnn* lines (from and including the top line).

nnnn = 1 to PrMax (see note below)

Print *mmmm* minutes

Prints next *mmmm* minutes (from and including the top line).

mmmm = 1 to 1439

Print Screen, Print *nnnn* lines and Print *mmmm* minutes are self-contained print commands that will be executed immediately.

Alternatively, a print range may be specified using a combination of the Print Start, Print End, and Print commands, as follows:

Print Start

Defines the top line as the start of the print range.

Print End

Defines the top line as the end of the print range.

Print

Prints all lines in the print range, inclusive of the start and end line. The print range is then reset. (The end line time may be before the start line time.)

Print Cancel

Resets any specified print range.

Print Range

Displays the currently specified print range.

Print Start, Print End, and Print must be entered in that order, but do not need to be consecutive commands - other non-Print commands may be issued in between.

Note: The default maximum print lines is 9999. Maximum can be changed with $GLBL $loPrMax *nnnn*, where *nnnn* is in the range 100 to 500000.

System Action:

None.

User Action:

None.

LOBROW19

Print line range *P1 P2 P3 P4 P5 P6 P7 P8 P9 P10*

Reason:

This message provides information about the current print line range.

A print line range may be specified via a combination of the Print Start, Print End, and Print commands, as follows:

Print Start

Defines the currently displayed top line as the start.

Print End

Defines the currently displayed top line as the end.

Print

Prints all lines in the print range, inclusive of the start and end line. The print range is then reset. (The end line time may be before the start line time.)

Print Cancel

Resets any specified print range.

Print Range

Displays the currently specified print range.

Print Start, Print End, and Print must be entered in that order, but do not need to be consecutive commands - other non-Print commands may be issued in between.

Alternatively, instead of specifying a print range, one of the following commands may be used.

Print Screen (or Print Page)

Prints all lines on the display.

Print *nnnn* lines

Prints next *nnnn* lines (from and including the top line).

nnnn = 1 to PrMax (see note below)

Print *mmmm* minutes

Prints next *mmmm* minutes (from and including the top line).

mmmm = 1 to 1439

Print Screen, Print *nnnn* lines and Print *mmmm* minutes are self-contained print commands that will be executed immediately.

Note: The default maximum print lines is 9999. Maximum can be changed with $GLBL $loPrMax *nnnn*, where *nnnn* is in the range 100 to 500000.

System Action:

None.

User Action:

None.

LOBROW20

P1 P2 P3 P4 P5 P6 P7 P8 P9 P10

Reason:

This message displays the completion status of a print request.
A successful print request should now be visible on the /PSM request queue.

System Action:

None.

User Action:

None.

LOBROW21

Print: P *n* lines | P *m* minutes | P screen | P start/end (see PF1)

Reason:

This message displays information about Print command syntax.

Valid command format is:

Print Screen (or Print Page)

Prints all lines on the display.

Print *nnnn* lines

Prints next *nnnn* lines (from and including the top line).

nnnn = 1 to PrMax (see note below)

Print *mmmm* minutes

Prints next *mmmm* minutes (from and including the top line).

mmmm = 1 to 1439

Print Screen, Print *nnnn* lines and Print *mmmm* minutes are self-contained print commands that will be executed immediately.

Alternatively, a print range may be specified via a combination of the Print Start, Print End, and Print commands, as follows:

Print Start

Defines the top line as the start of the print range.

Print End

Defines the top line as the end of the print range.

Print

Prints all lines in the print range, inclusive of the start and end line. The print range is then reset. (The end line time may be before the start line time.)

Print Cancel

Resets any specified print range.

Print Range

Displays the currently specified print range.

Print Start, Print End, and Print must be entered in that order, but do not need to be consecutive commands - other non-Print commands may be issued in between.

Print may be abbreviated as Prt, Pr or P.

The RESET command resets, among many other things, the print range settings.

Note: The default maximum print lines is 9999. Maximum can be changed with $GLBL $loPrMax *nnnn*, where *nnnn* is in the range 100 to 500000.

LOBROW23

Domain or link name P1 is unknown.

Reason:

A request to display a remote Activity Log has failed because the domain ID specified (*P1*) is unknown. The value must represent either a NetMaster Domain ID or an INMC Link Name that is known to this NetMaster region.

System Action:

Log Browse terminates.

User Action:

Ensure the domain ID is correctly specified. If necessary issue a SHOW DOMAINS or SHOW LINKS command to verify IDs that are available.

LOBROW24

Domain name P1 does not support remote Activity Log Browsing

Reason:

A request to display a remote Activity Log has failed because the domain ID specified (*P1*) does not support remote log browse. Only NetMaster systems running Management Services V3.3 and above provide this facility.

System Action:

Log Browse terminates.

User Action:

None.

LOBROW25

Domain name P1 cannot be contacted.

Reason:

A request to display a remote Activity Log has failed because the domain ID specified (*P1*) is not contactable due to one of the following reasons:
- The INMC link is not active.
- The APPC link is not defined.

System Action:

None

User Action:

Check the status of the INMC link by using the SHOW LINKS TYPE=INMC command. If the requested domain is not active, activate it. If it is active, check that APPC links have been defined on the remote system. Log on to the remote system and issue the SHOW LINKS TYPE=APPC command and verify that there is a link name defined, perhaps using a generic LUMASK, that supports a link from the local system.

LOBROW26

Displayed domain changed from P1 to P2

Reason:

The domain of the displayed Activity Log data has changed as indicated, as the result of a DOMAIN command.
Valid command format is:
DOMAIN Displays a selection list of formally linked domains.
DOMAIN domainId/linkName Switches the current display to the requested remote NetMaster region. The browsing environment is retained, and the time set as close as possible to the previous display.

Note: domainID/linkName, when explicitly specified, are not restricted to those on the selection list. Any dynamically linked domain may be specified.

System Action:

None

User Action:

None

LOBROW27

Invalid shortcut. (For help:put cursor on this line, press F1)

Reason:

An invalid shortcut was entered from the Activity Log Browse display.
Navigating to the function you want from the Activity Log can be done in any of these ways:
- Entering a shortcut (/levels or =/levels)
- Entering a combined shortcut and menu option (/bcast.s or =/bcast.s)
- Entering a panel path (=H.I.P)

System Action:

None.

User Action:

Correct the shortcut or panel path, and retry.

SHORTCUTS

Enter a shortcut name, preceded by a slash, at the ===> prompt (for example, /levels or /info or /ipmon). This will take you directly to the function.
To see a list of all shortcuts and their associated functions, enter a single slash (/) at the ===> prompt. Select the desired shortcut from the list by entering 'S' beside it.

If a shortcut exists for a menu option, it is displayed in turquoise, to the right of the option description.

Shortcuts may also be combined with menu options (for example, /bcast.s or =/bcast.s).

Shortcuts can be invoked in two ways: 1. A 'nested' shortcut 2. A shortcut skip
To retain and nest the current screen level, use a nested shortcut:
/shortcut_name Exit will bring you back to the last nested screen in this window.
Screens may be nested to a maximum of 64 levels.
To close all currently nested screen levels, use a shortcut skip:
=/shortcut_name

Exit will take you back to the Primary Menu. If you no longer need any nested screens, a shortcut skips saves storage and resources.
(If you are currently at the Primary Menu, a nested shortcut and a shortcut skip behave the same.)

PANEL PATH

Like shortcuts, panel paths move directly to a function without having to access each submenu between it and the current menu. A panel path consists of multiple menu options separated by periods (for example =U.M).

Also like shortcuts, the = sign functions as a skip character, closing all nested screens and effectively entering the path from the primary menu. (If you are currently at the Primary Menu, the skip character is not required.)

Frequently used panel paths have associated shortcuts. If you don't remember a shortcut, enter / at the ===> prompt for a list. Select one from the list, or enter it at the ===> prompt.

There is no difference between accessing a function using a panel path skip or a shortcut skip, although the shortcut should be easier to remember. Both close the current screens and go straight to the function.

Entering == at the ===> prompt from any panel closes all nested screens and returns you to the Primary Menu.

LOBROW28

Latest log entry posted on p1 p2

Reason:

This informational message issued by the Activity Log Browser indicates that new log entries have been posted that are not in the current

System Action:

User Action:

To view the most recent log entry, press F6=Latest to reposition the

LOCAL501

Find error, P1 P2 P3 P4 P5 P6

Reason:

A log browse 'Find' command was requested but could not be performed because of the error condition indicated. These are usually file errors on the activity log VSAM files.

System Action:

None.

User Action:

Check the log for any additional messages describing the error. For file errors, correct the condition and retry the find request.

LOCAL502

No Activity Log data files are available

Reason:

An attempt was made to browse the Activity Logs or perform Log Administration, but no VSAM log data files are available.
By default, three Activity Log VSAM files are defined at NetMaster installation time, and allocated and opened at region startup.
Activity Logs are VSAM datasets named ?dsnqual.NMLOG01, NMLOG02, NMLOG03 They should be allocated to the region as DD's NMLOG01, NMLOG02, NMLOG03 and a UDBCTL OPEN performed with the same names as the FILEIDs.
Up to 7 files, NMLOG01 - NMLOG07, may be used.

System Action:

Activity Log browse or administration functions are not available.

User Action:

Ensure that at least one activity log VSAM file is correctly allocated and opened.
Use SH VSAM=NMLOG* to check that correctly defined VSAM datasets are allocated as DDNAMEs NMLOG01 and so on.
A UDBCTL OPEN.. should have been performed for each file - recommended parameters are DEFER, LSR, SIS
Once the files are allocated and opened, use the SYSPARMS LOGPROC=$LOPROC command to start activity logging.

LOCAL503

Activity Log File P1 cannot be browsed

Reason:

An attempt was made to browse Activity Log VSAM Fileid *P1* , but this file cannot be browsed. It may not have been correctly allocated and opened, or it may have been flagged in error by the LOGPROC procedure (possibly after an unsuccessful swap attempt).

System Action:

None.

User Action:

Retry the Log Browse activity without specifying a specific fileid. The latest available log data will be displayed.
System Administrators: Ensure that the VSAM file has been correctly defined, allocated and opened. Check the $LOGFILES ICS Parameter group for errors. Check the hardcopy log for any log swap failures. After fixing any errors, flush and restart the LOGPROC to make this file available for use.

LOCAL504

APPC Error accessing remote system P1

Reason:

An APPC error was encountered while trying to get activity log data or details from remotely connected system *P1*
The APPC error details are written to the activity log.
(An APPC verb specified the parameter aaaa with invalid value bbbb)

If the parameter is LINK, a likely cause of the error is that the underlying INMC/APPC link between this system and the remote system
P1 has gone down. Check the status of the link, on both systems, and restart it if necessary.

If the parameter is LUNAME, a probable cause of the error is having no DEFLINK TYPE=APPC ... definition covering this LUNAME.
If the parameter is LUNAME, do a SH DEFLINK TYPE=APPC command and ensure that there is an LUMASK that matches this LUNAME. If not, use REPLINK to correct the definition.

System Action:

None. Activity Log display may revert to the local system.

User Action:

Check the log for any additional messages describing the link error. SH LINK TYPE=APPC and SH DOMAINS will display the remote links and domains available. Fix the link between the two systems, and try the operation again.

LOCAL505

Parameter error, P1 P2 P3 P4 P5

Reason:

Incorrect parameters were passed to the Activity Log Interface. This is an internal programming error.

System Action:

None.

User Action:

Retry the action - if the message recurs, contact support.

LOCAL506

Log file P1 is in a status of P2

Reason:

An attempt was made to browse the Activity Log, but the current activity log *P1* contains no data.
The file status *P2* is one of:
RESET The file has been reset and is ready to receive log record data, but no records have been written to it yet. This should be a temporary condition.
NODATA The file is in the process of being closed so that it can be reset. This should be a temporary condition.
ERROR This status has a variety of causes:
- The file could not be closed.
- The file could not be opened.
- The file is marked unusable because of a VSAM error condition.
- The region could not write to the file.

System Action:

None.

User Action:

Wait for a short time, then try to browse the activity log again.
If the problem recurs, investigate the following for additional details on the exact VSAM log file error:
- JCL message and SYSPRINT output for this NetMaster region
- SYSLOG LOGxx DD output for this NetMaster region
- this contains all log messages, including those that could not be written to VSAM Log files
- OCS SHOW VSAM and SHOW UDB commands

LOCALL01

NO LOG DATA PRESENT FOR P1

Reason:

No log data was found for the date specified.

System Action:

None.

User Action:

Specify a date that has log data for it. For a list of dates that contain log data, enter the DATE command without specifying a date.

LOCALL02

FILE ERROR, RC= P1 VSAMFDBK= P2 ON FILE P3

Reason:

A delete request for the named log file *P3* failed with an unexpected return code of *P1* . *P2* is the VSAM feedback.

System Action:

If available the system message from the FILE Verb is logged.

User Action:

Refer to the VSAM Programming manual for an explanation of error codes.

LOCALL03

RECORDS FOR DATE P1 NOT PRESENT IN FILE P2

Reason:

A delete request for the named log file *P3* was rejected. No records for the request date *P1* were found on the file *P2* .

System Action:

None.

User Action:

None.

LOCALL04

SYSTEM INITIALIZED ON P1 P2 at P3. JOB NAME P4

Reason:

Details of the system being accessed.

System Action:

None.

User Action:

None.

LOCALL05

DATE P1 NOT RECOGNIZED

Reason:

A request to access a specific date failed because the format of the data does not match one of the following: YY.DDD DD/MM/YY or MM/DD/YY (if US language code) YY/MM/DD YYMMDD

System Action:

None.

User Action:

Correct the date entered to match one of the supported formats.

LOCALL06

DELETE NOT SUPPORTED FOR CURRENT DAY

Reason:

A request to delete log data has specified the current day. This is not supported.

System Action:

None.

User Action:

None.

LOCALL07

NCL LOG FILEID P1 IS NOT AVAILABLE. FILERC= P2

Reason:

An attempt to access the named log file failed.

System Action:

None.

User Action:

Determine why the file is unavailable (by using SH ALLOC and SH UDB commands). Correct and retry.

LOCALL08

INSUFFICIENT AUTHORITY

Reason:

A request to process log resources requires the System Support authority which the current user region does not have.

System Action:

The request is rejected.

User Action:

Contact your Systems Administrator. System Support authority may be granted through the update user function of UAMS maintenance.

LOCALL09

REQUIRED OPERAND P1 OMITTED FOR ACTION P2

Reason:

A request to access Log functions has failed because a required operand is not specified.

System Action:

Request is terminated.

User Action:

Correct the request to specify the required operand.

LOCALL10

' P1' IS NOT A VALID VALUE FOR P2

Reason:

The value *P1* is not a valid value for the field identified by the field label *P2* .

System Action:

The user cannot proceed until a valid value is entered.

User Action:

Enter a valid value before proceeding.

LOCALL11

DATA ' P1' LOCATED IN LINE P2, P3 COLUMN P4

Reason:

The value *P1* has been located in the Log file. The log record number for the day is *P2* . The data was found in the field *P3* at offset *P3* .

System Action:

None.

User Action:

None.

LOCALL12

DATA NOT FOUND. P1 LINES SEARCHED (time P2 to P3)

Reason:

A Log search has failed to locate the requested search argument. *P1* lines were read in the time range indicated by *P2* to *P3* .

System Action:

None.

User Action:

If necessary retry the Find operation.

LOCALL13

DATA NOT FOUND. TOP OF DATA REACHED

Reason:

A Log search has failed to locate the requested search argument. The top of data was reached for the current day.

System Action:

None.

User Action:

If necessary retry the Find operation.

LOCALL14

DATA NOT FOUND. BOTTOM OF DATA REACHED

Reason:

A Log search has failed to locate the requested search argument. The bottom of data was reached for the current day.

System Action:

None.

User Action:

If necessary retry the Find operation.

LOCALL15

PARAMETER ERROR IN CALL TO P1, REFER TO LOG

Reason:

A parsing error occurred processing the parameters in the procedure *P1* .

System Action:

The SETVARS system message is logged.

User Action:

Refer to the log and report the error to your product support representative.

LOFI0101

Activity Log File P1 is empty or in error, and cannot be browsed.

Reason:

The VSAM file selected for browsing is either empty or in error. Only files with a status of 'DATA' can be browsed.

System Action:

None.

User Action:

None.

LOPKG001

Activity Log File Error. Proc: P1 Action: P2 Fileid: P3 Retcode: P4 Error number: P5 P6 Key: P7

Reason:

Activity Logging Services Procedure **P1** received an error on a **P2** operation for log file **P3** . The File System Error Number was **P5** . The associated file key was **P7**

System Action:

Additional messages may describe the specific error action taken by the calling procedure. In general, file errors while writing to a file cause the logging procedure to swap to the next available file. File errors on reading cause the termination of log browsing procedures.

User Action:

Contact your system administrator.

LOPKG002

Log Vartable Error. Procedure: P1 Action: P2 Vartable: P3 FDBK: P4 Key: P5

Reason:

Activity Logging Services Procedure P1 received an error on a P2 operation for Vartable P3 . The FDBK code was P4 . The asso*ci*ated file key was *P5*

System Action:

Additional messages may describe the specific error action taken by the calling procedure. In general, vartable errors cause log writing or browsing operations to terminate.

User Action:

Contact your system administrator.

LOPKG003

Logging Terminated. Fatal error: P3 Procedure: P1 P2

Reason:

The active LOGPROC procedure has terminated because of a fatal condition detected by Activity Log Services procedure *P1* in routine/function *P2*

System Action:

Activity Logging reverts to the default processing - messages are logged to SYSOUT, but are not written to any VSAM Log files. Log browsing may continue, but log records from this point onwards are not available. There may be additional SYSOUT messages related to the error condition.

User Action:

Contact your system administrator. Correct the error condition and issue the SYSPARMS LOGPROC= ... command to restart VSAM Activity Logging.

LOPKG004

Warning: No Logging Procedure is currently active.

Reason:

No LOGPROC procedure is currently active. The procedure may have terminated in error, or may have been manually stopped with the SYSPARMS LOGPROC=FLUSH command.

System Action:

Activity Logging is using the default processing - messages are logged to SYSOUT, but are not written to any VSAM Log files. Log browsing may continue, but no records since the LOGPROC termination will be available Log File and Date displays may be inaccurate.

User Action:

Contact your system administrator. Check the SYSOUT LOG files for error messages. Correct the error condition and issue the SYSPARMS LOGPROC=$LOPROC command to resume activity logging.

LOPKG005

Log Swap: Procedure P1 NCLID P2 P3 flushed to free file P5

Reason:

The executing NCL process with the specified NCLID has been flushed to enable a Log Swap to take place.

System Action:

Log Swap processing continues.

User Action:

None.

LOPKG006

Log Swap: Userid P1 cancelled to free file P5

Reason:

The specified userid has been cancelled in order to free the target log file and enable a Log Swap to take place.

System Action:

Log Swap processing continues.

User Action:

None.

LOPR0001

LOG PROCESSOR P1 STARTED ON P2, DOMAIN P3

Reason:

The LOG procedure *P1* has started processing activity log records.

System Action:

None.

User Action:

None.

LOPR0002

FILE ERROR ON P1, RC= P2, FDBK= P3. LOG PROCESSOR P4 TERMINATING

Reason:

A VSAM error was received writing to the activity log file P1 . P2 is the FILERC value. P3 is the VSAM feedback code indicating the error.
P4 is the procedure name of the log processor detecting the error.

System Action:

Log processing terminates.

User Action:

Refer to the hardcopy log for further messages. Use the feedback code to determine the nature of the error. If necessary allocate a new VSAM log file. Issue SYSPARMS LOGPROC= *P4* to restart the log processor.

LOPR0003

SESSION REPLAY FACILITY DISABLED. PROCESS P1 HAS TERMINATED

Reason:

The process P1 started by the log procedure to handle trace records has terminated. The recording of *S*ession Replay Facility traces stops.

System Action:

Logging continues with SRF.

User Action:

Determine why the $TRPROC process terminated. If necessary stop and restart the log procedure to reactivate SRF tracing.

LOPR0004

FILE OPEN ERROR ON P1, RC= P2. LOG PROCESSOR P3 TERMINATING

Reason:

An &FILE error was received opening the activity log file P1 . P2 is the &FILERC value. P3 is the procedure name of the log processor detecting the error.

System Action:

Log processing terminates.

User Action:

Use the &FILERC value to determine the cause of the error. Check that the file indicated is allocated and that the fileid has been made available to NCL by means of UDBCTL OPEN. Issue SYSPARMS LOGPROC= *P3* to restart the log processor.

LOPR0005

P1 FILE FORMAT INCOMPATIBLE, FILEKEY= P2. LOG PROCESSOR P3 TERMINATING

Reason:

The log file **P1** contains records that are not in the expected key format. **P2** is the unexpected data. The file key should be in the format 'yyyymmddnnnnnn'. **P3** is the procedure name of the log processor detecting the error.

System Action:

Log processing terminates.

User Action:

If the file key is in the format 'yy/mm/ddnnnnnn' then the file has not been converted from an earlier release. Refer to the product installation instructions for conversion procedures. If the existing data is not required then use the RESET option on UDBCTL OPEN to delete the old data.
Issue SYSPARMS LOGPROC= *P3* to restart the log processor.

LOPROC01

Log Swap P1 P2 P3 P4 P5 P6

Reason:

The Activity Log Services Logging Procedure is commencing a VSAM Log Swap operation. This message group indicates the status of the log swap.

System Action:

The log swap processing proceeds. Log swaps of VSAM Log Files are done in response to user request, and on full or file error conditions.

User Action:

None.

LOPROC02

Log Exit P1 P2 P3 P4 P5 P6

Reason:

This message provides information about the status of the log exit procedure.

System Action:

If an error is detected in a log exit procedure or it does not exist, calls to the exit are disabled until the next SYSPARMS LOGPROC restart. If the exit sets the log text to the string NOLOG, that record will be ignored by the LOGPROC procedure.

User Action:

The log exit name is set in the $NMLGXIT global variable. To implement or correct a log exit, LOGPROC must be flushed and restarted with the SYSPARMS LOGPROC command. The log exit is passed the variable &#lo$record and the MDO &$LOG. &$LOG. is mapped by the distributed ASN.1 map $MSG.

LOPROC03

Access Services Session Replay Facility disabled. Procedure $TRPROC NCL id P1 has terminated.

Reason:

The process *P1* started by the log procedure to handle trace records has terminated. The recording of Session Replay Facility traces stops.

System Action:

Logging continues with SRF.

User Action:

Determine why the $TRPROC process terminated. If necessary stop and restart the log procedure to reactivate SRF tracing.

LOPROC04

Backward time offset *P1* expires *P2P3*

Reason:

A backwards local time offset change was detected.

The offset amount was *p1* (s*HHMM*) and the change was made at *P2 P3*.

System Action:

None.

User Action:

None.

To see when local time offset changes were detected on this LPAR, look for log messages N02H10 to N02H13.

Note: When you browse the Activity Log for a period affected by a backwards time change, log records that occur during the second time through the same local time interval are marked with the character +.

MHx to MSx Messages

MH0001

Select an option or press a function key to proceed

Reason:

System Action:

User Action:

Enter a valid menu option, panel path, or command.

MENU OPTION

Each menu option is identified by a 1- to 3-character option string, displayed in yellow. Enter the option you want at the ===> prompt.

PANEL PATH

Panel paths move directly to a function without accessing each submenu between it and the current menu. A panel path consists of multiple menu options separated by periods (for example =AD.C.P).
The = sign functions as a skip character, closing all nested screens and entering the path from the primary menu. (If you are currently at the Primary Menu, the skip character is not required.)
Entering == at the ===> prompt from any panel closes all nested screens

MH0002

Select an option, press a function key, or enter a shortcut to proceed.

Reason:

The ENTER key was pressed, but no option, command or shortcut was entered.

System Action:

None.

User Action:

Enter a valid shortcut, menu option, panel path, or command.

SHORTCUTS

Enter a shortcut name, preceded by a slash, at the ===> prompt (for example, /levels or /info or /ipmon). This will take you directly to the function.

To see a list of all shortcuts and their associated functions, enter a single slash (/) at the ===> prompt. Select the desired shortcut from the list by entering 'S' beside it.

If a shortcut exists for a menu option, it is displayed in turquoise, to the right of the option description.

Shortcuts may also be combined with menu options (for example, /bcast.s or =/bcast.s).

Shortcuts can be invoked in two ways:

1. A 'nested' shortcut

2. A shortcut skip

To retain and nest the current screen level, use a nested shortcut:

/shortcut_name

Return will bring you back to the last nested screen in this window. Screens may be nested to a maximum of 64 levels.

To close all currently nested screen levels, use a shortcut skip:

=/shortcut_name

Return will take you back to the Primary Menu. If you no longer need any nested screens, a shortcut skip saves storage and resources.

(If you are currently at the Primary Menu, a nested shortcut and a shortcut skip are exactly equivalent.)

MENU OPTION

Each menu option is identified by a 1 to 3 character option string, displayed in yellow. Enter the option you want at the ===> prompt.

PANEL PATH

Like shortcuts, panel paths move directly to a function without having to access each submenu between it and the current menu. A panel path consists of multiple menu options separated by periods (for example =U.M).

Also like shortcuts, the = sign functions as a skip character, closing all nested screens and effectively entering the path from the primary menu. (If you are currently at the Primary Menu, the skip character is not required.)

Frequently used panel paths have associated shortcuts. If you don't remember a shortcut, enter / at the ===> prompt for a list. Select one from the list, or enter it at the ===> prompt.

There is no difference between accessing a function using a panel path skip or a shortcut skip, although the shortcut may be easier to remember. Both close the current screen and go straight to the function. A nested shortcut, however, retains the current screen.

COMMANDS

/CASCMD.L lists all CAS commands. /ASADMIN.C lists all Automation Services commands.

Entering == at the ===> prompt from any panel closes all nested screens and returns you to the Primary Menu.

MH0003

Invalid shortcut or option (For help: put cursor on this line, press F1)

Reason:

The entered shortcut, menu option, panel path, or command was invalid (for example, the syntax might be incorrect or the required function is not licensed in this region).
If you want to access a function, use one of the following methods (examples are given in parentheses):
- Enter a shortcut (/LEVELS or =/LEVELS)
- Enter a combined shortcut and menu option (/BCAST.S or =/BCAST.S)
- Enter a menu option
- Enter a panel path (=H.I.P)

Note: Some shortcuts and options might be displayed but their operation suppressed for *the f*ollowing reasons:
- The shortcut or option requires a product or component that is not configured in this region.
- Access to the shortcut or option is denied because you do not have sufficient authority.

System Action:

None.

User Action:

If the syntax is incorrect, correct the shortcut, option, panel path or command, and retry.

SHORTCUTS

Enter a shortcut name, preceded by a slash, at the ===> prompt (for example, /LEVELS, /INFO, or /IPMON). This will take you directly to the function.

To see a list of all shortcuts and their associated functions, enter a single slash (/) at the ===> prompt. Select the desired shortcut from the list by entering S beside it.

If a shortcut exists for a menu option, it is displayed in turquoise to the right of the option description. If the value is -, it indicates that the option has no shortcut.

Shortcuts may also be combined with menu options (for example, /BCAST.S or =/BCAST.S).

You can invoke shortcuts in two ways:

- A nested shortcut
- A shortcut skip

To retain and nest the current panel level, use a nested shortcut:

/shortcut_name

Exiting brings you back to the last nested panel. Panels may be nested to a maximum of 64 levels.

To close all currently nested panel levels, use a shortcut skip:

=/shortcut_name

Exiting takes you back to the Primary Menu. If you no longer need any nested panels, a shortcut skips saves storage and resources.

(If you are currently at the Primary Menu, a nested shortcut and a shortcut skip behave the same way.)

MENU OPTION

Each menu option is identified by a 1 to 3 character option string, displayed in yellow. Enter the option you want at the ===> prompt.

PANEL PATH

Like shortcuts, panel paths move directly to a function without having to access each submenu between it and the current menu. A panel path consists of multiple menu options separated by periods (for example, =U.M).

Also like shortcuts, the = sign functions as a skip character, closing all nested panels and effectively entering the path from the Primary Menu. (If you are currently at the Primary Menu, the skip character is not required.)

Frequently used panel paths have associated shortcuts. If you do not remember a shortcut, enter / at the ===> prompt for a list. Select one from the list, or enter it at the ===> prompt.

There is no difference between accessing a function using a panel path skip or a shortcut skip, although the shortcut should be easier to remember. Both close the current panels and go straight to the function.

Entering == at the ===> prompt closes all nested panels and returns you to the Primary Menu.

MH0004

Invalid option or command

Reason:

The value entered is not a valid option on this menu and is not a command that is supported on this menu.

System Action:

User Action:

MH0007

Unable to access P1 - RC= P2 P3

Reason:

An attempt to retrieve a menu record from the database was unsuccessful.

System Action:

The Menu Handler call is rejected.

User Action:

Determine the cause of the error from the return and feedback codes and retry.

MH0008

Service procedure ' P1' not found

Reason:

The service procedure defined for the requested menu was not found in the NCL source library.

The most likely cause is that you have used a shortcut that leads to a menu that is part of another product in the suite, but is not licensed on this region.

System Action:

The Menu Handler call is rejected.

User Action:

Check that the function you are trying to access is one for which the region is licensed. If this is the case then check that the name of the service procedure in the menu definition is correct, or add the NCL procedure to the NCL source library.

MH0009

NCL procedure ' P1' not found

Reason:

The NCL procedure to be executed for a selected menu option does not exist in the NCL procedure library.

System Action:

The Menu Handler call is rejected.

User Action:

Correct the name of the NCL procedure in the menu definition, or add the NCL procedure to the NCL source library.

MH0010

Option P1 unsuccessful

Reason:

The option selected by the user has ended unsuccessfully.

System Action:

Any error messages generated are displayed on a full screen panel before this message is displayed.

User Action:

Determine the cause of the error from the displayed messages and retry.

MH0019

Required field omitted

Reason:

No data was entered in a mandatory field.

System Action:

The cursor is placed in the field in error and the field is highlighted.

User Action:

Enter a valid value in the field.

MH0054

Invalid line definition

Reason:

An input field was specified incorrectly in the menu definition.

System Action:

If the invalid line is visible on the window, the cursor is placed on it and the field is highlighted.

User Action:

Correct the line definition.

MH0060

Menu P1 for application P2 not defined

Reason:

An attempt to retrieve a menu record from the database was unsuccessful because the menu does not exist.

System Action:

The Menu Handler call is rejected.

User Action:

Define the missing menu or correct the menu details and retry.

MH0063

Menu ID IS P1

Reason:

This message is in response to the MENUID command. *P1* is the ID of the current menu.

System Action:

None.

User Action:

None.

MH0064

Menu shortcut nesting limit exceeded

Reason:

To avoid excessive storage use and subsequent performance degradation, a nesting limit of 64 levels has been placed on the menu shortcut function. When you issue shortcut requests in the form /shortcut-name, the panels are nested, that is, when you exit a panel, you are returned to the panel from which you issued the shortcut. The nesting limit is exceeded by your last shortcut request.

System Action:

No further shortcuts are accepted.

User Action:

Enter *=panel-path* to access the panel, where panel-path can be /shortcut-name or the panel path in dot format (for example, A.B.C). The = sign takes you back to the Primary Menu and removes any nesting.

MS0001

Message ID prefix required for generic message list

Reason:

A generic list of messages starting with a prefix was requested. The Message ID field specified the wildcard character (* or ?) but omitted the prefix. At least one character must precede the wildcard character.

System Action:

None.

User Action:

Enter at least one prefix character.

MS0002

MSGID keyword must be supplied to P1 - call rejected

Reason:

A call was made to the Message Handler without the MSGID keyword parameter.

System Action:

The call to the Message Handler is rejected.

User Action:

Correct the procedure call and retry.

MS0003

Specified MSGID ' P1' exceeds 12 characters

Reason:

A call was made to the Message Handler with an invalid MSGID keyword parameter. The maximum allowable length for a message ID is 12 characters.

System Action:

The call to the Message Handler is rejected.

User Action:

Correct the procedure call and retry.

MS0006

Message definition P1 does not exist

Reason:

The requested message definition does not exist on the database.

System Action:

The action is rejected.

User Action:

None.

MS0017

PROCNAME keyword not supplied to $CAMS000 MSGID= P1

Reason:

The PROCNAME keyword parameter was not supplied on the call to the Message Handler.

System Action:

The procedure call is rejected.

User Action:

Correct the procedure call and retry.

MS0022

No more messages to view

Reason:

The first (if using the PrevMsg action) or last (if using the NextMsg) action) message on the database was viewed. There are no more messages to be viewed.

System Action:

None.

User Action:

None.

MS0071

Message definition *P1* does not exist for language *P2*

Reason:

The requested message definition does not exist on the database.

System Action:

The action is rejected.

User Action:

None.

N0x to N1x Messages

N00101

NOTIFY: *source* EVENT: *event* RESOURCE: *resource*

Reason:

This is the asynchronous event message. It is intended for delivery in the INTCMD environment to NCL processes which issue asynchronous NCL verbs that notify completion in this manner (eg PANEL and APPC verbs).

System Action:

None.

User Action:

User defined.

N00102

scope*>: *name* RESOURCE: *resource* OBJECT: *object* REF: *reference* TYPE: *type* DATA: *event-data

Reason:

This is the event notification message. It is intended for delivery in the INTCMD environment to NCL processes profiled for the particular event variables. Scope will be either SYSTEM or REGION, depending on event scope.

System Action:

None.

User Action:

User defined.

N00103

UNIX SUPPORT RESET DUE TO INITIALIZATION FAILURE - REASCODE nnnnnnnn

Reason:

The release of OS/390 that you are running supports UNIX System Services but the first call made by SOLVE failed.

System Action:

SOLVE UNIX support is reset. SOLVE initialization continues.

User Action:

UNIX Systems Services may not be configured correctly in OS/390. Consult your systems programmer. The reason code may be found in the UNIX System Services Messages and Codes manual.

N00151

SOLVE FSP/XSP INCORRECT ENTRY USED.

Reason:

SOLVE in a Fujitsu FSP or XSP environment has been link-edited incorrectly. It has been entered as NM000001, not NMFSP001.

System Action:

SOLVE terminates.

User Action:

Check that NM001 has been link-edited correctly.

N00180

SOLVE FSP/XSP UNRECOGNISED OPERATING SYSTEM.

Reason:

SOLVE is unable to recognise the operating system environment, when it expects Fujitsu FSP or XSP.

System Action:

SOLVE terminates.

User Action:

Contact your product support representative.

N00181

SOLVE FSP/XSP NOT IN SUBSYSTEM MODE.

Reason:

SOLVE running in an FSP or XSP environment must run as a subsystem. This was not the case.

System Action:

SOLVE terminates.

User Action:

Change the SOLVE JCL to execute it as a subsystem.

N00182

SOLVE FSP/XSP NOT AUTHORISED.

Reason:

SOLVE running in FSP or XSP must be APF authorized.

System Action:

SOLVE terminates.

User Action:

Ensure that the SOLVE load modules are in an APF authorized library.

N00301

INVALID OPERAND IN JCL PARM P1

Reason:

An error was detected during validation of the JCL parm field (*P1*). The value for the operand is invalid. This error may occur if commas are omitted between two parms and cannot be delimited.

System Action:

Execution is terminated.

User Action:

Correct the error and re-start the region.

N00302

UNRECOGNISED OPERAND IN JCL PARM STARTING AT xxxxxxxx

Reason:

An invalid operand was detected during validation of the JCL PARM field data. The invalid operand commences with xxxxxxxx.

System Action:

Execution is terminated.

User Action:

Correct the error and re-submit the job.

N00303

UNABLE TO LOAD SECURITY EXIT MODULE: mmm

Reason:

The security exit load module, mmm, named by the SEC=mmm JCL parm, could not be loaded.

System Action:

SOLVE terminates.

User Action:

Check the load module name, and ensure that the load module is in the SOLVE load library.

N00304

WARNING: JCL PARM P1 IS OBSOLETE AND HAS BEEN IGNORED

Reason:

This message indicates that an obsolete parameter (*P1*) was specified. The parameter has been ignored.

System Action:

None.

User Action:

Update your run JCL to remove the obsolete parameter.

N00501

START-UP PARAMETERS ARE:- *xxx.....xxx*

Reason:

The JCL initialization parameters *xxx.....xxx* are correct and are written to the activity log for reference.

System Action:

None.

User Action:

None.

N00502

I/O ERROR ON VFS DATASET ATTEMPTING TO RETRIEVE BROADCAST

Reason:

The system broadcasts stored on the VFS dataset could not be read.

System Action:

Processing continues. The stored broadcast will not be set and should be manually set by the system operator.

User Action:

Determine the cause of the dataset I/O error and correct it.

N00503

***** P1 INITIALIZATION COMPLETE P2 *****

Reason:

This message is written to the system console at the completion of the product's initialization. *P1* is the product name and *P2* is the system name as set by the PRI= initialization parameter.
The inclusion of the system name provides an identification aid when multiple regions are executing in the same system.

System Action:

The system is available for use. Both the INIT and READY procedures have completed and users can now logon.

User Action:

None

N00504

FEATURE INITIALIZATION FAILURE - LOAD FAILED FOR module, R15=yyyy, R1=zz

Reason:

Failure to load the specified module caused initialization of the relevant optional feature to be abandoned. yyyy and zzzz are the register values associated with the load failure and can be used to determine the reason for the failure.

System Action:

The optional feature will not be available for use.

User Action:

Determine which feature, of the optional features configured for your system, failed to initialize. Then determine why the system was unable to find the specified load module. The STATUS command will identify those features that have successfully initialized.

N00511

WAITING FOR SOLVE VFS DATASET: *dsname*

Reason:

SOLVE has issued an exclusive ENQ for the VFS dataset *dsname,* and this ENQ was not satisfied. Another SOLVE system has currently enqueued it. This message is followed by message N00514, which may be replied to cancel the wait.

System Action:

SOLVE delays further initialization until the ENQ is satisfied.

User Action:

If the requested VFS dataset is in use by another SOLVE system, then reply (with anything) to message N00514 and alter the SOLVE JCL, as VFS datasets cannot be shared. If the VFS dataset is being held by a previous execution of this SOLVE job, then when it finishes terminating, the ENQ is released and initialization continues. If you do not want to delay initialization, the JCL parameter, VFSENQ, can be used to prevent the ENQueing of the VFS dataset.

N00512

VFS DATASET AVAILABLE, INITIALIZATION CONTINUING.

Reason:

This message follows a previous N00511 message. It indicates that the VFS dataset ENQ has now been satisfied.

System Action:

SOLVE initialization continues. The N00514 WTOR message is deleted from the console.

User Action:

None.

N00513

VFS DATASET WAIT CANCELLED BY OPERATOR, TERMINATING.

Reason:

This message follows the previous N00511 and N00514 messages. The operator has replied to the N00514 (WTOR) message. Any reply to that message results in SOLVE terminating immediately.

System Action:

SOLVE terminates.

User Action:

Check that the operator reply to message N00514 was wanted. Restart SOLVE after correcting the VFS ENQ problems.

N00514

ANY REPLY WILL CANCEL VFS DATASET WAIT.

Reason:

This message follows the previous N00511 message. To shut down SOLVE, you can reply to this WTOR message.

If *not* replied to, it is automatically deleted when the VFS data set wait is satisfied (see message N00513).

System Action:

SOLVE waits for either a reply (any reply) to this message, or for the VFS data set wait to be satisfied.

User Action:

If you do *not* want SOLVE to wait for the VFS data set ENQ, use the operating system REPLY command to reply to this message. SOLVE then terminates.

N00517

REGION NOT RUNNING AUTHORIZED, TERMINATING

Reason:

Region initialization failed because the region was started from a non-authorized load library. This product must run from an APF-authorized library.

System Action:

The region terminates.

User Action:

Determine why the load library is not APF-authorized.

N00801

aaaaaaaa USER bbbbbbbb LOGON FAILED FOR REASON - xxxxxxxxxxxxxxxxxxxxxx

Reason:

The attempt to log on user ID bbbbbbbb failed for the stated reason. The user category (aaaaaaaa) is noted which may be LOCAL, REMOTE, SYSTEM, CONSOLE, TSO, NET/VIEW, VM/OPER, or APPC.

System Action:

User IDs fail to logon only if they have been defined incorrectly on the UAMS dataset, or incorrect definitions are provided by an installation's security exit.

User Action:

Check the definition of the userid whose logon is failing.

N00802

SYSTEM USERID *xxxxxx* LOGON FAILED, DEFAULTS TAKEN

Reason:

The initial attempt to logon an internal userid environment failed so a userid environment is built using standard system default userid attributes.

System Action:

Internal virtual userids fail to logon only if they are defined incorrectly on the UAMS dataset, or incorrect definitions are provided by an installation's security exit.

The default command authority is 255 except for consoles. Secondary consoles default to the same attributes as the SYSOPER userid. If the SYSOPER userid is undefined, the default command authority for all consoles is 3. In addition, if the system is configured with the WTO=YES initialization job parameter, the console region is enabled for monitor class message receipt.

User Action:

Check the definition of the userid whose logon is failing.

N00803

USERID aaaa DETAILS UNAVAILABLE, REASON - bbbb

Reason:

When the SIGNON command is used for an environment refresh the user security system is called to return the user attributes. The security system has rejected the request with the stated reason bbbb.

System Action:

The signon refresh for the region fails and the existing environment remains in effect.

User Action:

Note the reason and refer the problem to your installations help desk facility or systems administrator.

N00804

ERROR(S) DURING CREATION OF NETWORK PARTITIONS FOR xxxxxxxx MAY LIMIT FUNCTION

Reason:

Errors were found when the system tried to process the NPF control members or NPF resource tables defined for user xxxxxxxx. Network functions may be limited because resource names have been restricted.

System Action:

None.

User Action:

Use the SHOW NPF and SHOW NPTAB commands to determine the cause of the error. Correct the control members or NPF resource tables and signon again.

N00M10

hh*:*mm*:*ss* ET: *ss.th* DC: *s.tttttt* TC: *s.tttttt* %A: *pp.th

Reason:

This message is issued to the log every minute or every 15 seconds (depending on whether CPUCM or CPUFM is specified in the JCL parm XOPT list) if the XOPT JCL parameter CPUMM is specified. The message provides an indication of the region CPU utilization in the preceding period.

The fields are as follows:

hh*:*mm*:*ss

Displays the time that the message was issued.

ET:*ss.th*

Displays the interval elapsed time. This value is typically 60.00 or 15.00. If significantly longer, it may indicate that the region is *not* being dispatched in a timely manner due to system load.

DC: *s.tttttt*

Displays the amount of CPU time that the CA NetMaster maintask uses in this period (Delta CPU).

TC: *s.tttttt*

Displays the total amount of CPU time that the CA NetMaster maintask uses since this region started.

%A: *pp.th*

Displays the average percentage of the time that the CA NetMaster maintask was active in this period. That is, (delta CPU times 100) divided by elapsed time.

System Action:

None.

User Action:

None.

N00M11

hh*:*mm*:*ss* ET: *ss.th* TCB: DC: *s.tttttt* TC: *s.tttttt* %T: *pp.th

Reason:

This message is issued to the log every minute or every 15 seconds (depending on whether CPUCM or CPUFM is specified in the JCL parm XOPT list), if the XOPT JCL parameter CPUMM is specified. It provides a breakdown of the 'maintask' CPU utilization in the preceding period.

This message is produced only if XM=ZIIP or XM=BEST is specified in the JCL parms. IT indicates the CPU time used by the maintask TCB in the preceding period.

The fields are as follows:

hh:mm:ss displays the time the message was issued.

ET: *ss.th* displays the interval elapsed time. This is normally 60.00 or 15.00. If significantly longer, it may indicate that the region is not being dispatched in a timely manner due to system load.

TCB: indicates that the times in this message pertain to the maintask TCB CPU utilization.

DC: *s.tttttt* displays the amount of CPU time used in this period by the CA NetMaster Maintask (Delta CPU).

TC: *s.tttttt* displays the total amount of CPU time used by the CA NetMaster Maintask since this region started.

%T: *pp.th* displays the percentage of the CPU time expended in the period by the TCB, the percentage being of the total of TCB times (as in this message), and SRB times (as in the following N00M12 message).

System Action:

None.

User Action:

None.

N00M12

hh*:*mm*:*ss* ET: *ss.th* SRB: DC: *s.tttttt* TC: *s.tttttt* %S: *pp.th

Reason:

This message is issued to the log every minute or every 15 seconds (depending on whether CPUCM or CPUFM is specified in the JCL parm XOPT list), if the XOPT JCL parameter CPUMM is specified. It provides a breakdown of the 'maintask' CPU utilization in the preceding period.

This message is produced only if XM=ZIIP or XM=BEST is specified in the JCL parms. IT indicates the CPU time used by the paired maintask SRB in the preceding period.

The fields are as follows:

hh:mm:ss displays the time the message was issued.

ET: *ss.th* displays the interval elapsed time. This is normally 60.00 or 15.00. If significantly longer, it may indicate that the region is not being dispatched in a timely manner due to system load.

SRB: indicates that the times in this message pertain to the SRB associated with the maintask TCB.

DC: *s.tttttt* displays the amount of CPU time used in this period by the SRB (Delta CPU).

TC: *s.tttttt* displays the total amount of CPU time used by the SRB since the region started.

%S: *pp.th* displays the percentage of the CPU time expended in the period by the SRB, the percentage being of the total of TCB times (as in the preceding N00M11 message), and SRB times (as in this message).

System Action:

None.

User Action:

None.

N00M13

hh*:*mm*:*ss* ET: *ss.th* MS: *sss* #W: *www* #T: *ttt* XM: *mmmm

Reason:

This message is issued to the log every minute or every 15 seconds (depending on whether CPUCM or CPUFM is specified in the JCL parm XOPT list), if the XOPT JCL parameter CPUMM is specified. It provides information about events during the preceding period.

This message is produced only if XM=ZIIP or XM=BEST is specified in the JCL parms.

The fields are as follows:

hh:mm:ss displays the time the message was issued.

ET: *ss.th* displays the interval elapsed time. This is normally 60.00 or 15.00. If significantly longer, it may indicate that the region is not being dispatched in a timely manner due to system load.

MS: *sss* displays the number of 'mode switches' between TCB and SRB mode.

#W: *www* displays the number of real waits issued in this period.

#T: *ttt* displays the number of timer requests issued in this period.

XM: *mmm* displays the execution mode, normally ZIIP.

System Action:

None.

User Action:

None.

N00M14

hh*:*mm*:*ss* ET: *ss.th* PH: *s.tttttt* ZC: *s.tttttt* ZZ: *s.tttttt* %Z: *p.th

Reason:

This message is issued to the log every minute or every 15 seconds (depending on whether CPUCM or CPUFM is specified in the JCL parm XOPT list), if the XOPT JCL parameter CPUMM is specified. It provides information about events during the preceding period.

This message is produced only if XM=ZIIP or XM=BEST is specified in the JCL parms.

The fields are as follows:

hh:mm:ss displays the time the message was issued.

ET: *ss.th* displays the interval elapsed time. This is normally 60.00 or 15.00. If significantly longer, it may indicate that the region is not being dispatched in a timely manner due to system load.

PH: *s.tttttt* displays the delta of the ASSBPHTM field, indicating the total preemptible SRB CPU time expended in the period.

ZC: *s.tttttt* displays the delta of the ASSB_TIME_zIIP_ON_CP field, indicating the total zIIP-eligible CPU time expended on normal CPs during the period.

ZZ: *s.tttttt* displays the delta of the ASSB_TIME_ON_zIIP field, indicating the total zIIP-eligible CPU time expended on zIIPs during the period.

%Z: *p.th* indicates the percentage of total zIIP-eligible time that was actually expended on a zIIP.

System Action:

None.

User Action:

None.

N00M20

hh*:*mm*:*ss* ET: *ss.th* DC: *s.tttttt* PC: *s.tttttt* ST: *ss* EN: *ee* TO: *tt* CU: *cc

Reason:

This message is issued to the log every minute or every 15 seconds (depending on whether CPUCM or CPUFM is specified in the JCL parm XOPT list), if the XOPT JCL parameter CPUPM is specified. It shows the CA NetMaster Maintask CPU utilization by high-level language processes over the preceding period.

Note: If Process monitoring and CPU monitoring is active, this message follows the N00M10 message, and some fields will be identical.

The fields are as follows:

hh*:*mm*:*ss

The time the message was issued.

ET: *ss.th*

The interval elapsed time. This is normally 60.00 or 15.00. If significantly longer, it may indicate that CA NetMaster is not being dispatched in a timely manner due to system load.

DC: *s.tttttt*

The amount of CPU time used in this period by the CA NetMaster Maintask (Delta CPU).

PC: *s.tttttt*

The total amount of CPU time used by the high-level language processing in the CA NetMaster maintask in this period. If the value in this field is significantly less than the delta CPU value, it indicates that the remaining Maintask processing is not in high-level languages.

ST: *ss*

The number of high-level language processes that started in this period.

EN: *ss*

The number of high-level language processes that ended in this period.

TO: *ss*

The total number of high-level language processes that existed in this period.

CU: *ss*

The number of high-level language processes that existed at the end of this period (that is, current).

System Action:

None.

User Action:

None.

N00M21

aa bbbbbb uuuuuuuu pppppppp l se s.th c.tttttt s.tttttt

Reason:

This message is issued to the log once per minute or once per 15 seconds (depending on whether CPUCM or CPUFM is specified in the JCL parm XOPT list), if the XOPT JCL parameter CPUPM is specified. It follows the N00M20 message that summarizes the period. It lists the most-active high-level language processes in descending scaled CPU utilisation order.

The fields are as follows:

aa

The position of this process in the list.

1 is the top, 10 is the bottom.

bbbbbb

The NCLID of the process.

uuuuuuuu

The User ID that this process is executing under.

pppppppp

The base procedure name in the process.

l

The language of the base procedure.

N is NCL, O is OML, R is REXX.

se

Two flags that indicate if this process started and/or ended in this period.

The first flag can be 'S' meaning that the process started during this period or '-' meaning that the process was already executing when this period started. The second flag can be 'E' meaning that the process ended during this period or '-' meaning that the process was still executing at the end of the period. Thus,

-- means that the process was executing for the entire period

S- means that the process started during the period

-E means that the process ended during the period

SE means that the process started and ended during the period

s.th

The time that the process was executing during the period. If the '*se*' field is '--', this is the full period value; otherwise, this field indicates how much of the period the process existed.

c.tttttt

The CPU time that this process consumed during the period.

s.tttttt

The scaled CPU time that this process consumed during the period. This is the sort key for these lines (descending, highest first), and is calculated by taking the actual CPU time and scaling it by (period time/ actual exec time). For example, if a process was active for 10 seconds out of a 60 second period, the value in this field would be six times the actual CPU time used.

Note: Only processes that existed for at least one second and that used at least 10 milliseconds of CPU are considered for display. Only the top 10 of these eligible processes are displayed.

System Action:

None.

User Action:

None.

N00M29

END

Reason:

This message is issued to the log once per minute or once per 15 seconds (depending on whether CPUCM or CPUFM is specified in the JCL parm XOPT list), if the XOPT JCL parameter CPUPM is specified. It follows the last N00M21 message that summarizes the period. It terminates the list of the most active high-level language processes.

System Action:

None.

User Action:

N00M31

aa iiiiiiii pppppppp se s.th c.tttttt s.tttttt

Reason:

This message is issued to the log once per minute or once per 15 seconds (depending on whether CPUCM or CPUFM is specified in the JCL parm XOPT list) if the XOPT JCL parameter CPUTM is specified. The message follows the N00M30 message that summarizes the period. It lists the most-active subtasks in the descending scaled CPU usage order.

The fields are as follows:

aa

Is the position of this subtask in the list.

1 is the top, and 10 is the bottom.

iiiiiiii

Is a unique ID number assigned to each subtask, to allow the correlation of messages concerning that subtask. (Many subtasks have the same program name, thus this field uniquely identifies a specific subtask instance.)

pppppppp

Is the subtask program name.

se

Are two flags that indicate whether this subtask started and/or ended in this period.

The first flag can be 'S' meaning that the subtask started during this period or '-' meaning that the subtask was already executing when this period started. The second flag can be 'E' meaning that the subtask ended during this period or '-' meaning that the subtask was still executing at the end of the period. Thus,

- -- means that the subtask was executing for the entire period.
- S- means that the subtask started during the period.
- -E means that the subtask ended during the period.
- SE means that the subtask started and ended during the period.

s.th

Is the time that the subtask was executing during the period. If the 'se' field is '--', this is the full period value; otherwise, this field indicates how much of the period the subtask existed.

c.tttttt

Is the CPU time that this subtask consumed during the period.

s.tttttt

Is the scaled CPU time that this subtask consumed during the period. This is the sort key for these lines (descending, highest first), and is calculated by taking the actual CPU time and scaling it by (period time/actual exec time). For example, if a subtask was active for 10 seconds out of a 60-second period, the value in this field would be six times the actual CPU time used.

Note: All subtasks that existed in the period are considered for display. Only the top 50 of these subtasks are displayed.

P1 ##FDUMP ID= P2 JN= P3 DT= P4 TM= P5

Reason:

This message is used as the dump title if an SDUMP is requested when a ##FDUMP command is issued. The message contains the following:
P1 = Product Name
P2 = NMID
P3 = Jobname
P4 = Date (yyyyddd)
P5 = Time (hhmmsstt)

System Action:

The product takes a formatted dump and optionally a system dump. When a system dump is requested, it is written to a SYS1.DUMP dataset with this message used as the dump title.

User Action:

Send the formatted and system dumps to your support office.

N01701

CRITICAL STORAGE SHORTAGE OCCURRED

Reason:

The system attempted to obtain storage but none was available.

System Action:

The system attempts to continue to operate but if not successful terminates with a U017- 01 abend, signifying that there is insufficient storage for continued operation.

User Action:

If the message occurs persistently, increase the region or partition size. If the message continues to occur, contact your product support representative.

N01801

***** WARNING *** STORAGE ABOVE/BELOW 16M IS ABOVE LIMIT, CURRENT STORAGE=nnnnnnnK**

Reason:

The value set by either the STGWRN (below 16M) or STGWRNXA (above 16M) has been exceeded.

System Action:

The message is issued at 30 second intervals until the storage used drops below the limit.

User Action:

Review the storage requirements to determine if the region size is adequate for the workload.

N02101

REQUESTED EXECUTION MODE: *aaa* ACTUAL EXECUTION MODE: *bbb*

Reason:

This message is written to the log during region startup. It indicates the requested execution mode (*aaa*), as set or defaulted by the XM JCL Parm, and the in-effect execution mode (*bbb*).

The possible requested mode values are as follows:

N/S-No execution mode was requested.

TASK-Task mode was requested.

ZIIP-zIIP mode was requested.

BEST-The best available mode was requested.

The possible in-effect execution mode values are as follows:

TASK-The region is executing in TASK mode.

ZIIP-The region is executing in SRB mode, possibly utilizing a zIIP if one is available.

System Action:

None.

User Action:

None.

N02180

EXEC. MODE: *mode* SETUP FAILURE. REASON: *reason*

Reason:

This message is written to the log during region startup. It indicates that the setup of the requested execution mode failed. A reason is provided.

The possible requested mode values are as follows:

ZIIP-zIIP mode was requested.

BEST-The best available mode was requested.

The possible reasons are as follows:

- N/S ON THIS OPERATING SYSTEM
- NOT APF AUTHORIZED
- GETMAIN FAILURE (1)
- ZIIP SUPPORT NOT AVAILABLE
- NO DEFINED ZIIP PROCESSORS
- NO ONLINE ZIIP PROCESSORS
- PAUSE EP LOAD FAILURE
- PAUSE TOKEN DEFINE FAILED
- WLM REGISTRATION FAILED
- WLM ENCLAVE DEFINE FAILED
- WLM ENCLAVE ZIIP ACTIVATION FAILED
- SRB MODE WAIT SETUP FAILED

System Action:

Initialization continues in TASK mode.

User Action:

Examine the reason and take corrective action, if required.

N02601

INTCONT ISSUED WHEN NO VALID MESSAGE CURRENT

Reason:

No previous INTREAD has been satisfied or INTCONT has been issued after other message read processing, such as LOGREAD, MSGREAD etc.

System Action:

The procedure is terminated.

User Action:

Ensure INTREAD is satisfied before issuing INTCONT. If necessary change the procedure's logic to issue INTCONT before other message processing.

N02602

INTREPL ISSUED WHEN NO VALID MESSAGE CURRENT

Reason:

No previous INTREAD has been satisfied or INTREPL has been issued after other message read processing, such as LOGREAD, MSGREAD etc.

System Action:

The procedure is terminated.

User Action:

Ensure INTREAD is satisfied before issuing INTREPL. If necessary change the procedure's logic to issue INTREPL before other message processing.

N02603

MDO=$MSG is invalid MDO name for INTREAD.

Reason:

$MSG is a reserved MDO name for an INTREAD operation. A $MSG MDO is always built when an INTREAD request is satisfied, hence it may not be the target of an embedded input MDO.

System Action:

The procedure is terminated.

User Action:

Correct the INTREAD statement to specify an MDO name other than $MSG.

N02701

EVENT NAME CONTAINS INVALID CHARACTERS

Reason:

An EVENT statement contains an invalid NAME operand. The event name must consist of valid NCL variable name characters and must not begin with $.

System Action:

The NCL procedure is terminated.

User Action:

Correct the EVENT NCL statement.

N02B01

EDS PROFILE NAME aaaaaaaa ALREADY DEFINED

Reason:

A PROFILE EDS ENABLE=name command was issued from an environment in which a profile with the same name has already been defined.

System Action:

The registration request is ignored.

User Action:

Ensure the profile is only defined once, or define the new profile with a different name.

N02B02

UNABLE TO OBTAIN EVENT REGISTRATION BUFFER.

Reason:

SOLVE was unable to obtain storage for a PROFILE EDS ENA=name request.

System Action:

The registration request is ignored.

User Action:

Contact your systems administrator and examine reason for storage shortage.

N02B03

No matching event profile found for aaaaaaaa

Reason:

A PROFILE EDS DIS=name command was issued from an environment in which no profile existed with a matching name for the request.

System Action:

The request is ignored.

User Action:

Ensure the profile is correct.

N02B04

EVENT REGISTRATION REQUEST LIMIT REACHED.

Reason:

The system wide limit on event profile registration has been reached.

System Action:

The registration request is ignored.

User Action:

Investigate why a large number of event profile requests are being generated.

N02C01

UNABLE TO OBTAIN STORAGE FOR EVENT REGISTRATION.

Reason:

SOLVE was unable to obtain storage for a PROFILE EDS ENA=name request.

System Action:

The registration request is ignored.

User Action:

Contact your systems administrator and examine the reason for the storage shortage.

N02C02

EDS PROFILE DISABLED.

Reason:

This message is in response to a successful PROFILE EDS DIS=name request.

System Action:

All matching EDS profiles were successfully disabled.

User Action:

None.

N02C03

EDS PROFILE ENABLED.

Reason:

This message is in response to a successful PROFILE EDS ENA=name request.

System Action:

The EDS profile is registered.

User Action:

None.

N02C04

EVENT RESOURCE OPERAND IS INVALID.

Reason:

The RESOURCE operand specified on the PROFILE EDS request is invalid.

System Action:

The registration request is ignored.

User Action:

Correct the PROFILE EDS statement.

N02C05

EDS PROFILE REQUEST FAILED.

Reason:

This message is issued if the event registration profile build fails.

System Action:

The registration request is unsuccessful.

User Action:

Investigate the reason for the EDS profile build failure by looking for messages issued prior to this one.

N02C06

TYPE OPERAND IS INVALID.

Reason:

The TYPE operand specified on the PROFILE EDS request is invalid.

System Action:

The registration request is ignored.

User Action:

Correct the PROFILE EDS statement.

N02C07

ROUTCDE VALUE IS INVALID.

Reason:

The ROUTCDE operand specified on the PROFILE EDS request is invalid.

System Action:

The registration request is ignored.

User Action:

Correct the PROFILE EDS statement.

N02C08

EDS NAME OPERAND IS INVALID.

Reason:

The name specified on the PROFILE EDS ENA=profile NAME=name request is invalid. Specify any NCL character set name plus '*' wild characters.

System Action:

The registration request is ignored.

User Action:

Correct the PROFILE EDS statement.

N02C09

EDS PROFILE ENABLE OPERAND IS INVALID.

Reason:

The name specified on the PROFILE EDS ENA=name request is invalid. The profile name may contain 1 to 32 characters which are valid in an NCL variable in addition to '.' and '_'.

System Action:

The registration request is ignored.

User Action:

Correct the PROFILE EDS ENABLE operand.

N02D01

USER NCLID SCOPE PROFNAME

Reason:

This is the header line for the SHOW EDS command output.

System Action:

None.

User Action:

Refer to message N02D02.

N02D02

userid nclid scope profname NAME=name TYPE=type OBJECT=object RESOURCE=resource REF=reference ROUTCDE=routcdes

Reason:

This is a detail line for SHOW EDS command output which follows the N02D01 message. The attribute masks for an event profile are displayed. Fields displayed are as follows:

userid - Id of user who has EDS profile defined.

nclid - NCLID of NCL procedure to which EDS profile is assigned.

scope - Scope may be SYSTEM or REGION and defines the scope of event receipt.

profname - Name assigned to EDS profile on the ENA= operand of the PROFILE EDS command.

NAME= Shows the event name mask for the profile.

TYPE= Lists event types for profile.

OBJECT= Object mask (or mask pair) for profile.

RESOURCE=Resource mask for profile.

REF= Profile reference mask.

ROUTCDE= PROFILE route codes.

Only the first 256 bytes of profile details will be displayed on message N02D02. Data extending beyond this overflows onto message N02D03.

System Action:

None.

User Action:

None.

N02D03

xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx

Reason:

This is a continuation of N02D02 for profile displays which do not fit on one line.

System Action:

None.

User Action:

See N02D02 for details.

N02D04

NO EVENT PROFILES ACTIVE FOR XXXXXXXXXXXXX

Reason:

A SHOW EDS command was issued but no EDS profiles matched the show command display criteria.

System Action:

None.

User Action:

Check SHOW EDS operands.

N02D05

INVALID OPERAND FOR SHOW EDS COMMAND xxxxxxxxxxxxxxxxxxx.

Reason:

A SHOW EDS command operand was invalid.

System Action:

None.

User Action:

Check SHOW EDS operands.

N02D07

nnnnnnn EVENTS MATCHED userid nclid PROFILE profname time DD/MM

Reason:

This message is displayed for a SHOW EDS STATS command. It shows the number of events which have matched a user's EDS profile since it was enabled (time and day show when profile was enabled).

System Action:

None.

User Action:

None.

N02D08

nnnnnnn EVENTS DELIVERED TO userid nclid

Reason:

This message is displayed for a SHOW EDS STATS command. It shows the number of times events have been delivered to a user NCL environment because it matched an enabled EDS profile for that NCL process.
Note that a single event may be delivered more than once if it matches multiple EDS profiles.

System Action:

None.

User Action:

None.

N02D09

EVENT NOTIFICATION ENTERED *nnnnnnnn* TIMES SINCE STARTUP.

Reason:

This message is displayed for a SHOW EDS STATS command. It shows the number of times EDS has been entered since system initialization. This represents the number of &EVENT statements executed, plus the number of times internal event points were entered.

System Action:

None.

User Action:

None.

N02D10

***nnnnnnn* SYSTEM AND *nnnnnnnn* REGION EVENTS DELIVERED SINCE STARTUP.**

Reason:

This message is displayed for a SHOW EDS STATS command. It shows the number of events delivered to all users since system initialization.

System Action:

None.

User Action:

None.

N02F01

EVENT REGISTRATION CLEANUP FAILED.

Reason:

This message indicates a SOLVE logic error has occurred during event profile cleanup.

System Action:

None.

User Action:

Report the error to your product support representative.

N02H01

REGION LOCAL D/T: *dddd tttt* UTC OFFSET: *oooo*

Reason:

This message is written to the CA NetMaster log during initialization and shows the local date and time. The message also shows the offset from UTC (GMT) time in the format *shhmm*, or if greater than one day, *sddd*:*hhmm*.

System Action:

None.

User Action:

None.

N02H02

JCL PARM TZ= HAS SET UTC OFFSET TO *shhmm*

Reason:

This message is written to the CA NetMaster log during initialization when the TZ JCL parm is processed. It shows the offset used for local time.

System Action:

None.

User Action:

None.

N02H03

JCL PARM TZ=GMT IS IN EFFECT

Reason:

This message is written to the CA NetMaster log during initialization when the TZ JCL parm is processed. It shows that the region is using GMT (UTC) time.

System Action:

None.

User Action:

None.

N02H10

LOCAL TIME OFFSET CHANGE PROCESSED...

Reason:

This message is written to the CA NetMaster log and monitor receivers when a local time offset change is processed.

System Action:

The local region time is updated.

Additional message are written (messages N02H11,12,13) indicating the old, new and changed offset.

User Action:

None.

N02H11

OLD LOCAL D/T/OFFSET: *dddd tttt* UTC OFFSET: *oooo*

Reason:

This message is written to the CA NetMaster log and monitor receivers following the N02H10 message. It shows the previous local time and UTC (GMT) offset.

System Action:

None.

User Action:

None.

N02H12

NEW LOCAL D/T/OFFSET: *dddd tttt* UTC OFFSET: *oooo*

Reason:

This message is written to the CA NetMaster log and monitor receivers following the N02H11 message. It shows the new local time and UTC (GMT) offset.

System Action:

None.

User Action:

None.

N02H13

'OFFSET CHANGE: *ooo*

Reason:

This message is written to the CA NetMaster log and monitor receivers following the N02H12 message. It shows the change in local time offset for *shhmm* format or *sddd*:*hhmm* format.

System Action:

None.

User Action:

None.

N02I01

ENF CODE 53 LISTENER INSTALLED

Reason:

This message is written to the CA NetMaster log during initialization and indicates that a listener for ENF event 53 (local time offset change) has been installed.

This listener allows the region to automatically detect and process changes to the local date/time offset relative to GMT (UTC).

Note: The listener is activated only for z/OS release 1.7 or later.

System Action:

The listener is activated.

User Action:

If you do not want the ENF event 53 listener, specify XOPT=NOENF53 in the JCL parameters.

N02I80

ENF LISTENER INSTALL FAILED, REASON: *rrr*

Reason:

This message is written to the CA NetMaster log during initialization and indicates that the ENF event 53 listener could not be installed. The reasons are:

- OS OR VERSION N/S: *osname*,*osversion*
- NOT APF AUTH
- RESMGER ADD FAILED, RC: *rr*
- ECSA GETMAIN FAILED, RC: *rr*

The reasons are self-explanatory.

System Action:

The listener is not installed.

User Action:

If the reason is not because of an unsupported operating system or because it is not APF-authorized, contact Technical Support.

N03601

INVALID OR MISSING RESOURCE NAME IN RSCCHECK

Reason:

No valid resource name was specified on an RSCCHECK, NPFDCHK, NPFMCHK, or NPFVCHK builtin function statement.

System Action:

The NCL procedure is terminated.

User Action:

Correct the statement and retry the procedure.

N03602

INVALID SYNTAX.

Reason:

An invalid statement has been detected.

System Action:

The NCL procedure is terminated.

User Action:

This may have been caused by a variable having an unexpected null value which resulted in the variable being eliminated during the variable substitution process and hence altering the syntax of the statement. You must ensure that all variables are correct (and cannot have a null value) when used in a string statement (eg: *SUBSTR,* SELSTR). Correct the statement and retry the procedure.

N03604

INVALID OPERATOR xx FOUND IN aaaaaaaa STATEMENT

Reason:

An invalid operator *xx* has been found in the nominated *aaaaaaaa* NCL statement. Only those operators (eg: EQ or NE etc.) discussed in the appropriate section of the NCL Reference are accepted.

System Action:

The NCL procedure is terminated.

User Action:

Refer to the NCL Reference for valid operators. Correct the statement and retry the procedure. This error may have been caused by the elimination of a null variable during the variable substitution process. The NCL User Guide discusses techniques to cater for situations where variables in &IF statements may have a null value.

N03605

LOOP PROTECTION TRIGGERED, &LOOPCTL LIMIT EXCEEDED

Reason:

NCL procedure processing provides automatic runaway loop protection. When an NCL procedure commences processing a value of 1000 is assigned to the &LOOPCTL counter. This is subsequently decremented by 1 for each branch statement. If this count reaches 0, the procedure is automatically terminated as potentially looping.

System Action:

The NCL procedure is terminated.

User Action:

Determine if the procedure is in fact looping. The &CONTROL TRACE statement can be used to obtain expanded trace information during the processing of a procedure. If the NCL procedure is looping, correct it and retry. If the procedure is not looping, but has validly exhausted the &LOOPCTL counter due to large processing requirements, use the &LOOPCTL statement to assign a higher loop protection limit. Refer to the NCL Reference for information on the &LOOPCTL built infunction.

N03606

INVALID DATA SUPPLIED FOR HEXPACK PROCESSING

Reason:

The data to be converted to character format by the *HEXPACK function* must consist of hexadecimal digits (0 - 9, A - F).

System Action:

The procedure is terminated.

User Action:

Correct and retry.

N03608

EXCESSIVE DATA FOR HEXPACK OR HEXEXP

Reason:

HEXEXP processing converts single characters into 2-digit HEX representation (eg: 'A' converts to 'C1'). The result of the conversion is a string twice as long as the original string. Since the maximum length of a variable is 256 characters, the maximum string length input to HEXEXP processing is 128 characters, whilst for HEXPACK it is the NCL word length of 256 characters. This message indicates that more than the maximum length was supplied.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N03609

INVALID OR MISSING APPLICATION NAME IN APPSTAT

Reason:

APPSTAT was used to obtain the status of an application but the name of the application was either omitted or was not a valid 1 - 8 character name.

System Action:

The procedure is terminated.

User Action:

Correct and retry.

N03611

ILLEGAL ASSIGNMENT, EXCEEDS MAXIMUM FOR VARIABLE

Reason:

Data assigned to a variable cannot exceed the maximum variable data length of 256 characters.

System Action:

The procedure is terminated.

User Action:

Correct and retry.

N03613

INVALID NUMERIC EXPRESSION

Reason:

The numeric expression contains invalid syntax or has violated the rules for numeric expressions.

System Action:

The NCL procedure is terminated.

User Action:

Ensure no variables have been eliminated from the expression during the variable substitution process because they have a null value. Correct the statement and retry the procedure.

N03614

NUMERIC EXPRESSION VALUES EXCEED MAXIMUM

Reason:

The numeric expression has resulted in a value that exceeds the limits for the function being attempted.

System Action:

The NCL procedure is terminated.

User Action:

Refer to the NCL User Guide for information on the limits of numeric expressions. Correct the statement and retry the procedure.

N03615

OMITTED OR INVALID INPUT TO &HEX/&DEC OPERATION

Reason:

The &HEX and &DEC builtin functions must specify the number to be converted. For &DEC this must be a valid hexadecimal number, for &HEX this must be a valid decimal number.

System Action:

The NCL procedure is terminated.

User Action:

Refer to the NCL Reference for information on the maximum values that can be processed by these functions. Correct the statement and retry the procedure.

N03616

CONVERSION OF FLOATING POINT NUMBER TO CHARACTER STRING HAS FAILED.

Reason:

An NUMEDIT NCL statement to convert a floating point number to a character format has failed because the source variable is not a valid floating point number.

System Action:

The NCL procedure terminates.

User Action:

Correct the procedure and retry.

N03701

xxxxxxx IS NOT A VALID NAME FOR A VARIABLE

Reason:

The variable xxxxxxx violates the rules for user defined variables. A variable name must not exceed 12 characters (not including the ampersand).

System Action:

The NCL procedure terminates.

User Action:

Correct the statement and retry the procedure.

N03704

INVALID ASSIGNMENT SYNTAX.

Reason:

The syntax of an assignment statement is invalid.

System Action:

The NCL procedure terminates.

User Action:

Correct the statement and retry the procedure.

N03705

TRACING TERMINATED - SYSTEM LIMIT REACHED. NCLID nnnnnn

Reason:

The system imposed limit for the number of outstanding NCL trace messages has been reached.

System Action:

Tracing has been terminated, processing of the NCL procedure continues.

User Action:

If the trace limit is too low, increase it by use of the SYSPARMS NCLTRMAX command, or use the CONTROL TRACE/NOTRACE NCL statement to do selective tracing.

N03706

A COMMAND MUST FOLLOW WAIT.

Reason:

The statement following an WAIT must be a command.

System Action:

The NCL procedure terminates.

User Action:

Correct the statement and retry.

N03707

INVALID USE OF &xxxx KEYWORD.

Reason:

The specified keyword cannot be used in a procedure of this type or the keyword has been used in an invalid way.

System Action:

The procedure is terminated.

User Action:

See the NCL Reference for restrictions on the use of this keyword.

N03709

xxxxxxxx OPERAND yyyyyyyy IS INVALID OR MISSING.

Reason:

The function xxxxxxxx does not support operand yyyyyyyy. It is invalid.

System Action:

The NCL procedure terminates.

User Action:

Correct the statement and retry the procedure.

N03716

FACILITY ONLY VALID FROM PPOPROC

Reason:

Use of the &DEFMSG function is only valid within the system level PPOPROC procedure.

System Action:

The NCL procedure terminates.

User Action:

Use of this function within other NCL procedures is meaningless. Refer to the NCL Reference for information on these facilities.

N03717

INVALID OPERAND SPECIFIED FOR DEFMSG

Reason:

When used within PPOPROC, DEFMSG specifies the three trailing characters of the VTAM PPO messages to be processed by the procedure. Multiple three character operands can follow DEFMSG. In systems other than DOS each operand must be a three digit number in the range 000-999. In a DOS or NIDOS system, each operand must be one alphabetic characters followed by a 2 digit number in the range 00-99.

System Action:

The NCL procedure terminates and normal PPO message processing resumes.

User Action:

Correct the statement and retry the procedure.

N03801

SYSTEM BUFFER LIMIT EXCEEDED BY EXPANSION OF VARIABLE xxxxxxxx

Reason:

During the processing of the specified statement an attempt was made to perform variable substitution on the variable xxxxxxxx. The substitution process failed as the system buffer limit was exceeded.

System Action:

The NCL procedure terminates.

User Action:

The maximum size of a single variable is 256 characters. The maximum length of a statement after variable substitution is 16384. Restructure the procedure so that the failing statement remains within the system limits.

N03802

.aaaaaaaa STMT NO: bbbbbbbb PROC: cccccccc NCLID: dddddd or bbbbbbbb stmttext or bbbbbbbb PROC: cccccccc NCLID: dddddd stmttext

Reason:

The first message format identifies the passage of logic flow through the nominated label (.aaaaaaaa), when the CONTROL TRACE/TRACELAB/ TRACEALL/TRACELOG statement is in force, *at statement number bb*bbbbbbb within procedure cccccccc. The NCLID of the NCL procedure (dddddd) is also shown.
The second message format is issued when *CONTROL TRACE/TRACELOG is* in force. The statement number (bbbbbbbb) and the substituted text of the statement (stmttext) are displayed.
The third message format is issued when *CONTROL TRACEALL is in use.* In addition to the second format, the message will include the procedure name (cccccccc) and its NCLID (dddddd).

System Action:

None.

User Action:

None.

N03803

SUBSTITUTION OF VARIABLE aaaaa CREATED WORD EXCEEDING 256 CHARACTERS.

Reason:

The maximum length of the string generated by variable substitution cannot exceed 256 characters.

System Action:

The procedure is terminated.

User Action:

Correct and retry.

N03804

VARIABLE xxxxxxx EXCEEDS MAXIMUM LENGTH.

Reason:

The variable xxxxxxx exceeds the system limit of 256 characters.

System Action:

The NCL procedure terminates.

User Action:

Restructure the procedure to avoid this error and work within system limits.

N03806

INVALID LABEL.

Reason:

An invalid label has been specified. A label must commence with a period and be followed by 1 to 12 characters.

System Action:

The NCL procedure terminates.

User Action:

Correct the label and retry the procedure.

N03812

INVALID WORD AT HEAD OF STATEMENT

Reason:

The NCL statement starts with an unknown keyword or a keyword that cannot logically start a statement.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N03813

INVALID VERB GENERATED BY SUBSTITUTION

Reason:

The NCL statement contains an NCL verb created by a process of substitution. However, it is not valid to create the verb in this way.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N03814

INVALID ASSIGNMENT STATEMENT GENERATED BY SUBSTITUTION.

Reason:

An NCL assignment statement has been created by a process of substitution. This is not valid.

System Action:

The NCL procedure terminates.

User Action:

Correct the procedure and retry.

N03903

PRELOAD OF NCL PROCEDURE procname COMPLETE.

Reason:

Signals the completion of a previous SYSPARMS PRELOAD=procname request. IF this preload was as a result of the SYSPARMS CMDREPL command, the additional literal (COMMAND REPLACED) will appear.

System Action:

Procedure procname is now preloaded.

User Action:

The SHOW NCLSTAT command can be used to display a list of preloaded NCL procedures. A preloaded procedure cannot be updated until a restart of the system is performed or a SYSPARMS UNLOAD=procname command is issued.

N03905

NCL PROCEDURE procname STMT yyyyyyy EXCEEDS MAXIMUM CONTINUATION SIZE.

Reason:

A statement has been found in the nominated NCL procedure that (after concatenation of all continuation statements) exceeds the system limit of 2048 characters (excluding trailing blanks and continuation '+' characters). The CONTROL CONT / NOCONT operands control continuation processing.

System Action:

The NCL procedure is terminated.

User Action:

Correct the overlength statement and retry the procedure.

N03906

type procedure PROCESSING COMPLETE. NCLID nnnnnn

Reason:

The LIST, EXEC, FSPROC, NCLCHECK or START processing for NCL procedure 'procedure' has completed.
If SYSPARMS NCLOGTRM=YES is in effect, this message is also logged, with the total processing-units and performance group displayed.

System Action:

None.

User Action:

None. This message is issued by default. It can be suppressed by issuing an CONTROL NOENDMSG statement within the procedure. Regardless of CONTROL NOENDMSG, this message will be issued if a procedure is terminated by an END command.

N03909

aaaaaaaa FLUSHED. NCLID nnnnnn

Reason:

An NCL process aaaaaaaa that was being executed has been flushed. This can be the result of the FLUSH or CANCEL command being issued or the OCS Operator exiting while the function was in progress, in which case this message will be written to the log. The NCL identifier nnnnnn of the ended process is included in the message.

System Action:

None.

User Action:

None.

N03913

PROCEDURE procname HAS INVALID LABEL AT STMT NO: xxxxxxxx

Reason:

The NCL label statement nominated has an invalid label name.

System Action:

Execution of the procedure procname fails.

User Action:

Correct the label and retry.

N03915

typPROC HAS ENDED, RESUMING STANDARD typ PROCESSING

Reason:

The special system procedure typPROC (CNMPROC, PPOPROC, or LOGPROC) has ended. This can result from an error in the procedure that has caused it to terminate or the logic of the procedure has allowed it to end. This message is issued to users with Monitor status.

System Action:

The procedure is no longer active. Normal *typ* message processing resumes.

User Action:

Correct the error or procedure logic to avoid termination and restart the procedure.

N03920

LOAD OF PROCEDURE procname FAILED, DDNAME ddnm NOT DEFINED

Reason:

The nominated procedure could not be loaded, as the library indicated was not defined in the SOLVE JCL.

System Action:

The procedure is not loaded.

User Action:

Ensure the alternate NCL library DD or DLBL statement(s) are placed in the SOLVE JCL.

N03921

LOAD OF PROCEDURE procname FAILED, DATASET ddname IS NOT PO/F(B)/80

Reason:

The dataset(s) on the indicated ddname is not a PDS, or is not RECFM=F/FB with LRECL 80.

System Action:

The procedure is not loaded.

User Action:

Ensure the correct library name is in the user's UAMS definition.

N03922

ABEND abendcode LOADING PROCEDURE procname FROM LIBRARY libname

Reason:

An ABEND occurred while loading an NCL procedure from the indicated library.

System Action:

The procedure is not loaded.

User Action:

If the ABEND is a SYSTEM 913 ABEND, ensure that SOLVE is authorized to access the library. Otherwise, investigate the ABEND using the relevant operating system message manuals.

N03923

I/O ERROR OCCURRED LOADING PROCEDURE procname FROM LIBRARY libname

Reason:

A hard I/O error occurred while loading an NCL procedure from the indicated library.

System Action:

The procedure is not loaded.

User Action:

Correct the cause of the I/O error. Note that, for normal NCL load requests, the system automatically retries once after an I/O error.

N03924

LOAD OF PROCEDURE procname FROM LIBRARY libname FAILED, STORAGE SHORTAGE

Reason:

Insufficient storage was available to process an NCL procedure load request.

System Action:

The procedure is not loaded.

User Action:

Retry. If the problem persists, contact your systems administrator.

N03925

LOAD OF PROCEDURE procname FROM LIBRARY libname FAILED, PDS FIND ERROR

Reason:

An unexpected return code from the FIND macro was encountered while trying to locate the indicated NCL procedure.

System Action:

The procedure is not loaded.

User Action:

Contact your systems administrator. The PDS directory may be corrupt.

N03926

ABEND abendcode LOADING PROCEDURE procname FROM LIBRARY libname

Reason:

An ABEND occurred while loading an NCL procedure from the indicated library.

System Action:

The procedure is not loaded.

User Action:

If the ABEND is a SYSTEM 913 ABEND, ensure that SOLVE is authorized to access the library. Otherwise, investigate the ABEND using the relevant operating system message manuals.

N03927

I/O ERROR OCCURRED LOADING PROCEDURE procname FROM LIBRARY libname

Reason:

A hard I/O error occurred while loading an NCL procedure from the indicated library.

System Action:

The procedure is not loaded.

User Action:

Correct the cause of the I/O error. Note that, for normal NCL load requests, the system automatically retries once after an I/O error.

N03928

LOAD OF PROCEDURE procname FROM LIBRARY libname FAILED, STORAGE SHORTAGE

Reason:

Insufficient storage was available to process an NCL procedure load request.

System Action:

The procedure is not loaded.

User Action:

Retry. If the problem persists, contact your systems administrator.

N03929

LOAD OF PROCEDURE aaaaaaaa FROM LIBRARY bbbbbbbb FAILED, LIBRARY EXTENT ERROR.

Reason:

An MVS partitioned dataset containing the NCL library (DDNAME bbbbbbbb) has been extended by another region/address space whilst SOLVE was loading procedure aaaaaaaa.

System Action:

If the procedure was being loaded as a result of the LIST command, the command is terminated. In all other cases the load is retried once.

User Action:

If this was as a result of a LIST command, resubmit the command.

N03930

LOAD OF PROCEDURE aaaaaaaa FROM LIBRARY bbbbbbbb FAILED, PROCEDURE IS OML

Reason:

An attempt to load the named procedure failed. The procedure was found to be in written in the OML language, not NCL.
This should only occur if an NCLCHECK command names the procedure.

System Action:

The load is terminated.

User Action:

If this was as a result of the NCLCHECK command, use the OMLCHECK command instead.

N03950

RESTARTING LOAD OF PROCEDURE procname FROM LIBRARY libname AFTER I/O ERROR.

Reason:

An I/O error was encountered while loading the indicated procedure. One retry will be attempted.

System Action:

The procedure load will be restarted.

User Action:

None. If the load fails a second time, further messages will be produced.

N03A02

UNABLE TO LOAD PROCEDURE xxxxxxxx - STORAGE THRESHOLD REACHED

Reason:

Insufficient storage was available to complete the load of NCL procedure xxxxxxxx.

System Action:

The procedure is not executed.

User Action:

Use the SHOW NCL command to determine whether an unusually high number of NCL *processes are ru*nning.
Contact Technical Support if you are unable to identify the reason (process starts looping) for the situation.

N03C01

NCL I/O MANAGER INITIALIZATION COMPLETE

Reason:

This message (sent to the SOLVE activity log) indicates that the NCL I/O manager has initialized successfully.

System Action:

None.

User Action:

None.

N03C02

NCL I/O MANAGER SUBTASK ABEND - RESTARTING SUBTASK

Reason:

This message indicates an unexpected subtask abend by an NCL I/O subtask.

System Action:

An attempt is made to restart the subtask.

User Action:

Determine the reason for the abend from the operating system log. Contact your product support representative.

N03D50

NCL LIBRARY I/O ERROR PROC procname synad-information

Reason:

An I/O error was encountered whilst loading the indicated NCL procedure. I/O error information, as obtained by the SYNADAF function is displayed.

System Action:

The system will retry the load, if possible.

User Action:

None, unless the problem persists. If it does, investigate the problem.

N03F01

NCL LOADER STATISTICS

Reason:

Statistics for the NCL procedure loader follow. This is output of the SHOW NCLLOAD command.

System Action:

none.

User Action:

none.

N03F02

title

Reason:

Statistics for the NCL procedure loader follow. This is a heading line.

System Action:

none.

User Action:

none.

N03F03

name value

Reason:

This is an NCL loaded stats line. The name is self-explanatory.

System Action:

none.

User Action:

none.

N04001

NCL PROCEDURE NESTING LIMIT HAS BEEN EXCEEDED.

Reason:

A group of NCL procedures contains more than 250 levels of nested EXEC statements. EXEC statements in excess of 250 nested levels are invalid.

System Action:

The procedure terminates.

User Action:

Restructure the procedure(s) to prevent it/them from exceeding this maximum.

N04003

EXEC REJECTED. PROCEDURE procname ALREADY IN USE AT ANOTHER NESTING LEVEL.

Reason:

During execution of a group of NCL procedures, a nested EXEC statement occurred specifying a procedure already being executed at an earlier nesting level.

System Action:

The EXEC statement is ignored since its processing could lead to a nesting loop.

User Action:

Check the nesting levels specified in the executed group. This check is imposed to avoid inadvertent recursive looping of procedures. If it is intentional to re-execute a procedure of the same name the *CONTROL* RECCHK option must be used to bypass this check.

N04005

NCL PROCEDURE procname DOES NOT EXIST IN LIBRARY ddname

Reason:

The procedure specified on the EXEC, START or FSPROC command does not exist in the procedure library specified by ddname.

System Action:

The command is rejected.

User Action:

Correct the procedure name. If the procedure name is correct ensure that it exists in the procedure library specified for use by this userid. This can be determined by the SHOW EXEC command or alternatively the LIST command could be used to display the procedure without execution.

N04006

ttt PROCEDURE procname FLUSHED, NOT EXECUTED DUE TO USER EXITING.

Reason:

This message is issued if the user exits OCS mode before the specified procedure had started execution. The procedure type (NCL or OML) is indicated. This message is only written to the activity log.

System Action:

The procedure is flushed prior to completion.

User Action:

Determine if any corrective action is required due to the procedure being flushed.

N04007

EXEC OF PROCEDURE procname QUEUED PENDING COMPLETION OF procname

Reason:

A request to execute an NCL procedure has been entered while an existing procedure is executing in this OCS window. NCLPEND=YES is in force by default; therefore, the second procedure is queued for execution when

System Action:

Execution commences automatically when all previous procedures are

User Action:

If necessary, use the SHOW NCL command to determine why the existing

N04008

xxxx OF yyyyyyyy REJECTED, PROCEDURE eprocnam STILL BEING PROCESSED.

Reason:

This situation should not happen because NCLPEND=YES is hard-coded.

System Action:

The command is rejected.

User Action:

Contact Technical Support.

N04012

PROCEDURE procname IS ALREADY PRELOADED

Reason:

An attempt has been made to preload an NCL procedure that is already preloaded, or being shared by one or more users.

System Action:

The request is ignored.

User Action:

Use the SYSPARMS UNLOAD command to schedule an unload for a procedure that is PRELOADed or AUTOSHRed. If a new copy is required in storage, the procedure can then be PRELOADed. If the procedure is in the P-UNLOAD state, subsequent requests for this procedure will not be queued to this copy, rather, a new copy of the procedure will be loaded to which they will be directed. The SHOW NCLSTAT command can be used to display the names of PRELOADed or AUTOSHRed procedures, and those procedures that are pending an unload request.

N04013

PROCEDURE procname LOAD TERMINATED, PRELOAD/AUTOSHARE INDEX ERROR

Reason:

During manipulation of the internal indices for the preload/autoshare lists, an error occurred.

System Action:

The procedure is not loaded.

User Action:

Contact your Systems Administrator and report this error to Technical Support.

N04020

PROCEDURE aaaaaaaa NOT PRELOADED, COMMAND REPLACEMENT INHIBITED.

Reason:

A SYSPARMS CMDREPL=aaaaaaaa command has failed. This command requires the replacement NCL procedure (aaaaaaaa) to be preloaded, and will automatically preload it. During the execution of the command, another SOLVE user has unloaded the procedure.

System Action:

The command fails.

User Action:

Resubmit the command.

N04021

PROCEDURE aaaaaaaa IN AUTOSHR/PRELOAD STATUS. UNUSABLE FOR COMMAND REPLACEMENT.

Reason:

A SYSPARMS CMDREPL=aaaaaaaa command has failed because there is already a preloaded or autoshared copy of the NCL procedure.

System Action:

The command fails.

User Action:

Issue a SYSPARMS UNLOAD=aaaaaaaa statement and retry the command.

N04022

PROC xxxxxxxx NCLID nnnnnn SUSPENDED AT LINE mmmmmmmm DUE TO reason

Reason:

This message is produced by the NCL debug facility when an NCL procedure is suspended during execution. 'reason' gives the reason why the procedure was suspended.
'HOLD COMMAND BEING ISSUED' indicates that the DEBUG HOLD command was used to suspend execution of the procedure.
'PROFILE SETTING NEWHOLD=YES' indicates that the DEBUG SET NEWHOLD=YES command has been entered to cause all new NCL processes to be suspended when they begin execution.
'STEP STMT LIMIT BEING REACHED' indicates that the DEBUG STEP command was used to cause a specific number of statements in the NCL process to be executed before suspending the process.
'STEP STMT NUMBER BEING REACHED' indicates that the DEBUG STEP command was used and that it specified the statement number at which execution was to be suspended.
'PROCEDURE ENTRY' indicates that a DEBUG STEP NEXT=ENTRY command has been entered to allow execution of an NCL process until the next nested procedure entry, and the procedure entry has occurred.
'PROCEDURE EXIT' indicates that a DEBUG STEP NEXT=ENTRY command has been entered to allow execution of an NCL process until the next procedure exit, and the procedure exit has occurred.

System Action:

Execution of the NCL process is suspended.

User Action:

The DEBUG RESUME and DEBUG STEP commands may be used to continue execution of the NCL process.

N04023

CALL TO PROCEDURE aaaaaaaa NCLID bbbbbb LEVEL ccc METHOD LEVEL ddd

Reason:

The DEBUG CALLTRC command can be used to turn 'procedure call tracing' on. This causes this message to be issued to the debugging user when a nested procedure call is made by an NCL process which is executing under the control of NCL/DEBUG. If the new nesting level is also a new METHOD LEVEL, the new method level is displayed on the end of the

System Action:

User Action:

N04024

RETURN FROM PROCEDURE aaaaaaaa NCLID bbbbbb LEVEL ccc RETCODE ddd METHOD LEVEL eee

Reason:

The DEBUG CALLTRC command can be used to turn 'procedure call tracing' on. This causes this message to be issued to the debugging user when a nested procedure call returns to a previous nesting level in an NCL process which is executing under the control of NCL/DEBUG. If the return is a change in METHOD LEVEL, the new method level is placed on the end of the message.

System Action:

None.

User Action:

None. See also the DEBUG SET CALLTRC= operand.

N04107

PROCEDURE procname NCLID bbbb PAUSED.

Reason:

An &PAUSE statement has been detected in an NCL procedure.

System Action:

Processing for the procedure is suspended.

User Action:

Enter GO, END or FLUSH as required to resume or cancel processing of the procedure.

N04111

WAITING FOR MESSAGE STRING: aaaaaaaaaa

Reason:

An &WAIT STRING statement has been detected in an NCL procedure.

System Action:

Processing for the procedure is suspended, awaiting the arrival of a message containing the specified string aaaaaaaaa.

User Action:

The SHOW PAUSE command can be used to display the expected string.

N04113

WAITING FOR MESSAGE: aaaaaaaaaa.

Reason:

An &WAIT statement has been detected in an NCL procedure.

System Action:

Processing for the procedure is suspended awaiting the arrival of the specified message aaaaaaaaa.

User Action:

None.

N04114

WAIT INVALID WITHIN PROCEDURE EXECUTED BY INTCMD

Reason:

If &INTCMD is used to EXECute a dependent process, the dependent process cannot include procedures that issue WAIT statements.

System Action:

The procedure terminates.

User Action:

Correct the procedure and retry.

N04115

PAUSE IGNORED, PREVIOUS WAIT STILL REQUIRES A COMMAND.

Reason:

During NCL procedure processing an &PAUSE statement was found following an &WAIT statement. The &WAIT must be followed by a command. An &PAUSE statement is invalid.

System Action:

The statement is ignored.

User Action:

Correct the procedure and retry.

N04116

WAIT IGNORED, PREVIOUS WAIT STILL REQUIRES A COMMAND.

Reason:

During NCL procedure processing two successive &WAIT statements were found. An &WAIT statement requires a command other than &WAIT or &PAUSE to follow it.

System Action:

The &WAIT is ignored.

User Action:

Correct the procedure and retry.

N04201

SOLVE PAUSED DUE TO VTAM RECEIVE REQUEST FAILURE. RC=rc, FDBK2=fdbk, SENSE=sense

Reason:

The return code from a VTAM RECEIVE request indicates a temporary error. SOLVE issues this message and pauses for 5 seconds before retrying the VTAM RECEIVE. VTAM feedback data (rc, fdbk, sense) is only provided if the error is other than temporary storage shortage.

System Action:

If the condition persists for four minutes, SOLVE will close the primary ACB and go into re-open processing after a further five seconds.

User Action:

Refer the problem to your systems administrator.

N04202

INVALID RPL RECEIVED THROUGH PRIMARY ACB - reason

Reason:

An invalid RPL has been passed to SOLVE via the primary ACB. The reason indicates the failing condition and may be one of the following:

NO VTAM CID PRESENT - The communication identifier is not set in the RPL.

INVALID VTAM CID PRESENT - The communication identifier set does not match that related to the passed user correlator data.

NO USER CORRELATOR RETURNED - The user correlator expected by SOLVE is not set in the RPLUSFLD.

System Action:

The input is ignored. Messages N04203 and N04204 are issued containing a dump of the RPL and RU.

User Action:

Report the problem to your systems administrator.

N04203

dump text

Reason:

An invalid RPL has been passed to SOLVE via the primary ACB. This message is issued dumping the RU associated with the failing request. Message N04202 is issued detailing the reason for the rejection.

System Action:

Associated message N04204 is produced dumping the failing RPL.

User Action:

Record the data for problem resolution.

N04204

dump text

Reason:

An invalid RPL has been passed to SOLVE via the primary ACB. This message is issued dumping the RPL associated with the failing request. Message N04202 is issued detailing the reason for the rejection.

System Action:

None.

User Action:

Record the data for problem resolution.

N04301

OVERLENGTH INPUT RECEIVED FROM luname - LU DISCARDED

Reason:

Input received from LU luname was longer than 32K bytes. This is inconsistent with the type of data normally received from the type of LU.

System Action:

The LU is disconnected from SOLVE.

User Action:

Investigate the cause of the overlength input. The most likely cause is a failure of the terminal microcode or control program.

N04401

SEND-RESPONSE, GAVE RC=rc, FDBK2=fdbk, SENSE=sense

Reason:

A VTAM SEND, used to send a response, failed with the return code, feedback and sense codes shown.

System Action:

The error is ignored.

User Action:

Determine the cause of the failure with reference to the appropriate VTAM manual.

N04701

UNKNOWN COMMAND TYPE RECEIVED, IGNORED.

Reason:

A command other than START, MODIFY or STOP was received through the system console `MODIFY' command interface.

System Action:

The command is ignored.

User Action:

Refer this situation to your systems administrator.

N04702

STOP COMMAND REJECTED, USE MODIFY FSTOP.

Reason:

A system STOP (P) command was received from the system console.

System Action:

The command is rejected.

User Action:

Use the FSTOP command through the `MODIFY' command interface.

N04703

PARAMETERS ENTERED WITH START COMMAND HAVE BEEN IGNORED.

Reason:

Parameters specified on the START command when running SOLVE as a started task are ignored.

System Action:

SOLVE parameters are taken from the PARM field of the procedure JCL.

User Action:

None.

N04A01

CONSOLE NOT AUTHORISED FOR OCS - COMMAND REJECTED.

Reason:

An attempt to use an OCS command through a system console has failed because the console userid, for example SYSOPER, does not have OCS access privilege.

System Action:

The command is rejected.

User Action:

None.

N04A02

SIGNON FAILED FOR aaaaaaaa AT CONSOLE bbbbbbbb.

Reason:

A MODIFY command entered at the indicated console caused SOLVE to attempt to sign the console on. The indicated user ID was not a valid SOLVE user. The signon thus failed.

System Action:

The signon fails and the command is ignored.

User Action:

Define the user ID if required.

N04B01

COMMAND IGNORED, CONSOLE USERID aaaaaaaa NOT AUTHORISED FOR OCS

Reason:

A command entered from a system console is rejected because the userid definition of the user associated with the console is not profiled with OCS authority.

System Action:

None.

User Action:

If necessary, redefine the console userid to have OCS authority.

N04C09

COMMAND OBSOLETE

Reason:

The SHOW LICENCE command is now obsolete and will be withdrawn in a future release. Use the STATUS command to display the system CPU and product status information.

System Action:

None

User Action:

None

N04E01

feature_name FEATURE WILL EXPIRE IN nn DAYS/HAS EXPIRED.

Reason:

The SOLVE optional feature indicated by *feature_name* is about to expire or has already expired.

System Action:

None.

User Action:

Contact your product support representative.

N04E02

SOLVE FEATURE(S) DUE TO EXPIRE. SEE LOG FOR DETAILS.

Reason:

SOLVE has detected that some features will expire within the next thirty (30) days. A message N04E01 will be on the SOLVE log for each of the features due to expire. This message will be issued every night until the system is refreshed with a new license.

System Action:

Processing continues.

User Action:

Check the SOLVE log for the list of features due to expire and contact your product support representative.

N05501

CLSDST FAILED FOR luname - RC=bbb, FBK2=ccc, SENSE=ddd

Reason:

Release of the specified logical unit failed with the specified error information.

System Action:

None. The terminal may not be properly disconnected.

User Action:

Refer to the VTAM Programming manual for explanation of the error codes.

N05503

LOGON FAILED FOR luname - UNSUPPORTED DEVICE TYPE

Reason:

A logon request was received from a logical unit that was not defined as another SOLVE system and that does not have BIND parameters indicating it to be a supported terminal type. This may include an LU-1 terminal attempting to logon to SOLVE by bypassing EASINET.

System Action:

The logon is rejected.

User Action:

If the device attempting to logon is a supported device type, or an application simulating a supported device, ensure that the correct LOGMODE table entry is specified on the device definition.

N05602

SESSION FOR luname FAILED. LOSTERM CODE xx

Reason:

The specified LU has been unexpectedly disconnected.

System Action:

None.

User Action:

Refer to the VTAM Programming manual for the cause of the LOSTERM event. The OPNDST command can be used to re-acquire the LU if necessary.

N05701

SESSIONC FAILED FOR luname, reason-text

Reason:

A remote system attempted to establish a session with the system that issued this message, but during the connection process a VTAM OPNSEC or SESSIONC macro failed with the indicated error codes.

System Action:

The session is not established.

User Action:

Determine the cause of the error from the appropriate VTAM Programming manual.

N05901

Communication halted. Reply RESTART or END

Reason:

The ACBs have closed because VTAM is terminating or the primary APPL has

System Action:

Waits for a reply.

User Action:

Restart VTAM or activate the APPL definition and reply as appropriate.

N05902

COMMUNICATION HALTED, ACB OPEN RETRY IN 30 SECONDS

Reason:

The ACBs have been closed because VTAM is terminating or the primary

System Action:

Waits for 30 seconds before attempting to reopen the ACBs.

User Action:

None.

N05903

COMMUNICATION RESTARTED SUCCESSFULLY

Reason:

The system ACB has been successfully re-opened following an earlier N05901 message.

System Action:

Processing resumes.

User Action:

None.

N05904

VTAM PPO STOPPED

Reason:

The VTAM PPO ACB has been closed and SOLVE is no longer receiving PPO messages. PPO messages are sent by VTAM to the system console.

System Action:

None.

User Action:

Use the PPO START command to restart the PPO interface if necessary.

N06601

CLSDST FOR luname GAVE, RC=rc, FDBK2=fdbk, SENSE=sense

Reason:

A CLSDST macro, issued for the terminal luname shown, received from VTAM the non-retryable return codes displayed in the message.

System Action:

CLSDST processing continues, but the terminal may not be successfully disconnected from SOLVE.

User Action:

Investigate the error condition.

N06602

aaaa FAILED - VTAM TEMPORARY STORAGE SHORTAGE. RETRY IN PROGRESS.

Reason:

A VTAM macro -aaaa is CLSDST or TERMSESS - has failed because of a VTAM temporary storage shortage. This message will be automatically repeated at one minute intervals while the shortage persists.

System Action:

The VTAM function is retried every five seconds.

User Action:

If the message persists investigate the cause of the VTAM storage shortage.

N06701

ERROR DETECTED IN DATASTREAM FOR LU luname CODE=X'cc', POS1=X'pos1', POS2=X'pos2'.

Reason:

An error has been detected in the datastream for LU luname. The offset into the datastream before compression is given by pos1 which corresponds to the offset pos2 in the datastream after compression. The code cc is a 3270 control character order, which can be determined from the 3270 Component Description Manual.

System Action:

Compression is aborted, and a snapshot of the datastream is sent to the log.

User Action:

Determine the cause of the error.

N06702

DUMP OF DATASTREAM IN ERROR FOLLOWS:

Reason:

This message follows N06701. An error having been detected, a snapshot of the offending datastream, is written to the log to facilitate in determination of the problem.

System Action:

None.

User Action:

Determine the cause of the error.

N06703

TRACE OF DATASTREAM BEFORE COMPRESSION FOR LU luname

Reason:

Tracing of LU luname has been requested using the LUTRACE command.

System Action:

The data for LU luname will be traced based on the SYSPARMS TRACEOPT values.

User Action:

None.

N06704

+off bbbbbbbb bbbbbbbb bbbbbbbb bbbbbbbb ...

Reason:

This line contains the trace data as requested at offset off. The data is formatted in hex on the left and character format on the right.

System Action:

None.

User Action:

None.

N06705

END OF DATASTREAM.

Reason:

Denotes the end of tracing for this datastream.

System Action:

None.

User Action:

None.

N06801

PANEL EXCEEDS SYSTEM MAXIMUM - TRUNCATED

Reason:

The panel being processed has exceeded the size of the internal processing buffer and has been truncated.
This may be caused by a panel that contains an excessive number of attribute bytes which has resulted in a datastream being generated that exceeds the internal buffer which is 8K- 12 bytes (by default) or as set by the SYSPARMS PANLBFSZ operand.

System Action:

Processing continues, however processing may be impacted by the truncation of the panel.

User Action:

Determine the cause for the error. If necessary re-organize the panel to reduce the number of fields and attribute bytes. Alternatively, use SYSPARMS PANLBFSZ to increase the internal buffer size for panel support. If the problem persists report it to your product support representative.

N06B01

NAME ADDED DELETED CURRENT #SEQ #INDX DEPTH REORG FREESPC

Reason:

This is the heading message for a SHOW INDEX command. One or more N06B02 messages follow. The heading identifies the messages contents with the following meaning. NAME is the index name, identifying the index type. ADDED and DELETED are counts of all entries ever added to or deleted from the index. CURRENT is a count of current entries in the index. The remaining fields are internal debug guides. #SEQ is the number of sequence set elements, #INDX the number of index elements, DEPTH is the current depth of the index elements, REORG is the number of times a reorg has occurred, FREESPC is the amount of free space in the index.

System Action:

None.

User Action:

None.

N06B02

aaaaaaaaaaaaaaaaa bbbbb ccccccc ddddddddd eeee fffff ggggg hhhhh iiiii%

Reason:

This is the detail line of a SHOW INDEX command. Its contents are explained under the heading message N06B01.

System Action:

None.

User Action:

None.

