# CA NetMaster® File Transfer Management

# **Release Notes**

Release 12.1

This Documentation, which includes embedded help systems and electronically distributed materials, (hereinafter referred to as the "Documentation") is for your informational purposes only and is subject to change or withdrawal by CA at any time.

This Documentation may not be copied, transferred, reproduced, disclosed, modified or duplicated, in whole or in part, without the prior written consent of CA. This Documentation is confidential and proprietary information of CA and may not be disclosed by you or used for any purpose other than as may be permitted in (i) a separate agreement between you and CA governing your use of the CA software to which the Documentation relates; or (ii) a separate confidentiality agreement between you and CA.

Notwithstanding the foregoing, if you are a licensed user of the software product(s) addressed in the Documentation, you may print or otherwise make available a reasonable number of copies of the Documentation for internal use by you and your employees in connection with that software, provided that all CA copyright notices and legends are affixed to each reproduced copy.

The right to print or otherwise make available copies of the Documentation is limited to the period during which the applicable license for such software remains in full force and effect. Should the license terminate for any reason, it is your responsibility to certify in writing to CA that all copies and partial copies of the Documentation have been returned to CA or destroyed.

TO THE EXTENT PERMITTED BY APPLICABLE LAW, CA PROVIDES THIS DOCUMENTATION "AS IS" WITHOUT WARRANTY OF ANY KIND, INCLUDING WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NONINFRINGEMENT. IN NO EVENT WILL CA BE LIABLE TO YOU OR ANY THIRD PARTY FOR ANY LOSS OR DAMAGE, DIRECT OR INDIRECT, FROM THE USE OF THIS DOCUMENTATION, INCLUDING WITHOUT LIMITATION, LOST PROFITS, LOST INVESTMENT, BUSINESS INTERRUPTION, GOODWILL, OR LOST DATA, EVEN IF CA IS EXPRESSLY ADVISED IN ADVANCE OF THE POSSIBILITY OF SUCH LOSS OR DAMAGE.

The use of any software product referenced in the Documentation is governed by the applicable license agreement and such license agreement is not modified in any way by the terms of this notice.

The manufacturer of this Documentation is CA.

Provided with "Restricted Rights." Use, duplication or disclosure by the United States Government is subject to the restrictions set forth in FAR Sections 12.212, 52.227-14, and 52.227-19(c)(1) - (2) and DFARS Section 252.227-7014(b)(3), as applicable, or their successors.

# **CA Technologies Product References**

This document references the following CA Technologies products:

- CA Datacom®/AD (CA Datacom/AD)
- CA Mainframe Software Manager<sup>™</sup> (CA MSM)
- CA NetMaster® File Transfer Management (CA NetMaster FTM)
- CA NetSpy<sup>™</sup> Network Performance (CA NetSpy)

# **Contact CA Technologies**

### **Contact CA Support**

For your convenience, CA Technologies provides one site where you can access the information that you need for your Home Office, Small Business, and Enterprise CA Technologies products. At <a href="http://ca.com/support">http://ca.com/support</a>, you can access the following resources:

- Online and telephone contact information for technical assistance and customer services
- Information about user communities and forums
- Product and documentation downloads
- CA Support policies and guidelines
- Other helpful resources appropriate for your product

### **Providing Feedback About Product Documentation**

If you have comments or questions about CA Technologies product documentation, you can send a message to <u>techpubs@ca.com</u>.

To provide feedback about CA Technologies product documentation, complete our short customer survey which is available on the CA Support website at <a href="http://ca.com/docs">http://ca.com/docs</a>.

# **Contents**

Chapter 1: New Features	7

Appendix D: Published Fixes	33

# **Chapter 1: New Features**

This section contains the following topics:

<u>USS Command</u> (see page 7) <u>NMSAFF Security Solution</u> (see page 7) <u>CA OPS/MVS System State Manager</u> (see page 7)

# **USS Command**

The USS command issues shell commands in UNIX System Services (USS). You issue the command from Command Entry.

This command has the following format:

USS shell command

**Note:** The SOLVE SSI issues the shell commands on behalf of the user. The SOLVE SSI user ID authority determines which commands can be issued. To limit who can use the USS command, implement resource-level security. For information about resource-level security, see the *Security Guide*.

# **NMSAFF Security Solution**

The NMSAFF security solution provides a full security exit to interface with your external security package. The exit uses the SXCTL parameter file. The file defines the security resources that you use to configure the user security.

To use this solution, specify NMSAFF for the SEC region JCL parameter.