N06B03

***END* -- aaaa INDEX ENTRIES DISPLAYED.**

Reason:

This terminates a SHOW INDEX message sequence and provides a count of the number of name index sets processed. aaaa = count of index sets processed.

System Action:

None.

User Action:

None.

N06D01

WARNING - NRD RETENTION QUEUE FULL, OLD NRD MESSAGES LOST

Reason:

The number of Non-Roll Delete messages received has exceeded the hold limit and as a result one or more have been lost.

System Action:

The NRD messages are discarded.

User Action:

Some of the NRD messages currently being retained should be deleted so the queue can accept more NRD messages, otherwise the losses will continue. The SYSPARMS NRDLIM operand can be used to increase the limit.

N06D02

WARNING - NRD RETENTION QUEUE AT OR BEYOND 75% FULL

Reason:

The number of Non-Roll Delete messages received has reached or exceeded 75% the hold limit.

System Action:

None.

User Action:

When the hold limit is reached, message N06D01 will be issued; refer to message N06D01 above.

N07002

luname CONNECTED

Reason:

SOLVE has opened a session with terminal *luname* . This message is issued only if the SYSPARMS CONMSG=YES command has been issued.

System Action:

None.

User Action:

None.

N07003

CONNECT FAILED FOR TERMINAL aaaaaaaa - errdescr

Reason:

Connection of terminal aaaaaaaa has failed. errdescr describes the error which occurred.

System Action:

The terminal is not connected.

User Action:

From the error description, determine the cause of the error.

N07005

RE-ACQUISITION OF TERMINAL aaaaaaaa AS A MODEL 2 WILL BE ATTEMPTED.

Reason:

A Fullscreen terminal session has been rejected by the device aaaaaaaa. The M2RETRY system parameter setting indicates that the system should automatically retry session establishment using a default screen size. This message is logged and indicates that the session request is to be reissued using the default screen size.

System Action:

A session is requested with the named device using a default model 2 logmode.

User Action:

None.

N07006

OPNDST FAILED FOR LU luname - ALREADY IN USE BY ANOTHER APPLICATION

Reason:

The connection attempt for the specified logical unit failed because the terminal is already in session with another application.

System Action:

None.

User Action:

Reissue the OPNDST command requesting the owning application to release the terminal.

N07007

LOGMODE FOR LU aaaaaaaa - NOT FOUND IN MAIMDTAB.

Reason:

A SYSPARMS MAIMDTAB command was previously specified to provide a supplied mode table for MAI sessions. An attempt was made to match the bind parameters for the logical unit, LUNAME aaaaaaaa, with an entry in the supplied table but no match was found.

System Action:

The logmode table name is ignored.

User Action:

Check the user logmode table.

N07301

SEND TO TERMINAL luname FAILED. RC=xx,FBK2=yy,SENSE=zzzz

Reason:

An error occurred when a message was sent to the specified terminal. The codes given are the RPL return codes following the send.

System Action:

The session is ended.

User Action:

Refer to the VTAM Programming manual for explanation of the error codes.

N07401

POWER OFF DETECTED.

Reason:

An attempt to read input from a terminal has failed because the terminal is powered off. On non-SNA terminals this condition may only be detected when the terminal is powered on again.

System Action:

If this occurs in an active user region then a disconnection is performed. If an EASINET terminal then the EASINET procedure is redriven.

User Action:

Logoff to release system resources before powering off the terminal. A subsequent reconnection may be performed to resume the interrupted work.

N07501

SCREEN INPUT ERROR - HIT CLEAR KEY

Reason:

The system was unable to correlate an input from the screen with an active function. Pressing CLEAR will ensure synchronisation of processing.

System Action:

The input is ignored.

User Action:

Hit the Clear key to redisplay the current screen image and re-enter the data.

N07503

TRACE OF INBOUND DATASTREAM FROM LU luname

Reason:

Tracing of the inbound datastream has been requested for LU luname via the LUTRACE command.

System Action:

The inbound datastream will be traced.

User Action:

None.

N07504

aaaaaaaa bbbbbbbb cccccccc dddddddd

Reason:

This message is preceded by N07503. This message contains the requested trace data from the specified LU.

System Action:

The datastream is logged.

User Action:

None.

N07505

END OF DATASTREAM.

Reason:

Denotes the end of tracing for this datastream.

System Action:

None.

User Action:

Tracing can be terminated using the LUTRACE command.

N07901

MESSAGE(S) LOST, HOLD LIMIT EXCEEDED

Reason:

This message will appear whenever any messages are discarded because the limit to the number of messages that can be held for this OCS Operator has been exceeded. If the OCS window is not fully closed, the 'MSGS LOST' caption will be displayed above the command entry line to warn that messages are being discarded.

System Action:

One or more messages are discarded and processing continues. The hold limit is imposed to avoid excessive storage being allocated to queued messages.

User Action:

The number of messages that will be held is determined by the HOLD operand of the PROFILE command. A value in the range 10 to 999 can be specified by the user. By default 200 messages will be held. Refer to the PROFILE command for more information.

N07902

MISSING DOMID DETECTED IN DOM MESSAGE

Reason:

A message flagged as a Delete Operator Message does not contain a DOM identifier component.

System Action:

DOM processing is not performed.

User Action:

Determine if an NCL process has incorrectly generated or modified a DOM message. In particular, ensure that MSGPROC processing is not deleting the DOMID component when propagating messages.

N08002

WAIT STRING FOUND, RESUMING PROCEDURE procname

Reason:

The NCL procedure specified has resumed processing because the character string specified on an earlier &WAIT statement has been received.

System Action:

NCL procedure processing resumes.

User Action:

None.

N08401

luname CLOSED

Reason:

The region indicated, luname, has been processed for termination.

System Action:

The region is terminated.

User Action:

None.

N08403

luname CLOSE IN PROGRESS.

Reason:

The CLSDST command has been issued to terminate the session between the LU 'luname' and SOLVE. The session is already being terminated and this message is sent to the user to notify them.

System Action:

The CLSDST command is ignored. Termination of the session between the LU and SOLVE continues.

User Action:

None.

N08502

TRACE OF DATASTREAM SENT TO LU luname WITH RC/FDBK/SENSE xxxxxxxx

Reason:

A VTAM SEND to a terminal connected to SOLVE has failed with Return Code, Feedback and Sense values as shown. This message precedes a hexadecimal dump of the datastream (see messages N08503 and N08504).

System Action:

None.

User Action:

Contact your systems administrator to have the source of the datastream error located.

N08503

xxxxxxxx xxxxxxxx xxxxxxxx xxxxxxxx

Reason:

A VTAM SEND to an LU connected to SOLVE has failed, with Return Code, Feedback and Sense codes shown in message N08502. The dump of the datastream being sent is contained in the N08503 messages following message N08502.

System Action:

None.

User Action:

Contact you systems administrator to have the source of the datastream error located.

N08504

END OF DATASTREAM.

Reason:

This message terminates the hexadecimal dump of a datastream which was being sent to an LU connected to SOLVE when a VTAM SEND fails. Refer to message N08502 for return code, Feedback and Sense code information.

System Action:

None.

User Action:

Contact your systems administrator to have the source of the datastream error located.

N08505

EXCEPTION NOT RECEIVED FOR LU luname WITH RC/FDBK xxxxxxxx

Reason:

A VTAM RECEIVE for an exception response associated with a terminal connected to SOLVE has failed with the indicated Return Code, Feedback.
The occurrence of this message indicates an abnormal condition in the VTAM API. A SEND request has failed with an X'0C0D' sense code indicating an error in chain. The RECEIVE request issued to process the associated exception response has failed.

System Action:

If the terminal is still in session the failing SEND operation is retried.

User Action:

If the condition continues notify your product support representative and supply them with the error information.

N08801

Message(s) lost, &INTREAD queue limit exceeded

Reason:

When a procedure issues a command using the &INTCMD statement, there is a limit to the number of messages queued to the procedure's dependent response queue or dependent request queue as a result of command or other process execution. This limit, with a default of 32767, is set in the NMIQLIM parameter. If this limit is exceeded as a result of messages queued to a process's &INTREAD queues, this message is queued as the NMIQLIM + 1 message.
NMIQLIM affects the number of messages queued to &PROMPT environments and to the total number of Remote Operator Facility (ROF) messages

System Action:

One or more messages are discarded and processing continues. The hold limit is imposed to avoid excessive storage being allocated to queued messages. Messages are discarded until the queue depth drops below

User Action:

N08H01

userid RECONNECTED.

Reason:

This message acknowledges that a request by the user with the userid shown to reconnect to a previously disconnected user region has been successful.

System Action:

The user's terminal is connected to the disconnected region.

User Action:

Continue using the reconnected region.

N08H02

REGION nnnnn FOR userid DISCONNECTED.

Reason:

This message acknowledges that the DISCONN command or session failure has caused the disconnection of a user region. The reconnection identifier nnnnn and userid show the user who has been disconnected. This message is written to the activity log only.

System Action:

The user region has been disconnected.

User Action:

To reconnect to the region at a later stage, use the RECONN command.

N08H03

REGION ~P1 FOR ~P2 RECONNECTED

Reason:

A reconnection for the user P2 has completed successfully. P1 is the terminal name of the disconnected region.

System Action:

The terminal is connected to the disconnected region.

User Action:

Press the Enter key to resume processing.

N08R01

RECONNECTION REJECTED DUE TO DEVICE MISMATCH.

Reason:

An attempt has been made to reconnect to a session which was disconnected from a terminal with different physical characteristics (eg. previous session was an LU2 terminal and reconnection was attempted from an LU-1 terminal). The reconnection attempt has been rejected.

System Action:

The reconnection attempt has been rejected.

User Action:

Try reconnecting from a device with characteristics similar to those which the original terminal possessed.

N08R02

RECONNECTION REJECTED DUE TO REGION CLEANUP IN PROGRESS.

Reason:

An attempt was made to reconnect to a disconnected session, but the reconnection failed because either the current or original region was terminating.

System Action:

The reconnection attempt is rejected.

User Action:

None.

N08X01

aaaaaaaa CONNECTING AS A bbbbbb DEVICE

Reason:

This message appears on VOS3 systems only. It confirms that terminal aaaaaaaa which is currently connecting to SOLVE is a bbbbbb device type. bbbbbbb is either 3270 or 560/20.

System Action:

None.

User Action:

None.

N09003

TRACE OF DATASTREAM SENT TO LU luname CHAIN=ccc

Reason:

Tracing of outbound datastreams to LU luname has been requested. If compression was requested, this datastream is after compression has been performed. ccc is either FIC, LIC, MIC or OIC, indicating a first, last, middle or only in chain message.

System Action:

The datastream is traced to the activity log.

User Action:

Tracing may be terminated by use of the LUTRACE command.

N09004

+off hexdata hexdata hexdata hexdata char char char char

Reason:

This message is preceded by N09003. This is the trace of the outbound datastream to the specified LU.

System Action:

None.

User Action:

Tracing may be terminated by the LUTRACE command.

N09005

END OF DATASTREAM.

Reason:

Denotes the end of the trace messages for this datastream.

System Action:

None.

User Action:

None.

N09202

OPERATIONAL WINDOW TOO SMALL

Reason:

A split screen operation was attempted which would provide a window of insufficient size for the current function. Certain functions require a minimum sized window for their operation, for example OCS mode. Minimum requirements apply if an OCS mode screen is executing an NCL procedure in fullscreen mode.

System Action:

If the error occurs when attempting to split a screen being operated by an NCL procedure that is operating as a full screen processor out of OCS mode the screen split will be ignored and this message will be queued for display when the procedure reverts to standard OCS mode of operation.

User Action:

Select a larger window size.

N09301

SPO PROCESSING TERMINATED

Reason:

VTAM SPO message receipt has stopped. This is typically due to a VTAM error indicated in the previous message N09B02. If, however, the SPO interface has been stopped, no N09B02 will have been issued.

System Action:

The VTAM SPO interface is inactive.

User Action:

Refer to message N09B02.

N09302

SPO RCVCMD FAILED, reason-text

Reason:

A RCVCMD macro failed when issued to receive VTAM SPO messages. The error codes are explained in the appropriate VTAM Programming manual.

System Action:

Replies can no longer be received to VTAM commands.

User Action:

Determine the cause of the failure by referring to the VTAM Programming manual. Restart SOLVE. The SPO interface may be restarted using the SPO START command.

N09303

SPO RCVCMD FAILED - VTAM TEMPORARY STORAGE SHORTAGE

Reason:

A RCVCMD macro failed when issued to receive VTAM SPO messages because of a VTAM storage shortage.

System Action:

Replies can no longer be received to VTAM commands.

User Action:

SOLVE will continue to issue the RCVCMD macro every 5 seconds until an SPO STOP command is entered or until the storage shortage is relieved.

N09401

FACILITY ONLY VALID FROM PPOPROC.

Reason:

The NCL verbs &PPOREAD, &PPODEL, &PPOCONT and &PPOREPL are valid only if issued from PPOPROC.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N09402

INVALID OPERAND SPECIFIED FOR DEFMSG.

Reason:

An invalid VTAM message number has been specified on the &DEFMSG NCL statement.

System Action:

The PPOPROC NCL procedure is terminated. Standard PPO and SPO messages delivery is resumed.

User Action:

Correct the NCL procedure and restart PPOPROC.

N09501

PPO PROCESSING TERMINATED

Reason:

VTAM PPO message receipt has stopped due to a VTAM error. This message will follow N09B02 which details the VTAM error.

System Action:

The VTAM PPO interface is inactive.

User Action:

Refer to message N09B02.

N09503

PPO RCVCMD FAILED, reason-text

Reason:

A RCVCMD macro failed when issued to receive VTAM PPO messages. The error codes are explained in the appropriate VTAM Programming manual.

System Action:

The VTAM PPO ACB is closed, so no more unsolicited messages will be received from VTAM.

User Action:

Determine the cause of the failure by referring to the VTAM Programming manual. Use the PPO START command to re-open the ACB, or restart SOLVE.

N09601

VTAM PPO STARTED

Reason:

The SOLVE PPO ACB has been opened successfully.

System Action:

VTAM PPO messages will now be routed to those operators authorized to receive them.

User Action:

If you do not wish to receive PPO messages at this stage, the PROFILE command PPO=NO operand can be used to suppress them.

N09602

OPEN FOR VTAM PPO ACB FAILED CODE X'yy'.

Reason:

The SOLVE PPO ACB failed to open. The code specified is the value of ACBERFLG following the OPEN.

System Action:

None.

User Action:

Determine the cause of the error by referring to the appropriate VTAM Programming manual. When corrected, issue a PPO START command to retry the operation.

N09603

VTAM PPO STOPPED

Reason:

Signifies that SOLVE has closed its PPO ACB and stopped receiving PPO messages.

System Action:

None.

User Action:

PPO may be started by the PPO START command.

N09701

PRIMARY ACB acbname FAILED TO OPEN, CODE=xx REPLY RETRY OR END

Reason:

The system's primary ACB did not open for the stated reason code. The code is the value of the ACBERFLG following the OPEN macro.

System Action:

Waits for a reply of RETRY or END.

User Action:

Reply as required. Refer to the VTAM Programming manual for a description of ACB open error codes.

N09702

PRIMARY ACB acbname OPEN FAILED, CODE=xx, AUTO RETRY IN nn SECONDS

Reason:

The system's primary ACB did not open for the stated reason code. The code is the value of the ACBERFLG following the OPEN macro. The system retries every nn seconds (the default value is 30) if SYSPARMS ACBRETRY is set or defaulted to YES.

System Action:

The system automatically retries the open attempt every nn seconds.

User Action:

Refer to the VTAM Programming manual for a description of ACB open error codes.

N09703

SOLVE PRIMARY ACB *aaaaa* NOW OPEN.

Reason:

The primary ACB has successfully opened. This message is normally issued during initialization but may also be issued if VTAM is restarted or the primary ACB varied inactive and active.

System Action:

Communication between SOLVE and VTAM is now possible.

User Action:

None.

N09704

VTAM LEVEL: A.B.C VTAM COMPID: *XXXXXXXXXXXXXX* FUNC STRING: *AAAAAAAAAAAAAAA*.

Reason:

This message appears in the log during system initialization. It displays the installation VTAM level information. VTAM LEVEL is the version of VTAM your system is running on. COMPID displays the component name returned by VTAM, and FUNC STRING the function vector data converted to hexadecimal display.

System Action:

None.

User Action:

None.

N09705

GENERIC RESOURCE SUPPORT NOT AVAILABLE

Reason:

This message appears in the log during system initialization. It indicates that VTAM generic resources are not supported in this environment, and that the SYSPARMS GENRSRC=*name* command was entered.

System Action:

The generic resource name is ignored.

User Action:

Remove the SYSPARMS GENRSRC command from the NMINIT deck.

N09706

SETLOGON FAILED FOR GENERIC RESOURCE: P1

Reason:

This message is written to the activity log during initialization when an attempt to activate the requested generic resource fails. The VTAM return code (RTNCD) and feedback (FDB2) information is displayed (*P1*).

Note: RTNCD=X'10' (16) and FDB2=X'19' (25) is described in message N09708.

System Action:

The generic resource is ignored and the SYSPARM value is cleared.

User Action:

Investigate the failure information. VTAM RTNCD and FDB2 codes are documented in the IBM Communications Server SNA Programming guide. When the problem has been resolved, recycle the region to reactivate the generic resource.

N09707

SETLOGON GNAMEDEL FAILED: reason

Reason:

An attempt to set the VTAM Generic Resource System Parameter (GENRSRC) to NO failed.

System Action:

The region remains registered to the VTAM Generic Resource and the GENRSRC system parameter remains unchanged.

User Action:

It is likely that there is an operating system issue in the parallel sysplex. Investigate the failure reason codes to determine the cause of the problem.

N09708

SETLOGON FAILED FOR GENERIC RESOURCE: COUPLING FACILITY INACCESSIBLE

Reason:

This message is written to the hardcopy log during initialization when an attempt to activate the requested generic resource fails. A generic resource is activated using the SETLOGON macroinstruction but this activation has failed with RTNCD=X'10' (16) and FDB2=X'19' (25). These values indicate that the coupling facility for this host is not accessible.

The coupling facility may be inaccessible because:

- A coupling facility does not exist.
- A CFRM policy for the required coupling facility structure is not active.
- VTAM is not defined as an APPN node.
- VTAM has lost connectivity to the required coupling facility structure.

System Action:

The generic resource is ignored and the SYSPARM value is cleared.

User Action:

Determine why the coupling facility is inaccessible. When this has been resolved, recycle the region to reactivate the generic resource.

N09709

P1* ACTIVE AS GENERIC RESOURCE *P2

Reason:

The region with ACB, *P1*, has successfully registered as the generic resource *P2*.

System Action:

Users logging on to the generic resource, *P2*, can be directed to this region.

User Action:

Check the status of the $NM SSI parameter group to help ensure that the region is able to communicate with other members of the generic resource group.

N09B01

xxx RCVCMD FAILED - VTAM TEMPORARY STORAGE SHORTAGE

Reason:

A RCVCMD macro failed when issued to receive VTAM SPO or PPO messages (xxx is SPO or PPO) because of a VTAM storage shortage.

System Action:

Replies can no longer be received to VTAM commands.

User Action:

SOLVE will continue to issue the RCVCMD macro every 5 seconds until an SPO STOP or PPO STOP command is entered or until the storage shortage is relieved.

N09B02

xxx RCVCMD FAILED, R0=aa reason-text

Reason:

A RCVCMD macro failed when issued to receive VTAM SPO or PPO messages (xxx is SPO or PPO). The error codes are explained in the appropriate VTAM Programming manual.

System Action:

Replies can no longer be received to VTAM commands.

User Action:

Determine the cause of the failure by referring to the VTAM Programming manual. Restart SOLVE. The appropriate interface may be restarted using the SPO START or PPO START command.

N09C01

INSUFFICIENT STORAGE TO PROCESS PPO RECORD.

Reason:

An attempt to obtain storage to pass a PPO or SPO message to PPOPROC has

System Action:

User Action:

N09C02

PPO message queue threshold exceeded. Future PPO messages will be ignored

Reason:

The PPO queue limit has been reached. This may occur if PPOPROC is not clearing messages from the PPO queue quickly enough and may indicate

System Action:

No more PPO messages are queued to PPOPROC until the queue length drops

User Action:

Determine which statement PPOPROC is executing using the SHOW NCL command. If it is held up on one particular statement, review PPOPROC

N09F01

PPO ISR CONTACT INITIATED WITH LINK aaaa DOMAIN bbbb.

Reason:

An ISR command for unsolicited VTAM message traffic on the specified link has been accepted and is the process of being established. Additional message(s) will follow to indicate whether the establishment was successful or not.

System Action:

None.

User Action:

None.

N09F02

PPO ISR CONTACT COMPLETED WITH LINK *aaaa* DOMAIN *bbbb* VERSION *cccc*.

Reason:

Contact with a remote PPO system has been successfully established across an ISR link.

System Action:

None.

User Action:

None.

N09F03

PPO ISR CONTACT LOST WITH LINK *aaaa* DOMAIN *bbbb*.

Reason:

Contact with a remote PPO system across an ISR link has been lost. The PPO messages cannot flow between the two systems. This is probably due to the INMC link becoming disabled.

System Action:

PPO ISR traffic is suspended on this link. The ISR link is restarted automatically following a link failure.

User Action:

Determine the cause of the link failure.

N09J01

bbb ATTR=cccc PPOMSG=ddd SPOMSG=eee

Reason:

This message is issued as a part of the SHOW ISR command. The current settings of the local, remote, and actual ISR/PPO conversation are shown. This includes the message attribute option, whether PPO message are sent/received, whether SPO message are sent/received, and whether VTAM (SPO) commands are sent/received.

System Action:

None.

User Action:

Refer to the description of the PPO options of the ISR command.

N09J02

aaa SPOCMD=bbb DELIVER=ccccccccccccc

Reason:

This message is issued as a part of the SHOW ISR command. The current settings of the local, remote, and actual ISR/PPO conversation are shown. This includes whether VTAM (SPO) commands are sent/received, and the setting of the DELIVER option.

System Action:

None.

User Action:

Refer to the description of the PPO options of the ISR command.

N09J03

INVALID KEYWORD FOR DELIVER OPTION ON ISR COMMAND

Reason:

The option specified on the ISR ENA=PPO OPTION DELIVER= operand was invalid. Valid operands are PPO, LOCAL, REMOTE, ALL, or DEFMSG.

System Action:

The ISR command is ignored.

User Action:

Refer to the description of the PPO options of the ISR command and correct the operand.

N09J04

OPTION DEFMSG=xxxx NO LONGER SUPPORTED, DELIVER=yyyyyy ASSUMED

Reason:

The DEFMSG= operand is no longer supported on the ISR PPO command.

System Action:

DEFMSG=ASIS will be changed to mean DELIVER=PPO, and DEFMSG=LOCAL will be changed to DELIVER=DEFMSG.

User Action:

Refer to the description of the PPO options of the ISR command.

N09K01

VTAM MSG# PPO LOC. REM. DEF. ACT. EVENTNAME

Reason:

This message is the heading for a group of messages issued as a result of the SHOW DEFMSG command. It is followed by multiple occurrences of message N09K02 which detail individual VTAM message numbers. The fields in each line are: VTAM MSG# The VTAM message number. This is a message number, or message number range, and corresponds to message ISTnnnI or JCEnnnI. For DOS/VSE prior to VTAM R3.2 it is the 5AnnI to 5JnnI equivalent. Refer to the VTAM Messages and Codes manual. PPOPROC, LOCAL, REMOTE YES or NO. Show the message delivery indicators for PPOPROC, LOCAL, and remote destinations which have been set using the DEFMSG command, or which are set in the default message table
DEFAULT YES or NO. Indicates whether this message number is in the default table supplied by SOLVE.
ACT YES or NO. Indicates whether a DEFMSG SET command was issued for this message.
EVENTNAME SNA event name suffix for EDS event notification.

System Action:

None.

User Action:

None.

N09K02

aaaaaaaa bbbbbbbb cccccccc dddddddd

Reason:

Part of the SHOW DEFMSG display.

System Action:

None.

User Action:

Refer to message N09K01.

N09K04

PPO-RCV SPO-RCV Q-PPOPROC #-PPOCONT #-PPODEL #-LOCAL

Reason:

This message is the heading for the SHOW PPOSTAT display. Message N09K05 follows. Headings are:-
PPO-RCV The number of message lines received on the
PPO ACB. SPO-RCV The number of message lines received via the SPO interface.
Q-PPOPROC The number of message lines queued to PPOPROC.
#-PPOCONT The number of implicit or explicit *PPOCONTs issued.*
#-PPODEL The number of *PPODELs issued.*
#-LOCAL The number of PPO messages delivered to local receivers.

System Action:

None.

User Action:

None.

N09K05

aaaaaaaa bbbbbbbb ccccccc ddddddd eeeeeeee fffffff

Reason:

This message is contains details for the SHOW PPOSTAT command. It follows message N09K04 which contains the headings.

System Action:

None.

User Action:

See message N09K04.

N0D201

INSUFFICIENT STORAGE TO PROCESS SHOW COMMAND

Reason:

A SHOW DATACOM command was unable to obtain storage. The command requires approximately 12 KB of storage to process.

System Action:

The command is not processed.

User Action:

Increase the region size to at least 12 KB.

N0D202

DATACOM API DBSVWPR NOT LOADED, LOAD FAILED WITH R15= p1,R1=p2

Reason:

A SHOW DATACOM command was entered but could not be processed. The CA Datacom API module, DBSVWPR, could not be loaded during region initialization. The LOAD macro returned a nonzero return code in register 15.

p1 is the return code, and p2 is the failure reason code.

System Action:

The command is not processed.

User Action:

Ensure that the CAILIB data set allocated to STEPLIB is for the latest release of CA Datacom installed.

N0D203

DATACOM API DBSVWPR NOT LOADED, MODULE NOT FOUND

Reason:

A SHOW DATACOM command was entered but could not be processed. The CA Datacom API module, DBSVWPR, could not be loaded during region initialization.

System Action:

The command is not processed.

User Action:

Ensure that the CAILIB data set allocated to STEPLIB is for the latest release of CA Datacom installed.

N0D204

DATACOM API DBSVWPR RETURNED R15= p1

Reason:

A SHOW DATACOM command was entered. The CA Datacom API module, DBSVWPR, returned a nonzero return code in register 15.

System Action:

The command is not processed.

User Action:

Ensure that the CAILIB data set allocated to STEPLIB is for the latest release of CA Datacom installed.

For assistance, contact Technical Support.

N0D205

DATACOM API DBNTRY RETURN RC= p1, IC= p2

Reason:

A SHOW DATACOM command was entered but could not be processed. The CA Datacom API module, DBNTRY, returned a nonzero return code in

Register 15.

p1 is the decimal return code, and p2 is the decimal internal code.

System Action:

The command is not processed.

User Action:

For information about the return code, see Message Guide for CA Datacom.

For assistance, contact Technical Support.

N0D208

MUFNAME REL TP JOBNAME SVC SUB STATUS

Reason:

Reason:

A SHOW DATACOM command was entered. This is the heading line for the TABLE=TABLES operand.

System Action:

The N0D213 messages list the details of each table for the MUF.

User Action:

None.

N0D266

DATACOM VERSION p1 NOT SUPPORTED

Reason:

A SHOW DATACOM=mufname command was entered. The version of the targeted CA Datacom is not supported.

System Action:

The command is not processed.

User Action:

For assistance, contact Technical Support.

N0D267

DBSVWPR API DOES NOT SUPPORT VERSION p1

Reason:

A SHOW DATACOM=mufname command was entered. The loaded CA Datacom API module, DBSVWPR, does not support the targeted version of MUF.

System Action:

The command is not processed.

User Action:

Ensure that the CAILIB data set allocated to STEPLIB is for the latest release of CA Datacom installed.

For assistance, contact Technical Support.

N10001

WARNING - COMMAND xxxxxxxx TOO LONG FOR INTERNAL BUFFER

Reason:

The command string entered exceeded the internal processing buffer size; this can occur with the use of long Prefix PFKs or commands entered within NCL procedures. This message is also issued if an attempt is made to ROUTE a command to a system which does not support commands longer than 256 bytes.

System Action:

The excess command text is discarded.

User Action:

Change the command to operate within system limits.

N10002

COMMAND RECURSION LIMIT EXCEEDED.

Reason:

Recursive command execution has been detected. This may be because CMDREPLs or EQUATEs have been constructed in a way that cause a command to be executed recursively.

System Action:

Command execution is aborted.

User Action:

Remove the recursive command definitions.

N10049

COMMAND FAILED: aaaaaaaa NOT LOADED, reason text

Reason:

The execution of an SOLVE command failed because the command's processing load module (*aaaaaaaa*) could not be loaded for the indicated reason.

System Action:

The command is ignored.

User Action:

Check that the indicated load module is in a dataset that is included in your run-time load library concatenation.

N10101

COMMAND cccccccc NOT RECOGNIZED

Reason:

The command string cccccccc was not recognized as a valid system command.

System Action:

The command string is ignored.

User Action:

Determine why the command is incorrect. This error may result from the execution of an NCL statement which has invalid syntax, perhaps resulting from an unexpected null variable. In such cases, if a statement is not recognized, the product region attempts to execute it as a command or as an equated command string, which may in turn result in this error. If this is the case, correct the NCL procedure and retry. The &CONTROL TRACE statement may help in determining the source of errors within an NCL procedure.

N10102

cccccccc COMMAND IS NOT VALID FOR ENTRY FROM THIS SOURCE

Reason:

Certain commands can be accepted only when they form part of an NCL procedure or are entered from a particular operating mode.

System Action:

The cccccccc command is rejected.

User Action:

Refer to the description of the rejected command.

N10103

NEW LOGO TITLE SET

Reason:

Issued in response to an LTITLE command.

System Action:

The new LOGO title becomes immediately effective.

User Action:

None.

N10104

aaaaaaa COMMAND NOT VALID FROM DEPENDENT ENVIRONMENT

Reason:

The aaaaaaa command issued from a dependent environment is not supported from this source. For example fullscreen commands such as K, PAGE, and CLEAR.

System Action:

The command is rejected.

User Action:

Correct the NCL procedure issuing the INTCMD or executing under a dependent environment.

N10105

COMMAND NOT SUPPORTED UNDER THIS OPERATING SYSTEM

Reason:

The command entered is not a valid command under this operating system.

System Action:

The command is rejected.

User Action:

None.

N10106

COMMAND cccccccc IS AMBIGUOUS

Reason:

A command string was abbreviated to the point at which it cannot be uniquely interpreted.

System Action:

The command string cccccccc is rejected.

User Action:

Re-enter the relevant command with further qualification to make it unique or invoke the online help facility for further information.

N10107

USERID uuuuuuuu NOT AUTHORISED FOR REQUESTED COMMAND.

Reason:

The user is not authorized to issue the command.

System Action:

The command is rejected.

User Action:

Userid authorization is set in the userid definition. Authorization may be raised by authorized personnel.

N10109

AUTOHOLD OPERAND IS INVALID.

Reason:

An invalid operand was specified on the AUTOHOLD command. Valid operands are ON, OFF, AUTO, NOAUTO or blank.

System Action:

The command is ignored.

User Action:

Refer to the description of the AUTOHOLD command for correct syntax.

N10110

AUTOHOLD type SET status.

Reason:

This confirms that AUTOHOLD type is set to the given status, where type is MODE or AUTO and status is ON or OFF.

System Action:

If AUTOHOLD is set on, the window will be `frozen' whenever the last line is filled, necessitating operator action to view any further messages.

User Action:

None.

N10111

NEW TITLE SET.

Reason:

A TITLE command has been processed.

System Action:

The new Operator Control Services title line has been set.

User Action:

Press the CLEAR key to view the new title.

N10112

NCL PROCEDURE NAME procname IS INVALID.

Reason:

The requested NCL procedure name procname is longer than 8 characters or it contains invalid characters.

System Action:

The command is rejected.

User Action:

Correct the procedure name and re-enter.

N10114

COMMAND NOT VALID FOR ENTRY IN THIS MODE

Reason:

The command is not valid for entry in this mode.

System Action:

The command is rejected.

User Action:

Refer to the command description for restrictions on its use.

N10115

COMMAND NOT VALID FROM SYSTEM CONSOLE

Reason:

The command is not valid for entry by a system console environment.

System Action:

The command is rejected.

User Action:

Reissue the command from a standard user environment, For example from Operator Console Services. Alternatively, if executing NCL, then correct the procedure to not issue the command.

N10116

LOGSWAP REQUESTED BY userid COMMENCED.

Reason:

The specified USERID has issued a LOGSWAP command.

System Action:

The current log will be closed and the next available one opened.

User Action:

None.

N10117

LOGSWAP IMPOSSIBLE, LOGGING HALTED BY PREVIOUS ERROR.

Reason:

A LOGSWAP command is rejected because no further logging can take place.

System Action:

The command is rejected.

User Action:

Should logging be required, SOLVE must be terminated and restarted.

N10118

COMMAND NOT VALID FROM REMOTE USER

Reason:

A command was ROUTED to a remote SOLVE system via the Remote Operator Facility, but the command is one that can be executed only in the local system.

System Action:

The command is rejected.

User Action:

None.

N10119

DISCONNECTED.

Reason:

An `X' (Exit) command was ROUTED to a remote SOLVE system, causing the user's ROF session to be terminated.

System Action:

None.

User Action:

None.

N10120

SBCS TITLE INVALID

Reason:

The TITLE command contains invalid characters, possibly associated with entry from a DBCS capable terminal.

System Action:

The command is rejected.

User Action:

Correct and Retry. Ensure that the title text does not contain DBCS character strings.

N10121

NEW DBCS TITLE SET

Reason:

The command TITLE DBCS= was executed successfully to define a title that will be displayed on terminals that are DBCS capable.

System Action:

None.

User Action:

None.

N10122

DBCS TITLE EXCEEDS MAXIMUM LENGTH

Reason:

The TITLE DBCS= command was executed specifying a string that is longer than is acceptable for the command.

System Action:

The command is rejected.

User Action:

Refer to the TITLE command documentation.

N10123

SBCS LOGO TITLE INVALID

Reason:

The LTITLE command has specified an invalid character stream as the logo title, possibly associated with entry from a DBCS capable terminal.

System Action:

The command is rejected.

User Action:

Ensure that the title text does not contain DBCS characters.

N10124

NEW DBCS LOGO TITLE SET

Reason:

The command LTITLE DBCS= was executed successfully to define a title that will be displayed on terminals that are DBCS capable.

System Action:

None.

User Action:

None.

N10125

DBCS LOGO TITLE EXCEEDS MAXIMUM LENGTH

Reason:

LTITLE DBCS= command was executed specifying a string that is longer than is acceptable for the command.

System Action:

The command is rejected.

User Action:

Refer to the LTITLE command documentation.

N10126

COMMAND NOT VALID DURING SYSTEM SHUTDOWN

Reason:

The requested command is not valid once the system has commenced shutdown.

System Action:

The command is ignored.

User Action:

None.

N10199

COMMAND aaaaaaa NOT RECOGNISED.

Reason:

The entered command was not recognized by SOLVE as a valid command or equate name.

System Action:

The command is not executed.

User Action:

Correct the command and re-enter it.

N10501

CLSDST COMMAND REJECTED. luname NOT IN SESSION.

Reason:

A CLSDST command specified an LU which is not connected.

System Action:

The command is rejected.

User Action:

None.

N10502

CLSDST OF aaaaaaaa IS NOT SUPPORTED

Reason:

An attempt was made to issue a CLSDST command to disconnect the system console aaaaaaaa from the system, but this is invalid as the console is not a VTAM terminal.

System Action:

The command is rejected.

User Action:

None.

N10503

NO NODE NAME SPECIFIED.

Reason:

A CLSDST command was issued but the name of the terminal to be disconnected was omitted.

System Action:

The command is rejected.

User Action:

Retry, including the required terminal name.

N10504

INVALID NODE NAME.

Reason:

An OPNDST or CLSDST command was issued for a terminal whose name has an invalid length.

System Action:

The command is rejected.

User Action:

Correct the terminal name and re-enter.

N10505

INVALID SYNTAX.

Reason:

An invalid operand was specified on the OPNDST or CLSDST command.

System Action:

The command is rejected.

User Action:

See the description of the OPNDST command in the Command Reference.

N10506

CLSDST ACCEPTED FOR nnn LUNAME(S)

Reason:

A CLSDST command specifying the WAIT=YES operand was entered and has been accepted. The command will complete when all messages queued for all terminals have been sent. The CLSDST command may be used with the GENERIC operand to affect multiple terminals. The number of terminals (nnn) is noted in the message.

System Action:

The command is accepted.

User Action:

None.

N10507

NO LUNAMES MEET GENERIC MASK CRITERIA OF aaaaa.

Reason:

A CLSDST command with the GENERIC operand has failed to match on any logical unit names.

System Action:

The command is ignored.

User Action:

Check the generic mask aaaaa and retry. Use the SHOW SESS or SHOW USERS commands to list the LUNAMES of terminals with which SOLVE has a session.

N10508

LOGON REQUEST FOR luname CANCELLED

Reason:

A queued logon request for the specified LU has been cancelled by the CLSDST command.

System Action:

When the LU is connected to SOLVE it will be immediately discarded.

User Action:

None.

N10509

INSUFFICIENT AUTHORITY FOR CLSDST COMMAND: NOT AN LU1 PRINTER

Reason:

A CLSDST command was rejected because your command authority restricts you to LU1 Printers. This message can arise when either:

- the luname specified is not an LU1 printer, or,
- you specified GENERIC.

System Action:

The command is rejected.

User Action:

Contact your systems administrator.

N10601

USERID: userid TERMINAL-ID: termid

Reason:

This is the first line of the display issued as a result of a PROFILE command. userid is the name of the user currently logged on to this terminal which is known as termid.

System Action:

None.

User Action:

None.

N10602

NCL PROCEDURE LIBRARY ID: procdd.

Reason:

Part of the PROFILE display; shows the DD name that will be used by NCL when loading NCL procedures for this user ID. This is specified as part of the UAMS definition and allows users to reference different libraries.

System Action:

This library will only be used when loading procedures. If a preloaded copy of the procedure exists and your OCS profile specifies NCLTEST=NO, a copy of the preloaded procedure will be used.

User Action:

This ID can only be changed by altering your user ID definition.

N10603

AUTHORITY LEVEL IS x, zzzzzzzzzzzzzzzzz.

Reason:

Part of the PROFILE display; shows the user's command authority level (x) and the status of the message (MSGPROC) NCL procedure associated with the user (zz) if any is defined. The MSGPROC can be `NOT DEFINED', `ACTIVE' or `INACTIVE'. Inactive means the procedure was loaded and initially active but has terminated at some stage either due to an error or because it logically ended and is no longer effective.

System Action:

None.

User Action:

If the MSGPROC NCL procedure is required and has failed, you must correct the procedure and either exit and re-enter Operator Control Mode or use the PROFILE MSGPROC command to reinstate the MSGPROC procedure.

N10604

(VTAMNUM=xxx.) VTAM MESSAGE NUMBERS WILL/WILL NOT BE DISPLAYED

Reason:

Part of the PROFILE display; indicates the status of the VTAMNUM profile option.

System Action:

None.

User Action:

None.

N10605

(PPO=xxx.....) VTAM PPO MESSAGES WILL/WILL NOT BE DISPLAYED, CLASS=yyyy

Reason:

Part of the PROFILE display; indicates whether the user will receive PPO messages, and if so, at what severity class. `yyyy' may be INFO, WARN, NORM or SER.

System Action:

None.

User Action:

None.

N10606

(ROLL=nn.....) SCREEN ROLL DELAY TIME IS nn

Reason:

Part of the PROFILE display; indicates the current roll-delay time for this OCS environment in seconds.

System Action:

None.

User Action:

None.

N10607

(CMDSTACK=nn.) COMMAND STACK SIZE IS nn

Reason:

Part of the PROFILE display; indicates the user's command stack size.

System Action:

None.

User Action:

None.

N10608

(DELCHAR=x...) ROLL DELIMITER LINE CHARACTER IS "x"

Reason:

Part of the PROFILE display; indicates the character used to form the roll-delimiter line.

System Action:

None.

User Action:

None.

N10609

(HOLD=nnn....) HELD MESSAGES THRESHOLD IS nnn

Reason:

Part of the PROFILE display; indicates the number of messages which will be held for this window while the window is in HOLDING or AUTOHOLD state.

System Action:

None.

User Action:

None.

N10610

Profile complete for dependent/primary OCS environment.

Reason:

Signifies the end of the PROFILE display.

System Action:

None.

User Action:

None.

N10611

aaaaaaa PROFILE CHANGED.

Reason:

Confirms successful processing of a PROFILE command, aaaaaaa specifies the executing environment (CURRENT or PRIMARY).

System Action:

New PROFILE options are in effect.

User Action:

None.

N10612

PROFILE OPERAND xxxxxxxx IS INVALID OR OUT OF RANGE.

Reason:

The value of the specified operand is invalid.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N10613

DELCHAR OPERAND SPECIFIES INVALID CHARACTER

Reason:

The DELCHAR or NRDELCH characters cannot conflict with DBCS shiftin characters, value X`0E'.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N10614

USERID NOT AUTHORISED FOR PPO MESSAGES.

Reason:

The user's USERID definition does not specify PPO authority, and therefore this attempt to change the user's profile to receive PPO messages is rejected.

System Action:

None.

User Action:

None.

N10615

WARNING - PPO SELECTED BUT PPO FUNCTION NOT ACTIVE.

Reason:

A PROFILE command was entered requesting that the user start receiving PPO messages but the system is not receiving PPO messages from VTAM at the moment.

System Action:

None.

User Action:

Determine whether the system should be receiving PPO messages, and if so issue a PPO START command.

N10616

USERID HAS MONITOR STATUS.

Reason:

Part of the PROFILE display. Indicates that the user is privileged to receive Monitor messages.

System Action:

None.

User Action:

None.

N10617

(INITCMD=....) INITIAL CMD HAS NOT BEEN SET.

Reason:

Part of the PROFILE display. Indicates that no initial command is executed automatically when the user enters OCS mode.

System Action:

None.

User Action:

None.

N10618

(INITCMD=....) INITIAL CMD IS: command

Reason:

Part of the PROFILE display. Indicates that an initial command is executed automatically when the user enters OCS mode.

System Action:

None.

User Action:

None.

N10619

(CMDKEEP=....) LAST COMMAND WILL/WILL NOT BE KEPT ON ENTRY LINE.

Reason:

Part of the PROFILE display. Indicates that when a command is entered from the OCS window command line the command text is (is not) retained on the command line.

System Action:

If CMDKEEP=NO is in effect commands will be erased from the command input line. In this case they will still be added to the command stack and can be retrieved in the normal manner.

User Action:

None.

N10620

INITCMD OPERAND HAS UNPAIRED QUOTES OR NO DATA.

Reason:

The text of the INITCMD operand of the PROFILE command must be enclosed in quotes.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N10621

INITCMD TEXT EXCEEDS MAXIMUM OF 40 CHARACTERS.

Reason:

The INITCMD operand text is limited to 40 characters.

System Action:

The command is rejected.

User Action:

Reduce INITCMD text to 40 or fewer characters.

N10622

USERID NOT AUTHORISED FOR MSGPROC STATUS ALTERATION.

Reason:

A PROFILE MSGPROC= command has been issued by a user who does not have a command authority level high enough for this operand of the PROFILE command.

System Action:

The command is ignored.

User Action:

Refer to your systems administrator.

N10623

Operand Function

Reason:

Heading line within a PROFILE display.

System Action:

None.

User Action:

None.

N10624

NO NPF COMMAND RESTRICTIONS.

Reason:

Part of the PROFILE display. Indicates that no NPF command control member has been specified for the user. The user is entitled to issue VTAM commands referring to any network resource.

System Action:

None.

User Action:

None.

N10625

NPF COMMAND MEMBER=ccmem

Reason:

Part of the PROFILE display. Indicates that the user may issue VTAM commands that refer only to those network resources defined by the NPF tables associated with the command control member ccmem.

System Action:

None.

User Action:

None.

N10626

NOT AUTHORISED TO RECEIVE PPO MESSAGES.

Reason:

Part of the PROFILE display. Indicates that the user will not receive unsolicited VTAM messages.

System Action:

None.

User Action:

None.

N10627

PPO MESSAGE DELIVERY DETAILS:

Reason:

Part of the PROFILE display. This provides a heading for the subsequent messages that describe which unsolicited messages will be sent to the user.

System Action:

None.

User Action:

None.

N10628

..NO NPF MESSAGE RESTRICTIONS.

Reason:

Part of the PROFILE display. Indicates that if unsolicited (PPO) messages are to be sent to the user, the messages concerned may refer to any network resource.

System Action:

None.

User Action:

None.

N10629

..RECEIVE ALL PPO MESSAGES.

Reason:

Part of the PROFILE display. Indicates that the user will receive all unsolicited (PPO) messages generated by VTAM.

System Action:

None.

User Action:

None.

N10630

..RECEIVE UNDELIVERABLE PPO MESSAGES.

Reason:

Part of the PROFILE display. Indicates that the user will receive unsolicited messages that refer to network resources for which no logged-on operator is partitioned, or those that do not refer to any network resource.

System Action:

None.

User Action:

None.

N10631

..NPF MESSAGE MEMBER=mcmem

Reason:

Part of the PROFILE display. Indicates that the user will receive unsolicited (PPO) messages that refer to network resources defined by the NPF tables associated with message control member mcmem.

System Action:

None.

User Action:

None.

N10632

..UNDELIVERABLE PPO MESSAGES WILL/WILL NOT BE DISPLAYED.

Reason:

Part of the PROFILE display. Indicates that the user will/will not receive PPO messages referring to network resources outside their partition.

System Action:

None.

User Action:

None.

N10633

INITCMD OPERAND NOT VALID FROM THIS SOURCE.

Reason:

The INITCMD operand of the PROFILE command cannot be entered from a terminal under control of EASINET or from a user region which does not have OCS access authority.

System Action:

The command is rejected.

User Action:

None.

N10634

(MSGALARM=...) QUEUED MESSAGE ALARM COUNT IS bb.

Reason:

Part of the PROFILE display. MSGALARM specifies the number of times that the terminal alarm will be rung to notify the operator that a message has arrived at a closed OCS window. MSGALARM applies to all operational windows, including MAI, regardless of function.

System Action:

The alarm will be rung only the first time a message arrives. Subsequent arrival of additional messages will not cause the alarm to be rung.

User Action:

MSGALARM can be in the range 0 to 9. 0 indicates that the alarm is not to be rung.

N10635

MSGCODE VALUE EXCEEDS AUTHORISED RANGE.

Reason:

An attempt was made, using the PROFILE MSGCODE=mm command, to set additional bits in your msgcode profile that you are not entitled to set. The mask, mm, specifies 2 hexadecimal digits, 00-FF. The MSGCODE operand allows a user to specify a mask that is used to determine whether or not a user is to receive messages caused by an &WRITE MSGCODE=mm. If the bits set in xx are also set in the users msgcode profile mm then the message will be written to the screen.

System Action:

The command is rejected.

User Action:

Refer to the description of this command in the *SOLVE Command Reference* manual.

N10636

AUTOHOLD SETTING IS aaa bbbbb

Reason:

Part of the PROFILE display. Displays the current setting of the AUTOHOLD option, governing the automatic control of screen wraparound.

System Action:

None.

User Action:

See the Command Reference for details of the AUTOHOLD command.

N10637

(NRDELCH=b...) NRD DELIMITER LINE CHARACTER IS "b".

Reason:

Part of the PROFILE display. NRDELCH specifies the character to be used to form the delimiter line that separates the non-roll delete area on an OCS window from the roll delete area.

System Action:

None.

User Action:

None.

N10638

(RDMIN=bb....) MINIMUM RDM LINES IS bb.

Reason:

Part of the PROFILE display. RDMIN specifies the minimum number of lines that the roll delete area of the OCS window may shrink to, to make room for non-roll delete messages.

System Action:

None.

User Action:

None.

N10639

USERID NOT AUTHORISED FOR MONITOR MESSAGES.

Reason:

The user issued a PROFILE MONMSG= command but the userid is not authorized for the receipt of monitor messages.

System Action:

None.

User Action:

None.

N10640

(MONMSG=xxx..) MONITOR CLASS MESSAGES WILL/WILL NOT BE DISPLAYED.

Reason:

Part of the Profile display. It displays the users Monitor message receipt status.

System Action:

Monitor class messages will now be directed to this user's OCS window.

User Action:

None.

N10641

MSGPROC NOT ACTIVE, FLUSH REQUEST REJECTED

Reason:

An attempt has been made to flush MSGPROC using PROFILE MSGPROC=FLUSH but has failed because no MSGPROC was running.

System Action:

None.

User Action:

None.

N10642

INSUFFICIENT STORAGE TO START MSGPROC

Reason:

An attempt has been made to start MSGPROC but has failed because of a shortage of storage.

System Action:

MSGPROC is not started.

User Action:

Try again later. If the problem persists, notify your systems administrator.

N10643

ENVIRONMENT DOES NOT SUPPORT MSGPROC PROCESSING

Reason:

An attempt was made to start MSGPROC in an environment which does not support the use of MSGPROC, e.g: from an internal environment using *INTCMD.*

System Action:

MSGPROC is not started.

User Action:

None.

N10644

MSGPROC ALREADY ACTIVE, REQUEST REJECTED

Reason:

An attempt was made to start MSGPROC but failed because MSGPROC had already been started.

System Action:

MSGPROC is not started again.

User Action:

None.

N10645

MSGPROC PROCESSING ACTIVATED

Reason:

This message is issued to confirm that a request to start MSGPROC was successful.

System Action:

MSGPROC is started.

User Action:

None.

N10646

MSGPROC FLUSHED

Reason:

This message is issued to confirm that a request to flush MSGPROC was successful.

System Action:

MSGPROC processing is terminated.

User Action:

None.

N10647

DUPLICATE ENV= OPERAND IGNORED

Reason:

The ENV= operand on a PROFILE command has been entered twice and the second occurrence has been ignored.

System Action:

The second occurrence of the ENV= operand is ignored.

User Action:

None.

N10648

PROFILE OPERAND <aaaaaaaa> INVALID FOR ENVIRONMENT

Reason:

A PROFILE command has been entered but either an operand or the command itself (without operands) is not applicable to the environment specified on the ENV= operand supplied or defaulted.

System Action:

The PROFILE command is rejected.

User Action:

None.

N10649

..NPF RESOURCE MEMBER LIST=aaaaaaaa

Reason:

This message is part of the PROFILE LIST display. It shows the name of the users NPF RESOURCE LIST member.

System Action:

None.

User Action:

None.

N10653

USER TIMEZONE NAME: aaaaa OFFSET: shhmm

Reason:

This is a line of output from the PROFILE command. It shows the user's assigned time zone name and the time zone offset.

System Action:

None.

User Action:

None.

N10701

INSUFFICIENT STORAGE

Reason:

A SPLIT or SWAP command has been issued but the operation cannot be performed due to lack of storage.

System Action:

The command is rejected.

User Action:

None.

N10702

SWAP/SPLIT REQUEST INVALID WHILST TERMINAL IS LOCKED

Reason:

A SPLIT or SWAP command has been issued whilst the current window is locked.

System Action:

The command is rejected.

User Action:

Terminate the LOCK process before retrying the function.

N10704

SPLIT/SWAP REQUEST INVALID, USER NOT AUTHORISED.

Reason:

The SPLIT or SWAP was command was issued in a region not authorized for multiple windows.

System Action:

The command is rejected.

User Action:

Contact your installation Help Desk if authorization is required.

N10801

PFK nn SET.

Reason:

Confirms a PFnn command has been processed, setting the specified Program Function Key.

System Action:

None.

User Action:

None.

N10802

PFK REQUEST NOT RECOGNISED.

Reason:

An invalid operand was entered in a PF command.

System Action:

The command is rejected.

User Action:

Correct and re-enter the request.

N10803

REQUESTED PFK NOT WITHIN RANGE.

Reason:

The PF command supports PFKs in the range 1-24.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N10804

PFK REQUEST INVALID FROM THIS ENVIRONMENT

Reason:

A PF command has been issued from an environment which does not support PF Key usage eg: an internal environment via &INTCMD.

System Action:

The command is rejected. If issued from within an NCL procedure, the procedure will be terminated.

User Action:

Check which operands are supported in the environment specified.

N10805

ENTER KEY SET.

Reason:

A valid ENTER command has been used to equate the ENTER key to a command.

System Action:

None.

User Action:

None.

N10806

KEY NOT SET. AT LEAST ONE KEY MUST EXECUTE COMMAND LINE TEXT.

Reason:

The ENTER command has been used to set the ENTER key to a command but there is no PF key set to the standard ENTER key function. At least one key must be defined to execute the command line text.

System Action:

The ENTER command is ignored.

User Action:

Specify a PF key to take the role of the ENTER key before attempting to equate the ENTER key to another command.

N10807

INSUFFICIENT AUTHORITY

Reason:

A PFnn command has been executed by a SUBMIT command but the user who issued the SUBMIT command does not have the authority to do so.

System Action:

The command is rejected.

User Action:

This is a security related condition. The user authority may be too low.

N10901

MESSAGE LOGGED TO ACTIVITY LOG.

Reason:

Confirms that a LOG command has been processed.

System Action:

The message has been written to the activity log. The `===>' indicator will prefix the text of the message written to the log.

User Action:

None.

N10B04

INVALID KEYWORD FOR DELIVER OPTION ON DEFMSG.

Reason:

The DEFMSG command was entered with an invalid value specified on the DELIVER= operand.

System Action:

The DEFMSG command is rejected.

User Action:

Correct the DELIVER operand. The valid values are PPO, LOCAL, REMOTE, ALL and NONE.

N10B13

LIST PROCEDURE NAME procname IS INVALID

Reason:

A LIST command has been entered from OCS but the procedure name supplied, procname, is not a valid procedure name.

System Action:

None.

User Action:

Correct the syntax of the procedure name.

N10B27

LOG NUMBER IS INVALID

Reason:

The log number that is specified on a LOGSWAP command must be in the range 1 through 9.

Note: The log number is ignored unless SYSPARMS LOGWRAP=YES is specified.

System Action:

The LOGSWAP command is ignored.

User Action:

Reissue the corrected command.

N10B28

INVALID OPERAND SPECIFIED FOR DEFMSG

Reason:

An invalid VTAM message number has been specified on the DEFMSG command, or one of the other DEFMSG operands specified is invalid.

System Action:

The command is ignored.

User Action:

Reissue the corrected command.

N10B29

DEFMSG REQUEST ACCEPTED

Reason:

A DEFMSG command is valid and has been accepted.

System Action:

None.

User Action:

None.

N10B30

NCL TEST MODE IS aaa bbb ccc

Reason:

An NCLTEST command is valid and has been accepted. This message shows the (new) NCLTEST values.
aaa will be NOW if the NCLTEST command had operands, else it is not present. bbb will be OFF, ON, or LOG ccc will be blank, or if bbb is ON, may be LOG.

System Action:

None.

User Action:

None.

N10B31

NCLTEST OPTION NOT 'ON' OR 'OFF'.

Reason:

The NCLTEST command may have a single operand of either 'ON' or 'OFF'. The operand value specified is neither of these.

System Action:

The command is ignored.

User Action:

Correct the command and retry.

N10B32

INVALID PARAMETER(S) ON NCLTEST COMMAND.

Reason:

An NCLTEST command has additional operands following 'ON' or 'OFF'. No further operands are required.

System Action:

The entire command is ignored.

User Action:

Correct the command and retry.

N10B33

INSUFFICIENT STORAGE

Reason:

A request has been made to invoke the EDIT Services function of SOLVE. A storage shortage condition has occurred and the request has failed.

System Action:

The EDIT Services function is not invoked.

User Action:

Investigate cause of storage shortage condition.

N10C01

REQUESTED FUNCTION KEY NOT SET

Reason:

No value has been defined (via the PF command) for the PF key that was pressed.

System Action:

The PF key request is ignored.

User Action:

Set the PF key using the PF command if required.

N10C02

INVALID FUNCTION KEY, NOT SUPPORTED

Reason:

The system supports PFKs in the range 1-24 only.

System Action:

The command is rejected.

User Action:

Correct and retry.

N10F01

NCLTRACE COMMAND PROCESSED.

Reason:

Processing has successfully completed for the NCLTRACE command.

System Action:

If NCLTRACE has been used to start or reset tracing then the target NCL process will begin tracing upon resumption of execution.

User Action:

Review trace messages if required.

N10F02

NCLTRACE VARS= NOT SUPPORTED BY OML

Reason:

An NCLTRACE VARS= command has been issued, but the target procedure is an OML procedure. OML does not support the use of NCLTRACE VARS=. Use the NCL DEBUG facility to perform variable update tracing.

System Action:

None.

User Action:

None.

N10F09

NCLID aaaaaa HAS NO ACTIVE PROCEDURE

Reason:

An NCLTRACE command failed as the target NCL process was not executing an NCL procedure.

System Action:

None.

User Action:

Try an option that does not require a currently executing procedure.

N10F10

NCLID aaaaaa NOT PROCESSING IN bbbb ENVIRONMENT.

Reason:

The NCLTRACE command was unable to locate the specified NCL process identified as aaaaaa via the ID operand.

System Action:

None.

User Action:

Correct the ID= operand value. Use SHOW NCL if necessary to determine the processing identifier of the desired NCL process.

N10F11

NCLID aaaaaa AT TRACE LIMIT. USE 'RESET' OPTION.

Reason:

An NCLTRACE START has determined that the target process, aaaaaa, has already reached the system tracing limit. No further tracing will be performed.

System Action:

None.

User Action:

Review existing trace messages. If further tracing is required use the RESET keyword on the NCLTRACE START request so that tracing may be restarted.

N10F12

NCLTRACE COMMAND FAILED, STORAGE SHORTAGE.

Reason:

The NCLTRACE command failed to obtain the necessary storage to continue processing. The request is ignored.

System Action:

None.

User Action:

Review existing trace messages and if possible reduce storage held by clearing message queues. Retry the request.

N10F13

MAXIMUM RANGE DIFFERENTIAL EXCEEDED.

Reason:

An NCLTRACE command has specified a variable range greater than the maximum allowed.

System Action:

The command is rejected.

User Action:

Correct the variable specification.

N10F14

VARS=aaaaaaaaaaaa PREFIX TOO LONG FOR RANGE.

Reason:

The variable prefix supplied combined with the range generates variable names greater in length than the maximum of 12 characters.

System Action:

The command is rejected.

User Action:

Specify a smaller range or prefix so that all names within the requested range are valid.

N10G02

USERID aaaaaaaa NOT AUTHORISED FOR REQUEST

Reason:

Your userid has not been authorized to perform the function requested.

System Action:

None.

User Action:

Contact your installation help desk if you require this authority.

N10G05

UNDEFINED MODE SPECIFIED

Reason:

A SETMODE command has specified a mode not recognized by the system.

System Action:

None.

User Action:

The SETMODE command is used by primary menu procedures to control processing. Refer the problem to your installation help desk for problem determination.

N10G06

INVALID SOURCE FOR SHOWMSG

Reason:

The SHOWMSG command may only be issued from a dependent environment.

System Action:

None.

User Action:

None.

N10G07

PRIMARY ENVIRONMENT MODIFIED

Reason:

A SETMODE command to modify the primary environment has completed successfully.

System Action:

Any change in the primary environment manager will be actioned when the current primary environment manager terminates.

User Action:

None.

N10G99

SETMODE COMMAND IS NOT VALID FOR ENTRY FROM THIS SOURCE

Reason:

A SETMODE command has been issued from a non-terminal region.

System Action:

The command is rejected.

User Action:

None. The command environment is not valid for issuing SETMODE.

N10J01

Insufficient storage for DEFMSG build.

Reason:

The DEFMSG command could not obtain sufficient storage to build the DEFMSG table entry.

System Action:

The DEFMSG table entry is not build.

User Action:

Try to determine why the SOLVE address space is short on storage.

N10J02

PPO EVENT NAME LIMIT EXCEEDED, REQUEST REJECTED.

Reason:

A limit of 256 unique PPO event names exists for the DEFMSG table. You have tried to specify a new name on the DEFMSG EVENTNAME operand but have exceeded the limit.

System Action:

The DEFMSG table entry is not built.

User Action:

Normalize PPO event names to reduce the number of discrete event names. The other attributes of the PPO message may be used by the event listener procedures to achieve greater granularity if required.

N10J03

NPF INITIALIZATION FAILED - CHECK SYSTEM LOG.

Reason:

An attempt was made to issue a DEFMSG command but NPF initialization did not complete successfully.

System Action:

The DEFMSG command is ignored.

User Action:

Look for a message from SOLVE initialization which indicates the reason for initialization failure. This will most likely be an N180xx message. Correct the error and re-start SOLVE.

N10L01

TIMEZONE ADD SUCCESSFUL FOR aaaa

Reason:

A TIMEZONE ADD command has added the named time zone to the TIMEZONE table.

System Action:

None.

User Action:

None.

N10L02

TIMEZONE ADD FOR aaaa FAILED, ALREADY DEFINED

Reason:

The named time zone already exists in the TIMEZONE table.

System Action:

The command is ignored

User Action:

Correct the TIMEZONE name and retry if required.

N10L03

TIMEZONE DELETE SUCCESSFUL FOR aaaa

Reason:

A TIMEZONE DELETE command has removed the named time zone from the TIMEZONE table.

System Action:

None.

User Action:

None.

N10L04

TIMEZONE DELETE FOR aaaa FAILED, NOT DEFINED

Reason:

The named time zone could not be deleted as it does not exist in the TIMEZONE table.

System Action:

The command is ignored

User Action:

Correct the TIMEZONE name and retry if required.

N10L11

INVALID TIMEZONE NAME

Reason:

The time zone name on a TIMEZONE command is not valid. A time zone name must be a 1 to 8 character PDSNAME-format name, except that the values USER and SYSTEM are not accepted.

System Action:

The command is ignored.

User Action:

Correct the time zone name.

N10L12

INVALID TIMEZONE OFFSET

Reason:

The time zone offset on a TIMEZONE command is not valid. A time zone offset must be either 0 or in the format shhmm where s is + or -, hh is an hours value (00 to 23) and mm is a minutes value (00 to 59).

System Action:

The command is ignored.

User Action:

Correct the time zone offset and retry.

N10M01

INSUFFICIENT STORAGE FOR REQUEST.

Reason:

An attempt to start user NCL cputime accounting reporting failed due to insufficient storage being available for work buffers.

System Action:

None.

User Action:

Contact System Administrator.

N10M02

USERACCT COMMAND ACCEPTED.

Reason:

The USERACCT command entered by the user was accepted without any syntax errors.

System Action:

Command processed.

User Action:

None.

N10M03

USERACCT COMMAND OPERAND aaaaaaaaa INVALID OR OUT OF RANGE.

Reason:

An attempt to start user NCL cputime accounting reporting failed because one of the operands had an invalid value. aaaaaaaaaa is operand name.

System Action:

None.

User Action:

Correct and re-submit command.

N10M04

INVALID FROM TIME VALUE SYNTAX.

Reason:

The value used on the FROM= operand on the USERACCT command is invalid syntax for a time value.

System Action:

None.

User Action:

Correct and retry.

N10M05

FROM/INTERVAL OPERANDS INVALID WHEN USERACCT ACTIVE.

Reason:

It is invalid to specify the FROM or INTERVAL operands when user NCL cputime reporting is active.

System Action:

None.

User Action:

Either don't use these operands, or inactivate user NCL cputime accounting using a USERACCT STOP before restarting it.

N10M06

USERACCT PENDING INACTIVATION. WAIT AND RETRY.

Reason:

User NCL cputime accounting reporting was in the process of deactivating when the USERACCT command was entered.

System Action:

None.

User Action:

Wait till user NCL cputime accounting reporting deactivation finishes and retry.

N10M07

SYSTEM CPUTIME ACCOUNTING NOT ACTIVE.

Reason:

The USERACCT START command failed because the system was not started with the system cputime accounting option. (JCL PARM OPT=01).

System Action:

User NCL cputime accounting reporting not started.

User Action:

In order to use the user NCL cputime accounting facility, SOLVE must be re-started with JCL parm OPT=01.

N10M08

USERACCT COMMAND ACCEPTED.

Reason:

The USERACCT command was processed successfully.

System Action:

User NCL cputime accounting reporting commenced if USERACCT START specified. User NCL cputime accounting stopped if USERACCT STOP specified. Also any additional parameters specified (for USERACCT START or USERACCT SET) have been modified and will apply for the next report.

User Action:

None.

N10M09

USERACCT ERROR, INTERVAL MUST BE WHOLE FACTOR OF 24.

Reason:

The USERACCT command failed because an invalid value was specified on the INTERVAL= operand. The INTERVAL operand value must be a whole factor of 24. (i.e. 1,2,3,4,6,8,12 or 24).

System Action:

User NCL cputime accounting reporting not commenced.

User Action:

Correct and re-try.

N10M10

USERACCT START ERROR, ALREADY ACTIVE.

Reason:

The USERACCT command failed because the START operand was used when user NCL cputime reporting was already active.

System Action:

None.

User Action:

Either STOP user NCL cputime reporting in order to re-start it, or use the USERACCT SET option to modify user NCL cputime reporting parameters.

N10M11

USERACCT STOP ERROR, ALREADY INACTIVE.

Reason:

The USERACCT command failed because the STOP operand was used when the user NCL cputime reporting was already inactive.

System Action:

None.

User Action:

To start user NCL cputime reporting, use the USERACCT START operand. To modify user NCL cputime reporting parameters without affecting the current active/inactive status of user NCL cputime reporting, use the USERACCT SET operand.

N10N01

USERACCT SMF WRITE FAILED: INVALID OS OR AUTHORITY.

Reason:

An attempt to produce a user NCL cputime accounting SMF report failed because the system is not authorized to produce SMF reports, or the operating system does not support SMF reporting.

System Action:

User NCL cputime accounting reporting is terminated.

User Action:

Re-start system authorized in order to generate user NCL cputime accounting SMF reports.

N10N02

USERACCT SMF WRITE FAILED: STORAGE ERROR.

Reason:

An attempt to produce a user NCL cputime accounting SMF report failed due to a storage shortage.

System Action:

User NCL cputime accounting reporting is terminated.

User Action:

Contact system administrator.

N10N03

USERACCT SMF WRITE FAILED: SMF NOT ACTIVE.

Reason:

An attempt to produce a user NCL cputime accounting SMF report failed because SMF is inactive.

System Action:

User NCL cputime accounting reporting is terminated.

User Action:

Start SMF and then restart user NCL cputime accounting reporting, using the USERACCT START command.

N10N04

USERACCT SMF WRITE FAILED: INVALID RECORD TYPE.

Reason:

The SMF record id specified for user NCL cputime accounting reporting is invalid.

System Action:

User NCL cputime accounting reporting is terminated.

User Action:

Modify the SMF record id using the USERACCT SMFRECID= operand when re-starting user NCL cputime accounting reporting.

N10N05

USERACCT SMF WRITE FAILED: SMF RETCODE=retcode.

Reason:

An attempt to write a user NCL cputime accounting report to SMF failed in SMF with an SMF return code of retcode.

System Action:

User NCL cputime accounting reporting is terminated.

User Action:

Refer to SMF manual.

N10N06

USER NCL CPUTIME ACCOUNTING SMF REPORT GENERATED.

Reason:

A report containing details of user NCL cputime usage has been written to SMF.

System Action:

User NCL cputime accounting report was generated.

User Action:

None. (Note that SHOW USERACCT will show current status of user NCL cputime reporting, including the SMF record id for user NCL cputime accounting SMF records).

N10T01

ALTLIB COMMAND HAS SET NCL LIBRARY NAME TO: llllllll

Reason:

This message is issued when the ALTLIB SET command is used to alter the NCL library name. The new name is displayed.

System Action:

All following NCL procedure requests for this user session are loaded from the indicated library.

User Action:

None.

N10T02

ALTLIB COMMAND HAS SET PANEL PATH NAME TO: pppppppp

Reason:

This message is issued when the ALTLIB SET command is used to alter the PANEL path name. The new name is displayed.

System Action:

All following PANEL definition requests for this user session are loaded from the indicated library.

User Action:

None.

N10T03

ALTLIB COMMAND HAS RESET NCL LIBRARY AND PANEL PATH

Reason:

This message is issued when the ALTLIB RESET command is used to reset the NCL library name and PANEL path name.

System Action:

All following NCL procedure and PANEL requests for this user session are loaded from the default library/path (normally COMMANDS for NCL and PANELS for Panel requests).

User Action:

None.

N10T80

ALTLIB COMMAND NOT VALID IN THIS ENVIRONMENT

Reason:

This message is issued when the ALTLIB command is issued from an environment where it cannot be used. For example, an EASINET session.

System Action:

The command is ignored.

User Action:

None.

N10V01

DATE AND TIME RESYNCHRONISED WITH SYSTEM, OLD GMT OFFSET: *ooo* NEW GMT OFFSET: *nnn*

Reason:

This message is a response to the SYNCTIME command, and shows that a local time offset change was detected.

The previous offset (in hours and minutes) and new offset are shown.

System Action:

The system uses the new local time offset.

User Action:

None.

N10V02

NO DATE/TIME OFFSET CHANGE DETECTED

Reason:

This message is a response to the SYNCTIME command, and shows that no local time offset change was detected.

The previous offset (in hours and minutes) and new offset are shown.

System Action:

None.

User Action:

None.

N10V03

aaa **IN EFFECT, SYNCTIME COMMAND IGNORED**

Reason:

This message is a response to the SYNCTIME command, and shows that

the command was ignored. Possible reasons are as follows:

- ##TOFF TEST MODE-The ##TOFF command is used to set test mode.
- JCL PARM TZ=*offset*-The TZ JCL parm is specified.
- JCL PARM TZ=GMT-The TZ=GMT JCL parm is specified.

System Action:

None.

User Action:

None.

N10Z01

DDNAME C# #-EXCP T-CONN DSN

Reason:

A heading line for the response to a SHOW IOSTATS command.

System Action:

None.

User Action:

None.

N10Z02

ddname c# #-excp t-conn dsn

Reason:

A detail line for the response to a SHOW IOSTATS command.

The fields are:

ddname

Is the ddname for this file.

c#

Is the relative concatenation number. If *not* a part of a concatenation, the valus is '-'.

#-excp

Is the number of I/O requests to this file (through this allocation).

t-conn

Is the total connect time (seconds.milliseconds).

dsn

Is the data set name (and member name if available).

System Action:

None.

User Action:

None.

N10Z90

SHOW IOSTATS COMMAND NOT SUPPORTED ON THIS OPERATING SYSTEM

Reason:

This message is produced if the SHOW IOSTATS command is issued in an operating system environment that does not support it.
This command is supported on MVS/ESA and OS/390 only.

System Action:

The SHOW IOSTATS command is ignored.

User Action:

None.

N11001

LOCAL TIME: *hh.mm.ss day dd-mon-year yy.ddd shhmm gmt-ind*

Reason:

This is the response to a TIME command and a SYSPARMS TIMEZONE= command. It shows the current time, and the current date in Gregorian and Julian date formats. Also, the system GMT time offset, and if the JCL PARM TZ=GMT is specified, this is indicated with TZ=GMT.

System Action:

None.

User Action:

None.

N11002

GMT TIME: hh.mm.ss day dd-mon-year yy.ddd

Reason:

This is the response to a TIME command and a SYSPARMS TIMEZONE= command. It shows GMT time, and the current date in Gregorian and Julian date formats.

System Action:

None.

User Action:

None.

N11003

USER TIME: *hh.mm.ss day dd-mon-year yy.ddd shhmm name*

Reason:

This is the response to a TIME command. It shows the user time, date, time zone offset and name.

If the user time offset is greater than one day, the offset shown is only the remaining hours, and the message also contains (DAYS: *ddd*) following the offset.

System Action:

None.

User Action:

None.

N11101

FSTOP COMMAND ACKNOWLEDGED.

Reason:

Confirms the acceptance of an FSTOP command.

System Action:

An irreversible system shutdown begins. Logged on users will receive a 10 second warning prior to Shutdown completing.

User Action:

None.

N11102

SYSTEM ALREADY IN SHUTDOWN.

Reason:

A SHUTDOWN command was entered when an earlier one had already been entered.

System Action:

The command is ignored.

User Action:

None.

N11201

MAXIMUM TIMER COMMAND INTERVAL IS 24 HOURS.

Reason:

An EVERY command was entered specifying an interval greater than 24 hours.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N11202

INVALID TIME VALUE SYNTAX.

Reason:

The TIME operand of an AT or EVERY command is invalid or out of range. range.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N11203

REQUIRED OPERANDS HAVE BEEN OMITTED.

Reason:

One or more required operands of an AT or EVERY command has been omitted.

System Action:

The command is ignored.

User Action:

Supply the missing operand(s) and retry.

N11204

COMMAND TEXT HAS NOT BEEN SPECIFIED.

Reason:

The command text for an AT or EVERY command has been omitted.

System Action:

The command is rejected.

User Action:

The command text must be specified as the last operand of an AT or EVERY command. Correct and retry.

N11205

`KEEP' AND `ROUTE' OPERANDS REQUIRE A HIGHER AUTHORITY LEVEL.

Reason:

You are not authorized to use the KEEP or ROUTE operands of the AT and EVERY command.

System Action:

The command is rejected.

User Action:

Contact your systems administrator if you need to use either of these operands.

N11206

COMMAND REJECTED. LIMIT OF nnnnn TIMER BASED COMMANDS REACHED.

Reason:

The system has a limit to the number of timer based commands that may be active concurrently. This limit has been reached.

System Action:

The command is rejected.

User Action:

Retry the command later, when some timer based commands may have been purged. This limit may be increased by your systems administrator if required.

N11207

COMMAND TEXT EXCEEDS MAXIMUM OF 80 CHARACTERS.

Reason:

The command text in an AT or EVERY command may not be longer than 80 characters.

System Action:

The command is rejected.

User Action:

Split the command into multiple commands or abbreviate commands and operands where possible.

N11208

`EVERY' COMMAND MINIMUM REPEAT TIME IS sssss SECONDS.

Reason:

The time interval on an EVERY command may not be less than sssss seconds.

System Action:

The command is ignored.

User Action:

Choose an interval greater than sssss seconds.

N11209

COMMAND ACCEPTED. PURGE ID NUMBER IS ppppp.

Reason:

An AT or EVERY command has been accepted. The purge ID number shown can be used in a subsequent PURGE command to manually terminate the command. This number will also be displayed in the ID field of the SHOW TIMER display.

System Action:

The command is queued for execution at the specified interval.

User Action:

None.

N11210

`AT' COMMAND TIME RANGE IS 00.00.01 TO 24.00.00.

Reason:

An invalid time has been specified in the AT command.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N11212

COMMAND REJECTED. `EVERY' CANNOT BE SOURCED FROM AN `EVERY' COMMAND.

Reason:

Propagation of an `EVERY' timer command is not supported from other `EVERY' commands.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N11213

TIMER TID=aaaa VALUE ALREADY ASSIGNED

Reason:

The user-assigned timer identification (TID=aaaa) is already assigned to another timer command.

System Action:

The command is rejected.

User Action:

Specify a different TID= value and retry.

N11214

***+TIME ONLY VALID ON `AT' COMMAND.**

Reason:

A time offset expression is only valid on an AT command.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N11215

INVALID USERID.

Reason:

The ROUTE= operand on an AT or EVERY command contains invalid characters.

System Action:

The command is ignored.

User Action:

Correct the command and retry.

N11216

`ALL' OR `OWN' ARE NOT VALID FOR ID=

Reason:

ID=ALL or ID=OWN are not valid on an AT or EVERY command.

System Action:

The command is ignored.

User Action:

Specify a correct ID= operand and resubmit the command.

N11217

EVERY 0 REQUIRES A NON-ZERO LIMIT.

Reason:

A repeat timer interval of zero has been specified on an EVERY command but no LIMIT has been specified.

System Action:

The command is rejected.

User Action:

Specify either a limit, or a non-zero repeat interval.

N11301

CURRENT MAXUSERS LIMIT IS aaaa, NUMBER OF USERS IS bbbb.

Reason:

This is the response to a MAXUSERS command with no operands.

System Action:

None.

User Action:

None.

N11302

MAXUSERS LIMIT NOW SET TO nnnn.

Reason:

Confirms that a MAXUSERS command has been processed.

System Action:

The new MAXUSERS limit is now nnnn.

User Action:

None.

N11303

MAXUSERS LIMIT IS INVALID.

Reason:

The MAXUSERS operand specified is not numeric, or is longer than 4 digits.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N11304

MAXUSERS LIMIT EXCEEDS MAXIMUM ACCEPTABLE LIMIT OF xxxx.

Reason:

The MAXUSERS operand specifies a number greater than that allowed.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N11401

KEYWORD NOT RECOGNISED.

Reason:

No operands are expected on the STATUS command.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N11402

SYSTEM STATUS AS ON DDD dd-MMM-yyyy AT hh.mm.ss

Reason:

This is the first message in response to the STATUS command.

DDD Is the abbreviation of the day of the week.

dd Is the number of the day in the month.

MMM Is the abbreviation of the month.

yyyy Is the year.

hh Is the hour in 24-hour format.

mm Is the minute of the hour.

ss Is the second of the minute.

System Action:

None.

User Action:

None.

N11403

NUMBER OF USERS LOGGED ON IS nnnn.

Reason:

Part of the STATUS display. Indicates the number of users logged on to SOLVE.

System Action:

None.

User Action:

None.

N11404

VTAM PPO ACB IS OPEN.

Reason:

Part of the STATUS display. Indicates that SOLVE's PPO ACB is open, and that SOLVE will receive unsolicited VTAM messages.

System Action:

None.

User Action:

None.

N11405

PPO START COMMAND HAS NOT BEEN ENTERED.

Reason:

Part of the STATUS display. Indicates that SOLVE's PPO ACB is not open, or a PPO START command has been issued but an error was encountered and the ACB was not opened.

System Action:

None.

User Action:

Issue a PPO START command if SOLVE is to receive unsolicited VTAM messages.

N11406

SYSTEM SHUTDOWN IS IN PROGRESS.

Reason:

Part of the STATUS display. A SHUTDOWN or FSTOP command has been entered.

System Action:

SOLVE is in the process of terminating.

User Action:

None.

N11407

NUMBER OF USERS RECEIVING PPO MESSAGES IS nnnn.

Reason:

Part of the STATUS display. Indicates the number of logged-on users eligible to receive unsolicited VTAM messages.

System Action:

None.

User Action:

None.

N11408

SYSTEM DOMAIN ID: *aaaa* SYSTEM USER PREFIX: *bbbb*

Reason:

Part of the STATUS display. The domain ID is specified on the NMDID initialization parameter and must be unique in a network of connected SOLVE systems. The SOLVE System User Prefix is a 1 to 4-character value that forms the prefix for all system users, for example, BLOG, BMON. This value is specified on the NMSUP initialization parameter and if omitted defaults to the NMDID value.

System Action:

None.

User Action:

None.

N11409

SYSTEM ID: P1 JOBNAME 2

Reason:

Part of the display resulting from a STATUS command. *P1* is the local identifier of this region, as defined by the SYSPARMS ID= parameter at system initialization. The started task/job name is shown (*P2*) where available. If not available, for example before the VTAM interface is available, *N/A* is shown.

System Action:

None

User Action:

None

N11410

nnnn REMOTE LINK(S) ACTIVE, mmmm INACTIVE.

Reason:

Part of the display resulting from a STATUS command, this indicates the number of active (nnnn) or inactive (mmmm) links that exist from this SOLVE system to remote SOLVE systems.

System Action:

None.

User Action:

Use the SHOW LINKS command for detailed information on the status of the individual links.

N11411

NETWORK PARTITIONING FOR UNSOLICITED MESSAGES HAS BEEN DISABLED.

Reason:

An error during system initialization has caused NPF message partitioning to be disabled. Users will be treated as though no NPF message member has been defined for their userids.

System Action:

None.

User Action:

Refer to the system activity log for details of the error that occurred. Correct the error and restart the system.

N11412

aaaPROC procname IS (NOT) LOADED.

Reason:

Gives the name of the current PPOPROC, CNMPROC or LOGPROC NCL procedure and whether it is executing.

System Action:

None.

User Action:

None.

N11413

END

Reason:

Denotes the end of the STATUS display.

System Action:

None.

User Action:

None.

N11414

SYSTEM CONFIGURED WITH P1 P2 - P3 P4

Reason:

This region includes the displayed product feature.

P1 is the product feature name key. The key is in a PROD statement in the RUNSYSIN member.

P2 shows the product LMP code (if applicable).

P3 is the product feature release.

P4 is the service pack (if applied).

System Action:

None.

User Action:

If a required product is not indicated by one of these messages, add its product name key in a PROD statement in the RUNSYSIN member.

N11415

EASINET FEATURE IS ACTIVE, USING NCL PROCEDURE procname

Reason:

Part of the STATUS display. Indicates that the system is operating with the EASINET feature, and the feature is driven by the NCL procedure procname.

System Action:

None.

User Action:

None.

N11416

SYSTEM BASE IS - P1 P2

Reason:

Part of the STATUS display, this message specifies the current release (*P1*) of the system services base and the service pack (LEVEL *P2*) applied.

System Action:

None.

User Action:

None.

N11417

CPU ACCOUNTING IS ACTIVE P1

Reason:

CPU measurement is active in the region. A SHOW NCL command will return an N11946 message showing the NCL procedure's CPU usage in seconds.
If *P1* is blank, CPU accounting is controlled by the XOPT=CPU statement in the region's RUNSYSIN startup parameters, and it adds to the region's CPU usage.
If *P1* is (HIGH PERFORMANCE), the region is running on at least an IBM z9 system supporting the ECTG machine instruction. CPU accounting is enabled automatically, and it adds little to the region's CPU usage.

System Action:

None.

User Action:

None.

N11418

ACTIVITY LOGGING HALTED

Reason:

Part of the STATUS display. Indicates that logging to the system activity log has terminated. This happens only if I/O errors occur on the activity log. The system should not be run any longer than necessary without logs since no audit trail of system actions will be available.

System Action:

None.

User Action:

Determine the cause of the error that terminated logging.

N11419

LOCAL TIME OFFSET IS shhmm dddd mmmm

Reason:

Part of the STATUS display shows the local time offset in hours and minutes (with a sign indicating ahead (+) or behind (-) GMT/UTC.

If the offset exceeds one day, the offset is only the remaining hours, and the number of days is shown as (DAYS: nnn).

If the region is not operating in normal local time mode, an additional literal indicates the mode as follows:

(JCL TZ=SHHMM) JCL parm TZ=offset was specified

(JCL TZ=GMT) JCL parm TZ=GMT was specified

(##TOFF TEST MODE) The ##TOFF command is in use

System Action:

None.

User Action:

None.

N11420

SYSTEM OPERATING WITH type SECURITY EXIT

Reason:

Part of the STATUS display. Indicates that the system is operating with an installation provided security exit. type indicates the type of exit in use, either PARTIAL or FULL.

System Action:

None.

User Action:

None.

N11421

SYSTEM CONNECTED TO VTAM Va.a.a SSCPNAME=sscpname NETWORK=network

Reason:

Part of the STATUS display. Indicates the VTAM version and release level with which SOLVE is operating, and the SSCPNAME and NETWORK name of the VTAM system.

System Action:

None.

User Action:

None.

N11422

ABEND COMMAND IS SET TO: command-text / IS NOT SET

Reason:

Part of the STATUS display which shows the text of the ABEND command.

System Action:

None.

User Action:

None.

N11423

SPO INTERFACE IS ACTIVE/INACTIVE - DOMAIN=xxxx

Reason:

Part of the STATUS display which shows the status (ACTIVE/INACTIVE) of the VTAM SPO interface. If the status is ACTIVE then the domain ID of the owner of SPO interface is also shown.

System Action:

VTAM commands fail with message N12106.

User Action:

Refer to the user action for message N12106.

N11424

PPO/SPO IN RETRY, VTAM TEMPORARY STORAGE SHORTAGE

Reason:

A shortage of VTAM storage has occurred which has affected the operation of the PPO and/or SPO interface(s).

System Action:

Responses to VTAM commands and/or the processing of unsolicited messages will not be received due to the inactive state of the interface(s). SOLVE will attempt to restart the interface(s) every 5 seconds until a PPO STOP or SPO STOP command is entered or until the storage shortage is relieved.

User Action:

None.

N11425

PRIMARY NAME IS *nnnnnnnn*

Reason:

This message is part of the STATUS display. It indicates the primary name with which the region is operating.

System Action:

None.

User Action:

None.

N11426

SSL PROVIDER IS: *nnnnnnnnnnnnnnn* VERSION IS: *vvvvvvvvvv*

Reason:

This message is part of the STATUS display. It identifies the name and version of the SSL provider used by the region.

System Action:

None.

User Action:

None.

N11427

EXECUTION MODE (REQ ACTUAL): ***rrrr aaaa***

Reason:

This message is produced as part of the response to a STATUS command. It indicates the requested and in-effect execution mode (the requested mode is the mode specified on the *XM=aaaa* JCL parm).

The possible requested mode values are as follows:

N/S-No execution mode was requested.

TASK-Task mode was requested.

ZIIP-zIIP mode was requested.

BEST-The best available mode was requested.

The possible in-effect execution mode values are as follows:

TASK-The region is executing in TASK mode.

ZIIP-The region is executing in SRB mode, possibly utilizing a zIIP if one is available.

System Action:

None.

User Action:

None.

N11428

... FAILURE INFO... ***reas rc subreas desc***

Reason:

This message is produced as part of the response to a STATUS command, when the requested and actual execution modes differ (except when the requested mode is BEST and the actual mode is ZIIP).

The fields in the message are as follows:

reas

A reason code (related to the description)

rc

A system service return code

subreas

A system service reason code

desc

A textual description of the problem:

User Action:

Examine the description to determine why the requested mode was not activated.

N11429

Passwords are p1 Case Sensitive.

Reason:

This message indicates whether passwords are used as entered (case sensitive) or folded to uppercase (when p1 displays NOT).

Passwords are case sensitive if the XOPT JCL parameter of the region specifies the PWMIX option in the dsnpref.rname.TESTEXEC(RUNSYSIN) member. The default is to fold passwords to uppercase.

System Action:

None.

User Action:

To permit mixed case passwords, add PPREF='XOPT=PWMIX' to the RUNSYSIN member.

N11430

SYSTEM WAS INITIALIZED ON aaaa AT bbbb

Reason:

Issued in the group of messages that form the response to the STATUS command. This message displays the date and time that SOLVE completed its initialization.

System Action:

None.

User Action:

None, for information only.

N11431

SYSTEM CPUID ff-iiiiii-mmmm/(UNKNOWN)

Reason:

Displays the *CPUID* returned from the operating system where; ff is the CPU format code; iiiiii is the CPU identification number; mmmm is the CPU model number. If the product is running in an unauthorized environment and the CPUID cannot be determined the text (UNKNOWN) will be displayed.

System Action:

None.

User Action:

N11501

PPO START COMMAND ACCEPTED.

Reason:

Acknowledges a PPO START command.

System Action:

An attempt will be made to open the VTAM PPO ACB, if successful, PPO messages received will be distributed to authorized users. Individual operators that are authorized to receive PPO messages will be notified that the PPO interface is now active.

User Action:

If PPO messages are not required, use the PROFILE PPO=NO command to suppress them from your OCS window.

N11502

PPO STOP COMMAND ACCEPTED.

Reason:

Acknowledges a PPO STOP command.

System Action:

The VTAM PPO ACB will be closed. Each operator that is authorized to receive PPO messages will be notified that the PPO interface has been disabled.

User Action:

None.

N11503

PPO OPERAND INVALID OR MISSING.

Reason:

The PPO command must include either the START or STOP operand.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N11504

PPO ALREADY ACTIVE.

Reason:

A PPO START command was issued when an earlier PPO START command was still in effect.

System Action:

The command is rejected.

User Action:

None.

N11505

PPO NOT ACTIVE.

Reason:

A PPO STOP command was entered but the PPO ACB was not open.

System Action:

The command is rejected.

User Action:

None.

N11506

SPO START COMMAND ACCEPTED.

Reason:

Acknowledges successful completion of the SPO START command.

System Action:

The SPO interface has been started and replies to VTAM commands may now be returned to the users that issued them.

User Action:

None.

N11507

SPO STOP COMMAND ACCEPTED.

Reason:

Acknowledges successful completion of the SPO STOP command.

System Action:

The VTAM SPO interface will cease processing. Replies to VTAM commands will now be lost and will not be returned to the user who issued the command.

User Action:

None.

N11508

SPO OPERAND INVALID OR MISSING.

Reason:

The SPO command must include either the START or STOP operand.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N11509

SPO ALREADY ACTIVE.

Reason:

An SPO START command was issued when the SPO interface was already active.

System Action:

The command is rejected.

User Action:

None.

N11510

SPO NOT ACTIVE.

Reason:

An SPO STOP command was entered but the SPO interface was not active.

System Action:

The command is rejected.

User Action:

None.

N11511

SPO IN RETRY, VTAM SHORT ON STORAGE

Reason:

A VTAM storage shortage has halted operation of the SPO interface.

System Action:

SOLVE will try to restart the SPO interface every 5 seconds until an SPO STOP command is entered or the storage shortage is relieved.

User Action:

None.

N11512

LINK TO REMOTE DOMAIN NOT ACTIVE

Reason:

An attempt was made to redirect SPO commands to a remote domain, however, there is no active link to the remote domain.

System Action:

The SPO start fails.

User Action:

Start a link to the remote domain and reissue SPO START command.

N11513

SPO REDIRECTED TO DOMAIN dddd

Reason:

SPO commands have been redirected to domain dddd .

System Action:

All SPO commands will be routed to the remote domain indicated.

User Action:

None.

N11601

SHUTDOWN COMMAND ACKNOWLEDGED, aaaaa USERS STILL LOGGED ON. bbbbb ACTIVE, ccccc DISCONNECTED

Reason:

A SHUTDOWN command has been entered by an authorized user. If users are still logged on the message indicates the number still active and if any are disconnected.

System Action:

If the message does not indicate users are still logged on then the shutdown sequence has been initiated. Otherwise, further logons are rejected, and the shutdown sequence will start when the last user logs off.

User Action:

If users remain then these may be informed of the shutdown via a broadcast.
If necessary, enter SHUTDOWN CANCEL to reset the pending shutdown, or use the FSTOP command to shut down the system immediately.

N11602

SHUTDOWN NOT IN PROGRESS.

Reason:

A SHUTDOWN CANCEL command was entered, but no SHUTDOWN command had been entered earlier.

System Action:

The command is rejected.

User Action:

None.

N11603

SHUTDOWN NO LONGER IN EFFECT.

Reason:

A SHUTDOWN CANCEL has been processed successfully.

System Action:

The previous pending shutdown is cancelled.

User Action:

None.

N11604

SHUTDOWN OPERAND NOT RECOGNISED.

Reason:

An invalid operand was specified on a SHUTDOWN command.

System Action:

The command is rejected.

User Action:

None.

N11605

TOO LATE TO CANCEL SHUTDOWN.

Reason:

A SHUTDOWN CANCEL command was entered but system termination had already started.

System Action:

The system will terminate.

User Action:

None.

N11606

SHUTDOWN ALREADY IN EFFECT. aaaaa USERS STILL LOGGED ON. bbbbb ACTIVE, ccccc DISCONNECTED

Reason:

A SHUTDOWN command has been entered and shutdown processing is already in effect. The message also indicates the number of currently logged on users of which 'bbbbb' are active and 'ccccc' are disconnected.

System Action:

None.

User Action:

The shutdown can be cancelled with a SHUTDOWN CANCEL command or you can immediately terminate the system with an FSTOP command. You may also wish to notify the users via broadcast etc.. that a shutdown is pending.

N11701

***** P1 SHUTDOWN IN PROGRESS P2 *****

Reason:

This message is written to the system console at the beginning of the product's termination. *P1* is the product name and *P2* is the system name as set by the PRI= initialization parameter.

System Action:

System shutdown processing begins.

User Action:

Logoff from the system if you are logged on.

N11702

***** P1 SHUTDOWN COMPLETE P2 *****

Reason:

This message is written to the system console at the completion of the product's termination. *P1* is the product name and *P2* is the system name as set by the PRI= initialization parameter.

System Action:

The job terminates.

User Action:

None

N11801

The command is rejected.

User Action:

Correct and re-enter.

N11808

NON-PATH LOGONS TO applname SUSPENDED/ACTIVATED.

Reason:

One of the messages issued as a result of an ACTLOGON or SUSLOGON APPL=applname.

System Action:

SOLVE has taken the specified action to either allow or prevent all logon attempts to this application through the EASINET.

User Action:

None.

N11809

LOGON PATH pathname IS NOT DEFINED.

Reason:

The INPUT= operand of a SUSLOGON, ACTLOGON or DELLOGON command specified an undefined LOGON entry.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N11810

INSUFFICIENT STORAGE

Reason:

The DEFLOGON or REPLOGON command could not be processed because of storage shortage.

System Action:

The command is rejected.

User Action:

Retry.

N11811

MUTUALLY EXCLUSIVE OR DUPLICATED OPERANDS - aaaa

Reason:

An ACTLOGON, DEFLOGON, DELLOGON, REPLOGON or SUSLOGON command has been issued with conflicting or duplicated operands, aaaa.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N11812

LOGON PATH REMAINS SUSPENDED.

Reason:

A REPLOGON command has been successfully processed for a logon path which was previously suspended by a SUSLOGON command. The logon path remains suspended.

System Action:

None, for information only.

User Action:

If the path is to be activated also, issue the ACTLOGON command.

N11814

LOGON PATH pathname ALREADY EXISTS. DEFLOGON REJECTED.

Reason:

A DEFLOGON command was issued specifying the name of an existing LOGON entry.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N11815

NO LOGON PATHS FOUND WITH APPL=applname

Reason:

A DELLOGON command specified an APPL name for which no DEFLOGON entries have been defined.

System Action:

The command is rejected.

User Action:

Correct the APPL name and retry.

N11816

nnnnnn LOGON PATHS FOR APPL=applname SUSPENDED/DELETED/ACTIVATED.

Reason:

Confirms that the specified number of DEFLOGON entries for application applname have been suspended, deleted or activated, depending upon the command entered.

System Action:

None.

User Action:

None.

N11817

INPUT= OR APPL= NOT SPECIFIED. COMMAND REJECTED.

Reason:

A SUSLOGON, DELLOGON or ACTLOGON command failed to specify either the INPUT or the APPL operand, one of which is required.

System Action:

The command is rejected.

User Action:

Correct and retry.

N11818

SUPPLIED TEXT MORE THAN 50 CHARACTERS. COMMAND REJECTED.

Reason:

The SUSLOGON command TEXT operand may not exceed 50 characters.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N11819

nnnnnn LOGON PATHS SUSPENDED/DELETED/ACTIVATED.

Reason:

Confirms that the specified number of DEFLOGON entries have been suspended, deleted or activated, depending upon the command entered.

System Action:

None.

User Action:

N11918

..... *status nclverb*, STMT/LINE *line-number, text*

Reason:

This message is issued during a SHOW NCL command. An accompanying N11936 message identifies an NCL process. This message indicates the current state of that process. The process may be currently loading a procedure, executing the NCL verb *nclverb* at statement *nnnn*, or executing a command. The 'status' field has the following values:

- PROCESSING indicates that the NCL process is executing and is *not* under the control of the NCL debug facility.
- IN-DEBUG indicates that the NCL process is executing and is under the control of the NCL debug facility.
- SUSPENDED indicates that the NCL process is under control of the NCL debug facility and execution of the process has been suspended due to a user command or a breakpoint being reached.

The text string may contain a number of phrases that further describe the process:

- 'MSGS LOST' indicates that the dependent environment for the process has exceeded message queuing limits resulting in loss of data.
- 'FORCED IDLE' is displayed if the process is in a wait state due to NCL performance controls.
- 'P=*panel-name*' displays the active panel display if the current verb is &PANEL.

System Action:

None.

User Action:

None, or use the GO, END or FLUSH commands to force the NCL procedure to resume or terminate processing. If the procedure is waiting for the completion of &INTREAD, the GO command cannot be used. If the process is in a SUSPENDED state, the DEBUG RESUME command can be used to continue the execution.

N11919

NO GENERAL BROADCAST MESSAGE SET.

Reason:

The response to a SHOW BRO command when no system broadcast is currently set.

System Action:

The response to a SHOW BRO command when a Primary Menu broadcast is set. The broadcast text follows this message.

System Action:

None.

User Action:

None.

N11923

logid status yy.ddd hh.mm.ss yy.ddd hh.mm.ss pages swapped-by

Reason:

Follows message N11924 and gives details of a SHOW LOG command.
logid - JCL DD name of this log.
status - defines the current status of the log. This will be "IN USE", "SWAPPED" or "AVAIL".
yy.ddd hh.mm.ss - date and time logging commenced to this DD.
yy.ddd hh.mm.ss - date and time logging ceased for this DD.
pages - the number of pages printed.
swapped-by - the reason the activity log was swapped. This will be either a USERID if a user entered the LOGSWAP command, "FULL" if the log swapped because the log filled up, or "IO-ERROR" if the log was swapped due to a write failure.

System Action:

None.

User Action:

None.

N11924

-DD- STATUS- ---START TIME-- ---STOP TIME--- PAGES -SWAPPED BY-

Reason:

The title line of the SHOW LOG display.

System Action:

None.

User Action:

None.

N11925

***WARNING* ALL ACTIVITY LOGGING HAS CEASED.**

Reason:

Part of the SHOW LOG display. Issued if all logs have been closed and no logging is taking place. This can normally only happen if an I/O error occurs while logging to the last available log, or if the last available log is full.

System Action:

None.

User Action:

SOLVE should be re-started as soon as possible if logging is necessary.

N11926

PROCESSING ENVIRONMENT IS NOT RUNNING NCL

Reason:

The response to a SHOW NCL/NCLVARS command if your NCL processing region has no active NCL processing running.

System Action:

None.

User Action:

None.

N11928

..... WAITING FOR TEXT/STRING: wait-text

Reason:

The response to a SHOW PAUSE command if the user has an NCL procedure which is paused because of an *WAIT statement.*

System Action:

None.

User Action:

The GO, END or FLUSH commands may be used to resume or terminate execution of the NCL procedure if the waiting text is not expected to arrive.

N11931

..... WAITING ON RETURN FROM USER MODULE module.

Reason:

Issued in response to SHOW PAUSE command when an NCL procedure is suspended pending completion of processing by the module module, invoked by the procedure via an &CALL statement.

System Action:

None.

User Action:

None.

N11932

WAITING FOR LOAD OF NCL PROCEDURE procname TO COMPLETE.

Reason:

Issued in response to a SHOW PAUSE command and indicates that the loading of an NCL procedure is in progress prior to execution. The loading of NCL procedures is performed in conjunction with a subtask that performs the OPEN and CLOSE processing. It is possible that the loading of an NCL procedure could be delayed as a result of interference with the disk sub-system.

System Action:

None.

User Action:

Exiting OCS mode at this point in time will terminate the load process and flush the procedure. Excessive delays may be as a result of RESERVES being placed on the volume on which the NCL library resides. Check if this is the case and if necessary relocate the library to a less active volume.

N11934

..... WAITING ON VSAM I/O - STRING SHORTAGE OR EXCLUSIVE CONTROL.

Reason:

Issued in response to a SHOW PAUSE command and indicates that the user has an NCL procedure waiting for completion of a VSAM I/O operation which has been delayed due to a string shortage or an exclusive control lockout.

System Action:

None.

User Action:

The user may allow the procedure to complete or flush the procedure if desired.

N11936

aaaaaa bbbbbbbb ccccccc dd e fffffff ggggggg hhhhhhhh i j kkkkk

Reason:

The description of an NCL process following the N11935 heading line. The columns line up under the headings in message N11935. Values are:

aaa - The NCL identifier of the process.

bbb - The name of the base procedure in the process.

ccc - The name of the procedure currently executing in the process.

dd - The nesting level of the current procedure.

e - The window in whose NCL processing environment the process is executing. Value is 1 or 2.

fff - The type of process, for example, MSGPROC.

gggg - Typically the user ID that originated the execution of the process. If the NCL procedure was started through the EASINET procedure without effecting a user signon, this value is the LU name of the terminal.

hhhh - The user ID under whose NCL region the process is running.

i - The NCL performance group of the process.

j - The dispatch priority of the process within its performance group.

kkk - The number of NCL processing units that the execution of this process consumes so far.

System Action:

None.

N11950

LUNAME USERID ENV AM AM-INFORMATION

Reason:

A heading line for the response to a SHOW SESS command with extended operands.

System Action:

None.

User Action:

None.

N11951

luname userid env am am-information...

Reason:

A detail line issued in response to a SHOW SESS command. The various fields are as follows:

luname The name of the terminal

userid The userid logged on at this terminal ('-' if none)

env The SOLVE environment type

am The access method used for this terminal; note that 'SYSTEM' means an internal SOLVE access method.

am-information For access methods other than 'SYSTEM', information that is specific to the access method. For example, terminals using VTAM will display the network name and VTAM CID.

System Action:

None.

User Action:

None.

N11952

LISTED aaa SESSIONS FROM A TOTAL OF bbb (ccc ESAINET SESSIONS)

Reason:

This line details the number of sessions listed by a SH SESS command. The total number of sessions listed is shown, as well as the total number of sessions. The number of sessions that are EASINET sessions is also displayed.

System Action:

None.

User Action:

None.

N11980

oooo OPERAND INVALID reason

Reason:

This message is produced in response to a SHOW SESS command with extended operands. It indicates that an operand was in error.

System Action:

The SHOW SESS command is ignored.

User Action:

Correct the operand(s) in error and retry the command.

N11A01

NO OPERANDS SPECIFIED.

Reason:

The ALLOC and UNALLOC commands require one or more operands that have been omitted.

System Action:

The command is rejected.

User Action:

Refer to the description of the ALLOC and UNALLOC commands in the Command Reference.

N11A02

OPERAND aaaaaaaaaa IS INVALID OR IN ERROR.

Reason:

The operand is either unrecognized, or contains invalid syntax.

System Action:

The command is rejected.

User Action:

Refer to the description of the ALLOC and UNALLOC commands in the Command Reference.

N11A03

INSUFFICIENT STORAGE.

Reason:

The ALLOC or UNALLOC command failed due to insufficient storage.

System Action:

The command is rejected.

User Action:

Retry. If problem persists increase region size.

N11A04

INVALID aaaaaaaaaaa

Reason:

The requested suboperand is in error.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N11A05

DUPLICATED OPERANDS.

Reason:

An operand has been specified more than once on an ALLOC command.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N11A06

CONFLICTING OPERANDS.

Reason:

Operands specified are mutually exclusive.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N11A07

UCS NAME REQUIRED WITH "FOLD" OPTION.

Reason:

Use of the FOLD option requires a UCS entry to nominate the universal character set being used.

System Action:

The command is rejected.

User Action:

Include a UCS name and retry.

N11A08

REQUEST ACCEPTED.

Reason:

Confirms that the ALLOCate or UNALLOCate command has been accepted for processing.

System Action:

None.

User Action:

Other messages indicating the success or failure of this processing will follow.

N11A09

DDNAME ddddddd IS RESERVED.

Reason:

An attempt was made to ALLOC or UNALLOC a reserved DDNAME.

System Action:

The command is rejected.

User Action:

SOLVE itself has allocated to it ddnames such as those used for panel libraries, command libraries etc., which are reserved for its use only. Use a DDNAME that is not reserved.

N11A10

DSN OR SYSOUT MUST BE SPECIFIED.

Reason:

An ALLOC command was issued, but no dataset name or sysout class was specified.

System Action:

The command is rejected.

User Action:

The allocate command is used to allocate either a dataset or a sysout dataset. Determine the requirements for the task and re-enter specifying either a sysout class or dataset name.

N11A11

DDNAME ddddddd IS ALREADY IN USE.

Reason:

An attempt was made to issue the allocate command using a DD name previously allocated.

System Action:

The command is rejected.

User Action:

Use a DD name that is not currently being used. The SHOW ALLOC command can be used to display those files SOLVE previously allocated with the ALLOCate command. Other DD names may also be in use that were part of the System Startup JCL.

N11A12

INSUFFICIENT AUTHORITY, FILE NOT SYSOUT.