Note: For more information, see Security Guide.

# **CA OPS/MVS System State Manager**

A CA NetMaster FTM region and the SOLVE Subsystem Interface can automatically communicate both active status events and heart beat events to CA OPS/MVS EMA. The enabling technology is through a generic active status or heartbeat event API call. CA OPS/MVS EMA provides this API to other CA Technologies mainframe products so that they can communicate events consistently to CA OPS/MVS EMA.

# **Chapter 2: Changes to Existing Features**

This section contains the following topics:

ReportCenter (see page 9)

MS Line Command (see page 9)

JOB and STC Class Resource Status (see page 10)

**Command Entry** (see page 11)

STARTAUTO Operation Mode (see page 11)

Alert Monitor (see page 11)

Alert Forwarding (see page 12)

Alert Filters (see page 13)

Knowledge Base Export Utility (see page 13)

Knowledge Base Import Utility (see page 14)

Multisystem Communication Access Methods (see page 14)

**EXECNCL and STARTNCL Macros** (see page 14)

PARSE Macro (see page 14)

**SETSTATE Macro** (see page 15)

SYSCMD Macro (see page 15)

Panel Shortcuts (see page 15)

NMSAF Security Modeling (see page 15)

**Install Utility** (see page 15)

PDS Member Statistics (see page 15)

CA MSM (see page 16)

<u>Documentation</u> (see page 16)

Changes to Data Set Names (see page 16)

Removed Feature (see page 17)

Product Removed From Family (see page 17)

# ReportCenter

ReportCenter supports 64-bit Java. Review the REPORTCENTER parameter group.

**Note:** If you use CA Datacom/AD, the JDBC class and DLL directories are created as part of the CA Datacom/AD installation. Update the paths in the REPORTCENTER parameter group.

# **MS Line Command**

The MS line command overrides the current operation mode to change the mode to AUTOMATED. When the resource or service achieves its desired state, the override is removed to return to the operation mode set by the definition.

## **JOB and STC Class Resource Status**

Enhancements have been made in the determination of the ACTIVE and INACTIVE status of JOB and STC class resources:

- A default display method checks the existence of the address space instead of relying on messages.
- You can check for the end-of-memory condition when determining when a resource becomes INACTIVE.

### **Display Method**

The display method for JOB and STC class resources has changed. Templates that used the D J, resource\_name or D A, resource\_name system command as the method now have no system command specified on the Display and Heartbeat Details panel. Instead, a default method checks the existence of the address space ID, and sets the actual state to either ACTIVE or INACTIVE. When you migrate your existing definitions, they acquire the default method (unless a definition has extended information).

When a resource definition uses the default method, the D command issues the D J,resource\_name command.

### **End-of-Memory Condition**

End-of-memory detection is the default when a resource definition panel contains no message rules that set the resource status to INACTIVE. If you find that the message rules in your resource definitions are not detecting the INACTIVE state correctly, you can use end-of-memory detection:

- You can enable end-of-memory detection by removing the message rules that set an INACTIVE status.
- If you have many resource definitions to update and they are based on a template, you change the template and then apply the changes. In this case, we recommend that you change message rule status to STOPPING instead of removing the message rules altogether.

# **Command Entry**

Command Entry on a 3270 terminal has the following enhancements:

- The maximum value for the Limit field has increased to 32767.
- The panel supports a new LOG field. The field enables you to suppress the logging of the response to a local command to the activity log.

In WebCenter, when you issue a command, you can display the response in a separate window and can save the response in a text file. If you use this feature, there is no limit to the number of response lines returned. The value in the Maximum Lines Returned field has no effect.

# **STARTAUTO Operation Mode**

The STARTAUTO operation mode lets a resource or service to start in the AUTOMATED mode. As the resource or service achieves its desired state, its operation mode switches to MANUAL.

For example, use STARTAUTO to start a resource automatically when the system performs an initial program load (IPL) but switch it to manual control afterwards.

# **Alert Monitor**

You can add your own actions to the Alert Monitor. You customize the CC2DEXEC(\$AMCBCMX) exit to specify your actions.