Reason:

An attempt has been made to change the status (eg. ALLOC, UNALLOC) of a dataset of a format other than SYSOUT and the user has insufficient command authority. Unless changed by your installation, the status of SYSOUT format datasets can be changed by users with a command authority of 0. Changing the status of all other datasets requires a higher command authority, usually authority level 2.

System Action:

The command is rejected.

User Action:

Contact your systems administrator.

N11A13

DESTID NAME REQUIRED WITH USERID OPTION.

Reason:

Use of the USERID option requires a DESTID to nominate the destination node where the userid is defined.

System Action:

The command is rejected.

User Action:

Include a DESTID and retry.

N11B02

TERMINAL ~P1 LOCKED BY TIME OUT

Reason:

The specified terminal has been locked due to an inactivity timeout.

System Action:

The lock panel is displayed until the users password is entered.

User Action:

Enter your password to resume your work.

N11B03

PROCESSING COMPLETE

Reason:

Confirms that the TERMINAL command has been accepted.

System Action:

None.

User Action:

None.

N11B04

TERMINAL ~P1 LOCKED BY USER ~P2

Reason:

The specified terminal has been locked by the user issuing the LOCK command.

System Action:

The lock panel is displayed.

User Action:

Enter your password to unlock the terminal and resume your work.

N11B05

REGION NOT VALID FOR LOCK

Reason:

The LOCK command has been issued to lock a terminal, but the terminal is not valid for LOCK processing. Only LU1 and LU2 devices which have a signed-on user may be locked.

System Action:

The LOCK command is rejected.

User Action:

None.

N11B06

LOCK ALREADY IN PROGRESS

Reason:

The LOCK command has been issued to lock a terminal, but the terminal is already in a locked state.

System Action:

The LOCK command is rejected.

User Action:

None.

N11B08

LOCK BYPASSED DUE TO DISCONNECT

Reason:

The LOCK command has been entered to lock a terminal. The terminal is in a disconnected state, so the LOCK command is invalid and has been rejected.

System Action:

The LOCK command is rejected.

User Action:

None.

N11B10

terminal-type TERMINAL luname IS region-type

Reason:

This message is first line of the response to e TERMINAL command with no operands. It describes the terminal type (VIRTUAL/STD/FJ/FJ3), LU-name and region type (LU1/LU2/BSYS/BMON/ROF/etc).

System Action:

None. More information follows in subsequent messages.

User Action:

None.

N11B11

SCREEN SIZES aa,bb , cc,dd

Reason:

This message is part of the TERMINAL COMMAND device characteristics display, and shows the default (aa,bb) and alternate (cc,dd) screen sizes for the device.

System Action:

None.

User Action:

None.

N11B12

characteristic IS/IS NOT SUPPORTED

Reason:

This message is part of the TERMINAL command device characteristics display and shows which device characteristics (such as color, DBCS support and highlighting) are supported by the terminal.

System Action:

None.

User Action:

None.

N11C01

NO OPERANDS SPECIFIED.

Reason:

The SUBMIT command has been issued without operands.

System Action:

The command is rejected.

User Action:

Refer to the Command Reference for a description of this command.

N11C02

FIRST OPERAND INVALID.

Reason:

The SUBMIT command has been issued but the first operand, which specifies the target of the command, is not valid.

System Action:

The command is rejected.

User Action:

Refer to the Command Reference for a description of this command.

N11C03

NO COMMAND TEXT SUPPLIED.

Reason:

The SUBMIT command has been issued without any command text.

System Action:

The command is rejected.

User Action:

Refer to the Command Reference for a description of this command.

N11C04

COMMAND SUBMITTED TO aaaa REGION/USER userid.

Reason:

The SUBMIT command has been issued successfully to the nominated virtual region or real user for processing.

System Action:

None.

User Action:

None.

N11C05

aaaa REGION NOT ACTIVE.

Reason:

The SUBMIT command has been issued correctly but the target virtual userid is not active and cannot receive the command.

System Action:

The command is rejected.

User Action:

Refer to the Command Reference for a description of this command.

N11C06

USER userid NOT LOGGED ON OR HAS NO OCS WINDOWS.

Reason:

The SUBMIT command has been used with the USER= operand to execute a command in another user's OCS window. The command is rejected because the specified user is not logged on or has no OCS windows.

System Action:

The command is rejected.

User Action:

Ensure the correct userid has been specified.

N11C07

INVALID AUTH PARAMETER.

Reason:

The SUBMIT command was issued with the AUTH parameter but the value specified in the AUTH parameter is not valid or has been omitted.

System Action:

The SUBMIT command is rejected.

User Action:

Correct the AUTH parameter value and retry. The value must be numeric and in the range 0-255.

N11C08

INSUFFICIENT AUTHORITY FOR THE 'USER=' PARAMETER.

Reason:

The SUBMIT command has been entered with the USER= operand but the command authority of the command issuer is not high enough to use the USER= operand.

System Action:

The SUBMIT command is rejected.

User Action:

The authority level required can be set using the SYSPARMS CMDAUTH command. Check with your systems administrator to find out why you do not have sufficient authority.

N11D01

NO OPERANDS SPECIFIED

Reason:

An LUTRACE command was entered without any operands.

System Action:

The command is rejected.

User Action:

Re-enter the command with the appropriate operands.

N11D06

TRACE FOR luname ALREADY ENABLED, START COMMAND IGNORED

Reason:

An LUTRACE command was entered requesting a trace of luname. However, a trace of this LUNAME is already active.

System Action:

The command is ignored.

User Action:

None.

N11D07

TRACE FOR luname NOT ENABLED, STOP COMMAND IGNORED

Reason:

An LUTRACE command was entered requesting that a trace of luname be terminated. However, no trace is currently active for this LUNAME.

System Action:

The command is ignored.

User Action:

None.

N11D08

TRACE FOR luname STARTED, ACTIVATION PENDING

Reason:

An LUTRACE command requesting a trace of luname has been accepted.

System Action:

If the LU is currently in session with SOLVE, a subsequent message will indicate that tracing has started. Otherwise, the request will remain in a pending state until the LU connects.

User Action:

None.

N11D09

TRACE FOR luname ACTIVE, DEVICE IS lutype

Reason:

An LUTRACE command requesting a trace of luname has resulted in the tracing of this LU. lutype indicates the type of LU.

System Action:

Trace messages will be sent to the activity log as traffic occurs on the session.

User Action:

None.

N11D10

luname TYPE=lutype CURRENT MODE DEF SIZE(ccc,ddd) ALT SIZE(eee,fff)

Reason:

A trace of luname is currently active as a result of an LUTRACE command. The device is a 3270-type device, and this message gives the screen dimensions which it is currently utilizing, and any alternate dimensions.

System Action:

None.

User Action:

None.

N11D11

TRACE FOR luname INACTIVE, reason text.

Reason:

LU tracing for the LU 'luname' has been terminated. The reason for the trace to be terminated is given. The LUTRACE STOP command may be used to disable the trace on an LU. LU traces are also terminated when the session between the LU and SOLVE is terminated.

System Action:

Tracing is terminated.

User Action:

None.

N11D12

TRACE FOR luname STOPPED

Reason:

An LUTRACE command requested that a trace of one or more LUs be terminated. This message confirms that the trace of luname has been terminated.

System Action:

Tracing is terminated.

User Action:

None.

N11D13

NO LU TRACES ACTIVE.

Reason:

An LUTRACE command requested that tracing of all LUs be terminated. However, no tracing is currently active.

System Action:

The command is ignored.

User Action:

None.

N11D14

INSUFFICIENT STORAGE TO PROCESS REQUEST

Reason:

There is insufficient storage available to process an LUTRACE command.

System Action:

The command is ignored.

User Action:

If the problem persists, it is possible that the SOLVE partition or region size needs to be increased.

N11E01

ABEND COMMAND HAS BEEN CLEARED

Reason:

This message confirms that the Abend Command has been cleared by the entry of the ABENDCMD command with no message text.

System Action:

The Abend Command is cleared.

User Action:

None.

N11E02

ABEND COMMAND HAS BEEN SET

Reason:

Confirms the successful setting of the Abend Command with the ABENDCMD command. The Abend Command set will be submitted to the operating system if SOLVE terminates abnormally.

System Action:

The text of the Abend Command is set.

User Action:

None.

N11E03

ABEND COMMAND NOT SET, COMMAND TOO LONG

Reason:

An attempt to set the Abend Command was refused because the command text supplied exceeded the maximum acceptable length of 60 characters.

System Action:

The command is rejected.

User Action:

Change the text so that it is not more than 60 characters long.

N11E04

ABEND COMMAND NOT SET, SYSTEM NOT AUTHORISED

Reason:

An attempt to set the Abend Command has been refused because SOLVE does not have APF authorization to issue operating system commands.

System Action:

The command is rejected.

User Action:

If you wish to have an Abend Command, you will need to obtain APF authorization for SOLVE.

N11F11

MUTUALLY EXCLUSIVE OR DUPLICATED OPERANDS - AAAAAAAAAAAAAAAAAAAAAAAAAAAA AAAAAAAAAAAAAAAAAAAA.

Reason:

A DEFLOGON or related command as incorrectly specified the use of the operand supplied in the message text.

System Action:

The command is rejected.

User Action:

Remove or correct the operand in error and retry the command.

N11F17

INPUT= OR APPL= NOT SPECIFIED. COMMAND REJECTED.

Reason:

A DELLOGON, SUSLOGON or ACTLOGON command has been entered without the INPUT= or APPL= operand specified. This is invalid because one of these operands must be entered to identify which logon path is to be the subject of the command.

System Action:

The command is rejected.

User Action:

Specify the INPUT= or APPL= operand and retry.

N12001

NO COMMAND TEXT ENTERED

Reason:

The OPSYS or NOTIFY command was entered without text.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N12002

SYSTEM IS NOT APF AUTHORISED, CANNOT ISSUE COMMAND

Reason:

The OPSYS command may be used only if the region has APF authorization to issue operating system commands.

System Action:

The command is rejected.

User Action:

Refer this message to your systems administrator.

N12003

COMMAND ACCEPTED BY OPERATING SYSTEM

Reason:

An OPSYS or NOTIFY command has been passed to the operating system successfully and been accepted as syntactically correct.

System Action:

None.

User Action:

None.

N12004

COMMAND REJECTED BY OPERATING SYSTEM

Reason:

The text of the OPSYS command was not valid, and has been rejected by the operating system.

System Action:

None.

User Action:

Correct the command being passed and re-enter.

N12005

COMMAND PASSED TO OPERATING SYSTEM

Reason:

The text of an OPSYS command has been passed to the operating system. No information will be available as to whether or not the command passed was valid.

System Action:

None.

User Action:

None.

N12006

COMMAND NOT SUPPORTED UNDER THIS OPERATING SYSTEM

Reason:

The OPSYS command is supported only under MVS or MSP.

System Action:

The command is rejected.

User Action:

None.

N12007

INSUFFICIENT STORAGE TO ISSUE CP COMMAND

Reason:

An OPSYS CP command has failed because SOLVE could not obtain storage to receive the replies.

System Action:

The command is ignored.

User Action:

Investigate why SOLVE has a storage shortage.

N12008

------ text ------

Reason:

This message details one line of the response to an OPSYS CP command. The responses are terminated by message N12009.

System Action:

None.

User Action:

None.

N12009

***END* R(nnn)**

Reason:

The message terminates the responses to an OPSYS CP command. The return code provided by VM/SP (nnn) is shown.

System Action:

None.

User Action:

None.

N12010

CP RESPONSE INCOMPLETE, EXCEEDS 8192 CHARACTERS

Reason:

The total size of the messages provided by VM/SP in response to an OPSYS CP command exceeds 8K. N12008 messages detailing responses up to this point will have been issued prior to this message. Message N12009 is not issued.

System Action:

None.

User Action:

None.

N12011

COMMAND LONGER THAN 126 CHARACTERS

Reason:

The text of the command exceeds 126 characters and has been rejected by the operating system. This applies to MVS and MSP only which place a limit on the size of the (operating system) command. The NOTIFY command is equivalent to an OPSYS SEND command. It is the resultant OPSYS command which is restricted to 126 characters.

System Action:

The command is rejected.

User Action:

Shorten the command being passed and re-enter.

N12101

OPERAND MISSING, INVALID, OR OUT OF RANGE.

Reason:

A VTAM command was entered and a required operand was either missing or incorrect.

System Action:

The command is rejected.

User Action:

Refer to the command description in the Command Reference.

N12104

COMMAND REJECTED, ACCESS TO RESOURCE network.resource IS RESTRICTED.

Reason:

A VTAM VARY, MODIFY or DISPLAY command was issued specifying a network resource which is not within the user's Network Partitions.

System Action:

The command is rejected.

User Action:

Network Partitions define the resources which a user is entitled to reference. If access to the resource is required, the appropriate NPF tables must be available to the user. Refer to the SHOW NPF and SHOW NPTAB commands to determine the resources which you are entitled to reference.

N12105

REPLY COMMAND REJECTED, PPO ACB IS NOT OPEN.

Reason:

A REPLY command was entered but the system is not at present receiving PPO messages.

System Action:

The command is rejected.

User Action:

Issue a PPO START command if required.

N12106

COMMAND NOT ACCEPTED, SPO NOT ACTIVE

Reason:

A VTAM command was issued whilst the Secondary Program Operator (SPO) interface was inactive. The command cannot be processed until the SPO interface is active.

System Action:

The command is rejected.

User Action:

Check that the primary ACB has been defined with the SPO attribute.

Issue the STATUS command and review message N11423. If SPO is defined to run on the local domain use the SPO START command to re-activate SPO.

If SPO has failed due to a VTAM error then review the activity log for instances of message N09B02. Save the details and contact Technical Support.

N12201

SHOW TSO/TSS COMMAND NOT VALID IN THIS SYSTEM

Reason:

A SHOW TSO/TSS command was issued but SOLVE is not running in an operating system under which this command would be meaningful.

System Action:

The command is rejected.

User Action:

None.

N12202

SYSTEM IS NOT APF AUTHORIZED, CANNOT PROCESS COMMAND

Reason:

A SHOW TSO/TSS command cannot be processed unless your product region is authorized.

System Action:

The command is rejected.

User Action:

The product region must be APF authorized.

N12203

USERID NODENAME APPLID TERM ASID PROCNAME

Reason:

The title line of the SHOW TSO/TSS display.

System Action:

None.

User Action:

None.

N12204

nnnnn USER(S) DISPLAYED. mmmmm USERS LOGGED ON, sssss STARTING

Reason:

Part of the SHOW TSO/TSS display, showing the number of users displayed, the number logged on, and the number of `starting' address spaces..

System Action:

None.

User Action:

None.

N12205

TSO/TSS MAXUSERS SET TO nnn

Reason:

Part of the SHOW TSO/TSS display; the current TSO/TSS MAXUSERS value.

System Action:

None.

User Action:

None.

N12206

SHOW COMMAND HAS INVALID FORMAT

Reason:

A SHOW TSO=data command was entered with the supplied data being longer than 8 characters.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N12207

------ -------- ------ ---- ---- --------

Reason:

Underlines N12203.

System Action:

None.

User Action:

None.

N12208

userid node appl term asid procname

Reason:

The detail line of a SHOW TSO/TSS command. Identifies the TSO/TSS userid, the terminal to which the user is logged on (node), the TSO/TSS applid used for their terminal session, the terminal type, the address space ID of the user and their TSO/TSS logon procedure name.

System Action:

None.

User Action:

None.

N12301

MESSAGE DESTINATION AND TEXT OMITTED.

Reason:

The MSG command did not specify a destination for the message text.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N12302

SUPPLIED DESTINATION NAME IS INVALID.

Reason:

The destination name specified in a MSG command is invalid.

System Action:

The command is rejected.

User Action:

Use the SHOW USERS command to determine the names of userids or terminals to which you can send messages. Correct and retry.

N12303

DESTINATION NAME LONGER THAN 8 CHARACTERS.

Reason:

Destination name must be 1 to 8 characters in length.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N12304

MESSAGE TEXT NOT ENTERED.

Reason:

A MSG command was entered with no text.

System Action:

The command is rejected.

User Action:

Correct and re-enter. Text must be separated from destination name by a blank.

N12305

UNABLE TO SEND, USERID OR TERMINAL NOT IN SESSION.

Reason:

The destination of a MSG command is not available.

System Action:

The command is rejected.

User Action:

Use the SHOW OCS command to determine the OCS operators or terminals to which you can send messages. Correct and retry.

N12306

DESTINATION IS NOT IN OPERATOR CONTROL MODE AND CANNOT RECEIVE MSG.

Reason:

The destination of a MSG command cannot receive the message because the user is not at present in Operator Control Mode.

System Action:

The command is rejected.

User Action:

None.

N12307

MESSAGE DISPATCHED TO nnn ENVIRONMENT(S).

Reason:

Confirms that the message from a MSG command has been successfully dispatched.

System Action:

If possible the message will be delivered to an active OCS window, if the OCS window is closed the message will be queued.

User Action:

None.

N12308

MESSAGE SENT TO ALL OCS OPERATORS.

Reason:

A MSG ALL command has been executed.

System Action:

The message will be sent to all operators in OCS mode.

User Action:

None.

N12309

UNABLE TO SEND, xxxxxxxx IS POWERED OFF OR UNAVAILABLE.

Reason:

An attempt was made to send a message to terminal or userid xxxxxxxx using the MSG command, but that terminal is currently either powered off or otherwise unavailable.

System Action:

The message has not been sent.

User Action:

The terminal could be unavailable because it is in 'test' mode or in an SSCP session (SYSREQ pressed), or powered off. Retry later.

N12310

UNABLE TO SEND, xxxxxxxx IS PROFILED TO NOT RECEIVE MSG OUTPUT.

Reason:

An attempt was made to send a message to terminal or userid xxxxxxxx using the MSG command, but that environment has a profile which prevents the message being received.

System Action:

The message has not been sent.

User Action:

None.

N12401

NCL PROCEDURE NOT IN A PAUSE OR WAIT STATE

Reason:

A GO or END command was entered, but the target NCL process is not currently PAUSED.

System Action:

The command is ignored.

User Action:

None.

N12402

FLUSH COMMAND ACCEPTED.

Reason:

A flush command has been entered and accepted.

System Action:

The current NCL procedure is terminated without further processing.

User Action:

None.

N12403

NO USER NCL PROCEDURE EXECUTING

Reason:

A FLUSH command was entered, but there was no EXEC, FSPROC, NCLCHECK, START or LIST in progress to flush.

System Action:

The command is ignored.

User Action:

None.

N12404

aaaa COMMAND INVALID FOR PROCEDURE

Reason:

The command aaaa cannot be issued for the target NCL process.

System Action:

The command is ignored.

User Action:

None.

N12405

NCLID NOT PROCESSING IN aaaa ENVIRONMENT

Reason:

A GO, END, INTQ or FLUSH command was entered, but the target process is not running in the nominated NCL processing environment.

System Action:

The command is ignored.

User Action:

Check that you have specified the correct NCL identifier.

N12406

NCL PROCESS NOT UNIQUELY IDENTIFIED

Reason:

A GO, END, INTQ or FLUSH command was issued without specifying an NCL identifier. More than one NCL process is active in the NCL processing region and an identifier is required.

System Action:

The command is ignored.

User Action:

Specify the identifier of the required target process.

N12407

NO REQUEST TEXT SPECIFIED WITH INTQ COMMAND

Reason:

An INTQ command specified no text to be passed to the target process.

System Action:

The command is ignored.

User Action:

Supply the INTQ text as required.

N12408

Queue limit reached, message discarded

Reason:

An INTQ command was issued to pass a message to an NCL process. The process already had a backlog of messages queued to its &INTREAD queues. No more messages can be queued to the process until the backlog is reduced.

System Action:

User Action:

Establish why there is a backlog of unprocessed messages queued to the

N12409

NCLID SPECIFIED IS INVALID

Reason:

The NCL identifier used to identify an NCL process that is the target of a command is not valid. It should be a number in range 1-999999.

System Action:

The command fails.

User Action:

Correct and retry.

N12410

INVALID OPERANDS DETECTED

Reason:

A FLUSH or END command operand is unrecognized.

System Action:

The command is rejected.

User Action:

Review the command string in error. The ID operand may have been incorrectly specified.

N12411

TYPE OPERAND INVALID. SPECIFY REQ OR RESP

Reason:

An INTQ command was issued which specified an unrecognized value for the TYPE operand.

System Action:

The command is ignored.

User Action:

Correct and retry.

N12412

aaaaaaaa COMMAND NOT SUPPORTED BY OML

Reason:

An END command has been entered, but the target procedure is an OML procedure. OML does not support the use of the END command to terminate

System Action:

User Action:

N12413

NCL PROCEDURE HAS CALLED OML - COMMAND REJECTED

Reason:

An END command has been entered but the target NCL procedure has called an OML procedure. OML does not support the use of the END command to terminate a nesting level.

System Action:

None.

User Action:

None.

N12501

TIMER COMMAND x PURGED, EXECUTION LIMIT REACHED.

Reason:

The TIMER command with the purge ID of x has been automatically purged as the limit specified in the LIMIT operand when the command was defined has been reached.

System Action:

None.

User Action:

The timer command must be re-entered if further execution is required.

N12502

TIMER COMMAND x PURGED, xxxxxx NOT AVAILABLE AS OCS OPERATOR

Reason:

The TIMER command with the purge ID of x has been automatically purged as the specified USERID xxxxxx has exited Operator Control Mode.

System Action:

None.

User Action:

None.

N12601

PURGE OPERAND xxxxxxxx NOT RECOGNISED.

Reason:

The operand xxxxxxxx of the PURGE command is invalid.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N12602

PURGE OPERAND xxx IS INVALID OR OUT OF RANGE - nnnn.

Reason:

The value of the operand xxx in the PURGE TIMER=xxx command is invalid or out of range. The valid operands are OWN, ALL or purge id number (nnnn).

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N12603

REQUIRED OPERANDS HAVE BEEN OMITTED.

Reason:

Operands of the PURGE command that must be entered have been omitted.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N12604

TIMER COMMAND ID nn DOES NOT EXIST.

Reason:

The purge ID number specified in the PURGE command does not exist.

System Action:

The command is rejected.

User Action:

You may have inadvertently specified an incorrect ID number, or the timer command may have already been automatically purged due to its execution limit having been reached. Use the SHOW TIMER command to verify the purge ID, correct the error if necessary, and retry.

N12605

HIGHER AUTHORITY LEVEL IS REQUIRED TO PURGE ANOTHER USER'S COMMAND.

Reason:

You attempted to purge a timer command created by another user. This function requires a higher authority level than you have.

System Action:

The timer command is not purged.

User Action:

Have your authority level increased if it is necessary to perform this function.

N12606

NUMBER OF TIMER COMMANDS PURGED WAS nn.

Reason:

Issued in response to a PURGE TIMER=OWN, ALL or id command.

System Action:

nn timer commands have been purged.

User Action:

None.

N12607

PURGING OF ALL TIMER COMMANDS REQUIRES HIGHER AUTHORITY LEVEL

Reason:

You have entered a PURGE TIMER=ALL command and are not authorized to do so.

System Action:

No timer commands have been purged.

User Action:

Have your authority level increased if it is necessary for you to be able to purge all timer commands.

N12608

TIMER COMMAND ID NUMBER nn PURGED.

Reason:

Issued in response to a PURGE TIMER=nn command.

System Action:

The indicated timer command has been purged.

User Action:

None.

N12609

NO TIMER COMMANDS ACTIVE, PURGE IGNORED.

Reason:

You attempted to purge a timer command, but none are active.

System Action:

The command is rejected.

User Action:

The timer command(s) you were attempting to purge may have already been automatically deleted.

N12610

LOCK REQUEST aaaa NOT FOUND WAITING.

Reason:

The nominated LOCK request either does not exist or is not in a waiting state.

System Action:

The command is rejected.

User Action:

None.

N12611

LOCK REQUEST aaaa WITH TEXT bbbb PURGED

Reason:

The nominated LOCK has been successfully purged.

System Action:

None.

User Action:

None.

N12612

PURGE FOR LOCK aaaa FAILED

Reason:

The PURGE command for the nominated LOCK was not successful in deleting the LOCK.

System Action:

The command fails.

User Action:

Identify the holder(s) of the lock and cancel the associated NCL processes if the LOCK is causing problems to other NCL processes.

N12613

HIGHER AUTHORITY LEVEL IS REQUIRED TO PURGE LOCKS

Reason:

You do not have authority to purge LOCKs.

System Action:

The command is rejected.

User Action:

None.

N12614

HIGHER AUTHORITY LEVEL IS REQUIRED TO PURGE NRD MSGS.

Reason:

A PURGE NRD= command has been issued by a user who does not have a command authority level high enough for the command.

System Action:

The command is ignored.

User Action:

Refer to your systems administrator.

N12615

NRD MESSAGE(S) MATCHING ID: aaaa PURGED.

Reason:

A PURGE NRD= command to purge non-roll delimiter (NRD) messages based on domainid aaaa has been successful.

System Action:

None.

User Action:

None.

N12616

aaaa NRD MESSAGE(S) PURGED.

Reason:

A PURGE NRD= command to purge Non-Roll Delete (NRD) messages based on a time interval has been successful and has deleted aaaa messages.

System Action:

None.

User Action:

None.

N12617

NRD MESSAGES WITH NCLID aaaa PURGED.

Reason:

A PURGE NRD= command to purge non-roll delimiter (NRD) messages based on NCLID aaaa has been successful.

System Action:

None.

User Action:

None.

N12618

APPLSTAT REQUEST FOR applname DOES NOT EXIST.

Reason:

The PURGE command was issued to cause cessation of INQUIRE APPSTAT processing for the nominated application. The application was not subject to APPLSTAT processing. See the SYSPARMS APPLSTAT command and the &APPSTAT NCL verb for more details.

System Action:

The command is rejected.

User Action:

None.

N12619

APPLSTAT REQUEST FOR *aaaaaaaa* PURGED.

Reason:

A PURGE APPLSTAT=*aaaaaaaa* command has been issued to cancel INQUIRE APPSTAT processing for application *aaaaaaaa*. INQUIRE APPSTAT processing has now been terminated for the application.

System Action:

None.

User Action:

None.

If you want to monitor the application status periodically, use the APPLSTAT command to start this monitoring.

N12620

COMMAND REJECTED - VTAM SUPPORT DISABLED.

Reason:

A PURGE APPLSTAT= command has been rejected. The SOLVE system is not running under VTAM, so the APPLSTAT operand is invalid.

System Action:

The PURGE command is rejected.

User Action:

None.

N12701

SHOW OPERAND TIMER=aaaa NOT RECOGNISED.

Reason:

An invalid operand was entered on a SHOW TIMER command.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N12702

NO ACTIVE TIMER COMMANDS IN THE SYSTEM.

Reason:

Issued in response to a SHOW TIMER=ALL command, when no timer commands are active.

System Action:

None.

User Action:

None.

N12703

ID BY INTERVAL -USERID-R LIM CNT K/P EPZFB TID NEXT-LCL

Reason:

This is the heading line for the SHOW TIMER display.

The heading message is followed by pairs of detail lines (N12704 and N12707) for each TIMER command.

ID

Is the timer command purge ID.

BY

Is AT (AT), EV (EVERY), AF (AFTER), or *+ (AT *+interval), indicating the type of timer.

INTERVAL

Is, for EVERY, the repeat frequency, or, for AT, the time of day at which command will next execute. The interval is in the format *hh*.*mm*.*ss*.

If this is an AT timer with TZ=GMT or TZ=UTC, a Z follows the interval (time of day) to indicate that this is the GMT or UTC time.

USERID

Is the user ID under whose control command will be executed. Commands executing under the Background Monitor show a user ID of B/G-MON, and those executing under the Background Logger show a user ID of B/G-LOG. A user ID of STARTUP indicates that the commands are in the NMINIT or NMREADY initialization procedures where no specific user ID is assigned.

R

Displays an asterisk (*) if this timer command was routed to this user ID by the ROUTE operand. This command will not be purged automatically if the user ID is not logged on, unless a limit is specified using the LIMIT operand.

LIMIT

Specifies the number of times the command will be executed before automatic purging takes place. A limit of zero indicates that no limit applies.

CNT

Is the number of times the command has already been executed. This count is not incremented if the timer interval expires and the user ID is not logged on.

K/P

Specifies the value of the KEEP operand if it was entered when the command was created.

NO indicates that no KEEP function is in effect.

MON indicates that if the user ID is not logged on and the timer interval expires, the command will execute under control of the Background Monitor and the results will be routed to all monitor terminals.

LOG indicates that if the user ID is not logged on and the timer interval expires, the command will execute under the control of the Background Logger and the results will be routed to the activity log.

If specified, the KEEP operand takes precedence over the ROUTE operand if the user ID is not logged on.

EPZFB

Displays a set of 1-character flags:

E identifies the environment: P is primary, and C is current.

P displays the Pmsg option: Y is Yes, and N is No.

Z identifies the time zone: L is Local, and U is UTC or GMT.

F displays the FTC (Forward Time Change) option: S is Skip, and T is Trip. A dash (-) indicates that the FTC option is not relevant because the timer was defined with TZ=UTC or TZ=GMT.

B displays the BTC (Backward Time Change) option: S is Skip, and R is Repeat. A dash (-) indicates that the BTC option is not relevant because the timer was defined with TZ=UTC or TZ=GMT.

TID

Is the user assigned timer identification. Purge message is issued when the timer command expires.

NEXT

Is the *local* time at which the timer will pop next. If a backward time change occurs for a timer that has BTC=SKIP, the next logical pop time will be skipped and is indicated by a plus sign (+) following the time.

System Action:

Further display lines follow.

User Action:

Read the display lines that follow.

N12704

id by interval -userid-r lim cnt k/p epzfb tid next-lcl

Reason:

Follows message N12703 and gives details of a timer command. See message N12703 for details. The command or message text is detailed in the following message, N12707.

System Action:

None.

User Action:

None.

N12705

NUMBER OF TIMER COMMANDS DISPLAYED WAS nn.

Reason:

Gives a count of the number of preceding N12704 messages.

System Action:

None.

User Action:

None.

N12706

NO ACTIVE TIMER COMMANDS FOR USERID userid.

Reason:

Issued in response to a SHOW TIMER command, where the default operand of OWN has taken effect, and there are no active timer commands for the user.

System Action:

None.

User Action:

Use the SHOW TIMER=ALL command if timer commands other than those created by this userid are to be displayed.

N12707

CMD/MSG =xxxxxxxxxxxxxxxxxxxxx

Reason:

Follows message N12704 and gives details of the command or message that is associated with a timer command.

System Action:

Command text may wrap to a second line if length exceeds available display space.

User Action:

None.

N12801

INSUFFICIENT AUTHORITY FOR CMDAUTH OPERAND.

Reason:

An attempt was made to change the authority of a command using the SYSPARMS CMDAUTH= command. You do not have authority to do so.

System Action:

The command is rejected.

User Action:

Have your authority level increased if it is necessary to perform this function.

N12802

SYSPARMS OPERAND xxxxxxxx IS INVALID OR OUT OF RANGE.

Reason:

The operand xxxxxxx of the SYSPARMS command has an invalid or out-of- range value.

System Action:

The operand is rejected and processing continues.

User Action:

Correct the invalid value and enter the SYSPARMS command with that operand only.
Notes:
- SYSPARMS UNLOAD, MODDEL, MAPDEL, and MAPRESET have been replaced by the UNLOAD command.
- SYSPARMS PRELOAD, MODLOAD, and MAPLOAD have been replaced by the LOAD command.
- SYSPARMS APPLSTAT has been replaced by the APPLSTAT command.

N12803

NO OPERANDS SPECIFIED.

Reason:

A SYSPARMS command was entered with no operands.

System Action:

The command is rejected.

User Action:

Specify an operand.

N12804

SYSPARMS xxxxxxxx OPERAND ACCEPTED.

Reason:

Issued in response to a SYSPARMS command.

System Action:

The operand is now in effect. A completion message may follow for some operands.

User Action:

None.

N12805

SYSPARMS oprnd OPERAND NOT VALID AFTER INITIALIZATION COMPLETE.

Reason:

Certain operands of the SYSPARMS command may only be used in the NMINIT initialization procedure. One of these, oprnd, has been specified after system initialization.

System Action:

The operand is rejected.

User Action:

If the operand is required, it should be included in a SYSPARMS command in the NMINIT procedure, which is processed before the region initialization is complete.

N12806

UNABLE TO CHANGE ACB NAME - ACB IS CURRENTLY OPEN

Reason:

To change the SOLVE ACB name the ACB must first be closed.

System Action:

None.

User Action:

Close the ACB and retry the command.

N12807

MODCB FOR ACB NAME FAILED, R15=X''XX'', R0=X''XX''.

Reason:

A SYSPARMS PRIACBNM= command has been unsuccessful because a VTAM MODCB macro failed. The R15 and R0 feedback from MODCB is shown.

System Action:

The command is rejected.

User Action:

Refer to the *VTAM Programming* manual, return codes.

N12808

SYSPARMS OPERAND aaaa IS INVALID FOR THIS OPERATING SYSTEM.

Reason:

A SYSPARMS command has been rejected because the specific operand aaaa is not valid for this operating system.

System Action:

The command is ignored.

User Action:

None.

N12809

OPERAND aaaaaaaa IS NO LONGER SUPPORTED - COMMAND IGNORED

Reason:

SYSPARMS operand aaaaaaaa is obsolete.

System Action:

The SYSPARMS command is rejected.

User Action:

None.

N12810

SYSPARM OPERAND P1 REJECTED - SET BY PARAMETER GROUP P2

Reason:

If SYSPARMS SYSPGCHK=YES is specified (by default), all SYSPARMS operands that have been set using a Customizer parameter group can be updated only by using Customizer. You cannot execute SYSPARMS operands using the SYSPARMS command.
A request to set SYSPARMS operand (P1) has failed because it was previously set by execution of the identified parameter group (*P2*) and SYSPARMS SYSPGCHK=YES.

System Action:

The SYSPARMS command is rejected.

User Action:

To maintain integrity, this SYSPARMS operand should be updated using the Customizer parameter group identified.
If this SYSPARMS command was executed in an NCL procedure (either directly or using the &INTCMD verb), update the procedure to remove it. The value must be set by updating and actioning the parameter group. To bypass integrity checking, specify SYSPARMS SYSPGCHK=NO and reissue the (original) SYSPARM. Any SYSPARMS outside of Customizer are not reflected in the parameter group. If you bypass checking, we recommend that you synchronize the system with Customizer as soon as possible.
To synchronize the system: 1. Issue SYSPARMS SYSPGCHK=YES. 2. Update and action the Customizer parameter group.

N12811

INSUFFICIENT STORAGE FOR REQUEST

Reason:

A SYSPARM COMMAND has failed because there is insufficient system storage to process the request.

System Action:

The SYSPARM command fails.

User Action:

Retry the command.
If the problem persists, check storage requirements and increase the region size if necessary.

N12901

NO OCS OPERATORS CURRENTLY ACTIVE.

Reason:

A SHOW OCS command was entered but no users logged on to the system are in Operator Control Mode.

System Action:

None.

User Action:

None.

N12902

-USERID- TERMINAL --------NAME-------- ------LOCATION------ STATUS

Reason:

This message is title line of the SHOW OCS display. The messages following this message supply information about OCS operators.

System Action:

None.

User Action:

None.

N12903

userid termid name location status

Reason:

One of these messages is issued for each user currently logged on in Operator Control Mode. The display lines up under the title line (message N12902). The status (status) displayed may be REMOTE (the user has an ROF session from a remote system), ACTIVE, CLOSED (the user's OCS window is currently closed), or UNAVAIL (the user is logged on but the terminal is powered off).

System Action:

None.

User Action:

None.

N12904

END

Reason:

Signifies the end of the SHOW OCS display.

System Action:

None.

User Action:

None.

N13001

UNABLE TO ACCESS USERID INFORMATION.

Reason:

A PROFILE command was used to change the user's INITCMD, but the user's userid information could not be accessed, either because of an I/O error on the UAMS dataset or because the security exit in use rejected the request to update the userid.

System Action:

The command is rejected.

User Action:

Retry. Report occurrence to the systems administrator if this condition persists.

N13002

INITCMD NOT PERMANENTLY UPDATED.

Reason:

A PROFILE command was used to change the user's INITCMD but the update of the user's userid information failed.

System Action:

The command is rejected.

User Action:

Report the occurrence to the systems administrator for determination of the error cause.

N13003

INSUFFICIENT STORAGE TO COMPLETE REQUEST

Reason:

When calling a security exit to read a UDB insufficient storage was available to create the parameter list for the call.

System Action:

Request fails, system may eventually fall over due to lack of storage.

User Action:

Possibly wait until more storage is available. (if system stays up- system may eventually fall over due to lack of storage).

N13049

CONTAINS THE TEXT OF AN ERROR MESSAGE

Reason:

This message is issued from nm000130 when processing a PROFILE INITCMD.

System Action:

Refer to the embedded message. It may be issued from local UAMS or by a security exit.

User Action:

Determine the origin of the message and refer to that message.

N13101

NO DESTINATION SPECIFIED.

Reason:

A ROUTE command was entered without specifying the destination to which

System Action:

User Action:

Use the SHOW LINKS command to determine the destination name of the system to which the command is to be routed. A link name must be

N13102

NO COMMAND TEXT SPECIFIED.

Reason:

A ROUTE command was entered which did not specify any command text to be routed to the destination SOLVE for execution.

System Action:

The command is rejected.

User Action:

Include some command text on the ROUTE command.

N13103

INSUFFICIENT STORAGE TO PROCESS COMMAND, RETRY.

Reason:

System Action:

User Action:

Retry the command. Notify your Systems Administrator if the condition

N13104

UNABLE TO ROUTE COMMAND, linkname NOT CONNECTED.

Reason:

A ROUTE command specified a destination system to which there is no

System Action:

User Action:

Use the SHOW LINKS command to determine the status of the link to the specified destination, and retry the command when the link is active.

N13105

ROUTE COMMAND SPECIFIES INVALID LINK/DOMAIN/SSCP NAME aaaaaaaa

Reason:

The ROUTE command has been issued with the LINK or DOMAIN or SSCP operand specified but the value of the operand is invalid.

System Action:

The command is rejected.

User Action:

Correct the value of the invalid operand and retry.

N13106

COMMAND NOT VALID FOR ENTRY IN THIS MODE.

Reason:

An attempt has been made to execute a ROUTE command from an environment which does not support ROF connections. ROF connections are only supported from OCS, indirectly through ROF, from background regions (eg. BMON, BSYS, etc) and from &INTCMD environments.

System Action:

The command is rejected.

User Action:

Correct the way in which the ROUTE command is being executed. If the ROUTE command is to be executed from a fullscreen procedure then &INTCMD must be used.

N13107

Unable to route command, ROF outbound queue limit reached

Reason:

A ROUTE command to a remote system failed because the queue of messages already queued to that system for transmission exceeds the system

System Action:

User Action:

Establish whether there is a problem that is causing the backlog of

N13199

WARNING - COMMAND AAAAAAAA TOO LONG FOR INTERNAL BUFFER.

Reason:

A Remote Operator Facility command string exceeds 250 characters and the remote system does not handle commands beyond this limit.

System Action:

The command is truncated at the 250 character limit.

User Action:

Shorten the command string by using abbreviations.

N13201

NON-PATH LOGONS TO APPLICATION applname SUSPENDED.

Reason:

This message is issued in response to a SHOW DEFLOGON command to indicate that SOLVE has processed a SUSLOGON APPL=applname command, and will prevent all logon attempts to this application through the use of either MAI-FS or EASINET.

System Action:

None.

User Action:

None.

N13202

NON-PATH LOGONS TO ALL APPLICATIONS SUSPENDED.

Reason:

This message is issued in response to a SHOW DEFLOGON command to indicate that SOLVE has processed a SUSLOGON APPL=ALL command, and will prevent all logon attempts to any application through the use of either MAI-FS or EASINET.

System Action:

None.

User Action:

None.

N13203

TYPE OPERAND SPECIFIES AN INVALID VALUE.

Reason:

The SHOW DEFLINK command has been entered with an operand other than the TYPE= operand or the TYPE= operand was specified with an invalid value.

System Action:

The command is rejected.

User Action:

Correct and retry.

N13204

NO LOGON PATHS HAVE BEEN DEFINED.

Reason:

A SHOW DEFLOGON command was issued but no logons have been defined to the system.

System Action:

None.

User Action:

If you wish to logon to an external application you will need to use the DEFLOGON command to establish a logon path.

N13205

-INPUT-- OPT --APPL-- --MID-- LOGMODE- MSHR DATA

Reason:

This is the title line of the display resulting from a SHOW DEFLOGON command. The message will be followed by detail lines (N13206 or N13208) each of which may be followed by messages N13207 and/or N13209 if relevant. The display is terminated by message N11907.

System Action:

None.

User Action:

None.

N13206

input opt applid mid logmode data

Reason:

The response to a SHOW DEFLOGON command. One of these lines is displayed for each DEFLOGON entry, and shows the contents of the entry. The fields line up under the title line display N13205.

System Action:

None.

User Action:

None.

N13207

DEFLOGON Description

Reason:

Part of the multiline SHOW DEFLOGON display. Details the DEFLOGON description for the logon path identified in the previous message (N13206 or N13208) only if the description is present.

System Action:

None.

User Action:

None.

N13208

input opt applid mid logmode data

Reason:

This message has the same content as message N13206, but is displayed in high intensity to indicate that its use has been suspended by a SUSLOGON command.

System Action:

None.

User Action:

None.

N13209

SUSLOGON text

Reason:

Part of the multiline SHOW DEFLOGON display. Details the suspended logon text for logon path identified in the previous message (N13208).

System Action:

None.

User Action:

None.

N13210

NO DYNAMIC aaaa LINK DEFINITIONS EXIST

Reason:

A SHOW DEFLINK or SHOW DEFLINK TYPE="aaaa" command was issued but no dynamic link definitions have been defined to the system.

System Action:

None.

User Action:

None.

N13211

--MASK-- ---PREFIX--- MSGID -COLOUR-- HIGHLIGHT RETRY AM

Reason:

This is the title line of the display resulting from a SHOW DEFLINK TYPE=INMC command. It provides a heading or subheading for links defined using a mask.

System Action:

None.

User Action:

None.

N13212

aaaa bbbb cccc dddd eeee ffff gggg

Reason:

This is the detail line of the display resulting from a SHOW DEFLINK or SHOW DEFLINK TYPE=INMC command. One such line is displayed for each dynamic link definition in the system.

aaaa if the heading for this line is message N13211 this field is the mask value for this definition, with asterisks showing wildcard positions. When a remote system attempts to establish a link to this system, the mask value determines whether this dynamic link definition will be used to build the link. For the definition to be selected, the mask value must match the userdata passed on the logon from an NMPC system or the domain-id of the remote host SOLVE system. If the heading for this line is message N13214 this field is the luname of the remote system.
bbbb if the heading for this line is message N13211 this field is the 4-letter prefix which will be concatenated to the VTAM node name of the remote system to give its dynamic link name. If the heading for this line is message N13214 this field is the linkname.
cccc is the msgid which will be assigned to all dynamic links built from this definition.
dddd is the color to be used when displaying messages about any dynamic link built from this definition.
eeee is the highlight type to be used when displaying messages about any dynamic link built from this definition.
ffff is the retry interval (in seconds) to be used when restablishing any dynamic link built from this definition.
gggg is the access method that will be used to establish sessions for this link.

System Action:

None.

User Action:

None.

N13214

-LUNAME- --LINKNAME-- MSGID -COLOUR-- HIGHLIGHT RETRY AM

Reason:

This is a title line of the display resulting from a SHOW DEFLINK or SHOW DEFLINK TYPE=INMC command. It provides a heading or sub-heading for all links defined with an LUNAME operand.

System Action:

None.

User Action:

None.

N13215

-LUNAME- --LINKNAME-- QUAL --OPSET- -COLOUR-- -HIGHL- MON ENV TRC AM

Reason:

This is the title line of the display resulting from a SHOW DEFLINK TYPE=APPC command. It provides a heading or subheading for links defined using an LUNAME.

System Action:

None.

User Action:

None.

N13216

-LUMASK- ---PREFIX--- QUAL --OPSET- -COLOUR-- -HIGHL- MON ENV TRC AM

Reason:

This is the title line of the display resulting from a SHOW DEFLINK TYPE=APPC command. It provides a heading or subheading for links defined using a mask.

System Action:

None.

User Action:

None.

N13217

aaaa bbbb cccc dddd eeee ffff gggg hhhh iiii jjjj

Reason:

This is the detail line of the display resulting from a SHOW DEFLINK TYPE=APPC command. Fields shown relate to the headings provided by message N13215 or N13216 and are as follows:

aaaa the complete luname of the remote end or an luname mask.
bbbb either the linkname (heading is N13215) or a four character prefix (heading is N13216).
cccc the four character qualifier to be used for this destination to qualify transaction identifiers.
dddd the name of the Option Set Control Table entry to be used to determine the options supported by the remote LU.
eeee is the color used when displaying any messages that relate to this link.
ffff is the highlight type used when displaying any messages that relate to this link.
gggg specifies whether or not link messages are to be displayed as monitor messages.
hhhh specifies whether APPC user region creation will be link dependent (ENV) or link independent (GBL) for a given userid.
iiii indicates whether LU 6.2 session tracing is to be used.
jjjj the access method that will be used to initiate sessions.

System Action:

None.

User Action:

None.

N13218

MPREF REFRESH MRESP- LIMIT ACTION NTFY APPST SESS- -MAX- PASSTKT-

Reason:

This message displays the second header line of a SHOW DEFLOGON command. The heading identifies the attributes of a DEFLOGON detailed by an N13219 message.

System Action:

None.

User Action:

For more information, see the online help for the N13219 message.

N13219

P1 P2 P3 P4 P5 P6 P7 P8 P9 P10

Reason:

This message displays the second detail line from a SHOW DEFLOGON command. The following fields relate to the headings provided by the N13218 message:

P1

Is the 1- to 5-character prefix used by MAI-FS as the basis for selecting a pseudo-terminal.

P2

Identifies the function key that is recognized by the application as a request for screen refresh. For example, under CA SOLVE:Access, this key is CLEAR.

P3

Is the BEFORE/AFTER value indicating whether MAI-FS is to propagate responses from the physical terminal or respond before sending the data to the terminal.

P4

Is the time in minutes that is used by MAI-FS to set the period starting from keyboard unlock before MAI-FS initiates a time-out action.

P5

Identifies the time-out action to be taken by MAI-FS:

CC

Cancels the session conditionally.

C

Cancels the session.

EVENT

Issues an Event Distribution Services message.

SE

Invokes the session script in END mode.

SS

Invokes the session script in SKIP mode.

P6

Indicates whether EASINET uses the VTAM third-party notification facility when establishing sessions.

P7

Indicates whether the application's status is queried before establishing sessions (MAI-FS and EASINET).

P8

Is the number of active MAI-FS sessions using this entry.

P9

Is the maximum number of concurrent active sessions.

P10

Is the application name to use when encoding a passTicket. A '-' indicates that a passTicket is not generated.

System Action:

None.

User Action:

None.

N13220

P1

Reason:

This is the third detail line of the display resulting from a SHOW DEFLOGON command. This line shows the session script details (*P1*) and corresponds to the DEFLOGON SCRIPT parameter. The line is only displayed if the SCRIPT parameter is specified.

System Action:

NO EQUATE STRING SPECIFIED.

Reason:

An EQUATE command was entered but no character string to which the command string is to be equated was entered.

System Action:

The command is rejected.

User Action:

Correct and retry the command.

N13302

EQUATE STRING CANNOT EXCEED 8 CHARACTERS.

Reason:

The EQUATE command allows a string of between 1 and 8 characters to be equated to another text string. An EQUATE command has been entered which has attempted to set an equated value for a string of more than 8 characters.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N13303

EQUATE STRING CONTAINS INVALID CHARACTERS

Reason:

An EQUATE string has been entered which attempted to set an equate for a string which is not supported. The equate string may not have a suppression character (-) as the first character and may not contain ampersands (*).*

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N13304

NO EQUATE TEXT SPECIFIED.

Reason:

An EQUATE command was entered specifying an equate string but no text. This form of the EQUATE command is only valid when the EQUATE command is intended to delete an existing EQUATE.

System Action:

The command is rejected.

User Action:

The EQUATE may have already been deleted. If not, some text must be specified on the EQUATE command.

N13305

EQUATE TEXT EXCEEDS MAXIMUM OF 130 CHARACTERS.

Reason:

An EQUATE command has been entered which specifies more than the maximum of 130 characters of text.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N13306

EQUATE STRING xxx DELETED.

Reason:

The EQUATE for string xxx has been deleted by an EQUATE command. There is no longer an equated value for the string xxx.

System Action:

None.

User Action:

None.

N13307

TEXT SET FOR EQUATE STRING xxx.

Reason:

An EQUATE command has been completed successfully. Entry of the string xxx will cause the equated text to be substituted in place of xxx before command execution.

System Action:

None.

User Action:

None.

N13308

GLOBAL EQUATE FOR xxx NULLIFIED FOR LOCAL USE.

Reason:

The specified string, defined as a global or system wide EQUATE value, has been reset for this particular operator window by the entry of an EQUATE command. It remains available for other operator windows that have not also reset it.

System Action:

If the equated string is entered in this environment, the global equated string will not be substituted in its place.

User Action:

None.

N13309

EQUATE TEXT/STRING OF SINGLE `+' IS INVALID.

Reason:

The use of `+' indicates that a blank character is required at the end of the equated text or string, consequently a single `+' is equivalent to equating to a blank, which is invalid.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N13310

EQUATE STRING CONFLICTS WITH AN EXISTING COMMAND.

Reason:

You attempted to define an equate, but the selected equate string exactly matches an existing command. This is invalid after system initialization completes.

System Action:

The command is rejected.

User Action:

Select another string that does not conflict with another command. It is possible to replace an existing command with an equated string if you place the EQUATE command in the NMINIT NCL procedure that is executed automatically during system initialization. Using this technique, you can force an existing command to execute an alternative command or an NCL procedure if required. Another method of executing an NCL procedure in preference to executing a command is using the SYSPARMS CMDREPL command.

N13312

EQUATE STRING IS AMBIGUOUS WITH AN EXISTING COMMAND.

Reason:

You attempted to define an equate, but the selected equate string matches a valid abbreviation for an existing command. This is invalid after system initialization completes.

System Action:

The command is rejected.

User Action:

Select a string that does not conflict with another command.

N13313

GLOBAL EQUATE xxxxxxxx HAS OVER-RIDDEN MATCHING COMMAND.

Reason:

This message is issued when an EQUATE command in either NMINIT or NMREADY has exactly matched an existing SOLVE command and has replaced it. Each time the command is entered it will be translated into the equated string and the equated string will be executed in place of the original command.

System Action:

The equated string replaces the command for all users.

User Action:

If replacement of the command was intended, no action is required. If replacement was not intended, choose an alternative equate. The SHOW EQUATES command will show a TYPE of REPL for any equate that replaces a command. Local equates cannot be used to over-ride REPL equates. An alternative to replacing a command with an NCL procedure is to use the SYSPARMS CMDREPL command.

N13314

EQUATE CONFLICTS WITH FIXED GLOBAL EQUATE.

Reason:

You have defined an equate that matches an equate defined at system initialization, which was given the REPL attribute because it replaced an existing command. An equate that replaces an existing command is classified as fixed and cannot be replaced by a local equate.

System Action:

The command is rejected.

User Action:

Choose an alternative equate string.

N13315

EQUATE COMMAND INVALID FROM THIS ENVIRONMENT.

Reason:

The EQUATE command may only be issued from an OCS environment, such as a logged-on user or a console. It cannot be issued from a system procedure environment. If the EQUATE command is issued using &INTCMD, the EQUATE command applies to the primary environment in which the procedure is executing.

System Action:

The command is rejected.

User Action:

None.

N13433

USER SERVICES PROCEDURE: procname

Reason:

Part of the PROFILE display. Indicates the name of the User Services NCL procedure that will be executed on selection of the User Services option from the SOLVE Primary Menu.

System Action:

None.

User Action:

None.

N13435

(MSGCODE=aa..) CURRENT MESSAGE CODE SETTING IS aa.

Reason:

Part of the PROFILE display. MSGCODE specifies a mask of 2 hexadecimal digits, 00- FF . NCL procedures may specify &WRITE MSGCODE=aa to control delivery of messages. Only if the bits set on the &WRITE statement are also set in the users MSGCODE setting will the message will be written to that users screen.

System Action:

None.

User Action:

None.

N13441

(CMDSEP=aaa..) SEMI-COLONS `;' (NOT) RECOGNISED AS COMMAND SEPARATORS

Reason:

Part of the PROFILE display. CMDSEP specifies whether or not semi- colons may be used to separate multiple commands entered on the command line.

System Action:

None.

User Action:

None.

N13442

(NCLTEST=YES.) NCL PROCEDURES WILL BE LOADED FOR PRIVATE USE or (NCLTEST=NO..) NCL PROCEDURES MAY BE SHARED WITH OTHER USERS

Reason:

Part of the PROFILE display. NCLTEST specifies whether preloaded, autoshared, or retained NCL procedures can be used by this NCL environment. NO indicates they can be used (not test mode). YES indicates a private copy of an NCL procedure will always be used, and that this copy will never be autoshared or retained.

System Action:

None.

User Action:

None.

N13443

(PREFSYS=YES/NO...) MESSAGES WILL/WILL NOT HAVE ORIGIN SYSTEM ID PREFIX

Reason:

This message is part of the PROFILE display. It tells you whether or not all messages, including those from your local system, will be prefixed by the originating system id when displayed in this environment.

System Action:

None.

User Action:

None.

N13444

(MSG=YES/NO....) MSG COMMAND OUTPUT WILL/WILL NOT BE RECEIVED

Reason:

This message is part of the PROFILE display. It tells you whether or not this environment is to receive messages generated by the MSG command.

System Action:

None.

User Action:

None.

N13445

(UNSOL=YES/NO...) UNSOLICITED MESSAGES WILL/WILL NOT BE RECEIVED

Reason:

This message is part of the PROFILE display. It tells you whether or not unsolicited messages (PPO, AOM, monitor messages, broadcasts, etc) will be displayed in this environment. If UNSOL=YES, then unsolicited messages will be received as determined by individual message category options (such as PPOMSG=YES/NO). UNSOL=NO overrides 'YES' settings for individual message categories.

System Action:

None.

User Action:

None.

N13446

(EXIT=xxx....) OCS EXIT (NOT) PREVENTED WHILST NCL PROCESSES ACTIVE

Reason:

Part of the PROFILE command display. This message indicates the setting of the EXIT option for Operator Console Services. xxx indicates whether OCS allows termination whilst NCL processes remain active. Values are:
YES - OCS termination proceeds.
NCL processes are flushed.
NO - OCS termination is prevented when NCL processes are active.
WARN - A warning message is issued if NCL processes are active. A subsequent termination request without further command input will exit OCS.
An N23001 message is issued if OCS termination is prevented.

System Action:

None.

User Action:

None.

N13447

(INDENT=nn...) MULTI-LINE MESSAGES WILL/WILL NOT BE INDENTED.

Reason:

Part of the PROFILE list display, which supplies the current multi-line message indentation factor, nn. Messages to an OCS screen which are split over more than one line will have all lines other than the first indented by nn columns.

System Action:

None.

User Action:

None.

N13450

PANEL SERVICES PATH NAME: pathname

Reason:

Part of the PROFILE list display, which supplies the Library Services Path name which is used to locate all Panels used by NCL procedures executing in this environment.

System Action:

None.

User Action:

None.

N13451

nn/NO EDS PROFILES ACTIVE IN ENVIRONMENT.

Reason:

Part of the PROFILE list display, which shows the number nn of Event Distribution Services profiles active in the environment.

System Action:

None.

User Action:

None.

N13452

(NCLUCASE=xxx) NCL PARAMETERS WILL BE yyyyy CASE.

Reason:

This message is issued in response to a PROFILE display command. The NCLUCASE attribute of the Operator Console Service environment is set to either 'YES' or 'NO'. A value of 'YES' indicates that parameters passed to NCL will be uppercased. A value of 'NO' can be used to pass parameters as entered in the OCS command line.

System Action:

None.

User Action:

None.

N13453

USER TIMEZONE NAME: *nnn* OFFSET: *shhmm ddd*

Reason:

This message is issued in response to a PROFILE display command. It shows the user time zone name and GMT (UTC) time offset.

Note: A time zone name of SYSTEM means that this user is using the region local time offset.

If the offset is greater than one day, the number of days is shown and the *hhmm* is the remainder.

System Action:

N13501

-STRING- TYPE ---------- EQUATED COMMAND TEXT ----------

Reason:

This is the title line of the SHOW EQUATES display.

System Action:

None.

User Action:

None.

N13502

string type text.....

Reason:

This is an information line from the SHOW EQUATES display. One of these display lines is issued for each equated string available to this operator window. string is the equated string, type signifies whether the value is global (GLBL) and hence available to all users on entry to Operator Control Mode or local (LOCL) to this window only, or has replaced a SOLVE command (REPL). text.... is the text equated to the string.

System Action:

None.

User Action:

Equates with a type of LOCL will be lost when exiting from Operator Control Mode. Equates with a type of GLBL will always be available unless a LOCL equate has been defined to replace the GLBL equate. LOCL equates are only valid for use from the operator window from which they were defined. Equates with a type of REPL have replaced a SOLVE command of the same name and cannot be overlayed or replaced by the definition of a LOCL equate.

N13503

END

Reason:

Signifies the end of the results of a SHOW command.

System Action:

None.

User Action:

None.

N13504

NO EQUATES DEFINED.

Reason:

This message is issued in response to a SHOW EQUATES command if no EQUATE commands have been processed.

System Action:

None.

User Action:

None.

N13505

--LINKNAME-- -STATUS- MODE MSGID --NODE-- TYPE PEER -TIME DIFF-

Reason:

This is the title line of a SHOW LINKS display.

System Action:

None.

User Action:

None.

N13506

linkname status mode msgid node type peer timediff

Reason:

This display line is issued as a result of a SHOW LINK command. One such line is issued for each link that matches the selection criteria on the SHOW LINKS command. Other messages provide the status of each of the link sessions.

linkname is the INMC name by which the remote system is known within the system.

status is the current link status. Possible values are:

- ACTIVE indicates that one or more sessions are open between the two systems, and traffic flows between them.
- PEND-ACT indicates that this system is attempting to contact the remote system.
- STARTING indicates that the two systems have made contact and INMC initialization is underway. This involves a protocol exchange to authorize and aid startup.
- STOPPED indicates that the link between the two systems has been broken by the use of a LINK STOP command.
- FAILED indicates that an error has occurred on one or more of the sessions that comprise the link.
- DISABLED indicates that the link between the two systems has been disabled due to inadequate licensing authorization.

mode is the mode in which the link operates, values being `S' (Simple mode), `P' (Preferential), or `R' (Rotate and Backup').

msgid is the default prefix that is assigned to messages received from the remote system.

node is the network node name of the remote system.

type is the link type, either DYN (dynamic) or STAT (static).

peer describes the remote system as either a HOST or PC.

timediff is the difference between the internal (hardware) clock times on this system and the remote system. The difference is expressed as plus or minus hh:mm:ss.th (relative to this system). This value may not match the apparent difference between the time-of-day clocks on the two systems because time-of-day may be offset from the internal clock values.

System Action:

None.

User Action:

A FAILED link status indicates that an unrecoverable error has occurred on the link. Other log messages provide the failure reason. Report the messages to CA Support.

A DISABLED link status indicates that one or both systems are *not* licensed sufficiently. Report the error to CA Support.

N13507

NO LINKS DEFINED.

Reason:

A SHOW LINKS command was specified but there are no links defined that match the specified name or prefix.

System Action:

None

User Action:

None

N13508

NO USERS LOGGED ON.

Reason:

This message is issued in response to a SHOW USERS display, if there are no users currently logged on to the system.

System Action:

None.

User Action:

None.

N13509

USERID TERMINAL TYPE.

Reason:

This is the title line of the SHOW USERS display.

System Action:

None.

User Action:

None.

N13510

userid terminal type (status)

Reason:

This message forms part of the SHOW USERS display. One of these messages is issued for each user currently logged on to the system.

userid Is the logon user ID. This field is displayed in high intensity for the user that issued the display command.

terminal Is the region name. This is the logical unit name of the terminal at which the user is logged on. A numeric reconnection identifier is displayed for disconnected regions. *REMOTE* is displayed for users logged on from a remote system using ROF. This field is displayed in high intensity for the region that issued the display command.

type Is a mnemonic indicating the type of terminal being used:

AOMP - AOMPROC system procedure region

BAOM - background AOM region

BLOG - background logger region

BMON - background monitor region

BSVR - background server region

BSYS - background system region

CNMP - CNMPROC system procedure region

LOGP - LOGPROC system procedure region

OPER - system console

PPOP - PPOPROC system procedure region

3270 - display terminal (LU-type 2)

LU1 - line mode terminal (LU-type 1)

VDU - display terminal in a Fujitsu system

ROF - remote user (this is followed by the link name for the remote system)

status Contains additional information concerning the user region. The values may indicate the following:

LOCK The region is currently under the control of the LOCK function due to timeout or command.

DISC The region has been detached from the logical terminal due to timeout or the DISCONN command. Additional fields supply the terminal name and time of the disconnection.

TO link The user region has a ROF connection to the remote system named by 'link'.

FROM link The user region is a ROF connection from the remote system named by 'link'.

PENDING A ROF connection has been requested to a system for which the link is not active.

RECOVERY pending automatic recovery.

(U/A) An LUSTAT has been received indicating that the device is unavailable. This generally indicates that the device has been powered off.

System Action:

None.

User Action:

None.

N13511

aaaa USERS LOGGED ON, bbbb DISCONNECTED

Reason:

Issued at the end of a SHOW USERS command. Gives a count of the number of users logged on and the number logged on but currently disconnected.

System Action:

None.

User Action:

None.

N13512

----- -------- ----

Reason:

Provides an underline to the title line of the SHOW USERS display (N13509).

System Action:

None.

User Action:

None.

N13513

type TO linkname (status)

Reason:

Part of the SHOW USERS display, one such message appears for each connection that the user has to a remote SOLVE system. Type is INMC, NVC or APPC. Linkname is the name by which the remote SOLVE was defined in a LINK command and is the name to be used in ROUTE commands to that system. Status will be RECOVERY if the signon has failed at some time in the past owing to LINK failure. The signon will automatically be recovered when the link is re-established. Alternatively, status will be PENDING if a signon command was entered before a link to a remote SOLVE system was established. The signon will automatically complete when the link becomes active.

System Action:

None.

User Action:

None.

N13514

NO MESSAGES REQUIRING REPLIES HAVE BEEN INTERCEPTED.

Reason:

A SHOW REPLIES command was issued but no VTAM messages that require replies are outstanding.

System Action:

None.

User Action:

None.

N13515

TIME- R/# ---------- MESSAGE TEXT ----------

Reason:

The heading line of the SHOW REPLIES display.

System Action:

TIME is the time of day the message was intercepted. R/# is the reply number that will have to be used when replying to the message.

User Action:

See the following N13516 messages.

N13516

HH.MM x## ---------- MESSAGE TEXT ----------

Reason:

The text and receipt time of a VTAM message that requires or required a reply.

System Action:

None.

User Action:

The REPLY command can be used to reply to a message if no reply has already been issued. The reply number is in the format x## where x is the letter `P' or `S' and ## is in the range 00-99. When replying to a message the exact format of the reply number must be used. The P and S is used internally by SOLVE to determine how to return the reply to VTAM. Example: REPLY P00,YES

N13517

NO NCL PROCEDURES PRELOADED OR AUTO-SHARED.

Reason:

A SHOW NCLSTAT command was issued when there were no NCL procedures preloaded or auto-shared.

System Action:

None.

User Action:

User Action:

None.

N13519

NAME STATUS USERS REFCNT STMTS KBYTES LIBRARY AGEUSE/USERID

Reason:

The detail line of a SHOW NCLSTAT display.
NAME - identifies the name of the NCL procedure.
STATUS - states whether the procedure is PRELOADed, AUTO-SHRed, LOADING or P-UNLOAD, RETAINED, CMDREPL, PRIVATE or NCLTEST.
USERS - is the number of users referencing the procedure.
REFCNT - is the number of times this copy of the procedure has been referenced since it was loaded.
STMTS - is the number of statements in the procedure.
KBYTES - is the number of Kilo Bytes the procedure occupies in virtual storage.
LIBRARY - is the procedure's library DD name.
AGEUSE - is used to keep a count of the "age" of the retained procedure. Procedures that have a status of "P-UNLOAD", will be deleted only when the current user count reaches zero, subsequent requests for this procedure will result in a new copy of the procedure being loaded, and as such it is possible to have multiple copies of a procedure in storage at any one time.
USERID - is the userid initiated the procedure with the PRIVATE, LOADING or NCLTEST status (this field replaces AGEUSE).

System Action:

VSAM STATISTICS REQUEST FAILED, DD=ddname

Reason:

A SHOW VSAM command has failed, either due to a lack of storage or a VSAM error.

System Action:

The command is terminated due to error.

User Action:

If the condition persists contact your systems administrator.

N13521

DDNAME FILEID TYPE A/U SM DATA EXT INDX EXT RKP KYL UKY STUS OPTNS

Reason:

The heading in response to a SHOW UDB command. This information can be used to help determine the space requirements for the VFS dataset. It is extracted from the VSAM ACB; therefore, reflects VSAM calculations about the space remaining in the VFS dataset.

DDNAME The JCL DDname associated with this file.
FILEID For UDBs, this is the logical file ID assigned to the UDBCTL OPEN ID= operand. This FILE ID must be used when referring to this file with an NCL statement. For UDBs, a single dash ('-') in this field indicates that no file ID is assigned.
TYPE The type of VSAM datset: BASE (base cluster), AIX (Alternate Index), PATH (path), SYSO (sysout), ESDS or PDS.
A/U The number of active users that have a current logical connection to the file through VFS. This may include NCL procedures such as LOGPROC. It is not possible to logically stop access to a dataset (using the UDBCTL command) unless this number is 0.
SM Maximum strings used by VSAM to service this file. This can be used to tune the dataset.
DATA Percentage utilization of the data portion of the file.
EXT Number of extents used by the data portion of the file.
INDX Percentage utilization of the index portion of the file.
EXT Number of extents used by the index portion of the file.
RKP Relative key position of the dataset.
KYL The length of the key defined for the dataset.
UKY Indicates unique key requirement for alternate indices.
STUS Current file status. Can be SYS (SOLVE system dataset), AVAL (UDB available for use), STOP (UDB logically stopped by a UDBCTL command) or CLSD (UDB is physically closed because it failed to open or because a UDBCTL command closed it).
OPTNS The dataset may be opened with the following options:
R - Opened for reuse
I - Opened for input, updates not allowed
L - Local Shared Resource pool is used for buffers
S - Using Sequential Insert Strategy (SIS)
D - Using deferred writes
F - DBCS=FUJITSU is in effect for this file
N - EXIT=NO is in effect for this file
X - RLS is in effect for this file

System Action:

Multiple message lines (N13522) follow giving specific details.

User Action:

This information should be used only with the knowledge of the constraints of VSAM in calculating available space. The available space is based on control areas that are empty and have never been used. It is possible for a control area to have been used, the records deleted, and the control area to be empty again. VSAM does not classify this control area in its free space calculations; however, this information can be used to determine the largest amount of storage used at any time. When used in conjunction with the number of extents allocated, you should be able to predict when an increase in size is required. VSAM supports a maximum of 123 extents if the volume and/or available dataset permits.

N13522

ddname attributes

Reason:

This message supplies the details for each VFS dataset or UDB as described by message N13521 or N15101.

System Action:

None.

User Action:

Refer to N13521 or N15101 for a description of the contents of the fields in this message.

N13523

SESS#...*xn status mode* AM=*name* KB=*number*

Reason:

Part of the SHOW LINK display. This message is repeated for each active session maintained with the remote system.

Primary sessions are shown with *x* being a fullstop, and *n* being the relative session number, for example, SESS#....3.

Secondary sessions are shown with *x* being the letter S, and *n* being the relative session number. For example, SESS#...S2 (secondary sessions are displayed only if the SHOW LINK command has the DETAIL operand specified).

The *status* indicates the current session state. Values are:

PEND-ACT

The system is attempting to contact the remote system using this session.

ACTIVE

The session between the two systems is open and traffic can flow across it.

QUIESCING

The link between the two systems is being deactivated. The session is being terminated.

STOPPED

The link between the two systems has been broken by the use of a LINK STOP command. No session exists.

DISABLED

This session cannot start and the error is regarded as permanent. When the session was disabled, messages N35004 and N35005 were sent to MONITOR users and the log. See those messages for more information.

The *mode* indicates the session mode (displayed only if the DETAIL operand is specified). Values are:

S

Single-mode primary session.

P

Preferential-mode primary session.

A

Active/Backup mode normal active session.

AB

Active/Backup mode backup session activated when normal active mode session fails or cannot be started.

SE

Secondary session.

The AM=*name* shows the access method that the session is using (if the DETAILS operand is specified).

The KB=*number* shows the number of kilobytes of data that have been sent on this primary session.

System Action:

None.

User Action:

To monitor the status of your session links, enter **/INMC** at the prompt on any panel to display the INMC : Link Status List.

If a session is quiescing, the LINK cannot be restarted until the session terminates.

N13524

TOTALS: STATIC LINKS=stot DYNAMIC LINKS=dtot DYNAMIC LIMIT=dmax

Reason:

This message is the last line of a SHOW LINKS display. It gives the total number of static links defined in the system (stot), the total number of dynamic links in the system (dtot) and the maximum possible dynamic links (dmax), set by sysparm DYNLMAX.

N13526

SOURCE OUTPUT -BYTES -SENDS COMPRESSED -BYTES SUCC% CMPR% TOTL%

Reason:

This is the heading message for a SHOW COMP command. One or more messages N13527 follow which contain values for each of the fields under this heading message, as described here. The SOURCE field specifies the source of the datastreams being compressed - either as MAI or PANEL (internally from SOLVE panels). Two OUTPUT values are shown, the BYTES sent, and SENDS - the number of sends. The COMPRESSED -BYTES field contains the number of bytes compressed. The SUCC% field indicates, as a percentage, how often compression was successful in reducing the output datastream size. The CMPR% indicates, as a percentage, the compression ratio when compression was successful, while TOTL% indicates, as a percentage, the total compression ratio.

N13602

LINK OPERAND xxxx IS INVALID OR OUT OF RANGE.

Reason:

The operand xxxx specified in a LINK command is invalid or is syntactically incorrect.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N13603

REQUEST COMPLETED USING aaaa DEFLINK. LINKNAME=bbbbbbbbbbbb APPL=ccccccc

Reason:

Options for the link bbbbbbbbbbbb started with the LINK START command were obtained from the link definition aaaa.

System Action:

LINK START processing continues.

User Action:

None.

N13604

LINKNAME AND APPLID CLASH WITH aaaa DEFLINK DEFINITIONS.

Reason:

A LINK START command was entered for a linkname which matched a link previously defined using a DEFLINK command and the APPLID for the LINK START was different to that of the DEFLINK definition.

System Action:

The command is rejected.

User Action:

Correct either the linkname or APPLID on the LINK START command, or review the DEFLINK definition.

N13605

RT OPERAND OUT OF RANGE.

Reason:

The RT operand specified on the LINK START command was invalid. The value specified must be in the range 60 to 28800 seconds.

System Action:

The command is rejected.

User Action:

Correct and retry.

N13606

LINK ALREADY DEFINED, EXCESS OPERANDS WILL BE IGNORED.

Reason:

A LINK START=linkname command was entered including one or more definition operands, but the specified link has already been defined. The link will be placed in PEND-ACT status.

System Action:

None.

User Action:

The command will be accepted and this message is issued as a warning only.

N13607

type LINK linkname TO LU luname ALREADY ENABLED, START COMMAND IGNORED.

Reason:

A LINK START=linkname command was entered, but the link to luname is already ACTIVE or in PEND-ACT status.

System Action:

The command is ignored.

User Action:

None.

N13608

START ACCEPTED, LINK FROM systemid TO linkname ACTIVATION PENDING.

Reason:

This message confirms that a LINK START= linkname command has been accepted and that the link between the two SOLVE systems will be activated.

System Action:

None.

User Action:

None.

N13613

LINK START FOR aaaaaaaaaaaa ALREADY IN PROGRESS. REQUEST IGNORED.

Reason:

A request to activate an INMC link was made but the link is either already active or in the process of activating.

System Action:

The request is ignored.

User Action:

None.

N13615

linkname LINK NOT ACTIVE.

Reason:

A LINK STOP= command was entered specifying linkname *linkname*, but the link is not currently active.

System Action:

The command is rejected.

User Action:

Check link name and retry if necessary.

N13616

LINK FROM systemid TO linkname WILL BE QUIESCED AND DISABLED.

Reason:

Confirms that a LINK STOP= command has been accepted. Sessions on the link *linkname* will be closed and the link disabled until a subsequent LINK START= command is entered to re-activate it.

System Action:

De-activation of the link is commenced.

User Action:

None.

N13617

LINK DEFINITION FOR linkname DOES NOT EXIST.

Reason:

A LINK STOP= or LINK RESET= command was entered for link *linkname*, but no definition exists for that linkname.

System Action:

The command is rejected.

User Action:

Correct the linkname and retry.

N13618

LINK START FOR *linkname* ALREADY IN PROGRESS. REQUEST IGNORED.

Reason:

A LINK START command was entered for the *linkname* link, but the link is already the subject of another, currently processing, LINK START request.

System Action:

The command is rejected.

User Action:

Wait for the link to become active before issuing any other commands for it.

N13619

RESET REQUEST ACCEPTED FOR linkname LINK DEFINITION.

Reason:

Confirms that a LINK RESET= command has been accepted for the specified link, and that reset processing will start.

System Action:

Reset processing starts.

User Action:

None.

N13622

LINK NAME linkname INVALID, MATCHES LOCAL ID OF THIS HOST.

Reason:

The link name specified in a LINK command is the same as the name used to identify this SOLVE system, as defined by the SYSPARMS command ID= operand. The same name cannot be used to identify another SOLVE system.

System Action:

The command is rejected.

User Action:

Correct the link name and retry.

N13623

LINK FROM systemid TO linkname HAS BEEN STOPPED.

Reason:

This message confirms successful completion of a LINK STOP= *linkname* command where *linkname* is the link name of a remote SOLVE system and *systemid* is the local ID of this system.

System Action:

None.

User Action:

None.

N13624

LINK SESSIONS FOR linkname STILL QUIESCING AND CANNOT BE RESET.

Reason:

A LINK RESET command has been issued for link *linkname,* but one or more of the VTAM sessions associated with the link is still in the process of stopping. The link cannot be reset until all sessions have stopped. This situation usually occurs during a period of VTAM degradation.

System Action:

The link is not reset.

User Action:

Wait a minute or two and reissue the command.

N13625

APPC LINK START REQUEST ACCEPTED.

Reason:

Confirms that a LINK START=*linkname* command has been accepted.

System Action:

None.

User Action:

None.

N13626

COMMAND REJECTED. TEMPORARY STORAGE SHORTAGE.

Reason:

There was insufficient storage to process a LINK START= command.

System Action:

Command processing terminates.

User Action:

Investigate the storage problem.

N13627

APPC LINK aaaa TO LU bbbb WILL BE cccc AND DEACTIVATED.

Reason:

This message confirms that a LINK STOP= *aaaa* TYPE=APPC command with option *cccc* has been entered and accepted.

System Action:

Link de-activation starts using option *cccc.* For the meaning of the different de-activation options see the Command Reference.

User Action:

None.

N13628

APPC LINK aaaa TO LU bbbb WILL BE FORCE DEACTIVATED.

Reason:

This message confirms that a LINK STOP=aaaa TYPE=APPC FORCE command has been entered and accepted.

System Action:

Link de-activation will commence immediately. All active or pending conversations will be terminated.

User Action:

None.

N13629

APPC LINK aaaa TO LU bbbb cccc DEACTIVATION IN PROGRESS.

Reason:

A LINK STOP=aaaa TYPE=APPC command was entered when link de-activation was already in progress.

System Action:

The system will proceed with link de-activation using the strongest de-activation option cccc specified so far. QUIESCE takes precedence over DRAIN while FORCE takes precedence over both DRAIN and QUIESCE.

User Action:

None.

N13630

APPC LINK *aaaa* TO LU *bbbb* PENDING ACTIVATION, FORCE SCHEDULED.

Reason:

You entered a LINK STOP=*aaaa* TYPE=APPC with the FORCE operand. The link has not completed initialization but the force deactivation is scheduled.

System Action:

None.

User Action:

None.

N13631

TRACING aaaaaaaa FOR APPC LINK bbbbbbbbbbbb TO LU cccccccc.

Reason:

APPC tracing has been started or stopped, as indicated by "aaaaaaaa", for LINK "bbbbbbbbbbbb" to LU "cccccccc".

System Action:

As indicated by message.

User Action:

None.

N13632

APPC LINK aaaaaaaaaaaa NOT FOUND - COMMAND IGNORED.

Reason:

An attempt was made to stop an APPC link but no link by that name was active.

System Action:

The command is ignored.

User Action:

None.

N13633

APPC LINK aaaaaaaaaaaa TO LU bbbbbbbb ACTIVE - STOP REQUIRED.

Reason:

An attempt was made to RESET an APPC link but the link has not yet been stopped.

System Action:

The command is ignored.

User Action:

Issue STOP command to stop APPC link communication.

N13634

APPC LINK aaaaaaaaaaaa TO LU bbbbbbbb CLOSING - RESET SCHEDULED.

Reason:

An attempt was made to RESET an APPC link. The link is in the process of stopping and will be reset when all activity has ceased.

System Action:

Link reset is scheduled.

User Action:

None.

N13635

APPC LINK aaaaaaaaaaaa TO LU bbbbbbbb RESET.

Reason:

An APPC link has been reset after all processing associated with the link has terminated.

System Action:

Link knowledge is removed from memory.

User Action:

None.

N13640

name ACCESS METHOD NOT AVAILABLE

Reason:

A LINK START command was entered with an AM operand that specified an access method that is not available in this SOLVE system

System Action:

The command is rejected.

User Action:

Correct the AM operand.

N13641

name IS AN INVALID OR UNKNOWN ACCESS METHOD NAME

Reason:

A LINK START command was entered with an AM operand that specified an access method that is invalid or unrecognized.

System Action:

The command is rejected.

User Action:

Correct the AM operand.

N13642

LINK START COMMAND NOT SUPPORTED BY name ACCESS METHOD

Reason:

A LINK START command was entered with an AM operand that specified an access method that does not support the LINK command.

System Action:

The command is rejected.

User Action:

Correct the AM operand.

N13643

LINK START OF THIS TYPE NOT SUPPORTED BY name ACCESS METHOD

Reason:

A LINK START command was entered with an AM operand that specified an access method that does not support this type of LINK (APPC or INMC).

System Action:

The command is rejected.

User Action:

Correct the AM operand.

N13644

P1 ACCESS METHOD DISALLOWED IN DOMAIN DEFINITION

Reason:

A LINK START command was entered with an AM operand which was specified as "NO" in the DOMAIN definition.

System Action:

The command is rejected.

User Action:

Correct the AM operand, or reissue the DOMAIN DEFINE command for the link.

N13701

INVALID OPERAND xxxx ENTERED.

Reason:

The only operand allowed in the SIGNON/SIGNOFF command is the linkname of the remote SOLVE system.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N13702

DESTINATION NAME linkname EXCEEDS MAXIMUM LENGTH.

Reason:

The specified link name of a remote SOLVE system exceeded the maximum supported for the operand. A linkname is 1 to 12 characters and a domain specification is 1 to 4 characters.

System Action:

The command is rejected.

User Action:

Correct the command operands and retry.

N13703

DESTINATION NAME OMITTED.

Reason:

The linkname of a remote SOLVE system was omitted from a SIGNON/SIGNOFF command, but is required.

System Action:

The command is rejected.

User Action:

Retry the command with the correct linkname.

N13704

DESTINATION NAME linkname CONTAINS INVALID CHARACTERS.

Reason:

An invalid destination name was specified in a SIGNON/SIGNOFF command.

System Action:

The command is rejected.

User Action:

Retry the command with the correct linkname.

N13705

SIGNON COMPLETE. REGION REFRESHED.

Reason:

Confirms that a SIGNON command without operands has been completed successfully and that the user region authorization has been re-initialized.

System Action:

None.

User Action:

None.

N13707

DESTINATION NAME linkname IS NOT DEFINED.

Reason:

The destination name specified on a SIGNON/SIGNOFF command is not defined to the system as the linkname of a remote SOLVE system.

System Action:

The command is rejected.

User Action:

Retry the command with the correct linkname. If the linkname is correct, a LINK START=linkname command may be required to define the linkname.

N13708

SIGNON TO linkname ALREADY QUEUED.

Reason:

A SIGNON command has been entered but a previous SIGNON command is already queued for the same linkname for the same user.

System Action:

The command is rejected.

User Action:

The existing queued SIGNON will complete when the link to the remote SOLVE system becomes active.

N13709

LINK TO linkname NOT ACTIVE, SIGNON COMMAND PENDING.

Reason:

A valid SIGNON command has been entered but the link to the destination SOLVE system is not yet active. The request is queued and will complete when the link is established.

System Action:

The command is suspended.

User Action:

If the queued SIGNON is no longer required a SIGNOFF command can be used to cancel it.

N13710

SIGNOFF COMPLETE.

Reason:

Confirms successful completion of a SIGNOFF command.

System Action:

None.

User Action:

None.

N13711

NOT SIGNED ON FROM THIS WINDOW.

Reason:

A SIGNOFF command was entered specifying the linkname of a SOLVE system to which the user is not signed on from the window from which the command was entered.

System Action:

The command is rejected.

User Action:

None.

N13712

PENDING SIGNON CANCELLED.

Reason:

A SIGNON command issued earlier, but which has not completed because the link to the remote SOLVE system has not become active, has been cancelled by entry of a SIGNOFF command.

System Action:

None.

User Action:

None.

N13713

DESTINATION NAME aaaaaaaa IS NOT A REMOTE SYSTEM

Reason:

A SIGNON/SIGNOFF command was issued but the destination name specified was the system identifier of the local system.

System Action:

The command is rejected.

User Action:

Retry the command with a remote linkname.

N13714

COMMAND NOT VALID FOR ENTRY IN THIS MODE.

Reason:

An attempt was made to issue the SIGNON or SIGNOFF command from an environment that does not support this command.

System Action:

The command is rejected.

User Action:

Retry from another environment.

N13715

SIGNON FAILED. REFRESH NOT PERFORMED.

Reason:

A SIGNON command has been issued to refresh a current user or background environment. The refresh failed because an error occurred obtaining the security information. If you are using a full security exit, your exit may have issued an error return code for the `return userid information' request. Otherwise, there may be a problem with your UAMS dataset.

System Action:

The environment continues as before. It is not refreshed.

User Action:

For a user environment, refresh can be achieved by LOGOFF/LOGON.

N13716

REGION= OPERAND HAS INVALID VALUE.

Reason:

An invalid value was specified on the REGION= operand on a SIGNON command. Valid values are OWN, ALL or APPC. The default value is REGION=ALL.

System Action:

The command terminates.

User Action:

Correct operand value and retry the command.

N13717

OWNING REGION NOT FOUND FOR USER.

Reason:

An attempt to refresh a user definition using the SIGNON command failed because the users owning environment was not found. Possible causes are because the user was in the middle of logging off, or the user region was terminating for some other reason.

System Action:

The refresh is not performed.

User Action:

Determine the state of the region, if the region still requires a SIGNON, then retry the operation.

N13718

ADDITIONAL OPERANDS INVALID WITH REGION=

Reason:

A SIGNON command using the REGION= operand, had additional operands specified. The REGION= operand is mutually exclusive with all other SIGNON command operands.

System Action:

the command terminates.

User Action:

Correct the problem and retry the operation.

N13750

INSUFFICIENT AUTH FOR OPERAND

Reason:

A SIGNON command was entered but was rejected because one or more operands specified required a higher Command Authority level than that of the user who issued the command.

System Action:

The command is rejected.

User Action:

Retry without the operand(s).

N13801

NO NETWORK PARTITIONS DEFINED FOR THIS USERID.

Reason:

This is the response to a SHOW NPF command if no Network Partitioning for either commands or messages has been defined for this userid. The definition of Network Partitions is a function of UAMS maintenance.

System Action:

None.

User Action:

None.

N13802

NETWORK PARTITION STATUS FOR USERID uuuuuuuu

Reason:

The title line of the SHOW NPF display.

System Action:

None.

User Action:

None.

N13803

RESOURCE TABLE NETWORK STATUS NOW INITIAL-STATUS

Reason:

The display heading line for the SHOW NPF display.

System Action:

None.

User Action:

None.

N13804

resource table network curstat initstat

Reason:

The message is issued in response to the SHOW NPF command. A display line in this format is provided for each NPF table for which this user ID has been defined.

resource is the resource group name that is associated with this NPF table. The resource group name is the first operand on each NPF resource list control member entry.

table refers to resource members in the NPTABLES data set. The table names are specified as part of a RESOURCE LIST control entry with the resource-member=qualifier.tablename operand. It is also the name by which the table can be referenced with the SHOW NPTAB=*tablename* command and the NPTAB command.

network is the qualifier that applies to the NPF resources in the NPF table. For network resources, the qualifier defaults to the network ID in which the domain is executing. The resource qualifiers may be specified as part of a RESOURCE LIST control entry.

*ccurstat*iis the status of the table for this user ID. This status can be ACTIVE if the table is available for use, or INACTIVE if the table is *not* available, either due to the user entering an NPTAB INACT=*tablename* command or the table being specified in the NPF RESOURCE LIST control entry as having an initial status of INACTIVE (for example, NPTAB=*tablename*,I). A status of DELETED means the table was built, but an NPTAB DEL=*tablename* command has since deleted it. After a table has been deleted, it is no longer available to any user that currently references that table. If an NPTAB ADD= command re-adds the deleted table later, users that referenced the table when it was deleted and hence show a status of DELETED must log off and then log on to reinstate the deleted table entry so that the table becomes available. A status of UNAVAIL means that this table is *not* available to this user because of an error when the NPF control member entry was validated or an error in building the table. A corresponding message is written to the log in this case.

initstat is the initial status of the table when the NPF control entry was processed. *initstat* may indicate an error condition that was detected when the NPF control entry was processed.

System Action:

None.

User Action:

None.

N13805

END

Reason:

Designates the end of the SHOW NPF display.

System Action:

None.

User Action:

None.

N13806

NETWORK PARTITIONS CONTAIN ERROR(S). FUNCTION MAY BE RESTRICTED.

Reason:

This message is issued at the end of a SHOW NPF display if one or more of the tables valid for the user contain errors.

System Action:

None.

User Action:

Use the SHOW NPTAB= command to determine the precise reason for the error(s) that exist.

N13807

SHOW OPERAND NOT RECOGNISED.

Reason:

An unidentified operand was specified on a SHOW command.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N13808

NO NETWORK PARTITION TABLES ACTIVE.

Reason:

A SHOW NPTAB command was issued but no NPF tables have been built. NPF tables are either built automatically when a user requiring a particular table logs on, or can be added by the NPTAB ADD= command.

System Action:

None.

User Action:

None.

N13809

NETWORK PARTITIONING FOR UNSOLICITED MESSAGES HAS BEEN DISABLED.

Reason:

The system function that performs Network Partition analysis and routing for unsolicited messages has been disabled because of an earlier error condition. The specific error was recorded on the system activity log under message number N18002. This message indicates that the delivery of unsolicited messages is as though the users logged on had been defined without any NPF message restrictions. The NPF command restriction is still available.

System Action:

None.

User Action:

Analyze the associated log message, and take any corrective action. For assistance, contact CA Support at http://ca.com/support.

N13810

TABLE-NAME ERROR-STATUS

Reason:

The heading line of the SHOW NPTABS display.

System Action:

None.

User Action:

None.

N13811

tablename errstat

Reason:

Information line for the SHOW NPTABS display. This message is issued for each attempt to build an NPF table either by a user requiring the table to logon, or by the entry of an NPTAB ADD= command.
All NPF tables in the system are displayed, not just those in use by this user. Use the SHOW NP command to determine the tables applicable to this user. `tablename` is the name of the table, and`errstat`(if present) is the error that occurred when the table was built.

System Action:

None.

User Action:

More information for certain error conditions can be obtained with the SHOW NPTAB=tablname command.

N13812

REQUESTED TABLE IS INVALID OR NOT ACTIVE.

Reason:

A SHOW NPTAB= command requested a display of an NPF table that has either not been built or has been deleted by an NPTAB DEL= command. It is no longer available.

System Action:

The command is rejected.

User Action:

None.

N13813

REQUESTED TABLE MEMBER NOT FOUND IN LIBRARY DURING BUILD.

Reason:

A SHOW NPTAB= command requested a display of an NPF table that was not found in the NPF library when the build was attempted.

System Action:

The command is rejected.

User Action:

Correct the problem and create the member if necessary. Having created the member, the NPTAB ADD= command can be used to bring the table into effect. Users referencing that table will be immediately affected and need not logoff/logon.

N13814

REQUESTED TABLE MEMBER WAS EMPTY WHEN BUILT.

Reason:

A SHOW NPTAB= command requested a display of an NPF table that exists on the NPF library but is empty. A member that only contains comment cards or blank cards is not classified as empty.

System Action:

The command is rejected as there is nothing to display.

User Action:

None.

N13815

REQUESTED TABLE MEMBER HAD I/O ERROR DURING READ.

Reason:

A SHOW NPTAB= command requested a display of an NPF table, but an I/O error occurred when the table build was attempted.

System Action:

The command is rejected as the table cannot be displayed.

User Action:

Verify that the NPF dataset is not corrupted.

N13816

EXPANSION OF TABLE tablname FOLLOWS:

Reason:

The heading line of a SHOW NPTAB= display. Following this message is a description of the Network Partitioning tables active in the system.

System Action:

None.

User Action:

None.

N13817

t: xxxxxxxx xxxxxxxx xxxxxxxx xxxxxxxx xxxxxxxx

Reason:

Response to a SHOW NPTAB= command. This is an expansion of the NPF table entries for the requested table. Each display line can contain several entries.
The leading A: or R: on the message indicates if the entries on this line are ACCEPT (A:) or REJECT (R:) entries.

ACCEPT entries that match a resource allow access to the resource. REJECT entries that match a resource prohibit access to the resource. (Note that not finding a match in the table results in a REJECT.)

Each entry is displayed in the wildcard format. A question mark in the value indicates a single-character wildcard (that matches any nonblank character). An asterisk in the value indicates a multi-character wildcard (that matches zero or more characters in the value). Other characters match themselves.

For example:
NY* matches resources that start with NY NY?1 matches resources that start with NY, are 4 characters long, and end in 1
*X matches resources that end in X
NOTE: Tables that were coded using the BASIC format used asterisks for both single and end-generic wildcards. These are translated to the new format with question marks and are displayed in the new format. For example, an old-format entry of 'NY*5*' would display as 'NY?4*'.
When a table contains syntax errors, message N13818 is displayed at the point at which the error is detected. Entries for subsequent records following a record containing an error are displayed after the N13818 message that describes the error.

System Action:

None.

User Action:

The SHOW NPTAB= command can be used to determine the particular resources which a user is entitled to reference in VTAM commands if NPF command restriction has been imposed, and/or the VTAM resources for which the user will receive unsolicited network messages if NPF message restriction has been imposed.

N13818

SYNTAX ERROR IN RECORD SEQUENCE NO: xxxxxxxx DATA=yyyyyyyy

Reason:

This message is displayed as part of SHOW NPTAB= command when a syntax error is detected. This message may be preceded and followed by message N13817 which displays those entries which are not in error. When an NPF table is built, the processing for a record stops at the first entry in that record that is in error, and resumes on the following record. This message supplies the record sequence number from columns 73-80 of the record in error and the first 8 bytes of the data where the syntax error was detected.

System Action:

The command is rejected.

User Action:

Correct the record in error, and use the NPTAB REP= command to immediately bring the changes into effect.

N13819

NO VALID TABLE ENTRIES BUILT, NO RESOURCE TABLES WILL BE AVAILABLE.

Reason:

The user's NPF RESOURCE LIST control member contained syntax errors or were empty and the result was that no NPF resource tables are available and no access to any network resource will be allowed.

System Action:

None.

User Action:

Correct the control member(s) and logon again.

N13820

-------- ----- ------- ---------- ----------

Reason:

Provides an underline for the SHOW NPF display.

System Action:

None.

User Action:

None.

N13821

---------- ----------

Reason:

Provides an underline for the SHOW NPTABS display.

System Action:

None.

User Action:

None.

N13822

NPF TABLE tablname EXISTS, BUT DOES NOT CONTAIN ANY TABLE ENTRIES.

Reason:

A SHOW NPTAB=tablname command was issued but the specified NPF table did not contain any valid resource entries or only contained comment cards.

System Action:

None.

User Action:

None.

N13823

NPF type CONTROL MEMBER aaaaaaaa CONTAINS ERRORS.

Reason:

A warning issued after a SHOW NPF display that the specified control member aaaaaaaa contains errors of some sort.

System Action:

None.

User Action:

Correct the control member and logon again. It is most likely that the format of the control statements is incorrect.

N13824

NO RESOURCE TABLE FOUND FOR RESOURCE aaaaaaaa

Reason:

No resource table names match the name operand specified on the SHOW NPF=resource-name command.

System Action:

None.

User Action:

Check the command resource name operand.

N13825

TABLE FORMAT: format

Reason:

Part of the output of a SHOW NPTAB= display. The message indicates if the original table source was in the old format (BASIC), or the new format (ADVANCED).

System Action:

None.

User Action:

None.

N13901

UNABLE TO OPEN LIBRARY ID: xxxxxxxx

Reason:

A SHOW EXEC command failed because the NCL procedure library for DD statement xxxxxxxx could not be opened.

System Action:

The command is rejected.

User Action:

Determine why the dataset failed to open. A corresponding system message will have been written to the system console and log.

N13902

I/O ERROR ON LIBRARY ID: xxxxxxxx.

Reason:

An I/O error occurred during the processing of a SHOW EXEC command. The NCL library involved is associated with DD statement xxxxxxxx . This could occur when a dataset in the concatenation has a larger blocksize than the first dataset in the concatenation for that DD statement.

System Action:

If SHOW EXEC,LIST=FULL or LIST=ALL was specified, the next dataset in the concatenation is listed, otherwise the command is terminated.

User Action:

Report the occurrence to your systems administrator.

N13903

mbrname mbrname mbrname mbrname

Reason:

The information line of the SHOW EXEC command. This line contains the list of member names as requested.

System Action:

None.

User Action:

None.

N13904

***END* -- nnnnn MEMBERS DISPLAYED.**

Reason:

Signifies the end of the SHOW EXEC display and includes the number of members listed in the display.

System Action:

None.

User Action:

None.

N13905

INVALID RANGE SPECIFIED.

Reason:

The SHOW EXEC command requested a range of members to be displayed, but the range given was invalid. The range must be in the format SHOW EXEC,start,end, where start and end must be a string from 1 to 8 characters long and where the end argument must be higher in collating sequence than the start argument.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N13906

INVALID ID= OPERAND SPECIFIED.

Reason:

The SHOW EXEC command can specify the ID of a library whose members are to be displayed. The ID operand specifies the DDNAME of the dataset. If specified, this operand must follow any member name range specification. The syntax of the command is incorrect.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N13907

MEMBERS IN CONCATENATION n

Reason:

An information line of the SHOW EXEC command with LIST=ALL specified. A ddname may consist of several libraries concatenated together, each concatenated library is numbered from 0 upwards. Member names matching the requested specification within this dataset are listed following this message.

System Action:

None.

User Action:

None.

N13908

INVALID LIST= OPERAND SPECIFIED.

Reason:

The LIST= operand of the SHOW EXEC command allows you to display the member names in the FIRST library in the DD statement concatenation, the member names in ALL libraries or a FULL list, including member statistics for all libraries in the concatenation. If you specify LIST=, it must be LIST=FIRST, ALL or FULL.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N13909

name conc# vv.mm created changed size init mod id

Reason:

An information line of the SHOW EXEC command with LIST=FULL specified. name is the member name.
conc# is the concatenation number of the dataset within the ddname. The rest of the line contains ISPF/PDF statistics for the member (if present).
vv the version of the member.
mm the modification level of the member.
created the date (YY/MM/DD) the member was created.
changed the date (YY/MM/DD) and time (hh.mm) the member was last updated.
size the number of records in the member.
init the initial number of records in the member.
mod the number of records modified in the member.
id the userid or jobname which last updated the member.

System Action:

None.

User Action:

None.

N13910

NAME CONC VV.MM CREATED CHANGED SIZE INIT MOD ID

Reason:

A heading line of the SHOW EXEC command with LIST=FULL specified. For more details refer to the description of the N13909 message.

System Action:

None.

User Action:

None.

N13911

INVALID SYNTAX

Reason:

The SHOW EXEC command contained invalid syntax.

System Action:

Command is rejected.

User Action:

Correct and retry.

N13B01

DYNAMIC INMC/NVC/APPC LINK DEFINITION ALREADY EXISTS.

Reason:

A DEFLINK command was entered to add a dynamic link definition, but a definition already exists for the operands specified.

System Action:

The command is rejected.

User Action:

To change a dynamic link definition, use the REPLINK command. Use a `SHOW DEFLINK' command to display current dynamic link definitions.

N13B03

DYNAMIC INMC/NVC/APPC LINK DEFINITION DEFINED/REPLACED.

Reason:

Confirms the successful completion of a DEFLINK or REPLINK command to add or change a dynamic link definition.

System Action:

None.

User Action:

None.

N13B04

DYNAMIC INMC/NVC/APPC LINK DEFINITION DELETED.

Reason:

Confirms the successful completion of a DELLINK command to remove a dynamic link definition.

System Action:

None.

User Action:

None.

N13B05

DYNAMIC INMC/NVC/APPC LINK DEFINITION DOES NOT EXIST.

Reason:

An attempt to delete a dynamic link definition using a DELLINK command has failed because the indicated definition does not exist.

System Action:

The command is rejected.

User Action:

Change the operands and reissue the command. If necessary, use a `SHOW DEFLINK' command to list the current dynamic link definitions.

N13B06

RT OPERAND OUT OF RANGE

Reason:

An attempt to add a dynamic link definition using a DEFLINK command has failed because the retry interval specified on the RT operand was too high or too low. Retry interval must be between 60 seconds and 8 hours.

System Action:

The command is rejected.

User Action:

Change the RT operand to a number between 60 and 28800 and reissue the command.

N13B07

DYNAMIC INMC/NVC/APPC LINKNAME aaaa ALREADY DEFINED FOR LUNAME bbbb.

Reason:

A DEFLINK command was entered to add a dynamic link definition, but the dynamic link was already defined.

System Action:

The command is rejected.

User Action:

Change and retry.

N13B11

INVALID USE OF APPC KEYWORDS ON TYPE=INMC COMMAND.

Reason:

A DEFLINK command was entered to add a dynamic INMC link definition but it included operands which are only valid for DEFLINK TYPE=APPC.

System Action:

The command is rejected.

User Action:

Change the command to remove the APPC operands (or add TYPE=APPC).

N13B12

INVALID USE OF INMC KEYWORDS ON TYPE=APPC COMMAND.

Reason:

A DEFLINK command was entered to add a dynamic APPC link definition but it included operands which are only valid for DEFLINK TYPE=INMC.

System Action:

The command is rejected.

User Action:

Change the command to remove the INMC operands.

N13B20

UNKNOWN ACCESS METHOD: name

Reason:

A DEFLINK or REPLINK command was entered with the AM=name operand. The name supplied is not a recognized access method name

System Action:

The command is rejected.

User Action:

Correct the AM operand value.

N13B21

name ACCESS METHOD NOT AVAILABLE

Reason:

A DEFLINK or REPLINK command was entered with the AM=name operand. The name supplied is a recognized access method, however it is not active in this SOLVE system

System Action:

The command is rejected.

User Action:

Correct the AM operand value.

N13B22

name ACCESS METHOD DOES NOT SUPPORT REQUESTED LINK TYPE

Reason:

A DEFLINK or REPLINK command was entered with the AM=name operand. The name supplied is a recognized active access method, however it does not support the requested link type (APPC or INMC).

System Action:

The command is rejected.

User Action:

Correct the AM operand value.

N13C01

..... NO ACTIVE NCL PROCEDURE

Reason:

This message is the result of a SHOW NCL command. It indicates that an NCL environment exists for which no NCL procedure was active at the time the command was issued, however the environment remains active because it is a registered object server.

System Action:

Information only.

User Action:

N/A

N13C03

COMMAND NOT SUPPORTED - PROCESS HAS ACTIVE OML

Reason:

A SHOW NCLVARS command has been entered to display variables from an active process. The target process has one or more OML procedures active, and OML does not support the SHOW NCLVARS command. Use the NCL DEBUG facility to display variable contents.

System Action:

None.

User Action:

None.

N13C50

NCLID nnnnnn VARIABLE SUMMARY/LIST , CURRENT PROC aaaaaaaa LEV bbbb

Reason:

This message is a heading line issued by a SHOW NCLVARS command. nnnnnn is the NCLID of the target process for which information is being displayed. bbbb is the nesting level of the current procedure aaaaaaaa.

System Action:

None.

User Action:

None.

N13C51

aaaaaaaa bbb ccc dddddd eeeeeeee ffffff gggggggg

Reason:

This is a detail line of the SHOW NCLVARS command summarizing the variable use of an NCL procedure.
aaaaaaaa is the ncl procedure name
bbb is the method level of the procedure
ccc is the nesting level of the procedure
The following fields are provided if LIST=SUMMARY is specified.
dddddd is the count of the number of variables
eeeeeeee is the total number of characters for all variables
ffffff is the average variable size (d/c)
gggggggg is the maximum chain depth

System Action:

None.

User Action:

Use the information to review the storage efficiency of the NCL process displayed. Excessive variable use may cause performance degradation.

N13C52

PROC MLVL LVL < COUNT BYTES AVGE MX-CHAIN >

Reason:

This is a subheading issued by a SHOW NCLVARS command. It is followed by one or more N13C51 messages summarizing the variable use of an NCL process. The first sub-heading is issued if the LIST=SUMMARY operand is specified.

System Action:

None.

User Action:

None.

N13E01

svrtype SERVER.. server-name-attr = server-name

Reason:

This is the first title line of the display resulting from a SHOW SERVER command.
svrtype is the type of server registered. This will be AGENT, METHOD, PROCESS, or SYSTEM.
server-name-attr is the object services attribute name of the server name field. For NCL servers this will be ZZZSERVER.
server-name is the name of the object for which the server is registered.
This message will be followed by detail line (N13E02).

System Action:

None.

User Action:

None.

N13E02

CLASS. zzzclass SCOPE.. aaaaaaaa DOMAIN. bbbb target.. cccccccc

Reason:

This is a detail line of the display resulting from a SHOW SERVER command.
zzzclass is the class of object for the server registration. For NCL procedure servers the class will be ZZZPROCESS. For servers registered as object services methods the class will be the class of the registered object.
aaaaaaaa is the scope for the server is registered.
bbbb is the SOLVE system domain ID. target will be LINK or LU if this is an object services SYSTEM server or NCLID if it is a process, method, or agent server.
cccccccc is the linkname or luname for a system server or nclid of the method, agent, or function server.

System Action:

For servers with scope of USER down, message N13E03 will follow.

User Action:

None.

N13E03

USER.. aaaaaaaa REGION.. bbbbbbbb

Reason:

This the second detail line of the display resulting from a SHOW SERVER command for servers with scope of region or user.
aaaaaaaa is the userid that started the NCL process.
bbbbbbbb is the region name (ie the logical unit name of the terminal at which the user is logged on).

System Action:

None.

User Action:

None.

N13E04

CONTEXT aaaaaa

Reason:

This message displays the contextid for a server with scope of CONTEXT from a SHOW SERVER command. aaaaaa is the server contextid.

System Action:

None.

User Action:

None.

N13E08

nnnnnnn SERVER ENTRIES PROCESSED.

Reason:

This the termination line of the display resulting from a SHOW SERVER command. Where nnnnnnn is the number of server entries displayed.

System Action:

None.

User Action:

None.

N13E09

SHOW REJECTED - INVALID KEYWORD OR VALUE.

Reason:

A SHOW SERVER command has been entered but the SCOPE= operand specifies an invalid value.

System Action:

The command is rejected.

User Action:

Refer to the help for the SHOW SERVER command to obtain a valid value for the SCOPE operand, and retry the command.

N13G01

DOMAIN P1 P2

Reason:

A DOMAIN command has been successfully executed. The domain name is *P1* and the result *P2* (ADDED, REPLACED or DELETED) is shown.

System Action:

None.

User Action:

None.

N13G02

DOMAIN DEFINE FOR *P1* FAILED: ALREADY EXISTS. COMMAND REJECTED.

Reason:

A DOMAIN DEFINE command has failed because the domain name (*P1*) exists.

System Action:

The command is rejected.

User Action:

To replace an existing domain definition, use the DOMAIN REPLACE command.

N13G03

DOMAIN DELETE FOR P1 FAILED: DOES NOT EXIST. COMMAND REJECTED.

Reason:

A DOMAIN DELETE command has failed because the domain name specified (P1) does not exist.

System Action:

The command is rejected.

User Action:

None.

N13G11

DOMAIN FAILED: NO STORAGE.

Reason:

A DOMAIN command failed because of insufficient storage.

System Action:

The command is rejected.

User Action:

Determine why there is insufficient storage. You can use the OCS command, SHOW BUFF, to view the statistics on storage utilization.

N13G90

INVALID IP ADDRESS

Reason:

A DOMAIN DEFINE or DOMAIN REPLACE command specified an invalid IP address.

System Action:

The command is rejected.

User Action:

Issue the command with a valid IP address.

N13G91

INVALID PROXY ADDRESS/PORT

Reason:

A DOMAIN DEFINE or DOMAIN REPLACE command specified an invalid IP proxy address or port number.

System Action:

The command is rejected.

User Action:

Issue the command with a valid IP proxy address or host name, and port number.

N14001

NPTAB OPERAND xxxx NOT RECOGNISED.

Reason:

The operand xxxx included in an NPTAB command was not recognized.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N14002

NPTAB OPERAND xxxx IS INVALID OR OUT OF RANGE.

Reason:

An NPTAB command requires the name of an NPF table. The name was either omitted or too long.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N14003

REQUIRED OPERAND(S) OMITTED.

Reason:

An NPTAB command was entered but is invalid because no operands have been specified.

System Action:

The command is rejected.

User Action:

Correct and retry. For a description of the operands refer to the NPTAB command in the Command Reference.

N14004

NPF TABLE tablname ALREADY EXISTS.

Reason:

An NPTAB ADD= command specified the name of an NPF table that is already known to the system.

System Action:

The command is rejected.

User Action:

If a new version of the table is to be brought into effect, the REP= operand must be used.

N14006

NPF TABLE tablname DOES NOT EXIST.

Reason:

An NPTAB DEL= or REP= command specified the name of an NPF table that is not known to the system.

System Action:

The command is rejected.

User Action:

None.

N14007

NPF TABLE tablname HAS BEEN DELETED.

Reason:

Confirms successful completion of an NPTAB DEL= command.

System Action:

Users that are logged on that currently reference this table will no longer have it available. If a new user logs on that requires this table it will again be automatically added. It is the user's responsibility, when a table is deleted, to ensure that the table has been disabled or corrected as necessary to cater for this possibility.

User Action:

A SHOW NPF command display that includes this table will show a status of 'DELETED'.

N14008

NPF TABLE tablname STILL BEING BUILT, DELETE REJECTED.

Reason:

An NPTAB DEL= command was entered specifying the name of an NPF table that is in the process of being built. This is invalid until the build process is complete.

System Action:

The command is rejected.

User Action:

Retry after the build has completed.

N14009

RESOURCE resname TABLE network.tablename IS NOT IN USE BY THIS USERID.

Reason:

An NPTAB resource ACT= command specified the name of an NPF resource table that the user is not entitled to use.

System Action:

The command is rejected.

User Action:

Use the SHOW NPF command to determine which tables are available to your userid.

N14010

RESOURCE resname TABLE network.tablename ALREADY ACTIVE.

Reason:

An NPTAB resource ACT= command specified the name of an NPF resource table that is already active.

System Action:

The command is rejected.

User Action:

None.

N14011

RESOURCE resname TABLE network.tablename NOW ACTIVE.

Reason:

Confirms successful activation of NPF resource table tablname after an NPTAB resource ACT= command.

System Action:

Resources specified in the table will now be available to the user. If the table was an NPF message table (resource $NMMSG) the user will now receive unsolicited network messages for the resources included in table `network.tablename'.

User Action:

The NPTAB resource INACT= command may be used to return the table to INACTIVE status.

N14012

NO RESOURCE GROUPS DEFINED FOR THIS USERID.

Reason:

An NPTAB ACT= command was entered but the user does not have any NPF resource tables declared.

System Action:

The command is rejected.

User Action:

None.

N14013

RESOURCE resname TABLE network.tablename ALREADY INACTIVE.

Reason:

An NPTAB resource INACT= command specified the name of an NPF table that is already inactive.

System Action:

The command is rejected.

User Action:

The SHOW NPF command can be used to determine the current and initial status of tables.

N14014

RESOURCE resname TABLE network.tablename NOW INACTIVE.

Reason:

Confirms successful completion of an NPTAB resource INACT= command for NPF table `network.tablename' in resource group `resource'.

System Action:

None.

User Action:

The SHOW NPF command can be used to determine the current and initial status of tables.

N14015

COMMAND TABLES MAY NOT BE INACTIVATED OR ACTIVATED.

Reason:

An NPTAB resource INACT= command was attempted for an NPF command partitioning table (resource group $NMCMD). Command partitioning table status may not be modified.

System Action:

The command is rejected.

User Action:

Do not attempt to issue the NPTAB (IN)ACT command for command partitioning resource tables.

N14016

USERID NOT AUTHORISED FOR REQUESTED FUNCTION.

Reason:

An NPTAB ADD= or REP= command was entered but the user does not have a high enough command authority level.

System Action:

The command is rejected.

User Action:

None.

N14017

NPF TABLE tablname HAS BEEN DELETED AND IS NO LONGER AVAILABLE.

Reason:

An NPTAB ACT= command specified the name of an NPF table that has been deleted by an NPTAB DEL=tablname command. It is not available to be reactivated.

System Action:

The command is rejected.

User Action:

Contact your systems administrator to determine why the table has been deleted.

N14018

STATUS CHANGE FOR TABLE network.tablename REJECTED, UNAVAILABLE DUE TO CONTROL MEMBER SYNTAX ERRORS

Reason:

An NPTAB ACT=tablename or INACT=tablename command specified the name of NPF table that cannot be processed because there were syntax errors in the user's RESOURCE LIST control member for the `network.tablename' resource table.

System Action:

The command is rejected because the resource table is not available due to control member syntax errors.

User Action:

The message control member should be corrected, and may be refreshed by logging on again.

N14019

RESOURCE OPERAND WILL BE IGNORED FOR ADD, DEL, REP COMMANDS.

Reason:

A resource group name was specified on an NPTAB ADD, DEL, or REP command The ADD, DEL, REP commands apply only to library members and are only associated with resource groups via the RESOURCE LIST CONTROL MEMBER in a user's UAMS definition.

System Action:

The resource name operand is ignored and processing continues.

User Action:

It is not necessary to specify a resource name on NPTAB ADD, DEL, REP commands.

N14101

UNABLE TO OPEN NETWORK PARTITIONING DATASET.

Reason:

An attempt to build an NPF table failed because the system could not open the NPF dataset.

System Action:

The command is terminated.

User Action:

Report the occurrence to your systems administrator.

N14102

ERRORS OCCURRED DURING THE BUILDING OF NPF TABLE tablname.

Reason:

This message warns that one or more errors occurred during the building of NPF table tablname. This may result in a user's access being restricted to validly defined resources.

System Action:

None.

User Action:

Use the SHOW NPTAB=tablname command to display the errors that were detected within the specified NPF table.

N14103

NPF TABLE tablname ADDED.

Reason:

Confirms successful building of the new NPF table tablname.

System Action:

None.

User Action:

None.

N14104

NPF TABLE tablname REPLACED.

Reason:

Confirms successful completion of an NPTAB REP=tablname command.

System Action:

The new table is made available immediately to all users without the need to logoff and logon.

User Action:

None.

N14590

INSUFFICIENT AUTHORITY FOR SHOW STOR COMMAND

Reason:

You do *not* have a high enough authority level for the SHOW STOR command. The required authority level is 255.

System Action:

The command is ignored.

User Action:

Increase your command authority to 255, and try again.

N14901

P1 P2 P3

Reason:

A request to load or unload a procedure or module was successful. In the message:
P1 is the type (PROCEDURE, MODULE, or NVPANEL)
P2 is the name
P3 is the action taken (LOADED or UNLOADED)

System Action:

None.

User Action:

None.

N14902

LOAD FOR MODULE P1 FAILED, R15= P2, R1= P3

Reason:

A request to load a module (*P1*) failed. The R15 (*P2*) and R1 (*P3*) return codes from the LOAD macro are shown.

System Action:

The module specified is not loaded.

User Action:

Determine the cause of the error and retry.

N14903

DELETE FOR MODULE P1 FAILED.

Reason:

A request to delete load module (*P1*) failed.

System Action:

The specified module is not deleted.

User Action:

Specify the correct module name and retry.

N14904

PROCEDURE P1 NOT PRELOADED

Reason:

A request to unload a procedure (*P1*) failed because the NCL procedure was not preloaded.

System Action:

The command is rejected.

User Action:

None.

N14905

UNLOAD OF P1 ACCEPTED, P2 ACTIVE USERS.

Reason:

A request to unload a procedure (*P1*) was issued. There are *P2* current users of the procedure.

System Action:

The procedure will be unloaded when the last active user terminates. New users of the procedure will execute a fresh copy of the procedure read from the procedure library.

User Action:

None.

N14906

P1 NCL PROCEDURE(S) UNLOADED BY GENERIC REQUEST.

Reason:

An UNLOAD PROCEDURE= command has been issued specifying a generic procedure or DD name. This message shows the total NCL procedures unloaded as a result of the command.

System Action:

The procedures are reloaded, as required.

User Action:

None.

N14907

P1 MAP(S) UNLOADED BY GENERIC REQUEST.

Reason:

An UNLOAD MAP= command has been issued specifying a generic map name. This message shows the total maps unloaded as a result of the command.

System Action:

The maps are reloaded, as required.

User Action:

None.

N14908

P1 PANEL(S) UNLOADED BY GENERIC REQUEST.

Reason:

An UNLOAD NVPANEL= command has been issued specifying a generic panel name. This message shows the total panels unloaded as a result of the command.

System Action:

The panels are reloaded, as required.

User Action:

None.

N14909

PANEL P1 NOT PRELOADED

Reason:

A request to unload a panel (*P1*) failed because the panel is not loaded.

System Action:

The command is rejected.

User Action:

None.

N14949

INSUFFICIENT STORAGE TO PROCESS COMMAND.

Reason:

Storage could not be obtained to process the LOAD or UNLOAD command.

System Action:

The command is not processed.

User Action:

Determine the cause of the storage shortage.

N14E01

XOPT command processed, option: *P1* set

Reason:

Extended Options option *P1* was set successfully.

System Action:

None

User Action:

None

N14E02

XOPT command ignored, missing option name

Reason:

The name of the Extended Option to set is missing.

System Action:

None

User Action:

Repeat the command specifying the name of the Extended Option.

N14E03

XOPT command ignored, option: *P1* name invalid

Reason:

The name of the Extended Option specified is not recognized.

System Action:

None

User Action:

Repeat the command specifying the correct name of the Extended Option.

N14E04

XOPT command ignored, option: *P1* can not be changed

Reason:

The Extended Option specified cannot be set at the current stage of the Region processing.

System Action:

None

User Action:

Make sure that the option to be changed can be changed after the initialization phase.

N14E05

XOPT command ignored, option: *P1* is not used

Reason:

The Extended Option specified is disabled or not supported.

System Action:

None

User Action:

Check which Extended Option you want to change. Repeat the command with the correct option.

N14T01

##TOFF *ttt* COMMAND PROCESSED

Reason:

A ##TOFF command was entered and processed successfully.

System Action:

As per the request.

User Action:

None.

N14T02

##TOFF *ttt* COMMAND IGNORED, TZ=... JCL PARM SPECIFIED

Reason:

A ##TOFF command was entered. It was ignored because the region had the TZ JCL parameter specified.

System Action:

The request is ignored.

User Action:

If you want to use the ##TOFF testing facility, remove any TZ parameters from the JCL PARM.

N14T80

INVALID TIME OFFSET: *ooo*

Reason:

A ##TOFF command was entered. The time offset specified was not valid.

The time offset must be in the following format:

0 or *s*0 or *shhmm* or *shh.mm*

where:

s is + or E (meaning east of or ahead of GMT/UTC), or W (meaning west of or behind GMT/UTC)

hh is the offset in hours (1 or 2 digits, max 99)

mm is the offset in minutes (2 digits, 00 to 59)

System Action:

The command is ignored.

User Action:

Correct the offset.

N15005

xxxPROC REQUEST INVALID, ALREADY ACTIVE.

Reason:

Activation of xxxPROC was requested but the procedure is already active.

System Action:

The request is rejected.

User Action:

If you wish to restart the procedure you must first use the SYSPARMS xxxPROC=FLUSH command to terminate the current active procedure and then start the new version.

N15006

xxxPROC NOT ACTIVE, CANNOT FLUSH.

Reason:

An attempt to FLUSH the specified procedure cannot be processed because the procedure is not active.

System Action:

The request is rejected.

User Action:

If the procedure is active it should be waiting on the completion of an xxxREAD statement. Check the procedure logic to ensure that it does not get suspended without an xxxREAD statement being issued.

N15007

NCL GLOBAL VARIABLE TRACE ALREADY ACTIVE. NCLGBTRC=xxxx.

Reason:

An attempt to start tracing NCL global variables using SYSPARMS NCLGBTRC has failed because tracing is already active.

System Action:

The request is rejected.

User Action:

Tracing must be stopped using SYSPARMS NCLGBTRC= (that is, no operand) before tracing may be restarted.

N15012

EASINET CANNOT BE ACTIVATED/DEACTIVATED AFTER INITIALIZATION COMPLETE.

Reason:

You issued a SYSPARMS EASINET=procname or EASINET=NO command after system initialization. Activation of the EASINET feature can be specified only during system initialization and it cannot be deactivated by EASINET=NO after initialization is complete. The SYSPARMS EASINET=procname command may only be used after initialization to specify the name of a new EASINET procedure for security reasons.

System Action:

The command is rejected.

User Action:

The SYSPARMS EASINET=NO command must be issued by the ACINIT parameter group during system initialization. Update the parameter group and save the changes, but do not action it. The changes will take effect the next time the region is started. If necessary, recycle the region.

N15014

PROCEDURE procname NOT PRELOADED

Reason:

A SYSPARMS UNLOAD= command specified the name of an NCL procedure that had not been preloaded.

System Action:

The command is rejected.

User Action:

Use the SHOW NCLSTAT command to determine the names of preloaded procedures.

N15015

UNLOAD OF procname ACCEPTED, nn ACTIVE USERS.

Reason:

A SYSPARMS UNLOAD= command was issued. There are nn current users of the preloaded NCL procedure.

System Action:

The procedure will be unloaded when the last active user terminates. New users of the procedure will execute a fresh copy of the procedure read from the procedure library. Alternatively a SYSPARMS PRELOAD= command may now be issued to preload an updated copy of the procedure.

User Action:

The SHOW NCLSTAT command can be used to determine the current status of procedures that are waiting to be unloaded.

N15101

DDNAME RECSZ D-CISZ I-CISZ CI-SP CA-SP D-BF I-BF STRSH BFRSH LSR CTL

Reason:

This message is the title line of the SHOW VSAM (SHOW VSAMX) display:

DDNAME

Displays the JCL DDNAME or DLBL name that is associated with a file.

RECSZ

Displays the defined maximum record size for a data set.

D-CISZ

Displays the VSAM Control Interval size for the Data component of a KSDS.

I-CISZ

Displays the VSAM Control Interval size for the Index component of a KSDS.

CI-SP

Displays the number of Control Interval splits that VSAM has performed for a data set.

CA-SP

Displays the number of Control Area splits that VSAM has performed for a data set.

D-BF

Displays the maximum number of data buffers that are allocated for processing a string in a VSAM data set. This value shows the maximum amount of storage that is used at any time. You can use this value to tune the specified BUFND VSAM operand in the JCL or on the UDBCTL command.

Note: For MVS, the value may exceed the specified BUFND value due to dynamic string expansion.

I-BF

Displays the maximum number of index buffers that are allocated for processing a string in a VSAM data set. This value shows the maximum amount of storage that is used at any time. You can use this value to tune the specified BUFND VSAM operand in the JCL or on the UDBCTL command.

Note: For MVS, the value may exceed the specified BUFND value due to dynamic string expansion.

STRSH

Displays the number of times a string shortage condition caused a temporary delay in processing a file. The region writes a monitor message the first time this condition occurs.

BFRSH

Displays the number of times a buffer shortage condition caused a temporary delay in processing a file. This condition only occurs for data sets running with LSR=YES.

LSR

Indicates whether a VSAM data set is using the Local Shared Resource pool:

- NO means that the data set is not using the pool.
- YES means that the data set is using Pool 0 if multiple pools are supported.
- A number means that the data set is using the indicated LSR pool.
- RLS means that VSAM RLS is in effect for this file.

CTL

(MVS only) Indicates whether VSAM is sharing control block structures at a data set name level (DSN) or at a ddname level (DD). When processing with alternative indexes or paths, sharing is at the DSN level, which is the default.

Note: Where a number exceeds 99999, then truncation occurs to allow the value to fit within the field bounds. The magnitude of the number is represented by the units K, M, or G.

System Action:

None.

User Action:

None.

N15104

PANEL-NAME STATUS HITS PATH LIBRARY AGEUSE

Reason:

The title line issued in response to the SHOW PANELS command.
PANEL-NAME the name of a panel located in the active panel queue.
STATUS may be 'LOADED' indicating that the panel is actually resident in the active panel queue, or 'LOADING', indicating that a load is in progress for the particular panel.
HITS the number of times a requested panel has been found in the active panel queue, thus avoiding I/O.
PATH is the library path that the panel is registered on.
LIBRARY is the library in the path that the panel was found in.
AGEUSE is an aged use count used to decide when to drop a panel from the list of active panels.

System Action:

None.

User Action:

None.

N15105

panelname status hits path library ageuse

Reason:

Issued in response to the SHOW PANELS command, this is the information line as described on N15104.

System Action:

None.

User Action:

None.

N15106

***END* -- ACTIVE aaaa MAXPANEL bbbb REQUESTS cccccc HITS ddddddd DROPS eeeee**

Reason:

Indicates the end of the SHOW PANELS display and provides summary data about the active panel queue. The number of panels currently on the active panel queue is aaaa . The MAXPANEL value is bbbb . The total number of requests for panels processed by the system is cccccc. The total number of times a recccccc. panel was found on the active panel queue is ddddddd.

System Action:

User Action:

This information can be used to help analyze the optimal size of the active panel queue as set in the region.
A low number of hits indicates that the queue may be too small; therefore, excessive I/O must be performed to obtain panel images. Conversely, if the queue is too large, virtual storage is wasted and

N15107

DDNAME FILEID USERID NCL-PROC NCLID LUNAME

Reason:

This is the title line issued in response to a SHOW UDBUSER command.

System Action:

None.

User Action:

Refer to N15108 for details of these fields.

N15108

ddname fileid userid nclproc nclid luname

Reason:

The information line is in response to a SHOW UDBUSER command. This display is in the order of the UDBs. Each user of a UDB is displayed following the first reference to that particular UDB. Therefore, the users that have connections to multiple UDBs appear multiple times, once for each UDB to which they are connected.

ddname

Is the JCL DDNAME associated with this UDB. The ddname appears only for the first user that is referencing that UDB. Subsequent display lines for that UDB contain a `-' to help with clarifying the display.

fileid

Is the logical file ID assigned to the UDB using the UDBCTL command. This value is the name that NCL uses in an &FILEID statement to obtain access to the UDB. The file ID appears only for the first user that is referencing that UDB. Subsequent display lines for that UDB contain a `-' to help with clarifying the display.

userid

Identifies the user or system task currently processing the UDB. Where access to the UDB is being performed from the EASINET facility, `EASINET' is displayed. The system tasks utilizing UDB processing are displayed as `LOG-PROC', `BG- MON', `BG-SYS', or `BG-LOG'. If the UDB was opened as NDB, this field is displayed as `*NDB*'.

nclproc

Identifies the NCL procedure that issued the &FILEID statement to obtain access to this UDB. Where nested procedures are utilized, this procedure may not be the current NCL procedure that is processing.

nclid

Is the NCL ID of the NCL process.

luname

Is the LU name (terminal) the user is logged on from. The system tasks utilizing UDB processing are displayed as `LOG-PROC', `BG-MON', `BG-SYS', or `BG-LOG'.

(*status*)

If displayed, indicates that processing the NCL procedure has been temporarily suspended waiting for system resources. A value of `(STRSH)' indicates that the procedure is waiting for VSAM processing strings. A value of `(BFRSH)' indicates that the procedure is waiting for the VSAM buffers.

System Action:

None.

User Action:

If the (*status*) field is displayed, it may indicate that system performance is being impacted. Tune the VSAM usage within the system. For Local Shared Resource (LSR) pools, you can use the LSRPOOL command to alter the LSR pool to include more VSAM strings and buffers. If *not*, the system JCL or the UDBCTL command can be used to specify more strings and buffers as necessary. The SHOW UDB and SHOW VSAM commands can be used to monitor the system performance and obtain more information about the VSAM usage. For more information about buffer and string control, see *VSAM Programming Guide*.

N15109

SELECTIVE/FULL LIST OF NCL GLOBAL VARIABLES FOLLOWS:

Reason:

This is the heading line issued in response to a SHOW NCLGLBL (full) or SHOW NCLGLBL=varname (selective) command.

System Action:

Subsequent information lines follow.

User Action:

None.

N15110

NAME LEN TEXT

Reason:

This is a title line issued in response to the SHOW NCLGLBL=varname command. Varname refers only to the variable name following the global variable prefix, and does not include the prefix itself. This command may be used to determine the current length and value of each global variable beginning with varname.

System Action:

Information lines follow for each variable requested.

User Action:

None.

N15111

variablename variablename variablename variablename

Reason:

This is the information line following N15109 for a full list of NCLGLBL variable names.

System Action:

None.

User Action:

None.

N15112

variablename leng text....

Reason:

This is the information line issued in reponse to the SHOW NCLGLBL=varname command. The full name of the variable is variablename and currently has a length of leng, and the actual contents of this variable is given be text.

System Action:

None.

User Action:

None.

N15113

***END* -- aaaaaa DISPLAYED, MAXIMUM CHAIN nnnn**

Reason:

This message indicates the end of the SHOW NCLGLBL command and summarizes the number of variables displayed and the depth of the maximum chain. The maximum chain depth is an indication of the processing required to access specific variables. A normal value would be 2 or 3. The creation of many global variables will cause long chains and increase access time.

System Action:

None.

User Action:

None.

N15114

DDNAME STATUS REQ-USER TIME CONCATDD DSN

Reason:

The title line of the SHOW ALLOC display. Displays the DDname, the STATUS of the allocation, the user requesting the allocation, the time at which the allocation was performed, if the dataset is concatenated the ddname referred to in the CONCAT operand and the first 28 characters of the dataset name.
The STATUS field can contain one of 3 possible values :
ALLOCATED - the dataset is allocated to the SOLVE system
PENDING - the dataset is in the process of being allocated
UNKNOWN - the status of the allocation is unknown

System Action:

None.

User Action:

None.

N15115

ddname status requser time concatdd dsname

Reason:

The information line of the SHOW ALLOC display. Refer to message N15114 for details.

System Action:

None.

User Action:

None.

N15116

INSUFFICIENT AUTHORITY FOR NCLGLBL OPERAND.

Reason:

Your authority level is insufficient for use of the NCLGLBL operand of the SHOW command.

System Action:

The command is rejected.

User Action:

None.

N15117

DDNAME FM STATUS REQ-USER TIME CATDD DSN

Reason:

(VM/SP systems only) The title line issued in response to a SHOW ALLOC command. Displays the DDname, the filemode, the user requesting the allocation, the time at which the allocation was performed, the catalog in which the dataset is defined (the CATDD column) and the first 27 characters of the dataset name.

System Action:

None.

User Action:

None.

N15118

ddname filemode status requser time catdd dsname

Reason:

The information line issued in response to a SHOW ALLOC command. Refer to message N15117 for details.

System Action:

None.

User Action:

None.

N15119

STATUS SMFRID START INTERVAL MINCPU

Reason:

First message returned on SHOW USERACCT command.

System Action:

None.

User Action:

None.

N15120

status smfrid start interval mincpu

Reason:

Second message returned on SHOW USERACCT command. status is status of user NCL cputime reporting: ACTIVE,INACTIVE or P-INACT. smfrid is the SMF record id. Start is the FROM time for the reporting interval. interval is the reporting interval (in hours). mincpu is the minimum amount of cputime to be reported (in seconds).

System Action:

None.

User Action:

None.

N15301

INSUFFICIENT STORAGE FOR REQUEST

Reason:

An NCL based command (EXEC, START, LIST etc.) failed because insufficient storage was available.

System Action:

The command is rejected.

User Action:

Restructure the procedure or increase the SOLVE region or partition size.

N15302

INVALID OPERAND xxxx

Reason:

A START, EXEC, FSPROC, LIST or NCLCHECK command specified an invalid operand.

System Action:

The command is rejected.

User Action:

Correct and retry.

N15303

FSPROC IS INVALID FROM THIS SOURCE

Reason:

An FSPROC command was issued from a procedure that is not directly associated with a display terminal, eg: LOGPROC.

System Action:

The command is rejected.

User Action:

Restructure the procedure.

N15304

LIST ID=aaaaaaaa IS INVALID

Reason:

A LIST command has been issued to list a member of a procedure library. The ID parameter specified on the command is not a valid ddname (MVS), filetype (VM) or sublib (VSE).

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15305

PROC NAME IS REQUIRED.

Reason:

A START, EXEC, FSPROC, LIST or NCLCHECK command was issued but no procedure name was supplied. The PROC operand is mandatory.

System Action:

The command is rejected.

User Action:

Correct and retry.

N15306

INVALID PROC OPERAND VALUE xxxx.

Reason:

A START, EXEC, FSPROC, LIST or NCLCHECK command was issued but the PROC operand value xxxx is not a valid NCL procedure name.

System Action:

The command is rejected.

User Action:

Correct and retry.

N15307

INVALID SERVER OPERAND VALUE xxxx.

Reason:

A START command was issued but the SERVER operand value xxxx is not a valid NCL server name.

System Action:

The command is rejected.

User Action:

Correct and retry.

N15308

INVALID SCOPE OPERAND VALUE xxxx.

Reason:

A START command was issued but the SCOPE value xxxx is invalid.

System Action:

The command is rejected.

User Action:

Correct and retry.

N15309

INVALID ID OPERAND VALUE xxxx.

Reason:

A LIST command was issued but the ID operand value xxxx is invalid.

System Action:

The command is rejected.

User Action:

Correct and retry.

N15310

INVALID NOTIFY OPERAND VALUE xxxx

Reason:

The NOTIFY operand of the START command must be YES or NO.

System Action:

The command is rejected.

User Action:

Correct and retry.

N15314

PROCEDURE NESTING FROM CONCATENATED COMMAND IS INVALID.

Reason:

An EXEC or FSPROC command has been entered to begin execution of an NCL procedure. The EXEC or FSPROC command is concatenated with another command, This is invalid.

System Action:

The request to begin a new NCL procedure is rejected.

User Action:

The EXEC or FSPROC command must be entered as a single (ie. not concatenated) command. Correct the command and retry.

N15401

OPERAND xxxxx NOT RECOGNISED

Reason:

The specified operand of an NSBRO command was invalid.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15402

REQUIRED OPERAND HAS BEEN OMITTED

Reason:

A required operand for the entered NSBRO command has been omitted.

System Action:

The command is rejected.

User Action:

Correct and retry.

N15403

LINE n OF SPECIFIC/GENERAL BROADCAST TEXT DELETED

Reason:

Confirms deletion of the specified line of the broadcast text as a result of an NSBRO command.

System Action:

None.

User Action:

None.

N15404

LINE n OF SPECIFIC/GENERAL BROADCAST TEXT SET

Reason:

Confirms successful execution of an NSBRO command to set a broadcast line.

System Action:

None.

User Action:

None.

N15405

INSUFFICIENT STORAGE TO SERVICE REQUEST

Reason:

An NSBRO command could not be serviced because of a storage shortage.

System Action:

The command is rejected.

User Action:

If necessary increase the SOLVE region or partition size.

N15406

LINE n OF BROADCAST TEXT EXCEEDS MAXIMUM LENGTH - TRUNCATED

Reason:

The text length that can be specified with NSBRO is a maximum of 78 characters.

System Action:

The command is accepted but excess text is discarded.

User Action:

Re-format the broadcast if required.

N15408

xxxx BROADCAST MASK OMITTED OR INVALID

Reason:

The mask that defines the target terminals for a broadcast type xxxx is invalid or has been omitted.

System Action:

The command is rejected.

User Action:

Correct the mask and retry.

N15409

NO TEXT PROVIDED FOR SPECIFIC BROADCAST

Reason:

An NSBRO command was issued to send a specific broadcast but no text had been defined by an earlier NSBRO command.

System Action:

The command is rejected.

User Action:

Define the specific broadcast text and retry. After each use of the SSEND= operand, the specific broadcast text must be set again using the SBn operands.

N15411

BROADCAST REQUEST aaaaaaaa ACCEPTED

Reason:

An NSBRO broadcast has been accepted for processing. The ID assigned to the broadcast is aaaaaaaa. An N15501 message is issued when the broadcast has completed processing.

System Action:

The broadcast request is queued to process.

User Action:

Review the N15501 message to determine the results of the broadcast.

N15412

MUTUALLY EXCLUSIVE OPERANDS

Reason:

AN NSBRO command contains conflicting operands.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15413

OPERAND aaaaaaaaaa INVALID

Reason:

The indicated operand of an NSBRO command was invalidly specified.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15501

BROADCAST xxxxxxxx - MSG SENT TO yy TERMINALS, zz USERS.

Reason:

Confirms successful execution of an NSBRO command or broadcast services request. *xxxxxxxx* indicates the broadcast identifier associated with the request. *yy* indicates the number of terminals that received the broadcast. *zz* indicates the number of SOLVE users that received the broadcast.

System Action:

None.

User Action:

None.

N15502

BROADCAST REQUEST aaaaaaaa CANCELLED BY bbbbbbbb.

Reason:

The specified broadcast request has been cancelled by the named user. The broadcast may be either an active broadcast or one queued. If the broadcast was active then the N15501 message indicates the number of receivers.

System Action:

The broadcast request is discontinued if active and the broadcast is discarded.

User Action:

None.

N15577

BROADCAST REQUEST aaaaaaaa FOR userid DISCARDED.

Reason:

The specified broadcast request has not completed due to the user logging off.

System Action:

The log procedure detects this message and decrements the number of outstanding broadcasts.

User Action:

None.

N15601

INVALID OR OMITTED OPERAND.

Reason:

A UDBCTL command has been entered either with no operands or with an invalid operand.

System Action:

The command is rejected.

User Action:

Refer to the command description in the Command Reference.

N15602

INVALID SYNTAX.

Reason:

A UDBCTL command has been entered with invalid syntax.

System Action:

The command is rejected.

User Action:

Correct the command and retry. This error normally indicates that the DDNAME specified in the command has invalid syntax or a logical fileid that is being assigned is invalid.

N15603

xxxxxx REQUEST COMPLETE.

Reason:

A UDBCTL command has been completed successfully. *xxxxxx* is the type of request and will be OPEN, CLOSE, RESET or ASSIGN.

System Action:

None.

User Action:

If it was an OPEN request a logical file ID will still have to be assigned before the UDB is available for processing, unless the ID= operand was also specified.

N15604

FILEID xxxxxxxx IS INVALID.

Reason:

An attempt to assign a logical fileid to a UDB has failed because the specified name does not conform to system requirements.

System Action:

The command is rejected.

User Action:

Ensure that the specified name is from 1 to 8 characters in length, starts with an alphabetic or national character and contains only alphanumeric or national characters. Correct and retry.

N15605

UDB IS NOT CLOSED OR IS IN ERROR STATUS.

Reason:

An OPEN or RESET request has been rejected because the nominated UDB is not CLOSED.

System Action:

The command is rejected.

User Action:

An attempt to OPEN an already open UDB is meaningless. Before a RESET request can be processed the UDB must be closed. This can be achieved by using the CLOSE operand. If necessary close the UDB and retry.

N15606

OPEN-RESET FAILED, ACB CODE=X`yy', UDB=ddname

Reason:

An attempt to RESET the UDB associated with DD ddname has failed because of the error X`yy'.

System Action:

The UDB has not been reset and remains in closed status.

User Action:

The VSAM ACB open code X`yy' is described in the VSAM Programmer's Guide. VSAM imposes certain restrictions and requirements on datasets before they can be reset. The dataset cannot be allocated with the UNIQUE attribute, cannot use KEYRANGES or use ALTERNATE INDICES. In addition the dataset must have been defined with the REUSE attribute. The SHOW UDB command can be used at any time to redisplay the error code for the error that caused the failure. Determine the cause of the error and if possible retry it. Even though the RESET process failed, it may still be possible to re-open the UDB (with the OPEN operand) and resume processing until the error can be corrected.

N15607

REQUESTED UDB ddname NOT KNOWN TO SYSTEM.

Reason:

A UDBCTL command has been entered that references a DDNAME that was not included in the system JCL or has not been allocated by use of the ALLOC command.

System Action:

The command is rejected.

User Action:

This may result from a syntax error. If so correct the command and retry. If the DDNAME has been omitted, use the ALLOC command to allocate this UDB.

N15608

FILEID filename ALREADY ASSIGNED TO UDB ddddddd

Reason:

A UDBCTL command has been entered to assign a logical fileid to the DDNAME ddddddd. However, the FILEID fileid has previously been assigned. Only one fileid per UDB can be used.

System Action:

The assignment is rejected and the original fileid remains operative.

User Action:

If a new fileid is required the UDB must first be logically stopped using the STOP operand. The assignment of the new fileid can then be performed.

N15609

UNABLE TO ALTER STATUS, UNTIL OPEN ERROR CORRECTED.

Reason:

An attempt to change the status of a UDB by assigning a logical fileid, logically stopping or physically closing has been rejected because the UDB is in error status. This error will either have occurred during system startup or as the result of a subsequent OPEN or RESET attempt.

System Action:

The request is rejected.

User Action:

Use the SHOW UDB command to determine the nature of the open error. This will be displayed as a VSAM ACB open error code which can be interpreted using the *VSAM Programmer's Guide.* The UDBCTL command OPEN operand can be used to retry the open. Only when this condition has been corrected, can the status be further changed.

N15610

FILEID filename STILL HAS ACTIVE USERS.

Reason:

An attempt to STOP or CLOSE a UDB using the UDBCTL command has been rejected because the UDB still has active users.

System Action:

The command is rejected.

User Action:

Before a UDB can be logically stopped or physically closed it must have no active users. Stopping or closing a UDB while it is being actively processed could impact processing and result in errors. The SHOW UDB command can be used to obtain a count of the number of active users. This is displayed in the A/U column. An active user is represented by an NCL procedure that has issued an &FILEID statement for that UDB. The connection is terminated either by the procedure ending or an &FILEFREE statement being issued. The SHOW UDBUSER command can be used to display the active users of this UDB. It should be remembered that specialized system procedures such as LOGPROC and CNMPROC represent active users of their respective UDBs and can be stopped using the SYSPARMS command LOGPROC=FLUSH etc. operand if required.

N15611

FILEID filename PREVIOUSLY ASSIGNED TO UDB ddddddd

Reason:

An attempt to assign a logical fileid filename to a UDB has failed because the selected name has previously been assigned to another ddname ddddddd. A fileid can be assigned to only one UDB.

System Action:

The command is rejected.

User Action:

Select a different fileid or logically stop the conflicting UDB using the STOP operand and then proceed with assigning the fileid to the required UDB.

N15612

INSUFFICIENT AUTHORITY, FILE NOT SYSOUT.

Reason:

An attempt has been made to change the status (eg. OPEN, CLOSE OR RESET) of a dataset to a format other than SYSOUT using the UDBCTL command and the user has insufficient command authority. Unless changed by the installation, the status of a SYSOUT format dataset can be changed by users with a command authority of 0. Changing the status of all other datasets requires a higher authority, usually authority level 2.

System Action:

The command is rejected.

User Action:

Contact your systems administrator.

N15613

OPEN FAILED, ACB CODE=X`*xx*', UDB=*dddddddd*

OPEN FAILED, ABEND SYS-*nnn*', UDB=*dddddddd*

Reason:

An attempt to OPEN the UDB associated with ddname *dddddddd* has failed because of the ACB OPEN error X`*xx*' or system abend code *nnn*.

System Action:

The UDB has not been opened and remains in closed status.

User Action:

Enter **/VSAMRC.00xx** at the ==> prompt to lookup VSAM ACB open error codes. Refer to the appropriate operating system manual (for example the VSAM Programmer's Guide) for a description of the error code. The SHOW UDB command can be used at any time to redisplay the error code that caused the failure. Determine the cause of the error, correct and retry.

N15614

CANNOT ASSIGN FILEID WHILE CLOSED.

Reason:

An attempt to assign a logical fileid has been rejected because the UDB is closed. The UDB has been closed by use of the UDBCTL command CLOSE operand.

System Action:

The assignment is rejected.

User Action:

Use the OPEN operand to re-open the UDB and retry the assignment.

N15615

DELETE FAILED FOR VSAM LSR POOL, R15=aaaaaaaa

Reason:

In the process of closing the last UDB that utilizes the LSR pool, SOLVE issues a DLVRP macro to delete the LSR pool. This macro has failed with the return code indicated.

System Action:

Processing continues.

User Action:

Determine the reason for the failure from the relevant VSAM manual.

N15616

CONFLICTING OPERANDS.

Reason:

The RESET, SIS and DEFER operands of the UDBCTL command are mutually exclusive with the INPUT operand.

System Action:

The command is rejected.

User Action:

Determine the requirements of the UDB, correct the error and retry.

N15617

CANNOT ASSIGN FILEID, INVALID UDB DEFINITION

Reason:

The UDB to which the user was trying to assign a FILEID had not previously been opened successfully for either of two reasons: it is a dummy file, or its keylength is greater that 255 bytes. You may not assign a FILEID to a UDB that is not currently open.

System Action:

The request is rejected.

User Action:

The SHOW UDB command can be used to determine the status of the UDB.

N15618

DDNAME aaaaaa IS RESERVED.

Reason:

An attempt was made, using the UDBCTL OPEN=ddname command, to open a UDB using a system ddname that is reserved.

System Action:

The command is rejected.

User Action:

SOLVE itself has allocated to it DDnames such as those used for panel libraries, command libraries etc., which are reserved for its use only. Use a DDname that is not reserved.

N15619

OPEN FAILED, dddddddd IS NOT A VALID UDB.

Reason:

The ddname *dddddddd* specifies a dataset that is not a valid UDB, for one of the following reasons:
- It is a dummy file.
- Its keylength is greater than 255 bytes.
- Another reason specified in message N28511 which is written to the activity log.

System Action:

The UDB is not opened, and is flagged in error.

User Action:

If the reason for the error is unclear, check the activity log for additional messages, for example N28511. Determine your requirements for this UDB, correct and retry.

N15620

INSUFFICIENT STORAGE TO PROCESS COMMAND.

Reason:

Storage could not be obtained to process the UDBCTL command.

System Action:

The command is not processed.

User Action:

Determine the cause of the storage shortage.

N15701

MODULE modlname ATTACH/LOAD FAILED

Reason:

An attempt to attach or load module *modlname* has failed.

System Action:

The function in progress fails.

User Action:

Contact your systems administrator to determine the reason for the attach failing. Other messages will follow this describing any associated processing that is impacted.

N15702

SUBTASK HAS ABENDED SYS-yyy.

Reason:

The module has abnormally terminated with the error SYS-yyy.

System Action:

The function in progress fails.

User Action:

Determine the reason for the failure. Other messages will follow this describing any associated processing that is impacted. If necessary report this problem to your product support representative.

N15703

MODULE modlname ATTACH FAILED - DOS SYSTEM 'NTASKS' REACHED.

Reason:

The maximum number of subtasks allowed by the DOS System Generation NTASK value has been reached.

System Action:

The function requesting this attach fails.

User Action:

Retry when the number of tasks in the system has decreased. If the problem persists, notify your systems administrator.

N15704

MODULE modlname ATTACH FAILED - DOS PART. MAX. NO. SUBTASKS REACHED.

Reason:

The maximum number of subtasks allowed for any one partition has been reached.

System Action:

The current level of activity with FTS and/or MAI prevents the attach of a new subtask. The requested function fails.

User Action:

Retry when system activity declines.

N15705

INSUFFICIENT STORAGE TO ALLOCATE SUBTASK SAVEAREA.

Reason:

SOLVE failed to obtain sufficient storage for a task save area.

System Action:

The function in progress fails.

User Action:

Retry when system activity declines, or restart SOLVE in a larger partition.

N15749

SOLVE SUBTASK INTERNAL ABEND MODULE modlname REASON code.

Reason:

An SOLVE subtask has issued an internal abend. The reason code further clarifies the type of abend. A full list of internal abend codes may be obtained using the CAS : Message Definition menu. All internal abend codes are prefixed by $ABEND ie. $ABENDxxx-yy.

System Action:

The subtask terminates. SOLVE may also terminate.

User Action:

Use the internal abend code to obtain the cause and description of the internal abend. If the problem cannot be easily diagnosed, refer the error to your product support representative.

N15801

command OF USERID uuuuuuuu FROM/TO region ACCEPTED

Reason:

A CANCEL, DISCONN or RECONN command has been successfully issued against the named userid and region combination.

System Action:

If the command is CANCEL then the users processing region(s) is/are processed for termination.
If the command is DISCONN then the users processing region(s) is/are processed for disconnection.
For the RECONN command the current terminal is connected to the target region. The current region is either terminated or disconnected.

User Action:

If a reconnection is processed successfully a panel will be displayed indicating this. Press the ENTER key to resume the disconnected processing.

N15802

REQUIRED OPERAND OMITTED.

Reason:

The CANCEL command requires an operand. No operands have been specified.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N15803

INVALID USERID SPECIFIED.

Reason:

A CANCEL or DISCONN command has been issued specifying an invalid userid on the U= operand.

System Action:

The command is rejected.

User Action:

Correct and retry.

N15804

userid NOT VALID FOR COMMAND

Reason:

A CANCEL, DISCONN or RECONN command has been issued against the nominated userid. This userid is not processable by the command. Eg. Disconnection of a background userid.

System Action:

The command is rejected.

User Action:

None.

N15805

REGION NOT FOUND

Reason:

A CANCEL or DISCONN command was issued but no regions were found to process.

System Action:

The command is rejected.

User Action:

If required issue SHOW USERS to verify the current users logged on.

N15806

UNSUPPORTED OPERAND

Reason:

An unsupported operand (which is valid for another command) was specified on a CANCEL, DISCONN or RECONN command.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N15807

NO OTHER WINDOW EXISTS

Reason:

A CANCEL WINDOW command was issued when no other window existed.

System Action:

The command is rejected.

User Action:

None.

N15808

OTHER WINDOW CANCELLED.

Reason:

A CANCEL WINDOW command has successfully cancelled the users other window.

System Action:

Processing with a single window continues.

User Action:

None.

N15809

RECONNECT REGION nnnnn CANCELLED

Reason:

A CANCEL command was issued specifying a user that had a numeric reconnection identifier nnnnn.

System Action:

The users reconnect region is processed for termination.

User Action:

None.

N15810

USER REGION aaaaaaaa ALREADY PROCESSING COMMAND.

Reason:

A CANCEL, DISCONN or RECONN command has been issued for a region that is already processing a region level command.

System Action:

The command is rejected.

User Action:

Retry the command if the condition persists then report the problem to your installation help desk.

N15811

RECONNECT REGION *nnnnn* NOT FOUND < FOR *uuuuuuuu* >

Reason:

Either RECONN or CANCEL command has specified a numeric reconnection identifier *nnnnn* but no matching region exists. The user ID *uuuuuuuu* is specified for RECONN command only.

System Action:

The command is rejected.

User Action:

Verify the reconnection identifier by issuing SHOW USERS=*uuuuuuuu* (for RECONN command) or SHOW USERS (for CANCEL command). If necessary, retry the command.

N15812

INSUFFICIENT STORAGE

Reason:

A RECONN command has failed due to lack of storage.

System Action:

The reconnection request is aborted.

User Action:

Retry the command if the condition persists notify your installation help desk.

N15813

INSUFFICIENT AUTHORITY

Reason:

An attempt was made to CANCEL or DISCONN. The command operand authority level required exceeds that of the requestor.

System Action:

The command is rejected.

User Action:

None.

N15814

USER MUST RECONNECT FROM TERMINAL aaaaaaa

Reason:

A RECONN command has been issued from a terminal other than that specified in the message. The system is currently configured so that reconnection can only occur at the same terminal as disconnection.

System Action:

The request is rejected.

User Action:

If possible re-logon at the indicated terminal and retry the request.

N15815

REGION NOT PROCESSABLE

Reason:

A CANCEL or DISCONN command specified a region that could not be processed. The region specified is not in a valid state for processing by the command.

System Action:

The command is rejected.

User Action:

If required issue SHOW USERS to verify the current users logged on.

N15816

CANCEL FORCE OF USERID P1 FROM P2 REJECTED - NO PREVIOUS CANCEL DONE

Reason:

A CANCEL command with the FORCE operand can only be issued when a CANCEL command has already been issued without the FORCE operand.

System Action:

None.

User Action:

Issue the CANCEL command without the FORCE operand.

N15817

CANCEL FORCE OF USERID P1 FROM P2 REJECTED - SIGNOFF IN PROGRESS

Reason:

A CANCEL command with the FORCE operand cannot be issued for a user that is in the process of signing off.

System Action:

None.

User Action:

None.

N15818

CANCEL FORCE OF USERID P1 FROM P2 REJECTED - INVALID FOR THIS USER

Reason:

A CANCEL command with the FORCE operand can only be issued for a terminal owning region such as an LU2 or LU1 type session.

System Action:

None.

User Action:

Issue the CANCEL command without the FORCE operand for this user.

N15901

VTAM SENDCMD MACRO REJECTED, RC=rc,FBK2=fb,SENSE=sense

Reason:

A VTAM SENDCMD macro was rejected with the specified error codes.

System Action:

The VTAM command is unable to be executed.

User Action:

Determine the meaning of the error codes from the appropriate VTAM Programming manual.

N15902

VTAM SENDCMD MACRO FAILED RC=rc,FBK2=fb,SENSE=sense

Reason:

A VTAM SENDCMD macro was rejected with the specified error codes.

System Action:

The VTAM command is unable to be executed.

User Action:

Determine the meaning of the error codes from the appropriate VTAM programming manual.

N15A01

LSRPOOL OPT=REPLACE/UPDATE/RESET COMMAND PROCESSED SUCCESSFULLY.

Reason:

This message confirms the successful completion of an LSRPOOL command.

System Action:

None.

User Action:

None.

N15A02

LSRPOOL COMMAND REJECTED, `FORCE' REQUIRED WHEN AN LSR POOL IS ACTIVE.

Reason:

An LSRPOOL command has been issued to replace, update or reset the pending LSR pool definition. However there is an LSR pool currently active. You must code `FORCE' on your LSRPOOL command in this case.

System Action:

The command is rejected.

User Action:

Reissue the command with `FORCE' specified.

N15A10

BUFFER COUNT INVALID.

Reason:

An LSRPOOL command has been issued with a parameter size=num defining a set of buffers to be allocated to the VSAM shared resources pool. However the number (num) is invalid.
If MVS/XA or MVS/ESA, the count must be 0, or greater than 3, to a maximum of 65535.
If not MVS/XA or MVS/ESA, it must be 0, or 3 to 32767, and the product of (buffer size * count) must not exceed 16M.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15A11

BUFFER SIZE INVALID IN THIS ENVIRONMENT.

Reason:

You have specified a buffer size that is only supported in MVS/XA or MVS/ESA.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15A12

INVALID HIPERSPACE BUFFER SIZE.

Reason:

Hiperspace buffers must be a multiple of 4K to a maximum of 32K.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15A13

INVALID HIPERSPACE BUFFER COUNT.

Reason:

The count of hiperspace buffers must be from 0 to 16777215 (16M-1).

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15A14

DUPLICATED BUFFER SIZE SPECIFICATION.

Reason:

A buffer size specification on an LSR command has been duplicated within a specific section. For example:
DATA 4K=10 2K=5 4K=8 The second 4K is duplicated.
This does not include the case where a size is repeated in separate sections of the command for example:
DATA 4K=10 INDEX 4K=5

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15A15

SEPARATE INDEX BUFFERS NOT SUPPORTED.

Reason:

The use of the INDEX keyword on the LSR command to request a separate index buffer pool is not supported on this operating system.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15A16

HIPERSPACE BUFFERS NOT SUPPORTED.

Reason:

The use of the HIPERSPACE or HS keyword on the LSR command to request MVS/ESA hiperspace buffers is not supported on this operating system.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15A17

INVALID LSR POOL NUMBER.

Reason:

The POOL=n keyword of the LSR command has specified an invalid pool number. The number is less than 0, or greater than the maximum pool number supported by the LSR command. In MVS/XA and MVS/ESA, a maximum pool number of 15 is allowed. All other environments only support a pool number of 0.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15A20

aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa

Reason:

This message is the header line for a SHOW LSR display. It indicates which definition (active, pending, or default) is being displayed.

System Action:

None.

User Action:

None.

N15A21

KEYLEN: nnn STRNO: mmm FIXIOB:YES/NO FIXBFR:YES/NO

Reason:

This is one line of the SHOW LSR display. This line displays the maximum allowable key length for the pool, maximum number of strings available, whether I/O control blocks are fixed in storage (YES or NO), and whether I/O buffers are fixed in storage (YES or NO).

System Action:

None.

User Action:

None.

N15A22

SIZE COUNT INDEX H-SPACE X-H-SPACE

Reason:

This is one line of the SHOW LSR display. This line is a header for the subsequent lines of the display (see N15A23).
NOTE: The INDEX, H-SPACE, and X-H-SPACE headings will only be displayed if separate index pools and/or hiperspace buffers are supported by the current operating system.

System Action:

None.

User Action:

None.

N15A23

size count index h-space x-h-space

Reason:

This is one line of the SHOW LSR display. This line describes one set of buffers contained in the pool:

size is the size of the buffers,

count is the number of buffers of this size allocated.

index is the count of index buffers if a separate index pool exists.

h-space and x-h- space are the data and index pool hiperspace buffer counts.

NOTE: The count can be zero if one of the other counts are non-zero.

System Action:

None.

User Action:

None.

N15A30

ACTIVE LSR POOL nnn STATISTICS

Reason:

This is the header line for a multi-line display of statistics about a currently active LSR pool. The pool number is shown in the message.

System Action:

None.

User Action:

None.

N15A31

KEYLEN:nnn STRNO:mmm FIXIOB:YES/NO FIXBFR:YES/NO STRMAX:max ACTIVE:act

Reason:

This is one line of a SHOW LSR=STATISTICS display. This line describes the attributes of the active LSR pool. It gives the maximum allowable key length for the pool, maximum number of strings available, whether I/O control blocks are fixed in storage (YES or NO), whether I/O buffers are fixed in storage (YES or NO), the maximum number of concurrent strings used, and the current number of open datasets using the pool

System Action:

None.

User Action:

None.

N15A32

SIZE COUNT P.READS BUF FOUND UIW NUIW %FOUND HS-COUNT

Reason:

This is one line of a SHOW LSR=STATISTICS display. This is a header for the following lines describing the buffers in the pool (see N15A33).

System Action:

None.

User Action:

None.

N15A33

size count p.reads buf found uiw nuiw %found hs-count

Reason:

This message is one line of a SHOW LSR=STATISTICS display. This line describes one set of buffers within the pool. Statistics are:

size

Displays the size of each buffer.

count

Displays the number of buffers of this size in the pool.

p.reads

Displays the number of physical reads into this set of buffers.

buf found

Displays the number of read requests that are satisfied from the LSR pool.

uiw

Displays the number of user-initiated writes from the LSR pool.

nuiw

Displays the number of non-user-initiated writes from the LSR pool.

% found

Displays the percentage of reads satisfied from the LSR pool.

hs-count

(If hiperspace buffers are defined for this buffer size) Displays the number of hiperspace buffers.

System Action:

None.

User Action:

None.

N15A34

DATA...

Reason:

This is one line of a SHOW LSR=STATISTICS display. This line indicates that the pool currently being displayed has a separate data and index buffer set defined, and that the following N15A33 messages relate to the DATA pool.

System Action:

None.

User Action:

None.

N15A35

INDEX...

Reason:

This is one line of a SHOW LSR=STATISTICS display. This line indicates that the pool currently being displayed has a separate data and index buffer set defined, and that the following N15A33 messages relate to the INDEX pool.

System Action:

None.

User Action:

None.

N15A39

UNABLE TO DISPLAY LSR STATS, REASON: aaaaaaaaaaa

Reason:

A request for a display of LSR statistics has been unsuccessful for the reason given.

System Action:

None.

User Action:

None.

N15A40

INVALID OPTION ON SHOW LSR COMMAND.

Reason:

A SHOW LSR=xxxx command was entered, but the value of xxxx was not one of: STATISTICS, CURRENT, PENDING or DEFAULT

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15A41

INVALID OR UNRECOGNISED OPERANDS ON SHOW LSR COMMAND.

Reason:

A SHOW LSR command was issued with invalid parameters.

System Action:

The command is rejected.

User Action:

Correct the command and retry.

N15B01

SUBSYS option COMMAND ACCEPTED.

Reason:

The entered SUBSYS command has completed successfully.

System Action:

none.

User Action:

none.

N15B20

SUBSYS DEFINE COMMAND FAILED. SUBSYSTEM *name* ALREADY DEFINED.

Reason:

The entered SUBSYS DEFINE command failed. A defined subsystem of that name exists.

System Action:

The command is *not* processed.

User Action:

Correct the subsystem name if necessary.

N15B21

SUBSYS *option* COMMAND FAILED. SUBSYSTEM *name* NOT DEFINED.

Reason:

The entered SUBSYS command failed. No subsystem of that name is defined.

System Action:

The command is *not* processed.

User Action:

Correct the subsystem name if necessary.

N15B22

SUBSYS *option* COMMAND FAILED. SUBSYSTEM *name* HAS PENDING DELETE.

Reason:

The entered SUBSYS command failed. The subsystem is pending deletion.

System Action:

The command is *not* processed.

User Action:

Wait until the subsystem finishes processing the deletion request.

N15B23

SUBSYS FORCE COMMAND FAILED. SUBSYSTEM *name* NOT FORCEABLE.

Reason:

The entered SUBSYS FORCE command failed. The subsystem cannot be forced currently.

System Action:

The command is *not* processed.

User Action:

A subsystem can only be forced when the subsystem subtask is processing user code. Check the FORCE column of a SHOW SUBSYS, and retry if necessary.

N15C01

SUBSYS subsname PROGRAM progname LOADED.

Reason:

The listed subsystem has had the named program successfully loaded, ready for activation.

System Action:

none

User Action:

none

N15C02

SUBSYS subsname PROGRAM progname FAILED TO LOAD. reason.

Reason:

The listed subsystem program could not be loaded, The failure reason is shown.

System Action:

The subsystem remains inactive.

User Action:

Investigate the reason and correct it.

N15C03

SUBSYS name STARTED.

Reason:

The listed subsystem is now running, and ready to process requests.

System Action:

The subsystem becomes active.

User Action:

none.

N15C04

SUBSYS *name* SUBTASK ATTACH FAILED. REFER TO LOG.

Reason:

The listed subsystem subtask could *not* be attached. The activity log contains a related message.

System Action:

The subsystem stays inactive.

User Action:

Investigate the problem.

N15C05

SUBSYS name SUBTASK FAILED TO INITIALIZE.

Reason:

The listed subsystem subtask abended before initializing.

System Action:

The subsystem stays inactive.

User Action:

Check the System log and SOLVE job log for ABEND information (such as an indicative dump). Use the ABEND information to determine why the SUBSYS ABENDed.

N15C06

SUBSYS name STOPPED.

Reason:

The listed subsystem has stopped.

System Action:

none.

User Action:

none.

N15C07

SUBSYS name DELETED.

Reason:

The listed subsystem has been deleted.

System Action:

none.

User Action:

none.

N15C08

SUBSYS *name* START FAILED - STORAGE SHORTAGE.

Reason:

The listed subsystem could not be started, as there was a shortage of storage.

System Action:

The subsystem stays inactive.

User Action:

Investigate the reason for the storage shortage, and then retry.

N15C20

SUBSYS name ALREADY STARTED.

Reason:

The listed subsystem could not be started, as it is already started.

System Action:

The subsystem is already started.

User Action:

None.

N15C21

SUBSYS name CANNOT BE STARTED - PROGRAM LOAD FAILED.

Reason:

The listed subsystem could not be started, as the subsystem program failed to load.

System Action:

The subsystem remains inactive.

User Action:

Determine the reason for the load failure, correct it, and restart the subsystem.

N15C22

SUBSYS name CANNOT BE STOPPED - NOT STARTED.

Reason:

The listed subsystem could not be stopped as it is not started.

System Action:

The subsystem remains inactive.

User Action:

none.

N15C23

SUBSYS *name* STARTED, RELOAD NOT ALLOWED.

Reason:

The SUBSYS RELOAD command is *not* allowed when the target subsystem is started. The target subsystem must be stopped first.

System Action:

The command is *not* processed.

User Action:

Stop the subsystem, and reissue the command.

N15C24

SUBSYS *name* STARTED, DELETE NOT ALLOWED.

Reason:

The SUBSYS DELETE command is *not* allowed when the target subsystem is started. The target subsystem must be stopped first.

System Action:

The command is *not* processed.

User Action:

Stop the subsystem, and reissue the command.

N15C25

SUBSYS *name* CANNOT BE STOPPED - STORAGE SHORTAGE.

Reason:

The SUBSYS STOP command could *not* be processed because of a storage shortage.

System Action:

The command is *not* processed.

User Action:

Investigate the storage shortage, and retry,

N15C30

SUBSYS *name* ABEND *code*.

Reason:

The indicated subsystem has abended. The ABEND code is shown.

System Action:

The subsystem stops.

User Action:

Investigate the ABEND reason.

N15C31

SUBSYS name FORCED.

Reason:

The indicated Subsystem had a SUBSYS FORCE command successfully processed.

System Action:

The subsystem stops.

User Action:

None.

N15F01

No aaaaa SUBSYSTEMS DEFINED.

Reason:

This message will be issued by SHOW SUBSYS when no subsystems are defined, or if a SHOW SUBSYS=name command is issued and no subsystems match the supplied name or prefix.

System Action:

None.

User Action:

None.

N15F02

SUBSYS PROGRAM STATUS QREQ FRC PLF AUT STOP-REASON

Reason:

This message will be issued by SHOW SUBSYS to head up the subsystem list. The columns are:

SUBSYS The subsystem name

PROGRAM The program name

STATUS The subsystem status

QREQ The current number of queued requests

FRC Whether the subsystem can be forced

PLF The parameter list format

AUT The Automatic call replace option

STOP-REASON The reason that the subsystem was stopped

System Action:

None.

User Action:

None.

N15F03

subsys program status qreq frc plf aut stop-reason

Reason:

The SHOW SUBSYS command issues this message for each listed subsystem. See message N15F02 for the meanings of the columns.

System Action:

None.

User Action:

None.

N15F10

INVALID PARAMETERS ON SHOW SUBSYS COMMAND.

Reason:

The SHOW SUBSYS command had invalid or unrecognized parameters.

System Action:

The command is not processed.

User Action:

Correct the parameters.

N15F11

INVALID OR MISSING VALUE AFTER SUBSYS=.

Reason:

The SHOW SUBSYS command had invalid or unrecognized data after the SUBSYS= operand.

System Action:

The command is not processed.

User Action:

Correct the parameters.

N15Z10

SUBTASK ATTACH FAILED, PGM=name R15=r15 R0=r0

Reason:

SOLVE was unable to attach an operating system subtask to perform a function

System Action:

The attach fails.

User Action:

Contact your systems administrator to determine the reason for the attach failing. Other messages will follow this describing any associated processing that is impacted.

N15Z20

SOLVE SUBTASK ABEND, PGM: pgmname ABEND type PSW psw- info

Reason:

A subtask attached by SOLVE has abended. The message indicates the abend code and PSW. (if no SDWA was available, the PSW is not provided and a message indicates that no SDWA was available).
N15Z21 messages follow with register information.

System Action:

Depends on the subtask purpose.

User Action:

If the subtask is a user program (eg &CALL program), examine the abend and correct the code. SOLVE subtask abends should be notified to Technical Support.

N15Z21

REGS raa-bb xxxxxxxx xxxxxxxx xxxxxxxx xxxxxxxx

Reason:

This message follows the N15Z20 message and provides register information. 4 messages will contain all 16 registers.
Refer to message N15Z20 for details.

System Action:

See messages N15Z20

User Action:

See message N15Z20

N16101

NO ACTIVITY LOGS DEFINED, CONTINUING WITHOUT LOG.

Reason:

No LOG DD cards have been included in the product execution JCL.

System Action:

The system continues processing but no hardcopy logging can be performed. LOGPROC still receives each log record.

User Action:

If required, include DD cards for the log files. This can be done dynamically using the ALLOC command and logging can then be started using the LOGSWAP command.

N16102

INSUFFICIENT STORAGE FOR LOG BUFFER, CONTINUING WITHOUT ACTIVITY LOG.

Reason:

Storage shortage prevents use of the activity log.

System Action:

Processing continues.

User Action:

Increase job region/partition size and investigate cause of storage shortage.

N16103

I/O ERROR ON ACTIVITY LOG DD=xxxxxxxx, ABEND CODE=yyy-zz, USING NEXT LOG

Reason:

An I/O error has occurred on the log dataset defined by the specified DD card, caused by the specified abend code.

System Action:

Swaps to the next available log dataset. If no more logs are available logging is halted.

User Action:

If logging is halted but is still required, a new log dataset may be dynamically allocated (using ALLOC) and then swapped to (using LOGSWAP).

N16104

LOGSWAP REQUEST REJECTED, PREVIOUS LOGSWAP STILL BEING PROCESSED.

Reason:

A LOGSWAP command has been entered before a previous LOGSWAP command has completed.

System Action:

The command is rejected.

User Action:

Await completion of the previous LOGSWAP operation, and try again if necessary.

N16105

LOGSWAP REQUEST REJECTED, NO LOGS AVAILABLE.

Reason:

A LOGSWAP command has been entered to cause use the next available hardcopy log but no more are available.

System Action:

The command is rejected. Processing continues with the last available log.

User Action:

If additional logs are required, they may be dynamically allocated using the ALLOC command.

N16106

LOG CLOSED AND SWAPPED TO LOG DD=xxxxxxxx

Reason:

Confirms successful completion of a LOGSWAP command and shows the DD name of the new log dataset.

System Action:

None.

User Action:

None.

N16107

ACTIVITY LOGGING HALTED, NO LOGS AVAILABLE.

Reason:

During LOGSWAP processing the next activity log file could not be opened so activity logging has been halted.

System Action:

Activity logging stops.

User Action:

Refer to message N16103 for required action.

N16108

ACTIVITY LOG DD=xxxxxxxx FAILED TO OPEN, USING NEXT LOG.

Reason:

During LOGSWAP processing the log dataset with DDname xxxxxxxx could not be OPENed.

System Action:

The system tries the next available log dataset.

User Action:

None.

N16109

PREVIOUS LOG DD=xxxxxxxx, SWAPPED BY userid

Reason:

Confirms completion of LOGSWAP processing. This message provides a record of the previous log dataset and the user who requested the LOGSWAP.

System Action:

None.

User Action:

None.

N16110

LOGSWAP COMPLETED, NEW LOG DD=xxxxxxxx

Reason:

Confirms completion of LOGSWAP processing to the log identified by the xxxxxxxx DD statement.

System Action:

None.

User Action:

None.

N16111

I/O ERROR ON ACTIVITY LOG DD=xxxxxxxx, CONTINUING WITH NEXT LOG.

Reason:

An I/O error occurred on the current log and the system has generated an internal LOGSWAP operation.

System Action:

Logging will continue with the next available log if one exists. If no additional log remains a warning message will be issued to advise that logging has been halted. In this case the SYSPARMS command SYSLOG operand can be used to request logging to the system log until a restart can be performed.

User Action:

Determine the reason for the I/O error and rectify it.

N16112

PRINTER IN USE BY DD=xxxxxxxx, CONTINUING WITHOUT ACTIVITY LOG

Reason:

In a VM/GCS system, the LOG1 FILEDEF statement identifies a spooled printer but the (only) printer is in use by the identified DD.

System Action:

Activity logging is halted.

User Action:

Amend the SOLVE startup procedure to avoid the conflicting use of the spooled printer. Consider activity logging to CMS disk datasets.

N16201

NEW OCS WINDOW ID SET.

Reason:

Indicates successful processing of an OCSID command.

System Action:

This is the value that will subsequently be returned in the NCL system variable OCSID if requested from this window. The OCSID is displayed in the right hand side of the OCS window.

User Action:

None.

N16202

OCS ID TOO LONG, TRUNCATED.

Reason:

The OCSID command allows an ID of up to 8 characters. A longer ID was specified and has been truncated.

System Action:

None.

User Action:

None.

N16203

OCS WINDOW ID RESET.

Reason:

Indicates successful processing of an OCSID command that specified a null ID to delete the current OCSID.

System Action:

Any existing OCSID is deleted. At this time the OCSID NCL system variable will return a null value.

User Action:

None.

N16204

OCS ID TOO LONG, NOT SET

Reason:

An OCSID greater than 8 characters was specified, but the ID could not be truncated because it contains DBCS shift-in or shift-out characters.

System Action:

The command is rejected.

User Action:

Correct and retry.

N16205

OCSID REQUEST INVALID FROM THIS ENVIRONMENT

Reason:

An attempt was made to set the OCS window Id with the OCSID command but the current environment does not have an OCS window.

System Action:

The command is rejected.

User Action:

None.

N16301

OPERAND xxxx NOT RECOGNISED.

Reason:

The specified operand, entered in conjunction with a PROFILE, SHOW or SYSPARMS command, is not a valid operand for the command.

System Action:

The command is rejected.

User Action:

Correct and retry. The operand may be genuinely invalid or may be valid only for a feature which is not licensed.

N16302

OPERAND xxxx IS INVALID OR OUT OF RANGE.

Reason:

The specified operand, entered in conjunction with a PROFILE, SHOW or SYSPARMS command, is a valid operand for the command but its value is invalid.

System Action:

The command is rejected.

User Action:

Correct and retry.

N16303

OPERAND IS NO LONGER SUPPORTED - COMMAND IGNORED

Reason:

The specified operand, entered in conjunction with a PROFILE, SHOW or SYSPARMS command was valid in a previous release of SOLVE but is no longer supported.

System Action:

The command is ignored.

User Action:

Check the Release Summary for obsolete command operands.

N16601

UNABLE TO OBTAIN STORAGE FOR APPL ENTRY

Reason:

An APPLSTAT command could not be processed because of storage shortage.

System Action:

The command is rejected.

User Action:

Retry at a later time when the storage shortage is relieved. If necessary, increase the region size.

N16901

COMMAND NOT VALID WITH THIS OPERATING SYSTEM.

Reason:

A SYSPARMS NONSWAP command has been entered but it is not valid for use in this operational environment.

System Action:

The command is rejected.

User Action:

None.

N16902

SYSTEM IS NOT APF AUTHORISED, CANNOT PROCESS COMMAND.

Reason:

A SYSPARMS NONSWAP command has been rejected because the system is not APF authorized.

System Action:

The command is rejected.

User Action:

Contact your systems administrator to determine why the system is not APF authorized. Other processing may be limited without APF authorization.

N16903

SYSTEM IS ALREADY RUNNING SWAPPABLE.

Reason:

A SYSPARMS NONSWAP=NO command has been rejected because the system is already running swappable.

System Action:

The command is ignored.

User Action:

None.

N16904

SYSTEM IS ALREADY RUNNING NON-SWAPPABLE.

Reason:

A SYSPARMS NONSWAP=YES command has been rejected because the system is running non-swappable.

System Action:

The command is ignored.

User Action:

None.

N16907

LOAD FOR MODULE modname FAILED, R15=bbbb, R1=cccc.

Reason:

A SYSPARMS MODLOAD=modname command failed. bbbb and cccc show the return codes from the LOAD macro.

System Action:

The module specified is not loaded.

User Action:

Determine the cause of the error and retry.

N16908

DELETE FOR MODULE modname FAILED.

Reason:

A SYSPARMS MODDEL=modname command failed.

System Action:

The specified module is not deleted.

User Action:

Retry specifying the correct module name.

N16916

SYSTEM USING CROSS-MEMORY SERVICES, CANNOT BE MADE SWAPPABLE.

Reason:

A SYSPARMS NONSWAP=NO command has been issued (under MVS) to make SOLVE run swappable. The attempt has failed, since AOM is running in cross-memory mode, and requires SOLVE to run non-swappable.

System Action:

The command is rejected. SOLVE will keep running non-swappable.

User Action:

None.

N16917

PROCEDURE NAME: aaaaaaaa IS NOT AN EXACT COMMAND NAME.

Reason:

A SYSPARMS CMDREPL=aaaaaaaa command has been issued, however aaaaaaaa is not the exact name of a known command. To replace a command with an NCL procedure, the procedure name must be an exact match for the command is it replacing.

System Action:

The command is rejected.

User Action:

Check the spelling of the command and reissue.

N16918

COMMAND: aaaaaaaa NOT REPLACEABLE BY AN NCL PROCEDURE.

Reason:

A SYSPARMS CMDREPL=aaaaaaaa command has been issued, but it is not valid for command aaaaaaaa to be replaced by an NCL procedure.

System Action:

The command is rejected.

User Action:

None. The command cannot be replaced.

N16919

COMMAND: aaaaaaaa GLOBAL EQUATED OR OML REPLACED, NOT REPLACEABLE BY AN NCL PROCEDURE.

Reason:

A SYSPARMS CMDREPL=aaaaaaaa has been issued, but command aaaaaaaa is already overridden by a global equate, or has been replaced by an OML procedure.

System Action:

The command is rejected.

User Action:

None.

N16920

nnn NCL PROCEDURES UNLOADED BY GENERIC REQUEST.

Reason:

A SYSPARMS UNLOAD= command has been issued specifying a generic NCL procedure or DDname. This message shows how many NCL procedures were unloaded as a result of the command.

System Action:

nnn NCL procedures have been unloaded.

User Action:

None.

N16C01

DDNAME NOT FOUND, DD=aaaaaaaa

Reason:

A request has been received by Dataset Services for an action to be performed on a specified DD. The request has failed because the DD does not exist.

System Action:

The request fails.

User Action:

Allocate the specified DD then retry the request.

N16C02

DATASET NOT FOUND, DSN=aaaaaaaa

Reason:

A request has been received by Dataset Services for an action to be performed on a specified dataset referenced by dataset name aaaaaaaa. The request has failed because the dataset does not exist.

System Action:

The request fails.

User Action:

Allocate the specified dataset then retry the request.

N16C03

MEMBER NOT FOUND, MEMBER=aaaaaaaa

Reason:

A request has been received by Dataset Services for an action to be performed on a specified member of a Partitioned DataSet (PDS). The request has failed because the member aaaaaaaa does not exist.

System Action:

The request fails.

User Action:

Check that the member is correct.

N16C04

DATASET IS NOT ALLOCATED, DSN=aaaaaaaa

Reason:

A request has been received by Dataset Services for an action to be performed on a specified dataset. The request has failed because the dataset is not allocated to SOLVE.

System Action:

The request fails.

User Action:

Allocate the dataset to SOLVE and retry the request.

N16C05

DYNALLOC FAILURE VB=*aa* RC=*bb* E=*cccc* I=*dddd*

Reason:

The DYNALLOC macro has failed performing a Dataset Services action. The following information is returned:

aa is the verb code specified in the request block.

bb is the return code in Register 15.

cccc is the SVC99 error reason code.

dddd is the SVC99 information reason code.

System Action:

The request fails.

User Action:

Dynamic allocation return code information is found in the following IBM manual, chapter, and section:

Manual

z/OS MVS Programming: Authorized Assembler Services Guide (Document Number SA22-7608)

Chapter

Requesting Dynamic Allocation Functions

Section

SVC 99 Parameter List Verb Codes and Text Units, By Function

The verb index (VB) is one of the following:

- X'01' Dsname allocation
- X'02' Unallocation
- X'03' Concatenation
- X'04' Deconcatenation
- X'05' Remove-in-use processing based on task-ID
- X'06' Ddname allocation
- X'07' Information retrieval

Return code (RC) and feedback codes (E= and I=) are documented in the following section of the same chapter: Interpreting DYNALLOC Return Codes.

Investigate the reason for the failure using the supplied information. Check the SOLVE activity log for system messages that were returned by DYNALLOC processing.

N16C06

DATASET IS IN USE, DSN=aaaaaaaa

Reason:

A request has been received by Dataset Services for an action to be performed on a specified dataset. The request has failed because it requires exclusive access to the dataset, but another task in the system has the dataset allocated.

System Action:

The request fails.

User Action:

Obtain exclusive access to the dataset and retry the request.

N16C07

MEMBER REPLACED, MEMBER=aaaaaaaa

Reason:

A request has been received by Dataset Services to add an ALIAS for a member in a Partitioned DataSet (PDS). The ALIAS name matched the name of a member which already existed in the PDS, so this member has been replaced by the ALIAS entry.

System Action:

None.

User Action:

None.

N16C08

START OF NEW DIRECTORY

Reason:

A request has been received by Dataset Services to read a Directory entry from a Partitioned DataSet (PDS). The read has encountered the end of the current directory and has begun to read the directory of the next dataset in the DD concatenation.

System Action:

None.

User Action:

None.

N16C09

END OF FILE OR MEMBER

Reason:

A request has been received by Dataset Services to read one or more records from a sequential file or member of a Partitioned DataSet (PDS). During read processing, the end of the file or PDS member was found.

System Action:

None.

User Action:

None.

N16C10

WRITE ERROR ON CLOSE

Reason:

A request has been received by Dataset Services to CLOSE a file to which records were being written. The file supports blocked records and some records in the last block of records had not been written to the file, so before the CLOSE is performed the remaining records are written to the file. During the write of the final block, an error occurred.

System Action:

The file is closed.

User Action:

To obtain more specified error information, a FLUSH request should be performed before the CLOSE. The FLUSH request writes the remaining block of records to the file and returns more specific information about any errors which may occur.

N16C11

STOW ERROR ON CLOSE RC=aa

Reason:

A request has been received by Dataset Services to CLOSE a member of a Partitioned DataSet (PDS) which was being accessed. The STOW macro which is issued to end access to the PDS member has failed. The STOW macro is an IBM MVS macro.

System Action:

The member is not closed.

User Action:

Investigate the reason for the STOW failure using the return code shown in the appropriate IBM manual.

N16C12

ERROR ON CLOSE

Reason:

A request has been received by Dataset Services to close a file and the close of the file has failed. The error is not expected and the exact failure reason cannot be determined.

System Action:

The file is not closed.

User Action:

Investigate the system log for related error messages.

N16C13

CLOSE ABEND xaaaa

Reason:

A request has been received by Dataset Services to close a file and the CLOSE has resulted in an abend. The abend code is shown.

System Action:

The file is not closed.

User Action:

Investigate the reason for the abend using the abend code shown.

N16C14

DELETE FAILED - EXPDATE NOT REACHED

Reason:

A request has been received by Dataset Services to DELETE a dataset and the DELETE request has failed because the dataset has an expiry date and this date has not been reached yet.

System Action:

The dataset is not deleted.

User Action:

None.

N16C15

DELETE FAILED - SCRATCH FAILED

Reason:

A request has been received by Dataset Services to DELETE a dataset and the DELETE request has failed. The Operating System SCRATCH routine has indicated that an error has occurred.

System Action:

The dataset is not deleted.

User Action:

Check the system log and job log for related error messages.

N16C16

RENAME FAILED - aaaaaaaa RC=bb FB=cccc

Reason:

A request has been received by Dataset Services to RENAME a dataset and the RENAME request has failed. The request invoked an operating system function using macro aaaaaaaa, which returned Return Code bb and Feedback Code cccc.

System Action:

The dataset is not renamed.

User Action:

Investigate the reason for the failure using the supplied information.

N16C17

RENAME FAILED - MULTIVOLUME DATASET

Reason:

A request has been received by Dataset Services to RENAME a dataset and the RENAME request has been rejected because the dataset is distributed over more than one volume. Multi-volume datasets are not supported by Dataset Services.

System Action:

The dataset is not renamed.

User Action:

None.

N16C18

RENAME FAILED - NOT ON DASD

Reason:

A request has been received by Dataset Services to RENAME a dataset and the RENAME request has been rejected because the dataset is not resident on a Direct Access Storage Device (DASD). Dataset Services does not support rename of tape or cartridge datasets.

System Action:

The dataset is not renamed.

User Action:

None.

N16C20

DATASET MIGRATED

Reason:

A request has been received by Dataset Services to perform an action on a dataset but the dataset has been migrated (for example, by DFHSM) and MIGRATE=YES was not specified on the request.

System Action:

The action is not performed.

User Action:

Specify MIGRATE=YES on the request or recall the dataset and retry the request.

N16C21

VOLUME NOT MOUNTED

Reason:

A request has been received by Dataset Services to perform an action on a dataset but the volume on which the dataset resides is not mounted and MOUNT=YES was not specified on the request.

System Action:

The action is not performed.

User Action:

Specify MOUNT=YES on the request or mount the volume and retry the request.

N16C22

OUTPUT ENQ FAILED

Reason:

A request has been received by Dataset Services to ENQ a dataset or to OPEN a dataset for output, but the ENQ has failed.

System Action:

None.

User Action:

This usually indicates that another user is accessing the dataset. The other user may hold an ENQ for a very short time whilst accessing the dataset, in which case if the request is retried it may work.

N16C24

DATASET IS OPEN

Reason:

A request has been received by Dataset Services to perform an action on a dataset, but the request cannot be performed because the dataset is currently OPEN.

System Action:

The request fails.

User Action:

CLOSE the dataset and retry the request.

N16C25

DATASET IS VSAM

Reason:

A request has been received by Dataset Services to perform an action on a dataset, but the request cannot be performed because the dataset is a VSAM dataset. Some Dataset Services functions do not support VSAM files.

System Action:

The request fails.

User Action:

None.

N16C26

LOGSTREAM NOT FOUND, LSN=aaaaaaaa

Reason:

A request has been received by Dataset Services for an action to be performed on a specified logstream referenced by logstream name aaaaaaaa. The request has failed because the logstream does not exist.

System Action:

The request fails.

User Action:

Check and correct or create the specified logstream then retry the request.

N16C27

LOGGER ERROR. RC=aaa RS=bbbbbbbb

Reason:

A system logger request has encountered an error. The system return code (aaa, decimal) and reason code (bbbbbbbb, hex) are displayed.

System Action:

The request fails.

User Action:

The return and reason codes can be looked up in the IBM Assembler Programming Reference in the sections on the System Logger macros, IXG.... Take action as required.

N16C28

HFS PATH NOT FOUND, NAME=aaaaaa

Reason:

A request has been received by Dataset Services for an action to be performed on a specified HFS path referenced by path name aaaaaa. The request has failed because the path does not exist.

System Action:

The request fails.

User Action:

Create the specified path then retry the request.

N16C30

OPEN FAILURE DD=aaaaaaaa

Reason:

A request has been received by Dataset Services to OPEN a dataset and the OPEN of the dataset has failed.aaaaaaaa is the DDname used in the failed open request.

System Action:

The request fails.

User Action:

Check for relevant system messages on the system log and job log.

N16C31

I/O ERROR SEE LOG DD=aaaaaaaa

Reason:

A request has been received by Dataset Services to perform an action on a dataset and the action has resulted in an I/O error. The DDname used in the request was 'aaaaaaaa'.

System Action:

The request fails.

User Action:

Refer to the SOLVE activity log for messages which supply more specific information about the error.

N16C32

DCB ABEND abbbb

Reason:

Dataset Services received a request to perform an action on a data set, and the action resulted in an abend. abbbb is the abend code returned from the failed action.

System Action:

The request fails.

User Action:

If the abend code indicates system level error, correct the error and retry the request. If you cannot determine the cause of the abend, contact Technical Support.

N16C33

BAD WRITE RECORD LENGTH

Reason:

A request has been received by Dataset Services to write a record to a file but the record is too long for the dataset.

System Action:

The request fails.

User Action:

Either truncate the record to a valid length or redefine the file with a larger maximum record length.

N16C34

BAD DIRECTORY BLOCK LENGTH

Reason:

A request has been received by Dataset Services to read the next entry in a Partitioned DataSet (PDS) directory, and the length of the directory block returned by the system is invalid.

System Action:

The request fails.

User Action:

This indicates that the directory of the PDS is corrupted. Investigate the cause of the corruption.

N16C35

INVALID OPEN MODE

Reason:

A request has been received by Dataset Services to OPEN a dataset and the OPEN MODE is invalid.

System Action:

The request fails.

User Action:

Correct the MODE option and retry. Valid modes are INPUT, OUTPUT, and EXTEND.

N16C36

BAD USER DATA LENGTH

Reason:

A request has been received by Dataset Services to update a PDS directory entry (eg. due to CLOSE of a member or ADD ALIAS request) and the length of the userdata supplied is not valid.

System Action:

The request fails.

User Action:

Correct the userdata value and retry.

N16C37

BAD NUMBER OF USERDATA TTRS

Reason:

A request has been received by Dataset Services to update a PDS directory entry (eg. due to CLOSE of a member or ADD ALIAS request) and the userdata contains an invalid number of TTRs. The number of TTRs must be from 0 to 3, and the length of the userdata must match the length expected for the number of TTRs specified.

System Action:

The request fails.

User Action:

Correct the userdata value and retry.

N16C38

CANNOT OPEN PDS EXTEND/MOD

Reason:

A request has been received by Dataset Services to OPEN a file with MODE=EXTEND or to OPEN a file which is allocated with DISP=MOD but the request has been rejected because the file is a Partitioned DataSet (PDS) or a member of a PDS.

System Action:

The request fails.

User Action:

Alter the ALLOCation and OPEN requests to specify DISP=SHR/OLD and MODE=OUTPUT respectively. It is invalid to open a PDS or PDS member for EXTEND.

N16C39

INVALID DATASET BLKSIZE, VALUE: ssss

Reason:

A request has been received by Dataset Services to OPEN a dataset, however the dataset blksize is zero or invalid.

System Action:

The request fails.

User Action:

Determine why the dataset blksize is not valid. Reallocate the dataset and try again.

N16C40

INVALID DDNAME, DD=aaaaaaaa

Reason:

A request has been received by Dataset Services which specifies the DD name of a file to be actioned, but the DD name supplied is not a valid name.

System Action:

The request fails.

User Action:

Correct the DD name and retry the request.

N16C41

INVALID MEMBER NAME, MEMBER=aaaaaaaa

Reason:

A request has been received by Dataset Services which specifies the name of a Partitioned DataSet (PDS) to be actioned but the member name is not a valid name.

System Action:

The request fails.

User Action:

Correct the member name and retry the request.

N16C42

INVALID 2ND MEMBER NAME, MEMBER=aaaaaaaa

Reason:

A request has been received by Dataset Services which specifies the name of a Partitioned DataSet (PDS) to be actioned but the member name is not a valid name.

System Action:

The request fails.

User Action:

Correct the member name and retry the request.

N16C43

INVALID DATASET NAME, DSN=aaaaaaaa

Reason:

A request has been received by Dataset Services which specifies the name of a dataset to be actioned but the dataset name is not a valid name.

System Action:

The request fails.

User Action:

Correct the dataset name and retry the request.

N16C44

INVALID 2ND DATASET NAME, DSN=aaaaaaaa

Reason:

A request has been received by Dataset Services which specifies the name of a dataset to be actioned but the dataset name is not a valid name.

System Action:

The request fails.

User Action:

Correct the dataset name and retry the request.

N16C45

INVALID PARM

Reason:

A request has been received by Dataset Services which specifies a parameter which is not valid.

System Action:

The request fails.

User Action:

Locate the incorrect parameter, correct it and retry the request.

N16C46

INVALID DDLIST FORMAT

Reason:

A request has been received by Dataset Services which specifies a list of DD names to be actioned, but the format of the list is not valid.

System Action:

The request fails.

User Action:

Correct the format of the list and retry the request. The list must be one or more valid DD names separated by commas and may be enclosed in parentheses.

N16C47

INVALID DDLIST, MUST HAVE AT LEAST 2 DDNAMES

Reason:

A request has been received by Dataset Services which specifies a list of DD names to be actioned, but the list does not have at least 2 names.

System Action:

The request fails.

User Action:

Add more DD names to the list and retry the request.

N16C48

INVALID DDLIST, DUPLICATE DDNAME FOUND

Reason:

A request has been received by Dataset Services which specifies a list of DD names to be actioned, but the list contains a DD name which appears more than once in the list.

System Action:

The request fails.

User Action:

Ensure that each DD name in the list only appears once and retry the request.

N16C49

INVALID LOGSTREAM NAME, LSN=aaaaaaaa

Reason:

A request has been received by Dataset Services which specifies the name of a logstream to be actioned but the name is not a valid logstream name.

System Action:

The request fails.

User Action:

Correct the logstream name and retry the request.

N16C50

DSORG NOT aaaa

Reason:

A request has been received by Dataset Services which requires that the dataset to be actioned must have a specific dataset organisation. The dataset is not of the required organisation.

System Action:

The request fails.

User Action:

Redefine the dataset to have the specified dataset organisation.

N16C51

NO MEMBER NAME SUPPLIED

Reason:

A request has been received by Dataset Services which specifies an action to be performed on a member of a Partitioned DataSet (PDS), but the member name has not been supplied.

System Action:

The request fails.

User Action:

Specify the member name and retry the request.

N16C52

MEMBER NAME NOT ALLOWED

Reason:

A request has been received by Dataset Services which specifies an action to be performed on a Partitioned DataSet (PDS), but a member name has been supplied and no member name is allowed for the request.

System Action:

The request fails.

User Action:

Remove the member name and retry the request.

N16C53

SPANNED RECFM NOT SUPPORTED

Reason:

A request has been received by Dataset Services which involves a dataset which contains spanned records. Spanned record datasets are not supported by Dataset Services.

System Action:

The request fails.

User Action:

None.

N16C54

NEW MEMBER ALREADY EXISTS, MEMBER=aaaaaaaa

Reason:

A request has been received by Dataset Services to RENAME a member of a Partitioned DataSet (PDS), but a member with the NEW name already exists in the PDS.

System Action:

The request fails.

User Action:

Delete the target member or choose a different new member name.

N16C55

PDS DIRECTORY FULL

Reason:

A request has been received by Dataset Services to add a new member to a Partitioned DataSet (PDS), but there is no free space in the PDS directory.

System Action:

The request fails.

User Action:

Delete unwanted members from the PDS, or redefine the PDS with a larger directory.

N16C56

ENQ ALREADY HELD

Reason:

A request has been received by Dataset Services to obtain an ENQ for a file, but the specified ENQ is already held by the requestor. This usually denotes a logic error in the code being executed for not recognizing that the ENQ was already held.

System Action:

None.

User Action:

Notify the organization responsible for the code being executed of the ENQ problem.

N16C57

ENQ NOT HELD

Reason:

A request has been received by Dataset Services to release an ENQ for a file, but the specified ENQ is not held by the requestor.

System Action:

None.

User Action:

None.

N16C58

INVALID HFS PATH NAME, PATH=aaaaaa

Reason:

A request has been received by Dataset Services which specifies the name of an HFS path to be actioned but the path name is not a valid name.

System Action:

The request fails.

User Action:

Correct the path name and retry the request.

N16C59

INVALID DSNAME, DSN=*aaaaaa*

Reason:

A request received by Dataset Services specifies the name of a data set that is not qualified (that is, an attempt to allocate a high-level qualifier).

System Action:

The request fails.

User Action:

Specify a qualified data set name, and retry the request.

N16C60

UNABLE TO DETERMINE ALLOC REQUEST TYPE

Reason:

A request has been received by Dataset Services to ALLOCate a new or existing file, but some required parameters have been omitted. Dataset Services is unable to determine if the ALLOC request is for a new dataset, an existing dataset or a SYSOUT dataset.

System Action:

The ALLOC request is rejected.

User Action:

Specify either the STATUS operand or CLASS operand.

N16C61

ALLOC MDO OPERAND OMITTED, MDO KEY=aaaa

Reason:

A request has been received by Dataset Services to ALLOCate a new or existing file, but a required parameter has been omitted. aaaa shows the MDO key of the field which has been omitted. The MDO is mapped by by the map $DSCBD3Z. The MDO keys are in << >> structures in the map source which can be viewed from Mapping Services.

System Action:

The ALLOC request is rejected.

User Action:

Use the ASN.1 map for the request and key aaaa to determine which operand has been omitted, then retry the request with the operand supplied.

N16C62

ALLOC MDO OPERAND NOT ALLOWED, MDO KEY=aaaa

Reason:

A request has been received by Dataset Services to ALLOCate a new or existing file, but a parameter has been specified which is not allowed for this request. aaaa shows the MDO key for the operand which is in error. The MDO is mapped by map $DSCBD3Z. The keys are in the << >>structures in the maps source which can be viewed from Mapping Services.

System Action:

The ALLOC request is rejected.

User Action:

Use the ASN.1 map for the request and key aaaa to determine which operand is invalid, then retry the request without the operand supplied.

N16C63

ALLOC MDO OPERAND INVALID, MDO KEY=aaaa

Reason:

A request has been received by Dataset Services to ALLOCate a new or existing file, but a parameter has been specified which is invalid. aaaa shows the MDO key for the operand which is invalid. The MDO is mapped by the map $DSCBD3Z. The keys are in the << >> structures in the map source which can be viewed from Mapping Services.

System Action:

The ALLOC request is rejected.

User Action:

Use the ASN.1 map for the request and key aaaa to determine which operand is invalid, then retry the request after correcting the operand value.

N16C64

DYNALLOC REFUSED BY SMS VB=aa RC=bb REASON=cccccccc

Reason:

A request has been received by Dataset Services to allocate a new or existing file, but the request has failed due to a Systems Managed Storage error. The following fields are shown:
aa - The DYNALLOC verb code for the request.
bb - The return code in Register 15 on completion.
cccccccc - The SMS reason code for the failure.

System Action:

The ALLOC request is rejected.

User Action:

Investigate the reason for refusal by SMS, using the DYNALLOC verb code and SMS reason code. Refer to the activity log for any system messages related to the failure.

N16C65

LAST ALLOCATION RELATIVE REQUEST NUMBER REACHED

Reason:

A request has been received by Dataset Services to retrieve information about a DD using the Relative Request Number for the DD, and the operating system has indicated that the specified Relative Request Number is the highest for any dataset allocated to SOLVE.

System Action:

This message is for information only and informs the requestor that any request for information for a Relative Request Number higher than the one requested will fail.

User Action:

None.

N16C66

ALLOCATION RELATIVE REQUEST NUMBER aaaa DOES NOT EXIST

Reason:

A request has been received by Dataset Services to retrieve information about a DD using the Relative Request Number for the DD, but no DD exists with the specified Relative Request Number.

System Action:

The request fails.

User Action:

Correct the Relative Request number and retry the request. When obtaining information by Relative Request Number, always check for return of message N16C65 which indicates that the highest Relative Request Number has been reached.

N16C67

DATASET ALREADY EXISTS DSN=aaaaaaaa

Reason:

A request has been received by Dataset Services to allocate a NEW dataset but a dataset with the specified name already exists.

System Action:

The request fails.

User Action:

Delete the existing dataset or choose a different dataset name for the new dataset name.

N16C68

DD NAME aaaaaaaa ALREADY IN USE

Reason:

A request has been received by Dataset Services to allocate a dataset but the DD name specified is already in use.

System Action:

The request fails.

User Action:

Choose a different DD name or unallocate the existing DD and retry the request.

N16C70

MDO UPDATE FAILED RC=aa FB=bb

Reason:

A request has been received by Dataset Services which returns information in an MDO. An error was encountered whilst the MDO was being updated with the returned information.

System Action:

The request has been performed as requested but no information is returned.

User Action:

Investigate the reason for MDO update failure using the shown return code and feedback values. These are documented in the NCL Reference.

N16C71

ATTACH OF aaaaaaaaa FAILED, RC=bbbb

Reason:

A request has been received by Dataset Services which involves a call to a system Utility Module. The Utility Module is ATTACHed as a subtask of SOLVE. The ATTACH has failed.The system Utility Module is 'aaaaaaaa'.

System Action:

The request fails.

User Action:

Investigate the reason for the ATTACH failure using the shown return code.

N16C72

GET DSINFO FAILED FUNCTION=aa RC=bb

Reason:

A request has been received by Dataset Services which has failed due to errors during retrieval of dataset information. The following information is shown:
aa : A number indicating which function failed.
04 = DDname not found (DEVTYPE failed)
08 = Allocation Query failed (DYNALLOC failed)
12 = RDJFCB failed
16 = OBTAIN failed
20 = Abend occurred
bb : The return code from the requested function if applicable.

System Action:

The request fails.

User Action:

Investigate the cause of the problem by checking the meaning of the return code for the particular function.

N16C73

RDJFCB FAILED RC=aaaa

Reason:

A request has been received by Dataset Services which required a RDJFCB macro to be issued. The macro call failed with the return code as shown.

System Action:

The request fails.

User Action:

Investigate the reason for the RDJFCB failure using the shown return code.

N16C74

OBTAIN FAILED RC=aaaa

Reason:

A request has been received by Dataset Services which required a OBTAIN macro to be issued. The macro call failed with the return code as shown.

System Action:

The request fails.

User Action:

Investigate the reason for the OBTAIN failure using the shown return code.

N16C75

UNEXPECTED ENQ/DEQ RC=aaaa

Reason:

A request has been received by Dataset Services which resulted in an ENQ or DEQ being issued. The ENQ or DEQ failed with the return code as shown.

System Action:

The request fails.

User Action:

Investigate the reason for the ENQ or DEQ failure using the shown return code.

N16C76

NOTE FAILED RC=aaaa

Reason:

A request has been received by Dataset Services which caused data to be written to or read from a dataset. A NOTE Macro is issued to note the position in the dataset after the read or write is performed. The NOTE macro has failed.

System Action:

The request fails.

User Action:

Investigate the reason for the NOTE failure using the shown return code. Refer to the system log and job log for related error messages.

N16C77

aaaaaaaa FUNCTION UNEXPECTED RETURN CODE, RC=aaaa

Reason:

A request has been received by Dataset Services which requested an operating system function, and the operating system function has failed.

System Action:

The request fails.

User Action:

Investigate the reason for the failure using the shown return code and function name. Refer to the system log and job log for related error messages.

N16C78

aaaaaaaa FUNCTION ABEND=aaaa

Reason:

A request has been received by Dataset Services which requested an operating system function, and the operating system function has abended.

System Action:

The request fails.

User Action:

Investigate the reason for the failure using the shown return code and function name. Refer to the system log and job log for related error messages.

N16C80

PATH NAME INVALID

Reason:

A request has been received by Dataset Services which specifies a path name which is invalid.

System Action:

The request fails.

User Action:

Correct the path name and retry the request.

N16C81

PATH ALREADY DEFINED

Reason:

A request has been received by Dataset Services which opens a new path to a dataset, but a path with the specified name already exists.

System Action:

The request fails.

User Action:

Close the existing path name or change the path name and retry the request.

N16C82

PATH NOT DEFINED

Reason:

A request has been received by Dataset Services which access an existing path to a dataset, but no path exists with the specified name.

System Action:

The request fails.

User Action:

Correct the path name or open a path with the required name and retry the request.

N16C83

PATH WRONG ACCESS CLASS

Reason:

A request has been received by Dataset Services which access an existing path to a dataset, but the requested function is not available on the existing path. For example, a path has been opened to a Sequential File and a request to read a PDS directory has been encountered.

System Action:

The request fails.

User Action:

Correct the request type or open a path of the desired class and retry the request.

N16C84

REQUEST NOT VALID ON PATH NOW

Reason:

A request has been received by Dataset Services which access an existing path to a dataset, but the requested function is not available on the existing path. For example, the path is to a sequential file and is open for output, and a READ operation was requested.

System Action:

The request fails.

User Action:

Correct the request type or open a path of the desired type and retry the request.

N16C85

PATH HAS HAD PREVIOUS ERROR

Reason:

A request has been received by Dataset Services which access an existing path to a dataset, but the requested function cannot be performed due to a previous error on the path. For example, a WRITE operation was requested but an I/O error had occurred previously.

System Action:

The request fails.

User Action:

Close the path.

N16C86

INVALID SUBTASK STATUS

Reason:

A request has been received by Dataset Services which access an existing path to a dataset, but the requested function cannot be performed due to an abend in the I/O subtask during a previous request.

System Action:

The request fails.

User Action:

Close the path.

N16C87

NMDSSCHK EXIT HAS FAILED

Reason:

A request has been received by Dataset Services that requires authorization from the NMDSSCHK exit. The call to the NMDSSCHK exit has failed. This could indicate the LOAD of the NMDSSCHK module failed, or the initialization of the exit failed, or the exit abended during processing.

System Action:

The request fails.

User Action:

See the SOLVE activity log for further messages about the failure. Message N16D16 should be present, containing a description of the error. If an abend occurred, the subtask that calls the exit should have taken a subtask dump - investigate the dump and determine why the exit failed.

N16C88

NMDSSCHK EXIT HAS REFUSED REQUEST

Reason:

A request has been received by Dataset Services which requires authorisation from the NMDSSCHK exit. The call to the NMDSSCHK exit has resulted in a return code from the exit indicating that the request is not allowed.

System Action:

The request fails.

User Action:

Refer to the SOLVE activity log for further messages about the failure. If the exit returns a message indicating the reason for the failure, it will be logged as part of message N16D16.

N16C89

SECURITY SYSTEM HAS REFUSED REQUEST

Reason:

A request has been received by Dataset Services which requires authorization from the security system (for example, RACF). The security system has disallowed the request.

System Action:

The request fails.

User Action:

Check with your security administrator. There may be additional messages on the system log or system console that explain the failure.

N16C90

FUNCTION NOT SUPPORTED

Reason:

A request has been received by Dataset Services which is either not supported by the operating system on which SOLVE is executing (for example, Partitioned DataSet functions on VM operating system) or is not available in the environment in which SOLVE is executing (Systems Managed Storage not available in old versions of MVS).

System Action:

The request fails.

User Action:

None.

N16C91

ABEND aaaaaaaa OCCURRED

Reason:

A request has been received by Dataset Services which has resulted in an unexpected abend during processing of the request.

System Action:

The request fails.

User Action:

Contact your SOLVE support center.

N16C92

REQUEST CANCELLED

Reason:

A request has been received by Dataset Services which has been cancelled due to termination of the requestor.

System Action:

The request is cancelled.

User Action:

None. This is normal for requests which were issued from NCL procedures. The request is cancelled if the procedure is flushed.

N16C93

STORAGE SHORTAGE

Reason:

A request has been received by Dataset Services which has failed due to a storage shortage.

System Action:

The request fails.

User Action:

Retry the request.

N16C99

SYSTEM SHUTTING DOWN

Reason:

A request has been received by Dataset Services which has been rejected because SOLVE is in shutdown. Dataset Services does not accept new requests during shutdown to enable active file processing to quiesce before shutdown completes.

System Action:

The request fails.

User Action:

None.

N16D01

DSS UNCAPTURED ABEND: aaaaaaaa REQ-CLASS: bbbbbbbb REQ-CODE: cc

Reason:

This message indicates an unexpected abend has occurred in a Dataset Services request. It shows the Abend Code for the abend (aaaaaaaa), the Dataset Services Request Class (bbbbbbbb) for the request, and the Request Code (cc) which identifies the request being performed.

System Action:

This message and others relating to the abend are written to the activity log.

User Action:

Refer to the activity log for further information about the abend. Investigate the cause of the abend and, if the cause cannot be determined, contact Technical Support.

N16D02

PSW: aaaaaaaaaaaaaaaa IC: bbbb ILC: cccc

Reason:

This message indicates an unexpected abend has occurred in a Dataset Services request. It shows the Program Status Word (PSW) at the time of Abend, the Interrupt Code (IC) and the Instruction Length Code (ILC) at the time of abend.

System Action:

This message and others relating to the Abend are written to the SOLVE activity log.

User Action:

Refer to the SOLVE activity log for further information about the Abend. Investigate the cause of the Abend and if the cause cannot be determined contact your SOLVE support center.

N16D03

Raa-Rbb xxxxxxxx xxxxxxxx xxxxxxxx xxxxxxxx

Reason:

This message indicates an unexpected abend has occurred in a Dataset Services request. It shows the contents of some General Purpose Registers at the time of abend.

System Action:

This message and others relating to the Abend are written to the SOLVE activity log.

User Action:

Refer to the SOLVE activity log for further information about the Abend. Investigate the cause of the Abend and if the cause cannot be determined contact your SOLVE support center.

N16D04

aaa*: *xxxxxxxx aaa*: *xxxxxxxx aaa*: *xxxxxxxx aaa*: *xxxxxxxx

Reason:

This message indicates an unexpected abend has occurred in a Dataset Services request. The message identifies the addresses of various Dataset Services processing modules at the time of abend. Each module and its address are shown in the format *module_name*: *address*.

System Action:

This message and others relating to the abend are written to the activity log.

User Action:

See the activity log for further information about the abend. Investigate the cause of the abend. For assistance, contact CA Support at http://ca.com/support.

N16D09

END OF ABEND INFORMATION

Reason:

This message indicates an unexpected abend has occurred in a Dataset Services request. The message is the last in a group of messages that are written to the activity log when an abend has occurred in Dataset Services.

System Action:

This message and others relating to the abend are written to the activity log.

User Action:

See the activity log for further information about the abend. Investigate the cause of the abend. For assistance, contact CA Support at http://ca.com/support.

N16D15

DSS I/O ERROR: aaaaaaaa

Reason:

This message indicates an I/O error has occurred in a Dataset Services request. It shows the text of a messages returned by the operating system to describe the I/O error.

System Action:

This message is written to the SOLVE activity log.

User Action:

Investigate the cause of the I/O error using the information supplied in the message which was returned from the operating system. Refer to the system log and job log for further messages related to the error.

N16D16

NMDSSCHK EXIT ERROR: error text

Reason:

A request has been received by Dataset Services which requires authorisation from the NMDSSCHK exit. The call to the NMDSSCHK exit has failed or has returned a return code indicating that the request is not allowed. This message is logged along with any message returned by the exit to explain the failure.

System Action:

The request fails.

User Action:

Investigate the reason for the failure using the error text shown. If the text consists of a SOLVE error message, the help for the message will explain what the problem was.

N16O01

LOAD OF NMDSSCHK EXIT MODULE FAILED - RC=aaaaaaaa

Reason:

A request has been received by Dataset Services which requires authorisation from the NMDSSCHK exit. The LOAD of the exit module has failed with the return code aaaaaaaa.

System Action:

The request fails.

User Action:

Refer to the SOLVE job log for further messages about the failure. Check the SOLVE load library to ensure that the NMDSSCHK load module exists.

N16002

NMDSSCHK EXIT INITIALIZATION FAILED

Reason:

A request has been received by Dataset Services which requires authorization from the NMDSSCHK exit. The initialization call made to the exit has received return code 8 (initialization failed) but no error message was returned from the exit.

System Action:

The request fails.

User Action:

Check the exit logic to find out why initialization failed. Check the SOLVE job log for any related error messages.

N16003

ACCESS TO DATASET DENIED BY NMDSSCHK EXIT

Reason:

A request has been received by Dataset Services which requires authorisation from the NMDSSCHK exit. The authorisation call made to the exit has received return code 4 (access denied) but no error message was returned from the exit.