**Note:** For information about how to customize the \$AMCBCMX exit, see the *Reference Guide*.

# **Alert Forwarding**

The CC2DSAMP(\$AMTRAP) management information base (MIB) definition used by alert forwarding includes the following new object identifiers:

- **.** ..
- sourceTime (1.3.6.1.4.1.1126.1.2.1.3.9)
- updateTime (1.3.6.1.4.1.1126.1.2.1.3.10)
- closeTime (1.3.6.1.4.1.1126.1.2.1.3.11)
- lastTime (1.3.6.1.4.1.1126.1.2.1.3.12)
- elapsedTime (1.3.6.1.4.1.1126.1.2.1.3.13)
- occurrences (1.3.6.1.4.1.1126.1.2.1.3.14)
- sourceld (1.3.6.1.4.1.1126.1.2.1.3.15)
- explanationCount (1.3.6.1.4.1.1126.1.2.1.3.16)
- explanationTable (1.3.6.1.4.1.1126.1.2.1.3.17)
  - explanationEntry (1.3.6.1.4.1.1126.1.2.1.3.17.1)
    - explanation (1.3.6.1.4.1.1126.1.2.1.3.17.1.1)
- systemActionCount (1.3.6.1.4.1.1126.1.2.1.3.18)
- systemActionTable (1.3.6.1.4.1.1126.1.2.1.3.19)
  - systemActionEntry (1.3.6.1.4.1.1126.1.2.1.3.19.1)
    - systemAction (1.3.6.1.4.1.1126.1.2.1.3.19.1.1)
- userActionCount (1.3.6.1.4.1.1126.1.2.1.3.20)
- userActionTable (1.3.6.1.4.1.1126.1.2.1.3.21)
  - userActionEntry (1.3.6.1.4.1.1126.1.2.1.3.21.1)
    - userAction (1.3.6.1.4.1.1126.1.2.1.3.21.1.1)
- **.**..
- text2 (1.3.6.1.4.1.1126.1.2.1.3.105)
- text3 (1.3.6.1.4.1.1126.1.2.1.3.106)
- text4 (1.3.6.1.4.1.1126.1.2.1.3.107)
- opSysId (1.3.6.1.4.1.1126.1.2.1.3.201)
- opSysName (1.3.6.1.4.1.1126.1.2.1.3.202)
- sysplex (1.3.6.1.4.1.1126.1.2.1.3.203)
- ipHostName (1.3.6.1.4.1.1126.1.2.1.3.204)
- ipHostAddr (1.3.6.1.4.1.1126.1.2.1.3.205)

## **Alert Filters**

Alert filters have the following enhancements:

You can use Network Control Language (NCL) system variables in to provide values in the filter expression. For example, the following expression restricts the alerts to those alerts that originate from the local region:

```
SOURCE EO &ZNMDID
```

- The following new filters are available:
  - LOCAL for local alerts
  - REMOTE for alerts from remote regions
  - SYSLOGD for alerts from SYSLOGD event detectors (for use by CA NetMaster NM for TCP/IP)

# **Knowledge Base Export Utility**

The EXPORTRM utility exports one of the following types of definitions:

- A system image with the included resource definitions
- A service image with the included service definitions
- An EventView rule set with the included rules
- A class of common components

The utility does not support the selection of individual definitions.

The export data set must exist as a sequential file with a record length of at least 80 characters. You can use DISP=MOD to append multiple exports to a single data set.

This utility has the following format:

**Note:** For more information, see the *Reference Guide*.

# **Knowledge Base Import Utility**

The IMPORTRM utility imports definitions in a data set to the knowledge base. The data set contains definitions exported by the EXPORTRM utility.

This utility has the following format:

IMPORTRM DSNAME=data\_set\_name
MODE={REPLACE|OVERLAY|MERGE}

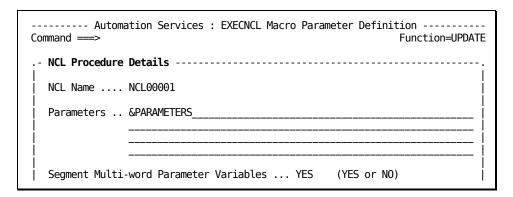

**Note:** For more information, see the *Reference Guide*.

# **Multisystem Communication Access Methods**

You can update the MULTISYS parameter group to change the communication access methods that can be used without having to unlink the region. When you apply the changes, links with the region are stopped and restarted.

## **EXECNCL and STARTNCL Macros**

You can pass a list of parameters to the EXECNCL and STARTNCL macros using variables. To use this feature, you specify YES in the Segment Multi-word Parameter Variables field on the Macro Parameter Definition panel, for example:

# **PARSE Macro**

The PARSE macro creates a number of variables to hold the parsed input. You can specify a variable to return this number. To use this feature, you specify the name of the variable in the Variable Name for Count of Variables Created field on the Macro Parameter Definition panel.