System Action:

The request fails.

User Action:

Contact your system administrator to find out why you are not allowed to perform the function you requested.

N16004

INVALID R15 RETURNED BY NMDSSCHK EXIT - aaaaaaaa

Reason:

A request has been received by Dataset Services which requires authorisation from the NMDSSCHK exit. The call made to the exit has received a return code aaaaaaaa in R15 which is not valid for the request type.

System Action:

The request fails.

User Action:

Check the logic of the NMDSSCHK exit to find out why the invalid return code was returned.

N16005

ABEND OCCURRED IN NMDSSCHK EXIT - aaaaaaaa

Reason:

A request has been received by Dataset Services which requires authorisation from the NMDSSCHK exit. The call made to the exit has resulted in an ABEND. aaaaaaaa shows the abend code.

System Action:

The request fails.

User Action:

The abend should result in a subtask dump for the task which called NMDSSCHK. Investigate the dump to find the cause of the abend.

N16O06

GETMAIN OF NMDSSCHK PARM LIST STORAGE FAILED

Reason:

A request has been received by Dataset Services which requires authorisation from the NMDSSCHK exit. The GETMAIN of storage used for the parameter list for the NMDSSCHK call has failed.

System Action:

The request fails.

User Action:

Investigate the reason for the storage shortage condition.

N16Q01

MDO mapped by $DSCBD3Z converted to $DSCBD3M format. Member name=*1*, line number=*2*(*3*), Column=*4*

Reason:

Program *1* at line number *2*, column *4*, called Dataset Services with an MDO mapped by $DSCBD3Z, which is obsolete. The calling program uses $DSCBD3M instead. *3* is either ABS or REL, indicating that the line number is absolute or relative.

System Action:

The operation continues.

User Action:

Contact CA Support, quoting the full text of the message.

N17004

USERID uuuuuuuu IS NOT KNOWN - CONNECTION REJECTED.

Reason:

ROF signon to a remote SOLVE system failed because the user's USERID is not defined to the remote system.

System Action:

The remote signon is rejected.

User Action:

Contact your systems administrator, and, if required, define the USERID to the remote system.

N17008

REMOTE USER userid LOGGED ON FROM linkname - username

Reason:

Issued to monitor status operators when successful ROF signon is completed by a user from another SOLVE system. The USERID (userid) origin (linkname) link name and user's name (username) are included in the message.

System Action:

None.

User Action:

None.

N17009

CONNECTED.

Reason:

Signifies successful completion of ROF signon to a remote system.

System Action:

None.

User Action:

None.

N17010

REMOTE USER userid FROM linkname LOGGED OFF.

Reason:

Notifies monitor status operators that a ROF user has logged off.

System Action:

None.

User Action:

None.

N17011

REMOTE USER userid FROM linkname FORCED OFF BY SESSION FAILURE.

Reason:

Notifies monitor status operators that user userid's ROF session has been terminated because the link to linkname has been lost.

System Action:

None.

User Action:

Attempt to re-establish the link to linkname if required.

N17012

USERID NOT AUTHORISED FOR OCS - CONNECTION REJECTED.

Reason:

A user has attempted to establish a ROF session but the USERID defined at the remote system does not have operator authority, and therefore the ROF connection is not allowed.

System Action:

None.

User Action:

None.

N17013

SIGNON RESTART IN PROGRESS.

Reason:

Notifies a user that re-establishment of a ROF connection that was disrupted earlier by a link failure will be attempted.

System Action:

Signon processing is scheduled at the remote SOLVE system.

User Action:

None.

N17014

ERROR(S) DURING CREATION OF NETWORK PARTITIONS MAY LIMIT FUNCTION.

Reason:

During establishment of a ROF connection, errors were detected when processing the NPF members associated with the USERID.

System Action:

None.

User Action:

Use the SHOW NPF and SHOW NPTAB commands (at the remote SOLVE system) to display the NPF tables in error. Have the tables corrected and sign on again to build the correct environment.

N17301

SIGNON TO linkname LOST, RESTART PENDING LINK RECOVERY.

Reason:

Notifies a user that the ROF connection to remote SOLVE system linkname has been broken because the link to the remote system has been lost.

System Action:

The ROF connection is scheduled for re-establishment when the link becomes active again.

User Action:

None.

N17302

ROF messages lost before transmission from link aaaa.

Reason:

ROF messages flowing from the nominated remote system were discarded before transmission from that system because the system NMIQLIM

System Action:

User Action:

Investigate why so many messages were issued. The default threshold is

N17401

ROF CONTACT ESTABLISHED/SUSPENDED LINK=aaaaaaaa

Reason:

This message is issued during link activation and de-activation. It shows that the system is prepared to support ROF sessions (link active), or has ceased supporting ROF sessions (link inactive).

System Action:

None.

User Action:

None.

N17501

SIGNON RESTART FOR linkname NO LONGER IN EFFECT.

Reason:

A user waiting for recovery of a ROF connection to remote SOLVE system linkname, lost because the link to the remote system has been broken, is notified that the ROF connection will not be restarted because the link definition to the remote system has been reset.

System Action:

None.

User Action:

If the link to the remote system is re-defined, the user will have to sign on again if a new ROF connection is required.

N17502

QUEUED SIGNON FOR userid CANCELLED. LINK DEFINITION RESET.

Reason:

A user who had queued a signon request to a remote SOLVE system, pending activation of the link to that system is notified that the request has been cancelled because the link definition to the remote system has been reset.

System Action:

None.

User Action:

The signon must be attempted again once the link is re-defined.

N17801

COMMAND FAILED: aaaa NOT LOADED bbbb.

Reason:

A SHOW command failed because the nominated module aaaa could not be loaded for execution. The reason may be determined from the reason code bbbb

System Action:

The command fails.

User Action:

Determine the reason for the failure to load. Ensure the module is in a library accessible to SOLVE.

N17A05

LOAD MODULE RETAINED STORAGE: CURR: aaaaaK, MAX: bbbbbK.

Reason:

Issued in response to a SHOW BUFF command following message N17A35. Some SOLVE commands are processed by non-resident load modules which are loaded as required and retained in storage until the total amount of storage (of all retained load modules) exceeds the maximum (bbbbbK). When this occurs the oldest modules are deleted. The current storage total of retained modules is shown (aaaaaK).

System Action:

None.

User Action:

None, information only.

N17A35

LOAD MODULE STORAGE: BASE MODULE: aaaaaK, LOADED MODULES: bbbbbK

Reason:

Part of the SHOW BUFF display. The size of the SOLVE base module NM001 which is loaded by the operating system is given in K-bytes. The storage total of all other modules subsequently loaded by the base module is given in K-bytes. For OS and VM systems storage allocation is controlled by the operating system. In DOS and NIDOS systems the storage for each loaded module is obtained from within the SOLVE reserves which are within GETVIS.

System Action:

None, for information only.

User Action:

None, for information only.

N17A36

LOAD MODULE STORAGE: BELOW 16M: aaaaaK

Reason:

Part of the SHOW BUFF display. Displays the total number of kilobytes used for program modules below the 16M line.

System Action:

None.

User Action:

Load module storage use below the line may be reduced by specifying the INC or EXC startup parameters to select a subset of licensed components.

N17A37

LOAD MODULE STORAGE: ABOVE 16M: aaaaaK

Reason:

Part of the SHOW BUFF display. Displays the total number of kilobytes used for program modules above the 16M line.

System Action:

None.

User Action:

None.

N17B01

NO NRD MESSAGES CURRENTLY HELD.

Reason:

This message is issued in response to a SHOW NRD command. There are currently no messages held in the NRD retention list to display.

System Action:

None.

User Action:

None.

N17B02

NRD MESSAGES. CURRENT: nnnnnn MAX: mmmmm.

Reason:

This message is part of a SHOW NRD display. It gives the number of messages currently held on the NRD retention queue, and the maximum allowed at one time (set by SYSPARM NRDLIM).

System Action:

None.

User Action:

None.

N17B03

ID DATE TIME USERID NCLID MFAV TEXT

Reason:

This message is part of a SHOW NRD display. It is a header for the subsequent display lines for individual held messages (see N17B04).

System Action:

None.

User Action:

None.

N17B04

id date time userid nclid mfav text

Reason:

This message is part of a SHOW NRD display. This line contains information and text of an individual held message.

id

Is the message ID.

date

Is the date that the message was added to the NRD queue.

time

Is the time that the message was added to the NRD queue.

nclid

Is the NCL ID of the NCL procedure that added this message.

mfav

Indicates where to display the message:

- M=monitor screens
- F=FTS screens
- A=AOM screens
- V=all OCS screens

text

Is the text of the message.

System Action:

None.

User Action:

None.

N17B05

NO MAPS CURRENTLY LOADED.

Reason:

No Mapped Data Services maps are currently loaded into memory.

System Action:

none.

User Action:

Enter Sysparms Mapload=mapname command to load a particular map into memory.

N17B06

MAP-NAME STATUS ---LOAD-TIME--- CUR-USE

Reason:

Title message for SHOW MAPS command. For each map selected N17B07 will display the map name, status, time it was last loaded, and the current number of active connections for the map.

System Action:

None.

User Action:

None.

N17B07

aaaaaaaaaaaa ccccccccc eeeeeeee gggggg

Reason:

Display for SHOW MAPS command. aaaaa = map name. ccccc = map status eeeee = map load time ggggg = map active connection count

System Action:

None.

User Action:

None.

N17B08

aaaa MAP(S) DISPLAYED. STORAGE USED: bbbbbb BYTES.

Reason:

End message for a SHOW MAPS command. aaaa is the number of maps selected for display, and bbbbbb is the total storage used by the selected maps.

System Action:

None.

User Action:

None.

N17B09

OPERAND aaaaaaaa HAS AN INVALID VALUE.

Reason:

An invalid value was specified for an operand of the SHOW MAP command.

System Action:

Command is rejected.

User Action:

Correct and retry.

N17C01

SHOW OPERAND MUST BE ENTERED.

Reason:

A SHOW command is incomplete because no other operands were specified.

System Action:

The command fails.

User Action:

Reenter the command with the appropriate operand(s).

N17C03

COMMAND FAILED: aaaaaaaa NOT LOADED bbbbbbbbbbbbbbbb

Reason:

A SHOW command failed because the nominated module *aaaaaaaa* could not be loaded for execution. The reason may be determined from the reason code *bbbbbbbbbbbbbbbb*

System Action:

The command fails.

User Action:

Determine the reason for the failure to load. Ensure the module is in a library accessible to SOLVE.

N17C04

COMMAND FAILED: STORAGE SHORTAGE

Reason:

A SHOW command failed because there was insufficient storage to load the processor module.

System Action:

The SHOW command is rejected.

User Action:

Contact your systems administrator who can determine if the storage shortage is temporary. Other messages may indicate that there is a storage shortage.

N17C05

OPERAND NOT SUPPORTED UNDER THIS OPERATING SYSTEM

Reason:

The operand entered on the SHOW command is not valid under this operating system.

System Action:

The SHOW command is rejected.

User Action:

None.

N17G01

TYPE ENV UID/NAME LUNAME W NCLID MSGS MEM/REQ QMPROC LOST

Reason:

This message is the title line of a SHOW MSGQ display.

TYPE - The type of queues being reported, from the SHOW MSGQ operands:
- OCS
- OCS environments
- NCL
- NCL INTCMD environments
- BG - background processing environments
- SYS - various system queues

ENV - The specific environment.

- For a type of OCS, can be
OCS - an actual full-screen OCS environment
ROF - A remote operator
OPER - A signed on operating system console
LU1 - An LU1 OCS session

- For a type of NCL will only be NCL

- For a type of BG will be the background environment id, for example BSYS or LOGP.

- for a type of SYS, can be
LOG - the LOG/LOGPROC message queue
NRD - the NRD message rentention queue
AOM - the AOMPROC message queue(s) and DOM Queue.
CNM - the CNMPROC message queue
PPO - the PPOPROC message queue

UID/NAME - the userid or a region or name of a system queue.

LUNAME - the terminal (or '-' if not relevant) W - the window number (or '-')

NCLID - for NCL types, or secondary AOMPROCs, the NCLID, or '-'.

MSGS - the number of queued response or OCS messages

MEM/REQ - the number of OCS screen memory or NCL REQ msgs

QMPROC - the number of msgs queued to MSGPROC

LOST - flags if msgs have been lost at this time. (ie the queue is presently full and messages have been discarded. This indication gets reset when messages are read from the queue)

System Action:

None.

User Action:

None.

N17G02

type env uid/name luname w nclid msgs mem/req qmproc lost

N17J01

con-name key-uid act-uid con-id uid-1 uid-2 uid-3

Reason:

This is the title line of a SHOW SYSCONS display.

con-name the console logical or terminal name (shown as LUNAME in SHOW USERS display).
key-uid the userid used as the logical key when incoming commands are processed. Used to detect when an operating system console has had a new RACF signon.
act-uid the actual userid that the console has been signed on to SOLVE under.
con-id the console id. Either a 2-digit decimal number (00 to 99) or 8 hexadecimal digits (being the extended 4-byte console id).
uid-1, the userids used during signon processing to establish the
uid-2, actual signed on userid.
uid-3

System Action:

None.

User Action:

None.

N17J02

N17L10

ASID JOBNAME STEPNAME PSTPNAME TYP PGM JOBID SSID

Reason:

This message displays the first header line for the SHOW ASINFO command. The column headings relate to the N17L15 message.

ASID

Is the address space ID (in hexadecimal).

JOBNAME

Is the job name.

STEPNAME

Is the step name.

PSTPNAME

Is the procedure step name.

TYP

Is the job type:

JOB

Indicates a JES2 job.

OTX

Indicates an OpenMVS transaction.

STC

Indicates a start task.

TSU

Indicates a TSO user.

PGM

Is the job step program name.

JOBID

Is the JES job ID.

SSID

Is the owning subsystem name (such as JES2).

System Action:

None.

User Action:

None.

N17L11

DDNAME DSNAME MEMBER CT#

Reason:

This is the second header message from the SHOW ASINFO message.

The column headings relate to the N17L16 message.

The column headings are:

DDNAME

A ddname used in the job step

DSNAME

A dsname associated with this ddname

MEMBER

a member name associated with the ddname

CT#

for concatenated datasets, the concatenation number.

System Action:

None.

User Action:

N18001

VTAM message module modname cannot be interpreted.

Reason:

During system initialization the VTAM message module, which is used to initialize the DEFMSG summary table, was found to have invalid non numeric entries. This module is required to be correct for NPF initialization.

System Action:

NPF message delivery is disabled. This message will be followed by N18003.

User Action:

This could signify a VTAM internal problem.

N18002

Unable to load module modname R15=aaaa Rn=bbbb

Reason:

During system initialization the VTAM message module *modname* (ISTCFCMM or its equivalent) could not be loaded. This module is required for NPF initialization. If *n* is 0 then the failure occurred on a BLDL macro.
aaaa shows the return code and *bbbb* is the reason code. If *n* is 1 then the failure occurred on a LOAD or LINK macro. *aaaa* shows the reason code and *bbbb* is the abend code.

System Action:

NPF for message delivery is disabled. This means that any users logging on to the system who is authorized to receive unsolicited (PPO) messages will receive ALL such messages whether or not their USERIDS specify NPF message control.

User Action:

Determine the cause of load failure and restart the NetMaster region.

N18003

Network partitioning for unsolicited messages has been disabled

Reason:

An error has occurred during initialization processing for the Network Partitioning Facility. An accompanying message on the activity log will indicate the reason for the failure.

System Action:

NPF for message delivery is disabled. This means that any users logging on to the system who is authorized to receive unsolicited (PPO) messages will receive ALL such messages whether or not their USERIDS specify NPF message control.

User Action:

Determine the cause of the failure and restart the NetMaster region.

N18101

NETWORK PARTITIONING ERROR: CONTROL MEMBER xxxx NOT IN DATASET

Reason:

During a user's LOGON processing the NPF RESOURCE control member xxxx defined in the user's UAMS record could not be located on the NPF dataset.

System Action:

The logon is allowed but the user will have no NPF resource access.

User Action:

Refer to the systems administrator for correction of the problem.

N18102

NETWORK PARTITIONING ERROR: I/O ERROR READING MEMBER mbrname

Reason:

During a user's logon processing an I/O error occurred while reading the NPF member mbrname. NPF processing continues but the user's access to network resources may be restricted, partially or completely.

System Action:

None.

User Action:

Refer the error to your systems administrator.

N18103

NETWORK PARTITIONING ERROR: CONTROL MEMBER aaaaaaaa SYNTAX ERROR, SEQ NO: bbbbbbb

Reason:

During a user's logon processing a syntax error was detected while processing control member aaaaaaaa. The sequence number of the record in error is bbbbbbbb, extracted from bytes 73-80 of the record.

System Action:

Processing continues.

User Action:

Correct the syntax error and logon again.

N18104

NETWORK PARTITIONING DATASET DD=ddname FAILED TO OPEN.

Reason:

Processing of a user's NPF authorisation terminated because the system NPF dataset referenced by the NPTABLES DD statement could not be opened.

System Action:

None.

User Action:

Refer the error to your systems administrator. Access to network resources will be prohibited.

N18401

NETWORK PARTITIONING ERROR: MEMBER mbrname NOT IN DATASET.

Reason:

During a user's logon processing the NPF RESOURCE table member mbrname, referred to by the user's NPF RESOURCE control member, could not be found.

System Action:

Processing continues. Access to network resources may be restricted.

User Action:

Refer to your systems administrator.

N18402

NETWORK PARTITIONING ERROR: I/O ERROR READING MEMBER mbrname

Reason:

During a user's logon processing an I/O error occurred attempting to read the NPF resource table member mbrname.

System Action:

Processing continues. Access to network resources may be restricted.

User Action:

Refer to your systems administrator.

N18403

NETWORK PARTITIONING ERROR: MEMBER mbrname ERROR IN RECORD SEQ NO: bbbbb bbb

Reason:

During a user's logon processing a syntax error was detected in record sequence number bbbbbbbbb of NPF resource table member mbrname.

System Action:

Processing continues at the next record. Access to network resources may be restricted.

User Action:

Refer to your systems administrator for correction of the problem.

N18701

NO LOCKS FOUND

Reason:

A SHOW LOCKS or SHOW NCLLOCKS command was issued but no locks are held.

System Action:

None

User Action:

None

N18702

OPERAND P1 HAS AN INVALID VALUE

Reason:

A SHOW LOCKS or SHOW NCLLOCKS command has an invalid operand (*P1*).

System Action:

The command fails.

User Action:

Correct and retry.

N18704

P1 CLASS LOCKS

Reason:

The title line for the SHOW LOCKS or SHOW NCLLOCKS display; shows the class of locks (*P1*). Lock classes are:
NCL - NCL programs
SYS - Internal system resources
EDIT - Panel Services (panel edit)

System Action:

None

User Action:

None; for more information on lock classes refer to the SHOW LOCKS or SHOW NCLLOCKS command description.

N18705

P1 NAME RESOURCE P2

Reason:

The information line of the SHOW LOCKS or SHOW NCLLOCKS display; indicates the lock level (*P1* , PRIMARY, or MINOR) and the lock name (*P2*).

System Action:

None

User Action:

None

N18706

LOCK-ID REQ LOCK-TEXT

Reason:

This message is the title line of the lock detail section of the SHOW LOCKS or SHOW NCLLOCKS display.

System Action:

None

User Action:

None

N18707

P1 P2 P3 P4

Reason:

The lock detail display for a specific primary or minor lock. It shows:
P1 is the unique lock number
P2 indicates how the lock is held (shared or exclusive)
P3 is the text associated with the lock
P4 is the minor lock name (if any)

System Action:

None

User Action:

None

N18708

INVALID OR DUPLICATE OPERAND - P1

Reason:

A SHOW LOCKS or SHOW NCLLOCKS command contains a wrong or duplicated operand (*P1*).

System Action:

The command fails.

User Action:

Correct and retry.

N18709

WAITING LOCK REQUESTS P1

Reason:

The title line of the LIST=WAIT display for SHOW LOCKS or SHOW NCLLOCKS; shows the minor lock name (*P1*) if any.

System Action:

None

User Action:

None

N18710

LOCK ALTERATION REQUESTS

Reason:

This message is the heading line for part of the SHOW LOCKS or SHOW NCLLOCKS display. It is followed by a list of lock requests which have SHR access to a resource and have requested that the lock ownership be changed to EXCL.

System Action:

None

User Action:

None

N18711

NCLID SET-PROC OWNER REQ LOCK-TEXT

Reason:

This message is a heading line for the SHOW NCLLOCKS display. It provides column headings for message N18713.

N18721

RDID LINKNAME NMID NETWORK VTAM/NOD M/S OPSYS STATUS

Reason:

The title line of the SHOW DOMAINS display. This message provides column headings for message N18722.

System Action:

None

User Action:

None

N18722

P1 P2 P3 P4 P5 P6 P7 P8

Reason:

The detail line of a SHOW DOMAINS display. The fields displayed are:
P1 represents the remote system domain ID (as specified by the NMDID initialization parameter for the remote system).
P2 is the linkname of the INMC link to the remote system.
P3 is the system identifier of the remote system.
P4 is the network name of the remote system.
P5 is the VTAM version and release level in the remote system, or, if the remote system is a Tandem system, the system node name.
P6 is the version and release level of the Management Services component of the remote NetMaster system.
P7 is the remote system operating system type.
P8 is the status of this NetMaster system's knowledge of the remote system domain information, as follows: *Complete* indicates that the information displayed is current. *Incomplete* indicates that the information displayed is the latest known.

System Action:

None

User Action:

None

N18723

MSLEVEL JOBNAME OSVERS SYSNAME GENRESNM

Reason:

The second title line of the SHOW DOMAINS display. This message provides column headings for message N18724.

System Action:

None

User Action:

None

N18724

P1 P2 P3 P4 P5

Reason:

This message provides the second detail line of a SHOW DOMAINS display; the fields are:

P1 represents the remote system Management Services level.

P2 is the job name of the remote system.

P3 is the operating system version of the remote system.

P4 is the operating system name of the remote system.

P5 is the VTAM generic resource name of the remote system, if used.

System Action:

None.

User Action:

None.

N18725

DOMAIN DEF VTAM IP EPS XNF

Reason:

The title line of the SHOW DOMAINS TYPE=DEFINED display. This is followed by messages N18726 and N18727 which contain details about each domain.

System Action:

None.

User Action:

None.

N18726

P1 P2 P3 P4 P5 P6 P7

Reason:

This is the detail line of the SHOW DOMAINS TYPE=DEFINED display. The fields displayed match the heading message N18725. The information is as follows:

P1

Is the domain name

P2

Indicates how the domain is defined:

- YES indicates that the domain was explicitly defined using a DOMAIN DEFINE command.
- NO indicates that the domain was implicitly defined as a result of an inbound LINK START command from a remote system that matched a DEFLINK command on this system.

P3* to *P6

Indicate if the domain may be accessed using the access method for that column, that is, VTAM, IP, EPS, and XNF. The columns display the following values:

- - indicates that no inbound links using that access method have been received and the access method has not been explicitly allowed.
- YES indicates that an inbound link has used that access method, or the access method was explicitly defined. IPADDR explicitly defines the IP access method.
- NO indicates that the access method has been explicitly prohibited.

If the IP access method is YES, there will be an additional message, N18727, which contains TCP/IP addressing information.

P7

Indicates whether the domain can be contacted with the INMC access method. This access method is relevant to APPC links only. It uses an INMC link (with some other access method) as a transport method for APPC sessions.

- YES indicates that the domain name is used to identify the remote domain.
- NO prevents an APPC over INMC link starting from an inbound request and inhibits the use of this access method for outbound requests.
- - indicates that this access method is not specified.

System Action:

None.

User Action:

None.

N18727

P1* IP: PORT=*P2* HOST *P3*=*P4

Reason:

This message is a detail line of the SHOW DOMAINS TYPE=DEFINED display. The message is issued if the preceding N18726 message indicated that the TCPIP access method is supported for connections to this domain. In this message:

P1 is the domain name.

P2 is the port number that the (remote) system uses to receive inbound connections.

P3 and *P4* show the connection details specified when the domain was defined, and are either: NAME and an internet host name, or ADDR and an IP address.

System Action:

None.

User Action:

None.

N18728

NO MATCHING DEFINED DOMAIN NAMES FOUND

Reason:

A SHOW DOMAINS TYPE=DEFINED display was requested but there are no domains defined which match the specified criteria.

System Action:

None.

User Action:

None.

N18729

P1* IP: PORT=*P2* HOST *P3=P4

Reason:

This is a detail line of the SHOW DOMAINS TYPE=DEFINED display. It is issued if the preceding N18726 message indicates that the TCP/IP access method is supported for connections to this domain. In this message:

P1 is domain name.

P2 is the port number that the (remote) system uses to receive inbound connections.

P3 and *P4* show the connection details of the proxy server and can be one of the following:

- NAME and an internet host name
- ADDR and an IP address

System Action:

None.

User Action:

None.

N19501

ALLOCATION REQUEST CANCELLED.

Reason:

A request for dynamic allocation that required a volume to be mounted was cancelled by the system operator.

System Action:

The allocation attempt is abandoned.

User Action:

Determine why the operator cancelled the request.

N19502

ALLOCATION SUCCESSFUL DDNAME IS ddddddd

Reason:

An ALLOCATE command has been successfully issued. The ddname is ddddddd.

System Action:

None.

User Action:

None.

N19503

ALLOCATION FAILED REASON aaaa-bbbb. SMS REASON CODE cccccccc

Reason:

A syntactically correct ALLOCATE command failed for the above reason. The SMS REASON CODE is only displayed if the error was related to a Systems Managed Storage error.

System Action:

None.

User Action:

You may use the $DAIR NCL procedure supplied with the system to determine the reason for the dynamic allocation interface return code. If an SMS error occurred, look up the reason code in the appropriate SMS documentation.

N19504

ALLOCATION SUBTASK FAILED.

Reason:

Requests for dynamic allocation are performed by a subtask. This subtask has failed.

System Action:

The request is rejected.

User Action:

Refer this problem to your systems administrator for correction.

N19505

ALLOCATION OF DDNAME ddname1 COMPLETED, CONCATENATION TO DDNAME ddname2 FAILED REASON cccc- dddd.

Reason:

An ALLOCATE command was issued specifying the CONCAT operand. The allocation was successful, but concatenation to the specified ddname
ddname2 has failed.

System Action:

The dataset is allocated to ddname1, but not concatenated to ddname2.

User Action:

Use the $DAIR NCL procedure to determine the reason for the failure using the dair code cccc.

N19601

UNABLE TO LOAD NMDSNCHK, ALLOCATION ABORTED

Reason:

The installation defined dataset authorisation exit could not be loaded.

System Action:

No allocation is performed.

User Action:

Determine the cause of the failure and retry.

N19702

UNALLOCATION COMPLETE

Reason:

The requested UNALLOC command has been successfully processed.

System Action:

None.

User Action:

None.

N19703

UNALLOCATION FAILED REASON aaaa-bbbb

Reason:

A syntactically correct UNALLOC command failed for the above reason.

System Action:

None.

User Action:

Use the $DAIR NCL procedure to determine the reason for the failure.

N19704

UNALLOCATION SUBTASK FAILED.

Reason:

Requests for unallocation are performed by a subtask. This subtask has failed.

System Action:

The request fails.

User Action:

Refer this problem to your systems administrator for correction.

N19801

COMMAND REJECTED. TEMPORARY STORAGE SHORTAGE.

Reason:

An OPNDST was rejected because of a storage shortage.

System Action:

The command is rejected.

User Action:

Retry the command. Increase job region or partition size if the problem persists.

N19802

luname ALREADY IN SESSION.

Reason:

An OPNDST was issued for a terminal already connected.

System Action:

The command is rejected.

User Action:

None.

N19803

luname IS ALREADY BEING CONNECTED.

Reason:

An OPNDST is already in progress for the specified LU.

System Action:

The command is rejected.

User Action:

None.

N19804

luname IS NOT KNOWN TO VTAM OR CANNOT BE CONTACTED.

Reason:

An OPNDST command specified an LU name not defined to VTAM, or one that VTAM cannot establish contact with. If the resource is in another domain there may not be a cross domain resource definition available or active.

System Action:

The command is rejected.

User Action:

Correct and re-enter.

N19805

SESSION REQUEST FAILED FOR luname, RC=rc, FBK2=fb, SENSE=sense.

Reason:

An OPNDST command failed.

System Action:

The command is rejected.

User Action:

Refer the error to your systems administrator. The error codes included in the message are explained in the appropriate *VTAM Programming* manual.

N19806

luname IS ALREADY IN USE BY ANOTHER APPLICATION.

Reason:

An OPNDST command was issued to connect terminal luname, but this device is already in session with a different application.

System Action:

The command is rejected.

User Action:

Retry the command later if required.

N19807

OPNDST FOR luname FAILED. logmode IS AN INVALID LOGMODE ENTRY NAME.

Reason:

An OPNDST command has specified an invalid logmode in the LOGMODE=logmode operand.

System Action:

The command is rejected.

User Action:

Correct the logmode name and retry.

N19808

CANCELLED LOGON REQUEST FOR luname IS PENDING COMPLETION

Reason:

An OPNDST command was entered to acquire an LU. SOLVE currently has a queued logon request for the LU due to a prior OPNDST command, and the LU has still not been connected. The CLSDST command has been used to cancel the pending logon request. SOLVE cannot issue another request to VTAM to acquire the terminal until the previous request completes.

System Action:

The OPNDST command is rejected.

User Action:

Investigate why the LU has not been connected to SOLVE. It is most likely to be in use by another application program.

N19901

FACILITY ONLY VALID FROM MSGPROC

Reason:

An &MSGREAD, &MSGDEL, &MSGCONT or &MSGREPL verb can only be issued by a procedure operating as a MSGPROC for an OCS window.

System Action:

The NCL procedure is flushed.

User Action:

Correct the NCL procedure.

N19902

MDS error on $MSG MDO; RC=xx FDBK=yy MSGPROC TERMINATED

Reason:

An MDS error occurred while trying to assign replacement message text during an INTREPL operation. xx and yy indicate the MDS return code and feedback information.

System Action:

The procedure is terminated.

User Action:

Return code and feedback values for MDS are explained in the NCL REFERENCE for the &ZMDSRC and &ZMDSFDBK system variables. Use this information to determine why MDS assignment failed for $MSG.TEXT.

N19T01

LOGGER REFORMAT ERROR: INVALID FUNCTION CODE (cc)

Reason:

This message is logged when an invalid function code is passed to the system logger interface record reformatter.

System Action:

The request is rejected.

User Action:

Contact your local SOLVE support office.

N19T02

LOGGER REFORMAT ERROR: INVALID FORMAT CODE (cc)

Reason:

This message is logged when an invalid format code is passed to the system logger interface record reformatter.

System Action:

The request is rejected.

User Action:

Contact your local SOLVE support office.

N19T03

LOGGER REFORMAT ERROR: OUTPUT AREA OVERFLOW

Reason:

This message is logged when a reformatted record overflows the output area during processing by the system logger interface record reformatter.

System Action:

The request is rejected.

User Action:

Contact your local SOLVE support office.

N19T10

LOGGER REFORMAT ERROR: MDB HEADER INVALID (RECORD FOLLOWS)

Reason:

This message is logged when the system logger interface record refirnatter encounters an invalid OPERLOG record. In this case, the MDB header is invalid.
The record is dumped to the SOLVE log (see message N19T90).

System Action:

The request is rejected.

User Action:

Contact your local SOLVE support office.

N19T11

LOGGER REFORMAT ERROR: INVALID MDB SEGMENT AT OFFSET *oo* (RECORD FOLLOWS)

Reason:

This message is logged when the system logger interface record reformatter encounters an invalid OPERLOG record. In this case, an invalid or unrecognized MDB segment was found. The offset is displayed.

The record is dumped to the SOLVE log (see message N19T90).

System Action:

The request is rejected.

User Action:

For assistance, contact CA Support at http://ca.com/support.

N19T12

LOGGER REFORMAT ERROR: MDB LENGTH ERROR (RECORD FOLLOWS)

Reason:

This message is logged when the system logger interface record reformatter encounters an invalid OPERLOG record. In this case, the MDB total length does *not* match the sum of the segment lengths.
The record is dumped to the SOLVE log (see message N19T90).

System Action:

The request is rejected.

User Action:

For assistance, contact CA Support at http://ca.com/support.

N19T13

LOGGER REFORMAT ERROR: MDB SEGMENT SEQUENCE ERROR (RECORD FOLLOWS)

Reason:

This message is logged when the system logger interface record reformatter encounters an invalid OPERLOG record. In this case, the MDB segments are not in the correct sequence.
The record is dumped to the SOLVE log (see message N19T90).

System Action:

The request is rejected.

User Action:

Contact your local SOLVE support office.

N19T90

off hex hex hex hex char...

Reason:

This message is logged when the system logger interface record reformatter encounters an invalid record. It provides a hex dump of the record in error.

System Action:

None

User Action:

Refer to the previous N19Txx message for details of the error.

N19U90

RECORD REFORMAT ERROR - SEE LOG

Reason:

This message is returned (in the &SYSMSG variable) when a record reformat error occurs on a DSS_LOGGER READ OML verb.
Preceding records on the SOLVE log describe the error.

System Action:

The request is rejected. The return code is set to 32, the feedback code to 0.

User Action:

Contact your local SOLVE support office.

N1AM01

File not found, PATH=path

Reason:

An attempt to reference a non-existent HFS file was made. The pathname was *path.*

System Action:

The request fails.

User Action:

Reissue the request with a valid path.

N1AM02

File not a directory, PATH=path

Reason:

An attempt was made to perform an HFS directory operation on pathname *path.* However, *path* is not a directory.

System Action:

The request fails.

User Action:

Reissue the request with a path that represents an HFS directory.

N1AM03

Supplied offset is negative

Reason:

An attempt was made to seek to a position before the start of an HFS file.

System Action:

The request fails.

User Action:

This is an internal error. Call your support representative.

N1AM04

Unable to determine MDO request type

Reason:

When processing a call to convert an MDO to a DSECT, a field was encountered that required classification. This was not possible because more than one class specification was encountered in the MDO.

System Action:

The request fails.

User Action:

This is an internal error. Call your support representative.

N1AM05

MDO operand omitted, MDO key=key

Reason:

A required operand was omitted on a call to convert an MDO to a DSECT or vice versa. The MDO key being processed was *key.*

System Action:

The request fails.

User Action:

This is an internal error. Call your support representative.

N1AM06

MDO operand not allowed, MDO key=key

Reason:

An operand that was not allowed was supplied on a call to convert an MDO to a DSECT or vice versa. The MDO key being processed was *key.*

System Action:

The request fails.

User Action:

This is an internal error. Call your support representative.

N1AM07

MDO operand invalid, MDO key=key

Reason:

An invalid operand was supplied on a call to convert an MDO to a DSECT or vice versa. The MDO key being processed was *key.*

System Action:

The request fails.

User Action:

This is an internal error. Call your support representative.

N1AM08

HFS environment initialization failed, Return Code=rrrr, Reason Code=cccc-cccc

Reason:

A Unix System Services call issued by Dataset Services failed with a return code of rrrr and reason code of cccc-cccc when trying to initialize the environment for an HFS call.

System Action:

The request fails.

User Action:

Refer to "Unix System Services Messages and Codes" for the relevant return code and reason code.

N1AM99

USS call failed, Return Code=*rrrr*, Reason Code=*cccc-cccc*

Reason:

A Unix System Services call issued by NetMaster Dataset Services to process an HFS file failed with a return code of *rrrr* and reason code of *cccc-cccc*.

System Action:

The request fails.

User Action:

HFS file errors may have a variety of environmental causes. A common one is when the HFS file system is not mounted. Other possibilities include:

EPERM

File permission error.

The NetMaster started task UID does not have the required authority to access the file

ENOENT

File does not exist.

The path name may be wrong, or the file may have been deleted

ENODEV

No such device exists.

ENOMEM

Not enough space is available.

ENOSPC

No space is left on the device, or no space is available to create the IPC member ID.

ENOTDIR

Not a directory.

EMVSPFSPERM

HFS encountered a system error.

Ensure that the HFS file system has been defined with sufficient space and is correctly and permanently mounted. Ensure that NetMaster features such as ReportCenter have been installed with the name of a correct and available file system.

File permissions are a frequent cause of HFS file errors.

Verify that the OMVS UID attempting the file operation has sufficient authority to do so. In general, all distributed HFS product files should allow at least read access to all users. Refer to the specific product installation and user manuals for additional file permission requirements for their specific working data.

A complete list of HFS reason codes is available in the IBM publication *z/OS UNIX System Services Messages and Codes* for your operating system level.

Additional information about z/OS HFS implementation is available from the IBM Redbook publication *Hierarchical File System Usage Guide*.

N1C201

UNABLE TO GET PROCESS EXTENSION

Reason:

Process extension storage is required to perform a CCI INIT request and is not obtainable because the region is low on storage.

System Action:

The CCI interface is not usable.

User Action:

Contact your Systems Programmer for assistance. If no problems are detected, contact Technical Support.

N1C202

CCI INIT NOT PERFORMED

Reason:

An attempt was made to perform a CCI function before CCI INIT initializes the CCI interface.

System Action:

The CCI request fails.

User Action:

Correct the procedure logic so that CCI INIT is performed before other functions are requested.

N1S401

SOAP subtask ABENDed

Reason:

The SOAP subtask has abended. Preceding messages N15Z20 and N15Z21 provide the abend details.

System Action:

If the subtask was currently processing a SOAP verb work request, that request is terminated with &SYS.RETCODE=8 and &SYS.FDBK=8. Message N1S402 or N1S404 follows.

User Action:

Report the abend to CA Support. See the following N1S402 or N1S404 message.

N1S402

SOAP subtask reactivated

Reason:

The SOAP subtask has abended as noted by the preceding message N1S401. The SOAP subtask has been reactivated.

System Action:

Subsequent work requests are processed as normal. To prevent a potential subtask abend loop, only two subtask reactivations are allowed. A third abend will cause message N1S404 to be issued instead of N1S402.

User Action:

None.

N1S403

SOAP subtask was FORCE-DETACHed

Reason:

An attempt to shutdown the SOAP subtask was unsuccessful. The SOAP subtask did not terminate gracefully within 5 seconds. The system has forcibly detached the subtask. This can occur if the subtask is still busy processing a SOAP service call.

System Action:

After forcibly detaching the subtask, the SOAP interface is disabled.

User Action:

A forced detach should only occur at region shutdown. From a NetMaster point of view, this message is informational use only. The SOAP interface may report errors due to the fact that the subtask is being removed whilst a SOAP call is in progress.

N1S404

SOAP subtask unrecoverable. SOAP interface disabled

Reason:

The SOAP subtask has abended as noted by the preceding message N1S401. The number of abends that are allowed for the SOAP subtask has been exceeded. This number is set to 2. The third abend during the region lifetime or since the last SOAP USD FUNCTION=RESET call will generate this message. The SOAP interface is now disabled.

System Action:

Any subsequent SOAP verb call requests are terminated with &SYS.RETCODE=8 and &SYS.FDBK=12. This action also applies to any SOAP requests already received but still queued for SOAP service processing.

User Action:

To reestablish the SOAP subtask interface, either recycle the region or execute the OML verb SOAP USD FUNCTION=RESET.

N1S405

SOAP subtask active

Reason:

The SOAP subtask has just been activated and is now fully active. The SOAP subtask is activated by one of the following reasons:
1. After the receipt of the very first SOAP verb call for this region. 2. After an abend and subtask reactivation i.e. after N1S401 and N1S402. 3. After an unrecoverable abend (message N1S404) and RESET call issued.

System Action:

The SOAP subtask processes SOAP verb calls as normal.

User Action:

None.

N1UY01

Waiting for UNIX subtask completion

Reason:

The SOLVE UNIX interface is not available until the initial call to UNIX System Services is completed. This message is issued every 30 seconds until completion.

System Action:

SOLVE UNIX support is unavailable until the initial call is completed. SOLVE initialization continues.

User Action:

None.

N1UY02

UNIX initialization subtask ABENDed - R0/R1: 1

Reason:

The subtask to initialize communications with UNIX System Services has ABENDed.

System Action:

SOLVE UNIX support is reset. SOLVE initialization continues.

User Action:

Contact Technical Support.

N1UY03

UNIX initialization subtask was FORCE DETACHed.

Reason:

The subtask that issued the initial call to UNIX System Services was FORCE DETACHed.

System Action:

UNIX support is reset. Region initialization continues.

User Action:

Contact Technical Support.

N1UY04

UNIX set_dub_default call failed - Return code: *1*, Reason code: *2*(Hex)

Reason:

The release of z/OS that you are running supports UNIX System Services, but the first region call failed.

System Action:

Region UNIX support is reset. The region initialization continues.

User Action:

UNIX Systems Services may *not* be configured correctly. Consult your systems programmer. For information about the reason code, see the *UNIX System Services Messages and Codes* guide.

N1UY05

UNIX support reset due to init failure

Reason:

The SOLVE UNIX SHELL interface was unable to initialize and is not available for use. The reason for this was given in an earlier N1UY*nn* message.

System Action:

SOLVE UNIX support is reset. SOLVE initialization continues.

User Action:

See the N1UY*nn* message issued earlier.

N2x to N4x Messages

N20002

SESSION CANCELLED AT *P1* ON *P2* FOR USERID *P3*

Reason:

Displayed when a user is cancelled by a CANCEL command.

System Action:

This message is displayed for a short period only.

User Action:

None.

N20003

SESSION DISCONNECTED AT *P1* ON *P2* FOR USERID *P3*

Reason:

Displayed when a user is disconnected by a DISCONN command or timeout action.

System Action:

This message is displayed for a short period only.

User Action:

None.

N20004

SESSION TIMED OUT AT *P1* ON *P2* FOR USERID *P3*

Reason:

Displayed when a user is cancelled by a timeout action.

System Action:

This message is displayed for a short period only.

User Action:

None.

N20005

SESSION TERMINATED AT ~P1 ON ~P2 FOR USERID ~P3

Reason:

Displayed when a user logs off from the system.

System Action:

This message is displayed for a short period only.

User Action:

None.

N20102

USERID uuuuuuuu NOT AUTHORISED FOR REQUEST

Reason:

A user has selected a Primary Menu function for which they are not authorized.

System Action:

The selection is rejected.

User Action:

Contact your systems administrator.

N20103

SYSTEM NOT CONFIGURED FOR THIS FEATURE

Reason:

A Primary Menu function was selected but this SOLVE system is not configured for the function.

System Action:

The selection is rejected.

User Action:

None.

N20104

PASSWORD/USER DETAILS UPDATED

Reason:

Confirms a successful change of password.

System Action:

None.

User Action:

The new password will be required from now on eg. for logging on and for unlocking LOCKed screens etc. If an external security manager is in use the new password may also apply to other applications and subsystems.

N20107

PRIMARY MENU ENDED.

Reason:

The primary menu NCL procedure has terminated without specifying any direct action to be taken. This may reflect an NCL coding error or logic error.

System Action:

The line messages associated with the primary environment are displayed.

User Action:

Press the END key (PF03/15) to redrive the primary menu NCL. Press the RETURN key (PF04/16) to close the window.

N20202

REQUEST ACCEPTED - LU luname PASSED TO APPLICATION applname

Reason:

Issued when a terminal under the control of EASINET is passed successfully to another VTAM application as a result of a logon request entered at the terminal.

System Action:

None.

User Action:

None.

N20203

INPUT INVALID, PLEASE RETRY

Reason:

An unidentified logon request was made at a terminal under EASINET control.

System Action:

None.

User Action:

Refer to the procedures set down by your installation for logging on to your required application. Correct and re-enter.

N20204

UNABLE TO SERVICE REQUEST (INQUIRE FAILED)

Reason:

A VTAM INQUIRE macro failed during the attempt to pass the terminal to the requested application. SOLVE also assumes request failure if no response is received from VTAM within 30 seconds.

System Action:

The terminal remains under the control of EASINET. If VTAM sense codes are received message N20212 will go to the activity log, giving specific return code information. If a timeout occurred, N20214 is written to the activity log.

User Action:

Retry the logon request. If the condition persists, the return code information logged in message N20212 should be investigated.

N20205

SELECTED APPLICATION IS INACTIVE

Reason:

A logon request was made from a terminal under EASINET control, but the selected application is not running.

System Action:

The terminal remains under EASINET control.

User Action:

Determine why the application is not running and/or retry the request later.

N20206

APPLICATION IS NOT ACCEPTING LOGONS

Reason:

An attempt to log on to an application failed because it will not allow any logons.

System Action:

The logon request is ignored.

User Action:

Check the status of the application and retry the logon when logons are allowed.

N20207

UNABLE TO SERVICE REQUEST (CLSDST PASS FAILED)

Reason:

An attempt to logon to an application failed because the VTAM CLSDST PASS operation failed.

System Action:

The logon request is ignored and the terminal remains under EASINET control. Message N20211 is written to the activity log providing specific error information.

User Action:

Contact your systems administrator.

N20208

SELECTED APPLICATION IS NOT KNOWN TO VTAM - INPUT= P1 APPL= P2

Reason:

An attempt was made to log on to an application that is undefined or inactive. The DEFLOGON used is identified by P1 and the associated application LU name is P2.

System Action:

The logon request is rejected.

User Action:

Consult your systems administrator. Ensure that the application is defined to VTAM and that the DEFLOGON specifies the required LU name.

N20209

SELECTED APPLICATION IS UNAVAILABLE - INPUT= P1 APPL= P2

Reason:

A logon request specified the name of a logical unit that:
- Is not an application program, or
- Is an application program in another domain, but the domain is not currently accessible (for example, the cross-domain resource-manager is not active)

P1 is the string that identifies the DEFLOGON used and *P2* is the target application LU name.

System Action:

The logon request is ignored.

User Action:

If the logical unit is not an application, the DEFLOGON entry pertaining to the logon request is wrong and you must change it. In the case of an inaccessible domain, retry the request later when communications are re- established.

N20210

LOGMODE NAME aaaaaaaa IS NOT KNOWN TO VTAM

Reason:

A logon request failed because the LOGMODE table entry specified in a DEFLOGON entry, or &LOGON statement, is not known to VTAM.

System Action:

The request is ignored.

User Action:

Consult your systems administrator to enable the DEFLOGON entry to be changed, or the &LOGON statement to be corrected.

N20211

CLSDST PASS FAILED, RC=rc,FBK2=fb,SENSE=sense

Reason:

Written to the activity log with message N20207. Gives specific VTAM return code, feedback and sense information.

System Action:

None.

User Action:

Interpret the information using the VTAM Programming manual. Refer to the related message N20207.

N20212

INQUIRE APPSTAT FAILED, RC=rc,FBK2=fb,SENSE=sense

Reason:

Written to the activity log with message N20204. Gives specific VTAM return code, feedback and sense information.

System Action:

None.

User Action:

Interpret the information using the VTAM Programming manual. Refer to the related message N20204.

N20213

LOGON TO SELECTED APPLICATION IS SUSPENDED

Reason:

An attempt was made to log on to an application that has been suspended using the SUSLOGON command.

System Action:

The logon is denied.

User Action:

Retry the logon later when the application is available.

N20214

NO RESPONSE TO INQUIRE APPSTAT FOR APPLICATION aaaaaaaa

Reason:

Written to the activity log when a VTAM INQUIRE APPSTAT has not completed within an expected interval.

System Action:

The associated function is failed as not completed successfully.

User Action:

Refer the details to your systems administrator for problem determination.

N20215

P1

Reason:

An attempt was made to log on to an application that has been suspended using the SUSLOGON command. The text, *P1* , indicates the reason for the suspension set by the issuer of the SUSLOGON command.

System Action:

The logon is denied.

User Action:

Retry the logon when the application has been made available.

N20216

SELECTED APPLICATION IS NOT DEFINED

Reason:

An attempt was made to access an application that is undefined. A DEFLOGON command, that matches the first word of the MAI-FS logon string, has not been found.

System Action:

The session request is terminated.

User Action:

Correct the application name used in the logon request. If necessary, consult your systems administrator.

N20601

RE-ACQUISITION OF LU luname WILL BE ATTEMPTED

Reason:

The session with an EASINET controlled terminal has been lost for a reason identified as recoverable by SOLVE.

System Action:

The system will try to re-establish the session with the terminal. Attempts of this nature are reported to Monitor status operators.

User Action:

None.

N20801

INVALID DATASET NAME

Reason:

A dynamic allocation request specified an invalid dataset name.

System Action:

The request is rejected.

User Action:

Correct and retry.

N20802

UNABLE TO RESOLVE GENERATION DATASET GROUP NAME

Reason:

A request was made for dynamic allocation of a member of a generation data group but the system was unable to resolve the absolute dataset name of the specified member.

System Action:

The allocation request is rejected.

User Action:

None.

N20803

DATASET NOT FOUND, CAMLST LOCATE ERROR R15=xx

Reason:

A request for dataset replace was made. This involves deleting the dataset and subsequently re-creating it. The dataset to be deleted could not be found.

System Action:

This message is written to the log as an informational message only.

User Action:

Refer to Data Management SPL for explanation of CAMLST LOCATE return codes.

N20804

DATASET NOT DELETED, CAMLST SCRATCH ERROR R15=xx STATUS=yy

Reason:

The CAMLST SCRATCH macro has failed with the return codes as described.

System Action:

The request fails.

User Action:

Refer to Data Management SPL for explanation of CAMLST SCRATCH return codes.

N20805

DATASET NOT UNCATALOGUED, CAMLST ERROR R15=xx

Reason:

The CAMLST CATALOG macro has failed with return codes as described.

System Action:

The dataset is not uncatalogued.

User Action:

Refer to Data Management SPL for explanation of CAMLST CATALOG return codes.

N20B01

aaaaaaaa IS A bbbbbb DEVICE.

Reason:

This message appears on VOS3 systems only. It confirms that terminal aaaaaaaa which has just connected to SOLVE is a bbbbbb device type. bbbbbbb is either 3270 or 560/20.

System Action:

None.

User Action:

None.

N20D09

USERID MUST BE ENTERED

Reason:

A logon was attempted but no userid was entered.

System Action:

None.

User Action:

Enter userid and password.

N20D10

PASSWORD MUST BE ENTERED

Reason:

A logon was attempted but no password entered.

System Action:

None.

User Action:

Enter userid and password.

N20E01

USERID uuuuuuuu IS NOT KNOWN, RE-ENTER OR LOGOFF

Reason:

A logon was attempted for an undefined USERID.

System Action:

The logon is rejected.

User Action:

Correct and re-enter, or have your USERID defined to SOLVE.

N20E02

PASSWORD IS INVALID, RE-ENTER

Reason:

The password entered during a logon attempt was not valid for the USERID.

System Action:

The logon is rejected.

User Action:

Correct and re-enter.

N20E03

PASSWORD VIOLATION LIMIT EXCEEDED, LOGON DENIED

Reason:

The maximum number of password retries was exceeded during a logon attempt.

System Action:

The logon is rejected.

User Action:

See your systems administrator.

N20E05

user-class USER userid LOGGED ON FROM nodename -- username

Reason:

This message is logged and sent to all monitor status users identifying users as they logon to SOLVE.
user-class: the user type, classed as LOCAL, REMOTE, SYSTEM, TSO, CONSOLE, NET/VIEW, VM/OPER or APPC. userid: the userid who has logged on. nodename: the terminal node name at which the user has logged on. In the case of an APPC user a nodename of *GLOBAL* indicates that any subsequent APPC logon requests for the same user will use this region irrespective of the node from which the logon request originates. username: the name of the user taken from their UAMS definition.

System Action:

None.

User Action:

None.

N20E06

PASSWORD NOT RENEWED, SESSION TERMINATED

Reason:

A logon has completed, but since the USERID password has expired, the system requires that it be changed. This was not done so the USERID is logged off.

System Action:

None.

User Action:

Logon again and change your password as requested.

N20E07

user-class USER userid LOGGED OFF FROM nodename USER TYPE usertype

Reason:

This message is logged to users with monitor status to indicate that the specified user has logged off. user-class identifies the class of user (see message N20E05). usertype indicates whether *the user* has multiple signon authority; values returned are MULTI or SINGLE.

System Action:

None.

User Action:

None.

N20E08

user-class USER userid FORCED OFF FROM nodename BY reason

Reason:

The specified userid has been forcibly logged off from the specified node because the VTAM session has failed or been terminated due to Operator action.

System Action:

The userid is logged off.

User Action:

If disconnection has occurred as indicated by the message then the user may wish to logon and re-connect to the lost session.

N20E09

PASSWORD INVALID, ENTER USERID AND PASSWORD

Reason:

A logon attempt, in which the user passed the userid and password as logon 'userdata' failed because the password specified was wrong.

System Action:

The SOLVE logo is displayed and this message prompts the user to re-enter both userid and password.

User Action:

Re-enter, or logoff.

N20E10

ENTER USERID

Reason:

A logon attempt is in progress. A 1 to 8 character userid is required to identify the user to the system.

System Action:

If possible the logo panel is displayed prompting for input.

User Action:

Enter your userid, or logoff.

N20E11

ENTER PASSWORD

Reason:

A logon attempt is in progress. A 1 to 8 character password is required to confirm the identity of the user to the system.

System Action:

If possible the logo panel is displayed prompting for input.

User Action:

Enter your password, or logoff.

N20E49

text (ex security exit)

Reason:

A logon attempt has been rejected. The message text is that returned by the system or user security system.

System Action:

The logon is rejected and the logon panel is displayed.

User Action:

Re-enter your userid and password, or logoff.

N20E99

TIMEZONE NAME *aaaaaa* FOR USER *bbbbbb* NOT KNOWN, SYSTEM TIMEZONE USED

Reason:

During user logon, the user definition time zone name was not found in the TIMEZONE table.

System Action:

The system time zone is used (name is SYSTEM).

User Action:

Ensure that time zone names are set up during system initialization using the TIMEZONE command.

N20F01

USERID userid NOT AUTHORISED FOR OCS

Reason:

An LU1 logon has been rejected because the user is not authorised for Operator Control Services.

System Action:

The logon is rejected.

User Action:

Contact your installation help desk to arrange OCS authorisation for your userid.

N20F03

USERID uuuuuuuu LOGGED ON AT time ON date.

Reason:

An LU1 logon has completed successfully.

System Action:

None.

User Action:

Review broadcast messages if any. Proceed with work.

N21101

PRODUCT P1 REQUIRES A PREREQ OF P2

Reason:

A product (*P1*), specified using the PROD= JCL parameter, is allowed only if another product is also specified. The prerequisite product (*P2*) is either the name of a specific product or **Multiple* to indicate that the product requires any one of multiple products as specified in the product documentation.

System Action:

The region terminates.

User Action:

Change the RUNSYSIN member to specify the correct PROD= values.

N21102

PRODUCT P1 NOT AUTHORIZED ON THIS OPERATING SYSTEM

Reason:

A product (*P1*), specified using the PROD= JCL parameter, is not allowed on the current operating system.

System Action:

The region terminates.

User Action:

Change the RUNSYSIN member to remove the relevant PROD= value. Contact your product supplier for product availability information.

N21103

PRODUCT P1 NOT AUTHORIZED ON SECURITY AND SYSTEM SERVICES VERSION P2

Reason:

A product (P1), specified using the PROD= JCL parameter, is not allowed on the version and maintenance level (P2) of Security and System Services.

System Action:

The region terminates.

User Action:

Change the RUNSYSIN member to remove the relevant PROD= value. Contact your product supplier for product availability information.

N21104

PROD= P1 NOT ALLOWED WITH PROD= P2

Reason:

A product (*P1*), specified using the PROD= JCL parameter, is not allowed to run concurrently with product *P2.*

System Action:

The region terminates.

User Action:

Remove one of the two PROD= values from the RUNSYSIN member. Contact your product supplier for product availability information.

N21302

CA Common Services HAS NOT BEEN INITIALIZED (CAS9 HAS NOT BEEN RUN)

Reason:

The initialization process for CA Common Services has not been run since the last IPL. This product requires the services for some functions, including LMP checking.

The services are initialized by the CAS9 started task, which is normally run as part of your system IPL process.

System Action:

Some functions, such as LMP checking, are not operational.

User Action:

Contact your systems administrator.

N21303

PRODUCT P1 (LMP= P2) REGISTERED

Reason:

A product (*P1*), with LMP code *P2* , has been registered with the Licence Manager Program (LMP) component of Resource Initialization Manager (CAIRIM). CAIRIM will monitor product usage.

System Action:

None

User Action:

None, for information only

N21304

PRODUCT *P1* (LMP= *P2*) NOT REGISTERED - *P3*

Reason:

The *P1* product (product code *P2*) failed registration with the LMP component of the Resource Initialization Manager (CAIRIM). *P3* is one of the following failure reasons:

CAS9 NOT RUN

Indicates that CA Common Services initialization process has not been run.

R15=*xx*

Indicates an unexpected LMP error. *xx* is the LMP return code in hexadecimal.

System Action:

None.

User Action:

If the reason is CAS NOT RUN, review the N21302 message. For other reasons, contact Technical Support.

N21305

WARNING: PRODUCT P1 (LMP= P2) WILL EXPIRE WITHIN 30 DAYS

Reason:

A product (*P1*), with LMP code *P2* , has been registered with the Licence Manager Program (LMP) component of Resource Initialization Manager (CAIRIM). However, the product will expire within 30 days.

System Action:

None

User Action:

Contact your product supplier to obtain a new licence key.

N21306

WARNING: PRODUCT *P1* (LMP=*P2*) HAS EXPIRED OR IS UNLICENSED

Reason:

The product is registered with License Management Program (LMP) of CAIRIM, but its LMP key has either expired or is *not* valid for this CPU.

P1 is the product name key. The key is in a PROD statement in the RUNSYSIN member.

P2 is the product LMP code.

System Action:

None.

User Action:

Check that the LMP key registered for the product is correct:

- If the key is correct, take *one* of the following actions:
  - Contact CA Support to get a new LMP key for the product, and register it.
  - Comment out the PROD statement for the product in the RUNSYSIN member.
- If the key is *not* correct, register the correct LMP key for the product.

N21701

INSUFFICIENT STORAGE

Reason:

A DEFLOGON command could not be processed because of a storage shortage.

System Action:

The command fails.

User Action:

Consider increasing the SOLVE region or partition size. Investigate possible cause of storage shortage.

N21801

INVALID QUERY REPLY FROM *aaaaaaaa*

Reason:

When the terminal, *aaaaaaaa*, connects to the region, a Read Partition Query was sent to the terminal to obtain information about its characteristics. The Query Reply, which was sent from the terminal to the region, contains invalid data. This message precedes a hexadecimal dump of the Query Reply.

System Action:

The logon of the terminal proceeds, but the region cannot use some abilities of the terminal such as extended color or extended highlighting.

User Action:

The dump of the invalid Query Reply follows this message. See this dump of the Query Reply to determine why it is invalid.

N21802

+off hexdata hexdata hexdata hexdata char char char char

Reason:

This message is preceded by N21801. This is the hexadecimal dump of the invalid Query Reply.

System Action:

None.

User Action:

None.

N22201

SYSPARM VALUE SOURCE NAME/USER LINKNAME

Reason:

This message is the title line of the SHOW SYSPARMS display.

System Action:

None.

User Action:

None.

N22202

P1 P2 P3 P4 P5

Reason:

This message is produced for each SYSPARM displayed by the SHOW SYSPARMS command. It includes the following information:
P1 - The SYSPARM operand name.
P2 - The current value.
P3 to *P5* Indicates how the value was set. Possible values for *P3* are: *DEFAULT* - The value is the default.
OCS - The value was set by a command entered in OCS.
P4 is the user ID that executed the command.
ROF - The value was set by a command entered in a remote region.
P4 is the user ID that executed the command.
P5 is the link name of the remote region.
COMMAND ENTRY - The value was set by a command entered using the Command Entry function.
P4 is the user ID that executed the command.
BG COMMAND - The value was set by a command entered from a background environment, for example, as a result of a time command.
P4 is the user ID of the background environment.
PROCEDURE - The value was set by an NCL procedure.
P4 is the procedure name.
Note: A procedure name of SYSPARMS indicates that a command replacement for the SYSPARMS command is in effect. For more information, see the CMDREPL Customizer parameter group and the SYSPARMS CMDREPL command.
CUSTOMIZER - The value was set when a Customizer parameter group was actioned.
P4 is the name of the parameter group.
Note: When a SYSPARM operand is set by Customizer, it cannot be updated using OCS, Command Entry, or an NCL procedure. The SYSPARM operand must be updated using the Customizer parameter group to ensure that values remain synchronized. Synchronization checks can be bypassed using SYSPARMS SYSPGCHK=NO; however, this is not recommended except in an emergency situation because there is no synchronization with the Customizer parameter group. If used, we recommended that you issue SYSPARMS SYSPGCHK=YES (the default) as soon as possible to reinstate synchronization checking.

System Action:

None.

User Action:

None.

N22203

STORAGE ERROR, UNABLE TO DISPLAY SYSPARMS

Reason:

A storage shortage has prevented processing of the SHOW SYSPARMS command.

System Action:

The command is not processed.

User Action:

Retry the command. If the problem persists, contact your systems administrator.

N22701

UNABLE TO SERVICE REQUEST (INSUFFICIENT STORAGE)

Reason:

A CLSDST operation could not be performed to pass a terminal to a target application because of a temporary storage shortage.

System Action:

The logon request fails.

User Action:

Retry. If the condition persists refer to your systems administrator.

N22703

TARGET APPLICATION REJECTED SESSION

Reason:

A logon request was issued for an active application and the terminal was passed successfully. However, the application subsequently rejected the session and SOLVE re-acquired the terminal.

System Action:

The logon request fails.

User Action:

Determine why the application rejected the session. In the case of systems such as CICS or IMS, the terminal may not be defined properly.

N22704

TERMINAL DID NOT ACCEPT SESSION

Reason:

A logon request was issued for an active application and the terminal was passed to it successfully. However, the terminal subsequently rejected the session and SOLVE re-acquired the terminal.

System Action:

The logon request fails.

User Action:

Determine why the terminal rejected the session. The application could have supplied invalid bind parameters.

N22705

LU P1 BEING PASSED TO APPLICATION P2 LOGMODE P3

Reason:

A logon request was issued for an active application. The terminal *P1* is now being passed to application *P2* . In VTAM terms, a CLSDST/PASS is about to be issued. The logmode specified for the session is *P1* . The word DEFAULT indicates no logmode is specified and that the terminal's default logmode will be used.

System Action:

The logon request proceeds. Subsequent messages indicate the result of the operation.

User Action:

None.

N22706

SESSION ESTABLISHMENT FAILED

Reason:

A logon request was issued for an active application and the terminal was passed to it successfully. However, the session between the terminal and the application was not established successfully, and EASINET re-acquired the terminal.

System Action:

The logon request fails and EASINET processing resumes.

User Action:

The error condition may be temporary - retry the logon request. If necessary examine the log for related messages which detail the error that occurred.
Message N22712 is written to the activity log to provide various reason and sense code information, which should be examined to determine the exact cause of the failure.
Message N22731 indicates that the communication subsystem does not support Third Party Notify for this application. Modification of the application's DEFLOGON definition to specify NOTIFY=NO may be used to bypass this condition.
Message N22732 indicates that an attempt to logon using a specific logmode failed due to a queued session request. Retry the logon request.

N22708

SELECTED APPLICATION IS INACTIVE

Reason:

A logon request is issued for an application which is not active.

System Action:

The logon request fails.

User Action:

Retry when the application is active.

N22709

SIMLOGON FAILED, RC=rc,FBK2=fb,SENSE=sense. LU luname DISCARDED

Reason:

A logon request was issued for an active application and the terminal luname was passed to that application. However, the session between the terminal and application did not establish successfully, and SOLVE attempted to re-acquire the terminal. During this re- acquisition, a VTAM SIMLOGON macro failed.

System Action:

The re-acquisition fails.

User Action:

Firstly, determine the cause of the session establishment failure. Message N22712 will detail the reason and sense codes. Secondly, determine the cause of the SIMLOGON failure. The VTAM return code, feedback and sense information in this message indicate the cause and should be used in reference to the VTAM Programming manual. If the terminal should be connected to the EASINET component, an OPNDST command should be issued from an OCS window.

N22712

SESSION BETWEEN LU *luname* AND APPL *applname* FAILED, RSN=X'*rr*', SENSE=X'*ssssssss*'

Reason:

A logon request was issued for an active application *applname* and the terminal *luname* was passed to it successfully. However, the session between the terminal and the application was *not* established successfully.

System Action:

The region attempts to reacquire the terminal and issues an error message to the user.

User Action:

Determine the cause of the failure. The reason and sense codes that are provided in this message are obtained from the information that is given to the region NSEXIT by VTAM. For information about NSEXIT, see the *VTAM Programming* guide. The region provides a more meaningful message for certain failure conditions (see messages N22703 and N22704).

N22713

LU luname DID NOT RECONNECT, DISCARDED

Reason:

A logon request was issued for an active application and the terminal luname was passed to that application. However, the session between the terminal and application did not establish successfully, and SOLVE attempted to re-acquire the terminal to notify the user. However, this re-acquisition failed.

System Action:

The re-acquisition fails.

User Action:

Determine if the terminal should be connected to the EASINET component, and if so issue an OPNDST command from an OCS window to connect it. The re-acquisition attempt could have failed because another application acquired the terminal, or because the terminal became otherwise unavailable or inactive.

N22714

OPNDST FAILED, RC=rc,FBK2=fb,SENSE=sense. LU luname DISCARDED

Reason:

A logon request was issued for an active application and the terminal luname was passed to that application. However, the session between the terminal and application did not establish successfully, and SOLVE attempted to re-acquire the terminal. During this re- acquisition, a VTAM OPNDST macro failed.

System Action:

The re-acquisition fails.

User Action:

Firstly, determine the cause of the session establishment failure. Message N22712 will detail the reason and sense codes. Secondly, determine the cause of the OPNDST failure. The VTAM return code, feedback and sense information in this message indicate the cause and should be used in reference to the VTAM Programming manual. If the terminal should be connected to the EASINET component, an OPNDST command should be issued from an OCS window.

N22715

LU luname RE-ACQUIRED

Reason:

A logon request was issued for an active application and the terminal luname was passed to that application. However, the session between the terminal and application did not establish successfully, and SOLVE re-acquired the terminal to notify the user.

System Action:

The EASINET procedure regains control after the &LOGON statement with an error message in the &SYSMSG variable.

User Action:

Other messages detail the cause of the session failure.

N22716

UNSUPPORTED DEVICE TYPE. LU luname DISCARDED

Reason:

A logon attempt was received from an LU specifying BIND parameters that indicated that it was not an LU type 1,2 or 3 or LU 0 3277 device.

System Action:

The system rejects the logon attempt.

User Action:

Check the BIND parameter definitions for the device if it is a terminal that should be able to logon to SOLVE.

N22717

RE-ACQUISITION OF LU luname AS A MODEL 2 WILL BE ATTEMPTED

Reason:

A 3270 device rejected a BIND issued by EASINET. The system will retry the BIND to attempt to connect the terminal as a model 2 (24 x 80) terminal.

System Action:

The system retries the BIND.

User Action:

Check the BIND parameter definitions for the device if it is a terminal that should be able to logon to SOLVE.

N22718

LOGMODE NAME lgmdname IS NOT KNOWN TO VTAM. RE- ACQUISITION OF LU luname WILL BE ATTEMPTED

Reason:

Connection of the nominated terminal failed because the LOGMODE table entry *lgmdname* is not defined to VTAM. SOLVE will retry the connection with a default set of BIND parameters.

System Action:

The system retries the BIND.

User Action:

Check the MODE TABLE entry specified for the terminal.

N22731

TERMINAL LOGGED BACK ON WITH NOTIFY OUTSTANDING

Reason:

A previous attempt to pass the terminal to another application using a VTAM CLSDST/PASS operation requested that VTAM provide notification to indicate the success or otherwise of the operation (this is referred to as Third Party Notify). VTAM has not provided notification and as such SOLVE cannot determine if the operation was successful.

System Action:

The current logon attempt is not completed. The EASINET procedure which issued the original CLSDST/PASS request via the &LOGON verb regains control of the terminal, and this error message is available in the &SYSMSG system variable after the &LOGON verb completes.

User Action:

Investigate the cause of the failure of VTAM to provide Third Party notification. Some versions of VTAM do not support the Third Party Notify feature. If this is the case, the use of this feature can be avoided by use of a SYSPARMS VTAMNTFY=NO command.

N22732

TERMINAL LOGGED BACK ON AFTER CLSDST ISSUED

Reason:

When a terminal connected to a SOLVE system requests logon using a Logmode other than the current one, SOLVE uses a VTAM CLSDST macro to terminate the current session, then a VTAM SIMLOGON macro to create a new session with the requested Logmode. After the CLSDST macro was issued, SOLVE detected that the terminal had logged on again before the SIMLOGON could be issued.

System Action:

The current logon attempt is not completed. The EASINET procedure which issued the original &LOGON request regains control of the terminal and this error message is available in the &SYSMSG system variable after the &LOGON verb completes.

User Action:

This occurrence indicates that VTAM has caused the terminal to be logged on (possibly because of LOGAPPL) when SOLVE had indicated the session with the terminal was not required. This has prevented SOLVE from reacquiring the terminal with the specified logmode. This error should be reported to your system administrator.

N23001

NCL PROCESS ACTIVE. Reason.

Reason:

An EXIT was attempted from OCS. However, there is an NCL process active. 'Reason' contains the reason an exit was not performed. Either: EXIT PREVENTED BY PROFILE OPTION or RE-ENTER EXIT TO FORCE OCS TERMINATION An exit from OCS is not performed.

System Action:

None.

User Action:

Action depends on the reason. Either re-enter EXIT or terminate the NCL process.

N23003

INSUFFICIENT STORAGE TO INITIATE OCS

Reason:

A temporary storage shortage prevented the user from entering Operator Console Services mode.

System Action:

None.

User Action:

Retry. Refer to your systems administrator if the condition persists.

N23005

INSUFFICIENT STORAGE TO INITIATE MSGPROC

Reason:

MSGPROC could not be invoked for the OCS window because of a storage shortage.

System Action:

None.

User Action:

Consider increasing the SOLVE region or partition size.

N23301

INVALID SYNTAX OR OMITTED VARIABLE

Reason:

The statement in error has wrong syntax or a required variable has been omitted.

System Action:

The procedure terminates.

User Action:

See the NCL Reference for the syntax of the statement.

N23302

DUPLICATE VARIABLE aaaa SPECIFIED

Reason:

The failing statement specified a duplicate variable name.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23303

INSUFFICIENT STORAGE

Reason:

The procedure has failed because of a storage shortage.

System Action:

The procedure terminates.

User Action:

Consider increasing the SOLVE region or partition size.

N23304

INVALID aaaa SPECIFICATION ON VARIABLE

Reason:

An invalid length or skip value is specified.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23305

INVALID VARIABLE OR LIST SYNTAX

Reason:

The failing statement contains invalid LIST syntax or an invalid variable.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23306

INVALID USE OF aaaa KEYWORD

Reason:

The failing statement contains a reserved keyword (e.g an attempt to modify a system variable).

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23307

GENERIC PROCESSING OF ALL GLOBALS IS INVALID

Reason:

You cannot perform generic processing of all global variables in the system. A generic processing request must specify a generic prefix longer than the global variable prefix so that only a subset of all global variables is selected.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23308

NAME: aaaaaaaaaaaa LEN: bbb MODF#: ccc ATTR: ddd DATA: eeeeeeeeeeee

Reason:

Issued in response to a SHOW NCLVARS command. The message contains:

NAME The name of the variable.

LENGTH The length of the variable.

MODF# Either blank or a number in the range 1 to 255. A value indicates the variable as having being modified by a system service eg. Panel Services, NDBGET.

ATTR Indicates the attributes of the variable. Either:
Blank- No special at*tribute*s set.
MOD - The variable has been modified using the *ASSIGN OPT=SETMOD function.*
ERR - The variable has been modified using the *ASSIGN OPT=SETERR function.*

HEX - The variable contains non-displayable hexadecimal data.

DATA Up to the first 12 bytes of data contained in the variable. If LIST=ALL is used then the second line contains the complete data of the variable.

System Action:

None.

User Action:

None.

N23310

aaaa IS AN INVALID VARIABLE NAME

Reason:

aaaa does not conform to the rules for variable names.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23311

ATTEMPT TO GENERATE AN INVALID VARIABLE NAME USING aaaa SOURCE VARIABLE

Reason:

Dynamic generation of a variable name using aaaa would cause an invalid name to be generated.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23312

vartype TRACE: varname FUNCTION: bbb UID:userid ID: nclid PROC: xxxxxxxx STMT: yyyyyyyy DATA: ddddddddddd

Reason:

SYSPARM NCLGBTRC has been set to cause tracing of varname. The trace is of a GLOBAL variable (vartype). The contents of the variable have been updated by the named user using procedure xxxx. The first 12 bytes of the data are displayed.

System Action:

None.

User Action:

Verify that the update is valid. When tracing is no longer required issue 'SYSPARM NCLGBTRC=', ie. without a value to terminate tracing.

N23314

GLOBAL VARIABLE USE INVALID.

Reason:

An operation was specified using a global variable (ie a variable whose name begins with the global variable prefix as defined by the NCLGLBL SYSPARM) but the operation is only valid for local variables. For example, setting or resetting the errfld or modified field attributes of a variable using *ASSIGN OPT=SETERR/RESETERR etc.*

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23315

DATA LENGTH EXCEEDS MAXIMUM OF aaaaa

Reason:

The data being moved into a buffer is too large for the buffer. For example, in a file operation the data exceeds the maximum record size.

System Action:

Operation is not completed.

User Action:

Reduce the length of data used in the operation.

N23316

HEX DATA ERROR. INVALID *reason*.

Reason:

An attempt was made to reference an NCL variable that is specified as containing hexadecimal data. The data has either invalid hexadecimal CHARACTERS or an invalid LENGTH (the length must be even) as indicated in *reason*.

System Action:

The NCL procedure is terminated.

User Action:

Correct, and retry.

N23317

VARIABLE LEN MODF# MEOH DATA

Reason:

This message is the title line for a variable display. The variables displayed are sorted into ascending alphabetic name order and show attributes (Modfld, Errfld, Outfld, Hex) and data. This display is produced by the DEBUG DISPLAY command. Refer to description of message N23318 for more information.

System Action:

None.

User Action:

None.

N23318

variable len modf# meoh data

Reason:

This message is the detail line for a variable display produced by the DEBUG DISPLAY command. The meanings of the fields are as follows:
variable - the name of the variable

len - the length of data contained in the variable

modf# - the current modfld order for the variable

meoh - attributes assigned to the variable
m - if 'Y' variable has MOD attribute set (otherwise '-')
e - if 'Y' variable has ERR attribute set (otherwise '-')
o - if 'Y' variable has OUT attribute set (otherwise '-')
h - if 'Y' variable contains HEX data (otherwise '-')

data - the contents of the variable

- If FORMAT=CHAR was entered on the DEBUG DISPLAY command the data contents are shown in character format.
- If FORMAT=HEX was entered on the DEBUG DISPLAY command the data contents are shown in hexadecimal format.
- If FORMAT=DUMP was entered on the DEBUG DISPLAY command the data contents are shown in a hex/character dump format in message N23319 which follows this message.

System Action:

None.

User Action:

None.

N23319

+ooo xxxxxxxx xxxxxxxx xxxxxxxx xxxxxxxx cccccccc

Reason:

This message is produced by the DEBUG DISPLAY command when the FORMAT=DUMP operand is entered. The message contains a hex and character dump format display of the data in the specified MDO. The meanings of the fields are as follows:
+ooo - shows the offset into MDO at which the data starts
xxxxxxxx - the hexadecimal format of the data
cccccccc - the character format of the data

System Action:

None.

User Action:

None.

N23320

ATTEMPT TO GENERATE INVALID LENGTH VARIABLE NAME: aaaaaaaaaaaaaaaa

Reason:

A generic operation which creates variables by appending a suffix to a supplied prefix attempted to create a token name longer than 12 characters. e.g. VARS=XXXXXXXXXX* RANGE=(1,100) aaaaaaaaaaaaaaaa = Invalid variable name.

System Action:

Procedure is flushed.

User Action:

Modify statement in error so that variable names generated don't exceed 12 characters, either by using a shorter prefix, or a different range or generic suffix set.

N23501

PROCEDURE xxxx REJECTED, NCLUMAX LIMIT HAS BEEN REACHED

Reason:

The maximum number of concurrent NCL processes allowed for any user is set by the NCLUMAX value. You have attempted to start more than this

System Action:

User Action:

N23502

PROCEDURE proc-name REJECTED, SERVER=server-name SCOPE=scope ALREADY ACTIVE.

Reason:

A START command was issued but the SERVER operand value server-name is not unique within the scope provided.

System Action:

The command is rejected.

User Action:

Correct and retry.

N23601

xxxxxxxx PROCESSING TERMINATED DUE TO ERROR. NCLID yyyyyy

Reason:

This is the standard termination message for any process that fails. The NCLID of the process is yyyyyy.

System Action:

None.

User Action:

Determine the reason for procedure termination from other error messages that accompany this message.

N23602

INSUFFICIENT STORAGE

Reason:

The process has failed to execute because of a storage shortage.

System Action:

The procedure terminates.

User Action:

If the condition persists, increase the SOLVE region or partition size.

N23603

OBJECT SERVICES METHOD aaaaaaaa TERMINATED DUE TO ERROR.

Reason:

This message indicates that an object services method procedure invoked via OSCALL has terminated due to an error.

System Action:

None.

User Action:

Investigate the reason for the failure of the object services method procedure. Other messages which precede this message will indicate the type of error encountered.

N23610

PROCEDURE xxxxxxxx NCLID nnnnnn IN ERROR, STMT NO: nnnnnnnn FOLLOWS:

Reason:

A general termination message; the failing statement follows this message.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23614

WAIT WAS LAST STMT IN PROCEDURE - WAIT CANCELLED

Reason:

If *WAIT is coded as the last statement in a procedure it is ignored and* the procedure is ended.

System Action:

The procedure terminates.

User Action:

None.

N23620

MEMBER *membername* IN LIBRARY *memberlib* DROPPED FROM NCL RETAIN QUEUE.

Reason:

This message appears if JCL PARMS TRACE1= includes GT1TRDRR (X'20'). The NCL procedure *membername* from the library *memberlib* has been dropped from the NCL retain queue because of *one* of the following reasons:

- The maximum number of members on the retain queue has been exceeded.
- The maximum amount of storage that is allocated to the NCL retain queue has been exceeded.

Members are dropped from the retain queue in least used order.

System Action:

None.

User Action:

None.

N23A01

INVALID SYNTAX

Reason:

The NCL statement syntax is incorrect.

System Action:

The NCL procedure is terminated.

User Action:

Check the syntax of the statement in error, correct and retry.

N23A02

VARS=aaaa PREFIX TOO LONG FOR SPECIFIED RANGE

Reason:

The prefix specified for generic variable name processing is too long for the range suffix to be appended.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23A03

0 INVALID AS A RANGE

Reason:

An NCL statement which contains the ARGS and RANGE operands has specified a range which includes the system variable *0*.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23A04

INVALID KEYWORD OPTION OR COMBINATION OF OPTIONS

Reason:

An NCL statement which contains the *FILE ADD PRTCNTL= operand has* invalid options. For example, nulls in list, duplicates in list, too many entries or a syntax error. e.g. prtcntl=(skip2,skip1) should generate this error.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23A06

ROUTCDE VALUE IS INVALID

Reason:

An invalid value has been specified for the ROUTCDE operand on either an *EVENT verb in an NCL procedure, or on a PROFILE EDS command.*

System Action:

The NCL procedure terminates, or the PROFILE command fails.

User Action:

Correct operand value and retry. An example of valid syntax is: ROUTCDE=(1,2,3,4).

N23A07

RESOURCE LIST IS INVALID

Reason:

The RESOURCE operand on an *EVENT NCL statement has an invalid value.* The RESOURCE operand is specified as a single resource, or a pair of resources. e.g. RESOURCE=(luname,userid).

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23B01

VARS=aaaa PREFIX TOO LONG FOR bbbb RANGE

Reason:

The prefix specified for generic variable name processing is too long for the range suffix to be appended.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23B03

VARS=aaaa PREFIX TOO LONG

Reason:

The prefix specified for generic variable name processing is too long.

System Action:

The NCL procedures is terminated.

User Action:

Correct and retry.

N23B04

MAXIMUM RANGE DIFFERENTIAL EXCEEDED

Reason:

ASSIGN has a processing limit of 256 generic variables in any one operation.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23B05

NONULLS/NORESET OPTION INVALID

Reason:

An *ASSIGN NCL statement has specified an incorrect NONULLS or NORESET* operand.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23C01

ARITHMETIC EXPRESSION HAS UNPAIRED BRACKETS

Reason:

If parentheses are used to delimit the evaluation order of an arithmetic statement an equal number of left and right parentheses, correctly paired, is required.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23C02

EXCESSIVE OPERATORS FOUND IN ARITHMETIC EXPRESSION

Reason:

Too many operators (+, - * etc) have been coded in the statement for the number of operands to be operated on.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23C03

EXCESSIVE OPERANDS FOUND IN ARITHMETIC EXPRESSION

Reason:

Too many operands have been coded in the statement for the number of operators (+, -, * etc).

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23C04

OPERAND STACK DEPTH EXCEEDED FOR ARITHMETIC EXPRESSION

Reason:

An arithmetic statement is processed as a sequence of simple expressions. There is a limit of 32 simple expressions per statement.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23C05

OPERATOR STACK DEPTH EXCEEDED FOR ARITHMETIC EXPRESSION

Reason:

An arithmetic statement is processed as a sequence of simple expressions. There is a limit of 32 simple expressions per statement.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23C06

OVERFLOW EXCEPTION IN ARITHMETIC EXPRESSION

Reason:

The failing statement had an expression, the result of which was too large to be held in an 8-byte floating-point register (*CONTROL REAL) or* a 4-byte binary register (*CONTROL INTEGER).*

System Action:

The procedure terminates.

User Action:

Correct and retry. of NCL arithmetic.

N23C07

ZERO DIVISOR IN ARITHMETIC EXPRESSION

Reason:

An attempt was made to divide by zero.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23C08

NUMERIC VALUE EXCEEDS MAXIMUM FOR ARITHMETIC EXPRESSION

Reason:

An expression yielded a number greater than the largest supported positive or negative value.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23C09

CONSECUTIVE OPERANDS FOUND IN ARITHMETIC EXPRESSION

Reason:

Each operand in an arithmetic expression must be separated from the next by an arithmetic operator.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23C11

OPERAND FOUND IN ARITHMETIC EXPRESSION NEITHER NUMERIC OR CONSTANT

Reason:

A variable in an arithmetic expression does not have a numeric value.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23C12

NEGATIVE OPERAND STACK INDEX ENCOUNTERED IN ARITHMETIC EXPRESSION

Reason:

The arithmetic statement cannot be resolved.

System Action:

The NCL procedure is terminated.

User Action:

Check the logic of the statement.

N23C13

OPERATOR DOES NOT HAVE OPERAND FOLLOWING IN ARITHMETIC EXPRESSION

Reason:

Each operator in an arithmetic expression must be followed by an operand.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23C14

REMAINDER DIVISION IS NOT SUPPORTED FOR FLOATING POINT ARITHMETICS

Reason:

The failing statement had an expression containing the remainder operator (\), however the expression contained floating-point values or
CONTROL REAL was in effect.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23E01

PROC procname LINE linenum MISPLACED ELSE

Reason:

The nominated statement contains an *ELSE verb that is either not on its* own statement or is logically inconsistent.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23E02

PROC procname LINE linenum HAS nnnn MISSING &DOENDS

Reason:

&DOEND statements to close preceding &DO, &DOUNTIL or &DOWHILE groups are missing.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23E03

PROC procname LINE linenum MISPLACED &DOEND

Reason:

An &DOEND statement was encountered, however there was no corresponding &DO statement preceding it.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23E04

PROC procname LINE linenum keyword STATEMENT INVALID ON keyword STATEMENT

Reason:

A statement was found which does not make sense as the statement is the result of an IF, ELSE or ENDAFTER statement. For example, ` IF A EQ
B THEN ELSE'.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23E05

PROC procname LINE linenum MISPLACED &ELSE STATEMENT

Reason:

An &ELSE statement was encountered where the previous statement was not an &IF statement or the closure of an &DO .. &DOEND group which was the executable part of an &IF statement.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23E06

PROC procname LINE linenum LABEL INVALID ON &ELSE STATEMENT

Reason:

A statement label (that is, a valid name preceded by a period character `.') was found on an &ELSE statement. It is illegal to branch directly to the &ELSE portion of an &IF statement, therefore labels are not allowed on the &ELSE statement.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23E07

PROC procname LINE linenum &ELSE INVALID ON &IF STATEMENT, NEED NEW STATEMENT

Reason:

An &ELSE keyword was encountered on the same line as an &IF statement. The &ELSE keyword must be on a separate statement.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23E46

PROC procname LINE linenum keyword IS INVALID AS FIRST WORD OF STATEMENT

Reason:

A valid NCL keyword was encountered at the beginning of a statement but that keyword is not valid at the beginning of a statement. For example, the &THEN keyword or any NCL builtin function.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23E47

PROC procname LINE linenum UNEXPECTED END-STATEMENT AFTER keyword

Reason:

A statement was encountered which terminated prematurely. For example, nothing appeared after the &THEN keyword of an &IF.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23E48

PROC procname LINE linenum INCORRECT NUMBER OF PARAMETERS AFTER keyword.

Reason:

An &IF, &DOWHILE or &DOUNTIL statement was encountered that had an incorrect number of parameters to make up the condition.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23E49

PROC procname LINE linenum TOO MANY PARAMETERS AFTER aaaa

Reason:

The aaaa function requires fewer parameters than have been coded.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23E50

PROC procname LINE linenum &DO STACK OVERFLOW

Reason:

The maximum number of nested &DO constructions has been reached. The maximum will vary depending upon the precise logic structure of the procedure, but is always a large number. Your procedure should never be structured in a manner that should ever approach this maximum.

System Action:

The NCL procedure is terminated.

User Action:

Restructure the procedure.

N23F01

NO DOMIDS PASSED

Reason:

&NRDDEL requires at least one DOMID (delete-operator-message identifier).

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23F02

DOMID aaaa IS INVALID

Reason:

An &NRDDEL statement specified a delete-operator-message identifier (DOMID) to delete a non-roll delete message, but the DOMID specified was invalid.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23G01

FACILITY NOT VALID UNDER THIS OPERATING SYSTEM

Reason:

The NCL procedure has issued an AOM NCL verb that is not supported under this operating system. For example, &WTOR is not supported in z/VM.

System Action:

The NCL procedure is terminated.

User Action:

Correct the procedure.

N23G03

&DOM SYSTEM ABEND code

Reason:

The NCL procedure has issued an &DOM NCL verb, but the DOM macro abended with the indicated code. This can occur if an invalid DOMID is provided.

System Action:

The NCL procedure is terminated.

User Action:

Ensure only valid DOMIDs are used.

N23G04

NO MESSAGE TEXT OR ALL BLANK

Reason:

The text for an &WTO or &WTOR NCL verb was either omitted, or the value provided was all blank.

System Action:

The NCL procedure is terminated.

User Action:

Correct the procedure.

N23G20

ROUTCDE VALUE INVALID

Reason:

The ROUTCDE parameter of an &WTO or &WTOR NCL verb was not valid.

System Action:

The NCL procedure is terminated.

User Action:

Correct the procedure.

N23G21

DESC VALUE INVALID

Reason:

The DESC parameter of an &WTO NCL verb was not valid.

System Action:

The NCL procedure is terminated.

User Action:

Correct the procedure.

N23G22

MCS VALUE INVALID

Reason:

The MCSFLAG value supplied for an &WTO or &WTOR NCL verb is not a valid list of allowable MCSFLAG values.

System Action:

The NCL procedure is terminated.

User Action:

Correct the procedure.

N23G23

WAIT=0/NOWAIT INVALID ON &WTOR

Reason:

The NCL procedure has issued an &WTOR NCL verb with WAIT=0 or NOWAIT specified. This is invalid, as a valid delay is required to give the operator some chance to reply.

System Action:

The NCL procedure is terminated.

User Action:

Correct the procedure.

N23G24

CONSOLE ID INVALID

Reason:

The console ID entered on an &WTO or &WTOR NCL statement is invalid. It must either be a number from 1 to 99 or (if extended MCS consoles are supported) a valid console name.

System Action:

The NCL process is terminated.

User Action:

Correct the console ID.

N23G25

USE OF LINETYPE OPERAND REQUIRES APF AUTHORISATION

Reason:

The LINETYPE operand of the &WTO NCL statement cannot be specified as anything other than NO unless the SOLVE system is running APF authorized.

System Action:

The NCL process is terminated.

User Action:

Determine why the SOLVE system is not running APF authorized.

N23G26

LINETYPE OPERAND NOT SUPPORTED IN THIS ENVIRONMENT

Reason:

Use of the LINETYPE operand on the &WTO NCL statement is only supported in the MVS and similar environments. It is not valid in z/VM,

System Action:

The NCL process is terminated.

User Action:

Remove the LINETYPE operand.

N23H31

INVALID OR MISSING SUBSTITUTION CHARACTER

Reason:

The substitution character provided to the *ZSUBST function is missing* or in error.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23H32

INVALID VARIABLES IN SUBSTITUTION STRING

Reason:

The substitution string in the &ZSUBST function contains invalid variables.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23H33

SUBSTITUTION RESULT TOO LONG

Reason:

The result of the &ZSUBST function is too long.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23H41

DATA TO BE QUOTED TOO LONG

Reason:

The data to be quoted by the &ZQUOTE2 function was too long. This function will always add quotes to the data and hence the total length of the data must be less than or equal to the maximum variable size minus the number of quotes that will be added by the function.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I01

DATA IN VARIABLE: aaaaa DOES NOT START WITH <KWD=>. DATA IS bbbbb

Reason:

The &SETVARS function did not locate a KWD= with the ARGS or VARS operands. The variable is 'aaaaa'. The supplied data is 'bbbbb' and must contain KWD=.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I10

MISSING OR INVALID KEYWORD IN DATA STARTING AT: aaaaa

Reason:

The DATA= operand of the &SETVARS functions contains an invalid keyword or the keyword is missing. The start of the data is displayed.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I11

INVALID QUOTED STRING IN DATA STARTING AT: aaaaa

Reason:

A quoted string in the DATA= operand of the &SETVARS function is in error. Either the quotes are not paired or the data is too long.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I50

KEYWORD: aaaaa NOT FOUND IN KEYWORDS LIST.

Reason:

The keyword *aaaaa* specified on a data string was not in the list of keywords specified on the KEYWORDS= operand of the &SETVARS verb.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry. Refer to the NCL Reference for a description of the &SETVARS verb.

N23I51

OUTPUT VARIABLE NAME: aaaaa INVALID OR RESERVED.

Reason:

The variable name that is created by the &SETVARS function (PREFIX= operand data concatenated with the KEYWORDS= operand data) is invalid or reserved.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I52

KEYWORD: aaaaa DUPLICATED.

Reason:

The input data specified in the DATA=, VARS= or ARGS operand of the &SETVARS function contains a duplicate keyword and DUPLICATE=NO is specified.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I53

DUPLICATE KEYWORD TABLE OVERFLOW WHILE PROCESSING KEYWORD: aaaaa

Reason:

The DUPLICATE=NO operand on the SETVARS function is specified. Too many keywords have been specified on the KEYWORDS= operand to perform checking for duplicates - the keyword table has overflowed.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I54

VALUE FOR VARIABLE: varname EXCEEDS NCL MAXIMUM LENGTH

Reason:

During processing of an &SETVARS verb, the value extracted for assignment to the named variable exceeded the maximum value that can be set into an NCL variable.

System Action:

The NCL procedure terminates, or, if the ERROR=CONTINUE operand was specified on the &SETVARS statement, this message is returned in &SYSMSG and a non-zero return code is set.

User Action:

Correct the input and retry.

N23I55

N23I55 UNEXPECTED BLANKS FOUND WHILE PROCESSING KEYWORD: *kkk*

Reason:

During the processing of an &SETVARS verb, embedded or trailing blanks were found while processing the named keyword.

System Action:

The NCL procedure terminates, or if the ERROR=CONTINUE operand was specified on the &SETVARS statement, this message is returned in &SYSMSG and a nonzero return code is set.

User Action:

Correct the input and retry.

N23I90

VARS PREFIX AND RANGE WILL GENERATE INVALID VARIABLE NAME.

Reason:

The input variable name to be generated by the SETVARS function using the VARS= and RANGE= operand will create a variable name that is greater than 12 characters.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I91

NUMERIC PREFIX REQUIRES ALL KEYWORDS TO BE NUMERIC.

Reason:

The PREFIX= operand of the &SETVARS function has been is a numeric value, all keywords of the KEYWORD= operand must be numeric.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I92

OUTPUT PREFIX AND KEYWORD WILL GENERATE INVALID VARIABLE NAME.

Reason:

The variable name to be generated by the &SETVARS function, using the PREFIX= operand concatenated either with one of the KEYWORDS= operand values or with one of the keywords specified in the PARMS, ARGS, VARS= or DATA= operand will be greater than 12 characters.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I93

VARS= PREFIX MUST BE GENERIC.

Reason:

The VARS= operand has been specified on the &SETVARS function. The prefix of each of the VARS must be generic.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23I94

KEYWORDS LIST SYNTAX ERROR AT: aaaaa.

Reason:

The KEYWORDS=list operand has been specified on the &SETVARS function. There is a syntax error in the specification of the list. The syntax of the list must be KWD,...,KWD or (KWD,...,KWD).

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23K01

NO FEATURE NAME SPECIFIED.

Reason:

An &ZFEATURE statement was encountered that had no feature parameters specified.

System Action:

The NCL procedure is flushed.

User Action:

Correct the NCL procedure and retry.

N23K02

FEATURE AA..AA BB..BB

Reason:

The &FEATURE verbs has been used to set version and level data for the feature indicated as *AA..AA* but this is invalid for the reason that is described as *BB..BB* which will be:

IS NOT A VALID FEATURE NAME The feature name is not a valid SOLVE feature name.

IS NOT AN NCL BASED FEATURE The feature name is not an NCL feature.

System Action:

The NCL process is flushed.

User Action:

Correct the NCL procedure.

N23K03

FEATURE VERSION FORMAT IS INVALID.

Reason:

The &ZFEATURE verb has been used to set the version and/or level for an NCL-based feature but the value specified for the version is invalid. The correct formats for version are either Vn.n or Vn.n.n (where n is a numeric digit).

System Action:

The NCL process is flushed.

User Action:

Correct the NCL procedure.

N23K04

FEATURE PUT LEVEL FORMAT IS INVALID.

Reason:

The &ZFEATURE verb has been used to set the version and/or level for an NCL-based feature but the value specified for the PUT level is invalid. The only valid format is a 4-digit value.

System Action:

The NCL process is flushed.

User Action:

Correct the NCL procedure.

N23K05

INVALID COMMAND FORMAT, TOO MANY PARAMETERS.

Reason:

The &ZFEATURE verb has been used to set the version and/or PUT level for an NCL-based feature but is invalid because additional data follows the PUT level value.

System Action:

The NCL process is flushed.

User Action:

Correct the NCL procedure.

N23L01

UNKNOWN &BOOLEXPR OPERAND: AAAAAAAAAAAAAAA

Reason:

This message shows an unrecognized operand that was passed to the &BOOLEXPR NCL builtin function.

System Action:

The NCL process is terminated.

User Action:

Correct the &BOOLEXPR operand.

N23L02

DUPLICATE BOOLEXPR OPERAND: *AAAAAAAAAAAAAAA*

Reason:

This message indicates a duplicated operand on an NCL statement using the &BOOLEXPR built-in function.

System Action:

The NCL process is terminated.

User Action:

Correct the &BOOLEXPR syntax.

N23L03

INVALID OR OMITTED SUBCHAR VALUE

Reason:

The value supplied for the SUBCHAR operand of the &BOOLEXPR builtin function is invalid or was omitted.
The SUBCHAR values permitted are: ! % ? `

System Action:

The NCL process is terminated.

User Action:

Correct the SUBCHAR operand.

N23L04

INVALID OR OMITTED FOLD VALUE

Reason:

The value supplied for the FOLD operand of the &BOOLEXPR builtin function is invalid or omitted.
Valid values are YES (meaning fold all character data), NO (meaning do not fold), and * (meaning honour the &CONTROL IFCASE setting).

System Action:

The NCL process is terminated.

User Action:

Correct the FOLD operand.

N23L05

INVALID OR OMITTED EVAL VALUE

Reason:

The value supplied for the EVAL operand of the &BOOLEXPR builtin function is invalid or omitted.
Valid values are YES (meaning attempt to evaluate the expression) and NO.

System Action:

The NCL process is terminated.

User Action:

Correct the EVAL operand.

N23L06

INVALID OR OMITTED VARS VALUE

Reason:

The value supplied for the VARS operand of the &BOOLEXPR builtin function is invalid or omitted. The value must be a valid generic variable name prefix (including an asterisk (*) at the end).

System Action:

The NCL process is terminated.

User Action:

Correct the VARS operand.

N23L07

INVALID OR OMITTED RANGE VALUE

Reason:

The value supplied for the RANGE operand of the &BOOLEXPR builtin function is invalid or omitted. It must be a parenthesized pair of numbers, with the second greater than or equal to the first, and the values must range from 0 to 32767.

System Action:

The NCL process is terminated.

User Action:

Correct the RANGE operand.

N23L10

OMITTED OR MUTUALLY EXCLUSIVE OPERANDS

Reason:

A combination of operands on the %BOOLEXPR NCL builtin function is invalid. You have coded both the VARS and DATA operands or have not coded either.

System Action:

The NCL process is terminated.

User Action:

Correct the combination of operands.

N23L11

INVALID VARS AND RANGE COMBINATION

Reason:

The operand values specified for the VARS and RANGE operands of the &BOOLEXPR NCL builtin function together result in a possible variable name length that exceeds 12 characters.

System Action:

The NCL process is terminated.

User Action:

Correct the operands.

N23L20

NULL BOOLEXPR EXPRESSION

Reason:

No boolean expression data has been supplied on the &BOOLEXPR NCL builtin function.

System Action:

The expression is regarded as 'invalid'.

User Action:

Provide an expression.

N23L21

INVALID SYNTAX IN BOOLEXPR EXPRESSION: token token

Reason:

Invalid expression syntax was detected in the provided expression for the &BOOLEXPR NCL builtin function.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression syntax.

N23L22

EXPECTED AND/OR/) IN BOOLEXPR EXPRESSION: token token

Reason:

Whilst parsing the &BOOLEXPR builtin function boolean expression, a syntax error in the expression was found. Either an 'AND', an 'OR' or a ')' (right parenthesis) was expected, but none was found.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression syntax.

N23L30

EXPECTED TRUE/FALSE AFTER IGNORE, FOUND: token

Reason:

An IGNORE clause in an &BOOLEXPR NCL builtin function boolean expression was not correct. The word IGNORE must be followed by either TRUE or FALSE.

System Action:

The return value is 'INVALID'

User Action:

Correct the expression syntax.

N23L31

EXPECTED NUMBER/LITERAL/VARIABLE, FOUND: token

Reason:

Whilst parsing an &BOOLEXPR NCL builtin function boolean expression, a syntax error was detected. A number or literal or NCL variable was expected, but none was found.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression syntax.

N23L32

EXPECTED RELATIONAL OPERATOR, FOUND: *token*

Reason:

While parsing an &BOOLEXPR NCL built-in function, invalid boolean expression syntax was detected. An operator was expected, but none was found.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L33

RANGE OR GENERIC ONLY VALID FOR = AND ^= OPERATORS

Reason:

Whilst parsing an &BOOLEXPR NCL builtin function, a range or generic value was found but the associated operator was not EQUAL (=) or NOT EQUAL (^=).

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L34

GENERIC ONLY VALID WITH QUOTED DATA OR VARIABLES

Reason:

Whilst parsing an &BOOLEXPR NCL builtin function, a GENERIC operation was found with numeric operands.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L35

EXPECTED NUMBER/LITERAL/VARIABLE AFTER :, FOUND: token

Reason:

During parsing of an &BOOLEXPR NCL builtin function, a range test was found (:). The token after the range was not a number, literal, or variable.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L36

STRING:NUMBER OR NUMBER:STRING IS NOT A VALID RANGE

Reason:

While parsing an &BOOLEXPR NCL builtin function boolean expression, a range test with differing data types was found.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L37

EXPECTED TYPE NAME OR VARIABLE, FOUND: token

Reason:

Whilst parsing an &BOOLEXPR NCL builtin function boolean expression, a TYPE ('IS') test was found. The following token(s) were not either valid type names, or variable names.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L38

OPTION: token IS INVALID OR DUPLICATED

Reason:

While parsing an &BOOLEXPR NCL builtin function boolean expression, a modifier on a test (CHARACTER, NUMERIC, FOLD or NOFOLD) was either invalid or duplicated. For example, both CHAR and NUM were specified.
The CHARACTER or NUMERIC modifiers are only allowed when both sides of the operator are variables. The default action is to perform a numeric comparison if both variables are numeric or a character comparison if either is not numeric. The modifier enables the comparison type to be forced.
If either side of the operator is a constant, then the comparison type is implicitly determined by the presence or absence of quotes around the constant. If quoted, a character compare is forced. If not quoted, the constant must be numeric and a numeric compare is forced. In these cases it is invalid also to specify a modifier as this is a duplication.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L39

INVALID TYPE NAME: name

Reason:

Whilst parsing an &BOOLEXPR NCL builtin function boolean expression, an invalid type name was found.

System Action:

The return value is 'INVALID'.

User Action:

Correct the type name.

N23L40

CONSTANTS ON BOTH SIDES OF AN OPERATOR

Reason:

Whilst parsing an &BOOLEXPR NCL builtin function, constant values was found on both sides of an operator. This is a constant expression, which needs no dynamic evaluation. This can occur if you allow variables to be substituted into the expression, rather than use SUBCHAR and allow &BOOLEXPR itself to retrieve the variable values as required.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L41

STRICT OPERATORS CANNOT HAVE NUMERIC OPERANDS

Reason:

Whilst parsing an &BOOLEXPR NCL builtin function boolean expression, either a strict operator , LIKE or CONTAINS operator with numeric operands was found. Since these operators always perform character compares, this is not permitted.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L42

MIXED CONSTANTS ON BOTH SIDES OF AN OPERATOR

Reason:

Whilst parsing an &BOOLEXPR NCL builtin function, constant values was found on both sides of an operator. This is allowed, but the types of the constant expressions were mixed. That is, there was a number on one side of an operator (unquoted), and a quoted string on the other side. You cannot compare these mixed types of data. This can occur if you allow variables to be substituted into the expression, rather than use SUBCHAR and allow &BOOLEXPR itself to retrieve the variable values as required.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L43

'IS' AND 'IS NOT' SUPPORT VARIABLES ONLY

Reason:

Whilst parsing an &BOOLEXPR NCL builtin function, constant values were found as arguments to the 'IS' or 'IS NOT' operators. Only variables may be provided as arguments. (Constants are allowed in the type list.)

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression and retry the operation.

N23L50

UNRECOGNISABLE DATA IN BOOLEXPR EXPRESSION: data

Reason:

Whilst parsing an &BOOLEXPR NCL builtin function boolean expression, invalid data was found. Parsing could not continue.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L51

INVALID VARIABLE IN BOOLEXPR EXPRESSION: data

Reason:

Whilst parsing an &BOOLEXPR NCL builtin function boolean expression, an invalid variable name was found.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L52

WORD LONGER THAN 256 CHARACTERS IN BOOLEXPR EXPRESSION: data

Reason:

Whilst parsing the boolean expression supplied to an BOOLEXPR function, a word longer than 256 characters was found.

System Action:

The return value is 'INVALID'.

User Action:

Correct the erroneous expression syntax.

N23L53

INVALID NUMBER IN BOOLEXPR EXPRESSION: *data*

Reason:

While parsing an &BOOLEXPR NCL built-in function Boolean expression, an invalid number was found.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L54

INVALID QUOTED STRING IN BOOLEXPR EXPRESSION: *data*

Reason:

While parsing an &BOOLEXPR NCL built-in function Boolean expression, an invalid quoted string was found. Either the quoted value was too long or no ending quote was found.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression.

N23L55

INVALID USE OF NCL KEYWORD IN BOOLEXPR EXPRESSION: keyword

Reason:

Whilst parsing an &BOOLEXPR NCL builtin function boolean expression, an NCL keyword was found that is not a system variable name.

System Action:

The return value is 'INVALID'.

User Action:

Correct the expression,

N23L56

UNSUPPORTED NCL-MODE SYSTEM VARIABLE IN &BOOLEXPR EXPRESSION: keyword

Reason:

An NCL system variable was encountered in a BOOLEXPR function that OML does not support.

System Action:

An error is raised or an invalid expression return is given.

User Action:

Correct the expression,

N23L70

VARIABLE: varname VALUE NOT NUMERIC: value

Reason:

Whilst executing an &BOOLEXPR NCL builtin function boolean expression, a variable value was retrieved and a numeric value was expected. The value was not numeric or was not in the range -2147483648 to 2147483647 for &CONTROL INTEGER setting (default) or in the range +1E-70 to +1E+70 or -1E+70 to -1E-70 for &CONTROL REAL setting.

System Action:

The return value is 'BAD'.

User Action:

Determine the reason for the bad variable data.

N23L71

VARIABLE: varname HAS INVALID TYPE NAME: type

Reason:

While executing an &BOOLEXPR NCL builtin function boolean expression, a type test ('IS') with a variable was processed. When the variable value was examined an invalid type name was found.

System Action:

The return value is 'BAD'.

User Action:

Correct the variable type list.

N23L79

VARIABLE: &varname VALUE LONGER THAN 256 BYTES.

Reason:

While processing a BOOLEXPR expression, the value for the named variable exceeded 256 bytes. This is presently not supported.

System Action:

An error is raised or a bad expression return is indicated.

User Action:

Ensure that all source variables used in the expression are not longer than 256 bytes,

N23L90

STORAGE SHORTAGE PROCESSING BOOLEXPR EXPRESSION

Reason:

While processing an &BOOLEXPR NCL built-in function, a storage shortage was encountered.

System Action:

The NCL process is terminated.

User Action:

Investigate the reason for the storage shortage.

N23004

INVALID OR OMITTED FILTER.

Reason:

A filter supplied to the object services selection method was invalid.

System Action:

Request is rejected.

User Action:

Correct the filter in the request SDU and submit it again.

N23005

INVALID OR OMITTED OBJECT.

Reason:

The object passed in an object services selection method was invalid.

System Action:

The request is rejected.

User Action:

Correct the object coded in the request SDU and resubmit the request.

N23P01

PPI RECEIVED INVALID - PPI DEFINE NOT ISSUED.

Reason:

An *PPI RECEIVE function has been called either without a prior* PPI DEFINE being performed or *PPI DEFINE was unsuccessful.*

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23P02

SUPPLIED HEX DATA INVALID OR UNEVEN NUMBER CHARS.

Reason:

An &PPI SEND or ALERT function has been issued with OPT=HEXPACK operand. The data specified in the DATA= operand is not valid hexadecimal data.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23P03

SUPPLIED MDO DATA INVALID OR NOT FOUND.

Reason:

An &PPI SEND or ALERT function has been issued with the MDO= operand. The mapped data object specified was invalid or not found.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N23P04

MDS ERROR ASSIGNING DATA TO MDO.

Reason:

An &PPI RECEIVE function was issued with MDO= operand. A processing error was encountered with the mapped data structure when assigning the data to an object.

System Action:

The NCL procedure is terminated.

User Action:

Correct the mapped data structure and retry.

N23P05

BUFFERISE TOKENS FAILED.

Reason:

An &PPI SEND or ALERT command was issued with the VARS= operand. An error was encountered processing the VARS and the variable tokens could not be buffered.

System Action:

The NCL procedure is terminated.

User Action:

Correct the VARS= operand or the variables and retry.

N23P90

INVALID PPI RECEIVER/SENDER ID.

Reason:

An &PPI RECEIVE or SEND command was issued. The ID specified is an invalid name. The name must be one to eight characters and contain valid characters - A-Z, @, #, $, % or .

System Action:

the NCL procedure is terminated.

User Action:

Correct and retry.

N23Q01

PROCESS STARTED. NCLID: aaaa DOMAIN: bbbb PROC: cccc

Reason:

An NCL process has been started using either the START command with NOTIFY=YES or the NCL verb *APPC START.*

System Action:

None.

User Action:

None.

N23Q02

PROCESS ENDED. NCLID: aaaa DOMAIN: bbbb PROC: cccc RETCODE: dddd

Reason:

An NCL process previously started using either the START command with NOTIFY=YES or the NCL verb APPC START, has ended normally and the procedure return code is dddd .

System Action:

None.

User Action:

None.

N23Q03

PROCESS FAILED. NCLID: aaaa DOMAIN: bbbb PROC: cccc REASON: dddd - eeee

Reason:

An NCL process previously started using either the START command with NOTIFY=YES or the NCL verb &APPC START, has ended abnormally. An indication of the cause of failure is given by the reason code dddd and the message eeee .

System Action:

None.

User Action:

None.

N23Q04

TRANSFER REJECTED BY TARGET PROCEDURE.

Reason:

An allocation request was issued for an APPC transaction whose remote end has been defined as a server (see DEFTRANS command) but the server was already active and an attempt to transfer the conversation to it was rejected by the active server.

System Action:

None.

User Action:

Refer to the DEFTRANS command for information on how to define the remote end of an APPC transaction as a server.

N23S01

DIRECTORY ERROR - TRANSACTION PROTOCOL ERROR.

Reason:

Protocol error occurred during cleanup of remote OSCALL servers context.

System Action:

Cleanup of context fails.

User Action:

Contact Systems Programmer.

N23S02

DIRECTORY ERROR - CONTEXT BUFFER INVALID.

Reason:

A corrupted OSCALL directory entry was detected during cleanup of remote OSCALL server's context.

System Action:

Cleanup of context fails.

User Action:

Contact Product Support Representative.

N23S03

DIRECTORY ERROR - DATA RECEIVED UNRECOGNISED.

Reason:

Invalid or null data was received during cleanup of remote OSCALL server context.

System Action:

Cleanup of context fails.

User Action:

Contact Technical Support.

N23S04

DIRECTORY ERROR - CONTEXT NOT FOUND.

Reason:

A cleanup request was received for an unknown remote OSCALL server context.

System Action:

Cleanup of context fails.

User Action:

Contact Technical Support.

N23T01

REMOTE CONTEXT CLEANUP FAILED.

Reason:

An attempt to send a request to a remote system to cleanup a remote OSCALL server context failed.

System Action:

Send cleanup request not issued.

User Action:

Check log for related messages if any, and check for APPC link failures.

N23U02

INVALID SYNTAX ON SRCEMDO OPERAND.

Reason:

Invalid syntax was used on the SRCEMDO operand of the &ZFMTLINE verb.

System Action:

Procedure terminates in error.

User Action:

Contact product support representative.

N23U03

FORMAT MDO NOT FOUND OR EMPTY.

Reason:

The MDO used for formatting the text lines on the &ZFMTLINE verb was not found, or contained no data.

System Action:

Procedure terminates in error.

User Action:

Contact product support representative.

N23U04

STORAGE ERROR.

Reason:

A storage error/shortage occurred during processing of the &ZFMTLINE verb.

System Action:

Procedure terminates in error.

User Action:

Determine reason for storage shortage on system.

N23U05

LIST FORMAT ERROR. FIELD TOO LONG.

Reason:

The length of one of the fields in a text line caused the text line to exceed the maximum length on the &ZFMTLINE verb.

System Action:

Procedure terminates in error.

User Action:

Contact product support representative.

N23U06

GENERATED VARIABLE NAME EXCEEDS MAXIMUM LENGTH.

Reason:

A variable name generated by the &ZFMTLINE verb exceeds the maximum variable name length.

System Action:

Procedure terminates in error.

User Action:

Contact product support representative.

N23U07

FMTMDO OPERAND MISSING OR INVALID.

Reason:

The FMTMDO operand was missing, or was invalid, on the &ZFMTLINE verb.

System Action:

Procedure terminates in error.

User Action:

Contact product support representative.

N23U08

FMTMDO HAS INVALID OR MISSING DATA.

Reason:

The MDO specified on the FMTMDO operand of the &ZFMTLINE verb has invalid or missing data.

System Action:

Procedure terminates in error.

User Action:

Contact product support representative.

N23U09

SOURCE MDO NOT FOUND, UNMAPPED OR IN ERROR.

Reason:

The MDO specified on the SRCEMDO operand of the &ZFMTLINE verb was not found, or was unmapped or had invalid data.

System Action:

Procedure terminates in error.

User Action:

Contact product support representative.

N23U10

VARS LIST INVALID WITH SUFFIX OPERAND

Reason:

The vars list format of the VARS= operand was used on the &ZFMTLINE verb in conjunction with the SUFFIX= operand. This combination is invalid. SUFFIX= is only valid with a generic form of VARS= operand.

System Action:

Procedure terminates in error.

User Action:

Contact product support representative.

N23V01

DATA IN VARIABLE varname IS TOO LONG, MAX LENGTH ALLOWED IS nnn.

Reason:

An attempt was made to update a VARTABLE entry with a data element longer than 256 bytes, or an attempt was made to reference a vartable entry with a key longer than the maximum stipulated on the KEYLEN parameter of the VARTABLE ALLOC statement.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23V02

DATA IN VARIABLE varname IS NOT NUMERIC OR IS NULL.

Reason:

A variable containing a non-numeric value was used for the ADJUST, COUNTER or user correlator field in an &VARTABLE ADD, UPDATE or PUT statement, or an attempt was made to access a vartable entry with a non-numeric key where the key format was specified as numeric in the
&VARTABLE ALLOC statement.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23V03

FIELDS= LIST CONTAINS DATA FIELD NUMBER HIGHER THAN ALLOCATED.

Reason:

An attempt was made to reference a VARTABLE entry data item, using an item number greater than the number of data items defined by the DATA= keyword of the VARTABLE ALLOC statement. For example, the field list specified 'DATA=5' but the va*rtable* ALLOC statement defining the vartable specified 'DATA=4' for the number of data items.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23V04

GET OPT=GEN/IGEN INVALID FOR TABLE WITH KEYFMT=NUM.

Reason:

An &VARTABLE GET statement was encountered which specified OPT=GEN or OPT=IGEN to do a generic or an inverse generic get operation on a vartable, however, the vartable was defined as having a numeric key (KEYFMT=NUM) in the &VARTABLE ALLOC statement. Generic and Inverse generic gets are only supported for character- format keys.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23V05

FIELD NUMBER ACCESS INVALID FOR ENTRY CONTAINING A MAPPED DATA OBJECT.

Reason:

When a VARTABLE entry contains a mapped data object then access by field number is not allowed. The entire object only may be accessed via the MDO operand.

System Action:

The NCL procedure is terminated.

User Action:

Use MDO operand to access a VARTABLE containing MDOs.

N23V20

SCOPE=AOM NOT SUPPORTED - AOM FEATURE NOT PRESENT.

Reason:

A vartable statement was encountered specifying 'SCOPE=AOM' for the vartable scope, however, this installation is not licensed for the AOM feature, or the feature was specifically excluded when the Net-Master system was brought up.

System Action:

The procedure terminates.

User Action:

Change the SCOPE to either PROCESS, REGION, or GLOBAL, if the vartable is not required for AOM.

N23V21

ALLOC SCOPE=AOM REQUIRES KEYLEN=16.

Reason:

An &VARTABLE ALLOC statement was encountered which specified 'SCOPE=AOM', however, either no keylength or a keylength not equal to 16 was specified with the KEYLEN option. Vartables which are required for AOM screening must have a keylength of 16.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23V22

ALLOC SCOPE=AOM REQUIRES A LIMIT= FROM 1 TO 65535.

Reason:

An &VARTABLE ALLOC statement was encountered which specified 'SCOPE=AOM', however, no limit was specified with the 'LIMIT' operand. Vartables which are required for AOM screening must have a limit to the number of entries specified.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23V23

ALLOC SCOPE=AOM REQUIRES DELOLD=NO.

Reason:

An &VARTABLE ALLOC statement was encountered which specified 'SCOPE=AOM', however, either no DELOLD option was specified or DELOLD=YES was specified. Vartables which are required for AOM screening must specify DELOLD=NO.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23V24

ALLOC SCOPE=AOM REQUIRES AGE=NO/NEW.

Reason:

An &VARTABLE ALLOC statement was encountered which specified 'SCOPE=AOM', however, either no AGE option was specified or the incorrect AGE option was specified. Vartables which are required for AOM screening must specify either AGE=NO or AGE=NEW.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23V25

RESET SCOPE=AOM DOES NOT ALLOW OLDEST/NEWEST.

Reason:

An &VARTABLE RESET statement was encountered which specified 'SCOPE=AOM', however, the options OLDEST or NEWEST were specified. Vartables which are required for AOM screening can only be wholly reset.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23V26

ALLOC SCOPE=AOM DOES NOT ALLOW KEYFMT=NUM/UCHAR.

Reason:

An &VARTABLE ALLOC statement was encountered which specified 'SCOPE=AOM', however, KEYFMT=NUM or UCHAR was specified. Vartables which are required for AOM screening must have a character key and it must be 16 characters long. Also data translation to upper case is not supported.

System Action:

The NCL procedure terminates.

User Action:

Correct and retry.

N23V30

VARS= AND FIELDS= LISTS MUST HAVE THE SAME NUMBER OF ENTRIES

Reason:

An VARTABLE statement was encountered where the number of elements in the fields list *(FIELDS= keyword) was different to the number of* elements in the *vari*ables list (VARS= keyword). There must be a 1-1 correspondence between the elements in the field list and the variables list.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N23V31

FIELDS= LIST HAS NULL ENTRIES.

Reason:

The FIELDS list on an &VARTABLE statement has null entries eg FIELDS=(A,,B). This is not permitted.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V32

FIELDS= LIST HAS DUPLICATE ENTRIES.

Reason:

The FIELDS list on an &VARTABLE statement has a duplicated entry (including option + .option). This is not permitted.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V33

FIELDS= LIST HAS TOO MANY ENTRIES.

Reason:

The FIELDS list on an &VARTABLE statement has more entries than the system can handle.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V34

FIELDS= LIST HAS INVALID SYNTAX.

Reason:

The FIELDS list on an &VARTABLE statement has invalid syntax.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V35

FIELDS= LIST IS EMPTY.

Reason:

The FIELDS list on an &VARTABLE statement is empty.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V36

FIELDS= LIST HAS AN INVALID OR UNRECOGNISED KEYWORD.

Reason:

The FIELDS list on an &VARTABLE statement contains invalid or unrecognizable keywords. Only the keywords listed for the current option of &VARTABLE can be used.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V40

GENERIC-TOKEN/MDO NAME NOT IN SAME SLOT AS DATA*/MDO KEYWORD IN FIELD LIST.

Reason:

An VARTABLE statement was encountered which specified either 'DATA*' or 'MDO' in the field list (FIELD operand) however the corresponding entry in the variable list (VARS operand) was not either a generic token name (eg 'AB*') or an MDO name (eg 'ABC.') respectively.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V41

VARS= LIST HAS NULL ENTRIES.

Reason:

The VARS list on an &VARTABLE statement has null entries eg: VARS=(A,,B). This is not permitted.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V42

VARS= LIST HAS DUPLICATE ENTRIES.

Reason:

The VARS list on an &VARTABLE statement has a duplicated entry. This is not permitted.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V43

VARS= LIST HAS TOO MANY ENTRIES.

Reason:

The VARS list on an &VARTABLE statement has more entries than the system can handle.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V44

VARS= LIST HAS INVALID SYNTAX.

Reason:

The VARS list on an &VARTABLE statement has invalid syntax.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V45

VARS= LIST IS EMPTY.

Reason:

The VARS list on an &VARTABLE statement is empty.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V46

VARS= LIST HAS AN INVALID VARIABLE NAME.

Reason:

The VARS list on an &VARTABLE statement contains an invalid variable name.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V47

VARS= LIST HAS MORE THAN ONE GENERIC VARIABLE NAME.

Reason:

An &VARTABLE statement was encountered with 2 or more generic variable names (ie variable names ending with '*') in the 'VARS=' operand. There may only be one generic variable name in the variables list of a vartable statement and it must correspond with the DATA* or .DATA* element in the FIELDS= list.

System Action:

The NCL procedure is terminated.

User Action:

Correct the NCL procedure.

N23V48

VARS= FORMAT INVALID WITH FIELDS= LIST.

Reason:

The FIELDS operand specified a list of items but the VARS operand was not a list of the same length.

System Action:

The procedure is terminated.

User Action:

Correct and retry.

N23V50

DATA LENGTH EXCEEDS MAXIMUM ALLOWABLE FOR AN ENTRY.

Reason:

The size and number of NCL variables exceeded the system limit for a single VARTABLE entry.

System Action:

The NCL procedure is terminated.

User Action:

Try using an MDO.

N23Y01

UNRECOGNISED OPERAND: aaaaaaaa IN SHOW VARTABLES COMMAND.

Reason:

An invalid or extraneous operand aaaaaaaa was entered on the SHOW VARTABLES command. Refer to the Command Reference for a description of the syntax of the SHOW VARTABLES command.

System Action:

None.

User Action:

Correct and retry.

N23Y02

OPERAND: aaaaaaaa DUPLICATED OR INVALID FOR SHOW VARTABLES COMMAND.

Reason:

Either an operand appears twice or the operand is invalid for this particular scope of the SHOW VARTABLES command. Refer to the Command Reference for a description of the syntax of the SHOW VARTABLES command.

System Action:

None.

User Action:

Correct and retry.

N23Y03

INVALID VALUE FOR OPERAND: aaaaaaaa IN SHOW VARTABLES COMMAND.

Reason:

The operand specified on the SHOW VARTABLES command was missing or invalid. Refer to the Command Reference for a description of the syntax of the SHOW VARTABLES command.

System Action:

None.

User Action:

Correct and retry.

N23Y04

NCLID: nclid NOT FOUND IN THIS REGION.

Reason:

There is no NCL procedure running in the active region matching the NCLID specified on the SHOW VARTABLES=nclid command. You can only display process scope vartables for NCL procedures executing in your region.

System Action:

None.

User Action:

None.

N23Y05

STORAGE SHORTAGE OCCURRED WHILE LOCATING NCLID.

Reason:

A temporary storage shortage occurred while trying to process the SHOW VARTABLES command. The command was not processed.

System Action:

None.

User Action:

Consider increasing the SOLVE region/virtual storage/partition size.

N23Y06

USERID: userid NOT FOUND.

Reason:

A show vartables command specifying a userid was entered but that userid is not currently logged on to SOLVE.

System Action:

None.

User Action:

None.

N23Y07

LUNAME: luname NOT FOUND

Reason:

A show vartables command specifying a logical unit name was entered but that logical unit is not currently in session with SOLVE.

System Action:

None.

User Action:

None.

N23Y10

NAME SC/NCLID LU USER KEYL LIMIT ENTRIES NF AGE UDF

Reason:

This message is the header for the following messages, a response to the SHOW VARTABLES command. The column headings are:

SC/NCLID

Displays the scope of the vartable, or, if the scope is process, the NCL ID of the procedure owning it.

USER

(SCOPE=REGION) Displays the user ID.

KEYL

Displays the defined key lengths.

LIMIT

Displays the maximum number of entries possible in the vartable.

ENTRIES

Indicates the number of entries currently in the tables.

NF

Displays the number of data fields per entry in each table.

AGE

Displays the aging option that is specified for the table.

U

Indicates whether a user correlator is present in the table.

D

Displays the DELOLD option that is specified on the vartable.

F

Identifies the key format:

- B for binary
- C for character
- N for numeric
- U for uppercased character

System Action:

None. The table list follows.

User Action:

None.

N23Y11

MIR STG(K)

Reason:

This is the subheader message for the following list of items, a response to the SHOW VARTABLES=AOM command. The column headings are: MIR Whether this vartable is mirrored or not. STG(K) The amount of storage taken up by the vartable mirror.

System Action:

None. The table list follows.

User Action:

None.

N23Y12

tablename scope lu user keyl limit entries nf age udf

Reason:

This message is produced for each vartable in the nominated scope. The columns are described in the N23Y10 message description.

System Action:

None.

User Action:

None.

N23Y13

mirrored storage

Reason:

This message is produced for each SCOPE=AOM table nominated. The columns are described in the N23Y11 message description.

System Action:

None.

User Action:

None.

N23Y14

END

Reason:

This message terminates a multi-line display of the response to the SHOW VARTABLES command.

System Action:

None.

User Action:

None.

N23Y15

STG/TOT STG/ENT

Reason:

This message appears as a response to a SHOW VARTABLES STATS command. It provides subheadings for the following N23Y16 message.

STG/TOT

Shows the total storage allocated to the vartable.

STG/ENT

Shows the average number of bytes per entry.

System Action:

None.

User Action:

None.

N23Y16

stg/tot stg/ent

Reason:

This message is the detail line displayed for a SHOW VARTABLES STATS command.

stg/tot

Is the total storage allocated to the vartable.

stg/ent

Is the average number of bytes per entry.

System Action:

None.

User Action:

None.

N23Y19

NO VARTABLES MATCH SEARCH CRITERIA.

Reason:

The user did a SHOW VARTABLES command but there were no vartables in existence matching the selection criteria specified.

System Action:

None.

User Action:

None.

N24010

INVALID SHRVARS GENERIC PREFIX SYNTAX

Reason:

An invalid generic variable prefix was specified on an *CONTROL SHRVARS* statement.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N24501

PANEL NAME INVALID OR OMITTED.

Reason:

An &PANEL statement either omitted or specified an invalid name for the panel to be displayed.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N24502

INVALID USE OF PANEL STATEMENT.

Reason:

The &PANEL statement can be used only in NCL procedures that have access to a screen which will display full-screen panels.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N24601

PANEL NAME INVALID OR OMITTED.

Reason:

An &LOGON statement either omitted or specified an invalid name for the `request accepted' panel.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N24603

LOGON TEXT EXCEEDS MAXIMUM LENGTH.

Reason:

The length of data following the panelname on an &LOGON statement cannot exceed 168 characters. This includes any 'userdata' that is being passed to the application.

System Action:

The EASINET procedure terminates.

User Action:

Correct the text and retry.

N24604

INVALID USE OF LOGON STATEMENT.

Reason:

The &LOGON statement may be used only within an EASINET procedure.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N24605

LOGMODE NAME INVALID.

Reason:

The &LOGON statement has specified an invalid logmode name on the logmode operand.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N24607

INSUFFICIENT STORAGE.

Reason:

&PANEL processing failed because of a temporary storage shortage.

System Action:

The procedure terminates.

User Action:

Retry. Contact your systems administrator if the condition persists.

N24701

MODULE NAME INVALID OR OMITTED.

Reason:

An &CALL statement omitted the name of the target module or specified a name that is not a valid load module name.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N24702

INSUFFICIENT STORAGE.

Reason:

&CALL processing failed because a temporary storage shortage prevented successful calling of the requested module.

System Action:

The procedure terminates.

User Action:

Retry. Contact your systems administrator if the condition persists to investigate the cause of the storage shortage.

N24703

MODULE modname ATTACH/LOAD FAILED.

Reason:

&CALL processing failed when the target module could not be successfully attached (MVS, VM, FSP) or loaded (VSE).

System Action:

The procedure terminates.

User Action:

Ensure that the target module is in a load library (core-image library) that is accessible to SOLVE. Contact your systems administrator.

N24704

MODULE modname RETURN CODE GREATER THAN 99.

Reason:

The valid range of return codes that may be passed back from a module invoked via &CALL is 0 - 99 inclusive. The module has returned a return code in register 15 which is outside this range.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N24705

MODULE modname HAS ABENDED yyy-zzz

Reason:

The module invoked via &CALL abended with the specified completion code. This completion code will be SYS-zzz for a system abend code or USER-zzz for a user abend code.

System Action:

The procedure terminates.

User Action:

Correct the module and retry.

N24706

DATA OR SUBSTITUTION ERROR IN CALL

Reason:

&CALL supports simple substitution only. For example, &CALL MYMODULE &PARM1 &PARM2 is valid, but &CALL MYMODULE &PARM&NUMBER1 &PARM&NUMBER2 is invalid because complex substitution would be required to evaluate the parameters passed.

System Action:

The NCL procedure is terminated.

User Action:

Correct the procedure and retry.

N24707

PARMLIST= PARAMETER IS INVALID.

Reason:

The PARMLIST= operand on the &CALL statement has specified an invalid value. The value must be NEW or OLD.

System Action:

The NCL procedure is terminated.

User Action:

Correct the operand and retry.

N24708

SUBSYS aaaaa NOT DEFINED.

Reason:

An &CALL statement with the SUBSYS= operand has specified a subsystem which is not defined.

System Action:

The NCl procedure is terminated.

User Action:

Correct the procedure and retry. See the SUBSYS command description for help on defining a subsystem.

N24709

CALL TO SUBSYS aaaaa FAILED. REASON=text

Reason:

A &CALL to a subsystem has failed whilst waiting to be actioned due to the reason specified.

System Action:

The NCL procedure is terminated.

User Action:

Find out why the subsystem failed.

N24710

PROGRAM aaaaa RETURNED INVALID LENGTH FOR PARAMETER bbbbb.

Reason:

A program called using CALL has returned a variable which has a length which is negative or too large.

System Action:

The NCL procedure is terminated.

User Action:

Correct the program and retry.

N24801

FACILITY ONLY VALID FROM LOGPROC

Reason:

&LOGREAD, &LOGDEL are verbs reserved for use by the LOGPROC system level procedure and cannot be used in any other process.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N24901

INVALID OR MISSING LABEL labname AFTER GOTO OR GOSUB.

Reason:

An &GOTO or &GOSUB statement either omitted a target label or specified an invalid label name, and &CONTROL LABEL is in effect.

System Action:

The procedure terminates.

User Action:

Correct and retry. &CONTROL NOLABEL will avoid the procedure being terminated due to this type of error.

N24902

LABEL labname NOT DEFINED OR NOT FOUND IN SEARCH RANGE.

Reason:

An &GOTO or &GOSUB specified a label that is not defined within the procedure, or was not found within the search range specified, and the procedure is executing without the &CONTROL NOLABEL option.

System Action:

The procedure terminates.

User Action:

Correct and retry or use the &CONTROL NOLABEL option to allow this occurrence.

N24903

LABEL labname HAS BEEN DUPLICATED.

Reason:

Duplicate labels are not allowed unless &CONTROL NODUPCHK is specified. The procedure has been terminated because a label has been duplicated.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N24904

INVALID GENERIC SEARCH SCOPE.

Reason:

The &GOTO and &GOSUB statements provide generic search capabilities. You have attempted to use an argument that is not valid.

System Action:

The procedure terminates.

User Action:

For a detailed description of this command, refer to the NCL User Reference manual.

N24906

RETURN CODE OUT OF RANGE.

Reason:

The &RETSUB statement has attempted to pass an invalid return code back to the mainline.

System Action:

The procedure terminates.

User Action:

Correct the error and retry.

N24907

&GOSUB NESTING LIMIT EXCEEDED.

Reason:

SOLVE allows 250 levels of nested subroutines only. The procedure has attempted to nest deeper than this.

System Action:

The procedure terminates.

User Action:

Restructure the procedure to prevent it from exceeding this maximum.

N24A01

FILE OPEN ERROR, ID=aaaaa - INSUFFICIENT STORAGE TO PROCESS REQUEST.

Reason:

Error opening a file. Not enough internal SOLVE storage was available to create the control blocks required to process this file.

System Action:

File is not opened. System may soon run out of memory and abend.

User Action:

Try again later.

N24A02

FILE OPEN ERROR - NO FILE ID SPECIFIED.

Reason:

No file id was specified on an &FILE OPEN ncl statement.

System Action:

No file opened.

User Action:

Specify a fileid on the &FILE OPEN statement.

N24A03

FILE OPEN ERROR, ID=aaaaa - INVALID RETURN CODE FROM NCL EXIT bbbbb.

Reason:

The NCL exit provided for an FILE OPEN statement (NCLEX01) returned an invalid return code. Valid return codes are: *0,4,8,12,16.*

System Action:

None.

User Action:

Examine the NCL exit, NCLEX01 to determine why it returned an invalid return code.

N24A04

FILE aaaaa ERROR - NO CURRENT FILE ID.

Reason:

Old file verbs: aaaaa = {KEY|PUT|GET|ADD|DEL}. No file is currently opened for processing.

System Action:

None.

User Action:

Use an &FILEID statement (for old file verb processing) before issuing the &FILE KEY/PUT/ADD/GET/DEL request.

N24A05

FILE aaaaa ERROR, ID=bbbbb - FILE ID NOT OPEN.

Reason:

New file verbs: aaaaa={SET/PUT/ADD/GET/DEL} Old file verbs: aaaaa={KEY/PUT/ADD/GET/DEL} bbbbb = File name. The specified file has not been successfully opened.

System Action:

None.

User Action:

Check that a &FILE OPEN, or &FILEID statement was specified, and check the return code after opening the file to see if it was opened successfully.

N24A06

FILE aaaaa ERROR, ID=bbbbb - FILE NOT AVAILABLE TO NCL.

Reason:

New file verbs: aaaaa = {SET/PUT/ADD/GET/DEL/OPEN} Old file verbs: aaaaa = {KEY/PUT/ADD/GET/DEL} bbbbb = File identifier. The specified file is not available to NCL for processing.

System Action:

None.

User Action:

Check the return code after opening the file. Check that the DDNAME is allocated and the UDB is open.

N24A07

FILE aaaaa ERROR, ID=bbbbb - RKP NOT 0.

Reason:

New file verbs: aaaaa={SET/PUT/ADD/GET/DEL} Old file verbs: aaaaa={KEY/PUT/ADD/GET/DEL} bbbbb=File name. The data set for this file was not defined with a relative key position of zero, and the file was opened as either delimited or mapped.

System Action:

None.

User Action:

It is not possible to carry out either Delimited (standard udb) or Mapped processing on a file which does not have a relative key position of 0. Use a different file, or a different processing mode.

N24A08

FILEaaaaaaaa ERROR, ID=bbbbbbbb - KEY INCONSISTENT WITH FILE FORMAT.

Reason:

Applies to old file verbs only. aaaaaaaa = {KEY/PUT/ADD/GET/DEL} bbbbbbbb = File name File key has been specified in a different format to the file format. e.g. a Text key specified for an EXT-HEX format file.

System Action:

None.

User Action:

Specify the file key using the correct format.

N24A09

FILE aaaaa ERROR, ID=bbbbb - NO CURRENT KEY IS SET.

Reason:

No key has been set for a file processing request which requires a key. e.g. GET/PUT/ADD/DEL. aaaaaa = {PUT/ADD/GET/DEL}. bbbbbb = File name.

System Action:

None.

User Action:

Specify a file key for the operation to be carried out. For the new file verbs, specify a key using the KEY=filekey operand. For the old file verbs, use the &FILEKEY verb to set a key.

N24A10

FILE aaaaa ERROR, ID=bbbbb - DATA INVALID FOR KEY ONLY FILE.

Reason:

The particular file has been defined as a key only file, and yet data has been specified on a file PUT/ADD operation. aaaaa = {PUT/ADD} bbbbb = File name.

System Action:

None.

User Action:

Don't specify data, or change file definition.

N24A11

FILE aaaa ERROR, ID=bbbbb - KEY LENGTH EXCEEDS MAXIMUM OF cccc FOR FILE.

Reason:

The specified key exceeds the maximum key length for the file. aaaaa = {SET/KEY/PUT/ADD/GET/DEL} bbbbb = File name. ccccc = Maximum key length for the file.

System Action:

None.

User Action:

Make the length of the key correct. If the key is specified in HEX it may be necessary to Halve it's length.

N24A12

FILE aaaaa ERROR, ID=bbbbb - ACCESS MUST BE VIA BASE CLUSTER.

Reason:

Access to a file using an alternate index must be via it's base cluster. This usually applies to PUT/ADD/DEL requests, where although a record is retrieved using the alternate index, processing must be switched to the base cluster for update requests.

System Action:

None.

User Action:

Swap processing to the base cluster before issuing the request.

N24A13

FILE aaaaa ERROR, ID=bbbbb - ACCESS RESTRICTED.

Reason:

Access to the file is restricted (e.g. Read only, or Read/Write but no Delete etc.). aaaaaa = {PUT/ADD/GET/DEL}. bbbbbb = File name.

System Action:

Request discarded.

User Action:

Access may have been restricted by NCLEX01, or because the UDB was opened for INPUT only. Update the users authority, or reopen the UDB for read/write.

N24A14

FILE *aaaaa* ERROR, ID=*bbbbb* - KEY SPECIFIED FOR NON-KEYED FILE.

Reason:

A key was specified for a non-keyed file. For example, a key was specified for an ESDS or SYSOUT.

aaaaa has the following values: KEY, SET, PUT, ADD, GET, and DEL.

bbbbb is the file name.

System Action:

None.

User Action:

Correct the NCL code, and retry.

N24A15

FILE aaaaa ERROR, ID=bbbbb - DATA EXCEEDS FILE MAX OF ccccc.

Reason:

The data being written to a file on a PUT/ADD is larger than the maximum record length specified for that file. aaaaa = {PUT/ADD} bbbbb = File name. ccccc = Maximum record length for this file (in bytes).

System Action:

None.

User Action:

Write less data to the file.

N24A16

FILE aaaaa ERROR, ID=bbbbb - DATA FORMAT INVALID.

Reason:

The format of the data being written to the file is invalid. (e.g. writing Text to a Hexadecimal format file)

System Action:

None.

User Action:

Use correct format for this file.

N24A17

FILE aaaaa ERROR, ID=bbbbb - DATA INCONSISTENT WITH FILE FORMAT.

Reason:

Indicates that the operands used are invalid for a file opened in the current format. For example, using the DATA= operand on a mapped file, or the VARS= operand on a mapped file which uses a map other than the $NCL map, or specifying the MAP= operand on a file that was not opened in mapped format.

System Action:

None.

User Action:

Make sure the file has been opened in the desired format, and that the operands are valid for that particular format.

N24A18

FILE aaaaa ERROR, ID=bbbbbb - PRTCNTL INVALID WITH RECFM=M.

Reason:

An invalid PRTCNTL option has been specified on an FILE ADD/PUT statement when writing to a SYSOUT file that was defined with machine control characters, i.e. DCB=RECFM=M, which is indicated by specifying PRTCNTL=M on the ALLOCATE command for the SYSOUT dataset.
When machine control characters are used the only allowable options for &FILE ADD/PUT are DATA, LEFT, CENTRE, and RIGHT.

System Action:

None.

User Action:

Correct the NCL procedure and rerun. You should either use ASA control characters by specifying PRTCNTL=A on the ALLOCATE command, or use PRTCNTL=DATA and specify the machine control character in the first character of the data line.

N24A19

FILE aaaaa ERROR, ID=bbbbb - OPTION INVALID FOR CURRENT FILE PROCESSING.

Reason:

An option was specified on a file verb which is invalid for the current processing mode. In particular when print control options are used on a file which is not opened in external or unmapped mode.

System Action:

None.

User Action:

Use a different processing mode, or don't use the options.

N24A20

FILE aaaaa ERROR, ID=bbbbb - MDS MAPPING ERROR. MAP=cccccccc

Reason:

A Mapping error occurred while trying to map an mdo during an FILE request. This error should only occur when processing a file using MAPPED format. *aaaa*a = OPEN|SET|GET|PUT|ADD|DEL bbbbb = File id cccccccc = Map name

System Action:

For &FILE GET, the incoming data is placed in the mdo as is, and the mdo remains unmapped.

User Action:

Make sure the file processing mode is intended to be MAPPED. If so, ensure the correct map name is being specified on the &FILE OPEN and/or the &FILE GET. Check that the map definition accurately describes the incoming data.

N24A21

FILE aaaaaaaa ERROR, ID=bbbbbbbb - GENERIC KEY LENGTH OF 0 SPECIFIED.

Reason:

An NCL procedure has fallen over on an FILE verb because GENLEN=0 was specified. aaaaaaaa = ADD/DEL/GET/PUT/SET. bbbbbbb*b = file id.*

System Action:

Procedure is flushed.

User Action:

Modify procedure to ensure the GENLEN field always has a none-zero value.

N24E01

FILE OPERAND MISSING/INVALID.

Reason:

An operand is missing from an *FILE verb.*

System Action:

None.

User Action:

Correct the syntax.

N24K10

ENCODE/DECODE ATF ERROR, R15=rr MDO COMP=cccc - information

Reason:

During the processing of an ENCODE or DECODE NCL statement, with the Advanced Translation Facility in use, ATF returned an error. This error occurred while the translation of a specific component of the MDO was being processed.
The message shows the ATF return code, the MDO component name, and specific error information as follows:

R15 Information
4 OUTPUT OVERFLOW, LENGTH GT nnnnnn The output string exceeded the allowable length
8 INPUT STRING ERROR, CODE=cc APPROX. OFFSET=oo DATA FOLLOWS A syntax error was detected in the input data. The approximate offset in the data is indicated. A dump of the input data will follow this message (Message ID N24K11).
The error codes are:
2 Double-byte string or substring has odd length
3 Invalid input character detected
4 Input exhausted unexpectedly for example, in the middle of a multi-byte character
5 Invalid unicode surrogate pair
6 Invalid or truncated shift sequence
12 SOURCE TYPE UNKNOWN: ssssss The requested source character set name is not defined to ATF
20 TARGET TYPE UNKNOWN: ssssss The requested target character set name is not defined to ATF
24 SOURCE TABLE LOAD FAILURE: ssssss The requested source character set table failed to load. (If this is the first request, additional messages will be logged describing the error)
28 TARGET TABLE LOAD FAILURE: ssssss The requested target character set table failed to load. (If this is the first request, additional messages will be logged describing the error.)

System Action:

&ENCODE or &DECODE fails.

User Action:

Look at the reason description and rectify as appropriate.

N24K11

off hex-data char-data

Reason:

This message follows the N24K10 message and displays the input data that was being translated by ATF.
It can be used to determine why a syntax error occurred during translation.

System Action:

&ENCODE or &DECODE fails.

User Action:

Refer to message N24K10.

N24M01

ENCODE ERROR DETECTED. aaaaa

Reason:

This is a warning against possible errors detected by an *ENCODE* operation. aaaaa = Warning Description

System Action:

&ENCODE ignores the warning and proceeds to completion.

User Action:

Look at the warning description to determine its severity.

N24M02

ENCODE ERROR. aaaaa COMPONENT: bbbbb

Reason:

A terminal error has occurred while processing an &ENCODE operation. aaaaa = Reason description bbbbb = Component in error

System Action:

&ENCODE fails.

User Action:

Look at the reason description and rectify as appropriate. Possible reasons are: Invalid data encountered in MDO. :- Check data of component in error. Mandatory component not found. :- Assign data to the component, or modify its MAP definition.

N24N01

DECODE ERROR DETECTED. aaaaa

Reason:

This is a warning against possible errors detected by an &DECODE operation. aaaaa = Warning Description

System Action:

&DECODE ignores the warning and proceeds to completion.

User Action:

Look at the warning description to determine its severity.

N24N02

DECODE ERROR. aaaaa OFFSET: bb/cc COMPONENT: ddddd

Reason:

The &DECODE operation has encountered a non-recoverable error in the data string being decoded. aaaaa = Description of the error bb = Offset(hex) of the structure in error cc = Offset(hex) from the structure bb ddddd = Component in error

System Action:

&DECODE fails.

User Action:

Look at the error description and rectify as appropriate. Possible reasons are: Invalid BER encoding detected. Mandatory component not found. Implementation limit exceeded.

N24S01

INSUFFICIENT STORAGE TO PROCESS MDO REQUEST.

Reason:

MDO processing was unable to obtain enough storage from the system pool to satisfy the last MDO request.

System Action:

Procedure is flushed.

User Action:

Retry request later.

N24S02

SYNTAX ERROR USING MDO.

Reason:

An assign statement with an MDO= operand has invalid syntax.

System Action:

Procedure is flushed.

User Action:

Check syntax.

N24S03

MDO NAME CHECK ERROR - BAD INDEX POSITION OR VALUE.

Reason:

An index was used in an MDO= operand where it wasn't expected, or the index value is out of range.

System Action:

Procedure is flushed.

User Action:

Check map definition, and see that this is a valid indexable component, and if so, check that the index does not exceed 32767, or any maximum imposed by a SIZE specification.

N24S04

MDO MAPPING ERROR.

Reason:

An error occurred while trying to map an MDO's data during an MDO request.

System Action:

Procedure is flushed.

User Action:

Check program logic. Test that map connection has been performed, and that it was successful. Ensure correct map is in use.

N24S05

RECURSION STACK OVERFLOW OCCURRED.

Reason:

The internal recursion stack limit was exceeded while attempting to process an MDO request, possibly caused by having too many segments in a compound name.

System Action:

Procedure is flushed.

User Action:

Reduce number of name segments in MDO name. May require redefinition of the map.

N24S06

SYNTAX ERROR - VARIABLE INDEX {*} USED INVALIDLY.

Reason:

A variable indexed MDO name (e.g. MDO=a.b.{*}) was used invalidly.

System Action:

Procedure is flushed.

User Action:

Check use of index on MDO operand.

N24S07

SYNTAX ERROR - MUTUALLY EXCLUSIVE OPERANDS.

Reason:

Mutually exclusive operands were used on an &ASSIGN verb using MDO.

System Action:

Procedure is flushed.

User Action:

Check syntax.

N24S08

UNEXPECTED FEEDBACK DETECTED.

Reason:

A feedback was returned during &ASSIGN processing of an MDO which was unexpected.

System Action:

None.

User Action:

Contact your product support representative.

N24S09

MDO TYPE|DATA|NAME CHECK ERROR.

Reason:

This message is only issued if &CONTROL MDOCHK is on. The message indicates a ZMDORC of 8 or 12 was obtained. MDO TYPE CHECK ERROR: ZMDORC=8, ZMDOFDBK=0 MDO DATA CHECK ERROR: ZMDORC=8, ZMDOFDBK=1 MDO NAME CHECK ERROR: ZMDORC=12, ZMDOFDBK=0

System Action:

Procedure is flushed.

User Action:

Determine the reason for the error. Type check: Attempt made to assign invalid data into or from an MDO. Data check: Physical limitations exceeded assigning data to an MDO. Name check: Component name used in MDO assign is not defined in the map.

N24S10

MAP CHECK ERROR, MAP *xxxxxxxxxxxx* NOT FOUND| LOAD FAILED| DATA MISMATCH.

Reason:

Message is only issued if CONTROL MDOCHK is set. *xxxxxxxxxxx* is the map name. An attempt to attach a map to an MDO failed because:

- The map was not found on the map database.
- The map failed to load due to definition errors.
- The data in the MDO does not conform to the map definition.

System Action:

Procedure is flushed.

User Action:

Verify that the map is defined and loads successfully, and that the data in the MDO agrees with the map definition. (Issue the **LOAD MAP=***map_name* command to see whether the map loads successfully.)

N24W01

MAP LOAD REQUEST ACCEPTED.

Reason:

This message is the response obtained when a SYSPARMS MAPLOAD=mapname command is entered. It indicates that the map load process has begun.

System Action:

Map loading commences.

User Action:

None.

N24W02

MAP aaaaa LOADED.

Reason:

Indicates that the map has been loaded. Issued in response to a SYSPARMS MAPLOAD=mapname command. aaaaa = mapname.

System Action:

Map has been loaded into memory. Errors during load will have been displayed.

User Action:

None.

N24W03

MAP DELETE REQUEST ACCEPTED. aaaaa ACTIVE CONNECTIONS.

Reason:

This is the response to a SYSPARMS MAPDEL=map or MAPRESET=map command. It indicates that the map delete process has begun. aaaaa = the number of map connections still in use which includes any MDO's using this map, or any other maps that import definitions from this map. When the use count goes to zero the map is completely purged.

System Action:

Map deletion commences.

User Action:

None.

N24W04

MAP aaaaa UNLOADED.

Reason:

This is issued in response to a SYSPARMS MAPDEL=mapname command, and indicates that the map deletion process is complete. aaaaa = the name of the map which was deleted from memory.

System Action:

Map has been deleted from memory.

User Action:

None. Issue SYSPARMS MAPLOAD=MAPNAME to reload the map into memory.

N24W05

MAP aaaaa NOT FOUND.

Reason:

This message is issued in response to a SYSPARMS MAPDEL=mapname command and indicates that the map specified is not currently loaded into memory. aaaaa = Name of map not found.

System Action:

None.

User Action:

Check that the correct map name was used on the SYSPARMS MAPDEL command. Use the SHOW MAPS command to display a list of maps currently loaded into memory.

N24W07

LOAD FOR MAP *aaaaa* FAILED. *bbbbb*

Reason:

This message is issued in response to a SYSPARMS MAPLOAD=*mapname* command and indicates that the load failed completely.

aaaaa is the map name.

bbbbb is the reason.

System Action:

Map is *not* loaded.

User Action:

Look at reason (*bbbbb*), and investigate further. Possible reasons include:

- File unavailable/error: Check that the OSCNTL file is allocated and valid.
- Map not found, in error: Check that the map name is correct, or recompile.
- Dictionary unavail: Check that the VFS is allocated and available.
- Dictionary error: An error occurred accessing the Data Dictionary.
- Storage Shortage: Try again later.

N24W09

MAP CONNECTION FAILED, DATA INVALID FOR MAP.

Reason:

An attempt to connect an MDO to a map failed. The data in the map load records was invalid.

System Action:

Map connection fails.

User Action:

Recompile the map and retry.

N24X02

MAP FILE GET ERROR. VSAM FDBK=aa.

Reason:

An error occurred while loading a map.

System Action:

Map load processing is not completed.

User Action:

Check the feedback code, correct and retry.

N24X03

MAP LOAD RECORD IN ERROR, KEY FOLLOWS.

Reason:

An error occurred during a map load. The key for the record in error is dumped following this message.

System Action:

Map is not loaded.

User Action:

Recompile map and retry.

N24Z01

MAP LOAD ERROR. REASON aa. bbbbbbbb

Reason:

An error occurred during a map load. aa = Reason code. bbbbbbbbb = Reason description

System Action:

Map connection or map load failed.

User Action:

Recompile or otherwise correct, and retry.

N24Z02

MAP COMPONENT/TYPE IN ERROR: aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa

Reason:

issued when a mapping error occurs, and displays the name of the component of type definition that was in error.

System Action:

None.

User Action:

Recompile the map, or correct the problem, and retry

N24Z03

MAP RECORD ERROR OFFSET: aaaaaaaaaa

Reason:

Issued when a mapping error occurs, and indicates the offset within the particular map load record at which the error was detected.

System Action:

Map is not loaded.

User Action:

Use this combined with output from message N24Z02 to determine the error in the map definition record.

N24Z04

hex dump of record data

Reason:

This message is issued when an error occurs in a map definition. It displays the contents of the map load record that was in error.

System Action:

Map is not loaded.

User Action:

Use this in conjunction with messages N24Z03, and N24Z02 to determine the error within the map load record.

N25001

INVALID VARIABLE ON RETURN.

Reason:

An *RETURN statement has specified an invalid variable name.*

System Action:

The procedure terminates.

User Action:

Correct and re-enter.

N25002

INVALID USE OF &*xxxx* KEYWORD.

Reason:

The specified keyword cannot be used on an &RETURN statement.

System Action:

The procedure terminates.

User Action:

See the NCL Reference for restrictions that apply to the use of this variable, then correct and retry.

N25003

RETURN VARIABLES

Reason:

This message, together with messages N25004 and N25005 are issued when an NCL procedure (with CONTROL ENDMSG in effect) terminates as a result of the RETURN statement but there is no higher level procedure to return to, for example, the procedure was invoked from OCS. Message N25004 provides a heading for multiple occurrences of message N25005, each of which lists a variable specified on the RETURN statement together with its length and value.

System Action:

None.

User Action:

None.

N25004

NAME LENGTH VALUE

Reason:

Refer to message N25003.

System Action:

None.

User Action:

None.

N25005

name length value

Reason:

Refer to message N25003.

System Action:

None.

User Action:

None.

N25301

INVALID ROUTCDE LIST

Reason:

An &WRITE verb has specified an invalid list for the ROUTCDE operand.

System Action:

The procedure terminates.

User Action:

Correct the procedure and retry.

N25302

INVALID AOMTIME VALUE

Reason:

An &WRITE verb has specified an invalid value for the AOMTIME operand.

System Action:

The procedure terminates.

User Action:

Correct the procedure and retry.

N25303

INVALID AOMJOBID VALUE

Reason:

An &WRITE verb has specified an invalid value for the AOMJOBID operand.

System Action:

The procedure terminates.

User Action:

Correct the procedure and retry.

N25309

MESSAGE ATTRIBUTES (ALARM, COLOUR, ETC) INVALID WITH TYPE=REQ.

Reason:

The &WRITE verb was issued with a type=req operand. This operand is mutually exclusive with display attribute operands such as COLOUR=, ALARM=, HIGHLIGHT=.

System Action:

The NCL procedure is terminated.

User Action:

Correct the *WRITE NCL statement.*

N25310

SERVER=, LUNAME=, USERID=, AND NCLID= ARE MUTUALLY EXCLUSIVE.

Reason:

An &WRITE verb has specified operands which are mutually exclusive. Only one of the SERVER, LUNAME, USERID or NCLID operands are permitted.

System Action:

The procedure terminates.

User Action:

Correct the procedure and retry.

N25311

TERM=NO INVALID WITH LUNAME=, USERID=, SERVER= OR NCLID=.

Reason:

An &WRITE verb has specified either the LUNAME, USERID, SERVER or NCLID operand together with TERM=NO. If any of these operands are present, then TERM=YES must be specified (or allowed to default).

System Action:

The procedure terminates.

User Action:

Correct the procedure and retry.

N25312

MON, AOM, FTS, ALL, MSGCODE INVALID WITH LUNAME=, USERID=, NCLID= OR SERVER=

Reason:

An &WRITE verb has specified either the LUNAME, USERID, NCLID or SERVER operand together with either MSGCODE, MON=YES, AOM=YES, FTS=YES or ALL=YES. These groups of operands are mutually exclusive.

System Action:

The procedure terminates.

User Action:

Correct the procedure and retry.

N25313

NO MESSAGE DESTINATIONS SPECIFIED, MESSAGE UNDELIVERABLE.

Reason:

An &WRITE verb has specified TERM=NO but no message destination is present. If TERM=NO is present, either LOG=YES, MON=YES, AOM=YES, FTS=YES or ALL=YES must be specified.

System Action:

The procedure terminates.

User Action:

Correct the procedure and retry.

N25320

INVALID AOM JOB, USER, SOS, AND/OR TYPE COMBINATION.

Reason:

The AOM operands on an &WRITE indicate that the message is sourced from both VM and MVS systems. This is not possible.

System Action:

The procedure terminates.

User Action:

Correct the procedure and retry. Refer to the AOM Installation and Reference manual for a description of the &WRITE operands.

N25321

AOMUFLG1-8 NOT ALLOWED IF AOMUFLGS CODED.

Reason:

An &WRITE verb has specified AOMUFLGS= as well as AOMUFLGn These operands are mutually exclusive.

System Action:

The procedure terminates.

User Action:

Correct the procedure and retry. Refer to the AOM Installation and Reference manual for a description of the &WRITE operands.

N25401

INVALID SYNTAX

Reason:

The &PARSE statement is incorrect.

System Action:

The procedure terminates.

User Action:

Correct and retry. For a description of the &PARSE built-in function see the NCL Reference.

N25402

INVALID RANGE

Reason:

The &PARSE statement has specified an invalid RANGE operand.

System Action:

The procedure terminates.

User Action:

Correct and retry. Refer to the NCL Reference for a description of the &PARSE function.

N25403

DUPLICATE OR CONFLICTING OPERANDS

Reason:

The &PARSE statement has duplicate or inconsistent operands.

System Action:

The procedure terminates.

User Action:

Correct and retry. Refer to the NCL Reference for a description of the &PARSE function.

N25404

REQUIRED OPERANDS OMITTED

Reason:

The &PARSE statement does not have mandatory operands specified.

System Action:

The procedure terminates.

User Action:

Correct and retry. Refer to the NCL Reference for a description of the &PARSE function.

N25405

VARS=aaaa PREFIX TOO LONG FOR specified/default RANGE

Reason:

The &PARSE statement variable prefix is too long for the specified, or default, RANGE suffix to be added.

System Action:

The procedure terminates.

User Action:

Correct and retry. Refer to the NCL Reference for a description of the &PARSE function.

N25406

INVALID DELIMITER(S) SPECIFICATION

Reason:

The &PARSE statement has no, or too many, characters in the DELIM= delimiter string.

System Action:

The procedure terminates.

User Action:

Correct and retry. Refer to the NCL Reference for a description of the &PARSE function.

N25407

VARIABLE NAME varname IS INVALID OR RESERVED

Reason:

The variable name is invalid or is the name of a reserved keyword.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N25408

DATA OPERAND OMITTED

Reason:

The &PARSE statement does not have a DATA operand coded.

System Action:

The procedure terminates.

User Action:

Correct and retry. Refer to the NCL Reference for a description of the &PARSE function.

N25501

INVALID SYNTAX

Reason:

The syntax in an &*SECCHK statement is invalid.*

System Action:

The NCL procedure terminates.

User Action:

Correct the statement and retry. Refer to the NCL User Reference for a description of the &SECCHK function.

N25502

INVALID USERID SPECIFIED

Reason:

You may only specify your own userid on the &SECCHK CHANGE statement unless the procedure is being run from EASINET.

System Action:

The procedure terminates.

User Action:

See the NCL Reference for details and restrictions on the use of this facility.

N25503

INVALID USE OF &SECCHK STATEMENT

Reason:

The &SECCHK CHECK statement is only valid in a procedure that is being run from EASINET.

System Action:

The procedure terminates.

User Action:

Refer to the NCL Reference for details and restrictions on the use of this facility.

N25601

MASK AND/OR DATA OMITTED.

Reason:

The syntax of the &MASKCHK statement is invalid.

System Action:

The procedure terminates.

User Action:

For information about the use of this statement, see *NCL Reference Guide*.

N25602

INVALID WILDCARD CHARACTER.

Reason:

The mask specified on the &MASKCHK statement must be a single character.

System Action:

The procedure is terminated in error.

User Action:

See the NCL Reference for details on the use of this statement.

N25702

INVALID USE OF &PROMPT STATEMENT

Reason:

The &PROMPT statement is valid only for use with LU-1 type terminals.

System Action:

The procedure is terminated in error.

User Action:

See the NCL Reference for details on the use of this statement.

N25A01

DUPLICATE OR CONFLICTING OPERANDS

Reason:

An &LOCK statement contains duplicate or conflicting operands. The statement is invalid.

System Action:

The procedure terminates.

User Action:

Correct and retry. For a description of the &LOCK built-in function see the NCL Reference.

N25A02

LOCKMAX LIMIT EXCEEDED

Reason:

The maximum number of LOCKs is already held. The &LOCK request is

System Action:

User Action:

Determine the number of currently active LOCKs using the &SHOW LOCKS command and determine if the number of requests is excessive.

N25A03

INVALID SYNTAX

Reason:

The &LOCK statement is incorrect.

System Action:

The procedure terminates.

User Action:

Correct the statement and retry.

N25A04

OPERAND aaaaaaaa HAS AN INVALID VALUE

Reason:

The &LOCK operand aaaaaaaa is invalid.

System Action:

The procedure terminates.

User Action:

Correct the statement and retry.

N25A05

REQUIRED OPERAND aaaaaaaa OMITTED

Reason:

The nominated &LOCK operand is required and must be coded.

System Action:

The procedure terminates.

User Action:

Correct the statement and retry.

N25A06

RESOURCE NAME INVALID

Reason:

The &LOCK statement specifies a resource name that is too long.

System Action:

The procedure terminates.

User Action:

Resource names may be 1 to 16 characters. Correct the statement and retry.

N25B01

SMFWRITE SPECIFIES INVALID RECORD TYPE OR DATA

Reason:

An &SMFWRITE NCL statement specified an invalid RECID value or invalid hexadecimal data.

System Action:

The procedure is terminated.

User Action:

Determine the cause of the error. Correct and retry.

N25B02

USER NOT AUTHORISED FOR &SMFWRITE REQUEST

Reason:

An unauthorized user or procedure attempted to issue an &SMFWRITE NCL statement.

System Action:

The procedure terminates unless the TEST option is specified or the SMFTRACE system parameter is set to YES. In TEST mode, the contents of the SMF record is written to the activity log instead of SMF.

User Action:

The &SMFWRITE statement is subject to an authorization check. The installation may have restricted its use to certain user IDs or from certain procedures.

See your systems administrator.

N25C01

INVALID USERID SPECIFIED

Reason:

An &SECCALL CHANGE=user has been issued for a user other than the user logged on or the user does not have UAMS authority to CHANGE another users password.

System Action:

None.

User Action:

Correct the userid specified and retry.

N25C02

INVALID USE OF SECCALL STATEMENT

Reason:

An &SECCALL CHECK USER=user was issued for a user other than the user logged on, or an &SECCALL QUERY was issued from EASINET.

System Action:

The procedure terminates.

User Action:

Correct and retry.

N25C03

UNAUTHORISED USER OF SECCALL STATEMENT

Reason:

An &SECCALL DELETE USER=user has been issued by a user without UAMS authority.

System Action:

None.

User Action:

Contact your installation help desk if necessary.

N25C04

INVALID PARAMETER - DETAILS MUST BE Y OR N, OR A FIELD LIST SUPPLIED

Reason:

An &SECCALL CHANGE USER=user DETAILS=x has been issued. DETAILS=x (where 'x' must be Y(es) or N(o)) or FIELDS=list operand must be specified.

System Action:

None.

User Action:

Correct the parameter and retry.

N25C05

INVALID PARAMETER - PASSWORD INVALID ON FORCE PASSWORD CHANGE

Reason:

An &SECCALL CHANGE USER=user has been issued by a UAMS authorized user to force change the password of another user. The password parameter is invalid on this operation.

System Action:

None.

User Action:

Correct the statement and retry.

N25C06

PARAMETER REQUIRED - DETAILS=Y OR NEW PASSWORD

Reason:

An &SECCALL CHANGE USER=user has been issued without a new password or the user details to be updated.

System Action:

None.

User Action:

Correct the statement and retry.

N25C07

USER userid PASSWORD ~P1 AND USER DETAILS ~P2

Reason:

This message indicates the outcome of a Password/details change for the indicated user.
The possible values for both P1 and P2 are :
UPDATED - the password/user details were updated
NOT UPDATED - the password/user details were not updated
UPDATE FAILED - the password/user details update failed

System Action:

None.

User Action:

None.

N25C08

UAMS DEFINITION user DELETED

Reason:

The UAMS definition for the specified user has been successfully deleted.

System Action:

None.

User Action:

None.

N25C09

FIELD LIST SPECIFICATION INVALID

Reason:

The field list specified in the FIELDS operand of an &SECCALL QUERY or &SECCALL CHECK is invalid.

System Action:

The procedure is flushed.

User Action:

Correct the FIELDS syntax and retry the operation.

N25C10

FIELD LIST CONTAINS INVALID FIELD(S)

Reason:

The field list that is specified in an &SECCALL function contains invalid fields.

If the request is &SECCALL QUERY, the list of valid fields is a subset of structured fields that are retained in storage for this user.

If the request is &SECCALL CHANGE, the list of valid fields is restricted to the user details and the user notification details.

For the list of valid fields, see *NCL Reference Guide*.

System Action:

The NCL procedure is flushed.

User Action:

Correct the field list, and retry the operation.

N25C11

STRUCTURED FIELD xxxx IN ERROR - REFER TO LOG FOR FURTHER DETAILS

Reason:

An &SECCALL CHANGE USER=user FIELDS= has been issued. An error has been found in processing one or more structured fields. Refer to the log for details of the structured field in error.

System Action:

The NCL procedure is flushed.

User Action:

Correct the field and retry.

N25D01

SECCALL EXIT INVALID WITHOUT SECURITY EXIT

Reason:

The &SECCALL EXIT command was issued when there was no security exit installed.

System Action:

The NCL procedure is terminated.

User Action:

Correct and retry.

N25E01

INSUFFICIENT STORAGE TO CALL NCLEX01 USER EXIT

Reason:

An NCL statement required a call to the NCL authorisation exit NCLEX01 but there was insufficient storage to complete the linkage and call.

System Action:

The procedure is terminated.

User Action:

Investigate the reason for the storage shortage. Correct and retry.

N25E02

NCL EXIT exitname - ATTACH/LINK FAILED

Reason:

An NCL statement required a call to the NCL authorisation exit NCLEX01 but linkage to the module failed.

System Action:

The procedure is terminated.

User Action:

Determine the reason for failure from an accompanying message.

N25E03

NCL EXIT exitname - INVALID RETURN CODE

Reason:

The return code passed back from the NCL authorisation exit NCLEX01 was not one of the allowable values.

System Action:

The procedure is terminated.

User Action:

Correct the exit return code and retry the request.

N25E04

NCL EXIT exitname HAS ABENDED SYS-bbb

Reason:

A call to the NCL authorisation exit NCLEX01 failed with the system abend code shown in the message.

System Action:

The procedure is terminated.

User Action:

Correct the problem in the exit and retry the request.

N25G01

INVALID USE OF SECCALL STATEMENT

Reason:

An &SECCALL UPDATE/ADD USER=user has been issued by a user without UAMS authority.

System Action:

The NCL procedure is flushed.

User Action:

If necessary contact your systems administrator.

N25G02

INVALID OPTION ON SECCALL GET STATEMENT

Reason:

An &SECCALL GET USER=user OPTION=opt has been issued. 'opt' must be KEQ (Key Equal), KGT (Key Greater Than) or KLT (Key Less Than).

System Action:

The NCL procedure is flushed.

User Action:

Correct the parameter and retry.

N25G03

STRUCTURED FIELD xxxx IN ERROR

Reason:

An &SECCALL GET/UPDATE/ADD USER=user FIELDS= has been issued. A structured field 'xxxx' has been found in error.

System Action:

The NCL procedure is flushed.

User Action:

Correct the field and retry.

N25G04

STRUCTURED FIELD xxxx IN ERROR - REFER TO LOG FOR FURTHER DETAILS

Reason:

An &SECCALL GET/UPDATE/ADD USER=user FIELDS= has been issued. An error has been found in processing one or more structured fields. Refer to the log for details of the structured field in error.

System Action:

The NCL procedure is flushed.

User Action:

Correct the field and retry.

N25G05

FIELD LIST SUPPLIED GREATER THAN 256 CHARACTERS

Reason:

The FIELDS operand on the &SECCALL function contains an entry that is more than 256 characters.

System Action:

The NCL procedure is flushed.

User Action:

Correct the FIELDS operand and retry the procedure.

N25G06

FIELD STARTING xxxx GREATER THAN FOUR CHARACTERS

Reason:

An &SECCALL GET/UPDATE/ADD USER=user FIELDS=field has been issued. A field specified exceeded the maximum supported. Structured fields are normally represented as 4 hex characters and leading zeroes may be omitted.

System Action:

The NCL procedure is flushed.

User Action:

Correct the field and retry.

N25G07

FIELD xxxx IS NOT VALID HEXADECIMAL CHARACTERS

Reason:

An &SECCALL GET/UPDATE/ADD USER=user FIELDS=field has been issued. The specified field 'xxxx' is invalid as hexadecimal characters.

System Action:

The NCL procedure is flushed.

User Action:

Correct the field and retry.

N25G08

FIELD xxxx IS AN UNDEFINED STRUCTURED FIELD

Reason:

An &SECCALL GET/UPDATE/ADD USER=user FIELDS=xxxx has been issued. The specified field 'xxxx' is not a defined structured field.

System Action:

The NCL procedure is flushed.

User Action:

Correct the field and retry.

N25G09

FIELD xxxx IS DEFINED IN AN EXCLUDED FEATURE

Reason:

An &SECCALL GET/UPDATE/ADD USER=user FIELDS=xxxx has been issued. The specified field 'xxxx' is processed by a feature that is not configured for this system.

System Action:

The NCL procedure is flushed.

User Action:

Correct the field and retry.

N25G10

INVALID SYNTAX - TYPE MUST BE USER OR GROUP

Reason:

An SECCALL ADD USER=user TYPE=type has been issued. 'type' must be either 'USER' to ADD a user definition, or 'GROUP' to ADD a group definition.

System Action:

The NCL procedure is flushed.

User Action:

Correct the type and retry.

N25G11

INVALID SYNTAX - PASSWORD INVALID WITH TYPE=GROUP

Reason:

An &SECCALL ADD USER=user PASSWORD=pwd TYPE=GROUP has been issued. The password field is invalid as a group definition is not available for logon.

System Action:

The NCL procedure is flushed.

User Action:

Correct the type and/or the password and retry.

N25G12

INVALID SYNTAX - PASSWORD MUST BE SUPPLIED WITH TYPE=USER

Reason:

An &SECCALL ADD USER=user TYPE=USER has been issued. A password must be supplied to add a user definition.

System Action:

The NCL procedure is flushed.

User Action:

Correct the statement and retry.

N25G13

UAMS DEFINITION user ADDED

Reason:

An &SECCALL ADD USER=user has been issued. The add of the definition 'user' has completed successfully.

System Action:

The user details are stored on the UAMS file or via an external security manager. The user may be prompted to change their initial password when they logon.

User Action:

Inform the new user of the password to be used when they log on.

N25G14

UAMS DEFINITION user UPDATED

Reason:

An &SECCALL UPDATE USER=user has been issued. The update of the definition 'user' has completed successfully.

System Action:

None.

User Action:

None.

N25G15

FIELD LIST SPECIFICATION INVALID

Reason:

The FIELDS operand on the &SECCALL function contains entries that are not contained within paired brackets. If there is more than one field to be processed by the &SECCALL function, then these must be contained within brackets.

System Action:

The NCL procedure is flushed.

User Action:

Correct the FIELDS operand and retry the operation.

N25G16

USERID SPECIFIED CONTAINS INVALID CHARACTERS

Reason:

An &SECCALL ADD USER= has been issued. The user id specified contains characters that are invalid. Valid characters are A-Z, 0-9 and national characters @, # and $.

System Action:

The ADD operation is rejected, &RETCODE is set to 8.

User Action:

Correct the user id value and retry the ADD operation.

N25H01

INVALID MDO NAME FOR REQUEST.

Reason:

The MDO supplied to an &ENCODE or &DECODE statement is invalid.

System Action:

None.

User Action:

Ensure that different source and target MDOs are used. Check the syntax of the MDO names and verify them against their respective MAP definitions.

N25H02

MDS MAPPING FAILURE.

Reason:

An internal MDS error has occurred.

System Action:

None.

User Action:

Contact your product support representative.

N25H03

STACK OVERFLOW.

Reason:

The internal recursion stack limit was exceeded while processing an &ENCODE or &DECODE operation, possibly caused by too many segments in a compound name.

System Action:

None.

User Action:

Reduce number of name segments in mdo name. May require redefinition of the map.

N25H04

INVALID ENCODE/DECODE SYNTAX.

Reason:

An &ENCODE or &DECODE statement has invalid syntax.

System Action:

None.

User Action:

Check syntax.

N25H05

INVALID TRANSLATE OPERAND.

Reason:

The TRANSLATE= operand supplied to an &ENCODE or &DECODE statement is invalid.

System Action:

None.

User Action:

Check supported TRANSLATE operands, e.g. ISO, DEC, ASCII...

N25H06

ENCODED STRING INVALID FOR TARGET MDO.

Reason:

The encoded string cannot be assigned to the target MDO of an &ENCODE statement, possibly due to its defined type.

System Action:

None.

User Action:

Check the type definition of the target MDO and rectify as appropriate.

N25H07

MAP NOT FOUND.

Reason:

The procedure has abended on an &ENCODE or &DECODE verb because an MDO was invalidly mapped because of one of the following:

- the map was not found on the mapping services database

- it failed to load

- it did not successfully attach to the MDO because it mismatched the data in the MDO.

System Action:

Procedure is flushed.

User Action:

Ensure map exists, loads and correctly maps the underlying MDO data.

N25H08

TARGET MDO IS INVALID

Reason:

The specified target mdo contains invalid data.

System Action:

None.

User Action:

Delete the invalid component, or use a new MDO.

N25H20

ATF NOT AVAILABLE OR NOT LICENCED

Reason:

An &ENCODE or &DECODE statement specified operands that indicate that ATF is to be used. However, ATF is not available or is not licenced on this SOLVE system.

System Action:

An error is indicated.

User Action:

Check your SOLVE licence for ATF support.

N25H21

UNKNOWN SOURCE CHARACTER SET NAME

Reason:

An &ENCODE or &DECODE statement has a SRC_CHARSET operand that names a character set that is not recognized by ATF.

System Action:

An error is indicated.

User Action:

Check the character set name.

N25H22

UNKNOWN TARGET CHARACTER SET NAME

Reason:

An &ENCODE or &DECODE statement has a TGT_CHARSET operand that names a character set that is not recognized by ATF.

System Action:

An error is indicated.

User Action:

Check the character set name.

N25L01

PROC NAME INVALID OR OMITTED.

Reason:

Procedure name specified on PROC parameter of &CALL verb is invalid or missing.

System Action:

NCL procedure terminates.

User Action:

Correct NCL procedure and restart it.

N25L02

SYSTEM IS SHORT ON STORAGE.

Reason:

The system could not obtain storage for new control blocks.

System Action:

NCL procedure terminates.

User Action:

Determine the reason for storage shortage. Rerun the proc.

N25L03

SYNTAX ERROR.

Reason:

&CALL PROC= statement contains invalid syntax.

System Action:

NCL procedure terminates.

User Action:

Correct NCL procedure and rerun it.

N25M01

OSCALL Processing Failure.

Reason:

An error was detected during an &OSCALL NCL request but the specific error condition could not be accessed.

System Action:

&SYSMSG is set to the error message and processing continues.

User Action:

Correct &OSCALL statement an re-run.

N25M02

MODE=UNCONFIRMED Invalid for OSCALL CONVERSE.

Reason:

An &OSCALL CONVERSE request SDU specified MODE=UNCONFIRMED. For UNCONFIRMED requests no response can be processed by the receive end of the CONVERSE, hence the request is invalid.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25M03

SDU EMPTY.

Reason:

An &OSCALL SEND or CONVERSE request specified a non-existant SDU.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25N02

OSCALL KEYWORD ERROR IN aaaaaaaa LIST.

Reason:

A syntax error was detected in the PARM, ATTR, or NAME keyword of an &OSCALL SEND or CONVERSE statement.

System Action:

&OSCALL retcode is set to 12, and SYSMSG is set to this message

User Action:

Correct &OSCALL statement and re-run.

N25N10

OSCALL COMPONENT ASSIGNMENT ERROR ON aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa.

Reason:

An MDS error occurred while attempting to process an &OSCALL SEND or CONVERSE keyword request.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement. &ZMDOFDBK and &ZMDORC are also set to indicate the MDS error.

User Action:

Check the MDS feedback variables to determine cause of MDS check and correct procedure. This error is most likely the result of an invalid data value specified for an SDU component.

N25O01

OBJECT SERVICES STORAGE REQUEST FAILED.

Reason:

An object services internal storage request failed.

System Action:

The request return code is set to 16 and processing is terminated.

User Action:

Determine the reason for storage shortage. Restart SOLVE region with larger virtual address space size.

N25002

OBJECT SERVICES MDS MAP CONNECTION FAILED.

Reason:

This message indicates that an error occurred while attempting to map an object services object using mapped data services (MDS).

System Action:

The service fails, and the MDS return code is set.

User Action:

Determine the reason for the mapping error. Correct the request or the object map, and retry.

N25003

OBJECT MDS ASSIGNMENT FAILED, RC=*00/00*

Reason:

An MDS error occurred when object services attempted to assign a mapped component. The MDS return code and feedback are set in the message.

System Action:

The request fails with return code 8.

User Action:

Diagnose the mapping error using the MDS return code and feedback information.

N25004

REQUEST MUST SPECIFY A VALID OBJECT NAME.

Reason:

An object services request did not contain a valid object name.

System Action:

The request fails with return code 4.

User Action:

Ensure the object name is correctly specified in the request.

N25005

OBJECT ALREADY EXISTS.

Reason:

An object services create request specified an object name which already exists.

System Action:

The request fails with return code 4.

User Action:

Check that the object name does not already exist.

N25006

INVALID OBJECT CLASS.

Reason:

The class specified for an object services request is not defined in the MIB or is invalid.

System Action:

The request is rejected.

User Action:

Specify the correct object class.

N25007

INVALID DELETE REQUEST - OBJECT IN USE.

Reason:

An attempt was made to delete an object which is being updated by the same process.

System Action:

The delete request is rejected.

User Action:

Check the request.

N25P01

OSCALL RECEIVE SDU MAPPING ERROR.

Reason:

A MDS mapping error occurred while attempting to process an OSCALL RECEIVE statement. The message is returned to the NCL procedure in the &SYSMSG variable.

System Action:

NCL processing continues at the next statement. &ZMDORC and &ZMDOFDBK are set.

User Action:

Check the &ZMDORC and &ZMDOFDBK fields to determine the reason for the MDS error.

N25P02

&OSCALL SDU PARSE DATA ERROR.

Reason:

An Object services reply SDU could not be parsed by MDS.

System Action:

NCL processing continues at the next statement.

User Action:

None.

N25P03

METHOD REPLY SDU ASSIGNMENT FAILED MDORC=00 MDOFB=00.

Reason:

Object services could not build the reply SDU because of a mapping error during assignment.

System Action:

The reply is not built.

User Action:

Check the MDS maps for the request objects.

N25P04

OSCALL SDU PARSE DATA ERROR.

Reason:

An internal error occurred while processing an &OSCALL RECEIVE statement

System Action:

NCL processing continues at the next statement. &ZMDORC and &ZMDOFDBK are set.

User Action:

Check &ZMDORC and &ZMDOFDBK values to determine cause of MDS check.

N25Q01

INSUFFICIENT STORAGE TO PROCESS MDO REQUEST.

Reason:

MDO processing was unable to obtain enough storage from the system pool to satisfy the last MDO request.

System Action:

Procedure is flushed.

User Action:

Retry request later.

N25Q02

SYNTAX ERROR USING MDO.

Reason:

An assign statement with an MDO= operand has invalid syntax.

System Action:

Procedure is flushed.

User Action:

Check syntax.

N25Q03

MDO NAME CHECK ERROR - BAD INDEX POSITION OR VALUE.

Reason:

An index was used in an MDO= operand where it wasn't expected, or the index value is out of range.

System Action:

Procedure is flushed.

User Action:

Check map definition, and see that this is a valid indexable component, and if so, check that the index does not exceed 32767, or any maximum imposed by a SIZE specification.

N25Q04

MDO MAPPING ERROR.

Reason:

An error occurred while trying to map an MDO's data during an MDO request.

System Action:

Procedure is flushed.

User Action:

Check program logic. Test that map connection has been performed, and that it was successful. Ensure correct map is in use.

N25Q05

RECURSION STACK OVERFLOW OCCURRED.

Reason:

The internal recursion stack limit was exceeded while attempting to process an MDO request, possibly caused by having too many segments in a compound name.

System Action:

Procedure is flushed.

User Action:

Reduce number of name segments in MDO name. May require redefinition of the map.

N25Q06

SYNTAX ERROR - VARIABLE INDEX {*} USED INVALIDLY.

Reason:

A variable indexed MDO name (e.g. MDO=a.b.{*}) was used invalidly.

System Action:

Procedure is flushed.

User Action:

Check use of index on MDO operand.

N25Q07

SYNTAX ERROR - MUTUALLY EXCLUSIVE OPERANDS.

Reason:

Mutually exclusive operands were used on an &ASSIGN verb using MDO.

System Action:

Procedure is flushed.

User Action:

Check syntax.

N25Q08

UNEXPECTED FEEDBACK DETECTED.

Reason:

A feedback was returned during &ASSIGN processing of an MDO which was unexpected.

System Action:

None.

User Action:

Contact your product support representative.

N25Q09

MDO TYPE|DATA|NAME CHECK ERROR.

Reason:

This message is only issued if &CONTROL MDOCHK is on. The message indicates a ZMDORC of 8 or 12 was obtained. MDO TYPE CHECK ERROR: ZMDORC=8, ZMDOFDBK=0 MDO DATA CHECK ERROR: ZMDORC=8, ZMDOFDBK=1 MDO NAME CHECK ERROR: ZMDORC=12,ZMDOFDBK=0

System Action:

Procedure is flushed.

User Action:

Determine the reason for the error. Type check: Attempt made to assign invalid data into or from an MDO. Data check: Physical limitations exceeded assigning data to an MDO. Name check: Component name used in MDO assign is not defined in the map.

N25Q10

MAP CHECK ERROR, MAP NOT FOUND|MAP LOAD FAILED|MAP/DATA MISMATCH.

Reason:

Message is only issued if &CONTROL MDOCHK is set. An attempt to attach a map to an MDO failed because:
- The map wasn't found on the map database.
- The map failed to load due to definition errors.
- The data in the mdo doesn't conform to the map definition.

System Action:

Procedure is flushed.

User Action:

Check that the map is defined, and loads ok, and that the data in the MDO agrees with the map definition. (Issue SYSPARMS MAPLOAD=mapname command to see if map loads ok.)

N25R01

REGISTRATION REQUEST INVALID FOR SYSTEM PROCEDURE.

Reason:

An &OSCALL REGISTER statement was executed from a system procedure environment. This is not allowed.

System Action:

The procedure is terminated.

User Action:

Remove &OSCALL register statement from system level procedure.

N25R02

DEREGISTER PROCESS IS NOT REGISTRATION OWNER.

Reason:

An &OSCALL deregistration statement was issued for an object which was not owned by the requestor.

System Action:

The procedure is terminated.

User Action:

Correct object definition for request.

N25R03

REGISTRATION REQUEST CONFLICTS WITH CURRENT PROCESS REGISTRATIONS.

Reason:

An NCL process may only register for a single server type and an OSCALL REGISTER_SERVER statement was issued with a server type which conflicts with the server type specified on a previous registration.

System Action:

The server registration request is rejected and *SYSMSG set.*

User Action:

Ensure all server registration requests are for the same server type and correct the server registration.

N25R04

REGISTRATION Name is invalid.

Reason:

The name specified in the OBJECT operand of a REGISTER_SERVER request could not be parsed.

System Action:

The server registration request is rejected and *SYSMSG set.*

User Action:

Check the name assignment for the OBJECT MDO.

N25R05

REGISTRATION LOGIC ERROR IN mod

Reason:

An invalid internal SOLVE call was detected by the registration processor.

System Action:

The server registration request is rejected and &SYSMSG set.

User Action:

Note the module id and call your SOLVE support center.

N25R06

INSUFFICIENT STORAGE FOR REGISTRATION REQUEST

Reason:

The dynamic storage available for internal processing was exhausted.

System Action:

The processing thread is terminated.

User Action:

Investigate the reason for the storage shortage, and increase the task region size if necessary.

N25R07

REGISTRATION INVALID IF BASE PROCEDURE NOT OML

Reason:

An &OSCALL TYPE=REGISTER-SERVER verb has been issued to register the NCL process as a server, but the base procedure of the process is not an NCL procedure. OML does not support server registration, thus the registration can only performed if the base procedure is NCL.

System Action:

The process is terminated.

User Action:

Convert the base procedure to NCL.

N25R08

OBJECT CREATE REQUEST FAILED - PARENT DOES NOT EXIST.

Reason:

An create request attempted to create an object for which the parent did not exist.

System Action:

The create request fails.

User Action:

Ensure the parent object exists before creating the child.

N25R09

OBJECT DELETE REQUEST FAILED - OBJECT LOCATE FAILED.

Reason:

An object services DELETE request failed because the object did not exist.

System Action:

No deletion takes place.

User Action:

Check the name specified in DELETE request.

N25R10

OBJECT DELETE REQUEST REJECTED FOR OBJECT WITH CHILDREN.

Reason:

An attempt was made to delete an object with children.

System Action:

The delete request is rejected.

User Action:

Delete all of an object's children before issuing a DELETE request for the object.

N25R11

OBJECT CREATE REQUEST FAILED - DUPLICATE.

Reason:

An attempt was made to create an object which already existed.

System Action:

The request is rejected.

User Action:

Ensure a unique object name is specified when creating an object.

N25S01

NO ACTIVE SERVER.

Reason:

An &OSCALL RECEIVE request was issued when no client server conversation was active for the request.

System Action:

The procedure is terminated.

User Action:

Correct NCL processing logic to ensure Object Services conversation is active when receive is issued.

N25S02

CONNECTION TO OBJECT METHOD FAILED.

Reason:

An attempt to invoke an object method via the &OSCALL verb failed.

System Action:

&SYSMSG is set. Processing continues with next NCL statement.

User Action:

Check return code information to determine reason for failure to connect to method.

N25S03

NO ACTIVE CLIENT.

Reason:

An attempt by an object server to reply to a client failed. Either the server incorrectly sent the reply, or the client connection was broken during processing.

System Action:

&SYSMSG and return codes are set. Processing resumes at the next statement in the server procedure.

User Action:

Look for other APPC messages to find reason for conversation failure and retry.

N25S04

CLIENT CONNECTION FAILED.

Reason:

An &OSCALL request on the Client/Server conversation failed.

System Action:

&SYSMSG and return codes are set. Processing resumes at the next statement in the server procedure.

User Action:

Look for other APPC messages to find reason for conversation failure and retry.

N25S05

CLIENT CANCELLED REQUEST.

Reason:

A server issued an &OSCALL REPLY but the client had already cancelled the request with an &OSCALL CANCEL.

System Action:

Server procedure continues at next NCL statement.
&RETCODE is set to 8. &ZFDBK is set to 5. &SYSMSG contains the message.

User Action:

The message may be the result of a desired client action.

N25S07

OSCALL CLIENT/SERVER PROTOCOL ERROR.

Reason:

An &OSCALL RECEIVE statement was issued for a request after the final reply was detected. This condition indicates some internal logic error because the final reply always terminates the session.

System Action:

&SYSMSG, &RETCODE and &ZFDBK are set, and processing continues.

User Action:

Get the details of the procedure that issued the request, and report to CA Support.

N25T01

OSCALL ERROR - TRANSACTION PROTOCOL ERROR

Reason:

An APPC protocol violation occurred while attempting to process an &OSCALL request during backend processing.

System Action:

The error message is written to the SOLVE system log.

User Action:

Look for other APPC messages to find reason for conversation failure and retry.

N25T02

OSCALL ERROR - RESOURCE SHORTAGE

Reason:

A storage shortage occurred while attempting to process the OSCALL backend transaction.

System Action:

The error message is written to the log. The object method fails.

User Action:

Investigate the reason for storage shortage. Correct and retry.

N25T03

OSCALL ERROR - DATA ASSIGNMENT ERROR MDS RC=rc/fb

Reason:

The OSCALL backend transaction could not map the data received into an SDU. rc/fb represents the MDS RETCODE and FDBK values.

System Action:

The error message is written to the SOLVE system log and the OSCALL backend processing is terminated.

User Action:

Only data in valid SDU format should be sent to the OSCALL backend transaction. Ensure no errant APPC requests are processed.

N25T04

OSCALL ERROR - INVALID SERVICE DATA UNIT

Reason:

The request flag was not set in an SDU received by the OSCALL back-end transaction processor.

System Action:

The OSCALL backend transaction is terminated.

User Action:

Ensure the OSCALL transaction is only operated via a valid &OSCALL request.

N25T05

OSCALL ERROR - REQUEST TO SERVER TYPE NOT SUPPORTED.

Reason:

The request server located by the OSCALL back end transaction was not for a method or agent server. Requests for other server types are not supported.

System Action:

The OSCALL backend transaction is terminated.

User Action:

Ensure the object services configuration does not involve indirect system registrations.

N25U01

**&OSCALL error SDU BUILD FAILED ON aaaa

N25V01

INVALID OSCALL KEYWORD aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa.

Reason:

The keyword shown in the message is not a valid OSCALL SEND or CONVERSE keyword.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V02

OSCALL CLASS OPERAND IS INVALID.

Reason:

An &OSCALL SEND/CONVERSE statement specified an invalid object class.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V03

OSCALL REQID OPERAND IS INVALID.

Reason:

REQID is not a valid operand on the &OSCALL SEND/CONVERSE NCL statement.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V04

OSCALL ACTION OPERAND IS INVALID.

Reason:

An &OSCALL SEND NCL statement specified an ACTION operand that was not valid, or was in conflict with the SERVICE keyword. ACTION can only be specified for SERVICE=ACTION, and the length must *not* exceed 12 bytes.

System Action:

&SYSMSG is set to the message, and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement, and rerun the procedure.

N25V05

OSCALL KEYWORD MISSING

Reason:

A &OSCALL SEND/CONVERSE statement contained an invalid or missing keyword.

System Action:

&SYSMSG is set to this message and the RETCODE is set to 12. processing continues at the next NCL statement.

User Action:

Correct the &OSCALL statement syntax.

N25V06

OSCALL MAP NAME IS INVALID.

Reason:

The &OSCALL SEND/CONVERSE MAP= operand, if specified, must be a valid MDS map name.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V07

OSCALL aaaaaaaaaa KEYWORD MUST BE SPECIFIED.

Reason:

The keyword named in the message text is mandatory and was left out of the &OSCALL SEND or CONVERSE NCL statement.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V08

OSCALL DUPLICATE KEYWORD SPECIFIED.

Reason:

An &OSCALL NCL statement specified a duplicate keyword.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V09

OSCALL ACTION KEYWORD MISSING.

Reason:

An &OSCALL SEND/CONVERSE SERVICE=ACTION NCL statement did not specify an action keyword.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V10

OSCALL COMPONENT ASSIGNMENT ERROR ON aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa.

Reason:

An MDS error occurred while attempting to process an OSCALL SEND or CONVERSE keyword request.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement. &ZMDOFDBK and &ZMDORC are also set to indicate the MDS error.

User Action:

Check the MDS feedback variables to determine cause of MDS check and correct procedure. This error is most likely the result of an invalid data value specified for an SDU component.

N25V11

OSCALL CLASS MAP FAILED MAP=aaaaaaaaaaaa.

Reason:

The object class specified on the &OSCALL NCL statement could not be mapped.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement. &ZMDOFDBK and &ZMDORC are also set.

User Action:

Check the object class specified on the &OSCALL statement is a valid class and that an MDS map exists for it. Correct the &OSCALL statement and re-run procedure.

N25V12

OSCALL INVALID OPERATION ooooooooooo.

Reason:

The SERVICE operand ooooooooooo on an &OSCALL SEND or CONVERSE NCL statement was not a valid object services SERVICE.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V13

&OSCALL SCOPE OPERAND IS NOT A VALID LEVEL.

Reason:

The SCOPE operand on an &OSCALL statement is not supported.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V14

OSCALL INVALID SCOPE VALUE.

Reason:

An &OSCALL NCL statement specified an invalid SCOPE operand value.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V15

OSCALL PARMS NOT VALID FOR REQUESTED SERVICE.

Reason:

The PARMS keyword is only valid for ACTION service requests on the &OSCALL SEND and CONVERSE NCL statement.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V16

OSCALL NOTIFY operand must be YES or NO.

Reason:

An &OSCALL SEND NCL statement specified an invalid NOTIFY operand value.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V17

OSCALL REPLYSDU operand is invalid.

Reason:

An &OSCALL CONVERSE statement specified an invalid REPLYSDU operand value.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V18

OSCALL NOTIFY not valid with converse.

Reason:

An &OSCALL CONVERSE NCL statement specified the NOTIFY operand. This is not allowed.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25V19

OSCALL keyword operands not allowed with SDU.

Reason:

The &OSCALL SEND and CONVERSE NCL statements may specify the request in keyword form, or as a pre-defined SDU mdo, but these operands may not be mixed.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25X01

OSCALL SDU OPERAND IS REQUIRED.

Reason:

The &OSCALL NCL statement must specify an SDU MDO.

System Action:

&SYSMSG is set to the error message and processing continues.

User Action:

Correct &OSCALL statement an re-run.

N25X02

xxxxxx MUST BE SPECIFIED FOR OSCALL REGISTER/DEREGISTER

Reason:

The xxxxxx keyword is required for the OSCALL (de)register statement.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25X03

SDU EMPTY.

Reason:

An &OSCALL send request specified a non-existant SDU.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL statement and re-run procedure.

N25X04

OSCALL ACCEPT NOT VALID FROM THIS PROCEDURE.

Reason:

The &OSCALL ACCEPT NCL statement is only valid from a registered agent server.

System Action:

&SYSMSG is set to the error message and processing continues.

User Action:

Correct &OSCALL statement an re-run.

N25X05

OSCALL INVALID OPERAND SPECIFIED: operand

Reason:

An &OSCALL NCL statement specificication of the named operand was invalid.

System Action:

&SYSMSG is set to the error message and processing continues.

User Action:

Correct &OSCALL statement an re-run.

N25X06

&OSCALL XCTL INVALID - METHOD CONTAINS ACTIVE OML

Reason:

An &OSCALL TYPE=XCTL verb has been issued to exchange control between the current method and another method. The current method contains active OML procedures, so the XCTL request is invalid. XCTL cannot be done unless all procedures in the method are NCL.

System Action:

The process is terminated.

User Action:

Make sure all procedures in the method are NCL.

N25X07

&OSCALL XCTL INVALID - METHOD CONTAINS ACTIVE OML

Reason:

An *&OSCALL TYPE=XCTL* verb has been issued to exchange control between the current method and another method. The current method contains active OML procedures, so the XCTL request is invalid. XCTL cannot be done unless all procedures in the method are NCL.

System Action:

The process is terminated.

User Action:

Make sure all procedures in the method are NCL.

N25Y01

INVALID OBJECT.

Reason:

The object specified on the *OSCALL (DE)REGISTER statement could not* be parsed.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Check that the MDO for the object is valid and re-run.

N25Y02

INVALID SDU - aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa COMPONENT MISSING.

Reason:

A required SDU component was not present in the OSCALL request.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the SDU build procedure to include the named component, and re-run request.

N25Y03

INVALID SDU - aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa COMPONENT VALUE INVALID.

Reason:

An OSCALL statement specified an SDU which contained the component named in the message. The component value was not valid.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the SDU component value and re-run procedure.

N25Y04

INVALID OBJECT - aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa COMPONENT MISSING.

Reason:

A mandatory request component was missing from an object services request.

System Action:

The missing component name is returned in the message.

User Action:

Correct the object services request SDU.

N25Z01

CLASS DEFINITION aaaaaaaa NOT FOUND.

Reason:

The class specified by the &OSCALL request did not exist in the MIB.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the class or ensure it is added to the system definition tables before re-running procedure.

N25Z02

SCOPE NOT SUPPORTED.

Reason:

Scoped requests are not valid for the service requested by an &OSCALL.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the &OSCALL request.

N25Z03

CLASS *cccccccc* UNAVAILABLE.

Reason:

The &OSCALL request for object class *cccccccc* could *not* proceed. The class was *not* initialized.

System Action:

&SYSMSG is set to the message, and processing continues with the next NCL procedure statement.

User Action:

Ensure object services class is initialized before you rerun the request.

N25Z04

ACTION action NOT VALID FOR CLASS m_o_class.

Reason:

An &OSCALL SERVICE=ACTION request could not be satisfied because the action was not valid for the specified object class.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the action requested and re-run procedure.

N25Z05

SYSTEM NOT INITIALIZED.

Reason:

An Object Services request was received, but Object Services initialization failed.

System Action:

&SYSMSG is set to the message, and processing continues with the next NCL procedure statement.

User Action:

Check the activity log to determine reason for initialization failure, and verify and that you are running with the correct version of the Object Services tables and maps.

N25Z06

xxxxxx METHOD NOT DEFINED FOR CLASS cccccccc.

Reason:

The requested method procedure was defined for an *OSCALL service* request for class cccccccc.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Ensure the &OSCALL request was correctly specified and that the class service definition is correct.

N25Z07

OBJECT SERVICES NOT INITIALIZED

Reason:

An Object Services request was made before Object Services initialization was complete.

System Action:

Request is terminated.

User Action:

Ensure object services is initialized before re-issuing request.

N25Z08

OBJECT SELECTION NOT SUPPORTED FOR CLASS m_o_class.

Reason:

No selection method is defined for the Managed Object Class for which the Object Services selection request was issued.

System Action:

&SYSMSG is set to the message and processing continues with the next NCL procedure statement.

User Action:

Correct the request and re-run procedure.

N26301

UAMS RECORD FROM EXTERNAL SECURITY EXIT NOT WRITTEN TO USER DATABASE

Reason:

During logon process an error was encountered when the user record was being written to the user database.

System Action:

The logon is processed.

User Action:

None.

N26302

USERID NOT DELETED

Reason:

An attempt was made to delete a user definition from the user database. The user's definition was not deleted. This message is issued if the security exit does not provide a specific reason for not deleting the user record from the user database.

System Action:

The user definition was not deleted.

User Action:

Determine if the required user record exists and retry operation.

N26303

I/O ERROR READING USER FROM UAMS DATABASE

Reason:

An error occurred whilst attempting to read a user from the user database. No specific reason applies.

System Action:

The user definitions was not read.

User Action:

Determine if the required user record is available and retry the operation.

N26304

INSUFFICIENT STORAGE FOR function REQUEST

Reason:

There is insufficient system storage available for SOLVE to complete the request. The request is either a LOGON or a READ of a user record.

System Action:

The user logon/read is failed.

User Action:

Determine the amount of storage available to SOLVE and retry the operation when there is storage available to complete the request.

N26305

USERID RECORD FOR uuuuuuuu CREATED, MODELLED ON modelid

Reason:

The user attempted a logon to SOLVE where a partial security exit was installed. The partial security exit provided a userid modelid whose user definition is to be used as a model for this user's logon.

System Action:

The logon is successful and a new user record is created.

User Action:

None.

N26306

USERID NOT AUTHORISED FOR USE AT THIS TERMINAL

Reason:

An attempt to logon has been rejected because the user attempted to logon from a terminal other than those to which the userid is restricted.

System Action:

The logon attempt is unsuccessful.

User Action:

Logon from an authorized terminal.

N26307

LOGONS STOPPED. SYSTEM IN SHUTDOWN.

Reason:

If the system is in a shutdown-pending state, no further logons are allowed.

System Action:

The logon is rejected.

User Action:

The SHUTDOWN CANCEL command could be used to reverse the shutdown process and allow further logons.

N26308

MAXIMUM USERS LOGGED ON, TRY LATER.

Reason:

A logon attempt is denied because the maximum number of users as limited by a MAXUSERS command are already logged on.

System Action:

None.

User Action:

Retry later, or the maximum number of users may be increased with the MAXUSERS command.

N26309

userid ALREADY LOGGED ON AT ANOTHER TERMINAL.

Reason:

An attempt was made to log on by a user who is already logged on elsewhere. The user is not authorized for multiple logons.

System Action:

The logon is rejected.

User Action:

Determine why the userid is already in use.

N26310

USERID HAS BEEN SUSPENDED, LOGON DENIED

Reason:

An attempt to logon has been rejected because the userid has been `suspended', that is, has been temporarily invalidated for use.

System Action:

The logon fails.

User Action:

Refer to your systems administrator.

N26311

SIGNON REJECTED

Reason:

A logon attempt has been rejected by the security exit. No other information was supplied by the security exit.

System Action:

None.

User Action:

Contact your systems administrator.

N26312

PASSWORD NOT CHANGED.

Reason:

The logon request or password change was denied. The security exit did not provide a specific message indicating the reason for the failure.

System Action:

None.

User Action:

Logon again and change password if requested.

N26313

USERID INFORMATION UNAVAILABLE

Reason:

A request to obtain userid information failed. The security exit did not provide a specific reason for the failure.

System Action:

The read request is rejected.

User Action:

Contact your systems administrator as this may indicate that the UAMS dataset is corrupted.

N26314

USERID INFORMATION NOT UPDATED

Reason:

An error occurred when attempting to update userid information on the UAMS dataset, or the security exit supplied by the system rejected the update request. No specific reason was provided by the security exit.

System Action:

None.

User Action:

Contact your systems administrator.

N26315

USERID NOT ADDED.

Reason:

An attempt to add a new user record has failed. No specific reason was provided by the security exit for the failure.

System Action:

The user record is not added.

User Action:

Contact your systems administrator for more information.

N26316

LOGON DENIED FOR userid AT TERMINAL luname - PASSWORD VIOLATION.

Reason:

This message reports a logon attempt that failed because the user entered their password in error more than the maximum number of times. It is sent to the system Log and to OCS operators who have monitor status.

System Action:

None.

User Action:

This may indicate an illegal attempt to gain access to the system. If the attempts continue you should report the matter to your systems administrator.

N26317

INVALID RETURN CODE FROM SHUTDOWN - SHUTDOWN CONTINUING

Reason:

The security exit has returned a non-zero return code. This return code is invalid. SHUTDOWN processing continues.

System Action:

Shutdown continues.

User Action:

None.

N26318

ACCESS DENIED FOR P1 (PORT RESTRICTION)

Reason:

The Access Control feature has denied access to this port.

System Action:

The logon is rejected.

User Action:

This may be a time restriction. Try again when access is allowed. If necessary contact your system administrator.

N26319

ACCESS DENIED FOR P1 (HOST RESTRICTION)

Reason:

The Access Control feature has denied remote host access.

System Action:

The logon is rejected.

User Action:

This may be a time restriction. Try again when access is allowed. If necessary contact your system administrator.

N26320

ACCESS DENIED TO PORT FOR P1

Reason:

The security subsystem has denied user *P1* access to this port.

System Action:

The logon is rejected.

User Action:

Contact your system administrator to provide authorization.

N26321

ACCESS DENIED TO HOST FOR P1

Reason:

The security subsystem has denied user *P1* host access.

System Action:

The logon is rejected.

User Action:

Contact your system administrator to provide authorization.

N26323

NETMASTER STILL INITIALIZING, TRY LATER

Reason:

You attempted to connect to the region while it is initializing.

System Action:

None.

User Action:

Wait until the region completes initialization, and then try again.

N26401

USERID INFORMATION FOR uuuuuuuu UNAVAILABLE

Reason:

An attempt to read a user record has failed because the user record 'uuuuuuuu' does not exist on the UAMS user database.

System Action:

The security function fails.

User Action:

Refer to your systems administrator.

N26402

USERID RECORD FOR uuuuuuuu CREATED, MODELLED ON modelid

Reason:

The user attempted a logon to SOLVE when there was no UAMS user record on the user database. However, a model user was defined to SOLVE using SYSPARMS MODLUSER=. The password that was provided by the user matches that of the model user and the logon proceeds. A user record is created for userid 'uuuuuuuu' based on 'modelid'.

System Action:

The logon is successful and a new user record is created.

User Action:

None.

N26403

MODEL USER (modelusr) NOT FOUND

Reason:

'modelusr' was specified as a model user through the SYSPARMS command. The model userid is not defined on the UAMS dataset.

System Action:

The logon is rejected.

User Action:

Define the required model userid to UAMS.

N26404

UAMS UDB RECORD FOR userid FAILED DECRYPTION

Reason:

The UDB record is stored in an encrypted form. Record retrieval was unable to decrypt the record. The wrong file may be in use or it contains invalid records.

System Action:

The function terminates.

User Action:

Refer this problem to your systems administrator for action.

N26405

UAMS UDB RECORD FOR X'aaaaaaaaaaaaaaaa' FAILED DECRYPTION

Reason:

The UDB record is stored in an encrypted form. Record retrieval was unable to decrypt the record. The wrong file may be in use or it contains invalid records. The record key contains non-display characters and is displayed in hex format.

System Action:

The function terminates.

User Action:

Refer this problem to your systems administrator.

N26406

USER userid IS A GROUP DEFINITION - LOGON REJECTED

Reason:

An attempt was made to logon to a UAMS Group definition. Group definitions are not available for logon and the logon is rejected.

System Action:

The logon request is rejected.

User Action:

Logon to a valid user definition.

N26407

USER userid HAS AN INVALID GROUP DEFINITION

Reason:

An attempt was made to logon or retrieve a user definition from the UAMS database. The user definition has a group user defined; however, this group definition is not a valid group definition.

System Action:

The request is rejected.

User Action:

Contact your systems administrator.

N26408

UAMS DATASET IS FULL - REQUESTED function FOR USERID uuuuuuuu FAILED

Reason:

The UAMS dataset is full and the requested 'function' for userid 'uuuuuuuu' failed.

System Action:

The request is rejected.

User Action:

Contact your systems administrator to increase the size of the UAMS dataset or to delete obsolete user definitions.

N26409

UAMS DATA SET I/O ERROR - REQUESTED function FOR USERID uuuuuuuu FAILED.

Reason:

An I/O error occurred whilst performing security 'function' for the userid 'uuuuuuuu'. The request is rejected.

System Action:

The request is rejected.

User Action:

Refer the problem to your systems administrator to determine the reason for the error.

N26410

USERID RECORD FOR uuuuuuuu ADDED BY UPDATE FUNCTION.

Reason:

An internal request to update a user definition resulted in the userid *uuuuuuuu* being added to the UAMS dataset.

System Action:

The user definition was added to the UAMS database.

User Action:

None; the update request completed successfully.

N26411

USERID RECORD FOR uuuuuuuu ALREADY EXISTS.

Reason:

An attempt was made to add a new user definition to the UAMS database. The userid uuuuuuuu already exists is the UAMS database.

System Action:

The request to add the new user definition to the UAMS database is rejected.

User Action:

Correct the userid on the ADD function and retry.

N26412

USER RECORD userid NOT DELETED - USERID INFORMATION UNAVAILABLE

Reason:

An attempt was made to delete a user record ('userid') from the UAMS database. The user record was not found.

System Action:

None.

User Action:

Correct the userid and retry the DELETE operation.

N26413

USERID RECORD FOR uuuuuuuu IS INVALID - GET OPT=KGT OR KLT.

Reason:

An &SECCALL GET OPT=KGT or KLT command was issued. The next sequential record on the user database for userid uuuuuuuu was invalid and was ignored. The next sequential record following or preceding *the in*valid record was read. This message is written to the activity log.

System Action:

The next sequential record is read.

User Action:

Contact your systems administrator in order that the user record in error can be corrected.

N26414

PASSWORD CHANGE INVALID FOR GROUP DEFINITION groupname

Reason:

An attempt was made to change the password of the group definition 'groupname'. This is invalid as group definitions cannot be logged on.

System Action:

The password change terminates.

User Action:

Correct the userid and retry.

N26415

GROUP USER NOT FOUND OR IN ERROR, PRIVILEGES RESET FOR USERID uuuuuuuu

Reason:

A user 'uuuuuuuu' is defined as using the privileges of a group definition. The group definition is not available. The user's privileges have been reset to the defaults. The logon, or the read, continues.

System Action:

The user's privileges are reset. The logon, or read, continues.

User Action:

Contact your systems administrator.

N26601

STRUCTURED FIELD IN ERROR - REFER TO LOG FOR DETAILS.

Reason:

The structured field processor determined that one (or more) structured field(s) passed to, or returned from the security exit was in error. The details of the structured field(s) in error are written to the activity log.

System Action:

The structured field is ignored.

User Action:

Correct the structured field(s) in error and retry the operation.

N26602

INSUFFICIENT STORAGE TO COMPLETE REQUEST.

Reason:

There was insufficient storage available to complete the security request.

System Action:

The request is not completed.

User Action:

Try the request later. If the problem persists, contact your product support representative.

N26701

STRUCTURED FIELD P1 IN ERROR

Reason:

A security sub-system exit has passed an invalid structured field (*P1*) or an invalid structured field was passed by an &SECCALL verb.

System Action:

This message is written to the activity log. The security request proceeds; however, the particular structured field in error is ignored.

User Action:

Identify the structured field in error and correct the error, either by correcting the NCL or the security exit.

N26A01

OBJECT INSTANCE METHOD CANCELLED BY RETCODE aaa FROM PROCEDURE bbbbbbbb.

Reason:

The NCL procedure bbbbbbb set a return code indicating that update of its target object instance was to be ignored. Execution of the system method routine is bypassed and the Object Instance is not updated in the repository.

System Action:

The message is returned to the client in the reply SDU.

User Action:

None.

N26A02

OBJECT METHOD REPLY FAILED.

Reason:

Object Services Framework generated reply to client failed.

System Action:

Message is logged.

User Action:

Check system log for possible causes.