### **SETSTATE Macro**

The SETSTATE macro provides defaults for the following fields:

- Resource Class has a default of &ZRMDBCLASS.
- Resource Name has a default of &ZRMDBNAME.

## **SYSCMD Macro**

The number of message rules that you can specify to detect responses in the SYSCMD macro is increased to ten.

# **Panel Shortcuts**

You can suppress panel shortcuts or change the shortcut character. You control shortcuts through the PMENUCONTROL parameter group.

# **NMSAF Security Modeling**

The NMSAF security solution is enhanced to build Userid Access Maintenance Subsystem (UAMS) records based on the modeling controls of a user. This build happens each time the user logs in. When the model for a user changes in external security, you no longer need to update the UAMS definitions.

# **Install Utility**

The Install Utility has the following changes:

- The Install Utility is now unloaded into the CC2DJCL data set.
- Field-level online help is available.

Note: For more information, see the Installation Guide.

# **PDS Member Statistics**

When you use Dataset Services to create or update a partitioned data set (PDS) member, interactive system productivity facility (ISPF) statistics are generated. The DSSISPST system parameter controls the generation of these statistics.

**Note:** For information about the system parameter, see the *Reference Guide*.

### **CA MSM**

The Software Configuration Service (SCS) has been added for CA MSM. Use this service to configure CA Technologies mainframe products from the software inventory of the driving system to your target enterprise systems.

The SCS guides you through the configuration creation process, and through the manual steps to implement the configuration. The SCS also includes an address space communications service running on each targeted z/OS system.

**Note:** For more information, see the CA Mainframe Software Manager User Guide.

# **Documentation**

This section contains topics that are related to documentation enhancements.

The following list shows the documentation library changes in this release:

- The Managed Object Development Services Programmer and Administrator Guide is renamed the Managed Object Development Services Guide.
- The Network Control Language Programmer Guide is renamed the Network Control Language Programming Guide.

# **Changes to Data Set Names**

The names of the data sets have changed. We recommend that you review the following table to determine the impact to your installation:

Original Name	New Name	Description
CAIJCL	CC2DJCL	This partitioned data set (PDS) contains the installation and maintenance JCL members.
CAILINK	CC2DLINK	This PDS contains various [set the NetView variable for your book] exits.
CAILPA	CC2DLPA	This PDS contains modules that must be executed from the link pack area (LPA).

**Note:** For information about data sets, see the *Reference Guide*.

# **Removed Feature**

The product no longer supports the WebCenter software development kit (SDK).

# **Product Removed From Family**

The following product is not included in this release: CA NetSpy, which remains at r12.

**Important!** When you upgrade to CA Mainframe Network Management Release 12.1 and you use CA NetSpy r12, do *not* delete the NMCO.CC2DLOAD data set. CA NetSpy requires the data set for health checks.

# Appendix A: Changes that Affect Resource-Level Security

Some product resources (for example, commands) have been added or deleted. If you are using resource-level security, review your implementation and modify as required.

This section contains the following topics:

Menu Option Changes (see page 19)

Monitor Command Changes (see page 19)

OCS Command Changes (see page 19)

# **Menu Option Changes**

The following list shows the affected menu options:

### New

Menu ID: \$RM.029 (Automation Services: RAMDB Utilities Menu)

F - Browse RAMDB Field Descriptions

# **Monitor Command Changes**

The following list shows the affected monitor commands:

### New

MS - Set mode override to STARTAUTO

TRC - Check members of a Resource Family Tree

# **OCS Command Changes**

The following list shows the affected Operator Console Services (OCS) commands:

### New

USS - Issue a UNIX System Services command

# Appendix B: Changes to Distributed Knowledge Base

If you have previously customized any of the changed objects or are using any of the deleted objects, review each instance in your old knowledge base and make modifications in your new knowledge base as required.

**Note:** For more information about knowledge base migration, see the *Installation Guide*.

This section contains the following topics:

\$TEMPLAT 0001 Definitions (see page 22)

\$TEMPLAT 0002 Definitions (see page 23)

Commands (see page 24)

File Transfer Rules (see page 24)

Alert Monitor Filters (see page 25)

<u>Icons</u> (see page 25)

# **\$TEMPLAT 0001 Definitions**

The following list shows the new, changed, and deleted definitions. The list has the following format:

```
resource_class :resource_type - resource_description
```

### New

No definitions have been added.