N26A03

INSUFFICIENT STORAGE FOR OBJECT SERVICES REQUEST.

Reason:

An Object Services request could not be processed due to insufficient virtual storage.

System Action:

The request is terminated.

User Action:

Look for possible causes of high storage utilisation. Increase virtual storage address space size.

N26A04

OBJECT *aaaaaa* METHOD DATA INITIALIZATION FAILED.

Reason:

The Object Services Request Broker could not initialize the method for an object request. This usually indicates a problem with building the Mapped Data Objects (MDOs) or may indicate a resource shortage.

System Action:

The service routine is not executed.

User Action:

1. Check that the object maps are valid.
2. Check the activity log for additional messages.

N26B01

REPOSITORY OPEN FAILED FOR aaaaaaaa - bbbbbbbbbbbbbbbbbbbb

Reason:

The Object Services Data Domain aaaaaaaa open failed either because the file could not be opened, or the dataset keylength was invalid.

System Action:

The request is rejected.

User Action:

Verify that the repository data domain is correctly defined and available for the required access level.

N26B02

OBJECT NAME IS INVALID.

Reason:

The instance name passed to the object services access method could not be parsed.

System Action:

Access to the system repository is rejected.

User Action:

Check the request parameters, and verify mds maps for object class.

N26B03

INSUFFICIENT STORAGE.

Reason:

The object services repository access method could *not* acquire sufficient storage to process the request.

System Action:

The request is rejected.

User Action:

Check that sufficient storage has been allocated to the address space and that there are no errant processes holding excess storage.

N26B04

DUPLICATE OBJECT INSTANCE.

Reason:

A request to CREATE an object instance was issued and an instance with the same name already exists.

System Action:

The request is rejected.

User Action:

Check the name passed in the request.

N26B05

REPOSITORY aaaa ERROR. VSAM FDBK=bb.

Reason:

An attempt to access the repository dataset failed with the VSAM FDBK bb. The access type is aaaa.

System Action:

The request is rejected.

User Action:

Review the VSAM FDBK for the function specified in the message.

N26B06

PARENT OBJECT NOT FOUND.

Reason:

A CREATE request was issued for an object whose parent did not exist.

System Action:

The request is rejected.

User Action:

Review the service request parameters.

N26B07

PERSISTENT OBJECT INSTANCE NOT FOUND.

Reason:

The object instance specified in the service data unit did not exist.

System Action:

ERRORID of NOSUCHOBJECTINSTANCE is set in the reply SDU.

User Action:

Check the name specified in the Service Data Unit.

N26B08

REPOSITORY RECORD SIZE TOO SMALL FOR OBJECT

Reason:

An attempt was made to CREATE or update an object instance in the repository, and the maximum data domain record size was too small to contain the object.

System Action:

The request is rejected.

User Action:

Check the size requirements for the object instance.

N26B09

INVALID UPDATE REQUEST FOR READ ONLY REPOSITORY

Reason:

An update request was issued for a repository which was in read-only mode.

System Action:

The request is rejected.

User Action:

Check the access mode for the repository.

N26B10

OBJECT DELETE REQUEST REJECTED FOR OBJECT WITH CHILDREN.

Reason:

A DELETE request was received for an object with dependant children.

System Action:

The request is rejected.

User Action:

Review the request.

N26B11

REPOSITORY ACCESS FAILED - CREATE REQUEST REJECTED

Reason:

An attempt to maintain the data domain root record failed. This message usually indicates a logical error exists on the data domain data set.

System Action:

The request is rejected.

User Action:

Check the integrity of the data domain data set. If necessary, restore the data domain from backup.

N26B12

DATA DOMAIN aaaaaaaaaaaa NOT INITIALIZED.

Reason:

The data domain required to service the object services request is not available.

System Action:

The request is rejected.

User Action:

Look for other messages in the log to determine why data domain initialization failed.

N26C02

MODE=UNCONFIRMED INVALID FOR &&OSCALL CONVERSE.

Reason:

No reply is expected for an unconfirmed request. &OSCALL CONVERSE anticipates a reply, hence it is not valid to issue an unconfirmed request using &OSCALL CONVERSE.

System Action:

The request is rejected.

User Action:

Use &OSCALL SEND, or change the type to CONFIRMED.

N26D01

REGISTRATION NAME IS INVALID.

Reason:

The object instance name passed in the service request could not be parsed.

System Action:

The request is rejected.

User Action:

Check the request parameters.

N26D06

INSUFFICIENT STORAGE FOR REGISTRATION REQUEST.

Reason:

An attempt to access the system directory failed because not enough storage was available to process the request.

System Action:

The request is rejected.

User Action:

Check your system storage utilisation.

N26D07

Transient OBJECT INSTANCE NOT FOUND.

Reason:

The object name specified in the service data unit could not be located in the system directory.

System Action:

The reply ERRORID is set to NOSUCHOBJECTINSTANCE.

User Action:

Check the instance name passed in the request.

N26E01

EVENT SELECTION FILTERING ERROR ON EFD aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa

Reason:

An attempt to compare an event to the filter specified on the Event Forwarding Discriminator (EFD) failed.

System Action:

Processing of the event continues with the next Event Forwarding Discriminator.

User Action:

Check the EFD filter is valid. It may also be necessary to check that the event mdo is correctly mapped.

N26F01

SCOPED REQUEST INVALID - aaaaaaaaaaaaaaaaaaaaa

Reason:

An object services selection request could not be processed for one of the following reasons:
- The request CMISFILTER parameters were invalid.
- The NAMEFILTER was invalid.
- A data domain for the object was not available.

System Action:

The request is rejected.

User Action:

Correct the request parameters depending on the reason for the failure.

N26F02

SELECTION METHOD FAILED. TOO MANY SUBTREE LEVELS.

Reason:

An Object Services selection method could *not* continue because the number of levels in the Base Object hierarchy exceeded 28.

As it is unusual to have this many levels in the naming hierarchy, this error may indicate a recursive naming structure.

System Action:

The selection method is terminated.

User Action:

Verify the integrity of the repository data structure.

N26F03

MDS ERROR PROCESSING aaaaaaaaaaaaaaaaaaaaaa MDORC=bb, MDOFDBK=cc.

Reason:

The Object Services Selection method detected an error while processing an internal mapped data structure. The component is: aaaaaaaaaaaaaaaaaaaaa, mds retcode bb, mds fdbk is cc.

System Action:

Processing of the selection request is terminated.

User Action:

Verify the map definitions for all object classes which are the target of the request. Check the request parameters.

N26F08

INSUFFICIENT STORAGE FOR OBJECT SERVICES REQUEST.

Reason:

The Object Services selection method could not acquire sufficient storage to process a request.

System Action:

The selection method is terminated.

User Action:

Check system storage utilisation.

N26G01

INVALID MIB OBJECT FOR CLASS aaaaaaaaaaaa.

Reason:

A system error occurred when the object services request broker attempted to access the class record aaaaaaaaaaaa.

System Action:

The request is rejected.

User Action:

Review the activity log to determine the cause of the class initialization failure. Particularly note any object services initialization errors that occurred during NetMaster initialization.

N26G02

MDS MAP CONNECTION FAILED FOR OBJECT MDO. MDSRC=00 FDBK=00 MAPNAME=aaaaa aaaaaaa.

Reason:

An internal MDS assignment failed while processing an object services request.

System Action:

The request is rejected.

User Action:

Determine the reason for the MDS error from the return code, feedback and mapname in the message.

N26G03

OBJECT INSTANCE NOT FOUND.

Reason:

The object instance named in the object services request could not be located in the system repository.

System Action:

The reply ERRORID is set to NOSUCHOBJECTINSTANCE.

User Action:

Check the request name parameters.

N26G05

OIS NOT SUPPORTED FOR MANAGED OBJECT CLASS: aaaaaaaaaaaa.

Reason:

A request was passed to the object services access method for an unsupported object data domain type.

System Action:

The request is rejected.

User Action:

Check the object class specification.

N26G06

DATA DOMAIN NOT AVAILABLE FOR OBJECT CLASS *aaaaaaaaaaaa*.

Reason:

A request was passed to the Object Services access method, which required access to an unavailable data domain.

System Action:

The request is rejected.

User Action:

Check the activity log for messages indicating why the data domain is not initialized.

N26G07

UPDATE INHIBITED FOR MANAGED OBJECT CLASS aaaaaaaaaaaa.

Reason:

An update request was passed to the object services access method routines and the class for the managed object instance is not available for update.

System Action:

The request is rejected.

User Action:

Check request parameters.

N26G08

OBJECT NAME IS INVALID.

Reason:

The object services access method could not parse the name of the object instance passed in the request.

System Action:

The request is rejected.

User Action:

Check the request name parameters.

N26H01

CLASS DEFINITION aaaaaaaaaaa NOT FOUND.

Reason:

Lookup of the object class by the object services broker failed. Class aaaaaaaaaaa was not defined to the MIB.

System Action:

The request is rejected.

User Action:

Check the class specification for the request.

N26H02

SYSTEM NOT INITIALIZED.

Reason:

Object Services is disabled because system initialization failed.

System Action:

The request is rejected.

User Action:

Check the activity log for initialization messages that indicate why the initialization of Object Services failed.

N26I01

ZOSMIB OBJECT INITIALIZATION FAILED. OBJECT SERVICES NOT AVAILABLE.

Reason:

The system MIB object ZOSMIB load failed. This is the root object for the MIB.

System Action:

Object Services is disabled.

User Action:

Check the SOLVE activity log for other messages which indicate the reason for the load failure. Correct and re-start SOLVE.

N26I02

MIB LOAD FAILED FOR *aaaaaaaaaaaa* CLASS RECORD. <OBJECT SERVICES INITIALISATION FAILED.>

Reason:

The Object Services kernel class *aaaaaaaaaaaa* could not be loaded. This is usually because the ZOSMIB data domain cannot be accessed or the MIB has not been created.

If initialization is unable to continue, the message says: OBJECT SERVICES INITIALISATION FAILED. If this is not present in the message, initialization proceeds using default values for the missing object.

Note: By default the ZOSMIB data domain is in the OSCNTL file.

System Action:

Initialization continues.

User Action:

If the error was due to file errors on the OSCNTL file, you must recover the OSCNTL file and restart SOLVE.

If your MIB has not been compiled, compile it before proceeding with Object Services initialization.

N26I03

MIB LOAD FAILED FOR aaaaaaaaaaa DOMAIN RECORD.

Reason:

The data domain definition for aaaaaaaaaaa could not be loaded.

System Action:

Object Services is disabled.

User Action:

Check the SOLVE system log for the reason and re-start SOLVE.

N26I04

MIB LOAD FAILED FOR *aaaaaaaaaaaa* ACTION RECORD.

Reason:

The action definition for *aaaaaaaaaaaa* cannot be loaded.

System Action:

Initialization continues. Some Object Services functions are disabled.

User Action:

Review the activity log for the reason for the failure.

N26I05

MDS MAP FAILED DURING OBJECT SERVICES INITIALIZATION - OS INITIALIZATION TERMINATED.

Reason:

An system object map failed during Object Services initialization.

System Action:

Object Services is disabled.

User Action:

Ensure that the OSCNTL file has been correctly installed. It may be necessary to re-install and re-compile if the ZOSMIB map is invalid. Alternatively re-generate the ZOSMIB map from source and re-start system.

N26I06

OBJECT SERVICES INITIALIZATION FAILED - STORAGE SHORTAGE.

Reason:

There was insufficient storage to initialize Object Services.

System Action:

Object Services is disabled.

User Action:

Increase the SOLVE region size.

N26J01

EVENT DELIVERY TO DESTINATION aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa FAILED: b bbbbbbbbbbbbbbbbbbb

Reason:

Delivery of an event to server aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa failed for one of the following reasons:
- Insufficient Storage; MDS mapping error; The connection to the server failed.

System Action:

The event report is not delivered.

User Action:

Check the server specified on the EFD is active.

N26K01

REPOSITORY OPEN FAILED FOR *aaaaaaaa* - *bbbbbbbbbbbbbbbbbbbb*

Reason:

An attempt to open the VSAM data set for repository data domain *aaaaaaaa* failed for reason *bbbbbbbbbbbbbbbbbbbb*.

System Action:

The data domain is unavailable and the data domain initialization action terminates.

User Action:

Review system log for reason for dataset open failure.

N26K02

DATA DOMAIN OBJECT *aaaaaaaaaaaa* - *bbbbbbbbbbbb* ATTRIBUTE REQUIRED. INIT IALISATION FAILED.

Reason:

The data domain attribute *bbbbbbbbbbbbbb* must be set before the data domain *aaaaaaaaaaaa* can be opened.

System Action:

The data domain is disabled.

User Action:

Ensure that the data domain is correctly specified. Recompile MIB if necessary.

N26K03

DATA DOMAIN COULD NOT BE ACCESSED - SEE LOG.

Reason:

Dataset allocation failed for repository data domain.

System Action:

The data domain is disabled.

User Action:

Review allocation error messages in the activity log.

N26K05

REPOSITORY GET ERROR. VSAM FDBK=*aa*.

Reason:

A VSAM error occurred when the Object Services data domain initialization routine attempted to retrieve the data domain definition record.

System Action:

The data domain is disabled.

User Action:

Check dataset integrity for the data domain.

N26K06

DATA DOMAIN aaaaaaaaaaaa INTEGRITY ERROR DETECTED.

Reason:

The instance identifier set in the system is invalid. This indicates possible corruption of the repository data domain.

System Action:

The data domain root record is not updated.

User Action:

Verify integrity of the repository dataset.

N26K07

DATA DOMAIN aaaaaaaaaaaa INITIALIZATION FAILED. FILE ALREADY ASSIGNED T O bbbbbbbbbbbb.

Reason:

The dataset allocated to Data Domain aaaaaaaaaaaa was previously opened for a different Data Domain definition bbbbbbbbbbbb.

System Action:

The data domain is disabled.

User Action:

Ensure that each dataset is allocated to only one Data Domain.

N26L02

OBJECT MDO IS INVALID - aaaaaaaaaaaaaaaaaaaaaaaa

Reason:

The object mdo specified for an object services method is invalid for one of the following reasons:
- OBJECT CLASS MISSING - CLASSID is required component of object.
OBJECT MDO NOT FOUND - The object mdo could not be found.

System Action:

The request is rejected.

User Action:

Correct the &OMCALL NCL statement.

N26L03

OBJECT NOT LOCATED FOR aaaaaa.

Reason:

The object name specified for an object services method does not exist in the Object Instance Repository.

System Action:

The request is rejected.

User Action:

Verify the object name.

N26L04

INVALID MIB OBJECT FOR CLASS *aaaaaaaaaaaa*.

Reason:

The Managed Object Class *aaaaaaaaaaaa* has not initialized in the MIB.

System Action:

The request is rejected.

User Action:

Check the activity log for messages indicating why the MIB class build failed.

N26L05

OIS NOT SUPPORTED FOR MANAGED OBJECT CLASS: aaaaaaaaaaaa.

Reason:

The OIS method service routine was passed a request for an object which is not defined with OIS support.

System Action:

The request is rejected.

User Action:

This is a system error. Ensure that the class definitions have been specified correctly and that they have not been dynamically modified.

N26L06

MDS MAP CONNECTION FAILED FOR OBJECT MDO. MDSRC=00 FDBK=00 MAPNAME=aaaaa aaaaaaa.

Reason:

An internal MDS assignment failed in the Object Services OIS method routine.

System Action:

The request is rejected.

User Action:

Use the MDS RETCODE and FDBK to determine the cause of the failure.

N26M01

&OMCALL $OSOBJECT MDO MUST BE AVAILABLE IN NCL OR SPECIFIED ON OBJECT OP ERAND.

Reason:

The OBJECT operand was not specified on an &OMCALL statement and the $OSOBJECT MDO was not available in the NCL procedure.

System Action:

The &OMCALL statement is ignored.

User Action:

Specify the OBJECT operand on the &OMCALL statement, or ASSIGN an MDO to $OSOBJECT.

N26O03

OBJECT DELETION REJECTED BY SYSTEM METHOD.

Reason:

A DELETE request for a Managed Object Instance was rejected by a the system resource manager. System methods may reject deletion requests for protected resources.

System Action:

The DELETION request is rejected.

User Action:

N/A

N26P01

OBJECT MDS INVALID.

Reason:

An invalid object was passed to the Object Services ZOSEFD system method

System Action:

The request is rejected.

User Action:

Correct the EFD request SDU.

N26P02

EFD FILTER INVALID.

Reason:

The CMIS filter passed in an EFD service request could not be parsed.

System Action:

The EFD request is rejected.

User Action:

Correct the CMIS filter specification.

N26P03

EFD CONTAINS TOO MANY DESTINATIONS.

Reason:

An EFD service request contained more than the maximum number of destinations allowed.

System Action:

The EFD service request is rejected.

User Action:

Reduce the number of destinations for the EFD.

N26R01

SELECTION METHOD FAILED FOR m_o_class m_o_instance

Reason:

The system object services selection method failed for the managed_ object_instance of managed_object_class.

System Action:

A message containing the reason for the failure is returned in the reply SDU.

User Action:

Check the reply SDU and correct the selection request.

N26R02

CMISFILTER PROCESSING FAILED.

Reason:

The Object Services system selection method could not process the CMIS filter against a selected object.

System Action:

Selection processing is terminated.

User Action:

Check the CMIS filter specified on the selection request.

N26R03

NESTED SELECTION METHOD FAILED FOR m_o_class m_o_instance

Reason:

A nested NCL selection procedure was required to complete a selection request by the system selection routine. The NCL selection method execution failed.

System Action:

Processing of the selection request is terminated.

User Action:

Check that selection methods defined to the MIB are correctly installed.

N26R04

MDS ERROR ON SELECTED OBJECT. MDORC=*aa*,MDOFDBK=*bb*.

Reason:

An attempt to return a selected object by the Object Services selection method failed because an MDS error occurred on the object assignment.

System Action:

Processing for the selection method is terminated.

User Action:

Check object maps are correctly defined.

N26R05

OPERATION FAILED.

Reason:

Object Services Selection method processing failed.

System Action:

Processing for the selection method is terminated.

User Action:

Check selection request parameters.

N26T01

DIRECTORY QUERY - TRANSACTION PROTOCOL ERROR

Reason:

An APPC protocol violation occurred while attempting to process a DIRECTORY_QUERY system transaction.

System Action:

The error message is written to the SOLVE system log.

User Action:

Look for other APPC messages to find reason for conversation failure and retry.

N26T02

DIRECTORY QUERY - STORAGE SHORTAGE.

Reason:

A storage shortage occurred while attempting to process the DIRECTORY_QUERY APPC transaction.

System Action:

The error message is written to the log. The object method fails.

User Action:

Investigate the reason for storage shortage. Correct and retry.

N26U02

MDS MAP CONNECTION FAILED FOR OBJECT MDO. MDSRC=*00* FDBK=*00* MAPNAME=*aaaaaaaaaaaa*.

Reason:

An MDS error occurred while the system action routine was attempting to build a request SDU.

System Action:

The system action request is *not* issued.

User Action:

Check the MDS feedback information to determine the cause of the mapping failure.

N26V06

OBJECT SERVICES TERMINATION FAILED - STORAGE SHORTAGE.

Reason:

During Object Services Termination, a system request could not be processed because there is insufficient storage.

System Action:

Object Services Termination can not continue.

User Action:

Ensure that sufficient Virtual Storage is allocated to the SOLVE address space.

N27G01

CURRENT PASSWORD INCORRECT, RE-ENTER

Reason:

An attempted password change operation has been rejected because the password supplied as the CURRENT password was incorrect.

System Action:

None.

User Action:

Enter correct password.

N27G02

NEW PASSWORD TOO SHORT OR TOO LONG, RE-ENTER

Reason:

An installation defined minimum or maximum password length applies.

System Action:

None.

User Action:

Choose a password whose length conforms with you installation's security standards. If in doubt contact your systems administrator.

N27G03

NEW PASSWORD CANNOT BE THE SAME AS CURRENT PASSWORD

Reason:

In response to a request to change passwords a replacement password has been entered that is the same as the existing password. A replacement password must be different.

System Action:

None.

User Action:

Enter a different password.

N28101

FIELD MUST BE Y OR N

Reason:

The field marked by the cursor is invalid. The only values that can be assigned are Y or N.

System Action:

None.

User Action:

Correct and re-enter.

N28102

INVALID VALUE

Reason:

The field marked by the cursor is invalid.

System Action:

None.

User Action:

Correct and re-enter.

N28127

IT IS INVALID TO HAVE 'X' AS INITIAL OCS COMMAND

Reason:

If X were allowed as the initial command executed automatically on entry to Operator Control Mode it would cause immediate exit to the primary menu. For this reason it is not allowed.

System Action:

None.

User Action:

Correct the command field and retry.

N28136

RECEIVE ALL PPO AND UNDELIVERABLES CANNOT BOTH BE Y

Reason:

These two fields are mutually exclusive and cannot both be set to the same value.

System Action:

None.

User Action:

Correct the fields and retry.

N28137

RECEIVE ALL PPO AND UNDELIVERABLES CANNOT BOTH BE N

Reason:

These two fields are mutually exclusive and cannot both be set to the same value.

System Action:

None.

User Action:

Correct the fields and retry.

N28501

VSAM INITIAL LOAD COMPLETED SUCCESSFULLY, DD= P1

Reason:

This message appears on the activity log only. Indicates that the system has initialized an empty VSAM dataset and shows the associated DD name (*P1*).

System Action:

For a VSAM KSDS, a low key record x'00' is inserted and then deleted. For an ESDS, a record consisting of message N28510 is inserted as the first record in the dataset and remains in the dataset.

User Action:

None.

N28502

OPEN FAILED FOR VSAM ACB, CODE *P1* - DD=*P2*

Reason:

A VSAM dataset failed to open in CREATE mode for the specified error reason code (*P1*), in the format X'*xy*'. The DD name associated with the dataset is shown (*P2*). Empty VSAM datasets are opened in CREATE mode in order to perform an initial load.

System Action:

The system terminates with a user abend code if the dataset is a system dataset. If the dataset is a User DataBase (UDB) processing continues but the dataset is not available for NCL procedure processing.

User Action:

Enter **/VSAMRC** at the command prompt to access NETINFO : Browse VSAM OPEN Macro Return Codes. Enter the ACB code value in the VSAM error code field and press Enter.

Refer to the appropriate *VSAM Programming* manual for an explanation of the error code.

N28503

OPEN FAILED FOR VSAM ACB, CODE *P1* - DD=*P2*

Reason:

A VSAM dataset failed to open in UPDATE mode for the specified error reason code (*P1*), in the format X'*xy*'. The DD name associated with the dataset is shown (*P2*).

System Action:

The system terminates with a user abend code if the dataset is a system dataset; if the dataset is a User DataBase (UDB) processing continues but the dataset is not available for NCL procedure processing.

User Action:

Enter /VSAMRC at the command prompt to access NETINFO : Browse VSAM OPEN Macro Return Codes. Enter the ACB code value in the VSAM error code field and press Enter.

Refer to the appropriate *VSAM Programming* manual for an explanation of the error code.

N28504

VSAM INITIAL LOAD FAILED, DD=*P1*

Reason:

When a UDB is opened, it is tested to determine if it is empty (not previously loaded). If the dataset is empty, VSAM requires that it be loaded before it can be processed in update mode. In such cases the dataset is opened in create mode and inserts an initialization record. The attempt to do this has failed. The DD name (*P1*) is shown.

System Action:

The UDB is not available for further processing.

User Action:

Determine the cause of the error, correct and retry.

N28506

BUILD FAILED FOR VSAM LSR POOL, R15= P1

Reason:

An attempt to build an LSR pool, by calling module NMDEFLSR, resulted in the module returning the indicated value (*P1*) in Register 15.

System Action:

The UDB requesting LSR processing will not be opened.

User Action:

Use the VSAM Programming Guide to determine the reason for the error, the R15 value is the return code from the BLDVRP macro.

N28507

VSAM LSR POOL P1 BUILT

Reason:

A UDB was opened requested LSR processing. The open request was the first that required the indicated LSR pool (*P1*).

System Action:

The LSR pool has been built using the specifications as defined in the LSRPOOL command.

User Action:

None.

N28508

VSAM LSR POOL P1 DELETED

Reason:

The last UDB using the indicated LSR pool has been closed. The LSR pool (*P1*) has been deleted.

System Action:

None.

User Action:

If necessary the format of the LSR pool can be changed by modifying the LSRPOOL command. Any such changes will be utilized when the next UDB is opened that requires LSR processing.

N28509

VSAM ACB OPEN WARNING, CODE= P1, DD= P2 PROCESSING CONTINUING

Reason:

During open processing a VSAM warning class message was detected. The warning code (P1) is shown in the format X'xy'. The associated DD name is also shown (P2).

System *A*ction:

Processing continues and the dataset is classified as having been opened successfully.

User Action:

Investigate the reason for the error using the VSAM Programming Guide and determine if the error will impact processing. Take corrective action if necessary.

N28510

VSAM INITIAL LOAD PERFORMED AT P1 ON P2

Reason:

This message is inserted as the first record in an ESDS UDB that required load processing. VSAM necessitates that new datasets be opened in create mode and a minimum of one record be inserted before the dataset can be shared. For KSDS datasets this record is later deleted. For ESDS datasets it is not possible to delete the record. The time (*P1* - hh.mm.ss) and date (*P2* -day-dd.mon-year) are included as part of the data.

System Action:

This record remains as the first record in the dataset and provides a record of the date and time the dataset was loaded.

User Action:

If not required in the dataset, this record can be dropped by using the VSAM IDCAMS utility to REPRO the dataset specifying the SKIP(1) operand to start the copy at the second record.

N28511

VSAM DATASET OPEN FAILED, DD= P1 - P2

Reason:

An attempt to open a VSAM dataset, (DD name *P1*), has failed for the stated reason (*P2*).

System Action:

If the dataset is a system dataset, for example the VFS, PANELS or USERIDS dataset, the region will abend with message N92049, abend code 285-09. If the dataset is a UDB (being opened by a UDBCTL command) the open fails.

User Action:

Examine the reason for the failure. Use Access Method Services to delete and redefine the dataset correctly.

N28512

CLOSE FAILED FOR VSAM ACB, R15= P1, EC= P2, DD= P3 UNUSABLE

Reason:

An error occurred trying to open an optional system dataset, and a subsequent attempt to close the VSAM ACB failed.
P1 = Return code from ACB CLOSE (X'xy').
P2 = Error Code from SHOWCB.
P3 = JCL DD name associated with the dataset.

System Action:

If the dataset is not a mandatory system dataset, then the system continues this dataset.

User Action:

Investigate why the dataset is in error.

N28601

LOAD FOR VSAM UTILITY utilname FAILED

Reason:

An attempt to invoke the VSAM utility program *utilname* failed.

System Action:

The system terminates with a user abend code.

User Action:

Determine the reason for the load failure and restart SOLVE.

N28801

***ERROR* EXTENDED ADDRESSABILTY ESDS NOT SUPPORTED ON P1**

Reason:

A request for an Extended Format / Extended Addressability ESDS has failed for the DD name indicated (P1). ESDS support is limited to datasets below 4GB.

System Action:

The request fails.

User Action:

Change your NCL procedure to use either:
- a smaller ESDS
- a KSDS.

N28802

***WARNING* VSAM P1 SHORTAGE FOR P2 - LSR POOL**

Reason:

This Monitor message indicates that one or more VSAM string or buffer shortages has occurred. In the message:

P1 is the shortage type, for example, STRING or BUFFER
P2 is the DD name.
The SHOW VSAM command can be used to determine the total number of string and buffer shortages that have occurred. A large number indicates that system tuning is required to avoid significantly impacting performance.

System Action:

Processing is suspended for that request until sufficient resources are available.

User Action:

If the LSR pool is indicated as the source of the problem, use the LSRPOOL command to provide more VSAM processing strings or buffers. For more information, see your systems administrator.

N28803

***ERROR* VSAM ERROR P1 DETECTED ON P2 USING LSR POOL**

Reason:

When using deferred I/O an attempt to write a record has resulted in an error although the system previously indicated that the record was written successfully. In an MVS-type environment, message N28805 will follow with additional details. In the message:
P1 is the VSAM error code (X'xy')
P2 is the DD name.

System Action:

Processing continues.

User Action:

Refer to the VSAM Programmers Guide to determine the reason for the error and if it is likely to impact processing. Deferred I/O should not be used for critical datasets where errors of this nature could result in the loss of data. If necessary avoid using the DEFER option on the UDBCTL command when opening the dataset. Refer to your systems administrator.

N28804

***ERROR* VSAM PHYSICAL I/O ERROR FDBK= P1 DETECTED ON P2**

Reason:

During processing of the VSAM file, described by the ddname in the message, a VSAM macro return code indicated a physical error had occurred. The message provides the corresponding RPL feedback code (P1) and DD name (P2).

System Action:

The file processing request fails.

User Action:

Refer to the VSAM Programming manual to determine the meaning of the feedback from the message and the appropriate course of corrective action. If the dataset with the I/O error has been opened using the LSR option, it should be closed and opened to free the LSR Buffer that was being used at the time of the error.

N28805

INFO P1

Reason:

This message is issued as a result of a physical I/O error on a VSAM dataset on an MVS (or equivalent) system. It will be preceded by message N28803. The information contained in the message is as returned by VSAM (*P1*) in the form:
yyddd,hhmmssth,rbaaddr ,d-or-i,volser,jobname ,j

System Action:

The file I/O request fails.

User Action:

Refer to message N28803.

N28806

GENERIC REQUEST HAS INVALID KEYLENGTH OR NULL KEY VARIABLE.

Reason:

A &FILE verb has been issued using an invalid generic key length or with the GENLEN= parameter supplied with a null variable.

System Action:

The &FILE verb fails with &FILERC=8 and &SYSMSG set to the N28806 message text.

User Action:

Investigate the reason for the error and correct the NCL program logic as required.

N29501

INVALID SYNTAX

Reason:

The failing statement contains invalid syntax.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29502

REQUIRED DATA OMITTED

Reason:

The required source data is missing from the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29503

REQUIRED KEYWORD NOT FOUND

Reason:

The failing statement does not contain a required keyword.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29504

REQUIRED DATA OMITTED

Reason:

The required source data for the function has been omitted from the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29505

INVALID NUMBER

Reason:

An invalid number has been specified on the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29506

INVALID HEXADECIMAL NUMBER

Reason:

An invalid hexadecimal number has been encountered on the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29507

INVALID HEXADECIMAL STRING

Reason:

An invalid hexadecimal string has been encountered on the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29508

INVALID NAME

Reason:

An invalid name has been encountered on the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29509

INVALID VARIABLE NAME

Reason:

An invalid variable name has been encountered on the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29510

INVALID NAME

Reason:

An invalid resource name has been encountered on the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29511

DATA IS INVALID LENGTH

Reason:

An invalid data length is specified on the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29512

NUMBER NOT IN RANGE

Reason:

A number has been specified on the failing statement which is outside of the range of expected values.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29513

DUPLICATE KEYWORD

Reason:

A duplicate keyword has been encountered on the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29514

INVALID SYNTAX OR OMITTED KEYWORD

Reason:

The failing statement is either invalid or a required keyword is missing.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29515

REQUIRED KEYWORD NOT FOUND

Reason:

A required keyword has been omitted from the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29516

INVALID KEYWORD AFTER `='

Reason:

An invalid or reserved keyword has been encountered on the failing statement or command.

System Action:

The entered command or NCL procedure fails.

User Action:

Correct and retry.

N29517

MUTUALLY EXCLUSIVE KEYWORDS

Reason:

The failing statement cannot be processed because of conflicting keywords.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29518

INVALID (A,B) NUMBERS

Reason:

Invalid range numbers have been found on the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29519

FIRST NUMBER TOO LOW, OR SECOND TOO HIGH

Reason:

Invalid range numbers have been found on the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29520

REQUIRED KEYWORD OMITTED

Reason:

A required keyword has been omitted from the failing statement.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29521

INVALID SYNTAX, NOT YES OR NO

Reason:

The failing statement has invalid syntax.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29522

UNBALANCED PARENTHESIS

Reason:

The failing statement has a missing parenthesis or incorrectly paired parentheses.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29523

REQUIRED VARIABLE(S) OMITTED

Reason:

The failing statement requires one or more variables for the requested function.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29524

INVALID NAME OR GENERIC NAME

Reason:

The failing statement contains an invalid variable name or generic prefix.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29525

NULL VALUE INVALID

Reason:

The failing statement specifies a null variable.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29526

QUOTED STRING HAS NO CLOSING QUOTE

Reason:

The failing statement contains a string enclosed in quotes but there is no closing quote to delimit the string.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29527

SINGLE QUOTE NOT FOLLOWED BY QUOTE/BLANK/VALID-CHAR

Reason:

The failing statement contains a single quote that is neither enclosed in quotes itself nor is delimiting a string enclosed in quotes.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29528

INVALID DOMAIN NAME

Reason:

The failing statement contains a domain name which does not comply with the syntax rules for domain names. That is, it is longer than 4 characters or contains invalid values.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29529

INVALID NAME PATTERN

Reason:

This message is produced while parsing a command or NCL verb when an invalid name pattern is found.
A name pattern must by a valid PDSNAME-format character string, where the first character is alphabetic or national, and the remaining characters alphanumeric or national.
The name pattern can have two additional characters in any position, the question mark (?) meaning a 1-character wildcard (matches any single pattern), and the asterisk (*), meaning that 0 or more characters will match at this point.
For example, ABC? matches ABCD, ABCX. ABC* matches ABC, ABCD, ABC1 *ABC matches ABC, XXABC, X7ABC

System Action:

The command or NCL statement is rejected.

User Action:

Correct the name pattern.

N29530

STRING EXCEEDED MAXIMUM ALLOWABLE

Reason:

The failing statement contains a character or hex data string which is longer than the maximum allowed.

System Action:

The procedure fails.

User Action:

Correct and retry.

N29531

INVALID PREFIX

Reason:

The operand in error requires an NCL prefix value. An NCL prefix value must start with a non-numeric and contain valid NCL naming characters.

System Action:

The function is terminated in error. Message N29549 is issued indicating the operand in error.

User Action:

Correct the operand indicated by message N29549.

N29548

USER EXIT INDICATED ERROR

Reason:

The failing statement has been signaled as being in error by a user exit.

System Action:

The procedure fails.

User Action:

Correct, and retry.

N29549

PARAMETER IN ERROR: *parm*

Reason:

This message will follow another N295*xx* message if the parameter that caused the error can be detected. *parm* displays up to 50 characters of the parameter in error.

System Action:

As for the preceding message.

User Action:

As for the preceding message.

N29E01

CONNECT OF P1 FAILED - P2

Reason:

This message is issued when an attempt to connect to another region fails. It indicates that the outgoing connect request failed. The fields in the message are:
P1 - The target region's primary APPL name.
P2 - The failure reason:
UNABLE TO CHOOSE ACCESS METHOD The system was unable to pick an access method (eg VTAM) for the connection request; no access method was specified on the LINK START or DEFLINK command, and a domain definition (DOMAIN command) for the target prevented choice of an active access method.
REQUESTED ACCESS METHOD DENIED The connection request had a specific access method eg VTAM. However a DOMAIN DEFINE command has been entered for the target and that access method has been specified as NO.

System Action:

The connection is not started.

User Action:

Examine the reason. Common causes are having a wrong DOMAIN definition table entry (Wrong access methods enabled), or not having all the required access methods active (eg TCP/IP).

N29K10

Unable to set Generic Resource at this time

Reason:

An attempt was made to set the VTAM Generic Resource System Parameter (GENRSRC) while the region's primary VTAM ACB is open.

System Action:

The command is ignored.

User Action:

To change the GENRSRC parameter, the region's primary VTAM ACB must be closed. This parameter should be set either by the GENRSRC JCL parameter in your region's RUNSYSIN, or by setting the name in the $AC INIT parameter group and recycling this region.

N29K11

Generic Resource Name delete failed, see the Activity Log

Reason:

An attempt to set the VTAM Generic Resource system parameter (GENRSRC) to NO failed.

System Action:

The command is ignored.

User Action:

Refer to the activity log for details about this failure.

N29N01

INSUFFICIENT AUTHORITY FOR OPNDST COMMAND: NOT AN LU1 PRINTER

Reason:

An OPNDST command was rejected because your command authority restricts you to LU1 printers.

System Action:

The command is rejected.

User Action:

Contact your systems administrator.

N29X01

APPL NAME P1 MONITORING REQUEST ACCEPTED

Reason:

This message is issued in response to an APPLSTAT command and indicates that the request to monitor a VTAM application name (*P1*) was accepted.

System Action:

The system monitors the application.

User Action:

None.

N29X02

APPL NAME P1 MONITORING REQUEST ALREADY EXISTS

Reason:

This message is issued in response to an APPLSTAT command. The message indicates that the request to monitor a VTAM application name (*P1*) failed because there is already an active request for this application.

System Action:

The request is ignored.

User Action:

Use the SHOW APPLSTAT command to list active monitoring requests.

N29Y01

APPLNAME STATUS LAST UPDATED

Reason:

This message is the heading line for a SHOW APPLSTAT command. For more information, see message N29Y02.

System Action:

None.

User Action:

None.

N29Y02

P1 P2 P3

Reason:

This message is the detail line for a SHOW APPLSTAT command. The following fields are displayed:
P1 - The VTAM application name
P2 - The current status
P3 - The time that the status was last updated

System Action:

None.

User Action:

None.

N29Y03

NO MONITORED APPLICATIONS FOUND

Reason:

This message is issued in response to a SHOW APPLSTAT command where one of the following applies:
- No application monitoring requests exist
- No definitions match the application name criteria provided

System Action:

None.

User Action:

If an application name pattern was provided, try using a different pattern.

N2A101

INVALID DEBUG SYNTAX OR OMITTED KEYWORD

Reason:

A DEBUG command has been entered but the keyword following the DEBUG keyword is not valid. This second keyword is used to identify the type of DEBUG command entered.

System Action:

The DEBUG command is rejected.

User Action:

Correct the DEBUG command and retry.

N2A201

DEBUGID nnnnnn DOES NOT EXIST

Reason:

A DEBUG START command has been entered with the DEBUGID operand to connect to a suspended debug session but no suspended debug session exists with the specified debugid.

System Action:

The DEBUG command is rejected.

User Action:

Correct the DEBUGID operand and retry. The SHOW DEBUG command can be used to obtain the debugid.

N2A202

NCL PROCESS nclid IS ALREADY BEING DEBUGGED

Reason:

A DEBUG START command has been entered with the NCLID operand to gain debug control over an executing NCL process. The NCL process is already under control of debug.

System Action:

The DEBUG command is rejected.

User Action:

The SHOW DEBUG command may be used to find out which user is debugging the NCL process.

N2A203

ANOTHER USER IS ALREADY DEBUGGING WITH THE SAME SCOPE SPECIFICATION

Reason:

A DEBUG START command has been entered which has targeted exactly the same scope as another DEBUG START in the system. It is invalid for different debug scopes to specify exactly the same criteria.

System Action:

The DEBUG command is rejected.

User Action:

Correct the DEBUG command operands and retry. The SHOW DEBUG command can be used to find out which user has entered the identical DEBUG START command.

N2A204

NCL PROCESS nclid IS NOT EXECUTING

Reason:

A DEBUG START command has been entered with the NCLID operand to target a specific NCL process but the NCL process is not executing in the system.

System Action:

The DEBUG command is rejected.

User Action:

Correct the NCLID operand and retry.

N2A205

NOT AUTHORISED TO DEBUG ANOTHER USERS NCL

Reason:

A DEBUG START command has been entered to debug NCL which is executing in another users region but the command issuer does not have sufficient authority to debug NCL owned by another user.

System Action:

The DEBUG command is rejected.

User Action:

None.

N2A206

INSUFFICIENT STORAGE TO SATISFY REQUEST

Reason:

A DEBUG START command has been entered but a storage shortage has prevented the system from starting the debug session.

System Action:

The DEBUG command is rejected.

User Action:

Investigate the reason for the storage shortage.

N2A207

DEBUG START REJECTED, DEBUG ALREADY ACTIVE

Reason:

A DEBUG START command has been entered with the DEBUGID operand to connect to a suspended debug session but the command issuer already has a debug session active.

System Action:

The DEBUG command is rejected.

User Action:

The DEBUG STOP command may be used to suspend the current debug session. The DEBUG START command may then be used to connect to the suspended debug session.

N2A208

DEBUG SESSION STARTED.

Reason:

A DEBUG START command has been entered and has successfully begun debug processing.

System Action:

Debug processing begins.

User Action:

Other DEBUG commands may be used to control the NCL processes which are being debugged.

N2A209

THE WINDOW/REGION/USER IS NOT ACTIVE. THIS IS REQUIRED IF KEEP=NO IS SPECIFIED OR DEFAULTED.

Reason:

A DEBUG START command has been entered without the KEEP=YES operand and the targeted WINDOW/REGION/USER does not currently exist.

System Action:

The DEBUG command is rejected.

User Action:

The KEEP=YES operand may be entered to allow the debug to begin without the window/region/user existing. This allows debug to be started on user region such as APPC which are transient and to not exist for long periods of time.

N2A210

DEBUG OF NCL PROCESS nclid STOPPED

Reason:

A DEBUG STOP command has been entered with the NCLID= operand to stop debug of a particular NCL process. The command has been successfully processed.

System Action:

Debug control has been removed from the specified NCL process.

User Action:

None.

N2A211

NCL PROCESS nnnnnn IS INELIGIBLE FOR DEBUG

Reason:

A DEBUG START command has been entered which specified the NCLID of a procedure which is not eligible for debug. This may be for one of the following reasons:
- the process is a LOCKPROC system process
- the process is a MSGPROC and the DEBUG START command was entered from the environment in which the MSGPROC is executing. This is invalid because if the process became suspended the debugging user would no longer be able to see command responses.
- the DEBUG START command was entered from within the dependent (&INTCMD) environment of the nominated process. This is invalid because if the process became suspended it could not enter any DEBUG commands to resume execution.

System Action:

The DEBUG START command is rejected.

User Action:

None.

N2A212

DEBUG SESSION STOPPED

Reason:

A DEBUG STOP command has been entered to stop all debugs owned by the command issuer. The command has been successfully processed.

System Action:

Debug control has been removed from all NCL processes which were under debug control from the command issuer's environment.

User Action:

None.

N2A213

THE USER OPERAND IS REQUIRED AS NO USER IS LOGGED ON TO THE SPECIFIED REGION

Reason:

A DEBUG START command has been entered with the REGION operand and no USER operand and without the KEEP=YES operand. To prevent the debug session maintaining control over NCL in the region for an excessive period of time and to increase security, the USER operand must be included on the DEBUG START command.

System Action:

The command is rejected.

User Action:

Specify a userid on the USER operand of the DEBUG START command.

N2A214

THE REGION OPERAND IS REQUIRED AS THE USER HAS MULTIPLE SESSIONS

Reason:

A DEBUG START command has been entered with the USER operand and no REGION operand and without the KEEP=YES operand. To identify which region is to be debugged the REGION operand must be included on the DEBUG START command.

System Action:

The command is rejected.

User Action:

Specify a region name on the REGION operand of the DEBUG START command.

N2A215

DEBUG SESSION ENDED BY ENVIRONMENT/PROCEDURE TERMINATION

Reason:

This message is sent to the SOLVE activity log when the environment (eg. OCS, dependent environment) which has an active debug session or the procedure terminates.

System Action:

The debug session is terminated.

User Action:

None.

N2A216

INSUFFICIENT AUTHORITY FOR REQUESTED FUNCTION

Reason:

A DEBUG START or DEBUG STOP command has been entered with the DEBUGID operand to reconnect to or terminate a suspended debug session. The command issuer is not authorized to issue the command to action another users debug session.

System Action:

None.

User Action:

None.

N2A217

DEBUG SESSION SUSPENDED, DEBUGID nnnn

Reason:

A DEBUG STOP TYPE=SUSPEND command has been issued to suspend a debug session and has completed successfully. A unique number, the 'DEBUGID', has been assigned to the suspended debug session. This number must be included on any DEBUG START or DEBUG STOP command which are to action the suspended debug session.

System Action:

The debug session has been suspended.

User Action:

None.

N2A218

NO DEBUG SESSION ACTIVE FROM THIS ENVIRONMENT

Reason:

A DEBUG STOP command was issued, and no previous DEBUG START command had been issued. No debug environment (established by a DEBUG START command) exists for the STOP command to terminate.

System Action:

None.

User Action:

None.

N2A219

PROCEDURE procname NCLID nnnnnn IS UNDER DEBUG CONTROL

Reason:

This message is issued to the owner of a restarted debug session to document a process as being under debug control. This occurs when the DEBUG START command has been issued and the DEBUGID operand was specified. The message is issued for every NCL process that is under the previously suspended debug sessions control at the time the DEBUG START command is processed.
The NCL process remains under debug control until a DEBUG STOP command is issued, or the NCL process no longer satisfies the criteria specified on the DEBUG START command, or the NCL process terminates.

System Action:

None.

User Action:

The owner of the debug session may now issue DEBUG commands to debug the NCL process.

N2A220

DEBUG OF NCL PROCESS nnnnnn SUSPENDED, DEBUGID mmmmmm

Reason:

A DEBUG STOP ID=nnnnnn TYPE=SUSPEND command has been issued to suspend the debug of a particular NCL process and has completed successfully. A unique number, the 'DEBUGID', has been assigned to the suspended debug session. This number must be included on any DEBUG START or DEBUG STOP command which are to action the suspended debug session. The NCL ID of the process that was targeted is nnnnnn.

System Action:

The debug for the NCL process has been suspended.

User Action:

None.

N2A301

BREAKPOINT TYPE HAS BEEN OMITTED

Reason:

A DEBUG BREAKPOINT command has been omitted but the breakpoint type cannot be determined. One of the breakpoint type operands (STMT, ARGS, VARS, VERB, EXEC) must be entered.

System Action:

The command is rejected.

User Action:

Enter one of the breakpoint operands required to identify the breakpoint type.

N2A302

SPECIFIED VARIABLE NAME IS INVALID

Reason:

A *DEBUG BREAKPOINT* command has been entered to set a variable breakpoint but the variable name specified is invalid.

System Action:

The command is rejected.

User Action:

Change the name of the variable and retry.

N2A303

SPECIFIED VARIABLE CANNOT BE THE TARGET OF A BREAKPOINT

Reason:

A DEBUG BREAKPOINT command has been entered to set a variable breakpoint but the *variable is not on*e which can support a breakpoint (e.g. system variable, global variable).

System Action:

The command is rejected.

User Action:

Change the name of the variable and retry.

N2A305

VARS=prefix PREFIX TOO LONG FOR SPECIFIED/DEFAULT RANGE

Reason:

A DEBUG BREAKPOINT command has been entered which specified a generic variable prefix. The length of the prefix plus the length of the numeric suffix determined by the specified or default range produces a variable name which is longer than the maximum allowed.

System Action:

The command is rejected.

User Action:

Correct the prefix or range.

N2A306

0 INVALID AS A RANGE

Reason:

A DEBUG BREAKPOINT command has been entered which specifies a generic variable prefix of ARGS or VARS=*. The specified or default range starts at 0 which produces a variable name of *0, which is invalid.*

System Action:

The command is rejected.

User Action:

Correct the prefix or range.

N2A401

PROCEDURE procname NCLID nnnnnn HAS ALREADY BEEN SUSPENDED

Reason:

A DEBUG HOLD command has been issued which specified an NCL process which is already in a suspended state due to DEBUG HOLD command, DEBUG STEP command which stepped the procedure and it has reached the step statement limit, profile NEWHOLD=YES setting or a breakpoint being hit.

System Action:

The command is rejected.

User Action:

None.

N2A402

PROCEDURE procname NCLID nnnnnn IS NOT SUSPENDED

Reason:

A DEBUG RESUME command was entered which specified an NCL process which is not in a suspended state.

System Action:

The command is rejected.

User Action:

None.

N2A403

HOLD COMMAND FOR PROCEDURE procname NCLID nnnnnn ACCEPTED

Reason:

A DEBUG HOLD command has been entered to halt execution of an NCL process and has been successfully processed.

System Action:

Execution of the NCL process will be suspended when the next statement in the currently executing procedure is encountered.

User Action:

None.

N2A404

RESUME COMMAND FOR PROCEDURE procname NCLID nnnnnn ACCEPTED

Reason:

A DEBUG RESUME command has been entered to resume execution of an NCL process and has been successfully processed.

System Action:

Execution of the NCL process will be resume at the next statement.

User Action:

None.

N2A405

DEBUG PROFILE CHANGED

Reason:

A DEBUG SET command has been entered to modify the debug profile for a debug session. This message confirms the success of the profile modification.

System Action:

None.

User Action:

None.

N2A406

STEP COMMAND FOR PROCEDURE procname NCLID nnnnnn ACCEPTED

Reason:

A DEBUG STEP command has been entered to invoke statement level stepping or NCL process execution until the next procedure entry or exit, and the command has been successfully processed.

System Action:

Execution of the NCL process will be suspended after the specified number of statements have been executed or when the next procedure entry or procedure exit occurs.

User Action:

None.

N2A407

OPERAND FUNCTION

Reason:

This message is the heading message for the display of a debug profile. A DEBUG SET command that is entered with no operands specified is interpreted as a request to display the current debug profile. When the debug profile is displayed the first message issued is a heading and subsequent messages describe each individual profile option.

System Action:

None.

User Action:

None.

N2A408

(NEWHOLD=aaa.) NEW PROCESSES WILL bbb BE SUSPENDED ON FIRST STATEMENT

Reason:

This message is issued as a result of a DEBUG SET command. It indicates the current setting for the NEWHOLD debug profile option. The valid values are YES or NO. If NEWHOLD=YES is set then all NCL processes which come under debug control will be suspended immediately. If NEWHOLD=NO is indicated then 'bbb' will be 'NOT' to indicate that NCL processes will not be suspended when they come under debug control.

System Action:

None.

User Action:

None.

N2A409

(LOG=aaa.....) DEBUG MESSAGES WILL bbb BE SENT TO THE LOG

Reason:

This message is issued as a result of a DEBUG SET command. It indicates the current setting for the LOG debug profile option. The valid values are YES or NO. If LOG=YES is set then messages issued by debug will also be sent to the activity log. If LOG=NO is indicated then 'bbb' will be 'NOT' to indicate that debug messages will not be logged.

System Action:

None.

User Action:

None.

N2A410

(NCLTRACE=aaa) DEBUGGED NCL'S TRACE MSGS WILL bbb BE SENT TO DEBUGGER

Reason:

This message is issued as a result of a DEBUG SET command. It indicates the current setting for the NCLTRACE debug profile option. The valid values are YES or NO. If NCLTRACE=YES is set then NCL trace messages issued by any process under the control of this debug session will be sent to the debugger. The trace messages will be issued if the NCL procedure has either CONTROL TRACE, CONTROL TRACELAB or CONTROL TRACEALL set. Alternatively the NCLTRACE command can be issued to set the tracing on for a particular process. If NCLTRACE=NO is indicated then 'bbb' will be 'NOT' to indicate that NCL trace messages will not be sent to the debugger.

System Action:

None.

User Action:

None.

N2A411

DISPLAY OF DEBUG PROFILE COMPLETE

Reason:

This message is issued as a result of a DEBUG SET command with no operands specified. It indicates the end of the debug profile display.

System Action:

None.

User Action:

None.

N2A412

(CALLTRC=....) CALL TRACE OUTPUT WILL NOT BE PRODUCED

Reason:

This message is part of the display which is produced when a DEBUG SET command is entered with no other operands. This display shows the current profile settings for the debug session. This message shows the setting of the CALLTRC option (YES or NO).

System Action:

None.

User Action:

None.

N2A413

CALL TRACE FOR NCLID bbbbbb SET ccc CALL TRACE FOR PROCEDURE aaaaaaaa NCLID bbbbbb SET ccc

Reason:

A DEBUG CALLTRC command has been entered to change the 'call trace' status of an NCL process. This message confirms the change in status (ccc = ON or OFF).

System Action:

None.

User Action:

None.

N2A504

NCLID BASEPROC W TYPE INIT OWNER STATUS

Reason:

This message is the title line for the DEBUG TRACE display. The DEBUG TRACE display shows the procedure calls and subroutine calls which resulted in execution of the NCL process reaching its current state.
Refer to message N2A505 for a description of the display.

System Action:

The DEBUG TRACE display will follow this message.

User Action:

None.

N2A505

nclid baseproc w type init owner status

Reason:

This message is part of the DEBUG TRACE display. The message shows information about the NCL process that is shown in the display.

nclid

Is the unique NCL ID of the NCL process.

baseproc

Is the name of the base procedure in the NCL process.

w

Is the window in which the NCL process is executing (1 or 2).

type

Identifies the type of NCL process (for example, MSGPROC).

init

Is the initiator of the NCL process. This value is a user ID or the NCL ID of the process that started this one.

owner

Is the user ID of the user whose region contains the executing NCL process.

status

Indicates if the process is ACTIVE or if the process has been SUSPENDED due to user command or a breakpoint being hit.

System Action:

None.

User Action:

None.

N2A506

PROC LIBRARY S LEVEL LINE NO. STMT

Reason:

This message is the title line for the call trace display of an NCL process and is part of the DEBUG TRACE display. This display shows all NCL procedure calls and subroutine calls which were made for the NCL process to reach its current state.

System Action:

None.

User Action:

None.

N2A507

procname ddname s ll.mm line-no statement

Reason:

This message is the detail display for the call trace display which is part of the DEBUG TRACE display. This display shows all NCL procedure calls and subroutine calls which were made for the NCL process to reach its current state. The field meanings are as follows:
procname - the name of the NCL procedure
ddname - the ddname of the library from where the NCL procedure was loaded from
s - the status of the loaded NCL procedure. The following values are possible:
A - AUTOSHR, C - CMDREPL, L - PRELOADED, N - NCLTEST, O - LOADING, P - PRIVATE, R - RETAINED, U - P-UNLOAD
ll - the nesting level of the procedure
mm - the subroutine call level within the procedure
line no - the line number from which the EXEC/FSPROC or &GOSUB was executed
statement - the first 256 bytes of the statement

System Action:

None.

User Action:

None.

N2A511

line# *statement

Reason:

This message is the detail display for the DEBUG SOURCE display. It shows the line number containing the source, and the first 256 bytes of the statement on that line. the '*' indicator is present on the current statement if it is displayed.

System Action:

None.

User Action:

None.

N2A512

STATEMENT NUMBER IS GREATER THAN MAXIMUM FOR PROCEDURE

Reason:

This message is issued when a DEBUG SOURCE command is issued and the statement number entered on the STMT= operand is greater than the statement number of the last line in the procedure. If the statement number does not exist but would be before the last line in the procedure the display starts at the next line.

System Action:

The command is rejected.

User Action:

Correct the statement number and retry.

N2A513

mmmm STATEMENTS LISTED FOR PROCEDURE procname NCLID nnnn

Reason:

This message is the summary line for the DEBUG SOURCE display and shows how many lines of source were displayed and which procedure and NCL process they came from.

System Action:

None.

User Action:

None.

N2A514

PROCEDURE aaaaaaaa NCLID nnnnn HAS NO CURRENT STATEMENT FOR DISPLAY

Reason:

This message is issued when a DEBUG SOURCE command is issued without the STMT= operand (which indicates the display is to start at the current statement) and the procedure has no current statement.

System Action:

The command is rejected.

User Action:

This indicates that the procedure has completed execution. Specify the STMT= operand on the DEBUG SOURCE command to nominate the statement which the display should start at.

N2A601

INVALID HEX DATA SUPPLIED

Reason:

A DEBUG MODIFY command has been entered to modify the contents of one or more variables but the data supplied contains invalid hex characters or is not an even number of characters.

System Action:

The command is rejected.

User Action:

Correct the data supplied.

N2A602

EXCESSIVE DATA SUPPLIED FOR MODIFY

Reason:

A DEBUG MODIFY command has been entered to modify the contents of one or more variables but the data supplied exceeds the maximum allowable amount of data which can be assigned to a variable.

System Action:

The command is rejected.

User Action:

Correct the data supplied.

N2A603

VARIABLE(S) NOT CURRENTLY MODIFIABLE

Reason:

A DEBUG MODIFY command has been entered to modify the contents of one or more variables but one or more of the variables specified are currently in use by a verb which will update the variable when it completes (eg. *INTREAD,* MSGREAD). When the verb completes any data assigned to the variable would be destroyed.

System Action:

The command is rejected.

User Action:

Modify the variables after the current verb completes.

N2A604

DATA FORMAT IS INVALID FOR SPECIFIED MDO

Reason:

A DEBUG MODIFY command has been entered to update MDO contents but the data does not adhere to the format defined for the specified MDO structure.

System Action:

The command is rejected.

User Action:

Correct the data format and retry.

N2A605

VARS=prefix PREFIX TOO LONG FOR SPECIFIED/DEFAULT RANGE

Reason:

A DEBUG DISPLAY or DEBUG MODIFY command has been entered with a generic variable prefix. The length of the prefix plus the length of the numeric suffix determined by the specified or default range produces a variable name which is longer than the maximum allowed.

System Action:

The command is rejected.

User Action:

Correct the prefix or range.

N2A606

0 INVALID AS A RANGE

Reason:

A DEBUG DISPLAY or DEBUG MODIFY command has been entered with a generic variable prefix of ARGS or VARS=*. The specified or default range starts at 0 which produces a variable name of 0, which is invalid.

System Action:

The command is rejected.

User Action:

Correct the prefix or range.

N2A607

VARIABLE/MDO DISPLAY FROM PROCEDURE procname NCLID nnnnnn

Reason:

This is the title line for the display produced by the DEBUG DISPLAY command. The procedure name and NCLID of the NCL procedure are shown.

System Action:

None.

User Action:

None.

N2A608

REQUESTED VARIABLES/MDO UPDATED

Reason:

A DEBUG MODIFY command has been entered and the variables or MDO specified on the command have been successfully updated.

System Action:

None.

User Action:

None.

N2A609

NO DATA IN MDO TO DISPLAY

Reason:

A DEBUG DISPLAY command has been entered to display the contents of an MDO and the MDO exists but the length of the data contained within the MDO is zero.

System Action:

None.

User Action:

None. The DEBUG MODIFY command may be used to modify the MDO.

N2A610

OFFSET HEX CHAR

Reason:

This message is the title line for the character and hex dump format display produced by the DEBUG DISPLAY command when a single variable name or MDO name is entered. The display shows the contents of the variable or MDO in hexadecimal and character format. Refer to the description of message N2A611 for more information.

System Action:

None.

User Action:

None.

N2A611

+ooo xxxxxxxx xxxxxxxx xxxxxxxx xxxxxxxx cccccccc

Reason:

This message is produced by the DEBUG DISPLAY command when the FORMAT=DUMP operand is specified. The message contains a hex and character dump format display of the data in the variable. The meanings of the fields are as follows:
+ooo - shows the offset into the variable at which the data starts
xxxxxxxx - the hexadecimal format of the data
cccccccc - the character format of the data

System Action:

None.

User Action:

None.

N2A612

SPECIFIED MDO NOT FOUND IN PROCEDURE procname NCLID nnnnnn

Reason:

A DEBUG DISPLAY command has been entered to display the contents of an MDO but the MDO does not exist.

System Action:

The command is rejected.

User Action:

Correct the MDO name and retry. This message could indicate that the map in which the MDO name belongs has not been loaded and assigned correctly.

N2A613

MAP NAME: mapname

Reason:

A DEBUG DISPLAY command has been entered to display the names (and maybe contents) of an MDO. This message displays the name of the MAP which has been used to map the MDO structure.

System Action:

None.

User Action:

None.

N2A614

SPECIFIED MDO NAME IS INVALID

Reason:

A DEBUG DISPLAY or DEBUG MODIFY command has been entered which specified an invalid MDO name on the MDO= or MDONAME= operand.

System Action:

The command is rejected.

User Action:

Correct the MDO name and retry.

N2A615

SPECIFIED MDO RANGE IS INVALID

Reason:

A DEBUG DISPLAY command has been entered which specified a variable indexed MDO name and a range which specified zero as the starting value in the range (eg MDO=AAAA.BBBB{*} RANGE=(0,4)). A value of zero is invalid as the start of a range.

System Action:

The command is rejected.

User Action:

Correct the range start value on the RANGE= operand and retry.

N2A616

COMMAND REJECTED. PROCEDURE procname NCLID nnnnnn IS status

Reason:

A DEBUG MODIFY command has been entered to modify the contents of an MDO but the command has been rejected. 'reason' indicates why. The modification of MDOs is valid only whilst the procedure is suspended by DEBUG and not after the procedure has terminated (abnormally or due to normal end of procedure condition).

System Action:

The command is rejected.

User Action:

None.

N2A617

DISPLAY PREVENTED BY STORAGE SHORTAGE

Reason:

SOLVE was unable to obtain storage for a DEBUG DISPLAY command.

System Action:

The display command is ignored.

User Action:

Contact your systems administrator and examine the reason for the storage shortage.

N2A618

MDO NAME: mdoname

Reason:

This message is part of the DEBUG DISPLAY MDO=/MDONAMES= display and shows the name of an MDO which satisfied the criteria specified on the DEBUG DISPLAY command. In the case of a DEBUG DISPLAY MDO= command, this message is followed by the data contents of the named MDO.

System Action:

None.

User Action:

None.

N2A619

FMT=MDO ONLY VALID FOR SINGLE MDO STEM DISPLAY

Reason:

A DEBUG DISPLAY command has been entered with the FMT=MDO option specified, but the display requested is not a single MDO stem display.

System Action:

The command is rejected.

User Action:

The FMT=MDO option is only valid for DEBUG DISPLAY MDO=aaaaaa where aaaaaa is a single (ie. not compound such as aa.bb.cc) MDO stem name. Re-enter the command with a single MDO name.

N2A620

SPECIFIED VAR/MDO NAME NOT VALID IN NCL

Reason:

A DEBUG DISPLAY or DEBUG MODIFY command specified an invalid variable or MDO name for an NCL procedure.

System Action:

The command is rejected.

User Action:

Correct the variable name and retry. To display global OML variables, debug an OML procedure.

N2A621

SPECIFIED VARIABLE NAME IS INVALID

Reason:

A DEBUG DISPLAY or DEBUG MODIFY command specified an invalid variable name on the VARS= operand.

System Action:

The command is rejected.

User Action:

Correct the variable name and retry.

N2A701

BREAKPOINT OPERANDS CONFLICT WITH BREAKPOINT nnnn

Reason:

A DEBUG BREAKPOINT command has been entered but the operands conflict with (are the same as or specify variables in common with) another breakpoint (breakpoint number 'nnnn'). Each breakpoint created within a debug session must be unique.

System Action:

The command is rejected.

User Action:

None.

N2A702

xxxxxxxx IS NOT A VALID VERB NAME

Reason:

A DEBUG BREAKPOINT command has been entered with the VERB= operand but the verb name entered is not a valid verb.

System Action:

The command is rejected.

User Action:

Correct the verb name and retry. This may mean that the verb specified does not exist because the verb belongs to a feature which is not licensed on the system.

N2A703

BREAKPOINT nnnn DOES NOT EXIST

Reason:

A DEBUG CLEAR command has been entered to clear a breakpoint but no breakpoint exists with the specified breakpoint number.

System Action:

The command is rejected.

User Action:

Obtain the correct breakpoint number and retry. The DEBUG LIST BREAKPOINTS command can be used to list all breakpoints within a debug session.

N2A704

BREAKPOINT nnnn RESET

Reason:

A DEBUG CLEAR command has been entered to clear a breakpoint and has been processed successfully.

System Action:

The breakpoint is cleared.

User Action:

None.

N2A705

BREAKPOINT nnnn SET

Reason:

A DEBUG BREAKPOINT command has been entered to create a breakpoint and has been processed successfully. The breakpoint has been assigned a number 'nnnn' which is unique within a debug session called the breakpoint number. The breakpoint number must be entered on the DEBUG CLEAR command to clear the breakpoint.

System Action:

The breakpoint is set.

User Action:

None.

N2A706

nnnn BREAKPOINTS RESET

Reason:

A DEBUG CLEAR command has been entered to clear breakpoints within a debug session. This message confirms successful processing of the command and shows how many breakpoints were reset.

System Action:

The specified number of breakpoints have been cleared.

User Action:

None.

N2A707

BREAKPOINT NOT SET DUE TO STORAGE SHORTAGE

Reason:

A DEBUG BREAKPOINT command has been entered to create a breakpoint but a storage shortage has prevented successful processing of the command.

System Action:

The breakpoint has not been set.

User Action:

Investigate the cause of the storage shortage.

N2A708

BP# PROCEDURE NCLID TYPE DESCRIPTION

Reason:

This message is the title line of the DEBUG LIST BREAKPOINTS display. This display lists all breakpoints within a debug session.
Refer to message N2A709 for a description of the display.

System Action:

None.

User Action:

None.

N2A709

nnnnnn procname nclid type description

Reason:

This message is the detail line of the DEBUG LIST BREAKPOINTS display. This display lists all breakpoints within a debug session. The meanings of the fields are as follows:
nnnnnn - the unique breakpoint number of the breakpoint
procname - the name of the procedure to which the breakpoint applies
nclid - the nclid of the process to which the breakpoint applies
type - the type of breakpoint
STMT - a statement breakpoint
VAR - a variable breakpoint
VERB - an NCL verb breakpoint
EXEC - an ENTRY or EXIT breakpoint
description - shows the criteria which were specified on the DEBUG BREAKPOINT command (statement number, variables names or verb name)

System Action:

None.

User Action:

None.

N2A710

nnnn BREAKPOINTS ACTIVE. mmmm SELECTED FOR DISPLAY.

Reason:

This message is the summary line of the DEBUG LIST BREAKPOINTS display. It shows how many breakpoints were displayed ('nnnn') and how many exist within the debug session ('mmmm').

System Action:

None.

User Action:

None.

N2A711

NO BREAKPOINTS EXIST IN DEBUG SCOPE

Reason:

A DEBUG LIST BREAKPOINTS command has been entered but no breakpoints exist within the debug session.

System Action:

None.

User Action:

None.

N2A712

WARNING: BREAKPOINT CANNOT BE APPLIED TO NCL

Reason:

A *DEBUG BREAKPOINT* command has been entered to set a breakpoint. The breakpoint specification is valid in OML but not in NCL, so this warning message is sent to notify that the breakpoint will only be applied to OML procedures, not NCL. For example, VARS=A.B.C is a valid breakpoint specification in OML, but not NCL (NCL does not support compound vars).

System Action:

The breakpoint is set as requested but will only be applied to OML procedures.

User Action:

None.

N2A713

INVALID HEX DATA SUPPLIED

Reason:

A DEBUG BREAKPOINT command has been entered to create a breakpoint but the data supplied for the conditional breakpoint which was specified in hexadecimal format contains invalid hexadecimal characters or is not of even length.

System Action:

The command is rejected.

User Action:

Correct the data and retry.

N2A714

EXCESSIVE DATA SUPPLIED FOR BREAKPOINT

Reason:

A DEBUG BREAKPOINT command has been entered to create a breakpoint but the length of the data supplied for the conditional breakpoint exceeds the maximum allowed for an NCL variable.

System Action:

The command is rejected.

User Action:

Correct the data and retry.

N2A715

VERB verbname CANNOT BE THE TARGET OF A BREAKPOINT

Reason:

A &DEBUG BREAKPOINT command has been entered to set a breakpoint. The verb named in the breakpoint is a known verb but is not suitable for a breakpoint because it is not executable.

System Action:

The command is rejected.

User Action:

None.

N2A716

WARNING: BREAKPOINT CANNOT BE APPLIED TO OML

Reason:

A &DEBUG BREAKPOINT command has been entered to set a breakpoint. The breakpoint specification is valid in NCL but not in OML, so this warning message is sent to notify that the breakpoint will only be applied to NCL procedures, not OML. For example, VERB=NDBADD is a valid breakpoint specification in NCL, but not OML (OML does not have an NDBADD verb).

System Action:

The breakpoint is set as requested but will only be applied to NCL procedures.

User Action:

None.

N2A801

BREAKPOINT xxxx HIT (STMT mmmmmmmm). PROC name NCLID nnnnnn SUSPENDED

Reason:

A statement type breakpoint which was set on procedure 'name' at statement 'mmmmmmmm' has been hit. The next statement to be executed will be the specified statement.

System Action:

Execution of the NCL process has been suspended.

User Action:

Other DEBUG commands may be used to obtain information about the NCL process. The DEBUG STEP and DEBUG RESUME commands may be used to allow execution of the NCL process to continue.

N2A802

BREAKPOINT xxxx HIT (VAR varname). PROC name NCLID nnnnnn SUSPENDED AT STMT mmmmmmmm

Reason:

A variable type breakpoint which was set on variable 'varname' in procedure 'name' has been hit. The variable has been updated. If the breakpoint was conditional, the variable now contains the value specified on the DEBUG BREAKPOINT command.

System Action:

Execution of the NCL process has been suspended.

User Action:

Other DEBUG commands may be used to obtain information about the NCL process. The DEBUG STEP and DEBUG RESUME commands may be used to allow execution of the NCL process to continue.

N2A803

BREAKPOINT xxxx HIT (VERB verbname). PROC name NCLID nnnnnn SUSPENDED AT STMT mmmmmmmm

Reason:

A variable type breakpoint which was set on verb 'verbname' in procedure 'name' has been hit. The next statement to be executed contains the specified verb.

System Action:

Execution of the NCL process has been suspended.

User Action:

Other DEBUG commands may be used to obtain information about the NCL process. The DEBUG STEP and DEBUG RESUME commands may be used to allow execution of the NCL process to continue.

N2A804

BREAKPOINT xxxx HIT (PROCEDURE ENTRY). PROC name NCLID nnnnnn SUSPENDED AT STMT mmmmmmmm

Reason:

A procedure ENTRY breakpoint has been set to cause suspension of the specified NCL procedure. The procedure has begun execution and has been suspended due to the breakpoint setting.

System Action:

Execution of the NCL process has been suspended.

User Action:

Other DEBUG commands may be used to obtain information about the NCL process. The DEBUG STEP and DEBUG RESUME commands may be used to allow execution of the NCL process to continue.

N2A805

BREAKPOINT xxxx HIT (PROCEDURE EXIT). PROC name NCLID nnnnnn SUSPENDED AT STMT mmmmmmmm

Reason:

A procedure EXIT breakpoint has been set to cause suspension of the specified NCL procedure. The procedure has completed execution and has been suspended due to the breakpoint setting.

System Action:

Execution of the NCL process has been suspended.

User Action:

Other DEBUG commands may be used to obtain information about the NCL process. The DEBUG STEP and DEBUG RESUME commands may be used to allow execution of the NCL process to continue.

N2A901

WARNING - STMT NUMBER nnnnnnnn NOT FOUND IN PROC procname NCLID nnnnnn

Reason:

A breakpoint has been set on the statement number and procedure or NCLID specified in this message but when an attempt was made to apply the breakpoint the specified statement number could not be found in the procedure 'procname'.

System Action:

The breakpoint is not applied.

User Action:

Correct the statement number or procedure name/nclid on the breakpoint definition and retry.

N2A902

WARNING - BREAKPOINT *nnnnnnnn* NOT APPLIED, PROC *procname* NCLID *nnnnnn* NOT PRIVATELY LOADED

Reason:

A statement type breakpoint has been set on the procedure or NCL ID specified in this message. When an attempt was made to apply the breakpoint, it was found that the procedure was *not* a private copy. The statement type breakpoint can only be applied to a procedure that was loaded privately or under the NCLTEST option. The breakpoint remains valid for future occurrences of the procedure.

System Action:

The breakpoint is *not* applied.

User Action:

Determine why the procedure was *not* privately loaded. If the breakpoint is set before the procedure begins execution, the region loads the procedure automatically privately.

N2AA01

NO NCL DEBUG SESSIONS EXIST

Reason:

A SHOW DEBUG command has been entered but there are no active debug sessions in the system.

System Action:

None.

User Action:

None.

N2AA02

OWNER K STATUS NCLID USER REGION W PROCEDURE DEBUGID

Reason:

This message is the title line for the SHOW DEBUG display. The SHOW DEBUG command is used to list the debug sessions active in the system and the scope over which the debug session has control.
See the description of message N2AA03 for the meanings of the column headings.

System Action:

None.

User Action:

None.

N2AA03

owner k status nclid userid region w proc debugid

Reason:

This message is the detail line for the SHOW DEBUG display. The SHOW DEBUG command is used to display the active debug sessions and the scope over which each session has control. The information in each field is as follows:

owner

Shows the user ID of the user who owns the debug session.

k

Shows the KEEP option on the DEBUG START command.

status

Indicates the status of the debug session:

- ACTIVE indicates that the debug session is active.
- SUSPENDED indicates that the DEBUG STOP TYPE=SUSPEND command has been issued to suspend the debug session.

nclid

Shows the NCLID specified on the DEBUG START command.

userid

Shows the USERID specified on the DEBUG START command.

region

Shows the REGION specified on the DEBUG START command. This value is a region name or a link name.

w

Shows the WINDOW specified on the DEBUG START command.

proc

Shows the PROCEDURE specified on the DEBUG START command.

debugid

Is the identification number that is assigned to the suspended debug session when the DEBUG STOP TYPE=SUSPEND command is issued to suspend a debug session.

System Action:

None.

User Action:

None.

N2AA04

nnnn DEBUG SESSIONS ACTIVE mmmm SELECTED FOR DISPLAY

Reason:

This message terminates the SHOW DEBUG display. It shows the total number of debug sessions active in the system (nnnn) and the number displayed (mmmm).

System Action:

None

User Action:

None

N2AA05

NCLID BASEPROC CURRENT LEV W TYPE INIT OWNER STATUS

Reason:

This message is the title line for the NCL display of the SHOW DEBUG display. If the SHOW DEBUG command requests a specific NCLID a display of the NCL process is appended to the SHOW DEBUG DISPLAY. If the NCL=YES operand is entered on SHOW DEBUG a detailed display is produced of all NCL within the debug sessions displayed. See the description of message N2AA06 for details about this display.

System Action:

None

User Action:

None

N2AA06

nclid baseproc current lv w type init owner status

Reason:

This message forms the detail display for one NCL process of the NCL display in the SHOW DEBUG display. The NCL display is produced when a specific NCLID is entered on the SHOW DEBUG command or when the NCL=YES operand is entered on the SHOW DEBUG command. The meanings of the fields are as follows:
nclid - the NCLID of the NCL process
baseproc - the name of the base procedure in the NCL process
current - the name of the procedure which is the currently executing nesting level
lv - the number of active nesting levels in the process
w - the window in which the ncl process is executing (1 or 2)
type - the type of ncl process eg. MSGPROC
init - the initiator of the NCL process. This may be a userid or the NCLID of the process which started this one
owner - the userid of the user whose region contains the executing NCL process
status - shows if the process is currently ACTIVE or has been SUSPENDED due to user command or a breakpoint being hit

System Action:

None

User Action:

None

N2AA07

nnnn NCL PROCESSES WITHIN SCOPE(S)

Reason:

If the SHOW DEBUG command is entered with a specific NCLID or with the NCL=YES operand, a detailed display of each NCL process under the control of the debug scopes displayed is produced. This message is a summary of the NCL display, stating how many NCL processes were displayed.

System Action:

None

User Action:

None

N2AB01

PROCEDURE procname NCLID nnnnnn NOW UNDER DEBUG CONTROL

Reason:

This message is issued to the owner of a debug session when an NCL process is placed under debug control. This is either when a DEBUG START command is issued or subsequently when a procedure starts which satisfies the scope specified on the DEBUG START command.
The NCL process remains under debug control until a DEBUG STOP command is issued, or the NCL process no longer satisfies the criteria specified on the DEBUG START command, or the NCL process terminates.

System Action:

The NCL process is placed under control of the NCL debug facility.

User Action:

The owner of the debug session may now issue DEBUG commands to debug the NCL process.

N2AB02

PROCEDURE procname NCLID nnnnnn NO LONGER UNDER DEBUG CONTROL

Reason:

This message is issued when the NCL debug facility relinquishes debug control over an NCL process. This could occur because of a DEBUG STOP command being issued, or because the NCL process no longer satisfies the criteria on the DEBUG START command, or because the NCL procedure has terminated.

System Action:

Debug control over the NCL process is removed.

User Action:

No more DEBUG commands can be applied to this process.

N2AB03

PROCEDURE procname NCLID nnnnnn IS INELIGIBLE FOR DEBUG

Reason:

An NCL process has matched the criteria specified on a DEBUG START command but has not been placed under debug control for one of the following reasons:
- the process is a LOCKPROC system process.
- the process is a MSGPROC and the DEBUG START command was entered from the environment in which the MSGPROC is executing. This is invalid because if the process became suspended the debugging user would no longer be able to see command responses.
- the DEBUG START command was entered from within the dependent (&INTCMD) environment of the nominated process. This is invalid because if the process became suspended it could not enter any DEBUG commands to resume execution.
- The NCL process is executing as a command replacement (see SYSPARMS CMDREPL=xxxx), and debug has been refused for security reasons.

System Action:

The NCL process is not placed under debug control.

User Action:

None.

N2AB04

DEBUG OF NCLID nnnnnn STOPPED BECAUSE NCL PROCESS ENDED

Reason:

This message is sent to the owner of a debug session when the scope of a DEBUG START was a specific NCL process ID and the process has ended.

System Action:

The debug scope is terminated.

User Action:

None.

N2AC01

DEBUG STOPPED BY ENVIRONMENT TERMINATION

Reason:

This message is sent to the owner of a debug session which has a debug scope which targets a specific environment (eg. OCS or dependent environment) and the environment terminates.

System Action:

The debug scope is terminated.

User Action:

None.

N2AC02

DEBUG OF WINDOW n IN REGION regname STOPPED BY WINDOW TERMINATION

Reason:

This message is sent to the owner of a debug session when the scope of a DEBUG START was a specific window within a region and the window which was specified has terminated.

System Action:

The debug scope is terminated.

User Action:

None. The KEEP=YES operand on DEBUG START can be used to prevent the debug scope from terminating when the window terminates.

N2AD01

DEBUG OF REGION regname STOPPED BY REGION TERMINATION

Reason:

This message is sent to the owner of a debug session when the scope of a DEBUG START was a specific region and the region has terminated.

System Action:

The debug scope is terminated.

User Action:

None. The KEEP=YES operand on the DEBUG START command can be used to prevent the termination of the debug scope when the region terminates.

N2AD02

DEBUG OF USER userid IN REGION regname STOPPED BY USER SIGNOFF

Reason:

This message is sent to the owner of a debug session when the scope of a DEBUG START was a specific user in a specific region and the user has signed off.

System Action:

The debug scope is terminated.

User Action:

None. The KEEP=YES operand on the DEBUG START command can be used to prevent termination of the debug scope when the user signs off.

N2AD03

DEBUG OF USER userid STOPPED BY USER SIGNOFF

Reason:

This message is sent to the owner of a debug session when the scope of a DEBUG START was a specific user and the user has just signed off. The user is no longer signed on in any region so the debug scope has been terminated.

System Action:

The debug scope is terminated.

User Action:

None. The KEEP=YES operand on the DEBUG START command can be used to prevent termination of the debug scope when the last occurrence of the userid signs off.

N2AE01

NO ACTIVE DEBUGS OWNED BY THIS ENVIRONMENT

Reason:

A DEBUG command has been entered which should have targeted a procedure which is currently being debugged by the environment issuing the DEBUG command. The environment does not have any active debug scopes.

System Action:

The DEBUG command is rejected.

User Action:

None. The DEBUG START command can be used to place procedures under debug control.

N2AE02

NCL PROCESS nclid NOT EXECUTING

Reason:

A DEBUG command has been entered which specified an NCLID but there is no NCL procedure active in the system with this NCLID.

System Action:

The DEBUG command is rejected.

User Action:

Obtain the correct NCLID and retry the command.

N2AE03

NCL PROCESS nclid NOT BEING DEBUGGED

Reason:

A DEBUG command has been entered which specified an NCLID and the specified NCL process is active in the system but is not currently being debugged by any user.

System Action:

The DEBUG command is rejected.

User Action:

The DEBUG START command can be used to place the process under debug control.

N2AE04

DEBUG ON NCL PROCESS nclid IS CURRENTLY SUSPENDED

Reason:

A DEBUG command has been entered which specified an NCLID and the specified NCL process is active in the system and is being debugged but the debug session which is debugging it is currently suspended.

System Action:

The DEBUG command is rejected.

User Action:

The SHOW DEBUG command can be used to obtain the 'debugid' of the suspended debug session. A DEBUG START DEBUGID=nnnn command can be used to obtain debug control over the suspended session.

N2AE05

NCL PROCESS nclid IS BEING DEBUGGED BY ANOTHER USER

Reason:

A DEBUG command has been entered which specified an NCLID and the specified NCL process is active in the system but is being debugged by another user.

System Action:

The DEBUG command is rejected.

User Action:

The SHOW DEBUG command can be used to find out which user is debugging the process. Only the environment which issued the DEBUG START command to obtain debug control over the NCL process may issue this DEBUG command to control the process.

N2AE06

NCL PROCESS nclid NOT BEING DEBUGGED BY THIS ENVIRONMENT

Reason:

A DEBUG command has been entered which specified an NCLID and the specified NCL process is active in the system and is being debugged by this user but the environment from which the command was issued is not the environment which has debug control over the process.

System Action:

The DEBUG command is rejected.

User Action:

None. Only the environment which issued the DEBUG START command to obtain debug control over the process may issue this DEBUG command to control the debugged NCL process.

N2AE07

NO DEFAULTS SET - NCLID OR PROCEDURE NAME MUST BE ENTERED

Reason:

A DEBUG command has been entered which did not specify an NCLID or procedure name and no default NCLID or NCL process exists for the debuggers environment. Therefore the NCL process to which the command is to be applied cannot be determined.

System Action:

The DEBUG command is rejected.

User Action:

Enter the NCLID or PROCEDURE operand on the DEBUG command to identify which NCL process is to be targeted by the command.

N2AE08

NCL PROCESS aaaaaa DOES NOT HAVE ANY ACTIVE NESTING LEVEL

Reason:

A DEBUG command has been entered which requires the target NCL process to have an active nesting level. The command has been rejected because the NCL process is currently dormant (ie. has no NCL procedure executing).

System Action:

The command is rejected.

User Action:

The command entered requires an NCL procedure to be executing at the time the command is processed (for example, DEBUG DISPLAY requires some NCL variables or MDOs to be associated with the NCL process, but if the NCL process is dormant then no variables or MDOs exist). Re-enter the command when the NCL process becomes active.

N2AE09

PROCEDURE procname NOT FOUND IN NCL PROCESS nclid

Reason:

A DEBUG command has been entered which specified the NCLID and PROCEDURE operands but the specified procedure does not exist at the required levels in the specified NCL process. Most commands require the procedure to exist only at base or current level, DEBUG DISPLAY and DEBUG MODIFY allow the procedure to exist at any level.

System Action:

The DEBUG command is rejected.

User Action:

Correct the NCLID or PROCEDURE operand and retry the command.

N2AE10

PROCEDURE procname DOES NOT EXIST IN DEBUG SCOPE

Reason:

A DEBUG command has been entered which specified the PROCEDURE operand but the specified procedure does not exist at the required nesting level any NCL process under debug control from that environment. Most commands require the procedure to exist only at base or current level, DEBUG DISPLAY and DEBUG MODIFY allow the procedure to exist at any level.

System Action:

The DEBUG command is rejected.

User Action:

Correct the PROCEDURE operand and retry the command.

N2B201

STRUCTURED FIELD xxxx IN ERROR

Reason:

A security sub-system exit has passed an invalid structured field to SOLVE or an invalid structured field was passed by an &SECCALL verb.

System Action:

This message is written to the SOLVE activity log. The security request proceeds however, the particular structured field in error is ignored.

User Action:

Identify the structured field in error and correct the error, either by correcting the NCL or the security exit.

N2B701

STRUCTURED FIELD xxxx IN ERROR

Reason:

A security sub-system exit has passed an invalid structured field to SOLVE or an invalid structured field was passed by an &SECCALL verb.

System Action:

This message is written to the SOLVE activity log. The security request proceeds however, the particular structured field in error is ignored.

User Action:

Identify the structured field in error and correct the error, either by correcting the NCL or the security exit.

N2BC01

STRUCTURED FIELD xxxx IN ERROR

Reason:

A security sub-system exit has passed an invalid structured field to SOLVE or an invalid structured field was passed by an &SECCALL verb.

System Action:

This message is written to the SOLVE activity log. The security request proceeds however, the particular structured field in error is ignored.

User Action:

Identify the structured field in error and correct the error, either by correcting the NCL or the security exit.

N2BH01

STRUCTURED FIELD xxxx IN ERROR

Reason:

A security sub-system exit has passed an invalid structured field to SOLVE or an invalid structured field was passed by an &SECCALL verb.

System Action:

This message is written to the SOLVE activity log. The security request proceeds however, the particular structured field in error is ignored.

User Action:

Identify the structured field in error and correct the error, either by correcting the NCL or the security exit.

N2BM01

STRUCTURED FIELD xxxx IN ERROR

Reason:

A security sub-system exit has passed an invalid structured field to SOLVE or an invalid structured field was passed by an &SECCALL verb.

System Action:

This message is written to the SOLVE activity log. The security request proceeds however, the particular structured field in error is ignored.

User Action:

Identify the structured field in error and correct the error, either by correcting the NCL or the security exit.

N2D001

Datacom interface is now *P1*

Reason:

This message is issued after a DCOM CONNECT or a DCOM DISCONNECT command has been issued to indicate a change to the connection status of the Datacom interface. *P1* may be CONNECTED or DISCONNECTED.

System Action:

None.

User Action:

Issue the DCOM CONNECT or DCOM DISCONNECT command if the updated status is not desired.

N2D002

Datacom *P1* failed with return code *P2* and internal return code *P3*

Reason:

This message is issued after a DCOM CONNECT or a DCOM DISCONNECT command has failed. *P1* is either CONNECT(OPEN) or DISCONNECT(CLOSE).

System Action:

None.

User Action:

Consult the *CA Datacom/DB Message Reference Guide* for an explanation of the return code and internal return code.

N2D801

The OML/DATACOM interface status is: *P1*

Reason:

This message is issued in response to a SHOW DCOM command to display the status of the OML/DATACOM interface. *P1* may be "UNAVAILABLE", "SHUTDOWN", "CONNECTED", "CONNECTING", "DISCONNECTED", or "DISCONNECTING".

System Action:

None.

User Action:

None - this is informational only.

N2D802

NCLID OWNER

Reason:

This message is issued in response to a SHOW DCOM=USERS command to display the list of users currently connected to DATACOM via the OML/DATACOM interface. This is a heading which will be followed by N2D803 detail lines.

System Action:

None.

User Action:

None - this is informational only.

N2D803

P1 P2

Reason:

This message is issued in response to a SHOW DCOM=USERS command to display the list of users currently connected to DATACOM via the OML/DATACOM interface. *P1* is the NCLID and *P2* is the owing user ID of the process.

System Action:

None.

User Action:

None - this is informational only.

N2D901

State is already *P1*

Reason:

This message is issued in response to a DCOM CONNECT or DCOM DISCONNECT command to indicate that the desired connection state is already in effect. *P1* may be either CONNECTED or DISCONNECTED.

System Action:

None.

User Action:

None.

N2D902

Disconnecting - *P1* users currently connected

Reason:

This message is issued in response to a DCOM DISCONNECT command. The message acknowledges that a DISCONNECT of the OML/DATACOM interface is to be performed and displays how many users are currently connected. The DISCONNECT will not complete until all OML/DATACOM users have terminated their connection.

System Action:

None.

User Action:

None.

N2D903

Command ignored - currently *P1*

Reason:

This message is issued in response to a DCOM CONNECT or DCOM DISCONNECT command to indicate that a previous DCOM command is being acted upon. *P1* will be CONNECTING if the prior command is DCOM DISCONNECT, else it will be DISCONNECTING.

System Action:

None.

User Action:

None.

N2D904

Command accepted

Reason:

This message is issued to indicate a DCOM CONNECT or DCOM DISCONNECT command has been accepted for processing.

System Action:

None.

User Action:

None.

N2U301

Server initialization failed with return code x'*1*'

Reason:

The UNIX server failed to initialize. The process of spawning an address space can fail any of the following three phases:

- Up to the issuing of the ASCRE system call
- The setting up of the created address space, referred to as "INIT1"
- The loading of the target server, referred to as "INIT2".

The return code consists of 3 bytes of hexadecimal digits: cause, qualifier1 (Q1), and qualifier2 (Q2). The following causes are possible:

```
00 BLDL failure
    Q1 - BLDL macro R15 value
    Q2 - BLDL macro R0 value
01 BLDL result
    Q1 - 00 Server in private library
         01 Server in linklist
02 SWAREQ failure
    Q1 - SWAREQ macro R15 value
    Q2 - SWAREQ macro R0 value
03 ASCRE failure
    Q1 - ASCRE macro R15 value
    Q2 - ASCRE macro R0 value
04 Not authorized
05 A/S terminated
06 Server system ABEND
07 Server user ABEND
10 Init 1 ASEXT failure
    Q1 - ASEXT macro R15 value
    Q2 - ASEXT macro R0 value
11 Init 1 IEANTCR failure
    Q1 - IEANTCR macro R15 value
20 Init 2 IEANTRT failure
    Q1 - IEANTRT macro R15 value
21 Init 2 parms
    Q1 - 00 Missing slash
         01 Missing DSN
         02 Missing member name
22 Init 2 DYNALLOC failure
    Q1 - DYNALLOC R15 value
    Q2 - DYNALLOC R0 value
23 Init 2 OPEN failure
    Q1 - OPEN macro R15 value
    Q2 - OPEN macro R0 value
24 Init 2 ATTACH failure
```

```
    Q1 - ATTACH macro R15 value
    Q2 - ATTACH macro R0 value
25 Init 2 RACROUTE VERIFY failure
    Q1 - RACROUTE VERIFY R15 value
    Q2 - RACROUTE VERIFY R0 value
26 Init 2 RACROUTE AUTH failure
    Q1 - RACROUTE AUTH R15 value
    Q2 - RACROUTE AUTH R0 value
```

System Action:

In all cases, server initialization is retried in 30 seconds, during which time any UNIX verb calls are delayed.

User Action:

For causes 04, 25, or 26, review the security settings for the address space. For all other causes, contact CA Support.

N2U302

Server completed with return code x'*1*'

Reason:

The UNIX server address space terminated.

System Action:

Server initialization is retried in 30 seconds, during which time any UNIX verb calls are delayed.

User Action:

See the UNIX syslog for messages indicating a possible cause.

N2U303

ABEND *1 2* reason code *3* in server

Reason:

The UNIX server has abended with the provided ABEND code and reason code. *1* is "S" for a system ABEND or "U" for a user ABEND.

System Action:

The UNIX server is restarted in 30 seconds.

User Action:

For a system ABEND, see the MVS system codes. For a user ABEND, contact CA Support.

N2U304

Attempting restart in 30 seconds

Reason:

The UNIX server has terminated unexpectedly, pending restart.

System Action:

The UNIX server is restarted in 30 seconds.

User Action:

See preceding messages for actions.

N30001

VFS OPEN ERROR - BROADCAST RECORD INACCESSIBLE.

Reason:

An attempt has been made to read the general broadcast from the VFS file but an error has occurred and the broadcast cannot be read.

System Action:

None.

User Action:

Determine the cause of the failure.

N30006

SAVED *type* TEXT WAS *action* BY *userid* AT *time* ON *date*.

Reason:

This message shows the user ID that last modified the broadcast that is stored on the VFS file. The message appears as a result of the SHOW BRO command, or when you update the broadcast text of a primary menu or general broadcast.

type

Is the type of broadcast:

- MENU for a primary menu broadcast
- GENERAL for a general broadcast

action

Is the last action on the broadcast:

- SET indicates that the user set the broadcast text.
- RESET indicates that the user reset (deleted) the broadcast text.

userid

Is the user ID of the person who set or reset the broadcast.

time

Is the time that the broadcast was set or reset in the format HH.MM.SS.

date

Is the date that the broadcast was set or reset in the format DD-MM-YYYY.

System Action:

If you entered the SHOW BRO command, the text of the new broadcast (if set) follows this message.

User Action:

None.

N30007

broadcast text

Reason:

This message shows each line of general broadcast text stored on the VFS file. It is issued as a result of the broadcast being set or reset or a SHOW BRO command.

System Action:

None.

User Action:

None.

N30008

I/O ERROR WHILE ATTEMPTING TO STORE BROADCAST MSG, MSG NOT STORED

Reason:

An error occurred when attempting to store a broadcast message in the VFS dataset.

System Action:

None.

User Action:

Retry. If the condition persists, check the status of the VFS dataset.

N30009

NO STORED BROADCAST EXISTS.

Reason:

A request was made to display the stored logo or primary menu broadcast, but no broadcast has been stored.

System Action:

None.

User Action:

None.

N30010

I/O ERROR READING BROADCAST DATA

Reason:

An I/O error occurred while attempting to read broadcast information from the VFS dataset.

System Action:

The broadcast function is terminated.

User Action:

Retry. If the condition persists, refer the error to your systems administrator.

N30011

THE FOLLOWING PRIMARY MENU BROADCAST IS SAVED:

Reason:

The SHOW BRO command lists the contents of the general and primary menu broadcasts stored on the VFS file. This heading message precedes the primary menu broadcast text in the SH BRO display.

System Action:

None.

User Action:

None.

N30012

BROADCAST RECORD UPDATED.

Reason:

The general broadcast or primary menu broadcast saved on the VFS file has been updated.

System Action:

None.

User Action:

None.

N30801

luname CLOSED

Reason:

The session with the LU1 device indicated in the message has been terminated following a CLSDST WAIT=YES command.

System Action:

None.

User Action:

None.

N30802

CLSDST luname IGNORED, MESSAGES QUEUED

Reason:

The luname shown in the message was the target of a CLSDST WAIT=YES command, but the CLSDST has been ignored due to the subsequent arrival of more messages for the terminal.

System Action:

The CLSDST command is ignored.

User Action:

None.

N31201

THE FOLLOWING MESSAGES WERE GENERATED DURING PROCESSING

Reason:

The processing of NCL procedures in a fullscreen mode may cause messages to be generated that cannot be displayed on the screen because it has been taken over for fullscreen displays. Such messages may originate from error conditions or as a result of commands issued within the procedure. When possible all such messages are listed in the order in which they were generated, on multiple screen pages if necessary. This message acts as a heading for that list.

System Action:

None.

User Action:

Review the messages displayed as appropriate. The messages may indicate a possible processing problem and need to be reported to your installations help desk facility.

N31202

PROCESSING

Reason:

Input was received (eg: Clear key was pressed) when the window was executing an NCL procedure in fullscreen mode, but the procedure was not expecting input.

System Action:

The input is ignored and the keyboard unlocked.

User Action:

Wait for the procedure to display a panel and accept input. An authorized user may wish to swap to the other window and use a 'SHOW NCL=REGION' command to determine the reason for the delay in &PANEL output. If necessary 'FLUSH' the process or use 'CANCEL WINDOW'.

N31301

INSUFFICIENT STORAGE TO QUEUE PANEL EVENT NOTIFY.

Reason:

SOLVE could not obtain storage to queue an event to an NCL procedure which is processing with an asynchronous panel. The procedure may be executing any NCL statement following the &PANEL statement.

System Action:

The procedure terminates.

User Action:

Contact your systems administrator.

N32101

ERROR - FUNCTION NOT AVAILABLE

Reason:

The INMC/EF option of System Support Services was selected but the load module required for this function could not be loaded.

System Action:

Processing is terminated.

User Action:

Contact your systems administrator.

N32901

APPLID DEFAULTED TO linkname

Reason:

A LINK START=linkname command was requested for a link that has not been started before and has no link definition on the VFS database. The APPLID operand was not included on the command, and the APPLID has defaulted to the linkname.

System Action:

Further messages will follow regarding the status of the link.

User Action:

None.

N32902

APPLID applname IS ALREADY IN USE AS TERMINAL OR LINK.

Reason:

The APPLID operand must specify a resource not already in session with this system.

System Action:

The command is rejected.

User Action:

Correct and retry.

N32903

LINK COMMAND FOR linkname FAILED, INSUFFICIENT STORAGE.

Reason:

A storage shortage prevented successful completion of the LINK START command.

System Action:

The command fails.

User Action:

Retry. Determine the cause of the storage shortage condition.

N32904

LINK DEFINITION FROM systemid TO linkname COMPLETE, ACTIVATION PENDING.

Reason:

A LINK START= command has completed successfully. The link will be activated automatically when the remote system is available.

System Action:

None.

User Action:

Wait for the remote system to become active.

N32905

MSGID DEFAULTED TO msid

Reason:

A LINK START=linkname command was requested for a link that has not been started before and no INMC/EF definition exists on VFS. The MSGID operand was not included within the command, and the MSGID has defaulted to the first four characters of the linkname.

System Action:

Link activation continues.

User Action:

None, unless the MSGID operand has been accidentally omitted.

N32906

LINK DEFINITION INVALID, APPLID applname IS AN ACBNAME USED BY THIS HOST

Reason:

The APPLID specified cannot be the name of an APPL definition used by this region.

System Action:

None.

User Action:

Correct and retry.

N32907

DEFINITION RECORD FOR linkname READ FROM VFS, EXCESS OPERANDS IGNORED.

Reason:

APPLID or MSGID operands specified on a LINK START= command are ignored if the link definition exists on VFS.

System Action:

Link activation continues.

User Action:

None.

N32908

LINK START FOR linkname FAILED, I/O ERROR ON VFS DATASET.

Reason:

The INMC/EF definition for the specified link could not be retrieved from the VFS database due to an I/O error.

System Action:

The command fails.

User Action:

Contact your systems administrator.

N32909

linkname NOT DEFINED ON VFS, ATTEMPTING SIMPLE-MODE DEFINITION

Reason:

A LINK START= command was issued in a system configured for INMC/EF, but no record was found of the definition on the VFS database. The system will build a simple-mode link definition.

System Action:

None.

User Action:

None.

N32910

LINK COMMAND FOR linkname FAILED, LINK TYPE=type IS INVALID.

Reason:

A LINK START= command was issued to start an INMC link but the link type is invalid. Valid values are INMC, APPC and NVC. Note: TYPE=NVC is only valid if the region is configured with the NetView Connect option.

System Action:

None.

User Action:

Correct the TYPE= operand and retry. If you require connections to NetView regions, contact your Systems Administrator to reconfigure the region with the NetView Connect option (PROD=NVC).

N32911

LINK NAME P1 CONFLICTS WITH EXISTING LINK P2

Reason:

A LINK START command was entered and has been rejected because the name of the link matches the application name in use for a dynamic link.

System Action:

The command is rejected.

User Action:

Use a different link name, or change the identifier of the dynamic link.

N32912

LINK DEFINITION *P1* TO *P2* COMPLETED USING DEFINITION: *P3*

Reason:

A link has been created for a remote application using the indicated DEFNAME entry.

P1 identifies the link.

P2 identifies the remote application.

P3 identifies the DEFNAME entry.

System Action:

Attributes from the *P3* definition are used to complete the link details.

User Action:

Use **/INMCDEF** to verify that the link attributes used are correct. If necessary, modify the DEFNAME used on the LINK START command or modify the definition used.

N32F01

INMC EXIT exitname NOT LOADED, LINK TO linkname DISABLED

Reason:

An INMC link was starting and the INMCEX01 exit was to be loaded, but the load failed. The link has been disabled.

System Action:

Link activation will not continue for security reasons.

User Action:

Refer this problem to your systems administrator for resolution. The nominated link module may not be available in SOLVE's load library.

N33201

BIND OF LINK ATTEMPT TO *luname* REJECTED: RUSIZE OUT OF RANGE

Reason:

The BIND resulting from a LINK command to another region contains an RUSIZE value less than 256 (X'80') or greater than 65535 (X'FFFF').

luname is the name of the primary ACB that sent the BIND.

System Action:

The BIND is rejected with a sense code of 08210000.

User Action:

Verify the logmode of the region primary ACB. Take a VTAM buffer trace, and review the BIND. Ensure that the RUSIZES values are within limits.

N33901

COMMAND REJECTED. YOU CANNOT USE OPN/CLS COMMANDS FOR ANOTHER SOLVE SYST EM

Reason:

An OPN or CLS command was issued specifying the ACBNAME of a remote SOLVE system with which this system has a connection. Control of links to remote SOLVE systems is handled only by the LINK command.

System Action:

The command is rejected.

User Action:

Use the LINK command to control the link to the remote SOLVE system.

N33D01

BIND OF LINK ATTEMPT FROM *luname* REJECTED: RUSIZE OUT OF RANGE

Reason:

The BIND resulting from a LINK command from another region contains an RUSIZE value less than 256 (X'80') or greater than 65535 (X'FFFF').

luname is the name of the primary ACB that sent the BIND.

System Action:

The BIND is rejected with a sense code of 08210000.

User Action:

Verify the logmode of the region primary ACB. Take a VTAM buffer trace, and review the BIND. Ensure that the RUSIZES values are within limits.

N34001

ERROR ON LINK linkname : error-type

Reason:

A serious error has occurred on INMC link *linkname* , from which it cannot recover automatically. The *error-type* in the message will be either SNA Sense codes, or an explanatory message.

System Action:

The link is forced inactive, and put into 'failed' status.

User Action:

If the *error-type* consists of SNA sense information, the sense codes should be checked to see what type of network problem occurred. An *error-type* of 'INVALID DATA RECEIVED' on an NMPC link may mean there is a hardware problem on the PC. The link can be restarted using a 'LINK START=linkname' command. If this error recurs, contact your product support representative.

N34601

ERROR ON LINK AAAAAA : STORAGE SHORTAGE

Reason:

The INMC link AAAAA has failed due to a lack of storage.

System Action:

The link is forced inactive and placed in 'failed' status.

User Action:

When the storage shortage is relieved, the link may be restarted by entering 'LINK START=linkname'.

N35001

LINK FROM systemid TO linkname NOW INACTIVE.

Reason:

The link from this system (systemid) to the remote system known as linkname is inactive.

System Action:

If the link has become inactive as a result of an earlier LINK STOP=linkname command, the link will remain inactive until a subsequent LINK START=linkname command. Otherwise, the system will attempt to re-establish the link at regular intervals.

User Action:

Determine the cause of link deactivation if no LINK STOP=linkname was entered. Possible causes may be a failure of the network path between the two systems or the remote system may have terminated.

N35002

LINK FROM systemid TO linkname NOW ACTIVE.

Reason:

Issued when the connection from this SOLVE system *(systemid)* to the remote SOLVE system *(linkname)* has been established.

System Action:

None.

User Action:

The Remote Operator Facility may now be used to route commands and enquiries to the remote system using the ROUTE command.

N35003

LINK DEFINITION FOR linkname RESET

Reason:

Confirms successful processing of an earlier LINK RESET=linkname command issued to delete the definition of the remote SOLVE system *linkname.*

System Action:

None.

User Action:

A LINK START= command will have to be entered to redefine the remote system linkname before connection can be re-established.

N35004

LINK linkname - SESSION DEFINITION nn DISABLED.

Reason:

The system has stopped all further attempts to establish session number nn with the remote SOLVE system *linkname* , where the remote system was to be the secondary end of the session.

System Action:

No retries will be performed.

User Action:

This message is followed by message N35005 indicating the reason for the disabling of the session definition. If the fault indicated by N35005 is correctable, correct it, then reset and redefine the link.

N35005

REASON: xxxxxxxxxxxxxxxxxxxxxxxxxxxxx

Reason:

This message identifies the reason why the system issued message N35004. Possible reasons are `INVALID LOGMODE TABLE' or `PARALLEL SESSION REFUSED'.

System Action:

None.

User Action:

Report the failure to your system administrator.
If INVALID LOGMODE TABLE, correct the DLOGMOD operand specified on the APPL definition statement used by the remote system. If PARALLEL SESSION REFUSED then if the level of VTAM being used supports parallel sessions check the APPL definition statements of both systems to ensure that they include the PARSESS operand. If the level of VTAM being used does not support parallel sessions ignore this message; the system will operate satisfactorily with one session between the two systems.

N35006

LNKTRACE - LINK aaaaaaaaaaa - bbbbbbbbbbbbbbbbbbbbbbbbbbbbbb

Reason:

This message is issued to all Monitor status operators when a session request to a remote system fails for any reason. The message is issued only if the SYSPARMS LNKTRACE=YES command has been entered. The text bbbbbbbbbbb describes the error which has occurred.