### Changed

The following definitions are changed to support the default display method:

```
CMMGR
        :CMSTC
                           - C:Mailbox Started Task
FTPMGR : AXSJOB
                           - FTP TCPAccess Server - JOB

### **Deleted**

No definitions have been deleted.

# **Commands**

The following list shows the new, changed, and deleted command definitions. The list has the following format:

```
command :class - command_description
```

**Note:** The ALL-X class indicates all classes except for an excluded set.

### New

```
MS :ALL-X - Set Mode Override to StartAuto
TRC :ALL-X - Check members of a Resource Family Tree
```

### Changed

ALH :ALL-X - Display Alert History for a Resource

### **Deleted**

No definitions have been changed.

# File Transfer Rules

The following list shows the new, changed, and deleted file transfer rules. The list has the following format:

```
rule_set_name.rule_name - rule_description
```

### New

No definitions have been added.

### Changed

```
SAMPLE.RUNPROC - Run a process at end of a transfer
```

### Deleted

No definitions have been deleted.

# **Alert Monitor Filters**

The following list shows the new, changed, and deleted alert monitor filters. The list has the following format:

monitor\_filter\_name - monitor\_filter\_description

### New

LOCAL - Local system alerts only
REMOTE - Alerts from linked regions only

### Changed

No definitions have been changed.

### **Deleted**

No definitions have been deleted.

# **Icons**

The following list shows the new, changed, and deleted icons. The list has the following format:

```
icon_name - icon_description
```

### New

No icons have been added.

### Changed

The following icon has changed in width so that four icons can fit abreast on the Graphical Monitor:

```
RMPROD - All Resources Within a Product
```

### **Deleted**

No icons have been deleted.

# **Appendix C: Changes to Messages**

This section lists the changed, deleted, and new messages in Release 12.1.

**Note:** For information about each message, see the *Message Reference Guide*.

This section contains the following topics:

<u>Changed Messages</u> (see page 27) <u>Deleted Messages</u> (see page 28) <u>New Messages</u> (see page 29)

# **Changed Messages**

The text of the following messages changed:

BAIPWI12	Cannot change TCP/IP Software Type: multisystem link(
GP0027	~P1 requires System Base version of ~P2
N13218	MPREF REFRESH MRESP- LIMIT ACTION NTFY APPST SESSM
N13219	~P1 ~P2 ~P3 ~P4 ~P5 ~P6 ~P7 ~P8 ~P9 ~P10
N3AN01	TCP/IP SERVER ACTIVE ON type: pppp SOCKET: ssss
N3AN90	TCP/IP SERVER REGISTER FAILED. type: pppp RC: rc FB:
N3AN91	TCP/IP SERVER ACCEPT FAILED. SOCKET: ssss type: pppp
N53H01	POOL NAME USE#
N53H02	~P1 ~P2
N59006	PANEL panelname EXPANSION ERROR
RE0108	RULESET &P1 INCLUDED BY RULESET &P2
RMAOMNX00	BURST SUPPRESS=> ~P1
RMCALL22	'~P1' COMMAND CANNOT BE ISSUED AGAINST A LOCALLY LOAD
RMDM0038	ARM RESTART FAILED - &p1 - START COMMAND WILL BE ISSU
RMINWI56	No common access method with ~P1
RMINWI60	TCP/IP not available on this system
RMRS0002	No &P1 records found &P2
RMVM0069	OPERATION MODE MUST BE AUTOMATED, STARTAUTO, MANUAL,
RMVM0124	~p1 selection list not available for this resource

# **Deleted Messages**

The following messages were deleted:

NMCP0100	The Minute-Minder Listener is already running
NMCP0101	~P1 must be a number between ~P2 and ~P3 inclusive.
NMCP0102	LOCPU value must be less than HICPU value
NMCP0103	~P1 is not a valid data set name
NMCP0110	Minute-Minder Listener started
NMCP0111	~P1 = ~P2
NMCP0197	Minute-Minder Listener is not active
NMCP0198	Minute-Minder Listener stop requested
NMCP0199	Minute-Minder Listener ended

# **New Messages**

The following messages are new:

```
AMEVFWD27
             Invalid parameter to alert forwarding. PARAMETER=~p1
BACP0100
             The Minute-Minder Listener is already running
BACP0101
             ~P1 must be a number between ~P2 and ~P3 inclusive.
BACP0102
             LOCPU value must be less than HICPU value
             ~P1 is not a valid data set name
BACP0103
BACP0110
             Minute-Minder Listener started
               \simP1 = \simP2
BACP0111
BACP0197
             Minute-Minder Listener is not active
             Minute-Minder Listener stop requested
BACP0198
BACP0199
             Minute-Minder Listener ended