System Action:

None.

User Action:

This trace message may be of use to systems administrator if difficulty is experienced in establishing a connection between two systems.
Use the SYSPARMS LNKTRACE=NO command to reset the trace option that produces this message when the cause of the error has been established.

N35007

LINK linkname - SESSION NUMBER nn OPENED º FAILED

Reason:

If the SYSPARMS SESSMSG=YES option is in effect the system will report the loss or establishment of all sessions on INMC links. If INMC/EF is in use the session number specified corresponds to the session number displayed on the link status panels available through System Support Services.

System Action:

None.

User Action:

None.

N35008

LINK FROM *systemid* TO *linkname* STARTING.

Reason:

This message is issued during link activation. It indicates that at least one VTAM session has been established between this system and the system known as *linkname.* The initial handshaking is now taking place. When it is complete, message N35002 is logged.

System Action:

Link initialization continues.

User Action:

None.

N35009

LINK linkname HAS FAILED AND IS BEING FORCED INACTIVE.

Reason:

This message indicates that a serious error has occurred on the INMC link to the system known as linkname . The link is now inoperative and will remain in 'failed' status until a 'LINK START' command is entered to restart it.

System Action:

The link is inactivated and put into 'failed' status. All sessions of the link are terminated.

User Action:

Other messages should precede this message indicating the cause of the original error. Refer to these messages to see what corrective action is necessary. When the error condition has been corrected, issue a 'LINK START' command to reactivate the link.

N35010

RESETSR ERROR ON LINK linkname : RC=xx FBK2=xx SENSE=xxxxxxxx

Reason:

During session establishment for one of the sessions making up an INMC link, a VTAM RESETSR operation failed, giving error code and sense information as listed.

System Action:

The link will attempt to operate without this session. If no other sessions are available, the link will be inoperative.

User Action:

Check the sense information to see why the RESETSR failed, and whether corrective action is possible. If the condition persists, contact your product support representative.

N35011

SESSION DENIED BY PARTNER FOR LINK P1 - P2

Reason:

This message is issued to all Monitor status operators when a session request to a remote system fails with sense 080A permission denied. The *P2* text describes the error. This error indicates that the remote partner has no LINK or DEFLINK that matches this system's LU. This may be a temporary condition while the remote system is initializing.

System Action:

The session is retried, based on the link retry interval.

User Action:

Ensure that a LINK START or DEFLINK command is issued in the remote system for the local system's application name.

Note: Do not use VTAM USERVARs in link definitions. The application name is presented to the logon exit, not the USERVAR value.

N35301

ERROR ON LINK linkname : LOST TPE

Reason:

A serious error has occurred on INMC link linkname , from which it cannot recover automatically.

System Action:

The link is forced inactive, and put into 'failed' status.

User Action:

The link can be restarted using a 'LINK START=linkname' command. This error should be reported to your product support representative.

N35801

INVALID DATA RECEIVED ON LINK linkname : reason

Reason:

A protocol error has occurred on link linkname, from which automatic recovery is not possible. The reason for the data being invalid may be one of: INVALID SEQUENCE NUMBER, SEGMENTATION ERROR or LENGTH ERROR.

System Action:

The link is forced inactive, and put into 'failed' status.

User Action:

The link can be restarted using a 'LINK START=linkname' command. This error should be reported to your product support representative.

N35901

ERROR ON LINK linkname : error-type

Reason:

A protocol error has occurred on link linkname, from which automatic recovery is not possible. The error-type may be one of: INVALID RESPONSE SEQUENCE or LOST OMR.

System Action:

The link is forced inactive, and put into 'failed' status.

User Action:

The link can be restarted using a 'LINK START=linkname' command. This error should be reported to your product support representative.

N35A03

LINK START FAILED. UNABLE TO LOAD NM030 : R15=NNNN R1=NNNN

Reason:

A LINK START command has failed because loadmodule NM030 could not be loaded. The reason for the failure to load NM030 may be determined by the values of r15 and r1.

System Action:

The LINK command fails.

User Action:

Ensure load module NM030 is in a library accessible to SOLVE.

N36101

linkname OFFSET: aaaa SECS. PROPAGATION DELAY: bbbb SECS.

Reason:

This message is issued when link linkname becomes active. The offset (aaaa seconds) is the difference between the hardware clock values (STCK values) on this system and the remote system, expressed relative to this system. This offset will not necessarily match the apparent difference between the time-of-day clocks on the two systems. The propagation delay (bbbb seconds) is the average time taken for a message to be sent one-way between the two systems, as measured during link activation.

System Action:

None.

User Action:

None.

N36102

aaaaaaa TIME OFFSET COULD NOT BE CALCULATED, SET TO ZERO

Reason:

During INMC link activation, the values of the hardware clocks on each end of the link are compared, and the difference calculated. This 'time offset' is used to correlate network information containing timestamps, which may be propagated across the INMC link. Link activation of aaaaaa could not calculate the time offset, perhaps because one end of the link is running a back-level SOLVE system, or is not an IBM compatible mainframe system.

System Action:

The time offset for link aaaaaa is set to zero.

User Action:

None.

N36103

LINK TO P1 DISABLED. INCOMPATIBLE REGION.

Reason:

An attempt to establish an INMC link to *P1* has been disallowed. Remote region *P1* was successfully contacted, but the products licensed in the remote region are not compatible with this region.

System Action:

The INMC link is flagged as DISABLED.

User Action:

The INMC link cannot be used.

N36401

userid CONTACTED ON PC LINK linkname -- username

Reason:

This message is logged to all monitor status users when a session is established with a NMPC user. *userid* the userid at the PC.
linkname the name of the link to the PC. *username* the name of the user taken from their UAMS definition.

System Action:

None.

User Action:

None.

N36402

CONTACT ON PC LINK linkname REJECTED DUE TO SECURITY VIOLATION

Reason:

An NMPC user has attempted to establish a session on link linkname , however during userid/password validation the maximum number of password *retries* was exceeded.

System Action:

The session is rejected.

User Action:

See your systems administrator.

N36403

PASSWORD UPDATED FOR USERID uuuuuuuu

Reason:

Confirms a successful change of password for user *uuuuuuuu* during session establishment from an NMPC system.

System Action:

None.

User Action:

The new password will be required the next time the userid *uuuuuuuu* is used.

N36404

PASSWORD UPDATE FOR USERID uuuuuuuu FAILED, CONTACT ABORTED

Reason:

During session establishment, an NMPC user has attempted unsuccessfully to change his password.

System Action:

The session is rejected.

User Action:

For more information on the cause of the failure, refer to the journal file on the PC.

N36C01

UNABLE TO INITIATE INMC/AM CONNECTION TO LINK: lll LU: iii VERS: vvv REASON: rrrrr

Reason:

This message is issued when link *linkname* becomes active. It indicates that the INMC access method used to transport APPC conversations over an INMC link could not connect. The LU name and SOLVE version of the other system is shown. The reason indicates why the connection could not be established:
NO DTE FOUND - the target SOLVE system is possibly extremely back-level.
UNSUPPORTED SOLVE VERSION - the target SOLVE system does not support the INMC/AM facility
STORAGE SHORTAGE - a storage shortage occurred.

System Action:

INMC/AM facilities are not available to this system.

User Action:

If a storage shortage is the reason, increase the storage available to the SOLVE region.

N36E01

INMC/AM CONTACT INITIATED. LINK=llll DOMAIN=dddd LU=uuuuuuuu

Reason:

This message is issued when the INMC/AM (for APPC) initiated contact over a starting INMC link.
The linkname, domain id, and LUname are shown.

System Action:

INMC/AM link initiation starts.

User Action:

none.

N36E02

INMC/AM CONTACT COMPLETED. LINK=llll DOMAIN=dddd LU=uuuuuuuu VERSION=v

Reason:

This message is issued when the INMC/AM (for APPC) completes contact over an INMC link.
The linkname, domain id, and LUname are shown. The SOLVE version is also displayed.

System Action:

INMC/AM link initiation is complete. APPC sessions may use INMC as an access method.

User Action:

none.

N36E03

INMC/AM CONTACT LOST. LINK=llll DOMAIN=dddd LU=uuuuuuuu

Reason:

This message is issued when the INMC/AM (for APPC) loses contact over an INMC link.
The linkname, domain id, and LUname are shown.

System Action:

The INMC/AM link is closed.

User Action:

Confirm that the INMC link was supposed to be stopped.

N36E10

INMC/AM CONTACT WITH LINK=llll DOMAIN=dddd LU=uuuuuuuu NOT ESTABLISHED. INMC/AM NOT SUPPORTED

Reason:

This message is issued when the INMC/AM (for APPC) tried to initiate contact over a starting INMC link. The target SOLVE system does not support the INMC access method for APPC.

System Action:

INMC/AM link initiation terminates.

User Action:

If the target SOLVE system is back-level, consider upgrading it.

N36P01

PROCESSING OF INPUT FOR nnnnnnnn FAILED DUE TO STORAGE SHORTAGE

Reason:

This message indicates that the INMC/AM access method was unable to process input from the indicated INMC source node due to a storage shortage.

System Action:

The session is closed.

User Action:

ensure that the SOLVE region has sufficient storage available.

N36Q01

CONNECT OF nnnnnnnn FAILED, STORAGE SHORTAGE

Reason:

An attempt to establish as session using INMC/AM failed due to a lack of storage.

System Action:

The session establishment fails.

User Action:

Ensure that the SOLVE region has sufficient storage.

N36Q02

CONNECT-ffffffff PROCESSING FOR nnnnnnnn FAILED, reason

Reason:

INMC/AM session connection failed for the indicated target system name. The specific type of processing is indicated (the ffffffff operand), and a reason is displayed.
For each processing type, the possible reasons are:
-type- -reason... ACCEPT INTERNAL ERROR - UNKNOWN EPS CID ACCEPT STORAGE SHORTAGE ACCEPT INTERNAL ERROR - INVALID USERDATA LENGTH REJECT INTERNAL ERROR - UNKNOWN EPS CID REJECT STORAGE SHORTAGE REJECT INTERNAL ERROR - INVALID USERDATA LENGTH

System Action:

The session establishment fails.

User Action:

Examine the reason and if possible, correct the problem.

N36R01

CONNECT OF nnnnnnnn FAILED, STORAGE SHORTAGE

Reason:

An attempt to establish a session using INMC/AM failed due to a lack of storage.

System Action:

The session establishment fails.

User Action:

Ensure that the SOLVE region has sufficient storage.

N36U01

SEND OF DATA FOR nnnnnnnn FAILED, STORAGE SHORTAGE

Reason:

An attempt to send data across an INMC/AM session failed due to a lack of storage.

System Action:

The send fails.

User Action:

Ensure that the SOLVE region has sufficient storage.

N36U02

INMC/AM SEND PROCESSING FOR nnnnnnnn FAILED, reason

Reason:

An attempt to send data across an INMC/AM session failed. The target SOLVE system name is shown. The reasons are:
INTERNAL ERROR - INVALID CID
STORAGE SHORTAGE
INTERNAL ERROR - INVALID USERDATA LENGTH
REQUEST GAVE RC nnnnnnnn

System Action:

The send fails.

User Action:

Correct the problem if possible. It is possible that the target SOLVE system has terminated or INMC contact was lost. If the problem persists, contact your SOLVE product support office.

N36Z01

CONNECT OF nnnnnnnn FAILED, STORAGE SHORTAGE

Reason:

An attempt to establish an APPC session using INMC failed due to a lack of storage.

System Action:

The session establishment fails.

User Action:

Ensure that the SOLVE region has sufficient storage.

N36Z02

CONNECTION TO nnnnnnnn INMC/AM LINK LOST

Reason:

A INMC/AM (APPC) connection to the named SOLVE system has been lost

System Action:

Any active INMC/AM (APPC) sessions are terminated.

User Action:

Determine why the INMC/AM connection was lost and reestablish it if possible.

N36Z04

PROCESSING OF INPUT FOR nnnnnnnn FAILED DUE TO STORAGE SHORTAGE

Reason:

This message indicates that the INMC/AM access method was unable to process input from the indicated INMC/AM source node due to a storage shortage.

System Action:

The session is closed.

User Action:

ensure that the SOLVE region has sufficient storage available.

N37201

NEWS CNM ACB acbname OPEN FAILED, ACBERFLG=X'yy'. FEATURE NOT RECORDING.

Reason:

The NEWS feature was unable to open the CNM ACB for the specified reason code.

System Action:

None.

User Action:

Refer to the appropriate VTAM Programming Guide for an explanation of the error code specified. When the condition has been corrected NEWS recording may be started from within the NEWS option of the System Support Services function.

N37202

NEWS CNM ACB acbname OPEN FAILED, INSUFFICIENT STORAGE.

Reason:

NEWS recording could not be started because of a storage shortage.

System Action:

None.

User Action:

Increase the SOLVE region size.

N37203

NEWS CNM ACB NOW OPEN.

Reason:

Confirms that NEWS has opened its CNM ACB and that the CNM interface is available.

System Action:

None.

User Action:

None.

N37204

NEWS RECEIVE FAILED. RC=rc,FBK2=fb,SENSE=sense

Reason:

NEWS encountered a RECEIVE error attempting to receive CNM records from the network.

System Action:

The CNM ACB is closed.

User Action:

Refer to the appropriate VTAM Programming Guide for an explanation of the error codes. Re-opening the CNM ACB may be attempted from the NEWS System Support panel.

N37206

NEWS CNM ACB HAS BEEN CLOSED.

Reason:

Notifies all Monitor status Operator Control Services users that the NEWS feature has stopped recording.

System Action:

None.

User Action:

None.

N37207

NEWS CNM EXIT exitname TERMINATED PREMATURELY.

Reason:

The NEWS CNM exit exitname has abended or terminated prematurely.

System Action:

The exit can no longer process CNM records.

User Action:

Refer this to your systems administrator for problem determination.

N37209

CNM SEND REJECTED, SENSE sense. explanation.

Reason:

An attempt to send data across the CNM interface failed with the stated sense and feedback codes. If known, a brief explanation of the sense code is also provided.

System Action:

NEWS continues processing.

User Action:

Determine the meaning of the sense codes to diagnose why the failure occurred.

N37210

POSITIVE RESPONSE RECEIVED

Reason:

Confirms that the message sent across the CNM interface has been received by the target device.

System Action:

NEWS continues processing.

User Action:

None.

N37211

LOCAL CNM RECEIVE - NEGATIVE RESPONSE, SEQ=aaaa SENSE=bbbb

Reason:

This message is part of a CNM trace display and supplies the sense code when a CNM RECEIVE macro completes with a negative response returned.

System Action:

NEWS continues processing.

User Action:

Determine the meaning of the sense information to diagnose the reason for the negative response.

N37212

LOCAL CNM RECEIVE - POSITIVE RESPONSE, SEQ=aaaa

Reason:

This message is part of a CNM trace display and indicates that a CNM RECEIVE has completed with a positive response.

System Action:

NEWS continues processing.

User Action:

None.

N37301

data

Reason:

Solicited data returned through the CNM Interface as the result of a REQMS command being issued.

System Action:

None.

User Action:

None.

N37302

NEWS CNM EXIT NAME MISSING

Reason:

No CNM exit name has been specified.

System Action:

NEWS continues processing with no CNM exit.

User Action:

Provide an exit name if required.

N37303

UNABLE TO OBTAIN STORAGE FOR EXIT

Reason:

Communication with the CNM exit was prevented by a lack of storage.

System Action:

NEWS continues processing with no CNM exit.

User Action:

Increase the SOLVE region size.

N37502

CNMPROC QUEUE LIMIT REACHED. DATA BEING DISCARDED.

Reason:

NEWS has received a CNM record to be processed by CNMPROC but the number of records in the queue waiting to be processed has reached it's maximum.

System Action:

The record is discarded.

User Action:

The queue may be full for several reasons. Use the SH NCL command to determine if a CNM processing procedure is hung on an *xxxREAD* (*INTREAD, for example) or an* FILExxx (*FILEADD, for example). You may* find that one of the CNM processing procedures has begun looping or that a resource contention of some sort has halted processing. An NCL procedure producing alerts using *CNMALERT may be looping. It is also* possible that a device in the network is producing large volumes of CNM records due to an error. If there is a high volume of ISR traffic, the ISR queue limit may have been reached. If you wish to clear the backlog, simply use the SYSPARMS CNMPROC= command to stop and restart CNMPROC.

N37701

INVALID HEX DATA SPECIFIED

Reason:

The data supplied on an &CNMSEND statement was not valid hexadecimal display data.

System Action:

The procedure is terminated.

User Action:

Correct the error and retry the request.

N37702

NO DATA SPECIFIED

Reason:

No data was specified on an &CNMSEND statement.

System Action:

The procedure is terminated.

User Action:

Correct the error and retry the request.

N37703

CNM REQUEST FAILED. SYSTEM UNAVAILABLE, DISABLED OR AT QUEUE LIMIT.

Reason:

An attempt has been made using &CNMALERT or &CNMSEND to deliver a CNM record to a local or remote NEWS system for processing, but has failed due to one or more error conditions.

System Action:

The issuing NCL procedure continues, with &RETCODE set to 8 to indicate that the send has failed.

User Action:

Check that the INMC link to the remote host has been activated, and that the NEWS facilities in ISR (Inter-System Routing) have been enabled using the ISR command, from both the remote and local ends of the link. Also check that the NEWS ACB at the remote end has been opened, and (for
&CNMALERT) that the CNMPROC in the destination host is active.

N37704

NEWS ACB NOT OPEN.

Reason:

An attempt has been made using &CNMSEND to send a CNM record to VTAM through the CNM interface for processing, but the NEWS ACB is not open and the record cannot be sent.

System Action:

The send fails, and the NCL procedure is notified by setting the &RETCODE system variable to a value of 8.

User Action:

The NEWS ACB should be opened, using the CNM START command or through the $SN CNM parameter group.

N37705

INSUFFICIENT STORAGE TO PROCESS CNM REQUEST

Reason:

The CNM request failed because of a storage shortage.

System Action:

NEWS continues processing.

User Action:

Determine the cause of the storage shortage. If necessary increase the SOLVE region or partition size.

N37706

UNABLE TO ALLOCATE CORRELATOR.

Reason:

Each CNM request is assigned a unique number from 1 to 4095. This message indicates that a number could not be assigned because there were already 4095 requests outstanding.

System Action:

The request is rejected, and the NCL procedure is notified with a return code of 8 in the *RETCODE system variable.*

User Action:

Retry the request. If the condition persists, the queue has become clogged for some reason. Attempt to find out why the queue has become full. If you require assistance, contact your product support representative.

N37707

NEWS SEND FAILED, RC=aa, FBK2=bb, SENSE=cccccccc. dddd

Reason:

VTAM has rejected a CNM record sent by NEWS across the CNM interface and has supplied information in the RPL to describe the reason(s) for the rejection.

System Action:

NEWS extracts the information from the RPL and attempts to interpret it to supply a meaningful explanation for the failure of the send.

User Action:

Take action depending on the explanation given. For example, the rejection may indicate that the targeted resource does not exist or does not support the function you have requested. More information about the Return Code, Feedback and Sense codes may be found in the VTAM Programming Guide for your release of VTAM.

N37708

LOST CONTACT WITH REMOTE SYSTEM.

Reason:

A &CNMSEND was used to deliver a CNM record to a remote SOLVE system for processing but before a reply was received the communication between the local and remote systems failed, preventing the reply from being returned.

System Action:

The NCL procedure is notified by a value of 8 in the &RETCODE system variable and SOLVE will automatically try to re-establish contact with the remote system.

User Action:

If the INMC link to the remote system does not recover, you may find that another user has deliberately disabled the INMC link between the local and remote systems, or a permanent hardware or software error has occurred in the communications between the two hosts. Contact your systems administrator.

N37709

CNM SEND REJECTED.

Reason:

VTAM has rejected the send of a CNM record by NEWS, but has given no explanation for the rejection. No Return code, Feedback or Sense code has been supplied in the RPL to explain the reason for the rejection.

System Action:

The NCL procedure is notified by setting the *RETCODE system variable* value to 8.

User Action:

None.

N37710

INVALID REQUEST TO INSERT A CNM ALERT.

Reason:

An attempt to queue a CNM alert to CNMPROC using &CNMALERT MODE=INSERT has been rejected because either the NCL procedure which issued the &CNMALERT was not CNMPROC or executed by CNMPROC, or the context of the current record has been lost due to a CNMDEL or a non-specific &CNMCONT.

System Action:

The NCL procedure is flushed.

User Action:

Remove the MODE=INSERT parameter from the &CNMALERT statement, or issue the &CNMALERT before issuing a &CNMCONT or &CNMDEL.

N37711

INVALID LENGTH IN DELIVER RU aaaa.

Reason:

An &CNMSEND or &CNMALERT statement has been rejected because the length (aaaa) found in the DELIVER RU supplied was greater than the imbedded RU which followed and whose length it represents.

System Action:

&RETCODE is set to 8 and processing of the NCL procedure continues. This message is available in the SYSMSG variable.

User Action:

Correct the CNM request data specified on the &CNMALERT or &CNMSEND statement.

N37712

INVALID CNM INPUT RECORD DETECTED.

Reason:

A CNM record passed on an &CNMALERT or &CNMSEND statement could not be processed because its format was invalid.

System Action:

The message is returned in the &SYSMSG NCL variable, and the statement completes with RETCODE 8.

User Action:

Correct the data passed on the &CNMALERT or &CNMSEND statement.

N37801

INSUFFICIENT STORAGE TO PROCESS RECEIVED CNM REPLY

Reason:

This message is written to the SOLVE activity log if an NCL procedure issues a &CNMREAD verb to receive a solicited reply from the CNM interface and a storage shortage condition has prevented the successful processing of the reply.

System Action:

The NCL procedure waiting for the reply is notified by a value of 8 in the &RETCODE system variable and message N37801 in the &SYSMSG variable.

User Action:

Contact your product support representative and report the storage shortage condition.

N37802

INVALID CNM RECORD RECEIVED, RECORD NOT PROCESSED.

Reason:

A message received by a &CNMREAD statement contained invalid CNM format data.

System Action:

Processing continues with error data.

User Action:

Investigate cause of possible invalid CNM format record.

N37D01

INVALID MDO NAME FOR REQUEST

Reason:

The MDO supplied to an &CNMPARSE statement is invalid.

System Action:

None.

User Action:

Check the syntax of the MDO name and verify it against its corresponding MAP definition.

N37D02

SOLVE MAPPING FAILURE

Reason:

An internal error has occurred while processing Mapping Services.

System Action:

None.

User Action:

Contact you product support representative.

N37D03

STACK OVERFLOW

Reason:

The internal recursion stack limit was exceeded while processing an &CNMPARSE operation.

System Action:

None.

User Action:

Contact your product support representative.

N38001

description of CNM record origin/destination captured by CNMTRACE command

Reason:

This message contains the destination/origin, type and status of a CNM record captured by the CNMTRACE command and is issued immediately prior to message(s) N38002.

System Action:

Processing continues.

User Action:

None.

N38002

hex-data

Reason:

This message contains the hexadecimal data captured when the CNMTRACE command is in effect.

System Action:

None.

User Action:

None.

N38201

REQUIRED OPERANDS MISSING

Reason:

Required operands on the DEFALIAS, REPALIAS or DELALIAS command were omitted.

System Action:

The command is rejected.

User Action:

Correct the error and retry the command. For a description of the commands refer to the command help.

N38202

OPERAND xxxxxxxx HAS INVALID VALUE

Reason:

An attempt was made to provide an invalid value to the operand described in the message.

System Action:

The command is rejected.

User Action:

Determine the correct value and retry the command.

N38203

OPERAND xxxxxxxx CONTAINS INVALID CHARACTER(S)

Reason:

An attempt was made to provide an invalid value to the operand described in the message.

System Action:

The command is rejected.

User Action:

Determine the correct value and retry the command.

N38204

GENERIC (R)NAME VALUE SPECIFIED BUT (R)NAME VALUE IS NOT GENERIC.

Reason:

When specifying a generic alias name (or real name) on the DEFALIAS command a generic real name (or alias name) must also be provided to preserve the single name-to-name mapping of the Alias Name Translation Facility.

System Action:

The command is rejected.

User Action:

Correct the error and retry the command.

N38205

ALIAS NAME=alias DELETED/REPLACED/DEFINED.

Reason:

The alias name, previously defined by a DEFALIAS command, has been either deleted or replaced following a DELALIAS or REPALIAS request.

System Action:

As described above.

User Action:

None.

N38206

OPERAND xxxxxxxx NOT RECOGNISED

Reason:

An invalid operand was specified on the command.

System Action:

The command is rejected.

User Action:

Correct the error and retry the command.

N38207

**** WARNING ** ALIAS NAME=aliasnam NET=aliasnet ALSO DEFINES RNAME=realnam RNET=realnet ; POSSIBLE NAME CONFLICT**

Reason:

This is a warning message indicating that the DEFALIAS command just processed refers to a real name and network previously allocated an alias name. This may be intentional.

System Action:

Processing continues.

User Action:

Ensure that the result was intentional, otherwise delete one of the alias name definitions (using the DELALIAS command) as the reverse name mapping (real to alias) is no longer unique.

N38208

ALIAS NAME=aliasnam NET=aliasnet NOT FOUND, IS NOT REPLACED/DELETED.

Reason:

A REPALIAS or DELALIAS command referenced an alias name and network which was not defined.

System Action:

The command is ignored.

User Action:

Determine the correct action and retry.

N38210

ALIAS NAME=aliasnam NET=aliasnet ALREADY EXISTS. DEFALIAS REJECTED.

Reason:

An attempt was made to define an alias name/network pair but a previous DEFALIAS command had already defined this name and network.

System Action:

The command is rejected.

User Action:

Correct and retry the command if necessary.

N38301

aliasnam aliasnet realnam realnet cdrmname

Reason:

This message provides details solicited with the SHOW DEFALIAS command. Refer to message N38304 which provides the column headings for more details on the contents.

System Action:

None.

User Action:

None.

N38302

OPERAND xxxxxxxx HAS INVALID VALUE.

Reason:

An attempt was made to use the invalid operand described in the message on the SHOW DEFALIAS command.

System Action:

The command is rejected.

User Action:

Correct the error and retry the command.

N38303

OPERAND xxxxxxxx NOT RECOGNISED

Reason:

An invalid operand was specified on the SHOW DEFALIAS command.

System Action:

The command is rejected.

User Action:

Correct and retry.

N38304

-ALIAS-- --NET--- -RNAME-- --RNET-- -RCDRM--

Reason:

This message provides the heading describing the line contents for a SHOW DEFALIAS command. Following this message one or more N38301 messages will format the details of those DEFALIAS entries selected by the SHOW DEFALIAS. ALIAS and NET define the resource as known in this system. RNAME and RNET describe the real name of the resource and the network which owns that resource. For a TYPE=LU display the RCDRM field indicates the owning CDRM if known.

System Action:

None.

User Action:

None.

N38305

count type ENTRIES DISPLAYED.

Reason:

This message terminates a SHOW DEFALIAS display. count provides the total number of DEFALIAS entries selected for display, and type describes the type of entries selected and may be either LU, MODE or COS.

System Action:

None.

User Action:

None.

N38306

NO ACTIVE CNM TRACES FOUND.

Reason:

This message is in response to a SHOW CNMTRACE command when no CNM traces are active.

System Action:

None.

User Action:

None.

N38307

USERID ID# COUNT RU-TYPE RESOURCE I-O S-U L-R LINK

Reason:

This message provides the heading describing the line contents for a SHOW CNMTRACE display. Following this message one or more messages N38308 will format the details of those CNMTRACE entries selected by the SHOW CNMTRACE. USERID is the user starting the trace. ID# is the unique trace identification number. COUNT is the number of traces matching this trace request that have been counted. RU-TYPE is the RU type (if any is specified) that the trace request is tracing. RESOURCE is the network name of the PU to be traced. I-O is 'Y' or 'N' to indicate if inbound and/or outbound RUs are being traced. L-R is 'Y' or 'N' to indicate whether or not tracing is being performed for local and/ or remote systems. If tracing is performed for a remote system, LINK may contain the name of a specific remote system being traced.

System Action:

None.

User Action:

None.

N38308

userid trcnum trccnt ru-type rescname a b c d e f linkname

Reason:

This message provides details solicited with the SHOW CNMTRACE command. Refer to message N38307 which provides the column headings for more details on the contents.

System Action:

None.

User Action:

None.

N38309

aaaaaaaa CNM TRACES ACTIVE. bbbbbbbb SELECTED FOR DISPLAY.

Reason:

This message terminates a SHOW CNMTRACE display. 'aaaaaaaa' provides the total number of active CNMTRACE entries, and 'bbbbbbbb' shows the number of CNMTRACE entries displayed.

System Action:

None.

User Action:

None.

N38310

DUPLICATE OPERANDS ENTERED.

Reason:

A parameter has been used twice on the SHOW CNMTRACE command.

System Action:

None.

User Action:

Review SHOW CNMTRACE command usage.

N38311

OPERAND xxxxxxxx IS INVALID

Reason:

An invalid operand was specified on the SHOW CNMTRACE command.

System Action:

The command is rejected.

User Action:

Correct and retry.

N38402

INSUFFICIENT STORAGE TO PROCESS ALIAS NAME TRANSLATION REQUEST

Reason:

An alias name translation request failed because of a storage shortage.

System Action:

The request is not processed.

User Action:

Determine the cause of the storage shortage. If necessary increase the SOLVE region or partition size.

N38501

REQUIRED OPERANDS MISSING

Reason:

One or more operands required on the XLATE command were omitted.

System Action:

The command is rejected.

User Action:

Correct and retry the command.

N38502

OPERAND xxxxxxxx NOT RECOGNISED

Reason:

An invalid operand was specified on the XLATE command.

System Action:

The command is rejected.

User Action:

Correct and retry.

N38503

OPERAND xxxxxxxx HAS AN INVALID VALUE

Reason:

An attempt was made to specify an invalid value for the XLATE command operand described in the message.

System Action:

The command is rejected.

User Action:

Correct and retry.

N38504

LU|COS|MODE ALIAS|REAL NAME/NET = name1/net1 ; REAL|ALIAS NAME/NET = name2/net2. cdrm IS CDRM.

Reason:

This message displays the results of an XLATE command. The name1/net1 provide the name and network of the input resource requiring translation, which may be an LU, COS or MODE name of type ALIAS or REAL. The name2/net2 are the names that the name1/net1 pair would be translated to in the target network as specified on the XLATE command.

System Action:

None.

User Action:

None.

N38505

LU|COS|MODE ALIAS|REAL NAME/NET = name1/net1 WAS NOT TRANSLATED, SENSE xxxxxxxx RETURNED.

Reason:

The name1/net1 input to an XLATE command was not successfully translated by the Alias Name Translation Facility. The sense code shown was returned.

System Action:

None.

User Action:

None.

N38506

TARGNET OPERAND REQUIRED UNLESS CLASS ALIAS, TYPE LU

Reason:

The TARGNET operand of the XLATE command must be specified unless the input name is an LU and alias to real name conversion was requested explicitly or by default.

System Action:

The command is rejected.

User Action:

Correct and retry.

N38801

CNM START COMMAND ACCEPTED.

Reason:

The CNM START command has been issued to start CNM processing.

System Action:

NEWS will attempt to open the CNM ACB and start receiving records across the CNM interface from the local SSCP.

User Action:

None.

N38802

CNM STOP COMMAND ACCEPTED.

Reason:

The CNM STOP command has been issued to stop CNM processing.

System Action:

NEWS will close the CNM ACB and CNM records will no longer be received from the local SSCP.

User Action:

None.

N38803

CNM OPERANDS MISSING OR INVALID.

Reason:

The CNM or CNMTRACE command has been issued but the required operands have been omitted or are invalid.

System Action:

The command is rejected.

User Action:

The CNM command accepts two operands, START and STOP. You should have only one of these operands on the command (not both). The CNMTRACE command also accepts a CANCEL=id operand (id must be in the range 1 - 999999).

N38804

CNM IS ALREADY ACTIVE. NEWS CNM ACB acbname

Reason:

The CNM START command has been issued but CNM processing has already been activated.

System Action:

The command is rejected.

User Action:

None.

N38805

CNM IS NOT ACTIVE.

Reason:

The CNM STOP command has been issued but CNM processing was not active and hence cannot be stopped.

System Action:

The command is rejected.

User Action:

None.

N38806

CNM ACB FAILED TO OPEN, ACBERFLG X'yy'.

Reason:

An attempt to open the CNM ACB failed, for the specified reason code.

System Action:

None

User Action:

Refer to the appropriate VTAM Programming Guide for an explanation of the error code specified.

Note: A common error code is x'5A', which indicates that the ACB name is not defined to VTAM. Correct the name, or define the ACB name to VTAM, and retry.

N38807

OPERAND xxxxxxxx NOT RECOGNISED

Reason:

An invalid operand was specified on the CNMTRACE command.

System Action:

The command is rejected.

User Action:

Correct and retry.

N38808

CNM TRACE REQUEST ACCEPTED, ID=aaaaaa.

Reason:

A CNMTRACE command has been issued to start CNM record tracing. aaaaa is the identifier for the trace initiated.

System Action:

NEWS will begin tracing CNM records of the type specified by the CNMTRACE command.

User Action:

None.

N38809

aaaaaaaa CNM TRACES TERMINATED.

Reason:

A CNMTRACE CANCEL=n or CNMTRACE STOP command has been issued where aaaaaaaa is the number of CNMTRACE requests terminated (if greater than 1).

System Action:

The specified CNM trace(s) will terminate.

User Action:

None.

N38810

NO CNM TRACES FOUND.

Reason:

A CNMTRACE STOP command has been issued but no CNM traces were active at the time.

System Action:

None.

User Action:

None.

N38811

DUPLICATE OPERANDS ENTERED

Reason:

Duplicate operands were entered for a CNMTRACE command.

System Action:

The CNMTRACE command is rejected.

User Action:

Correct the error and retry the command.

N38812

INSUFFICIENT STORAGE FOR REQUEST.

Reason:

A CNM record matching a CNMTRACE request mask arrived but insufficient storage was available to process the trace.

System Action:

The request is not processed.

User Action:

Determine the cause of the storage shortage. If necessary increase the SOLVE region or partition size.

N38813

SPECIFIED CNM TRACE NOT ACTIVE.

Reason:

A CNMTRACE CANCEL=n command has been issued but no CNM trace with an identifier matching that specified by 'n' was found.

System Action:

The command is rejected.

User Action:

Check that the correct identifier was specified and re-issue the command.

N38814

CNM ACB RETRY CANCELLED, CNM IS NOT ACTIVE

Reason:

The CNM ACB was in retry mode and a CNM STOP command was issued.

System Action:

The open retry against the CNM ACB is cancelled.

User Action:

N/A

N38B01

REMOTE CNM RECEIVE/SEND - POSITIVE RESPONSE, SEQ=aaaa

Reason:

This message is part of a CNM trace display and indicates that a CNM RECEIVE or SEND has completed on a remote SOLVE system with a positive response.

System Action:

NEWS continues processing.

User Action:

None.

N38B02

REMOTE CNM RECEIVE/SEND - NEGATIVE RESPONSE, SEQ=aaaa SENSE=bbbb

Reason:

This message is part of a CNM trace display and indicates that a CNM RECEIVE or SEND has completed on a remote SOLVE system with a negative response.

System Action:

NEWS continues processing.

User Action:

Determine the meaning of the sense information to diagnose the reason for the negative response.

N38B03

ERROR ON LINK AAAAAAAAAAAA - INVALID NEWS RECORD RECEIVED.

Reason:

An invalid NEWS record was received across ISR on link name AAAAAAAAAA.

System Action:

The LINK is stopped and processing on the record ignored.

User Action:

Correct source of invalid ISR format input.

N38C01

NEWS ISR CONTACT INITIATED WITH LINK aaaa DOMAIN bbbb.

Reason:

This message is written to the activity log to indicate that NEWS is initiating the establishment of ISR communication with the indicated remote SOLVE system.

System Action:

Establishment of the ISR connection is initiated.

User Action:

None. This message is informational only.

N38C02

NEWS ISR CONTACT COMPLETED WITH LINK aaaa DOMAIN bbbb VERSION cccc.

Reason:

This message indicates the successful establishment of ISR communication with the indicated remote SOLVE system.

System Action:

The NEWS ISR facilities are enabled.

User Action:

Proceed to use the NEWS ISR facilities.

N38C03

NEWS ISR CONTACT LOST WITH LINK aaaa DOMAIN bbbb.

Reason:

This message indicates that the NEWS ISR facilities have been disabled. Communication between the local SOLVE system and the indicated remote SOLVE system has been interrupted.

System Action:

An attempt is made to re-establish INMC contact at regular intervals if the link has actually failed. It is possible that the link was deliberately shut down by an operator.

User Action:

Take no immediate action. It is possible for the INMC link to recover automatically from most communications failures. Normally, a communications line has had an error and as soon as the line is restarted, INMC will be able to recover the link.

N39001

Load failed for NEWS EXIT exitname.

Reason:

The installation provided NEWS exit (exitname) could not be loaded. Possible reasons are that it was not available in the SOLVE STEPLIB DD, or there was insufficient storage to load the exit into the SOLVE address space.

System Action:

No calls will be made to the exit.

User Action:

Check the system log and SOLVE job log for possible causes. Correct and attempt to reinitialize the exit.

N39101

NEWS USER EXIT ABEND: *xxx-yyyy* MODULE NAME *module*. EXIT TERMINATED

Reason:

The installation provided NEWS exit (load module name *module*) has abended with the specified abend code. If the abend was a system abend, *xxx* is set to SYS; for a user abend *xxx* will be set to USR. This message is issued during system initialization only.

System Action:

No further calls are made to the exit.

User Action:

Identify and correct the abend cause. The exit may be restarted from the NEWS option of System Support Services.

N39302

OPERAND xxxxxxxx IS INVALID OR OUT OF RANGE

Reason:

The operand *xxxxxxxx* of the SYSMON command is not recognized.

System Action:

The command is rejected.

User Action:

Correct and retry.

N39303

NO PU NAME SPECIFIED

Reason:

No PU name was specified on the SYSMON command.

System Action:

The command is rejected.

User Action:

Correct and retry.

N39304

INVALID PU NAME SPECIFIED

Reason:

The PU name specified on the SYSMON command is longer than 8 characters.

System Action:

The command is rejected.

User Action:

Correct and retry.

N39305

INSUFFICIENT STORAGE TO PROCESS COMMAND

Reason:

A lack of storage prevented successful execution of the SYSMON command.

System Action:

The command is rejected.

User Action:

If the condition persists, consider increasing the SOLVE region size.

N39306

NO TEXT SUPPLIED

Reason:

No text to be sent to the PU was supplied on the SYSMON command.

System Action:

The command is rejected.

User Action:

Correct and retry.

N39401

INVALID HEX DATA SPECIFIED

Reason:

The data supplied on the REQMS command either was not an even number of characters long or contained other than hexadecimal characters.

System Action:

The command is rejected.

User Action:

The data on a REQMS command must be character format hexadecimal, where each two characters represents one hexadecimal byte. The characters can only be A to F and 0 to 9. Correct the error and retry.

N39402

LENGTH OF SUPPLIED DATA EXCEEDS MAXIMUM

Reason:

The data supplied on the REQMS command cannot exceed 512 characters in length.

System Action:

The command is rejected.

User Action:

Correct and retry.

N39403

NO DATA SPECIFIED

Reason:

No data was supplied on the REQMS command.

System Action:

The command is rejected.

User Action:

Correct and retry.

N39404

LENGTH OF SUPPLIED DATA LESS THAN MINIMUM

Reason:

The data supplied on a REQMS command must be at least 32 characters in length.

System Action:

The command is rejected.

User Action:

Correct the error and retry.

N39405

INSUFFICIENT STORAGE TO PROCESS THE COMMAND

Reason:

The REQMS command cannot be processed because of a storage shortage.

System Action:

NEWS continues processing.

User Action:

If necessary increase the SOLVE region or partition size.

N39501

UNABLE TO ALLOCATE CORRELATOR

Reason:

NEWS was unable to allocate a correlator number to a request to be sent to VTAM across the CNM interface. All available correlator numbers were in use by outstanding requests.

System Action:

The command is rejected.

User Action:

Wait, then retry the command.

N39502

NEWS ACB NOT OPEN

Reason:

NEWS was unable to send a request to VTAM across the CNM interface because the NEWS CNM ACB was not open.

System Action:

The command is rejected.

User Action:

Review the log for the $SN CNM parameter group (CNM Interface Details). If necessary, update the details and action the parameter group to activate the CNM ACB used by the NEWS component.

N39503

NEWS SEND FAILED, RC=xx, FBK2=yy, SENSE=zzzzzzzz

Reason:

NEWS was unable to send a request to VTAM across the CNM interface because a VTAM SEND macro failed.

System Action:

The command is rejected.

User Action:

xx, yy and zzzzzzzz are, respectively, the VTAM return code, feedback and sense information which may be interpreted from the VTAM Programming Guide .

N39505

LOCAL CNM SEND - NEGATIVE RESPONSE, SEQ=aaaaaaaa SENSE=bbbbcccc

Reason:

This message is part of a CNM trace display and supplies the sense code when a CNM SEND macro completes with a negative response returned.

System Action:

NEWS continues processing.

User Action:

Determine the meaning of the sense information to diagnose the reason for the negative response.

N39506

LOCAL CNM SEND - POSITIVE RESPONSE, SEQ=aaaaaaaa.

Reason:

This message is part of a CNM trace display and indicates that a CNM SEND has completed with a positive response.

System Action:

NEWS continues processing.

User Action:

None.

N39601

INVALID RECFMS REPLY DATA RECEIVED.

Reason:

Data received in reply to a SYSMON command is not of the correct format.

System Action:

The data is ignored.

User Action:

This could be a problem with the generation of the data by the controller from which the data was received. A VTAM buffer trace of the NEWS VTAM ACB will show the data received, which should be a RECFMS type 4 response.

N39602

SYSMON puname REJECTED, SENSE ssssssss. reason text

Reason:

A negative response was received in reply to the data sent to VTAM as a result of a SYSMON command. puname is the name of the PU to which the data was sent, ssssssss is the sense code returned, and reason text is the meaning of the sense code, if known.

System Action:

Processing of the SYSMON command ends.

User Action:

Interpret the meaning of the sense code, and retry the command if appropriate.

N39603

MESSAGE TO xxxxxxxx DISPATCHED

Reason:

Confirms the successful sending of a message to the control operator of the 3600/4700 controller xxxxxxxx via a SYSMON TYPE=MSG command.

System Action:

None.

User Action:

None.

N39701

hexadecimal data

Reason:

This is the reply to a REQMS command. The data is exactly as received across the CNM interface. Multiple N39701 messages will be returned if the data received is longer than 60 bytes, each message formatting 60 bytes into character format hexadecimal.

System Action:

None.

User Action:

Refer to the REQMS command description.

N39702

REQMS REJECTED, SENSE ssssssss. reason text

Reason:

A negative response was received in reply to the data sent to VTAM as a result of a REQMS command. ssssssss is the sense code returned, and reason text is the meaning of the sense code, if known.

System Action:

Processing of the REQMS command ends.

User Action:

Interpret the meaning of the sense code, and retry the command if appropriate.

N39703

END

Reason:

Signifies the end of N39701 messages received in reply to a REQMS command.

System Action:

None.

User Action:

None.

N39704

POSITIVE RESPONSE RECEIVED

Reason:

This message is received when the positive response from the network resource is received following the sending of CNM data using the REQMS command and where the data content indicated that no solicited data was expected in reply.

System Action:

None.

User Action:

None.

N39901

SYSTEM CONFIGURED WITH NEWS FEATURE - nlvl

Reason:

Issued in response to the STATUS command to show that this SOLVE is configured with the NEWS feature, which is at release level nlvl.

System Action:

None.

User Action:

None.

N39902

CNMPROC procname IS/IS NOT LOADED

Reason:

Issued in response to the STATUS command to show the status of the CNMPROC procname.

System Action:

None.

User Action:

None.

N39903

NEWS ACB IS/IS NOT OPEN

Reason:

Issued in response to the STATUS command to show whether the NEWS VTAM ACB is open.

System Action:

None.

User Action:

None.

N39904

CNMPROC NOT ACTIVE, CANNOT FLUSH.

Reason:

Issued in response to a SYSPARMS CNMPROC=FLUSH command if a CNMPROC is not currently active, or is not currently waiting on an *CNMREAD* statement.

System Action:

None.

User Action:

Retry the command. If a CNMPROC is active, this condition could indicate that it has not been written to always loop around to an
&CNMREAD statement, as should be the case.

N39905

CNMPROC REQUEST INVALID, ALREADY ACTIVE

Reason:

Issued in response to a SYSPARMS CNMPROC=procname command if a CNMPROC is already active.

System Action:

None.

User Action:

If you wish to invoke a new CNMPROC, the active one must first be flushed using the SYSPARMS CNMPROC=FLUSH command.

N39906

UNABLE TO CHANGE CNM ACB NAME - ACB IS CURRENTLY OPEN

Reason:

To change the NEWS ACB name the ACB must be closed first using the NEWS option of the System Support Services function.

System Action:

None.

User Action:

Close the NEWS ACB then retry.

N39907

MODCB FOR ACB NAME acbname FAILED, R15=X'xx', R0=X'yy'.

Reason:

A MODCB macro for the acbname shown failed with the return codes shown.

System Action:

None.

User Action:

Determine the cause of the error. Correct and retry.

N39908

SYSTEM CONFIGURED WITH XIS FEATURE - nlvl

Reason:

Issued in response to the STATUS command to show that this SOLVE system is configured with the XIS feature, which is at release level nlvl.

System Action:

None.

User Action:

None.

N39B01

STRUCTURED FIELD aaaa IN ERROR

Reason:

A NEWS security structured field value was invalid.

System Action:

The value is ignored.

User Action:

Correct the security exit value returned and restart the exit.

N39D01

STRUCTURED FIELD aaaa IN ERROR

Reason:

A SOLVE:Attach for Netware security structured field value was invalid.

System Action:

The value is ignored.

User Action:

Correct the security exit value returned and restart the exit. Check the processing for SF x'0535'.

N39F09

INVALID USE OF CNMCONT STATEMENT

Reason:

An NCL procedure has tried to use the &CNMCONT verb but permission has been denied. Use of the &CNMCONT verb is only valid from CNMPROC or from an NCL procedure executed by CNMPROC.

System Action:

The procedure is flushed.

User Action:

Remove the &CNMCONT statement from the procedure, or ensure the procedure is executed as or by CNMPROC. Normally only CNMPROC would ever issue a &CNMCONT, unless it is required by a CNM processing procedure executed by CNMPROC to re- route the record to a remote system for processing.

N39F10

INSUFFICIENT STORAGE TO PROCESS RECEIVED CNM REPLY

Reason:

A CNM reply message cannot be processed because of a storage shortage.

System Action:

NEWS continues processing.

User Action:

If necessary increase the SOLVE region or partition size.

N39F11

NEGATIVE RESPONSE RECEIVED, SENSE=aaaa. bbbb

Reason:

A negative response was received across the CNM interface specifying the nominated sense and feedback information.

System Action:

NEWS continues processing.

User Action:

Determine the meaning of the sense code to diagnose the reason for the negative response.

N39F12

CNM READ FAILED, RPL RTCD=aa, FDBK=bb, SENSE=cccc. dddd

Reason:

A CNM read failed for the stated reason codes.

System Action:

NEWS continues processing.

User Action:

Determine the meaning of the RPL return and sense code information.

N39F13

CNM READ FAILED. aaaa

Reason:

An NCL procedure has issued the &CNMREAD verb but due to an error the read has failed. The text aaaa explains the reason for the failure.

System Action:

The failure is indicated by a value of 8 in the &RETCODE system variable.

User Action:

The message text should explain the reason for the failure - take action to correct the cause of the failure.

N3AC01

SYNTAX ERROR: VARS/ARGS NOT SUPPORTED.

Reason:

Current release of SOLVE:LINK for TCP/IP does not support VARS and ARGS operands on &SOCKET verb.

System Action:

NCL procedure terminates.

User Action:

Correct NCL procedure.

N3AE01

nn errno-desc

Reason:

This message is issued when a socket error occurs after a TCP/IP call. It is a translation of the errno number to the errno returned from the call.

System Action:

Dependent on the calling program.

User Action:

A more specific error message should precede this. See the "NCL REFERENCE" for a list of errno values.

N3AF01

USERID NCLID NCL-PROC LUNAME SOC#

Reason:

The heading displayed in response to a SHOW TCPIP USERS command. This information is used to determine who is using TCP/IP services and how many sockets are in use.

System Action:

None.

User Action:

None.

N3AF02

userid nclid procname luname soc

Reason:

A detail line displayed in response to the SHOW TCPIP USERS command. The fields are as follows:

userid The ID of the user of TCP/IP services.
nclid The ID of the NCL process using TCP/IP services.
procname The name of the NCL procedure using TCP/IP services.
luname The user region name.
soc The number of open sockets used by the NCL process.

System Action:

None.

User Action:

None.

N3AF03

SOCKET TYPE OWNER CLIENTID LPORT PPORT PEER-IP-ADDRESS

Reason:

The heading is displayed in response to a SHOW SOCKETS command.

System Action:

None.

User Action:

For more information, see help for messages N3AF04 and N3AF42.

N3AF04

socket type owner clientid lport pport peer-ip-address

Reason:

A detail line displayed in response to the SHOW SOCKETS command. The fields are as follows:

socket

Displays the ID of the socket used internally.

type

Displays the type of socket, for example, RAW, UDP, TCP. A TCP Listener is TCPL and TCPI is an associated inbound connection. TCPO is an outbound connection.

owner

Displays the ID of the NCL process using TCP/IP services.

clientid

Displays the ID of the socket used by the TCP/IP stack.

lport#

Displays the local port number assigned to the socket.

pport#

Displays the port number of a peer host if the socket is a TCP connection. Also, the last sent to or received from port for a UDP socket.

peer-ip-address

Displays the IP address of the peer host.

System Action:

None.

User Action:

None.

N3AF05

TCP/IP INTERFACE IS *status* NAME=*name* PRIMARY=*pri* IPVERS=*vers*

Reason:

This message is issued in response to a SHOW TCPIP STATUS command. The fields are as follows:

- *status* is the status of the TCP/IP socket interface. Possible values are:

  ACTIVE—The TCP/IP sockets interface is active, and TCP/IP requests can be issued.

  INACTIVE—The TCP/IP sockets interface is inactive.

  STARTING—The TCPIP START command has been issued, and the sockets interface is initializing.

  STOPPING—The TCPIP STOP command has been issued and the sockets interface is terminating.

- *name* is the name that is assigned to the instance of the TCP/IP sockets interface displayed. CA NetMaster can use multiple TCP/IP sockets interfaces concurrently and each is assigned a name. The name is used in commands such as TCPIP STOP, SHOW TCPIP, and others to control and display information about specific interfaces.

- *pri* indicates whether the TCP/IP sockets interface displayed is the primary sockets interface.

  All CA NetMaster TCP/IP functions use the primary TCP/IP sockets interface, for example, IP Node Monitor and IP Diagnostics. This interface is also the default interface that a TCPIP STOP command stops and a TCPIP MODIFY command alters.

- *vers* is the IP version that the displayed TCP/IP sockets interface supports.

  4 indicates that the sockets interface uses IPv4 sockets and 6 indicates that the interface uses IPv6 sockets.

  When using IPv4 sockets, CA NetMaster can communicate with IPv4 partner applications only. When using IPv6 sockets, CA NetMaster can communicate with IPv4 and IPv6 partner applications.

N3AF07

TCP/IP LOCAL HOST ADDRESS=ipaddress

Reason:

This message is issued in response to a SHOW TCPIP STATUS command. The fields are as follows:

ipaddress The IP address of the local host.

System Action:

None.

User Action:

None.

N3AF08

TCP/IP LOCAL HOST NAME=hostname

Reason:

This message is issued in response to a SHOW TCPIP STATUS command. The fields are as follows:

hostname The short name of the local host.

System Action:

None.

User Action:

None.

N3AF09

TCP/IP type PORT=port

Reason:

This message is issued in response to a SHOW TCPIP STATUS command. It shows the server's type and port number. The fields are as follows:

type is either INMC or APPC.
port is the server's port number.

System Action:

None.

User Action:

None.

N3AF10

TCP/IP TRACE=*status*

Reason:

This message is issued in response to a SHOW TCPIP STATUS command.

status specifies the trace settings for the TCP/IP sockets interface. Possible values are:

NO—The TCP/IP trace is not active.

SUMMARY—The TCP/IP trace is active, summary trace data is written the log.

YES—The TCP/IP trace is active, all trace data is written to the log.

ASCII—The TCP/IP trace is active, all trace data is written to the log, character data is assumed to be ASCII.

System Action:

None.

User Action:

None.

N3AF11

TCP/IP LOCAL HOST FULL NAME=hostname

Reason:

This message is issued in response to a SHOW TCPIP STATUS command. The fields are as follows:

hostname The full name of the local host.

System Action:

None.

User Action:

None.

N3AF12

TCP/IP SHARED SERVER IS *status* PORT=*port*

Reason:

This message is displayed in response to a SHOW TCPIP STATUS command. The fields are as follows:

- *status* is the status of the TCP/IP shared server. Possible values are:

  ACTIVE—The TCP/IP shared server is active.

  INITIALISING—The TCP/IP shared server is initializing.

  INACTIVE—The TCP/IP shared server is inactive.

- *port* is the TCP/IP shared server port number. If no port number is set, it displays NONE.

System Action:

None.

User Action:

None.

N3AF13

luname pid last-request soc

Reason:

A detail line displayed in response to the SHOW TCPIP LINKS command. The fields are as follows:

luname The user's LU name (logical user name).
pid Unique process number. A process number is allocated when the &SOCKET ALLOCATE verb is executed.
last-request The last function executed by TCP/IP services.
soc The number of open sockets used by the process.

System Action:

N3AF15

TYPE NAME SOCKET LPORT PPORT PEER-IP-ADDRESS

Reason:

This message is displayed in response to a SHOW TCPIP AM command. It provides the following headings for the individual TCPIP AM sessions.

The headings are:

- TYPE is the session type:

  UNKNOWN—The session type has not yet been determined.

  AM- PRI—A TCPIP AM (INMC/APPC) session, primary (connector).

  AM-SEC—A TCPIP AM (INMC/APPC) session, secondary (acceptor).

  TELNET—A TCPIP Telnet session, under negotiation.

  TELNET-3270—A TCPIP TN3270 session.

  TELNET-3270E—A TCPIP TN3270E terminal session.

  TELNET-PRINT—A TCPIP TN3270E printer session (LU1 printer).

  TELNET-NVT—A TCPIP NVT session (treated as LU1).
- NAME is the logical LU name (APPL or simulated terminal).
- SOCKET is the socket ID.
- LPORT is the local port number.
- PPORT is the peer port number.
- PEER-IP-ADDRESS is the peer IP address.

System Action:

None.

User Action:

None.

N3AF16

type name socket lport pport peer-ip-address

Reason:

This message is displayed in response to a SHOW TCPIP AM command. The message displays the session information for the individual TCPIP AM sessions.

For more information, see message N3AF15.

N3AF90

OPERAND *operand* IS INVALID OR OUT OF RANGE

Reason:

This message is issued in response to a SHOW TCPIP or SHOW SOCKETS command.

It indicates that the command cannot be processed because an invalid or unknown operand was specified.

operand is the invalid or unknown operand.

System Action:

The SHOW TCPIP or SHOW SOCKETS command is ignored.

User Action:

Correct or remove the invalid operand and reenter the command.

N3AF91

SHOW *optname* FAILED, NAME=*name* IS NOT DEFINED

Reason:

This message is issued in response to a SHOW TCPIP or SHOW SOCKETS command.

It indicates that the NAME operand of the command specified the name of a TCP/IP sockets interface that is not defined.

The fields are as follows:

- *optname* is the SHOW command option specified, TCPIP or SOCKETS.
- *name* is the NAME operand value specified.

System Action:

The SHOW TCPIP or SHOW SOCKETS command is ignored.

User Action:

Correct or remove the NAME operand and reenter the command.

N3AI01

request FAILED: RC=rc RSN=rsn ERR=err PID=pid SID=sid

Reason:

Execution of a TCP/IP request has failed. The fields are as follows:

request is the TCP/IP request that failed.
rc is the return code.
rsn is the reason code.
err is the error code as set by the TCP/IP API.
pid is the process ID.
sid is the socket ID.

System Action:

The APPC server terminates.

User Action:

Contact your technical support helpdesk.

N3AI02

SUBTASK ALLOCATE FAILED.

Reason:

The address space could not allocate a TCP/IP subtask.

System Action:

APPC server terminates.

User Action:

Check system log for additional error messages.

N3AI03

APPC SERVER HAS TERMINATED.

Reason:

The APPC server has stopped. No further APPC TCP/IP connections are possible.

System Action:

Connect request to APPC server port are rejected.

User Action:

None.

N3AL01

SYSPARM=ssssssss REJECTED, TCP/IP ACCESS METHOD IS NOT ACTIVE

Reason:

An attempt to modify a TCP/IP SYSPARM was made when the TCP/IP access method was not active.

System Action:

The command is ignored.

User Action:

Ensure the TCP/IP access method is active.

N3AL02

SYSPARM=ssssssss rejected; port number is same as a TELNET port

Reason:

You attempted to modify the IPPORT SYSPARM value. However, the new port number is presently defined as a TELNET port (via the TNCTL command).

System Action:

The command is ignored.

User Action:

Select a port number that is not the same as a defined TELNET port.

N3AN01

TCP/IP SERVER ACTIVE ON *type*: *pppp* SOCKET: *ssss*

Reason:

The TCP/IP shared port/path server is active.

type identifies whether *pppp* is a port number or path.

pppp is the server port number or path.

ssss is the server socket number.

System Action:

None.

User Action:

None.

N3AN90

TCP/IP SERVER REGISTER FAILED. *type*: *pppp* RC: *rc* FB: *fb* ERRNO: *er*

Reason:

The TCP/IP shared port/path server was unable to register the port or path. The error information is displayed.

Additional information follows this message.

System Action:

The server will retry registration in 30 seconds.

User Action:

Check the error information. If ERRNO indicates that the port or path is in use, change it using the SOCKETS parameter group.

N3AN91

TCP/IP SERVER ACCEPT FAILED. SOCKET: *ssss type*: *pppp* RC: *rc* FB: *fb* ERRNO: *err*

Reason:

The TCP/IP shared port/path server has an error on ACCEPT. The error information is displayed.

Additional information follows this message.

System Action:

The server terminates. It restarts when the primary TCP/IP sockets interface is restarted.

User Action:

Usually, no user action is required. It is likely that a TCP/IP sockets interface problem has occurred. When the primary TCP/IP sockets interface restarts, the server restarts.

N3AO85

TCP/IP SERVER PEER=paddr:pport S=sss ERR: error RC=rc FB=ff ERRNO=errno VERRIN=verr

Reason:

A TCP/IP error occurred when negotiating an incoming connection request. The error information relates to the &SOCKET NCL verb.

System Action:

The connection is not accepted.

User Action:

Review the error information to identify the problem and correct it.

Note: For information about the &SOCKET return code, feedback code, and error number, see the Network Control Language Reference Guide.

N3AO86

TCP/IP SERVER PEER=paddr:pport S=sss ERR: error

Reason:

An error occurred when negotiating an incoming connection request.

This message may be followed by the N3AO87 message, which dumps the incoming data buffer.

System Action:

The connection is not accepted.

User Action:

Review the error information, and correct the problem.

N3AO87

off hex hex hex hex char

Reason:

This message follows an N3AO86 message and contains the dump of an incoming connection request.

It is followed by N3ZJ91 messages that display the incoming data buffers, which may help you diagnose the problem.

System Action:

None.

User Action:

See N3AO86.

N3AP90

SOCKET *socket* CONNECT TO *server* AT *paddr*/*pport* FAILED - *errdesc* - DATA FOLLOWS

Reason:

An attempt to connect to another CA NetMaster system using the TCP/IP access method failed. The fields are as follows:

- *socket* is the socket identifier.
- *server* is the server name.
- *paddr*/*pport* is the TCP/IP address and port number of the remote system.
- *errdesc* is the error description.

This message is logged and precedes N3ZJ91 messages that contain an incoming data buffer that may help diagnose the error.

System Action:

None.

User Action:

Dependant on the error description in the message.

N3AP91

off hex hex hex hex char

Reason:

This message is logged following an N3AP90 message and contains a dump of an incoming data buffer.

This message is logged, and precedes N3ZJ91 messages containing an incoming data buffer that may help diagnose the error.

System Action:

None.

User Action:

Dependant on N3AP90

N3AR01

request FAILED: RC=rc RSN=rsn ERR=err PID=pid SID=sid

Reason:

Execution of a TCP/IP request has failed. The fields are as follows:

request is the TCP/IP request that failed.
rc is the return code.
rsn is the reason code.
err is the error code as set by TCP/IP API.
pid is the process ID.
sid is the socket ID.

System Action:

Connect processing terminates.

User Action:

Contact your technical support help desk.

N3AR02

SUBTASK ALLOCATE FAILED.

Reason:

The address space could not allocate a TCP/IP subtask.

System Action:

Connect processing terminates.

User Action:

Check system log for additional error messages.

N3AS01

request FAILED: RC=rc RSN=rsn ERR=err PID=pid SID=sid

Reason:

Execution of a TCP/IP request has failed. The fields are as follows:

request is the TCP/IP request that failed.
rc is the return code.
rsn is the reason code.
err is the error code as set by TCP/IP API.
pid is the process ID.
sid is the socket ID.

System Action:

The error is handled by the calling service.

User Action:

Contact your technical support help desk.

N3AT01

TCPIP option COMMAND PROCESSED

Reason:

This message is issued in response to a TCPIP command.
It indicates that the command has been processed.
'option' is the command option that was specified.

System Action:

None.

User Action:

None.

N3AT02

TCPIP *option* IGNORED, NAME=*name* IS *status*

Reason:

This message is issued in response to a TCPIP command. It indicates that the command was not processed because the TCP/IP sockets interface that the command was directed to is in a status that prevents processing, for example, a TCPIP START command when the TCP/IP sockets interface is already active.

The fields are as follows:

- *option* is the command option specified.
- *name* is the name of the TCP/IP sockets interface to which the command was directed.
- *status* is the status of the TCP/IP sockets interface.

System Action:

The TCPIP command is ignored.

User Action:

Determine if the TCPIP command is needed.

N3AT05

TCPIP START FAILED, PRIMARY ALREADY ACTIVE

Reason:

This message is issued in response to a TCPIP START command. It indicates that the command was not processed because the command operand PRIMARY=YES was specified or was selected by default, and a primary TCP/IP sockets interface is already active.

System Action:

The TCPIP START command is ignored.

User Action:

Determine if the TCPIP START command is needed.

N3AT10

TCPIP *option* FAILED, UNKNOWN TYPE: *type*

Reason:

This message is issued in response to a TCPIP command. It indicates that the command cannot be processed because the TYPE operand specified an unknown TCP/IP sockets interface.

The fields are as follows:

- *option* is the command option specified.
- *type* is the sockets interface type specified. Valid types are:

  IBM: Interfaces to IBM Communications Server using IPv4 HPNS (High Performance Native Sockets).

  IBMV4: Interfaces to IBM Communications Server using IPv4 HPNS. IBMV4 is a synonym for IBM.

  IBMV6: Interfaces to IBM Communications Server using IPv6 HPNS.

  TCPAXS: Interfaces to CA TCPaccess Communications Server 5.2 or later.

  VM: Interfaces to IBM VM TCP/IP.

  XNFTCP: Interfaces to Hitachi XNF/TCP.

  TISP: Interfaces to Fujitsu TISP.

In most cases, the TYPE operand can be omitted. CA NetMaster selects the correct TCP/IP sockets interface based on the current environment.

System Action:

The TCPIP command is ignored.

User Action:

Correct or remove the TYPE operand and reenter the command.

N3AT11

TCPIP *option* FAILED, TYPE: *type* IS INVALID FOR THIS OPERATING SYSTEM

Reason:

This message is issued in response to a TCPIP command. It indicates that the command cannot be processed because the TYPE operand specified a TCP/IP sockets interface that is not supported in this environment.

The fields are as follows:

- *option* is the command option specified.
- *type* is the sockets interface type specified. Valid types are:

  IBM: Interfaces to IBM Communications Server using IPv4 HPNS (High Performance Native Sockets).

  IBMV4: Interfaces to IBM Communications Server using IPv4 HPNS. IBMV4 is a synonym for IBM.

  IBMV6: Interfaces to IBM Communications Server using IPv6 HPNS.

  TCPAXS: Interfaces to CA TCPaccess Communications Server 5.2 or later.

  VM: Interfaces to IBM VM TCP/IP.

  XNFTCP: Interfaces to Hitachi XNF/TCP.

  TISP: Interfaces to Fujitsu TISP.

In most cases, the TYPE operand can be omitted. CA NetMaster selects the correct TCP/IP sockets interface based on the current environment.

System Action:

The TCPIP START command is ignored.

User Action:

Correct or remove the TYPE operand and reenter the command.

N3AT12

TCPIP *option* FAILED, NO VENDOR INTERFACE AVAILABLE

Reason:

This message is issued in response to a TCPIP command. It indicates that the command cannot be processed because the TYPE operand was omitted from the command and CA NetMaster was unable to determine a default TCP/IP sockets interface to use.

option is the command option specified.

System Action:

The TCPIP command is ignored.

User Action:

Determine the correct TCP/IP sockets interface and reenter the TCPIP command, with the TYPE=*type* operand.

N3AT13

TCPIP option FAILED, STORAGE SHORTAGE

Reason:

This message is issued in response to a TCPIP command.
It indicates that the command could not be processed as a temporary storage shortage was encountered.

System Action:

The TCPIP command is ignored.

User Action:

Determine why a storage shortage condition exists.

N3AT21

TCPIP DEFINE FAILED, NAME=*name* ALREADY DEFINED

Reason:

This message is issued in response to a TCPIP DEFINE command. It indicates that the command cannot be processed because a TCP/IP sockets interface is already defined with the same name specified by the NAME operand or selected by default.

name is the sockets interface name specified or selected by default.

System Action:

The TCPIP DEFINE command is ignored.

User Action:

Determine if the TCPIP DEFINE command is needed.

N3AT22

TCPIP *option* FAILED, NAME=*name* IS RESERVED

Reason:

This message is issued in response to a TCPIP command. It indicates that the command cannot be processed because the NAME operand specified a reserved name.

The fields are as follows:

- *option* is the command option specified.
- *name* is the TCP/IP sockets interface name specified.

System Action:

The TCPIP command is ignored.

User Action:

Correct the NAME operand and reenter the command.

N3AT30

TCPIP MODIFY FAILED, *operand* OPERAND NOT ALLOWED

Reason:

This message is issued in response to a TCPIP MODIFY command. It indicates that the command cannot be processed because an operand was specified that is allowed only when the TCP/IP sockets interface is inactive.

name is the name of the operand that is not allowed.

System Action:

The TCPIP MODIFY command is ignored.

User Action:

Use the TCPIP STOP command to stop the TCP/IP sockets interface, reissue the TCPIP MODIFY command, and then use the TCPIP START command to restart the TCP/IP sockets interface.

N3AT31

TCPIP *option* FAILED, NO PRIMARY VENDOR INSTANCE

Reason:

This message is issued in response to a TCPIP command. It indicates that the command cannot be processed because the NAME operand was omitted and a primary TCP/IP sockets interface is not active.

option is the command option specified.

System Action:

The TCPIP command is ignored.

User Action:

Reissue the TCPIP command with the NAME=*name* operand.

N3AT32

TCPIP *option* FAILED, NO DEFINED VENDOR INSTANCES

Reason:

This message is issued in response to a TCPIP command. It indicates that the command cannot be processed because the NAME=ALL operand was specified but no TCP/IP sockets interfaces are defined.

option is the command option specified.

System Action:

The TCPIP command is ignored.

User Action:

Determine if the TCPIP command is needed.

N3AT33

TCPIP *option* FAILED, NAME=*name* IS NOT DEFINED

Reason:

This message is issued in response to a TCPIP command. It indicates that the command cannot be processed because the TCP/IP sockets interface is not defined with the name specified by the NAME operand.

The fields are as follows:

- *option* is the command option specified.
- *name* is the TCP/IP sockets interface name specified.

System Action:

The TCPIP command is ignored.

User Action:

Correct the NAME operand and reenter the command.

N3AT34

TCPIP *option* FAILED, NO ACTIVE VENDOR INSTANCES

Reason:

This message is issued in response to a TCPIP command. It indicates that the command cannot be processed because the NAME=ALL operand was specified but no TCP/IP sockets interfaces are active.

option is the command option specified.

System Action:

The TCPIP command is ignored.

User Action:

Determine if the TCPIP command is needed.

N3AV01

DNR option COMMAND PROCESSED

Reason:

This message is issued in response to a DNR command.
It indicates that the command has been processed.
'option' is the command option that was specified.

System Action:

None.

User Action:

None.

N3AV02

***count* DNR CACHE ENTRIES DELETED**

Reason:

This message is issued in response to a DNR command with the PURGE operand.

count is the number of DNR cache entries deleted.

System Action:

None.

User Action:

None.

N3AV03

STATIC DNR CACHE LOADED, ADD=*add*, REPLACE=*replace*, NOREPLACE=*noreplace*, ERROR=*error*

Reason:

This message is issued in response to a DNR command with the STATIC operand. The fields are as follows:

- *add* is the number of cache entries in the VARTABLE for which there is no identically-named entry in the static cache and that were added to the static cache.
- *replace* is the number of cache entries in the VARTABLE for which there is an identically-named entry in the static cache and the entry in the static cache is replaced because the REPLACE option is specified.
- *noreplace* is the number of cache entries in the VARTABLE for which there is an identically-named entry in the static cache and the entry in the static cache is not replaced because the NOREPLACE option is specified (or defaulted).
- *error* is the number of cache entries in the VARTABLE that were in error.

System Action:

None.

User Action:

None.

N3AV10

WARNING, CALCULATED TOTAL TIMEOUT: aaa SECONDS EXCEEDS LIMIT TIMEOUT: bbb SECONDS

Reason:

This message is issued in response to a DNR command.
It indicates that at least one of the TIMELIM, RETRY, and NS operands was specified, and that the calculated maximum time needed to query all name servers in turn (allowing for retries) exceeds the specified (or current) TIMELIM setting.

System Action:

This is a warning. The command is still processed and the requested values are set.

User Action:

You may wish to adjust the values of the TIMELIM and RETRY operands (taking into account the number of name servers) to be consistent.
For example, if you have 2 name servers (NS=(ns1,ns2)) and wish to have 2 retries, the first after 5 seconds, the second after 10, then you could specify:
DNR SET NS=(addr1,addr2) RETRY=(2,5,5,0)
(This assumes an additive delay. The last delay would be 15 seconds)

This means that for each name server, the resolver would issue sends as follows:
NS1 send 1 wait 5 seconds NS1 send 2 wait 10 seconds NS1 send 3 wait 15 seconds <start NS2 sends)
For each name server, this is a total of 30 seconds. With 2 name servers, the total required time to satisfy the RETRY specification would be 60 seconds.
If you specify (or currently have) a TIMELIM value less than 60, this message is issued in response to the DNR command as a warning. You may then decide to adjust either the TIMELIM value or the RETRY settings.

N3AV80

ooooo OPERAND INVALID

Reason:

This message is issued in response to a DNR command.
It indicates that the named operand is invalid.
'ooooo' is either DOMAIN or RETRY.

System Action:

The command is ignored.

User Action:

Correct the indicated operand and reissue the command.

N3AV99

***P1* OPERAND IS OBSOLETE AND IS IGNORED**

Reason:

A DNR command is entered with an obsolete operand.

The *P1* operand is obsolete and is ignored.

System Action:

The obsolete operand is ignored, and command processing continues.

User Action:

Remove the obsolete operand from the command string.

N3AW10

CURRENT TCP/IP DNR PARMS... (DNR=type)

Reason:

The heading displayed in response to a SHOW DNR command. This information is used to determine the parameter settings of the SOLVE Domain Name Resolver (DNR). It also displays current statistics.
The current setting of the TCPIP START or MODIFY command DNR operand is shown (in the 'type' field). It will be VENDOR or SOLVE.

System Action:

None.

User Action:

None.

N3AW11

parmname value

Reason:

This response message to a SHOW DNR command, displays various DNR parameter names and their current settings.
The following names are displayed:
DOMAIN The current setting of the DOMAIN operand, showing the domain suffix that will be applied to names with no fullstops.
MAXSTG The current setting of the MAXSTG operand, showing the maximum amount of storage that will be used for the DNR dynamic cache.
TIMELIM The current setting of the TIMELIM operand, showing the absolute time limit that will be applied to a DNR request.
CNRSP The current setting of the CNRSP operand, showing the time (in seconds) that the results of a request that received no answer (in the timeout period) will be cached.
CNFND The current setting of the CNFND operand, showing the time (in seconds) that the results of a request that was answered with no relevant information (and no cache timeout information) will be cached.
RETRY The current settings of the RETRY operand, will display as 'NO' or a list of 4 numbers, representing the retry count, initial timeout, additive timeout, and timeout multiplier.
TRACE The current settings of the TRACE operand.

N3B201

TCPIP START COMPLETE (TYPE=*type*, NAME=*name*)

Reason:

A TCP/IP sockets interface has been activated by the TCPIP START command.

The fields are as follows:

- *type* is the type of TCP/IP sockets interface.
- *name* is the name assigned to the TCP/IP sockets interface.

System Action:

None.

User Action:

None.

N3B202

TCP/IP INTERFACE FAILED TO INITIALIZE - RC=rc RSN=rsn ERR=err

Reason:

Execution of a TCP/IP request has failed. The fields are as follows:

rc is the return code.
rsn is the reason code.
err is the error code as set by TCP/IP API.

System Action:

TCP/IP services are not available.

User Action:

Contact your technical support help desk.

N3B203

TCPIP AUTOMATIC RESTART IN PROGRESS (TYPE=*type*, NAME=*name*)

Reason:

A TCP/IP sockets interface is automatically restarting after being stopped by a vendor stack shutdown (for example, TCP/IP started task termination).

The fields are as follows:

- *type* is the type of TCP/IP sockets interface.
- *name* is the name assigned to the TCP/IP sockets interface.

System Action:

The TCP/IP sockets interface attempts to restart.

User Action:

None.

N3B210

TCPIP START (TYPE=*type*, NAME=*name*) INITIALIZATION FAILURE, RETRY in *nn* SECONDS

Reason:

The TCP/IP sockets interface cannot be started by the TCPIP START command. A soft or retriable failure occurred (messages preceding this describe the error).

A retry occurs in the indicated interval. To stop retry, issue a TCPIP STOP command.

The fields are as follows:

- *type* is the type of TCP/IP sockets interface.
- *name* is the name assigned to the TCP/IP sockets interface.
- *nn* is the retry interval, in seconds.

System Action:

After the indicated interval, initialization of the TCP/IP sockets interface is retried.

User Action:

Determine the reasons for the failure and correct them if required.

N3B220

TCPIP START (TYPE=*type*, NAME=*name*) FAILED, *rsn* - *info*

Reason:

A TCP/IP sockets interface cannot be started by the TCPIP START command.

The fields are as follows:

type

Is the type of TCP/IP sockets interface.

name

Is the name assigned to the TCP/IP sockets interface.

rsn

Is the reason code associated with the failure.

info

Is the reason information associated with the failure.

The reason code and information is as follows:

1 - LOAD FOR type INTERFACE MODULE *mmmm* FAILED, INFO: *information*

Indicates that CA NetMaster is unable to load the named module for the indicated sockets interface type. Load error information is displayed.

2 - ATTACH FOR *mmmm* FAILED, REFER TO LOG

Indicates that CA NetMaster is unable to attach the named sockets interface module. For more information, see the CA NetMaster log.

3 - SUBTASK *mmmm* TERMINATED OR ABENDED, REFER TO LOG

Indicates that the identified subtask abended or unexpectedly terminated. For more information, see the CA NetMaster log.

4 - SUBTASK *mmmm* INITIALIZATION FAILURE 1

Indicates that the identified subtask cannot perform basic initialization.

5 - SUBTASK *mmmm* INITIALIZATION FAILURE 2, RC: *nn*

Indicates that the identified subtask cannot perform subtask engine initialization. The RC values are as follows:

1: STQE eye-catcher invalid (internal error)

2: Engine already active (internal error)

3: Engine previously active (internal error)

4: No shared subpool available (internal error)

5: Initial GETMAIN failed

6: Initial ESTAE failed

7: 31 bit support not available

8: Caller not AMODE 31

9: FD WAIT support not available in this O/S

If a return code other than GETMAIN failure occurs, contact CA Support.

6 - *type* MODULE *mmmm* FAILED, RC=*rr*

Indicates that the identified sockets interface module returned a non-zero return code.

7 - *type* MODULE *mmmm* INITIALISATION FAILURE, RC: *rr*

Indicates that the identified sockets interface module cannot initialize. The message preceding this describes the specific problem.

20 - *type* MODULE *mmmm* INVALID VECTOR HEADER: *xxxxxxxxxxxxxxxx*

Indicates that the identified sockets interface module returned an invalid information vector header.

21 - *type* MODULE *mmmm* INVALID VECTOR *xxxxxxxx*

Indicates that the identified sockets interface module returned an invalid information vector.

22 - *type* MODULE *mmmm* CAPABILITY ERROR *ee*

Indicates that the identified sockets interface module has errors in the returned capability list. For assistance, contact CA Support at http://ca.com/support.

30 - STORAGE SHORTAGE

Indicates that insufficient storage is available to complete initialization.

40 - ATTACH OF SECONDARY SUBTASK FAILED

Indicates that an attempt to attach a required secondary subtask failed.

41 - TCP/IP SUBTASK *ssss* ABEND, SEE LOG

Indicates that a secondary subtask abended. For more information, see the CA NetMaster log.

42 - TCP/IP SUBTASK *ssss* INIT FAILURE: *aa-bb*

Indicates that a secondary subtask failed to initialize. The codes (*aa-bb*) are as follows:

1-0: Unable to obtain storage

2-*x*: Internal initialization error

3-*y*: TCP/IP sockets interface initialization error. An additional message is displayed. *y* is the return code from the TCP/IP sockets interface.

50 - UNABLE TO OBTAIN RECEIVE BUFFER POOL

Indicates that there is insufficient storage to obtain a pool of receive buffers.

System Action:

Initialization of the TCP/IP sockets interface fails.

User Action:

Determine the reasons for the failure and correct them if required.

N3B280

TCPIP START (TYPE=*type*, NAME=*name*) HALTED BY TCPIP STOP COMMAND

Reason:

A TCP/IP sockets interface initialization was terminated by a TCPIP STOP command.

The fields are as follows:

- *type* is the type of TCP/IP sockets interface.
- *name* is the name assigned to the TCP/IP sockets interface.

System Action:

Initialization of the TCP/IP sockets interface stops.

User Action:

None.

N3B290

TCPIP START (TYPE=*type*, NAME=*name*) WARNING - UNABLE TO OBTAIN TCP/IP HOST NAME, USING 'LOCALHOST'

Reason:

The TCP/IP sockets interface cannot determine the local host name. The value LOCALHOST is used to let the sockets interface initialize.

The fields are as follows:

- *type* is the type of TCP/IP sockets interface.
- *name* is the name assigned to the TCP/IP sockets interface.

System Action:

Initialization of the TCP/IP sockets interface completes.

User Action:

Determine why the correct host name is not available.

N3B291

TCPIP START (TYPE=*type*, NAME=*name*) WARNING - UNABLE TO OBTAIN TCP/IP HOST ADDRESS, USING 127.0.0.1 (LOOPBA CK)

Reason:

A TCP/IP sockets interface cannot determine the local host IP address. The LOOPBACK address is used to let the sockets interface initialize.

The fields are as follows:

- *type* is the type of TCP/IP sockets interface.
- *name* is the name assigned to the TCP/IP sockets interface.

System Action:

Initialization of the TCP/IP sockets interface completes.

User Action:

Determine why the correct host address is not available.

N3B301

request FAILED: RC=rc RSN=rsn ERR=err PID=pid SID=sid

Reason:

Execution of a TCP/IP request has failed. The fields are as follows:

request is the TCP/IP request that failed.
rc is the return code.
rsn is the reason code.
err is the error code as set by TCP/IP API.
pid is the process ID.
sid is the socket ID.

System Action:

INMC link manager terminates.

User Action:

Contact your technical support help desk.

N3B302

SUBTASK ALLOCATE FAILED.

Reason:

The address space could not allocate a TCP/IP subtask.

System Action:

INMC link manager terminates.

User Action:

Check system log for additional error messages.

N3B303

INVALID SESSION TERMINATED - REMOTE ADDRESS:aaa.aaa.aaa.aaa PORT: bbbbbb

Reason:

An attempt was made to establish a new connection by a remote system on a link that is already connected or local system does not allow connections from the remote address aaa.aaa.aaa.aaa .
bbbbbb is the remote system's INMC server port number.

System Action:

Session terminates.

User Action:

Check the link definitions of local and remote systems.

N3B401

TCPIP STOP IN PROGRESS (TYPE=*type*, NAME=*name*), REASON: *reason*

Reason:

A TCP/IP sockets interface enters shutdown.

The fields are as follows:

- *type* is the type of TCP/IP sockets interface.
- *name* is the name assigned to the TCP/IP sockets interface.
- *reason* is the reason the TCP/IP sockets interface entered shutdown.

  Valid values are:

  SYSTEM SHUTDOWN IN PROGRESS

  An FSTOP or SHUTDOWN command has caused CA NetMaster to commence shutdown.

  TCP/IP STACK SHUTDOWN

  The TCP/IP vendor stack (interface/job/etc) has shut down or abended.

  INTERFACE SUBTASK ABEND

  The CA NetMaster TCP/IP sockets interface subtask has ABENDED. For more information, see the log.

  TCPIP STOP COMMAND ENTERED

  A TCPIP STOP command was entered

System Action:

The TCP/IP sockets interface enters shutdown.

User Action:

None.

N3B402

TCPIP STOP COMPLETE (TYPE=*type*, NAME=*name*)

Reason:

A TCP/IP sockets interface has shut down.

The fields are as follows:

- *type* is the type of TCP/IP sockets interface.
- *name* is the name assigned to the TCP/IP sockets interface.

System Action:

None.

User Action:

None.

N3BH10

IP TRACE: RECEIVE SOCKET=ssssss LEN=ll PREFIX=pp xxxxxxxx

Reason:

This message is written to the SOLVE log only if TCP/IP tracing is enabled (Summary or Yes).
It is written when a SOCKET RECEIVE operation with a length prefix length of 1 to 4 has received sufficient data to analyze the length prefix value on the incoming data.
The socket ID, length prefix length (1 to 4), and length prefix value (from the incoming data) are displayed.
The incoming length prefix value is displayed in both decimal and hexadecimal notations.

System Action:

None.

User Action:

If the SOCKET RECEIVE does not complete, this message may show an expected length that is too long. SOLVE is waiting for more data but the sender is not sending it. This could indicate a problem with the length prefix length.
For example, if the SOCKET RECEIVE specified LENGTH=4, but the sender used LENGTH=3, and the length of the buffer was data (x'0400'), the 3-byte length prefix sent would be X'000400'. The receiver would receive X'000400??' (where ?? represents the first actual data byte) and expect a buffer approximately 240K bytes long. This may not be satisfied for quite a while!
Note: If an invalid length prefix is received, then this message is not produced. Messages N3BH90 and N3BH91 are produced instead.
Invalid length prefix values are 0, negative values (for LENGTH=4 only), or greater than 16,777,215.

N3BH90

SOCKET ssssss RCV LEN=ll INVALID LENGTH PREFIX: pp - BUFFER FOLLOWS

Reason:

This message is written to the SOLVE log when a SOCKET RECEIVE operation fails due to a bad length prefix detected on incoming data.
The length prefix is 0, negative (for LENGTH=4 only), or greater than 16,777,215.
The socket ID, length prefix length (1 to 4), and length prefix value are shown.
Messages N3BH91 will follow, containing a dump of the received data.

System Action:

The SOCKET RECEIVE operation fails with a feedback code of 17.

User Action:

Check the prefix length specification on the SOCKET RECEIVE and the associated sending application SOCKET SEND (or equivalent).
You can examine the data by looking at the following N3BH91 messages.

N3BH91

ooo xxxxxxxx xxxxxxxx xxxxxxxx xxxxxxxx ccccccccccccccc

Reason:

This message is written to the SOLVE log following an N3BH90 message. It contains a hexadecimal/character dump of the received data, up to 64 bytes.

System Action:

See the preceding message N3BH90.

User Action:

See the preceding message N3BH90.

N3BI01

request FAILED: RC=rc RSN=rsn ERR=err PID=pid SID=sid

Reason:

Execution of a TCP/IP request has failed. The fields are as follows:

request is the TCP/IP request that failed.
rc is the return code.
rsn is the reason code.
err is the error code as set by TCP/IP API.
pid is the process ID.
sid is the socket ID.

N3C101

MDS error assigning data to mdo

Reason:

A SOCKET verb failed when attempting to assign data to an MDO.
xxxxxxxx - The session SOLVE primary APPL name.
aaaaaa - the TCP/IP IP address of the session.
ppp - the TCP/IP port of the session.
sss - the assigned socket number of the session.
rr - the socket return code (normally 8)
The most likely cause of an error is a TCPIP STOP or the other SOLVE region has terminated the connection.

System Action:

The SOCKET call is rejected.

User Action:

Check that the MDO specified is correct.

N3C102

ADDRESS= operand specifies invalid value

Reason:

A SOCKET verb specified an invalid IP address value.
xxxxxxxx - The session SOLVE primary APPL name.
aaaaaa - the TCP/IP IP address of the session.
pppp - the TCP/IP port of the session.
sss - the assigned socket number of the session.
rr - the socket return code (normally 8)
The most likely cause of an error is a TCPIP STOP or the other SOLVE region has terminated the connection.

System Action:

The SOCKET call is rejected.

User Action:

Check the IP address specified in the ADDRESS= operand.

N3C103

HOSTNAME= operand specifies invalid value

Reason:

A SOCKET NSLOOKUP verb specified an invalid HOSTNAME value.
The hostname contains invalid characters or is not formatted correctly.
Hostnames must consist of the A-Z, 0-9, -, and . (fullstop) characters, and cannot have more than 63 characters between fullstops, and 2 adjacent fullstops are not permitted.

System Action:

The SOCKET call is rejected.

User Action:

Check the hostname specified in the HOSTNAME= operand.

N3C104

NSADDRESS= operand specifies invalid value

Reason:

A SOCKET NSLOOKUP verb specified an invalid name server IP address value.

System Action:

The SOCKET call is rejected.

User Action:

Check the IP address specified in the NSADDRESS= operand.

N3C105

SRCIP= operand specifies invalid value

Reason:

A SOCKET PING or SOCKET TRACEROUTE verb specified an invalid source IP address value.

System Action:

The SOCKET call is rejected.

User Action:

Correct the IP address specified in the SRCIP= operand.

N3C106

TAKEOVER=YES required if SERVER= and PATH= specified on REGISTER

Reason:

TAKEOVER=YES must be specified explicitly on a SOCKET REGISTER call if SERVER= and PATH= are also specified.

System Action:

The SOCKET call is rejected.

User Action:

Specify TAKEOVER=YES on the SOCKET REGISTER call.

N3D690

PING/TRACEROUTE RAW SOCKET OPEN FAILURE, NAME=*name* PROTO=*pppp* RC=*rr* RSN=*rrr* ERRNO=*eee* VERRIN=*vvv*

Reason:

An attempt to open a raw TCP/IP socket to process SOCKET PING and SOCKET TRACEROUTE requests failed. The sockets interface name, protocol (RAW, ICMPV4, or ICMPV6), return code, reason code, errno, and vendor error information are shown.

System Action:

The current PING or TRACEROUTE request fails with an error.

User Action:

Examine the error codes and determine why the open failed. Often it is because the CA NetMaster region is not authorized to open RAW sockets.

For more information about the socket error code (ERRNO=*eee*), see the *NCL Reference Guide*.

For more information about the Vendor Error Code (VERRIN=*xxx*), see the appropriate TCP/IP error codes reference guide.

N3D691

PING/TRACEROUTE RAW SOCKET RECV FAILURE, NAME=*name* RC=*rr* RSN=*rrr* ERRNO=*eee* VERRIN=*vvv*

Reason:

A receive operation on a raw TCP/IP socket used to process SOCKET PING and SOCKET TRACEROUTE has failed. The sockets interface name, return code, reason code, errno, and vendor error information are shown.

System Action:

The current PING or TRACEROUTE request fails with an error.

User Action:

Examine the error codes and determine why the receive failed. It may be transient (for example, TCP/IP shutdown).

N3D692

P1* RAW SOCKET SEND FAILURE, NAME=*name* RC=*rr* RSN=*rrr* ERRNO=*eee* VERRIN=*vvv* DESTIP=*destip

Reason:

A send operation on a raw TCP/IP socket used to process a SOCKET request has failed. The request type *P1* can be PING or TRACEROUTE. The sockets interface name, return code, reason code, errno, vendor error and destination IP address information are shown.

System Action:

The current PING or TRACEROUTE request fails with an error.

User Action:

Examine the error codes and determine why the send failed. It may be transient (for example, TCPIP shutdown).

N3DB80

DNDR @ aaaaaaaa - information

Reason:

This message is issued to the NetMaster log when the NetMaster DNR is tracing activity. It is only issued if NetMaster DNR tracing is activated. This will only be done when requested by a NetMaster Support Engineer.

System Action:

None.

User Action:

Provide the trace information to Technical Support as requested.

N3DC90

SOLVE DNR SOCKET *request* FAILURE, NAME=*name* RC=*rr* RSN=*rrr* ERRNO=*eee* VERRIN=*vvv*

Reason:

A socket request has failed for the CA NetMaster DNR socket. The request type, sockets interface name, return code, reason code, errno, and vendor error information are shown.

System Action:

DNR requests can be rejected (typically with a timeout error).

User Action:

Examine the error codes and determine why the request failed.

N3DC91

NETMASTER DNR RCV BUFFER ERROR - iiiiiiii OFF=oooo

Reason:

This message is issued to the NetMaster log when an incoming message from a name server contains structural errors.
A description of the problem and the approximate offset in the message where the problem was found is shown.

System Action:

The message is discarded.

User Action:

Contact Technical Support.

N3DC98

N3U101

PARM 1 INVALID: MUST BE INIT|GET

Reason:

An invalid call was made to module NM0003U1. For a call to be valid, the first parameter must be either "INIT" or "GET".

System Action:

The call is rejected.

User Action:

Correct the code which calls NM0003U1.

N3U103

LINK TO T01PNSIP FAILED

Reason:

An attempt was made to call module T01PNSIP. The Link SVC returned an error response. (T01PNSIP is a utility module which is provided as a component of CA TCPaccess.

System Action:

The call fails.

User Action:

Ensure that T01PNSIP is available for use in your region by placing it in either the steplib or linklist.

N3U104

NO RESPONSE FROM TCPACCESS

Reason:

A Netstat command was issued to gather information from CA TCPaccess. A timeout occurred while waiting for a response to the command.

System Action:

The request for information from CA TCPaccess fails.

User Action:

Determine why CA TCPaccess cannot respond to the request.

N3U105

INVALID RESPONSE FROM GET CALL

Reason:

NM0003U1 attempted to issue a Netstat command to CA TCPaccess, but the interface module (T01PNSIP) returned an unrecognized return code.

System Action:

The call is rejected.

User Action:

Determine why T01PNSIP returned an unrecognized response. Correct the situation, and reissue the request.

N3U106

INVALID RESPONSE FROM FINISH CALL

Reason:

Module NM0003U1 was attempting cleanup after receiving information from CA TCPaccess. The cleanup call to the interface module (T01PNSIP) returned an unrecognized response.

System Action:

The call fails.

User Action:

Determine why the cleanup call to T01PNSIP failed. Correct the situation, and retry the call.

N3U107

INVALID SSID

Reason:

A call was made to NM0003U1 to obtain information from CA TCPaccess. The second parameter of the call is the subsystem identifier that names the CA TCPaccess system to be queried. The SSID passed is invalid. To be valid, the SSID must be from one to four characters long.

System Action:

The call is rejected.

User Action:

Correct the code which calls NM0003U1, and retry the operation.

N3U108

NOT ENOUGH PARMS TO DO ANYTHING USEFUL

Reason:

A call was made to NM0003U1 to obtain information from CA TCPaccess. Not enough parameters were provided for NM0003U1 to return any information.

System Action:

The call fails.

User Action:

Amend the call to NM0003U1 to pass more parameters.

N3U109

SUBSYSTEM CALL WITH OLD-FORMAT PARAMETER LIST

Reason:

A call was made to the $IPNETAX subsystem, using the old-format subsystem parameter list. $IPNETAX requires the use of the new-format parameter list.

System Action:

The call is rejected.

User Action:

Use the OCS command "SHOW SUBSYS=$IPNETAX" to diagnose the subsystem. The subsystem must be defined to use the new-format parameter list.

N3Z301

TCP/IP SERVER ACTIVE ON PORT: pppp SOCKET: ssss

Reason:

The TCP/IP server has started. It identifies the server port being used and the assigned TCP/IP socket number.

System Action:

The TCP/IP server becomes available.

User Action:

None.

N3Z390

TCP/IP SERVER REGISTER FAILED. PORT: ppp RC: rr FB: ff ERRNO: ee

Reason:

The TCP/IP server is unable to start.

The likely cause is a port conflict. Other software on this system may be using the port (indicated by ERRNO 37 (EADDRINUSE)).

Other errors can be analyzed by referring to the return code (RC), feedback code (FB), and error number (ERRNO) of the SOCKET NCL verb. For more information, see the NCL Reference Guide.

This message is followed by an N3AE01 message that describes the error number in more detail.

System Action:

The TCP/IP server is unavailable.

User Action:

If the port number is already in use, change it using the SOCKETS parameter group.

N3Z391

TCP/IP SERVER ACCEPT FAILED. SOCKET: sss PORT: ppp RC: rr FB: ff ERRNO: err

Reason:

The TCP/IP server is unable to accept an incoming connection request.

This can occur when the connecting system closes the connection before it is complete or a storage shortage occurs.

This message is followed by an N3AE01 message that describes the error number in more detail.

System Action:

The connection is not accepted. The server stops accepting connections until TCP/IP is restarted.

User Action:

None.

N3Z401

TELNET SESSION INITIATED WITH *hostaddr*:*port* LUNAME: *ll* TYPE: *tt*

Reason:

A new client has successfully completed initial negotiation.

The message shows the TCP/IP address and port of the client, and the allocated LUname and Telnet session type.

Session types are as follows:

NVT is a Network Virtual Terminal (a linemode session that appears as an LU1 terminal).

TN3270 is a standard TN3270 session.

TN3270E TERMINAL is a TN3270E terminal session.

TN3270E PRINTER is a TN3270E printer session (that appears as an LU1 printer).

System Action:

The session is connected.

User Action:

None.

N3Z410

TELNET SESSION WITH nnnn FAILED, NO TERMINALS AVAILABLE

Reason:

This message is displayed on a TN3270 or NVT session Telnet client when SOLVE has refused the session due to all generic terminals being in use.

System Action:

The connection is closed.

User Action:

None.

N3Z411

TELNET SESSION WITH nnnn FAILED, TERMINAL tttt NOT VALID

Reason:

This message is displayed on a TN3270 session Telnet client when SOLVE has refused the session. The session was refused because the requested terminal name was invalid or in use.

System Action:

The connection is closed.

User Action:

Check that the supplied terminal name is valid. The TNSPREFX and TNANYNAM sysparm settings are relevant.

N3Z480

TELNET PEER=*hostaddr*:*port* ERR: *err*

Reason:

An error occurred during session negotiation. A description of the error is in the message.

System Action:

The connection closes.

User Action:

Contact Technical Support.

N3Z481

TELNET S=sss ERR: err

Reason:

This message is issued by the SOLVE Telnet Server connection processor when an error occurs during session negotiation.
A description of the error is in the message.

System Action:

The connection is closed.

User Action:

Report the error to your SOLVE support office.

N3Z482

TELNET PEER=*hostaddr*:*port* ERR: *err* RC=*rr* FB=*ff* ERRNO=*eee*

Reason:

A TCP/IP error occurred during session negotiation. A description of the error and the return information from the TCP/IP request is shown.

System Action:

The connection closes.

User Action:

Contact Technical Support.

N3Z483

CS=aa LS=bb LAST RCVD CMD FOLLOWS...

Reason:

This message is issued by the SOLVE Telnet Server connection processor following an N3Z480 message when the last received Telnet command was related to the error. It is followed by a set of N3Z484 messages that show the received command.

System Action:

A dump of the command follows.

User Action:

Report the error to your SOLVE support office.

N3Z484

off hex hex hex hex char

Reason:

This message is logged following an N3Z483 message and contains a dump of an incoming data buffer.

This message is logged, and precedes N3ZJ91 messages containing an incoming data buffer that may help diagnose the error.

System Action:

See N3Z483.

User Action:

See N3Z483.

N3Z680

TELNET PEER=*hostaddr*:*port* ERROR: *err* RC=*rr* FB=*ff* ERRNO=*eee*

Reason:

A TCP/IP error occurred. A description of the error and the return information from the TCP/IP request is shown.

System Action:

The connection closes.

User Action:

Ensure that the client did not close the connection.

N3Z681

TELNET PEER=*hostaddr*:*port* STORAGE SHORTAGE

Reason:

There is a storage shortage. The return information from the TCP/IP request is shown.

System Action:

The connection closes.

User Action:

None.

N3Z682

TELNET PEER=*hostaddr*:*port* INVALID/UNEXPECTED TELNET COMMAND RECEIVED...

Reason:

Invalid input data from the Telnet client was detected.

It is followed by a dump of the buffer and the return information from the TCP/IP request.

System Action:

The connection closes.

User Action:

None.

N3Z683

off hex hex hex hex char

Reason:

This message is logged following an N3Z682 message and contains a dump of a data buffer.

This message is logged, and precedes N3ZJ91 messages containing an incoming data buffer that may help diagnose the error.

System Action:

See N3Z682.

User Action:

See N3Z682.

N3Z684

TELNET PEER=*hostaddr*:*port* INVALID/UNEXPECTED TN3270E DATA RECEIVED...

Reason:

Invalid input data from a TN3270E Telnet client was detected.

It is followed by a dump of the buffer and the return information from the TCP/IP request.

System Action:

The connection closes.

User Action:

None.

N3Z685

off hex hex hex hex char

Reason:

This message is logged following an N3Z684 message and contains a dump of a data buffer.

This message is logged, and precedes N3ZJ91 messages containing an incoming data buffer that may help diagnose the error.

System Action:

See N3Z684.

User Action:

See N3Z684.

N3Z901

SYSPARM=ssssssss REJECTED - TCP/IP INTERFACE IS NOT ACTIVE

Reason:

An attempt to modify a TCP/IP Telnet sysparm was made when the TCP/IP interface was active.
Some of these sysparms can be altered only when the TCPIP interface is not active.

System Action:

The command is ignored.

User Action:

Issue TCPIP STOP, alter the sysparm, then issue TCPIP START.

N3ZA01

PROCESSING OF INPUT FOR xxxxxxxx FAILED DUE TO STORAGE SHORTAGE

Reason:

This message is issued during input message processing for terminals and INMC/APPC sessions that are using the TCP/IP access method.
It indicates that no storage was available for the input data.

System Action:

The session is terminated.

User Action:

Determine why the storage shortage occurred.

N3ZB01

CONNECT OF xxxxxxxx (aaaaaa:pppp id=sss) FAILED, rrrrrrrr

Reason:

This message is issued during an incoming connect request for a session using the TCP/IP access method.
It indicates that the incoming connect failed.
The fields in the message are:
xxxxxxxx - The incoming SOLVE primary APPL name.
aaaaaa - the TCP/IP IP address of the incoming request
pppp - the TCP/IP port of the incoming request
sss - the assigned socket number of the incoming request
rrrrrrr - the failure reason:
STORAGE SHORTAGE - a storage shortage has occurred
REJECTED - the request was rejected, for example no LINK START or DEFLINK matched the request.

System Action:

The session is refused.

User Action:

For storage shortages, determine why the storage shortage occurred.
For rejections, check the current DEFLINK and LINK requests.

N3ZB10

IP SEND TO xxxxxxxx (aaaaaa:pppp id=sss) FAILED, RC=rr FB=ff ERRNO=ee

Reason:

This message is issued when a TCP/IP send on a TCPIP access method session fails. The fields in the message are:
xxxxxxxx - The session SOLVE primary APPL name.
aaaaaa - The TCP/IP IP address of the session.
pppp - The TCP/IP port of the session.
sss - The assigned socket number of the session.
rr - The socket return code (normally 8)
ff - The socket feedback (see the NCL SOCKET verb &ZFDBK values)
ee - The socket errno (see the NCL SOCKET verb &ZSOCERRN values)
The most likely cause of this error is a TCPIP STOP or the other SOLVE domain has terminated the connection.

System Action:

The session is closed.

User Action:

Use the feedback and errno values to determine the cause of the failure and take appropriate corrective action.

N3ZB11

IP ASY RCV FOR *xxxxxxxx* (*aaaaaa*:*pppp* id=*sss*) FAILED, RC=*rr*

Reason:

This message is issued when a TCP/IP receive on a TCP/IP access method session fails.

The fields in the message are:

xxxxxxxx

Is the session primary APPL name.

aaaaaa

Is the TCP/IP IP address of the session.

pppp

Is the TCP/IP port of the session.

sss

Is the assigned socket number of the session.

rr

Is the socket return code (typically 8)

The most likely cause of the error is a TCPIP STOP or the other region has terminated the connection.

System Action:

The session is closed.

User Action:

Check that the other region has *not* closed the connection.

N3ZB12

INITIAL RCV FAILED, PEER=(*aaaaaa*:*pppp* ID=*sss*) RC=*rr* FB=*ff* ERRNO=*ee*

Reason:

This message is issued when a TCP/IP RECEIVE on a TCP/IP access method fails.

aaaaaa*:*pppp

Are the IP address and port number of the peer.

sss

Is the assigned socket number of the session.

rr

Is the socket return code.

ff

Is the socket feedback code.

ee

Is the socket ERRNO value.

The most likely cause of an error is a TCPIP STOP or the other domain has terminated the connection.

System Action:

The session is closed.

User Action:

Check that the remote domain has *not* closed the connection.

N3ZB13

INITIAL RCV TIMED OUT, PEER=(aaaaaa:pppp ID=sss)

Reason:

This message is issued when a TCP/IP RECEIVE on a TCP/IP access method times out.
aaaaaa:pppp are the IP address and port number of the peer
xxxxxxxx - The session SOLVE primary APPL name.
aaaaaa - The TCP/IP IP address of the session.
pppp - The TCP/IP port of the session.
sss - The assigned socket number of the session.
rr - The socket return code (normally 8)
The most likely causes of an error are a TCPIP STOP or the other SOLVE domain has terminated the connection.

System Action:

The session is closed.

User Action:

Check that the remote SOLVE domain has not closed the connection.

N3ZB14

INVALID INCOMING CONN REQ, PEER=(aaaaa:ppp ID=sss) REASON=rrr

Reason:

Invalid data is detected from an initial RECEIVE.
aaaaaa:pppp are the IP address and port number of the peer
rrr describes the reason the data is considered invalid
xxxxxxxx - The session region primary APPL name.
aaaaaa - The TCP/IP IP address of the session.
pppp - The TCP/IP port of the session.
sss - The assigned socket number of the session.
rr - The socket return code (normally 8).
Likely causes of the an error are:
- A TCPIP STOP command has been issued
- A connected region has terminated the connection

System Action:

The session is closed.

User Action:

Contact Technical Support and quote the message number and reason code.

N3ZB15

INVALID INCOMING CONN REQ, PEER=(aaaaa:ppp ID=sss) REASON=TARGET LU UNMATCHED, TARGET=tttttttt EXPECTED=eeeeeeee

Reason:

The target LU to log on to is incorrect.
aaaaaa:pppp are the IP address and port number of the peer.
tttttttt is the target specified by the logon request.
eeeeeeee is the lu of the system issuing the message.
xxxxxxxx - The session SOLVE primary APPL name.
